Illinois Pollution Control Board -

I support the proposed PFAS groundwater quality standards in proposal IPCB R2022-018. This proposal is very important for the water quality for all the residents of the area now and into the future. By adjusting the chemical exposure factors from adult to child offers increased protection against the harmful effects caused by ingestion of such chemicals in drinking water. These toxicity values based on childhood exposure risks will protect the most sensitive and vulnerable of Illinois' citizens.
