Company:	Williamson Energy, LLC
Mine:	Pond Creek Mine #1
County:	Williamson
Location:	Johnston City
NPDES #:	IL0077666
BOW ID:	W1998590001
Inspection Date:	August 30, 2018
Inspected by:	Brian Rodely
Accompanied by:	Bruce Rodely
Type of Inspection:	CSI & IEMA IL-2018-0717
Contact Person(s):	Nick Culbreth-& Brenton Mumford (Engineering)
Arrival Time:	9:15 AM
Departure Time	11:30 AM
Weather:	Sunny, 83F

Compliance Sampling & IEMA Follow-Up

August 30, 2018 Compliance Sampling and IEMA Report Follow Up:
A compliance sampling inspection was conducted at the above-referenced 540-acre NPDES permitted underground mine resulting from report IL-2018-0717 received by the Illinois EPA Emergency Response Unit.

The report narrative indicated that an unnamed tributary crossing Dean Road near the intersection of Dean Road and Liberty School Road adjacent to the Pond Creek Mine contained a black water as follows: "A slurry silt is going into a Creek west of the Gob Hill of Mach Coal Mine in between Liberty School Rd. and Dwina Rd. The Coal Mine is pumping the slurry silt with water out of the coal mine directly into creek. The creek does not have enough water to dilute it and it is black. Caller is concerned because he has land nearby. This creek runs into Pond Creek. This Mach Mines is just East of Johnston City."

The mine site includes drainage control structures, eight sediment basins, slope, preparation plant, coal stockpile, refuse disposal area, railroad loop, roads, ventilation shafts, parking areas, coal conveyors, and office/maintenance buildings. NPDES permit IL0077666 was issued/effective June 28, 2005 with an expiration date of July 1, 2010 has been administratively continued through timely renewal submissions and contains the discharge limitations for permitted outfalls at the site.

Findings: The attached 5 photo pages, site plan, and water flow diagram should be consulted to clarify the following activities. We arrived at the unnamed tributary to Pond Creek crossing Dean Road about ½ mile east of the intersection of Dean Road and Liberty School Road at approximately 9:15 am. The stream appeared to have moderate flow (approximately 750 gpm) of slightly turbid water with mostly natural conditions as shown in photo 1. We were immediately met by Williamson Energy Engineer James Plumley, then OMM representatives William Gillespie and Natalia Montano

arrived at the bridge. Pond Creek Mine Engineer Nick Culbreth arrived while discussing the conditions of the unnamed tributary to Pond Creek and operating conditions at the mine with Plumley and OMM. Culbreth said that he was contacted by IDNR-OMM last night about the incident report and that mine engineers were on site from 9:00 pm until midnight attempting to find the "release". Culbreth said that they did not find anything during their investigation. Gillespie said that he was on site at "daylight" (around 6:00 am) and he noted no adverse conditions of the unnamed tributary to Pond Creek or Pond Creek at Liberty School Road. Gillespie said the conditions appeared the same as they do at the time of our inspection. I advised the group that I needed to look at the water handling system, observe the outfalls, and sample any discharges occurring. Culbreth told me that he would have Brenton Mumford in the engineering department take me to the outfalls on their sampling UTV. During the time at the bridge on Dean Road, I noted a track hoe that had recently been removing sludge from pond 1 that was temporarily stacked on the pond berm. I suggested to the group that if no other discharges of slurry are found, the presence of the excavator and piling of sediment from pond 1 may be the catalyst for the call to IEMA. Consequently, while Mumford and I observed all the sedimentation structures and outfalls, I asked Bruce Rodely to document the conditions of the sediment removal and outfall of pond 001.

First, I observed pond 002 with outfall 002 where the contents of pond 002 has been pumped to the freshwater pond as shown in photo 2. Outfall 006 was noted to be discharging at approximately 250 gpm where sample PCM006 was taken as shown in photo 3. The HDPE pipe shown in the effluent tile of pond 006 is the water returned from pond 002 discharging into pond 6 near the outlet tile. Next, ponds 007 and 008 with associated outfalls were observed with no discharge as shown in photos 4 and 5, respectively. Mumford then took me to newly constructed outfall 009 that was not and has never discharged. Photos 6 through 8 show the non-discharging outfalls of ponds 003, 004, and 005.

I met with Bruce Rodely in the office parking lot where he reported that outfall 001 was not discharging as shown in photo 9. Sediment in pond 001has been removed, placed on the pond berm, and silt fence was utilized around the pond to contain any potential erosion by precipitation as shown in photo 10.

Finally, we observed the conditions of Pond Creek at Liberty School Road downstream of the commingled unnamed tributary from the mine discharge. Conditions of Pond Creek appeared mostly natural as were observed in the unnamed tributary discussed above.

Subsequent Information: Sample results for PCM006 are attached and provided below:

Parameter	TSS	Fe	Alk/Acid	Sulfates	Chlorides	Mn	Hardness
Permit (mg/L)	70	6.0	Acid<=Alk	500	500	1	N/A
Sample (mg/L)	17	0.122	440<552	2120	1420	0.073	359

Apparent Violations: The following effluent violations were noted during the complaint and CSI Inspection at Pond Creek Mine #1.

Effluent: Section 12(a) & 12(f) of the Act; Subtitle C Sections 304.105, 304.106; Subtitle D Section 406.202, and Permit

Summary: No adverse conditions were noted in Pond Creek or the unnamed tributary receiving stream from the mine discharge. Recent controlled dredging of pond 001 may have been the catalyst for the call to IEMA. Outfall 006 (Acid Mine Drainage) receives pumped water from pond 002 (Alkaline Mine Drainage) and was the only discharging outfall at the time of inspection. Sample PC006 taken at outfall 006 resulting in excursions of WQS and permit limits for sulfates and chlorides. Sulfates and Chlorides concentrations of PC006 were 2,120 and 1,420 mg/L, respectively. Permit and WQS limits for both parameters are 500 mg/L.

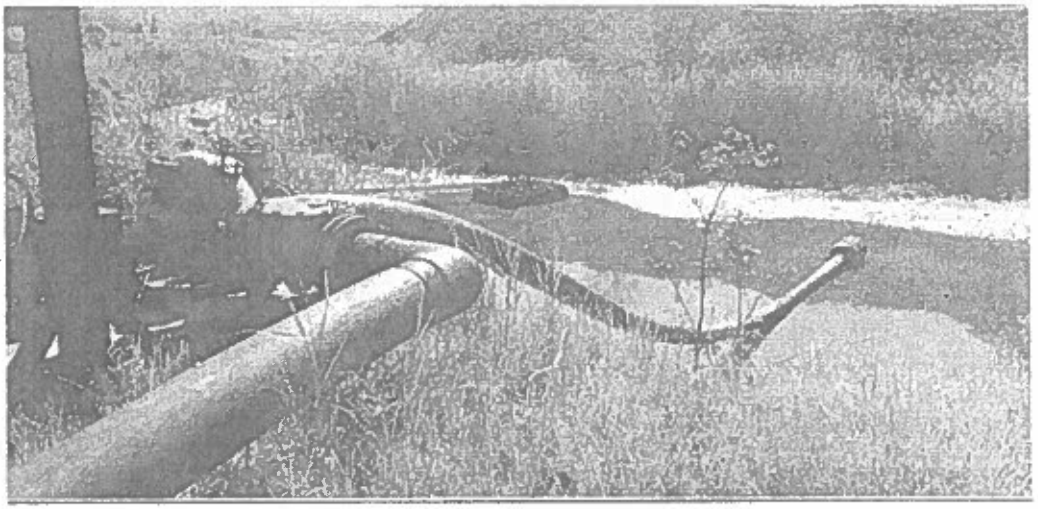
Pond Creek Mine #1- 180830



Satellite view of Pond Creek Mine #1 is shown above with the outfalls appearing as bull's eye with their respective label. At the time of inspection, a pump located in pond 2 discharges water into pond 6 though a HDPE pipe running up though the discharge culvert of outfall 006. Outfall 006 was the only discharging outfall noted at the site and sample PCM006 was taken at that time.

Compliance Sampling Inspection

August 29, 2019 Compliance Sampling: A compliance sampling inspection was conducted at the above-referenced 540-acre NPDES permitted underground mine. The mine site includes drainage control structures, eight sediment basins, slope, preparation plant, coal stockpile, refuse disposal area, railroad loop, roads, ventilation shafts, parking areas, coal conveyors, and office/maintenance buildings.

Permitting: NPDES permit IL0077666 was issued/effective June 28, 2005 with an expiration date of July 1, 2010 has been administratively continued through timely renewal submissions and contains the discharge limitations for permitted outfalls at the site. The permit was modified February 7, 2013 reflect a name change to Williamson Energy, L.L.C., Pond Creek Mine No. 1.

Discharge Monitoring Reports: Quarterly DMR's are to be received by the Agency's DWPC, Compliance Assurance Section, by the 15th day of April, July, October, and January for the preceding three months. An annual storm water monitoring and sampling plan is due by November 1st of each year.

Drainage Control & Water Treatment: There are 8 NPDES permitted outfalls at this site each associated with a sedimentation basin. Outfalls 001, 002, 003, 004, and 005 are classified as Alkaline Mine Drainage. Outfalls 006, 007, and 008 are classified as Acid Mine Drainage. Sedimentation basins control runoff from three refuse disposal areas (RDA), coal stock piles, and approximately 2.7 million gallons per day of groundwater infiltration into the mine. All outfalls report to unnamed tributaries to Pond Creek.

Findings: The attached 7 photo pages, site plan, and water flow diagram should be consulted to clarify the following activities. I arrived at the unnamed tributary to Pond Creek crossing Dean Road about ½ mile east of the intersection of Dean Road and Liberty School Road at approximately 9:15 am. The stream appeared to have a small flow (approximately 100 gpm) of clear water. A nearby

property owner was working along Dean Road near the unnamed tributary bridge across Dean Road. The owner told me that I need to take samples on Saturday or Sunday when the ditch is rolling "dark gob water" released when the mine knows it will not be caught. I told the land owner that he could file a complaint. The land owner said that when he complained the last time the mine "gave him a hard time". Sample PCDR was taken in the unnamed tributary upstream (south) of Dean Road as documented in photo 1. I proceeded to pond 009 along Dean Road and turned into an actively used entrance to assess the emergency spillway at pond 009. I noted that the emergency spillway had over 2 feet of freeboard before discharge as shown in photo 2. Water was running into pond 009 from the direction of RDA3 and pumps appeared operational in the western end of the pond as shown in photo 3. I called Clayton Cross and was unable to make contact. Next, I called Gary Vancil and explained that I was at the Pond Creek Mine where I needed to conduct an NPDES inspection of the site. Vancil told me that Cross was with him but on another call. Vancil said that he would attempt to contact Brenton Mumford the Pond Creek Mine Engineer or someone to meet me at the Mine Gate. Vancil called back and told me that he was coming with Chris Skelton to meet me at the mine and take me where I needed to go. Cross then returned my call and said that he may be down to the mine later to meet with me.

Vancil and Skelton arrived at the mine and I explained that I needed to observe the mine's water collection and management system including collection ditches, sedimentation basins, and outfalls. We proceeded to outfall 002 that was observed to be non-discharging at the time of inspection as shown in photo 4. Pond 002 collects runoff from the raw coal pile and water is pumped to the freshwater for use in the prep plant. Photo 5 shows the non-discharging culvert outfall 006. It was noted that water has recently discharged from 006 due to water remaining in the corrugated pipe as indicated by the yellow arrow in photo 5. Sample PC006DS shown in the foreground of photo 5 was taken of standing water in the receiving stream of 006 as indicated by the white arrow. The receiving stream appeared to have slight staining on the stream bank vegetation that was recently lodged due to significant water flow with no recent precipitation. I then observed outfalls 008 and 007 that were not discharging as shown in photos 6 and 7. Clayton Cross met with us at outfalls 007 and 008 where we discussed the operations at Pond Creek Mine. Cross left the group and we proceeded to non-discharging outfalls 005, 003, 004, and 001 as shown in photos 8 through 11. I noted that newly constructed water holding cells located north of the mine office along Liberty School Road appeared to only contain storm water with no piping to receive or discharge mine process water. Finally, we walked the collection ditch south of RDA 3 progressing east from Dwina Road. The southern collection ditch is shown in photo 12 where water is actively pumped to the ditch from the southern cell of RDA 3. We walked east then approximately ¼ mile north to a retention dam with a large elevation change resulting in an approximate 15-foot waterfall as shown in photo 13. Vancil and Skelton advised me that specific information about the collection system and sedimentation ponds could be provided by Pond Creek Mine Engineer Brenton Mumford. I left the mine at approximately 12:50 pm.

Subsequent Information: 9/3/19: IDNR inspector Will Gillespie called and told me he heard there was a "leak" at the Pond Creek Mine. I told Gillespie that I conducted an inspection at the mine and found a wet culvert at 006 with standing water in the receiving stream that I sampled. I also discussed the possibility of mine discharges occurring during off hours as reported by a

nearby land owner. Gillespie indicated that he has received similar information about off-hour discharges from multiple sources. Gillespie also told me that he has been attempting to have the mine dredge some sedimentation ponds with limited results at this time.

09/19/19: Sample results were received at the Marion Regional Office for Sample PCDR taken at Dean Road and PC006DS taken downstream from outfall 006.

35 IAC Subtitle C Part 302 Subpart B General Use Water Quality Standards calculated or provided Acute Standard Water Quality Standard (ASWQS) are shown below with the reported sample results.

Sample results for PCDR are attached and provided below:

Parameter	Fe	Sulfates	Chlorides	Mn	Hardness
ASWQS (mg/L)	1.0	1391	500	9.24	N/A
PCDR (mg/L)	0.069	1790	1150	0.03	289

Sample results for PC006DS are attached and provided below:

Parameter	Fe	Sulfates	Chlorides	Mn	Hardness
ASWQS (mg/L)	1.0	1180	500	7.79	N/A
PC006DS (mg/L)	ND	1780	1140	0.04	230

General Use Water Quality Standards are exceeded for Sulfates and Chlorides as shown above. Sulfates are calculated using the maximum value of 500 for Chlorides.

Discharge Monitoring Report Submittal: Discharge monitoring reports have been evaluated for all outfalls from January 2018 through March 2019. DMR's appear to have been submitted with no discharge reported during non-precipitation events despite the daily influent of approximately 2.7 million gallons of underground mine water. The water mass balance of influent water and discharged water does not appear consistent.

Apparent Violations: The following apparent monitoring and effluent violations were noted during the CSI Inspection at Pond Creek Mine #1.

General Use Water Quality Standards are exceeded for 35 IAC Subtitle C Part 302 Subpart B Sections 302.203 (staining downstream) and 302.208 (numerical ASWQS).

Monitoring Violations: Analysis not conducted of discharges, inadequate frequency of sampling, and invalid/unrepresentative sample as required by permit.

Summary: All affected areas of the mine appear to drain to sedimentation ponds and the collection system appears adequate with no unpermitted discharges noted. Samples were taken in the unnamed tributary to Pond Creek downstream from the mine immediately south of Dean Road. A local land owner indicated that the unnamed tributary to Pond Creek has heavy dark flow during non-business hours due to mine water release. A sample was also taken of the unnamed tributary immediately downstream from outfall 006 that appeared to recently discharge due to water in the corrugated tile, staining on receiving stream vegetation, and remaining pools of water in the stream bed. No discharges have been reported from January 2018 through March 2019 during non-precipitation events despite the estimated 2.7 million gallons of daily mine water pumped to the surface collection system. Sample Results PCDR and PC006DS show excursions of General Use Water Quality Standards for Sulfates and Chlorides.

Pond Creek Mine #1- 190829

Satellite view of Pond Creek Mine #1 is shown above with the outfalls appearing as bull's eye with their respective label. Collection ditch flow is indicated with a red arrow and sample points are shown with orange indicators. No discharge was occurring at any of the outfalls at the time of inspection. Staining on vegetation and the presence of pooled water downstream from outfall 006 gives the appearance of recent discharge. Sample PC006DS was taken immediately downstream from outfall 006 and sample PCDR was taken in the unnamed tributary to Pond Creek immediately south of Dean Road. All water appears to report to the collection system controlled by sedimentation basins. Outfall 009 is not permitted to discharge and appeared to have 2 feet of freeboard prior to discharging through the emergency spill way of pond 009. Water is continuously discharged to pond 009 from RDA 3 under drains and by the RDA 3 collection ditch. Water is pumped from 009 to RDA 3 or freshwater lake used as makeup water for the preparation plant. RDA 3 water is pumped to the fresh water lake or pond 006. Pond 005 receives water from Johnston City Lake and the collection ditch north of RDA 2. Water is pumped from pond 005 to the mine works.

Reported:
09/17/19 13:11

Chicago Tribune December 5, 2019

Illinois has cut its EPA workforce by 38% in the past decade — more than any other state, report shows

By MICHAEL HAWTHORNE

Years before President Donald Trump's industry-backed appointees began rolling back enforcement of environmental laws, Illinois had begun shedding inspectors and slowing the policing of air and water pollution.

A pair of new reports document how funding for the Illinois Environmental Protection Agency steadily declined during the past decade, dropping by more than 25% in inflation-adjusted dollars as the agency's responsibilities expanded and became more complex.

Illinois also cut its environmental agency's workforce by 38% during the same period — more than any other state.

With a smaller staff and less money, the state agency has failed repeatedly to identify hazards to public health and hold polluters accountable, said Eric Schaeffer, a former top U.S. EPA enforcement official who directs the nonprofit Environmental Integrity Project and **compiled one of the reports**.

In several cases, federal officials have stepped in to address some of the state's biggest environmental problems. But federal enforcement regionally and nationally has declined sharply since Trump took office in 2017, according to records provided by the union for U.S. EPA workers.

Schaeffer and two former Illinois EPA directors urged Gov. J.B. Pritzker and the Democratic-controlled General Assembly to tweak the way the state agency is funded. Since 2003, when lawmakers stopped sharing a portion of the state's general fund with the agency, it has relied largely on federal payments and permit fees that aren't adjusted to keep pace with inflation or the rising cost of employee pensions and health care.

"We're jeopardizing the health and safety of Illinois citizens and the economic well-being of its businesses that rely on the Illinois EPA for timely permits and even-handed enforcement," said Mary Gade, who led the agency under former Republican Gov. Jim Edgar and later served as the regional U.S. EPA administrator under President George W. Bush.

Illinois ranks among the top 10 states for the amount of industrial air and water pollution released into the environment each year, according to federal records. Federal data also show that Illinoisans face some of the highest risks in the nation for cancer, lung disease and other health problems linked to toxic chemicals from industry smokestacks.

Yet state inspections of air polluters dropped 81% during the last decade, **according to a report** compiled by Gade, former Illinois EPA Director Doug Scott and the Abrams Environmental Law Clinic at the University of Chicago. "If you aren't looking for violations you aren't going to find any," Gade said. Often it takes persistent citizens, lawsuits from nonprofit groups and the glare of media attention to force environmental regulators into action.

For instance, the Illinois EPA refused to crack down on coal-fired power plants in Chicago and the suburbs, despite records documenting multiple violations of clean air laws. Market forces eventually priced the coal plants out of electricity markets, and most ended up closing under legal pressure from community groups, Chicago aldermen and the U.S. EPA.

The state agency also has been largely absent from investigations of brain-damaging manganese pollution contaminating Chicago's Southeast Side and lead-tainted yards in the Pilsen neighborhood. It took a citizen lawsuit and a federal investigation to force changes in the regulation of confined hog and cattle farms downstate, but the Illinois EPA still lacks dedicated inspectors to ensure the operations aren't spilling manure into the state's creeks and rivers.

"You can have all the rules in the world, but if you don't have the staff or the expertise to implement them, it's useless," said a veteran Illinois EPA official, who requested anonymity for fear of reprisals. "Morale is horrible. Employees have no guidance or tools to do their jobs."

Pritzker has signaled that he understands the problems and plans to fix them. Among other things, his administration has posted 161 job openings at the Illinois EPA this year, compared with 276 posted between 2013 and 2017.

"The governor believes the IEPA plays an important role ... and appreciates the bipartisan agreement of leaders from years past that we need to invest in critical government services to better serve the people of Illinois," Jordan Abudayyeh, a Pritzker spokeswoman, said in a statement.

Another reason enforcement is on the decline across Illinois is the agency has **cut back sharply** on using its most powerful tool: referring cases to the state attorney general's office for civil or criminal prosecution.

The **Tribune reported last year** that during former Republican Gov. Bruce Rauner's first year in office, the Illinois EPA referred 73 cases to the attorney general — by far the lowest number since 1991. The annual average during Rauner's first three years as governor was 80.

By contrast, the agency sent 198 referrals a year on average during former Democratic Gov. Rod Blagojevich's first three years in office and 144 during the same time under former Democratic Gov. Pat Quinn, the Tribune analysis found.

There have been 89 referrals since Pritzker took office this year, according to records provided by the attorney general's office.
The steady erosion of money and expertise at the Illinois EPA is even more alarming when considering the Trump administration's anti-regulatory policies, Schaeffer said.

Trump promised during his campaign to eliminate the U.S. EPA. Andrew Wheeler, a former coal industry lobbyist who serves as Trump's EPA administrator, has pushed to cede more authority to states. At the same time, the Trump administration has proposed steep cuts in federal support for state environmental programs.

But one of the reasons former Republican President Richard Nixon created the U.S. EPA in 1970 was leaders in both political parties had concluded states were incapable of holding polluters accountable — or were unwilling to do so.

The late William Ruckelshaus , an Indiana Republican who served as U.S. EPA administrator under Nixon and former President Ronald Reagan, often said the agency "represents one of the clearest examples of our political system listening and responding to the American people."

"Budget cuts that hurt programs that states now have in place to meet those duties run the risk of returning us to a time when some states offered industries a free lunch, creating havens for polluters," Ruckelshaus wrote in a **2017 opinion piece**. "This could leave states with strong environmental programs supported by the public at a competitive disadvantage compared to states with weak programs. In other words, it could lead to a race to the bottom."

Hello,

I would like to submit a comment about the Pond Creek Mine proposal.

I love fishing and kayaking in southern Illinois, and I spend a lot of time outdoors. I am thirteen years old, and I live in southern Illinois. My family enjoys the many outdoor opportunities that this area provides, and I would not like to see it polluted. Please do not let the Pond Creek Mine put any more pollution into the Big Muddy river!

Sincerely,

Wils Evans

Re: Pond Creek Mine (IL0077666)

Dear Ms. Lieberoff and other IEPA officials,

We are writing with concerns about the draft renewed National Pollutant Discharge Elimination System (NPDES) permit (IL0077666) for the Pond Creek Mine. Please deny the proposal by Williamson Energy to pump polluted mine wastewater over 12 miles from the Pond Creek Mine into the Big Muddy River and to increase pollution into Pond Creek.

The IEPA should deny the draft water discharge permit because:

1. Williamson Energy's plan to discharge high chloride and high sulfate water into the Big Muddy River and Pond Creek will harm mussels, fish, and other aquatic organisms. The draft permit and antidegradation assessment do not adequately address impacts to these organisms or require pre- or post- construction biological sampling.

2. Williamson Energy's plan to monitor chloride concentrations is complex and requires monitoring of several parameters and a conductivity correlation, yet gives no way for the Agency or public to evaluate if the permittee is doing that monitoring properly. The mine proposes to continually balance their high-chloride effluent with the chloride levels already in the river. Given the public interest in this project and the company's history of past violations, the proposed monitoring plan is insufficient and infeasible.

3. The draft permit and antidegradation assessment have failed to take into consideration potential increases of Methyl-Mercury levels or other pollutants like copper, iron, selenium and nickel.

4. The antidegradation assessment has not adequately or accurately considered the economic impacts of the proposed project. New reports have indicated a continuing and projected decline of coal production in the Illinois Basin and Murray Energy, the parent company of Williamson Energy, filed for bankruptcy in fall 2019. The IEPA's estimates of local economic impact and jobs have failed to consider these developments.

Thank you for the opportunity to comment on the draft renewed National Pollutant Discharge Elimination System (NPDES) permit (IL0077666) for the Pond Creek Mine.

Sincerely,

Illinois Environmental Protection Agency
RE: Pond Creek Mine NPDES
1021 North Grand Ave. East
P.O. Box 19276
Springfield, IL 62794-9276

Sent via email to: epa.publichearingcom@illinois.gov

Public Comment: IL0077666 Pond Creek Mine NPDES

To the Illinois Environmental Protection Agency:

This letter is to request that the IEPA deny the draft reissued permit incorporating seven modifications to NPDES IL0077666, Pond Creek Mine No. 1, because it fails in multiple ways to ensure it can safely protect the resources of the state of Illinois as specified under the NPDES program. This permit risks direct harm to the Muddy River, which is listed by the Illinois Department of Natural Resources as a water of the state for public use[1] and risks increased toxicity to aquatic life reproduction and health and fish kills impacting both human and wildlife uses of the river. The past history of permit compliance problems for this mine gives no confidence that they can operate to meet standards that are proposed and if a discharge over permitted levels happens, damage could occur before any steps could be taken to address the problem. The draft permit Anti-Degradation statement is incomplete and has numerous inaccurate statements. It is lacking any consideration of the costs this permit will impose on public health, environmental health, present and future recreational uses and economic values of the Big Muddy River and affected stream corridors, and the environmental well-being of the state of Illinois, this nation and the climate.

Harm to the Big Muddy River Ecosystem

I am very concerned that discharges as described will cause direct harm to the Big Muddy River through negative impacts on fish, other aquatic creatures and insects, wildlife and the ecosystem of the area. The river hosts various catfish, gar, buffalo and other fish commercially harvested[2] and which are part of the recreational opportunities of the area. Other wildlife, from eagles to otters, raccoons, mink and other creatures are part of this river ecosystem, depending on it for food sources and habitats[3]. Discharges to the Big Muddy are also being planned by the Sugar Camp Mine, located to the north. Consideration should be given to the combined impacts of high chloride, sulfate and other constituents loading the river and what this could mean over an extended period of time.

[3] Phone conversation with Charles McCann, retired commercial fisherman, Big Muddy River, December 10, 2019

Inadequate Assessment of Alternatives

The November 18, 2016, Williamson Energy, L.L.C. – Anti-Degradation Document for Pond Creek Mine NPDES Permit IL0077666 claims that the mine needs to discharge to the Big Muddy River because an aquifer above the coal seam has caused an influx groundwater into the mine.[4] The mine does not appear to have provided any consideration of relocating their active mining face to remedy this problem. A listing of alternatives to the proposed Big Muddy discharge does not include anything regarding adjustments that could be made in mining operations. There is also no mention of the profits this mine is making or what percentage the costs of an alternative treatment process would be of this mine's profits. The Foresight Energy webpage claims the Pond Creek Mine is one of the most productive underground mines in the United States with some of the lowest per ton costs of produced coal[5] yet much of the reason discharge to the Big Muddy appears to be preferred is because it is the lowest cost option for the mine.

Lack of History of Compliance with Permits

The Sugar Camp Energy Mine and the Pond Creek Mine are both Foresight Energy/Murray Energy mines with a history of problems with water permit compliance, including violations that have been taken to the Illinois Pollution Control Board by the Illinois Attorney General. The proposed discharge to the Big Muddy utilizes an out-of-sight diffuser and relies on the daily monitoring and reporting of the mine for safe operations. Millions of gallons of an out-of-compliance discharge cannot be whistled back. It can take years for a water pollution violation to make its way through agencies and the Illinois Pollution Control Board. The proposed permit appears to me to be a high risk gamble that Williamson Energy will operate responsibly without incurring any accidents or problems.

Full Economic Costs Are Not Considered

The costs to land uses, local resources, and environment and citizen health are not considered in the Anti-Degradation statement. The Illinois Department of Natural Resources Williamson Energy mining permit No. 417 for the Pond Creek Mine indicated that productive agricultural land, forested wetlands and an intermediate stream would be destroyed for building the expansion of the New Disposal Area Number 3, which is part of the draft reissued permit under consideration. Wetland soils existing prior to construction of the Disposal Area 3 mean mine pollutants may disperse more quickly and in unpredicted directions below. The coal seam under Disposal Area 3 was already long-wall mined, meaning rock layers are fissured and contamination problems for future generations may occur. Forest and agricultural lands can be sustainable sources of income and resources for the public good for generations to come. This coal mine is time limited and will leave lands that cannot be used for agriculture or forests. The U.S. Energy Information Administration 2019 Illinois Report includes that Illinois is a leader in wind-powered energy capacity and has the largest number of nuclear power plants in the country, producing more energy than it uses.[6] Pond Creek Mine claims that "coal is essential to the generation of electricity in Illinois" yet Illinois has a multi-faceted energy supply, including natural gas plants, solar and wind energy. Coal plants have higher costs in utilizing high sulfur Illinois coal and Powder River Western Basin Coal will continue to be cheaper, but even that coal is not

[4] Williamson Energy, L.L.C.-AntiDegradation Document for Pond Creek Mine NPDES Permit IL—0077666, November 18,2016.page 5/145

[5] Foresight Energy Operations, Williamson Energy web listing at http://www.foresight.com/operations/ 01/16/2020

[6] United States Energy Information Administration, Illinois State Profile and Energy Estimates, April 18, 2019 at https://www.eia.gov/state/analysis.php?sid=IL

as low cost as natural gas for power generation.[7] The demand for Illinois coal and the value of Illinois coal shows marked declines. The January 13, 2020, price per ton average of Illinois is listed as $34.20, which is down $.30 per ton since December, 2019.[8] No consideration is given to the health costs of burning coal in Illinois, which include more heart-attacks and other respiratory problems estimated for 2016 to cause 2,300 asthma attacks and more than 350 premature deaths.[9] Climate change is real and in rapid advance costly billions in flooding, fires and other natural disasters. I think action must be taken now to reduce the increase of climate change gasses, although I respect that is not part of the existing NPDES regulations, burning coal is a large contributor of climate change and certainly has extraordinary social and economic costs.

I attended the IEPA Public Hearing December 18, 2019, in Marion, Illinois and waived my opportunity for public comment because it was clear there was not enough time for all who signed up, even though the Hearing Officer graciously extended the time for the hearing. I want to thank the IEPA for the professional manner in which the hearing was conducted.

A very wide-range of concerns were presented by the public at the hearing. Certainly the full existing regulations must be applied to this draft permit and need to be critically evaluated aspect by aspect because of the many impacts it contains.

Sincerely,

Joyce Blumenshine

I am requesting the EPA to ban any discharges of coal slurry into the Pond Creek watershed. The high concentration of sulfates, heavy metals, arsenates, selenates, and chlorides are a significant threat to these wetlands, wildlife, and water quality of the Big Muddy River basin. These slurries must remain contained in their holding ponds.

Re: NPDES Permit No. IL0077666, Notice 7516c-Williamson

Dear Ms. Lieberoff and Other Illinois EPA Officials:

I am writing to oppose the Pond Creek Mine pipeline permit application to dump millions of gallons a day of this mine's waste into the Big Muddy River. The reasons for my opposition are stated below.

1.) Sufficient monitoring to determine the impact of the mine's waste water on the Big Muddy's river water has not been set up. As has been testified, the amount of daily flow will regularly come close to exceeding the maximum allowed. Therefore daily measurements of the impact of the mine's effluents on the river should without question be required—and indeed measured by a neutral party, such as the USGS. Another rationale for requiring daily monitoring of the Big Muddy by a neutral party is that Pond Creek Mine's owner, Williamson Energy LLC, has been cited numerous times for infractions, for dumping that exceeds the agreed upon amount.

2.) Additionally, the Pond Creek Mine permit application should not be approved since the data that should have been supplied prior to the public comment period is incomplete. That is, the data that was supplied doesn't take into account the toxicity resulting from the interaction of the chloride and sulphate from mine's waste water with other chemicals such as mercury. Nor does it take into account the waste water that will flow down stream if and when the Sugar Camp Mine pipeline has been completed and activated.

3.) An additional reason against approval of the PCM pipeline permit is that approval of this permit would be counter to the IEPA's mission as stated on its own website: "to safeguard environmental quality, consistent with the social and economic needs of the State, so as to protect health, welfare, property and the quality of life." Even if one looks solely to the economic needs of the area, it is clear that, counter to IEPA statements that the PCM permit should be approved in light of the mine's economic importance to the area, approval of the permit would in fact harm not only the area's health, quality of life and welfare. Williamson LLC can no longer been seen as reliable economic engine. Its stock has recently fallen precipitously, from $17 to $.08. And Murray Energy declared bankruptcy, in October 2019; can Williamson LLC be far behind?

The coal industry in general and these companies in particular are in a perilous state not because of having to pay to clean up its own waste (as it should—why should the public have to pay?), but rather because of its inability to compete with low priced natural gas. Propping up Williamson LLC by approving this pipeline, trying to hold onto the belief that it's good for business in Illinois, would be a betrayal of the public trust and of the IEPA's mission.

4.) I'll add that the other economic activities connected to the Big Muddy have a right to use of the river. As I person who lives just a short distance from the Big Muddy River and knows a great number of people who regularly depend on it for canoeing and recreational fishing. With water being an increasingly valuable and scarce resource, particularly clean water, the focus should be on seeing that the river's health be not only safeguarded but also improved.

I indeed am hopeful that you will follow the wider public interest your mission statement asks you to attend to and reject the PCM permit application.

Respectfully submitted,

Subject: [External] Mine water

Hello, My name is Kim Ford, from De Soto, Illinois.

Do Not let them dump all this waste water from the mines into our river. Illinois has enough problems without adding another crisis.

Do Not believe people when they say it will be safe. I'm sure that was exactly what was said to officials prior to putting things into Flint, Michigan.

We know it's not safe nor environmentally sound to dump waste into a river. And when this river flows right through so many towns and people use this river to fish and their recreation or live off the banks of it. And the fact that it flows into the Mississippi. We already know that this area is susceptible to flooding. This year alone, so much of the areas impacted by state of emergency will be impacted. In addition tens of thousands more. Many people have not had a chance to recover, and this is on the table with a deadline of August 12, 2019 to show opposition. We still have road closures. People still with water damage. People still batching it as they cannot go home yet. I know supporters of this atrocity are thinking this is perfect time to slide this through so people will be so distracted they can't oppose.

You can make a difference. This is your opportunity to do the Right thing. You can stop this now.

If you do Not stop this we are going to have more flooding, reduction in wildlife survival, humans being impacted by the chemicals. It will not only be a nightmare for southern Illinois but for southeast Missouri, Kentucky, Tennessee, Arkansas, Mississippi, Louisiana and Gulf of Mexico. This will be much bigger than the outrage of Flint. I know you probably Do Not want to harm people, nor tarnish your name with such a harmful and negligent decision as to letting them dump all this waste water into our river which is a tributary into one of America's largest rivers.

I'm pleading with you, please stand up and do the Right Thing. For the people, the wildlife, our environment. Just say No to dumping waste water into the Big Muddy River.

This mining company, committee, and state of Illinois will any and all responsible for surveying all property around the big muddy river, loss of income from businesses which include farmers which may or may not be able to get their crops planted or harvested. These entities will also be 100% responsible for any adverse effects to persons in or around these communities that surround the Big Muddy River and water quality. Taxes will be absorbed by the above entities due to any loss of property or employment. Any alterations in food due to the mine water will also be absorbed 100% by the above entities. This includes plant based and any animal based which may have been exposed to water or the vegetation exposure to water. The above will be 100% responsible for any birth defects, poisonings, carcinogenic or any other diseases or maladies that are even questionable that it may have occurred in relation to the mine water. If this water was so safe then why disperse it in agriculture and drinking water yet refuse to keep it around your mine? You all know the answer to that.

Any surveys will also be 100% absorbed by above entities in and around Big Muddy River. Property Taxes for people around the Big Muddy River will be greatly reduced due to encroachment of mine water.

Everyone that I have sent this to will be agreeable to all the above terms unless they publicly spell this out prior to any decisions.

Thank You for your time and consideration

Kim Ford

RECEIVED IN
JAN 16 2020
THE OFFICE OF THE DIRECTOR

Re: Pond Creek Mine (IL0077666)

Greetings,

I would like to add my comments to the chorus.

We, the people of southern Illinois, participated in democracy when we came out on a cold night just before Christmas to speak at a public hearing held by the Illinois Environmental Protection Agency.

There were more than a hundred of us, with varied voices sharing the specifics of concerns on the same topic.

We included farmers who are concerned about flooding leaving residue on fields.
We included fisherman concerned about the poisoning of fish and the people who eat them.
We included people who moved to this area as adults and people who have lived here all their lives.
We included people who boat on the river, swim in the river and live on the river.

We, the people of Southern Illinois shared the same request....

Please do not allow Williamson Energy, L.L.C. to pour waste water from their mining operation into the Big Muddy River.

Please do not allow a mining company with a long history of environmental violations to self-monitor the dumping of "acid and alkaline mine drainage" into the Big Muddy River.

Please do not allow a mining company that may go bankrupt and disappear to degrade our land and our water forever.

Please do not allow the mining company to add toxic chemical waste to the Big Muddy River, with all the resultant impacts on the environment....

Because this is where we, the people of Southern Illinois, boat, fish, farm and live.

Please, protect our environment and deny the permit

James Plumley, P.E.

Alternative 2: Do Not Mine

Presently, and for the foreseeable future, coal remains essential. The need for low cost electricity in today's economy is crucial. The coal industry and this mine in particular are vital to the economic health of the local economy. The direct impact of this alternative would mean the loss of tens of millions of dollars that are generated from this mine for the local economy through 235 direct mining jobs, taxes and support industry jobs.

If no mining is conducted at this site, the following economic losses are estimated to occur:

- Loss of approximately 235 direct jobs with a payroll of approximately $20.2 million annually. Many of these employees are long term miners and are not currently trained for other employment. In addition to the direct employees, approximately 100 additional persons such as truck drivers, engineers, and support personnel are employed full time through operation of the mine. Further, based on an economic formula widely accepted in the state of three persons employed in indirect or induced jobs per each direct coal industry job (ICA), an additional 705 persons are employed as a result of this mine.

- The mining industry is particularly important to the local economy of Williamson County, the surrounding counties, as well as to the region and state. Williamson Energy contributes approximately $1.5 million in federal taxes and approximately $0.7 million in local and state taxes.

- Since over 30% of the electricity produced in the U.S. and nearly 30% of the electricity produced in Illinois comes from coal-fired plants, it is vital to the local, state and national economy that available high quality coal be mined to maintain a continuous supply of fuel to the coal-fired plants. Economic losses beyond the local economy will occur if sufficient electricity is not provided to private and commercial energy consumers. If the Mine produced no coal, approximately 4.7 million American households' worth of energy would have to be replaced (likely at a higher cost) or foregone to meet the world's energy demand. (6m clean coal tons * 8,141 kwh/ton generated / 10,400 kwh/yr average household energy use)

- The loss in tax revenue of approximately 2.216 million dollars to Illinois, Williamson County, and Franklin County, both direct and indirect, would be significant, particularly when a replacement industry is unknown.

In addition, the Mine has significant resources invested in the acquisition of land, approximately 360 million tons of remaining proven and probable coal reserves, permitting expenses, mining equipment, and more into this project. The economic loss to the company,

should mining at the site cease, would be considerable. The substantial investment made by the company using a business plan on maximizing recovery of the coal reserve yields the "Do Not Mine" alternative as a reasonable or feasible option.

Alternative 3: Reverse Osmosis (RO)

Reverse Osmosis (RO) is a water purification process that uses partially permeable membranes to remove dissolved salt and other unwanted particles in suspension from the water stream. The RO process includes a pre-treatment pond, ultra-filtration system, high-pressure pumps, membrane assembly, clean water discharge, and wastewater discharge. At a design capacity of 3.5 million gallons per day, approximately 2.625 million gallons of de-salinized water (75%) and .875 million gallons of highly brackish water (25%) are created by this process. The de-salinized water can be discharged through an approved NPDES outlet or reused in the mining process. The concentrated brackish water must then be treated through an additional process for long-term management such as Deep Well Injection or Crystallization and solid waste land fill.

A single plant could be designed to meet the required capacity to treat the initial proposed discharge. A plant of this size would cost approximately $15 million of up-front capital investment. The operational and maintenance expenditures amount to approximately $200,000 per month. After the RO process is completed a highly concentrated waste stream of brackish water is created and requires the development of additional technology to dispose of the highly concentrated brackish water utilizing Deep Well Injection (Alternative 4) or Crystallization (Alternative 8).

Using deep well injection to dispose of the concentrated waste has a capital cost of approximately $39 million with an annual operation budget of $0.90 million. Therefore, the RO with Deep Well Injection would have a capital cost of $54 million and an annual operating cost of $3.30 million. A comparable sized RO plant is currently in operation at an affiliated company (coal mine) nearby and this system has experienced low plant utilization and lower than design throughput due to the plugging of filters and membranes. This RO plant also uses deep well injection for the disposal of the concentrated brackish water. When the two deep wells are operational, they are only able to accept of about 25% of the required discharge; therefore, the remaining concentrate stream must be stored in a large holding facility. They are currently reviewing additional alternatives to dispose of the excess brackish water. Due to the negative experience with deep well injection at the affiliated operation for secondary treatment, crystallization and solid waste land fill would be the most reliable method. Likening to a comparable sized operation at an affiliated company (coal mine) in the Appalachian region, the anticipated capital cost for crystallization and solid waste land fill is $65 million with an annual

operation budget of $6.70 million. Therefore, the RO system with crystallization and the solid waste land fill would have a capital cost of $79 million and an annual operating cost of $9.10 million.

Considering the above, RO technology has not proven to be a reliable method of treating excess water from similar mines. It is not cost effective and creates a waste stream more hazardous that the water prior to treatment that creates another set of disposal problems. Therefore, RO is not considered applicable or feasible as a long term solution for this type of application.

Alternative 4: Deep Well Injection of the Mine Infiltration Water

The mine infiltration water could be discharged directly to an Underground Injection Control (UIC) well (often referred to as a deep well). Deep well injection is an unreliable and impractical alternative to dispose of the amount of water infiltrating the Williamson coal mine.

The injection wells must be installed at extreme depths to ensure they do not affect potential aquifers used for public consumption and into a geologic formation that is capable of receiving excess water. The receiving formation has a limited amount of volume it can receive instantaneously and long term. As the formation is filled with excess water, its acceptance can be diminished. Consequently, multiple wells cannot be installed in close proximity to one another or they will negatively influence one another and restrict flow.

An affiliated company nearby operates two deep injection wells. Each deep injection well has an up-front capital investment of approximately $4 million. In order to completely utilize this technology at Williamson, it is estimated that nine (9) deep injection wells spaced an adequate distance apart would be needed. Additionally, miles of pipeline conveying water to each individual well. An ultra-filtration system would also be needed to remove any suspended solids from the water prior to injection. The anticipated up-front capital investment would be approximately $39 million with an anticipated operation cost of $0.9 million per year. At the affiliated mine, ongoing operation of water disposal has been hampered by excess pressures, scaling of injection tubing, and plugging off the receiving geologic formation. Due to these operational challenges, the wells have been inactive for several years. When injecting during optimal conditions, the wells only accepted a fraction of the amount of water Williamson would need to dispose of.

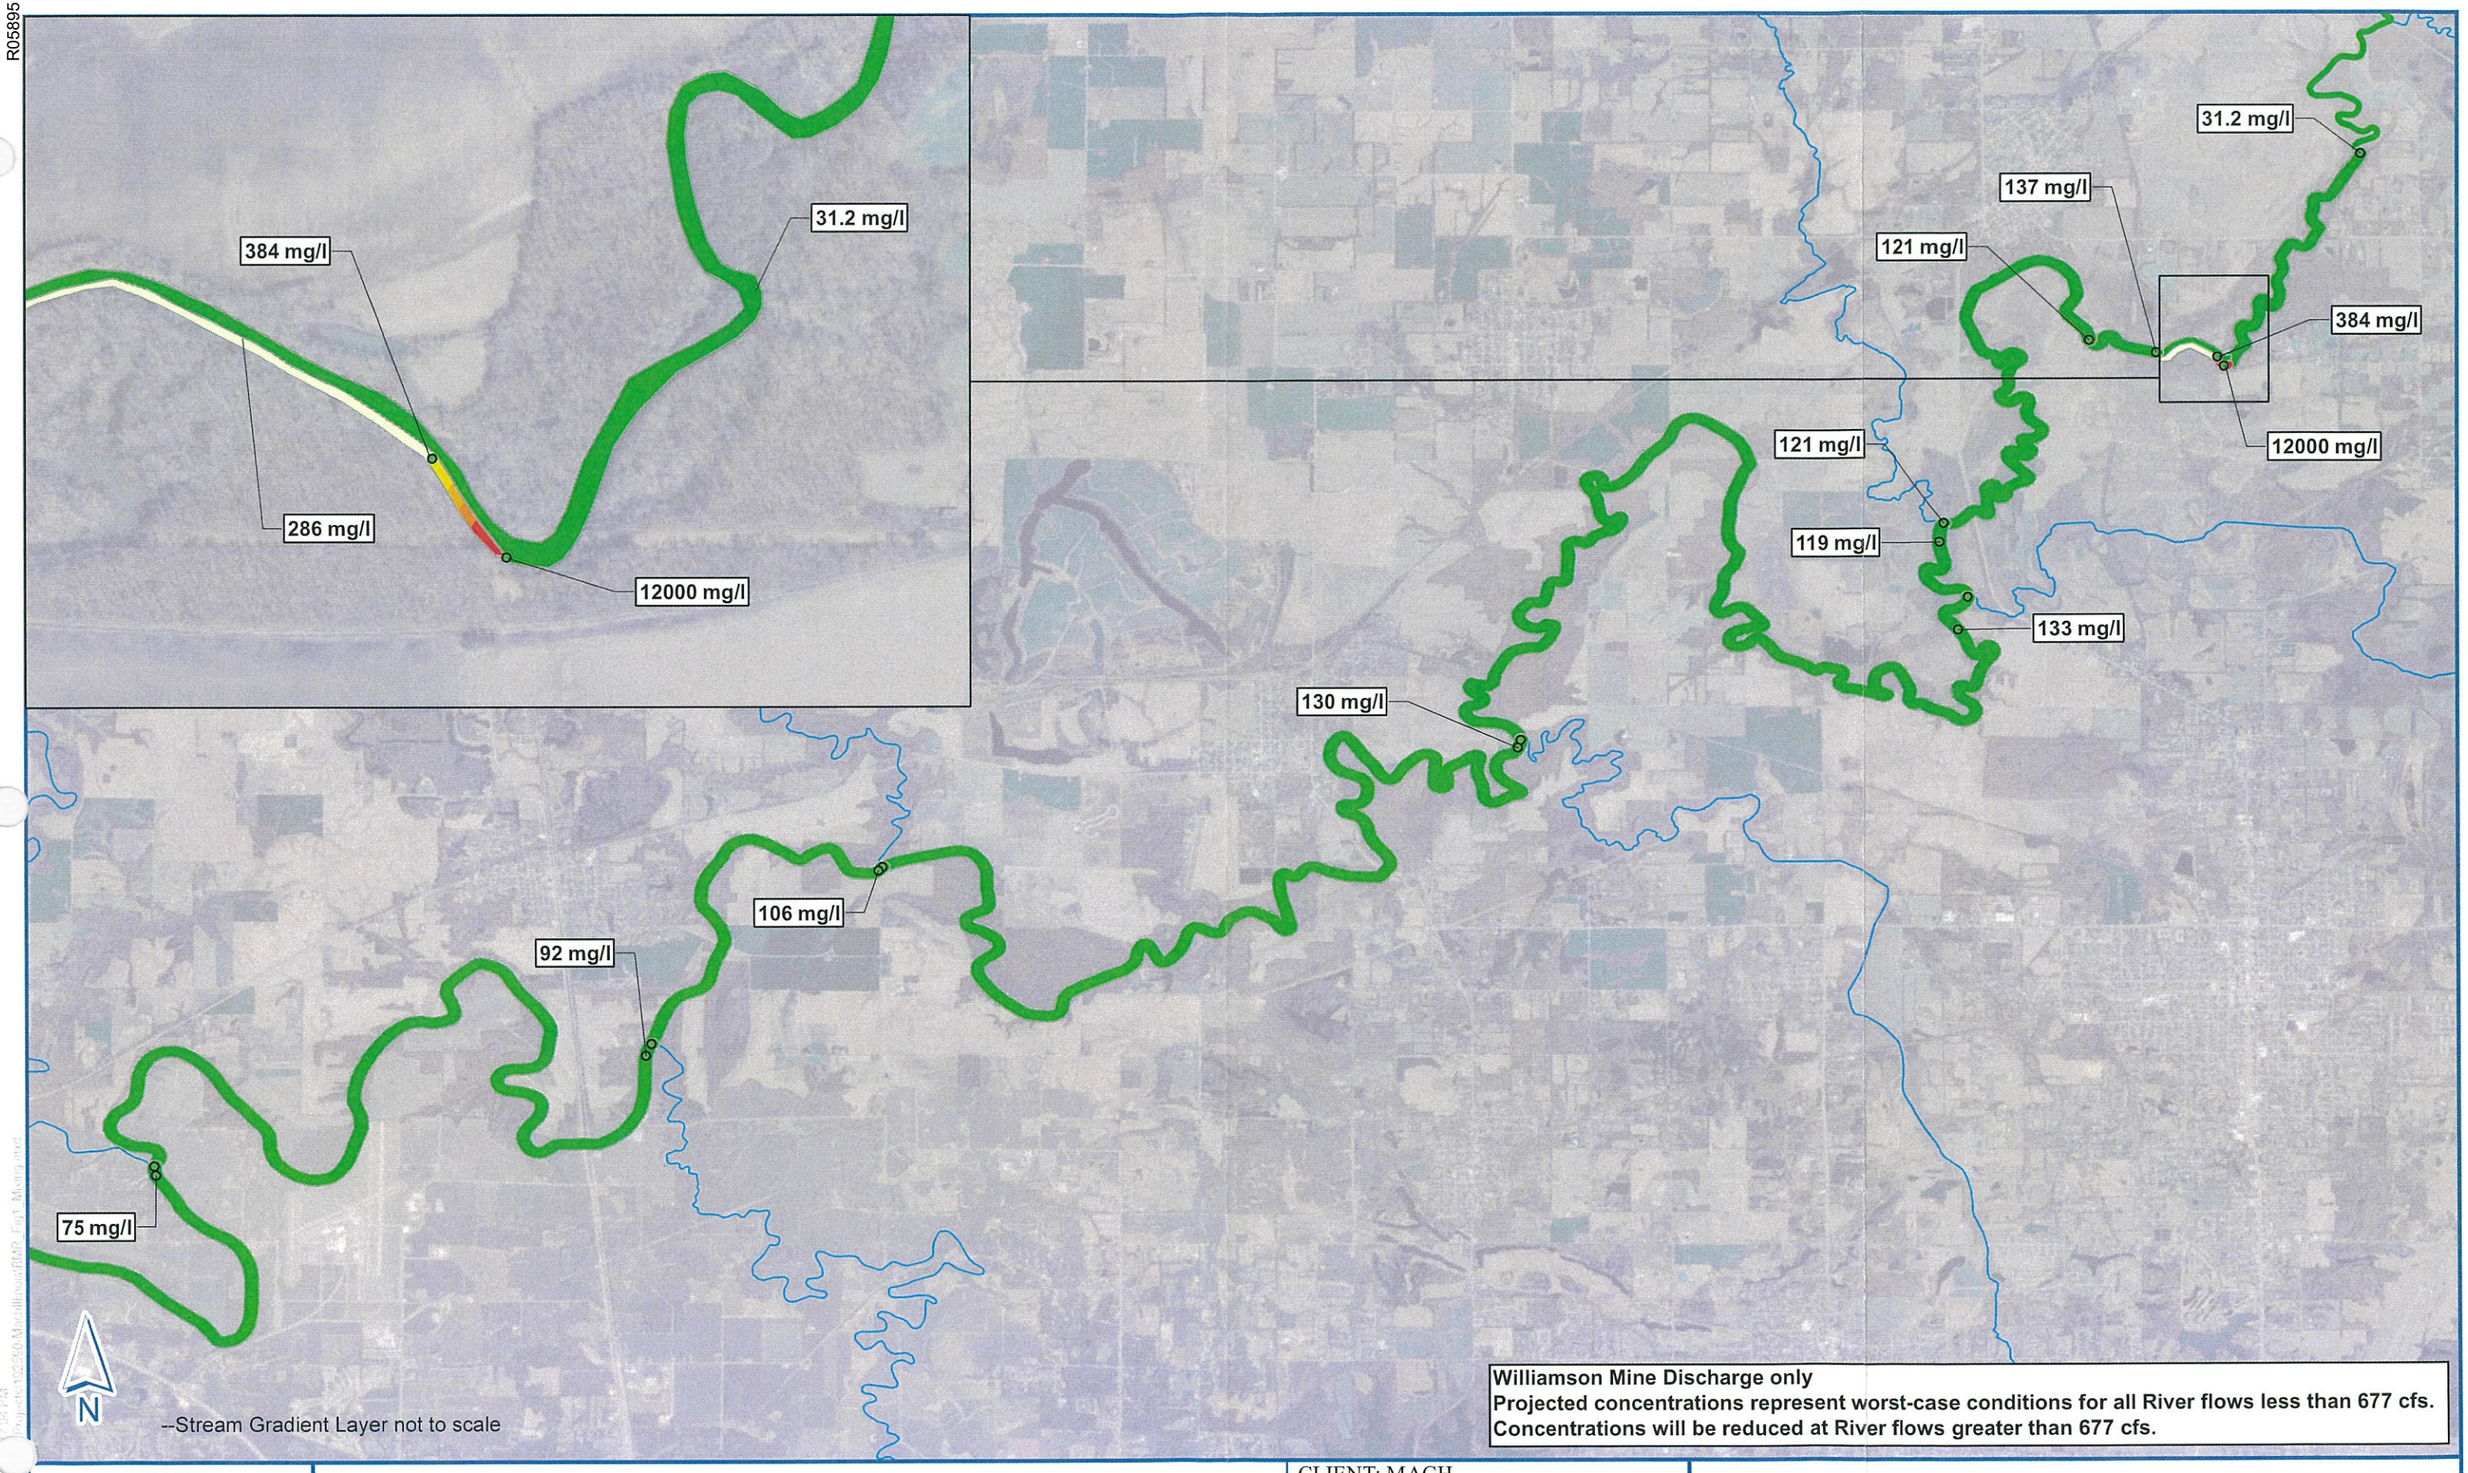
Considering the cost and operational difficulties that can be experienced when attempting to discharge to a deep well, deep well injection of the mine infiltration water is not considered either applicable or feasible for the operation of the Mine.

Alternative 6: Evaporation

Evaporation works by constructing ponds with large surface area, filling the ponds with water and exposing water to the forces of nature. The groundwater would be evaporated, leaving a TDS residue in a constructed evaporation pond. Criteria for design include being located in a moisture deficient area, sufficient surface area to evaporate the total annual waste water volume plus precipitation that would fall on the pond, using the maximum wet year, and using the minimum evaporation year of record. Evaporation ponds require large land areas, and the area would not be expected to be productive once it is used for this purpose (salt accumulation). It is recommended that the land for this system be naturally flat or the pond be designed to provide a uniform depth, and that a large land area be available. The current anticipated maximum flow rate for the collection of the groundwater is 3.5 mgd.

Williamson developed a conceptual design for an evaporation system was reviewed. Typical hourly weather reports for Marion, Illinois were used to construct a model from January 1980 to December 2016 to predict the monthly average climate conditions. The air capacity to hold water vapor was considered and adjusted according to temperature in 5-degree increments and air dew point. Humidity and average wind speeds were taken into consideration during these calculations. Based on these climatic conditions, a 7-month evaporation season from April to October was identified. Average evaporation rates were estimated between 20% and 35 % of the total water throughput for each evaporator during any 24-hour period. This conceptual design assumed the evaporators would be placed on floating platforms along the outside of the water storage lake and operated 214 days per year. In order to evaporate 3.5 million gallons per calendar day during the estimated 214-day period, 1,621 evaporators would be required. During the non-evaporative season, a 1,600 acre-ft pond would have to be constructed to store the excess water during this time. This extremely large pond would have an enormous footprint (approximately 160 surface acres, 10-feet deep) because it would have to collect unevaporated water and salt that falls back to the surface. Furthermore, this conceptual evaporation design does not remedy the continuous salt accumulation that remains after evaporation of the liquid leaving the land in an unproductive condition. The anticipated capital cost of this system, excluding the 1,600 acre-ft storage pond, is $30 million with an annual operating budget of $4.2 million.

The climate at this location is not conducive to evaporation techniques because it is not considered moisture deficient. After the evaporators have finished concentrating the salt water then some additional technology is required to dispose of the salt concentrates (Ex: Deep well injection or Crystallization and Solid Waste Land Fill). Given the inefficient system, high capital and operational costs, operational difficulties to maintain a system of this magnitude, and additional alternatives to dispose of the salt mechanical evaporation is not a viable alternative. This option is not considered applicable or economically feasible to dispose of water at Williamson.



Alternative 8: Crystallization

Crystallization is the process that converts the concentrated brackish water generated in a mechanical evaporator or reverse osmosis process to create a disposable salt cake. This process offers an alternative to deep well injection for the brackish reject stream from a reverse osmosis or mechanical evaporator system.

It is possible that the salt cake can be sold, but unlikely due to the various salt compositions that are captured in a mine related RO process. This process usually culminates in the utilization of a large lined landfill to dispose of the waste that consumes large tracts of land that would otherwise not be impacted. Crystallization equipment is energy intensive, expensive to construct, install, operate and maintain. Based in the design and construction cost of another affiliated operation using crystallization and solid waste land fill, the anticipated capital cost is $65 million with an annual operation budget of $6.70 million.

Considering the above, crystallization is not a standalone treatment option and it is not considered either applicable or feasible as a treatment system for the operation of the mine as a long-term solution.

Flood Study Results
Williamson Energy Multiport Outfall Diffuser
Franklin County, Illinois

Dear Mr. Plumley:

Per your request, Alliance Consulting, Inc. (Alliance) has completed a Phase 1 flood study to determine the change in water surface elevations resulting from the discharge of the proposed Williamson Energy Multiport Outfall Diffuser (Williamson Diffuser) into the Big Muddy River. Flows for the 2-, 5-, 10-, 25-, 50-, 100-, and 500-year, 24-hour storm events were obtained from StreamStats for use in the study. The Williamson Diffuser's expected maximum discharge of 11.1 cfs was added to these flows to provide a basis for comparison of the pre-construction and post-construction water surface elevations for each storm event.

A HEC-RAS steady flow model was utilized to route the pre-construction and post-construction flows along an approximately 53-mile reach of the Big Muddy River, beginning near Plumfield, IL (approximately 1.5 miles upstream of the Williamson Diffuser) and extending to a point approximately 3 miles downstream of the 20th Street Bridge in Murphysboro, IL. A total of 213 cross-sections were created at intervals along the reach. Cross-section geometry was created using countywide LiDAR data for Franklin, Jackson, and Williamson Counties as a primary data source. A pilot channel was used to ensure consistency of the bottom elevations of the main channel in the HEC-RAS model, given the use of different LiDAR datasets for each county. A total of 10 bridge crossings were input into the model using a combination of field survey data and information sourced from the Illinois Department of Transportation, both of which were provided by Foresight Energy LLC.

USGS stream gages of the Big Muddy River at Plumfield, IL and Murphysboro, IL were used to calibrate the HEC-RAS model to recorded flood stages and discharges and to assist in developing downstream boundary conditions for the HEC-RAS model. However, the calibration was limited by the small number of recorded discharges that corresponded to the lesser frequency storm events.

The results of the flood study show that the effects from the expected maximum discharge of Williamson Diffuser on the 2-year through 500- year water surface elevations and the flood extents are minimal. The maximum increase in water surface elevation along the simulated reach was approximately 0.009 feet, occurring during the 2-year, 24-hour storm event with the

Williamson Diffuser discharging at 11.1 cfs. A table listing the results of each flow scenario is attached.

Phase 2 of the study modeled the Williamson Diffuser and the Sugar Camp Diffuser discharges at 11.1 cfs simultaneously, for a total of 22.2 cfs. The results of this Phase 2 flood study show that the effects from the expected maximum discharge of the diffusers on the 2-year through 500- year water surface elevations and the flood extents are minimal. The maximum increase in water surface elevation along the simulated reach was approximately 0.017 feet, occurring during the 2-year, 24-hour storm event with both discharging at 11.1 cfs. A table listing the results of each flow scenario is attached.

If you have questions or require additional information, please do not hesitate to contact us.

Sincerely,

ALLIANCE CONSULTING, INC.

MEMORANDUM

TO: **James Plumley**
CC:
FROM: John Michael Corn, P.E. (TN)
DATE: December 13, 2019
JOB NO.: 192584
RE: **Mixing Zone Calculations**

AquAeTer previously provided the mixing zone calculations in the Conceptual Diffuser Design report produced in November 2016. This memo summarizes the modeling and describes each model input file.

CORMIX was originally used. The version used was 3.2. **AquAeTer** has performed side-by-side comparison modeling with newer versions of CORMIX. The results were nearly identical. Aside from some new graphical features, the underlying mathematics are still the same. Based on multiple diffuser performance studies performed by **AquAeTer**, CORMIX is expected to provide a very reasonable estimate of the mixing.

Each port was modeled independently for each scenario. The results of the models were then stitched together to determine where the water quality criteria were met. The most stringent point was to meet 500 mg/L for chloride at the edge of the mixing zone. All other mixing zones would be smaller than this one. For the model, we assumed that Sugar Camp's outfall would be in use, resulting in less available mixing for Williamson. The following dispersions were determined based on meeting all applicable water quality criteria. The worse-case required dispersion is 34.0:1 for the total mixing zone. The worse-case acute dispersion required was 3.3:1, for nickel.

PARAMETER	ACUTE / CHRONIC	WQS	CONCENTRATION		DISPERSION REQUIRED (__:1)
			BACKGROUND (mg/L)	MINE (mg/L)	
Chloride	Single Value	500	31.2	12,000	25.5
	Single Value	500	151	12,000	34.0
Sulfate	Single Value	1,182	60.1	2,120	1.8
Iron (total)	Aquatic Organisms	0.5	0.220	1.835	5.8
Nickel (dissolved)	Acute	0.0074	-	0.013	3.3
	Chronic	0.004	-	0.013	3.25
Copper	Acute	0.015	-	0.032	2.1
	Chronic	0.012	-	0.032	2.7

The scenarios and the projected distances to meet the target dispersions are given in the following table.

SCENARIO	RIVER FLOW (cfs)	ACTIVE PORT(S)	TOTAL DISCHARGE (gpm)	ACUTE ZONE DISTANCE (ft)	TOTAL MIXING ZONE DISTANCE (ft)
Case 1, Min.	30	Port 1	102	7.1	50
Case 1, Max.	>=116	Port 1	396	5.8	37
Case 2, Min.	117	Ports 1 & 2	396	4.4	36.6
Case 2, Max.	>=233	Ports 1 & 2	793	6.9	88
Case 3, Min.	234	Ports 1, 2, & 3	793	11.2	46
Case 3, Max.	>=440	Ports 1, 2, & 3	1,499	9.3	116
Case 4, Min.	441	Ports 1, 2, 3, & 4	1,499	13.9	176
Case 4, Max.	>=906	Ports 1, 2, 3, & 4	3,085	11.4	147
Case 5, Min.	907	Ports 1, 2, 3, 4, & 5	3,085	18.2	231.8
Case 5, Max.	>=1,734	Ports 1, 2, 3, 4, & 5	5,905	14.5	251

The CORMIX files followed the naming convention:

MAC + Scenario (1-5) + Port + Normal(N)/Max (X)

The files are listed below:

1. Case 1
    a. MAC1-1N
    b. MAC1-1X
2. Case 2 (as both of these are 3-inch ports with the same flowrate, only one model was run for each scenario in this case).
    a. MAC2-1N
    b. MAC2-1X
3. Case 3 (ports 1 and 2 are the same, so only one model run was made for each scenario)
    a. MAC3-1N
    b. MAC3-3N
    c. MAC3-1X
    d. MAC3-3X
4. Case 4 (ports 1 and 2 are the same, so only one model run was made for each scenario)
    a. MAC4-1N
    b. MAC4-3N
    c. MAC4-4N
    d. MAC4-1X
    e. MAC4-3X
    f. MAC4-4X
5. Case 5 (ports 1 and 2 are the same, so only one model run was made for each scenario)
    a. MAC5-1N
    b. MAC5-3N
    c. MAC5-4N
    d. MAC5-5N
    e. MAC5-1X
    f. MAC5-3X
    g. MAC5-4X
    h. MAC5-5X

If you should have questions or comments concerning our assessment, please call us at (615) 373-8532 or by FAX at (615) 373-8512 or by e-mail at jmcorn@aquaeter.com.

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.27 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

END OF MOD141: BUOYANT AMBIENT SPREADING

BEGIN MOD161: PASSIVE AMBIENT MIXING IN UNIFORM AMBIENT

Vertical diffusivity (initial value) = .229E-02 m^2/s
Horizontal diffusivity (initial value) = .574E-02 m^2/s

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.65 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD141: BUOYANT AMBIENT SPREADING

BEGIN MOD161: PASSIVE AMBIENT MIXING IN UNIFORM AMBIENT

MAC2-1N.CX1

Vertical diffusivity (initial value) = .489E-02 m^2/s
Horizontal diffusivity (initial value) = .122E-01 m^2/s

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

Plume Stage 1 (not bank attached):

X	Y	Z	S	C	BV	BH	ZU	ZL
5.55	.00	.00	16.9	.591E+02	.27	.50	.27	.00
11.15	.00	.00	45.5	.220E+02	.42	.89	.42	.00

Plume interacts with SURFACE.
The passive diffusion plume becomes VERTICALLY FULLY MIXED within this prediction interval.

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.32 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.26 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

MAC3-1X.CX1

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.19 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.39 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD161: PASSIVE AMBIENT MIXING IN UNIFORM AMBIENT

MAC4-1N.CX1

Vertical diffusivity (initial value) = .804E-02 m^2/s
Horizontal diffusivity (initial value) = .201E-01 m^2/s

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

Plume Stage 1 (not bank attached):

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.16 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.22 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.23 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.38 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.21 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

END OF MOD141: BUOYANT AMBIENT SPREADING

BEGIN MOD161: PASSIVE AMBIENT MIXING IN UNIFORM AMBIENT

Vertical diffusivity (initial value) = .913E-02 m^2/s
Horizontal diffusivity (initial value) = .228E-01 m^2/s

The passive diffusion plume is VERTICALLY FULLY MIXED at beginning of region.

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

Plume Stage 2 (bank attached):

MAC5-3N.CX1

Vertical diffusivity (initial value) = .117E-01 m^2/s
Horizontal diffusivity (initial value) = .293E-01 m^2/s

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

Plume Stage 1 (not bank attached):

X	Y	Z	S	C	BV	BH	ZU	ZL

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.31 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.22 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

END OF MOD133: LAYER BOUNDARY IMPINGEMENT/FULL VERTICAL MIXING

BEGIN MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

Phase 1: Vertically mixed, Phase 2: Re-stratified

Phase 1: The plume is VERTICALLY FULLY MIXED over the entire layer depth.
This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

Phase 2: The flow has RESTRATIFIED at the beginning of this zone.

This flow region is INSIGNIFICANT in spatial extent and will be by-passed.

END OF MOD153: VERTICALLY MIXED PLUME IN CO-FLOW

** End of NEAR-FIELD REGION (NFR) **

The initial plume WIDTH values in the next far-field module will be
CORRECTED by a factor 3.85 to conserve the mass flux in the far-field!
The correction factor is quite large because of the small ambient velocity
relative to the strong mixing characteristics of the discharge!
This indicates localized RECIRCULATION REGIONS and internal hydraulic JUMPS.
Flow appears highly UNSTEADY and prediction results are UNRELIABLE!

BEGIN MOD141: BUOYANT AMBIENT SPREADING

BEGIN MOD161: PASSIVE AMBIENT MIXING IN UNIFORM AMBIENT

Vertical diffusivity (initial value) = .914E-02 m^2/s
Horizontal diffusivity (initial value) = .228E-01 m^2/s

Profile definitions:
BV = Gaussian s.d.*sqrt(pi/2) (46%) thickness, measured vertically
= or equal to layer depth, if fully mixed
BH = Gaussian s.d.*sqrt(pi/2) (46%) half-width,
measured horizontally in Y-direction
ZU = upper plume boundary (Z-coordinate)
ZL = lower plume boundary (Z-coordinate)
S = hydrodynamic centerline dilution
C = centerline concentration (includes reaction effects, if any)

Plume Stage 1 (not bank attached):

ILLINOIS ENVIRONMENTAL PROTECTION AGENCY
MINE RELATED WATER POLLUTION CONTROL PERMIT

PERMIT NO.: 2014-MW-4275

DATE ISSUED: October 2, 2014

FINAL PLANS, SPECIFICATIONS, APPLICATION AND SUPPORTING DOCUMENTS

EXPIRATION DATE: September 30, 2019

PREPARED BY: Stephen M. Sutphin, P.E./
Claudio E. Yon, P.E.
Alliance Consulting, Inc.

LOG NUMBERS: 4275-14-B

SUBJECT: Williamson Energy, L.L.C. – Pond Creek Mine
Geotextile Tube Refuse Disposal

Williamson Energy, L.L.C.
430 Harper Park Drive
Beckley, WV 25801

Permit is hereby granted to the above designated Permittee to develop and operate the mine refuse disposal area referenced in the above subject heading and described as follows:

A fine coal refuse (slurry) disposal area incorporating the use of geotextile tubes will be developed and operated as described and depicted in IEPA Log No. 4275-14-B. Development of this area will include the construction of a low permeability liner consisting of four (4) foot compacted clay with a hydraulic conductivity of $1x10^{-7}$ cm/sec, or less. With prior Agency approval, a synthetic liner capable of providing an equivalent level of groundwater protection may be utilized in lieu of the four (4) foot compacted clay. A subsurface underdrain system will be installed as depicted to assist in evacuating leachate from the geotextile tubes.

A dredge to be located within the existing embanked fine coal refuse disposal area will pump slurry into the geotextile tubes located as depicted. As the geotextile tubes de-water and the deposited fine coal refuse solidifies, additional geotextile tubes will be placed on top of the initially placed tubes in an offset manner. This process will continue until the current design of three (3) tiers of geotextile tubes have been placed.

(Continued on Page 2)

This permit is issued in accordance with the Illinois Environmental Protection Act of 1970, the Title 35, Subtitle C: Water Pollution and Subtitle D: Mine Related Pollution Regulations adopted pursuant thereto by the Illinois Environmental Protection Act. THE STANDARD CONDITIONS OF ISSUANCE INDICATED ON THE ATTACHMENT TO THIS PERMIT (PAGE 1a) MUST BE COMPLIED WITH IN FULL. READ ALL CONDITIONS CAREFULLY.

Larry D. Crislip

Larry D. Crislip, P.E.
Manager, Permit Section
Mine Pollution Control Program
Bureau of Water

cc: IDNR, Office of Mines and Minerals
IDNR, Division of Water Resources
BOW/MPCP/FOS/Marion ✓

LDC:cs/6823c/10-1-14

Surface runoff and de-watering of the geotextile tubes will be collected in a "no-discharge" perimeter containment basin. Operation and maintenance of the perimeter containment basin is subject to Special Condition No. 2.

Reclamation (abandonment) of the geotextile tube refuse disposal area will consist of construction of a low permeability cap consisting of four (4) foot compacted clay with a hydraulic conductivity of $1x10^{-7}$ cm/sec, or less. With prior Agency approval a synthetic liner capable of providing an equivalent level of protection may be utilized in lieu of the four (4) foot compacted clay. Rooting medium and topsoil required for establishment of vegetative cover shall be in addition to the four (4) foot compacted clay low permeability cap.

Four (4) monitoring wells identified as Well Nos. GW-29, GW-30, GW-31 and GW-32 shall be installed at each corner of the geotextile tube placement area as depicted in IEPA Log No. 4275-14-B. These wells will be completed in the first water bearing zone below the base of the disposal area. Groundwater monitoring shall be performed in accordance with Special Condition No. 3.

This Permit is issued subject to the following Special Conditions. If such Special Conditions require additional or revised facilities, satisfactory engineering plan documents must be submitted to this Agency for review and approval for issuance of a Supplemental Permit.

Special Condition No. 1: This permit is issued with the expressed understanding that there shall be no surface discharge from these facilities. If such discharge occurs, additional or alternate facilities shall be provided. The construction of such additional or alternate facilities may not be started until a Permit for the construction is issued by this Agency.

Special Condition No. 2: The perimeter containment basin surrounding the geotextile tube refuse disposal area shall be subject to the following requirements and limitations:

a. There shall be no discharge from the containment basin due to runoff from any storm event less than or equal to the highest single day rainfall of record (6.9 inches).

b. Pumpage capacity shall be available at all times sufficient to evacuate water collecting in the perimeter containment basins within a 24 hour period. All water pumped from the containment basin shall be directed to the existing embanked refuse disposal area or the coal preparation plant for use in the coal processing circuit.

c. A minimum of 2 feet of freeboard between the accumulated water surface within the containment basin and the basin embankment shall be maintained at all times.

Special Condition No. 3: Groundwater monitoring requirements for Well Nos. GW-29, GW-30, GW-31 and GW-32 are as follows:

a. Ambient background monitoring shall be performed for all referenced wells. Such ambient monitoring shall consist of a minimum of six (6) samples collected on a monthly basis immediately following well installation, but no later than during the first six (6) months of operation or disturbance of the geotextile tube disposal area. Background monitoring shall include the following list of constituents:

Aluminum	Fluoride	Sulfate
Antimony	Iron (dissolved)	Thallium
Arsenic	Iron (total)	Total Dissolved Solids
Barium	Lead	Vanadium
Beryllium	Manganese (dissolved)	Zinc
Boron	Manganese (total)	pH
Cadmium	Mercury	Acidity
Chloride	Molybdenum	Alkalinity
Chromium	Nickel	Hardness
Cobalt	Phenols	Static Water Elevation
Copper	Selenium	
Cyanide	Silver	

b. Following the ambient monitoring as required under Special Condition No. 3(a) above, routine monitoring shall continue on a quarterly basis for all wells identified above and shall include the entire list of constituents identified under Special Condition No. 3(a) above.

c. Following completion of active mining (refuse disposal) and reclamation, post-mining monitoring of all above referenced wells shall consist of six (6) samples collected during a 12-month period (approximately bi-monthly) to determine post-mining concentrations. Post-mining monitoring shall include the list of constituents identified in Special Condition No. 3(a) above.

d. Groundwater monitoring reports shall be submitted to the Agency in accordance with the following:

Mailing Address:

Illinois Environmental Protection Agency
Mine Pollution Control Program
2309 West Main Street, Suite 116
Marion, IL 62959

Should electronic filing be available and elected through IDNR/OMM, the Agency shall be notified via correspondence or e-mail at such time that the electronic filing has been completed.

Completed groundwater monitoring reports shall be filed electronically or mailed and received by the IEPA at the address indicated above in accordance with the following schedule:

Period	Received by IEPA
January, February, March	May 1st
April, May, June	August 1st
July, August, September	November 1st
October, November, December	February 1st

e. A statistically valid representation of background and/or post mining water quality required under Condition No. 3(a) above shall be submitted utilizing the following method. This method shall be used to determine the upper 95 percent confidence limit for each parameter listed above.

Should the Permittee determine that an alternate statistical method would be more appropriate based on the data being evaluated, the Permittee may request utilization of such alternate methodology. Upon approval from the Agency, the alternate methodology may be utilized to determine a statistically valid representation of background and/or post mining water quality.

This method should be used to predict the confidence limit when single groundwater samples are taken from each monitoring (test) well.

i. Determine the arithmetic mean $(\overline{X}_b)$ of each indicator parameter for the sampling period. If more than one well is used, an equal number of samples must be taken from each well.

$$\overline{X}_b = \frac{X_1 + X_2 + \ldots X_n}{n}$$

Where:

$\overline{X}_b$ = Average value for a given chemical parameter

X_n = Values for each sample

n = the number of samples taken

ii. Calculate the background and/or post mining variance (S_b^2) and standard deviation (S_b) for each parameter using the values (X_n) from each sample of the well(s) as follows:

$$S_b^2 = \frac{(X_1 - \overline{X}_b)^2 + (X_2 - \overline{X}_b)^2 + \ldots + (X_n - \overline{X}_b)^2}{n-1}$$

$$S_b = \sqrt{S_b^2}$$

iii. Calculate the upper confidence limit using the following formula:

$$CL = \overline{X}_b \pm t\sqrt{1+1/n}\ \ (S_b)$$

Where:

CL = upper confidence limit prediction
(upper and lower limits should be calculated for pH)
t = one-tailed t value at the required significance
level and at n-1 degrees of freedom from Table 1
(a two-tailed t value should be used for pH)

iv. If the values of any routine parameter for any monitoring well exceed the upper confidence limit for that parameter, the permittee shall conclude that a statistically significant change has occurred at that well.

v. When some of the background and/or post mining values are less than the Method Detection Limit (MDL), a value of one-half (1/2) the MDL shall be substituted for each value that is reported as less than the MDL. All other computations shall be calculated as given above.

If all the background and/or post mining values are less than the MDL for a given parameter, the Practical Quantitation Limit (PQL), as given in 35 Ill. Adm. Code Part 724 Appendix I shall be used to evaluate data from monitoring wells. If the analytical results from any monitoring well exceed two (2) times the PQL for any single parameter, or if they exceed the PQLs for two or more parameters, the permittee shall conclude that a statistically significant change has occurred.

RE: Pond Creek Mine, Williamson Energy, Mine Dewatering at Depth
Consultation Program
EcoCAT Review #2001813
Williamson and Franklin Counties

Dear Mr. Skelton:

This letter is in reference to your Illinois Environmental Protection Agency (IEPA), National Pollutant Discharge Elimination System (NPDES) permit application No. IL0077666. The purpose of this letter is to satisfy consultation requirements pursuant to the *Illinois Endangered Species Protection Act* [520 ILCS 10/11], the *Illinois Natural Areas Preservation Act* [525 ILCS 30/17], and Title 17 *Illinois Administrative Code* Part 1075. Additionally, the Department may offer advice and recommendations for species covered under the *Fish & Aquatic Life Code* [515 ILCS 5, *et seq.*]; the *Illinois Wildlife Code* [520 ILCS 5, *et seq.*]; and the *Herptiles-Herps Act* [510 ILCS 69].

This review is specific to the NPDES permit application as the pipeline installation was previously reviewed in EcoCAT projects 1905659, 1905660, and 1905661 under the jurisdiction of the Department's Office of Mines and Minerals. This review does not include necessary permits for the outfall structure(s) from the Department's Office of Water Resources. A separate consultation will be required for those permits.

Per the NPDES permit narrative: *"The applicant proposes additional surface facilities area to an existing underground coal mine (SIC 1222). Mine operations result in the discharge of alkaline and acid mine drainage. Incorporates three (3) new outfalls designated as Outfall Nos. 009, 009ES and 011. Receiving waters are Big Muddy River, Pond Creek, and tributaries to Pond Creek."* The permit states that Pond Creek outfalls 009 and 009ES are permitted to discharge under stormwater conditions and are held to specified permit limits. For outfall 011 to the Big Muddy River, water will be conveyed from the mine to the river via a 12.5-mile pipeline with a maximum flow of 5,000 gpm at Outfall 011. Discharge will only be allowed when the Big Muddy River is flowing above 30 cfs. The permit states the applicant will perform real-time monitoring and flow control to achieve compliance with the water quality standards within the

maximum distance of 251 feet in length and 25 feet wide, otherwise known as the "mixing zone." The mixing zone for copper is more restrictive at 18.2 feet long by 4 feet wide.

EcoCAT has indicated no records in the vicinity of the proposed outfalls for state-listed species or protected natural areas. However, the Department offers the following general information on the aquatic community in the Big Muddy River:

> The Department's routine fish survey efforts indicate 96 species of fish occur in the Big Muddy River. These species include important sportfish and non-game species, as well as 11 species designated in the Illinois Wildlife Action Plan as "Species in Greatest Need of Conservation" *(SGNC)*. The SGNC that occur in the Big Muddy River include the Alligator Gar (*Atractosteus spatula*) Blacktail Shiner (*Cyprinella venusta*), Brown Bullhead (*Ameiurus nebulosus*), Flier (*Centrarchus macropterus*), Mooneye (*Hiodon tergisus*), Paddlefish (*Polyodon spathula*), Pugnose Minnow (*Opsopoeodus emiliae*), Ribbon Shiner (*Lythrurus fumeus*), River Darter (*Percina shumardi*) Spottail Darter (*Etheostoma squamiceps*), and Stripetail Darter (*Etheostoma kennicotti*). The Department also notes that the Lower Big Muddy River is one of several locations in the state where Alligator Gar have been released as part of our "Alligator Gar Reintroduction Program." The Lower Big Muddy River received a stocking of 500 Alligator Gar in the year 2017. Additionally, a survey by the Illinois Natural History survey detected 19 extant species of freshwater mussels in the Big Muddy River with one, the Pistolgrip (*Tritogonia verrucose*) classified as an SGNC (Shasteen *et al.* 2012).

While the fish and freshwater mussel species referenced above are not state-listed and therefore, not protected under the *Illinois Endangered Species Act,* their importance to the aquatic ecosystem and conservation need as a public trust resource are no less significant to the Department. Therefore, strict adherence to all effluent limits and all effluent monitoring requirements in accordance with NPDES Permit IL0077666 is requested.

Consultation on the part of the Department is closed unless Williamson Energy or the IEPA desires additional information or advice related to this proposal. Consultation for Part 1075 is valid for two years unless new information becomes available which was not previously considered; the proposed action is modified; or additional species, essential habitat, or Natural Areas are identified in the vicinity. **If the action has not been implemented within two years of the date of this letter, or any of the above listed conditions develop, a new consultation is necessary.**

This natural resource review reflects the information existing in the Illinois Natural Heritage Database at the time of the project submittal and should not be regarded as a final statement on the project being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are unexpectedly encountered during the project's implementation, the applicant must comply with the applicable statutes and regulations.

Please contact Mr. Brian Willard of this office at 217-557-0480 or brian.c.willard@illinois.gov for additional information on this review, or if providing a response to this correspondence. Please reference EcoCAT 2001813 in any communication.

P.O. Box 300
Johnston City, Illinois 62951

Name and Address of Facility:

Williamson Energy, LLC
Pond Creek Mine
4 miles east of Johnston City, Illinois
(Williamson and Franklin Counties)

The Illinois Environmental Protection Agency (IEPA or Agency) has made a tentative determination to issue an NPDES permit to discharge into waters of the state and has prepared a draft permit and associated fact sheet for the above named discharger. The Public Notice period will begin and end on the dates indicated in the heading of this Public Notice/Fact Sheet. Comments will be accepted until midnight of the Public Notice period ending date indicated above, unless a request for an extension of the original comment period is granted by the Agency. Interested persons are invited to submit written comments on the draft permit to the IEPA at the above address. Commenters shall provide his or her name, address and the nature of the issues raised and the evidence supporting those issues. Commenters may include a request for public hearing. The NPDES permit and notice number(s) must appear on each comment page.

The application, engineer's review notes, Public Notice/Fact Sheet, draft permit, comments received, and other documents are available for inspection and may be copied at the IEPA between 9:30 a.m. and 3:30 p.m. Monday through Friday when scheduled by the interested person.

As provided in 35 Ill. Adm. Code 309.115(a) any person may submit a request for a public hearing and if such written comments or requests indicate a significant degree of public interest in the draft permit, the permitting authority may, at its discretion, hold a public hearing. The Agency shall issue public notice of such hearing no less than thirty (30) days prior to the date of such hearing in the manner described by 35 Ill. Adm. Code 309.109 through 309.112 for public notice. The Agency's responses to written and/or oral comments will be provided in the Responsiveness Summary provided when the final permit is issued.

The applicant proposes additional surface facilities area to an existing underground coal mine (SIC 1222). Mine operations result in the discharge of alkaline and acid mine drainage.

Public comments are invited on the entire draft permit. The following proposed modifications were incorporated into this Permit renewal:

Incorporated three (3) new outfalls designated as Outfall Nos. 009, 009ES and 011.

Various mining operation and drainage control plan revisions.

229.78 acres incorporated for new Refuse Disposal Area No. 3.

70.7 acres incorporated for the pipeline to the Big Muddy River.

145.32 acres for various IBR's for additional permit area.

Addition of bi-annual metals monitoring of discharges from Outfall Nos. 006, 007, 008,009, 009ES and 011.

Incorporated previously issued State Construction and Operating Permits (Subtitle D Permits).

This facility has eight (8) existing discharges which are located in Williamson County, Illinois. The following information identifies the discharge points and receiving streams:

Outfall	Receiving Stream	Latitude (North)	Longitude (West)
001	Unnamed tributary of Pond Creek	37° 50' 59.2"	88° 49' 37.5"
002	Unnamed tributary of Pond Creek	37° 50' 26.0"	88° 49' 51.5"
003	Unnamed tributary of Pond Creek	37° 50' 26.0"	88° 49' 58.0"
004	Unnamed tributary of Pond Creek	37° 50' 25.0"	88° 49' 56.6"
005	Unnamed tributary of Pond Creek	37° 50' 9.1"	88° 50' 00.0"
006	Unnamed tributary of Pond Creek	37° 50' 28.4"	88° 50' 40.6"
007	Unnamed tributary of Pond Creek	37° 50' 29.5"	88° 49' 34.0"
008	Unnamed tributary of Pond Creek	37° 50' 31.4"	88° 49' 33.9"

The stream segment NG-02 of Pond Creek receiving the flow from the unnamed tributary into which Outfall 001, 002, 003, 004, 005, 006, 007 and 008 discharges is not on the 2016 303(d) list of impaired waters.

Application is made for three (3) new discharges which are located in Williamson and Franklin Counties, Illinois. The following information identifies the discharge points and receiving streams:

Outfall	Receiving Stream	Latitude (North)	Longitude (West)
009	Pond Creek	37° 51' 16.1"	88° 49' 25.5"
009ES	Unnamed tributary to Pond Creek	37° 50' 52.3"	88° 48' 43.7"
011	Big Muddy River	37° 52' 37"	89° 01' 49"

The stream segment NG-02 of Pond Creek receiving the discharge from Outfalls 009 and 009ES is on the 2016 303(d) list of impaired waters.
The following parameters have been identified as the pollutants causing impairment.

Outfall	Pollutant
009, 009ES	Alteration in stream-side or littoral vegetative cover Changes in stream depth and velocity patterns Chlorides Loss of instream cover, dissolved oxygen, Sedimentation/siltation

The stream segment N-11 of Big Muddy River receiving the discharge from Outfall 011 is on the draft 2016 303(d) list of impaired waters. The following parameters have been identified as the pollutants causing impairment.

Outfall	Pollutant
011	Iron, Oxygen, dissolved; Sedimentation/Siltation Total Suspended Solids (TSS) Mercury, Polychlorinated biphenyls Fecal Coliform

The alkaline mine discharge from this facility shall be monitored and limited at all times as follows:

Outfalls: 001, 002, 003, 004, 005

Discharge Condition	Parameters											
	Total Suspended Solids (3) (mg/l)		Iron (total) (3) (4) (mg/l)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/l)	Chloride (mg/l)	Cadmium (Cd) (mg/l) (6)	Hardness (5)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum								
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for alkaline mine discharges are contained in 35 Ill. Adm. Code 406.110.
(3) Effluent standards for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 001, 002, 003, 004 and 005 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average.
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limit.
(6) The Cadmium water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).

The acid mine discharge from this facility shall be monitored and limited at all times as follows:

Outfalls: 006, 007

Discharge Condition	Parameters												
	Total Suspended Solids (3) (mg/L)		Iron (total) (3) (4) (mg/L)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/L)	Chloride (mg/L)	Cadmium (Cd) (mg/l) (6)	Mn (total) (mg/L)	Hardness (5)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum									
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	1.0	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	1.0	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(b), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 1-year, 24-hours precipitation event, but less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 1-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hours precipitation event for this area is considered to be 5.21 inches.

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for acid mine drainage discharges are contained in 35 Ill. Adm. Code 406.110(b), (c), and (d).
(3) Effluent limitations for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 006 and 007 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average.
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.
(6) The Cadmium water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).

The acid mine discharge from this facility shall be monitored and limited at all times as follows:

Outfall: 008

Discharge Condition	Parameters											
	Total Suspended Solids (3) (mg/L)		Iron (total) (3) (4) (mg/L)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/L)	Chloride (mg/L)	Mn (total) (mg/L)	Hardness (5)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum								
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	1.0	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	1.0	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(b), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 1-year, 24-hours precipitation event, but less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 1-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hours precipitation event for this area is considered to be 5.21 inches.

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for acid mine drainage discharges are contained in 35 Ill. Adm. Code 406.110(b), (c), and (d).
(3) Effluent limitations for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 008 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average.
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.

The alkaline mine discharge from this facility shall be monitored and limited at all times as follows:

Outfall: 009

Discharge Condition	Parameters													
	Total Suspended Solids (3) (mg/L)		Iron (total) (3) (4) (mg/L)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/L)	Chloride (mg/L)	Mn (total) (mg/L)		Hardness (5)	Copper (CU) (mg/L)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum					30 day average	daily maximum				
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	2.0	4.0	Monitor only	0.0245	Measure When Sampling	-

III	-	-	-	-	6.0-9.0	-	1250	See Special Condition No. 14	-	-	Monitor only	-	Measure When Sampling	-
IV	35	70	3.0	6.0	6.0-9.0	Alk.>Acid	1250	See Special Condition No. 14	2.0	4.0	Monitor only	0.0245	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall at times of "low flow" or "no flow" conditions in the receiving stream as defined in Special Condition No. 14.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. At such time that receiving stream flow subsides to the degree that the mixing ratio specified in Special Condition No. 14 is not available, monitoring requirements and permit limitations shall revert to Discharge Condition I.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for alkaline mine discharges are contained in 35 Ill. Adm. Code 406.110.
(3) Effluent standards for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 009 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.

The alkaline mine discharge from this facility shall be monitored and limited at all times as follows:

Outfall: 009ES

Discharge Condition	Parameters													
	Total Suspended Solids (3) (mg/L)		Iron (total) (3) (4) (mg/L)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/L)	Chloride (mg/L)	Mn (total) (mg/L)		Hardness (5)	Copper (CU) (mg/L)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum					30 day average	daily maximum				
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	2.0	4.0	Monitor only	0.0245	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	-	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	-	Measure When Sampling	-
IV	35	70	3.0	6.0	6.0-9.0	Alk.>Acid	1250	500	2.0	4.0	Monitor only	0.0245	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

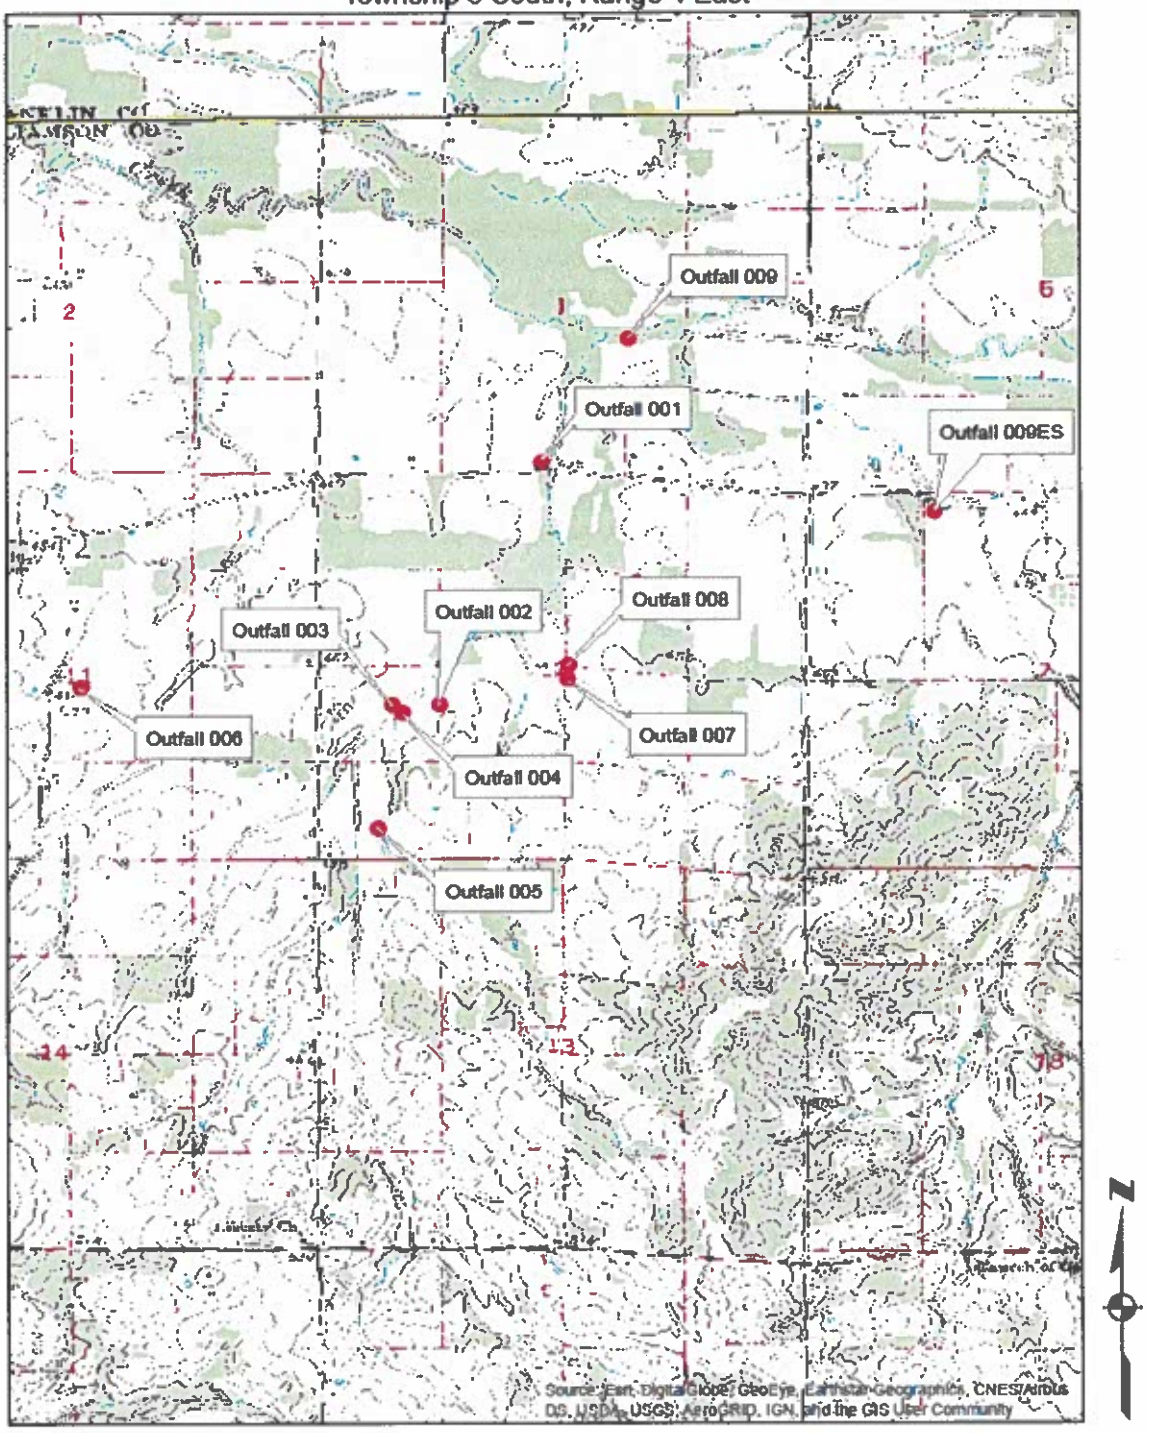
III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for alkaline mine discharges are contained in 35 Ill. Adm. Code 406.110.
(3) Effluent standards for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 009ES are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.

