BEFORE THE ILLINOIS POLLUTION CONTROL BOARD

IN THE MATTER OF:)
)
PETITION OF AMEREN ENERGY MEDINA) AS 2021-008
VALLEY COGEN, LLC (OLD MEREDOSIA)) (Adjusted Standard - Land)
FOR ADJUSTED STANDARDS)
FROM 35 ILL. ADMIN. CODE PART 845)

**AMEREN ENERGY MEDINA VALLEY COGEN, LLC REPLY IN
SUPPORT OF ITS MOTION FOR 180-DAY STAY AND
MOTION FOR EXTENSION OF DISCOVERY**

Consistent with the Hearing Officer’s January 23, 2025 Order and pursuant to Sections 101.500(e) of the Illinois Pollution Control Board’s (“Board”) Procedural Rules. 35 Ill. Adm. Code 101.500(e), Ameren Energy Medina Valley Cogen, LLC (“Ameren”) submits this Reply in Support of its Request for 180-day Stay and its Motion for Extension of Discovery.

The Illinois Environmental Protection Agency (“Agency”) essentially has two bases for its objections, neither of which should preclude the Board from granting the stay and extending discovery. The first, the Agency’s allegations that Ameren’s groundwater monitoring program does not comply with Part 845, is immaterial, and the second, that the treatability study does not meet the Part 845 closure and post-closure standards, is contrary to the very purpose of an adjusted standard - - to allow an adjusted standard from rules of general applicability when there exist factors relating to the petitioner that are substantially and significantly different from the factors relied upon by the Board in adopting the general rules. 415 ILCS 5/28.1(c).

I. The Agency’s Claims of Alleged Deficiencies in the Groundwater Monitoring Program Are Irrelevant to Ameren’s Motions

The Agency’s claims that there are alleged deficiencies in the Ameren groundwater monitoring system are irrelevant to granting a stay or extending discovery. Ameren timely filed its

petition for adjusted standard immediately following the effective date of the Part 845 regulations, resulting in a stay of the application of the rule to the Old Meredosia Pond and has been diligent in its pursuit of adjusted standard relief for the Old Meredosia Pond. As Ameren stated in its Motions, Ameren is preparing an operating permit application, which includes establishing the groundwater monitoring system and implementing the groundwater program consistent with the Part 845 requirements. 35 Ill. Adm. Code 845.230(d)(2)(I), 845.610(b)(1). Because Ameren has installed groundwater wells around the Old Meredosia Pond, Ameren reasonably expects to be able to provide the necessary documentation and information for the groundwater monitoring program to the Agency in a timely manner. Accordingly, allowing Ameren's request for a stay will not delay any work related to establishing a groundwater monitoring program pursuant to Part 845.

In a misleading effort to assert an environmental threat where none exists, the Agency presented the Board with an incomplete description of the groundwater monitoring data to date. The Agency cited elevated concentrations of boron and selenium in MW-8 but did not tell the Board that the boron concentrations of boron are decreasing (See Agency Ex. A, Fig. 1-22). More importantly, throughout 2023, levels of both these constituents in MW-2, a monitoring well downgradient of MW-8, were below the Part 845 standards. See Agency Ex. A, Fig. 1-2, 1-16. MW-2 groundwater concentrations continued to remain below the Part 845 standards throughout 2024. *See Meredosia 2024 Groundwater Data*¹ (Ex. 1- 2024Q1, p. 10; Ex. 2 – 2024Q2, p. 10; Ex. 3 – 2024Q3, p. 10; Ex. 4 – 2024Q4, p. 9-10). Similarly, groundwater concentrations in MW-5 and MW-6, two additional downgradient wells on the south side of the Station, are also consistently below the Part 845 standards. *See Agency Ex. A., Appen. A, and attached Meredosia 2024 Groundwater Data* (Ex. 1- 2024Q1, p. 16, 18; Ex. 2 – 2024Q2, p. 16, 18; Ex. 3 – 2024Q3, p. 15-

¹ Because the 2024 tables of the groundwater data are not available as of the date of this filing, the raw data packages are attached as Exhibits 1-4.

18; Ex. 4 – 2024Q4, p. 15-18). Collectively, the compliant groundwater concentrations in MW-2, MW-5 and MW-6, coupled with the decreasing concentrations in MW-8, and the undisputed analysis attached as Exhibit 3 to Ameren’s Amended Petition for Adjusted Standard concluding that the groundwater did not pose risk to the Illinois River, demonstrates that no harm will be caused to the environment by granting the stay. *See* Ameren’s Motion for 180-Stay, ¶18.

