Re: Quarterly Groundwater Monitoring Results – Second Quarter 2015
Joliet #29 Generating Station – Ash Impoundments
Compliance Commitment Agreement VN W-2012-00059; ID# 6284

Dear Ms. Rhodes:

The second quarterly groundwater sampling for 2015 has been completed for the ash pond monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Joliet #29 Generating Station in accordance with the signed Compliance Commitment Agreement (CCA) with Illinois Environmental Protection Agency (IEPA) dated October 24, 2012. This quarterly monitoring report is being submitted summarizing the results of the monitoring event.

Well Inspection and Sampling Procedures

The groundwater monitoring network around the ash ponds at the Joliet facility consists of eleven wells (MW-1 through MW-11) as shown on Figure 1. As part of sampling procedures, the integrity of all monitoring wells was inspected and water levels obtained using an electronic water level meter (see summary of water level discussion below). Overall the wells were in good condition with locked protector casings and the concrete surface seals were intact.

Groundwater samples at well locations MW-3 through MW-11 were collected using the low-flow sampling technique. Based on historical water levels at monitoring well locations MW-1 and MW-2, Midwest Generation determined that there was not enough water column within these wells (generally less than two feet of water column within each well) to allow for the placement of dedicated pumping systems. Instead, at these two well locations, dedicated PVC bailers are used to collect groundwater samples. During this round of sampling, MW-1 was not sampled due to a limited amount of water within that well (near dry conditions).

One duplicate sample was collected from well MW-8. In addition, a deionized water trip blank accompanied the groundwater samples bottles from and back to the laboratory. The groundwater monitoring samples and the duplicate sample were analyzed for the compounds listed in Illinois

Administrative Code (IAC) 620.410(a), 620.410(d) and 620.410(e), excluding radium 226/228. The trip blank was analyzed for the volatile organic compounds listed in IAC 620.410(d).

Groundwater Flow Evaluation

Water level data from the most recent round of sampling along with historical water levels obtained from each well are summarized in Table 1. The water levels were used to generate a groundwater flow map which is provided on Figure 2. Groundwater flow is generally consistent with historical conditions with flow in a southerly direction.

Analytical Data

A copy of the analytical data package is provided in Attachment 1. The field parameter and analytical data from the most recent sampling, along with the previous eight quarters of data, are summarized in Table 2. The data are generally consistent with previous data generated for the site. The off-trend detections noted last quarter for wells MW-8 and MW-11 have re-established to typical historical levels with the exception of chloride at well MW-11. Chloride was also noted to increase at wells MW-2 and MW-4 along with Total Dissolved Solids at well MW-4.

All wells for which the sampling data reports a value above one or more groundwater standards are located within the area of the approved Groundwater Management Zone.

Receipt

The samples were received on 5/28/2015 2:00 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 3 coolers at receipt time were 0.2° C, 2.6° C and 3.7° C.

Receipt Exceptions

All Perchlorate samples were received at the Sacramento laboratory outside the required temperature criteria. FedEx was to deliver the cooler on Friday 5/29/15, but it was not delivered until Monday 6/1/15. As a result, all of the ice was melted and the temperature was 21.1 degrees C.

Per client proceed with analysis.