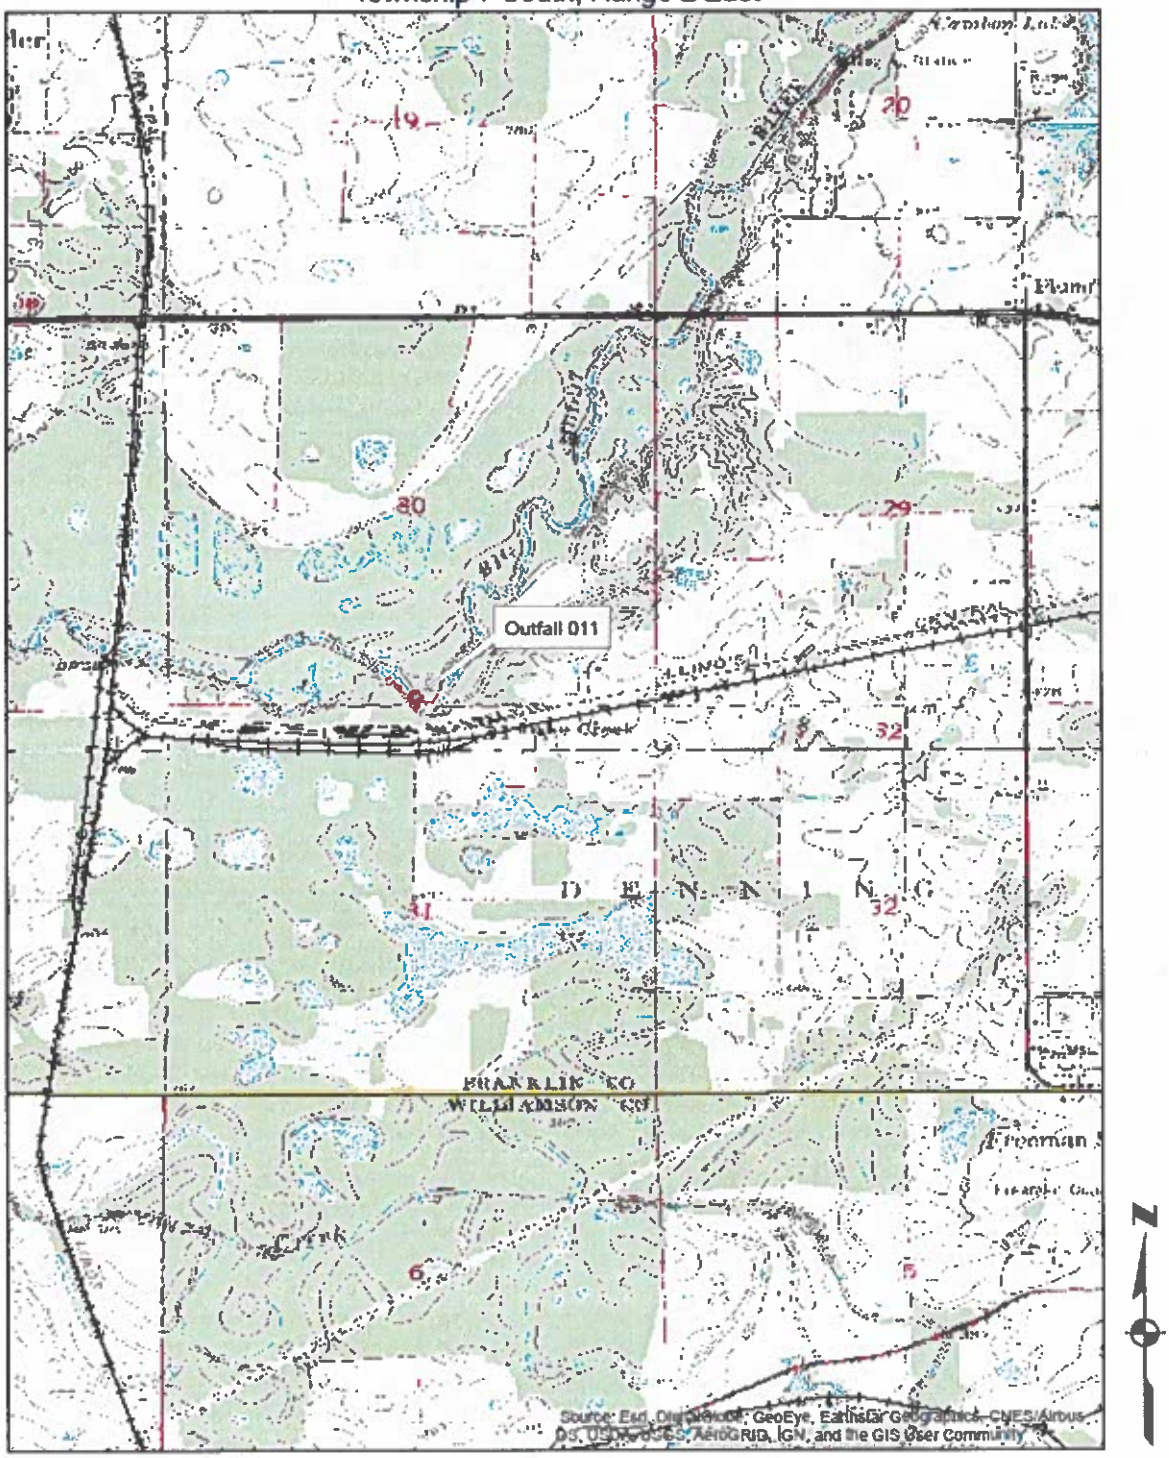
The alkaline mine discharge from this facility shall be monitored and limited at all times as follows:

Outfall: 011



Parameters														
Total Suspended Solids (1) (mg/l)		Iron (total) (2) (mg/l)		pH (3) (S.U.)	Alkalinity/ Acidity (4)	Sulfate (5) (mg/l)	Chloride (mg/l)	Mn (total) (mg/l) (2)		Hardness (6)	Nickel (mg/L)	Copper (mg/L)	Flow (MGD)	Iron (Dissolved)
30 day average	daily maximum	30 day average	daily maximum					30 day average	daily maximum					
35	70	3.0	6.0	6.0-9.0	Alk.>Acid	See Special Condition No. 16	See Special Condition No. 16	2.0	4.0	Monitor only	See Special Condition No. 16	See Special Condition No. 16	Measure When Sampling	See Special Condition No. 16

For any discharge not meeting the water quality standard for any of the above parameters, such discharge shall be subject to the limitations and monitoring requirements of Special Condition No. 16.



(1) Effluent standards for Total Suspended Solids in mine discharges are established pursuant to 35 Ill. Adm. Code 406.106.
(2) Effluent standards for Iron and Manganese are established pursuant to 35 Ill. Adm. Code 304.124.
(3) Pursuant to 35 Ill. Adm. Code 406.106, pH shall not be less than 6.0 or greater than 9.0 S.U.
(4) Pursuant to 35 Ill. Adm. Code 406.106, total acidity shall not exceed total alkalinity.
(5) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(6) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.

To assist you in identifying the location of the discharges, please refer to the attached map. The permit area for this facility is located in Sections 2, 3, 4, 7, 8, 9, 10, 12, 14, 15, 16, 17, 18 and 29, Township 8 South, Range 4 East, and Sections 11, 12, 13, 35, 36, Township 8 South, Range 3 East, Williamson County, 3rd P.M., Illinois, and Sections 1, 2 and 12, Township 8 South, Range 2 East, and Sections 7, 8, 9, 11, 14, 15, 16, and 17, Township 8 South, Range 3 East, and Sections 27, 28, 29, 30, 31, 32, 34 and 35, Township 7 South, Range 2 East, Franklin County , 3rd P.M., Illinois.

Antidegradation Assessment for RDA #3
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Williamson Energy, LLC –Pond Creek Mine No. 1 is creating a new Refuse Disposal Area No. 3. This proposed disposal area will tie into the existing Refuse Disposal Area No. 1 & 2. Associated with the new Refuse Disposal Area No. 3, a new sediment basin will be installed to control the rainfall that falls on the out-slopes of the sediment basin and will discharge through new Outfalls 009 and 009ES.

The facility is also requesting a modification to Outfall 005. The facility is proposing to stop using the geotextile tubes, which were operated in a no discharge configuration. The facility was using the geotextile tubes to remove fine refuse and collecting the water and pumping it to the existing refuse disposal area. Williamson Energy, LLC is requesting to modify the drainage control plan to allow stormwater runoff from the area to discharge through sediment ditches and spillway, into Ditch D-5C and through Pond 005. This drainage pattern is not a deviation from the originally approved drainage plan. Due to the nature of the geotextile tubes, surface water quality is not anticipated to be affected once the geotextile tubes are out of service and no longer being utilized.

To not increase chlorides and sulfates due to the construction of RDA No. 3, the mine is eliminating or reclaiming the outslopes of RDA No. 1 and RDA No. 2 that previously discharged through Outfalls 007 and 008. Therefore, there will not be an increase in loading due to the construction of RDA No. 3.

The information in this antidegradation assessment came from the December 2014 NPDES Renewal #2 for Permit #IL0077666 report by Alliance Consulting, Inc. titled "Pond Creek Mine No. 1 & Refuse Disposal Area No. 3" and the anti-degradation assessment provided on November 18, 2016.

Identification and Characterization of the Affected Water Body.

The subject facility proposed to discharge to Pond Creek through Outfall 009 at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. Pond Creek is classified as a General Use Water. Pond Creek is not listed as a biologically significant stream in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. Pond Creek, Waterbody Segment, NG-02, is listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List as impaired for aquatic life use with potential causes given as alteration in stream-side or littoral vegetative cover (non-pollutant), changes in stream depth and velocity patterns (non-pollutant), chlorides, loss of instream cover (non-pollutant), dissolved oxygen (non-pollutant), and sedimentation/siltation. Primary contact recreation and secondary contact uses are fully supported. Pond Creek is not subject to enhanced dissolved oxygen standards.

Identification of Proposed Pollutant Load Increases or Potential Impacts on Uses.

The mine outfalls will be classified as acid mine drainage. Suspended solids will be treated in the sedimentation ponds. Effluent discharged from these ponds will contain suspended solids loadings that are similar to those occurring from the land in its present use. Sulfates and chlorides will undergo an increase in loading to the receiving streams as a result of the mining activities. Based on estimated effluent concentrations for this mine, chloride and sulfate will meet water quality standards in the receiving stream based on the mixing provided by my December 13, 2016 water quality memo.

Fate and Effect of Parameters Proposed for Increased Loading.

Suspended solids discharged will eventually be incorporated into bed sediments and will continue to move downstream. Sulfate and chloride will remain dissolved in the water and will move through the downstream continuum. Small amounts of these substances will be removed by organisms as these substances are necessary for life. No adverse impacts to the receiving streams will occur as all water quality standards will be met.

Purpose and Social & Economic Benefits of the Proposed Activity.

The disposal of excess water, including the water infiltrating the mine, will allow the mine to continue to operate. The Pond Creek Mine is expected to generate 5 - 6 million tons of useable coal annually. According to information given in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666, continued operation of the existing mine will continue to provide jobs for 203 employees with an annual payroll of approximately $18 million. In addition to these 203 direct employees, it is estimated that another 100 persons are employed in daily work associated with the Mine's production. This includes truck drivers, supply and support personnel, train crews, and technical personnel. In addition, other local businesses would also benefit from the wealth created by the mine. The operation of the mine provides tax revenues through payroll, coal severance, and mineral resource taxes for the surrounding counties and the State of Illinois. The total local, state, and federal revenues generated by the continuation of this Mine are approximately $78 million annually. Current employment statistics indicate that the unemployment rate for Williamson County was 7.5%.

Williamson County

Assessments of Alternatives for Less Increase in Loading or Minimal Environmental Degradation.

Alternatives to discharge through Outfall 009 have been evaluated by the mine company in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit and are summarized as follows:

Chloride and Sulfate

Membrane Processes. Standard reverse osmosis (RO) treatment results in a waste stream of water with a high concentration of contaminants that is typically 25% of the flow being sent to the RO treatment system. The reject stream must still be disposed of in a responsible manner. Due to the disposal issue, the Membrane Process is not viable.

Deep Well Injection of the Entire Groundwater Stream. The untreated groundwater infiltrate could be discharged directly to a deep well. Considering the cost and operational difficulties experienced to date for the two wells that have been installed at the nearby Sugar Camp Coal facility to accept 0.45 MGD each, deep well injection of the untreated groundwater infiltrate is not considered either applicable or feasible for the operation of the Mine.

Discharge to POTW or Other Sources. POTWs are not designed to treat wastewaters containing dissolved substances such as chloride or sulfate. This option is not feasible.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Mechanical Evaporation. Mechanical evaporation uses high temperatures and pressure to remove the water. The equipment is expensive to construct/install, operate, and maintain. Also, there would be materials to dispose of either in a landfill or in the Injection Wells that have been found to be unreliable for nearby mines. Therefore, this option is not considered either applicable or feasible for the operation of the mine.

Crystallizaton. Crystallization equipment is expensive to construct/install, operate and maintain. The cost is estimated at $0.25/gallon, the mine company concludes that crystallization is not a viable option for disposal of the stormwater runoff mine effluent.

Cost Effective Sulfate Removal (CESR) process. This is a proprietary technology that uses hydrated lime and proprietary chemicals to precipitate gypsum, metals and ettringite. Sludge would be produced that would require landfill disposal. The proprietary technology is still being developed. Additionally, this method is not proven to remove chlorides. These drawbacks make the CESR process infeasible for use at the coal mine.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Additionally, this method is not proven to remove chlorides. These drawbacks make chemical precipitation infeasible.

Sedimentation/Siltation

Sedimentation. The facility is proposing to pump the groundwater infiltration to a Water Staging Cell where the water will have an opportunity for solids to settle out. The water will then be discharged to the Big Muddy River though the diffuser.

Use alternate sediment control and treatment devices. Alternatives to the use of sediment control ponds exist for control of discharge of settleable solids. Such alternatives include chemical soil stabilizers, erosion control blankets, geotextile filter bags, fiber rolls, silt fencing, straw mulch, straw bale dikes, and temporary seeding. These measures are aimed at minimization of the generation of settable solids. Most of these measures have been used previously during the construction and operations and in accordance with the current permit, as supplemental treatment and prevention of generation of settable solids. The use of alternative sediment control measures is considered practical and cost effective for the treatment and control of surface runoff in conjunction with sediment control ponds. However, the use of these practices to eliminate the proposed sediment control ponds is not feasible. Instead, it is being proposed that these BMPs be incorporated into the proposed alternative as needed.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Filtration. Filtration is a technology that is not feasible for the proposed facility because: filtration is much more expensive than sediment ponds, filtration processes require a steady stream of water for treatment which is not the case in treating stormwater runoff, a large area of land would be required for such a facility, and maintenance and supervision of the filtration and sludge disposal operation would be burdensome and would increase production costs.

Antidegradation Assessment for RDA #3
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Constructed Wetlands. Constructed wetlands have proven to be effective for treatment of suspended solids with several limitations. These limitations include; low and consistent rates of inflow, eventual sludge accumulation requiring dredging and wetland reconstruction, and release of hydrogen sulfide and other digestive gases into the atmosphere from sulfate digestion processes. Use of wetlands in mine stormwater runoff treatment would be limited by the enormous amount of land required to construct a wetland of sufficient size for the flow rates to be expected from such an operation.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Concerns with the use of chemical precipitation at the proposed coal mine include; worker safety regarding the chemicals to be used, treatment costs, process operation and maintenance, disposal of precipitate sludge in a landfill, necessity of treatment considering that acid water is not considered a factor for the proposed operation, susceptibility to system malfunction due to high volume flows from storm events, and improbability of actual improvement in overall water quality when compared to the use of sediment ponds. These drawbacks make chemical precipitation infeasible.

Summary Comments of the Illinois Department of Natural Resources, Regional Planning Commissions, Zoning Boards or Other Entities

On November 2, 2016, the IDNR EcoCAT web-based tool was used and indicated that there were no aquatic endangered/threatened species present in the vicinity of the discharge. While the IDNR EcoCAT web-based tool did not terminate the consultation because of the nearby presence of Chuck-Will's-Willow (*Caprimulgus carolinensis*), future termination is likely.

Agency Conclusion.

This preliminary assessment was conducted pursuant to the Illinois Pollution Control Board regulation for Antidegradation found at 35 Ill. Adm. Code 302.105 (antidegradation standard) and was based on the information available to the Agency at the time the draft permit was written. We tentatively find that the proposed activity will result in the attainment of water quality standards; that all existing uses of the receiving stream will be maintained; that all technically and economically reasonable measures to avoid or minimize the extent of the proposed increase in pollutant loading have been incorporated into the proposed activity; and that this activity will benefit the community at large by allowing the continuation of coal mining with all of its economic benefits to the local economy. Comments received during the NPDES permit public notice period will be evaluated before a final decision is made by the Agency.

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Williamson Energy, LLC operates the Pond Creek No. 1 Mine which is located in Williamson County. The mining complex contains an estimated 383.3 million tons of clean, recoverable coal reserves. Williamson Energy commenced construction of the Mine in 2005. The Mine has a life expectancy of more than 20 years. The mine has one operating longwall system. The Preparation Plant facilities are capable of processing 2,000 tons of coal per hour. The productive capacity of the mine is 5-6 million tons per year. Coal is shipped by rail, truck and barge (via railroad).

Williamson currently operates the mine under the existing Permit 375 and Permit 417 from the Illinois Department of Natural Resources, Office of Mines and Minerals (IDNR-OMM). The Mine currently discharges under NPDES Permits IL0077666.

The Pond Creek Mine has submitted an antidegradation report as part of the following NPDES permit activities:

- To respond to the over capacity of water on-site, a new outfall to the Big Muddy River is proposed. The outfall structure will be a multi-port diffuser and a mixing zone is being requested for the discharge; and
- The mine permit modification request includes the discharge of stormwater from stormwater ponds associated with the proposed Refuse Disposal Area No. 3 to Pond Creek. (Discussed under another antidegradation assessment.) A mixing zone is being requested for Pond Creek.

The mine uses water in two areas of operation; dust suppression during coal extraction and wash water in the preparation plant. The water used in the coal extraction process is fresh, untreated water purchased from the City of Johnston City and it not recoverable. The water used to wash the coal in the preparation plant comes from the fresh water lake. Over time, the fine solid particles present in the thickener underflow that is pumped to the Slurry Impoundment/RDA No. 3 settle to the bottom of the impoundment leaving clarified water on the surface. There is some loss of water during the washing process. Additionally, since the fines do not all settle immediately in the slurry impoundment, the quality of the clarified water results in a need for additional water for the preparation plant. Therefore, preparation plant water is supplemented with mine infiltration water and/or stormwater.

An aquifer above the coal seam causes an influx in water into the Mine. The infiltrating groundwater is from a saline aquifer, with a chloride content of approximately 1,099 to 2,799 mg/L. The sulfate ranges between 1,720 and 2,120 mg/L. Presently, the mine is removing 2.7 MGD of this high-chloride groundwater from the active mine. During normal coal processing operations, the preparation plant requires approximately 2.3 MGD. It is necessary to remove the water from the mine to protect the health and safety of the workforce, as well as, the overall mining operation.

Water will be stored in the Water Staging Cell and will be pumped to the Big Muddy River diffuser for mixing. An evaluation of the mixing zone will be reported in a separate memo.

The information in this antidegradation assessment came from the December 2014 NPDES Renewal #2 for Permit #IL0077666 report by Alliance Consulting, Inc. titled "Pond Creek Mine No. 1 & Refuse Disposal Area No. 3" and the anti-degradation assessment provided on November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666

Identification and Characterization of the Affected Water Body.

The subject facility proposes to discharge to the Big Muddy River through Outfall 011 at a point where 37.0 cfs of flow exists upstream of the outfall during critical 7Q10 low-flow conditions. The Big Muddy River is classified as a General Use Water. The Big Muddy River is not listed as a biologically significant stream in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The Big Muddy River, Waterbody Segment, N-11, is listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List as impaired for aquatic life use with potential causes given as iron (dissolved), dissolved oxygen (non-pollutant), sedimentation/siltation (non-pollutant), and total suspended solids; fish consumption use with potential causes given as mercury and polychlorinated biphenyls; and primary contact recreation use with potential cause given as fecal coliform. Aesthetic quality use is fully supported. This segment of the Big Muddy River is not subject to enhanced dissolved oxygen standards.

Identification of Proposed Pollutant Load Increases or Potential Impacts on Uses.

The constituents of concern are chloride, sulfates, manganese, iron, and total suspended solids. The chloride loading will range from 19,141 to 1,197,698 lbs/day at a concentration ranging from 1,699 to 12,000 mg/L. The sulfate loading will range from 9,720 to 476,031 lbs/day at a concentration ranging from 820 to 2,120 mg/L. The manganese loading will range from 33 to 336 lbs/day at a concentration ranging from 0.125 to 0.419 mg/L. The Iron (total) loading will range from 34 to 348 lbs/day at a concentration ranging from 0.216 to 1.835 mg/L. Iron (dissolved) is only a fraction of the Iron (total) and will meet the water quality standard at the end-of-pipe or at the edge of the mixing zone. The Nickel loading will range from 1 to 8 lbs/day at a concentration ranging from 0.004 to 0.014 mg/L. The Copper loading will range from 1 to 8 lbs/day at a concentration ranging from 0.011 to 0.32 mg/L. The TSS loading will range from 2,337 to 118,332 lbs/day at a concentration ranging from 7 to 70 mg/L.

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Fate and Effect of Parameters Proposed for Increased Loading.

Chloride and sulfates would remain dissolved in the water and would move through the downstream continuum. Manganese, iron, Nickel, Copper, and total suspended solids will most likely settle and become part of the bed sediment load in the river. A mixing zone in the Big Muddy River will be utilized to dissipate chloride and sulfate to water quality standard levels. A zone of initial dilution will be utilized to dissipate Copper to water quality standard levels. Small amounts of chloride and sulfates would be removed by organisms as these substances are necessary for life. Because of the near real-time continuous monitoring of upstream and downstream conditions in the receiving stream, and the ability of the permittee's diffuser to adjust to flow and background concentration conditions, discharges will always be into a waterbody that is below water quality standards and in concentrations and flow combinations that will not cause or contribute to an exceedance downstream of the mixing zone. No adverse impacts to streams would occur as all water quality standards are expected to be met in the receiving water.

Purpose and Social & Economic Benefits of the Proposed Activity.

The disposal of excess water, including the water infiltrating the mine, will allow the mine to continue to operate. The Pond Creek Mine is expected to generate 5 - 6 million tons of useable coal. According to information given in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666, continued operation of the existing mine will continue to provide jobs for 203 employees with an annual payroll of approximately $18 million. In addition to these 203 direct employees, it is estimated that another 100 persons are employed in daily work associated with the Mine's production. This includes truck drivers, supply and support personnel, train crews, and technical personnel. In addition, other local businesses would also benefit from the wealth created by the mine. The operation of the mine provides tax revenues through payroll, coal severance, and mineral resource taxes for the surrounding counties and the State of Illinois. The total local, state, and federal revenues generated by the continuation of this Mine are approximately $78 million annually. Current employment statistics indicate that the unemployment rate for Williamson County was 7.5%.

Assessments of Alternatives for Less Increase in Loading or Minimal Environmental Degradation.

Excess water is proposed to be discharged to the Big Muddy River. Alternatives to this system have been evaluated by the mine company in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit and are summarized as follows:

Chloride and Sulfate

Membrane Processes. Standard reverse osmosis (RO) treatment results in a waste stream of water with a high concentration of contaminants that is typically 25% of the flow being sent to the RO treatment system. The reject stream must still be disposed of in a responsible manner. Due to the disposal issue, the Membrane Process is not viable.

Deep Well Injection of the Entire Groundwater Stream. The untreated groundwater infiltrate could be discharged directly to a deep well. Considering the cost and operational difficulties experienced to date for the two wells that have been installed at the nearby Sugar Camp Coal facility to accept 0.45 MGD each, deep well injection of the untreated groundwater infiltrate is not considered either applicable or feasible for the operation of the Mine.

Discharge to POTW or Other Sources. POTWs are not designed to treat wastewaters containing dissolved substances such as chloride or sulfate. This option is not feasible.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Mechanical Evaporation. Mechanical evaporation uses high temperatures and pressure to remove the water. The equipment is expensive to construct/install, operate, and maintain. Also, there would be materials to dispose of either in a landfill or in the Injection Wells that have been found to be unreliable for nearby mines. Therefore, this option is not considered either applicable or feasible for the operation of the mine.

Crystallizaton. Crystallization equipment is expensive to construct/install, operate and maintain. The cost is estimated at $0.25/gallon, the mine company concludes that crystallization is not a viable option for disposal of the stormwater runoff mine effluent.

Cost Effective Sulfate Removal (CESR) process. This is a proprietary technology that uses hydrated lime and proprietary chemicals to precipitate gypsum, metals and ettringite. Sludge would be produced that would require landfill disposal. The proprietary technology is still being developed. Additionally, this method is not proven to remove chlorides. These drawbacks make the CESR process infeasible for use at the coal mine.

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Additionally, this method is not proven to remove chlorides. These drawbacks make chemical precipitation infeasible.

Sedimentation/Siltation

Sedimentation. The facility is proposing to pump the groundwater infiltration to a Water Staging Cell where the water will have an opportunity for solids to settle out. The water will then be discharged to the Big Muddy River though the diffuser.

Use alternate sediment control and treatment devices. Alternatives to the use of sediment control ponds exist for control of discharge of settleable solids. Such alternatives include chemical soil stabilizers, erosion control blankets, geotextile filter bags, fiber rolls, silt fencing, straw mulch, straw bale dikes, and temporary seeding. These measures are aimed at minimization of the generation of settable solids. Most of these measures have been used previously during the construction and operations and in accordance with the current permit, as supplemental treatment and prevention of generation of settable solids. The use of alternative sediment control measures is considered practical and cost effective for the treatment and control of surface runoff in conjunction with sediment control ponds. However, the use of these practices to eliminate the proposed sediment control ponds is not feasible. Instead, it is being proposed that these BMPs be incorporated into the proposed alternative as needed.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Filtration. Filtration is a technology that is not feasible for the proposed facility because: filtration is much more expensive than sediment ponds, filtration processes require a steady stream of water for treatment which is not the case in treating stormwater runoff, a large area of land would be required for such a facility, and maintenance and supervision of the filtration and sludge disposal operation would be burdensome and would increase production costs.

Constructed Wetlands. Constructed wetlands have proven to be effective for treatment of suspended solids with several limitations. These limitations include; low and consistent rates of inflow, eventual sludge accumulation requiring dredging and wetland reconstruction, and release of hydrogen sulfide and other digestive gases into the atmosphere from sulfate digestion processes. Use of wetlands in mine stormwater runoff treatment would be limited by the enormous amount of land required to construct a wetland of sufficient size for the flow rates to be expected from such an operation.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Concerns with the use of chemical precipitation at the proposed coal mine include; worker safety regarding the chemicals to be used, treatment costs, process operation and maintenance, disposal of precipitate sludge in a landfill, necessity of treatment considering that acid water is not considered a factor for the proposed operation, susceptibility to system malfunction due to high volume flows from storm events, and improbability of actual improvement in overall water quality when compared to the use of sediment ponds. These drawbacks make chemical precipitation infeasible.

Summary Comments of the Illinois Department of Natural Resources, Regional Planning Commissions, Zoning Boards or Other Entities.

On November 2, 2016, the IDNR EcoCAT web-based tool was used and indicated that there were no aquatic endangered/threatened species present in the vicinity of the discharge. While the IDNR EcoCAT web-based tool did not terminate the consultation because of the nearby presence of Chuck-Will's-Willow (*Caprimulgus carolinensis*), future termination is likely.

Agency Conclusion.

This preliminary assessment was conducted pursuant to the Illinois Pollution Control Board regulation for Antidegradation found at 35 Ill. Adm. Code 302.105 (antidegradation standard) and was based on the information available to the Agency at the time the draft permit was written. We tentatively find that the proposed activity will result in the attainment of water quality standards; that all existing uses of the receiving stream will be maintained; that all technically and economically reasonable measures to avoid or minimize the extent of the proposed increase in pollutant loading have been incorporated into the proposed activity; and that this activity will benefit the community at large by allowing the continuation of coal mining with all of its economic benefits to the local economy. Comments received during the NPDES permit public notice period will be evaluated before a final decision is made by the Agency.

Antidegradation Assessment for RDA #3 (Supplemental Information)
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Pond 009 has an emergency discharge via Outfall 009ES. During normal operations, Pond 009 will discharge directly to Pond Creek via Outfall 009 and has provisions for allowed mixing. Outfall 009ES is not expected to have a discharge, except during an emergency.

Identification and Characterization of the Affected Water Body.

The subject facility discharges to an unnamed tributary of Pond Creek through Outfall 009ES at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. The unnamed tributary of Pond Creek is classified as a General Use Water. The unnamed tributary of Pond Creek is not listed as a biologically significant streams in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The unnamed tributary of Pond Creek, tributary to Waterbody Segment, NG-02, is not listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List since it has not been assessed. The unnamed tributary of Pond Creek is not subject to enhanced dissolved oxygen standards.

Agency Conclusion.

Upon completing the assessment, it has been determined that the proposed activity will result in only short-term, temporary increases in pollutant loading and will not result in long term or permanent impacts to existing uses including aquatic life habitat; therefore, we find that it is subject to Subsection (d) "Activities Not Subject to a Further Antidegradation Assessment" of 35 Ill. Adm. Code 302.105.

MEMORANDUM

DATE: July 12, 2019

TO: Manager, DWPC/FOS, Marion Region

FROM: Darin LeCrone, Manager, Industrial Unit, Permit Section DEL

SUBJECT: Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Bureau ID #W1998590001
Draft Renewed Permit, Public Notice/Fact Sheet

Please review the attached copy of the subject documents and notify the Mine Pollution Control Program if you take exception to the limitations, sampling frequency, sample type or other requirements therein.

If no response is received within fifteen (15) days from the date of this memorandum, we will assume that you concur in the issuance of the Public Notice.

If you have any questions, please contact Iwona Ward at 618/993-7200.

Thank you for your cooperation.

Pond Creek Mine
4 miles east of Johnston City, Illinois
(Williamson and Franklin Counties)

The Illinois Environmental Protection Agency (IEPA or Agency) has made a tentative determination to issue an NPDES permit to discharge into waters of the state and has prepared a draft permit and associated fact sheet for the above named discharger. The Public Notice period will begin and end on the dates indicated in the heading of this Public Notice/Fact Sheet. Comments will be accepted until midnight of the Public Notice period ending date indicated above, unless a request for an extension of the original comment period is granted by the Agency. Interested persons are invited to submit written comments on the draft permit to the IEPA at the above address. Commenters shall provide his or her name, address and the nature of the issues raised and the evidence supporting those issues. Commenters may include a request for public hearing. The NPDES permit and notice number(s) must appear on each comment page.

The application, engineer's review notes, Public Notice/Fact Sheet, draft permit, comments received, and other documents are available for inspection and may be copied at the IEPA between 9:30 a.m. and 3:30 p.m. Monday through Friday when scheduled by the interested person.

As provided in 35 Ill. Adm. Code 309.115(a) any person may submit a request for a public hearing and if such written comments or requests indicate a significant degree of public interest in the draft permit, the permitting authority may, at its discretion, hold a public hearing. The Agency shall issue public notice of such hearing no less than thirty (30) days prior to the date of such hearing in the manner described by 35 Ill. Adm. Code 309.109 through 309.112 for public notice. The Agency's responses to written and/or oral comments will be provided in the Responsiveness Summary provided when the final permit is issued.

The applicant proposes additional surface facilities area to an existing underground coal mine (SIC 1222). Mine operations result in the discharge of alkaline and acid mine drainage.

Public comments are invited on the entire draft permit. The following proposed modifications were incorporated into this Permit renewal:

Incorporated three (3) new outfalls designated as Outfall Nos. 009, 009ES and 011.

Various mining operation and drainage control plan revisions.

229.78 acres incorporated for new Refuse Disposal Area No. 3.

70.7 acres incorporated for the pipeline to the Big Muddy River.

145.32 acres for various IBR's for additional permit area.

Addition of bi-annual metals monitoring of discharges from Outfall Nos. 006, 007, 008,009, 009ES and 011.

Incorporated previously issued State Construction and Operating Permits (Subtitle D Permits).

This facility has eight (8) existing discharges which are located in Williamson County, Illinois. The following information identifies the discharge points and receiving streams:

Outfall	Receiving Stream	Latitude (North)	Longitude (West)
001	Unnamed tributary of Pond Creek	37° 50' 59.2"	88° 49' 37.5"
002	Unnamed tributary of Pond Creek	37° 50' 26.0"	88° 49' 51.5"
003	Unnamed tributary of Pond Creek	37° 50' 26.0"	88° 49' 58.0"
004	Unnamed tributary of Pond Creek	37° 50' 25.0"	88° 49' 56.6"
005	Unnamed tributary of Pond Creek	37° 50' 9.1"	88° 50' 00.0"
006	Unnamed tributary of Pond Creek	37° 50' 28.4"	88° 50' 40.6"
007	Unnamed tributary of Pond Creek	37° 50' 29.5"	88° 49' 34.0"
008	Unnamed tributary of Pond Creek	37° 50' 31.4"	88° 49' 33.9"

The stream segment NG-02 of Pond Creek receiving the flow from the unnamed tributary into which Outfall 001, 002, 003, 004, 005, 006, 007 and 008 discharges is not on the 2016 303(d) list of impaired waters.

Application is made for three (3) new discharges which are located in Williamson and Franklin Counties, Illinois. The following information identifies the discharge points and receiving streams:

Outfall	Receiving Stream	Latitude (North)	Longitude (West)
009	Pond Creek	37° 51' 16.1"	88° 49' 25.5"
009ES	Unnamed tributary to Pond Creek	37° 50' 52.3"	88° 48' 43.7"
011	Big Muddy River	37° 52' 37"	89° 01' 49"

The stream segment NG-02 of Pond Creek receiving the discharge from Outfalls 009 and 009ES is on the 2016 303(d) list of impaired waters.
The following parameters have been identified as the pollutants causing impairment.

Outfall	Pollutant
009, 009ES	Alteration in stream-side or littoral vegetative cover Changes in stream depth and velocity patterns Chlorides Loss of instream cover, dissolved oxygen, Sedimentation/siltation

The stream segment N-11 of Big Muddy River receiving the discharge from Outfall 011 is on the draft 2016 303(d) list of impaired waters. The following parameters have been identified as the pollutants causing impairment.

Outfall	Pollutant
011	Iron, Oxygen, dissolved; Sedimentation/Siltation Total Suspended Solids (TSS) Mercury, Polychlorinated biphenyls Fecal Coliform

DRAFT

JUL 12 2019

PUBLIC NOTICE

The alkaline mine discharge from this facility shall be monitored and limited at all times as follows:

Outfalls: 001, 002, 003, 004, 005

Discharge Condition	Parameters											
	Total Suspended Solids (3) (mg/l)		Iron (total) (3) (4) (mg/l)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/l)	Chloride (mg/l)	Cadmium (Cd) (mg/l) (6)	Hardness (5)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum								
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for alkaline mine discharges are contained in 35 Ill. Adm. Code 406.110.
(3) Effluent standards for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 001, 002, 003, 004 and 005 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average.
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limit.
(6) The Cadmium water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).

The acid mine discharge from this facility shall be monitored and limited at all times as follows:

Outfalls: 006, 007

Discharge Condition	Parameters												
	Total Suspended Solids (3) (mg/L)		Iron (total) (3) (4) (mg/L)		pH (3) (S.U.)	Alkalinity/ Acidity (3)	Sulfate (1) (mg/L)	Chloride (mg/L)	Cadmium (Cd) (mg/l) (6)	Mn (total) (mg/L)	Hardness (5)	Flow (MGD)	Settleable Solids (2) (ml/l)
	30 day average	daily maximum	30 day average	daily maximum

I Dry weather discharge (base flow or mine pumpage) from the outfall at times of "low flow" or "no flow" conditions in the receiving stream as defined in Special Condition No. 14.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24 hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. At such time that receiving stream flow subsides to the degree that the mixing ratio specified in Special Condition No. 14 is not available, monitoring requirements and permit limitations shall revert to Discharge Condition I.

(1) Sulfate water quality standards and effluent limitations determined in accordance with 35 Ill. Adm. Code 302.208(h).
(2) Settleable solids are monitored only as a result of a discharge due to precipitation events which exceed a predetermined 24-hour duration or snowmelt total. Settleable solids effluent limitations for alkaline mine discharges are contained in 35 Ill. Adm. Code 406.110.
(3) Effluent standards for mine discharges are contained in 35 Ill. Adm. Code 406.106.
(4) Discharges from Outfall 009 are subject to a 30-day average effluent limitation for Iron of 3.0 mg/l. Daily maximum effluent concentrations are calculated as twice the 30-day average
(5) Hardness monitoring is required to determine the appropriateness of the sulfate permit limitation.

Antidegradation Assessment for RDA #3
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Williamson Energy, LLC –Pond Creek Mine No. 1 is creating a new Refuse Disposal Area No. 3. This proposed disposal area will tie into the existing Refuse Disposal Area No. 1 & 2. Associated with the new Refuse Disposal Area No. 3, a new sediment basin will be installed to control the rainfall that falls on the out-slopes of the sediment basin and will discharge through new Outfalls 009 and 009ES.

The facility is also requesting a modification to Outfall 005. The facility is proposing to stop using the geotextile tubes, which were operated in a no discharge configuration. The facility was using the geotextile tubes to remove fine refuse and collecting the water and pumping it to the existing refuse disposal area. Williamson Energy, LLC is requesting to modify the drainage control plan to allow stormwater runoff from the area to discharge through sediment ditches and spillway, into Ditch D-5C and through Pond 005. This drainage pattern is not a deviation from the originally approved drainage plan. Due to the nature of the geotextile tubes, surface water quality is not anticipated to be affected once the geotextile tubes are out of service and no longer being utilized.

To not increase chlorides and sulfates due to the construction of RDA No. 3, the mine is eliminating or reclaiming the outslopes of RDA No. 1 and RDA No. 2 that previously discharged through Outfalls 007 and 008. Therefore, there will not be an increase in loading due to the construction of RDA No. 3.

The information in this antidegradation assessment came from the December 2014 NPDES Renewal #2 for Permit #IL0077666 report by Alliance Consulting, Inc. titled "Pond Creek Mine No. 1 & Refuse Disposal Area No. 3" and the anti-degradation assessment provided on November 18, 2016.

Identification and Characterization of the Affected Water Body.

The subject facility proposed to discharge to Pond Creek through Outfall 009 at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. Pond Creek is classified as a General Use Water. Pond Creek is not listed as a biologically significant stream in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. Pond Creek, Waterbody Segment, NG-02, is listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List as impaired for aquatic life use with potential causes given as alteration in stream-side or littoral vegetative cover (non-pollutant), changes in stream depth and velocity patterns (non-pollutant), chlorides, loss of instream cover (non-pollutant), dissolved oxygen (non-pollutant), and sedimentation/siltation. Primary contact recreation and secondary contact uses are fully supported. Pond Creek is not subject to enhanced dissolved oxygen standards.

Identification of Proposed Pollutant Load Increases or Potential Impacts on Uses.

The mine outfalls will be classified as acid mine drainage. Suspended solids will be treated in the sedimentation ponds. Effluent discharged from these ponds will contain suspended solids loadings that are similar to those occurring from the land in its present use. Sulfates and chlorides will undergo an increase in loading to the receiving streams as a result of the mining activities. Based on estimated effluent concentrations for this mine, chloride and sulfate will meet water quality standards in the receiving stream based on the mixing provided by my December 13, 2016 water quality memo.

Fate and Effect of Parameters Proposed for Increased Loading.

Suspended solids discharged will eventually be incorporated into bed sediments and will continue to move downstream. Sulfate and chloride will remain dissolved in the water and will move through the downstream continuum. Small amounts of these substances will be removed by organisms as these substances are necessary for life. No adverse impacts to the receiving streams will occur as all water quality standards will be met.

Purpose and Social & Economic Benefits of the Proposed Activity.

The disposal of excess water, including the water infiltrating the mine, will allow the mine to continue to operate. The Pond Creek Mine is expected to generate 5 - 6 million tons of useable coal annually. According to information given in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666, continued operation of the existing mine will continue to provide jobs for 203 employees with an annual payroll of approximately $18 million. In addition to these 203 direct employees, it is estimated that another 100 persons are employed in daily work associated with the Mine's production. This includes truck drivers, supply and support personnel, train crews, and technical personnel. In addition, other local businesses would also benefit from the wealth created by the mine. The operation of the mine provides tax revenues through payroll, coal severance, and mineral resource taxes for the surrounding counties and the State of Illinois. The total local, state, and federal revenues generated by the continuation of this Mine are approximately $78 million annually. Current employment statistics indicate that the unemployment rate for Williamson County was 7.5%.

Assessments of Alternatives for Less Increase in Loading or Minimal Environmental Degradation.

Alternatives to discharge through Outfall 009 have been evaluated by the mine company in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit and are summarized as follows:

Chloride and Sulfate

Membrane Processes. Standard reverse osmosis (RO) treatment results in a waste stream of water with a high concentration of contaminants that is typically 25% of the flow being sent to the RO treatment system. The reject stream must still be disposed of in a responsible manner. Due to the disposal issue, the Membrane Process is not viable.

Deep Well Injection of the Entire Groundwater Stream. The untreated groundwater infiltrate could be discharged directly to a deep well. Considering the cost and operational difficulties experienced to date for the two wells that have been installed at the nearby Sugar Camp Coal facility to accept 0.45 MGD each, deep well injection of the untreated groundwater infiltrate is not considered either applicable or feasible for the operation of the Mine.

Discharge to POTW or Other Sources. POTWs are not designed to treat wastewaters containing dissolved substances such as chloride or sulfate. This option is not feasible.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Mechanical Evaporation. Mechanical evaporation uses high temperatures and pressure to remove the water. The equipment is expensive to construct/install, operate, and maintain. Also, there would be materials to dispose of either in a landfill or in the Injection Wells that have been found to be unreliable for nearby mines. Therefore, this option is not considered either applicable or feasible for the operation of the mine.

Crystallizaton. Crystallization equipment is expensive to construct/install, operate and maintain. The cost is estimated at $0.25/gallon, the mine company concludes that crystallization is not a viable option for disposal of the stormwater runoff mine effluent.

Cost Effective Sulfate Removal (CESR) process. This is a proprietary technology that uses hydrated lime and proprietary chemicals to precipitate gypsum, metals and ettringite. Sludge would be produced that would require landfill disposal. The proprietary technology is still being developed. Additionally, this method is not proven to remove chlorides. These drawbacks make the CESR process infeasible for use at the coal mine.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Additionally, this method is not proven to remove chlorides. These drawbacks make chemical precipitation infeasible.

Sedimentation/Siltation

Sedimentation. The facility is proposing to pump the groundwater infiltration to a Water Staging Cell where the water will have an opportunity for solids to settle out. The water will then be discharged to the Big Muddy River though the diffuser.

Use alternate sediment control and treatment devices. Alternatives to the use of sediment control ponds exist for control of discharge of settleable solids. Such alternatives include chemical soil stabilizers, erosion control blankets, geotextile filter bags, fiber rolls, silt fencing, straw mulch, straw bale dikes, and temporary seeding. These measures are aimed at minimization of the generation of settable solids. Most of these measures have been used previously during the construction and operations and in accordance with the current permit, as supplemental treatment and prevention of generation of settable solids. The use of alternative sediment control measures is considered practical and cost effective for the treatment and control of surface runoff in conjunction with sediment control ponds. However, the use of these practices to eliminate the proposed sediment control ponds is not feasible. Instead, it is being proposed that these BMPs be incorporated into the proposed alternative as needed.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Filtration. Filtration is a technology that is not feasible for the proposed facility because: filtration is much more expensive than sediment ponds, filtration processes require a steady stream of water for treatment which is not the case in treating stormwater runoff, a large area of land would be required for such a facility, and maintenance and supervision of the filtration and sludge disposal operation would be burdensome and would increase production costs.

PUBLIC NOTICE

Antidegradation Assessment for RDA #3
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Constructed Wetlands. Constructed wetlands have proven to be effective for treatment of suspended solids with several limitations. These limitations include; low and consistent rates of inflow, eventual sludge accumulation requiring dredging and wetland reconstruction, and release of hydrogen sulfide and other digestive gases into the atmosphere from sulfate digestion processes. Use of wetlands in mine stormwater runoff treatment would be limited by the enormous amount of land required to construct a wetland of sufficient size for the flow rates to be expected from such an operation.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Concerns with the use of chemical precipitation at the proposed coal mine include; worker safety regarding the chemicals to be used, treatment costs, process operation and maintenance, disposal of precipitate sludge in a landfill, necessity of treatment considering that acid water is not considered a factor for the proposed operation, susceptibility to system malfunction due to high volume flows from storm events, and improbability of actual improvement in overall water quality when compared to the use of sediment ponds. These drawbacks make chemical precipitation infeasible.

Summary Comments of the Illinois Department of Natural Resources, Regional Planning Commissions, Zoning Boards or Other Entities

On November 2, 2016, the IDNR EcoCAT web-based tool was used and indicated that there were no aquatic endangered/threatened species present in the vicinity of the discharge. While the IDNR EcoCAT web-based tool did not terminate the consultation because of the nearby presence of Chuck-Will's-Willow (*Caprimulgus carolinensis*), future termination is likely.

Agency Conclusion.

This preliminary assessment was conducted pursuant to the Illinois Pollution Control Board regulation for Antidegradation found at 35 Ill. Adm. Code 302.105 (antidegradation standard) and was based on the information available to the Agency at the time the draft permit was written. We tentatively find that the proposed activity will result in the attainment of water quality standards; that all existing uses of the receiving stream will be maintained; that all technically and economically reasonable measures to avoid or minimize the extent of the proposed increase in pollutant loading have been incorporated into the proposed activity; and that this activity will benefit the community at large by allowing the continuation of coal mining with all of its economic benefits to the local economy. Comments received during the NPDES permit public notice period will be evaluated before a final decision is made by the Agency.

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Williamson Energy, LLC operates the Pond Creek No. 1 Mine which is located in Williamson County. The mining complex contains an estimated 383.3 million tons of clean, recoverable coal reserves. Williamson Energy commenced construction of the Mine in 2005. The Mine has a life expectancy of more than 20 years. The mine has one operating longwall system. The Preparation Plant facilities are capable of processing 2,000 tons of coal per hour. The productive capacity of the mine is 5-6 million tons per year. Coal is shipped by rail, truck and barge (via railroad).

Williamson currently operates the mine under the existing Permit 375 and Permit 417 from the Illinois Department of Natural Resources, Office of Mines and Minerals (IDNR-OMM). The Mine currently discharges under NPDES Permits IL0077666.

The Pond Creek Mine has submitted an antidegradation report as part of the following NPDES permit activities:

- To respond to the over capacity of water on-site, a new outfall to the Big Muddy River is proposed. The outfall structure will be a multi-port diffuser and a mixing zone is being requested for the discharge; and
- The mine permit modification request includes the discharge of stormwater from stormwater ponds associated with the proposed Refuse Disposal Area No. 3 to Pond Creek. (Discussed under another antidegradation assessment.) A mixing zone is being requested for Pond Creek.

The mine uses water in two areas of operation; dust suppression during coal extraction and wash water in the preparation plant. The water used in the coal extraction process is fresh, untreated water purchased from the City of Johnston City and it not recoverable. The water used to wash the coal in the preparation plant comes from the fresh water lake. Over time, the fine solid particles present in the thickener underflow that is pumped to the Slurry Impoundment/RDA No. 3 settle to the bottom of the impoundment leaving clarified water on the surface. There is some loss of water during the washing process. Additionally, since the fines do not all settle immediately in the slurry impoundment, the quality of the clarified water results in a need for additional water for the preparation plant. Therefore, preparation plant water is supplemented with mine infiltration water and/or stormwater.

An aquifer above the coal seam causes an influx in water into the Mine. The infiltrating groundwater is from a saline aquifer, with a chloride content of approximately 1,099 to 2,799 mg/L. The sulfate ranges between 1,720 and 2,120 mg/L. Presently, the mine is removing 2.7 MGD of this high-chloride groundwater from the active mine. During normal coal processing operations, the preparation plant requires approximately 2.3 MGD. It is necessary to remove the water from the mine to protect the health and safety of the workforce, as well as, the overall mining operation.

Water will be stored in the Water Staging Cell and will be pumped to the Big Muddy River diffuser for mixing. An evaluation of the mixing zone will be reported in a separate memo.

The information in this antidegradation assessment came from the December 2014 NPDES Renewal #2 for Permit #IL0077666 report by Alliance Consulting, Inc. titled "Pond Creek Mine No. 1 & Refuse Disposal Area No. 3" and the anti-degradation assessment provided on November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666

Identification and Characterization of the Affected Water Body.

The subject facility proposes to discharge to the Big Muddy River through Outfall 011 at a point where 37.0 cfs of flow exists upstream of the outfall during critical 7Q10 low-flow conditions. The Big Muddy River is classified as a General Use Water. The Big Muddy River is not listed as a biologically significant stream in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The Big Muddy River, Waterbody Segment, N-11, is listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List as impaired for aquatic life use with potential causes given as iron (dissolved), dissolved oxygen (non-pollutant), sedimentation/siltation (non-pollutant), and total suspended solids; fish consumption use with potential causes given as mercury and polychlorinated biphenyls; and primary contact recreation use with potential cause given as fecal coliform. Aesthetic quality use is fully supported. This segment of the Big Muddy River is not subject to enhanced dissolved oxygen standards.

Identification of Proposed Pollutant Load Increases or Potential Impacts on Uses.

The constituents of concern are chloride, sulfates, manganese, iron, and total suspended solids. The chloride loading will range from 19,141 to 1,197,698 lbs/day at a concentration ranging from 1,699 to 12,000 mg/L. The sulfate loading will range from 9,720 to 476,031 lbs/day at a concentration ranging from 820 to 2,120 mg/L. The manganese loading will range from 33 to 336 lbs/day at a concentration ranging from 0.125 to 0.419 mg/L. The Iron (total) loading will range from 34 to 348 lbs/day at a concentration ranging from 0.216 to 1.835 mg/L. Iron (dissolved) is only a fraction of the Iron (total) and will meet the water quality standard at the end-of-pipe or at the edge of the mixing zone. The Nickel loading will range from 1 to 8 lbs/day at a concentration ranging from 0.004 to 0.014 mg/L. The Copper loading will range from 1 to 8 lbs/day at a concentration ranging from 0.011 to 0.32 mg/L. The TSS loading will range from 2,337 to 118,332 lbs/day at a concentration ranging from 7 to 70 mg/L.

DRAFT

JUL 12 2019

PUBLIC NOTICE

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Fate and Effect of Parameters Proposed for Increased Loading.

Chloride and sulfates would remain dissolved in the water and would move through the downstream continuum. Manganese, iron, Nickel, Copper, and total suspended solids will most likely settle and become part of the bed sediment load in the river. A mixing zone in the Big Muddy River will be utilized to dissipate chloride and sulfate to water quality standard levels. A zone of initial dilution will be utilized to dissipate Copper to water quality standard levels. Small amounts of chloride and sulfates would be removed by organisms as these substances are necessary for life. Because of the near real-time continuous monitoring of upstream and downstream conditions in the receiving stream, and the ability of the permittee's diffuser to adjust to flow and background concentration conditions, discharges will always be into a waterbody that is below water quality standards and in concentrations and flow combinations that will not cause or contribute to an exceedance downstream of the mixing zone. No adverse impacts to streams would occur as all water quality standards are expected to be met in the receiving water.

Purpose and Social & Economic Benefits of the Proposed Activity.

The disposal of excess water, including the water infiltrating the mine, will allow the mine to continue to operate. The Pond Creek Mine is expected to generate 5 - 6 million tons of useable coal. According to information given in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit IL0077666, continued operation of the existing mine will continue to provide jobs for 203 employees with an annual payroll of approximately $18 million. In addition to these 203 direct employees, it is estimated that another 100 persons are employed in daily work associated with the Mine's production. This includes truck drivers, supply and support personnel, train crews, and technical personnel. In addition, other local businesses would also benefit from the wealth created by the mine. The operation of the mine provides tax revenues through payroll, coal severance, and mineral resource taxes for the surrounding counties and the State of Illinois. The total local, state, and federal revenues generated by the continuation of this Mine are approximately $78 million annually. Current employment statistics indicate that the unemployment rate for Williamson County was 7.5%.

Assessments of Alternatives for Less Increase in Loading or Minimal Environmental Degradation.

Excess water is proposed to be discharged to the Big Muddy River. Alternatives to this system have been evaluated by the mine company in a document dated November 18, 2016 entitled Anti-degradation Assessment, Pond Creek No. 1 Mine, NPDES Permit and are summarized as follows:

Chloride and Sulfate

Membrane Processes. Standard reverse osmosis (RO) treatment results in a waste stream of water with a high concentration of contaminants that is typically 25% of the flow being sent to the RO treatment system. The reject stream must still be disposed of in a responsible manner. Due to the disposal issue, the Membrane Process is not viable.

Deep Well Injection of the Entire Groundwater Stream. The untreated groundwater infiltrate could be discharged directly to a deep well. Considering the cost and operational difficulties experienced to date for the two wells that have been installed at the nearby Sugar Camp Coal facility to accept 0.45 MGD each, deep well injection of the untreated groundwater infiltrate is not considered either applicable or feasible for the operation of the Mine.

Discharge to POTW or Other Sources. POTWs are not designed to treat wastewaters containing dissolved substances such as chloride or sulfate. This option is not feasible.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Mechanical Evaporation. Mechanical evaporation uses high temperatures and pressure to remove the water. The equipment is expensive to construct/install, operate, and maintain. Also, there would be materials to dispose of either in a landfill or in the Injection Wells that have been found to be unreliable for nearby mines. Therefore, this option is not considered either applicable or feasible for the operation of the mine.

Crystallizaton. Crystallization equipment is expensive to construct/install, operate and maintain. The cost is estimated at $0.25/gallon, the mine company concludes that crystallization is not a viable option for disposal of the stormwater runoff mine effluent.

Cost Effective Sulfate Removal (CESR) process. This is a proprietary technology that uses hydrated lime and proprietary chemicals to precipitate gypsum, metals and ettringite. Sludge would be produced that would require landfill disposal. The proprietary technology is still being developed. Additionally, this method is not proven to remove chlorides. These drawbacks make the CESR process infeasible for use at the coal mine.

Antidegradation Assessment for Big Muddy River Mixing
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Additionally, this method is not proven to remove chlorides. These drawbacks make chemical precipitation infeasible.

Sedimentation/Siltation

Sedimentation. The facility is proposing to pump the groundwater infiltration to a Water Staging Cell where the water will have an opportunity for solids to settle out. The water will then be discharged to the Big Muddy River though the diffuser.

Use alternate sediment control and treatment devices. Alternatives to the use of sediment control ponds exist for control of discharge of settleable solids. Such alternatives include chemical soil stabilizers, erosion control blankets, geotextile filter bags, fiber rolls, silt fencing, straw mulch, straw bale dikes, and temporary seeding. These measures are aimed at minimization of the generation of settable solids. Most of these measures have been used previously during the construction and operations and in accordance with the current permit, as supplemental treatment and prevention of generation of settable solids. The use of alternative sediment control measures is considered practical and cost effective for the treatment and control of surface runoff in conjunction with sediment control ponds. However, the use of these practices to eliminate the proposed sediment control ponds is not feasible. Instead, it is being proposed that these BMPs be incorporated into the proposed alternative as needed.

No discharge. Given the climate of Williamson County, the mine company concludes that evaporation is not a viable option for disposal of the stormwater runoff mine effluent.

Filtration. Filtration is a technology that is not feasible for the proposed facility because: filtration is much more expensive than sediment ponds, filtration processes require a steady stream of water for treatment which is not the case in treating stormwater runoff, a large area of land would be required for such a facility, and maintenance and supervision of the filtration and sludge disposal operation would be burdensome and would increase production costs.

Constructed Wetlands. Constructed wetlands have proven to be effective for treatment of suspended solids with several limitations. These limitations include; low and consistent rates of inflow, eventual sludge accumulation requiring dredging and wetland reconstruction, and release of hydrogen sulfide and other digestive gases into the atmosphere from sulfate digestion processes. Use of wetlands in mine stormwater runoff treatment would be limited by the enormous amount of land required to construct a wetland of sufficient size for the flow rates to be expected from such an operation.

Chemical Precipitation. Alkaline chemicals may be added to acid mine effluent to precipitate metals. The sludge produced must be disposed of and in some cases will contain hazardous materials added to the wastewater to attain precipitation. The additives used require mining in their own right. The water discharged may contain these additives, such as aluminum, in elevated concentrations. Concerns with the use of chemical precipitation at the proposed coal mine include; worker safety regarding the chemicals to be used, treatment costs, process operation and maintenance, disposal of precipitate sludge in a landfill, necessity of treatment considering that acid water is not considered a factor for the proposed operation, susceptibility to system malfunction due to high volume flows from storm events, and improbability of actual improvement in overall water quality when compared to the use of sediment ponds. These drawbacks make chemical precipitation infeasible.

Summary Comments of the Illinois Department of Natural Resources, Regional Planning Commissions, Zoning Boards or Other Entities.

On November 2, 2016, the IDNR EcoCAT web-based tool was used and indicated that there were no aquatic endangered/threatened species present in the vicinity of the discharge. While the IDNR EcoCAT web-based tool did not terminate the consultation because of the nearby presence of Chuck-Will's-Willow (*Caprimulgus carolinensis*), future termination is likely.

Agency Conclusion.

This preliminary assessment was conducted pursuant to the Illinois Pollution Control Board regulation for Antidegradation found at 35 Ill. Adm. Code 302.105 (antidegradation standard) and was based on the information available to the Agency at the time the draft permit was written. We tentatively find that the proposed activity will result in the attainment of water quality standards; that all existing uses of the receiving stream will be maintained; that all technically and economically reasonable measures to avoid or minimize the extent of the proposed increase in pollutant loading have been incorporated into the proposed activity; and that this activity will benefit the community at large by allowing the continuation of coal mining with all of its economic benefits to the local economy. Comments received during the NPDES permit public notice period will be evaluated before a final decision is made by the Agency.

DRAFT
JUL 12 2019
PUBLIC NOTICE

Antidegradation Assessment for RDA #3 (Supplemental Information)
Williamson Energy, LLC
Pond Creek Mine
NPDES Permit No. IL0077666
Williamson County

Pond 009 has an emergency discharge via Outfall 009ES. During normal operations, Pond 009 will discharge directly to Pond Creek via Outfall 009 and has provisions for allowed mixing. Outfall 009ES is not expected to have a discharge, except during an emergency.

Identification and Characterization of the Affected Water Body.

The subject facility discharges to an unnamed tributary of Pond Creek through Outfall 009ES at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. The unnamed tributary of Pond Creek is classified as a General Use Water. The unnamed tributary of Pond Creek is not listed as a biologically significant streams in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The unnamed tributary of Pond Creek, tributary to Waterbody Segment, NG-02, is not listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List since it has not been assessed. The unnamed tributary of Pond Creek is not subject to enhanced dissolved oxygen standards.

Agency Conclusion.

Upon completing the assessment, it has been determined that the proposed activity will result in only short-term, temporary increases in pollutant loading and will not result in long term or permanent impacts to existing uses including aquatic life habitat; therefore, we find that it is subject to Subsection (d) "Activities Not Subject to a Further Antidegradation Assessment" of 35 Ill. Adm. Code 302.105.

NPDES Permit No. IL0077666

Illinois Environmental Protection Agency

Division of Water Pollution Control

1021 North Grand Avenue, East

P.O. Box 19276

Springfield, Illinois 62794-9276

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

Renewed NPDES Permit

Expiration Date:

Issue Date:
Effective Date:

Name and Address of Permittee:

Williamson Energy, LLC
P.O. Box 300
Johnston City, Illinois 62951

Facilty Name and Address:

Williamson Energy, LLC
Pond Creek Mine
4 miles east of Johnston City, Illinois
(Williamson and Franklin Counties)

Discharge Number and Classification:		Receiving waters
001, 002, 003, 004, 005	Alkaline Mine Drainage	Unnamed tributary to Pond Creek
006, 007, 008	Acid Mine Drainage	Unnamed tributary to Pond Creek
009	Alkaline Mine Drainage	Pond Creek
009ES	Alkaline Mine Drainage	Unnamed tributary to Pond Creek
011	Alkaline Mine Drainage	Big Muddy River

In compliance with the provisions of the Illinois Environmental Protection Act, Subtitle C and/or Subtitle D Rules and Regulations of the Illinois Pollution Control Board, and the Clean Water Act, the above-named permittee is hereby authorized to discharge at the above location to the above-named receiving stream in accordance with the standard conditions and attachments herein.

Permittee is not authorized to discharge after the above expiration date. In order to receive authorization to discharge beyond the expiration date, the permittee shall submit the proper application as required by the Illinois Environmental Protection Agency (IEPA) not later than 180 days prior to the expiration date.

PUBLIC NOTICE

NPDES Permit No. IL0077666

Effluent Limitations and Monitoring

From the effective date of this Permit until the expiration date, the effluent of the following discharge shall be monitored and limited at all times as follows:

Outfalls*: 001, 002, 003, 004, 005 (Alkaline Mine Drainage)

Discharge Condition	Parameters											
	Total Suspended Solids (mg/L) ***		Iron (total) (mg/L) ***		pH** (S.U.) ***	Alkalinity/ Acidity ***	Sulfate (mg/L) ***	Chloride (mg/L) ***	Cadmium (Cd) (mg/l)	Hardness ***	Flow (MGD)	Settleable Solids (ml/l)
	30 day average	daily maximum	30 day average	daily maximum								
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

Sampling during all Discharge Conditions shall be performed utilizing the grab sampling method.

*** There shall be a minimum of nine (9) samples collected during the quarter when the pond is discharging. Of these 9 samples, a minimum of one sample each month shall be taken during either Discharge Condition I or IV should such discharge condition occur. A "no flow" situation is not considered to be a sample of the discharge. In the event that Discharge Conditions II and/or III occur, grab sample of each discharge caused by the above precipitation events (Discharge Conditions II and/or III) shall be taken and analyzed for the parameters identified in the table above during at least 3 separate events each quarter. For quarters in which there are less than 3 such precipitation events resulting in discharges, a grab sample of the discharge shall be required whenever such precipitation event(s) occur(s). Should a sufficient number of discharge events occur during the quarter, the remaining three (3) quarterly samples may be taken during any of the Discharge Conditions described above.

The water quality standards for sulfate and chloride must be met in discharges from the above referenced outfall as well as in the receiving stream.

---

* The Permittee is subject to the limitations, monitoring, and reporting requirements of Special Condition No. 13 for the discharges from Outfalls 001, 002, 003, 004 and 005 and unnamed tributary of Pond Creek receiving such discharges.

** No discharge is allowed from any above referenced permitted outfall during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

NPDES Permit No. IL0077666

Effluent Limitations and Monitoring

From the effective date of this Permit until the expiration date, the effluent of the following discharge shall be monitored and limited at all times as follows:

Outfalls*: 006, 007 (Acid Mine Drainage)

Discharge Condition	Parameters												
	Total Suspended Solids (mg/L) ***		Iron (total) (mg/L) ***		pH** (S.U.) ***	Alkalinity/ Acidity ***	Sulfate (mg/L) ***	Chloride (mg/L) ***	Cadmium (Cd) (mg/l) ***	Mn (total) (mg/L) ***	Hardness ***	Flow (MGD)	Settleable Solids (ml/l)
	30 day average	daily maximum	30 day average	daily maximum									
I	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	1.0	Monitor only	Measure When Sampling	-
II	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	500	-	-	Monitor only	Measure When Sampling	-
IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	0.0144	1.0	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(b), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 1-year, 24-hour precipitation event, but less than or equal to the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 1-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

Sampling during all Discharge Conditions shall be performed utilizing the grab sampling method.

*** There shall be a minimum of nine (9) samples collected during the quarter when the pond is discharging. Of these 9 samples, a minimum of one sample each month shall be taken during either Discharge Condition I or IV should such discharge condition occur. A "no flow" situation is not considered to be a sample of the discharge. In the event that Discharge Conditions II and/or III occur, grab sample of each discharge caused by the above precipitation events (Discharge Conditions II and/or III) shall be taken and analyzed for the parameters identified in the table above during at least 3 separate events each quarter. For quarters in which there are less than 3 such precipitation events resulting in discharges, a grab sample of the discharge shall be required whenever such precipitation event(s) occur(s). Should a sufficient number of discharge events occur during the quarter, the remaining three (3) quarterly samples may be taken during any of the Discharge Conditions described above.

The water quality standards for sulfate and chloride must be met in discharges from the above referenced outfall as well as in the receiving stream.

---

* The Permittee is subject to the limitations, monitoring, and reporting requirements of Special Condition No. 13 for the discharges from Outfalls 006 and 007 and unnamed tributary of Pond Creek receiving such discharges. Also, discharges from Outfalls 006 and 007 shall be subject to the limitations, monitoring, and reporting requirements of Special Condition No. 18.

** No discharge is allowed from any above referenced permitted outfall during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

IV	35	70	3.0	6.0	6.5-9.0	Alk.>Acid	1250	500	1.0	Monitor only	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.110(b), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 1-year, 24-hour precipitation event, but less than or equal to the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 1-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For outfalls which have no allowed mixing, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

Sampling during all Discharge Conditions shall be performed utilizing the grab sampling method.

*** There shall be a minimum of nine (9) samples collected during the quarter when the pond is discharging. Of these 9 samples, a minimum of one sample each month shall be taken during either Discharge Condition I or IV should such discharge condition occur. A "no flow" situation is not considered to be a sample of the discharge. In the event that Discharge Conditions II and/or III occur, grab sample of each discharge caused by the above precipitation events (Discharge Conditions II and/or III) shall be taken and analyzed for the parameters identified in the table above during at least 3 separate events each quarter. For quarters in which there are less than 3 such precipitation events resulting in discharges, a grab sample of the discharge shall be required whenever such precipitation event(s) occur(s). Should a sufficient number of discharge events occur during the quarter, the remaining three (3) quarterly samples may be taken during any of the Discharge Conditions described above.

The water quality standards for sulfate and chloride must be met in discharges from the above referenced outfall as well as in the receiving stream.

---

* The Permittee is subject to the limitations, monitoring, and reporting requirements of Special Condition No. 13 for the discharges from Outfalls 008 and unnamed tributary of Pond Creek receiving such discharges. Also, discharges from Outfalls 008 and 009ES shall be subject to the limitations, monitoring, and reporting requirements of Special Condition No. 18.

** No discharge is allowed from any above referenced permitted outfall during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

NPDES Permit No. IL000077666

Effluent Limitations and Monitoring

From the effective date of this Permit until the expiration date, the effluent of the following discharge shall be monitored and limited at all times as follows:

Outfall*: 009 (Alkaline Mine Drainage)

Discharge Condition	Parameters													
	Total Suspended Solids (mg/L) ***		Iron (total) (mg/L) ***		pH** (S.U.) ***	Alkalinity/ Acidity ***	Sulfate (mg/L) ***	Chloride (mg/L) ***	Mn (total) (mg/L) ***		Hardness ***	Copper (Cu) ***	Flow (MGD)	Settleable Solids (ml/l)
	30 day average	daily maximum	30 day average	daily maximum					30 day average	daily maximum

II	-	-	-	-	6.0-9.0	-	1250	See Special Condition No. 14	-	-	Monitor only	-	Measure When Sampling	0.5
III	-	-	-	-	6.0-9.0	-	1250	See Special Condition No. 14	-	-	Monitor only	-	Measure When Sampling	-
IV	35	70	3.0	6.0	6.0-9.0	Alk.>Acid	1250	See Special Condition No. 14	2.0	4.0	Monitor only	0.0245	Measure When Sampling	-

I Dry weather discharge (base flow or mine pumpage) from the outfall at times of "low flow" or "no flow" conditions in the receiving stream are subject to Special Condition No. 14.

II In accordance with 35 Ill. Adm. Code 406.110(a), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b). The 10-year, 24-hour precipitation event for this area is considered to be 2.97 inches.

III In accordance with 35 Ill. Adm. Code 406.110(d), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.106(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. At such time that receiving stream flow subsides to the degree that the mixing ratio specified in Special Condition No. 14 is not available, monitoring requirements and permit limitations shall revert to Discharge Condition I.

Sampling during all Discharge Conditions shall be performed utilizing the grab sampling method.

*** There shall be a minimum of nine (9) samples collected during the quarter when the pond is discharging. Of these 9 samples, a minimum of one sample each month shall be taken during either Discharge Condition I or IV should such discharge condition occur. A "no flow" situation is not considered to be a sample of the discharge. In the event that Discharge Conditions II and/or III occur, grab sample of each discharge caused by the above precipitation events (Discharge Conditions II and/or III) shall be taken and analyzed for the parameters identified in the table above during at least 3 separate events each quarter. For quarters in which there are less than 3 such precipitation events resulting in discharges, a grab sample of the discharge shall be required whenever such precipitation event(s) occur(s). Should a sufficient number of discharge events occur during the quarter, the remaining three (3) quarterly samples may be taken during any of the Discharge Conditions described above.

Discharges from the above referenced outfall that are subject to the requirements of Discharge Conditions II, III and/or IV must meet the water quality standards for sulfate and chloride in the receiving stream.

---

* The Permittee is subject to the limitations, monitoring, and reporting requirements of Special Condition No. 14 for the discharges from Outfall 009 and Pond Creek receiving such discharges. Also, discharges from Outfall 009 shall be subject to the limitations, monitoring and reporting requirements of Special Condition No. 18.

** No discharge is allowed from any above referenced permitted outfall during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

NPDES Permit No. IL0077666

Effluent Limitations and Monitoring

Upon completion of Special Condition 10 and approval from the Agency, the effluent of the following discharge shall be monitored and limited at all times as follows:

Outfalls*: 001, 002, 003, 004, 005, 006, 007, 008, 009, 009ES (Reclamation Area Drainage)

Discharge Condition	Parameters					
	pH** (S.U.) ***	Sulfate (mg/L) ***	Chloride (mg/L) ***	Hardness ***	Flow (MGD)	Settleable Solids (ml/l) ***
I	6.5-9.0	1250	500	Monitor only	Measure When Sampling	0.5
II	6.0-9.0	1250	500	Monitor only	Measure When Sampling	0.5
III	6.0-9.0	1250	500	Monitor only	Measure When Sampling	-
IV	6.5-9.0	1250	500	Monitor only	Measure When Sampling	0.5

I Dry weather discharge (base flow, if present) from the outfall.

II In accordance with 35 Ill. Adm. Code 406.109(b), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period less than or equal to the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations. The 10-year, 24-hour precipitation event for this area is considered to be 5.21 inches.

III In accordance with 35 Ill. Adm. Code 406.109(c), any discharge or increase in the volume of a discharge caused by precipitation within any 24-hour period greater than the 10-year, 24-hour precipitation event (or snowmelt of equivalent volume) shall comply with the indicated limitations instead of those in 35 Ill. Adm. Code 406.109(b).

IV Discharges continuing 24 hours after cessation of precipitation event that resulted in discharge. For reclamation area discharges, monitoring requirements and permit limitations of Discharge Condition IV are identical to Discharge Condition I to which the outfall discharge has reverted.

Sampling during all Discharge Conditions shall be performed utilizing the grab sampling method. A "no flow" situation is not considered to be a sample of the discharge.

*** One sample per month (1/month) shall be collected if and/or when a discharge occurs under either Discharge Condition I, II or IV and analyzed for the parameters identified in the table above. In addition, at least three (3) grab samples shall be taken each quarter from separate precipitation events under Discharge Condition III and analyzed for parameters indicated in the above table. For quarters in which there are less than 3 such precipitation events, a grab sample of the discharge shall be required whenever such precipitation event(s) occur(s).

The water quality standards for sulfate and chloride must be met in discharges from the above referenced outfall as well as in the receiving stream.

---

* The Permittee is subject to the limitations, monitoring, and reporting requirements of Special Condition Nos. 13 and 15 for the discharges from Outfalls 001, 002, 003, 004, 005, 006, 007, 008 and 009ES and unnamed tributary to Pond Creek and Outfall 009 tributary to Pond Creek receiving such discharges.

** No discharge is allowed from any above referenced permitted outfall during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

NPDES Permit No. IL0077666

Effluent Limitations and Monitoring

Upon completion of Special Condition No. 11 and approval from the Agency, the effluent of the following discharge shall be monitored and limited at all times as follows:

Outfalls: 001, 002, 003, 004, 05, 006, 007, 008, 009, 009ES (Stormwater Discharge)

Parameters	
pH* (S.U.) **	Settleable Solids (ml/l) **
6.0-9.0	0.5

Stormwater discharge monitoring is subject to the following reporting requirements:

Analysis of samples must be submitted with second quarter Discharge Monitoring Reports.

If discharges can be shown to be similar, a plan may be submitted by November 1 of each year preceding sampling to propose grouping of similar discharges and/or updated previously submitted groupings. If updating of a previously submitted plan is not necessary, a written notification to the Agency, indicating such is required. Upon approval from the Agency, one representative sample for each group may be submitted.

Annual stormwater monitoring is required for all discharges until Final SMCRA Bond is released and approval to cease such monitoring is obtained from the Agency.

---

* No discharge is allowed from any above referenced permitted outfalls during "low flow" or "no flow" conditions in the receiving stream unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.204 for pH.

** One (1) sample per year shall be collected and analyzed for the indicated parameter; however, such sampling and analysis is required only if and/or when a discharge occurs from the individual Outfall(s) identified above.

DRAFT

JUL 12 2019

PUBLIC NOTICE

NPDES Permit No. IL0077666

Construction Authorization No. 3117-15

Authorization is hereby granted to the above designee to construct and operate the mine and mine refuse area described as follows:

Surface facilities in support of an underground mine containing a total of 986.10 acres, also identified as IDNR/OMM Permit Nos. 375 417 and 456, located in Sections 2, 3, 4, 7, 8, 9, 10, 12, 14, 15, 16, 17, 18 and 29, Township 8 South, Range 4 East, and Sections 11, 12, 13, 35, 36, Township 8 South, Range 3 East, Williamson County, 3rd P.M., Illinois, and Sections 1, 2 and 12, Township 8 South, Range 2 East, and Sections 7, 8, 9, 11, 14, 15, 16, and 17, Township 8 South, Range 3 East, and Sections 27, 28, 29, 30, 31, 32, 34 and 35, Township 7 South, Range 2 East, Franklin County , 3rd P.M., Illinois.

The surface facilities at this site contain drainage control structures (ditches) and nine (9) sediment basins, incline slope, coal preparation plant, coal stockpiles, refuse disposal areas, coal conveyors, railroad loop, ventilation shafts, parking areas, access roads, and office and maintenance buildings. The following additional areas are being added to the original facilities approved for this operation.

An additional area of 4.05 acres, identified as IBR No. 4 to OMM Permit No. 375, located in Section 12, Township 8 South, Range 3 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log Nos. 2416-06 and 2416-06-A, installation of three (3) boreholes and associated pipeline to ensure mine ventilation is approved. Runoff from the area approved herein should be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 9.71 acres, identified as IBR No. 5 to OMM Permit No. 375, located in Section 13, Township 8 South, Range 3 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log Nos. 2380-06 and 2380-06-A, installation of the support facilities to ensure mine ventilation is approved. Runoff from the area approved herein should be controlled by two temporary catch basins, silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 3.20 acres, identified as IBR No. 10 to OMM Permit No. 375, located in Section 8, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log Nos. 1396-07 and 1396-07-A, installation of two (2) boreholes and a vertical pump to ensure mine ventilation is approved. Runoff from the area approved herein should be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 12.50 acres, identified as IBR No. 11 to OMM Permit No. 375, located in Sections 4, 7 and 8, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log Nos. 1525-07 and 1525-07-A, this area is incorporated for the installation of the water line from the Locust Grove Shaft area to Pond 006. Runoff from the area approved herein should be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 0.36 acres, identified as IBR to OMM Permit No. 375, located in Sections 11 and 12, Township 8 South, Range 3 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log Nos. 0190-08 and 0190-08-A, re-alignment of access road is approved. Runoff from the area approved herein should be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc

An additional area of 3.57 acres, identified as IBR No. 14 to OMM Permit No. 375, located in Section 9, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 0369-08, two (2) boreholes will be drilled and a vertical pump will be installed to ensure mine ventilation. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 8.1 acres, identified as IBR No. 25 to OMM Permit No. 375, located in Sections 9 and 10, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 8091-10, two (2) concrete transport boreholes and access road will be constructed and a turbine pump, buried waterline and power line will be installed. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 2.13 acres, identified as IBR No. 55 to OMM Permit No. 375, located in Section 9 and 16, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 5530-13 a buried pump discharge pipeline and electrical power line will be installed. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 4.18 acres, identified as IBR No. 52 to OMM Permit No. 375, located in Section 15, Township 8 South, Range 4 East, Williamson County, Illinois. As proposed and depicted in IEPA Log No. 5168-13, this area is being incorporated for the construction of an underground mine support facility including a borehole and installation of an electric vertical turbine pump. The area will also include a buried pipeline and electric power line. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 3.3 acres, identified as IBR No. 57 to OMM Permit No. 375, located in Section 18, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 4088-14, two (2) boreholes will be constructed and a pump and waterline will be installed to pump underground mine pumpage to an existing waterline along Jordan Fort Road. Topsoil stockpiles will also be located with the IBR area. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 3.3 acres, identified as IBR No. 58 to OMM Permit No. 375, located in Sections 8 and 17, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 5477-13, two (2) boreholes will be constructed and a pump and waterline will be installed to pump underground mine water and to ensure underground ventilation. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 9.89 acres, identified as IBR No. 60 to OMM Permit No. 375, located in Section 13, Township 8 South, Range 3 East, Williamson County, Illinois. As proposed and depicted in IEPA Log No. 4237-14, this area is for the development of topsoil and subsoil storage areas and construction of associated drainage ditches. Two (2) drainage ditches, identified as Collection Ditch Nos. D-5E-1 and D-5D-1, directs runoff from this area to existing Ditch D-5c and Pond 005.

An additional area of 1.0 acres, identified as IBR No. 78 to OMM Permit No. 375, located in Section 13, Township 8 South, Range 3 East, and Sections 7 and 18, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 9082-19, this area is incorporated into this permit for a buried four-inch waterline to be installed. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 19.9 acres, identified as IBR No. 79 to OMM Permit No. 375, located in Sections 35 and 36, Township 7 South, Range 3 East, in Franklin County, Illinois. As proposed and depicted in IEPA Log No. 9083-19, this area is incorporated into this permit for installation of a supply shaft to transport supplies underground as required for the continued effective operation of approved mine plan, belt air shaft and fan to supply required ventilation along with six (6) steel cased boreholes with a diameter less ten 10 5/8 inches for power and other supplies, power substation, dry storage barn and equipment yard. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

An additional area of 17.01 acres, identified as IBR No. 83 to OMM Permit No. 375, located in Sections 2, 3, 9 and 10, Township 8 South, Range 4 East, in Williamson County, Illinois. As proposed and depicted in IEPA Log No. 9109-19, this area is incorporated into this permit for a access roadway, one 16.5 foot bleeder shaft, utility boreholes, concrete pad for transformer, a compressor station and a portable crib plant. Runoff from the area approved herein will be controlled by silt fence, mulching, seeding, vegetation, rock check dams, erosion control blankets, etc.

As described in IEPA Log No. 7395-11 and previously approved under Subtitle D Permit No. 2012-MA-7395-1, a permit area consisting of 9.82 acres located in Section 10, Township 8 South, Range 4 East, Williamson County, is incorporated into this permit for the construction of compressor bore hole, installation of a buried power line and an access road. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above.

As described in IEPA Log No. 6141-12 and previously approved under Subtitle D Permit No. 2012-MA-6141-1, a permit area consisting of 0.64 acres located in Section 13, Township 8 South, Range 3 East, Williamson County, is incorporated into this permit for the construction of borehole for the batch material supply of crushed stone and concrete to the underground mine. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above.

As described in IEPA Log No. 6562-12 and previously approved under Subtitle D Permit No. 2013-MA-6562, a permit area consisting of 3.81 acres located in Section 16, Township 8 South, Range 4 East, Williamson County, is incorporated into this permit for the construction of a steel-liner drill hole and temporary installation of a pumpable cement product mixing plant used for underground mine. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above.

As described in IEPA Log No. 6039-12 and previously approved under Subtitle D Permit No. 2015-MA-6039, a permit area consisting of 4.65 acres located in Section 14, Township 8 South, Range 4 East, Williamson County, is incorporated into this permit for installation of ventilation shaft site. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above.

As described in IEPA Log No. 2273-16 and previously approved under Subtitle D Permit No. 2016-MA-2273, a permit area consisting of 6.5 acres located in Section 29, Township 8 South, Range 4 East, Williamson County, is incorporated into this permit for the construction of a concrete lined South District Supply Shaft to provide supplies to underground workings, three (3) boreholes, a pole barn and an access road. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above.

DRAFT

JUL 12 2019

PUBLIC NOTICE

As previously approved under Subtitle D Permit No. 2014-MW-4275, a fine coal refuse (slurry) disposal area incorporating the use of geotextile tubes was developed at Pond Creek Mine site. As described and depicted in IEPA Log Nos. 4275-14, 4275-14-A, 4275-14-B, 1475-14-C development of this area included construction of a low permeability liner consisting of four (4) foot compacted clay with a hydraulic conductivity of 1 x 10^{-7} cm/sec, or less. Surface runoff and dewatering of the geotextile tubes is collected in a "no-discharge" perimeter containment basin and pumped to existing refuse disposal area or coal preparation plant. Hereby incorporated into this permit is a modification of the drainage control plan to allow stormwater runoff from the area to discharge through sediment ditches and spillway into existing Ditch D-5C and through Pond No. 005, as described and depicted in IEPA Log No. 3117-15. Reclamation of the geotextile tube refuse disposal area shell consists of construction of a low permeability cap consisting of four (4) foot compacted clay with hydraulic conductivity of 1x10^{-7}cm/sec, or less. Rooting medium and topsoil required for establishment of vegetative cover shall be in addition to the four (4) foot compacted clay low permeability cap. Four (4) monitoring wells identified as Well Nos. GW-29, GW-30, GW-31 and GW-32 shall be installed at each corner of the geotextile tube placement area. Groundwater monitoring shall be performed in accordance with Special Condition No. 12.

As described in IEPA Log Nos.1186-17, 1186-17-Band 1385-17, and previously approved under Subtitle D Permit No. 2017-MA-1186-1, a permit area consisting of 17.7 acres located in Section 12, Township 8 South, Range 3 East, Williamson County, is incorporated into this permit for construction of a Water Management Facility consisting of three (3) water holding cells. Construction and development of the water Management facility includes topsoil removal, grading, foundation preparation and installation of a low permeability liner consisting of four (4) foot compacted clay liner with a hydraulic conductivity of 1 x 10^{-7} cm/sec within the water holding cells. Compacted clay liner shall also be subject to and in accordance with the specifications and testing requirements of Condition No. 12. All runoff from this area shall be monitored in accordance with stormwater monitoring requirements of Special Condition No. 11 of this NPDES Permit. This additional area is included in the total permit acreage cited above. Four (4) monitoring wells identified as Well Nos. GW-33, GW-34, GW-35 and GW-36 shall be installed as depicted in IEPA Log Nos. 1186-17, 1186-17-B and 1385-17 Groundwater monitoring shall be performed in accordance with Special Condition No.13. This additional area is included in the total permit acreage cited above.

The following mining operations plan changes are incorporated into this permit:

Log No. 2413-06	The Mining Operations Plan has been revised to include the construction of an access tunnel under the railroad loop and administration building.
Log No. 2414-06	The Mine Operations Map has been revised to depict the revised various structures within the support facility.
Log No. 0371-08	Installation of a concrete sump at the existing road tunnel and a pipeline which will discharge to Sediment Pond No. 003, identified as IPR No. 13 to OMM Permit No. 375.

Surface drainage control is provided by eleven (11) sedimentation ponds with discharges designated as 001, 002, 003, 004, 005, 009, 09ES and 011 classified as alkaline mine drainage, and Outfalls 006, 007, 008 classified as acid mine discharge. The sanitary wastewater water treatment system will be approved by the Illinois Department of Public Health.

The location and receiving stream of the Outfalls at this facility is as follows:

Outfall No.	Latitude			Longitude			Receiving Water
	DEG	MIN	SEC	DEG	MIN	SEC	
001	37°	50'	59.2"	88°	49'	37.5"	Unnamed tributary to Pond Creek
002	37°	50'	26.0"	88°	49'	51.5"	Unnamed tributary to Pond Creek
003	37°	50'	26.0"	88°	49'	58.0"	Unnamed tributary to Pond Creek
004	37°	50'	25.0"	88°	49'	56.6"	Unnamed tributary to Pond Creek
005	37°	50'	9.1"	88°	50'	00.0"	Unnamed tributary to Pond Creek
006	37°	50'	28.4"	88°	50'	40.6"	Unnamed tributary to Pond Creek
007	37°	50'	29.5"	88°	49'	34.0"	Unnamed tributary to Pond Creek
008	37°	50'	31.4"	88°	49'	33.9"	Unnamed tributary to Pond Creek
009	37°	51'	16.1"	88°	49'	25.5"	Pond Creek
009ES	37°	50'	52.3"	88°	48'	43.7"	Unnamed tributary to Pond Creek
011	37°	52'	37"	89°	01'	49"	Big Muddy River

Original Sedimentation Ponds with discharges designated as Outfall Nos. 007 and 008 have been re-designed as described and depicted in IEPA Log No. 8554-10.

Refuse disposal
Refuse Disposal Area as previously approved in IEPA Log No. 3054-05, was constructed in phases as depicted and described in IEPA Log No. 2377-06 (RDA No. 1), Refuse Disposal Area No. 2 was constructed at Pond Creek Mine facilities as proposed and described in IEPA Log Nos. 1465-07, 1465-07-B, 1465-07-D, 1465-07-E, 1465-07-G, 1520-07, 0346-08, 9005-09, 9198-09, 9198-09-A, 8114-10, 8114-10-A, 7185-11, 7225-11, 6431-12, 6431-12-A and 5378-13.

As previously approved under Subtitle D Permit No. 2015-MA-3432, construction and development of Refuse Disposal Area No. 3 includes topsoil removal, grading, foundation preparation for refuse area, also construction of the water holding cell and installation of four (4) foot compacted clay liner was performed in accordance with the procedures discussed and outlined in IEPA Log No. 3432-15. As described in IEPA Log No. 3432-15, all stormwater runoff from the deposited coarse refuse within the RDA No. 3 is collected and maintained within the RDA No. 3 and/or is pumped into the slurry impounding structure of the existing RDA, which is an integral part of the Pond Creek Mine No. 1 coal preparation plant closed circuit wastewater handling system.

As described and depicted in IEPA Log Nos. 3001-15 and 3001-15-C Refuse Disposal Area No. 3 (RDA 3) is approved for construction. RDA 3 is located immediately east of the RDA 1 and RDA 2 areas, contains 229.78 acres, and is included in the above cited total Permit acreage. The area for RDA 3 is located in Section 12, Township 8 South, Range 3 East and Section 7, Township 8 South, Range 4 East, Williamson County, Illinois. To not increase chloride and sulfates due to construction of RDA 3, the mine is reclaiming the outslopes of the RDA 1 and RDA 2 that previously discharged through Outfalls 007 and 008. There will be no increase in loading due to the construction of RDA 3. Runoff from this area will be tributary to previously constructed water holding cell with the designated NPDES Outfalls 009 and 009ES, as depicted in IEPA Log No. 3117-15-A. Construction of four (4) foot compacted clay liners for the Refuse Disposal Area No. 3, Sediment Pond 009 and associated drainage control structures shall be subject to and in accordance with the specifications and testing requirements of Condition No. 12. With prior approval as to thickness and installation procedures, an HDPE synthetic liner may be utilized in lieu of the compacted clay liners proposed.

Mixing Zone (Big Muddy River)
Excess water will be transported from the Pond Creek Mine to Outfall No. 011 on the Big Muddy River through a high-density polyethylene (HDPE) pipeline. Water will be pumped from the Water Holding Cell by pumps through approximately 12.5 miles of pipe to the diffuser located at the mixing zone location. The pipeline ROW will be approximately 50 feet in width with a total permitted area of approximately 70.7 acres. The amount of water that could be discharged through the Pipeline depends upon the chloride concentration in the discharge stream, the background chloride content and the flow in the Big Muddy River. The upper limit to the discharge will be based on the pumping capacity of the facility. Maximum pumping rate of 5,000 gallons per minute or 11.1 cfs. from the facility. The volume of water discharged to Big Muddy River will be dependent upon the flow in the Big Muddy River and the chloride concentration of the water in the Water Holding Cell and the chloride concentration coming downstream in the River.

During operations of the pipeline, continuous flow monitors will be installed to provide protection against leakage. Flow will be monitored near the pump discharge while the pipeline is within the sediment control structure of Pond Creek Mine. Flow will also be monitored at the mixing zone location. This instrumentation will be connected to an alarm monitoring system and flow data will be transmitted to a central location for tracking and assessing system operations. The flow monitoring system operation and maintenance is subject to the requirements of Special Condition No. 16.

Groundwater monitoring for the facility will consist of Monitoring Well Nos.GW-1, GW-2, GW-3, GW-4, GW-5GW-9, GW-30, GW-33, GW-34, GW-35 and GW-36. Monitoring Well Nos. MW-8R, MW-10, MW-11, MW-12, MW-13, MW-14 and MW-28, as depicted in IEPA Log No. 3001-15, will monitor effects of the initial refuse disposal area. Groundwater monitoring requirements are outlined in Condition No. 13.

This Construction Authorization replaces Construction Authorization No. 3054-05.

The abandonment plan shall be executed and completed in accordance with 35 Ill. Adm. Code 405.109.

All water remaining upon abandonment must meet the requirements of 35 Ill. Adm. Code 406.202. For the constituents not covered by 35 Ill. Adm. Code Parts 302 or 303, all water remaining upon abandonment must meet the requirements of 35 Ill. Adm. Code 406.106.

DRAFT

JUL 12 2019

PUBLIC NOTICE

NPDES Permit No. IL0077666

Construction Authorization No. 3117-15

This Authorization is issued subject to the following Condition(s). If such Condition(s) require(s) additional or revised facilities, satisfactory engineering plan documents must be submitted to this Agency for review and approval to secure issuance of a Supplemental Authorization to Construct.

1. If any statement or representation is found to be incorrect, this permit may be revoked and the permittee thereupon waives all rights thereunder.

2. The issuance of this permit (a) shall not be considered as in any manner affecting the title of the premises upon which the mine or mine refuse area is to be located; (b) does not release the permittee from any liability for damage to person or property caused by or resulting from the installation, maintenance or operation of the proposed facilities; (c) does not take into consideration the structural stability of any units or parts of the project; and (d) does not release the permittee from compliance with other applicable statutes of the State of Illinois, or with applicable local laws, regulations or ordinances.

3. Final plans, specifications, application and supporting documents as submitted by the permittee and approved by the Agency shall constitute part of this permit in the records of the Agency.

4. There shall be no deviations from the approved plans and specifications unless revised plans, specifications and application shall first have been submitted to the Agency and a supplemental permit issued.

5. The permit holder shall notify the Agency (217/782-3637) immediately of an emergency at the mine or mine refuse area which causes or threatens to cause a sudden discharge of contaminants into the waters of Illinois and shall immediately undertake necessary corrective measures as required by 35 Ill. Adm. Code 405.111. (217/782-3637 for calls between the hours of 5:00 p.m. to 8:30 a.m. and on weekends.)

6. The termination of an NPDES discharge monitoring point or cessation of monitoring of an NPDES discharge is not authorized by this Agency until the permittee submits adequate justification to show what alternate treatment is provided or that untreated drainage will meet applicable effluent and water quality standards.

7. Initial construction activities in areas to be disturbed shall be for collection and treatment facilities only. Prior to the start of other activities, surface drainage controls shall be constructed and operated to avoid violations of the Act or Subtitle D. At such time as runoff water is collected in the sedimentation pond, a sample shall be collected and analyzed, for the parameters designated as 1M through 15M under Part 5-C of Form 2C and the effluent parameters designated herein with the results sent to this Agency. Should additional treatment be necessary to meet the standards of 35 Ill. Adm. Code 406.106 or applicable water quality standards, a Supplemental Permit must be obtained. Discharge from ponds is not allowed unless applicable effluent and water quality standards are met in the basin discharge(s).

8. This Agency must be informed in writing and an application submitted if drainage, which was previously classified as alkaline (pH greater than 6.0), becomes acid (pH less than 6.0) or ferruginous (base flow with an iron concentration greater than 10 mg/L). The type of drainage discharging to the basin should be reclassified in a manner consistent with the applicable provisions of 35 Ill. Adm. Code Part 406. The application should discuss the treatment method and demonstrate how the discharge will meet the applicable standards.

9. A permittee has the obligation to add a settling aid if necessary to meet the suspended solids or settleable solids effluent standards. The selection of a settling aid and the application practice shall be in accordance with a. or b. below

   a. Alum ($Al_2(SO_4)_3$), hydrated lime ($Ca(OH)_2$), soda ash (Na_2CO_3), alkaline pit pumpage, acetylene production by-product (tested for impurities), and ground limestone are acceptable settling aids and are hereby permitted for alkaline mine drainage sedimentation ponds.

   b. Any other settling aids such as commercial flocculents and coagulants are permitted only on prior approval from the Agency. To obtain approval a permittee must demonstrate in writing to the Agency that such use will not cause a violation of the toxic substances standard of 35 Ill. Adm. Code 302.210 or of the appropriate effluent and water quality standards of 35 Ill. Adm. Code parts 302, 304, and 406.

10. A general plan for the nature and disposition of all liquids used to drill boreholes shall be filed with this Agency prior to any such operation. This plan should be filed at such time that the operator becomes aware of the need to drill unless the plan of operation was contained in a previously approved application.

11. Any of the following shall be a violation of the provisions required under 35 Ill. Adm. Code 406.202:

    a. It is demonstrated that an adverse effect on the environment in and around the receiving stream has occurred or is likely to occur.

b. It is demonstrated that the discharge has adversely affected or is likely to adversely affect any public water supply.

c. The Agency determines that the permittee is not utilizing Good Mining Practices in accordance with 35 Ill. Adm. Code 406.204 which are fully described in detail in Sections 406.205, 406.206, 406.207 and 406.208 in order to minimize the discharge of total dissolved solids, chloride, sulfate, iron and manganese. To the extent practical, such Good Mining Practices shall be implemented to:

i. Stop or minimize water from coming into contact with disturbed areas through the use of diversions and/or runoff controls (Section 406.205).

ii. Retention and control within the site of waters exposed to disturbed materials utilizing erosion controls, sedimentation controls, water reuse or recirculation, minimization of exposure to disturbed materials, etc. (Section 406.206).

iii. Control and treatment of waters discharged from the site by regulation of flow of discharges and/or routing of discharges to more suitable discharge locations (Section 406.207).

iv. Utilized unconventional practices to prevent the production or discharge of waters containing elevated contaminant concentrations such as diversion of groundwater prior to entry into a surface or underground mine, dewatering practices to remove clean water prior to contacting disturbed materials and/or any additional practices demonstrated to be effective in reducing contaminant levels in discharges (Section 406.208).

12. The four (4) foot compacted clay liner to be constructed course refuse disposal area, fine coal refuse area (RDA No. 3) and Sedimentation Basin 009 shall be subject to the specifications and procedures presented in IEPA Log No. 3001-15-C.

Construction Specifications

a. All soils to be used for the compacted clay liner shall be free of grass, vines, vegetation and rock or stones greater than four (4) inches in diameter.

b. Samples collected from the borrow area shall be evaluated in accordance with ASTM D422, D4318 and D2487 to ensure classification criteria are met.

c. Each successive soil lift shall be placed to a 6 to 8 inch loose thickness; however, in no instance shall the loose lift thickness exceed the length of the pads or feet on the compactor or roller.

d. Each soil lift shall be compacted to the minimum Standard Prototor (ASTM D698) density identified in item no. 12(q) below, at a moisture content of 0% to 5% above the optimum moisture content of the soil.

e. Inter-lift surfaces shall be adequately scarified to ensure inter-lifting bonding.

f. Liner construction shall be performed to consistent achievement of density, moisture content, and hydraulic conductivity for each successive lift.

g. The placement of frozen material or the placement material on frozen ground is prohibited.

h. Contemporaneous placement or protective covering shall be provided to prevent drying, desiccation and/or freezing where necessary.

i. Liner construction shall be completed in a manner which reduces void spaces within the soil and liner.

j. All construction stakes shall be removed during construction, and all test holes (Shelby tube samples) are to be backfilled with bentonite.

k. The compacted clay liner shall be constructed in a manner to achieve a uniform barrier with a hydraulic conductivity of 1×10^{-7} cm/sec.

l. In the event that acceptable compaction results are not achieved, the soil lift shall be reprocessed or removed and replaced. If moisture content is less than optimum, or greater than 5% above optimum, the falling material shall be wetted or dried to a moisture content within specification and re-compacted. If the dry density is below specification, the failing material shall be re-compacted until a passing test is achieved.

m. In the event of a failing conductivity test, the soil may be removed or re-compacted and retested until a passing result is obtained; or the soil immediately above and below the test specimen from the same Shelby tube may be tested. If both tests pass, the original test shall be nullified. If either test fails, that portion of the liner shall be rejected and shall be reconstructed and retested until passing results are obtained. The limits of necessary reconstruction shall be determined by additional sampling and testing within the failed region, thereby isolating the failing area of work.

Testing Specifications

n. Prior to initiating soil liner construction, borrow soils shall be identified, qualified, and verified. At minimum, a representative sample of each soil type identified within the borrow area is to be collected and analyzed for gradation, compaction, and hydraulic conductivity characteristics.

o. Samples collected from borrow area shall be evaluated in accordance with ASTM D422, D4318 and D2487 to ensure classification criteria are met.

p. Samples collected from the borrow area shall be tested in accordance with ASTM D 698 to determine maximum dry density and optimum moisture content of the soil.

q. Samples collect from the borrow area shall be compacted to 90% and 95% standard Proctor density at or near optimum moisture content. The hydraulic conductivity of the re-compacted samples shall be determined in accordance with ASTM D5084 procedures. The results of this testing shall be used to establish the minimum dry density for soil liner compaction necessary to achieve a hydraulic conductivity of 1×10^{-7} cm/sec or less.

r. Moisture and density testing by nuclear methods (ASTM D2922 and D3017) shall be conducted at a rate of at least one test per 1,000 cubic yards placed. Testing locations shall be random and shall not be known to the earthwork contractor prior to lift placement.

s. To ensure the accuracy and reproducibility of the nuclear testing, all nuclear density gauges shall be certified to calibration. Soil compaction tests shall be double-checked with independent test methods. A drive cylinder test and laboratory moisture content determination shall be conducted and compared to gauge readings. These independent checks shall be made at the outset of construction and on a bi-weekly basis (e.g., every ten working days) thereafter.

t. Samples for hydraulic conductivity verification shall be retrieved from the compacted soil liner and tested in accordance with ASTM D5084 procedures. Samples shall be retrieved using three-inch Shelby tubes. Samples shall be completed at frequency of one sample/test per 20,000 cubic yards placed. The vertical location of the recovered samples shall be varied so that representative portions or lifts of the contractor prior to soil liner construction.

u. Survey checks shall be conducted at a minimum spacing of 100 ft. centers, and at 100 ft. intervals along each line where a break in slope occurs, to verify liner thickness. To verify liner thickness, the survey checks shall be taken before and after liner construction.