Finally, the Agency’s claim that MW13 and MW14 are improperly constructed is baseless. The Agency’s exhibit only shows that MW13 and 14 were dry in 2023, but nothing more. A monitoring well being dry does not mean it was improperly constructed. This is particularly true here because both wells have been successfully sampled (i.e., were not dry) at other times (see Ameren Amended Petition, Ex. 3, Page 1033). In any case, any issues related to the groundwater monitoring wells will be remedied through the preparation of the operating permit application.

II. An Adjusted Standard for an Alternative Closure Due a Site-Specific Issue at the Old Meredosia Pond is Proper.

Ameren’s treatability study is intended to determine whether site-specific conditions warrant an alternative closure approach to Part 845. This is the crux of why Ameren is seeking an adjusted standard. The Agency’s contention that this treatability study does not meet the Part 845 requirements for closure and post-closure ignores the purpose of a petition for an adjusted standard. As the Board stated in its Order and Opinion adopting Part 845, “to address site-specific issues, an affected entity may avail itself of relief mechanisms, such as an adjusted standard or a variance.” *In the Matter of: Standards for the Disposal of Coal Combustion Residuals in Surface Impoundments: Proposed New 35 Ill. Adm. Code 845, R20-19* (Feb. 4, 2021), p. 17. The conditions at the Old Meredosia Pond are the very type of site-specific issues envisioned by the Board to warrant an adjusted standard relief mechanism. The Board should not deny Ameren the opportunity to avail itself of adjusted standard relief.

The Agency does not dispute that there is an established ecosystem on the surface of the Old Meredosia Pond, which supports a variety of plants and animals including a bald eagle's nest, and the presumed presence of a threatened species. The Agency also does not dispute that the Part 845 closure methods would destroy the unique ecosystem. Accordingly, to address the site-specific ecosystem on the surface of a historic surface impoundment, Ameren is pursuing an alternative groundwater treatment approach that could be an equally effective treatment and closure method. This is exactly the type of situation for which an adjusted standard is proper.

Perhaps recognizing the relevancy and need for the treatment study, the Agency advances a "fall back" argument that Ameren did not provide sufficient information on the treatability study to warrant the stay. The Agency is wrong. Ameren explained the methodology and the expected results of the treatability study in its Motion. *See* Ameren Motion, ¶12. Ameren attached the proposal for the treatability study that laid out in detail the scope of work, including the "Treatability Testing Approach," a description of the resin treatment and boron precipitation, and a schedule. *See* Ameren Ex. A., §§2.2, 3. Ameren also attached the results from a virtually identical groundwater treatment approach, showing the expected results of a significant decrease in concentrations to below the Part 845 standards. Ameren Ex. B, p. 2. To further demonstrate the acceptance of the treatment method, Ameren attached two studies demonstrating USEPA's reliance on the treatment methods to remove constituents in groundwater. The Agency's objection fails to explain in any way what is still "deficient" about this information. Accordingly, the Board should grant Ameren's Request for Stay and Motion for Extension of Discovery.

III. Conclusion

For the reasons stated herein, in Ameren's Motion for 180-Day Stay and its Motion for Extension of Discovery, Ameren respectfully requests that the Board stay this Matter for 180 days

and extend discovery to 90 days after the stay or the Board's decision to deny the stay, whichever is later.

Respectfully submitted,

Ameren Energy Mediana Valley Cogen LLC
Petitioner,

RE: Meredosia GW Monitoring Q1 2024

WorkOrder: 24030008

Dear Meghan Maxwell:

TEKLAB, INC received 16 samples on 3/14/2024 3:00:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley
Director of Customer Service

Abbr Definition

* Analytes on report marked with an asterisk are not NELAP accredited

CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.

CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.

DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.

DNI Did not ignite

DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.

ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.

IDPH IL Dept. of Public Health

LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.

LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.

MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."

MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).

MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MW Molecular weight

NC Data is not acceptable for compliance purposes

ND Not Detected at the Reporting Limit

NELAP NELAP Accredited

PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.

RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.

RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).

SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.

Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.

TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"

TNTC Too numerous to count (> 200 CFU)

Pages to follow: Chain of custody 6

Extra pages included 0

- Shipping container/cooler in good condition? Yes [checked] No [] Not Present [] Temp °C 5.5
Type of thermal preservation? None [] Ice [checked] Blue Ice [] Dry Ice []
Chain of custody present? Yes [checked] No []
Chain of custody signed when relinquished and received? Yes [checked] No []
Chain of custody agrees with sample labels? Yes [checked] No []
Samples in proper container/bottle? Yes [checked] No []
Sample containers intact? Yes [checked] No []
Sufficient sample volume for indicated test? Yes [checked] No []
All samples received within holding time? Yes [checked] No []
Reported field parameters measured: Field [checked] Lab [] NA []
Container/Temp Blank temperature in compliance? Yes [checked] No []

When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.

- Water - at least one vial per sample has zero headspace? Yes [] No [] No VOA vials [checked]
Water - TOX containers have zero headspace? Yes [] No [] No TOX containers [checked]
Water - pH acceptable upon receipt? Yes [] No [checked] NA []
NPDES/CWA TCN interferences checked/treated in the field? Yes [] No [checked] NA []

Any No responses must be detailed below or on the COC.

pH strip #96651/89660. - LH/ehurley - 3/12/24

Samples were received on 3/13/24 at 15:35 on ice [0.1C - LTG#7]. - LH/pschultz - 3/13/2024 4:00:41 PM

Additional Nitric Acid (96331) was needed in APW3 upon arrival at the laboratory. Additional Sodium Hydroxide (95443) was needed in APW2 and APW3 upon arrival at the laboratory. - LH/pschultz - 3/13/2024 4:01:32 PM

pH strip #96651/89660. - LH/pschultz - 3/13/2024 4:02:54 PM

Samples were received on 3/14/24 at 15:00 on ice [3.9C - LTG#7]. - ES/pschultz - 3/14/2024 3:36:23 PM

pH strip #96651/89660. - ES/pschultz - 3/14/2024 3:37:15 PM

Additional Nitric Acid (96331) and Sodium Hydroxide (95443) were needed upon arrival at the laboratory. - ES/pschultz - 3/14/2024 3:37:42 PM

RE: Meredosia GW Monitoring Q2 2024

WorkOrder: 24051908

Dear Annie Muehlfarth:

TEKLAB, INC received 16 samples on 6/12/2024 2:40:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley
Director of Customer Service
(618)344-1004 ex 33

Abbr Definition

* Analytes on report marked with an asterisk are not NELAP accredited

CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.

CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.

DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.

DNI Did not ignite

DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.

ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.

IDPH IL Dept. of Public Health

LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.

LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.

MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."

MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).

MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MW Molecular weight

NC Data is not acceptable for compliance purposes

ND Not Detected at the Reporting Limit

NELAP NELAP Accredited

PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.

RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.

RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).

SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.

Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.

TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"

TNTC Too numerous to count (> 200 CFU)

Report Date: 21-Jun-24

Qualifiers

- # - Unknown hydrocarbon
- C - RL shown is a Client Requested Quantitation Limit
- H - Holding times exceeded
- J - Analyte detected below quantitation limits
- ND - Not Detected at the Reporting Limit
- S - Spike Recovery outside recovery limits
- X - Value exceeds Maximum Contaminant Level
- B - Analyte detected in associated Method Blank
- E - Value above quantitation range
- I - Associated internal standard was outside method criteria
- M - Manual Integration used to determine area response
- R - RPD outside accepted recovery limits
- T - TIC(Tentatively identified compound)

Any No responses must be detailed below or on the COC.

pH strip #89660/96651. - LH/amberdilallo - 6/10/2024 4:02:57 PM

Additional Nitric Acid (97737) was needed in APW-6 and APW-11 upon arrival at the laboratory. - LH/amberdilallo - 6/10/2024 4:02:59 PM

Samples were received on 6/11/24 at 1545 on ice [9.5C - LTG#5]. Additional Nitric Acid (97737) was needed in APW-3 upon arrival at the laboratory. pH strip #89660/96651. - LH/amberdilallo - 6/11/2024 4:12:59 PM

Samples were received on 6/12/24 at 1440 on ice [6.7C - LTG#7]. pH strip #96651/89660. Field Blank was filtered and preserved with Nitric Acid (97737) for the dissolved parameters upon arrival at the laboratory. - Imaddox - 6/12/2024 3:35:14 PM

RE: Meredosia GW Monitoring Q3 2024

WorkOrder: 24080263

Dear Annie Muehlfarth:

TEKLAB, INC received 16 samples on 8/28/2024 2:33:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley
Director of Customer Service
(618)344-1004 ex 33

Abbr Definition

* Analytes on report marked with an asterisk are not NELAP accredited

CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.

CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.

DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.

