Don.Brown@Illinois.Gov

Dear Mr. Brown:

I am grateful that the Illinois Pollution Control Board is currently considering PFAS Groundwater Quality Standards (IPCB, Case No. R2022-018). As a resident of Will County, a county that has high levels of PFAS exposure and many residents are served by groundwater, I support the Illinois Environmental Protection Agency's Groundwater Quality Standards (GQS) proposed amendments to 35 Ill. Adm. Code 620. The proposed amendments would add GQS for six PFAS chemicals (PFOS, PFOA, PFNA, PFBS, PFHxS, and GenX) and it will change the methodology in calculating toxicity values by utilizing child exposure factors in place of adult exposure factors. This amendment will help protect our communities from these harmful chemicals.

The more scientific data that becomes known about PFAS chemicals the more we learn how serious of a threat they are to human health, including causing cancer, birth defects, and compromised immune systems. As a person of faith I have a deep concern for the care of the earth and human dignity, comprehensive GQS is a way to protect the earth and human dignity.

IPCB, Case No. R2022-018 is a step in the right direction to support healthy communities in Illinois. Thank you for your consideration.

Sincerely,

Harrie Tracey
228 S. Anderson Rd
New Lenox, Ill. 60451