13. Groundwater monitoring requirements for Well Nos. MW-12, MW-13, MW-14, MW-8R and MW-28 are as follows:

a. Ambient background monitoring shall be performed for all referenced wells. Such ambient monitoring shall consist of six (6) samples collected during the first year (approximately bi-monthly) following well installation but no later than during the first year of operation or disturbance to determine ambient background concentrations. Background monitoring shall include the following list of constituents:

Aluminum	Fluoride	Sulfate
Antimony	Iron (dissolved)	Thallium
Arsenic	Iron (total)	Total Dissolved Solids
Barium	Lead	Vanadium
Beryllium	Manganese (dissolved)	Zinc
Boron	Manganese (total)	pH (field)
Cadmium	Mercury	Acidity
Chloride	Molybdenum	Alkalinity
Chromium	Nickel	Hardness
Cobalt	Phenols	Static Water Elevation
Copper	Selenium	
Cyanide	Silver	

b. Following the ambient monitoring as required under Condition No. 13(a) above, routine monitoring shall continue on a quarterly basis as follows:

i. Monitoring Well Nos. MW-12, MW-13, MW-14, MW-8R and MW-28 shall continue to be monitored quarterly for the contaminants identified in Condition No. 12(a) above.

ii. Monitoring Well Nos. MW-12, MW-13, MW-14, MW-8R and MW-28 shall be monitored quarterly as required by IDNR/OMM for the following list of constituents:

Chloride	Total Dissolved Solids
Iron (dissolved)	Hardness
Iron (total)	Acidity
Manganese (dissolved)	Alkalinity
Manganese (total)	pH
Sulfate	Static Water Elevation

c. Following completion of active mining and reclamation, post-mining monitoring of all above referenced wells shall consist of six (6) samples collected during a 12-month period (approximately bi-monthly) to determine post-mining concentrations. Post-mining monitoring shall include the list of constituents identified in Condition No. 13(a) above.

d. Groundwater monitoring reports shall be submitted to the Agency in accordance with Special Condition Nos. 3 and 5 of this NPDES permit.

e. A statistically valid representation of background and/or post mining water quality required under Condition No. 13(b) above shall be submitted utilizing the following method. This method shall be used to determine the upper 95 percent confidence limit for each parameter listed above.

Should the Permittee determine that an alternate statistical method would be more appropriate based on the data being evaluated, the Permittee may request utilization of such alternate methodology. Upon approval from the Agency, the alternate methodology may be utilized to determine a statistically valid representation of background and/or post mining water quality.

The following method should be used to predict the confidence limit when single groundwater samples are taken from each monitoring (test) well.

i. Determine the arithmetic mean $\left(\overline{X}_b\right)$ of each indicator parameter for the sampling period. If more than one well is used, an equal number of samples must be taken from each well.

$$\overline{X}_b = \frac{X_1 + X_2 + \ldots X_n}{n}$$

Where:

$\overline{X}_b$ = Average value for a given chemical parameter

X_n = Values for each sample

n = the number of samples taken

ii. Calculate the background and/or post mining variance (S_b^2) and standard deviation (S_b) for each parameter using the values (X_n) from each sample of the well(s) as follows:

$$S_b^2 = \frac{(X_1 - \overline{X}_b)^2 + (X_2 - \overline{X}_b)^2 + \ldots + (X_n - \overline{X}_b)^2}{n-1}$$

$$S_b = \sqrt{S_b^2}$$

DRAFT

JUL 12 2019

PUBLIC NOTICE

iii. Calculate the upper confidence limit using the following formula:

$$CL = \overline{X}_b \pm t\sqrt{1 + 1/n}\ (S_b)$$

Where:

CL = upper confidence limit prediction
(upper and lower limits should be calculated for pH)
t = onetailed t value at the required significance
level and at n1 degrees of freedom from Table 1
(a twotailed t value should be used for pH)

iv. If the values of any routine parameter for any monitoring well exceed the upper confidence limit for that parameter, the permittee shall conclude that a statistically significant change has occurred at that well.

v. When some of the background and/or post mining values are less than the Method Detection Limit (MDL), a value of one-half (1/2) the MDL shall be substituted for each value that is reported as less than the MDL. All other computations shall be calculated as given above.

If all the background and/or post mining values are less than the MDL for a given parameter, the Practical Quantitation Limit (PQL), as given in 35 Ill. Adm. Code Part 724 Appendix I shall be used to evaluate data from monitoring wells. If the analytical results from any monitoring well exceed two (2) times the PQL for any single parameter, or if they exceed the PQLs for two or more parameters, the permittee shall conclude that a statistically significant change has occurred.

Table 1
Standard tTables Level of Significance

Degrees of freedom	tvalues (onetail)		tvalues (twotail)*	
	99%	95%	99%	95%

Adopted from Table III of "Statistical Tables for Biological Agricultural and Medical Research" (1947, R.A. Fisher and F. Yates).

* For pH only when required.

NPDES Permit No. IL0077666

Special Conditions

Special Condition No. 1: No effluent from any mine related facility area under this permit shall, alone or in combination with other sources, cause a violation of any applicable water quality standard as set out in the Illinois Pollution Control Board Rules and Regulations, Subtitle C: Water Pollution.

Special Condition No. 2: Samples taken in compliance with the effluent monitoring requirements shall be taken at a point representative of the discharge, but prior to entry into the receiving stream.

Special Condition No. 3: All periodic monitoring and reporting forms, including Discharge Monitoring Report (DMR) forms, shall be submitted to the Agency according to the schedule outlined in Special Condition No. 4 or 5 below with one (1) copy forwarded to each of the following addresses:

Illinois Environmental Protection Agency
Division of Water Pollution Control
1021 North Grand Ave., East
P.O. Box 19276
Springfield, IL 62794-9276

Attn: Compliance Assurance Section

Illinois Environmental Protection Agency
Mine Pollution Control Program
2309 West Main Street, Suite 116
Marion, Illinois 62959

The Permittee will be required to submit electronic DMRs (NetDMR) instead of mailing paper DMRs to the IEPA, unless a waiver is approved by the Agency. More information, including registration information for the NetDMR program, can be obtained on the IEPA website, https://www2.illinois.gov/epa/topics/water-quality/surface-water/netdmr/Pages/quick-answer-guide.aspx.

Special Condition No. 4: Completed Discharge Monitoring Report (DMR) forms and as well as upstream and downstream monitoring results, shall be retained by the Permittee for a period of three (3) months and shall be submitted electronically (or mailed if waiver is approved by the Agency) and received by the IEPA at the addresses indicated in Special Condition No. 3 above in accordance with the following schedule, unless otherwise specified by the permitting authority.

Period	Received by IEPA
January, February, March	April 15
April, May, June	July 15
July, August, September	October 15
October, November, December	January 15

The Permittee shall record discharge monitoring results on Discharge Monitoring Report (DMR) forms using one such form for each Outfall and Discharge Condition each month. In the event that an Outfall does not discharge during a monthly reporting period or under a given Discharge Condition, the DMR form shall be submitted with "No Discharge" indicated.

Any and all monitoring results, other than NPDES outfall discharge results reported through NetDMR, shall be submitted to the Agency at the addresses indicated in Special Condition No. 3 above.

Special Condition No. 5: Completed periodic monitoring and reporting, other than DMR's and stream monitoring (i.e., groundwater monitoring, coal combustion waste analysis reports, etc.), shall be retained by the Permittee for a period of three (3) months and shall be mailed and received by the IEPA at the addresses indicated in Special Condition No. 3 above in accordance with the following schedule, unless otherwise specified by the permitting authority.

Period	Received by IEPA
January, February, March	May 1
April, May, June	August 1
July, August, September	November 1
October, November, December	February 1

Special Condition No. 6: The Agency may revise or modify the permit consistent with applicable laws, regulations or judicial orders.

Special Condition No. 7: If an applicable effluent standard or limitation is promulgated under Sections 301(b)(2)(C) and (D), 304(b)(2), and 307(a)(2) of the Clean Water Act and that effluent standard or limitation is more stringent than any effluent limitation in the permit or controls a pollutant not limited in the NPDES Permit, the Agency shall revise or modify the permit in accordance with the more stringent standard or prohibition and shall so notify the permittee.

Special Condition No. 8: The permittee shall notify the Agency in writing by certified mail within thirty days of abandonment, cessation, or suspension of active mining for thirty days or more unless caused by a labor dispute. During cessation or suspension of active mining, whether caused by a labor dispute or not, the permittee shall provide whatever interim impoundment, drainage diversion, and wastewater treatment is necessary to avoid violations of the Act or Subtitle D Regulations.

DRAFT

JUL 12 2019

PUBLIC NOTICE

Special Conditions

Special Condition No. 9: Plans must be submitted to and approved by this Agency prior to construction of any future sedimentation ponds. At such time as runoff water is collected in the sedimentation pond, a sample shall be collected and analyzed for the parameters designated as 1M-15M under Part 5-C of Form 2C and the effluent parameters designated herein with the results sent to this Agency. Should additional treatment be necessary to meet these standards, a Supplemental Permit must also be obtained. Discharge from a pond is not allowed unless applicable effluent and water quality standards are met.

Special Condition No. 10: The special reclamation area effluent standards of 35 Ill. Adm. Code 406.109 apply only on approval from the Agency. To obtain approval, a request form and supporting documentation shall be submitted to request the discharge be classified as a reclamation area discharge. The Agency will notify the permittee upon approval of the change.

Special Condition No. 11: The special stormwater effluent standards apply only on approval from the Agency. To obtain approval, a request with supporting documentation shall be submitted to request the discharge to be classified as a stormwater discharge. The documentation supporting the request shall include analysis results indicating the discharge will consistently comply with reclamation area discharge effluent standards. The Agency will notify the permittee upon approval of the change.

Special Condition No. 12: Annual stormwater monitoring is required for all discharges not tributary to a sediment basin until Final SMCRA Bond is released and approval to cease such monitoring is obtained from the Agency.

a. Each discharge must be monitored for pH and settleable solids annually.

b. Analysis of samples must be submitted with second quarter Discharge Monitoring Reports. A map with discharge locations must be included in this submittal.

c. If discharges can be shown to be similar, a plan may be submitted by November 1 of each year preceding sampling to propose grouping of similar discharges and/or update previously submitted groupings. If updating of a previously submitted plan is not necessary, a written notification to the Agency indicating such is required. Upon approval from the Agency, one representative sample for each group may be submitted.

Special Condition No. 13: Sediment Pond Operation and Maintenance (Outfalls 001, 002, 003, 004, 005, 006, 007, 008, 009ES):

a. For discharges resulting from precipitation events, in addition to the alternate effluent (Discharge Condition Nos. II and III) monitoring requirements, as indicated on the applicable effluent pages of this Permit, discharges from Outfalls 001, 002, 003, 004, 005, 006, 007, 008, 009ES shall be monitored and reported for Discharge Rate, Sulfate, Chloride and Hardness.

b. The following sampling and monitoring requirements are applicable to flow in the unnamed tributary to Pond Creek which receive discharges from Outfalls 001, 002, 003, 004, 005, 006, 007, 008, 009ES.

   i. All sampling and monitoring required under 13(b)(ii) and (iii) below shall be performed during a discharge and monitoring event from the associated outfall.

   ii. Unnamed tributary to Pond Creek shall be monitored and reported quarterly for Discharge Rate, Chloride, Sulfate and Hardness downstream of the associated outfall. This downstream monitoring shall be performed a sufficient distance downstream of the associated outfall to ensure that complete mixing has occurred. At such time that sufficient information has been collected regarding receiving stream flow characteristics and in-stream contaminant concentrations the permittee may request a re-evaluation of the monitoring frequency required herein for possible reduction or elimination. For the purpose of re-evaluating the downstream monitoring frequency of the receiving stream, "sufficient information" is defined as a minimum of ten (10) quarterly sampling events.

   In the event that downstream monitoring of the receiving waters is eliminated during the term of this permit based on an evaluation of the quarterly data, a minimum of three (3) additional samples analyzed for the parameters identified above must be submitted with the permit renewal application a minimum of 180 days prior to expiration of this permit.

   iii. Unnamed tributary to Pond Creek shall be monitored and reported annually for Discharge Rate, Chloride, Sulfate and Hardness upstream of the associated outfall.

Special Condition No. 14: Sediment Pond Operation and Maintenance (Outfall 009):

a. No discharge is allowed from Outfall No. 009 during "low flow" or "no flow" conditions in the receiving stream, unless such discharge meets the water quality standards of 35 Ill. Adm. Code 302.

Pursuant to 35 Ill. Adm. Code Part 302.102, discharges from the referenced outfalls that otherwise would not meet the water quality standards of 35 Ill. Adm. Code Part 302 may be permitted if sufficient flow exists in the receiving stream to ensure that applicable water quality standards are met. That is, discharges not meeting the water quality standards of 35 Ill. Adm. Code Part 302 may only be discharged in combination with stormwater discharges from the basin, and only at such times that sufficient flow exists in the receiving stream to ensure that water quality standards in the receiving stream beyond the area of allowed mixing will not be exceeded.

The permittee shall determine the effluent limitation for chloride and/or the maximum effluent flow rate allowable to maintain water quality in the receiving stream. The following equations shall be used to make such determinations:

$$C_{DS} = [C_E Q_E + 0.25 C_{US} Q_{US}]/ (0.25 Q_{US} + Q_E)$$

Where:

C_E = Effluent concentration (mg/L)

Q_E = Effluent flow rate (cfs) for Outfall 009

Q_{US} = Upstream flow rate (cfs)

C_{US} = Upstream concentration (mg/L)

C_{DS} = Downstream concentration

The "calculated" downstream concentration shall be less than 500 mg/L for chloride and reported on the discharge monitoring reports (DMRs).

The permittee shall install a gauging station and conductivity monitor upstream of the discharge to determine an upstream flow (Q_{US}) and a chloride concentration (C_{US}) correlated to the conductivity value. In addition, the permittee shall install a continuous conductivity monitor downstream to ensure that the chloride concentration (correlated to the conductivity value) stays within the chloride water quality standard. The daily maximum downstream chloride concentration controlled to conductivity shall be reported on the DMR"s.

If there is no upstream mixing available for Outfall 009, the NPDES permit shall be regulated at 500 mg/L for Chloride and 1250 mg/L for Sulfate.

The upstream and downstream conductivity monitoring locations need to be approved by the Agency.

b. The following sampling and monitoring requirements are applicable to flow in Pond Creek which receives the discharges from Outfall 009.

   i. All sampling and monitoring required under 14(b)(ii) and (iii) below shall be performed during a discharge and monitoring event from the associated outfall.

   ii. Pond Creek shall be monitored and reported quarterly for Discharge Rate, Sulfate, Chloride and Hardness downstream of the associated outfall. This downstream monitoring shall be performed a sufficient distance downstream of the associated outfall to ensure that complete mixing has occurred. At such time that sufficient information has been collected regarding stream flow characteristics and in-stream contaminant concentrations, the permittee may request a re-evaluation of the monitoring frequency required herein for possible reduction or elimination. For the purpose of re-evaluating the downstream monitoring frequency of the receiving stream, "sufficient information" is defined as a minimum of ten (10) quarterly sampling events.

   In the event that downstream monitoring of the receiving waters is eliminated during the term of this permit based on an evaluation of the quarterly data, a minimum of three (3) additional samples analyzed for the parameters identified above must be submitted with the permit renewal application a minimum of 180 days prior to expiration of this permit.

   iii. Pond Creek shall be monitored and reported annually for Discharge Rate, Sulfate, Chloride and Hardness upstream of the associated outfall.

Special Condition No. 15: Sediment Pond Operation and Maintenance (Outfall 009 – Reclamation Area Discharge Classification):

a. For discharges resulting from precipitation events, in addition to the alternate effluent (Discharge Condition Nos. II and III) monitoring requirements, as indicated on the applicable effluent pages of this Permit, discharges from Outfall 009 shall be monitored and reported for Discharge Rate, Sulfate, Chloride and Hardness.

b. The following sampling and monitoring requirements are applicable to flow in the Middle Fork Big Muddy River which receive discharges from Outfall 009.

DRAFT
JUL 12 2019
PUBLIC NOTICE

Special Conditions

i. All sampling and monitoring required under 15(b)(ii) and (iii) below shall be performed during a discharge and monitoring event from the associated outfall.

ii. Middle Fork Big Muddy River shall be monitored and reported quarterly for Discharge Rate, Chloride, Sulfate and Hardness downstream of the associated outfall. This downstream monitoring shall be performed a sufficient distance downstream of the associated outfall to ensure that complete mixing has occurred. At such time that sufficient information has been collected regarding receiving stream flow characteristics and in-stream contaminant concentrations the permittee may request a re-evaluation of the monitoring frequency required herein for possible reduction or elimination. For the purpose of re-evaluating the downstream monitoring frequency of the receiving stream, "sufficient information" is defined as a minimum of ten (10) quarterly sampling events.

In the event that downstream monitoring of the receiving waters is eliminated during the term of this permit based on an evaluation of the quarterly data, a minimum of three (3) additional samples analyzed for the parameters identified above must be submitted with the permit renewal application a minimum of 180 days prior to expiration of this permit.

iii. Middle Fork Big Muddy River shall be monitored and reported annually for Discharge Rate, Chloride, Sulfate and Hardness upstream of the associated outfall.

Special Condition No. 16: Sediment Pond Operation and Maintenance (Outfall 011):

a. Pursuant to 35 Ill. Adm. Code Part 302.102, discharges from the referenced outfalls that otherwise would not meet the water quality standards of 35 Ill. Adm. Code Part 302 may be permitted if sufficient flow exists in the receiving stream to ensure that applicable water quality standards are met. That is, discharges not meeting the water quality standards of 35 Ill. Adm. Code Part 302 may only be discharged in combination with stormwater discharges from the basin, and only at such times that sufficient flow exists in the receiving stream to ensure that water quality standards in the receiving stream beyond the area of allowed mixing will not be exceeded.

The permittee shall determine the effluent limitation for chloride and/or the maximum effluent flow rate allowable to maintain water quality in the receiving stream. The following equations shall be used to make such determinations:

$$C_{DS} = [C_E Q_E + 0.25 C_{US} Q_{US}]/ (0.25 Q_{US} + Q_E)$$

Where:

C_E = Effluent concentration (mg/L)

Q_E = Effluent flow rate (cfs) for Outfall 011

Q_{US} = Upstream flow rate (cfs)

C_{US} = Upstream concentration (mg/L)

C_{DS} = Downstream concentration

The "calculated" downstream concentration (CDS) shall be less than 500 mg/L for chloride and reported on the discharge monitoring reports (DMRs).

Chloride is limited in the NPDES permit at the limits described below. The maximum flow from Outfall 011 is 5,000 gpm and the maximum chloride concentration is 12,000 mg/L.

Sulfate and Iron (dissolved) shall be monitored from the effluent monthly when discharging.

The permit only allows a discharge when the Big Muddy River is flowing above 30 cfs. The maximum dispersion required for all water quality parameters is 34:1. Model predictions have been made for a maximum effluent total flow rate of 11.1 cfs. At the maximum chloride concentration of 12,000 mg/L, this maximum discharge requires a river flow of 1,734 cfs to meet a dispersion of 34:1 in less than 25 % of the river volume. The maximum distance to meet the water quality standard for all scenarios is 251 feet downstream with a plume width of 25 feet. The maximum zone of initial dilution to meet the acute Copper water quality standard for all scenarios is 18.2 feet downstream with a plume width of 4 feet.

The upstream flow (Q_{US}) should be based on the full flow measurement upstream of the proposed Outfall 011 that shall be approved by the Agency.

The upstream and downstream conductivity monitoring locations need to be approved by the Agency.

Special Conditions

The permittee shall install a conductivity monitor upstream of the discharge to determine a chloride concentration (C_{US}) correlated to the conductivity value. In addition, the permittee shall install a continuous conductivity monitor downstream to ensure that the chloride concentration (correlated to the conductivity value) stays within the chloride water quality standard. The daily maximum downstream chloride concentration controlled to conductivity shall be reported on the DMR's.

b. The following sampling and monitoring requirements are applicable to flow in Big Muddy River which receives the discharges from Outfall 011.

i. All sampling and monitoring required under 16(b)(ii) and (iii) below shall be performed during a discharge and monitoring event from the associated outfall.

ii. The Big Muddy River shall be monitored and reported quarterly for Discharge Rate, Sulfate, Chloride and Hardness downstream of the associated outfall. This downstream monitoring shall be performed a sufficient distance downstream of the associated outfall to ensure that complete mixing has occurred. At such time that sufficient information has been collected regarding stream flow characteristics and in-stream contaminant concentrations, the permittee may request a re-evaluation of the monitoring frequency required herein for possible reduction or elimination. For the purpose of re-evaluating the downstream monitoring frequency of the receiving stream, "sufficient information" is defined as a minimum of ten (10) quarterly sampling events.

In the event that downstream monitoring of the receiving waters is eliminated during the term of this permit based on an evaluation of the quarterly data, a minimum of three (3) additional samples analyzed for the parameters identified above must be submitted with the permit renewal application a minimum of 180 days prior to expiration of this permit.

iii. The Big Muddy River shall be monitored and reported annually for Discharge Rate, Sulfate, Chloride and Hardness upstream of the associated outfall.

Special Condition No. 17: Data collected in accordance with Special Condition Nos. 13, 14, 15 and 16 above will be utilized to evaluate the appropriateness of the effluent limits established in this Permit. Should the Agency's evaluation of this data indicate revised effluent limits are warranted; this permit may be reopened and modified to incorporate more appropriate effluent limitations. This data will also be used for determination of effluent limitations at the time of permit renewal.

Special Condition No. 18: Discharges from Outfalls 006, 007, 008, 009, 009ES and 011 shall be monitored twice annually with such monitoring spaced at approximately 6-month intervals during the entire 5-year term of this NPDES Permit. Sampling of the discharges shall be performed utilizing the grab sampling method and analyzed for total (unfiltered) concentrations. The results of the sampling required under this Special Condition shall be submitted twice annually to the Agency in January and July of each calendar year to the addresses indicated in the Special Condition No. 3 above. The parameters to be sampled and the detection limits (minimum reported limits) are as follows:

Parameter	Detection Limit
Arsenic	0.05 mg/L
Barium	0.50 mg/L
Cadmium	0.001 mg/L
Chromium (hexavalent)	0.01 mg/L
Chromium	0.05 mg/L
Copper	0.005 mg/L

Attachment H

Standard Conditions

Definitions

Act means the Illinois Environmental Protection Act, 415 ILCS 5 as Amended.

Agency means the Illinois Environmental Protection Agency.

Board means the Illinois Pollution Control Board.

Clean Water Act (formerly referred to as the Federal Water Pollution Control Act) means Pub. L 92-500, as amended. 33 U.S.C. 1251 et seq.

NPDES (National Pollutant Discharge Elimination System) means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under Sections 307, 402, 318 and 405 of the Clean Water Act.

USEPA means the United States Environmental Protection Agency.

Daily Discharge means the discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the "daily discharge" is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurements, the "daily discharge" is calculated as the average measurement of the pollutant over the day.

Maximum Daily Discharge Limitation (daily maximum) means the highest allowable daily discharge.

Average Monthly Discharge Limitation (30 day average) means the highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month.

Average Weekly Discharge Limitation (7 day average) means the highest allowable average of daily discharges over a calendar week, calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week.

Best Management Practices (BMPs) means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the State. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Aliquot means a sample of specified volume used to make up a total composite sample.

Grab Sample means an individual sample of at least 100 milliliters collected at a randomly-selected time over a period not exceeding 15 minutes.

24-Hour Composite Sample means a combination of at least 8 sample aliquots of at least 100 milliliters, collected at periodic intervals during the operating hours of a facility over a 24-hour period.

8-Hour Composite Sample means a combination of at least 3 sample aliquots of at least 100 milliliters, collected at periodic intervals during the operating hours of a facility over an 8-hour period.

R0023

Flow Proportional Composite Sample means a combination of sample aliquots of at least 100 milliliters collected at periodic intervals such that either the time interval between each aliquot or the volume of each aliquot is proportional to either the stream flow at the time of sampling or the total stream flow since the collection of the previous aliquot.

(1) **Duty to comply.** The permittee must comply with all conditions of this permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action, permit termination, revocation and reissuance, modification, or for denial of a permit renewal application. The permittee shall comply with effluent standards or prohibitions established under Section 307(a) of the Clean Water Act for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if the permit has not yet been modified to incorporate the requirements.

(2) **Duty to reapply.** If the permittee wishes to continue an activity regulated by this permit after the expiration date of this permit, the permittee must apply for and obtain a new permit. If the permittee submits a proper application as required by the Agency no later than 180 days prior to the expiration date, this permit shall continue in full force and effect until the final Agency decision on the application has been made.

(3) **Need to halt or reduce activity not a defense.** It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

(4) **Duty to mitigate.** The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

(5) **Proper operation and maintenance.** The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding, adequate operator staffing and training, and adequate laboratory and process controls, including appropriate quality assurance procedures. This provision requires the operation of back-up, or auxiliary facilities, or similar systems only when necessary to achieve compliance with the conditions of the permit.

(6) **Permit actions.** This permit may be modified, revoked and reissued, or terminated for cause by the Agency pursuant to 40 CFR 122.62 and 40 CFR 122.63. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

(7) **Property rights.** This permit does not convey any property rights of any sort, or any exclusive privilege.

(8) **Duty to provide information.** The permittee shall furnish to the Agency within a reasonable time, any information which the Agency may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with the permit. The permittee shall also furnish to the Agency upon request, copies of records required to be kept by this permit.

(9) **Inspection and entry.** The permittee shall allow an authorized representative of the Agency or USEPA (including an authorized contractor acting as a representative of the Agency or USEPA), upon the presentation of credentials and other documents as may be required by law, to:

(a) Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

(b) Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

(c) Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit; and

(d) Sample or monitor at reasonable times, for the purpose of assuring permit compliance, or as otherwise authorized by the Act, any substances or parameters at any location.

(10) **Monitoring and records.**

(a) Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

(b) The permittee shall retain records of all monitoring information, including all calibration and maintenance records, and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this permit, and records of all data used to complete the application for this permit, for a period of at least 3 years from the date of this permit, measurement, report or application. Records related to the permittee's sewage sludge use and disposal activities shall be retained for a period of at least five years (or longer as required by 40 CFR Part 503). This period may be extended by request of the Agency or USEPA at any time.

(c) Records of monitoring information shall include:

(1) The date, exact place, and time of sampling or measurements;

(2) The individual(s) who performed the sampling or measurements;

(3) The date(s) analyses were performed;

(4) The individual(s) who performed the analyses;

(5) The analytical techniques or methods used; and

(6) The results of such analyses.

(d) Monitoring must be conducted according to test procedures approved under 40 CFR Part 136, unless other test procedures have been specified in this permit. Where no test procedure under 40 CFR Part 136 has been approved, the permittee must submit to the Agency a test method for approval. The permittee shall calibrate and perform maintenance procedures on all monitoring and analytical instrumentation at intervals to ensure accuracy of measurements.

(11) **Signatory requirement.** All applications, reports or information submitted to the Agency shall be signed and certified.

(a) **Application.** All permit applications shall be signed as follows:

(1) For a corporation: by a principal executive officer of at least the level of vice president or a person or position having overall responsibility for environmental matters for the corporation:

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official.

(b) **Reports.** All reports required by permits, or other information requested by the Agency shall be signed by a person described in paragraph (a) or by a duly authorized representative of that person. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described in paragraph (a); and R06232

(2) The authorization specifies either an individual or a position responsible for the overall operation of the facility, from which the discharge originates, such as a plant manager, superintendent or person of equivalent responsibility; and

(3) The written authorization is submitted to the Agency.

(c) **Changes of Authorization.** If an authorization under (b) is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of (b) must be submitted to the Agency prior to or together with any reports, information, or applications to be signed by an authorized representative.

(d) **Certification.** Any person signing a document under paragraph (a) or (b) of this section shall make the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

(12) **Reporting requirements.**

(a) **Planned changes.** The permittee shall give notice to the Agency as soon as possible of any planned physical alterations or additions to the permitted facility. Notice is required when:

(1) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source pursuant to 40 CFR 122.29 (b); or

(2) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements pursuant to 40 CFR 122.42 (a)(1).

(3) The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan.

(b) **Anticipated noncompliance.** The permittee shall give advance notice to the Agency of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

(c) **Transfers.** This permit is not transferable to any person except after notice to the Agency.

(d) **Compliance schedules.** Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this permit shall be submitted no later than 14 days following each schedule date.

(e) **Monitoring reports.** Monitoring results shall be reported at the intervals specified elsewhere in this permit.

(1) Monitoring results must be reported on a Discharge Monitoring Report (DMR).

(2) If the permittee monitors any pollutant more frequently than required by the permit, using test procedures approved under 40 CFR 136 or as specified in the permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR.

(3) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Agency in the permit.

(f) **Twenty-four hour reporting.** The permittee shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24-hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and time; and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance. The following shall be included as information which must be reported within 24-hours:

(1) Any unanticipated bypass which exceeds any effluent limitation in the permit.

(2) Any upset which exceeds any effluent limitation in the permit.

(3) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Agency in the permit or any pollutant which may endanger health or the environment.

The Agency may waive the written report on a case-by-case basis if the oral report has been received within 24-hours.

(g) **Other noncompliance.** The permittee shall report all instances of noncompliance not reported under paragraphs (12) (d), (e), or (f), at the time monitoring reports are submitted. The reports shall contain the information listed in paragraph (12) (f).

(h) **Other information.** Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application, or in any report to the Agency, it shall promptly submit such facts or information.

(13) **Bypass.**

(a) Definitions.

(1) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.

(2) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

(b) Bypass not exceeding limitations. The permittee may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (13)(c) and (13)(d).

(c) Notice.

(1) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass.

(2) Unanticipated bypass. The permittee shall submit notice of an unanticipated bypass as required in paragraph (12)(f) (24-hour notice).

(d) Prohibition of bypass.

(1) Bypass is prohibited, and the Agency may take enforcement action against a permittee for bypass, unless:

(i) Bypass was unavoidable to prevent loss of life personal injury, or severe property damage;

(ii) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(iii) The permittee submitted notices as required under paragraph (13)(c).

(2) The Agency may approve an anticipated bypass, after considering its adverse effects, if the Agency determines that it will meet the three conditions listed above in paragraph (13)(d)(1).

(14) **Upset.**

(a) Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

(b) Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (14)(c) are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(c) Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) An upset occurred and that the permittee can identify the cause(s) of the upset;

(2) The permitted facility was at the time being properly operated; and

(3) The permittee submitted notice of the upset as required in paragraph (12)(f)(2) (24-hour notice).

(4) The permittee complied with any remedial measures required under paragraph (4).

(d) Burden of proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

(15) **Transfer of permits.** Permits may be transferred by modification or automatic transfer as described below:

(a) Transfers by modification. Except as provided in paragraph (b), a permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued pursuant to 40 CFR 122.62 (b) (2), or a minor modification made pursuant to 40 CFR 122.63 (d), to identify the new permittee and incorporate such other requirements as may be necessary under the Clean Water Act.

(b) Automatic transfers. As an alternative to transfers under paragraph (a), any NPDES permit may be automatically transferred to a new permittee if:

(1) The current permittee notifies the Agency at least 30 days in advance of the proposed transfer date;
(2) The notice includes a written agreement between the existing and new permittees containing a specified date for transfer of permit responsibility, coverage and liability between the existing and new permittees; and
(3) The Agency does not notify the existing permittee and the proposed new permittee of its intent to modify or revoke and reissue the permit. If this notice is not received, the transfer is effective on the date specified in the agreement.

(16) All manufacturing, commercial, mining, and silvicultural dischargers must notify the Agency as soon as they know or have reason to believe:
(a) That any activity has occurred or will occur which would result in the discharge of any toxic pollutant identified under Section 307 of the Clean Water Act which is not limited in the permit, if that discharge will exceed the highest of the following notification levels:
(1) One hundred micrograms per liter (100 ug/l);
(2) Two hundred micrograms per liter (200 ug/l) for acrolein and acrylonitrile; five hundred micrograms per liter (500 ug/l) for 2,4-dinitrophenol and for 2-methyl-4,6 dinitrophenol; and one milligram per liter (1 mg/l) for antimony.
(3) Five (5) times the maximum concentration value reported for that pollutant in the NPDES permit application; or
(4) The level established by the Agency in this permit.
(b) That they have begun or expect to begin to use or manufacture as an intermediate or final product or byproduct any toxic pollutant which was not reported in the NPDES permit application.

(17) All Publicly Owned Treatment Works (POTWs) must provide adequate notice to the Agency of the following:
(a) Any new introduction of pollutants into that POTW from an indirect discharge which would be subject to Sections 301 or 306 of the Clean Water Act if it were directly discharging those pollutants; and
(b) Any substantial change in the volume or character of pollutants being introduced into that POTW by a source introducing pollutants into the POTW at the time of issuance of the permit.
(c) For purposes of this paragraph, adequate notice shall include information on (i) the quality and quantity of effluent introduced into the POTW, and (ii) any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW.

(18) If the permit is issued to a publicly owned or publicly regulated treatment works, the permittee shall require any industrial user of such treatment works to comply with federal requirements concerning:
(a) User charges pursuant to Section 204 (b) of the Clean Water Act, and applicable regulations appearing in 40 CFR 35;
(b) Toxic pollutant effluent standards and pretreatment standards pursuant to Section 307 of the Clean Water Act; and
(c) Inspection, monitoring and entry pursuant to Section 308 of the Clean Water Act.

(19) If an applicable standard or limitation is promulgated under Section 301(b)(2)(C) and (D), 304(b)(2), or 307(a)(2) and that effluent standard or limitation is more stringent than any effluent limitation in the permit, or controls a pollutant not limited in the permit, the permit shall be promptly modified or revoked, and reissued to conform to that effluent standard or limitation.

(20) Any authorization to construct issued to the permittee pursuant to 35 Ill. Adm. Code 309.154 is hereby incorporated by reference as a condition of this permit. R06234

(21) The permittee shall not make any false statement, representation or certification in any application, record, report, plan or other document submitted to the Agency or the USEPA, or required to be maintained under this permit.

(22) The Clean Water Act provides that any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the Clean Water Act is subject to a civil penalty not to exceed $25,000 per day of such violation. Any person who willfully or negligently violates permit conditions implementing Sections 301, 302, 306, 307, 308, 318 or 405 of the Clean Water Act is subject to a fine of not less than $2,500 nor more than $25,000 per day of violation, or by imprisonment for not more than one year, or both.
Additional penalties for violating these sections of the Clean Water Act are identified in 40 CFR 122.41 (a)(2) and (3).

(23) The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this permit shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or both.

(24) The Clean Water Act provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this permit, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

(25) Collected screening, slurries, sludges, and other solids shall be disposed of in such a manner as to prevent entry of those wastes (or runoff from the wastes) into waters of the State. The proper authorization for such disposal shall be obtained from the Agency and is incorporated as part hereof by reference.

(26) In case of conflict between these standard conditions and any other condition(s) included in this permit, the other condition(s) shall govern.

(27) The permittee shall comply with, in addition to the requirements of the permit, all applicable provisions of 35 Ill. Adm. Code, Subtitle C, Subtitle D, Subtitle E, and all applicable orders of the Board or any court with jurisdiction.

(28) The provisions of this permit are severable, and if any provision of this permit, or the application of any provision of this permit is held invalid, the remaining provisions of this permit shall continue in full force and effect.

RE: Pond Creek Mine
NPDES Permit No. IL0077666
I.D.N.R. Permits 375 and 417
Supplemental Information Concerning Outlets 009 and 009ES

Dear Mr. Stitely,

Please find attached two (2) copies of the supplemental information concerning outfalls 009 and 009ES for the pending NPDES Renewal for NPDES Permit No. IL0077666 and IDMM Permit No.s 375 and 417 for Williamson Energy, LLC's Pond Creek Mine. If you have any questions concerning this submittal, or require additional information, please contact me at (618) 969-8259.

Respectfully Submitted,

James Plumley

Memorandum

DATE: 18 June 2019

TO: Iwona Ward

FROM: Scott Twait ST

SUBJECT: WQBELs
Williamson Energy, LLC – Pond Creek Mine
NPDES Permit No. IL007766 (Williamson County)

The subject facility discharges to an unnamed tributary of Pond Creek through Outfall 009ES at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. The unnamed tributary of Pond Creek is classified as a General Use Water. The unnamed tributary of Pond Creek is not listed as a biologically significant streams in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The unnamed tributary of Pond Creek, tributary to Waterbody Segment, NG-02, is not listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List since it has not been assessed. The unnamed tributary of Pond Creek is not subject to enhanced dissolved oxygen standards.

Outfall 009ES is acid mine drainage. The NPDES application did not indicate any watershed sizes or flow expected for mixing.

Chloride should be regulated as a daily maximum at the water quality standard of 500 mg/L for Outfall 009ES.

Where appropriate, Manganese should be regulated as a daily maximum at the water quality standard of 1.0 mg/L.

The Sulfate limit is determined according to the water quality standards at 302.208(h)(2). The chloride and hardness data is from AWQMN station NG-02, Pond Creek, South edge of West Frankfort, downstream of the Williamson Energy, LLC – Pond Creek Mine No. 1 property, so this limit should be used for all outfalls. No mixing was used in the derivation of the effluent limit. The following table shows the results of downstream chloride and hardness.

Outfalls	Average Receiving Stream Chloride (mg/L)	Receiving Stream Critical Hardness (mg/L)	Sulfate Water Quality Standard (mg/L)
009ES	21.5	141	1250

The sulfate values in the far-right column are applied as daily maximum permit limits.

Monitoring for chloride, sulfate and hardness should be periodically required at a downstream location from each outfall, or downstream of the mine property, during the course of the permit. This data will be used to recalculate sulfate limits for the next renewed or modified permit.

These recommendations reflect a water quality standards perspective only and should not be construed as being inclusive of all factors that must be taken into consideration by the permit writer.

1021 NORTH GRAND AVENUE EAST, P.O. BOX 19276, SPRINGFIELD, ILLINOIS 62794-9276 • (217) 782-3397
JB PRITZKER, GOVERNOR JOHN J. KIM, ACTING DIRECTOR

Memorandum

Date: 18 June 2019

To: Iwona Ward

From: Scott Twait ST

Subject: Williamson Energy, LLC – Pond Creek Mine
Antidegradation Assessment
NPDES Permit No. IL0077666 (Williamson County)

Pond 009 has an emergency discharge via Outfall 009ES. During normal operations, Pond 009 will discharge directly to Pond Creek via Outfall 009 and has provisions for allowed mixing. Outfall 009ES is not expected to have a discharge, except during an emergency.

Identification and Characterization of the Affected Water Body.

The subject facility discharges to an unnamed tributary of Pond Creek through Outfall 009ES at a point where 0 cfs of flow exists upstream of the outfalls during critical 7Q10 low-flow conditions. The unnamed tributary of Pond Creek is classified as a General Use Water. The unnamed tributary of Pond Creek is not listed as a biologically significant streams in the 2008 Illinois Department of Natural Resources Publication *Integrating Multiple Taxa in a Biological Stream Rating System*, nor is it given an integrity rating in that document. The unnamed tributary of Pond Creek, tributary to Waterbody Segment, NG-02, is not listed on the draft 2016 Illinois Integrated Water Quality Report and Section 303(d) List since it has not been assessed. The unnamed tributary of Pond Creek is not subject to enhanced dissolved oxygen standards.

Agency Conclusion.

Upon completing the assessment, it has been determined that the proposed activity will result in only short-term, temporary increases in pollutant loading and will not result in long term or permanent impacts to existing uses including aquatic life habitat; therefore, we find that it is subject to Subsection (d) "Activities Not Subject to a Further Antidegradation Assessment" of 35 Ill. Adm. Code 302.105.

MEMORANDUM

TO: James Plumley
FROM: John Michael Corn, P.E. and Pam Hoover, P.E., **AquAeTer, Inc.**
DATE: April 26, 2019
JOB NO.: 192569
RE: **Supplemental Information**
2019 Mach Mine Pond 009 Effluent Results

AquAeTer, Inc. (**AquAeTer**) reviewed the February 28, March 4, and March 6, 2019 laboratory results for the sampling at Mach Mine Pond 009. The results were added to a summary table with the 2016 laboratory results for comparison. The average, maximum, and minimum values were provided on the attached table for both the 2016 laboratory results and for the combined 2016 and 2019 laboratory results. A copy of the summary table is attached.

The Illinois Environmental Protection Agency (IEPA) reviewed the 2016 and 2019 data and stated that the 2019 nickel data does not exceed the acute water quality standard (WQS). Further, the IEPA stated that the average of the 2016 and 2019 nickel data does exceed the chronic WQS; however, a mixing zone has already been demonstrated. Based on the findings, the IEPA indicated in electronic mail correspondence, that, as a result, the laboratory data can be submitted to the Agency as supplemental information to the 2016 Antidegradation Report. The attached summary table is being provided to satisfy the supplemental requirement.

If you have any questions or comments, please do not hesitate to contact us by telephone at (615) 373-8532, by facsimile at (615) 373-8512, or by electronic mail at jmcorn@aquaeter.com or phoover@aquaeter.com.

Subject: RE: Williamson Energy - Pond Creek

Iwona,

Is this data for the discharge to the Big Muddy River via Outfall 011?
If so, the new Nickel data does not exceed the acute WQS. The average of the Nickel data does exceed the chronic WQS, however, they have already demonstrated a mixing zone. This new data can just be submitted as supplemental information.

As to the flood zone information, if the impact would increase as it goes downstream, they should evaluate the Big Muddy River further downstream. I the point of discharge would be the largest impact, then what they have submitted will be sufficient.

Scott

Subject: Williamson Energy - Pond Creek

Scott,
James Plumley delivered today couple documents I would like to share them with you and ask you for your comments. First is updated dataset for the discharge that we requested from the Applicant. The question is do they need to submit all new antidegradation assessment or if they could submit supplemental information to the existing AA?
Second question was about flood zone. They wanted to check with us how they supposed to submit the info to us? How far down the stream they should provide data. From the table that is in the attachment they show profile from 2 yr24 hr to 100 yr 24 hr they additionally discharge 13.2 cfs and change in the W.S. elevation is not significant.

Let me know if you have a questions

Thank you
Iwona

DRAFT
MEMORANDUM

TO: James Plumley
FROM: John Michael Corn, P.E. and Pam Hoover, P.E., **AquAeTer, Inc.**
DATE: April 3, 2019
JOB NO.: 192569
RE: **Supplemental Information**
2019 Mach Mine Pond 009 Effluent Results

AquAeTer, Inc. (AquAeTer) reviewed the February 28, March 4, and March 6, 2019 laboratory results for the sampling at Mach Mine Pond 009. The results were added to a summary table with the 2016 laboratory results for comparison. The average, maximum, and minimum values were provided on the attached table for both the 2016 laboratory results and for the combined 2016 and 2019 laboratory results. A copy of the summary table is attached.

The Illinois Environmental Protection Agency (IEPA) reviewed the 2016 and 2019 data and stated that the 2019 nickel data does not exceed the acute water quality standard (WQS). Further, the IEPA stated that the average of the 2016 and 2019 nickel data does exceed the chronic WQS; however, a mixing zone has already been demonstrated. Based on the findings, the IEPA indicated in electronic mail correspondence, that, as a result, the laboratory data can be submitted to the Agency as supplemental information to the 2016 Antidegradation Report. The attached summary table is being provided to satisfy the supplemental requirement.

If you have any questions or comments, please do not hesitate to contact us by telephone at (615) 373-8532, by facsimile at (615) 373-8512, or by electronic mail at jmcorn@aquaeter.com or phoover@aquaeter.com.

Scott,
James Plumley delivered today couple documents I would like to share them with you and ask you for your comments. First is updated dataset for the discharge that we requested from the Applicant. The question is do they need to submit all new antidegradation assessment or if they could submit supplemental information to the existing AA?
Second question was about flood zone. They wanted to check with us how they supposed to submit the info to us? How far down the stream they should provide data. From the table that is in the attachment they show profile from 2 yr24 hr to 100 yr 24 hr they additionally discharge 13.2 cfs and change in the W.S. elevation is not significant.

Let me know if you have a questions

Thank you
Iwona

James, We are providing the following project update.

1. Compare the 2016 dataset for the discharge to the 2016+2019 dataset

The following table provides the compounds of concern 2016 dataset and the combined 2016 and 2019 dataset.

CONSTITUENT	2016			2016 & 2019 DRAFT			DIFFERENCE (%)
	AVERAGE (mg/L)	MAXIMUM (mg/L)	MINIMUM (mg/L)	AVERAGE (mg/L)	MAXIMUM (mg/L)	MINIMUM (mg/L)	
pH	7.2	8	7	7.3	8.4	7	-2%
Acidity	14.3	24	< 10	12.4	24	< 10	13%
Alkalinity	464.4	612	64	464	612	64	0%
Hardness	805.8	970	610	700	970	380	13%
Chlorides	2251.3	2799	1699	1925.1	2799	795	14%
Sulfates	1741	2120	820	1557.4	2120	800	11%
Settleable solids	--	--	--	< 0.25	< 0.25	< 0.25	NC
TSS	37.2	72	7	35.3	72	7	5%
Cyanide	<0.002	<0.002	<0.002	<0.002	<0.002	<0.002	NC
Phenols, TR	<0.01	<0.01	<0.01	<0.01	<0.01	<0.01	NC
Antimony	0.001	0.002	< 0.001	0.001	0.003	< 0.001	-17%
Arsenic	0.001	0.002	< 0.002	0.002	0.003	< 0.002	-11%
Beryllium	<0.001	<0.001	<0.001	<0.001	<0.001	<0.001	NC
Cadmium, total	0.0002	0.0007	<0.002	0.0002	0.0007	<0.002	15%
Cadmium, dissolved	0.0002	0.0006	<0.002	0.0002	0.0006	<0.002	13%

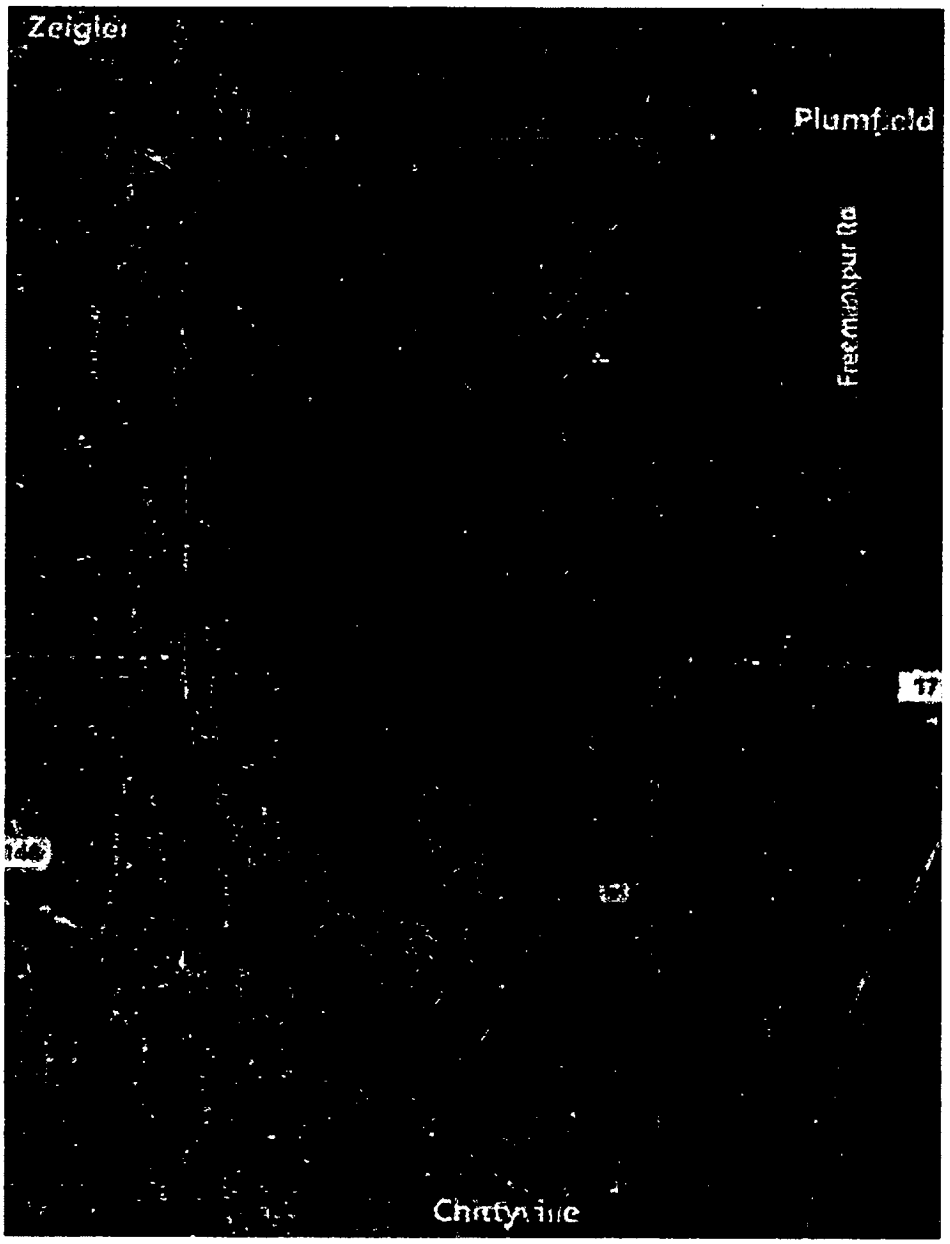
Copper	0.023	0.032	0.011	0.023	0.032	0.011	0%
Iron, total	0.685	1.835	0.216	0.664	1.835	0.157	3%
Iron, dissolved	0.263	0.709	0.061	0.203	0.709	< 0.05	23%
Lead	<0.001	<0.001	<0.001	0.001	< 0.002	< 0.001	NC
Manganese, total	0.204	0.419	0.125	0.227	0.419	0.125	-11%
Manganese, dissolved	0.192	0.405	0.121	0.176	0.405	0.061	8%
Mercury	< 0.002	< 0.002	< 0.002	< 0.002	< 0.002	< 0.002	NC
Nickel, total	0.008	0.014	0.004	0.017	0.057	0.004	-120%
Nickel, dissolved	0.007	0.013	0.004	0.016	0.052	0.004	-111%
Selenium	0.006	0.009	0.004	0.007	0.012	0.004	-13%
Silver	< 0.001	< 0.001	< 0.001	< 0.001	< 0.001	< 0.001	NC
Thallium	< 0.0004	< 0.0004	< 0.0004	< 0.0004	< 0.0004	< 0.0004	NC
Zinc	< 0.02	< 0.02	< 0.02	0.014	< 0.05	< 0.02	NC
PCBs	--	--	--	--	--	--	

As shown on the table, for the compounds of concern, the datasets are the same or the values decreased; except for nickel. We would expect that IEPA will require that the Antidegradation Report be updated for nickel. It might be useful to discuss this with the Permit Writer in order to find out if an addendum with the new nickel information would be acceptable or if they will require a complete update of the Report.

2. Evaluate the new background dataset from IEPA.

At this time, we are working on the evaluating the background data provided by IEPA for Station N-11 and potentially N-08. Previously, the IEPA database was limited and did not include a number of compounds. The new IEPA background database does now include all compounds on this list. We will compare the background values to the 2016 values used in the original report to determine if the background dataset has changed significantly.

3. Calculate new loadings for the compounds of concern using the new discharge data and the new IEPA background data.



To be completed when the background dataset is compiled.

If you have any questions, please let me know. We will send an update with the background analysis soon.

Regards,
John Michael

MARION REGIONAL OFFICE

Re: Permit No. 375
Incidental Boundary Revision No. 83

Dear Mr. Pollastro:

The appropriate Department technical staff have reviewed the proposed incidental boundary revision dated January 28, 2019, and the supplemental information dated, March 5, 2019, submitted by the permittee for the Pond Creek No. 1 Mine. The request would add 17.01 acres to conduct surface coal mining activities. The additional acres would be used for the installation of a support site consisting of gravel entrance road and work area, a 16.5-foot diameter bleeder fan shaft, one 16-inch diameter borehole for a vertical turbine pump, one 8.625-inch diameter borehole for compressed air, three 12.75-inch diameter utility boreholes, one 24-inch diameter utility borehole, associated concrete pads for the boreholes, and a 10,900 linear foot water line (12-inch diameter) for the conveyance of mine infiltration water.

Section 1774.13: The Department finds the permittee has demonstrated in its request, and field inspections by the Department's field representative have confirmed, that these areas meet the requirements for an incidental boundary revision, as outlined in 62 Ill. Adm. Code 1774.13(d). Section 1774.13(d)(6) publication requirements have been met. Section 1774.13(c) findings are below.

DEPARTMENT FINDINGS

Section 1761.11(d): The proposed area is within one hundred (100) feet measured horizontally of the outside right-of-way line of public roads in Williamson County, described as follows:

> The proposed area is adjacent to the right-of-way of Kraatz, Crawford, and Locust Grove Roads. The proposed activities in the application area include the development of a support area with a gravel setup yard and the installation of an

underground waterline. Also, an access road will be constructed from Crawford Road to the support area.

No approvals from the authority with jurisdiction over the roads were required.

The applicant provided proper public notice and opportunity for a public hearing. No hearing was requested, and no written comments were submitted to the Department concerning these roads.

The Department finds the interests of the public and affected landowners will be protected from the proposed mining operations as a result of the measures to be taken by the applicant as described in the mining operations plan concerning these roads.

Section 1761.11(e): The proposed area is within three hundred (300) feet measured horizontally of two occupied dwellings.

The applicant shall establish a three hundred (300) foot buffer around the dwelling located to the northeast, not disturb within the buffer zone and shall install and maintain buffer zone markers to prevent disturbance within the buffer zone.

The owner of the dwelling located to the southwest has provided a written waiver pursuant to Section 1761.15 consenting to surface coal mining operations closer than 300 feet.

Section 1773.15(c)(12): The effect of the proposed permitting action on properties listed on or eligible for listing on the National Register of Historic Places has been taken into account by the Department.

Sections 1784.14(e)(4) and 1784.14(f)(2), respectively: The Department has determined that neither a new or updated probable hydrologic consequences determination nor a new or updated assessment of the probable cumulative hydrologic impacts is required.

Section 1817.46(e): A sediment pond exemption is requested for an area delineated in the application. The regulations at Section 1817.46(e) allow the Department to grant exemptions from the requirement to pass all disturbed drainage through a siltation structure when:

a. The disturbed drainage area within the total disturbed area is small; and

b. Alternate sediment control measures as described in Section 1817.45(b) are used in lieu of a siltation structure, and the applicant demonstrates that siltation structures are not necessary for drainage from the disturbed area to meet the effluent limitations and water quality standards for the receiving waters set forth in Section 1817.42.

The Department has determined that the area for which a sediment pond exemption is requested meets the criteria established in Section 1817.46(e) and hereby grants an exemption from the use of a sedimentation pond for this area.

Section 1817.57(a)(1): The applicant has requested a stream buffer zone variance for an area as delineated in the application. In accordance with Section 1817.57(a)(1), the Department finds that:

a. The original stream channel and its associated riparian vegetation will be restored; and

b. Surface mining activities will not cause or contribute to a violation of Section 1817.42 and will not adversely affect the water quantity and quality or other environmental resources of the stream.

Therefore, the Department authorizes surface mining activities closer than one hundred (100) feet of the top of the bank of the normal channel of the perennial or intermittent stream or through the stream.

Section 1773.15 (c)(10) and 1816.97(b): Based on 17 Ill. Adm Code Section 1075 consultation and consultation with the U. S. Fish and Wildlife Service (USFWS), the Department has determined that the operations as approved will not affect the continued existence of endangered or threatened species or result in destruction or adverse modification of their critical habitats, as determined under the Endangered Species Act of 1973 (16 USC 1531 et seq.).

Incidental Take Authorization: A federal Incidental Take Authorization for the Indiana bat (*Myotis sodalis*) has been requested as part of this submittal. A Protection and Enhancement Plan (PEP) has been provided that meets the specifications for the 2013 revised edition of the guidance document provided by the USFWS, including planting of a minimum of 0.70 acres of approved tree species at reclamation. The Incidental Take Authorization for the Indiana bat is hereby granted under the authority granted to the Department by the 1996 Biological Opinion, OSM, and the USFWS.

The applicant utilized the federal actions key to the 4(d) rule regarding Incidental Take of the northern-long eared bat (*Myotis septentrionalis*). The Department has determined that this project may affect northern long-eared bat habitat, but that any resulting incidental take is not prohibited by the federal final 4(d) rule. Therefor this project is consistent with the USFWS Jan 2016 Programmatic Biological Opinion on the final 4(d) rule. The Department and the applicant are in compliance with Section 7 of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 et seq).

Section 1817.150: The applicant has proposed the creation of a road in the permit area. Pursuant to Section 1817.150(a)(2)&(3) the Department has determined that the road is an ancillary road.

FEE AND BOND

Section 1777.17(c): The fee for the area will be $425.00. The fee is comprised of $425.00 for non-surface mining area ($5/acres x 17.0 acres x the 5 years the bond is in force).

Section 1800.15(d): The bond for the area will be $253,500.00.

PERMIT CONDITIONS

Section 1778.15: Pursuant to Section 1778.15, the permittee shall possess all necessary legal rights to enter and conduct surface coal mining and reclamation operations within the permit area until final bond release is obtained.

Section 1817.13: Upon completion of drilling activities, a borehole/well completion diagram shall be submitted to the Department for all boreholes (dewater, injection, observation, methane vent, rockdust, power supply, etc.) within thirty (30) days of completion of drilling activities. Pursuant to 62 Ill. Adm. Code 1817.13, each borehole shall be properly cased/lined. The construction diagram shall include the location and surveyed elevation of each borehole, a unique name for the borehole and details on the casing/construction materials used. A copy of the borehole/well completion diagram can be found on the Department's Forms webpage at: https://www.dnr.illinois.gov/mines/LRD/Pages/FormsApplicationsMemoranda.aspx under Miscellaneous Permittee/Operator Forms. Construction all boreholes/monitoring wells shall be in accordance with Operator Memorandum 2017-01.

Section 1817.15: Pursuant to 62 Ill. Adm. Code 1817.15, each borehole shall be properly abandoned and sealed when no longer needed for its intended purpose. A copy of the plugging affidavit form can be found on the Department's Forms webpage at: https://www.dnr.illinois.gov/mines/LRD/Pages/FormsApplicationsMemoranda.aspx, under Miscellaneous Permittee/Operator Forms. Proof of plugging of all boreholes shall be in accordance with Operator Memorandum 2015-02.

All conditions and provisions contained in the approved permit also apply to this revision. Approval from this agency does not relieve the permittee from obtaining approval from other agencies requiring such.

The Department is in receipt of the fee and bond. Please forward two copies of your request letter and maps to Illinois Environmental Protection Agency, Mine Pollution Control Program, 2309 West Main Street, Suite 116, Marion, Illinois 62959. Mining activities on these 17.01 acres may commence.

Should you have any questions, please contact Will Gillespie at our Benton Office.

Sincerely,

Nick San Diego, Supervisor
Land Reclamation Division

Is application to be used as an application for an NPDES and/or Subtitle D?

☐ YES ☒ NO

NOTE: If this is an application for an NPDES permit, the Consolidated Permits Program, Application Form 2C (renewal), Form 2D (new), or Form 2E (sanitary) must be completed.

If YES, check the appropriate box below:

☐ IEPA Subtitle D State Permit
☐ NPDES *(New)*
☐ NPDES *(Renewal)*
☐ NPDES *(Modification)*

☐ I waive my right of the 90-day permit issuance deadline as required by Section 39(a)(4) of the Illinois Environmental Protection Act and 35 Ill. Adm. Code 309.225(c) of the Illinois Pollution Control Board Rules and Regulations.

Affidavits, Certifications, Insurance Certificates, Newspaper Notice, Financial Assurance. The applicant shall attach the appropriate affidavits required for the type of operations proposed, a draft public notice, and a valid certificate of insurance.

Check and attach the completed documents for the proposed operations, if applicable:

	Underground Mining Affidavit
	Planned Subsidence Mitigation Right of Entry Affidavit
	Underground Slurry Disposal Affidavit
	Public Land Survey Monuments Certification
X	Engineering Certification
	Technical Data Information Sheet
	Occupied Dwelling Buffer Zone Waiver

Complete below and attach the draft public notice for review. **[1778.21].**

X	*Marion Daily Republican*

Proof of general liability insurance from an authorized provider (licensed to write from the Illinois Department of Insurance), Performance bond

	Certificate of Insurance **[1778.18, 1817.121(c)(3)]**
	Evidence of required bond **(Renewals only) 1774.15**

☐ I waive the time limits for the Department to make its final permit decision pursuant to 62 Ill. Adm. Code 1773.19(a)(2)

I, James P Lumley Authorized Person , under penalties
(Signature, Title)

of perjury, declare that I have examined this application, including the accompanying statements and documents, and that, to the best of my knowledge, it is true and correct. I also certify that all printed copies of this application provided to the Department and County Clerk(s) are identical. **(Signer must be at least a Vice-President or duly authorized representative)**

Dated: 1/28/19

Description of Proposed Permitting Action:

Describe in sufficient detail the proposed activities. The information should summarize the requested permitting action to assist the Department in determining the scope and magnitude of the proposal.

This IBR is requesting to install the following: a access road, one 16.5 foot bleeder shaft, one 16 inch turbine borehole, one 8.625 inch utility borehole, three 12.75 inch steel utility boreholes, one 24 inch utility borehole, (each borehole has a 10'x10'x1' concrete pad), transformer with a 10'x8'x1' concrete pad, compressor station, crib plant (Jenchem Plant) with associated facilities. The shaft will a large concrete pad poured irregularly shaft with a surface area of ~2430 square feet and a thickness of 4 feet. Two temporary drill pits (one ~20'x40'x10' and one ~ 10'x20'x10) will be used during the development of the turbine and utility boreholes. The IBR drill site will be gravel with 8 inches of crusher run gravel ~(1.56 acres). HDPE water (12") and power lines will be installed back connection into the existing shaft site along Locust Grove Road.

Shadow Area	

1.2.2 Indicate on the Pre-Mining Land Use Map where future permits for coal refuse piles, coal waste impoundments, or other surface facilities would be located. Provide a general statement that future facilities will be located X number of miles from the current permit. **[1778.17(a); 1779.24(c)]**

N/A

1.3 Ownership and Control Information. NOT APPLICABLE

1.3.1 Complete Table 1.3.1 to identify all owners/controllers of the applicant. Separate sheet/table shall be provided for each entity or individual deemed to be an owner/controller of the applicant.

Ownership or control is evidenced by:

- Being a permittee of a surface coal mining operation; or
- Based on instruments of ownership or voting securities, owning of record in excess of fifty (50) percent of an entity; or
- Having any other relationship which gives one person authority directly or indirectly to determine the manner in which an applicant, an operator, or other entity conducts surface coal mining operations

The following relationships are presumed to constitute ownership or control unless a person can demonstrate that the person subject to the presumption does not in fact have the authority directly or indirectly to determine the manner in which the relevant surface coal mining operation is conducted.

- Being an officer or director of an entity; or
- Being the operator of a surface coal mining operation; or
- Having the ability to commit the financial or real property assets or working resources of an entity;
- Being a general partner in a partnership; or
- Based on the instruments of ownership or the voting securities of a corporate entity, owning of record ten (10) through fifty (50) percent of the entity; or
- Owning or controlling coal to be mined by another person under a lease, sublease or other contract and having the right to receive such coal after mining or having authority to determine the manner in which that person or another person conducts a surface coal mining operation. **[1773.5, 1778.13(c)(1) to (c)(3)]**

1.3.2 Complete Table 1.3.2 for surface coal mining and reclamation operations, within the five (5) years preceding the date of the application for associated with: **[1778.13(c)(4)/1778.13(c)(5)]**

- Each Owner/Controller identified in Table 1.3.1
- The applicant.

1.4 Violation History. NOT APPLICABLE

1.4.1 Has the applicant, any subsidiary, affiliate, or persons controlled by or under common control with the applicant, had Federal, State, or Tribal coal mining permit suspended or revoked in the last five (5) years preceding the date of submission of the application? **[1778.14(a)(1)]**

☐ Yes ☐ No

1.4.2 Has the applicant, any subsidiary, affiliate, or persons controlled by or under common control with the applicant, had forfeited a performance bond or similar security deposited in lieu of bond? **[1778.14(a)(2)]**

☐ Yes ☐ No

If YES to either Questions 1.4.1 or 1.4.2, the applicant shall complete Table 1.4 for any permit/company associated with permit suspension, revocation or bond forfeiture. **[1778.14(a) and (b)]**

1.4.3 The applicant shall complete Table 1.4.3 for all violations received by the applicant or any one owning/controlling the applicant as provided in Table 1.3.1 during the three (3) year period preceding the application date. **[1778.14(c)]**

For any outstanding violation or violation under appeal listed in Table 1.4.3, the applicant shall provide supporting documentation showing good faith efforts for the violation from the issuing agency, or in the case of appeals provide documentation of current proceedings. **[1773.15(b), 1778.14(c)]**

NOTE: Provide as an Attachment to Part 1.4.3.

1.5 Property Ownership.

1.5.1 Complete Table 1.5.1 for (1) each legal or equitable owner of record, (2) each holder of leasehold interest, and (3) any purchaser of record under a real estate contract for the surface and mineral property within the proposed permit boundary. **[1778.13(e), 1778.15(a)]**

If the proposed permit is for a surface mine where the private mineral estate has been severed from the private surface estate, applicant must also provide the Department with:

- A copy of the written consent of the surface owner to the extraction of coal by surface mining methods; or
- A copy of the conveyance that expressly grants or reserves the right to extract the coal by surface mining methods; or
- If the conveyance does not expressly grant the right to extract the coal by surface mining methods, provide the Department with documentation that, under the applicable State law, the applicant has the legal authority to extract the coal by surface mining methods. **[1778.15(b)]**
- See Part 1.5.3, below, for additional requirements to uncontrolled properties.

NOTE: Provide as an Attachment to Part 1.5.1.

1.5.2 Complete Table 1.5.2 for any owner of record for property (surface and subsurface) contiguous to any part of the proposed permit boundary. **[1778.13(f)]**

Does the applicant have an interest in any lands, options or pending bids on interest for lands which are contiguous to the proposed permit area?

☐ Yes ☒ No

If YES, the applicant shall indicate in Table 1.5.2 all lands, interest in lands, options, or pending bids on interests held or made by the applicant for lands contiguous to the area described in the permit application. **[1778.13(h)]**

Upon request by the applicant, this information may be held in confidence by the Department, if not on public file. Does the applicant wish any of the above information to be held confidential?

☐ Yes ☒ No

If YES, the applicant shall identify which information is to be held confidential in its statement. **[1778.13(h)]**

1.5.3 Complete Table 1.5.3 for any owner of record for property (surface and subsurface) identified in Table 1.5.1 and shown on the Pre-Mining Land Use Map identified in 1.5.4, not owned by the applicant, identifying the documents and legal rights claimed to enter and mine.

All properties identified in Table 1.5.1 that the applicant does not have a legal right to enter and begin mining operations shall require submission of a Property Ownership Waiver form for each property identified for the application to be considered administratively complete [see Operator Memorandum No. 2011-01]

NOTE: Provide as an Attachment to Part 1.5.3.

1.5.4 Delineate all boundaries of lands and names of present owners of record of those lands, both surface and subsurface, included in or contiguous to the permit area on the Pre-Mining Land Use Map. The map shall also show lands within the permit area that are controlled properties (i.e. applicant is claiming legal right to enter and begin surface coal mining and reclamation operations) versus uncontrolled properties (i.e. applicant does not yet have the legal right of entry). **[1779.24(a) and (b)]**

ENGINEERING CERTIFICATION

I hereby certify the engineering design used in preparation of this application, attachments, and supplements were done by me or under my direct supervision.

I certify that I am familiar with all of the plans, specifications, reports, and maps submitted as part of this application and that said information is accurate.

I certify to the best of my knowledge all such design is in accordance with all applicable local, state and federal laws, rules and regulations.

I further certify that all applicable maps and/or drawings have been individually sealed in accordance with the Professional Engineering Act, 225 ILCS 325/15.

PUBLIC NOTICE

Pursuant to the Surface Coal Mining Land Conservation and Reclamation Act (PA-81-1015, as amended) and the Rules and Regulations of the Act, Williamston Energy, LLC, PO Box 99, Johnston City, IL 62959 hereby gives notice that under the prevision of Section 1743.13 (d) (2) of 62 Ill. Admin. Code, a request for 17.01 acres Contiguous IBR Surface Permit application to Permit No. 375 was submitted to the Illinois Department of Natural Resources, Office of Mines and Minerals, Land Reclamation Division, a access roadway , one 16.5 foot bleeder shaft, one 16 inch utility borehole, one 8.625 inch utility borehole, three 12.75 inch utility boreholes, and one 24 inch utility borehole , (each borehole having a 10'x10'x1' concrete pad), a 10'x8'x1' concrete pad for transformer, a compressor station, and a portable crib plant. The shaft will a large concrete pad poured irregularly shaft with a surface area of ~2430 square feet and a thickness of 4 feet. Two temporary drill pits (one ~20'x40'x10' and one ~ 10'x20'x10) will be used during the development of the boreholes. The site will be gravel with 8 inches of gravel ~(1.56 acres). HDPE water (12") and power lines will be installed back connection into the existing shaft site along Locust Grove Road.

Approval is also requested to operate within 100 feet of the outside right-of-way of a public road (Kraatz Road, Crawford Road, and Locust Grove Road) which is located as follows: Kraatz Road and Crawford Road - Along the North and West side of the northwest quarter of the northeast quarter of Section 2 and northeast side of the northwest quarter of Section 2, Township 8 South, Range 4 East and Locust Grove Road – Along the southeast quarter of the southeast quarter of Section 3 and northwest quarter of the northwest quarter of Section 10, Township 8 South, Range 4 East. In accordance to the prevision of Section 1761.14 of 62 Ill. Administrative Code a public hearing may be requested to determine whether the interests of the public and affected landowners will be protected.

The Proposed IBR is described as: Part of the NW/4 of NE/4 of Section 2, W/2 of Section 2, S/2 of Section 3, NE4 of NE/4 of Section 9 and NW/4 of NW/4 of Section 10, Township 8S, R4E of the 3rd Principal Meridian, Williamson County, IL, containing approximately 17.01 acres. Copies of the application are on file for inspection at the following office, and written comment may be addressed to Illinois Department of Natural Resources, Office of Mines and Minerals, Land Reclamation Division, One Natural Resources Way, Springfield, IL 62702-1271.

The closing date of the comment period and the request of a public hearing for this IBR is fourteen (14) days from the date of this Public Notice.

Public Notice to be advertised in the Marion Daily Republican.

OCCUPIED DWELLING BUFFER ZONE WAIVER

(Williamson Energy, LLC) will conduct surface coal mining operations (Bleeder shaft IBR with Fan and Utility boreholes) within the permitted area for (Pond Creek #1 Mine), Permit No. 375, Insignificant Boundary Revision (North Bleeder Shaft) in Williamson County, Illinois.

These mining activities will be conducted within 300 feet measured horizontally of the occupied dwelling located at:

WILLIAMSON ENERGY LLC, 18399 CRAWFORD RD; THOMPSONVILLE IL; 62890 (04-02-100-003) or Map ID (100.003)

I (we), as signator(s) below, verify that I am (we are) the legal owner(s) of the occupied dwelling.

I (we) acknowledge that I (we) have the legal right to deny mining activities within a 300-ft. buffer zone from my (our) occupied dwelling.

I (we), as the legal owner(s) of the dwelling and associated property on which the dwelling is located, do knowingly waive this right and hereby consent to the mining activities to be conducted within 300 feet of the occupied dwelling.

EASEMENT

Prepared by and return to:
Williamson Energy, LLC
P.O. Box 99
Johnston City, IL 62951

EASEMENT

KNOW ALL MEN BY THESE PRESENTS:

That AMEREN ILLINOIS COMPANY d/b/a AMEREN ILLINOIS, an Illinois corporation, 1901 Chouteau Avenue, Mail Code 700, St. Louis, Missouri 63103, its successors, assigns, agents, lessees, tenants, contractors, sub-contractors and licensees, (herein the "Grantor"), for and in consideration of Ten Dollars ($10.00), and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, has granted unto Grantee an easement and surface waiver and consent on, over, across, through or under a strip of land (hereafter defined) of Grantor, unto WILLIAMSON ENERGY, LLC, a Delaware limited liability company, of P.O. Box 99, Johnston City, Illinois 62951 (herein "Williamson"), and all of Williamson's successors, licensees, agents, lessees, contractors, sub-contractors, tenants and assigns (herein collectively the "Grantee").

Grantor does hereby give and grant to Grantee the right and easement, for a term as hereinafter defined, to construct, reconstruct, install and lay underground and thereafter use, operate, inspect, repair, maintain, replace and remove a water line lines and any and all associated appurtenances and facilities (with such right and easement being collectively either the "Easement" or the "Easement Rights," and with such line or lines and any and all associated appurtenances and facilities being collectively the "Lines and Appurtenances") on, over, across, through or under a strip of land fifty feet (50') in width on the land of Grantor in Williamson County, Illinois (herein the "Easement Area," and with such land being the "Land"), said Land being described as follows:

From a stone at the Northwest corner (NW Cor) of the Northeast Quarter (NE ¼) of the Northwest Quarter (NW ¼) of section two (Sec.2) Township Eight South (T8S) Range Four East (R4E) of the Third Principal Meridian (3PM) measure southwardly along the west line of said quarter quarter section seven hundred fifty six and thirty nine hundredths (756.39') feet to a point for the Point of Beginning. Thence continuing the last described course measure sixty one and twenty two hundredths (61.22') feet. Thence deflecting seventy eight degrees and twenty five minutes (78° 25') to the left measure southeastwardly one thousand three hundred forty one and twelve hundredths (1341.12') feet to the east line of said quarter quarter section. Thence deflecting one hundred one degrees and fourteen minutes (101° 14') to the left measure northwardly along the east line of said quarter quarter section sixty one and sixteen hundredths (61.16') feet. Thence deflecting seventy eight degrees and forty six minutes (78° 46') to the left measure northwestwardly on thousand three hundred forty one and forty eight hundredths (1341.48') feet to the Point of Beginning. Containing an area of two (2.0) acres more of less situated in the County of Williamson, in the State of Illinois.

Parcel Index Number: 04-02-100-005

And being the same lands described in that certain Deed dated August 9, 1922, recorded August 26, 1922 at Book 170 Page 481.

The general location of the Easement Area is shown or depicted on the Plat entitled Exhibit "A" attached hereto and made a part hereof.

Grantor, also grants to Grantee the following, but only to the extend they do not interfere with Grantor's use of the land: (i) all rights reasonably implied by and/or incidental to the complete and full exercise and enjoyment of the Easement Rights, including without limitation the right of ingress and egress to, from, over and across the Easement Area for all necessary or convenient purposes; (ii) the right to trim, cut, and/or remove at any time, and from time to time, any and all brush, bushes, trees, roots, undergrowth, rock or other substances or obstructions upon, over or under the surface of the Easement Area deemed by Grantee to interfere with the Easement Rights or endanger the safety of or interfere with the Lines and Appurtenances; and (iii) the right to license, permit or otherwise agree to the use, operation or occupancy of the Lines and Appurtenances by any other person, association, authority, entity or corporation for the purposes stated herein.

The Easement is subject to the following:

- The Easement shall be expressly limited to an area totaling 50 feet in width and running along and with and being 25 feet each side of the center line of the Lines and Appurtenances as installed; provided, however, that the Easement Area shall not apply at any time when Grantee is constructing, installing, replacing or removing the Lines or Appurtenances or conducting significant maintenance or repairs thereto. At such time when Grantee is constructing, installing, replacing or removing the Lines or Appurtenances or conducting significant maintenance or repairs thereto, the Easement shall be expressly expanded within reason to allow for and area as necessary to conduct said installation or significant maintenance or repairs thereto.

- The Lines and Appurtenances to be installed shall be trenched and laid, except as otherwise allowed herein, at a minimum of 30 inches below the surface.

- Prior to commencement of work contemplated hereunder, Grantee will stake the center line of the Easement on Grantor's Land.

- Subsequent to the installation, operation, maintenance and/or removal of the Lines and Appurtenances under or from the Land, Grantee will perform the necessary reclamation work on and respecting the Land.

- Grantor reserves the right to use the Easement Area for purposes of an electrical transmission line and Grantee may use the Easement area for purposes that do not unreasonably interfere with Grantor's use.

- Grantee agrees that it will conduct its operations hereunder and on the Land in a workmanlike manner and in accordance with industry practice; that it will comply with all applicable laws and regulations; and that it will obtain all necessary permits.

- Grantor understands and acknowledges that the Land will be used in connection with the present and future business operations of Grantee. At such time as Grantee or any person or entity doing business with Grantee no longer does business in the State of Illinois in any mineral or energy related industry, this Easement will terminate, and thereupon Grantee shall deliver a release of easement to Grantor to place of record in the Office of the County Recorder of Franklin County, Illinois.

- Nothing contained herein shall prevent Grantor from claiming damages to other lands as a result of Grantee's installation, use and/or maintenance of the Lines and Appurtenances.

This Easement shall be in force and have effect for as long thereafter as mining operations are being conducted.

For and in consideration of the sum of Ten Dollars ($10.00), the receipt and sufficiency of which is hereby acknowledged, and other good and valuable consideration to be paid to Grantor by Grantee as total consideration in full payment for all benefits secured by Grantee under or in connection with this Easement.

Grantee shall provide, and shall require all persons acting under or with the consent of Grantee to provide, no less than twenty-five (25') feet radial clearance from

all of Grantor's overhead lines. Grantee shall provide, and shall require all persons acting under or with the consent of Grantee to provide, no less than fifteen (15') feet radial clearance from all of Grantor's facilities on or adjacent to the Easement Area and Land, including towers, poles, anchors and structures. Grantee shall warn and instruct each and every person acting under or with the consent of Grantee as to the existence, location and nature of Grantor's electric lines and electrical facilities on or adjacent to the Easement Area and Land. As and to the extent applicable, Grantee shall comply with, and shall require any person(s) acting under Grantee including without limitation agents, contractors and employees, to comply with 765 ILCS 140 ("Adjacent Landowner Excavation Protection Act") and the National Electrical Safety Code (collectively "Laws"), as such Laws may be amended from time to time. Nothing contained in this instrument shall be construed to relieve Grantee, or any person(s) acting under Grantee, from the duty to comply with the Laws; but if and to the extent that this instrument provides for precautions or specific clearances which are greater than those imposed by the Laws, such greater precautions or clearances provided for in this instrument shall be binding on Grantee and any such person(s) acting under Grantee. Grantee agrees not to make any excavations within thirty (30) feet radial clearance for any of Grantee.

Grantee shall be responsible for actual damages occurring on Easement Area, Land and property adjacent thereto, including damages, if any, done as a result of ingress or egress over Grantors adjoining property, or as a result of the construction,

operation, maintenance or repair, including anything whatsoever described herein as allowed to Grantee.

Grantee will indemnify and hold Grantor harmless from any and all liability, expense, judgment, suit, cause of action, or demand for personal injury, death, or direct damage to tangible property which may accrue against Grantor, its subcontractors, or their employees or agents, as a result of Grantee performing its activities under this Easement Agreement,

The provisions of the Easement shall constitute covenants "running with the land" for the benefit of Grantee (as herein defined).

The Easement granted herein and the provisions relating thereto shall be binding upon and inure to the benefit of both Grantor and its successors and assigns and Grantee (as herein defined). This Easement and the Easement Rights are fully assignable, in whole or in part, by Grantee, without the consent or approval of Grantor, to any person, entity, public utility, and/or governmental or quasi-governmental authority, board or association whatsoever who or which will use or utilize the Easement to serve (or use or utilize the Easement in conjunction with) any business and/or operations of Grantee or any person or entity affiliated with Grantee. Any such assignment shall be encumbered by the terms of this Easement, and any successor, licensee, agent, lessee, contractor, sub- contractor, tenant or assignee of or to this Easement shall be bound thereby.

DATED this 30 day of January, 2019.

REAL ESTATE LEASE

This Real Estate Lease, hereinafter called "Lease" made and entered into this 18th day of July, 2018, by and between David M. Mandrell and Karen Y. Mandrell, husband and wife, with a mailing address at 17889 Crawford Road, Thompsonville, Illinois 62890, hereinafter called "Lessor", and Williamson Energy, LLC, a Delaware Limited Liability Company, with a mailing address at P.O. Box 99, Johnston City, Illinois 62951 hereinafter called "Lessee".

For and in consideration of the mutual covenants herein contained, the parties agree as follows:

1. Lessor hereby leases unto Lessee the surface only of the following described premises, hereinafter called "Leased Premises," located in Williamson County, Illinois:

> THE SURFACE ONLY of the West One-Half (W ½) of the Northeast Quarter (NE ¼) And the Northwest Quarter (NW ¼) of the Southeast Quarter (SE ¼) of Section Two (2), all in Township Eight (8) South, Range Four East of the Third Principal Meridian.
> Subject to all public and private roadways or easements as now located.
> PIN: 04-02-200-001

Upon the terms and conditions hereinafter stated.

2. With respect to the Leased Premises, Lessee is privileged to use same in connection with the drilling, construction, operation, repair, replacement and dismantling of a certain air bleeder shaft, air intake shaft and bore hole facilities. Lessee may construct the foregoing shafts and may install related facilities, structures and equipment, including, but not limited to, a high-powered electrical fan, communication lines, rock dust conveyor, compressed air, electrical power lines and substation or gas turbine generator, top soil stockpile sites and cutting pit sites and other related maintenance and operation equipment, structures and facilities.

In addition, Lessee will install necessary culverts and construct a road for access to the site. In addition, Lessee will be privileged to install a three phase power line to serve the various facilities. Also, in addition, Lessee shall be privileged to install facilities for the transporting of water to the site.

In connection with the initial construction activities, Lessee may use the premises for a cuttings pit and for drilling equipment and related activities as reasonably needed. Lessee will strip all top soil which may be affected by the activities contemplated hereunder and will store the same on site in suitable berms.

After construction is completed, the facility site, the substation site and the cutting pit site may be enclosed by fencing, at the discretion of Lessee.

3. The term of this Lease shall be for a period of Ten (10) years, beginning on the date this lease was entered into, and for as long as Lessee, at its discretion, requires the use of the above described facilities in connection with its mining activities or permitting, or until reclamation activity on and respecting the Affected Lands, as may be required by all regulatory agencies having jurisdiction over the operations hereunder, have been completed.

4. After expiration or termination of this Lease, Williamson Energy shall re-enter the Affected Lands and remove all of its equipment and related property and begin reclamation and environmental work on and respecting the Affected Lands within one hundred eighty (180) days thereafter. Further, prior to performing such reclamation and environmental work on the Affected Lands, and subject to the expressed prior approval of any regulatory agency having jurisdiction over Williamson Energy's operations on the Property and Affected Lands under this Lease; Lessor may desire to retain certain Facilities and Appurtenances existing on the Affected Lands, and upon written notice to Williamson Energy, and, thereafter, if mutual acceptable and

agreeable to and by Williamson Energy, matters as may be requested by Lessor shall transfer, in whole or in part, and become the sole possession and ownership of the Lessor and Lessor shall accept said such Facilities and Appurtenances on an "as is", "with all faults", and/or "environmental liabilities". Notwithstanding, if expressed prior approval is not granted for such transfer by any such regulatory agency having jurisdiction over Williamson Energy's said operations; Williamson Energy shall have the continuing right during which Williamson Energy may re-enter the Affected Lands and remove all Facilities and Appurtenances from the Affected Lands in accordance with then applicable laws and regulations.

5. In consideration thereof, Lessee agrees to pay to Lessor the sum [redacted] with the first payment being due within 30 days from the execution of this Lease, and subsequent annual payments being due on or before the anniversary date thereof. Lessor agrees to accept Lessee's corporate check as good and sufficient payment.

6. Lessee will protect and indemnify Lessor from any and all claims for property damage, personal injury or death resulting from the occupation of the Leased Premises by Lessee and resulting from Lessee's operations thereon.

7. At the termination of this Lease, Lessee agrees to restore the Leased Premises, as nearly as is reasonable and practical to the condition in which they existed prior to the time of this Lease. Restoration work shall commence during appropriate periods of favorable weather and suitable soil conditions as mutually agreed to by both parties. Once started, the work shall proceed in an orderly and timely manner until completed. Lessee's compliance with such requirements as are imposed by regulatory agencies having jurisdiction shall be determinative as to Lessee's obligation to repair and restore as provided in this Real Estate Lease. If mining

operations and reclamation activities of Lessee cause disturbance of the roadways or utilities located on the premises described above, and if additional easements or rights of way are required by the state, county, or by the township, to repair said roadways, or by a public utility providing utility service of any nature whatsoever, including but not limited to, electricity, water, telephone service, cable service and the like, Lessor agrees, upon request, to convey, to the relevant entity, without additional consideration, such additional rights of way or easements as are required to restore, repair, or replace previously existing roadways or utilities. At Lessee's cost, Lessee will fill and restore the shaft site, remove roadways, remove the equipment associated therewith and remove and restore the substation site and the cutting pit site. Lessee shall also arrange for the removal of the electrical power line. Lessee will redistribute the top soil previously stored onto the area previously stripped.

8. Lessee agrees to pay the real estate taxes of Leased Premises for 2019, payable in 2020, and subsequent years for as long as Lessee, at its discretion, requires the use of the above described facilities in connection with its mining activities or permitting, or until reclamation activity on and respecting the Affected Lands, as may be required by all regulatory agencies having jurisdiction over the operations hereunder, have been completed.

9. Lessor agrees to execute a Memorandum of this Lease suitable for recording in the form attached hereto as Exhibit A, if requested by Lessee.

10. If it becomes necessary for either party to enforce any of the terms of this Lease against the other, the party in default shall pay all costs and expenses incident thereto, including reasonable attorneys' fees.

11. Any notices to be given under this Lease shall be deemed to have been properly given if in writing and delivered in person, by certified mail or telegram, with all necessary postage or charges fully prepaid, at the address for the respective parties as shown below.

To Lessor: David M. Mandrell and Karen Y. Mandrell
17889 Crawford Road
Thompsonville, Illinois 62890

To Lessee: Williamson Energy, LLC
Attn: Land Department
P.O. Box 99
Johnston City, Illinois 62951

12. This instrument constitutes the entire Lease between the parties hereto and such Lease shall not be changed except in writing signed by all parties.

13. Time is of the essence of the Lease and the terms hereof shall be binding upon, and inure of the benefit of the parties hereto, their heirs, devisees, legal representatives, successors and assigns.

14. This Lease shall be construed under the laws of the State of Illinois.

IN WITNESS WHEREOF, the parties hereto have executed this Lease as of the day and year hereinabove set forth.

MEMORANDUM OF SURFACE EASEMENT AND AGREEMENT

This Memorandum of Surface Easement and Agreement, with an Effective Date of the August 21, 2018, by and between **New River Royalty, LLC**, a Delaware limited liability company duly authorized to transact business in the State of Illinois whose mailing address is 3801 PGA Blvd. Suite 903, Palm Beach Gardens, FL 33410, hereinafter called "Grantor", and **Williamson Energy, LLC**, P.O. Box 99, Johnson City, Illinois 62951, hereinafter called "Grantee",

WITNESSETH:

WHEREAS, Grantor owns or controls certain real property situated in Williamson County, Illinois as depicted on **Exhibit A** attached hereto and incorporated herein by reference (the "**Property**"); and

WHEREAS, Grantor and Grantee entered into a Surface Easement and Agreement ("**Agreement**") which Grantor thereby did Grant and Convey unto Grantee a non-exclusive Twenty-foot (20') easement (the "**Easement**") over a portion of the Property depicted in or on Exhibits B1 attached hereto and incorporated herein by reference (the "**Easement Premises**")

Said Agreement describes the conveyance of certain rights to install water, power, and communication lines, across the property listed on Exhibit A attached hereto, related to and necessary for the operation of the Williamson Energy (Mach) Mine by Grantee or its affiliates, successors and permitted assigns in Williamson County, Illinois (the "**Mine**").

The term of the Easement shall continue in force and effect until the waterline is no longer utilized by the Mine, or the date which is Two (2) years after the date on which Grantee or its affiliates, succors or permitted assigns cease to actively mine coal in Williamson or Franklin County, under IDNR Permit #375, whichever date comes first (the "**Term**") at which time the Easement and the Agreement shall cease and terminate without any further action or documentation.

All persons having reason to be concerned with the title as to the foregoing Premises are hereby given notice of the existence of said Easement and of the duty to inquire about its terms and conditions with regard to the title to the foregoing Premises. Inquiries may be made to Grantee at the address set forth above.

KNOW ALL MEN BY THESE PRESENTS that for and in consideration of the payment of Ten Dollars ($10), the receipt of which is hereby acknowledged, the undersigned, ***Mary E. Wilkas, surviving spouse of Robert Wayne Wilkas, (deceased) and Executor of his Estate, and Eric J. Wilkas, Erica D. Coram, and Courtney J. Wilkas, surviving descendants of Robert Wayne Wilkas,*** *with an address of,* ***22698 Locust Grove RD. Thompsonville, Illinois 62890***, hereinafter called Grantor, do hereby grant and convey unto Williamson Energy, LLC, with an address of P.O. Box 99, Johnston City, Illinois 62951, hereinafter called Grantee, its successors, licensees, agents, lessees, contractors, sub-contractors and assigns, an easement across the described Premises attached as Exhibit A hereto, and in the general area of the Premises as shown on the plat attached as Exhibit B hereto.

This easement shall be for the purpose of constructing, reconstructing, installing and laying, using, operating, inspecting, repairing, maintaining, replacing and removing a pipeline or other utility lines (underground) and all associated appurtenances and facilities for the transportation of fluids over and across ***a strip of land twenty feet wide and with an additional 30 feet of workspace during times of construction or making***

repairs across the aforementioned Premises . Grantee will also pay Grantor the fair market value for any crop loss incurred from time to time by Grantor and/or its tenant farmer by reason of the exercise by Grantee of the rights granted herein. In the event of a pipeline leak or other significant adverse event, Grantee will compensate Grantor for crops damaged or destroyed and will remediate lingering effects to the affected area.

Subsequent to each incident of constructing, reconstructing, installing and laying, using, operating, inspecting, repairing, maintaining, replacing and removing a pipeline or pipelines or other utility lines (underground) and all associated appurtenances and facilities, Grantee will perform all necessary reclamation and restoration work at its sole expense on and respecting the Premises described herein. Grantee shall also repair any fencing, driveways, field access roads, field tile, or other structures and appurtenances damaged by Grantee's actions.

Grantee agrees that it will conduct all operations hereunder in a workmanlike manner and in accordance with industry practice; that it will comply with all applicable laws and regulations and that it will obtain all necessary permits. Grantee shall have the right to cut and remove trees, brush, vegetation and other materials on the easement Premises as necessary.

All pipelines shall be buried to a minimum depth of thirty-six (42) inches.

Any assignee, transferee or successor in interest shall be encumbered by the terms of this Easement.

Route to be installed as generally shown in attached EXHIBIT "B".

Grantor reserves the right to use the easement for any purpose that will not interfere with Grantee's full enjoyment of the rights granted herein, including agricultural use, provided, however, that Grantor agrees that no building or permanent structure will be constructed on the easement Premises. It is permissible for the Grantor to construct roads or driveways across the Easement.

Grantee shall indemnify and defend Grantor against all claims, losses and expenses by reason of liability imposed or claimed to be imposed by law for damage due to bodily injuries (including death) and property damage sustained by any persons, including Grantor, arising out the consequences of Grantee's exercise of its rights hereunder.

The parties acknowledge that the use of this easement will be regulated in part, by the Illinois Department of Natural Resources and may be subject to requirements of said Department. Grantor agrees to cooperate with Grantee with regard to any such matters.

The parties acknowledge that the use of this easement will be regulated in part, by the Illinois Department of Natural Resources and may be subject to requirements of said Department. Grantor agrees to cooperate with Grantee with regard to any such matters.

This easement and the provisions thereof shall be binding upon and inure to the benefit of Grantor, their successors and assigns, and Grantee and its successors or assigns.

OPTION

This Option made and entered into this 16th day of August, 2018, by and between, ***Joyce L. King, a married person acting in her individual right,*** *with an address of,* ***23825 Liles Road Thompsonville, Illinois 62890,*** hereinafter called "Optionor", and Williamson Energy, LLC, with an address of P.O. Box 99, Johnston City, Illinois 62951, hereinafter called "Optionee."

For and in consideration of the mutual covenants herein contained, the parties hereby agree as follows:

1. In consideration of the payment of the sum of [redacted] hereinafter "Option Payment", Optionor hereby grants to Optionee the right and option to purchase a pipeline easement on the following described property attached as "Exhibit A" hereto, hereinafter "Premises", upon the terms and conditions hereinafter stated.

2. The terms and conditions of the easement will be as set forth on Exhibit B attached hereto. Upon execution of the Easement, Grantee agrees to pay to Grantor a one-time payment of [redacted] in full consideration of the privileges granted herein. This consideration shall constitute payment in full for any damages to the easement Premises incurred by reason of the installation, operation and maintenance of the facilities of Grantee, or otherwise

arising from Grantee's use and enjoyment of the easement except as stated below.

3. This Option shall remain in effect for a term of 12 months from the date hereof or until the Option is exercised or terminated as provided for herein, whichever occurs first.

4. In the event of the exercise of this Option, the consideration for the Option shall be credited toward said purchase price if this Option is exercised and shall be retained by Optionor if the Option is not exercised.

5. If Optionee elects to exercise this Option, it shall give to Optionor, at any time during the option period, notice in writing of its election to exercise, and the exercise shall be effective as of the date the notice is given. If exercised, this Option shall become a contract between the parties upon the terms and conditions set forth herein.

6. At any time while this Option is in effect, Optionee or its agents may enter upon the Premises with necessary personnel and equipment for the purpose of conducting surveys and other activities related to the ascertainment of boundaries. If such activities result in crop damages, Optionee agrees to compensate Optionor or the agricultural tenant for such crop damages as their interests may appear.

7. Optionee shall have the right to terminate the Option for any reason at any time by giving written notice to Optionor.

8. Any notices to be given hereunder shall be in writing and shall be deemed given when personally delivered or mailed, postage charges prepaid, to the parties as follows:

To Optionor: ***Joyce L. King***
23825 Liles Road
Thompsonville, Illinois 62890

To Optionee: Williamson Energy, LLC
P.O. Box 99
Attn: Land Department
Johnston City, IL 62951

or to such other address as each party may choose by giving notice thereof to the other.

9. Optionor agrees to execute a memorandum of this Option suitable for recording if requested by Optionee.

10. This instrument constitutes the entire agreement between the parties.

11. This Option shall be construed in accordance with the laws of the State of Illinois. All terms and conditions of this Option shall be binding on and shall extend to the heirs, administrators, executors, successors or assigns of the respective parties. This Option shall be fully assignable.

12. Time is of the essence of this Option and the terms hereof shall be binding.

IN WITNESS WHEREOF, the parties hereto have executed this Option the day and year first above written.

PIPELINE EASEMENT

KNOW ALL MEN BY THESE PRESENTS that for and in consideration of the payment of Ten Dollars ($10), the receipt of which is hereby acknowledged, the undersigned ***Joyce L. King, a married person acting in her individual right,*** *with an address of,* ***23825 Liles Road Thompsonville, Illinois 62890***hereinafter called Grantor, do hereby grant and convey unto Williamson Energy, LLC, with an address of P.O. Box 99, Johnston City, Illinois 62951, hereinafter called Grantee, its successors, licensees, agents, lessees, contractors, sub-contractors and assigns, an easement across the described Premises attached as Exhibit A hereto, and in the general area of the Premises as shown on the plat attached as Exhibit B hereto.

This easement shall be for the purpose of constructing, reconstructing, installing and laying, using, operating, inspecting, repairing, maintaining, replacing and removing a pipeline or other utility lines (underground) and all associated appurtenances and facilities for the transportation of fluids over and across ***a strip of land twenty feet wide and with an additional 30 feet of workspace during times of construction or making repairs across the aforementioned Premises***. Grantee will also pay Grantor the fair market value for any crop loss incurred from time to time by Grantor and/or its tenant

farmer by reason of the exercise by Grantee of the rights granted herein. In the event of a pipeline leak or other significant adverse event, Grantee will compensate Grantor for crops damaged or destroyed and will remediate lingering effects to the affected area.

Subsequent to each incident of constructing, reconstructing, installing and laying, using, operating, inspecting, repairing, maintaining, replacing and removing a pipeline or pipelines or other utility lines (underground) and all associated appurtenances and facilities, Grantee will perform all necessary reclamation and restoration work at its sole expense on and respecting the Premises described herein. Grantee shall also repair any fencing, driveways, field access roads, field tile, or other structures and appurtenances damaged by Grantee's actions.

Grantee agrees that it will conduct all operations hereunder in a workmanlike manner and in accordance with industry practice; that it will comply with all applicable laws and regulations and that it will obtain all necessary permits. Grantee shall have the right to cut and remove trees, brush, vegetation and other materials on the easement Premises as necessary.

All pipelines shall be buried to a minimum depth of fourty-two (42) inches.

Any assignee, transferee or successor in interest shall be encumbered by the terms of this Easement. Route to be installed as generally shown in attached EXHIBIT "B".

Grantor reserves the right to use the easement for any purpose that will not interfere with Grantee's full enjoyment of the rights granted herein, including agricultural use, provided, however, that Grantor agrees that no building or permanent structure will

be constructed on the easement Premises. It is permissible for the Grantor to construct roads or driveways across the Easement.

Grantee shall indemnify and defend Grantor against all claims, losses and expenses by reason of liability imposed or claimed to be imposed by law for damage due to bodily injuries (including death) and property damage sustained by any persons, including Grantor, arising out the consequences of Grantee's exercise of its rights hereunder.

The parties acknowledge that the use of this easement will be regulated in part, by the Illinois Department of Natural Resources and may be subject to requirements of said Department. Grantor agrees to cooperate with Grantee with regard to any such matters.

This easement and the provisions thereof shall be binding upon and inure to the benefit of Grantor, their successors and assigns, and Grantee and its successors or assigns.

This easement shall be governed by the laws of the State of Illinois. This agreement constitutes the full agreement between the parties relating to the matters set forth herein.

KNOW ALL MEN BY THESE PRESENTS that Optionor and Optionee have entered into an Option of even date herewith concerning the Premises located in Franklin County, Illinois, described in Exhibit A attached hereto.

Optionor is the owner of the rights and estates to be granted pursuant to said Option.

Said Option contemplates conveyance within a reasonable, specified time period, but extensions are provided for therein based on various contingencies.

All persons having reason to be concerned with the title as to the foregoing Premises are hereby given notice of the existence of said Option and of the duty to inquire about its terms and conditions with regard to the title to the foregoing Premises. Inquiries may be made to Optionee at the address set forth above.

Dated the date set forth above.

Parcel Index Number: 04-02-100-007

PART 2: Pre-Mining Information

2.1 Pre-Mining Land Use Information.

2.1.1 Pre-Mining Land Use and Capability Acreages. Complete Table 2.1.1: Pre-Mining Land Use Capability giving the acreage and capability of each land use within the proposed permit area, employing only land use categories of 62 Ill. Adm. Code 1701.5, the "fish and wildlife" land use category must be subdivided as required by Operator Memorandum 2015-01. Use only these land uses for completing the land use maps.