DNI Did not ignite

DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.

ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.

IDPH IL Dept. of Public Health

LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.

LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.

MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."

MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).

MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MW Molecular weight

NC Data is not acceptable for compliance purposes

ND Not Detected at the Reporting Limit

NELAP NELAP Accredited

PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.

RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.

RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).

SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.

Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.

TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"

TNTC Too numerous to count (> 200 CFU)

Any No responses must be detailed below or on the COC.

Samples were received on 8/26/24 at 1620 on ice [10.1C - LTG#5]. pH strip #89660/96651. Additional Nitric Acid (99172) was needed in APW-3 upon arrival at the laboratory. - PS/amberdilallo - 8/26/2024 4:39:39 PM

Samples were received on 8/27/24 at 1614 on ice [5.5C - LTG#5]. pH strip #89660/96651. - amberdilallo - 8/27/2024 4:22:43 PM

Samples were received on 8/28/24 at 1433 on ice [4.9C - LTG#5]. Field Blank was filtered and left unpreserved and preserved with Nitric Acid (99172) for the dissolved parameters upon arrival at the laboratory. pH strip #89660/96651. - DS/amberdilallo - 8/28/2024 3:06:32 PM

RE: Meredosia GW Monitoring Q4 2024

WorkOrder: 24110005

Dear Annie Muehlfarth:

TEKLAB, INC received 16 samples on 11/14/2024 2:15:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Elizabeth A. Hurley
Director of Customer Service
(618)344-1004 ex 33

Abbr Definition

* Analytes on report marked with an asterisk are not NELAP accredited

CCV Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.

CRQL A Client Requested Quantitation Limit is a reporting limit that varies according to customer request. The CRQL may not be less than the MDL.

DF Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilution factors.

DNI Did not ignite

DUP Laboratory duplicate is a replicate aliquot prepared under the same laboratory conditions and independently analyzed to obtain a measure of precision.

ICV Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.

IDPH IL Dept. of Public Health

LCS Laboratory control sample is a sample matrix, free from the analytes of interest, spiked with verified known amounts of analytes and analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system.

LCSD Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MBLK Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.

MDL "The method detection limit is defined as the minimum measured concentration of a substance that can be reported with 99% confidence that the measured concentration is distinguishable from method blank results."

MS Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).

MSD Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).

MW Molecular weight

NC Data is not acceptable for compliance purposes

ND Not Detected at the Reporting Limit

NELAP NELAP Accredited

PQL Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions.

RL The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.

RPD Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).

SPK The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.

Surr Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.

TIC Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"

TNTC Too numerous to count (> 200 CFU)

- Shipping container/cooler in good condition? Yes [checked] No [] Not Present [] Temp °C 5.9
Type of thermal preservation? None [] Ice [checked] Blue Ice [] Dry Ice []
Chain of custody present? Yes [checked] No []
Chain of custody signed when relinquished and received? Yes [checked] No []
Chain of custody agrees with sample labels? Yes [checked] No []
Samples in proper container/bottle? Yes [checked] No []
Sample containers intact? Yes [checked] No []
Sufficient sample volume for indicated test? Yes [checked] No []
All samples received within holding time? Yes [checked] No []
Reported field parameters measured: Field [checked] Lab [] NA []
Container/Temp Blank temperature in compliance? Yes [checked] No []

When thermal preservation is required, samples are compliant with a temperature between 0.1°C - 6.0°C, or when samples are received on ice the same day as collected.

- Water - at least one vial per sample has zero headspace? Yes [] No [] No VOA vials [checked]
Water - TOX containers have zero headspace? Yes [] No [] No TOX containers [checked]
Water - pH acceptable upon receipt? Yes [] No [checked] NA []
NPDES/CWA TCN interferences checked/treated in the field? Yes [] No [] NA [checked]

Any No responses must be detailed below or on the COC.

pH strip #96651/98858. - JD/amberdilallo - 11/12/2024 3:12:25 PM

Samples were received on 11/13/24 at 1520 on ice [9.1C - LTG#5]. Additional Nitric Acid (100984) was needed in APW-3 upon arrival at the laboratory. pH strip #96651/98858. - NR/amberdilallo - 11/13/2024 5:33:36 PM

Samples were received on 11/14/24 at 1415 on ice [3.5C - LTG#5]. Field Blank was filtered and preserved with Nitric Acid (100984) and left unpreserved for the dissolved parameters upon arrival at the laboratory. pH strip #96651/98858. - NR/amberdilallo/EAH - 11/14/2024 6:01:59 PM
