---

Mr. Brown,

I lived in Waukegan all my life, there have been many designated "Super Fund" sites over the years and some have been remediated. Please make sure that both coal ash ponds on our Lakefront are properly cleaned. They both pose an imminent threat to our drinking water.

Additionally, we were told at a US EPA meeting that of the two ponds, the East pond (the closest to the lakeshore) had the least clean-up requirements. It is also the most likely pond to seep into both our ground water and Lake Michigan.

Thanks for your consideration.

Raymond W Papp