The information shall be broken down with a separate table for each landowner. In addition, the applicant shall complete Table 2.1.1 - Grand Total: Pre-Mining Land Use Capability Summary. This table is a compilation of all Pre-Mining Land Use Capability tables filled out for each individual land owner.

For IBR applications, complete Table 2.1.1: Pre-Mining Land Use Capability for each landowner and update Table 2.1.1 - Grand Total: Pre-Mining Land Use Capability Summary. **[1780.23/1784.15]**

Note: other agencies, such as USACE, may define land uses differently.

See Table 2.1.1

2.1.2 Provide slope measurements to represent existing land surface configuration of proposed permit area. A soils map of medium intensity prepared to NRCS specifications or a contoured aerial photo may be submitted to meet this requirement. **[1779.24/1783.24(l)]**

☒ Check here if using one of the above maps or photos.

Does the Soils Map submitted with the application meet the requirements to provide slope measurements?

☒ YES ☐ NO

If NO, provide a contoured aerial photo for the proposed boundary.

2.1.3 For any proposed surface coal mining and reclamation operation, has previous mining activity including active, inactive or abandoned underground mine workings along with any mine opening to the surface occurred within the permit and/or adjacent area? **[1816.133/1817.133]**

☒ YES ☐ NO

If YES, complete Table 2.1.3: Previous Mining Activity - Surface Permit Areas and delineate the areas disturbed by previous mining activities, including active, inactive or abandoned underground mine work along with any mine opening to the surface on the Pre-Mining Land Use Map. In addition, the map shall identify areas where surface coal mining operations were conducted prior to August 3, 1977; after August 3, 1977 and prior to May 3, 1978; after May 3, 1978 and prior to February 1, 1983; and any permanent regulatory program permit issued after February 1, 1983. **[1777.14(b); 1779.25(a)(8)/1783.25(a)(8)]**

2.1.3.1 Identify the land uses preceding any type of mining, if known. **[1780.23(a)(1)/1784.15(a)(1)]**

Cropland, Industrial, Fish and Wildlife – Herbaceous, Fish and Wildlife-Woody, Residential. Note: Area identified as residential is owned by the applicant.

2.1.4 Is any of the permit area subject to local or county zoning?

☐ YES ☒ NO

If YES, provide a description of the existing land uses and land classifications under local law, if any, for the proposed permit and adjacent areas.

2.1.5 Provide the location of surface and subsurface man-made features within, passing through, or passing over the proposed permit area on the Pre-Mining Land Use Map. Such features should include, but are not limited to, major electric transmission lines, pipelines, agricultural drainage tile fields, gas and oil wells, and water wells. For gas, oil, and water wells provide the depth, if available, of the well in Table 2.1.5: Oil and Gas Well Information. **[1779.24(e)/1783.24(e)]**

2.1.6 If any of the land uses changed within the last five (5) years, indicate the acreage and changes of land uses. **[1780.23(a)(1)/1784.15(a)(1)]**

N/A

2.2 Pre-Mining Soils Information. The applicant is strongly recommended to use the USDA Web Soil Survey. The web soil survey has the ability to create a Custom Soil Survey report for the application area which will generate many of the information requirements for pre-mining soils and prime farmland restoration plans which may reference this report. Please note there are extra soil data tables, including Land Classification, Non-irrigated Capability Class, and Vegetation Productivity, and the data from the Soil Property and Qualities tab which must specifically be extracted when creating a custom report.

NOTE: The acreage of the Area of Interest must agree with the permit acreage. This report may be referenced in responding to portions of the required soil information.

2.2.1 The narrative of land capability and productivity shall employ the USDA National Resources Conservation Service's Land-Capability Classification (Agriculture Handbook No. 210) in conjunction with the soil information provided under the published soil survey when completing Part 2.2.9. Optimum levels management productivity information may be found in Bulletin 811. **[1779.21/1783.21].**

NOTE: This Bulletin has periodic updates in a supplemental table.

See Attachment 2.2

2.2.2 A Soils Map shall be provided as required by Part 2.2. The scale of the Soil Map scale must be the same scale as the Pre-Mining Land Use Map and Post-Mining Land Use/Capability Reclamation Map, unless otherwise approved by the Department. Does the submitted Soils Map represent a map developed by the National Resources Conservation Service (NRCS)? **[1779.21/1783.21]**

☒ YES ☐ NO

If YES, complete the following:

2.2.2.1 Has the NRCS soil map been modified in any way except by a change in scale?

☐ YES ☒ NO

If YES, explain the nature of the changes.

2.2.3 For surface mines, delineate on the Soils Map, the area which will incur actual mining (removal of overburden and/or deposition of overburden for the extraction of coal). Identify any areas proposed to remain undisturbed. **[1780.14]**

For underground mines, identify any areas proposed to remain undisturbed. **[1784.23]**

N/A. All area is underground mine support

2.2.4 Are any of the identified map units correlated as prime farmland by NRCS criteria?

☒ YES ☐ NO

If YES, explain and provide documentation to meet the requirements of 62 Ill. Adm. Code 1785.17 or 1823.11, if a request for grandfathering, negative determination or underground mine exemption is sought. If prime farmlands exist which will not meet the exemption criteria described above, a prime farmlands restoration plan must be provided in Parts 8.2 through 8.4. **[1785.17(b)/1823.11]**

See attached Soil map and soil report.

2.2.5 Indicate the average topsoil thickness of each of the Soil Map units to be affected. Locate on Soils Map the test holes for soil horizon thickness sampling. Provide the average and methodology for determining the average pre-mining topsoil thickness in inches for: **[1779.21/1783.21]**

- Non-cropland capability 6-9 inches
- High capability 6-9 inches
- Prime Farmland 6-9 inches

2.2.6 List the soil types and acreages of areas that will require the B and/or portions of the C horizon to be removed and replaced in order to establish the root medium necessary to achieve soil productivity consistent with the proposed post-mining land use. Alternatively, a narrative description explaining why specific soil type acres information for reclamation plan achievement is not necessary may be provided. **[1780.18(b)(4)/1784.13(b)(4)]**

N/A

2.2.7 Are selected overburden materials proposed to be used in lieu of or as a supplement to the A-horizon?

☐ YES ☒ NO

If YES, provide the appropriate information required by 62 Ill. Adm. Code 1779.21(b) or 1783.21(b).

Also, identify the source of the substitute materials and the topsoil to be substituted away from (not removed) on a separate soils map, labeled Topsoil Substitution Map and/or describe the area in narrative form. **[1780.14/1784.23]**

2.2.8 Explain why the proposed plan will provide the best available material of equal or better quality than present topsoil or surface existing material. **[1816.22(b)/1817.22(b)].** This section must be addressed when affecting previously disturbed areas if the surface soil is not to be salvaged. If topsoil substitutes or supplements are proposed, a demonstration of their suitability shall be required based on analysis of thickness of soil horizons, total depth, texture, percent coarse fragments, pH, and aerial extent of the different kinds of soils. The Department shall require other chemical and physical analyses, field-site trials, or greenhouse tests if determined to be necessary or desirable to demonstrate the stability of the topsoil substitutes or supplements. **[1780.18(b)(4)/1784.13(b)(4); 1779.21/1783.21]**

N/A. Topsoil will be replaced.

2.2.9 Complete Table 2.2.9: Soils Information Chart acreage for each of the map units (soil type and slope classification) of prime farmland, high capability (include grandfathered and negatively determined prime farmland) and non-cropland capability land with respect to areas within the permit area. All soils previously disturbed by home sites, farmsteads, roads, etc., shall be tabulated as non-cropland capability and need not undergo a negative determination. The Soil Information Chart must be broken out by land owner, if there is more than one. **[1779.21(a)/1783.21(a); 1785.17]**

Table 2.2.9 included

Optional-addition: If applicable, quantify map units acreage values on Table 2.2.9: Soils Information Chart for areas which will not be disturbed. **[1779.21(a)/1783.21(a)]**

2.3 Areas Where Mining is Limited or Prohibited.

Complete Table 2.3: Areas Prohibiting or Limiting Mining Operations for each structure (occupied dwelling, public building, school, church, community/institutional building, public park, cemeteries, public road) identified in question 2.3.2 through 2.3.9 with respect to areas where mining is prohibited. Indicate if the buffer zone will be in effect or if a waiver is obtained. **[1761.11(c)(d)(e)(f)(g)]**

2.3.1 Does the proposed permit area include areas designated unsuitable for surface coal mining and reclamation operations, or under study for designation in an administrative proceedings as unsuitable for surface coal mining and reclamation operations? **[1773.15(c)(3)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-Mining Land Use and Operations Map.

2.3.2 Does the proposed permit area include lands within boundaries of the National Park System, National Wildlife Refuge System, the National System of Trails, the National Wilderness Preservation System, the Wild and Scenic Rivers System, and National Recreation Areas, etc.? **[1761.11(a)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-Mining Land Use and Operations Map.

2.3.3 Does the proposed permit area include lands within the boundaries of any national forest? **[1761.11(b)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-Mining Land Use and Operations Map.

2.3.4 Are there any publicly owned parks or any places included in the National Register of Historic Places on or within 1,000 feet of the proposed permit area? **[1761.11(c)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-Mining Land Use and Operations Map.

2.3.5 Does the operations plan propose any surface coal mining operations within 100 feet measured horizontally of the outside right-of-way line of any public road? **[1761.11(d)]**

☒ YES ☐ NO

If YES, complete the following:

2.3.5.1 Describe the measures to be used to insure that the interest of the affected public and landowners will be protected. **[1761.11(d)(2)(B)]**

The Bleeder site is located adjacent to Kraatz and Crawford roads and will be accessed off Crawford Road via North Bleeder access road and the associated waterline and powerline corridor will be accessed from Crawford Road and Locust Grove Road. Crawford Road and Locust Grove Road will have water line install up to the road right of way and the waterline will be bored underneath the roads from outside of the road right of way. The entrances will comply with the Williamson County Road Authority to ensure the safety of the affected public and the land owner. Installation and construction activities will be completed over a short period of time and once completed there will be no further construction activities. During construction, no equipment will be allowed to endanger the public or landowner.

2.3.5.2 In the public notice of the application required in the Cover Sheet, identify the public road(s), describe the activities to be conducted within 100 feet of the road(s), and indicate the opportunity for a public hearing on this matter. **[1761.11(d)(2)(A)]**

See public notice

2.3.6 Does the proposed permit area include any public roads which are to be removed, relocated or closed? **[1761.14]**

☐ YES ☒ NO

If YES, complete the following:

2.3.6.1 Submit the necessary approvals of the authority with jurisdiction over the public road. **[1761.14(b)(2)]**

N/A

2.3.6.2 If a public road is to be replaced or re-located within the permit area, provide evidence that a bond has or will be posted with the authority with jurisdiction over the public road. If such bond has not been nor will be posted, address road replacement costs in Table 9.5.1.14: Public Road Replacement.

N/A

2.3.6.3 Describe the measures to be used to insure that the interest of the affected public and landowners will be protected. **[1761.14(b)(5)]**

2.3.6.4 As required in the Cover Sheet, the public notice shall identify the public road(s) to be removed, relocated or closed, and indicate the opportunity for a public hearing on this matter. **[1761.14(b)(3) and (4)]**

See public notice

2.3.7 Does the operations plan propose any surface coal mining operations within 300 feet measured horizontally from any occupied dwelling other than a haul road or access road which connects with an existing public road on the side of the public road opposite the dwelling? **[1761.11(e)]**

☐ YES ☒ NO

If YES, include a waiver from the owner of the dwelling meeting the following requirements: **[1761.15]**

- The waiver shall be by lease, deed, or other conveyance from the owner of the dwelling. The waiver must clarify that the owner and signator had the legal right to deny mining and knowingly waived that right.
- Provide proof that the waiver has been properly filed in public property records pursuant to State laws.

If NO, and occupied dwellings are located either within the permit boundary or within 300 feet of the permit boundary but no disturbance is proposed within 300 feet, then indicate 300 foot buffer markers around all applicable occupied dwellings on the Operations Map

NOTE: If a valid waiver was obtained before August 3, 1977 from the owner of an occupied dwelling to conduct operations within 300 feet of the dwelling, a new waiver need not be obtained. [1761.15(c)]

300 foot buffer shown on the Operations Map. Williamson Energy owns two the of structures within 300 feet of the site therefore no waiver is require, the third structure a 300 feet buffer zone will be observed.

2.3.8 Does the operations plan propose any surface coal mining operations within 300 feet measured horizontally of any public building, school, church, community or institutional building or public park? **[1761.11(f)]**

☐ YES ☒ NO

2.3.9 Are there any public or private cemeteries or Indian burial grounds or other areas where human bodies are interred located in or within one hundred (100) feet of the proposed permit area? **[1761.11(g)]**

☐ YES ☒ NO

If YES, locate on the Pre-Mining Land Use, Operations and Post-Mining Land Use/Capability Reclamation Plan Maps the boundaries of the above-referenced areas and indicate a 100 foot buffer zone around the cemetery or burial ground. **[1779.24(j)/1783.24(j)]**

2.3.10 Are valid existing rights claimed for any part of the permit area? **[1761.5; 1761.16] N/A**

☐ YES ☒ NO

If YES, complete Part 2.6 or 2.7 to substantiate the claim.

2.4 Public Parks, Historic Properties.

2.4.1 Provide a description of the historic properties (archeological sites and/or historic standing structures) listed or potentially eligible for listing on the National Register of Historic Places and any known archeological features within the proposed permit and adjacent areas. The description of the historic properties occurring within the permit area and adjacent areas shall be based upon available data. If studies have been completed and submitted for review prior to this application, attach a copy of the results of that review. For significant revisions other than shadow area revisions, attach a copy of the IHPA review. Also, with regard to historic properties, provide the anticipated start date when the area is to be affected. **[1779.12/1783.12]**

See Attachment 2.4.1

2.4.2 If investigations are underway or under review, reference the current status. **[1779.12(b)/1783.12(b)]**

NOTE: Studies which are submitted to the Department shall be submitted as a separate document (3 hard copies, plus one on disk in pdf format or other format as directed by the Department)

N/A

2.4.3 If historic properties are to be avoided, provide a map showing their location in lieu of either a Phase I evaluation or a Phase II evaluation. A qualified archaeologist shall create the map and identifying field markings to be employed to ensure the site(s) will not be disturbed by surface coal mining and reclamation operations. The map is to be submitted in duplicate in separate cover from the rest of the application and labeled Historic Properties Protection Map. The Department will hold the map as a confidential document. If a revision proposes a disturbance not previously identified, identify its location to any avoidance area. **[1773.13(d)(3)].**

N/A

2.4.4 Provide a plan for publicly owned park(s), or place(s) listed on the National Register of Historic Places, that may be adversely affected by the proposed operation describing the measures to be employed: **[1780.31/1784.17]**

- To prevent adverse impacts caused by surface mining related activities including, but not limited to, loss or destruction of historic properties; or
- If valid existing rights exist or joint agency approval is to be obtained under 62 Ill. Adm. Code 1761.17(d), to minimize adverse impacts. If valid existing rights are to be claimed, complete Sections 2.5 or 2.6 of this application, whichever is applicable.

N/A

2.5 Valid Existing Rights (VER) Good Faith/All Permits Standard. [1761.16(b)(2)] N/A

The applicant must provide a property rights demonstration under 62 Ill. Adm. Code 1761.5(a) if the applicant's request for VER is based upon the good faith/all permits standard in Section 1761.5(b)(1). This demonstration must include the following items: **[1761.16(b)]**

2.5.1 A legal description of the land to which the request pertains.

2.5.2 Complete documentation of the character and extent of the current interests in the surface and mineral estates of the land to which the request pertains.

2.5.3 A complete chain of title for the surface and mineral estates of the land to which the request pertains.

2.5.4 A description of the nature and effect of each title instrument that forms the basis for the request, including any provision pertaining to the type of method of mining or mining-related surface disturbances and facilities.

2.5.5 A description of the type and extent of surface coal mining operations that the applicant or permittee claims the right to conduct, including the method of mining and mining-related surface activities and facilities, and an explanation of how those operations would be consistent with State property law.

2.5.6 Complete documentation of the nature and ownership, as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11, of all property rights for the surface and mineral estates of the land to which the request pertains.

2.5.7 Names and addresses of the current owners of the surface and mineral estates of the land to which the request pertains.

2.5.8 If the coal interests have been severed from other property interests, documentation that the owners of other property interests in the land to which the request pertains have been notified and provided a minimum of 14 days to comment on the validity of the applicant or permittee's property rights claims.

2.5.9 Provide any comments received in response to the notification provided under Part 2.5.8. above.

2.5.10 Approval and issuance dates and identification numbers for any permits, licenses, and authorizations that the applicant, permittee or a predecessor in interest obtained before the land came under the protection of 62 Ill. Adm. Code 1761.11.

2.5.11 Application dates and identification numbers for any permits, licenses, and authorizations for which the applicant, permittee or a predecessor in interest submitted an application before the land came under the protection of 62 Ill. Adm. Code 1761.11.

2.5.12 An explanation of any other good faith effort that the applicant, permittee or a predecessor in interest made to obtain the necessary permits, licenses, and authorizations as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11.

2.6 Valid Existing Rights (VER) Needed for and Adjacent Standard. [1761.16(b)(3)] N/A

The applicant must provide a property rights demonstration under 62 Ill. Adm. Code 1761.5(a) if the applicant's request for VER is based upon the needs for and adjacent standard in Section 1761.5(b)(1). This demonstration must include the following items: **[1761.16(b)]**

2.6.1 A legal description of the land to which the request pertains.

2.6.2 Complete documentation of the character and extent of the current interests in the surface and mineral estates of the land to which the request pertains.

2.6.3 A complete chain of title for the surface and mineral estates of the land to which the request pertains.

2.6.4 A description of the nature and effect of each title instrument that forms the basis for the request, including any provision pertaining to the type of method of mining or mining-related surface disturbances and facilities.

2.6.5 A description of the type and extent of surface coal mining operations that the applicant or permittee claims the right to conduct, including the method of mining and mining-related surface activities and facilities, and an explanation of how those operations would be consistent with State property law.

2.6.6 Complete documentation of the nature and ownership, as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11, of all property rights for the surface and mineral estates of the land to which the request pertains.

2.6.7 Names and addresses of the current owners of the surface and mineral estates of the land to which the request pertains.

2.6.8 If the coal interests have been severed from other property interests, documentation that the owners of other property interests in the land to which the request pertains have been notified and provided a minimum of 14 days to comment on the validity of the applicant or permittee's property rights claims.

2.6.9 Provide any comments received in response to the notification provided under Part 2.6.8 above.

2.6.10 Explain how and why the land is needed for and immediately adjacent to the operation upon which the request is based. This explanation shall include a demonstration that prohibiting expansion of the operation onto that land would unfairly impact the viability of the operation as originally planned before the land came under the protection of 62 Ill. Adm. Code 1761.11.

2.7 Valid Existing Rights (VER) Standards for Mine Roads. [1761.16(b)(4)] N/A

If the request relies upon one of the standards for roads in 62 Ill. Adm. Code 1761.5(c)(1) through (c)(4), satisfactory documentation of one or more of the following must be submitted showing that: **[1761.5(c)]**

2.7.1 The road existed when the land upon which it is located came under the protection of 62 Ill. Adm. Code 1761.11, and the applicant has a legal right to use the road for surface coal mining operations.

2.7.2 A properly recorded right of way or easement for a road in that location existed when the land came under the protection of 62 Ill. Adm. Code 1761.11, and, under the document creating the right-of-way or easement, and under any subsequent conveyances, the applicant has a legal right to use or construct a road across that right of way or easement to conduct surface coal mining operations.

2.7.3 A valid permit for use or construction of a road in that location for surface coal mining operations existed when the land came under the protection of 62 Ill. Adm. Code 1761.11.

2.7.4 Valid existing rights exist under 62 Ill. Adm. Code 1761.5(a) and (b).

Custom Soil Resource Report for Franklin County, Illinois, and Williamson County, Illinois

North Bleeder Shaft

January 28, 2019

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Franklin County, Illinois
Survey Area Data: Version 12, Sep 12, 2018

Soil Survey Area: Williamson County, Illinois
Survey Area Data: Version 13, Sep 12, 2018

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 11, 2012—Mar 14, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made

up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series.* Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases.* Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Franklin County, Illinois

3382A—Belknap silt loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2tbrv
Elevation: 330 to 490 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 200 days
Farmland classification: Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

Map Unit Composition

Belknap, frequently flooded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Belknap, Frequently Flooded

Setting

Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Silty alluvium

Typical profile

Ap - 0 to 7 inches: silt loam
Bw - 7 to 59 inches: silt loam
Bg - 59 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.20 to 2.00 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Very high (about 12.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Bonnie, frequently flooded

Percent of map unit: 5 percent

Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Piopolis, frequently flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Williamson County, Illinois

10C—Plumfield silty clay loam, 5 to 10 percent slopes

Map Unit Setting

National map unit symbol: 2wk1l
Elevation: 330 to 820 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Plumfield and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Plumfield

Setting

Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Side slope, head slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 5 inches: silty clay loam
2Btx1 - 5 to 12 inches: silty clay loam
2Btx2 - 12 to 36 inches: silt loam
3Btgb - 36 to 70 inches: silty clay loam

Properties and qualities

Slope: 5 to 10 percent
Depth to restrictive feature: 5 to 20 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.02 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Very low (about 1.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Passport, eroded

Percent of map unit: 4 percent
Landform: Hillslopes
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Hydric soil rating: No

Belknap, occasionally flooded

Percent of map unit: 4 percent
Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Bluford

Percent of map unit: 2 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

10D—Plumfield silty clay loam, 10 to 18 percent slopes

Map Unit Setting

National map unit symbol: 2wk1m
Elevation: 330 to 820 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: Not prime farmland

Map Unit Composition

Plumfield and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Plumfield

Setting

Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Head slope, side slope
Down-slope shape: Convex

Across-slope shape: Linear
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 5 inches: silty clay loam
2Btx1 - 5 to 12 inches: silty clay loam
2Btx2 - 12 to 36 inches: silt loam
3Btgb - 36 to 70 inches: silty clay loam

Properties and qualities

Slope: 10 to 18 percent
Depth to restrictive feature: 5 to 20 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.02 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Very low (about 1.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Belknap, occasionally flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Bluford

Percent of map unit: 5 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

13B2—Bluford silt loam, 2 to 5 percent slopes, eroded

Map Unit Setting

National map unit symbol: 2t95f
Elevation: 360 to 840 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 53 to 58 degrees F
Frost-free period: 175 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Bluford and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bluford

Setting

Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loess over mixed loess and drift

Typical profile

Ap - 0 to 6 inches: silt loam
E - 6 to 9 inches: silt loam
Btg - 9 to 32 inches: silty clay
2Btgx - 32 to 47 inches: silty clay loam
2Btg - 47 to 60 inches: silty clay loam

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: 5 to 20 inches to abrupt textural change; 19 to 45 inches to fragipan
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 13.0
Available water storage in profile: Very low (about 2.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified

Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C/D
Hydric soil rating: No

Minor Components

Ava

Percent of map unit: 5 percent
Landform: Ridges
Landform position (two-dimensional): Shoulder, summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Wynoose

Percent of map unit: 5 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

14B—Ava silt loam, 2 to 5 percent slopes

Map Unit Setting

National map unit symbol: 2t95h
Elevation: 360 to 840 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Ava and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ava

Setting

Landform: Ridges
Landform position (two-dimensional): Shoulder, summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 6 inches: silt loam

E - 6 to 14 inches: silt loam
Bt - 14 to 34 inches: silty clay loam
2Btx - 34 to 50 inches: silty clay loam
3Btb - 50 to 79 inches: loam

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: 25 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.02 to 0.06 in/hr)
Depth to water table: About 18 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Moderate (about 6.3 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Bluford

Percent of map unit: 10 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

14C2—Ava silt loam, 5 to 10 percent slopes, eroded

Map Unit Setting

National map unit symbol: 2t95l
Elevation: 360 to 840 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Ava, eroded, and similar soils: 90 percent
Minor components: 10 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ava, Eroded

Setting

Landform: Hillslopes, ridges
Landform position (two-dimensional): Backslope, shoulder, summit
Landform position (three-dimensional): Side slope, interfluve
Down-slope shape: Convex
Across-slope shape: Linear, convex
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 9 inches: silt loam
Bt and E - 9 to 28 inches: silty clay loam
Btx - 28 to 36 inches: silty clay loam
2Btx - 36 to 64 inches: silt loam
3Btb - 64 to 78 inches: silt loam

Properties and qualities

Slope: 5 to 10 percent
Depth to restrictive feature: 25 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Low (about 5.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Bluford, eroded

Percent of map unit: 10 percent
Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

14C3—Ava silty clay loam, 5 to 10 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 1lm1b
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Ava, severely eroded, and similar soils: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ava, Severely Eroded

Setting

Landform: Till plains
Landform position (two-dimensional): Backslope, shoulder
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Peoria and roxana loess over glacial drift

Typical profile

H1 - 0 to 9 inches: silty clay loam
H2 - 9 to 28 inches: silty clay loam
H3 - 28 to 64 inches: silt loam
H4 - 64 to 78 inches: silt loam

Properties and qualities

Slope: 5 to 10 percent
Depth to restrictive feature: 25 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Low (about 4.9 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

337A—Creal silt loam, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 1lm36
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Creal and similar soils: 90 percent
Minor components: 5 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Creal

Setting

Landform: Fans
Landform position (two-dimensional): Footslope
Landform position (three-dimensional): Base slope
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Mixture of loess and local silty alluvium

Typical profile

H1 - 0 to 9 inches: silt loam
H2 - 9 to 27 inches: silt loam
H3 - 27 to 55 inches: silty clay loam
H4 - 55 to 80 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 12 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Available water storage in profile: High (about 11.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2w
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Racoon

Percent of map unit: 5 percent
Landform: Depressions
Landform position (two-dimensional): Toeslope
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: Yes

3382A—Belknap silt loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2tbrv
Elevation: 330 to 490 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 200 days
Farmland classification: Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

Map Unit Composition

Belknap, frequently flooded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Belknap, Frequently Flooded

Setting

Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Silty alluvium

Typical profile

Ap - 0 to 7 inches: silt loam
Bw - 7 to 59 inches: silt loam
Bg - 59 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.20 to 2.00 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None

Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Very high (about 12.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Bonnie, frequently flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Piopolis, frequently flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

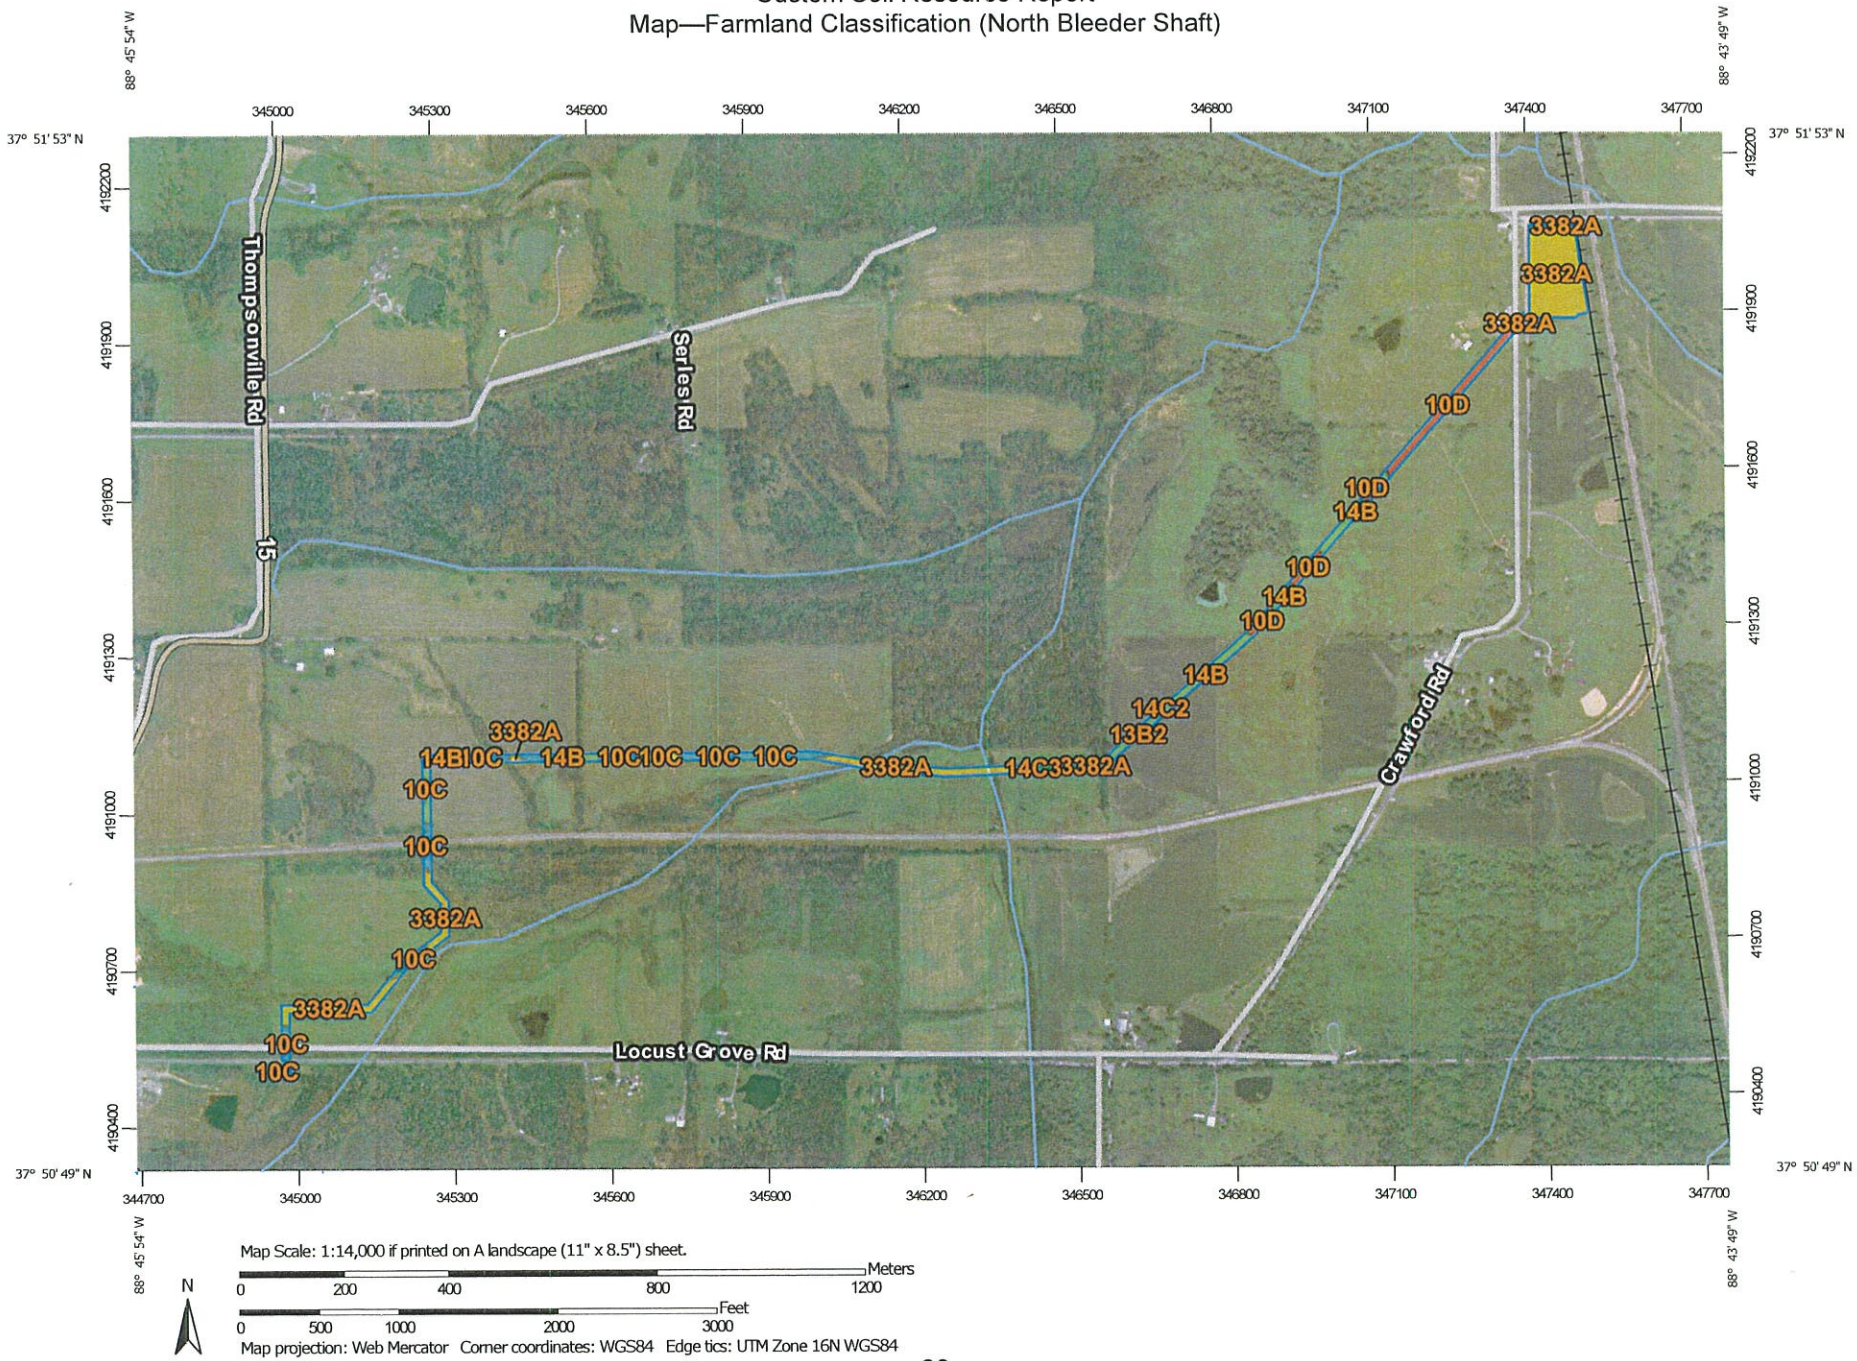
Part 2 of 3

Soil Information for All Uses

Suitabilities and Limitations for Use

The Suitabilities and Limitations for Use section includes various soil interpretations displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each interpretation.



Land Classifications

Land Classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Farmland Classification (North Bleeder Shaft)

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

Custom Soil Resource Report
Map—Farmland Classification (North Bleeder Shaft)

MAP LEGEND

Area of Interest (AOI)

- Area of Interest (AOI)

Soils

Soil Rating Polygons

- Not prime farmland
- All areas are prime farmland
- Prime farmland if drained
- Prime farmland if protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated
- Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated and drained
- Prime farmland if irrigated and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if subsoiled, completely removing the root inhibiting soil layer
- Prime farmland if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60
- Prime farmland if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance
- Farmland of local importance
- Farmland of unique importance
- Not rated or not available

Soil Rating Lines

- Not prime farmland
- All areas are prime farmland
- Prime farmland if drained
- Prime farmland if protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated
- Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated and drained
- Prime farmland if irrigated and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if subsoiled, completely removing the root inhibiting soil layer
- Prime farmland if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60
- Prime farmland if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance
- Farmland of local importance
- Farmland of unique importance
- Not rated or not available

Soil Rating Points

- Not prime farmland
- All areas are prime farmland
- Prime farmland if drained
- Prime farmland if protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated
- Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if irrigated and drained
- Prime farmland if irrigated and either protected from flooding or not frequently flooded during the growing season
- Prime farmland if subsoiled, completely removing the root inhibiting soil layer
- Prime farmland if irrigated and the product of I (soil erodibility) x C (climate factor) does not exceed 60
- Prime farmland if irrigated and reclaimed of excess salts and sodium
- Farmland of statewide importance

Background

Aerial Photography

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Franklin County, Illinois
Survey Area Data: Version 12, Sep 12, 2018

Soil Survey Area: Williamson County, Illinois
Survey Area Data: Version 13, Sep 12, 2018

Your area of interest (AOI) includes more than one soil survey area. These survey areas may have been mapped at different scales, with a different land use in mind, at different times, or at different levels of detail. This may result in map unit symbols, soil properties, and interpretations that do not completely agree across soil survey area boundaries.

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 11, 2012—Mar 14, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background

R06374

MAP INFORMATION

imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

R06375

Table—Farmland Classification (North Bleeder Shaft)

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
3382A	Belknap silt loam, 0 to 2 percent slopes, frequently flooded	Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season	0.0	0.0%
Subtotals for Soil Survey Area			**0.0**	**0.0%**
Totals for Area of Interest			**17.0**	**100.0%**

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
10C	Plumfield silty clay loam, 5 to 10 percent slopes	Farmland of statewide importance	3.2	18.6%
10D	Plumfield silty clay loam, 10 to 18 percent slopes	Not prime farmland	2.1	12.2%
13B2	Bluford silt loam, 2 to 5 percent slopes, eroded	All areas are prime farmland	0.5	3.2%
14B	Ava silt loam, 2 to 5 percent slopes	All areas are prime farmland	2.5	14.6%
14C2	Ava silt loam, 5 to 10 percent slopes, eroded	Farmland of statewide importance	0.0	0.0%
14C3	Ava silty clay loam, 5 to 10 percent slopes, severely eroded	Farmland of statewide importance	0.1	0.5%
337A	Creal silt loam, 0 to 2 percent slopes	Prime farmland if drained	0.3	2.0%
3382A	Belknap silt loam, 0 to 2 percent slopes, frequently flooded	Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season	8.3	48.8%
Subtotals for Soil Survey Area			**17.0**	**100.0%**
Totals for Area of Interest			**17.0**	**100.0%**

Rating Options—Farmland Classification (North Bleeder Shaft)

Aggregation Method: No Aggregation Necessary

Tie-break Rule: Lower

PART 3: Mining Operations Plan

3.1 General Description of Operations.

3.1.1 Describe the type of operation (surface, underground or carbon recovery) and method of mining procedures (surface, room and pillar or longwall). **[1780.11(a)/1784.11(a)]**

This IBR is requesting to install the following: a Bleeder site access (30 feet wide), one (1) 16.5 foot concrete finished bleeder shaft (Hole A) (~500' deep), one (1) 16 inch steel lined turbine utility borehole (Hole B), one (1) 8.625 inch compressed air steel lined utility borehole (Hole C), three (3) 12.75 inch steel lined power drop/Jenchem utility boreholes (Holes D, E & F), one (1) 24 inch pump drop steel lined utility borehole (Hole F), (each borehole having a 10'x10'x1' concrete pad and each ~500' deep), a transformer with a 10' x 8' x 1' concrete pad, a compressor station, crib plant (Jenchem Plant) with associated facilities.

The shaft will a large concrete pad poured irregularly shaft with a surface area of ~2430 square feet and a thickness of 4 feet. Two temporary drill pits (one ~20'x40'x10' and one ~ 10'x20'x10) will be used during the development of the turbine and utility boreholes. The IBR drill site will be gravel with 8 inches of crusher run gravel (~2.07 acres). HDPE water (12") and power lines will be installed back connection into the existing shaft site along Locust Grove Road. A mobile crib plant will be used this site. All tanks with crib plant chemical will have temporary berm construct around each for spill prevention.

Within the bleeder shaft IBR site Jenchem plant will be used to provide underground roof support, compress to provide underground air and various service boreholes for power and material drops in to the mine and water recovery from the mine.
Installation of a 12" HPDE water line to return excess mine water back to IBR #11 where it will connect into and existing water line to return the water from underground back to the mine site. The pipeline will constructed with SDR 17 HDPE pipe or equivalent which has a pressure rating of 125 psi Pipe are constructed by fusing joints whenever possible. Operation of vertical turbine pumps is managed through a PLC system that turns pumps on and off and monitors their operation. The pipelines are inspected once per month to check for leaks and other conditions that require maintenance. If leaks are detected, they are immediately addressed.
Historically, no impacts have been seen when undermining these heavy walled HPDE pipeline but the most critical points of this pipeline, based on severity of subsidence, will be inspected on an as needed basis during periods of subsidence while the pipelines are being undermined. During the longwall process prior to and during subsidence the pipeline will be inspected on a more frequent basis as needed to ensure integrity and for a period after until subsidence in the pipeline area has ceased, then the inspection schedule will resume to monthly.
Please see the Operations Map in the Map Section.

3.1.2 Describe the major equipment to be employed and how such equipment will be used in the different aspects of the mining operation. **[1780.11(a)/1784.11(a)]**

Bulldozers, Scrapers, Loaders, Excavators, rotary drill

3.1.3 Provide an estimation of the anticipated annual coal production and anticipated total coal production by tonnage once the mine is at full operational capacity. Define the annual progression of mining on the Operations Map. For underground mines, show annual progression of surface disturbance for support facilities. **[1780.11(a)/1784.11(a)]**

N/A

3.2 Description of Mine Facilities. Provide a narrative that explains the construction, modification, use maintenance and removal of the following structures and facilities as applicable to the proposed operations. If not applicable to this permitting action, indicate such. **[1780.11(b)/1784.11(b)]**.

3.2.1 Dams, Embankments, and other impoundments. List all such structures, their use, maintenance practices and whether they will be retained permanently or removed as applicable. Please note that an impoundment includes incised structures. **[1780.11(b)/1784.11(b)]**

N/A

3.2.2 Coal storage, coal preparation and cleaning facilities, loading and transportation areas. **[1780.11(b)/1784.11(b)]**

N/A

3.2.3 Water treatment facilities including but not limited to, sediment ponds, chemical treatment of discharge, and any special water treatment facilities beyond sediment ponds. **[1780.11(b)/1784.11(b)]**

N/A. Sediment pond exemption requested.

3.2.4 Air pollution control facilities **[1780.11(b)/1784.11(b)]**

N/A

3.2.5 Buried Pipelines. Are pipelines proposed to be buried within the permit boundary? **[1816.133/1817.133]**

☒ YES ☐ NO

If YES, locate pipeline corridors on the operations map. Provide a description of the pipeline operation including but not limited to: the material to be transported, the type, diameter and wall thickness of the pipe and the depth of burial to the top of pipe. Indicate whether the pipe is to be removed when no longer needed. It is recommended that pipeline burials follow the Illinois Department of Agriculture guidelines if they are intended to be left in place permanently. IDOA guidelines for different types of pipelines may be found at: https://www2.illinois.gov/sites/agr/Resfv ources/LandWater/Documents/pipelinestandardspolicies.pdf#search=pipeline https://www2.illinois.gov/sites/agr/Resources/LandWater/Documents/waterandsewerlines.pdf

See Operations Map, 12" HDPE (minimum SDR of 19) waterline buried a minimum of 5 feet deep and buried electrical and communication wires in the same ditch. All lines will be capped and left in place during reclamation.

3.3 Signs and Markers. All signs and markers required to be posted shall be easily seen and read, uniform in design and made of durable material. Signs and markers shall also be maintained and retained in place throughout the life of specific mining activity. Boundary or buffer markers shall be spaced to be visible from one to another. Describe the signs and markers in terms of material type, color, and wording to be used for the following boundary(s) and/or protected feature(s). If not applicable to this permitting action, indicate as such. **[1816.11(a)/1817.11(a)]**.

3.3.1 Permit Perimeter markers (Include incremental bond areas, unaffected areas, uncontrolled properties, pending archeological areas, and areas of lateral support) **[1816.11(d)/1817.11(d)]**

Permit perimeter will be marked in accordance with the provisions specified in Permit 375.

3.3.2 Stockpile Markers **[1816.11(f)/1817.11(f)]**

Topsoil stockpiles will be marked with an identifying sign.

3.3.3 Stream buffer zones **[1816.57(b)/1817.57(b)]**

There are five (5) intermittent streams that pass through the proposed IBR site. The applicant is requesting a waiver to the 100 foot stream buffer restriction. This is justified because no runoff from the operations will flow into this stream segment. The intermittent stream segments will be bored underneath. There will be no adverse impact to the quantity or quality of water going into this ditch. There will be no adverse impact to stream biota. See Part 6 for more details.

3.3.4 Prohibited or limited areas identified on Table 2.3: Areas Prohibiting or Limiting Mining Operations **[1816/1817.11(d)]**

Structures with 300 feet waiver will have metal fence post place at the edge of the buffer zone and the tops of the metal post will be painted red.

3.4 Soil and Overburden Handling and Protection.

3.4.1 Describe how each type of overburden (soil horizons, glacial drift and consolidated material) will be handled with regards to different types of mining equipment. **[1780.18(b)(7)/1784.13(b)(7)]**

Topsoil and Subsoil will be stockpile on site by dozer, truck and excavators.

3.4.2 If toxic materials have been identified as occurring in the overburden, describe how these materials will be segregated and handled to insure proper disposal. This includes, shaft and slope cuttings, excavation of incised portions of ponds, ditches, stream diversions or refuse disposal areas. **[1780.11(b)/1784.11(b); 1780.18(b)(7)/1784.13(b)(7)]**

N/A

3.4.3 Locate all soil horizon storage areas and/or root medium stock piles on the Operations Map and describe measures to be employed to prevent or minimize exposure of soil stockpiles to excessive water and wind erosion, unnecessary compaction and contamination by undesirable materials. **[1780.11(b)(2)/1784.11(b)(2); 1780.14(b)(5)/1784.23(b)(5)]**

See operation map for storage area location, stockpiles will be seed and strawed during the first appropriate seeding period after completion of used.

3.4.4 Describe methods and treatment measures to be used on exposed areas where topsoil has been removed to prevent excess air and water pollution. **[1816.95/1817.95]**

Stockpiles will be seed and strawed during the first appropriate seeding period after completion of used.

3.5 Lateral Support. For excavations locate all areas on the Operations Map where lateral support removal will approach the minimum distance allowed. State the minimum width of lateral support to be left in appropriate areas, including adjacent landowners, road right-of-way's, pipelines and power line easements. Account for highwall sloping when such slopes are to be incorporated into the proposed reclamation plan. **[1816.99]**

N/A

3.6 Surface Mining Near Underground Mining. If surface mining activities are to be conducted within 500 feet of an underground mine describe the measures to be employed to comply with the requirements of 62 Ill. Adm. Code 1780.27 and 1816.79

N/A

3.7 Existing Structures. The definition of an "existing structure" is a structure used in connection with surface coal mining and reclamation operations for which construction began prior to June 1, 1982. Are existing structures proposed to be used in connection with or to facilitate the surface coal mining and reclamation operations? **[1701.APP.A]**

☐ YES ☒ NO

If YES, complete the following:

3.7.1 Use of Existing Structures. Provide a list of all of the existing structures to be used **[1780.12/1784.12]**

3.7.2 Provide the location of all existing structures on the Operations Map and provide the following information for each existing structure to be used: **[1780.12(a)/1784.12(a)]**

- Plans of the structure detailing its current, pre-mining condition.
- Approximate dates, beginning and completion for construction of the structure.
- A showing that the structure meets the performance standards of 62 Ill. Adm. Code 1810 through 1828. The showing shall include monitoring data or other substantiating evidence.

3.7.3 Modification or Reconstruction of Existing Structures. Provide a plan for each existing structure to be modified or reconstructed for use in connection, or to facilitate coal mining and reclamation operations. The plan shall include the following information: **[1780.12(b)/1784.12(b)]**

- Design specifications for reconstruction or modification of the structure to meet the design and performance standards of 62 Ill. Adm. Code 1810 through 1828,
- A schedule for reconstruction or modification of the structure showing dates for beginning and completing interim steps as well as final reconstruction,
- Provisions for monitoring the structure during and after modification to ensure that the performance standards of 62 Ill. Adm. Code 1810 through 1828 are met, and
- A showing that the risk of harm to the environment or to public health or safety is not significant during the period of modification or reconstruction.

3.8 Transportation Facilities.

3.8.1 Which, if any of the following facilities, are to be constructed, used, modified or maintained within the proposed permit area?

- ☒ Roads
- ☐ Conveyors
- ☐ Rail Systems

3.8.2 For all roads proposed, indicate the classification of each as either Primary or Ancillary in accordance with 62 Ill. Adm. Code 1816.150/1817.150 below: **[1816.150(a)/1817.150(a)]**

Road Identification	Road Classification (Primary or Ancillary)
North Bleeder Site Access Road	Ancillary

3.8.3 For each transportation facility, provide a detailed description of their design, construction and maintenance that includes the following information: **[1780.37/1784.24]**

3.8.3.1 A general description of each road, conveyor, or rail system to be constructed, used, or maintained within the proposed permit area. **[1780.37(a)(6)/1784.24(a)(6)]**

The North Bleeder Site Access Entrance will be an infrequently used entrance to allow construction of the IBR site and long term monitoring of the bleeder shaft, turbine pump and associated facilities. Please see the Operations Map in the Map Section.

3.8.3.2 Specifications for each road width, existing grade line, proposed road gradient, road surface, road cut, fill embankment, culvert, bridge, drainage ditch, and drainage structure. Provide information as Attachment 3.8.3.2. **[1780.37(a)(1)/1784.24(a)(1)]**

See Drawing of Entrance Plan.

3.8.3.3 Provide a report of appropriate geotechnical analysis, where the Department's approval is required for alternative specifications, or for steep cut slopes. This report shall be included as Attachment 3.8.3.3. **[1780.37(a)(2)/1784.24(a)(2); 1816.150/1817.150]**

N/A

3.8.3.4 A description of measures to be taken to obtain the Department's approval for alteration or relocation of a natural drainageway. **[1780.37(a)(3)/1784.24(a)(3); 1816.150/1817.150]**

N/A

3.8.3.5 A description of measures, other than use of a rock headwall, to be taken to protect the inlet end of a ditch relief culvert. **[1780.37(a)(4)/1784.24(a)(4); 1816/1817.150]**

N/A

3.8.3.6 The drawings and specifications for each proposed ford of a perennial or intermittent stream that is used as a temporary route. **[1780.37(a)(5)/1784.24(a)(5); 1816.151(c)(2)/1817.151(c)(2)]**

N/A

3.8.3.7 A description of the plans to remove and reclaim each road that will not be retained under an approved post-mining land use, and the schedule for this removal and reclamation. **[1780.37(a)(7)/1784.24(a)(7)]**

Ancillary road will be removed at time of reclamation of the IBR. Road gravel will be hauled to future IBR site for re-use.

3.8.3.8 A discussion of the removal/construction/or relocation of powerlines related to transportation facilities and structures associated with roads. **[1780.11(b)(3)/1784.11(b)(3)]**

N/A

3.8.4 Primary Roads. If any roads identified in Part 3.8.2 are classified as primary, provide the design criteria and construction procedures used for each primary road proposed. Design calculations and/or drawings shall be included as attachments to this part. **[1816.151/1817.151]**

3.8.5 Are any roads constructed to facilitate surface coal mining operations proposed to be permanent? **[1816.150(b)/1817.150(b)]**

☐ YES ☒ NO

If YES, locate on the Post-Mining Land Use/Capability Reclamation Map and include appropriate discussion on how modifications will be accomplished, including the removal and disposition of any excess road material.

3.9 Non-Coal Mine Waste Material.

3.9.1 Identify all non-coal waste material to be disposed within the permit area, including but not limited to, grease, lubricants, paints, flammable liquids, garbage, tires, abandoned mining machinery, lumber and other hazardous and/or combustible materials generated during coal mining operations. **[1780/1784.11(b)(4)]**

N/A

3.9.2 Describe how each non-coal waste will be stored on site, disposed on site or removed from the site. Also, describe the measures to be employed to ensure that all debris, acid-forming and toxic-forming materials, and materials constituting a fire hazard are disposed in a safe manner. Indicate on the Operations Map the location of each non-coal waste storage area. **[1780.14(b)(5)/1784/23(b)(5); 1816.89/1817.89].**

N/A

3.10 Coal Preparation.

3.10.1 Will processing of coal take place within the proposed permit area? **[1780.11(b)(3)/1784.11(b)(3)]**

☐ YES ☒ NO

If YES, locate processing facilities on the Operations Map and give a general description of the coal processing operation at this facility. **[1780.14(b)(4)/1784.23(b)(4)].**

If NO, and coal preparation plants are not located within the permit area, the applicant shall explain where coal processing would occur. The applicant is required to possess or obtain a separate permit for coal preparation plants that are not located within the proposed permit area. **[1785.21; 1827]**

N/A

3.10.2 Will in-situ processing activities be conducted? **[1785.22]**

☐ YES ☒ NO

If YES, provide information to assure compliance with 62 Ill. Adm. Code 1785.22 and 1828. **[1785.22; 1828]**

3.10.3 Provide an annual estimation of the volume of both coarse and fine coal waste streams generated. **[1780/1784.11(b)(4)]**

3.10.4 Describe the processing water (fresh water/make-up water) and slurry line circuitry. Incorporate flow diagrams as necessary. Provide locations of all processing water transport lines and slurry transport lines on the Operations Map. **[1780.11(b)/1784.11(b)]**

3.10.5 What safeguards are provided to prevent the discharge of slurry fines and untreated slurry water during emergency situations (e.g. power outages, mechanical equipment breakdown, plant shutdowns, etc.)? Indicate where the slurry would go by gravity flow in the event of an emergency discharge, and the environmental impact this would have **[1780.21(h)/1784.14(g)]**

3.11 Coal Processing Waste and Underground Development Waste.

3.11.1 Will coal processing waste and/or underground development waste be disposed of within the proposed permit area?

☐ YES ☒ NO

If NO, explain how coal processing waste and underground development waste will be handled and disposed?

Drill cuttings will be stored in a temporary drill pit. See Operations Map.

If YES, complete Table 3.11.1: List of Coal Waste Materials to be Disposed within the Permit Area providing analytical data to describe the nature of all coal processing waste and underground development waste material that will be disposed within the proposed permit area.

Note: If this is a new facility and no processed refuse has been generated, provide an estimated analysis in the table and a discussion of the basis for the assumptions in the space below. Also, please note the Department will require submittal of actual analytical results of the refuse material within 60 days after the preparation facility is operational.

Table 3.11.1: List of Coal Waste Materials to be Disposed within the Permit Area

Type of material includes but is not limited to *Coarse Coal Refuse Filter Cake, Fine Coal Refuse (Slurry), immediate floor and roof rock potentially removed and not sent to the preparation plant with coal.*

Type of Material	Source Mine Permit and Preparation Plant	Potential Acidities	Net Neutralization Potential

3.11.2 Is Disposal of Coal Waste in Underground Workings proposed in this application?

☐ YES ☒ NO

If YES, complete and include Part 14: Disposal of Coal Waste in Underground Workings

3.12 Coal Refuse Disposal Area. Is the construction or modification of a Coal Refuse Disposal Area proposed in this application?

☐ YES ☒ NO

If YES, complete the following

3.12.1 Complete Table 3.12.1: List of Coal Refuse Disposal Areas to be Constructed or Modified for each Coal Refuse Disposal Area to be constructed or modified with this application.

Table 3.12.1 List of Coal Refuse Disposal Areas to be Constructed or Modified.

Name of Facility			
***Type of Facility**			

(Coal Refuse Pile, Coal Slurry Waste Impoundment)			
Latitude (DD)			
Longitude (DD)			
Approx. Start of Construction (month/yr)			
Estimated Lifespan			
Coarse refuse			
Slurry			
Surface Acreage footprint			
Total Coarse Coal Refuse Storage Volume (cubic yards)			
Total Fine Coal Refuse Storage Volume (cubic yards)			
*Dam Class (According to TR-60, if applicable)			
*Hazard Classification (According to MSHA determination, if applicable)			
Associated NPDES Permit			

3.12.2 Design and Construction Details of Coal Refuse Disposal Areas. Coal mine waste shall be disposed of in compliance with requirements of 62 Ill. Adm. Code 1816.81/1817.81 through 1816.84/1817.84.

3.12.2.1 Provide location and describe refuse disposal capacity requirements, facility configuration/staging and scheduling in a detailed construction plan. The plan shall include: acreage of disposal and borrow areas associated with the coal waste disposal area, engineering calculations, cross sections, maps, drawings and design certification for each proposed structure. **[1780.14(b)(8)/1784.23(b)(7); 1816/1817.81(c)]**

3.12.2.2 Provide measures to be taken to: control surface drainage, provide surface area stabilization and minimize erosion of the coarse refuse disposal facility and of areas that receive runoff from the coarse refuse disposal facility. Include detail engineering design of all proposed surface drainage control structures. **[1816/1816.81(a)(1); 1816/1817.83(a); 1816.84/1817.84(d)]**

3.12.2.3 Provide measures that will be taken to ensure mass stability and prevent mass movement of the structure during and after construction. **[1816/1817.49(a)(4); 1816.81(a)(2)/1817.81(a)(2)]**

3.12.2.4 Provide all necessary on-site investigations results, test borings, and laboratory results of foundation material and coal waste that was used to determine the design requirements for the foundation stability of the coarse refuse disposal area and/or structure as Attachment 3.12.2.4. **[1816/1817.49(a)(6); 1816/1817.81(d)]**

3.12.2.5 For coal processing waste dams and embankments meeting the Mine Safety and Health Administration (MSHA) size criteria, each design and operations plan shall comply with the requirements of MSHA 30 CFR 77.216-1 and 77.216-2.

3.12.2.5.1 Is the applicant proposing to construct or modify a coal waste disposal structure that impounds water and/or slurry to an elevation of five (5) feet or more above the upstream toe of the structure and can have a storage volume of 20 acre-feet or more?

☐ YES ☐ NO

3.12.2.5.2 Is the applicant proposing to construct or modify a coal waste disposal structure that impounds water and/or slurry to an elevation of twenty (20) feet or more above the upstream toe of the structure?

☐ YES ☐ NO

If the answer to either above is YES, the applicant shall provide in this application the plan submitted to the District Manager of the Mine Safety and Health Administration (MSHA) under 77.216 insofar as the MSHA informational design standard requirements are duplicative of the Department's requirements. **[1816/1817.49(a)(2)]**.

3.12.3 Operation and Maintenance of Coal Refuse Disposal Areas.

3.12.3.1 Describe measures to be taken to safely operate the coal refuse disposal area including but not limited to: Scope and frequency of inspections, maintenance of embankments and liners, controls to ensure compaction standards and maintenance of runoff conveyance and discharge structures **[1816/1817.81(a)(4)]**

3.12.3.2 For all coal waste disposal areas explain measures to be taken to ensure that final disposal facility is suitable for reclamation. **[1816/1817.81(a)(3)]**

3.12.3.3 Provide the emergency guidelines that will be followed in the case that a potential hazard develops associated with the coarse refuse disposal area(s) being discussed. **[1816/1817.81(e)]**

3.13 Air Pollution Control Plan.

3.13.1 Provide a plan detailing fugitive dust control practices to be employed during proposed surface coal mining and reclamation operations. **[1780.15/1784.26; 1816.150(b)(1)/1817.150(b)(1)]**

N/A

3.13.2 Provide a description of the steps to be taken to comply with the requirements of the Clean Air Act (42 U.S.C. 7401 et seq.), and other applicable air and water quality laws and regulations and health and safety standards. **[1780.18(b)(9)/1784.13(b)(9)]**

N/A

3.14 Fire Control Plan.

3.14.1 Concerning non-coal mine waste, all debris, acid-forming and toxic-forming materials, and materials constituting a fire hazard, provide a description of contingency plans which have been developed to preclude sustained combustion of such materials. **[1780.18(b)(7)/1784.13(b)(7)].**

N/A

3.14.2 Provide a plan detailing how coal mine waste fires shall be extinguished. **[1816.87/1817.87]**

N/A

3.14.3 Provide a plan detailing how coal stockpile fires shall be extinguished. [225 ILCS 720/4.08]

N/A

PART 5: Drainage Control

5.1 Pre-mining Drainage Patterns Mapping. On the Existing Streams Location and Watershed Map, show the pre-mining drainage patterns of all areas to be affected by the mining and reclamation activities within the permit boundary and properties adjacent to the permit boundary. The map shall include, at minimum, adequate contour mapping, a delineation of the watershed boundaries both within and adjacent to the permit boundary, and shall depict the size of each watershed. **[1780.14/1784.23]**

5.2 General Drainage Control Description.

5.2.1 Will all surface drainage from the affected mining area be collected and treated prior to leaving the permit area? **[1816.46(b)(2)/1817.46(b)(2)]**

☐ YES ☒ NO

If NO, delineate the areas where an exemption is being requested on the Operations Map. Describe each location concerning the size of the disturbed area and the type of disturbances. Describe alternate sediment control measures to be utilized if proposed. Demonstrate that siltation structures and alternate sediment control measures (if not proposed) are not necessary for drainage from the disturbed areas to meet effluent limitations and water quality standards. **[1816.46(e)/1817.46(e)]**

Williamson Energy is requesting a sediment pond exemption due to its small area. Silt fence and/or straw bales will be placed along the outside edge of the disturbed areas to minimize sediment loss during site construction. After construction is complete a durable rock surface will be installed or lime stabilization will be completed and all available areas will be seeded during the first planting season after completion of construction.

5.2.2 Will any surface drainage from unaffected areas be intercepted and diverted around the affected mining area. **[1816/1817.43(a)]**

☐ YES ☒ NO

If NO, explain why this is not necessary.

Water will be allowed to sheet flow along the waterline/powerline corridor and the Bleeder site is located such that the unaffected areas will drain away from the Bleeder site.

If YES, based on the definitions of "perennial" and "intermittent" streams as outlined in 62 Ill. Adm. Code 1701.Appendix A, does the Applicant propose to divert a perennial or intermittent stream?

☐ YES ☒ NO

If YES, also complete the appropriate items of Part 6.0: Streams.

5.2.3 Describe the timing in which all construction of the sediment ponds and surface drainage control structures will be completed. Include a discussion of the vegetation stabilization of these structures. **[1816.46(b)(3)/1817.46(b)(3); 1816.49(a)(7)/1817.49(a)(7)]**

N/A

5.3 Conveyance Ditch Design.

5.3.1 Does the Applicant propose to construct or modify any conveyance ditch that collects surface water drainage from affected mining areas and direct it to sediment ponds/treatment facilities? **[1816/1817.45(b)(3)]**

☐ YES ☒ NO

Does the Applicant propose to construct or modify any conveyance ditch that intercepts surface drainage from unaffected areas and direct it around the affected mining area? **[1816/1817.45(b)(4)]**

☐ YES ☒ NO

If either answer above is YES, complete Table 5.3.1: Conveyance Ditch Design Summary and complete the remaining questions through Part 5.3.4. Refer to Technical Guidance Document 2 for clarification.

5.3.1.1 Provide detailed design and construction calculations for the ditches listed in Table 5.3.1 as Attachment 5.3.1.1. **[1816.43/1817.43]**

5.3.1.2 For all ditches listed in Table 5.3.1, indicate the location of each on the Operations Map in relation to the proposed mining operations. Include the drainage area reporting to each segment of conveyance ditch on the Surface Drainage Control Plan Map and/or indicate the drawing(s) that provide the information required and provide a specific reference in the area below. **[1780.14(b)(6)/1784.23(b)(6)]**

5.3.1.3 Provide typical cross-sections for each ditch listed in Table 5.3.1 depicting the bottom width, side slopes, depth based on the appropriate precipitation event, and freeboard depth. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below.) **[1780.14(b)(6)/1784.23(b)(6)]**

5.3.1.4 Provide profiles for each ditch listed in Table 5.3.1 depicting the flow line slope and the depth based on the appropriate precipitation event. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below.) **[1780.14(b)(6)/1784.23(b)(6)]**

5.3.1.5 Based on calculated flows, define areas that require supplemental erosion control such as rip rap or dry dams on the Surface Drainage Control Plan Map. Provide details and calculations on the design of additional erosion control features to be employed during the operational life of the ditches. **[1780.14(b)(6)/1784.23(b)(6)]**

5.3.1.6 Describe measures to ensure proper maintenance of diversion ditches, such as methods and frequency of cleaning of ditches that may receive excessive sediments and special equipment to be used for ditches designed with liners. **[1816.43(a)(2)(c)/1817.43(a)(2)(c)]**

5.3.1.7 Provide details of the proposed erosion and sediment control measures to be employed during the construction of the proposed conveyance ditches. **[1816.43(a)(2)/1817.43(a)(2)]**

5.3.2 Are culvert(s) being proposed within the permit area including but not limited to ditches, stream crossings and/or transportation facilities.

☐ YES ☒ NO

If YES, complete Table 5.3.2: Culvert Design Summary and the following:

5.3.2.1 Provide design calculations for each culvert as Attachment 5.3.2.1. **[1816/1817.43(b)(3); 1816/1817.43(c)(3); 1816/1817.151(d)(1)]**

5.3.2.2 Provide a profile for each culvert, depicting appropriate design information including but not limited to length, diameter, slope, inlet and outlet elevations, maximum headwater depth and elevation of roadway or rail crossing. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below) **[1780/1784.29]**

N/A

5.3.2.3 For culverts being proposed beneath transportation facilities (road/railway), provide measures to be implemented to insure structural capacity under live loads. **[1816/1817.151(d)(4)]**

N/A

5.4 Impoundments. This section refers to modifications or design plans for all impoundments including sediment ponds, freshwater lakes, recirculation lakes (both incised and above grade) other than those covered under Part 3.12 "Coal Refuse Disposal Area". These structures are considered "impoundments" as defined in 62 Ill. Adm. Code 1701.Appendix A. Refer to Technical Guidance Document 2 for clarification. NOT APPLICABLE

5.4.1 Impoundment Design.

5.4.1.1 For all proposed impoundments, complete the Impoundment Design Table 5.4.1: Impoundment Design. **[1816.46(c)/1817.46(c)]**

5.4.1.2 Discuss the design basis for the impoundment calculations. Submit calculations used in spillway designs and determination of inflow volume and pond volume as Attachment 5.4.1.2.

5.4.1.3 Provide construction and maintenance details of dams, spillways, seepage control measures, and erosion control measures for inlets and outlets. Employ maps and cross sections where necessary. **[1816.45/1817.45; 1816.46/1817.46; 1816.49/1817.49]**

5.4.1.4 Submit a typical cross section of the embankment(s), details of the principal and emergency spillways and a plan view of each pond at an appropriate scale showing pond bottom contours and points of inflow. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below) **[1816.45/1817.45; 1816.46/1817.46; 1816.49/1817.49]**

5.4.1.5 If underground mining has or will occur beneath or adjacent to the proposed impoundment, the plan shall incorporate a technical discussion, survey and evaluation of the potential effect subsidence of the surface and subsurface strata would have on the structure. **[1780.25(a)(1)(D)/1784.16(a)(1)(D)]**

5.4.1.6 Explain what criteria will be used to monitor and determine periodic and/or timely removal of sediments from sediment ponds, to maintain storage volume capacity. If sediment removal becomes necessary to maintain necessary pond treatment volume, explain how the sediment will be removed, where it will be disposed of, and what protective measures will be used to ensure the integrity of clay and/or geosynthetic liners, if applicable. **[1816.46(c)(1)(C)(vi)/1817.46(c)(1)(C)(vi)]**

5.4.1.7 Will pH adjustment be necessary on any of the impoundments in order to meet the applicable State and Federal Standards? **[1780.21(h); 1784.14(g)]**

☐ YES ☐ NO

If YES, discuss in detail, along with detailed basis of design. The basis should include a detailed description of the proposed treatment facilities, process flow diagrams, and design calculations. **[1780.21(h)/1784.14(g)]**

5.4.2 Impoundments Regulated by MSHA.

Are any of the impoundments proposed to be modified or constructed in Part 5.4.1 capable of impounding water or sediment to an elevation of five feet or more above the upstream toe of the structure and can have a storage volume of 20 acre-feet or more?

☐ YES ☐ NO

Are any of the impoundments proposed to be modified or constructed in Part 5.4.1 capable of impounding water or sediment to an elevation of twenty feet or more above the upstream toe of the structure?

☐ YES ☐ NO

If the answer to either above is YES, for each structure meeting or exceeding the size or other criteria of MSHA, 30 CFR 77.216(a), include the following additional information **[1780.25(a)(2)/1784.16(a)(2)]**:

5.4.2.1 The plan required to be submitted to the District Manager of the Mine Safety and Health Administration (MSHA) under 30 CFR 77.216 shall also be submitted to the Department as part of the permit application insofar as the MSHA informational design standard requirements are duplicative of the requirements of 62 Ill. Adm. Code 1780.25/1784.22. This plan shall be included as Attachment 5.4.2.1. **[1816/1817.49(a)(2)]**

5.4.2.2 Any certification issued by MSHA with respect to the design plan shall be included as Attachment 5.4.2.2. **[1816/1817.49(a)(2)]**

5.4.2.3 Provide a geotechnical analysis for stability design and construction specification requirements for the structure as Attachment 5.4.2.3. Include a description of each engineering design assumption and calculation with discussion of each alternative considered in selection design parameters and construction methods. **[1780.25(f); 1784.16(f)]**

5.4.2.4 Describe the operation and maintenance procedures that will be used to ensure the stability of each structure. Include all monitoring instrumentation to be used. **[1780.25(a)(2)(C); 1784.16(a)(2)(C)]**

5.4.3 Impoundment Reclamation.

For permanent impoundments, including sedimentation ponds, provide the following information:

5.4.3.1 Describe the proposed reclamation plans for each structure, including a time table and plans for removal and disposal of material. **[1780.25(a)(2)(D); 1784.16(a)(2)(D)]**

For permanent impoundments, including sedimentation ponds, provide the following information:

5.4.3.2 Provide sufficient design data and calculations to substantiate that the design is in accordance with NRCS Engineering Standard 378 "Ponds" or NRCS Technical Release #60 "Earth Dams and Reservoirs". This information shall be included as Attachment 5.4.3.2. **[1816/1817.49(b)(2)]**

5.4.3.3 Based on the location of the pond relative to existing or proposed surface mining disturbances, and the projected post mining reclamation and post mining land uses, provide an evaluation of the anticipated water quality to assure it will be suitable for the intended use. **[1816.49(b)(2)/1817.49(b)(2)]**

5.4.3.4 Describe the relationship of the impoundment to the post-mining land use. **[1816.49(b)(6)/1817.49(b)(6)]**

5.4.3.5 Describe methods of dropping surface runoff over excavated impoundment side slopes. Discuss design criteria to be employed for downdrain structures and perimeter diversions. **[1816.49(b)(7)/1817.49(b)(7)]**

5.4.3.6 Plans of access roads and other use related facilities. **[1816.49(b)(4)/1817.49(b)(4)]**

PART 6: Streams

The design and construction of all stream channel diversions of perennial and intermittent streams shall be sealed by a qualified registered professional engineer as meeting the performance standards of this Section. **[1780.16(a)(2)(B)/1784.21(a)(2)(B); 1816.97(f)/1817.97(f); 1816.43(a)(3)/1817.43(a)(3)]**

6.1 Disturbance Information. Are surface coal mining operations and/or reclamation activities (including road crossings) or permit boundaries proposed within 100 feet of any stream (ephemeral, intermittent, or perennial)? **[1816.57/1817.57]**

☒ YES ☐ NO

If YES,

- For any stream(s) located outside the proposed permit boundary where disturbance within 100 feet. is proposed go to Part 6.3; and
- For any stream(s) located outside the proposed permit boundary where NO disturbance within 100 feet. will occur go to Part 6.9; and
- For any stream(s) located within the proposed permit boundary where disturbance within 100 feet. is proposed go to Part 6.2.

If NO, go to Part 6.9.

6.2 Stream Information. Provide a Stream Delineation Report and/or Wetland Delineation Report as Attachment 6.2. Information contained in the report(s) shall meet the requirements found at **1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43 and 1816.97/1817.97.**

6.2.1 Stream Classification. Provide the total number of each type of stream or stream segment or channel reach located within the proposed permit area and continue to Part 6.3.

[2] Ephemeral [5] Intermittent [ ] Perennial

6.3 Stream Buffer Variance. Is a stream buffer variance requested? **[1816.57/1817.57]**

☒ YES ☐ NO

Note, in certain scenarios both YES and NO may be applicable.

If YES,

- For stream(s) located outside the proposed permit boundary go to Part 6.4
- For stream(s) located inside the proposed permit boundary go to Part 6.5.

If NO, provide a justification that each disturbed stream is ephemeral based on both parts of the definition of ephemeral stream found at Section 1701.5 Appendix A. Refer to Operator Memorandum No. 2017-06 for guidance regarding ephemeral stream justification. Briefly describe the disposition of the ephemeral stream(s) during operations and post-mining. Nomenclature of ephemeral streams must be consistent with maps and reports. No further information is required in Part 6 of the application if all streams are ephemeral. **[1816.57/1817.57; 1701.5 Appendix A; 1777.13]**

See delineation report (Attachment 6.2) The surface disturbance was modified to not disturb the

potential wetland identified in the Attachment 6.2.
Both ephemeral streams have a drainage watershed of less than one square mile.
S1 is a small channel which was classified as "ephemeral" based on criteria specified in OMM-LRD Operator Memorandum 2017-06. Specifically, Criterion 1 applies as the soil description for the Bluford silt loam indicates the highest perched water table is 0.5 feet deep with a channel depth of only 0.3 ft. Criterion 2 applies as the stream is a headwater stream. The bed and bank begins about 9 feet upstream of the southern corridor boundary. No other streams flow into S1 upstream of the corridor. Also Criterion 6 applies as there are no meanders, riffles, or pools in the corridor reach. Criterion 7 applies as there are no erosional features such as headcuts. Criterion 9 also applies as soil coloration was 0-1" 10YR 3/3; 1-12" 10YR 4/3, which is not gray enough to meet the criteria for a hydric soil."

S3 is an erosional gully in a soybean field which appears to be growing larger each year as tillage occurs up to the top of slope and headcut erosion is progressing to the south. This feature, although exhibiting bed and bank, may not be a CWA jurisdictional stream but rather an erosional feature. 2017-06 Criteria 6 applies as there are no meanders, riffles, or pools, therefore this feature is classified as "ephemeral"."

6.4 Streams Outside Permit Boundary. For each intermittent and/or perennial stream located outside the permit boundary where a stream buffer variance is requested, provide the name of the stream and describe how the stream channel and its associated riparian vegetation will be restored and how the proposed operations will not adversely affect water quality and quantity. No further information is required in Part 6 of the application for streams outside the proposed permit boundary where buffer zone exemptions are requested. **[1816.57/1817.57]**

There are two intermittent stream segments located adjacent to the proposed IBR area that are not directly associated with the intermittent stream segments proposed to be bored underneath. Quality of riparian vegetation is poor. Neither the channel nor any associated stream bank vegetation associated with these stream segments will be directly impacted by this operation. Water quantity and quality will not be adversely impacted through the use of alternate sediment control measures such as straw bales and silt fence.

6.5 Existing Streams Locations. Provide the Existing Streams Location and Watershed Map meeting the specifications found in the General Mapping Requirements of the Instructions. Additionally, for each intermittent and/or perennial stream located inside the permit boundary where a stream buffer variance is requested, provide the name of the stream and describe how the stream channel and its associated riparian vegetation will be restored and how the proposed operations will not adversely affect water quality and quantity. **[1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43; 1816.57/1817.57; 1816.97/1817.97]**

- For Temporary Stream Diversions complete Part 6.6.
- For Permanent Stream Diversions, Restorations and Relocations complete Part 6.7.
- For culverts and crossings of non-diverted, temporary, or permanent stream channels complete Part 6.8.

A Stream Buffer Zone Variance is requested by Williamson Energy for all streams to allow for the boring and installation of water and powerline and/or bleeder shaft site. The stream locations and buffer zones for the streams are shown on the Operations Map. Williamson Energy will install silt fence and/or straw bales along the boundary of the construction activities adjacent to the stream segments to protect the stream from having any adverse effect to the water quantity or quality. Construction activities will be carried out over a short period of time and will be temporarily reclaimed immediately after completion of construction and/or boring under the stream segments.

6.6 Temporary Stream Diversions. Temporary diversions shall be removed promptly when no longer needed to achieve the purpose for which they were authorized. **[1816.43/1817.43]**

6.6.1 Temporary Stream Diversion Construction Narrative. For each temporary diversion proposed, discuss the proposed construction practices including the following information: **[1780.29/1784.29]; [1816.43/1817.43;** Memorandum No. 2005-04**]**

6.6.1.1 Estimated diversion construction beginning and ending dates.

6.6.1.2 Erosion control practices during construction to reduce addition of suspended solids to streamflow outside the permit area.

6.6.1.3 Estimated date when erosion control and vegetation will be sufficiently established to allow diversion of water through the temporary channel.

6.6.1.4 Indicate the timing and method of contacting the Department for approval upon stabilization of the stream channel. Department approval is required before water may be diverted through the temporary stream channel.

6.6.1.5 If a sediment pond exemption was requested for diversion channel spoil in Part 5.2.1, then describe methods to prevent channel spoil from impacting the surrounding area and include a discussion of the disposition of channel spoil. If a sediment pond exemption was not requested for diversion channel spoil in Part 5.2.1, then indicate N/A. **[1816.46(e)/1817.46(e)]**

6.6.1.6 Outline a reporting schedule to be submitted to the Department during construction and submit a report to the Department within 30 days after completion of the temporary diversion that has been sealed by a qualified registered professional engineer.

6.6.1.7 Discuss how the activity will comply with the Section 404 of the Federal Water Pollution Control Act of 1972, as amended, and all local ordinances. **[Ill. Rev. Stat. 1991, ch. 19, pars. 52-79; 615 ILCS 5; 30 U.S.C. 1344]**

6.6.2 Temporary Stream Diversion Locations. Provide a Stream Diversion Map meeting the specifications found in the General Mapping Requirements of the Instructions or reference the Surface Drainage Control Plan Map. **[1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43]**

6.6.3 Temporary Stream Diversion Plan-Profile and Cross-Section. For each temporary stream diversion proposed, provide drawings depicting the following information: **[1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43]**

6.6.3.1 Cross-sections showing the limits and configuration of the proposed activities, dimensions, channel linings, normal water surfaces, side slopes and inflection points (cut and fill, curves, and straight sections).

6.6.3.2 A profile of the temporary stream diversion depicting the flow line slope and the water level for the 10-year 6-hour storm event.

6.6.3.3 Detailed channel sizing calculations demonstrating the temporary diversion channel is adequate to convey the 10-year 6-hour storm event. The calculations shall include run-off volumes from the drainage area.

6.6.4 Post-Diversion Reclamation. Describe the reclamation of temporary stream diversions after flow has been diverted to the restored or relocated stream channel, provide the following information: **[1816.43(a)(3)/1817.43(a)(3)]**

6.6.4.1 Describe the timing of removal of each temporary stream diversion when the diversion is no longer needed to achieve the purpose for which they were authorized.

6.6.4.2 Discuss any necessary modification or removal of downstream water treatment facilities that were protected by the temporary diversion to prevent overtopping or failure of such facilities.

6.7 Permanent Stream Diversion. The following requirements for a permanent stream diversion must be met: **[1816.43/1817.43]**

6.7.1 Classification. The following information in Part 6.8 contains construction and restoration plan information for (indicate the number of each type):

☐ Permanent Restored Stream(s) ☐ Permanent Relocated Stream(s)

6.7.2 Permanent Stream Channel Construction Narrative. For each permanent diversion or permanent restored stream proposed, discuss the proposed construction practices including the following information: **[1780.29/1784.29; 1816.43/1817.43;** Operator Memorandum No. 2005-04**]**

6.7.2.1 Estimated permanent channel construction beginning and end dates.

6.7.2.2 Erosion control practices during construction to reduce addition of suspended solids to streamflow outside the permit area.

6.7.2.3 Estimated date when erosion control and vegetation will be sufficiently established to allow diversion of water through the permanent channel.

6.7.2.4 Indicate the timing and method of contacting the Department for approval upon stabilization of the stream channel. Department approval is required before water may be diverted through the permanent stream channel.

6.7.2.5 Is a Sediment Pond Exemption requested for diversion channel spoil. **[1816.46(e)/1817.46(e)]**

☐ YES ☐ NO

If NO, explain why an exemption is not required.

If YES, describe methods to prevent diversion channel spoil from impacting surrounding area, including disposition of channel spoil.

6.7.2.6 Discuss how the activity will comply with the Rivers, Lakes, and Streams Act, Section 404 of the Federal Water Pollution Control Act of 1972, as amended, and all local ordinances. **[Ill. Rev. Stat. 1991, ch. 19, pars. 52-79; 615 ILCS 5; 30 U.S.C. 1344]**

6.7.2.7 Outline a reporting schedule to be submitted to the department during construction and submit a report to the Department within 30 days after completion of the permanent stream channel that has been sealed by a qualified registered professional engineer.

6.7.3 Permanent Stream Diversion Locations. Provide a Stream Diversion Map meeting the specifications found in the General Mapping Requirements of the Instructions or reference the Surface Drainage Control Plan Map. **[1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43]**

6.7.4 Permanent Stream Channel Plan-Profile and Cross-Section. Permanent stream channels shall approximate the original pre-mining stream characteristics. For each permanent stream channel proposed, provide drawings depicting the following information: **[1780.14/1784.23; 1780.29/1784.29; 1816.43/1817.43]**

6.7.4.1 A profile depicting bed slopes, pool-riffle ratios, and normal water surfaces.

6.7.4.2 Plans and drawings for boulder deflectors, check dams, and other instream habitat structures.

6.7.4.3 Cross-sections showing the limits and configuration of the proposed activities, dimensions, channel linings, normal water surfaces, side slopes and inflection points (cut and fill, curves, and straight sections).

6.7.4.4 Include a calculated flow rate (cfs) and velocity (ft/sec) at representative locations for low flow and normal flow and the 100-year flood condition that will allow a freeboard of no less than 0.3 feet.

6.7.4.5 Channel sizing calculations to demonstrate that the proposed stream channel and surrounding flood plain are adequate to convey the 100-year, 6-hour storm event. The calculations shall include run-off volumes from the drainage area.

6.7.5 Permanent Stream Channel Reclamation. Describe the reclamation of permanent stream channels, provide the following: **[1780.18(b)(5)/1784.13(b)(5); 1816.14/1817.43; 1816.116/1817.116; 1816.97/1817.97]**

If all responses to this part are the same as Forest or Fish and Wildlife - Woody post-mining land use information provided in Part 10, indicate such in the space below.

6.7.5.1 Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

6.7.5.2 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114]**

6.7.5.3 Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

6.7.5.4 Provide a permanent species list that will achieve the designated post-mining land use that is diverse, permanent, composed of species native to the area, capable of controlling erosion, compatible with the approved post-mining land use, and capable of self-regeneration.. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable and necessary to achieve the approved post-mining land use. Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5); 1816.111 (a) and (b)/1817.111 (a) and (b); 1816.97(g)/1817.97(g)]**

6.7.5.5 If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. Describe measures taken to ensure consistency.

6.7.5.6 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-mining land use success. Remedial actions required may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]**

6.8 Culverts and Crossing of Non-Diverted, Temporary, and/or Permanent Stream Channels. Where a bridge, road, culvert or other crossing is proposed for any streams, provide the following information: **[1780.37/1784.24]**

NOTE: For design specification requirements, see Part 5.3.2.

6.8.1 Name of stream(s) with nomenclature consistent with names used in maps and reports.

The five intermittent streams will be bored under from outside the riparian zone.

6.8.2 Description of construction methods and sequence including water handling during construction and erosion/sediment control measures for each crossing.

A directional boring machine will be used to bore at least 5 feet underneath the bottom of the stream bed. Silt fence will be used to provide erosion/sediment control around the boring and receiving locations.

6.8.3 Describe how the original stream channel(s) and associated riparian vegetation will be restored.

No riparian vegetation will be disturbed

6.9 Stream Buffer Zone. Discuss how the designated 100 ft. stream buffer zone will be marked for any intermittent and/or perennial stream that will not be disturbed by surface mining activities. Cleary indicate the 100-ft. stream buffer zone on all appropriate maps in the General Mapping Requirements of the Instructions and Part 3.3. If no streams are located within the proposed permit boundary or within 100 ft. of the proposed permit boundary indicate N/A. **[1816.57(b)/1817.57(b) and 1816.11/1817.11]**

October 2018

PROJECT DESCRIPTION

HMG Engineers, Inc. (HMG) was contacted Williamson Energy who requested a wetland and stream delineation on a site located in Sections 2, 3, and 10, T8S, R4E in Williamson County, Illinois, located 4 miles south of Thompsonville, Illinois (Figure 1). The delineation area includes rowcrop agricultural land, hayland, and forest. The site includes a corridor approximately 2 miles long and 50 feet wide, and also a trapezoidal tract of 4.4 acres on the east end.

METHODS

HMG conducted a wetland and stream delineation for the assessment area. Results of that investigation are reported herein. Background information was reviewed including aerial photography, topography, soils, floodplain maps, and National Wetland Inventory. A field investigation was conducted on June 20, 2018 and October 16, 2018 by HMG Environmental Scientist William O'Leary. Stream identification utilized COE "bed and bank" criteria. Wetland delineation followed criteria of the 1987 U.S. Army Corps of Engineers Wetlands Delineation Manual, including Regional Supplement, Midwest Version 2.0 (U. S. Army Corps of Engineers [COE] 2010). Global positioning equipment was used to locate features in the field.

BACKGROUND

USGS Topographical Map (see Figures 1 and 3), aerial photography (see Figure 2), soils, National Wetlands Inventory (NWI, Figure 2), and floodplain maps (Figure 2) were reviewed. Aerial photographs and topographical maps identified 3 main stream channels running through and/or adjacent to the corridor. Additionally a number of draws intersected the corridor in which small streams might be present. The area does not lie within any 100 year floodplains; the closest being just across the railroad track from the NE corner (Prairie Creek floodplain). The site includes 7 soil map units, 10C and 10D (Plumfield silty clay loam 5-10% and 10-18% slope), 13B2 (Bluford silt loam 2-5% slope, eroded), 14B and 14C2 (Ava silt loam 2-5% slope and 5-10% slope, eroded), 337A (Creal silt loam 0-2% slope), and 3382A (Belknap silt loam 0-2% slope). None of these soil types are classified as hydric.

FIELD DELINEATION

Field investigation identified that the corridor crosses 7 "bed and bank" channels, which are labeled as S1 through S7 in Figure 4. S1 Is a small channel which was classified as "ephemeral" based on criteria specified in OMM-LRD Operator Memorandum 2017-06. Specifically, Criterion 1 applies as the soil description for the Bluford silt loam indicates the highest perched water table is 0.5 feet deep. Criterion 2 applies as the stream is a headwater stream. The bed and bank begins about 9 feet upstream of the southern corridor boundary. No other streams flow into S1 upstream of the corridor. Also Criterion 6 applies as there are no meanders, riffles, or pools in the corridor reach. Criterion 7 applies as there are no erosional features such as headcuts. Criterion 9 also applies as soil coloration was 0-1" 10YR 3/3; 1-12" 10YR 4/3, which is not gray enough to meet the criteria for a hydric soil.

Stream S2 is identified as an intermittent stream on the USGS topo map. None of the 2017-06 criteria apply, therefore, the intermittent classification was used.

Feature S3 is an erosional gully in a soybean field which appears to be growing larger each year as tillage occurs up to the top of slope and headcut erosion is progressing to the south. This feature, although exhibiting bed and bank, may not be a CWA jurisdictional stream but rather an erosional feature. 2017-06 Criteria 6 applies as there are no meanders, riffles, or pools, therefore this feature is classified as "ephemeral".

Stream S4 has a drainage area greater than 1 square mile and is therefore classified as "intermittent", which is consistent with the USGS designation. This is the largest stream in the corridor. The corridor crosses the meanders of this stream in 3 locations (the reach containing the sample point, a reach just downstream, and a reach near the confluence with S2).

Stream S5 is a draw draining an upland area NW of the corridor. The channel was classified as "intermittent" as none of the 2017-06 criteria apply.

Stream S6 is located where the corridor crosses into a crop field via a culvert. The sample ppint is just downstream of the culvert. This stream is identified as "intermittent" on the USGS topographical map. None of the 2017-06 criteria apply, therefore the "intermittent" designation was used.

The corridor crosses Stream S7 just south of the railroad track. This is a fairly large channel which was classified as "intermittent".

See Figure 4 for overview of jurisdictional features, Figure 6 for more detail on S1 through S4, and Figure 7 for more detail on S5 through S7.

Within the trapezoidal block at the east end of the corridor, no bed and bank streams were observed, although one such channel was observed just off site to the south. A small wetland area is present, a portion of which is located in the SE corner of the trapezoid. The portion of the wetland within the trapezoidal block is 0.04 acres (Figures 4 and 5).

Three other areas along the corridor were tested for either stream or wetland criteria, identified in Figure 4 as points A, B, and C. Point A is located in a draw with likely wetland hydrology. Vegetation was mowed grass which could be reed canary grass (wetland vegetation). Soils, however, tested as 10YR 3/3, not a hydric soil. No bed and bank was present at this location either. At point B, there was no bed and bank. Vegetation was upland species. At point C, there also is no bed and bank. Soils tested as 10YR 4/3, not a wetland soil.

RESULTS

Based on review of available information and the field assessment, 7 streams and 1 wetland were identified. The streams were classified as ephemeral in 2 cases and intermittent in 5 cases. One small emergent wetland (0.04 acre) is present.

STORET #	AGENCY	
INVESTIGATORS William OLeary		
FORM COMPLETED BY WO	DATE 16OCT2018 TIME 11:15 (AM) PM	REASON FOR SURVEY potential permitting

Parameters to be evaluated in sampling reach

Habitat Parameter	Condition Category			
	Optimal	Suboptimal	Marginal	Poor
1. Epifaunal Substrate/ Available Cover	Greater than 50% of substrate favorable for epifaunal colonization and fish cover; mix of snags, submerged logs, undercut banks, cobble or other stable habitat and at stage to allow full colonization potential (i.e., logs/snags that are not new fall and not transient).	30-50% mix of stable habitat; well-suited for full colonization potential; adequate habitat for maintenance of populations; presence of additional substrate in the form of newfall, but not yet prepared for colonization (may rate at high end of scale).	10-30% mix of stable habitat; habitat availability less than desirable; substrate frequently disturbed or removed.	Less than 10% stable habitat; lack of habitat is obvious; substrate unstable or lacking.
11				
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
2. Pool Substrate Characterization	Mixture of substrate materials, with gravel and firm sand prevalent; root mats and submerged vegetation common.	Mixture of soft sand, mud, or clay; mud may be dominant; some root mats and submerged vegetation present.	All mud or clay or sand bottom; little or no root mat; no submerged vegetation.	Hard-pan clay or bedrock; no root mat or vegetation.
6				
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
3. Pool Variability	Even mix of large-shallow, large-deep, small-shallow, small-deep pools present.	Majority of pools large-deep; very few shallow.	Shallow pools much more prevalent than deep pools.	Majority of pools small-shallow or pools absent.
1				
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
4. Sediment Deposition	Little or no enlargement of islands or point bars and less than <20% of the bottom affected by sediment deposition.	Some new increase in bar formation, mostly from gravel, sand or fine sediment; 20-50% of the bottom affected; slight deposition in pools.	Moderate deposition of new gravel, sand or fine sediment on old and new bars; 50-80% of the bottom affected; sediment deposits at obstructions, constrictions, and bends; moderate deposition of pools prevalent.	Heavy deposits of fine material, increased bar development; more than 80% of the bottom changing frequently; pools almost absent due to substantial sediment deposition.
6				
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
5. Channel Flow Status	Water reaches base of both lower banks, and minimal amount of channel substrate is exposed.	Water fills >75% of the available channel; or <25% of channel substrate is exposed.	Water fills 25-75% of the available channel, and/or riffle substrates are mostly exposed.	Very little water in channel and mostly present as standing pools.
1				
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0

HABITAT ASSESSMENT FIELD DATA SHEET—LOW GRADIENT STREAMS (BACK)

Parameters to be evaluated broader than sampling reach

Habitat Parameter	Condition Category			
	Optimal	**Suboptimal**	**Marginal**	**Poor**
6. Channel Alteration	Channelization or dredging absent or minimal; stream with normal pattern.	Some channelization present, usually in areas of bridge abutments; evidence of past channelization, i.e., dredging, (greater than past 20 yr) may be present, but recent channelization is not present.	Channelization may be extensive; embankments or shoring structures present on both banks; and 40 to 80% of stream reach channelized and disrupted.	Banks shored with gabion or cement; over 80% of the stream reach channelized and disrupted. Instream habitat greatly altered or removed entirely.
SCORE 15	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
7. Channel Sinuosity	The bends in the stream increase the stream length 3 to 4 times longer than if it was in a straight line. (Note - channel braiding is considered normal in coastal plains and other low-lying areas. This parameter is not easily rated in these areas.)	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	Channel straight; waterway has been channelized for a long distance.
SCORE 7	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
8. Bank Stability (score each bank)	Banks stable; evidence of erosion or bank failure absent or minimal; little potential for future problems. <5% of bank affected.	Moderately stable; infrequent, small areas of erosion mostly healed over. 5-30% of bank in reach has areas of erosion.	Moderately unstable; 30-60% of bank in reach has areas of erosion; high erosion potential during floods.	Unstable; many eroded areas; "raw" areas frequent along straight sections and bends; obvious bank sloughing; 60-100% of bank has erosional scars.
SCORE 9 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 9 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
9. Vegetative Protection (score each bank) Note: determine left or right side by facing downstream.	More than 90% of the streambank surfaces and immediate riparian zone covered by native vegetation, including trees, understory shrubs, or nonwoody macrophytes; vegetative disruption through grazing or mowing minimal or not evident; almost all plants allowed to grow naturally.	70-90% of the streambank surfaces covered by native vegetation, but one class of plants is not well-represented; disruption evident but not affecting full plant growth potential to any great extent; more than one-half of the potential plant stubble height remaining.	50-70% of the streambank surfaces covered by vegetation; disruption obvious; patches of bare soil or closely cropped vegetation common; less than one-half of the potential plant stubble height remaining.	Less than 50% of the streambank surfaces covered by vegetation; disruption of streambank vegetation is very high; vegetation has been removed to 5 centimeters or less in average stubble height.
SCORE 9 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 9 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
10. Riparian Vegetative Zone Width (score each bank riparian zone)	Width of riparian zone >18 meters; human activities (i.e., parking lots, roadbeds, clear-cuts, lawns, or crops) have not impacted zone.	Width of riparian zone 12-18 meters; human activities have impacted zone only minimally.	Width of riparian zone 6-12 meters; human activities have impacted zone a great deal.	Width of riparian zone <6 meters: little or no riparian vegetation due to human activities.
SCORE 10 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 4 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0

(Note - channel braiding is considered normal in coastal plains and other low-lying areas. This parameter is not easily rated in these areas.)	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	Channel straight; waterway has been channelized for a long distance.
SCORE 8	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
8. Bank Stability (score each bank)	Banks stable; evidence of erosion or bank failure absent or minimal; little potential for future problems. <5% of bank affected.	Moderately stable; infrequent, small areas of erosion mostly healed over. 5-30% of bank in reach has areas of erosion.	Moderately unstable; 30-60% of bank in reach has areas of erosion; high erosion potential during floods.	Unstable; many eroded areas; "raw" areas frequent along straight sections and bends; obvious bank sloughing; 60-100% of bank has erosional scars.
SCORE 2 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 2 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
9. Vegetative Protection (score each bank) Note: determine left or right side by facing downstream	More than 90% of the streambank surfaces and immediate riparian zone covered by native vegetation, including trees, understory shrubs, or nonwoody macrophytes; vegetative disruption through grazing or mowing minimal or not evident, almost all plants allowed to grow naturally.	70-90% of the streambank surfaces covered by native vegetation, but one class of plants is not well-represented, disruption evident but not affecting full plant growth potential to any great extent; more than one-half of the potential plant stubble height remaining.	50-70% of the streambank surfaces covered by vegetation; disruption obvious; patches of bare soil or closely cropped vegetation common; less than one-half of the potential plant stubble height remaining.	Less than 50% of the streambank surfaces covered by vegetation; disruption of streambank vegetation is very high; vegetation has been removed to 5 centimeters or less in average stubble height.
SCORE 3 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 3 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
10. Riparian Vegetative Zone Width (score each bank riparian zone)	Width of riparian zone >18 meters; human activities (i.e., parking lots, roadbeds, clear-cuts, lawns, or crops) have not impacted zone.	Width of riparian zone 12-18 meters; human activities have impacted zone only minimally.	Width of riparian zone 6-12 meters; human activities have impacted zone a great deal.	Width of riparian zone <6 meters; little or no riparian vegetation due to human activities.
SCORE 0 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 0 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0

Parameters to be evaluated in sampling reach

Habitat Parameter	Condition Category			
	Optimal	Suboptimal	Marginal	Poor
1. Epifaunal Substrate/ Available Cover	Greater than 50% of substrate favorable for epifaunal colonization and fish cover; mix of snags, submerged logs, undercut banks, cobble or other stable habitat and at stage to allow full colonization potential (i.e., logs/snags that are not new fall and not transient).	30-50% mix of stable habitat; well-suited for full colonization potential; adequate habitat for maintenance of populations; presence of additional substrate in the form of newfall, but not yet prepared for colonization (may rate at high end of scale).	10-30% mix of stable habitat; habitat availability less than desirable; substrate frequently disturbed or removed.	Less than 10% stable habitat; lack of habitat is obvious; substrate unstable or lacking.
SCORE 11	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
2. Pool Substrate Characterization	Mixture of substrate materials, with gravel and firm sand prevalent; root mats and submerged vegetation common.	Mixture of soft sand, mud, or clay; mud may be dominant; some root mats and submerged vegetation present.	All mud or clay or sand bottom; little or no root mat; no submerged vegetation.	Hard-pan clay or bedrock; no root mat or vegetation.
SCORE 10	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
3. Pool Variability	Even mix of large-shallow, large-deep, small-shallow, small-deep pools present.	Majority of pools large-deep, very few shallow.	Shallow pools much more prevalent than deep pools.	Majority of pools small-shallow or pools absent.
SCORE 6	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
4. Sediment Deposition	Little or no enlargement of islands or point bars and less than <20% of the bottom affected by sediment deposition.	Some new increase in bar formation, mostly from gravel, sand or fine sediment; 20-50% of the bottom affected; slight deposition in pools.	Moderate deposition of new gravel, sand or fine sediment on old and new bars; 50-80% of the bottom affected; sediment deposits at obstructions, constrictions, and bends; moderate deposition of pools prevalent.	Heavy deposits of fine material, increased bar development; more than 80% of the bottom changing frequently; pools almost absent due to substantial sediment deposition.
SCORE 8	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
5. Channel Flow Status	Water reaches base of both lower banks, and minimal amount of channel substrate is exposed.	Water fills >75% of the available channel; or <25% of channel substrate is exposed.	Water fills 25-75% of the available channel, and/or riffle substrates are mostly exposed.	Very little water in channel and mostly present as standing pools.
SCORE 10	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0

HABITAT ASSESSMENT FIELD DATA SHEET—LOW GRADIENT STREAMS (BACK)

S4

Parameters to be evaluated broader than sampling reach

Habitat Parameter	Condition Category			
	Optimal	Suboptimal	Marginal	Poor
6. Channel Alteration	Channelization or dredging absent or minimal; stream with normal pattern.	Some channelization present, usually in areas of bridge abutments; evidence of past channelization, i.e., dredging, (greater than past 20 yr) may be present, but recent channelization is not present.	Channelization may be extensive; embankments or shoring structures present on both banks, and 40 to 80% of stream reach channelized and disrupted.	Banks shored with gabion or cement; over 80% of the stream reach channelized and disrupted. Instream habitat greatly altered or removed entirely.
SCORE 15	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
7. Channel Sinuosity	The bends in the stream increase the stream length 3 to 4 times longer than if it was in a straight line. (Note - channel braiding is considered normal in coastal plains and other low-lying areas. This parameter is not easily rated in these areas.)	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	Channel straight; waterway has been channelized for a long distance.
SCORE 10	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
8. Bank Stability (score each bank)	Banks stable; evidence of erosion or bank failure absent or minimal; little potential for future problems. <5% of bank affected.	Moderately stable; infrequent, small areas of erosion mostly healed over. 5-30% of bank in reach has areas of erosion.	Moderately unstable; 30-60% of bank in reach has areas of erosion; high erosion potential during floods.	Unstable; many eroded areas; "raw" areas frequent along straight sections and bends; obvious bank sloughing; 60-100% of bank has erosional scars.
SCORE 5 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 4 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
9. Vegetative Protection (score each bank) Note: determine left or right side by facing downstream.	More than 90% of the streambank surfaces and immediate riparian zone covered by native vegetation, including trees, understory shrubs, or nonwoody macrophytes; vegetative disruption through grazing or mowing minimal or not evident; almost all plants allowed to grow naturally.	70-90% of the streambank surfaces covered by native vegetation, but one class of plants is not well-represented; disruption evident but not affecting full plant growth potential to any great extent; more than one-half of the potential plant stubble height remaining.	50-70% of the streambank surfaces covered by vegetation; disruption obvious; patches of bare soil or closely cropped vegetation common; less than one-half of the potential plant stubble height remaining.	Less than 50% of the streambank surfaces covered by vegetation; disruption of streambank vegetation is very high; vegetation has been removed to 5 centimeters or less in average stubble height.
SCORE 5 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 4 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
10. Riparian Vegetative Zone Width (score each bank riparian zone)	Width of riparian zone >18 meters; human activities (i.e., parking lots, roadbeds, clear-cuts, lawns, or crops) have not impacted zone.	Width of riparian zone 12-18 meters; human activities have impacted zone only minimally.	Width of riparian zone 6-12 meters; human activities have impacted zone a great deal.	Width of riparian zone <6 meters: little or no riparian vegetation due to human activities.
SCORE 2 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 2 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0

Parameters to be evaluated in sampling reach

Habitat Parameter	Condition Category			
	Optimal	Suboptimal	Marginal	Poor
1. Epifaunal Substrate/ Available Cover	Greater than 50% of substrate favorable for epifaunal colonization and fish cover; mix of snags, submerged logs, undercut banks, cobble or other stable habitat and at stage to allow full colonization potential (i.e., logs/snags that are not new fall and not transient).	30-50% mix of stable habitat; well-suited for full colonization potential; adequate habitat for maintenance of populations; presence of additional substrate in the form of newfall, but not yet prepared for colonization (may rate at high end of scale).	10-30% mix of stable habitat; habitat availability less than desirable; substrate frequently disturbed or removed.	Less than 10% stable habitat; lack of habitat is obvious; substrate unstable or lacking
SCORE 13	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
2. Pool Substrate Characterization	Mixture of substrate materials, with gravel and firm sand prevalent; root mats and submerged vegetation common.	Mixture of soft sand, mud, or clay; mud may be dominant; some root mats and submerged vegetation present.	All mud or clay or sand bottom; little or no root mat; no submerged vegetation.	Hard-pan clay or bedrock; no root mat or vegetation.
SCORE 11	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
3. Pool Variability	Even mix of large-shallow, large-deep, small-shallow, small-deep pools present.	Majority of pools large-deep, very few shallow.	Shallow pools much more prevalent than deep pools.	Majority of pools small-shallow or pools absent.
SCORE 5	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
4. Sediment Deposition	Little or no enlargement of islands or point bars and less than <20% of the bottom affected by sediment deposition.	Some new increase in bar formation, mostly from gravel, sand or fine sediment; 20-50% of the bottom affected; slight deposition in pools.	Moderate deposition of new gravel, sand or fine sediment on old and new bars; 50-80% of the bottom affected; sediment deposits at obstructions, constrictions, and bends; moderate deposition of pools prevalent.	Heavy deposits of fine material, increased bar development; more than 80% of the bottom changing frequently; pools almost absent due to substantial sediment deposition.
SCORE 8	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
5. Channel Flow Status	Water reaches base of both lower banks, and minimal amount of channel substrate is exposed.	Water fills >75% of the available channel; or <25% of channel substrate is exposed.	Water fills 25-75% of the available channel, and/or riffle substrates are mostly exposed.	Very little water in channel and mostly present as standing pools.
SCORE 8	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0

HABITAT ASSESSMENT FIELD DATA SHEET—LOW GRADIENT STREAMS (BACK)

S6

Parameters to be evaluated broader than sampling reach

Habitat Parameter	Condition Category: Optimal	Suboptimal	Marginal	Poor
6. Channel Alteration	Channelization or dredging absent or minimal, stream with normal pattern.	Some channelization present, usually in areas of bridge abutments; evidence of past channelization, i.e., dredging, (greater than past 20 yr) may be present, but recent channelization is not present.	Channelization may be extensive; embankments or shoring structures present on both banks, and 40 to 80% of stream reach channelized and disrupted.	Banks shored with gabion or cement; over 80% of the stream reach channelized and disrupted. Instream habitat greatly altered or removed entirely.
SCORE 11	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
7. Channel Sinuosity	The bends in the stream increase the stream length 3 to 4 times longer than if it was in a straight line. (Note - channel braiding is considered normal in coastal plains and other low-lying areas. This parameter is not easily rated in these areas.)	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	The bends in the stream increase the stream length 1 to 2 times longer than if it was in a straight line.	Channel straight; waterway has been channelized for a long distance.
SCORE 7	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
8. Bank Stability (score each bank)	Banks stable; evidence of erosion or bank failure absent or minimal, little potential for future problems. <5% of bank affected.	Moderately stable; infrequent, small areas of erosion mostly healed over 5-30% of bank in reach has areas of erosion.	Moderately unstable; 30-60% of bank in reach has areas of erosion, high erosion potential during floods.	Unstable; many eroded areas; "raw" areas frequent along straight sections and bends; obvious bank sloughing; 60-100% of bank has erosional scars.
SCORE 5 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 6 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
9. Vegetative Protection (score each bank) Note: determine left or right side by facing downstream.	More than 90% of the streambank surfaces and immediate riparian zone covered by native vegetation, including trees, understory shrubs, or nonwoody macrophytes; vegetative disruption through grazing or mowing minimal or not evident; almost all plants allowed to grow naturally.	70-90% of the streambank surfaces covered by native vegetation, but one class of plants is not well-represented; disruption evident but not affecting full plant growth potential to any great extent; more than one-half of the potential plant stubble height remaining.	50-70% of the streambank surfaces covered by vegetation; disruption obvious; patches of bare soil or closely cropped vegetation common; less than one-half of the potential plant stubble height remaining.	Less than 50% of the streambank surfaces covered by vegetation; disruption of streambank vegetation is very high; vegetation has been removed to 5 centimeters or less in average stubble height.
SCORE 5 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 6 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0
10. Riparian Vegetative Zone Width (score each bank riparian zone)	Width of riparian zone >18 meters; human activities (i.e., parking lots, roadbeds, clear-cuts, lawns, or crops) have not impacted zone.	Width of riparian zone 12-18 meters; human activities have impacted zone only minimally.	Width of riparian zone 6-12 meters; human activities have impacted zone a great deal.	Width of riparian zone <6 meters: little or no riparian vegetation due to human activities.
SCORE 2 (LB)	Left Bank 10 9	8 7 6	5 4 3	2 1 0
SCORE 3 (RB)	Right Bank 10 9	8 7 6	5 4 3	2 1 0

Total Score 90

PART 7: Fish and Wildlife

7.1 Pre-Mining Fish and Wildlife Resources. Each application shall include fish and wildlife resource information for the permit and adjacent area. Prior to initiating fish and wildlife resource information studies, the applicant shall contact the Department to determine what fish and wildlife resources information will be required. If the applicant has not contacted the Department as described above, an explanation shall be supplied in the space below. **[1780.16(a)/1784.21(a); 1780.16(a)(1)(A)/1784.21(a)(1)(A)]**

See the Pre and Post Mining Land Use Map

7.1.1 Vegetation Map. Provide a Vegetation Map meeting the requirements found in General Mapping Requirements of the Instructions. **[1779.19/1783.19; 1779.24(l)/1783.24(l); 1780.16(a)(2)(B) & (C)/1784.21(a)(2)(B)&(C)]**

See Aerial Photo Map and Pre and Post Mining Land Use Map.

7.1.2 Habitat Descriptions. Provide a description of the habitat types for each listed pre-mining land use category, excluding cropland, within the proposed permit area. Include information for areas categorized as Residential, Industrial/Commercial, Recreational, and Undeveloped that contain trees or other potential habitats of high value for fish and wildlife. Include specific information on pre-mining woody and herbaceous vegetation species. In addition, provide a general description of the habitat found in the adjacent half mile area, specifically addressing any potential habitats of high value. **[1784.15(a)(1)/1780.23(a)(1); 1779.19(a)/1783.19(a);** Operator Memorandum 2015-01**]**

Primary habitat is Cropland, Fish and Wildlife – Woody, Fish and Wildlife Habitat – Herbaceous, Residential and Industrial. Within the half mile buffer the primary land use is cropland and fish and wildlife habitat (herbaceous, woody, and water) with limited areas of residential and industrial/commercial.

7.1.2.1 For wetland resources located within the proposed permit area, discuss how these areas will be avoided or replaced, and enhanced where applicable and provide general information on the steps taken to comply with the Section 404 of the Clean Water Act. If no wetland resources exits within the proposed permit area pre-mining, indicate N/A. **[1780.18(b)(9)/1784.13(b)(9); 1816.97(f)/1817.97(f)]**

N/A.

7.1.3 Other Site Specific Habitats of High Value. Address any habitats of unusually high value for fish and wildlife located within the proposed permit and adjacent half mile area. The following information is required: **[1780.16(a)(2)(B)/1784.21(a)(2)(B); 1816.97(f)/1817.97(f)]**

7.1.3.1 Stream Habitat Characterization. For each intermittent and perennial stream discussed in Part 6, provide a description of the riparian vegetation (if this information is found in Attachment 6.2, referencing that material is acceptable) and a narrative discussing any critical habitat for threatened and endangered aquatic species. Provide a general discussion on how stream habitat will be avoided or replaced, and enhanced where practicable. Provide general information on the steps taken to comply with Section 404 of the Clean Water Act regarding streams and associated riparian areas. If no intermittent or perennial streams were identified in

Part 6 indicate N/A. **[1780.16(a)(2)(B)/1784.21(A)(2)(B); 1816.97(f)/1817.97(f); (1780.18(b)(9)/1784.13(b)(9)]**

The stream intermittent streams will be bored underneath and the riparian vegetation will not be disturbed.

7.1.3.2 Shelter, Protection, and Reproductive Areas. Discuss areas within the proposed permit and adjacent half mile area such as cliffs supporting raptors, caves, migration routes and wintering areas and measures to protect these areas and enhance where practicable. If none of these areas exist indicate N/A. **[1780.16(a)(2)(B)/1784.21(a)(2)(B); 1816.97(f)/1817.97(f)]**

7.1.3.2 Agency Consultation. Discuss any additional habitats of high value identified through other agency consultations as requiring protection by applicable state and federal laws, this may include a larger adjacent area as defined by consultation. If no other habitats of high value were identified through consultation indicate N/A. **[1780.16(a)(2)(C)/1784.21(a)(2)(C); 1780.16(a)(1)(B)(iii)/1784.21(a)(1)(B)(iii)]**

7.2 Threatened and Endangered Species. Information required in this section will ensure that the proposed operations adhere to the Endangered Species Act of 1973, as amended, the Migratory Bird Treaty Act, as amended, the Bald and Golden Eagle Protection Act, as amended and other applicable state and federal laws. **[1773.12; 1780.16/1784.21; 1816.97/1817.97]**

7.2.1 T&E Species List. Provide a complete threatened and endangered species list for both state and federally listed species that are known to occur within the county(ies) of the proposed permit area and half a mile adjacent to the proposed boundary. Applicants should be aware that the adjacent area may be expanded based on the nature of the listed species in the area and/or as defined by consultation. The applicant is encouraged to utilize IPaC - Information for Planning and Conservation system for federal species lists. This information may be provided in Attachment 7.2.1. **[1780.16(a)(1)(B)/1784.21(a)(1)(B); 1780.16(a)(2)(A)/1784.21(a)(2)(A); 1816.97(b)/1817.97(b)]**

Indiana Bat (Myotis Sodalist) and Chuck-Wills-Widow

7.2.1.1 Likely to Occur Determination. For each threatened and endangered species listed in part 7.2.1 provide a determination based on species habitat requirements regarding the likelihood that the species may occur within the proposed permit and, if applicable, the adjacent half mile area. In addition, provide the rationale justifying the determination. If an attachment is provided, it should be titled Attachment 7.2.1.1. If multiple attachments are necessary they should be titled Attachment 7.2.1.1 - 1 of 2 etc. **[1780.16(a)(1)(B)/1784.21(a)(1)(B), 1780.16(a)(2)(A)/1784.21(a)(2)(A); 1816.97(b)/1817.97(b)]**

Williamson Energy, LLC has performed Indiana and Northern Long eared bat survey in this area. No protected bats were caught within this IBR area but the southwest portion of this IBR falls within the 2.5 mile buffer zone of an Indiana Bat roost tree capture during the 2018 bat survey by Alliance Consulting, Inc. Williamson Energy is proposing

to only cut any trees within the buffer zone during the approved Indiana Bat cutting season of October 15 through March 31.

Chuck-Wills-Widow survey was complete by HMG, Inc. (Attachment 7.2.1 2-2). The Chuck-Wills-Widow typically nest in habitat of bare dirt, leaf, or pine needle cover in dense thickets near openings is not present on this proposed IBR area. Given the lack of habitat and the plans not to disturb the surface around the stream corridors, impact to the Chuck-Wills-Widow is unlikely. Chuck-Wills-Widow, typical nesting habitat is namely bare dirt, leaf, or pine needle cover in dense thickets near openings is not present on this proposed IBR area. Given the lack of habitat and the plans not to disturb the surface around the stream corridors, impact to the Chuck-Wills-Widow is unlikely.

7.2.1.2 Format and Contents. The information presented shall be current, clear and concise, filed in the format required by the Department, and contain explicit citations. **Where required by the Department**, relevant portions of the referenced materials shall be presented by photocopying or abstracting. If references to previously approved permits are made, the relevant portions of the permits must be supplied in accordance with Operator Memorandum No. 90-08 or an explanation shall be provided below why this information is not provided. This information may be supplied as Attachment 7.2.1.3 if necessary. **[1777.11(a) and (b)]**

7.2.1.3 Agency Consultation. Discuss any additional species identified through other agency consultations as requiring protection by applicable state and federal laws. If no other species information is required indicate N/A. **[1780.16(a)(2)(C)/1784.21(a)(2)(C); 1780.16(a)(1)(b)(iii)/1784.21(a)(1)(b)(iii)]**

7.2.2 T&E Species Protection and Enhancement Plans.

7.2.2.1 Do any trees exist within the proposed permit area? **[1780.16(b)/1784.21(b)]**

☒ YES ☐ NO

If YES, the applicant shall:

- Provide a Protection and Enhancement Plan and an Incidental Take Authorization request as Attachment 7.2.2 for the Indiana bat meeting the specifications of the "Range-wide Indiana Bat Protection and Enhancement Plan Guidelines" (revised 2013) developed by the U.S. Fish and Wildlife Service and the Office of Surface Mining, or justify why a Protection and Enhancement Plan and Incidental Take authorization request are not required under those guidelines, and;

- Discuss whether or not the project is consistent with the northern long-eared bat Final 4(d) Rule for Federal Actions (January 2016), and if not then provide a Protection and Enhancement Plan and Incidental Take Authorization request consistent with the 2013 Indiana bat guidelines referenced above. This information may be provided in Attachment 7.2.2.

If NO, provide a statement regarding the absence of trees below. If the proposed permit area contains trees but these trees will remain unaffected throughout the life of the permit, this information may be relayed in the space below.

See Attachment 7.2.2 and 7.2.2 A for the Protection and Enhancement Plan, Williamson Energy has performed Indiana and Northern Long eared bat survey in this area. No protected bats were caught within this IBR area but the southern portion of this IBR falls within the 2.5 mile buffer zone of a male Indiana Bat roost tree capture during the 2018 bat survey. Williamson Energy is proposing to only cut any trees within the buffer zone during the approved Indiana Bat cutting season of October 15 through March 31. Tree removal will be limited to the extent practicable during construction of this IBR. Please note if not tree removal is completed on this project because of the boring under the wood patch around the stream, not tree girdling will be completed, but it any trees great than 3" DBH are remove then tree girdling will be completed.

Northern Long-Eared Bat 4(d) Rule Streamlined Consultation Protocol
Does the project occur wholly outside of the WNS Zone? No
Have you contacted the appropriate agency to determine if your project is near known hibernacula or maternity roost trees? Yes
Could the project alter the entrance or interior environment of a known hibernaculum? No
Does the project remove any trees within 0.25 miles of a known hibernaculum at any time of year? No
Would the project cut or destroy known occupied maternity roost trees, or any other trees within a 150-foot radius from the maternity roost tree from June 1 through July 31? No
Base on about no further action is needed to be in compliance with the Northern Long-Eared Bat 4(d) rule.

7.2.2.2 Provide Protection and Enhancement Plans for any additional state or federally listed species that are likely to occur within the proposed permit and adjacent half mile area in Attachment 7.2.2.2. For any additional federally listed threatened or endangered species that are likely to occur in the permit area, provide an Incidental Take Authorization request with the Protection and Enhancement Plan. Indicate N/A if this information is not applicable.

See Attachment 7.2.2 for the Protection and Enhancement Plan

7.2.2.3 If an applicant is in possession of any current Incidental Take Authorizations for state listed threatened or endangered species obtained through the Illinois Department of Natural Resources Office of Resource Conservation, list those species in the space below, otherwise indicate N/A.

See Attachment 7.2.2 for the Protection and Enhancement Plan

7.2.3 Eagles. The applicant shall ensure that mining activity will be conducted in a manner that will not result in the taking of a Bald or Golden Eagle, or any other raptor protected under the Bald Eagle Protection Act, and their nests or eggs. "Take" includes the disturbance of protected eagles to the degree that it substantially interferes with breeding, feeding, or sheltering behavior or results in injury. **[1816.97(c) and (d)/1817.97(c) and (d)]**

7.2.3.1 Provide current and accurate information on distances to known Bald Eagle nests within the proposed permit boundary and within a one mile radius. If none exist, then this should be specifically stated. If nests exist within a one mile radius, a Protection and Enhancement Plan must be supplied. Information should also include any species protected under the Bald Eagle Protection Act as amended and may be provided in Attachment 7.2.3.

The following resource is suggested:

National Bald Eagle Management Guidelines USFWS

N/A

7.2.4 Reporting of Threatened and Endangered and Other Identified Protected Species. Describe the steps and timeframe for reporting to the Department any state or federally listed species or other protected species **as identified through agency consultation**, should the operator become aware of the species existence within the proposed permit area. This may include, but not be limited to bald eagle nest reporting in the permit area or applicable adjacent area. **[1780.16(a)(2)(C)/1784.21(a)(2)(C); 1816.97(b)/1817.97(b)]**

See Attachment 7.2.2 and 7.2.2 A for the Protection and Enhancement Plan

7.3 General Fish and Wildlife Protection and Enhancement Measures. The applicant shall, to the extent possible and with the best technology currently available, minimize disturbances and adverse impacts on fish and wildlife and related environmental values and achieve enhancement of these resources where practicable. **[1780.16(b)/1784.21(b)]; [1816.97(a)/1817.97(a)]**

7.3.1 Protection Measures. Provide information on measures using the best technology currently available how the applicant will protect fish and wildlife and related environmental values. The following information is required: **[1780.16(b)(3)/1784.21(b)(3); 1816.97(e)/1817.97(e)]**

7.3.1.1 Electric Powerlines. If powerlines are proposed to be relocated or constructed at any point during operations, then discuss the measures to ensure electric powerlines are designed and constructed to minimize electrocution hazards and other hazards as identified by agency consultation (potentially including collisions with powerlines) to ensure that the Endangered Species Act, the Bald Eagle Protection Act, and the Migratory Bird Treaty Act have been considered and addressed where applicable. This information may be provided in Attachment 7.3.1.1 if necessary. **[1773.12; 1780.16(b)/1784.21(b); 1816.97(e)(1)/1817.97(e)(1)]**

The following are suggested resources:
"Suggested Practices for Avian Protection from Powerlines: The State of the Art in 2006"

"Reducing Avian Collisions with Power Lines: The State of the Art in 2012"

Any powerline constructed will be constructed per the suggested practice for avian protection for powerlines.

7.3.1.2 Haul and Access Roads. Describe how access and haul roads will be located and operated to avoid or minimize impacts on species protected under the Endangered Species Act, Migratory Bird Treaty Act, and the Bald Eagle Protection Act, or discuss why these protection measures are not applicable. **[1780.16(b)(3)(A)/1784.21(b)(3)(A); 1816.97(e)(2)/1817.97(e)(2)]**

Access road will be minimized length as much as possible.

7.3.1.3 Fences and Overland Conveyers. Describe how fences and overland conveyers and other potential barriers will be designed and constructed to allow passage of large mammals, or discuss why these protection measures are not applicable. **[1780.16(b)(3)(A)/1784.21(b)(3)(A); 1816.97(e)(3)/1817.97(e)(3)]**

N/A

7.3.1.4 Exclusion from Ponds. Provide information on whether or not ponds on site will contain hazardous concentrations of toxic-forming materials and if so, then describe how control measures, management techniques, and monitoring methods will be used to ensure how wildlife protected under the Endangered Species Act, Migratory Bird Treaty Act, and the Bald Eagle Protection Act are excluded from these areas. **[1780.16(b)(3)(A)/1784.21(b)(3)(A); 1816.97(e)(4)/1817.97(e)(4)]**

N/A, no ponds are proposed in this application.

7.3.2 Enhancement Measures. Provide a detailed description of enhancement measures that will be used during the reclamation and post-mining phases of operations to develop aquatic and terrestrial habitats. Measures may include but are not limited to: restoration of streams and wetlands, retention of ponds, establishment of wildlife food and cover, addition of perches or nest boxes, habitat diversification of croplands, and any other management strategies designed to enhance wildlife habitat.
[1780.16(b)(3)(b)/1784.21(b)(3)(b)]

Disturbed areas will be revegetated after the initial disturbance with a cover crop to minimize erosion. The entire disturbed area will be graded for positive drainage.
During the reclamation work, topsoil removed and stored during initial site construction, will be redistributed and graded over the exposed subsoil. The topsoil will be limed, fertilized, prepared and seeded in accordance with the following schedule:

- If the site is reclaimed in the spring season but before normal crop planting, the disturbed area will be straw mulched at 1 ½ tons/acre and seeded with a cover crop of spring oats to protect the soil until the primary planting season is under way. The site will then be planted to row crops as determined by the property owner or tenant farmer.

- If the site is reclaimed in the late fall season, the site will be seeded to a temporary cover crop of winter wheat (+/-) 1.5 Bu./Ac., and the site fertilized, and then mulched at two tons/acre, to protect the soil over the winter season.

- Thereafter, planting of agricultural crops will occur during the first available crop planting period after proper seedbed preparation has been achieved.

A SUMMER SURVEY FOR THE FEDERALLY ENDANGERED INDIANA BAT (*MYOTIS SODALIS*) AND NORTHERN LONG-EARED BAT (*MYOTIS SEPTENTRIONALIS*)
WILLIAMSON COUNTY, ILLINOIS
WILLIAMSON ENERGY, LLC

1.0 INTRODUCTION

Alliance Consulting, Inc. (Alliance) was contracted by Williamson Energy, LLC (Williamson) to conduct a presence/absence survey of the federally endangered, Indiana bat (*Myotis sodalis*) and federally threatened northern long-eared bat (*Myotis septentrionalis*) (NLEB) at the proposed Pond Creek No. 1 Mine North Panels project area located in Williamson County, Illinois. The project is the Pond Creek No. 1 Mine North Panels (Permit No. 375). The mist net survey site locations are shown on Drawing No. B18-128-B2 contained within this submittal. This report is hereby submitted on behalf of Williamson to fulfill the requirements set forth by the USFWS and IDNR.

The bat survey was conducted by Alliance biologists from July 17-23, 2018, while tracking persisted through July 23, 2018. The bat survey services were completed in accordance with our proposal for professional ecological services and Williamson's subsequent authorization to proceed.

The purpose of the study was to confirm presence/ absence of the federally endangered Indiana bat (*Myotis sodalis*) and the federally threatened NLEB (*Myotis septentrionalis*). The survey was based on Alliance's professional judgment and interpretation of the technical criteria outlined in the USFWS (Region 3) agency document entitled "2018 Range-Wide Indiana Bat Summer Survey Guidelines", dated April 2018.

2.0 SITE LOCATION

The project area is located approximately six miles northeast of Johnston City in Williamson County, Illinois and has its approximate center at Latitude 37.856 and Longitude -88.784. Drawing No. B18-128-B1, found in the Figures Section and entitled "Project Location Map", shows the general area where the study took place.

2.1 Watershed Information

The proposed shadow area and associated facilities lie within the Pond Creek watershed in Illinois. Pond Creek flows into the Big Muddy River. The Big Muddy River, is a perennial stream which flows to the Mississippi River, which are navigable waters of the United States.

3.0 INDIANA BAT INFORMATION

3.1 Species Status and Conservation

The Indiana bat (*Myotis sodalis*) was one of the first bat species in the United States to be

recognized as endangered by the U.S. Fish and Wildlife Service Endangered Species Act (ESA). It was listed as a federally endangered species on March 11, 1967, under the ESA. This listing was largely due to declines recorded at winter hibernation sites in caves, which until very recently were the only known roosts for this species. It is now known that in summer, Indiana bats roost and rear their young under loose bark or in tree hollows. In order to outline habitat requirements, critical habitat, potential causes for the bats' decline, and recovery objectives, the USFWS published a recovery plan in 1983. An agency Draft of a Revised Recovery Plan was distributed by the USFWS in 1999. This document was re-circulated in 2002 for further comments and a first revision was available in 2007. The objectives of the Indiana Bat Recovery Plan include: (1) protect hibernacula, (2) maintain, protect, and restore summer maternity habitat, (3) monitor population trends through winter censusing, (4) educate the public, and (5) continue research. Most recently the USFWS released the "2018 Range-Wide Indiana Bat Summer Survey Guidelines" that outline the specific efforts that should be undertaken during a survey.

The Indiana bat was listed as endangered by the federal government because of declines in their numbers that were documented at seven major hibernacula in the Midwest. At the time of the federal listing, about 85% of the entire population hibernated at only seven sites, and nearly half of the entire population hibernated in only two caves. Populations across the species range (as recorded from counts in hibernacula) have declined since the late 1950s. Human disturbance, collapse, and flooding of hibernacula are considered to be major factors in the bats' population decline. Suspected contributing factors include loss of suitable summer habitat and contamination by pesticides (USFWS, 1999). Since then, steps have been taken to protect most of the major, as well as minor hibernation sites.

3.2 Distribution

The Indiana bat is a migratory species found throughout much of the eastern half of the United States. They are found from Oklahoma, Iowa, Wisconsin east to Vermont, and south to northwestern Florida (Barbour and Davis, 1969). As this species is migratory, this range includes both summer and winter habitat. During winter, the Indiana bat primarily hibernates in caves and abandoned mines. Within these hibernacula, Indiana bats congregate in tightly packed clusters and are easily counted; therefore, winter census data is the most reliable method for documenting population trends range-wide. Consequently, winter distribution of the Indiana bat is well documented. During the summer maternity season, the bats are much more scattered and difficult to locate, so there is much less known about summer distribution. Data on summer distribution may reflect lack of search effort in some areas (USFWS, 1999). Also, even less is known about the migratory habits of the Indiana bat.

3.2.1 Winter Distribution and Habitat

Indiana bats hibernate from October to April, depending on climactic conditions. Specific roost sites in caves or mines that attain temperatures appropriate for hibernation serve as winter habitat for Indiana bats. The preferred hibernacula have temperatures averaging 37 degrees to 43 degrees Fahrenheit in midwinter, and a relative humidity averaging 87 percent. The 2017 winter census estimate of the population was 559,781 individuals (USFWS, 2017). The current

population is less than half the estimated population of 1960, even though there were fewer known hibernacula at that time (USFWS, 2002). However, the populations for the state of Illinois have shown a nearly 16.5% increase in populations since 2015 with the 2017 estimate including approximately 81,444 individuals.

3.2.2 Summer Distribution and Habitat

Reproductive female Indiana bats typically form maternity colonies in trees during the summer. Most records of reproductively active females come from the Midwest: southern Iowa, northern Missouri, northern Illinois, northern Indiana, southern Michigan, and western Ohio (Gardner and Cook, 2002). This area is considered to be the core summer range for the species.

Typically, Indiana bats use the space under exfoliating bark of trees in riparian, bottomland, and upland forest to day roost in the summer. Maternity colonies of females may congregate under this loose tree bark. Because these bats are roosting mainly under exfoliating tree bark, their summer roosts are short-lived. Maternity colonies appear to have at least one "primary roost" that is used by the majority of the colony. Portions of the colony may use over a dozen different "alternate roosts" intermittently.

3.3 Reproduction

Most bats of the United States, including the Indiana bat, mate in the fall. Between early August and mid-September, Indiana bats arrive near their hibernation caves and engage in swarming and mating activity. Swarming at cave entrances continues into mid- or late October. Limited observations indicate that birth and development occur in very small, widely scattered colonies consisting of 25 or so females and their young. Females give birth to a single young in late May to early July. Young Indiana bats are capable of flight within a month of birth, and may mate their first autumn (USFWS, 2002).

3.4 Food Habits

Indiana bats forage in and around the tree canopy of flood plains, riparian areas, and upland forests (USFWS, 1999). They eat a variety of soft-bodied, flying insects found along rivers and lakes in these habitats. Consistently, food habit studies conducted throughout the species range reveal that small moths are important prey items. However, components of diet vary depending on habitat, region, season, and sex or age of the bat. Some researchers have labeled the Indiana bat as a "selective opportunist" feeder due to the abundant occurrence in the diet of one particular insect for brief, unpredictable periods, corresponding with the hatch or mating swarms (Brack and LaVal, 1985).

3.5 Reasons for Current Status

Causes for the overall decline of the Indiana bat are not fully understood or have not been determined. The decline of the species at its current rate is unknown, although it is rapid in certain areas of it range, due the onset of "white-nose syndrome". Originally, cave disturbance

by humans was thought to be the primary reason for the decline, and thought to transmit the fungus that causes "white nose" called *Pseudogymnoascus destructans*. Therefore, habitat protection for these bats has primarily focused on the caves where they hibernate, such as gating of the opening, fencing of the surrounding land, and generally protecting the hibernacula. However, as evidenced by the still-declining population numbers, these measures have not produced the desired result of recovery of the species (USFWS, 1999). Other potential causes for the decline include loss of summer habitat, improper cave gate construction, loss of forest cover, stream channelization, severe weather, and range-wide pesticide poisoning (USFWS, 2002). Presently, white-nose syndrome has devastated bat populations across the eastern United States, not excluding the already endangered Indiana bat (BCI, 2010).

4.0 NORTHERN LONG-EARED BAT INFORMATION

4.1 Species Status and Conservation

The NLEB bat is currently listed as federally threatened under the ESA due to significant population declines throughout the bat's range. This species was proposed for listing in October of 2013, and was added as a threatened species on April 2, 2015. The 4(d) rule was later developed and approved on January 14, 2016. The 4(d) rule prevents the removal of trees within ¼ mile of known hibernaculum, tree removal, or destruction of a known occupied maternity roost tree or any other trees within a 150 foot radius of a maternity roost between June 1 and July 31.

4.2 Distribution

The NLEB has an extensive range, from Canada down to North Carolina, and from the Atlantic coasts to as far west as the Yukon territory in Canada and Montana and Wyoming in the United States.

4.3 Winter Habitat

NLEBs roost over winter in hibernacula including caves and mines. These hibernacula vary from large, with large passages and entrances, to much smaller hibernacula. The hibernacula tend to have relatively constant cool temperatures ranging from 32° - 48° F. NLEBs tend to prefer higher humidity hibernacula than most other species of bats (Federal Register, 2015).

4.4 Summer Habitat

During the summer, NLEBs roost singly or in colonies under loose bark, tree crevices, or man-made structures. They will utilize a wide variety of roosts including dead or live trees, buildings, or even caves. They will utilize areas with abundant canopy cover, as well as areas with less canopy cover, which could be due to their ability to exploit roosts in cluttered environments (Federal Register, 2015).

4.5 Reproduction

Mating occurs from late July to early October. Copulation occurs in early spring, but may also

occur during the winter. They typically produce a single pup in early summer. Females form maternity colonies comprised of adult females and juveniles of up to 30 bats. The colony of females tends to give birth around the same time in late May or early June (Federal Register, 2015).

4.6 Reasons for Current Status

Limited scientific literature exists in relation to the NLEB, including its habitat, reproduction, and foraging activities. The reason for the current listed state of the NLEB is due to white nose syndrome decimating its population in many cases up to 90-100%.

5.0 METHODS

5.1 Level of Survey Effort

The level of survey effort for this project was based upon survey guidelines developed by the Indiana Bat Recovery Team (USFWS, 2018; Appendix A).

5.2 Site Selection

Using a topographic map, aerial photographs, and field reconnaissance of the proposed project area, field personnel identified areas for possible mist net site placement. Alliance corresponded with USFWS for concurrence on these projected mist net sites, prior to implementing the survey (refer to Appendix B). Actual mist net sites for the project were selected during field reconnaissance (Drawing No. B18-128-B2). Field reconnaissance was completed in order to establish mist net sites that would maximize the success of the survey. Additionally, each net site was assessed individually. Photographs were taken (Appendix E) and sketches were made of each net site to show net placement and surrounding habitat features, and habitat characteristics near each net site were recorded (Appendix C).

5.3 Mist Net Survey

Alliance conducted the mist netting survey following the guidelines (Appendix A) outlined in the 2018 Range Wide Indiana Bat Summer Survey Guidelines. Mist nets were composed of 2-ply, 50-denier nylon construction with a mesh size of 38 mm. Mist net sizes were 2.6 to 7.8 m high (approximately 9 to 27 feet) in height, and were 2.6, 6, 9, 12 or 18 m (approximately 9, 20, 30, 36 or 54 feet) in width.

Nine (9) sites were proposed; however, only four (4) sites were operated due to an Indiana bat being captured at Site 01. The three (3) sites were surveyed for endangered bats by Alliance biologists on July 17-23, 2018. Four (4) or five (5) net sets were each operated for two calendar nights at each site. This resulted in a total of 22 net nights of the proposed 81 for the entire survey. A "net night" is defined as the operation of one net set for one night. To the extent possible, nets were placed in a location where they would be bordered on top and sides by vegetation to create a funneling effect to facilitate the capture of bats. Mist nets were deployed at dusk (approximately 20:00 hours) and monitored every 10 minutes for at least five hours.

It is not recommended that Indiana bat surveys be conducted when temperatures drop below 50 degrees Fahrenheit or during rainy, foggy, or windy conditions (USFWS, 2018). To ensure that surveys were not conducted during inclement weather, temperature, wind speed, percent cloud cover, rainfall and moon phase were monitored and recorded during the survey (Appendix C).

Captured bats were carefully removed from the nets and then identified. The age, sex, reproductive condition, weight, and forearm length were then determined and recorded for all bats. Any notable bands, parasites or deformities were also recorded. After all information had been collected, the bats were released at the site of capture.

5.4 Telemetry

Alliance biologists used Lotek PicoPip Ag337 (Bat) transmitters in the 172 MHz range. Each transmitter weighed 0.3 grams or less and had a transmitter life expectancy of 8 days. When an endangered bat was captured the transmitter was activated by removing the magnetic switch and tested for signal quality at 500 meters. Field Marshall 1000 telemetry receivers paired with folding 3 element Yagi directional antennas from Marshall Telemetry were used to locate and track the activated transmitters. The active and tested transmitter was then affixed to the back of the bat using Perma-Type Surgical Cement. Once the adhesive was dry the bat was released in a relative open area so the biologist could ensure that the bat flew unimpeded.

Once a transmitted bat was released the biologist monitored its activity to obtain a direction of flight from the release point and to ensure that the bat was active. Following release of a transmitted bat and upon verification that the bat was flying unimpeded, a telemetry crew of 2 to 4 biologists would search for the transmitter frequency. Once the transmitter frequency was located its general position was triangulated using a compass and handheld gps unit.

The biologist then proceeded to hone in on the transmitter frequency until they found the exact tree that the radio signal was coming from. The determination of the roost tree was confirmed by circling the tree and approaching the tree from multiple angles with the telemetry receivers. If the transmitter frequency was not located, the telemetry crew would begin searching for the bats and continue for a minimum of four hours.

5.5 Roost Tree Emergence Survey

Once a roost tree was identified and its location was recorded with a sub-meter gps unit the biologists would record the tree DBH, height, percent of exfoliating bark, approximate location on the tree of the transmitter, species of tree, and solar exposure. The biologists would then leave the area to keep disturbance to a minimum around the roost tree. The biologists would then return to the roost tree approximately half an hour before sunset. They would approach quietly to the general area of the roost tree and check that the radio signal was still present. The biologists would then find a place where they could see the most actual roosting locations on the tree with the sky as a backdrop. If multiple roosting locations or debris were encountered then the biologists would split up to cover multiple angles of observation.

Each biologist watched the roost tree to document the total number of bats that emerged, as well as when the first bat emerged, when the transmitted bat emerged, and when the final bat emerged. The biologists stayed in position until they could no longer see the roost tree due to darkness.

Each transmitted bat was tracked for a minimum of seven days. Each identified roost tree was surveyed for a minimum of two evenings.

6.0 RESULTS

6.1 Summer Habitat Survey

From July 17-23, 2018, Alliance biologists evaluated the project area for potential Indiana bat summer habitat. The forested areas were dominated by an overstory of box elder (*Acer negundo*), American sycamore (*Platanus occidentalis*), and silver maple (*Acer saccharinum*). The area is covered with a mixed mesophytic forest of primarily second or third growth timber and several large snags including potential and known roost trees.

6.2 Mist Net Survey

Mist nets were set primarily along stream channels through forested areas, as well as forest/field interfaces and ponds. Old roads and stream corridors provide foraging areas or travel corridors for bats as they move between roosts and feeding areas. Streams and ponds attract insects and provide drinking areas as well. The forest/field interfaces offer some protection for the bats while flying from field to field, as well as providing foraging areas.

6.3 Pond Creek No. 1 Mine North Panels Results

A total of 31 bats of three species were captured during the 22 net nights of effort for the Pond Creek No. 1 Mine North Panels. Two federally listed endangered Indiana bats were captured during survey efforts. The eastern red bat (*Lasiurus borealis*) was the species most commonly encountered, making up 80.6 percent of the total capture (Table No. 1). Other species captured included the tri-colored bat (*Perimyotis subflavus*) and the Indiana bat (*Myotis sodalis*). Refer to Table No. 1. Bat survey forms were completed for each night of mist netting and can be found in Appendix E. Representative photographs of bat species caught in the project area and representative photographs at the bat roosts are located in Appendix D.

Table No. 1 – Pond Creek No. 1 Mine North Panels

Site	Eastern Red Bat	Tri-colored Bat	Indiana Bat	Total
1	5	4	1	10
2	5	0	1	6
3*	0	0	0	0

% Total	***80.6***	***12.9***	***6.5***	

*Site not operated due to it being within a 2.5 mile Indiana bat buffer.

6.5 Telemetry and Tracking

The mist net surveys for the Pond Creek No. 1 Mine North Panels project that Alliance conducted included the capture of two Indiana bats (Table No. 2). One of the captured bats was an adult lactating female and another was an adult non-reproductive male. A radio transmitter was affixed on the captured Indiana bats. Both of the captured bats were banded (Table No. 2). The frequency of the radio transmitter utilized is included in Table No. 2.

Table No. 2 Tracking Summary

Species	Age/Sex/Condition	Transmitter Frequency	Capture Site	Band Number
Myotis sodalis	Adult/Female/ Lactating	172.413	01	A0024
Myotis sodalis	Adult/Male/Non-Reproductive	172.636	02	A0026

Bat 172.413 was captured and tracked from July 15 through July 23, 2018. The first night it was tracked, Alliance biologist tracked all night until they could no longer locate the bat. On July 16th, the bat could not be located during the day, but was located at night and tracked to its roost on July 17th (Roost 01). It was located in the same roost on July 18th (Roost 01). It was located in a new roost on July 19th (Roost 02). On July 20th, the bat was located in the same roost as the previous night (Roost 02). On July 21st, Bat 172.413 was located in a third roost (Roost 03). On July 23rd, the bat could not be located.

Bat 172.636 was captured and tracked on July 18, 2018. It was tracked from July 18th through July 24th. On July 18th, the bat was tracked through the night, and its roost was identified on July 19th (Roost 01). On July 20th, it was located in a new roost (Roost 02). On July 21st, the bat was located back in its first roost (Roost 01). Bat 172.636 remained in the same tree until July 24th, when tracking concluded.

6.6 Roost Emergence

The tracking efforts for Bat 172.413 were carried out from July 15, 2018 through July 23, 2018. Bat 172.413 used three different roosts over that time. Roost 01 was watched on July 17th and 18th. Roost 02 was watched on July 19th and 20th, and Roost 03 was watched on July 21st and 23rd. The results of the emergence counts for Bat 172.413 have been summarized in Table No. 3 below. Roost and emergence data sheets can be found in Appendix D. Photographs of the roosts can be found in Appendix D as well. Locations of the roosts can be found in the Figures section (Drawing No. B18-128-B3).

The tracking efforts for Bat 172.636 were carried out from July 18, 2018 through July 24, 2018. Bat 172.636 used two different roosts during that time. Roost 01 was watched on July 19th and 21st, and Roost 02 was watched on July 20th and July 21st. The results of the emergence counts for Bat 172.636 have been summarized in Table No. 4 below. Roost and emergence data sheets can be found in Appendix D. Photographs of the roosts can be found in Appendix D as well. Locations of the roosts can be found in the Figures section (Drawing No. B18-128-B3).

7.0 DISCUSSION

7.1 Bats Captured

Weather conditions at the project area were within the limits to conduct an Indiana bat survey. The eastern red bat was the most common species captured during survey efforts. Other bats captured included the tri-colored bat and the Indiana bat.

The eastern red bat (*Lasiurus borealis*) was the most abundant species of bat captured during the survey when evaluated cumulatively (80.6%). Its distribution includes southern Canada, the eastern United States (except the Florida peninsula), and northeastern Mexico (Harvey et al.,

1999). In colder parts of their range, they are known to migrate south in winter or hibernate in hollow trees or leaf litter. The eastern red bat is common throughout most of its range.

Tri-colored bats (*Perimyotis subflavus*) were also captured in the project area. These are one of the most common bats within their range, which includes eastern Canada, most of the eastern United States, and southward through eastern Mexico to Central America (Harvey et al., 1999).

Myotis sodalis, the Indiana bat, was also captured within the project area. The Indiana bat was one of the first bat species in the United States to be recognized as endangered by the U.S. Fish and Wildlife Service Endangered Species Act (ESA). This bat spends the winter at hibernation sites in caves, which, until very recently, were the only known roosts for this species. It is now known that in summer, Indiana bats roost and rear their young under loose bark or in tree hollows. Indiana bats forage in and around the tree canopy of flood plains, riparian areas, and upland forests (USFWS, 1999). They eat a variety of soft-bodied, flying insects found along rivers and lakes in these habitats. Consistently, food habit studies conducted throughout the species range reveal that small moths are important prey items. However, components of diet vary depending on habitat, region, season, and sex or age of the bat.

It should be noted that no NLEBs (*Myotis septentrionalis*) were captured during this project. The NLEB has been listed as threatened.

No open mine portals or other potential hibernacula were observed in the proposed project area by Alliance or reported by Williamson personnel.

In preparing this document, our professional services have been performed with the care and skill ordinarily exercised by reputable members of the profession practicing under similar conditions at the same time and the same or similar locality. No warranty, expressed or implied, is made or intended by rendition of these consulting services or by furnishing oral or written reports of the findings made. We reserve the right to revise or amend our opinion in this report in the event new information, documentation or evidence becomes available.

Respectfully submitted,

APPENDIX A

MIST NETTING GUIDELINES RATIONALE

(AS CONTAINED WITHIN APPENDIX B OF 2018 INDIANA BAT SUMMER SURVEY GUIDANCE)

APPENDIX B: PHASE 2 or 3 MIST-NETTING

Mist-netting can be used as a presence/probable absence method (Phase 2 surveys) or it can be conducted for the purpose of attempting to capture Indiana bats after detection during acoustic presence/probable absence surveys (Phase 3 surveys). The same recommendations (e.g., season, personnel, equipment, net placement, checking nets) apply for either use of mist-netting surveys.

SUMMER MIST-NETTING SEASON: May 15[29] – August 15[30]

Capture of reproductive adult females (i.e., pregnant, lactating, or post-lactating) and/or young of the year during May 15 – August 15 confirms the presence of a maternity colony in the area. Since adult males and non-reproductive females have commonly been found summering with maternity colonies, radio-tracking results will be relied upon to help determine the presence or absence of a maternity colony or large concentrations of bats in the area when only males and/or non-reproductive females are captured.

PERSONNEL

A qualified biologist(s)[31] must (1) select/approve mist-net set-ups in areas that are most suitable for capturing Indiana bats, (2) be physically present at each mist-net site throughout the survey period, and (3) confirm all bat species identifications. This biologist may oversee other biological technicians and manage mist-net set-ups in close proximity to one another as long as the net-check timing (i.e., every 10 minutes) can be maintained while **walking** between nets.

COORDINATION WITH USFWS FO(s)

If not already required by federal permit, we recommend that applicants submit a draft study plan for all survey phases to the USFWS FO(s) for review and approval. Study plans should include a map/aerial photo identifying the proposed project area boundaries, suitable bat habitats and acreages within the project area, and the proposed number and tentative locations of net sites.

EQUIPMENT

Use the finest, lowest visibility mesh mist-nets commercially available, as practicable. Currently, the finest net on the market is 75 denier, 2 ply, denoted 75/2 (Arndt and Schaetz 2009); however, the 50 denier nets are still acceptable for use at this time. The finest mesh size available is approximately 1½ inches (38 millimeters).

---

[29] Due to concerns with transmission of white-nose syndrome, some USFWS FO(s) and state natural resource agencies have delayed the start of the Indiana bat summer field survey season/mist-netting until June 1. Surveyors/applicants should always coordinate with local USFWS FO(s) and state natural resource agencies before beginning surveys.

[30] With prior USFWS FO approval, a survey may be completed after August 15 if it was initiated in time to be completed by August 15 and extenuating weather circumstances resulted in delaying completion. Delays as a result of not meeting the acceptable weather requirements are the ONLY valid justification for surveying after August 15.

[31] A qualified biologist is an individual who holds a USFWS Recovery Permit (Federal Fish and Wildlife Permit) for Indiana bats in the state/region in which they are surveying and/or has been authorized by the appropriate state agency to net and handle Indiana bats. Several USFWS offices maintain lists of qualified bat surveyors, and if working in one of those states with authorizations in lieu of a Recovery Permits, the individual will either need to be on that list or submit qualifications to receive USFWS approval prior to conducting any field work.

APPENDIX B: PHASE 2 or 3 MIST-NETTING

No specific hardware is required. There are many suitable systems of ropes and/or poles to hold nets. The system of Gardner et al. (1989) has been widely used. See NET PLACEMENT for minimum net heights, habitats, and other netting requirements that affect the choice of hardware.

To minimize potential for disease transmission, any equipment that comes in contact with bats should be kept clean and disinfected, following approved protocols; this is particularly a concern relative to white-nose syndrome (WNS). Disinfection of equipment to avoid disease transmission (e.g., WNS) is required; protocols are posted at http://www.whitenosesyndrome.org/. Federal and state permits may also have specific equipment restrictions and disinfection requirements.

MINIMUM PRESENCE/ABSENCE MIST-NETTING LEVEL OF EFFORT (PHASE 2)

The level of netting survey effort required for a non-linear project will be dependent upon the overall acreage of suitable habitat that may be impacted by the action (directly or indirectly). To determine the survey effort, quantify the amount of suitable summer habitat within the project area. **NOTE**: for projects where other impacts than tree removal are likely (e.g., collision), ensure that presence/probable absence surveys are designed to cover all suitable habitat within the entire project area (where exposure to any kind of impacts may be anticipated) and NOT just the locations where tree removal is planned. Additional guidance for linear project is in Appendix F.

Conduct Mist-Netting Surveys following Recovery Unit-based protocols[32] (See Figures 1 and 2)

Northeast and Appalachian Recovery Units (CT, DE, MA, MD, NC, NJ, NY, PA, eastern TN, WV, VA, VT):

Linear projects: a minimum of 3 net nights per km (0.6 miles) of suitable summer habitat (see Appendix F).

Non-linear projects: a minimum of 42 net nights per 123 acres[33] (0.5 km^2) of suitable summer habitat.

For example:

- 7 sites[34], 2 nets[35]/site for 3 calendar nights = 42 net nights
- 7 sites, 3 nets/site for 2 calendar nights = 42 net nights
- 3 sites, 2 nets/site for 7 calendar nights* = 42 net nights

[32] The Indiana bat populations in the Northeast and Appalachian Recovery Units (RUs) have been more heavily impacted by white-nose syndrome; therefore, we recommend higher survey effort in these RUs than the Midwest and Ozark-Central RUs.

[33] We have no recommendations for reducing the minimum level of effort required to demonstrate probable absence for projects <123 acres in size. Detection probabilities and occupancy estimates were derived from past survey efforts that used the same acreage threshold (see Niver et al. 2013).

[34] A site is defined as a geographic area to be sampled. It can include one or more nets that can be managed by one Qualified Biologist.

[35] A net is defined as any combination of individual panels and poles (e.g., single, double, triple high) to fill the area (e.g., corridor) being sampled.

APPENDIX B: PHASE 2 or 3 MIST-NETTING

Maximum of 3 nights of consecutive netting at any given net location. After 3 consecutive nights of netting at the same location, you must change net locations or wait at least 2 calendar nights before resuming netting at the same location.

a) If no capture of Indiana bats, then no further summer surveys are necessary[36].
b) If capture of Indiana bat(s), then stop or proceed to **Phase 4** as previously decided in coordination with the FO(s).

Midwest and Ozark-Central Recovery Units (AL, AR, GA, IA, IL, IN, KY, MI, MO, MS, OH, OK, and central & western TN):

Linear projects: a minimum of 2 net nights per km (0.6 miles) of suitable summer habitat (see Appendix F).

Non-linear projects: a minimum of 9 net nights per 123 acres (0.5 km^2) of suitable summer habitat.

- 3 sites, 1 net/site for 3 calendar nights = 9 net nights
- 1 site, 3 nets/site for 3 calendar nights = 9 net nights

Maximum of 3 nights of consecutive netting at any given net location. After 3 consecutive nights of netting at the same location, you must change net locations or wait at least 2 calendar nights before resuming netting at the same location.

a) If no capture of Indiana bats, then no further summer surveys are necessary.
b) If capture of Indiana bat(s), then stop or proceed to **Phase 4** as previously decided in coordination with the FO(s).

MIST-NETTING SURVEYS TO CAPTURE INDIANA BATS AFTER ACOUSTICS WERE USED AS P/A METHOD (PHASE 3)

If netting was not conducted as the P/A method, then netting may be conducted to capture and characterize (e.g., sex, age, reproductive condition) the Indiana bats (documented through the Phase 2 acoustic P/A survey) present in an area and to facilitate radio-tracking (Phase 4) efforts. We encourage working with the FO(s) to develop Phase 3 netting plans based on best available information (e.g., positive acoustic locations). There are no minimum requirements for this phase as this is not a P/A phase.

a) If no Indiana bats are captured, then coordinate with the USFWS FO.
b) If Indiana bats are captured, then proceed to **Phase 4** as previously decided in coordination with the FO(s).

[36] NOTE: For Phase 2 Presence/Absence Surveys, wherever the phrase "no further summer surveys are necessary" occurs within this document, the USFWS FO(s) is in affect assuming probable absence of Indiana bats during the summer.

APPENDIX B: PHASE 2 or 3 MIST-NETTING

NET PLACEMENT

Potential travel corridors (e.g., streams, logging trails) typically are the most effective places to net (although other places may also be productive; see Carroll et al. 2002). Place nets approximately perpendicular across the corridor. Nets should fill the corridor from side to side, extending beyond the corridor boundaries when possible, and from stream (or ground) level up to the overhanging canopy. Nets of varying widths and heights may be used as the situation dictates. A typical set is at least 5 m to 9 m high consisting of two or more nets stacked on top one another and from 6 m to 18 m wide. If netting over water, ensure there is enough space between the net and the water so that captured bats will not get wet.

Occasionally it may be necessary or desirable to net where a suitable corridor is lacking. The typical equipment described in the section above may be inadequate for these situations, requiring innovation on the part of the surveyor (see Humphrey et al. 1968). See Kiser and MacGregor (2005) for additional discussion about net placement.

Although no minimum spacing between mist-nets is being specified, surveyors should attempt to evenly distribute net set-ups throughout suitable habitat and must provide written justification in their report if net set-ups were not distributed throughout suitable habitat (i.e., why were they clumped?). Net set-ups can be repeatedly sampled throughout the project, but generally no more than 2-3 nights at a single location is recommended. In addition, changing locations within a project area may improve capture success (see Robbins et al. 2008; Winhold and Kurta 2008). Photo-document placement of nets.

SURVEY PERIOD

The survey period for each net shall begin at sunset[37] and continue for at least 5 hours (longer survey periods may also improve success).

CHECKING NETS

Each net set-up should be checked approximately every 10 minutes (Gannon et al. 2007). If surveyors monitor nets continuously, take care to minimize noise, lights and movement near the nets. Monitoring the net set-up continuously with a bat detector (ideally using ear phones to avoid alerting bats) can be beneficial: (a) bats can be detected immediately when they are captured, (b) prompt removal from the net decreases stress on the bat and potential for the bat to escape (MacCarthy et al. 2006), and (c) monitoring with a bat detector also allows the biologist to assess the effectiveness of each net placement (i.e., if bats are active near the net set-up but avoiding capture), which may allow for adjustments that will increase netting success on subsequent nights. There should be no other disturbance near the nets, other than to check nets and remove bats. Biologists should be prepared to cut the net if a bat is severely entangled and cannot be safely extracted within 3 or 4 minutes (CCAC 2003; Kunz et al. 2009).

[37] Surveys may need to start a little earlier or later than official sunset times (i.e., at "dusk") in some settings such as a deep/dark forested valleys or ridge tops to avoid missing early-flying bats or capturing late-flying birds, respectively. Sunset tables for the location of survey can be found at: http://aa.usno.navy.mil/data/docs/RS_OneYear.php.

APPENDIX B: PHASE 2 or 3 MIST-NETTING

Capture and handling are stressful for bats. Emphasis should be on minimizing handling and holding bats to as short a time as possible to achieve field study objectives. Indiana bats should not be held for more than 30 minutes after capture, unless the individual is targeted for radio-tracking. Bats targeted for radio-tracking should be released as quickly as possible, but no longer than 30 minutes[38] after capture, or as allowed in federal and state permits. See Kunz and Kurta (1988) for general recommendations for holding bats.

WEATHER, LIGHTING, AND OTHER ENVIRONMENTAL CONDITIONS

Severe weather adversely affects capture of bats. Some Indiana bats may remain active despite inclement weather and may still be captured while others in the same area become inactive. Therefore, negative surveys combined with any of the following weather conditions throughout all or most of a sampling period are likely to require an additional night of mist-netting[39]: (a) temperatures that fall below 50°F (10°C)[40]; (b) precipitation, including rain and/or heavy fog, that exceeds 30 minutes or continues intermittently during the survey period; and (c) sustained wind speeds greater than 9 miles/hour (4 meters/seconds; 3 on Beaufort scale) for 30 or more minutes.

NOTE: Provided that nets are not dripping wet, surveyors can resume netting to meet the minimum 5-hour requirement after short periods of adverse weather. If nets are under good cover, light rain may not alter bat behavior. However, if no bats are being captured during marginal weather, coordinate with the USFWS FO(s).

It is typically best to place net set-ups under the canopy where they are out of moonlight, particularly when the moon is half-full or greater. Net set-ups illuminated by artificial light sources should also be avoided.

The shining of lights, and noise should be kept to a minimum with no smoking around the survey sites. In addition, the use of radios, campfires, running vehicles, punk sticks, citronella candles and other disturbances will not be permitted within 300 feet of mist nets (or acoustic detectors) during surveys.

DOCUMENTATION OF INDIANA BAT CAPTURES

If an Indiana bat(s) is captured during mist-netting, protocols for radio-tracking and emergence survey requirements, as provided in Appendix D and E, respectively, should be followed. In addition, the appropriate USFWS FO(s) must be notified of the capture within 48 hours (or in accordance with permit conditions), and the sex and reproductive condition of the bat and GPS coordinates of the capture site should be provided. Ensure GPS coordinates are recorded for each individual net set on datasheets.

---

[38] Current standard federal Section 10 bat permit conditions require prior written approval from the Field Supervisor in the USFWS FO(s) if capture times may exceed 30 minutes.

[39] With prior USFWS FO approval, a survey may be completed after August 15 if it was initiated in time to be completed by August 15 and extenuating weather circumstances resulted in delaying completion. Delays as a result of not meeting the acceptable weather requirements are the ONLY valid justification for surveying after August 15.

[40] If using this guidance for NLEB: Overnight survey temperatures may be lower in northern portions of the NLEB range, please coordinate with the local USFWS FO in the northern portion of the range for any variation in temperature requirements.

APPENDIX B: PHASE 2 or 3 MIST-NETTING

Several species of bats from the genus *Myotis* share common features which can make identification difficult; Indiana bats and little brown bats (*Myotis lucifugus)* can be particularly difficult to distinguish. Photo-documentation of all bats captured and identified as Indiana bats and the first 10 little brown bats per project are requested to verify the identifications made in the field.

Photo-documentation should include diagnostic characteristics:

- a ¾-view of face showing ear, tragus, and muzzle
- view of calcar showing presence/absence of keel
- a transverse view of toes showing extent of toe hairs

If a bat from the genus *Myotis* is captured during mist netting that cannot be readily identified to the species level, then species verification may be attempted through fecal DNA analysis. Collect one or more fecal pellets (i.e., guano) from the bat in question by placing it temporarily in a holding bag (15 minutes is usually sufficient, no more than 30 minutes is recommended). The pellet (or pellets) collected should be placed in a small vial (e.g., 1.5 ml) with silica gel desiccant; pellets from each individual bat should be stored in separate vials and out of direct light. Fees charged by independent laboratories for sequencing fecal DNA samples is generally inexpensive (approx. $50 per guano sample), however, it has been challenging to identify labs willing to consistently conduct these analyses. Any additional information and a list of available laboratories will be made available on the Indiana bat webpage on the USFWS's Region 3 website (http://www.fws.gov/midwest/Endangered/mammals/inba/index.html).

SUBMISSION OF MIST-NETTING RESULTS

Provide results of netting surveys to the appropriate USFWS FO(s) in accordance with previously agreed upon[41] timeframes and formats[42]. If Indiana bats are captured, this report should also include the results of subsequent radio-tracking and emergence counts. Reports should include the following:

1. Copy of prior phase reports (if not previously provided).
2. Explanation of any modifications from original survey plan (e.g., altered net locations).[43]
3. Description of net locations (including site diagrams), net set-ups (include net heights), survey dates, duration of surveys, weather conditions, and a summary of findings.
4. Map identifying netting locations and information regarding net set-ups, including lat/long or UTM, individual net placement, net spacing (i.e., include mist-netting

[41] As discussed in the Introduction, we encourage coordination with USFWS FO(s) prior to implementation of any surveys to ensure that all parties agree upon the need for surveys, the methods proposed, and the decisions from various survey results.

[42] In 2016, the USFWS implemented a new standardized approach for reporting of bat survey data. In addition to a traditional written report, federal permit holders are now required to submit their survey data using the standardized permit reporting spreadsheets available on the R3 Indiana Bat Summer Survey Guidance webpage (http://www.fws.gov/midwest/Endangered/mammals/inba/inbasummersurveyguidance.html).

[43] If the USFWS previously agreed upon the study plan we need to understand whether the revised work still accomplished the agreed upon methods

equipment in photographs of net locations), and adequate justification if net set-ups are not evenly distributed across suitable habitat within the project area.

5. Full names of mist-netting personnel attending each mist-net site during an operation, including the federally-permitted/qualified biologist present at each mist-net site. Indicate on the field data sheet the full name of person who identified bats each night at each site.
6. Legible copies of all original mist-netting datasheets (see example datasheet below) and a summary table with information on all bats captured during the survey including, but not limited to: capture site, date of capture, time of capture, sex, reproductive condition, age, weight, right forearm measurement, band number and type (if applicable), and Reichard's wing damage index score (Reichard and Kunz. 2009).
7. Photographs of all net set-ups, as well as **all** Indiana bats and the first 10 little brown bats captured from each project, so that the placement of netting equipment and identification of species can be verified. Photographs of bats should include all diagnostic characteristics that resulted in the identification of the bat to the species level.
8. Any other information requested by the local USFWS FO(s) related to the project.

APPENDIX B

REQUIRED PERMITS

NATIVE ENDANGERED & THREATENED SP. RECOVERY
ENDANGERED & THREATENED WILDLIFE

Permit Number: TE06801A-5

Effective: 03/29/2018 Expires: 12/31/2018

Issuing Office:

Department of the Interior
U.S. FISH & WILDLIFE SERVICE
Endangered Species Permit Office
5600 American Boulevard, West, Suite 990
Bloomington, MN 55437-1458
permitsR3ES@fws.gov

Laura J. Rogers
Acting
CHIEF - ENDANGERED SPECIES

Permittee:

PITTSBURGH WILDLIFE & ENVIRONMENTAL, INC.
dba PWE
853 BEAGLE CLUB ROAD
MCDONALD, PA 15057
U.S.A.

Name and Title of Principal Officer:
NEIL R. BOSSART - PRESIDENT

Authority: Statutes and Regulations: 16 USC 1539(a), 16 USC 1533(d); 50 CFR 17.22, 50 CFR 17.32, 50 CFR 13.

Location where authorized activity may be conducted:
'N LANDS SPECIFIED IN THE CONDITIONS AND AUTHORIZATIONS

Reporting requirements:
ANNUAL REPORT DUE: 01/31
See permit conditions for reporting requirements

Authorizations and Conditions:

A. General Conditions set out in Subpart B of 50 CFR 13, and specific Conditions contained in Federal regulations cited above, are hereby made a part of this permit. All activities authorized herein must be carried out in accord with and for the purposes described in the application submitted. Continued validity, or renewal of this permit is subject to complete and timely compliance with all applicable Conditions, including the filing of all required information and reports.

B. The validity of this permit is also conditioned upon strict observance of all applicable foreign, state, local, tribal, or other Federal law.

C. Valid for use by those identified in the List of Authorized Individuals.

C.1. Authorized Individuals:

Only individuals on the attached List of Authorized Individuals (LAI) are authorized to conduct activities pursuant to this permit. The LAI, printed on U.S. Fish and Wildlife Service (USFWS) letterhead, and signed and dated by the Region 3 permit issuing office or a Region 3 lead species Field Office Supervisor, may identify special Conditions or circumstances under which individuals can conduct authorized activities and it must be retained with these Conditions and Authorizations. Each named

individual shall be responsible for compliance with the Conditions and Authorizations of this permit.

Trained assistants not named on the attached LAI may work on permitted activities under the direct and on-site supervision of the individuals named on the LAI. "On-site supervision" is defined as having the Permittee at a distance close enough to enable immediate assistance to a supervised individual, as needed, while the supervised individual conducts an authorized activity. Trained assistants may not work independently at a site.

Permittee/Principal Officer shall replace outdated LAIs and attach the subsequent current updated version of the LAI to this recovery permit upon receipt. **This permit will be considered invalid without a current attached LAI.**

C.2. To request changes to the LAI, the Permittee/Principal Officer shall submit written requests to the USFWS Midwest Region (Region 3) Permit Coordinator identified in Condition L. The request shall be submitted at least 30 days prior to the desired effective date. The request should indicate the desired effective date, must include the $50 application processing fee unless fee exempt (see 50 CFR 13.11 (d)), must be signed and dated by the Permittee/Principal Officer, and include the following information:

a. The name of each individual (first name, middle initial, last name) to be added to the LAI and indicate the species they will be working with and the activities they will be conducting;

b. The resume/qualifications of each person, including specific information on previous professional experience working with the species/activity affected by the request. Information should include: the approximate number of hours of focused activity with each species in occupied habitat; approximate numbers of each species the applicant has worked with at each site (e.g., how many birds at a specific site(s) or specific activity(ies); names, dates, and location of areas surveyed; and experience with similar species;

c. For each individual: the names, titles, organizations, emails, and telephone numbers of a minimum of two references who can verify experience with the species (reference letters are preferred and always appreciated); and

d. The names of any individuals to be deleted from the LAI.

Note: This procedure is **only** for personnel changes to the LAI. For requests to renew/amend this permit, a complete application and appropriate application processing fee must be submitted to the Region 3 Recovery Permits Coordinator. The application Form 3-200-55 may be obtained at: https://www.fws.gov/endangered/permits/how-to-apply.html.

D. Acceptance of this permit serves as evidence that the Permittee and its authorized agents understand and agree to abide by the terms of this permit and all sections of Title 50 Code of Federal Regulations, Parts 13 and 17, pertinent to issued permits (https://www.fws.gov/permits/ltr/ltr.html). Section 11 of the Endangered Species Act of 1973, as amended, provides for civil and criminal penalties for failure to comply with permit Conditions.

E. Permittee is authorized to take (capture with mist-nets or harp traps, handle, identify, radio-tag, band, collect non-intrusive measurements, enter hibernacula or maternity roost caves, and release) Indiana bat (*Myotis sodalis*), gray bat (*M. grisescens*), and northern long-eared bat (*M. septentrionalis*) for scientific research aimed at recovery of the species: presence/absence surveys, studies to document habitat use, population monitoring, and to evaluate potential impacts. This permit does **not** authorize the collection of voucher specimens.

F. Activities are authorized at the following locations:

F.1. Location within Region 2 of the USFWS: Oklahoma upon receipt of written concurrence from the Field Supervisor, and upon coordination with Ozark Plateau National Wildlife Refuge prior to 1) surveys of caves known to be used by federally-listed bats, and 2) examinations of caves suspected of containing federally-listed bat species (some presence/absence surveys may require the presence of a USFWS Biologist), and as outlined in Condition G.

F.2. Locations within Region 3 of the USFWS: Illinois, Indiana, Iowa, Michigan, Missouri, Ohio, and Wisconsin upon receipt of written concurrence from the Field Supervisor, as outlined in Condition G.

F.3. Locations within Region 4 of the USFWS: Alabama, Arkansas, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee, upon receipt of written concurrence from the Field Supervisor, as outlined in Condition G.

F.4. Locations within Region 5 of the USFWS: New Jersey, New York, Pennsylvania, Virginia and West Virginia, upon receipt of written concurrence from the Field Supervisor, as outlined in Condition G.

F.5. Locations within Region 6 of the USFWS: Kansas, upon receipt of written concurrence from the Field Supervisor, as outlined in Condition G.

G. Permittee shall notify the USFWS Field Supervisor in the state in which activities are proposed to occur at least 15 days prior to conducting any activities. Contact information is available at: https://www.fws.gov/midwest/endangered/permits/index.html. Your request for this site-specific approval must be in writing and must indicate:

G.1. Species for which proposed activities are being conducted.

G.2. Location of proposed activities, including project site (legal description and lat/long), county, and state.

G.3. The purpose and a description of the proposed activities (e.g., surveys, radio telemetry studies, etc.).

G.4. Dates when the project is proposed to take place.

G.5. Evidence that Permittee has received any required contracts to complete the activities.

G.6. Whether all annual reporting requirements have been fulfilled.

G.7. You may proceed with activities only upon receipt of written concurrence from the USFWS Field Supervisor. ***Your concurrence letter must be carried with this permit to authorize site-specific activities.***

H. Permittee shall adhere to the following Conditions involving capture and handling of bats:

H.1. Bats may be captured with mist nets following the protocol included in the Range-wide Indiana Bat Summer Survey Guidelines. Guidelines are available at: https://www.fws.gov/midwest/endangered/mammals/inba/inbasummersurveyguidance.html. Note: You must use the most up-to-date version of the Summer Survey Guidelines, available on the USFWS website page, for your summer surveys. The monitoring interval for mist nets is +/- 10 minutes and may not exceed 15 minutes. Captured bats may be held for a maximum of 30 minutes, unless injured. In extenuating circumstances, bats shall be held for no longer than 45 minutes.

H.2. Bats may be captured with harp traps with written concurrence from the Field Supervisor in the state in which trapping is proposed. Harp traps must be continually monitored. Captured bats may be held for a maximum of 30 minutes, unless injured. In extenuating circumstances, bats shall be held for no longer than 45 minutes.

H.3. Permittee shall carry out non-intrusive measurements on all captured bats. Data shall be recorded for all bats captured and include, but not be limited to, the data requested in any automated or species specific data sheet provided by the USFWS (e.g., Bat Reporting Spreadsheet). Handling should be limited to the maximum extent practicable and should cease immediately at signs of undue stress (e.g., bat becoming unresponsive, etc.). Bats that appear stressed from handling should be placed in a dark, quiet location away from activity where it can safely fly away after recovery, and should be checked to ensure successful recovery before leaving the study site. Photographs of the identifying characteristics for each individual federally-listed species captured are encouraged. The Permittee may be requested to provide individual photographs after submittal of annual reporting data.

H.4. Lipped metal bands having a unique identifier may be applied to the forearm of captured bats prior to release. No more than one band per bat may be used. Bands should be applied to the forearm of captured bats prior to release. Position the band on the wing so that when the bat is hanging upside down, the band numbers are right-side up. A single band should be placed on the right forearm of each male and the left forearm of each female bat.

H.5. Radio transmitters may be applied during spring, summer, and fall roosting and migration periods via nontoxic skin bond adhesive. The total weight of the transmitter may not exceed 5% of the bat's body weight and the total weight of the package (transmitter and adhesive) may not exceed 6% of the bat's body weight. The lightest package (both transmitter and adhesive) capable of accomplishing the required task should be used, especially with pregnant females and newly volant juveniles. Bats carrying transmitters must be monitored daily for at least three days, or until the transmitter falls off, whichever occurs first. ***Although not required as a Condition of this permit, in order to gather needed information to promote the conservation of the northern long-eared bat, it is recommended that the permittee radio-track female and juvenile northern long-eared bats captured when conducting mist-netting and radio-tracking of Indiana bats within the white-nose syndrome zone of the range of the northern long-eared bat. Specifics on the number of females and juvenile bats to be tracked will be determined in coordination with the appropriate Field Office, as specified in Condition G.***

H.6. No trapping activities shall occur within 20 meters of a known Indiana bat maternity roost site, either natural or artificial roosts, unless Permittee receives prior written approval from the USFWS Field Supervisor for the state in which the activities are proposed to occur.

H.7. Caves, mines, or other suitable hibernation sites may be quietly searched in a manner that minimizes disturbance by utilizing the minimum number of people and time required to complete the survey. Surveys should not be repeated more often than once every other year in any given hibernaculum that is occupied by endangered or threatened bats. Where hibernacula area and safety conditions allow, individuals entering caves are recommended to utilize night vision goggles or red-filtered light and to remain in the cave no more than 90 minutes to complete the work.

H.8. For the Ozark big-eared bat (*Corynorhinus townsendii ingens*), Virginia big-eared bat (*C. t. virginianus*) [***all authorized individuals***], and gray bat (*M. grisescens*) [***Genavie Veron and Ethan Okon***], Permittee is authorized to take (capture and release) only in the event that the species is captured accidental to lawful survey activities directed at other permitted species. This permit does not authorize any activities for the specific purpose of capture of gray bat, Ozark or Virginia big-eared bats. Should incidental/accidental capture of gray bat, Ozark or Virginia big-eared bats occur, you must document the

capture and collect data (weight, sex, and age) on the captured animal. Permittee must also document the discovery with a photograph. Gray bat, Ozark and Virginia big-eared bats must be released immediately following the data collection. Captured bats may be held for a maximum of 30 minutes, unless injured. Handling should be limited to the maximum extent practicable and should cease immediately at signs of undue stress (e.g., bat becoming unresponsive, etc.). Bats that appear stressed from handling should be placed in a dark, quiet location away from activity, where they can safely fly away after recovery, and should be checked to ensure successful recovery before leaving the study site. Ozark and Virginia big-eared bats shall not be held in paper bags. Within 48 hours, you must notify the USFWS in the state in which you are working of the accidental capture (see https://www.fws.gov/midwest/endangered/permits/index.html).

H.9. Equipment used to capture and handle bats shall be cleaned and decontaminated, including personal gear such as boots and gloves, using products cited in decontamination guidelines and in compliance with label directions. The most recent decontamination guidance is found on the web at: https://www.whitenosesyndrome.org/topics/decontamination.

I. Upon determination that endangered or threatened bats are present at previously undocumented sites, Permittee shall notify the following offices within 48 hours: the USFWS Region 3 Office (Condition L.), the Species Recovery Lead (Condition M.), and the USFWS Field Office within the geographic location of study areas (https://www.fws.gov/midwest/endangered/permits/index.html).

J. Accidental injury or mortality may not exceed two (2) specimens. In the event that any accidental injury or mortality occurs, all activities must cease. The Permittee must immediately report any bat mortality or serious injury to the applicable USFWS Field Office in the state in which the incident occurred (contact information provided at: https://www.fws.gov/midwest/endangered/permits/index.html). Written notification must also be made within 24 hours to the Midwest Regional Permits Coordinator (see Condition L.), the Species Recovery Lead (Condition M.), and the applicable USFWS Field Office in the state in which the incident occurred (Condition N.). The Permittee's statement must document the cause of the injury or mortality, and identify all remedial measures employed by the Permittee to eliminate future mortality or injury events. Based on consultation between the USFWS offices, decisions will be made regarding remedial measures that will be implemented and whether and/or when any of the authorized activities may continue. The Species Recovery Lead Office will provide a decision within five (5) business days concerning the disposition of any injured or dead specimen. Dead or moribund bats may be retained for further study only with the written permission of the USFWS. Any bats that are not authorized for retention are to be chilled and promptly transferred to the USFWS Species Recovery Lead for potential necropsy and/or contaminants analysis. Permitted activities may resume upon receipt of written approval from the Species Recovery Lead Office.

K. An Annual Report of all activities conducted under the authority of this permit is due by January 31 following each year this permit is in effect. In addition, copies of all publications and reports resulting from work conducted under this permit must be submitted as they become available. Failure to furnish any reports required by this permit is cause for permit revocation and/or denial of future permit applications. At a minimum, your report shall include:

K.1. The date, time, geographic locations (including datum and projection information), species, age, sex, and weight of all bats encountered.

K.2. A description of locations surveyed where no bats were encountered.

K.3. Band numbers of all bats banded.

K.4. Information on any injuries and/or mortalities and disposition of specimens.

K.5. Location and characteristics of roost trees and bat colonies.

K.6. Copies of any separate reports and/or publications resulting from work conducted under the authority of this permit.

K.7. A completed data collection form as found in the Summer Survey Guidelines, Appendix B, cited in Condition H.1.

K.8. Data shall be submitted for all bats captured and include, but not be limited to, the data requested in any automated or species-specific data sheet provided by the USFWS (e.g., the data collection sheets found on the current Rangewide Indiana Bat Summer Survey Guidelines website page cited in Condition H.1., or other species specific data sheets). Photographs of the identifying characteristics for each individual federally-listed species captured are encouraged. The Permittee may be requested to provide individual photographs after submittal of annual reporting data.

K.9. Copies of all site-specific authorization letters required under Condition G.

IF NO ACTIVITIES OCCURRED OVER THE COURSE OF THE YEAR, INDICATION OF SUCH SHALL BE SUBMITTED AS AN ANNUAL REPORT.

L. **Copies of your reports shall be sent to the offices listed below.** When possible, electronic copies shall be submitted in lieu of hard copies in MS Word, Portable Document Format, Rich Text Format, or other file format that is compatible with the receiving office.

FWS/AES-TE

LIST OF AUTHORIZED INDIVIDUALS
TE06801A-5
Pittsburgh Wildlife & Environmental, Inc.
Neil R. Bossart (Principal Officer)

C.1. Individuals authorized to independently conduct activities under this permit:

For all species/all activities: Neil R. Bossart and Jennifer L. Dreibelbis.

For all activities with Indiana bat and northern long-eared bat, other than entering hibernacula and maternity roost caves: Genavie Veron and Ethan D. Okon.

Trained assistants may conduct activities pursuant to this permit only under the direct and on-site supervision of an above-named individual. "On-site supervision" is defined as having the Permittee at a distance close enough to enable immediate assistance to a supervised individual, as needed, while the supervised individual conducts an authorized activity. **At least one named Permittee must remain present at each mist-net site while it is being operated.**

Acting Chief, Division of Endangered Species

March 29, 2018
Date

This List of Authorized Individuals (LAI) is valid only when it is dated on or after the permit issuance date. Federal Permit TE06801A-5 will be considered invalid without this LAI.

APPENDIX C

COMPLETED BAT SURVEY DATA FORMS

PWE Bat Survey Data Form

Project: Pond Creek No. 1 Mine North Panels | Site #: 01 | Night: 01 | Date: 7/15/18

State: IL | County: Williamson | Township: N/A

Quad: Pittsburg | Lat/UTM: 37.85570° | Long/UTM: -88.82660° | Datum: WGS 84

Identifier: E. Okon | Tech(s): J. Brooke | Bat activity time: 20:35

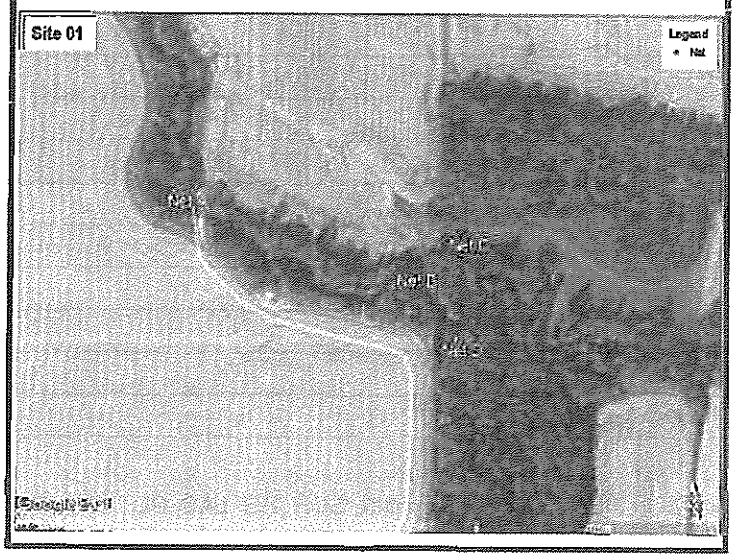
Site Description: Forested stream through ag fields and woodlots

Dominant Tree Species: Black walnut, shagbark hickory, box elder

Other Wildlife Observed: Song birds, frogs, water snakes, deer, barred owl | Whip-Poor-Wills: 0

Comments: Closed early due to Indiana bat capture, tracked bat all night

Sunrise: 05:44 | Sunset: 20:17 | Moonrise: 08:39 | Moonset: 22:32 | Illumination: 5%



Nets/Traps/Detectors | **Time Open: 20:30** | **Time Closed: 23:30**

Exfoliating bark on bole (%) 90 **Describe: sloughing** X **platy**__ **tight**__

Cavities present? ____ **If so, describe:**_____

Roost Decay State: 1 2 3 (4) 5 6 7 8 9 Other

APPENDIX D: PHASE 4 RADIO-TRACKING

Roost tree or snag canopy position: Dominant X Co-Dominant __ Suppressed __

Surrounding Habitat Condition

Canopy closure at roost (%) 20%

Approximate woodlot size (ac or ha) 100 **Distance to non-forest (ft or m)** 645 Ft

Describe forest/woodlot current condition (mature, partially cut-over, burned, insect damage, etc.)
The roost Roost 01 was located in a swamp within a woodlot. The woodlot had copious mature trees, as well as dense understory brush. The swamp had many dead or dying trees making suitable habitat.

APPENDIX E: PHASE 4 EMERGENCE SURVEYS

USFWS BAT EMERGENCE SURVEY DATASHEET

Date: 7-17-18 **Surveyor(s) Full Name:** Alex Patterson

State: IL **County:** Williamson **Project Name:** Mach North Panels Bat Survey

Site Name/#: a1 **Roost Name/#** Roost 01 **Bat #:** 172, 413

Lat/Long or UTM of Roost: 37.84750°, -88.79230

Description of Roost/Habitat Feature Surveyed: The roost is along dead silver maple

Bat Species Known to be using this Roost/Feature (if not known, leave blank): Myotis sodalis

Other Suspected Bat Species (explain):

Weather Conditions during Survey (temperature, precipitation, wind speed): warm and clear

Survey Start Time: 19:45 **Time of Sunset:** 20:45 **Survey End Time:** 20:52

NOTE: Emergence surveys should begin ½ hour before sunset and continue until at least one hour after sunset or until it is otherwise too dark to see emerging bats. The surveyor(s) should position him or herself so that emerging bats will be silhouetted against the sky as they exit the roost. Tallies of emerging bats should be recorded every few minutes or as natural breaks in bat activity allow. Please ensure that surveyor(s) are close enough to the roost to observe all exiting/returning bats, but not close enough to influence emergence (i.e., do not stand directly beneath the roost and do not make unnecessary noise and/or conversation, and minimize use of lights other than a small flashlight to record data, if necessary). Do not shine a light on the roost tree crevice/cave/mine entrance itself as this may prevent or delay bats from emerging. If available, use of an infra-red, night vision, or thermal-imaging video camera or spotting scope and an ultrasonic bat detector are strongly recommended but not required.

Time	Number of Bats Leaving Roost*	Comments / Notes
20:33	1	First bat
20:43	1	Bat 172, 413
20:46	1	Last Bat

APPENDIX E: PHASE 4 EMERGENCE SURVEYS

Site Name/#: Roost 01 Bat 1724 **Roost Name/#:** Roost 01

Time	Number of Bats Leaving Roost*	Comments / Notes
Total Number of Bats Observed Emerging from the Roost/Feature During the Survey:	56	

* If any bats return to the roost during the survey, then they should be subtracted from the tally.

Describe Emergence: Did bats emerge simultaneously, fly off in the same direction, loiter, circle, disperse, etc. If a radio-tagged bat was roosting in the tree, at what time did it emerge?

Bats emerged at different times, sometimes bats would loiter and circle the roost.

Survey Start Time: 19:45 Time of Sunset: 20:45 Survey End Time: 20:59

NOTE: Emergence surveys should begin ½ hour before sunset and continue until at least one hour after sunset or until it is otherwise too dark to see emerging bats. The surveyor(s) should position him or herself so that emerging bats will be silhouetted against the sky as they exit the roost. Tallies of emerging bats should be recorded every few minutes or as natural breaks in bat activity allow. Please ensure that surveyor(s) are close enough to the roost to observe all exiting/returning bats, but not close enough to influence emergence (i.e., do not stand directly beneath the roost and do not make unnecessary noise and/or conversation, and minimize use of lights other than a small flashlight to record data, if necessary). Do not shine a light on the roost tree crevice/cave/mine entrance itself as this may prevent or delay bats from emerging. If available, use of an infra-red, night vision, or thermal-imaging video camera or spotting scope and an ultrasonic bat detector are strongly recommended but not required.

Time	Number of Bats Leaving Roost*	Comments / Notes
		No bats

APPENDIX E: PHASE 4 EMERGENCE SURVEYS

Site Name/#: 07 **Roost Name/#:** Roost 07 Bat 172,636

Time	Number of Bats Leaving Roost*	Comments / Notes
Total Number of Bats Observed Emerging from the Roost/Feature During the Survey:	0	

* If any bats return to the roost during the survey, then they should be subtracted from the tally.

Describe Emergence: Did bats emerge simultaneously, fly off in the same direction, loiter, circle, disperse, etc. If a radio-tagged bat was roosting in the tree, at what time did it emerge?

No bats

Chuck-Wills-Widow Nesting Habitat Assessment

North District Shaft IBR Site

Pond Creek Mine

Williamson County, IL

Prepared for:

Williamson Energy, LLC

Prepared by:

William O'Leary, M.S.

HMG Engineers, Inc.

1032 N. 6th Street

Murphysboro, Illinois 62966

January 2019

INTRODUCTION

HMG Engineers, Inc. (HMG) was contacted by Williamson Energy, LLC seeking assistance in assessing the likelihood of the presence of Chuck-Wills-Widow nesting habitat associated with a corridor and shaft site located in Williamson County 4 miles south of Thompsonville, IL. The site includes a corridor 2 miles long and 50 feet wide and also a trapezoidal shaped tract 4.4 acres on the east end (Figure 1).

Williamson Energy, LLC informed HMG of a concern regarding Chuck-Wills-Widows (*Caprimulgus carolinensis)*, a listed (threatened) bird species in Illinois. Chuck-Wills-Widows reportedly nest on the ground among dead leaves, pine needles, or bare dirt in dense thickets near openings. State biologists were wanting more information regarding the liklihood that Chuck-Wills-Widow nesting habitat occurs in the proposed IBR area.

METHODS

The entire proposed IBR area including both the corridor and the 4.4 acre tract were visually inspected. Habitat features including vegetation composition were noted and compared with the reported preferred nesting habitat for the Chuck-Wills-Widow.

RESULTS

The most prevalent vegetation cover in the proposed IBR area is soy bean stubble. The next most prevalent is cool season grassland. Neither of these vegetation regimes has any woody vegetation. These two cover types account for approximately 95% of the proposed IBR area. The remaining 5 % includes stream channels with narrow wooded margins. These margins include thick understory vegetation composed largely of Japanese honeysuckle, multiflora rose, and blackberry. This habitat type is not the type as described for nesting Chuck-Wills-Widow. It is also noted that in areas where the corridor will be crossing the streams, the company plans to bore under the stream corridors and not disturb the surface.

CONCLUSIONS

The typical nesting habitat of the Chuck-Wills-Widow, namely bare dirt, leaf, or pine needle cover in dense thickets near openings is not present on the proposed IBR area. Given the lack of habitat and the company's plans not to disturb the surface around stream corridors, impacts to the Chuck-Wills-Widow is unlikely.

Indiana Bat Incidental Take Table

INTRODUCTION

Williamson Energy, LLC has proposed to permit an area for a Bleeder Shaft Site along with a water line and powerline corridor to connect the Bleeder Shaft Site to the existing Permit 375 area. The proposed North Bleeder Shaft IBR permit area consist of approximately 17.0 acres, of which approximately 8.4 acres are within know habitat and only 1.0 acres contain suitable forested habitat to be considered habitat for Threatened and Endangered bat species. The proposed permit area is located approximately 2.8 miles northwest of Corinth, Illinois. The approximate project center is at Latitude 37.85 and Longitude 88.74 (Exhibit A).

Coal mining operations may affect the Indiana bat in situations where the proposed surface disturbance area is located near documented Indiana bat habitat, or when forested areas which could provide Indiana bat habitat are cleared to facilitate the mining activity (USFWS 2009). Indiana bats are known to occur in several counties in Illinois, including Williamson County. Coal mining activities may result in clearing of forested habitat or alteration of potential hibernacula like old mine portals and caves that serve as potential habitat for the Indiana bat. The potential for altering bat travel corridors, feeding and watering locations, and sheltering and hibernating locations exists due to the potential tree clearing and hibernacula closing or alteration. In July 2009, the "Range-wide Indiana Bat Protection and Enhancement Plan Guidelines" (hereafter referred to as "the guidelines") were established in order to set minimum standards for determining the presence of Indiana bat habitat and developing Indiana bat Protection and Enhancement Plans. The guidelines were updated in February 2013. The following Plan was prepared in accordance with these guidelines.

In 2018, two Indiana bats were captured and tracked to roost locations. Based upon the roost tree locations for the two bats (Bats 172.413 and 172.636), portions of the proposed North Bleeder Shaft IBR fall within the Indiana Bat buffer and making it "known habitat". No Northern long-eared bats (NLEB) were captured in the vicinity of the permit area; therefore, it is assumed to be absent. As a result, a Protection and Enhancement Plan (PEP) is required and is included below. It is important to note that one mist net site was run within the IBR area in 2018 and no endangered bats were captured in the vicinity of the project area.

The project area itself totals 17.0 acres in its entirety, of which a total of 8.4 acres exists within a 2.5 mile known habitat buffer, and of the 8.4 acres within the known habitat buffer, only 1.0 acres is sufficiently forested to be considered bat habitat at all. The remainder of the project area within the known habitat buffer consists of primarily of agricultural fields that do not meet the FWS definition of suitable habitat. The remaining 8.6 acres outside of known habitat buffer was surveyed for T/E species in 2018 with negative results and therefore will not be considered in this PEP. The areas covered by the proposed PEP are shown on the Aerial Map (Exhibit B)

POTENTIAL INDIANA BAT HABITAT

Known Habitat

Known habitat is defined as "habitat occupied by Indiana bats based on capture records, survey information, or other sources" (USFWS 2013).

There are no documented caves or other underground openings where Indiana bats have been recorded within the proposed permit area.

The nearest capture site for a female or juvenile is located approximately 4.7 miles West of the proposed project area. The nearest known maternity roost tree is located 2.5 miles southwest of the proposed permit area. The nearest capture site for a male is located 3.4 miles West of the proposed permit area. Based on these distances, portions of the proposed permit area do meet the criteria to be considered "known summer habitat" (USFWS 2013).

Based on available information and the results of field surveys, the proposed permit area does not meet the criteria to be considered "known winter habitat" (USFWS 2013) as no portals or other karst features exist within the project area.

Potential Summer Habitat

Suitable/potential habitat is defined as habitat that is "within the range of the species and is either (a) currently suitable for habitation by Indiana bats but for which no survey or other data is available showing that Indiana bats are present or (b) may be suitable pending a definitive analysis of its suitability for Indiana bat use, which is especially relevant for potential winter habitat" (USFWS 2013).

A mist net survey for Indiana bats and NLEBs was conducted in the summer of 2018 by Alliance Consulting, Inc. for the area that surrounds the permit area associated with the North Bleeder Shaft IBR. During this survey, two (2) Indiana bats were captured, and both of them were found to be roosting approximately 2.5 miles southwest of the proposed IBR area which resulted in the creation of a 2.5 mile buffer. Of the 17.0 acre permit area, a total of 8.4 acres is within known habitat buffers and the remainder is located within an area of assumed absence for both the Indiana and NLEB. Due to the permit area existing within an Indiana bat buffer, the 1.0 wooded acres is considered to be known habitat. No NLEBs were captured during the mist net survey; therefore, they are assumed to be absent within the permit area and will not be further discussed. Additionally, the 8.6 acres of the proposed IBR area outside of the buffer is also in an assumed absence area based on survey results, and is not considered under this PEP.

MINIMIZING POTENTIAL TAKE OF AN INDIANA BAT

Avoidance of Potential Summer and/or Winter Habitat

Due to the nature of this project, it will not be possible to avoid impacts to known summer habitat. The forested areas within the proposed permit area will be cleared to facilitate mining activity. As previously mentioned, the project will only impact 1.0 forested acres.

No potential winter hibernacula exist within the project area; therefore, no buffering of caves or abandoned mines is proposed. There are no known caves within 2.5 miles of the proposed IBR area.

Tree Clearing Restrictions

By avoiding tree clearing during Indiana bat occupancy periods, potential adverse effects to these species can be effectively minimized. As discussed above, the habitat in the proposed permit area does contain 1.0 acres of known summer habitat for the Indiana bat. Tree clearing operations will only occur from October 15 to March 31, unless otherwise authorized by the Illinois Department of Natural Resources and the U.S. Fish and Wildlife Service. However, given permit authorization time frames and the necessity of this facility, it is likely that authorization to clear this 1.0 acres will be requested outside the normal tree clearing window.

Protection of Aquatic Resources

No stream crossings are proposed by this project. However, the project will include five (5) borings underneath intermittent stream segments. The borings will be conducted such that the Riparian vegetation will be left in-tact to the extent practicable. The stream segments subject to the borings and the adjacent aquatic resources will be protected by the erosion and sediment control plan for the facility.

SHORT-TERM HABITAT REPLACEMENT

The applicant proposes to girdle three (3) trees within the proposed IBR area. Trees will be girdled outside of the limits of disturbance but within the proposed permit area. According to the guidelines, a tree must be girdled for every 500 feet of project perimeter. The perimeter of forested project area within the known habitat area is approximately 1,530 linear feet.

Short-term Habitat Measures

As part of the PEP, the forested areas above and below the proposed contouring operations in the affected watersheds will be evaluated for the existence of sufficient trees/snags and availability of suitable girdling trees. This evaluation will be conducted once the permit has been approved, prior to or concurrent with the clearing during the initial winter clearing season. Based upon the findings, additional measures, such as Bat Boxes may be utilized to provide sufficient suitable roosting habitat adjacent to the proposed permit area.

Flooded Timber

Flooded timber is not proposed for this project due to the abundance of potential roosting, watering and feeding habitat around the proposed IBR area.

Tree Girdling

Tree girdling is proposed for the project at an adjacent location due to the 1.0 acres being cleared. A total of three (3) trees will be girdled within the proposed IBR area.

Staged Tree Removal

The proposed facility will only require the potential clearing of approximately 1.0 forested acres. During the construction operations associated with the proposed IBR, removal of trees >3 dbh will be limited to the extent practicable. However, the applicant does not intend to stage tree removal given the limited and fragmented amount of forested habitat to be lost (Exhibit B).

Minimization of disturbed areas

The operation will only disturb areas necessary for the facilitation of mining and will only result in the potential clearing of 1.0 forested acres within the know habitat area (Exhibit B).

Long Term Habitat Measures

Appropriate Herbaceous Ground Cover

Reestablishment of appropriate herbaceous ground cover species within the proposed IBR area is important to ensure erosion control while preventing competition with planted trees. The applicant will use herbaceous species or other species which have proven to be effective in controlling erosion while minimizing competition with growing seedlings for nutrients and sunlight. Table 1 lists the herbaceous ground cover mix for woody planting areas.

Table 1 - Herbaceous Wildlife Area and Woody Wildlife Areas (Cool Season Seed Mix Augmented with Warm Season Species)

Plant Species*	Seeding Rate PLS	Method of Application
Redtop	10 lbs/acre	Broadcast
Partridge Pea	5 lbs/acre	Broadcast
Orchard Grass	10 lbs/acre	Broadcast
Indian Grass	2 lbs/acre	Broadcast
Spring Oats (Spring Seeding)	50 lbs/acre	Broadcast
Winter Wheat (Fall Seeding)	40 lbs/acre	Broadcast
Much (Straw or Mixed Hay)	2 tons/acre	Broadcast

* Some of the above species area non-native. Although they are non-native, their use in grass establishment is necessary to achieve the desired post mining land use. The oats and wheat are easy and fast to establish and provide temporary erosion control. The oats and wheat are annuals that are not persistent and will be replaced by the native grasses.

Travel Corridors

No travel corridors are proposed for planting at this time. However, the forested areas affected by the proposed IBR are largely segmented.

Tree Species Selection and Performance Criteria

The PEP guidelines provide a list of tree species that should be used for Indiana bat habitat. This list is included below (Table 2). The reforestation area will include a minimum of six different species from the list. In particular, four of those species must be those identified as "exfoliating bark species". At the request of the IDNR, ash species (Fraxinus sp.) will not be planted as part of the reforestation. The exfoliating bark species must equal at least 40 percent of the minimum stems per acre. Since a total of 1.0 acres of forested habitat exists within the project, a minimum of 0.7 acres (70%) will be reforested with an appropriate mix of the species below.

Table 2 - Tree Species Appropriate for Establishing Indiana Bat Habitat

Exfoliating Bark Species	
Acer. saccharinum	Suger Maple
Carya cordiformis	Bitternut Hickory
Carya glabra	Pignut Hickory
Carya laciniosa	Shellbark Hickory
Carya ovate	Shagbark Hickory
Carya. tomentosa	Mockernut Hickory
Fraximus americana	White Ash
Fraximus pennsylvania	Green Ash
Oxydendron arboreum	Sourwood
Pinus echinata	Shortleaf Pine
Populus detloides	Cottonwood
Quercus. alba	White Oak
Quercus coccinea	Scarlet Oak
Quercus falcate	Southern Red Oak
Quercus imbricaria	Shingle Oak
Quercus prinus	Chestnut Oak
Quercus rubra	Northern Red Oak
Quercus stellata	Post Oak
Quercus velutina	Black Oak
Sassafras albidum	Sassafras
Ulmus americana	American Elm
Ulmus rubra	Slippery Elm
Nitrogen Fixing Trees	
Cercis Canadensis	Redbud
Robinia pseudoacacia	Black Locust
Other Trees	
Cornus florida	Flowering Dogwood
Diospyros virginiana	Persimmon
Morus rubra	Red Mulberry
Prunus serotina	Wild Black Cherry

Watering Areas

The intermittent stream segments that fall within the proposed IBR area will be bored underneath to minimize any potential impact to the stream segments. These stream segments and the multiple farm ponds, intermittent and perennial stream segments that exist within one mile of the proposed IBR area currently provide drinking areas; therefore, no water areas are proposed.

Other Long-Term Habitat Replacement: Reforestation

Currently there are 1.0 acres of forest habitat in the proposed IBR area that is located within known habitat which will potentially be disturbed. During construction activities associated with the proposed IBR, the applicant will limit tree removal within the forested segments of the known habitat area to the extent practicable. Additionally, according to the guidelines, the applicant must replant a minimum of 70% of the forested acres that is disturbed (USFWS 2013).

SUMMARY

The first objective of the PEP is to avoid the potential take of Indiana bats by avoiding or minimizing disturbance to known or potential habitat areas. While the applicant will not disturb any areas that are not critical to the facilitation of mining, there are 1.0 acres of known Indiana bat summer habitat that will potentially be cleared. This forested habitat will be cleared between the dates of October 15 and March 31 to effectively minimize adverse effects to the bat population, unless otherwise approved by the USFWS and IDNR. However, Williamson Energy, LLC reserves the right to consult with the USFWS and IDNR to explore other options, which may allow them to clear outside these dates, if necessary.

The second objective of the PEP is to minimize the potential take of Indiana bats by providing short-term habitat measures. The forested habitat cleared during mining operations will be supplemented in the short-term by girdling trees. There are also large amounts of forested habitat adjacent to the project area to provide additional roosting/foraging habitat for any displaced bats.

The third objective of the PEP is to provide long-term habitat measures for the Indiana bats in the post-mine reclamation plan. The applicant will provide long-term habitat post-mining by planting appropriate herbaceous ground cover, and reforesting the area. These measures will regenerate 70% of the potential summer bat habitat that existed on the project prior to disturbance.

Given the minimization efforts to be used and the long-term habitat improvement post-mining, the Indiana bat populations should not be affected by the proposed project. Additionally, the Indiana Bat Incidental Take Table for the project has been included within Appendix A of this document.

APPENDIX A

INDIANA BAT INCIDENTAL TAKE TABLE

Type and amount of incidental take resulting from SMCRA permits issued by the Ill. Dept. of Natural Resources, Mines & Minerals Division, Land Reclamation Division for the 2018 year reporting period.

Permit No. [c]	Forest Habitat [d] (# acres)			Roost Trees [e] (# trees)		Hibernacula [f] (# hibernacula)	Individual Bats [g] (# bats)	Maternity Colonies [h] (# colonies)
	Known	Potential	Proposed PMLU [i]	Known	Potential			
	1.0	0	0.7 (minimum)	NA	0	0	NA	NA
Annual Totals:	1.0	0	0.7 (minimum)	NA	0	0	NA	NA

[a] Enter the name of the RA that compiled the data for the table in place of "[RA]".
[b] Enter the year or other period of time for which the table was prepared in place of "[Year or reporting period]".
[c] Enter the permit number for all permits (including amendments and revisions) where Indiana bat incidental take was expected and used based on known occurrence or when Indiana bat presence is assumed. Additional rows should be added to the table as necessary to include all permits where incidental take occurred in a given year.
[d] Enter the number of acres of known and/or potential habitat that will be cleared, removed, or destroyed by the permitted action. Potential habitat (e.g., assumed habitat) and known habitat must be accounted for separately in the table. Most permits will have at least one acreage entry for Forest Habitat and some permits may have entries for both. Indeterminable entries should be marked as "NA" in the table.
[e] Enter the number of known and/or potential roost trees that will be removed by the permitted action. Potential roost trees and known roost trees must be accounted for separately in the table. Indeterminable entries should be marked as N/A."
[f] Enter the number of known hibernacula that will be impacted (e.g., changes in air flow, etc.) or destroyed (e.g., mined-through or entrances closed). Indeterminable entries should be marked as "Unknown" in the table.
[g] Enter the number of individual Indiana bats that were adversely affected by the permitted mining activity. For most permits, and especially those permits where Indiana bat presence was assumed, this number will not be known, because sufficient demographic data is unavailable. If no specific information or data is available regarding the number of Indiana bats that were adversely affected, this entry should be marked as "NA", which will mean that the number of individuals was indeterminable.
[h] Enter the number of maternity colonies that were adversely affected by the permitted mining activity. For most permits, and especially those permits where Indiana bat presence was assumed, this number will not be known because sufficient demographic data was unavailable. If no specific information or data is available regarding the number of Indiana bat maternity colonies that were adversely affected, this entry should be marked as "NA", which will mean that the number of maternity colonies was indeterminable.
[i] Enter the acreage of the proposed Post Mining Forest land use.

Chuck-Wills-Widow Nesting Habitat Assessment

North District Shaft IBR Site

Pond Creek Mine

Williamson County, IL

Prepared for:

Williamson Energy, LLC

Prepared by:

William O'Leary, M.S.

HMG Engineers, Inc.

1032 N. 6th Street

Murphysboro, Illinois 62966

January 2019

INTRODUCTION

HMG Engineers, Inc. (HMG) was contacted by Williamson Energy, LLC seeking assistance in assessing the likelihood of the presence of Chuck-Wills-Widow nesting habitat associated with a corridor and shaft site located in Williamson County 4 miles south of Thompsonville, IL. The site includes a corridor 2 miles long and 50 feet wide and also a trapezoidal shaped tract 4.4 acres on the east end (Figure 1).

Williamson Energy, LLC informed HMG of a concern regarding Chuck-Wills-Widows (*Caprimulgus carolinensis)*, a listed (threatened) bird species in Illinois. Chuck-Wills-Widows reportedly nest on the ground among dead leaves, pine needles, or bare dirt in dense thickets near openings. State biologists were wanting more information regarding the liklihood that Chuck-Wills-Widow nesting habitat occurs in the proposed IBR area.

METHODS

The entire proposed IBR area including both the corridor and the 4.4 acre tract were visually inspected. Habitat features including vegetation composition were noted and compared with the reported preferred nesting habitat for the Chuck-Wills-Widow.

RESULTS

The most prevalent vegetation cover in the proposed IBR area is soy bean stubble. The next most prevalent is cool season grassland. Neither of these vegetation regimes has any woody vegetation. These two cover types account for approximately 95% of the proposed IBR area. The remaining 5 % includes stream channels with narrow wooded margins. These margins include thick understory vegetation composed largely of Japanese honeysuckle, multiflora rose, and blackberry. This habitat type is not the type as described for nesting Chuck-Wills-Widow. It is also noted that in areas where the corridor will be crossing the streams, the company plans to bore under the stream corridors and not disturb the surface.

CONCLUSIONS

The typical nesting habitat of the Chuck-Wills-Widow, namely bare dirt, leaf, or pine needle cover in dense thickets near openings is not present on the proposed IBR area. Given the lack of habitat and the company's plans not to disturb the surface around stream corridors, impacts to the Chuck-Wills-Widow is unlikely.

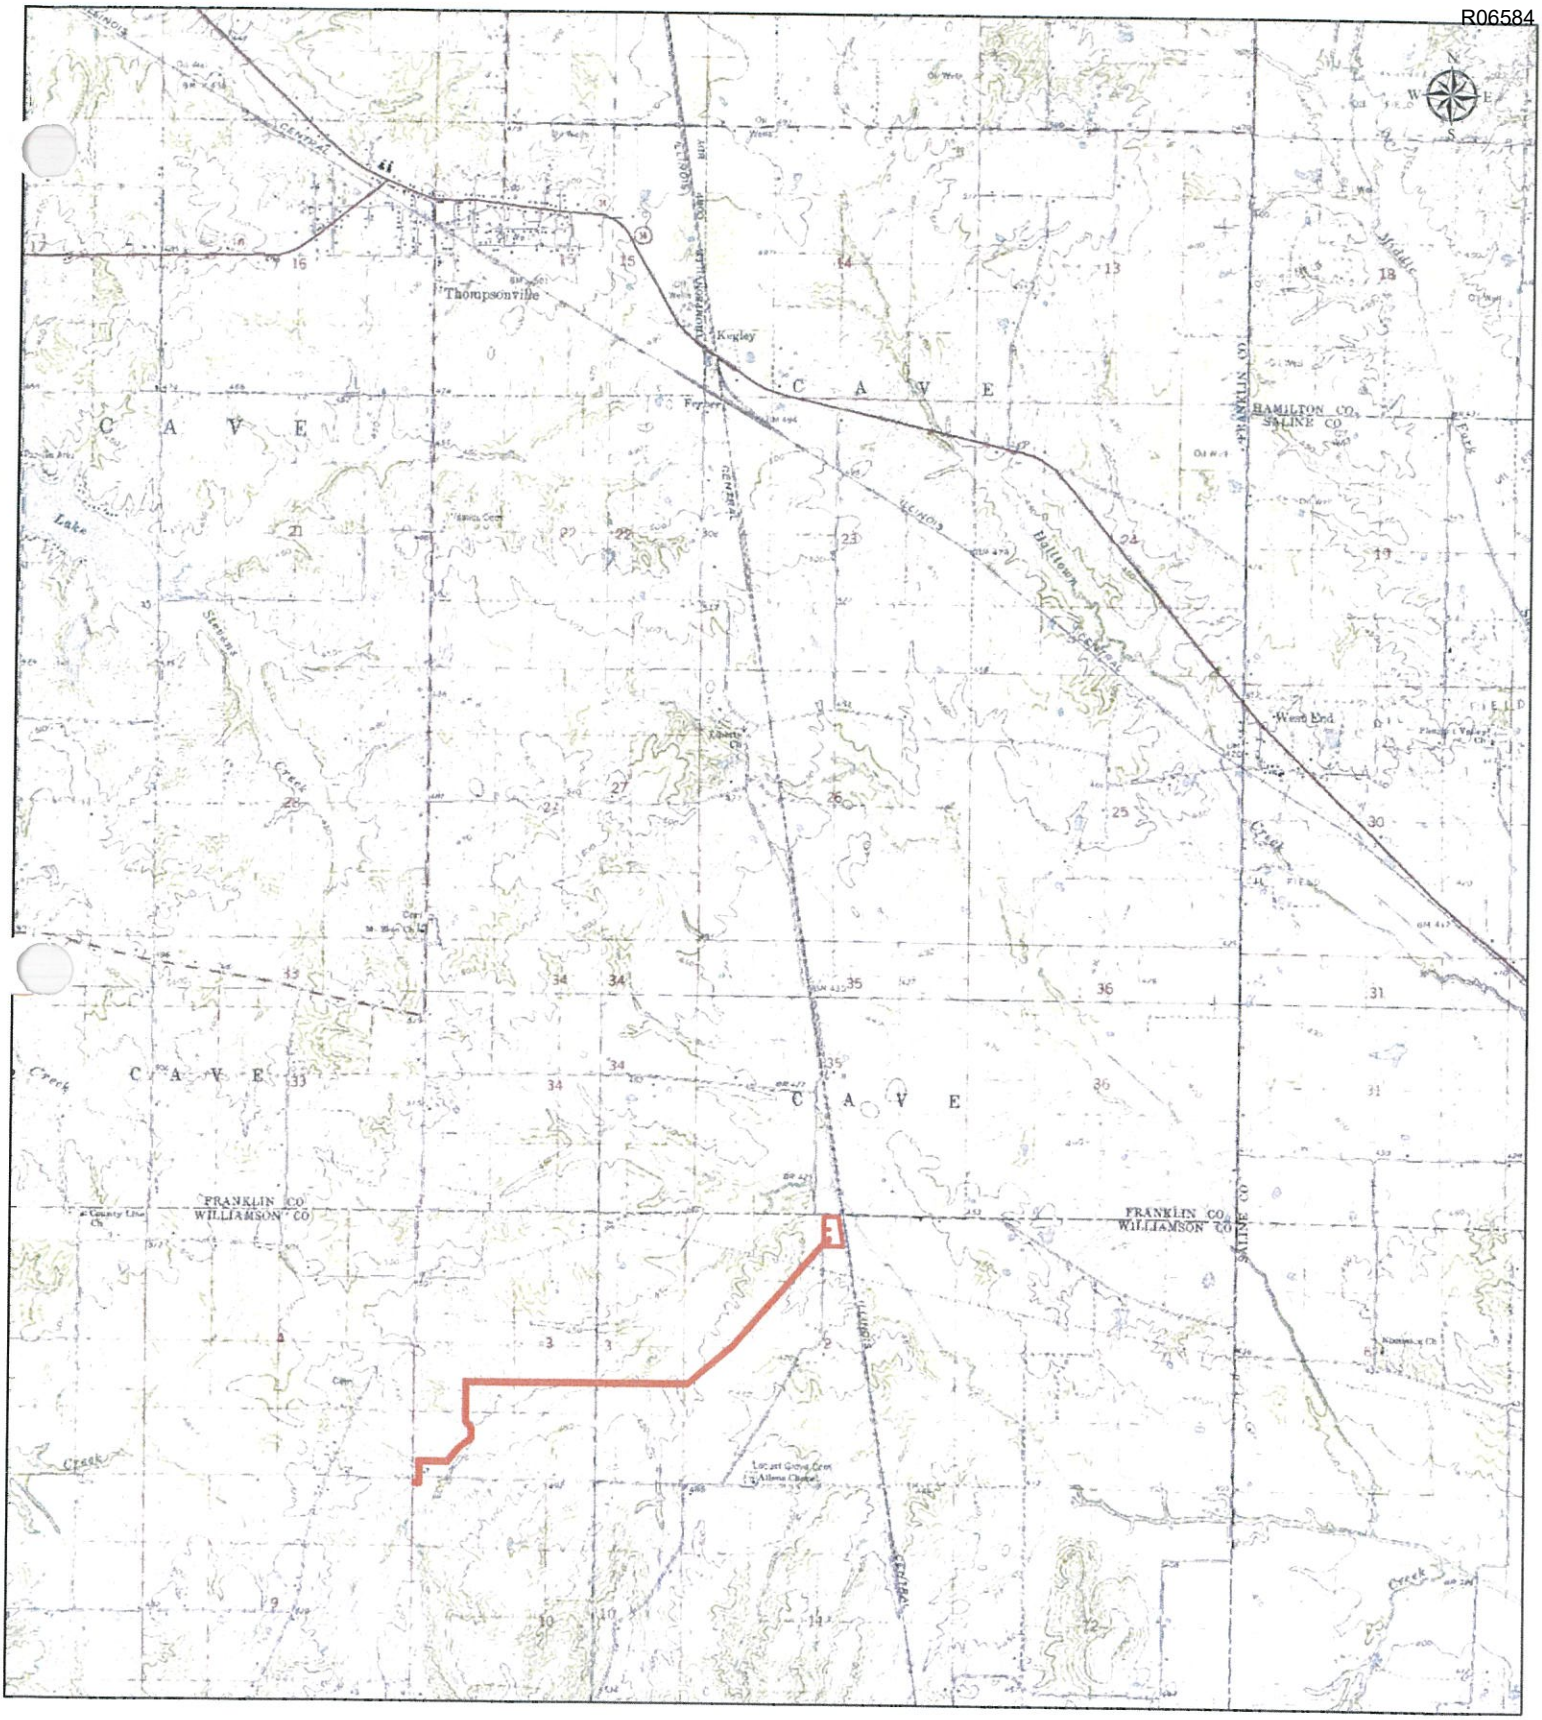

Figure 1. Site location south of Thompsonville, IL.

PART 8: Cropland Capability Soils

8.1 High Capability Post-Mining Land Use.

8.1.1 Discuss planned final graded slopes of the replaced high capability areas. Include a discussion of slope lengths and slope steepness. **[1825.14(c)]**

All slopes will be graded to original contour.

8.1.2 Discuss planned replacement of soil horizons with respect to horizon thickness and total root zone (mention thickness of each horizon).

Topsoil will be redistributed evening across the site. Topsoil will be replaced to ~7-14 inches thick. Subsoil will be replaced to pre-mining condition.

a) The topsoil replacement thickness will be __ inches. **[1823.14]**

b) The root medium replacement thickness will be ___ inches **[1825.14**

8.1.3 Discuss how excessive compaction will be avoided. If excessive compaction cannot be avoided, provided a compaction alleviation plan. **[1825.14(e)]**

Minimal passes will be required to distribute topsoil. Therefore, compaction will be minimized.

8.1.4 Discuss how wind and water erosion will be minimized. Include discussions of construction, timing, seeding, seeding equipment to be used and erosion control structures to be used. **[1825.14(f)]**

Topsoil will be removed and redistributed during dry ground conditions.

8.1.5 Discuss the management of these areas including crop rotations, green manuring, and levels of fertility. **[1780.18(b)/1784.13(b)]**

Soil will be sampled at the time of starting crop rotation and appropriate fertilize will be added.

8.1.6 Discuss planned timing of the construction and removal, if applicable, of the erosion control structures. If erosion control design and construction is to be coordinated with the Natural Resources Conservation Service, please discuss. **[1825.14(f)]**

Site will be reclaimed within one year after the plugging of the boreholes and shaft.

8.1.7 Discuss the management of positive surface drainage with respect to differential settling. **[1825.14]**

Topsoil will be distributed evening across the site and will be graded back to original contours.

8.1.8 Discuss the methods of mulching to be used with respect to seasonal variation. **[1780.18(b)/1784.13(b)]**

Immediately after topsoil replacement, the topsoil will be seeded with a quick-growing nurse crop such as wheat or oats. The area will then be planted to row crops during the next row-cropping season.

8.1.9 If the post-mining acreage of high capability land is proposed to be reduced for any individual landowner in the permit area other than the applicant, provide a letter of consultation and response, if received, from those landowners.**[1780.23 (b) and (c)/1784.15(b) and (c)]**

N/A

8.2 Pre-Mining Prime Farmland Soils. The following information must be given, in order for the regulatory authority to evaluate whether the applicant has the technological capability to restore mined prime farmland to equivalent or greater productivity within a reasonable time. The applicant shall use the Soils Map and Soil Information Chart provided in Part 2.3.9 of the application. The applicant may also choose to include references to the Custom Soil Survey referenced in Part 2.3.

8.2.1 Pre-Mining Soil Profile. The applicant must include a description of the original undisturbed soil profile. The description must discuss the following parameters for each soil horizon that collectively constitutes the root zone unless specific depths or horizons are requested. **[1785.17(c)]**

See Soil Report

8.2.1.1 Depth and thickness of each horizon (range and average).

Topsoil is 7-14 inches thick.

8.2.1.2 Moist bulk density of each major horizon (use USDA approved method or reference).

8.2.1.3 Present pH and state of fertility (P&K) (A horizon only).

8.2.1.4 Texture analysis of each horizon (use USDA texture classification).

8.2.1.5 If B&C horizons are proposed to be mixed, submit evidence to support proposal.

8.2.2 Pre-Mining Soil Samples. Soil samples must be taken on the permit site to obtain the material necessary for the above-required information. Sample site locations must be indicated on the soils map. NRCS established values on bulk density may be used in lieu of field investigation. Use of soil information from related permits may be considered if they are representative of the proposed application area. Underground mine surface disturbances which are not exempt from prime farmland restoration requirements and which propose to leave the subsoil in place, may submit the information provided in a Custom Soil Survey except that onsite samples must be taken to provide the information required for A horizon thickness.

Soil description is as found in the County Soil Survey. No sample was taken.

8.2.2.1 The applicant shall discuss the history of previous productivity and cropping practices on the prime farmland, if known, or may reference the productivity information from Bulletin 811, provided in response to Part 2.3.1. **[1785.17(c)(4)]**

8.2.2.2 The applicant shall provide references or copies of available agricultural school studies, company data or other scientific data for comparable areas to demonstrate that the applicant, using their proposed method of reclamation will achieve, within a reasonable time, equivalent or higher levels of yield after mining as existed before mining. **[1785.17(c)(3)]**

8.3 Prime Farmland Soil Handling.

8.3.1 Describe the equipment to be used in the removal and replacement of each soil horizon. **[1785.17(c)(2)]**

Topsoil will be picked up and stockpiled by small scrapers and redistributed similarly.

8.3.2 Discuss how excessive compaction will be avoided. **[1823.14(c)].** If excessive compaction cannot be avoided, provide a compaction alleviation plan. **[1823.14(d)]**

Minimal passes will be required to distribute topsoil. Therefore, compaction will be minimized.

8.3.3 Discuss the timing of the removal and replacement of the horizons with regards to seasons, weather, and regulatory authority testing approval. **[1823.12, 1823.14(b) and (e)]**

Topsoil will be removed and redistributed during dry ground conditions. Topsoil stockpiles will remain in place for at least 5 years prior to be redistributed over the site.

8.3.4 Discuss how mining operation will impact prime farmlands where the B and/or C horizons are to be left in place and how these soils layers will be protected or restored to their original capability **[1823.12]**

B and C horizons will be deep-ripped if deemed necessary.

8.3.5 Discuss how the prime farmland will be identified in the field in order to avoid contamination with non-prime farmland soils. **[1823.12]**

Prime farmland will be identified according to the Soils map.

8.3.6 Are prime farmland topsoil or subsoils to be mixed with non-prime soils?

☐ YES ☒ NO

If YES, provide evidence showing how combining will not affect the permittee's ability to restore the pre-mining prime farmland productivity. **[1823.14(e)]**

8.3.7 Discuss whether stockpiles will be used or direct placement will be used. If stockpiling will be used, discuss. Locate on Operations Map. **[1823.13]**

Stockpiles will be used. See Operations Map.

8.3.8 Discuss length of time stockpiles are to be in place. **[1823.13]**

Stockpiles will be in place for approximately six years.

8.3.9 Discuss how prime land stockpiles are to be identified in the field in terms of different horizons and prime versus non-prime farmland piles. **[1823.13]**

The prime farmland topsoils will be in the stockpiles on IBR Site.

8.3.10 Discuss any intermittent stockpile relocations as to how, when and why. **[1823.13]**

N/A

8.3.11 Discuss temporary and/or permanent seeding and revegetation to prevent wind and water erosion. **[1823.13]**

Immediately after topsoil replacement, the topsoil will be seeded with a quick-growing nurse crop such as wheat or oats. The area will then be planted to row crops during the next row-cropping season.

8.3.12 Discuss how contamination by other soil horizons or by fly rock will be prevented. **[1823.13]**

Temporary subsoil pile from drilling pit construction and shaft development material will be kept in separate stockpiles from topsoil stockpiles throughout the remainder of the IBR site, thus preventing contamination of the topsoil.

8.4 Prime Farmland Reclamation Plan and Map.

8.4.1 Locate on the Post-Mining Land Use/Capability Reclamation Map the location of the replaced prime farmland. Give acreage totals in Table 11.1. If the post mining acreage of prime farmland is proposed to be reduced for any individual landowner in the permit area other than the applicant, provide a letter of consent from those landowners. **[1785.17 (e)(5)]**

See Pre and Post Mine Land Use Map.

8.4.2 Discuss how wind and water erosion will be minimized. Include discussions of construction, timing, seeding, seeding equipment to be involved and erosion control structures to be used. **[1823.14(e)]**

Erosion will be minimized by using nurse crops and normal farming practices.

8.4.3 Discuss the management of these areas including crop rotations, green manuring, levels of fertility and personnel responsible for management. Discuss the fertility management. Also, discuss the management in relation to any land leveling needed. **[1823.14(f)]**

The area will be subject to crop rotation (normally corn and soybeans) along with the rest of the adjacent crop field.

8.4.4 Discuss the timing of the construction of the erosion control structures and the criteria used to determine the need for and construction design of erosion control systems. If erosion control design and construction is to be coordinated with the Natural Resources Conservation Service, please discuss. **[1823.14(g)]**

N/A

8.4.5 Discuss the final graded slopes of the replaced prime farmland areas. Include a discussion of slope lengths. **[1816.102(a)/1817.102(a); 1823.14]**

Slopes will be reconstructed to the pre-mining slopes.

8.4.6 Discuss the management of positive surface drainage with respect to differential settling. **[1823.14]**

N/A as the area is small.

8.4.7 Discuss the replacement of soil horizons with respect to horizon thickness and the total root zone.

Topsoil will be replaced to ~7-14 inches thick. Subsoil will be replaced to pre-mining condition.

a) The topsoil replacement thickness will be ___ inches. **[1823.14(e)]**

b) The root medium replacement thickness will be ___ inches **[1823.14(a)(1)]**

8.4.8 Include any other relevant information in support of a possible finding by the regulatory authority that the operator has the technological capability to restore prime farmland areas, within a reasonable time, to equivalent or higher levels of yield, as determined by the regulatory authority. **[1785.17(e)]**

N/A

PART 9: Reclamation Plan

9.1 Post-Mining Land Use.

9.1.1 Provide a Post-Mining Land Use/Capability Reclamation Map as required by the General Mapping Requirements.

Provide a detailed description of proposed post-mining land uses and capabilities employing land use and capability categories listed in Table 9.1: Post-Mining Land Use Capability. Complete acreage figures for each post-mining land use proposed and designate its capability classification. This information shall be broken down by landowner in addition to the composite land uses and capabilities. In addition, the applicant shall complete Table 9.1 – GRAND TOTAL: Post-Mining Land Use Capability Summary. This table is a compilation of all Post-Mining Land Use Capability tables filled out for each individual land owner.

For IBR applications complete Table 9.1: Post-Mining Land Use Capability for each landowner and update Table 9.1 – GRAND TOTAL Post-Mining Land Use Capability Summary.

*NOTE: For Post-Mining Land Use change IPRs and Significant Revisions see Guidance Document TGD#4 and **complete ONLY** Tables 9.1.1 and 9.1.2*

For surface mines, acreage figures for post-mining land use must differentiate between mined and surface disturbance areas based on the mining line used in Part 2.2.3 of the application. **[1777.11(a)(3)]**

The pre-mining land use of the proposed permit area is Cropland, Industrial, Fish and Wildlife (woody and herbaceous) and Residential. Stockpile areas will be revegetated after the initial disturbance with a cover crop to minimize erosion. The entire disturbed area will be graded for positive drainage.
During the reclamation work, topsoil removed and stored during initial site construction, will be redistributed and graded over the exposed subsoil. The topsoil will be limed, fertilized, prepared and seeded in accordance with the following schedule: If the site is reclaimed in the spring season but before normal crop planting, the disturbed area will be straw mulched at 1 ½ tons/acre and seeded with a cover crop of spring oats to protect the soil until the primary planting season is under way. The IBR areas will be returned to their original land use. Where applicable, the IBR areas will then be planted to row crops as determined by the property owner or tenant farmer. If the site is reclaimed in the late fall season, the site will be seeded to a temporary cover crop of winter wheat (+/-) 1.5 Bu./Ac., and the site fertilized, and then mulched at two tons/acre, to protect the soil over the winter season.

Thereafter, planting of agricultural crops will occur during the first available crop planting period after proper seedbed preparation has been achieved.

9.1.2 Where a post-mining land use different from a pre-mining land use is proposed, provide:

a) A discussion explaining the consideration which has been given to making all the proposed surface mining activities consistent with surface owner plans and applicable state and local land use plans and programs. **[1780.23/1784.15]**

N/A

b) A copy of the comments from the owner of the surface concerning the proposed land use of the proposed permit area and from the state or local government agencies which would have to initiate, implement, approve or authorize the proposed uses of the land following reclamation. In the event the surface land owner does not provide comments; the applicant shall provide proof of mailing to the surface owner soliciting comments to show that a good faith effort was made to provide the surface owner with the opportunity to comment. **[1780.23/1784.15]**

9.1.3 Provide a detailed timetable for completion for each major step in the proposed reclamation plan. The time table shall include for: **[1780.18(b)(1)/1784.13(b)(1)]**

9.1.3.1 Surface mine mining areas: **NOT APPLICABLE**

9.1.3.1.1 The timing of the rough grading, root medium, and topsoil during active mining to meet the standards of Section 1816.101(b)(1).

Note: If the plan proposes to reduce the time frames or distance to less than that allowed, it must be stated here and in the reclamation cost estimate section.

9.1.3.1.2 The timing of the planting of initial and permanent vegetation after final grading as it relates to the proposed land use.

9.1.3.2 Surface and underground mines, support areas, including refuse disposal areas:

9.1.3.2.1 The timing of the rough grading, root medium, and topsoil during active mining to meet the standards of Section 1816.101/1817.101

All grading will be completed within 12 months of cessation of active use.

9.1.3.2.2 The timing of the planting of initial and permanent vegetation after final grading as it relates to the proposed land use.

Temporary seeding will take place immediately after topsoil replacement. Cropping will be initiated with the next normal cropping season.

9.1.3.2.3 Any other reclamation proposed activities during the mining to minimize reclamation liability and its associated costs.

N/A

9.2 Backfilling and Grading.

9.2.1 Describe the methods to be used for backfilling and grading the proposed permit area, including soil stabilization and compaction practices in accordance with 62 Ill. Adm. Codes 1816.102/1817.102 through 1816.107/1817.107.

See responses above.

9.2.1.1 Provide appropriate cross-sections to illustrate and define the proposed post-mining configuration of the permit area. These cross-sections shall be referenced on the Post-Mining Land Use/Capability Reclamation Map **[1780.18(b)(3)/1784.13(b)(3)]**

The area will be restored to pre-mining conditions.

9.2.2 To achieve the proposed post-mining configuration including cover requirements for refuse disposal areas, the Applicant shall provide soil balancing calculations to ensure an adequate quantity of material is available. These calculations shall include soil shrinkage and swell factors consistent with sound engineering practices as approved by the Department. **[1780.23(b)(1)/1784.15(b)(1)]**

NOTE: This information may be supplied as Attachment 9.2.2.

N/A

9.2.2.1 Are borrow areas being proposed to provide a sufficient amount of material to achieve the post-mining configuration?

☐ YES ☒ NO

If YES, delineate the locations of the borrow areas on the Post-Mining Land Use/Capability Reclamation Map and complete the appropriate items included in Part 5.0: Drainage Control.

9.2.3 For surface mines, does the proposed surface coal mining and reclamation operation require disposal of excess spoil?

☐ YES ☐ NO ☒ N/A

If YES, provide the following:

9.2.3.1 Each application shall contain descriptions, including appropriate maps and cross-section drawings, of the proposed disposal site and design of the spoil disposal structures according to **62 Ill. Adm. Code 1816.71 through 1816.74**. These plans shall describe the geotechnical investigation, design, construction, operation, maintenance, and removal, if appropriate, of the site and structures. **[1780.35(a)]**

9.2.3.2 Each application shall contain the results of a geotechnical investigation of the proposed disposal site that include the information outlined in **62 Ill. Adm. Code 1780.35(b)**.

9.2.3.3 If, under 62 Ill. Adm. Code 1816.71(l), rocktoe buttresses or key-way cuts are required, the application shall include information as outlined in **62 Ill. Adm. 1780.35(c).**

If NO, will the spoil and other waste materials available from the entire permit area be insufficient to restore the disturbed area to its approximate original contour as addressed in **62 Ill. Adm. Code 1816.104**?

9.2.4 Describe the timing in which all grading and the construction and removal or renovation of water and erosion control structures will be complete and the sequence for accomplishing the work in relation to seasonal weather conditions. **[1780.25(a)/1784.16(a)]**

9.3 Shaft, Slope and Borehole Sealing. Each shaft, drift, adit, tunnel, exploratory hole, entryway, or other opening to the surface from underground shall be capped, sealed, backfilled, or otherwise properly managed, as required by the Department, in accordance with **62 Ill. Adm. Code Section 1816.13/1817.13**, Operator Memorandum No. 00-01, Operator Memorandum No. 2015-02, Operator Memorandum No. 17-09, consistent with **30 CFR 75.1711**, and provide the following: **[1816.15/1817.15]**

9.3.1 Temporary Seals. In the event the mine is temporarily closed or abandoned, provide information on temporary seals to be constructed for prevention of entry to all mine openings. Include an appropriate timetable for construction of these seals. **[1816.14/1817.14]**

All openings will be covered with a perforated metal cap to prevent access to the mine workings by people, livestock, fish and wildlife, and machinery. The surface casing will be high enough above ground to prevent drainage from entering hole and to keep acid or other toxic drainage from entering ground water or surface water.

9.3.2 Permanent Sealing Plans.

9.3.2.1 Provide a description, including appropriate cross-sections and plan views, of the measures to be used to seal or manage mine openings, and to plug, case, or manage exploration holes, other boreholes, wells, and other openings within the proposed permit area, in accordance with **62 Ill. Adm. Code 1816.13/1817.13 through 1816.15/1817.15** and shall reflect the following concerns:

- Completion using a combination of backfilling and sealing.
- The type and grade of materials to be used for backfilling and the intervals in which they will be used.
- Sections of casing, entry linings, or collar to be demolished.
- Design of hydraulic seals, including construction material, reinforcing, method of placement, design thickness, and method of anchoring.
- Design of gas ventilation piping that will be incorporated in seal design.
- Finished grading at land surface.
- A description of a permanent monument marker identifying the seal as a mine opening.
- A description of the location of all sealed shafts, slopes, or other entrance tunnels to be recorded with the appropriate recorder of deeds. This is in Operator Memorandum 00-01 as a RECOMMENDATION.

9.3.2.2 For any deviation from the established guidelines for sealing, backfilling, and capping, provide an engineering and hydrologic justification. **[1780.18(b)(8)/1784.13(b)(8);** Operator Memorandum 00-01**;** Operator Memorandum 17-09**]**

The shaft and any boreholes will be plugged from top to bottom according to all MSHA and IDNR regulatory standards after they are no longer needed. Any steel casings will be cut off five feet below natural soil level and the void filled with subsoil, and then covered with topsoil, mulched and seeded. Shaft hole will be filled with stockpile shaft material/rip rap and have at least one foot of concrete reinforced cap. All utility

boreholes will be plugged and filled with neat cement. The shaft will be surveyed and filed in the Williamson County Courthouse as required by Operation Memorandum 00-01.

9.4 Abandonment and Closure of Refuse Disposal Areas. NOT APPLICABLE

9.4.1 Describe proposed reclamation for all coal refuse disposal areas in accordance with **62 Ill Adm. Code 1780.18(b)/1784.13(b)**. The proposed reclamation plan shall include the following information:

- Timing of final coverage
- Cross sections of final cover and configuration.
- Type and amount of material proposed to be used for cover, including any coarse refuse used to provide a base over slurry prior to soil cover.
- Construction details of cover and caps, including the proposed soil depths and long-term groundwater protection measures.
- Design details of all proposed downdrain, terraces, benches or any other permanent surface drainage structure.
- Relationship of the refuse disposal area to the post-mining land use.
- Any plans of access roads and other use related facilities.

NOTE: This information shall be provided as Attachment 9.4.1.

9.5 Bond Estimation.

9.5.1 Provide a detailed estimate of the cost of reclamation for the proposed operation required to be covered by a performance bond. Provide calculations and/or drawings, cross sections, etc., to support the reclamation cost estimate. Provide extra calculations for multiple pits or refuse areas. Complete the appropriate Table 9.5 sections. At a minimum, delineate all buildings, reinforced concrete structures and pavement/gravel areas to be reclaimed on the Bond Calculation Map. **[1780.18(b)(2)/1784.13(b)(2); 1800.14]**

The estimate of the cost of reclamation shall be based on:

- Bond Calculation Acreage *(Table 9.5.1.1)*
- Surface Mining Soil Reclamation *(Table 9.5.1.2)*
- Interior Grading *((Table 9.5.1.3)*
- Boxcut Outslope Grading *(Table 9.5.1.4)*
- Incline/Highwall Reclamation *(Table 9.5.1.5)*
- Gob Pile/Gob Impounding Structure/Slurry Reclamation *(Table 9.5.1.6)*
- Incised Slurry Pond or Refuse Reclamation *(Table 9.5.1.7)*
- Support Area Reclamation *(Table 9.5.1.8)*
- Building Reclamation *(Table 9.5.1.9)*
- Reinforced Concrete Structure Reclamation *(Table 9.5.1.10)*
- Pavement/Gravel Area Reclamation *(Table 9.5.1.11)*
- Borehole/Monitoring Well Backfilling *(Table 9.5.1.12)*
- Shaft/Slope Backfilling *(Table 9.5.1.13)*
- Public Road Reclamation *(Table 9.5.1.14)*

NOTE: If incremental bonding is requested, provide a Bond Increment Map as required by the General Mapping Requirements of the Instructions and complete all appropriate Tables of this part.

9.5.2 If applicable, provide the location of buried volatile material storage facilities on the Bond Calculation Map and list the size of each facility. **[1800.14]**

				COST:	**$0.00**	

PART 10: Revegetation *(Excluding Cropland and Streams)*

10.1 Revegetation of Drainage Control Ditches. Describe plans for revegetation of ditches associated with construction of roads, conveyer systems, rail systems, and associated with controlling overland flow drainage. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5; 1816.43/1817.43; 1816.45/1817.45; 1816.111/1817.111; 1816.114/1817.114]**

10.1.1 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114; 1780.18(b)(5)/1784.13(b)(5)]**

N/A

10.1.2 Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent or permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

N/A

10.1.3 Provide a semi-permanent or permanent grass and forbs species list that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. **[1816.111 (a) and (b)/1817.111 (a) and (b); 1816.111(c)/1817.111(c)]**

N/A

10.1.4 Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent or permanent grass and forbs list. **[1780.18(b)(5)/1784.13(b)(5)]**

N/A

10.2 Revegetation of Faces of Embankments. Describe plans for revegetation of faces of embankments of sediment ponds and other water structures. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5); 1816.46(b)(1) and (4)/1817.46(b)(1) and (4); 1816.49(a)(8)/1817.49(a)(8); 1816.111/1817.111]**

10.2.1 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114; 1780.18(b)(5)/1784.13(b)(5)]**

N/A – No embankment sediment ponds are proposed by this IBR

10.2.2 Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent or permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

N/A

10.2.3 Provide a semi-permanent or permanent grass and forbs species list that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land

use, and are required to control erosion. **[1816.111 (a) and (b)/1817.111 (a) and (b); 1816.111(c)/1817.111(c)]**

N/A

10.2.4 Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent or permanent grass and forbs list. **[1780.18(b)(5)/1784.13(b)(5)]**

N/A

10.3 Revegetation of Soil Stockpiles. Describe plans for revegetation of subsoil and topsoil stockpiles. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5; 1816.22(c)(2)(C)/1817.22(c)(2)(C); 1816.111/1817.111]**

10.3.1 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/1817.114; 1780.18(b)(5)/1784.13(b)(5)]**

Spring Oats(Spring Seeding) 50 lbs./acre and Winter Wheat (Fall Seeding) 40 lbs./acre are proposed as temporary cover crop , Ryegrass (annual) 20.0 lbs./acre, German Millet 20.0 lbs./acre, (Fall Planting), Ryegrass (perennial) 20.0 lbs./acre, 1.5 tons mulch/acre straw broadcast.

10.3.2 Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

Permanent vegetation will be planted during final reclamation.

10.3.3 Provide a semi-permanent grass and forbs species list that is capable of controlling erosion and capable of self-regeneration. If non-native species are proposed, provide adequate justification that the species are desirable and necessary to control erosion. **[1816.111 (a) and (b)/1817.111 (a) and (b); 1816.111(c)/1817.111(c)]**

See 10.3.1

10.3.4 Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent grass and forbs list. **[1780.18(b)(5)/1784.13(b)(5)]**

See 10.3.1.

10.4 Revegetation of Refuse Disposal Facilities. Describe plans for revegetation of refuse disposal facilities. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5); 1816.22(c)(2)(C)/1817.22(c)(2)(C); 1816.111/1817.111]**

10.4.1 Provide the proposed post-mining land use designation for refuse disposal facilities and a justification for the necessity of that land use. **[1780.23(b)/1784.15(b)]**

10.4.2 Describe proposed soil preparation and a soil testing plan related to reclamation and re-vegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

10.4.3 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114]**

10.4.4 Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

10.4.5 Provide a permanent grass and forbs species list that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. Specify if the proposed seed mix contains different species for the slopes and the top of the structure. Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5); 1816.111(a) and (b)/1817.111(a) and (b); 1816.111(a)(2)/1817.111(a)(2); 1816.97(g)/1817.97(g)]**

10.4.6 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-Mining Land Use success. Remedial actions may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]**

10.5 Pasture Reclamation Plan. Describe plans for reclamation and revegetation of Pasture. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5); 1816.111/1817.111; 1816.116/1817.116]**

10.5.1 Describe proposed soil preparation and a soil testing plan related to reclamation and re-vegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

10.5.2 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114]**

10.5.3 Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

10.5.4 Provide a permanent pasture grass species list, describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.13(b)(5)/1784.18(b)(5)]**

10.5.5 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-Mining Land Use success. Remedial actions may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]**

10.6 Fish and Wildlife-Herbaceous Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Herbaceous areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required:
[1780.18(b)(5)/1784.13(b)(5); 1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117]

10.6.1 Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

Topsoil will be redistributed evenly across the site.

10.6.2 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch.
[1816.111(c)/1817.111(c); 1816.114/0817.114]

Spring Oats(Spring Seeding) 50 lbs./acre and Winter Wheat (Fall Seeding) 40 lbs./acre are proposed as temporary cover crop, Redtop 10 lbs./acre, Perennial Ryegrass 5 lbs./acre, Orchard Grass 10 lbs./acre, White Dutch Clover 5 lbs./acre, Red Clover 8 lbs./acre, Partridge Pea 1 lb./acre. and 1.5 tons/acre of straw mulch broadcast.

10.6.3 Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

Planted during final reclamation.

10.6.4 Provide a permanent grass and forbs species list that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5); 1816.111(a) and (b)/1817.111(a) and (b); 1816.111(a)(2)/1817.111(a)(2); 1816.97(g)/1817.97(g)]**

See 10.6.2

10.6.5 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-mining land

use success. Remedial actions may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]**

Areas will be inspected routinely until 70% uniformed vegetative cover has been obtained over the disturbed area.

10.7 Fish and Wildlife-Woody Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Woody areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1780.18(b)(5)/1784.13(b)(5; 1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117;** OSM Directives TSR-16 Directive 931**]**

10.7.1 Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

10.7.2 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/0817.114]**

Redtop 10 lbs/acre, Partridge Pea 5 lbs/acre, Orchard Grass 10 lbs/acre, Indian Grass 2 lbs/acre, Spring Oats (Spring Seeding) 50 lbs/acre, Winter Wheat (Fall Seeding), 40 lbs/acre Mulch (Straw or Mixed Hay) 2 tons/acre Broadcast

10.7.3 Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

Tree will be planted after water line is no longer needed.

10.7.4 Provide a permanent herbaceous ground cover species list and a woody species list that is diverse, native, capable of controlling erosion, capable of self-regeneration, and that has growth habits compatible with woody species success. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5); 1816.111(a) and (b)/1817.111(a) and (b); 1816.111(a)(2)/1817.111(a)(2); 1816.97(g)/1817.97(g);** Operator Memorandum No. 2017-02**]**

Acer. saccharinum Suger Maple, Carya cordiformis Bitternut Hickory, Carya glabra Pignut Hickory, Carya laciniosa Shellbark Hickory, Carya ovate Shagbark Hickory, Carya. tomentosa Mockernut Hickory, Fraximus americana White Ash, Fraximus pennsylvania Green Ash, Oxydendron arboreum Sourwood, Pinus echinata Shortleaf Pine, Populus detloides Cottonwood, Quercus. alba White Oak, Quercus coccinea Scarlet Oak, Quercus falcate Southern Red Oak, Quercus imbricaria Shingle Oak, Quercus prinus Chestnut Oak, Quercus rubra Northern Red Oak, Quercus stellata Post Oak, Quercus velutina Black Oak, Sassafras albidum Sassafras, Ulmus americana American Elm, Ulmus rubra Slippery Elm, Cercis Canadensis Redbud, Robinia pseudoacacia Black Locust, Cornus florida Flowering Dogwood, Diospyros virginiana

Persimmon, Morus rubra Red Mulberry, Prunus serotina Wild Black Cherry

10.7.5 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-mining land use success. Remedial actions may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control.
[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]

During final reclamation, an attempted will be made to remove all invasive species through the use of cutting and herbicides. Vegetation will be routinely monitored after final planting to ensure the approved vegetative species are present.

10.8 Fish and Wildlife-Wetland Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Wetland areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. The following information is required: **[1701.5; 1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117; 1816.102(h)/1817.102(h);** OSM Directives System TSR-14 Directive 828**]**

10.8.1 Is the wetland a managed, engineered area that functions as part of a drainage control plan, a sediment control plan, or is not a fully incised wetland?

☐ YES ☐ NO

If NO, complete Part 10.8.2, If YES, the following information is required:

10.8.1.1 Describe how the soil type(s) in the proposed wetland area will support hydrophytic vegetation. If hydric soils are not present, describe how the area will function as a wetland without this wetland parameter. **[1701.5 Appendix A]**

10.8.1.2 Discuss the potential for the area to be inundated or saturated by surface or groundwater at a frequency to support hydrophytic vegetation on at least 30% of the surface acres of the wetland. **[1701.5 Appendix A]**

10.8.1.3 Provide a permanent wetland vegetation species list that is compatible with the Corp of Engineers Wetland Delineation Manual as described in the regulations. The species list must also be diverse, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion.
[1816.116(a)(5)(A)/1817.116(a)(5)(A); 1816.111 (a) and (b)/1817.111 (a) and (b); 1816.97(g)/1817.97(g)]

10.8.1.4 Provide a description of how the requirements for permanent impoundments will be met. **[1816.49(b)/1817.49(b)]**

10.8.2 Is the wetland a depression created by removal of soil for the purposes of a borrow area or enhancement of wildlife habitat and not an engineered portion of a drainage control plan or sediment control plan?

☐ YES ☐ NO

If YES, the following information is required:

10.8.2.1 Describe how the soil type(s) in the proposed will support hydrophytic vegetation. If hydric soils are not present, describe how the area will function as a wetland without this wetland parameter. **[1701.5 Appendix A]**

10.8.2.2 Discuss the potential for the area to be inundated or saturated by surface or groundwater at a frequency to support hydrophytic vegetation on at least 30% of the surface acres of the wetland. **[1701.5 Appendix A]**

10.8.2.3 Provide a permanent wetland vegetation species list that is compatible with the Corp of Engineers Wetland Delineation Manual as described in the regulations. The species list must also be diverse, capable of controlling erosion, and capable of self-regeneration. Adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. **[1816.116(a)(5)(A)/1817.116(a)(5)(A); 1816.111 (a) and (b)/1817.111 (a) and (b); 1816.97(g)/1817.97(g)]**

10.9 Fish and Wildlife-Water and/or Developed Water Resources Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Water and/or Developed Water Resources areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. The following information is required: **[1816.49(b)/1817.49(b); 1816.56/1817.56; 1816.97/1817.97]**

10.9.1 For Developed Water Resources, provide a description of the future quality of the impounded water including the following: assurance that it will meet water quality standards, it will not degrade the quality of the receiving water, and it will not diminish the quality/quantity of water utilized by adjacent land owners. **[1816.49(b)/1817.49(b)]**

10.9.2 For Fish and Wildlife - Water, discuss how the area will support and enhance fish and wildlife habitat, describe the future water quality, and describe how the water level will be capable of supporting the intended use. **[1816.49(b)/1817.49(b); 1816.97/1817.97]**

10.10 Forest Reclamation Plan. Describe plans for reclamation and revegetation of Forest areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois

Noxious Weed Law. If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117;** OSM Directives TSR-16 Directive 931**]**

10.10.1 Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

10.10.2 Describe the methods for the use of temporary seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c); 1816.114/1817.114]**

10.10.3 Describe the timing and methods proposed to transition from the temporary herbaceous cover vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

10.10.4 Provide a permanent herbaceous ground cover species list and a woody species list that is diverse, native, capable of controlling erosion, capable of self-regeneration, and that has growth habits compatible with woody species success. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5); 1816.111(a) and (b)/1817.111(a) and (b); 1816.111(a)(2)/1817.111(a)(2); 1816.97(g)/1817.97(g);** Operator Memorandum No. 2017-02**]**

10.10.5 Describe a periodic measurement plan of the vegetation that will be used to identify if remedial actions are necessary to achieve the approved species and / or post-mining land use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also describe a remedial action plan to achieve the approved vegetative species, invasive species management, or post-mining land use success. Remedial actions may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1); 1816.111(a) and (b)/1817.111(a) and (b)]**

10.11 Industrial/Commercial Reclamation Plan. Describe plans for reclamation and revegetation of Industrial/Commercial areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117]**

10.11.1 Describe plans for utilization of the area for Industrial or Commercial purposes at the time of bond release.

The existing rail will continue to operate as it did prior to IBR construction.

10.11.2 Provide a ground cover species list and a woody species list, if applicable that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion. **[1816.111 (a) and (b)/1817.111 (a) and (b); 1816.97(i)/1817.97(i)]**

Seeding around vegetated area will comply with the Fish and Wildlife – Herbaceous requirements above in Part 10.6

10.12 Recreation Reclamation Plan. Describe plans for reclamation and revegetation of Recreation areas. The revegetation plan must conform to the standards of success outlined in the regulations and adhere to the Illinois Noxious Weed Law. For responses that are identical to other parts, "see response to question number X" is acceptable. The following information is required: **[1816.111/1817.111; 1816.97/1817.97; 1816.116/1817.116; 1816.117/1817.117]**

10.12.1 Describe plans for utilization of the area for recreational purposes at the time of bond release.

N/A

10.12.2 Provide a ground cover species list and a woody species list, if applicable that is diverse, native, capable of controlling erosion, and capable of self-regeneration. If non-native species are proposed to achieve the post-mining land use, provide adequate justification that the species are desirable, necessary to achieve the approved post-mining land use, and are required to control erosion **[1816.111 (a) and (b)/1817.111 (a) and (b); 1816.97(i)/1817.97(i)]**

N/A

10.13 Habitat Diversification in Cropland. Describe plans to intersperse crop fields with trees, hedges, conservation drainage ways, or fence rows that will break up crop monocultures and diversify habitat, where appropriate and compatible with crop management and wildlife management practices. **[1816.97(h)/1817.97(h); 1816.111/1817.111]**

PART 12: Shaft, Slope and Miscellaneous Borehole Construction

12.1 Shafts and/or Slopes.

12.1.1 For the shafts and/or slopes being proposed, describe the measures to be implemented to minimize disturbance to the prevailing hydrologic balance and to ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. **[1816.13/1817.13]**

The 16.5 feet concrete finished shaft will have all necessary fencing require to comply with 1816.13/1817.13. The shafts will be fully grouted into place to protect prevailing hydrologic balance.

12.1.2 For each shaft and/or slope, provide a drawing showing those features which are relevant to protecting the hydrologic balance. The drawing shall include:

- The physical dimensions of excavations and entry lining material;
- The type of entry lining material;
- The measures which will be used to seal the annulus between the entry lining and adjacent rock;
- Water rings and conductor pipes;
- Elevation of land surface, coal seam, and any other mine workings penetrated by the structure; and
- Provide the latitude and longitude (in decimal degrees) for each shaft and/or slope.

Provide reference to each drawing below.

A raise bore shaft construction of a 16.5 feet diameter finished cement with water collection rings as required (Typical location for the water ring in a raise bore shaft in the bottom 40 feet). Concrete collar will be excavated and keyed into bedrock to ensure not surface water is intermixed with ground water. Surface Elevation is approximately 421 and the bottom of the shaft will be the Herrin #6 at 500 feet deep. (Lat 37.8623, Long 88.7338). The top of the Illinois #6 coal is at approximately elevation -79.(District#4BleederShaft)

12.1.3 Will the Applicant be conducting any surface blasting activities incidental to underground mining, including, but not limited to, initial rounds of slopes and/or shafts that are within 50 vertical feet of the original ground surface? **[1817.61(a)]**

☐ YES ☒ NO

If YES, complete the appropriate items in Part 11: Blasting.

12.2 Miscellaneous Boreholes.

12.2.1 For each borehole or group of boreholes being proposed, describe the measures to be implemented to minimize disturbance to the prevailing hydrologic balance and ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. **[1816.13/1817.13]**

Six (6) holes will be drilled. Each hole will be fully cased with steel pipe and fully grouted in place. All open will be covered with a perforated metal cap to prevent access

to the mine workings by people, livestock, fish and wildlife, and machinery. The surface casing will be high enough above ground to prevent drainage from entering hole and to keep acid or other toxic drainage from entering ground water or surface water. The boreholes will be permanently sealed within 60 days of when the borehole becomes inactive. Each hole drilled will be plugged during reclamation by filling with neat cement to the top and the casing will be cut off at least five feet below grade.

12.2.2 For each borehole or group of boreholes which will be constructed in a similar manner, provide a borehole log with the following: [Operator Memorandum 2017-01]

- The depth (or depth range) and diameter of each drill hole;
- The depth (or depth range) and diameter of each casing string, type and thickness of casing material in each string, and spacing of collars and any centralizers;
- Intervals to be cemented, grouted, or otherwise sealed and the method of placement;
- Any geophysical logging which is proposed;
- The names and numbers of boreholes to which the sketch applies; and
- Provide the latitude and longitude (in decimal degrees) for each borehole.

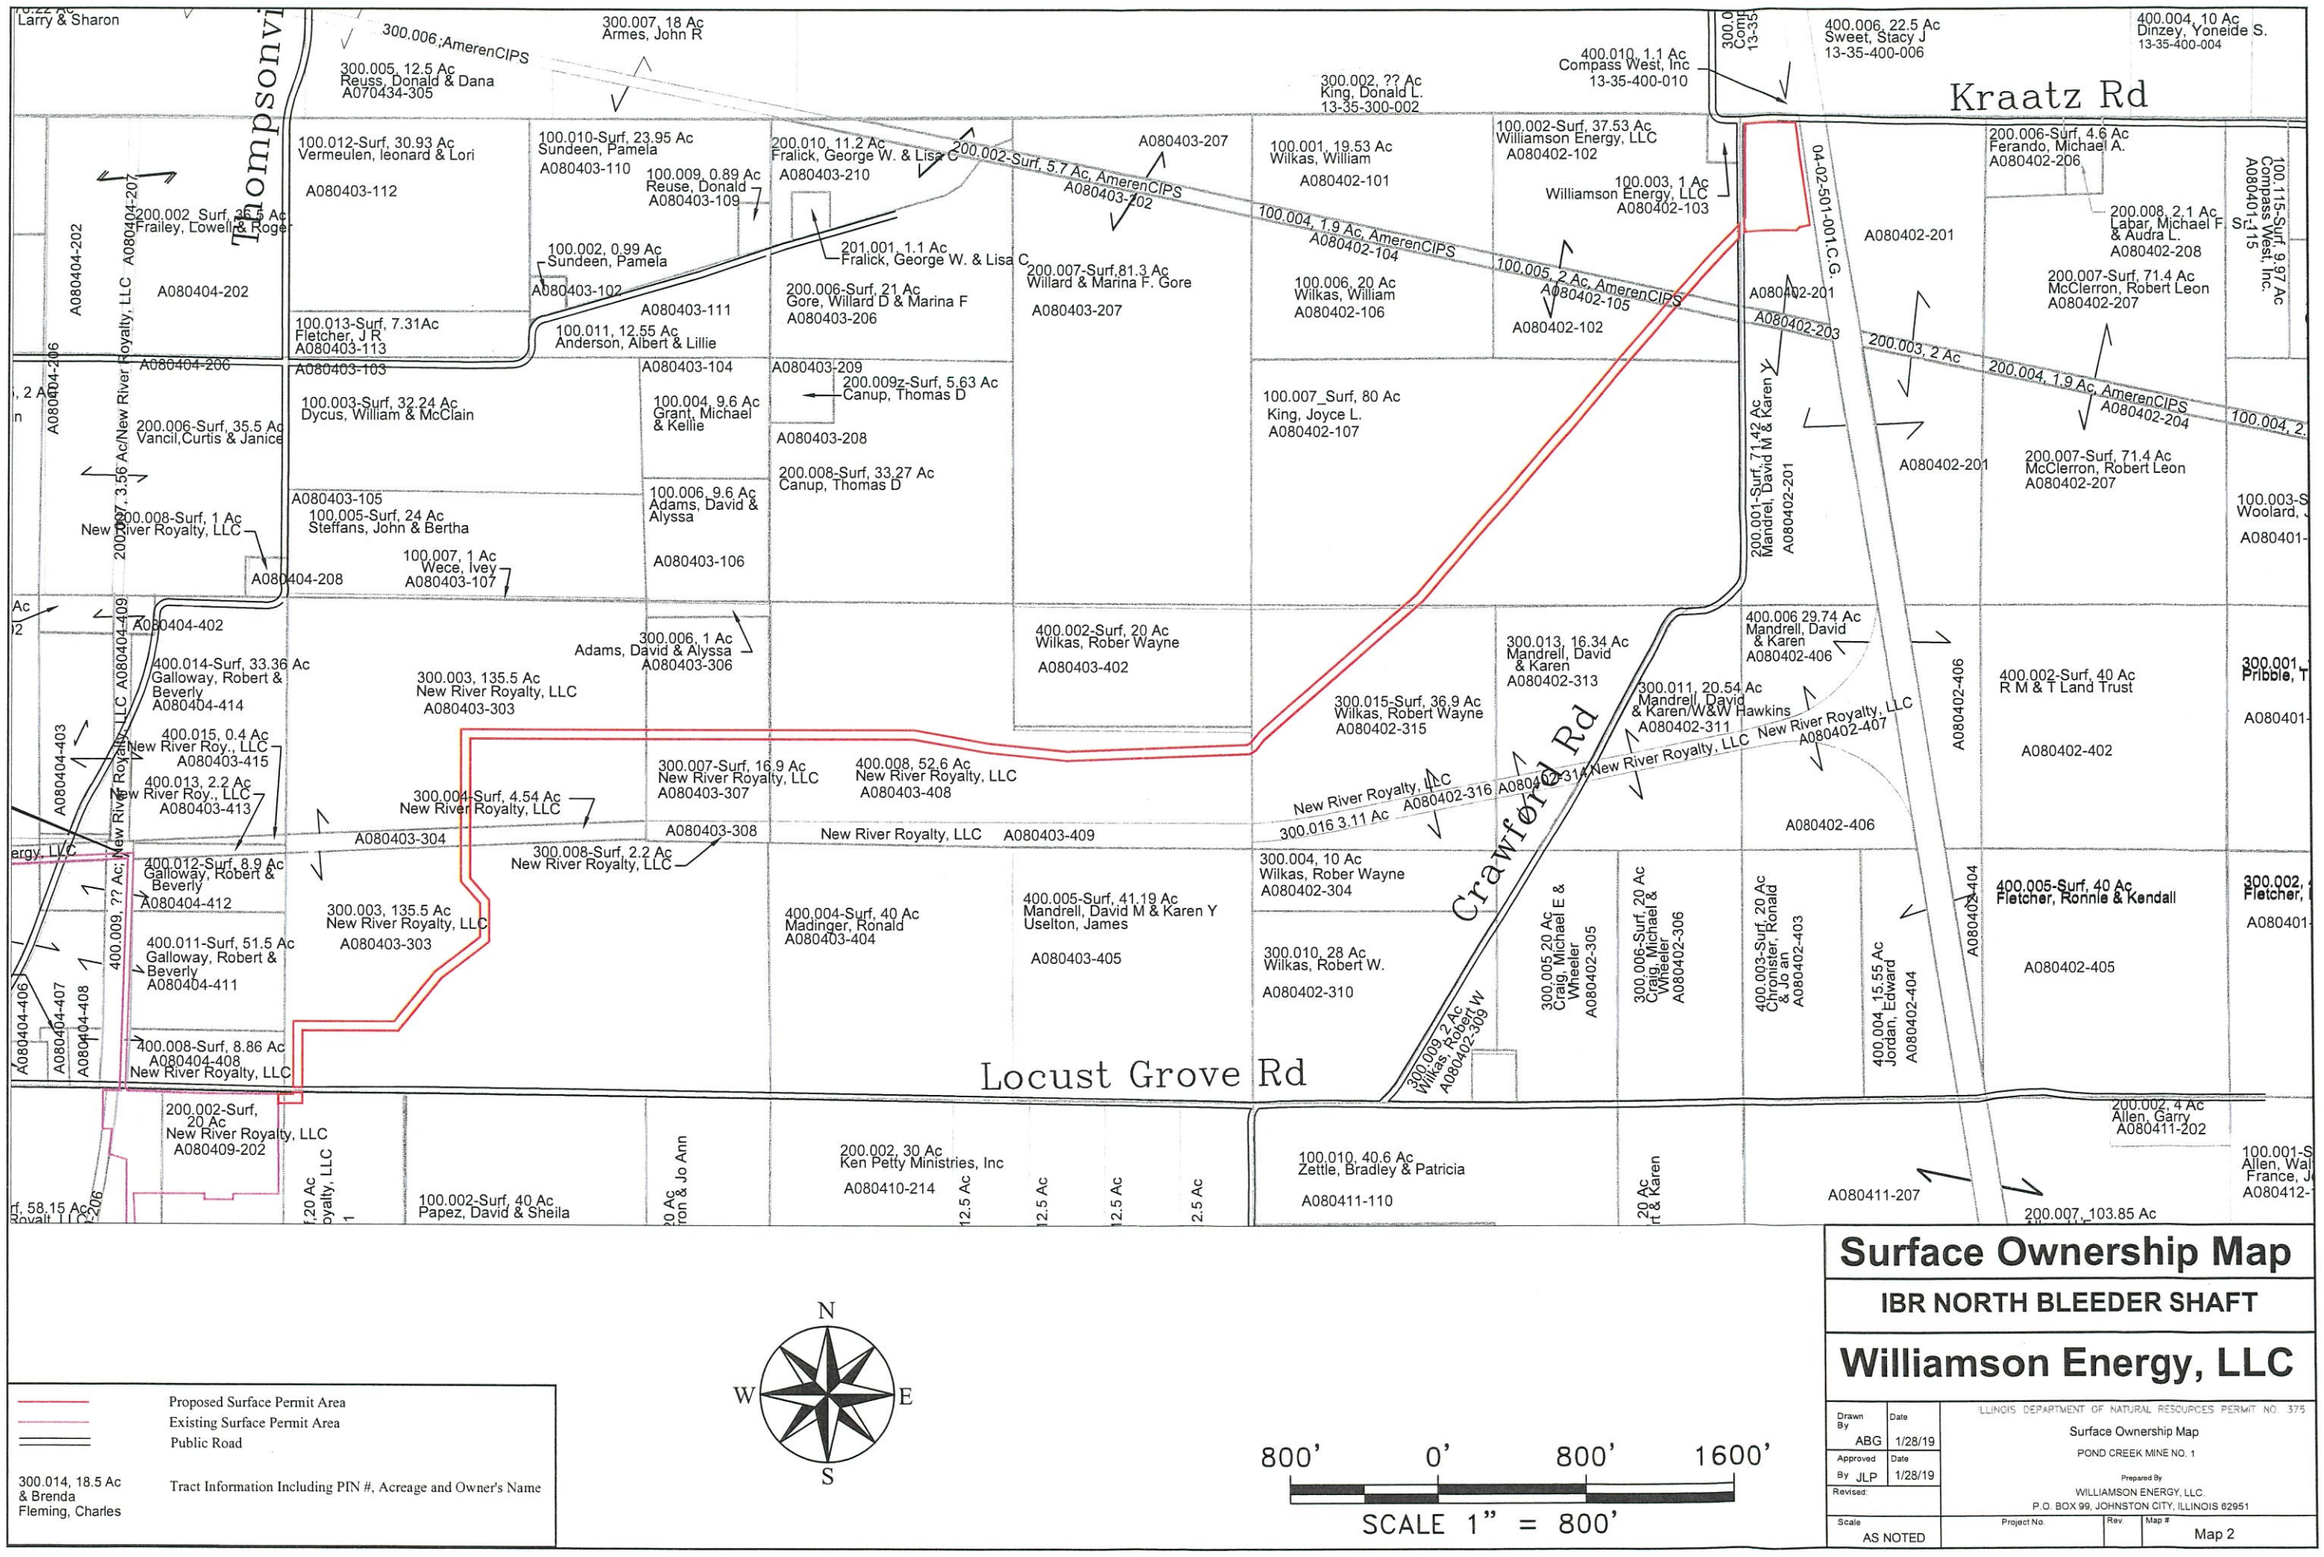
Provide reference to each borehole log below.

1 – 16" diameter ¼" Steel cased fully grouted hole approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8619° LON: ~88.7339° (Borehole B - Dist#4-1Turbine)

1 – 8 5/8" diameter ¼" Steel cased fully grouted hole approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8627° LON: ~88.7341° (Borehole C - Dist#4-2Service)

1 – 12 3/4" diameter ¼" Steel cased fully grouted holes approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8627° LON: ~88.7341° (Borehole D - Dist#4-3Service)

1 – 12 3/4" diameter ¼" Steel cased fully grouted holes approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8627° LON: ~88.7340° (Borehole E - Dist#4-4Service)



1 – 12 3/4" diameter ¼" Steel cased fully grouted holes approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8627° LON: ~88.7340° (Borehole F - Dist#4-5Service)

1 – 24" diameter ¼" Steel cased fully grouted hole approximately ~500 feet deep, No geophysical logging proposed at ~ LAT: ~37.8627° LON: ~88.7339° (Borehole G - Dist#4-6Service)

The boreholes will be permanently sealed within 60 days of when the borehole becomes inactive. Each hole drilled will be plugged during reclamation by filling with neat

cement to the top and the casing will be cut off at least five feet below grade.

IL Environmental Protection Agency
MARION REGIONAL OFFICE

Re: Permit No. 375
Insignificant Revision No. 55
Incidental Boundary Revision No. 78

Dear Mr. Pollastro:

The appropriate Department technical staff has reviewed the proposed change dated October 30, 2017, and the supplemental information dated December 11, 2017, submitted by the permittee for the Pond Creek No. 1 Mine. The permittee has requested approval to add 1.0 acre to the permitted area and utilize the areas of the previously approved incidental boundary revisions (IBRs) number 37 and 41. The 1.0-acre area will be used for installation of a four-inch underground waterline to convey mine water from the borehole in IBR No. 41 to the perimeter ditch on Permit No. 417. Also, IBR No. 37 will be utilized for horizontal boring and placement of the waterline.

Since this operation is not currently approved, it will constitute a change to the approved plan. Insignificant permit revisions (IPR's) and incidental boundary revisions (IBR's) are allowed under 62 Ill. Adm. Code Sections 1774.13(b)(2) and (d), respectively.

Section 1774.13: The Department has determined the proposed alteration will have no significant potential adverse impact on the achievement of final reclamation plans or upon the surrounding area, is in compliance with 62 Ill. Adm. Code 1700 – 1850 and is insignificant, and therefore exempts the permittee from submitting a significant permit revision application in accordance with Section 1774.13(b).

Further, the Department finds the permittee has demonstrated in its request, and field inspections by the Department's field representative have confirmed, that these areas meet the requirements for an incidental boundary revision, as outlined in 62 Ill. Adm. Code 1774.13(d). Section 1774.13(d)(6) publication requirements have been met. Section 1774.13(c) findings are below.

a. The disturbed drainage area within the total disturbed area is small; and

b. Alternate sediment control measures as described in Section 1817.45(b) are used in lieu of a siltation structure, and the permittee demonstrates that siltation structures are not necessary for drainage from the disturbed area to meet the effluent limitations and water quality standards for the receiving waters set forth in Section 1817.42

The Department has determined that the area for which a sediment pond exemption is requested meets the criteria established in Section 1817.46(e) and hereby grants an exemption from the use of a sedimentation pond for this area.

Section 1817.57(a)(1): The applicant has requested a stream buffer zone variance for an area as delineated in the application. In accordance with Section 1817.57(a)(1), the Department finds that:

a. The original stream channel and its associated riparian vegetation will be restored;

b. Surface mining activities will not cause or contribute to a violation of Section 1817.42 and will not adversely affect the water quantity and quality or other environmental resources of the stream.

Therefore, the Department authorizes surface mining activities closer than one hundred (100) feet of the top of the bank of the normal channel of the perennial or intermittent stream or through the stream.

Section 1817.97(b): Based on the 17 Ill. Adm. Code Part 1075 consultation, the Department has determined that the operations, as approved, will neither affect the continued existence of endangered or threatened species nor result in the destruction or adverse modification of their critical habitats, as determined under the Endangered Species Act of 1973 (16 USC 1531, et seq.).

FEE AND BOND

Section 1777.17(c): The total fee for this operation will be $25.00. The fee is comprised of $25.00 for non-surface mining permit area ($5/acre x 1.0 acre x the 5 years the bond is in force).

Section 1800.15(d): The bond for the area will be $5,500.00.

PERMIT CONDITIONS

1. Pursuant to 62 Ill. Adm. Code 1780.16 (b)(3)(A) and 1816.97 (b) surface disturbance activities within the IBR boundary shall only be conducted within the Chuck-Will's-

ENGINEERING CEERTIFICATION

I hereby certify the engineering design used in preparation of this application, attachments, and supplements was done by me or under my direct supervision.

I further certify to the best of my knowledge all such design is in accordance with all applicable local, state and federal laws, rules and regulations. I have placed an "X" in the box below if that item is relevant.

N/A	Whereas the Reclamation Plan calls for an alternative land use, I also certify the plans to conform to applicable accepted standards for adequate land stability, drainage, vegetative cover, and aesthetic design appropriate for the post-mining use of the site.
N/A	Whereas the operation proposes disposal of spoil or waste materials in areas other than mining workings or excavations, I also certify such fills are designed in accordance with recognized professional standards and all applicable laws.
N/A	Certification of Illinois Environmental Protection Agency-35 Ill. Adm. Code 405.104(a) Permit. In my professional judgment, the plans and specifications submitted as part of this application describe an operation which will meet all applicable effluent and water quality standards. I certify that I am familiar with all of the plans, specifications, reports, and maps submitted as part of this application and that said plans, etc. are accurate insofar as they represent existing conditions.

B) Indicate the type of disturbance and associated acreage.

Type of Disturbance	Existing	Permit IBR	Total
Area Stripping	20.1	0.0	20.1
Mine Waste Areas	277.4	0.0	277.4
Processing Areas & Support Facilities	4.7	1.0	5.7
Access, Haul Roads & Transport Facilities	181.2	0.0	181.2
Soil Storage Areas	28.9	0.0	28.9
Diversions	87.5	0.0	87.5
Coal Recovery (Gob & Slurry)	32.8	0.0	32.8
Other (shaft site/fan pad, etc.)	50.8	0.0	50.8
Not to be Disturbed	38.8	0.0	38.8
Total	722.2	1.0	723.2

2) A) Provide name and address of every legal or equitable owner of record of the IBR area.

RESPONSE: **The IBR surface area is owned by:**
Williamson County Highway Department, 1817 North Court St., Marion, IL 62959

B) Provide name and address of the owner of record for all surface and subsurface areas contiguous to any part of the proposed IBR area.

RESPONSE: **Please see the Surface Ownership Map (Map 2) and the corresponding Property Rights Summary sheet at the end of this Part I of the application.**

C) Show location of owners of record of those lands, both surface and subsurface, included in or contiguous to the IBR area on premining land use map or another map, if necessary.

RESPONSE: **See Surface Ownership Map (Map 2) in map section and corresponding Property Rights Summary sheet at the end of this Part I of the application.**

3) Provide name and address of any holder of record of leasehold interest for the IBR area.

RESPONSE: **Williamson Energy, LLC (applicant) has leasehold interest in the surface and coal.**

4) Affidavits, Certifications

A) Complete affidavit regarding applicant's legal right to enter and begin surface coal mining and reclamation operations in the IBR area and whether that right is the subject of pending litigation. Identify the documents upon which affidavit is based by type and date of execution and identify specific lands to which each document pertains and explain the legal rights claimed by the applicant (1778.15(a)). If the private mineral estate to be mined has been severed from the private surface estate, provide copies of the documents required under Section 1778.15(B)(1)-(3). On the permit map or other designated map show the boundaries of land within the permit area upon which the applicant has the legal right to enter and begin surface mining activities.

B) Complete certification for engineering aspects of the application. In addition to the general certification, three specific certifications are included which are applicable only if the box in front of each is marked. The first two cover special permit requirements and should be marked only when they occur for the proposed permit. The third certification covers the Illinois Environmental Protection Agency permit requirements. In most cases, an Illinois registered engineer will be required to certify IEPA permit requirements. Except as otherwise provided all maps, plans and cross-sections included in the permit application shall be prepared by, or under the direction of, and sealed by a qualified registered professional engineer licensed under the Illinois Professional Engineering Act, a qualified registered structural engineer licensed under the Illinois Structural Engineering Act or if authorized by state law, a qualified registered professional land surveyor licensed under the Illinois Land Surveyors Act with assistance from experts in related fields.

RESPONSE: **The Affidavit at the end of this Part.**

5) Areas Designated Unsuitable for Mining

A) Does proposed IBR area include -

(1) Lands within boundaries of the National Park System, National Wildlife Refuge System, National Recreation Areas, etc. [Section 1761.11(a)]?

Yes ____ No **X**

(2) National forest land?

Yes ____ No **X**

(3) Any land which will adversely affect any publicly-owned park or places included in or eligible for listing in the National Register of Historic places, etc. [per 62 Ill. Adm. Code 1761.11(a)(3) or Section 10, (B)(C) of the SCM-1?
Yes ____ No **X**

If yes, complete Part II, Section 10, (B) & (C) of the SCM-1 or theUCM-1

Application.

(4) Any public roads which are to be removed, relocated or temporarily closed?

Yes ____ No __X__

Indicate on the pre-mining land use map or other designated map the location of the public roads and attach a copy of the written agreement from the appropriate authority authorizing the relocation, removal or temporary closure.

Describe the measures to be used to insure that the interest of the public and land owners affected will be protected.

B) Will proposed IBR area be located --

(1) Within 100 feet of the right-of-way line of any public road?

Yes __X__ No _____

If yes, explain proposed procedure for complying with regulation section 1761.11(d), including request for variance, if relevant. Provide location of public roads on pre-mining land use map or other designated map. Describe the measures to be used to insure that the interest of the public and land owners affected will be protected.

RESPONSE: **The new four inch waterline will parallel Dwina road for ~4,000 feet (Dwina Road Please see Operation PLAN Map. (Map 5 S.F.)) Williamson Energy, LLC has a written agreement with Williamson County Highway department to ensure the interest of the public is protected. Per our agreement, Williamson Energy will ensure one-way traffic be maintained during the period of construction and adequate protections for safety of the public be provided. All work shall be constructed to satisfaction of the county engineer. All work performed so as not to permanently impair the existing road, and that any damage to the said road that might be done during the time of construction shall be repaired to the satisfaction of the County Engineer.**

(2) Within 300 feet measured horizontally from any occupied dwelling?

Yes __X__ No ___

If so, is waiver provided meeting requirements of Section 1761.15?

RESPONSE: **IBR will be within 300 feet of an occupied dwelling. See attached 300 feet waivers.**

(3) Within 300 feet measured horizontally of any public building, school, church, community or institutional building or public park?

Yes ____ No X

(4) Within 100 feet measured horizontally of a cemetery?

Yes____ No X

C) Are valid existing rights (per 1761.11) claimed for any part of the IBR area?

Yes ____ No X

If yes, provide documentation to substantiate claim.

D) Provide a draft copy of the proposed newspaper notice and name of local newspaper of general circulation in which advertisement of the application will be published, per 62 Ill. Adm. Code 1774.13(d)(6). Certification of publication is to be furnished to the Department and must be received prior to Department approval of the IBR.

RESPONSE: **A draft copy of the Public Notice is at the end of this Part I of the application. It will be published in the Marion, Illinois Daily Republican newspaper.**

PUBLIC NOTICE

Pursuant to the Surface Coal Mining Land Conservation and Reclamation Act (PA-81-1015, as amended) and the Rules and Regulations of the Act, Williamson Energy, LLC, P. O. Box 99, Johnston City, IL 62951, hereby gives notice that a request for a 1.0-acre Incidental Boundary Revision (IBR) was submitted to the Illinois Department of Natural Resources, Office of Mines and Minerals, Land Reclamation Division under the provisions of Section 1774.13 (d) (2 to install a four inch HDPE waterline inside the Dwina Road ROW at one location the four inch HDPE waterline will be bored underneath Dwina Road.

The Proposed Permit Area is described as: Part of the E/2 of Section 13 of Township 8S, R3E of the 3rd Principal and Part of W/2, NW/4 of Section 18 and Part of SW/4, SW/4 of Section 7 Township 8S, R4E of the 3rd Principal Meridian, Williamson County, IL.

The physical location is on Dwina Road and approximately 2060 feet north of the Corinth Road intersection in Williamson County, Illinois.

Approval is also requested to operate within 100 feet of the outside right-of-way of public roads which are located as follows: Dwina Road along East side of Section 13 of Township 8S, R3E of the 3rd Principal and Part of W/2, NW/4 of Section 18 and Part of SW/4, SW/4 of Section 7 Township 8S, R4E.

Activities to be conducted within 100 feet of the outside right-of-way of public roads can include but not be limited to construction/installation of a waterline.

Copies of the application are on file for inspection at the following office, and written comments may be addressed to: Illinois Department of Natural Resources, Office of Mines & Minerals, Land Reclamation Div., One Natural Resources Way, Springfield, IL 62702-1271.

The closing date of the comment period for this IBR is fourteen (14) days from the date of this Public Notice.

SUB-SURFACE OWNERSHIP WITHIN PROPOSED PERMIT AREA

WPP, LLC leased to Williamson Energy, LLC, with an address at 3801 PGA Blvd. Suite 903, Palm Beach Gardens, Florida 33410

NOTE: Applicant has leasehold interest to the coal under the proposed permit area.

SUB-SURFACE OWNERSHIP CONTIGUOUS TO PROPOSED PERMIT AREA

WPP, LLC leased to Williamson Energy, LLC, with an address at 3801 PGA Blvd. Suite 903, Palm Beach Gardens, Florida 33410

RIGHTS CLAIMED BY APPLICANT:

The right to conduct mining and reclamation operations within the approved and proposed areas of coal mining. See Mining Affidavit in PART I.

SURFACE WAIVER AND CONSENT

Prepared by:
Williamson Energy, LLC
P. O. Box 99
Johnston City, IL 62951

SURFACE WAIVER AND CONSENT

This surface waiver and consent (herein this "Waiver and Consent") is made this 10th day of August, 2017, from NEW RIVER ROYALTY, LLC, a Delaware Limited Liability Company, authorized to conduct business in the State of Illinois, with and address of 402 N Main Street, Benton, Illinois 62812, (herein the "Grantor"), in favor of Williamson Energy, LLC with and address at P.O. Box 99, Johnston City, Illinois 62951, (herein the "Grantee").

WHEREAS, Grantee desires to install a water line within the existing Dwina Road right-of-way pursuant to the Williamson County Highway Department Permit issued July 31, 2017, and attached hereto as Exhibit A.

WHEREAS, the Grantor is the owner of occupied dwellings located upon the following described real property (herein the "Dwellings"):

New River Royalty, LLC's deed source of title:

WHEREAS, Grantee owner or leases the coal rights as to the real property corresponding to the Dwellings and will be conducting surface coal mining operations with respect to the coal rights; and,

WHEREAS, the surface coal mining operations of Grantee will be conducted within 300 feet, measured horizontally, of the Dwellings; and,

WHEREAS, Grantor and Grantee acknowledge that Grantor, as owner of the Dwellings, has the legal right to deny surface coal mining operations within said 300 feet; and,

WHEREAS, notwithstanding Grantor's legal right to deny mining, Grantor desires to waive this right and consent to surface coal mining operations, consisting only of the installation of a single four-inch water pipeline within the existing Dwina Road Williamson County Right of Way, within 300 feet, measured horizontally, of the Dwellings; and,

WHEREAS, Grantor desires to execute this Waiver and Consent waiving said right and consenting to said operations.

NOW, THEREFORE, for and in consideration of the foregoing recitals, the mutual benefits to be derived therefrom, and Two Thousand Five Hundred Dollars ($2,500.00) and other valuable consideration, Grantor agrees, waives, and consents as

follows:

1. Waives the right to deny Grantee the right to conduct surface coal mining operations, consisting only of the installation of a single four-inch water pipeline within the existing Dwina Road Williamson County Right of Way, within 300 feet, measured horizontally, of the Dwellings.

2. Consents to the conducting of surface coal mining operations, consisting only of the installation of a single four-inch water pipeline within the existing Dwina Road Williamson County Right of Way, by Grantee closer than 300 feet, measured horizontally, of the Dwellings.

3. Waives and consents as set forth in paragraphs 1 and 2 above knowing that as the owner of the Dwellings, Grantor has the right to deny such surface coal mining operations.

4. Consents to the recording of this Waiver and Consent in the County Clerk and Recorder's Office in the county where the Dwellings are located.

5. Waives all rights under and by virtue of the homestead exemption laws of the State of Illinois.

6. Agrees that this Waiver and Consent shall be binding upon and inure to the benefit of the Grantor and Grantee together with their successors and assigns.

7. Agrees that this Waiver and Consent is executed pursuant to 62 Ill.Adm. Code 1761.15(b).

DATED the day and year above written.

GRANTOR

NEW RIVER ROYALTY, LLC

By: Robert Keith Varney

Its: Vice President

STATE OF ~~ILLINOIS~~ Florida)
) SS.
COUNTY OF Palm Beach)

I, the undersigned Notary Public, in and for said County in the State aforesaid, do hereby certify that Robert Keith Varney its Vice President personally known to me to be a duly authorized person for NEW RIVER ROYALTY, LLC, a Delaware Limited Liability Company, and personally known to me to be the same person whose name is subscribed to the foregoing instrument, appeared before me this day in person, and acknowledged that he signed, sealed and delivered the said instrument as such authorized person pursuant authority given by the Members of said limited liability company, as their free and voluntary act, and as the free and voluntary act and deed of said Company, for the uses and purposes therein set forth.

Given under my hand and seal this 10th day of August, 2017.

EXHIBIT "A" to Surface Waiver and Consent

PERMIT REQUEST TO INSTALL WATER LINE

WHEREAS, **Williamson Energy, LLC**, Williamson County, Illinois, has requested permission to construct a water line under a road in Williamson County which is subject to the jurisdiction and authority of said County and its officers.

WHEREAS, the proposed construction consists of 4000 feet of 4" HDPE waterline to be installed along and under **Dwina Road (TR 544), in Section 13, T8S, R3E, and Sections 7 & 18, T8S, R4E of the 3rd P.M.** in Williamson County.

THEREFORE, be it permitted and granted by the County Engineer of Williamson County, Illinois, that permission be granted to proceed with said construction, subject to the following conditions:

1. That the petitioner shall furnish all materials, do all work and pay all costs of such work.

2. That one-way traffic be maintained during the period of construction and adequate protection for the safety of the public be provided.

3. That the petitioner or his assigns shall assume all risks and liability for accidents and damages that may occur to persons or property on account of said work.

4. That this permit is effective insofar only as the County has jurisdiction and does not presume to release the petitioner from compliance with the provisions of any existing statute relative to the work involved.

5. That the said work shall be constructed to the satisfaction of the County Engineer.

6. That the work shall be performed so as not to permanently impair the existing road, and that any damage to the said road that might be done during the time of construction shall be repaired to the satisfaction of the County Engineer.

7. That the waterline shall be a minimum of three (3) feet below the present grade of the road where the waterline crosses the roadway or two feet below the existing ground line if located outside of the roadbed but within the R.O.W. The said water line shall be placed in the back slope of the ditch.

8. That the waterline shall be relocated at no expense to the County if such a move is needed for maintenance or construction work on the road at any time in the future.

9. Open cutting of the road surface will not be allowed. Directional boring will be required.

PERMIT REQUESTED BY _____

IN WITNESS WHEREOF, I have hereunto set my hand and seal as the County Engineer of Williamson County, Illinois, this 31ST day of JULY, 2017

Gregory S. Smothers
County Engineer
Williamson County Highway Dept.

PART II PREMINING INFORMATION

Premining information is to be displayed on premining land use map unless otherwise indicated.

1) Describe how the IBR area perimeter will be marked and discuss the method or system employed to locate permit area perimeter and set markers along it. Designate a reference point outside the IBR area if different than the original permit. Provide a description of the reference point and a sketch relating the reference point to the IBR area perimeter.

   RESPONSE: **The permit boundary will be marked at each end of the waterline with permit sign. The waterline will be installed in the back slope of the road ditch. No markers will be place along the proposed route due to routine maintenance of the Right of Way by the Williamson County Highway Department. For permit reference point, the physical location is approx. 2070 feet north of the intersection of Dwina Road and Cornith Road in Williamson County, Illinois. This reference point is noted on the General Location Map.**

2) Explain and locate areas where the IBR is contiguous to an existing permit.

   RESPONSE: **Please see the General Location Map and the other maps included with this application.**

2) Post Mining Land Use

A) Provide a detailed description of proposed post-mining land uses and capabilities employing land use and capability categories listed below. Provide acreage figures for each post-mining land use proposed for the existing permit, the IBR area and total permit after inclusion of the IBR acreage and designate the post-mining land uses on the Post Mining Land Use Map. Acreage figures for post-mining land use must differentiate between mined and surface disturbance areas based on the mining line used in the premining section of the application.

	Existing Permit (ac)			IBR (ac)			Total Permit (ac)

Developed Water Resources	0.0	0.0	19.3				0.0	0.0	19.3
Undeveloped Land	0.0	0.0	0.0				0.0	0.0	0.0
Total	18.8	33.1	670.3	0.0	0.5	0.5	18.8	33.6	670.8

Prime: Prime farmland

HCap: High Capability - meeting productivity requirements of 62 Ill. Adm. Code 1825.

NonCrop: Non-Cropland - All soils which do not qualify as prime farmland or high capability

* = "Negative Determination" Acres

4) Soils Information Map

A) Does the submitted soils map represent a map developed by the National Resources Conservation Service (NRCS)?

Yes X No ___. If no, explain.

B) Delineate on the soils map(s) the area which will incur actual mining (removal of overburden and/or deposition of overburden for the extraction of coal).

RESPONSE: **No mining will be conducted on this site.**

C) Are any of the identified map units correlated as prime farmland by NRCS criteria?

Yes X No ____

If yes, explain and provide documentation to meet the requirements of Section 1785.17, if a determination for grandfathering and/or negative determination is sought. If prime farmlands exist which will not meet the exemption criteria described above, the approved prime farmlands restoration plan must be followed.

RESPONSE: **None of the prime farmland units identified by the NRCS are currently in crop projection therefore, were a negative determination on these acres.**

D) Submit, by completing soils information chart, acreage totals of each map unit (soil type and slope classification) and land use capability classes in the IBR area and the percent slope range of each lettered slope classification used on the soil map.

RESPONSE: **See Soils Information Chart at the end of this Part II.**

E) Provide, by completing soil information chart, acreage for each of the map units of high capability land (including grandfathered and negatively determined prime farmland) and non-cropland capability land with respect to areas which will be mined and areas which will incur other forms of disturbance (i.e., roads, ditches, etc.). Identify and provide map unit acreage values, if any, for areas which will not be disturbed.

RESPONSE: **See Soils Information Chart at the end of this Part along with Soils Map.**

F) Are selected overburden materials proposed to be used in lieu of or as a supplement to the A-horizon?

Yes ____ No X If yes, provide the appropriate information required under 1780.18(b)(4)/1784.13(b)(4).

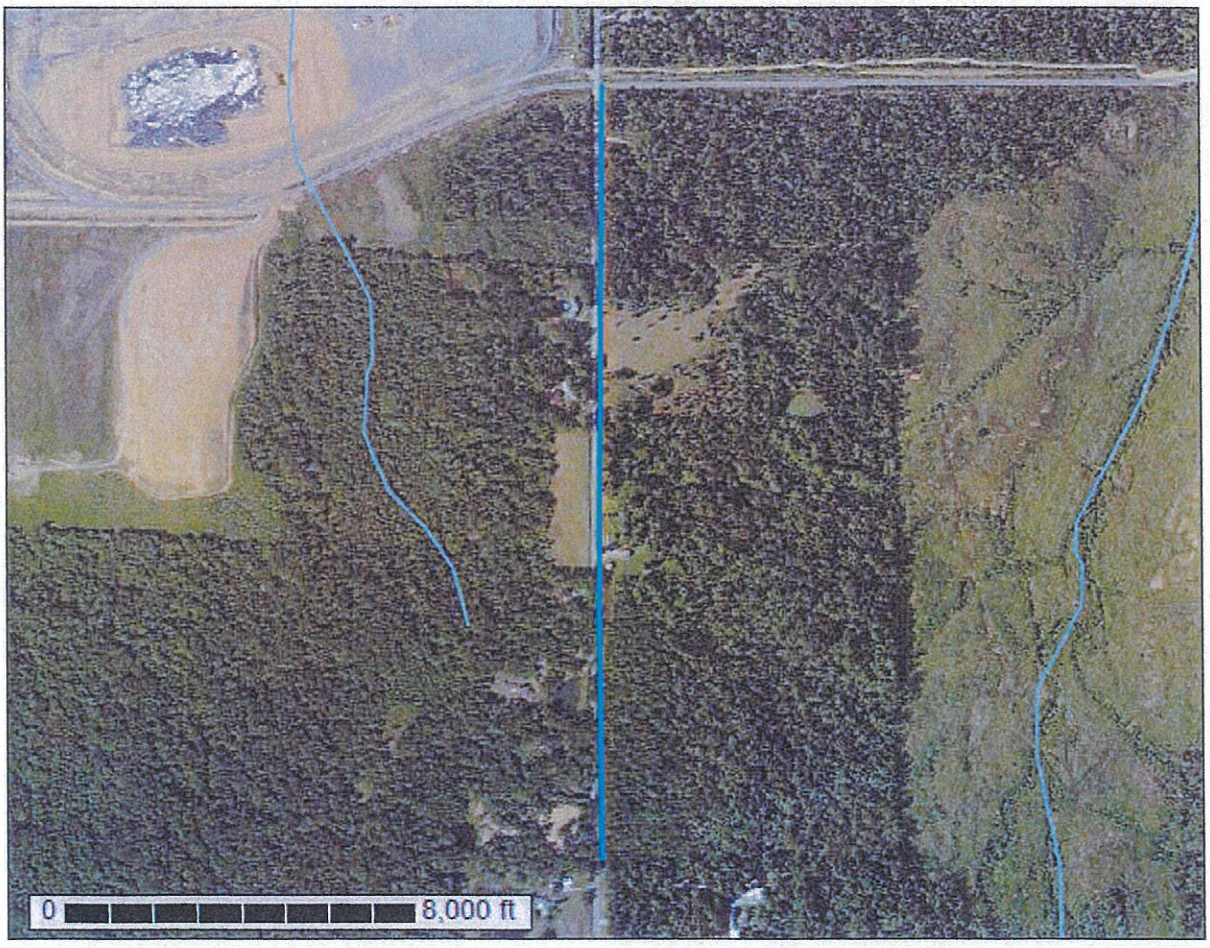
United States Department of Agriculture



NRCS

Natural Resources Conservation Service

A product of the National Cooperative Soil Survey, a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local participants

Custom Soil Resource Report for Williamson County, Illinois

Soil Dwina Waterline 1

August 1, 2017

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

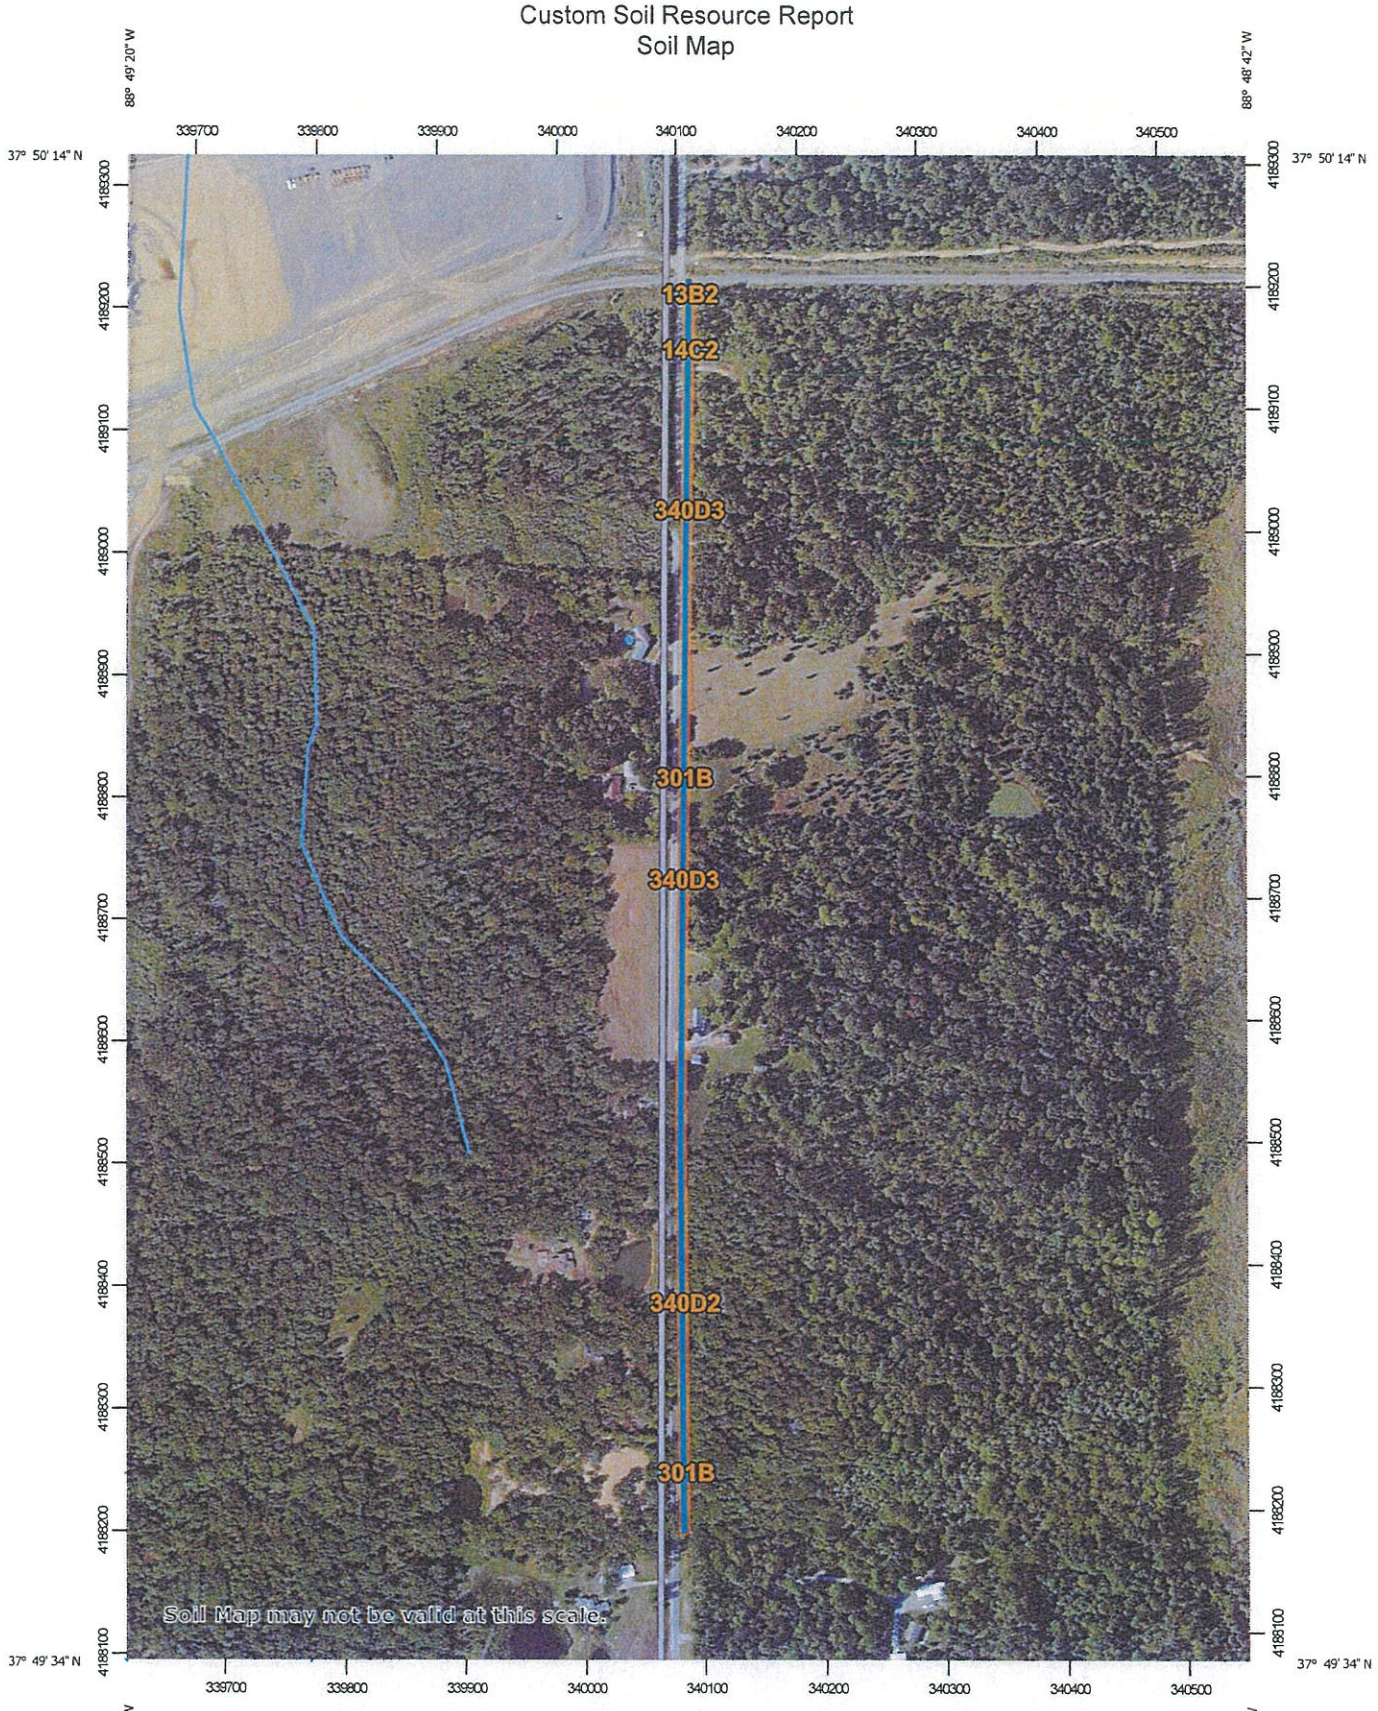
The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.



After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it

was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Williamson County, Illinois

13B2—Bluford silt loam, 2 to 5 percent slopes, eroded

Map Unit Setting

National map unit symbol: 2t95f
Elevation: 360 to 840 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 53 to 58 degrees F
Frost-free period: 175 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Bluford and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bluford

Setting

Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Loess over mixed loess and drift

Typical profile

Ap - 0 to 6 inches: silt loam
E - 6.to 9 inches: silt loam
Btg - 9 to 32 inches: silty clay
2Btgx - 32 to 47 inches: silty clay loam
2Btg - 47 to 60 inches: silty clay loam

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: 5 to 20 inches to abrupt textural change; 19 to 45 inches to fragipan
Natural drainage class: Somewhat poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.06 to 0.20 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 13.0
Available water storage in profile: Very low (about 2.0 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C/D
Hydric soil rating: No

Minor Components

Ava

Percent of map unit: 5 percent
Landform: Ridges
Landform position (two-dimensional): Shoulder, summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Wynoose

Percent of map unit: 5 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

14C2—Ava silt loam, 5 to 10 percent slopes, eroded

Map Unit Setting

National map unit symbol: 2t95l
Elevation: 360 to 840 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Ava, eroded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Ava, Eroded

Setting

Landform: Ridges, hillslopes
Landform position (two-dimensional): Shoulder, summit, backslope
Landform position (three-dimensional): Interfluve, side slope
Down-slope shape: Convex
Across-slope shape: Convex, linear
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 9 inches: silt loam
Bt and E - 9 to 28 inches: silty clay loam
Btx - 28 to 36 inches: silty clay loam
2Btx - 36 to 64 inches: silt loam

3Btb - 64 to 78 inches: silt loam

Properties and qualities

Slope: 5 to 10 percent
Depth to restrictive feature: 25 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 36 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Low (about 5.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3e
Hydrologic Soil Group: C
Hydric soil rating: No

Minor Components

Bluford, eroded

Percent of map unit: 10 percent
Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

301B—Grantsburg silt loam, 2 to 5 percent slopes

Map Unit Setting

National map unit symbol: 1lm2y
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Grantsburg and similar soils: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Grantsburg

Setting

Landform: Loess hills
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Peoria and roxana loess over residuum

Typical profile

H1 - 0 to 11 inches: silt loam
H2 - 11 to 24 inches: silt loam
H3 - 24 to 38 inches: silty clay loam
H4 - 38 to 61 inches: silt loam
H5 - 61 to 80 inches: silt loam

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: 24 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Sodium adsorption ratio, maximum in profile: 4.0
Available water storage in profile: Moderate (about 6.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C
Hydric soil rating: No

340D2—Zanesville silt loam, 10 to 18 percent slopes, eroded

Map Unit Setting

National map unit symbol: 1lm5w
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 45 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Zanesville, eroded, and similar soils: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Zanesville, Eroded

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope, nose slope
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess over residuum

Typical profile

H1 - 0 to 4 inches: silt loam
H2 - 4 to 19 inches: silty clay loam
H3 - 19 to 39 inches: silt loam
H4 - 39 to 57 inches: channery silt loam
R - 57 to 67 inches: bedrock

Properties and qualities

Slope: 10 to 18 percent
Depth to restrictive feature: 19 to 32 inches to fragipan; 40 to 80 inches to lithic bedrock; 40 to 80 inches to paralithic bedrock
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Sodium adsorption ratio, maximum in profile: 4.0
Available water storage in profile: Low (about 3.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4e
Hydrologic Soil Group: D
Hydric soil rating: No

340D3—Zanesville silty clay loam, 10 to 18 percent slopes, severely eroded

Map Unit Setting

National map unit symbol: 1lm34
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Not prime farmland

Map Unit Composition

Zanesville, severely eroded, and similar soils: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Zanesville, Eroded

Setting

Landform: Hillslopes
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope, nose slope
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess over residuum

Typical profile

H1 - 0 to 4 inches: silt loam
H2 - 4 to 19 inches: silty clay loam
H3 - 19 to 39 inches: silt loam
H4 - 39 to 57 inches: channery silt loam
R - 57 to 67 inches: bedrock

Properties and qualities

Slope: 10 to 18 percent
Depth to restrictive feature: 19 to 32 inches to fragipan; 40 to 80 inches to lithic bedrock; 40 to 80 inches to paralithic bedrock
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Sodium adsorption ratio, maximum in profile: 4.0

Soil Information for All Uses

Suitabilities and Limitations for Use

The Suitabilities and Limitations for Use section includes various soil interpretations displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each interpretation.

Land Classifications

Land Classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Farmland Classification (Area 1)

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

Custom Soil Resource Report for Williamson County, Illinois

Soil Dwina Waterline 2

August 1, 2017

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

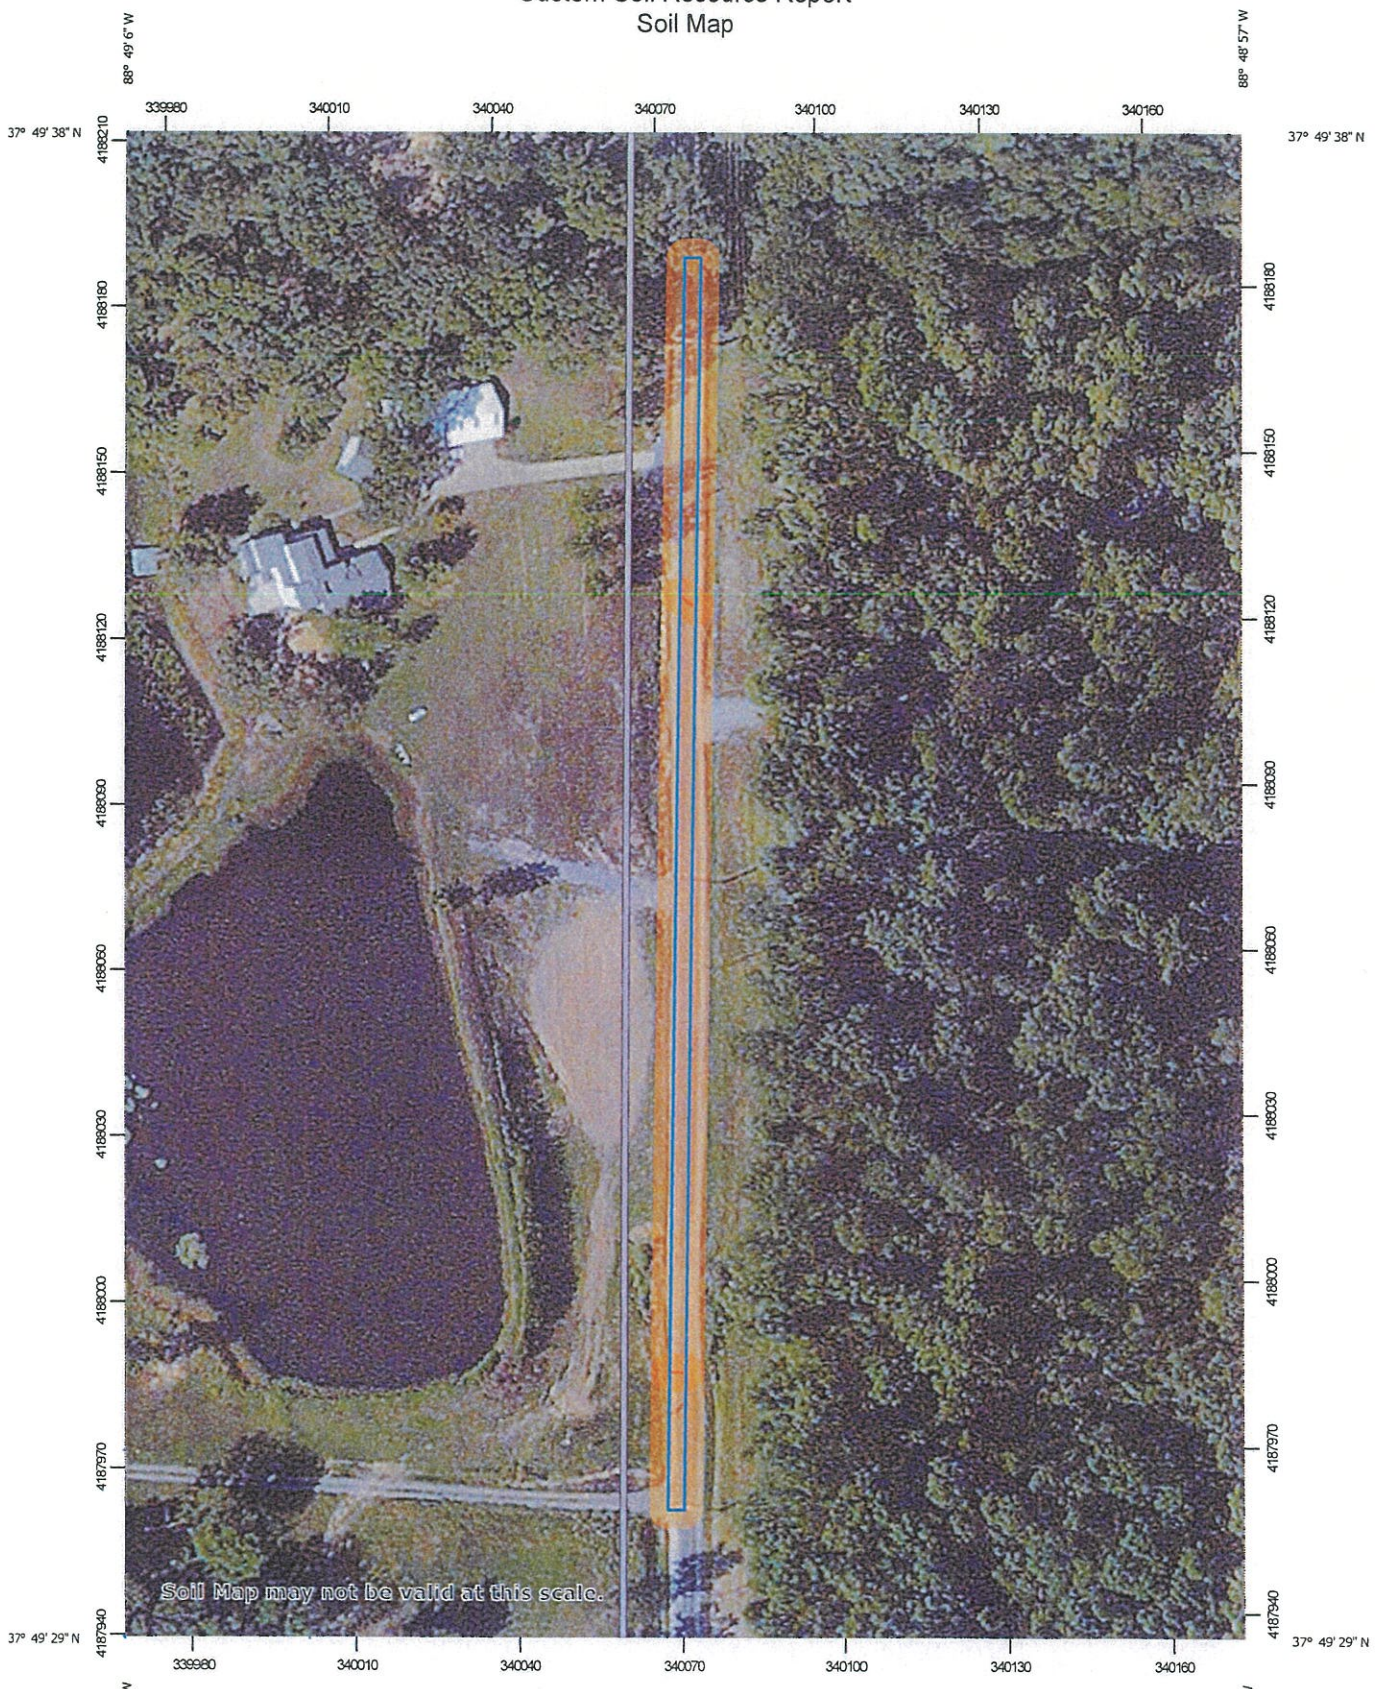
The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.



After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Williamson County, Illinois
Survey Area Data: Version 11, Sep 16, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 13, 2011—Oct 21, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Williamson County, Illinois (IL199)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
10D	Plumfield silty clay loam, 10 to 18 percent slopes	0.1	61.6%
301B	Grantsburg silt loam, 2 to 5 percent slopes	0.1	38.4%
Totals for Area of Interest		0.2	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the

development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Williamson County, Illinois

10D—Plumfield silty clay loam, 10 to 18 percent slopes

Map Unit Setting

National map unit symbol: 2wk1m
Elevation: 330 to 820 feet
Mean annual precipitation: 38 to 46 inches
Mean annual air temperature: 54 to 58 degrees F
Frost-free period: 180 to 195 days
Farmland classification: Not prime farmland

Map Unit Composition

Plumfield and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Plumfield

Setting

Landform: Ground moraines
Landform position (two-dimensional): Shoulder, backslope
Landform position (three-dimensional): Head slope, side slope
Down-slope shape: Convex
Across-slope shape: Linear
Parent material: Loess over mixed loess and drift over till

Typical profile

Ap - 0 to 5 inches: silty clay loam
2Btx1 - 5 to 12 inches: silty clay loam
2Btx2 - 12 to 36 inches: silt loam
3Btgb - 36 to 70 inches: silty clay loam

Properties and qualities

Slope: 10 to 18 percent
Depth to restrictive feature: 5 to 20 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: Very high
Capacity of the most limiting layer to transmit water (Ksat): Moderately low (0.02 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 5.0
Available water storage in profile: Very low (about 1.8 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 6e
Hydrologic Soil Group: D
Hydric soil rating: No

Minor Components

Belknap, occasionally flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Bluford

Percent of map unit: 5 percent
Landform: Ground moraines
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Rise
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

301B—Grantsburg silt loam, 2 to 5 percent slopes

Map Unit Setting

National map unit symbol: 1lm2y
Elevation: 360 to 660 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: All areas are prime farmland

Map Unit Composition

Grantsburg and similar soils: 90 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Grantsburg

Setting

Landform: Loess hills
Landform position (two-dimensional): Summit, shoulder
Landform position (three-dimensional): Interfluve
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Peoria and roxana loess over residuum

Typical profile

H1 - 0 to 11 inches: silt loam
H2 - 11 to 24 inches: silt loam
H3 - 24 to 38 inches: silty clay loam
H4 - 38 to 61 inches: silt loam
H5 - 61 to 80 inches: silt loam

Properties and qualities

Slope: 2 to 5 percent
Depth to restrictive feature: 24 to 40 inches to fragipan
Natural drainage class: Moderately well drained
Runoff class: High
Capacity of the most limiting layer to transmit water (Ksat): Low to moderately low (0.01 to 0.06 in/hr)
Depth to water table: About 18 to 42 inches
Frequency of flooding: None
Frequency of ponding: None
Sodium adsorption ratio, maximum in profile: 4.0
Available water storage in profile: Moderate (about 6.5 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 2e
Hydrologic Soil Group: C
Hydric soil rating: No

Soil Information for All Uses

Suitabilities and Limitations for Use

The Suitabilities and Limitations for Use section includes various soil interpretations displayed as thematic maps with a summary table for the soil map units in the selected area of interest. A single value or rating for each map unit is generated by aggregating the interpretive ratings of individual map unit components. This aggregation process is defined for each interpretation.

Land Classifications

Land Classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Farmland Classification

Farmland classification identifies map units as prime farmland, farmland of statewide importance, farmland of local importance, or unique farmland. It identifies the location and extent of the soils that are best suited to food, feed, fiber, forage, and oilseed crops. NRCS policy and procedures on prime and unique farmlands are published in the "Federal Register," Vol. 43, No. 21, January 31, 1978.

PART III OPERATIONS PLAN

1) Explain the proposed operation and why the IBR is needed. Locate on a mining operations map.

RESPONSE: **The proposed operation is to bury a four inch HPDE line along ~four thousand feet long and ~10 feet in wide along Dwina Road. The buried waterline will be used to bring underground water back the existing water holding cell/system. The water is currently being pumped underground through a series of pumps to the Dean Road Bleeder shaft. Then the water is pumped to the surface with a vertical turbine pump. A new vertical turbine pump will be installed on an existing 10 5/8" steel casing located on the adjacent IBR #41. A new concrete pad 10'x10' will be installed as a foundation for the pump on IBR #41. All water lines will be buried at least 36 inches deep after the water line leave the pumping site. The waterline will be installed across a small portion of IBR #37. The waterline will be bored under Dwina road.**

2) Surface Drainage Control

A) 1) Locate on the mining operations map or on a separate drainage map all proposed drainage control systems. Show drainage patterns of all affected mining areas.

RESPONSE: The surface drainage pattern is indicated on the attached Pre and Post-Mine Surface Topography Map.

2) Will all surface drainage from the affected mining area be collected and treated prior to leaving the IBR area?

Yes ____ No **X** ____.

If yes, delineate how and where surface drainage will be collected and treated, and list permit numbers and type of permit that the drainage control systems are operated under. If above answer is no, explain how regulatory compliance will be achieved without treatment, i.e., address the requirements of 1816.46(e)/1817.46(e).

RESPONSE: **A sediment pond exemption is requested for this permit area due to its size (1.0 acres). Silt fence and/or straw bales will be placed along the down-slope edge of the disturbed area to minimize sediment loss from the disturbed areas as needed. Due to the small diameter of the waterline being installed, the trench will be immediately reclaimed during construction. The reclaimed trench will be seeded and mulched to reduce runoff and promote cover establishment.**

B) Will all surface drainage from unaffected areas be intercepted and diverted around the affected mining area?

Yes ____ No X .

If no, please discuss.

RESPONSE: **Due to the small diameter waterline being installed. Reclamation concurrently with the installation of the waterline therefore no surface drainage problem are anticipated.**

C) Overland Flow Diversions and Sediment Ponds:

Are either overland flow diversions or sediment ponds to be constructed?

Yes ___ No X .

If yes, complete applicable parts of the SCM-1 or UCM-1 Part IV (surface drainage control).

D) Are surface mining activities, including road crossings, proposed within 100 ft of any stream (ephemeral, intermittent, or perennial)?

Yes X Yes No _____.

If **Yes**,

a) For any stream(s) located outside the proposed permit boundary where disturbance within 100ft is proposed go to Part D.2

b) For any stream(s) located **within** the proposed boundary where disturbance within 100 ft is proposed go to Part D.1.

If **No**, go to Part D.6.

D.1. Provide a Stream Delineation Report and/or Wetland Delineation Report. Information contained in the report(s) shall meet the requirements found at 1780.14/1784.23, 1780.29/1784.29, 1816.43/1817.43 and 1816.97/1817.97.

RESPONSE:

Indicate the number of each type of stream located within the proposed permit area.

☐ Ephemeral ☒ Intermittent ☐ Perennial

D.2 Is a stream buffer variance requested?

Yes X No____

If **YES**,

a) For stream(s) located **outside** the proposed permit boundary go to Part D.3.
b) For stream(s) located **inside** the proposed permit boundary go to Part D.4.

If **NO**, provide a justification that each disturbed stream is ephemeral based on both parts of the definition of ephemeral stream found at **Section 1701.5 Appendix A**. Briefly describe the disposition of the ephemeral stream(s) during operations and post-mining. Nomenclature of ephemeral streams must be consistent with maps and reports. No further information is required in this part of the application if all streams are ephemeral.

D.3 For each intermittent and/or perennial stream located **outside** the permit boundary where a stream buffer variance is requested, provide the name of the stream and describe how the requirements of Section 1816.57/1817.57 will be met. No further information is required for streams outside the proposed permit boundary.

Response: A stream buffer variance is being requested because the proposed boundary is within a stream buffer zone for an un-named tributary of Pond Creek. A proposed water line will run along the opposite side of the existing county roadway. There will be no impact on stream riparian zone or water quality/quantity.

D.4 For each intermittent and/or perennial stream located **inside** the permit boundary where a buffer variance is requested, describe the proposed activities. Where a bridge, road, culvert or other crossing is proposed for any streams that will not be diverted, provide the information required in Section 1780.37/1784.24. In addition, describe how compliance with Section 1816.57/1817.57 will be achieved.

D.5 For each stream diversion complete the applicable parts of the SCM-1 or UCM-1.

D.6 Discuss how the designated 100 ft stream buffer zone will be marked for any intermittent and/or perennial stream that will not be disturbed by surface mining activities. Cleary indicate the 100 ft. stream buffer zone on all maps. If NO streams are located within the proposed permit boundary or within 100 ft of the proposed permit boundary indicate N/A.

3) Roads and other activities:

A) Are roads to be constructed in the IBR area?

Yes ___ No _X_.

If yes, complete the applicable part of the SCM-1or UCM-1 (transportation facilities).

B) If the operations involve blasting, or any other activities not specifically addressed above, complete applicable parts of the SCM-1 or UCM-1.

4) Are any existing structures proposed for utilization in the IBR?

Yes ____ No _X__.

If yes, complete Part IV.4 of the SCM-1 or UCM-1.

PART IV RECLAMATION PLAN

1) Provide a reclamation plan map outlining proposed reclamation of the lands within the proposed IBR area and state how the IBR area will be reclaimed in conformity with the original plan.

RESPONSE:

- See the Pre and Post-Mine Land Use (Reclamation Map)
- The buried waterline will not be recovered. It will remain buried, and final site reclamation will be conducted "over" it.
- All disturbed acres will be returned to their previous land use. (Residential or Fish and Wildlife (Herbaceous)).
- The entire disturbed area will be graded for positive drainage.
- The topsoil will be amended, if necessary, and fertilized and prepared for appropriate planting.

2) Post Mining Land Use

A) Provide a detailed description of proposed post-mining land uses and capabilities employing land use and capability categories listed below. Provide acreage figures for each post-mining land use proposed for the existing permit, the IBR area and total permit after inclusion of the IBR acreage and designate the post-mining land uses on the Post Mining Land Use Map. Acreage figures for post-mining land use must differentiate between mined and surface disturbance areas based on the mining line used in the premining section of the application.

	Existing Permit (ac)			IBR (ac)			Total Permit (ac)		
Land Use	Prime	Hcap	NCrop	Prime	Hcap	NCrop	Prime	Hcap	NCrop
Cropland	13.0	8.7	2.5				13.0	8.7	2.5
Pasture Land	0.0	0.8	5.5				0.0	0.8	5.5
Grazing Land	0.0	0.0	0.0				0.0	0.0	0.0
Forestry	0.0	0.0	14.3				0.0	0.0	14.3
Residential	0.0	0.0	1.5				0.0	0.0	1.5
Industrial/Commercial	0.3	0.0	0.0				0.3	0.0	0.0
Recreation	0.0	0.0	0.0			0.1 *	0.0	0.0	0.1
Fish & Wildlife Habitat (Herbaceous)	5.5	22.8	46.0		0.3	0.6 *	5.5	23.1	46.6
Fish & Wildlife Habitat (Woody)	0.0	0.8	571.8				0.0	0.8	571.8
Fish & Wildlife Habitat (Wetland)	0.0	0.0	0.2				0.0	0.0	0.2
Fish & Wildlife Habitat (Water)	0.0	0.0	9.2				0.0	0.0	9.2
Developed Water Resources	0.0	0.0	19.3				0.0	0.0	19.3
Undeveloped Land	0.0	0.0	0.0				0.0	0.0	0.0
Total	19.1	25.9	677.2	0.0	0.3	0.7	18.8	33.4	671.0

Prime: Prime farmland

HCap: High Capability - meeting productivity requirements of 62 Ill. Adm. Code 1825.

NonCrop: Non-Cropland - All soils which do not qualify as prime farmland or high capability

* = "Negative Determination" Acres

3) Are trees located within the proposed boundary area?

Yes ___ No X .

Response: All construction activity will accrue within the existing managed road right of way.

If yes, then pursuant to Sections 1784.21 (a)(2)(A) and (C) and 1817.97 (b) the applicant shall:

A) Provide a Protection and Enhancement Plan (PEP) and an Incidental Take (IT) authorization request to the Department for the Indiana bat meeting the specifications of the "Range-wide Indiana Bat Protection and Enhancement Plan Guidelines" (revised 2013) developed by the U.S. Fish and Wildlife Service and the Office of Surface Mining, or justify why no PEP and IT are required under those guidelines.

B) Discuss whether or not the project is consistent with the Northern long-eared bat Final 4(d) Rule (January 2016), and if not then provide a PEP and IT authorization request to the Department consistent with the 2013 Indiana bat guidelines referenced above.

Herbaceous Vegetation Assessment

Dwina Road Waterline

Pond Creek Mine

Williamson County, IL

Prepared for:

Williamson Energy, LLC

Prepared by:

William O'Leary, M.S.

HMG Engineers, Inc.

1032 N. 6th Street

Murphysboro, Illinois 62966

October 2017

INTRODUCTION

HMG Engineers, Inc. (HMG) was contacted by Williamson Energy, LLC seeking assistance in identifying existing herbaceous vegetation located in an area planned for the laying of a water line. The corridor which is 10 feet wide begins along the east side of Dwina Road at its intersection with the mine rail loop, located southeast of the preparation plant. The water line is scheduled to be buried along the top outslope of the east road ditch. The line will extend south approximately 3,360 feet where it will cross under the road and then extend an additional 750 feet, approximately, along the west side of the road (Figure 1).

Williamson Energy, LLC informed HMG of a concern regarding Chuck-Wills-Widows (*Caprimulgus carolinensis)*, a listed (threatened) bird species in Illinois. Chuck-Wills-Widows reportedly nest on the ground among dead leaves, pine needles, or bare dirt in dense thickets near openings. State biologists were wanting more information about the composition of herbaceous vegetation along the proposed waterline corridor.

METHODS

Five representative locations were selected along the length of the corridor, 4 on the east side of the road and 1 on the west side (Figure 1). At each location dominant herbaceous species were identified and a visual estimate made of percent cover to the nearest 5 %. The east side corridor is under or adjacent to an overhead power line, vegetation is managed to prevent woody growth. The west side part of the corridor is managed by intensive mowing.

RESULTS

Species recorded are typical of species in Southern Illinois which dominate areas where succession is held back by regular mowing (Table 1). This management scheme favors perennial and biennial grasses and legumes like tall fescue, purpletop grass, broomsedge, and red clover. Where the frequency of mowing is somewhat less, aggressive annuals like foxtails and goldenrods will invade. Where mowing is less often yet, aggressive perennials and biennials like Japanese honeysuckle, Sericea lespedeza, Trumpet creeper vine, and blackberry will begin to invade. In summary, the corridor vegetation is typical for areas developing varying degrees of old field vegetation due to varying degrees of mowing frequency. This is consistent with normal management of road and power line rights of ways. Table 2 shows that over 80% of the vegetation is comprised of tall fescue, Japanese honeysuckle, green foxtail, and purpletop grass.

CONCLUSIONS

The typical nesting habitat of the Chuck-Will's-Widow, namely bare dirt, leaf, or pine needle cover in dense thickets near openings is not present on the proposed water line area. The proposed corridor is open, void of any canopy, with ground cover dominated by living annual, biennial, and perennial herbaceous vegetation.

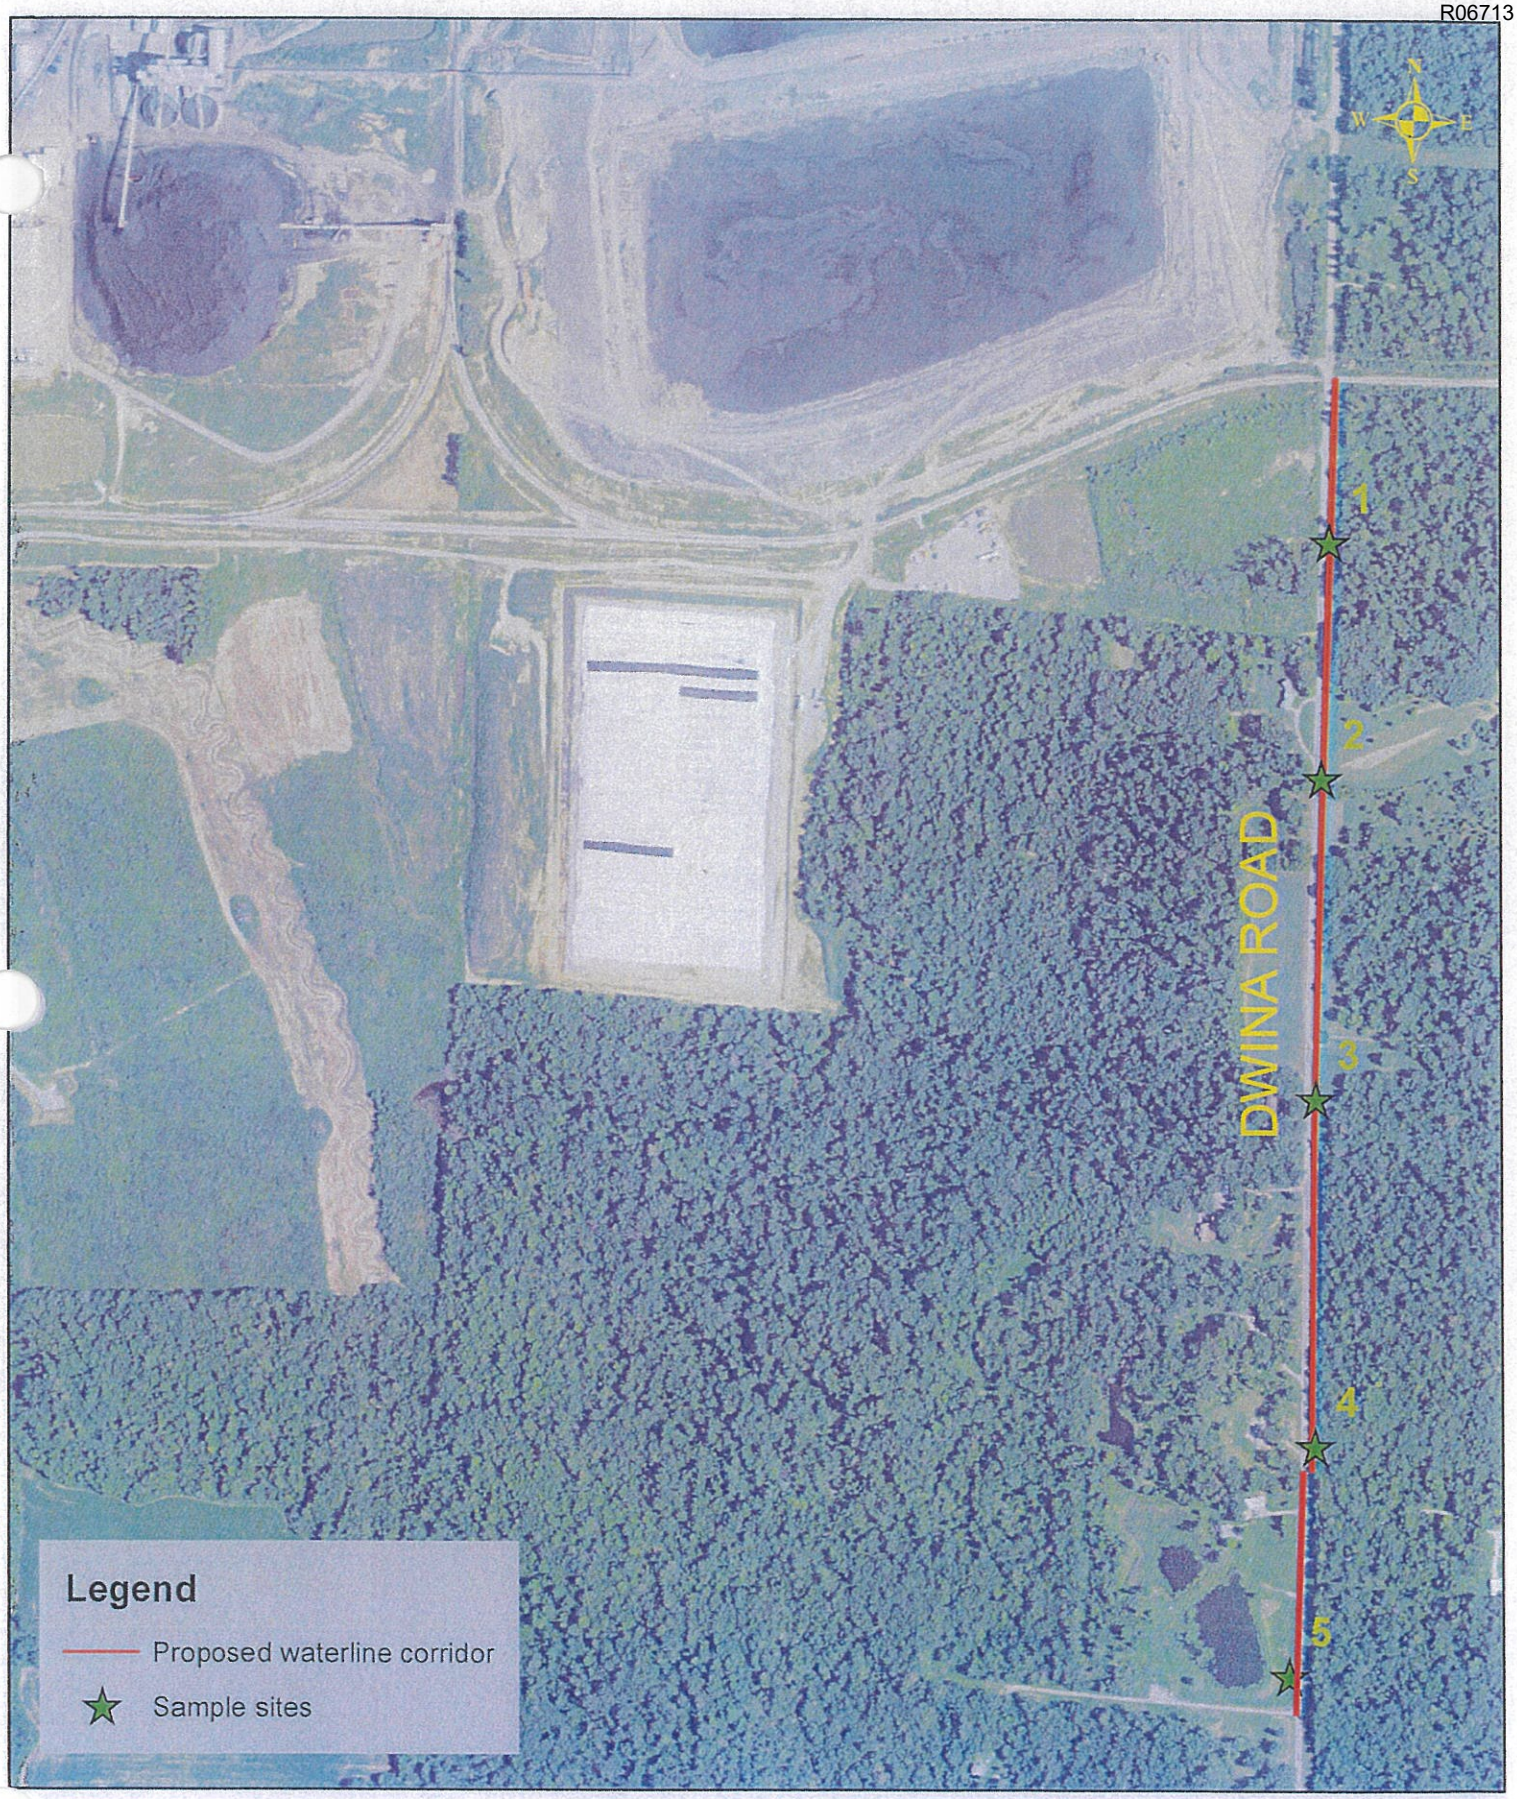

Figure 1. Location of waterline corridor southeast of preparation plant, and location of sample locations.

Table 1. Dwina Road waterline herbaceous vegetation, October 24, 2017.

Sample site	Species	Scientific name	% Cover
1	Japanese honsysuckle	*Lonicera japonica*	70
	Sericea lespedeza	*Lespedeza cuneata*	10
	Canada goldenrod	*Solidago canadensis*	10
	Trumpet creeper vine	*Campsis radicans*	5
2	Green foxtail	*Setaria viridis*	30
	Tall fescue	*Festuca arundinacea*	25
	Purpletop grass	*Tridens flavus*	20
	Japanese honeysuckle	*Lonicera japonica*	15
3	Purpletop grass	*Tridens flavus*	20
	Green foxtail	*Setaria viridis*	20
	Japanese honeysuckle	*Lonicera japonica*	20
	Broomsedge	*Andropogon virginicus*	15
	Canada goldenrod	*Solidago canadensis*	10
	Common blackberry	*Rubus allegheniensis*	5
4	Tall fascue	*Festuca arundinacea*	90
	Green foxtail	*Setaria viridis*	10
5	Tall fascue	*Festuca arundinacea*	70
	Yellow foxtail	*Setaria pumila*	20
	Red clover	*Trifolium pratense*	10

Table 2. Relative dominance for the site.

	total %
Tall fescue	38.9
Japanese honsysuckle	22.1
Green foxtail	12.6
Purpletop grass	8.4
Canada goldenrod	4.2
Yellow foxtail	4.2
Broomsedge	3.2
Sericea lespedeza	2.1
Red clover	2.1
Trumpet creeper vine	1.1
Common blackberry	1.1

Dear Dr. Leibowitz:

Pursuant to the requirements of the Programmatic Agreement between the Illinois Historic Preservation Agency and IDNR concerning mining, please review the enclosed Archaeological Survey Short Report.

PROJECT: Williamson Energy, Permit 375: waterline
LOCATION: starting 0.4 miles north of the intersection of Dwina Road and Corinth Road North, ~~Cornith,~~ IL, running northward for 0.75 miles IL
COUNTY: Williamson CONTRACTOR: ARG (Titus)

The Phase One archaeological survey of **0.9 acres** has not recorded any archaeological sites; project clearance is recommended.

In accordance with the established procedures for coordination of Illinois Department of Natural Resources projects, IDNR-Office of Realty and Environmental Planning requests the concurrence of the State Historic Preservation Office in our determination that the proposed undertaking is a **no effect** regarding status of any Historic Property.

If no reply is received from IHPA within 45 days, IDNR will conclude that, as per the Programmatic Agreement, this application is approved and will proceed with the undertaking.

Sincerely,

Dawn E. Cobb

Dawn Cobb
Archaeologist

LOCATIONAL INFORMATION AND SURVEY CONDITIONS:
County: Williamson **Quadrangle:** Pittsburg, Illinois 7.5'

Project Type/Title: Phase I Cultural Resources Survey and Assessment of the Dwina Road Waterline for Williamson Energy, LLC, Williamson County, Illinois (ARG CRM 1990).
Funding and/or Permitting Federal/State Agencies: IDNR

Legal Location:
Section: 7 (SWSW), 18 (W2NW) **Township:** 8S **Range:** 4E
Section: 13 (NESE) **Township:** 8S **Range:** 3E

UTM Coordinates:
North End: **UTM North:** 4189211 **UTM East:** 340110
South End: **UTM North:** 4187964 **UTM East:** 340069

Location: Survey area is located along the west (southern ¼ mile) and east (northern ½ mile) sides of Dwina Road; the southern end of the survey corridor begins approximately 0.63 km (0.4 mile) north of the intersection of Dwina Road and Corinth Road, and extends northward approximately 1.25 km (0.75 mile). The survey area is approximately 3.6 km (2.25 miles) west-northwest of Corinth, Illinois.

Project Description: Phase I archaeological survey of a proposed waterline for Williamson Energy, LLC IDNR Mine Permit No. 375.
Topography: Slopes and ridge crest
Elevation (' AMSL): 485'-560'
Soils: Ava-Bluford-Wynoose (University of Illinois 1966)
Drainage: Unnamed Intermittent, Pond Creek, Middle Fork Big Muddy River, Big Muddy River River, Mississippi River
Land Use/Ground Cover (include % visibility): Grass and weeds 0-20% visibility
Survey Limitations: None

_ **Phase II archaeological investigation has indicated that site(s) does(do) not meet requirements for National Register eligibility; project clearance is recommended.**

_ **Phase II archaeological investigation has indicated that site(s) meet requirements for National Register eligibility; formal report is pending and a determination of eligibility is recommended.**

Comments: American Resources Group recently completed an intensive, Phase I cultural resources survey of a proposed waterline in northeastern Williamson County, Illinois. The project area is located approximately 3.6 km (2.25 miles) west-northwest of Corinth along Dwina Road (Attachment A, Figure A-1).

The site-file search and architectural records review conducted prior to beginning the field survey revealed that no archaeological sites or architectural properties had been recorded within the present project area. One previously recorded archaeological site/cemetery (Alsup Cemetery), is, however, located on a wooded ridge spur along the western side of Dwina Road in the extreme southeastern corner of Section 12. This cemetery was recorded in 1981 and revisited in 2003 (Ensor et al. 2003; Vander Leest 1981). Though no stones were observed during either the 1981 or the 2003 surveys, local informants indicated that at least two individuals were buried there. The presence of two cedar trees in an unplowed location supported the oral history. The cemetery will not be impacted by the current project area, as it is located on the opposite (west) side of the road from the proposed waterline, which will be constructed just east of the road ditch along the east side of Dwina Road, a distance of approximately 20 m.

The results of the pre-field records and literature review suggested that both prehistoric and historic site density was apt to be low in the project area, due to its relatively great distance form a perennial water source and primarily sloping topography. The pre-field review of historic maps indicated there no structures plotted on any of the maps within the project area (Attachment B, Figures B-1–B-5).

The project area is comprised of 3-m-wide (10-foot-wide) linear corridor comprising approximately 0.9 acre of land where a waterline is planned for construction. The project corridor is located along the west (along the southern ¼ mile) and east (along the northern ½ mile) sides of Dwina Road. The project area was primarily located in mowed and unmowed grass and weeds; the southern portion along the west side of Dwina Road had recently been scalped by mowing, allowing up to 50 percent ground surface visibility in this area, which was surface surveyed along a single transect (Attachment C, Figure C-1). The remaining areas were primarily in high grass and weeds (Attachment C, Figures C-2–C-4). Ground surface visibility was negligible in these areas. Though much of this area was situated on sloping ground adjacent to the road ditches (which was surface surveyed along a single transect), the ridge tops and areas with less than 20 percent slope were subject to systematic, screened shovel testing at 15 m intervals along a single transect.

No cultural resources were identified during the present investigation, indicating the proposed undertaking will not have an adverse effect on significant cultural resources. It is recommended that the proposed undertaking be allowed to proceed as planned without any additional cultural resources investigations.

Re: Permit No. 375
Incidental Boundary Revision No. 79

Dear Mr. Pollastro:

The appropriate Department technical staff have reviewed the proposed incidental boundary revision dated December 18, 2017, and the supplemental information dated, January 18, 2018, submitted by the permittee for the Pond Creek No. 1 Mine. The request would add 19.9 acres to conduct surface coal mining activities. The additional acres would be used for the installation and operation of a materials shaft, an air shaft and fan, six steel-cased boreholes, a power substation, a storage building, and an equipment storage yard.

Section 1774.13: The Department finds the permittee has demonstrated in its request, and field inspections by the Department's field representative have confirmed, that these areas meet the requirements for an incidental boundary revision, as outlined in 62 Ill. Adm. Code 1774.13(d). Section 1774.13(d)(6) publication requirements have been met. Section 1774.13(c) findings are below.

DEPARTMENT FINDINGS

Section 1761.11(d): The proposed permit area is adjacent to the right-of-way of Davis Road. The only proposed coal mining activities in the permit area within 100 feet of the public road is the construction of a mine access road. Thus, the provisions of 1761.14(b) do not apply.

Section 1761.11(e): The proposed permit area is within three hundred (300) feet measured horizontally of an occupied dwelling. The applicant shall establish a three hundred (300) foot buffer around the dwelling, not disturb within the buffer zone and shall install and maintain buffer zone markers to prevent disturbance within the buffer zone. No mining operations are proposed within three hundred (300) feet measured horizontally of the dwelling.

Section 1773.15(c)(12): The effect of the proposed permitting action on properties listed on or eligible for listing on the National Register of Historic Places has been taken into account by the Department.

Section 1817.13: Upon completion of drilling activities, a borehole/well completion diagram shall be submitted to the Department for all boreholes (dewater, injection, observation, methane vent, rockdust, power supply, etc.) within thirty (30) days of completion of drilling activities. Pursuant to 62 Ill. Adm. Code 1817.13, each borehole shall be properly cased/lined. The construction diagram shall include the location and surveyed elevation of each borehole, a unique name for the borehole and details on the casing/construction materials used. A copy of the borehole/well completion diagram can be found on at:

https://www.dnr.illinois.gov/mines/LRD/Pages/FormsApplicationsMemoranda.aspx

under Miscellaneous Permittee/Operator Forms. Construction all boreholes/monitoring wells shall be in accordance with Operator Memorandum 2017-01.

Section 1817.15: Pursuant to 62 Ill. Adm. Code 1817.15, each borehole shall be properly abandoned and sealed when no longer needed for its intended purpose. Proof of plugging shall be submitted to the Department within sixty (60) days of the date of this approval letter. A copy of the plugging affidavit form can be found on the Department's Forms webpage at:

https://www.dnr.illinois.gov/mines/LRD/Pages/FormsApplicationsMemoranda.aspx,

under Miscellaneous Permittee/Operator Forms. Proof of plugging of all boreholes shall be in accordance with Operator Memorandum 2015-02.

All other conditions and provisions contained in the approved permit also apply to this revision. Approval from this agency does not relieve the permittee from obtaining approval from other agencies requiring such.

The Department is in receipt of the fee and bond. Please forward two copies of your request letter and map(s) to Illinois Environmental Protection Agency, Mine Pollution Control Program, 2309 West Main Street, Suite 116, Marion, Illinois 62959. Mining activities on these 19.9 acres may commence.

Should you have any questions, please contact Will Gillespie at our Benton Office.

Sincerely,

Nick San Diego, Supervisor
Land Reclamation Division

1.2.3 For each phase (permit) of the proposed surface coal mining and reclamation operation over the life of the mine, provide the anticipated or actual starting and termination date and the anticipated number of acres to be affected. **[1779.12]** Designate the boundaries of each phase on the Pre-mining Land Use. **[1779.24(c)]**

Phase/Permit	Start Date	End Date	Acres to be Affected

1.2.4 Indicate on the Pre-mining Land Use Map where future permits for coal refuse piles, coal waste impoundments, or other surface facilities would be located. Provide a general statement that future facilities will be located X number of miles from the current permit.

1.3 Property Ownership

1.3.1 Complete Table 1.3.1 for (1) each legal or equitable owner of record, (2) each holder of leasehold interest, and (3) any purchaser of record under a real estate contract for the surface and mineral property within the proposed permit boundary. **[1778.13(e), 1778.15(a)]**

Complete Table 1.3.1 Property Interest Holders Within Permit Area

1
.3.1A If the proposed permit is for a surface mine where the private mineral estate has been severed from the private surface estate, also provide with Department with:

- A copy of the written consent of the surface owner to the extraction of coal by surface mining methods; or
- A copy of the conveyance that expressly grants or reserves the right to extract the coal by surface mining methods; or
- If the conveyance does not expressly grant the right to extract the coal by surface mining methods, provide the Department with documentation that, under the applicable State law, the applicant has the legal authority to extract the coal by surface mining methods. **[1778.15(b)]**

Provide as an Attachment to Part 1.3.1A.

1.3.2 Complete Table 1.3.2 for any owner of record for property (surface and subsurface) contiguous to any part of the proposed permit boundary. **[1778.13(f)]**

Complete Table 1.3.2 Property Interest Holders Contiguous to the Permit Area

1
.3.2A Does the applicant have an interest in any lands, options or pending bids on interest for lands which are contiguous to the proposed permit area?

☐ Yes ☒ No

If YES, the applicant shall also provide a statement of all lands, interest in lands, options, or pending bids on interests held or made by the applicant for lands contiguous to the area described in the permit application. **[1778.13(h)]**

Upon request by the applicant, this information may be held in confidence by the Department, if not on public file. Does the applicant wish any of the above information to be held confidential?

☐ Yes ☐ No

If YES, the applicant shall identify which information is to be held confidential in its statement. **[1778.13(h)]**

1.3.3 Provide a map ID (name) which shows all boundaries of lands and names of present owners of record of those lands, both surface and subsurface, included in or contiguous to the permit area. The map shall also show which lands within the permit area are **controlled properties** (i.e. applicant is claiming legal right to enter and begin surface coal mining and reclamation operations) versus **uncontrolled properties** (i.e. applicant does not yet have the legal right of entry). **[1779.24(a) and (b)]**

Provide Map of Controlled vs. Uncontrolled Properties as an Attachment to Part 1.3.3.

1.3.4 Complete Table 1.3.4 for any owner of record for property (surface and subsurface) identified in table 1.3.1 and shown on the appropriate map identified in 1.3.3, not owned by the applicant, identifying the documents and legal rights claimed to enter and mine.

All properties identified in Table 1.3.4 that the applicant does not have a legal right to enter and begin mining operations shall require submission of a Property Ownership Waiver form for each property identified for the application to be considered administratively complete [see Operator Memorandum No. 2011-01] as an Attachment to Part 1.3.4.

Complete Table 1.3.4 Uncontrolled Interest Within Proposed Boundary.

1.4 Ownership and Control Information

1.4.1 Complete Table 1.4.1 to identify all owners/controllers of the applicant. Ownership or control is evidenced by:

- Being a permittee of a surface coal mining operation; or
- Based on instruments of ownership or voting securities, owning of record in excess of fifty (50) percent of an entity; or
- Having any other relationship which gives one person authority directly or indirectly to determine the manner in which an applicant, an operator, or other entity conducts surface coal mining operations

The following relationships are presumed to constitute ownership or control unless a person can demonstrate that the person subject to the presumption does not in fact have the authority directly or indirectly to determine the manner in which the relevant surface coal mining operation is conducted.

- Being an officer or director of an entity; or

- Being the operator of a surface coal mining operation; or
- Having the ability to commit the financial or real property assets or working resources of an entity;
- Being a general partner in a partnership; or
- Based on the instruments of ownership or the voting securities of a corporate entity, owning of record ten (10) through fifty (50) percent of the entity; or
- Owning or controlling coal to be mined by another person under a lease, sublease or other contract and having the right to receive such coal after mining or having authority to determine the manner in which that person or another person conducts a surface coal mining operation.

[1773.5, 1778.13(c)(1) to (c)(3)]

See Permit 375

1.4.2 If an owner/controller identified in Table 1.4.1 is or has been associated with a permitted surface coal mining and reclamation operation in the United States within the five (5) years preceding the date of the application, the applicant shall complete Table 1.4.2. **[1778.13(c)(4)]**

See Permit 375

1.4.3 For any other pending surface coal mining operation in any State in the United States filed by an owner/controller identified in Table 1.4.2, the applicant shall complete Table 1.4.3. **[1778.13(c)(5)]**

See Permit 375

1.4.4 For any surface coal mining operation (permitted or applied for) owned or controlled by the applicant, the applicant shall complete Table 1.4.4. **[1778.13(d)(1)]**

See Permit 375

1.5 Violation History

1.5.1 Has the applicant, any subsidiary, affiliate, or persons controlled by or under common control with the applicant, had Federal, State, or Tribal coal mining permit suspended or revoked in the last five (5) years preceding the date of submission of the application? **[1778.14(a)(1)]**

☐ Yes ☒ No

1.5.2 Has the applicant, any subsidiary, affiliate, or persons controlled by or under common control with the applicant, had forfeited a performance bond or similar security deposited in lieu of bond? **[1778.14(a)(2)]**

☐ Yes ☒ No

If YES to either Questions 1.5.1 or 1.5.2, the applicant shall complete Table 1.5 for any permit/company associated with permit suspension, revocation or bond forfeiture. **[1778.14(a) and (b)]**

1.5.3 The applicant shall complete Table 1.5.3 for all violations received by the applicant during the three (3) year period preceding the application date. **[1778.14(c)]**

See Permit 375

1.5.3A For any outstanding violation or violation under appeal listed in Table 1.5.3, the applicant shall provide supporting documentation showing good faith efforts from the issuing agency or appeals proceedings. **[1773.15(b), 1778.14(c)]**

Provide as an Attachment to Part 1.5.3A.

1.5.4 The applicant shall complete Table 1.5.4 for all violations received by surface coal mining operations owned/controlled by the applicant. **[1778.14(c)]**

See Permit 375

1.6 Affidavits, Certifications, Insurance Certificates, Newspaper Notice. The applicant shall attach the appropriate affidavits required for the type of operations proposed, a draft public notice, and a valid certificate of insurance.

1.6.1 Check and attach the completed documents for the proposed operations, if applicable:

	Underground Mining Affidavit
	Planned Subsidence Mitigation Right of Entry Affidavit
	Underground Slurry Disposal Affidavit
	Public Land Survey Monuments Certification
X	Engineering Certification
	Occupied Dwelling Buffer Zone Waiver

1.6.2 Attach a draft public notice and indicate below the name of the newspaper to publish the notice. **[1778.21].**

Marion Daily Republican

Provide draft public notice as an Attachment to Part 1.6.2.

1.6.3 The applicant shall provide proof of general liability insurance from an authorized provider (licensed to write from the Illinois Department of Insurance). If the certificate is intended to also cover liability in the event of subsidence-related damages, this should be clearly indicated on the certificate. **[1778.18, 1817.121(c)(3)]**

Provide certificate of insurance as an Attachment to Part 1.6.3. **See Permit 375**

ENGINEERING CERTIFICATION

I hereby certify the engineering design used in preparation of this application, attachments, and supplements were done by me or under my direct supervision.

I certify that I am familiar with all of the plans, specifications, reports, and maps submitted as part of this application and that said information is accurate.

I certify to the best of my knowledge all such design is in accordance with all applicable local, state and federal laws, rules and regulations.

I further certify that all applicable maps and/or drawings have been individually sealed in accordance with the Professional Engineering Act, 225 ILCS 325/15.

PUBLIC NOTICE

Pursuant to the Surface Coal Mining Land Conservation and Reclamation Act (PA-81-1015, as amended) and the Rules and Regulations of the Act, Williamson Energy, LLC, P. O. Box 99, Johnston City, IL 62951, hereby gives notice that a request for a 19.9 acre Incidental Boundary Revision (IBR) was submitted to the Illinois Department of Natural Resources, Office of Mines and Minerals, Land Reclamation Division under the provisions of Section 1774.13 (d) (2 to complete a supply shaft to transport supplies underground as required for the continued effective operation of the approved mine plan, belt air shaft and fan to supply required ventilation along with six (6) steel cased boreholes with a diameter < 10 $^{5}/_{8}$ inches for power and other supplies, power substation, dry storage barn and equipment grave yard(6.8 acres).

The proposed permit area is described: 19.90 acres of the NW/4, SW/4 of Section 36 and Part of NE/4, SE/4 of Section 35 , Township 7S, R3E of the 3rd Principal Meridian, Franklin County, IL.

The physical location is on Davis Road and approximately 25 feet north of the Gunn Road intersection in Franklin County, Illinois.

The applicant will also be accessing the site from Davis Road at approximately 90 degree angle from Davis Road.

Copies of the application are on file for inspection at the following office, and written comments may be addressed to: Illinois Department of Natural Resources, Office of Mines & Minerals, Land Reclamation Div., One Natural Resources Way, Springfield, IL 62702-1271.

The closing date of the comment period for this IBR is seven (7) days from the date of this Public Notice.

Public Notice will be ran in the Marion Daily Republican.

MEMORANDUM OF REAL ESTATE LEASE

This Memorandum dated this 20th day of June, 2017, by and between Donald E. Grant and Leilani S. Grant, husband and wife, with a mailing address at 17712 Dean Road, Johnston City, Illinois 62951, hereinafter called "Lessor", and Williamson Energy, LLC, a Delaware Limited Liability Company, with a mailing address at P.O. Box 99, Johnston City, Illinois 62951 hereinafter called "Lessee".

KNOW ALL MEN BY THESE PRESENTS that Lessor and Lessee have entered into a Real Estate Lease of even date herewith concerning various interests in the surface only of the following described premises located in Franklin County, Illinois:

> The Center One-third of the North Three-Fourths of the West half of the Southwest Quarter of Section Thirty-six (36), Township Seven (7) South, Range Three (3) East of the Third P.M., and containing twenty (20) acres, more or less.
>
> PIN: 12-36-300-002

Lessor is the owner of the rights granted in said Lease.

Said Lease has an initial Fifteen (15) year term with the right to renew on a year to year basis.

All persons having reason to be concerned with the title as to the foregoing premises are hereby given notice of the existence of said Real Estate Lease and of the duty to inquire about its

terms and conditions with regard to the title to the foregoing premises. Inquiries may be made to Lessee at the address set forth above.

Dated the date set forth above.

PART 2: Pre-mining Information

2.1 Pre-mining Land Use Information

2.1.1 Pre-mining land use and capability acreages. Complete Table 2.1.1: Land Use Capability (Pre-mine) Summary giving the acreage and capability of each land use within the proposed permit area, employing only land use categories of 62 Ill. Adm. Code 1701.5, the "fish and wildlife" land use category must be subdivided per Operator Memorandum 2015-01, and as provided in Table 2.1.1. Use only these land uses for completing the land use maps. The information shall be broken down with a separate table for each landowner. **[1780.23/1784.15]**

Note: other agencies, such as USACE, may define land uses differently.

See Table 2.1.1

2.1.2 Provide slope measurements to represent existing land surface configuration of proposed permit area. A soils map of medium intensity prepared to NRCS specifications or a contoured aerial photo may be submitted to meet this requirement. **[1779.24/1783.24(l)]**

☒ Check here if using one of the above maps or photos.

Does the Soils Map submitted with the application meet the requirements to provide slope measurements?

☐ YES ☒ NO

If NO, provide a contoured aerial photo for the proposed boundary.

N/A

2.1.3 Has previous mining activity occurred within the permit and/or adjacent area? **[1816.133/1817.133]**

☒ YES ☐ NO

If YES, provide the following: **[1777.14(b); 1779.25(a)(8)/1783.25(a)(8)]**

a) Type of mining and the approximate date of extraction.

☐	Surface Mining	Approx. Dates:
X	Underground Mining	Approx. Dates: Ongoing

b) What coal seam or other minerals(s) were extracted?

Illinois 6 Seam

c) Delineate on the Pre-mining Land Use Map the areas disturbed by previous mining activities, including active, inactive or abandoned underground mine work along with any mine opening to the surface.

N/A

d) Identify, on the Pre-mining Land Use Map, areas where surface coal mining operations were conducted prior to August 3, 1977; after August 3, 1977 and prior to May 3, 1978; after May 3,

1978 and prior to February 1, 1983; and any permanent regulatory program permit issued after February 1, 1983. **[1777.14(b)]**

N/A

e) Identify the land uses preceding any type of mining, if known.

N/A

2.1.4 Is any of the permit area subject to local or county zoning?

☐ YES ☒ NO

If YES, provide a description of the existing land uses and land classifications under local law, if any, for the proposed permit and adjacent areas.

2.1.5 Provide the location of surface and subsurface man-made features within, passing through, or passing over the proposed permit area on the Pre-mining Land Use Map. Such features should include, but are not limited to, major electric transmission lines, pipelines, agricultural drainage tile fields, gas and oil wells, and water wells. For gas, oil, and water wells provide the depth, if available, of the well. **[1779.24(e)/1783.24(e)]**

See Operation Map

2.1.4 If any of the land uses changed within the last five (5) years, indicate the acreage and changes of land uses. **[1780.23(a)(1)/1784.15(a)(1)]**

N/A

2.2 Pre-mining Soils Information The applicant is strongly recommended to use the USDA Web Soil Survey. The web soil survey has the ability to create a Custom Soil Survey report for the application area which will generate many of the information requirements for pre-mining soils and prime farmland restoration plans which may reference this report. Please note there are extra soil data tables, including Land Classification, Non-irrigated Capability Class, and Vegetation Productivity, and the data from the Soil Property and Qualities tab which must specifically be extracted when creating a custom report.

NOTE: The acreage of the Area of Interest must agree with the permit acreage. This report may be referenced in responding to portions of the required soil information.

2.2.1 The narrative of land capability and productivity shall employ the USDA National Resources Conservation Service's Land-Capability Classification (Agriculture Handbook No. 210) in conjunction with the soil information provided under the published soil survey completing the Soil Information Chart in Part 2.2.9. Optimum levels management productivity information may be found in Bulletin 811. **[1779.21/1783.21].**

NOTE: This Bulletin has periodic updates in a supplemental table.

See Attached Soil Report 2.2.1

2.2.2 A Soils Map shall be provided as required by Part 2.2. Soil map scale must be the same scale as the Pre-mining Land Use Map and Post Mining Land Use/Capability Reclamation Map, unless otherwise approved by the Department. Does the submitted Soils Map represent a map developed by the National Resources Conservation Service (NRCS)? **[1779.21/1783.21]**

☒ YES ☐ NO

If YES, complete the following:

a) Has the NRCS soil map been modified in any way except by a change in scale?

☐ YES ☒ NO

If YES, explain the nature of the changes.

2.2.3 For surface mines, delineate on the Soils Map, the area which will incur actual mining (removal of overburden and/or deposition of overburden for the extraction of coal). You may identify any areas proposed to remain undisturbed. **[1780.14]**

For underground mines, you may identify any areas proposed to remain undisturbed. **[1784.23]**

N/A

2.2.4 Are any of the identified map units correlated as prime farmland by NRCS criteria?

☒ YES ☐ NO

If YES, explain and provide documentation to meet the requirements of **1785.17 or 1823.11**, if a request for grandfathering, negative determination or underground mine exemption is sought. If prime farmlands exist which will not meet the exemption criteria described above, a prime farmlands restoration plan must be provided in Parts 8.2 through 8.4. **[1785.17(b)/1823.11]**

N/A

2.2.5 Indicate the average topsoil thickness of each of the Soil Map units to be affected. Locate on Soils Map the test holes for soil horizon thickness sampling. Provide the average and methodology for determining the average pre-mining topsoil thickness in inches for: **[1779.21/1783.21]**

- Non-cropland capability _____ inches
- High capability _____ inches
- Prime Farmland ~8 inches

2.2.6 List the soil types and acreages of areas that will require the B and/or portions of the C horizon to be removed and replaced in order to establish the root medium necessary to achieve soil productivity consistent with the proposed post-mining land use. Alternatively, a narrative description explaining why specific soil type acres information for reclamation plan achievement is not necessary may be provided. **[1780.18(b)(4)/1784.13(b)(4)]**

N/A

2.2.7 Are selected overburden materials proposed to be used in lieu of or as a supplement to the A-horizon?

☐ YES ☒ NO

If YES, provide the appropriate information required by Part 2.2.9. **[1779.21(b)/1783.21(b)].**

N/A

Also, **identify** the source of the substitute materials and the topsoil to be substituted away from (not removed) on a separate soils map, labeled Topsoil Substitution Map and/or describe the area in narrative form. **[1780.14/1784.23]**

N/A

2.2.8 Explain why the proposed plan will provide the best available material of equal or better quality than present topsoil or surface existing material. **[1816.22(b)/1817.22(b)].** This section must be addressed when affecting previously disturbed areas if the surface soil is not to be salvaged. If topsoil substitutes or supplements are proposed, a demonstration of their suitability shall be required based on analysis of thickness of soil horizons, total depth, texture, percent coarse fragments, pH, and aerial extent of the different kinds of soils. The Department shall require other chemical and physical analyses, field-site trials, or greenhouse tests if determined to be necessary or desirable to demonstrate the stability of the topsoil substitutes or supplements. **[1780.18(b)(4)/1784.13(b)(4)]; [1779.21/1783.21]**

N/A

2.2.9 Complete Table 2.2.9: Soils Information Chart acreage for each of the map units (soil type and slope classification) of prime farmland, high capability (include grandfathered and negatively determined prime farmland) and non-cropland capability land with respect to areas within the permit area. All soils previously disturbed by home sites, farmsteads, roads, etc., shall be tabulated as non-cropland capability and need not undergo a negative determination. The Soil Information Chart must be broken out by land owner, if there is more than one. **[1779.21(a)/1783.21(a)]; [1785.17]**

See Table 2.2.9

Optional-addition: If applicable, quantify map units acreage values on Table 2.2.9: Soils Information Chart for areas which will not be disturbed. **[1779.21(a)/1783.21(a)]**

2.3 Areas Where Mining is Limited or Prohibited

2.3.1 Does the proposed permit area include areas designated unsuitable for surface coal mining and reclamation operations, or under study for designation in an administrative proceedings as unsuitable for surface coal mining and reclamation operations? **[1773.15(c)(3)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-mining Land Use and Operations Map.

2.3.2 Does the proposed permit area include lands within boundaries of the National Park System, National Wildlife Refuge System, the National System of Trails, the National Wilderness Preservation System, the Wild and Scenic Rivers System, and National Recreation Areas, etc.? **[1761.11(a)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-mining Land Use and Operations Map.

2.3.3 Does the proposed permit area include lands within the boundaries of any national forest? **[1761.11(b)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-mining Land Use and Operations Map.

2.3.4 Are there any publicly owned parks or any places included in the National Register of Historic Places on or within 1,000 feet of the proposed permit area? **[1761.11(c)]**

☐ YES ☒ NO

If YES, identify these areas on the Pre-mining Land Use and Operations Map.

2.3.5 Does the operations plan propose any surface coal mining operations within 100 feet measured horizontally of the outside right-of-way line of any public road? **[1761.11(d)]**

☐ YES ☒ NO

If YES, complete the following:

a) Describe the measures to be used to insure that the interest of the affected public and landowners will be protected. **[1761.11(d)(2)(B)]**

b) In the public notice of the application required in Section 1.6.2, identify the public road(s), describe the activities to be conducted within 100 feet of the road(s), and indicate the opportunity for a public hearing on this matter. **[1761.11(d)(2)(A)]**

2.3.6 Does the proposed permit area include any public roads which are to be removed, relocated or closed? **[1761.14]**

☐ YES ☒ NO

If YES, complete the following:

a) Submit the necessary approvals of the authority with jurisdiction over the public road. **[1761.14(b)(2)]**

b) If a public road is to be replaced or re-located within the permit area, provide evidence that a bond has or will be posted with the authority with jurisdiction over the public road. If such bond has not been nor will be posted, address road replacement costs in Table 11.5.1.14.

c) Describe the measures to be used to insure that the interest of the affected public and landowners will be protected. **[1761.14(b)(5)]**

d) In the public notice of the application required in Part 1.6.2, identify the public road(s) to be removed, relocated or closed, and indicate the opportunity for a public hearing on this matter. **[1761.14(b)(3) and (4)]**

2.3.7 Does the operations plan propose any surface coal mining operations within 300 feet measured horizontally from any occupied dwelling other than a haul road or access road which connects with an existing public road on the side of the public road opposite the dwelling? **[1761.11(e)]**

☐ YES ☒ NO

If YES, include a waiver from the owner of the dwelling meeting the following requirements: **[1761.15]**

- The waiver shall be by lease, deed, or other conveyance from the owner of the dwelling. The waiver must clarify that the owner and signator had the legal right to deny mining and knowingly waived that right.
- Provide proof that the waiver has been properly filed in public property records pursuant to State laws.

NOTE: If a valid waiver was obtained before August 3, 1977 from the owner of an occupied dwelling to conduct operations within 300 feet of the dwelling, a new waiver need not be obtained. [1761.15(c)]

2.3.8 Does the operations plan propose any surface coal mining operations within 300 feet measured horizontally of any public building, school, church, community or institutional building or public park? **[62 Ill. Adm. Code 1761.11(f)]**

☐ YES ☒ NO

2.3.9 Are there any public or private cemeteries or Indian burial grounds or other areas where human bodies are interred located in or within one hundred (100) feet of the proposed permit area? **[62 Ill. Adm. Code 1761.11(g)]**

☐ YES ☒ NO

If YES, locate on the Pre-mining Land Use Map, Operations Map and Post Mining Land Use/Capability Reclamation Plan Map the boundaries of the above-referenced areas and indicate a 100 foot buffer zone around the cemetery or burial ground. **[1779.24(j)/1783.24(j)]**

2.3.10 Are valid existing rights claimed for any part of the permit area? **[1761.5; 1761.16]**

☐ YES ☒ NO

If YES, complete Part 2.6, 2.7, or 2.8 to substantiate the claim.

2.4 Public Parks, Historic Properties

2.4.1 Provide a description of the historic properties (archeological sites and/or historic standing structures) listed or potentially eligible for listing on the National Register of Historic Places and any known archeological features within the proposed permit and adjacent areas. The description of the historic properties occurring within the permit area and adjacent areas shall be based upon available data. If studies have been completed and submitted for review prior to this application, attach a copy of the results of that review. For significant revisions other than shadow area revisions, attach a copy of the IHPA review. **[1779.12/1783.12]**

N/A

2.4.2 If investigations are underway or under review, reference the current status. **[1779.12(b)/1783.12(b)]**

NOTE: Studies which are submitted to the Department shall be submitted as a separate document (3 hard copies, plus one on disk in pdf format or other format as directed by the Department)

N/A

2.4.3 If historic properties are to be avoided, provide a map showing their location in lieu of either a Phase I evaluation or a Phase II evaluation. A qualified archaeologist shall create the map and identifying field markings to be employed to ensure the site(s) will not be disturbed by surface coal mining and reclamation operations. The map is to be submitted in duplicate in separate cover from the rest of the application and labeled Historic Properties Protection Map. The Department will hold the map as a confidential document. If a revision proposes a disturbance not previously identified, identify its location to any avoidance area. **[1773.13(d)(3)].**

N/A

2.4.4 Is this an underground mine with planned subsidence?

☐ YES ☒ NO

If YES, provide photos and a Shadow Area Structure Photo Reference Map with information on structures within the angle of draw of planned subsidence operations. **[1784.20(b)(8)]**

2.4.5 Provide a plan for publicly owned park(s), or place(s) listed on the National Register of Historic Places, that may be adversely affected by the proposed operation describing the measures to be employed: **[1780.31/1784.17]**

- To prevent adverse impacts caused by surface mining related activities including, but not limited to, loss or destruction of historic properties; or
- If valid existing rights exist or joint agency approval is to be obtained under 62 Ill. Adm. Code 1761.17(d), to minimize adverse impacts. If valid existing rights are to be claimed, complete Sections 2.5 or 2.6 of this application, whichever is applicable.

N/A

2.5 Valid Existing Rights (VER) Good Faith/All Permits Standard. [1761.16(b)(2)]

The applicant must provide a property rights demonstration under 62 Ill. Adm. Code 1761.5(a) if the applicant's request for VER is based upon the good faith/all permits standard in Section 1761.5(b)(1). This demonstration must include the following items: **[1761.16(b)]**

2.5.1 A legal description of the land to which the request pertains.

N/A

2.5.2 Complete documentation of the character and extent of the current interests in the surface and mineral estates of the land to which the request pertains.

N/A

2.5.3 A complete chain of title for the surface and mineral estates of the land to which the request pertains.

N/A

2.5.4 A description of the nature and effect of each title instrument that forms the basis for the request, including any provision pertaining to the type of method of mining or mining-related surface disturbances and facilities.

N/A

2.5.5 A description of the type and extent of surface coal mining operations that the applicant or permittee claims the right to conduct, including the method of mining and mining-related surface activities and facilities, and an explanation of how those operations would be consistent with State property law.

N/A

2.5.6 Complete documentation of the nature and ownership, as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11, of all property rights for the surface and mineral estates of the land to which the request pertains.

N/A

2.5.7 Names and addresses of the current owners of the surface and mineral estates of the land to which the request pertains.

N/A

2.5.8 If the coal interests have been severed from other property interests, documentation that the owners of other property interests in the land to which the request pertains have been notified and provided a minimum of 14 days to comment on the validity of the applicant or permittee's property rights claims.

N/A

2.5.9 Provide any comments received in response to the notification provided under Part 2.5.8. above.

N/A

2.5.10 Approval and issuance dates and identification numbers for any permits, licenses, and authorizations that the applicant, permittee or a predecessor in interest obtained before the land came under the protection of 62 Ill. Adm. Code 1761.11.

N/A

2.5.11 Application dates and identification numbers for any permits, licenses, and authorizations for which the applicant, permittee or a predecessor in interest submitted an application before the land came under the protection of 62 Ill. Adm. Code 1761.11.

N/A

2.5.12 An explanation of any other good faith effort that the applicant, permittee or a predecessor in interest made to obtain the necessary permits, licenses, and authorizations as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11.

N/A

2.6 Valid Existing Rights (VER) Needed for and Adjacent Standard. [1761.16(b)(3)]

The applicant must provide a property rights demonstration under 62 Ill. Adm. Code 1761.5(a) if the applicant's request for VER is based upon the good faith/all permits standard in Section 1761.5(b)(1). This demonstration must include the following items: **[1761.16(b)]**

2.6.1 A legal description of the land to which the request pertains.

N/A

2.6.2 Complete documentation of the character and extent of the current interests in the surface and mineral estates of the land to which the request pertains.

N/A

2.6.3 A complete chain of title for the surface and mineral estates of the land to which the request pertains.

N/A

2.6.4 A description of the nature and effect of each title instrument that forms the basis for the request, including any provision pertaining to the type of method of mining or mining-related surface disturbances and facilities.

N/A

2.6.5 A description of the type and extent of surface coal mining operations that the applicant or permittee claims the right to conduct, including the method of mining and mining-related surface activities and facilities, and an explanation of how those operations would be consistent with State property law.

N/A

2.6.6 Complete documentation of the nature and ownership, as of the date that the land came under the protection of 62 Ill. Adm. Code 1761.11, of all property rights for the surface and mineral estates of the land to which the request pertains.

N/A

2.6.7 Names and addresses of the current owners of the surface and mineral estates of the land to which the request pertains.

N/A

2.6.8 If the coal interests have been severed from other property interests, documentation that the owners of other property interests in the land to which the request pertains have been notified and provided a minimum of 14 days to comment on the validity of the applicant or permittee's property rights claims.

N/A

2.6.9 Provide any comments received in response to the notification provided under Part 2.6.8 above.

N/A

2.6.10 Explain how and why the land is needed for and immediately adjacent to the operation upon which the request is based. This explanation shall include a demonstration that prohibiting expansion of the operation onto that land would unfairly impact the viability of the operation as originally planned before the land came under the protection of 62 Ill. Adm. Code 1761.11.

N/A

2.7 Valid Existing Rights (VER) Standards for Mine Roads. [1761.16(b)(4)]

If the request relies upon one of the standards for roads in 62 Ill. Adm. Code 1761.5(c)(1) through (c)(4), satisfactory documentation of one or more of the following must be submitted showing that: **[1761.5(c)]**

2.7.1 The road existed when the land upon which it is located came under the protection of 62 Ill. Adm. Code 1761.11, and the applicant has a legal right to use the road for surface coal mining operations.

N/A

2.7.2 A properly recorded right of way or easement for a road in that location existed when the land came under the protection of 62 Ill. Adm. Code 1761.11, and, under the document creating the right-of-way or easement, and under any subsequent conveyances, the applicant has a legal right to use or construct a road across that right of way or easement to conduct surface coal mining operations.

N/A

2.7.3 A valid permit for use or construction of a road in that location for surface coal mining operations existed when the land came under the protection of 62 Ill. Adm. Code 1761.11.

N/A

2.7.4 Valid existing rights exist under 62 Ill. Adm. Code 1761.5(a) and (b).

N/A

Table 2.1.1
Land Use Capability (Pre-Mining) Summary

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

Map Scale: 1:2,220 if printed on A landscape (11" x 8.5") sheet.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Franklin County, Illinois
Survey Area Data: Version 10, Sep 16, 2016

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Sep 13, 2011—Oct 21, 2011

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Descriptions (North Supply Shaft)

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Franklin County, Illinois

376A—Cisne silt loam, bench, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2snm6
Elevation: 360 to 840 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Prime farmland if drained

Map Unit Composition

Cisne, bench, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cisne, Bench

Setting

Landform: Structural benches
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Peoria silty loess over roxana silty loess

Typical profile

Ap - 0 to 8 inches: silt loam
E - 8 to 17 inches: silt loam
Bt1 - 17 to 37 inches: silty clay loam
2Bt2 - 37 to 60 inches: silty clay loam
2C - 60 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: 15 to 23 inches to abrupt textural change
Natural drainage class: Poorly drained
Runoff class: Medium
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.02 to 0.20 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 13.0
Available water storage in profile: Low (about 3.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

Minor Components

Hoyleton, bench

Percent of map unit: 10 percent
Landform: Structural benches
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Interfluve
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

639A—Wynoose silt loam, bench, 0 to 2 percent slopes

Map Unit Setting

National map unit symbol: 2t95n
Elevation: 360 to 840 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 53 to 58 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Wynoose, bench, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Wynoose, Bench

Setting

Landform: Structural benches
Landform position (two-dimensional): Summit
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Loess over mixed loess and drift over ablation till

Typical profile

Ap - 0 to 7 inches: silt loam
Eg - 7 to 19 inches: silt loam
Btg - 19 to 36 inches: silty clay
2Btg - 36 to 66 inches: silty clay loam
3Btgb - 66 to 79 inches: silty clay loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: 13 to 24 inches to abrupt textural change
Natural drainage class: Poorly drained
Runoff class: Negligible
Capacity of the most limiting layer to transmit water (Ksat): Moderately low to moderately high (0.02 to 0.20 in/hr)

Depth to water table: About 0 to 12 inches
Frequency of flooding: None
Frequency of ponding: Frequent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Sodium adsorption ratio, maximum in profile: 12.0
Available water storage in profile: Low (about 4.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

Minor Components

Bluford, bench

Percent of map unit: 10 percent
Landform: Structural benches
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Rise
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

3108A—Bonnie silt loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2tbrr
Elevation: 330 to 490 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 195 days
Farmland classification: Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

Map Unit Composition

Bonnie, frequently flooded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Bonnie, Frequently Flooded

Setting

Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Alluvium

Typical profile

Ap - 0 to 10 inches: silt loam
Cg1 - 10 to 27 inches: silt loam
Cg2 - 27 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Poorly drained
Capacity of the most limiting layer to transmit water (Ksat): Moderately high (0.20 to 0.60 in/hr)
Depth to water table: About 0 to 12 inches
Frequency of flooding: Frequent
Frequency of ponding: Frequent
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Very high (about 12.6 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: C/D
Hydric soil rating: Yes

Minor Components

Belknap

Percent of map unit: 10 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

3382A—Belknap silt loam, 0 to 2 percent slopes, frequently flooded

Map Unit Setting

National map unit symbol: 2tbrv
Elevation: 330 to 490 feet
Mean annual precipitation: 35 to 46 inches
Mean annual air temperature: 54 to 57 degrees F
Frost-free period: 175 to 200 days
Farmland classification: Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

Map Unit Composition

Belknap, frequently flooded, and similar soils: 90 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Belknap, Frequently Flooded

Setting

Landform: Flood plains
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Silty alluvium

Typical profile

Ap - 0 to 7 inches: silt loam
Bw - 7 to 59 inches: silt loam
Bg - 59 to 79 inches: silt loam

Properties and qualities

Slope: 0 to 2 percent
Depth to restrictive feature: More than 80 inches
Natural drainage class: Somewhat poorly drained
Runoff class: Very low
Capacity of the most limiting layer to transmit water (Ksat): Moderately high to high (0.20 to 2.00 in/hr)
Depth to water table: About 6 to 24 inches
Frequency of flooding: Frequent
Frequency of ponding: None
Salinity, maximum in profile: Nonsaline to very slightly saline (0.0 to 2.0 mmhos/cm)
Available water storage in profile: Very high (about 12.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 3w
Hydrologic Soil Group: B/D
Hydric soil rating: No

Minor Components

Bonnie, frequently flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Piopolis, frequently flooded

Percent of map unit: 5 percent
Landform: Flood plains
Landform position (two-dimensional): Toeslope
Landform position (three-dimensional): Talf
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: Yes

Soil Information for All Uses

Soil Reports

The Soil Reports section includes various formatted tabular and narrative reports (tables) containing data for each selected soil map unit and each component of each unit. No aggregation of data has occurred as is done in reports in the Soil Properties and Qualities and Suitabilities and Limitations sections.

The reports contain soil interpretive information as well as basic soil properties and qualities. A description of each report (table) is included.

Land Classifications

This folder contains a collection of tabular reports that present a variety of soil groupings. The reports (tables) include all selected map units and components for each map unit. Land classifications are specified land use and management groupings that are assigned to soil areas because combinations of soil have similar behavior for specified practices. Most are based on soil properties and other factors that directly influence the specific use of the soil. Example classifications include ecological site classification, farmland classification, irrigated and nonirrigated land capability classification, and hydric rating.

Prime and other Important Farmlands (North Supply Shaft)

This table lists the map units in the survey area that are considered important farmlands. Important farmlands consist of prime farmland, unique farmland, and farmland of statewide or local importance. This list does not constitute a recommendation for a particular land use.

In an effort to identify the extent and location of important farmlands, the Natural Resources Conservation Service, in cooperation with other interested Federal, State, and local government organizations, has inventoried land that can be used for the production of the Nation's food supply.

Prime farmland is of major importance in meeting the Nation's short- and long-range needs for food and fiber. Because the supply of high-quality farmland is limited, the U.S. Department of Agriculture recognizes that responsible levels of government, as well as individuals, should encourage and facilitate the wise use of our Nation's prime farmland.

Prime farmland, as defined by the U.S. Department of Agriculture, is land that has the best combination of physical and chemical characteristics for producing food, feed, forage, fiber, and oilseed crops and is available for these uses. It could be cultivated land, pastureland, forestland, or other land, but it is not urban or built-up land or water areas. The soil quality, growing season, and moisture supply are those needed for the soil to economically produce sustained high yields of crops when proper management, including water management, and acceptable farming methods are applied. In general, prime farmland has an adequate and dependable supply of moisture from precipitation or irrigation, a favorable temperature and growing season, acceptable acidity or alkalinity, an acceptable salt and sodium content, and few or no rocks. The water supply is dependable and of adequate quality. Prime farmland is permeable to water and air. It is not excessively erodible or saturated with water for long periods, and it either is not frequently flooded during the growing season or is protected from flooding. Slope ranges mainly from 0 to 6 percent. More detailed information about the criteria for prime farmland is available at the local office of the Natural Resources Conservation Service.

For some of the soils identified in the table as prime farmland, measures that overcome a hazard or limitation, such as flooding, wetness, and droughtiness, are needed. Onsite evaluation is needed to determine whether or not the hazard or limitation has been overcome by corrective measures.

A recent trend in land use in some areas has been the loss of some prime farmland to industrial and urban uses. The loss of prime farmland to other uses puts pressure on marginal lands, which generally are more erodible, droughty, and less productive and cannot be easily cultivated.

Unique farmland is land other than prime farmland that is used for the production of specific high-value food and fiber crops, such as citrus, tree nuts, olives, cranberries, and other fruits and vegetables. It has the special combination of soil quality, growing season, moisture supply, temperature, humidity, air drainage, elevation, and aspect needed for the soil to economically produce sustainable high yields of these crops when properly managed. The water supply is dependable and of adequate quality. Nearness to markets is an additional consideration. Unique farmland is not based on national criteria. It commonly is in areas where there is a special microclimate, such as the wine country in California.

In some areas, land that does not meet the criteria for prime or unique farmland is considered to be *farmland of statewide importance* for the production of food, feed, fiber, forage, and oilseed crops. The criteria for defining and delineating farmland of statewide importance are determined by the appropriate State agencies. Generally, this land includes areas of soils that nearly meet the requirements for prime farmland and that economically produce high yields of crops when treated and managed according to acceptable farming methods. Some areas may produce as high a yield as prime farmland if conditions are favorable. Farmland of statewide importance may include tracts of land that have been designated for agriculture by State law.

In some areas that are not identified as having national or statewide importance, land is considered to be *farmland of local importance* for the production of food, feed, fiber, forage, and oilseed crops. This farmland is identified by the appropriate local agencies. Farmland of local importance may include tracts of land that have been designated for agriculture by local ordinance.

Report—Prime and other Important Farmlands (North Supply Shaft)

Prime and other Important Farmlands–Franklin County, Illinois		
Map Symbol	**Map Unit Name**	**Farmland Classification**
376A	Cisne silt loam, bench, 0 to 2 percent slopes	Prime farmland if drained
639A	Wynoose silt loam, bench, 0 to 2 percent slopes	Farmland of statewide importance
3108A	Bonnie silt loam, 0 to 2 percent slopes, frequently flooded	Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season
3382A	Belknap silt loam, 0 to 2 percent slopes, frequently flooded	Prime farmland if drained and either protected from flooding or not frequently flooded during the growing season

PART 3: Mining Operations Plan

3.1 Mining Operations Plan

3.1.1 Describe the type and method of mining procedures and proposed engineering techniques to be employed in the operation of the proposed mine. Describe the major equipment to be employed and how such equipment will be used in the different aspects of the mining operation. Provide an estimation of the anticipated annual coal production and anticipated total coal production by tonnage once the mine is at full operational capacity. **[1780.11(a)/1784.11(a)]**

Excavator and trucks, dozer, scraper, and rotary drill

3.1.2 Describe the proposed mining operations plan for the permit area in terms of the mining sequence, the employment of facilities, establishment and maintenance of erosion control facilities, air pollution control facilities, coal storage, cleaning and loading areas, location and placement of topsoil, spoil, coal waste, or other storage facilities. This description shall include the following: **[1780.11(b)/1784.11(b)]**

The proposed operation is construction of a graved access road containing two CMP (12" and 18") to allow off site drainage to pass under access road. Construction of various concrete pad ((1) 20'x5'x4", (2) 40'x50'x1.5', (1) 40'x20'x1.5') will be completed to support a belt air fan, material shaft collar, emergency man hoist, mine power substation. Various holes and shafts will be drilled including 16.5' concrete lined material shaft (raise bored), 8' finished concrete belt air shaft (raise bored), (six) 10 5/8 steel lined full grouted holes for power supply, compressed air and material supply/utility holes to the mine. All shaft and holes will be ~490 feet deep and will be vertical raise bores. There will be ~three drill pits required for drilling these boreholes. The pits will be approximately 10'x10'x10'. Each pit will be reclaimed after the completion of the drill the respective holes. A three sided dry barn storage building (pole barn structure 50'x100') will be constructed with a gravel floor. The remaining 6.8 acre graveled area will serve as a supply yard for mine supplies. If buried utility lines (powerline, control line, air lines, and/or public water line) necessary, they will be buried at least four feet.

a) How each type of overburden (soil horizons, glacial drift and consolidated material) will be handled with regards to different types of mining equipment. If toxic materials have been identified as occurring in the overburden, describe how these materials will be handled to insure proper disposal. **[1780.11(b)/1784.11(b)]; [1780.18(b)(7)/1784.13(b)(7)]**

Topsoil and subsoil will be store separately

b) Measures to be employed to prevent or minimize exposure of soil stockpiles to excessive water and wind erosion, unnecessary compaction and contamination by undesirable materials. **[1780.11(b)(2)/1784.11(b)(2)]**

Silt fence will be used around entire IBR, soil stockpile will be seed during the first planting season with approve seed mix from permit 375

c) Describe methods and treatment measures to be used on exposed areas where topsoil has been removed to prevent excess air and water pollution. **[1816.95/1817.95]**

Area will be gravel with durable rock or have lime stabilization completed to prevent excess air and water pollution.

3.1.3 Locate all soil horizon storage areas and/or root medium stockpiles on the Operations Map. Identify each storage area as to its content. **[1780.14(b)(5)/1784.23(b)(5)]**

See Operation Map

3.1.4 Provide a plan for topsoil, subsoil and/or substitute materials removal, storage and redistribution. **[1780.18(b)(4)/1784.13(b)(4)]**

See Operation Map

3.1.5 The Operations Map and plans shall show the lands proposed to be affected within the proposed permit by the operation, according to the sequence of mining and reclamation and any change in a facility or feature to be caused by the proposed operations if the facility or feature was shown in response to the General Mapping Requirements for the Operations Map. **[1780.14(b)(2)/1784.23(b)(2)]**

See Operation Map

3.1.6 For surface mines, locate all areas where lateral support removal will approach the minimum distance allowed. State the minimum width of lateral support to be left in appropriate areas, including adjacent landowners, road right-of-ways, pipelines and power line easements. Be sure to account for highwall sloping when such slopes are to be incorporated into the proposed reclamation plan. **[1816.99]**

N/A

3.1.7 Disposal of Non-coal Mine Wastes. Concerning non-coal waste, describe measures to be employed to ensure that all debris, acid-forming and toxic-forming materials, and materials constituting a fire hazard are disposed of in accordance with 62 Ill. Adm. Code 1816.89/1817.89 and 1816.102(f)/1817.102(f). Provide a description of contingency plans which have been developed to preclude sustained combustion of such materials.

See Permit 375

3.1.8 If surface mining activities are to be conducted within 500 feet of an underground mine describe the measures to be employed to comply with the requirements of 62 Ill. Adm. Code 1816.79 of the regulations. **[1780.27]**

N/A

3.2 Transportation Facilities

3.2.1 Which, if any of the following facilities, are to be constructed, used, or maintained within the proposed permit area?

- ☒ Road *(identify in space below)*
- ☐ Conveyor *(identify in space below)*
- ☐ Rail System *(identify in space below)*

For transportation facilities identified above, provide a detailed description of each; include the following:

a) Specifications for each road width, road gradient, road surface, road cut, fill embankment, culvert, bridge, drainage ditch, and drainage structure; **[1780.37(a)(1)/1784.24(a)(1)]**

See Road Profile Drawing. Access road only have two culvert pipes (12" and 18") installed.

b) A report of appropriate geotechnical analysis, where the Department's approval is required for alternative specifications, or for steep cut slopes under 62 Ill. Adm. Code 1816.150/1817.150; **[1780.37(a)(2)/1784.24(a)(2)]**

N/A

c) A description of measures to be taken to obtain the Department's approval for alteration or relocation of a natural drainageway under 62 Ill. Adm. Code 1816.150/1817.150; **[1780.37(a)(3)/1784.24(a)(3)]**

N/A

d) A description of measures, other than use of a rock headwall, to be taken to protect the inlet end of a ditch relief culvert, for approval by the Department under 62 Ill. Adm. Code 1816/1817.150; **[1780.37(a)(4)/1784.24(a)(4)]**

N/A

e) The drawings and specifications for each proposed ford of a perennial or intermittent stream that is used as a temporary route, as necessary for approval of the ford by the Department in accordance with 62 Ill. Adm. Code 1816.151(c)(2)/1817.151(c)(2); **[1780.37(a)(5)/1784.24(a)(5)]**

N/A

f) A general description of each road, conveyor, or rail system to be constructed, used, or maintained within the proposed permit area: **[1780.37(a)(6)/1784.24(a)(6)]**

Road will be covered with a durable rock surface.

g) A description of the plans to remove and reclaim each road that will not be retained under an approved post-mining land use, and the schedule for this removal and reclamation. **[1780.37(a)(7)/1784.24(a)(7)]**

All durable rock will be recovered and used at other location or for filling adjacent shafts. All road culverts will be removed and properly disposed of offsite. Topsoil will be spread evenly over the entire road surface to comply with the post-mine land used of cropland.

h) A discussion of the removal/construction/or relocation of powerlines related to transportation facilities and structures associated with roads **[1780.11(b)(3)]**

All powerlines will be reclaimed from property by removing the power poles. All power poles will be properly disposed of offsite.

3.2.2 For roads identified in Part 3.2.1, please indicate the classification in accordance with 62 Ill. Adm. Code 1816.150/1817.150 below: [*Primary or Ancillary*]

Road Identification	Road Classification
Entrance Road	Ancillary
	Choose Type

	Choose Type
	Choose Type
	Choose Type
	Choose Type
	Choose Type
	Choose Type

3.2.3 Transportation facilities shall be located on the Operations Map. Provide specification and plan-profiles of existing grade line, proposed road centerline, ditch flow lines, road cut, fill embankment, culvert, bridge and drainage structures, and typical cross sections. **[1780.37/1784.24]**

See road profile drawing

3.2.4 If any roads identified in Part 3.2.2 are classified as primary, the following requirements shall be met:

a) Each primary road shall be designed and constructed in accordance with **1816.151/1817.151**. Provide a summary of the design criteria used for each primary road proposed in the area below this item. Additional design calculations and/or drawings shall be included.

b) **Primary Road Certification.** The plans and drawings for each primary road shall be prepared by, or under the direction of, and certified by a qualified registered professional engineer as meeting the requirements of 62 Ill. Adm. Code 1816.150/1817.150 and 1816.151/1817.151 in accordance with prudent engineering practices. The professional engineer shall be experienced in the design and construction of roads, as evidenced by the placement of a registered engineer's seal on the certification. **[1780.37(b)/1784.24(b)]**

3.2.5 Are any roads constructed to facilitate surface coal mining operations proposed to be permanent?

☐ YES ☒ NO

If YES, locate on the Post Mining Land Use/Capability Reclamation Map and include appropriate discussion how modifications will be accomplished including the removal and disposition of any excess road material.

3.3 Air Pollution Control Plan

3.3.1 Provide a plan detailing fugitive dust control practices to be employed during proposed surface coal mining and reclamation operations. **[1780.15/1784.26]; [1816.150(b)(1)/1817.150(b)(1)]**

See Permit 375

3.3.2 Provide a description of the steps to be taken to comply with the requirements of the Clean Air Act (42 U.S.C. 7401 et seq.), and other applicable air and water quality laws and regulations and health and safety standards. **[1780.18(b)(9)/1784.13(b)(9)]**

See Permit 375

3.3.3 Fire Control Plan

a) Concerning non-coal mine waste, provide a description of contingency plans which have been developed to preclude sustained combustion of such materials. **[1780.18(b)(7)/1784.13(b)(7)].**

N/A

b) Provide a plan detailing how coal mine waste fires shall be extinguished. **[1816.87/1817.87]**

N/A

c) Provide a plan detailing how coal stockpile fires shall be extinguished. [225 ILCS 720/4.08]

N/A

3.4 Mine Waste Material

3.4.1 Non-Coal Mine Waste. Identify the nature of all non-coal waste material to be disposed of within the permit area, including but not limited to, grease, lubricants, paints, flammable liquids, garbage, tires, abandoned mining machinery, lumber and other hazardous and/or combustible materials generated during coal mining operations. Describe how and where each waste will be generated, stored, and disposed in accordance with 62 Ill Adm. Code 1816.89/1817.89 and indicate locations of all areas in which such materials are to be disposed of on the mining operations map. **[1816.89/1817.89]**

Note: All wastes are to be managed according to the Title 35 of the Illinois Administrative Code, Subtitle G and any non-coal mine waste defined as "hazardous" under Section 3001 of the Resource Conservation and Recovery Act (RCRA) (P. L. 94-580, as amended) and 40 CFR 261 shall be handled in accordance with the requirements of Subtitle C of RCRA and in accordance with the Illinois Environmental Protection Act as implemented by Title 35, Subtitle G, Part 721.

N/A

3.4.2 Coal Processing and Underground Development Waste. Will coal refuse waste and/or underground development from activities inside and/or outside the proposed permit area be disposed of within the proposed permit area?

☐ YES ☒ NO

If YES, list in Table 3.4.2 the nature of ALL coal waste material to be disposed of within the permit area and give the potential acidities and net neutralization potentials for each coal waste.

Table 3.4.2. List of coal waste materials to be disposed within the permit area.

Type of material shall be limited to the following designations: *Coarse Coal Refuse, Filter Cake, Fine Coal Refuse, Fly Ash, Bottom Ash, or Wastewater Treatment slurry.*

Type of Material	Source Mine Permit and Preparation Plant or Ash Generator	Potential Acidities	Net Neutralization Potential
Choose a Type			
Choose a Type			
Choose a Type			

Choose a Type			

3.4.3 Physical Properties of Underground Development Material and Coal Waste. Provide a physical and engineering analysis of the underground development material, coal waste or in case there is no coal waste production at the time of this application, the coal seam and the strata immediately above and below it, from which the underground development material and/or the coal waste will be generated. The analysis shall include: thickness of coal seam and strata that may contain acid-forming or alkalinity materials moisture content, the, maximum dry density, optimum moisture content, grain size distribution, coefficient of friction, and cohesion. **[1780.22(b)(2) and (b)(3)/1784.22(b)(2) and (b)(3)].**

3.5 Operation of Coal Refuse Disposal Areas Provide the information required in the following table for each Coal Refuse Disposal Area to be constructed or modified through this application.

Table 3.5. List of Coal Refuse Disposal Areas to be constructed or modified.

Type of facility shall be limited to the following designations: *Coal Refuse Pile, Coal Waste Impoundment, Incised Slurry Pond, Slurry Sump (No Discharge), or Underground Slurry Injection.*

Name of Facility			
Type of Facility	Choose an item.	Choose an item.	Choose an item.
Latitude (DD)			
Longitude (DD)			
Anticipated Construction Date			
Surface/ Shadow Area of Disposal (acres)			
Total coarse Coal Refuse Storage Volume (cubic yards)			
Total Fine Coal Refuse Storage Volume (cubic yards)			

3.5.1 Design and Construction Details of Coal Refuse Disposal Areas. Provide location and detailed construction plan (including engineering calculations, cross sections, maps and drawings) for each proposed structure in accordance with 62 Ill Adm. Code 1780.14(b)(8)/1784.23(b)(7). Take into account that:

a) Coal mine waste shall be disposed in compliance with requirements of 62 Ill. Adm. Code 1816.81/1817.81 through 1816.84/1817.84.

b) For coal processing waste dams and embankments meeting the MSHA size criteria, each plan shall comply with the requirements of MSHA 30 CFR 77.216-1 and 77.216-2, each plan shall contain typical cross-sections of all proposed levees, dams and excavations and the results of a geo-technical investigation as prescribed under 62 Ill. Adm. Code 1816.49/1817.49.

3.5.2 Operation and Maintenance of Coal Refuse Disposal Areas

a) **Surface and Groundwater Protection.** For all coal waste disposal areas, explain measures to be taken to avoid pollution of surface or groundwater due to leaching through levees or dams and through underlying soil as required in 62 Ill Adm. Code 1816.81(a)(1)/1817.81(a)(1). Locate and provide details of:

- All streams, creeks, and surface water impoundments within coal waste disposal areas or which receive runoff from coal waste disposal areas.
- Diversions as necessary to divert surface water around coal waste disposal areas.
- Diversions or other devices designed to collect surface runoff from waste disposal sites and transport same to appropriate treatment facility, including but not limited to: down drains, terraces, benches, under drains, spring collectors and leachate collectors.
- Location and discharge flow rate calculations of under drain, internal/ leachate drain and associated NPDES discharge points.
- Description of extent, properties, construction and operation of liners or caps to be used on the coal refuse disposal area and/or structure.

b) **Monitoring.** For all coal waste disposal areas explain measures to be taken to safely operate the coal refuse disposal area and ensure that final disposal facility is suitable for reclamation in accordance with 62 Ill Adm. Code 1816.81/1817.81. Measures to ensure safety can include a description of:

- Scope and frequency of inspections
- Maintenance of embankments and liners
- Controls to ensure compaction standards.
- Maintenance of runoff conveyance and discharge structures

3.5.3 Coal Waste Dams and Embankments. If there are dams or embankments constructed of, or designed to contain coal processing waste that are proposed to be built or modify in this permit application, provide the information required in the following Table 3.5.3.

Identify in the table: each coal waste dam's class according to USDA Technical Release 60 criteria; each coal waste dam's hazard classification according to MSHA 30CFR 77.216 criteria; the dam's height, slopes, top width, top and bottom elevation, pool elevation for every phase of construction, all proposed dam's discharge structures, and any associated NPDES discharge point to which runoff from the structure will be directed.

Table 3.5.3: List of Coal Waste Dams and Embankments

Class criteria shall be limited to the following designations: *Class A, Class B, or Class C.*

MSHA structure classification shall be limited to the following designations: *Low Hazard, Medium Hazard, High Hazard, or Not an MSHA Structure.*

Measurements of varying slopes, heights, and discharge structures according to construction phases shall be included.

3.5.4

Disposal of Coal Waste in Underground Workings.

a) The return of coal processing waste to underground workings must be approved by both the Department and MSHA as required by **Section 1784.25(a).** Has the applicant received approval from MSHA to conduct the prosed operations?

☐ YES ☐ NO

If YES, provide documentation. If NO, indicate the status of the necessary MSHA approval **[1784.25(a)]**.

b) Provide the source and type of waste to be stowed and the transport medium. **[1784.25(c)]**

c) Is the applicant proposing to use pneumatic transport to return the coal processing waste to the underground workings? **[1784.25(e)]**

☐ YES ☐ NO

If YES, is the applicant requesting to be exempted from requirements of hydrologic monitoring?

☐ YES ☐ NO

If YES, provide a detailed justification for the monitoring exemption.

d) **Surface Disturbance Operations:** In addition to providing all relevant parts of this application for permitting surface disturbances, provide the following:

i) On the Operations Map and Underground Mine Plan Map, provide the location of all coal waste slurry transport lines from the point of origin to the disposal boreholes. Locate specific features such as pump stations, cleanout points, etc. **[1784.25(a)]**

ii) Provide a written plan describing the design, operation, and maintenance of the proposed coal processing waste disposal facility, including flow diagrams and any other drawings and maps submitted to MSHA for their approval. Include information on periodic inspection of the delivery system to recognize deterioration and avoid failure. **[1784.25(a)]**

iii) Define the type, size and thickness of the lines to be used. **[1784.25(a)]**

iv) Provide detail on a monitoring system to assure any leak or break in the line can be detected and the system shut down to minimize any potential negative impacts. **[1784.25(a)]**

v) Should a release of slurry on the surface occur from either borehole overflow or breaks in the delivery system, provide an emergency contingency plan to minimize environmental harm. **[1784.25(c)]**

e) **Underground Workings Disposal Area**

i) Provide the anticipated volume of slurry to be disposed of in the proposed area and the anticipated life of the operation. **[1784.25(a)]**

ii) On the Underground Mine Plan Map, provide the location of all areas targeted to receive the underground waste material. Include pillar geometry, incorporate floor contours, barriers and any constructed mine seals that serve to control the area of backfill. Also, locate all boreholes for disposal, return water, vent wells and monitoring wells. **[1784.25(b)]**

iii) Is the applicant proposing to circulate decant water back out of the mine? **[1784.25(c)]**

☐ YES ☐ NO

If YES, provide a plan to monitor input and outtake volumes over the life of the operation.

iv) If mine seals are present and are intended to confine the area where backfill material and transport medium will be limited to, provide the locations on the Underground Mine Plan Map and indicate the design of such seals to achieve this purpose. **[1784.25(b)]**

v) Within the defined area of containment, provide the anticipated percentage of area to be filled. **[1784.25(b)]**

vi) Discuss any influence the backfilling operation will have on active underground mine operations. **[1784.25(b)]**

vii) Provide information and engineering analysis of the potential impacts to existing mine stability. Provide a discussion and analysis of the stratum underlying the mined coal and any potential influence the backfilling operation will have on mine stability and subsidence. **[1784.25(b)]**

f) **Hydrologic Balance Protection:** In addition to completing all applicable questions of Part 4 "Hydrologic and Geologic Information", provide the following.

i) Provide quality information on the coal waste material to be disposed. **[1784.25(b)]**

ii) Provide the proposed construction details for all boreholes for this underground waste disposal operation to demonstrate protection of the hydrologic balance. **[1784.25(c)]**

iii) Is the backfill material proposed to be dewatered (i.e. decant water returned to the surface facility)? **[1784.25(c)]**

☐ YES ☐ NO

If YES, provide the controlling elevation of the return pump intake relative to the mine void and mine workings gradient to define the anticipate pool elevation.

iv) If applicable, describe the handling of return water. Indicate if the water will be directed to the preparation plant or stored in an impoundment on permit if not. If the water will be released to surface streams, indicate if treatment is necessary and provide proposed treatment methods. **[1784.25(c)]**

v) Is transport water to be permanently retained in the underground workings?

☐ YES ☐ NO

If YES, provide information on the elevational level the retained water will rise to both during the operations and long-term after cessation of the disposal operations. **[1784.25(c)]**

vi) Provide information with supporting documentation on the stratigraphic location of any potable water resources in relation to the area to be backfilled. **[1784.25(c)]**

vii) Provide information with supporting documentation on the stratigraphic location of aquitards, if any, in relation to the potable water resources and the area to be backfilled. **[1784.25(c)]**

viii) Based on the geologic and hydrogeologic information presented, provide an evaluation on the potential effects the proposed underground disposal operations may have on the hydrologic regime. **[1784.25(c)]**

ix) Are permanent monitoring wells to be installed to monitor water levels and/or quality changes? **[1784.25(d)]**

☐ YES ☐ NO

If YES, provide the locations of monitoring wells on the Underground Mine Plan Map and the Hydrogeologic Map Information. Detail the purpose of each, quality parameters to be monitored, the frequency of monitoring and how the data will be used to determine if unanticipated or negative impacts to the hydrologic regime are occurring from this proposed operation.

If NO, provide justification for the omission of long-term monitoring wells in the plan.

3.6 Coal Preparation

3.6.1 Are coal processing operations proposed in this permit application?

☐ YES ☒ NO

If YES, complete the following:

a) Will processing of coal take place within the proposed permit area?

☐ YES ☐ NO

If YES, locate processing facilities on the Operations Map and give a general description of the coal processing operation at this facility as required by 62 Ill Adm. Code 1780.11(b)(3)/1784.11(b)(3); 1780.14(b)(4) and 1784.23(b)(4). In the case in-situ processing activities are proposed, description of these operations shall comply with 62 Ill Adm. Code 1785.22.

If NO, and coal preparation plants are not located within the permit area, the applicant shall obtain a permit in accordance with 62 Ill Adm. Code 1785.21, and operate complying with the requirements of 62 Ill Adm. Code 1827.

3.6.2 Describe the fresh water (makeup) and slurry circuits for this operation and depict location of makeup water and slurry circuits on the Surface Drainage Control Plan Map. Indicate if a discharge occurs and if so, it should be included on Schedule A. If a discharge does not occur, a detailed description of how this will be accomplished must be submitted. **[1780.11(b)/1784.11(b)]**

3.6.3 What safeguards are provided to prevent the discharge of slurry fines and untreated slurry water during emergency situations (e.g. power outages, mechanical equipment breakdown, plant shutdowns, etc.) and/or high rainfall events?

a) Also indicate where the slurry would go by gravity flow in the event of an emergency discharge, and the environmental impact this would have. **[1777.11(a)(3)]; [1780.11(a)/1784.11(a)]**

3.7 Blasting (Refer to Technical Guidance Document 3 when completing this section)

3.7.a Is blasting to be conducted as part of a surface mine?

☐ YES ☒ NO

If YES, skip to 3.7.1.
If NO, proceed to 3.7.b

3.7.b Is blasting to be conducted as part of a underground mine?

☐ YES ☒ NO

If YES, proceed to 3.7.c.
If NO, no further blasting information is required.

3.7.c Are surface blasting activities incident to underground mining, including, but not limited to, initial rounds of slopes and shafts that are within 50 vertical feet of the original ground surface proposed?

☐ YES ☐ NO

If YES, skip to 3.7.2.
If NO, no further blasting information is required.

3.7.1 Surface Mine Blasting

a) Provide a copy of the proposed blasting schedule(s). **[1816.64]**

b) Provide a list of persons to whom the schedule will be distributed for each blasting area described including local governments within one mile of the blasting area; Township and County road commissioners within one mile of the blasting area; utilities within one mile of the blasting area; and the County Clerk of the county where blasting will occur. **[1816.64]**

Name	Address

c) Provide a copy of the format used to notify persons within one-half (½) mile of the permit area as to how to obtain a pre-blast or condition survey. **[1816.62(a)]**

d) Provide a brief description of procedures to be used to perform pre-blast or condition surveys and for distributing copies of the survey reports to owners/residents and the Department. **[1816.62(e)]**

e) Provide a copy of the blasting report form. **[1816.68]**

f) Provide the distance to, and the names and addresses of the owners of, all dwellings or other structures within one half (½) mile of the proposed permit area or within one mile of the blasting area, whichever distance is greater. **[1816.62(b)]**

Name	Address	Distance

g) Will blasting be conducted within one thousand (1,000) feet of any building used as a dwelling, public building, school, church, community building or institutional building outside the permit area or within five hundred (500) feet of an active or abandoned underground mine? **[1816.61(c)(1)]**

☐ YES ☐ NO

If YES, proceed to next question.
If NO, proceed to 3.7.1.h

h) If a blast design is required, it may be presented as part of this application or at a time, before the blast, for approval by the Department. If the blast design is not included with this application, please state when you plan to submit the design. **[1816.61(c)(2)]**

- The blast design shall contain sketches of the drill patterns, delay periods, and decking and shall indicate the type and amount of explosives to be used, critical dimensions, and the location and general description of structures to be protected, as well as a discussion of design factors to be used, which protect the public and meet the applicable air blast, flyrock, and ground vibration standards in 62 Ill. Adm. Code 1816.67. **[1816.61(c)(3)]**

- The blast design shall be prepared and signed by a certified blaster. **[1816.61(c)(4)]**

i) Include information setting forth the limitations the operator will meet with regard to ground vibration and airblast, the basis for those limitations, and the methods to be applied in controlling the adverse effects of blasting operations. **[1780.13(a)/1816.67]**

j) Include a description of any system to be used to monitor compliance with the standards of 62 Ill. Adm. Code 1816.67, including the type, capability, and sensitivity of any blast monitoring equipment and proposed procedures and locations of monitoring. **[1780.13(b)/1816.67]**

k) Blasting operations within five hundred (500) feet of active underground mines require approval of the Department and Federal Mine Safety and Health Administration (MSHA). If blasting operations are expected to occur within five hundred (500) feet of an active underground mine, please include the written approvals of the Department and MSHA, or state when the written approvals will be submitted prior to conducting blasting operations. **[1780.13(c)]**

3.7.2 Underground Mine Blasting

a) Provide a copy of the proposed blasting notice. **[1817.64]**

b) Provide a list of persons to whom the notice will be distributed for each blasting area described including local governments within one mile of the blasting area; Township and County road commissioners within one mile of the blasting area; utilities within one mile of the blasting area; and the County Clerk of the county where blasting will occur. **[1817.64]**

Name	Address

c) Provide a copy of the format used to notify persons within one-half (½) mile of the permit area as to how to obtain a pre-blast or condition survey. **[1817.62(a)]**

d) Provide a brief description of procedures to be used to perform pre-blast or condition surveys and for distributing copies of the survey reports to owners/residents and the Department. **[1817.62(e)]**

e) Provide a copy of the blasting report form. **[1817.68]**

f) Provide the distance to, and the names and addresses of the owners of, all dwellings or other structures within one half (½) mile of the proposed permit area or within one mile of the blasting area, whichever distance is greater. **[1817.62(b)]**

Name	Address	Distance

g) Will blasting be conducted within one thousand (1,000) feet of any building used as a dwelling, public building, school, church, community building or institutional building outside the permit area or within five hundred (500) feet of an active or abandoned underground mine? **[1817.61(d)(1)]**

☐ YES ☐ NO

If YES, proceed to next question.
If NO, proceed to 3.7.2.h

h) If a blast design is required, it may be presented as part of this application or at a time, before the blast, for approval by the Department. If the blast design is not included with this application, please state when you plan to submit the design. **[1817.61(d)(2)]**

- The blast design shall contain sketches of the drill patterns, delay periods, and decking and shall indicate the type and amount of explosives to be used, critical dimensions, and the location and general description of structures to be protected, as well as a discussion of design factors to be used, which protect the public and meet the applicable air blast, flyrock, and ground vibration standards in 62 Ill. Adm. Code 1817.67. **[1817.61(d)(3)]**

- The blast design shall be prepared and signed by a certified blaster. **[1817.61(c)(4)]**

i) Include information setting forth the limitations the operator will meet with regard to ground vibration and airblast, the basis for those limitations, and the methods to be applied in controlling the adverse effects of blasting operations. **[1817.67]**

j) Include a description of any system to be used to monitor compliance with the standards of 62 Ill. Adm. Code 1817.67, including the type, capability, and sensitivity of any blast monitoring equipment and proposed procedures and locations of monitoring. **[1817.67]**

3.8 Existing Structures

3.8.1 Are existing structures proposed to be used in connection with or to facilitate the surface coal mining and reclamation operations?

☐ YES ☒ NO

If YES, complete the following:

a) Provide a list of all of the existing structures to be used including: roads, bridges, culverts, fills, berms, benches, waste banks, discharge structures, diversions, rail loops, rail sidings, rail spurs, refuse areas, shafts, spoil piles, utility lines, terraces, drains, wells, exploration holes, boreholes, barricades, fences, storage areas, mine buildings, tipples, storage facilities, repair facilities, surge ponds, treatment plants, pipelines, conveyors, and other man-made structures or areas disturbed by mining activities.

b) Provide the following information as required by 62 Ill. Adm. Code 1780.12(a)/1784.12(a):

- The location of structures on the Operations Map.
- Plans of the structure detailing its current, pre-mining condition.
- Approximate dates, beginning and completion for construction of the structure.
- A showing that the structure meets the performance standards of 62 Ill. Adm. Code 1810 through 1828. The showing shall include monitoring data or other substantiating evidence.

3.8.2 Are any structures proposed to be modified or reconstructed for use in connection with or to facilitate the surface coal mining and reclamation operations?

☐ YES ☒ NO

If YES, complete the following:

a) In accordance with as required by 62 Ill. Adm. Code 1780.12(b)/1784.12(b), a compliance plan for each existing structure to be modified or reconstructed for use in connection, or to facilitate coal mining and reclamation operations, shall be submitted with the following information:

- Design specifications for reconstruction or modification of the structure to meet the design and performance standards of 62 Ill. Adm. Code 1810 through 1828,
- A schedule for reconstruction or modification of the structure showing dates for beginning and completing interim steps as well as final reconstruction,
- Provisions for monitoring the structure during and after modification to ensure that the performance standards of 62 Ill. Adm. Code 1810 through 1828 are met, and
- A showing that the risk of harm to the environment or to public health or safety is not significant during the period of modification or reconstruction.

3.9 Shaft, Slope, and Miscellaneous Borehole Construction.

3.9.1 For the shafts and/or slopes being proposed, describe the measures to be implemented to minimize disturbance to the prevailing hydrologic balance and to ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. [1816.13/1817.13]

All shafts when idle will be covered with a perforated metal cap to prevent access to the mine workings by people, livestock, fish and wildlife, and machinery, and to keep acid or other toxic drainage from entering ground water or surface water. The boreholes will

be permanently sealed within 60 days of when the borehole becomes inactive.

3.9.2 For each shaft and/or slope, provide a drawing showing those features which are relevant to protecting the hydraulic balance. The drawing shall include:

- The physical dimensions of excavations and entry lining material;
- The type of entry lining material;
- The measures which will be used to seal the annulus between the entry lining and adjacent rock;
- Water rings and conductor pipes;
- Elevation of land surface, coal seam, and any other mine workings penetrated by the structure; and
- Provide the latitude and longitude (in decimal degrees) for each shaft and/or slope.

Belt Air shaft – 8' diameter fully lined finished concrete. One water ring will be installed at the bottom of the shaft. All water collected will be pumped underground back into the mine water system for re-use. Hole # NSBELTAIR Lat 37.8676, Long 88.8347 490 feet Deep

Material Shaft – 16.5' diameter fully lined finished concrete. One water ring will be installed at the bottom of the shaft. All water collected will be pumped underground back into the mine water system for re-use. Hole # NSMATERIAL Lat 37.8670, Long 88.8346 490 feet Deep

3.9.3 Will the Applicant be conducting any surface blasting activities incidental to underground mining, including, but not limited to, initial rounds of slopes and/or shafts that are within fifty (50') vertical feet of the original ground surface? **[1817.61(a)]**

☐ YES ☒ NO

If YES, complete the appropriate items in Part 3.7: Blasting.

3.9.4 For each borehole or group of boreholes being proposed, describe the measures to be implemented to minimize disturbance to the prevailing hydrologic balance and ensure the safety of people, livestock, fish and wildlife, and machinery in the permit area and adjacent area. **[1816.13/1817.13]**

All boreholes when idle will be covered with a perforated metal cap to prevent access to the mine workings by people, livestock, fish and wildlife, and machinery, and to keep acid or other toxic drainage from entering ground water or surface water. The boreholes will be permanently sealed within 60 days of when the borehole becomes inactive.

3.9.5 For each borehole or group of boreholes which will be constructed in a similar manner, provide a sketch indicating:

- The depth (or depth range) and diameter of each drill hole;
- The depth (or depth range) and diameter of each casing string, type and thickness of casing material in each string, and spacing of collars and any centralizers;
- Intervals to be cemented, grouted, or otherwise sealed and the method of placement;
- Any geophysical logging which is proposed;
- The names and numbers of boreholes to which the sketch applies; and
- Provide the latitude and longitude (in decimal degrees) for each borehole.

Six utility boreholes will be installed. All holes will be 10 5/8" diameter steel line fully grouted hole wall thickness of .218" approximately ~490 feet deep, No geophysical logging

proposed. (NSUTILITY#1 Lat 37.8675, Long 88.8347), (NSUTILITY#2 Lat 37.8675, Long 88.8347), (NSUTILITY#3 Lat 37.8675, Long 88.8347), (NSUTILITY#4 Lat 37.8670, Long 88.8336), (NSUTILITY#5 Lat 37.8670, Long 88.8336), (NSUTILITY#6 Lat 37.8670, Long 88.8336)

PART 5: Drainage Control

5.1 Pre-mining Drainage Patterns

5.1.1 Show the pre-mining drainage patterns of all areas to be affected by the mining and reclamation activities within the permit boundary and properties adjacent to the permit boundary. The map shall include, at minimum, adequate contour mapping, a delineation of the watershed boundaries, and shall depict the size of each watershed. If the applicant has provided an Existing Streams Location Map, it can be referenced if it addresses the requested information of this part. **[1780.14/1784.23]**

See Topo Map

5.1.2 Do any ephemeral, intermittent, or perennial streams as defined by Section 1701.5 occur within the proposed permit area? **[1816.43(b)/1817.43(b)]**

☒ YES ☒ NO

IF YES, complete the appropriate items of Part 6.0: Stream Diversions.

See Attachment 5.1.2, Small Ephemeral stream within the IBR boundary and along the southern border will not be disturbed during construction or maintenance of this IPR. The intermittent stream on the western edge of the IBR will have a 100 feet stream buffer zone marked by T-post with red painted tops.

5.2 Drainage Control

5.2.1 Will all surface drainage from the affected mining area be collected and treated prior to leaving the permit area? **[1816.46(b)(2)/1817.46(b)(2)]**

☐ YES ☒ NO

If NO, explain how regulatory compliance will be achieved without treatment, i.e., address the requirements of **62 Ill. Adm. Code 1816.46(e)/1817.46(e)**.

Williamson Energy is request small area drainage exemption. Silt fence and straw bales will be used to temporary sediment control during construction. After construction is complete a durable rock surface will be installed and all area will be seeded during the first planting season after completion of construction.

5.2.2 Will all surface drainage from unaffected areas be intercepted and diverted around the affected mining area. **[1816/1817.43(a)]**

☐ YES ☒ NO

If NO, explain why this is not necessary.

Alternative drainage control (Silt Fence and Straw bales) will be used to manage the minimal runoff expected from the IBR. All disturbed area will be graveled, lime stabilized, or seed during the first planting season after construction work is completed.

If YES, based on the definitions of "perennial" and "intermittent" streams as outlined in 62 Ill. Adm. Code 1701.Appendix A, does the Applicant propose to divert a perennial or intermittent stream?

☐ YES ☐ NO

If YES, complete the appropriate items of Part 6.0: Stream Diversions.

5.2.3 Describe the timing in which all construction of the sediment ponds and surface drainage control structures will be completed. Include a discussion of the vegetation stabilization of these structures. **[1816(b)(3)/1817.46(b)(3)]; [1816.49(a)(7)/1817.49(a)(7)]**

Silt fence will be installed prior to any disturbance.

5.3 Conveyance Ditch Design

5.3.1 Does the Applicant propose to construct conveyance ditch(es) to collect surface water drainage from affected mining areas and direct it to treatment facilities?

☐ YES ☒ NO

Does the Applicant propose to construct conveyance ditch(es) to intercept surface drainage from unaffected areas and direct it around the affected mining area?

☐ YES ☒ NO

If either answer above is YES, complete Table 5.3.1 and complete the remaining questions within Part 5.3: Conveyance Ditch Design. **(Refer to Technical Guidance Document 2)**

a) Provide detailed design and construction calculations for the ditches listed in Table 5.3.1. **[1816.43/1817.43]**

b) For all ditches listed in Table 5.3.1, indicate the location of each on the Operations Map in relation to the proposed mining operations. Include the drainage area reporting to each channel on the Surface Drainage Control Plan Map and/or indicate the drawing(s) that provide the information required and provide a specific reference in the area below this item. **[1780.14(b)(6)/1784.23(b)(6)]**

c) Provide typical cross-sections for each ditch listed in Table 5.3.1 depicting the bottom width, side slopes, depth based on the appropriate precipitation event, and freeboard depth. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below this item.) **[1780.14(b)(6)/1784.23(b)(6)]**

d) Provide profiles for each ditch listed in Table 5.3.1 depicting the flow line slope and the depth based on the appropriate precipitation event. (Indicate the drawing(s) that provide the information required and provide a specific reference in the area below this item.) **[1780.14(b)(6)/1784.23(b)(6)]**

e) Based on calculated flows, define areas that require supplemental erosion control such as rip rap or dry dams on the Surface Drainage Control Plan Map. Provide details and calculations on the design of additional erosion control features **[1780.14(b)(6)/1784.23(b)(6)]**

5.3.2 Are culvert(s) being proposed within any of the ditches listed in Table 5.3.1?

☐ YES ☒ NO

If YES, complete the following items:

a) Identify the culverts by an identification name, the ditch which the culvert is associated with, and the station at which the culvert is located.

Two road culvert will be installed

b) Provide design calculations for each culvert identified in Part 5.3.3.1. **[1816.150(b)/1817.150(b)]**

See Attachment 5.3.3.1

c) Provide a profile for each culvert, depicting the following information:

i. Culvert length, size, and type;
ii. Slope;
iii. Invert inlet and outlet elevations; and
iv. Available headwater depth.

Culvert 1 – CMP 12" diameter (50-100) feet long Invert 429.6' and outlet 429.1'
Culvert 2 – CMP 18" diameter (60-120) feet long Invert 425.5' and outlet 425.0'

5.3.3 Provide details of the proposed erosion and sediment control measures to be employed during the construction of the proposed conveyance ditches. **[1816.43(a)(2)/1817.43(a)(2)]**

5.3.4 Describe the measures to ensure that all temporary ditches are removed and reclaimed and that all permanent ditches meet the requirements of 62 Ill. Adm. Codes 1700-1850 for permanent structures, have been maintained properly, and meet the requirements of the approved reclamation plan. **[1816.56/1817.56]**

5.4 Sediment/Fresh Water/Holding Pond Design. (Note: This includes all constructed ponds other than Coal Refuse Disposal Areas covered under Part 3.5 "Operation of Coal Refuse Disposal Areas". These structures are considered "impoundments" as defined in 62 Ill. Adm. Code 1701.Appendix A.) **(Refer to Technical Guidance Document 2)**

5.4.1 Sediment pond design. Complete Table 5.4.1 for all proposed sediment ponds. **[1816.46(c)/1817.46(c)]**

5.4.2 Discuss the design basis for the sediment pond(s) calculations. Submit calculations used in spillway designs and determination of inflow volume and pond volume. **[1816.45/1817.45, 1816.46/1817.46, & 1816.49/1817.49]**

5.4.3 Submit a typical section of the embankment(s), details of the principal and emergency spillways and a plan view of each pond at a scale of 1 inch = 200 ft. or larger showing pond bottom contours and points of inflow. **[1816.45/1817.45, 1816.46/1817.46, & 1816.49/1817.49]**

5.4.4 For all sedimentation ponds provide design information showing compliance with the requirements of 62 Ill. Adm. Code 1816.46/1817.46. Each plan shall, at minimum, comply with the requirements of MSHA, 30 CFR 77.216-1 and 77.216-2. **[1816.45/1817.45, 1816.46/1817.46, & 1816.49/1817.49]**

5.4.5 Explain what criteria will be used to monitor and determine periodic and/or timely removal of sediments from sediment ponds, ditches and any other conveyance and treatment structure before the facilities lose their storage or conveyance volume capacity. If sediment removal becomes necessary, explain how the sediment will be removed, where it will be disposed of, and what disposal methods will be used. **[1816(c)(1)(C)(vi)/1817.46(c)(1)(C)(vi)]**

5.4.6 Will pH adjustment be necessary on any of the discharges in order to meet the applicable State and Federal Standards? **[1780.21(h); 1784.14(g)]**

☐ YES ☐ NO

If YES, discuss in detail, along with detailed basis of design. The basis should include a detailed description of the proposed treatment facilities, process flow diagrams, and design calculations. **[1780.21(h)/1784.14(g)]**

5.4.7 Will the mining operation involve the construction of any fresh water and/or holding ponds? **[1816.49/1817.49]** (*All temporary and permanent impoundments must meet these requirements.*)

☐ YES ☐ NO

If YES, complete the following items:

a) Locate on the Operations Map all fresh water ponds, holding ponds and dam locations. Depict on the Surface Drainage Control Plan Map all watershed limits and indicate which impoundments are proposed to remain permanent. For permanent impoundments, complete Section 5.5.2. **[1780.25(a)/1784.16(a)]; [1816.46(c)(1)(C)/1817.46(c)(1)(C)]**

b) Provide construction and maintenance details of dams, spillways, seepage control measures, and erosion control measures for inlets and outlets. Employ maps and cross sections where necessary. Where design plans for proposed structures are not provided, submit a certification statement providing a schedule for submission of detailed design plans for each structure. **[1780.25(b)/1784.16(b)]; [1816.46(c)(2)/1817.46(c)(2)]**

5.4.8 For each structure that meets or exceeds the size or other criteria of MSHA, 30 CFR 77.216(a), the detailed design plan shall:

a) Be prepared by or under the direction of and sealed by a qualified registered professional engineer licensed under the Illinois Professional Engineering Act; **[1780.25(a)(2)(A)/1784.16(a)(2)(A)]**

b) Include any design and construction requirements for the structure, including any required geo-technical information; **[1780.25(a)(2)(B)/1784.16(a)(2)(B)]**

d) Describe the operation and maintenance requirements for each structure; and **[1780.25(a)(2)(C)/1784.16(a)(2)(C)]**

e) Describe the timetable and plans for removal of each structure, if appropriate. **[1780.25(a)(2)(D)/1784.16(a)(2)(D)]**

5.4.9 For each structure that does not meet the size or other criteria of MSHA, 30 CFR 77.216(a), the detailed plan shall:

a) Be prepared by or under the direction of and sealed by a qualified registered professional engineer licensed under the Illinois Professional Engineering Act; **[1780.25(a)(3)(A)/1784.16(a)(3)(A)]**

b) Include any design and construction requirements for the structure, including any required geo-technical information; **[1780.25(a)(3)(B)/1784.16(a)(3)(B)]**

c) Describe the operation and maintenance requirements for each structure; and **[1780.25(a)(3)(C)/1784.16(a)(3)(C)]**

d) Describe the timetable and plans for removal of each structure if appropriate. **[1780.25(a)(3)(D)/1784.16(a)(3)(D)]**

5.5 Sediment/Fresh Water Pond Reclamation.

5.5.1 Describe proposed reclamation plans for each structure, including a time table and plans for removal and disposal of material. Each plan shall: **[1780.25(a)(2)(D)/1784.16(a)(2)(D)]**

a) Be prepared by or under the direction of, and sealed by a qualified registered professional engineer licensed under the Illinois Professional Engineering Act; **[1780.25 a)(3)(A)/1784.16(a)(3)(A)]**

b) Contain a description, plan view, and cross-section of the structure and its location; **[1780.25(a)(1)(B)/1784.16(a)(1)(B)]**

c) Contain preliminary hydrologic and geologic information required to assess the hydrologic impact of the structure. **[1780.25(a)(1)(C)/1784.16(a)(1)(C)]**

d) If underground mining has occurred beneath or adjacent to the proposed impoundment, the plan shall incorporate a technical discussion and evaluation of the potential effect subsidence of the surface and subsurface strata would have on the structure. **[1780.25(a)(1)(D)/1784.16(a)(1)(D)]**

e) For structures where the detailed design plans are not submitted to the Department with the general plan, the plan shall contain a certification statement which includes a schedule setting forth the dates that detailed design plans are to be submitted. For these structures, the detailed design plans must be submitted to the Department and approved in writing prior to the beginning of construction. **[1780.25(a)(1)(E)/1784.16(a)(1)(E)]**

5.5.2 For permanent impoundments, including sedimentation ponds, provide the following information:

a) Provide sufficient design data and calculations to substantiate that the design is in accordance with NRCS engineering standard 378 "Ponds" or NRCS technical release #60 "Earth Dams and Reservoirs". **[1816.49(a)(4)(B)/1817.49(a)(4)(B)]**

b) Based on the location of the pond relative to existing or proposed surface mining disturbances, and the projected post mining reclamation and post mining land uses, provide an evaluation of the anticipated water quality to assure it will be suitable for the intended use. **[1816.49(b)(2)/1817.49(b)(2)]**

c) The relationship of the impoundment to the post-mining land use. **[1816.49(b)(6)/1817.49(b)(6)]**

d) Describe methods of dropping surface runoff over excavated impoundment side slopes. Discuss design criteria to be employed for downdrain structures and perimeter diversions. **[1816.49(b)(7)/1817.49(b)(7)]**

e) Plans of access roads and other use related facilities. **[1816.49(b)(4)/1817.49(b)(4)]**

5.5.3 Are any structures 20 feet or higher?

☐ YES ☐ NO

Do any structures impound more than 20 acre-feet?

☐ YES ☐ NO

If the answer to either above is YES, for each structure meeting the criteria, provide stability analysis and include strength parameters, pore pressures, and long-term seepage conditions. Include description of each engineering design assumption and calculation with discussion of each alternative considered in selection design parameters and construction methods. **[1780.25(a)(2)/1784.16(a)(2)]**

Submission of MSHA certification documents for a detailed design plan shall satisfy the requirements, in so far as the MSHA informational and design standard requirements are duplicative of the requirements. If the applicant wishes to submit such certification. Justification that all design standards are duplicative must be provided for the Department to accept the certification without adequate supporting design. **[1780.25(a)(2)/1784.16(a)(2)]**

5.5.4 Describe in detail a rehabilitation design plan for each siltation structure and/or fresh water pond to be implemented and completed prior to abandonment. Any departures from detailed design plan requirements must be designated as such and be accompanied by supporting documentation. **[1816.56/1817.56; 225 ILCS 720/9.05]**

Wetland & Stream Delineation

North Portal Site

Franklin County, Illinois

Prepared for

Williamson Energy, LLC

Prepared by

HMG Engineers, Inc.

1032 North 6th Street
Murphysboro, Illinois 62966

July 2017

PROJECT DESCRIPTION

HMG Engineers, Inc. (HMG) was contacted by Williamson Energy, LLC who requested a wetland and stream delineation on a tract located in the S1/2 NW ¼ SW ¼ Section 36, T7S, R3E located in southeastern Franklin County, Illinois (Figures 1 and 2). The delineation area is approximately 19 acres located west of Davis Road and south of Nielson Road. WGS84 latitude/longitude is 37.86777/-88.83315.

METHODS

HMG conducted a wetland and stream delineation for the project area. Results of that investigation are reported herein. Background information was reviewed including aerial photography, topography, watershed, floodplain maps, and National Wetland Inventory. A field investigation was conducted on July 25, 2017 by HMG Environmental Scientist, William O'Leary. Stream identification utilized COE "bed and bank" criteria. Wetland delineation followed criteria of the 1987 U.S. Army Corps of Engineers Wetlands Delineation Manual, including Regional Supplement, Midwest Version 2.0 (U. S. Army Corps of Engineers [COE] 2010). Global positioning equipment was used to locate features in the field.

BACKGROUND

USGS Topographical Map (see Figure 4), aerial photography (see Figure 3), soils (Figure 5), National Wetlands Inventory (NWI, Figure 6), and floodplain maps (Figure 6) were reviewed. Past and current aerial photographs identified that the site is, and has been for many years, tilled on a regular basis in the production of row crops. The western quarter of the site has a soil type 3382A, Belknap which is not a hydric soil. The remainder of the area has hydric soils including Cisne, Bonnie, and Wynoose. There are no NWI sites in the project area, which is not in the flood plain of Pond Creek (Figure 6).

FIELD DELINEATION

No stream channels are identified on the USGS topographical map. The only drainage feature evident from aerial photography are lighter colored linear features located in the western portion. Past and present aerial photo review reveal that these lighter colored areas have been historically and continuously farmed through, making bed and bank features unlikely. Field investigation confirmed this to be the case, with standing corn rows present within these lighter areas and no bed and bank present. Representative photographs were taken facing upgrade and downgrade. (see Appendix A).

The east-west oriented tree row along the southern boundary was inspected. One channel exhibiting bed and bank characteristics was noted. Bed and bank character begins at point A in Figure 3 and ends at point B. Because this channel is separated from downstream streams by a reach with no discernable bed and bank, it is an isolated feature which would not fall within Clean Water Act, Section 404 jurisdiction. The channel was classified as ephemeral for the following reasons:

- Drainage area is less than 20 acres.
- The channel is not depicted on a USGS topographic map.
- Upland plants were observed rooted in the channel bottom, particularly trumpet creeper (*Campsis radicans)*, a facultative upland plant, indicating groundwater level

below depth needed to support wetland plants.
- No obligate or facultative wetland plants were observed.
- No meanders, riffles, or pools were observed.
- No head cuts were observed.
- No base flow was observed.

There is a ditch present on the west perimeter which the company does not plan to disturb, according to company personnel. There is also a road ditch along the east perimeter, along Davis Road, which will be crossed for access. Both ditches flow from north to south. According to the company, the row of trees along the southern boundary will not be disturbed.

RESULTS

As a result of the review and field investigation, no Clean Water Act, Section 404 jurisdictional streams or wetlands were identified that will be affected by planned disturbances. The Davis Road ditch and isolated ephemeral channel along the southern border, are not 404 jurisdictional. The ditch along the western boundary and the southern isolated ephemeral channel are not planned for disturbance. There are no bed and bank channels associated with flow routes in the cropfield. There are no wetlands in the project area.

SUMMARY

Based on the above analysis, no 404 jurisdictional waters were identified that are planned for disturbance in the project area.

Culvert Selection: Access Road For North Supply Shaft

Summary: Area 1 requires one (1) 12 inch diameter corrugated steel culverts (or equivalent) for the access road to the surface site. Area 2 requires one (1) 18 inch diameter corrugated steel culverts (or equivalent) for the access road to the surface site to allow offsite drainage to pass under the access road.

1----Specifically required per 62 Ill. ADM. Code, Ch. 1, Section 1817.43 c) 3), drainage flow must safely pass the peak runoff of a 2-year / 6-hour precipitation event. For this particular site, the event is approximately 2.6 inches of rainfall.

2----Use Talbot's Formula for round, steel corrugated culvert sizing (standard method for most Illinois County Highway Departments) to safely pass a 2.6-inch rainfall event.

The watershed runoff for the culvert selection was coefficient 0.3 "Flat Land".

Please see attached calculations sheets for further details.

Using Talbot's Formula to Determine the Correct Culver Size To Carry Surface Drainage

The program that calculates the Talbot Formula (a=C*A3/4) allows the user to plug in the data fields and a square footage water flow area is computed. The computed value must then be correlated to the Pipe Area list of standard sized culverts. Where the flow area value is between the listed pipe sizes, standard practice is to select the next up or use multiple smaller diameter pipes.

The attached 2-yr. 6 hr. hydrograph was taken from the NRCS Compilation of Bullentin 71-Rainfall Frequency Atlas of the Midwest (Illinois State Water Survey) by Floyd Huff and James Angel. This hydrograph shows 2.6 inches of rain for the area near Williamson Energy's Mach Mine facilities for the 6-hour duration of a 2-year event. This equates to an average of 0.433 inches of rain per hour for this 2-hr.--6 year event. For comparison, the 100-yr/24-hr. event is 0.33-inches/hr.

Note: "Talbot's Formula" by Professor Arthur N. Talbot, Water Resources Engineering---University of Illinois at Champaign.

PART 6: Stream Diversions

The design and construction of all stream channel diversions of perennial and intermittent streams shall be sealed by a qualified registered professional engineer as meeting the performance standards of this Section.

6.1 Disturbance Information. Are surface mining activities (including road crossings) or permit boundaries proposed within 100 ft of **any** stream (ephemeral, intermittent, or perennial)?

☒ YES ☐ NO

If YES,

a) For any stream(s) located **outside** the proposed permit boundary where disturbance within 100 ft is proposed go to Part 6.3; and
b) For any stream(s) located **outside** the proposed permit boundary where NO disturbance within 100 ft will occur go to Part 6.10; and
c) For any stream(s) located **within** the proposed permit boundary where disturbance within 100 ft is proposed go to Part 6.2.

If NO, go to Part 6.10.

6.2 Stream Information. Provide a Stream Delineation Report and/or Wetland Delineation Report. Information contained in the report(s) shall meet the requirements found at **1780.14/1784.23, 1780.29/1784.29, 1816.43/1817.43 and 1816.97/1817.97.**

6.2.1 Stream Classification. Indicate the number of each type of stream located within the proposed permit area.

[1] Ephemeral [1] Intermittent [ ] Perennial

6.3 Stream Buffer Variance. Is a stream buffer variance requested? **[1816.57/1817.57]**

☐ YES ☒ NO

If YES,

a) For stream(s) located **outside** the proposed permit boundary go to Part 6.4
b) For stream(s) located **inside** the proposed permit boundary go to Part 6.5.

If NO, provide a justification that each disturbed stream is ephemeral based on both parts of the definition of ephemeral stream found at **Section 1701.5 Appendix A.** Refer to Operator Memorandum No. 2017-06 for guidance regarding ephemeral stream justification. Briefly describe the disposition of the ephemeral stream(s) during operations and post-mining. Nomenclature of ephemeral streams must be consistent with maps and reports. No further information is required in Part 6 of the application **if** all streams are ephemeral.

See Wetland and Stream delineation Report Attachment 5.1.2. A small ephemeral stream is located along the south edge of the proposed permitted area. No impact is proposed for this area. The stream is determined to be ephemeral because the drainage area is less than 1 square mile and the stream does not receive contribution from

groundwater flow. The stream was examined to have upland plants rooted in the stream bed and an absence of obligate or facultative wetland plants. The stream does not show any meanders, riffles, pools and no active erosional features.

A small intermittent stream is located on the western edge of the IBR. This stream will be protected with a 100 feet buffer zone and no disturbance is proposed inside the buffer zone.

6.4 Streams Outside Permit Boundary. For each intermittent and/or perennial stream located outside the permit boundary where a stream buffer variance is requested, provide the name of the stream and describe how the requirements of **1816.57/1817.57** will be met. No further information is required in Part 6 of the application for streams outside the proposed permit boundary.

N/A

6.5 Existing Streams Locations. Provide the **Existing Streams Location and Watershed Map** meeting the specifications found in Part 2.1.3.c. **[1780.14/1784.23]; [1780.29/1784.29]; [1816.43/1817.43]; [1816.97/1817.97]**

6.6 Habitat Characterization. Pre-Mining Stream Habitat Characterization of each stream channel to be either temporarily or permanently diverted shall be discussed in Part 7.1.3.a. **[1780.16(a)(2)(B)/1784.21(a)(2)(B)]; [1816.97(f)/1817.97(f)]; [1816.43(a)(3)/1817.43(a)(3)]**

6.7 Temporary Stream Diversions. Temporary diversions shall be removed promptly when no longer needed to achieve the purpose for which they were authorized. **[1816.43/1817.43]**

6.7.1 Temporary Stream Diversion Construction Narrative. For each temporary diversion proposed, discuss the proposed construction practices including the following information: **[1780.29/1784.29]; [1816.43/1817.43];** [Memorandum No. 2005-04]

a) Estimated diversion construction beginning and ending dates.

b) Erosion control practices during construction to reduce addition of suspended solids to streamflow outside the permit area.

c) Estimated date when erosion control and vegetation will be sufficiently established to allow diversion of water through the temporary channel.

d) Indicate the timing and method of contacting the Department for approval upon stabilization of the stream channel. Department approval is required before water may be diverted through the temporary stream channel.

e) Indicate below if a Sediment Pond Exemption is requested (1816.46(e)/1817.46(e)) for diversion channel spoil.

If NO – explain why an exemption is not required.
If YES – describe methods to prevent diversion channel spoil from impacting surrounding area, including disposition of channel spoil.

f) Outline a reporting schedule to be submitted to the department during construction and submit a report to the Department within 30 days after completion of the temporary diversion that has been sealed by a qualified registered professional engineer.

g) Discuss how the activity will comply with the Rivers, Lakes, and Streams Act (Ill. Rev. Stat. 1991, ch. 19, pars. 52-79) [615 ILCS 5], Section 404 of the Federal Water Pollution Control Act of 1972, as amended (30 U.S.C. 1344), and all local ordinances.

6.7.2 Temporary Stream Diversion Locations. Provide a **Stream Diversion Map** meeting the requirements in Part 2.1.3.j. **[1780.14/1784.23]; [1780.29/1784.29]; [1816.43/1817.43]**

6.7.3 Temporary Stream Diversion Plan-Profile and Cross-Section. For each temporary stream diversion proposed, provide drawings depicting the following information: **[1780.14/1784.23]; [1780.29/1784.29]; [1816.43/1817.43]**

a) Cross-sections showing the limits and configuration of the proposed activities, dimensions, channel linings, normal water surfaces, side slopes and inflection points (cut and fill, curves, and straight sections).

b) A profile of the temporary stream diversion depicting the flow line slope and the water level for the 10-year 6 hour storm event.

c) Detailed channel sizing calculations demonstrating the temporary diversion channel is adequate to convey the 10-year 6 hour storm event. The calculations shall include run-off volumes from the drainage area.

6.7.4 Post-Diversion Reclamation. Describe the reclamation of temporary stream diversions after flow has been diverted to the restored or relocated stream channel, provide the following information: **[1780.18(b)(5)/1784.13(b)(5)]; [1816.43/1817.43]; [1816.116/1817.116]; [1816.97/1817.97] IF all responses to this part are the same as Forest or Wildlife Woody** Post Mining-Land Use information provided in Part 12, indicate such in the space below.

a) Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

c) Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

d) Provide a permanent species list that will achieve the designated Post-Mining Land Use that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2). Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5)]**

e) If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. Describe measures taken to ensure consistency.

f) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)];[1816.111(a) and (b)/1817.111(a) and (b)]**

6.8 Permanent Stream Diversion. The following requirements for a permanent stream diversion must be met: **[1816.43/1817.43]**

6.8.1 Classification. The following information in Part 6.8 contains construction and restoration plan information for (indicate the number of each type):

☐ Permanent Restored Stream(s) ☐ Permanent Relocated Stream(s)

6.8.2 Permanent Stream Diversion Construction Narrative. For each permanent diversion proposed, discuss the proposed construction practices including the following information: **[1780.29/1784.29] [1816.43/1817.43];** [Operator Memorandum No. 2005-04]

a) Estimated permanent channel construction beginning and end dates.

b) Erosion control practices during construction to reduce addition of suspended solids to streamflow outside the permit area.

c) Estimated date when erosion control and vegetation will be sufficiently established to allow diversion of water through the temporary channel.

d) Indicate the timing and method of contacting the Department for approval upon stabilization of the stream channel. Department approval is required before water may be diverted through the temporary stream channel.

e) Indicate below if a Sediment Pond Exemption is requested (1816.46(e)/1817.46(e)) for diversion channel spoil.

If NO – explain why an exemption is not required.
If YES – describe methods to prevent diversion channel spoil from impacting surrounding area, including disposition of channel spoil.

f) Discuss how the activity will comply with the Rivers, Lakes, and Streams Act (Ill. Rev. Stat. 1991, ch. 19, pars. 52-79) [615 ILCS 5], Section 404 of the Federal Water Pollution Control Act of 1972, as amended (30 U.S.C. 1344), and all local ordinances.

g) Outline a reporting schedule to be submitted to the department during construction and submit a report to the Department within 30 days after completion of the permanent stream channel that has been sealed by a qualified registered professional engineer.

6.8.3 Permanent Stream Diversion Locations. Ensure that the **Stream Diversions Map** submitted in Part 6.8.2 meets the requirements in Part 2.1.3.j. **[1780.14/1784.23]; [1780.29/1784.29]; [1816.43/1817.43]**

6.8.4 Permanent Stream Channel Plan-Profile and Cross-Section. Permanent stream channels shall approximate the original pre-mining stream characteristics. For each permanent stream channel proposed, provide drawings depicting the following information: **[1780.14/1784.23]; [1780.29/1784.29]; [1816.43/1817.43]**

a) A profile depicting bed slopes, pool-riffle ratios, and normal water surfaces.

b) Plans and drawings for boulder deflectors, check dams, and other instream habitat structures.

c) Cross-sections showing the limits and configuration of the proposed activities, dimensions, channel linings, normal water surfaces, side slopes and inflection points (cut and fill, curves, and straight sections).

d) Include a calculated flow rate (cfs) and velocity (ft/sec) at representative locations for low flow and normal flow and the 100-year flood condition that will allow a freeboard of no less than 0.3 feet.

e) Channel sizing calculations to demonstrate that the proposed stream channel and surrounding flood plain are adequate to convey the 100-year 6 hour storm event. The calculations shall include run-off volumes from the drainage area.

6.8.5 Permanent Stream Channel Reclamation. Describe the reclamation of permanent stream channels, provide the following: **[1780.18(b)(5)/1784.13(b)(5)]; [1816.14/1817.43]; [1816.116/1817.116]; [1816.97/1817.97] IF all responses to this part are the same as Forest or Wildlife Woody** Post Mining-Land Use information provided in Part 12, indicate such in the space below.

a) Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

c) Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

d) Provide a permanent species list that will achieve the designated Post-Mining Land Use that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2). Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5)]**

e) If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. Describe measures taken to ensure consistency.

f) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)]; [1816.111(a) and (b)/1817.111(a) and (b)]**

6.9 Culverts and Crossing of Non-Diverted, Temporary, and/or Permanent Stream Channels. Where a bridge, road, culvert or other crossing is proposed for any streams, provide the following information: **[1780.37/1784.24]**

a) Name of stream(s) with nomenclature consistent with names used in maps and reports.

b) Description of construction methods and sequence including water handling during construction and erosion/sediment control measures for each crossing.

c) Calculations of the hydraulic capacity of each structure.

d) Is the proposed structure(s) temporary or permanent? If temporary, include plans for removal.

e) A profile of the each stream bed at minimum 100 feet above and below the proposed location of the structure(s) unless the Department requires a greater distance to demonstrate appropriate engineering design to contain and control flow. The profile(s) shall depict normal and flood water surface elevations and the backwater effects of the structure.

f) Cross-section of the structure(s) showing the inlet and outlet invert elevations, length of the culvert, slope of the culvert, and the elevation of the road surface.

g) Describe how the original stream channel(s) and associated riparian vegetation will be restored.

6.10 Stream Buffer Zone. Discuss how the designated 100 ft stream buffer zone will be marked for any intermittent and/or perennial stream that will not be disturbed by surface mining activities. Cleary indicate the 100 ft. stream buffer zone on all required maps in Part 2.1.3. If NO streams are located within the proposed permit boundary or within 100 ft of the proposed permit boundary indicate N/A. **[1816.57(b)/1817.57(b) and 1816.11/1817.11]**

The stream buffer zone will be marked with steel post with painted red tops to signify a protected area. Post spacing will be at 100 feet apart.

PART 7: Fish and Wildlife

7.1 Pre-mining Fish and Wildlife Resources: Each application shall include fish and wildlife resource information for the permit and adjacent area. Prior to initiating fish and wildlife resource information studies, the applicant shall contact the Department to determine what fish and wildlife resources information will be required. If the applicant has not contacted the Department as described above, an explanation shall be supplied in the space below. **[1780.16(a)/1784.21(a)]; [1780.16(a)(1)(A)/ 1784.21(a)(1)(A)]**

See Attachment 7.1

7.1.1 Vegetation Map. Provide a Vegetation Map meeting the specifications outlined in Part 2.1.3.b **[1779.19/1783.19]; [1779.24(l)/1783.24(l)]; [1780.16(a)(2)(B) & (C)/1784.21(a)(2)(B)&(C)]**

See Pre-Mine Land Used Map

7.1.2 Habitat Descriptions. Provide a description of the habitat types for each listed Pre-Mining Land Use category, excluding cropland, within the proposed permit area. Include information for areas categorized as Residential, Industrial/Commercial, Recreational, and Undeveloped that contain trees or other potential habitats of high value for fish and wildlife. Include specific information on pre-mining woody and herbaceous vegetation species. In addition, provide a general description of the habitat found in the adjacent half mile area, specifically addressing any potential habitats of high value. **[1784.15(a)(1)/1780.23(a)(1)]; [1779.19(a)/1783.19(a)];** [Operator Memorandum 2015-01]

See Pre-Mine Land Used Map

a) For Wildlife Wetland Pre-Mining Land Use located within the proposed permit area, discuss how these areas will be avoided or replaced, and enhanced where applicable and provide general information on the steps taken to comply with the Section 404 of the Clean Water Act. If no Wildlife Wetland exits within the proposed permit area pre-mining, indicate N/A. **[1780.18(b)(9)/1784.13(b)(9)];[1816.97(f)/1817.97(f)]**

7.1.3 Other Site Specific Habitats of High Value: Address any habitats of unusually high value for fish and wildlife located within the proposed permit and adjacent half mile area. The following information is required: **[1780.16(a)(2)(B)/1784.21(a)(2)(B)]; [1816.97(f)/1817.97(f)]**

a) **Stream Habitat Characterization**: For **each** intermittent and perennial stream discussed in Part 6, provide a description of the riparian vegetation and a narrative discussing any critical habitat for threatened and endangered aquatic species. Provide a **general** discussion on how stream habitat will be avoided or replaced, and enhanced where practicable. If no intermittent or perennial streams were identified in Part 6 indicate N/A. **[1780.16(a)(2)(B)/1784.21(A)(2)(B)]; [1816.97(f)/1817.97(f)]**

i) Provide general information on the steps taken to comply with Section 404 of the Clean Water Act regarding streams and associated riparian areas. **[(1780.18(b)(9)/1784.13(b)(9)]**

b) **Shelter, Protection, and Reproductive Areas**: Discuss areas within the proposed permit and adjacent half mile area such as cliffs supporting raptors, caves, migration routes and wintering areas and measures to protect these areas and enhance where practicable. If none of these areas exist indicate N/A. **[1780.16(a)(2)(B)/1784.21(a)(2)(B)]; [1816.97(f)/1817.97(f)]**

c) **Agency Consultation:** Discuss any additional habitats of high value identified through other agency consultations as requiring protection by applicable state and federal laws, this may include a larger adjacent area as defined by consultation. If no other habitats of high value were identified through consultation indicate N/A. **[1780.16(a)(2)(C)/1784.21(a)(2)(C)]; [1780.16(a)(1)(B)(iii)/1784.21(a)(1)(B)(iii)]**

7.2 Threatened and Endangered Species: Information required in this section will ensure that the proposed operations adhere to the Endangered Species Act of 1973, as amended, the Migratory Bird Treaty Act, as amended, the Bald and Golden Eagle Protection Act, as amended and other applicable state and federal laws. **[1773.12]; [1780.16/1784.21]; [1816.97/1817.97]**

7.2.1 T&E Species List. Provide a complete threatened and endangered species list for both state and federally listed species that are known to occur within the county(ies) of the proposed permit area and each adjacent counties. This information may be provided in Attachment 7.2.1. **[1780.16(a)(1)(B)/1784.21(a)(1)(B)]; [1780.16(a)(2)(A)/1784.21(a)(2)(A)]; [1816.97(b)/1817.97(b)]**

See Attachment 7.1 / See Permit 375

a) **Likely to Occur Determination.** For each threatened and endangered species listed in part 7.2.1 provide a determination based on species habitat requirements regarding the likelihood that the species may occur within the proposed permit and, if applicable, the adjacent half mile area. In addition, provide the rationale justifying the determination. If an attachment is provided, it should be titled Attachment 7.2.1.a. If multiple attachments are necessary they should be titled Attachment 7.2.1.a 1 of 2 etc. **[1780.16(a)(1)(B)/1784.21(a)(1)(B)], [1780.16(a)(2)(A)/1784.21(a)(2)(A)]; [1816.97(b)/1817.97(b)]**

b) **Reporting of Technical Data.** Provide the names and qualifications of person(s) or organization(s) that collected and analyzed threatened and endangered species data and made the determinations of likely occurrences of those species. **[1777.13]**

c) **Format and Contents**: The information presented shall be current, clear and concise, filed in the format required by the Department, and contain explicit citations. Where required by the Department, relevant portions of the referenced materials shall be presented by photocopying or abstracting. If references to previously approved permits are made, the relevant portions of the permits must be supplied in accordance with Operator Memorandum No. 90-08 or an explanation

shall be provided below why this information is not provided. This information may be supplied in Attachment 7.2.1.c if necessary. **[1777.11(a) and (b)]**

d) **Agency Consultation**: Discuss any additional species identified through other agency consultations as requiring protection by applicable state and federal laws. If no other species information is required indicate N/A. **[1780.16(a)(2)(C)/1784.21(a)(2)(C)]; [1780.16(a)(1)(b)(iii)/1784.21(a)(1)(b)(iii)]**

7.2.2 T&E Species Protection and Enhancement Plans. Do any trees exist within the proposed permit area? **[1780.16(b)/1784.21(b)]**

☒ YES ☐ NO

IF YES, the applicant shall:

a) Provide a Protection and Enhancement Plan and an Incidental Take Authorization request as Attachment 7.2.2 for the Indiana bat meeting the specifications of the "Range-wide Indiana Bat Protection and Enhancement Plan Guidelines" (revised 2013) developed by the U.S. Fish and Wildlife Service and the Office of Surface Mining, or justify why a Protection and Enhancement Plan and Incidental Take authorization request are not required under those guidelines.

b) Discuss whether or not the project is consistent with the northern long-eared bat Final 4(d) Rule for Federal Actions (January 2016), and if not then provide a Protection and Enhancement Plan and Incidental Take Authorization request consistent with the 2013 Indiana bat guidelines referenced above. This information may be provided in Attachment 7.2.2.

No trees are within the area of the proposed disturbance on the IBR. No trees along the ephemeral stream will be disturbed during any construction activities.

c) Provide Protection and Enhancement Plans for any additional state or federally listed species that are likely to occur within the proposed permit and adjacent half mile area in Attachment 7.2.2.c. For any additional federally listed threatened or endangered species that are likely to occur in the permit area, provide an Incidental Take Authorization request with the Protection and Enhancement Plan.

d) If an applicant is in possession of any current Incidental Take Authorizations for state listed threatened or endangered species obtained through the Illinois Department of Natural Resources Office of Resource Conservation, list those species in the space below, otherwise indicate N/A.

7.2.3 Eagles. The applicant shall ensure that mining activity will be conducted in a manner that will not result in the taking of a Bald or Golden Eagle, or any other raptor protected under the Bald Eagle Protection Act, and their nests or eggs. "Take" includes the disturbance of protected eagles to the degree that it substantially interferes with breeding, feeding, or sheltering behavior or results in injury. **[1816.97(c) and (d)/1817.97(c) and (d)]**

a) Provide current and accurate information on distances to known Bald Eagle nests within the proposed permit boundary and within a one mile radius. If none exist, then this should be specifically stated. If nests exist within a one mile radius, a Protection and Enhancement Plan must be supplied. Information should also include any species protected under the Bald Eagle Protection Act as amended and may be provided in Attachment 7.2.3.

The following resource is suggested:

National Bald Eagle Management Guidelines USFWS

N/A

7.2.4 Reporting of Threatened and Endangered and Other Protected Species: Describe the steps and timeframe for reporting any state or federally listed species, or other protected species to the Department, should the operator become aware of the species existence within the proposed permit area. **[1816.97(b)/1817.97(b)]**

See Attachment 7.1

7.3 General Fish and Wildlife Protection and Enhancement Measures: The applicant shall, to the extent possible and with the best technology currently available, minimize disturbances and adverse impacts on fish and wildlife and related environmental values and achieve enhancement of these resources where practicable. **[1780.16(b)/1784.21(b)]; [1816.97(a)/1817.97(a)]**

7.3.1 Protection Measures. Provide information on measures using the best technology currently available how the applicant will protect fish and wildlife and related environmental values. The following information is required: **[1780.16(b)(3)/1784.21(b)(3)]; [1816.97(e)/1817.97(e)]**

a) **Electric Powerlines**. If powerlines are proposed to be relocated or constructed at any point during operations, then discuss the measures to ensure electric powerlines are designed and constructed to minimize any hazards to raptors and migratory birds to ensure that the Bald Eagle Protection Act and the Migratory Bird Treaty Act have been considered and addressed where applicable. This information may be provided in Attachment 7.3.1.a if necessary **(1780.16(b)(3)(A)/1784.21(b)(3)(A)/1816.97(e)(1)/1817.97(e)(1)).**

The following are suggested resources:
"Suggested Practices for Avian Protection from Powerlines: The State of the Art in 2006"

"Reducing Avian Collisions with Power Lines: The State of the Art in 2012"

Powerline will be constructed in accordance with Suggested Practices for Avian Protection of powerlines.

b) **Haul and Access Roads.** Describe how access and haul roads will be located and operated to avoid or minimize impacts on species protected under the Endangered Species Act, Migratory

Bird Treaty Act, and the Bald Eagle Protection Act, or discuss why these protection measures are not applicable. **[1780.16(b)(3)(A)/1784.21(b)(3)(A)]; [1816.97(e)(2)/1817.97(e)(2)]**

See Permit 375

c) **Fences and Overland Conveyers.** Describe how fences and overland conveyers and other potential barriers will be designed and constructed to allow passage of large mammals, or discuss why these protection measures are not applicable. **[1780.16(b)(3)(A)/1784.21(b)(3)(A)]; [1816.97(e)(3)/1817.97(e)(3)]**

See Permit 375

d) **Exclusion from Ponds.** Provide information on whether or not ponds on site will contain hazardous concentrations of toxic-forming materials and if so, then describe how control measures, management techniques, and monitoring methods will be used to ensure how wildlife protected under the Endangered Species Act, Migratory Bird Treaty Act, and the Bald Eagle Protection Act are excluded from these areas. **[1780.16(b)(3)(A)/1784.21(b)(3)(A)]; [1816.97(e)(4)/1817.97(e)(4)]**

N/A

7.3.2 Enhancement Measures. Provide a **detailed** description of enhancement measures that will be used during the reclamation and post-mining phases of operations to develop aquatic and terrestrial habitats. Measures may include but are not limited to: restoration of streams and wetlands, retention of ponds, establishment of wildlife food and cover, addition of perches or nest boxes, habitat diversification of croplands, and any other management strategies designed to enhance wildlife habitat. **[1780.16(b)(3)(b)/1784.21(b)(3)(b)]**

See Permit 375

EcoCAT
Ecological Compliance Assessment Tool

ILLINOIS DEPARTMENT OF NATURAL RESOURCES

Applicant: Williamson Energy, LLC
Contact: Chris Skelton
Address: PO Box 99
Johnston City, IL 62951

IDNR Project Number: 1801405
Date: 08/25/2017

Project: North Portal Coal Prospect Drilling
Address: 16824 Liberty School Road, Marion

Description: Coal prospect drilling

Natural Resource Review Results

This project was submitted for information only. It is not a consultation under Part 1075.

The Illinois Natural Heritage Database contains no record of State-listed threatened or endangered species, Illinois Natural Area Inventory sites, dedicated Illinois Nature Preserves, or registered Land and Water Reserves in the vicinity of the project location.

Location

The applicant is responsible for the accuracy of the location submitted for the project.

County: Franklin

Township, Range, Section:
7S, 3E, 35
7S, 3E, 36

IL Department of Natural Resources Contact
Impact Assessment Section
217-785-5500
Division of Ecosystems & Environment

Disclaimer

The Illinois Natural Heritage Database cannot provide a conclusive statement on the presence, absence, or condition of natural resources in Illinois. This review reflects the information existing in the Database at the time of this inquiry, and should not be regarded as a final statement on the site being considered, nor should it be a substitute for detailed site surveys or field surveys required for environmental assessments. If additional protected resources are encountered during the project's implementation, compliance with applicable statutes and regulations is required.

Terms of Use

By using this website, you acknowledge that you have read and agree to these terms. These terms may be revised by IDNR as necessary. If you continue to use the EcoCAT application after we post changes to these terms, it will mean that you accept such changes. If at any time you do not accept the Terms of Use, you may not continue to use the website.

IDNR Project Number: 1801405

1. The IDNR EcoCAT website was developed so that units of local government, state agencies and the public could request information or begin natural resource consultations on-line for the Illinois Endangered Species Protection Act, Illinois Natural Areas Preservation Act, and Illinois Interagency Wetland Policy Act. EcoCAT uses databases, Geographic Information System mapping, and a set of programmed decision rules to determine if proposed actions are in the vicinity of protected natural resources. By indicating your agreement to the Terms of Use for this application, you warrant that you will not use this web site for any other purpose.

2. Unauthorized attempts to upload, download, or change information on this website are strictly prohibited and may be punishable under the Computer Fraud and Abuse Act of 1986 and/or the National Information Infrastructure Protection Act.

3. IDNR reserves the right to enhance, modify, alter, or suspend the website at any time without notice, or to terminate or restrict access.

Security

EcoCAT operates on a state of Illinois computer system. We may use software to monitor traffic and to identify unauthorized attempts to upload, download, or change information, to cause harm or otherwise to damage this site. Unauthorized attempts to upload, download, or change information on this server is strictly prohibited by law.

Unauthorized use, tampering with or modification of this system, including supporting hardware or software, may subject the violator to criminal and civil penalties. In the event of unauthorized intrusion, all relevant information regarding possible violation of law may be provided to law enforcement officials.

Privacy

EcoCAT generates a public record subject to disclosure under the Freedom of Information Act. Otherwise, IDNR uses the information submitted to EcoCAT solely for internal tracking purposes.

PART 8: Cropland Capability Soils

8.1 High Capability Post-mining Land Use

8.1.1 Discuss planned final graded slopes of the replaced high capability areas. Include a discussion of slope lengths and slope steepness. **[1825.14(c)]**

8.1.2 Discuss planned replacement of soil horizons with respect to horizon thickness and total root zone (mention thickness of each horizon).

a) The topsoil replacement thickness will be ___ inches. **[1823.14]**

b) The root medium replacement thickness will be ___ inches **[1825.14**

8.1.3 Discuss how excessive compaction will be avoided. If excessive compaction cannot be avoided, provided a compaction alleviation plan. **[1825.14(e)]**

8.1.4 Discuss how wind and water erosion will be minimized. Include discussions of construction, timing, seeding, seeding equipment to be used and erosion control structures to be used. **[1825.14(f)]**

8.1.5 Discuss the management of these areas including crop rotations, green manuring, and levels of fertility. **[1780.18(b)/1784.13(b)]**

8.1.6 Discuss planned timing of the construction and removal, if applicable, of the erosion control structures. If erosion control design and construction is to be coordinated with the Natural Resources Conservation Service, please discuss. **[1825.14(f)]**

8.1.7 Discuss the management of positive surface drainage with respect to differential settling. **[1825.14]**

8.1.8 Discuss the methods of mulching to be used with respect to seasonal variation. **[1780.18(b)/1784.13(b)]**

8.1.9 If the post mining acreage of high capability land is proposed to be reduced for any individual landowner in the permit area other than the applicant, provide a letter of consultation and response, if received, from those landowners.**[1780.23 (b) and (c)/1784.15(b) and (c)]**

8.2 Pre-mining Prime Farmland Soils. The following information must be given, in order for the regulatory authority to evaluate whether the applicant has the technological capability to restore mined prime farmland to equivalent or greater productivity within a reasonable time. The applicant shall use the Soils Map and Soil Information Chart provided in Part 2.3.9 of the application. The applicant may also choose to include references to the Custom Soil Survey referenced in Part 2.3.

8.2.1 Pre-mining Soil Profile. The applicant must include a description of the original undisturbed soil profile. The description must discuss the following parameters for each soil horizon that collectively constitutes the root zone unless specific depths or horizons are requested. **[1785.17(c)]**

See Soil Report Attachment 2.2.1

a) Depth and thickness of each horizon (range and average).

See Soil Report Attachment 2.2.1

b) Moist bulk density of each major horizon (use USDA approved method or reference).

See Soil Report Attachment 2.2.1

c) Present pH and state of fertility (P&K) (A horizon only).

See Soil Report Attachment 2.2.1

d) Texture analysis of each horizon (use USDA texture classification).

See Soil Report Attachment 2.2.1

e) If B&C horizons are proposed to be mixed, submit evidence to support proposal.

See Soil Report Attachment 2.2.1

8.2.2 Pre-mining Soil Samples. Soil samples must be taken on the permit site to obtain the material necessary for the above-required information. Sample site locations must be indicated on the soils map. NRCS established values on bulk density may be used in lieu of field investigation. Use of soil information from related permits may be considered if they are representative of the proposed application area. Underground mine surface disturbances which are not exempt from prime farmland restoration requirements and which propose to leave the subsoil in place, may submit the information provided in a Custom Soil Survey except that onsite samples must be taken to provide the information required for A horizon thickness

See Soil Report Attachment 2.2.1

a) The applicant shall discuss the history of previous productivity and cropping practices on the prime farmland, if known, or may reference the productivity information from Bulletin 811, provided in response to Part 2.3.1. **[1785.17(c)(4)]**

See Soil Report Attachment 2.2.1

b) The applicant shall provide references or copies of available agricultural school studies, company data or other scientific data for comparable areas to demonstrate that the applicant, using

their proposed method of reclamation will achieve, within a reasonable time, equivalent or higher levels of yield after mining as existed before mining. **[1785.17(c)(3)]**

See Soil Report Attachment 2.2.1

8.3 Prime Farmland Soil Handling

8.3.1 Describe the equipment to be used in the removal and replacement of each soil horizon. **[1785.17(c)(2)]**

Topsoil will be removed with dozer, scraper, or truck and excavator.

8.3.2 Discuss how excessive compaction will be avoided. **[1823.14(c)]** If excessive compaction cannot be avoided, provide a compaction alleviation plan. **[1823.14(d)]**

Topsoil will be handled as little as possible to ensure minimal compaction. Topsoil will stockpile separately from any other soil type.

8.3.3 Discuss the timing of the removal and replacement of the horizons with regards to seasons, weather, and regulatory authority testing approval. **[1823.12, 1823.14(b) and (e)]**

Topsoil will be evenly redistributed over the site and planted during the next planting cycle. A cover crop will be used to prevent erosion prior to next planting cycle.

8.3.4 Discuss how mining operation will impact prime farmlands where the B and/or C horizons are to be left in place and how these soils layers will be protected or restored to their original capability **[1823.12]**

The subsoils will be ripped/plowed prior to having topsoil place over them to minimized compacting from surface operations.

8.3.5 Discuss how the prime farmland will be identified in the field in order to avoid contamination with non-prime farmland soils. **[1823.12]**

All topsoil is prime farmland soil

8.3.6 Are prime farmland topsoil or subsoils to be mixed with non-prime soils?

☐ YES ☒ NO

If YES, provide evidence showing how combining will not affect the permittee's ability to restore the pre-mining prime farmland productivity. **[1823.14(e)]**

8.3.7 Discuss whether stockpiles will be used or direct placement will be used. If stockpiling will be used, discuss. Locate on Operations Map. **[1823.13]**

Stockpiles will be shown on Operation Map

8.3.8 Discuss length of time stockpiles are to be in place. **[1823.13]**

Stockpiles will be let in place until operation of the supply shaft are completed.

8.3.9 Discuss how prime land stockpiles are to be identified in the field in terms of different horizons and prime versus non-prime farmland piles. **[1823.13]**

All topsoil on this project are prime topsoils

8.3.10 Discuss any intermittent stockpile relocations as to how, when and why. **[1823.13]**

N/A

8.3.11 Discuss temporary and/or permanent seeding and revegetation to prevent wind and water erosion. **[1823.13]**

Topsoil stockpiles will be seed using approved Permit 375 mix during the next appropriate growing cycle.

8.3.12 Discuss how contamination by other soil horizons or by fly rock will be prevented. **[1823.13]**

N/A

8.4 Prime Farmland Reclamation Plan and Map

8.4.1 Locate on the Post-mining Land Use/Capability Reclamation Map the location of the replaced prime farmland. Give acreage totals in Table 11.1. If the post mining acreage of prime farmland is proposed to be reduced for any individual landowner in the permit area other than the applicant, provide a letter of consent from those landowners. **[1785.17 (e)(5)]**

All disturbed are will be return to previous land used

8.4.2 Discuss how wind and water erosion will be minimized. Include discussions of construction, timing, seeding, seeding equipment to be involved and erosion control structures to be used. **[1823.14(e)]**

Silt fence and straw bales will be used to prevent erosion; Topsoil stockpiles will be seed using approved Permit 375 mix during the next appropriate growing cycle.

8.4.3 Discuss the management of these areas including crop rotations, green manuring levels of fertility and personnel responsible for management. Discuss the fertility management. Also, discuss the management in relation to any land leveling needed. **[1823.14(f)]**

Applicable soil nutrient and soil amendments will be used are required to me 1823.14(F)

8.4.4 Discuss the timing of the construction of the erosion control structures and the criteria used to determine the need for and construction design of erosion control systems. If erosion control design and construction is to be coordinated with the Natural Resources Conservation Service, please discuss. **[1823.14(g)]**

Silt fence will be install prior to any disturbance

8.4.5 Discuss the final graded slopes of the replaced prime farmland areas. Include a discussion of slope lengths. **[1816.102(a)/1817.102(a)]; [1823.14]**

Grade will be same as pre-mining grades.

8.4.6 Discuss the management of positive surface drainage with respect to differential settling. **[1823.14]**

N/A

8.4.7 Discuss the replacement of soil horizons with respect to horizon thickness and the total root zone.

N/A

a) The topsoil replacement thickness will be ___ inches. **[1823.14(e)]**

b) The root medium replacement thickness will be ___ inches **[1823.14(a)(1)]**

8.4.8 Include any other relevant information in support of a possible finding by the regulatory authority that the operator has the technological capability to restore prime farmland areas, within a reasonable time, to equivalent or higher levels of yield, as determined by the regulatory authority. **[1785.17(e)]**

N/A

PART 11: Reclamation Plan

11.1 Post-Mining Land Use

11.1.1 Provide a **Post Mining Land Use/Capability Reclamation Map** as required by the General Mapping Requirements.

Provide a detailed description of proposed post-mining land uses and capabilities employing land use and capability categories listed in Table 11.1: Land Use Capability (Post-Mining) Summary. Complete acreage figures for each post-mining land use proposed and designate its capability classification. This information shall be broken down by landowner in addition to the composite land uses and capabilities.

For surface mines, acreage figures for post-mining land use must differentiate between mined and surface disturbance areas based on the mining line used in Part 2.3.3 of the application. **[1777.11(a)(3)]**

See Pre-mine land use map.

11.1.2 Where a post-mining land use different from a pre-mining land use is proposed, provide:

a) A discussion explaining the consideration which has been given to making all the proposed surface mining activities consistent with surface owner plans and applicable state and local land use plans and programs. **[1780.23/1784.15]**

No

b) A copy of the comments from the owner of the surface concerning the proposed land use of the proposed permit area and from the state or local government agencies which would have to initiate, implement, approve or authorize the proposed uses of the land following reclamation. In the event the surface land owner does not provide comments; the applicant shall provide proof of mailing to the surface owner soliciting comments to show that a good faith effort was made to provide the surface owner with the opportunity to comment. **[1780.23/1784.15]**

11.1.3 Provide a detailed timetable for completion for each major step in the proposed reclamation plan. The time table shall include for: **[1780.18(b)(1)/1784.13(b)(1)]**

11.1.3.1 Surface mine mining areas:

a) The timing of the rough grading, root medium, and topsoil during active mining to meet the standards of Section 1816.101. **Note: If the plan proposes to reduce the time frames of distance to less than that allowed, it must be stated her and in the reclamation cost estimate section.**

b) The timing of the planting of initial and permanent vegetation after final grading as it relates to the proposed land use.

11.1.3.2 Surface and underground mines, support areas, including refuse disposal areas:

a) The timing of the rough grading, root medium, and topsoil during active mining to meet the standards of Section 1816.101/1817.101

Reclamation will be complete after used of supply shaft. Seeding will be completed during the first planting season after reclamation.

b) The timing of the planting of initial and permanent vegetation after final grading as it relates to the proposed land use.

Seeding will be completed during the first planting season after reclamation.

c) Any other reclamation proposed activities during the mining to minimize reclamation liability and its associated costs.

N/A

11.2 Backfilling and Grading

11.2.1 Describe the methods to be used for backfilling and grading the proposed permit area, including soil stabilization and compaction practices in accordance with 62 Ill. Adm. Codes 1816.102/1817.102 through 1816.107/1817.107.

Topsoil will be redistributed evenly of the entire site.

a) Provide a Post-mining Contour Map and appropriate cross-sections to illustrate and define the proposed post-mining configuration of the permit area. **[1780.18(b)(3)/1784.13(b)(3)]**

See topo map

11.2.2 To achieve the proposed post-mining configuration including cover requirements for refuse disposal areas, the Applicant shall provide soil balancing calculations to ensure an adequate quantity of material is available. These calculations shall include soil shrinkage and swell factors consistent with sound engineering practices as approved by the Department. **[1780.23(b)(1)/1784.15(b)(1)]**

N/A

a) Are borrow areas being proposed to provide a sufficient amount of material to achieve the post-mining configuration?

☐ YES ☒ NO

b) If YES, the Applicant shall include the locations of the borrow areas on the Post Mining Land Use/Capability Map and complete the appropriate items included in Part 5.0: Drainage Control.

11.2.3 For surface mines, does the proposed surface coal mining and reclamation operation require disposal of excess spoil?

☐ YES ☐ NO ☒ N/A

If YES, provide the following:

a) Each application shall contain descriptions, including appropriate maps and cross-section drawings, of the proposed disposal site and design of the spoil disposal structures according to 62 Ill. Adm. Code 1816.71 through 1816.74. These plans shall describe the geotechnical investigation, design, construction, operation, maintenance, and removal, if appropriate, of the site and structures. **[1780.35(a)]**

b) Each application shall contain the results of a geotechnical investigation of the proposed disposal site that include the information outlined in **62 Ill. Adm. Code 1780.35(b)**.

c) If, under 62 Ill. Adm. Code 1816.71(l), rocktoe buttresses or key-way cuts are required, the application shall include information as outlined in **62 Ill. Adm. 1780.35(c).**

If NO, will the spoil and other waste materials available from the entire permit area be insufficient to restore the disturbed area to its approximate original contour as addressed in 62 Ill. Adm. Code 1816.104.

11.2.4 Describe the timing in which all grading and the construction and removal or renovation of water and erosion control structures will be complete and the sequence for accomplishing the work in relation to seasonal weather conditions. **[1780.25(a)/1784.16(a)]**

11.3 Shaft, Slope and Borehole Sealing. Each shaft, drift, adit, tunnel, exploratory hole, entryway, or other opening to the surface from underground shall be capped, sealed, backfilled, or otherwise properly managed, as required by the Department, in accordance with Section 1816.13/1817.13, Operator Memorandum No. 00-01, Operator Memorandum No. 2015-02, consistent with 30 CFR 75.1711, and provide the following: **[1816.15/1817.15]**

11.3.1 Temporary Seals. In the event the mine is temporarily closed or abandoned, provide information on temporary seals to be constructed for prevention of entry to all mine openings. Include an appropriate timetable for construction of these seals. **[1816.14/1817.14]**

Steel vent caps will be used if necessary.

11.3.2 Permanent Sealing Plans

a) Provide a description, including appropriate cross-sections and plan views, of the measures to be used to seal or manage mine openings, and to plug, case, or manage exploration holes, other boreholes, wells, and other openings within the proposed permit area, in accordance with 62 Ill. Adm. Code 1816.13/1817.13 through 1816.15/1817.15 and shall reflect the following concerns:

- Completion using a combination of backfilling and sealing.
- The type and grade of materials to be used for backfilling and the intervals in which they will be used.
- Sections of casing, entry linings, or collar to be demolished.

- Design of hydraulic seals, including construction material, reinforcing, method of placement, design thickness, and method of anchoring.
- Design of gas ventilation piping that will be incorporated in seal design.
- Finished grading at land surface.
- A description of a permanent monument marker identifying the seal as a mine opening.
- A description of the location of all sealed shafts, slopes, or other entrance tunnels to be recorded with the appropriate recorder of deeds. This is in Operator Memorandum 00-01 as a RECOMMENDATION.

b) For any deviation from the established guidelines for sealing, backfilling, and capping, provide an engineering and hydrologic justification. **[1780.18(b)(8)/1784.13(b)(8); Operator Memorandum 00-01]**

The shaft and any boreholes will be plugged from top to bottom according to all MSHA and IDNR regulatory standards after they are no longer needed. Any steel casings will be cut off three feet below natural soil level and the void filled with subsoil, and then covered with topsoil, mulched and seeded. Shaft and belt air holes will be filled with stockpile shaft material/rip rap and have at least one foot concrete reinforced cap. All utility boreholes will be plugged and filled with neat cement. The shaft will be survey and fill in the Franklin County Courthouse as required by Operator Memorandum 00-01.

11.4 Abandonment and Closure of Refuse Disposal Areas

11.4.1 Describe proposed reclamation for all coal refuse disposal areas in accordance with 62 Ill Adm. Code 1780.18(b)/1784.13(b). The proposed reclamation plan shall include the following information:

- Timing of final coverage
- Cross sections of final cover and configuration.
- Type and amount of material proposed to be used for cover, including any coarse refuse used to provide a base over slurry prior to soil cover.
- Construction details of cover and caps.
- Relationship of the refuse disposal area to the post-mining land use.
- Any plans of access roads and other use related facilities.

N/A

11.4.2 If any structure is 20 feet or higher or impounds more than 20 acre-feet, provide a stability analysis of each structure which shall include strength parameters, pore pressures, and long-term seepage conditions. Also, to be included is a description of each engineering design assumption and calculation with a discussion of each alternative considered in selection design parameters and construction methods. (For impounding structures refer to Part 3.5.1.) **[1780.25(a)(2)/1784.16(a)(2)]**

11.4.3 Submission of MSHA certification documents for a detailed design plan shall satisfy the requirements, in so far as the MSHA informational and design standard requirements are duplicative of the requirements. **[1780.25(a)(2)/1784.16(a)(2)]**

N/A

11.5 Bond Estimation

11.5.1 Provide a detailed estimate of the cost of reclamation for the proposed operation required to be covered by a performance bond. Provide calculations and/or drawings, cross sections, etc., to support the reclamation cost estimate. Provide extra calculations for multiple pits or refuse areas. Complete the appropriate Table 11.5 sections. At a minimum, delineate all buildings, reinforced concrete structures and pavement/gravel areas to be reclaimed on the Bond Calculation Map. **[1780.18(b)(2)/1784.13(b)(2)]; [1800.14]**

NOTE: If incremental bonding is requested, provide a Bond Increment Map and provide the following information by increment.

The estimate of the cost of reclamation shall be based on:

- Bond Calculation Acreage *(Table 11.5.1.1)*
- Surface Mining Soil Reclamation *(Table 11.5.1.2)*
- Interior Grading *((Table 11.5.1.3)*
- Boxcut Outslope Grading *(Table 11.5.1.4)*
- Incline/Highwall Reclamation *(Table 11.5.1.5)*
- Gob Pile/Gob Impounding Structure/Slurry Reclamation *(Table 11.5.1.6)*
- Slurry Pond/Incised Refuse Reclamation *(Table 11.5.1.7)*
- Support Area Reclamation *(Table 11.5.1.8)*
- Building Reclamation *(Table 11.5.1.9)*
- Reinforced Concrete Structure Reclamation *(Table 11.5.1.10)*
- Pavement/Gravel Area Reclamation *(Table 11.5.1.11)*
- Borehole Backfilling *(Table 11.5.1.12)*
- Shaft/Slope Backfilling *(Table 11.5.1.13)*
- Public Road Reclamation *(Table 11.5.1.14)*

11.5.2 Indicate location and size of buried volatile material storage facilities.

N/A

PART 12: Revegetation and Reclamation *(Excluding Cropland and Streams)*

12.1 Revegetation During Operations. Provide information specific to temporary, semi-permanent, and/or permanent revegetation of disturbed areas during construction and operations. **For responses that are identical,** "see response to question number X" is acceptable.

12.1.1 Revegetation of drainage control ditches. Describe plans for revegetation of ditches associated with construction of roads, conveyer systems, rail systems, and associated with controlling overland flow drainage. The following information is required: **[1816.43/1817.43]; [1816.45/1817.45]; [1816.111/1817.111]; [1816.114/1817.114]**

a) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

b) Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent or permanent vegetative cover.

c) Provide a **semi-permanent or permanent** grass and forbs species list that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b). If non-native species are proposed, provide adequate justification meeting the requirements of 1816.111(c)/1817.111(c).

d) Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent or permanent grass and forbs list.

12.1.2 Revegetation of faces of embankments. Describe plans for revegetation of faces of embankments of sediment ponds. The following information is required: **[1816.46(b)(1) and (4)/1817.46(b)(1) and (4)]; [1816.49(a)(8)/1817.49(a)(8)]; [1816.111/1817.111]**

a) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

b) Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent or permanent vegetative cover.

c) Provide a **semi-permanent or permanent** grass and forbs species list that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b). If non-native species are proposed, provide adequate justification meeting the requirements of 1816.111(c)/1817.111(c).

d) Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent or permanent grass and forbs list.

12.1.3 Revegetation of soil stockpiles. Describe plans for revegetation of subsoil and topsoil stockpiles and any sediment pond exemptions required for stockpiles. The following information is required **[1816.22(c)(2)(C)/1817.22(c)(2)(C)]; [1816.111/1817.111]**

a) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114)]**

See Permit 375

b) Describe the timing and methods proposed to transition from the temporary vegetation to the semi-permanent vegetative cover.

See Permit 375

c) Provide a **semi-permanent** grass and forbs species list that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b). If non-native species are proposed, provide adequate justification meeting the requirements of 1816.111(c)/1817.111(c).

See Permit 375

d) Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates for the semi-permanent or permanent grass and forbs list.

See Permit 375

d) Is a Sediment Pond Exemption requested for any proposed soil stockpiles? **[1816.46(e)/1817.46(e)]**

☒ YES ☐ NO

If YES, justify the request and describe how the requirements of 1816.46(e)/1817.46(e) will be met.

Silt fence and straw bales will used to control drainage for entire site. Soil and Topsoil stockpiles will be seeded at the first possible planting season and covered with straw as necessary.

12.2 Post-Mining Reclamation Plans. Provide the following information on each proposed Post-Mining Land Use within the permit area, **excluding cropland and streams** (1780.18(b)(5)/1784.13(b)(5)). Plans for revegetation and reclamation must conform to the standards of success outlined in 1816.116/1817.116 and 1816.117/1817.117 and adhere to the Illinois Noxious Weed Law (1816.111(b)(5)). **For responses that are identical,** "see response to question number X" is acceptable. **For those Post-Mining Land Uses that are not proposed** indicate N/A.

See Land Used Map. Pre and Post Land use will be same.

12.2.1 Pasture Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Pasture. The following information is required: **[1816.111/1817.111]; [1816.116/1817.116]**

a) Describe proposed soil preparation and a soil testing plan related to reclamation and re-vegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

c) Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

d) Provide a **permanent** pasture grass species list, describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.13(b)(5)/1784.18(b)(5)]**

e) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)];[1816.111(a) and (b)/1817.111(a) and (b)]**

12.2.2 Wildlife Herbaceous Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Herbaceous areas. The following information is required: **[1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117]**

a) Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

See Permit 375

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

See Permit 375

c) Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

See Permit 375

d) Provide a **permanent** grass and forbs species list that meets the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If herbaceous species list is different for slopes of reclaimed refuse disposal facilities than for other herbaceous areas, please specify. If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2). Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5)]**

See Permit 375

e) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)];[1816.111(a) and (b)/1817.111(a) and (b)]**

See Permit 375

12.2.3 Wildlife Woody Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Woody areas. The following information is required: **[1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117];**[OSM Directives TSR-16 Directive 931]

a) Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

c) Describe the timing and methods proposed to transition from the temporary vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

d) Provide a permanent herbaceous ground cover species list and a woody species list that meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2). Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5)]**

e) If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. Describe measures taken to ensure consistency.

f) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)];[1816.111(a) and (b)/1817.111(a) and (b)]**

12.2.4 Wildlife Wetland Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Wetland areas. The following information is required: **[1701.5]; [1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117]; [1816.102(h)/1817.102(h)];** [OSM Directives System TSR-14 Directive 828]

12.2.4.1 Is the wetland a managed, engineered area that functions as part of a drainage control plan, a sediment control plan, or is not a fully incised wetland?

☐ YES ☐ NO

If NO, complete Part 12.2.4.2, If YES, the following information is required:

a) Describe how the soil type(s) in the proposed wetland area will support hydrophytic vegetation. If hydric soils are not present, describe how the area will function as a wetland without this wetland parameter.

b) Discuss the potential for the area to be inundated or saturated by surface or groundwater at a frequency to support hydrophytic vegetation on at least 30% of the surface acres of the wetland.

c) Provide a permanent wetland vegetation species list that is compatible with the Corp of Engineers Wetland Delineation Manual as described at 1816.116(a)(5)(A)/1817.116(a)(5)(A), however the most current version of this document shall be used (1701.5 Appendix A definition of best technology currently available includes vegetative selection). The species list must also meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2).

d) Provide a description of how the requirements found at 1816.49(b)/1817.49(b) will be met.

12.2.4.2 Is the wetland a depression created by removal of soil for the purposes of a borrow area or enhancement of wildlife habitat and not an engineered portion of a drainage control plan or sediment control plan?

☐ YES ☐ NO

If YES, the following information is required:

a) Describe how the soil type(s) in the proposed will support hydrophytic vegetation. If hydric soils are not present, describe how the area will function as a wetland without this wetland parameter.

b) Discuss the potential for the area to be inundated or saturated by surface or groundwater at a frequency to support hydrophytic vegetation on at least 30% of the surface acres of the wetland.

c) Provide a permanent wetland vegetation species list that is compatible with the Corp of Engineers Wetland Delineation Manual as described at 1816.116(a)(5)(A)/1817.116(a)(5)(A), however the most current version of this document shall be used (1701.5 Appendix A definition of best technology currently available includes vegetative selection). The species list must also meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2).

12.2.5 Wildlife Water and/or Developed Water Resources Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Wildlife Water and/or Developed Water Resources areas. The following information is required: **[1816.49/1817.49]; [1816.56/1817.56]; [1816.97/1817.97]**

a) Provide a general description of how the requirements found at 1816.49(b) will be met.

b) Discuss how the post-mining water area will support and enhance fish and wildlife habitat. **[1816.97(g)(3)]**

12.2.6 Forest Post-Mining Land Use Reclamation Plan. Describe plans for reclamation and revegetation of Forest areas including the following information: **[1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117];** [OSM Directives TSR-16 Directive 931]

a) Describe proposed soil preparation and a soil testing plan related to reclamation and revegetation procedures. **[1780.18(b)(5)(G)/1784.13(b)(5)(G)]**

b) Describe the methods for the use of **temporary** seeding/mulching to control erosion, discuss the species, seeding rate by species per acre, and mulching methods and type of mulch. **[1816.111(c)/1817.111(c)]; [1816.114/0817.114]**

c) Describe the timing and methods proposed to transition from the temporary herbaceous cover vegetation to the permanent vegetative cover. **[1816.111(c)/1817.111(c)]**

d) Provide a permanent herbaceous ground cover species list and a woody species list that meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(g)/1817.97(g). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2). Describe seeding rate by species per acre, methods of planting and seeding, mulching and fertilizer plan and rates. **[1780.18(b)(5)/1784.13(b)(5)]**

e) If a bat Protection and Enhancement Plan (PEP) is part of the application, the applicant shall ensure consistency between this part and the bat PEP. Describe measures taken to ensure consistency.

f) Describe a **periodic measurement plan** of the vegetation as outlined in 1816/1817.116(b)(1) that will be used to identify if remedial actions are necessary to achieve the approved species and / or Post-Mining Land Use vegetation success standards during the applicable period of liability. Refer to Operator Memorandum No. 2017-02 for additional information regarding tree and shrub planting maintenance. Information provided shall also **describe a remedial action plan** to achieve the approved vegetative species, invasive species management, or Post-Mining Land Use success. Remedial actions required to meet Sections 1817.111 (a) and (b) may include but are not limited to mowing, burning, undesirable invasive species control, irrigation and pest and disease control. **[1816.116(b)(1)/1817.116(b)(1)];[1816.111(a) and (b)/1817.111(a) and (b)]**

12.2.7 Industrial/Commercial Post-Mining Land Use. Describe plans for reclamation and revegetation of Industrial/Commercial areas. The following information is required: **[1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117]**

a) Describe plans for utilization of the area for Industrial or Commercial purposes at the time of bond release.

b) Provide a ground cover species list and a woody species list, if applicable that meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(i)/1817.97(i). If non-

native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2).

12.2.8 Recreation Post-Mining Land Use. Describe plans for reclamation and revegetation of Recreation areas. The following information is required: **[1816.111/1817.111]; [1816.97/1817.97]; [1816.116/1817.116]; [1816.117/1817.117]**

a) Describe plans for utilization of the area for recreational purposes at the time of bond release.

b) Provide a ground cover species list and a woody species list, if applicable, that meet the requirements of 1816.111 (a) and (b)/1817.111 (a) and (b) and 1816.97(i)/1817.97(i). If non-native species are proposed to achieve the Post-Mining Land Use, provide adequate justification meeting the requirements of 1816.111(a)(2)/1817.111(a)(2).

12.3 Habitat Diversification in Cropland Post-Mining Land Use Areas. Describe plans to intersperse crop fields with trees, hedges, conservation drainage ways, or fence rows that will break up crop monocultures and diversify habitat, where appropriate and compatible with crop management and wildlife management practices. **[1816.97(h)/1817.97(h)]; [1816.111/1817.111]**

Small field in a larger group of farmland.

Dear Dr. Leibowitz:

Pursuant to the requirements of the Programmatic Agreement between IHPA and IDNR concerning mining, please review the enclosed Archaeological Survey Short Report.

PROJECT: Williamson Energy, LLC, Pond Creek Mine Permit 375, 20a. IBR for North Supply Shaft
LOCATION: northwest corner at the intersection of Davis and Gunn roads (0.25 miles north of intersection of Davius and Liberty School roads), West Frankfort, IL
COUNTY: Franklin
CONTRACTOR: ARG (Titus)

The Phase One archaeological survey of **20. acres** has not recorded any archaeological sites; project clearance is recommended.

In accordance with the established procedures for coordination of Illinois Department of Natural Resources projects, IDNR requests the concurrence of the State Historic Preservation Office in our determination that the proposed undertaking is a **no effect** regarding status of any Historic Property.

If no reply is received from IHPA within 45 days, IDNR will conclude that, as per the Programmatic Agreement, this application is approved and will proceed with the undertaking.

Sincerely,

Dawn E. Cobb

LOCATIONAL INFORMATION AND SURVEY CONDITIONS:
County: Franklin **Quadrangle:** Pittsburg, Illinois 7.5'

Project Type/Title: Phase I Cultural Resources Survey and Assessment of the Proposed, 20-Acre North Supply Shaft IBR for Williamson Energy, LLC, Franklin County, Illinois (ARG CRM 1989).
Funding and/or Permitting Federal/State Agencies: IDNR

Legal Location: S2NWSW
Section: 36 **Township:** 7S **Range:** 3E
UTM Coordinates: **Center Point UTM North:** 4192710 **UTM East:** 338743

Location: The project area is located at the intersection of Davis and Gunn roads, approximately 0.4 km (0.25 mile) north of the intersection of Davis and Liberty School roads, and 9.1 km (5.65 miles) southeast of West Frankfort, Illinois.
Project Description: Phase I archaeological survey of 20 acres for a mine supply shaft IBR (Permit 375) for Williamson Energy, LLC.
Topography: Low ridge and floodplain of Pond Creek/tributaries
Elevation (' AMSL): 427'–436'
Soils: Ava-Bluford-Wynoose (University of Illinois 1966)
Drainage: Pond Creek, Big Muddy River, Mississippi River
Land Use/Ground Cover (include % visibility): Cultivated field (corn, 85% visibility)
Survey Limitations: None

Previously Reported Sites: Within project area: None. In 1-mile of project area: 11FK211

Previous Surveys: Within project area: None. In 1-mile of project area: 11688 (Wagner 2001)

Regional Archaeologist Contacted: None, consulted the Illinois Inventory of Archaeological Sites
Investigation Techniques: Systematic surface survey along transects spaced 5 m apart in cultivated fields.

Time Expended: 6 Hours
Sites/Find Spots Located: None
Cultural Material: n/a

Curated At: n/a
Collection Techniques: n/a
Area Surveyed (acres and square meters): 20 acres; 80,937 square meters

RESULTS OF INVESTIGATIONS AND RECOMMENDATIONS: **(check one)**

_X_ **Phase I archaeological reconnaissance has located no archaeological material; project clearance is recommended.**

_ **Phase I archaeological reconnaissance has located archaeological materials; site(s) does(do) not meet requirements for National Register eligibility; project clearance is recommended.**

_ **Phase I archaeological reconnaissance has located archaeological materials; site(s) may meet requirements for National Register eligibility; further testing is recommended.**

_ **Phase II archaeological investigation has indicated that site(s) does(do) not meet requirements for National Register eligibility; project clearance is recommended.**

_ **Phase II archaeological investigation has indicated that site(s) meet requirements for National Register eligibility; formal report is pending and a determination of eligibility is recommended.**

Comments: American Resources Group recently completed an intensive, Phase I cultural resources survey of a 20-acre parcel of land for Williamson Energy's proposed North Supply Shaft IBR for Mine Permit 375. The project area encompasses a portion of a level upland surface that overlooks the broad floodplain bordering the north (right) bank of Pond Creek to the south. A channelized, intermittent tributary of Pond Creek bounds the western end of the project area, and Pond Creek itself lies approximately .65 km (.4 mile) to the south. The project area is located about 9.1 km (5.65 miles) southeast of West Frankfort, in southern Franklin County, Illinois (Attachment A, Figure A-1). The survey was conducted by a two-person crew on June 25, 2017.

The site-file search and architectural records review conducted prior to beginning the field survey revealed that no archaeological sites or architectural properties had been recorded within the present project area. The results of the pre-field records and literature review suggested that prehistoric site density was apt to be moderately low in the project corridor due to its largely being located in a relatively level floodplain of Pond Creek and its tributaries. The pre-field review of historic maps also suggested there was little potential for the project corridor to contain historic sites (Attachment B, Figures B-1–B-7).

The project area is located on a broad, level upland surface north of Pond Creek, approximately 19 km (12 miles) upstream of the point where this perennial stream empties into the Big Muddy River and 1 km (.63 mile) downstream of its headwaters. The total area surveyed in the course of the present investigation is 20 acres.

At the time of survey, the project area was planted in 8-feet-high corn. Below the corn canopy, ground surface visibility was estimated to be approximately 85 percent (Attachment C, Figures C-1–C-4). The project area was surveyed through surface survey conducted along transects spaced 5 m apart.

No cultural resources were identified during the present investigation, indicating the proposed undertaking will not have an adverse effect on significant cultural resources. It is recommended that the proposed undertaking be allowed to proceed as planned without any additional cultural resources investigations.

ARCHAEOLOGICAL CONTRACTOR INFORMATION:

Archaeological Contractor: American Resources Group, Ltd.
Address/Phone: 127 North Washington Street
