RE: Rule Making R08-009

Dear Illinois Pollution Control Board:

On behalf of my family, I am writing to express my support for the recommended water quality standard improvements proposed by the Illinois EPA for the Chicago Area Waterways (CAWS) and Lower Des Plaines River as rule making R08-009.

These changes are long overdue and recommended only after five years of study on the CAWS and seven on the Lower Des Plaines. We should all support the Illinois EPA's effort and approve the changes.

As a recreational user of the Chicago River, I think it is critical that:

- The Metropolitan Water Reclamation District disinfect sewage treatment plant effluent to kill bacteria and protect public health and
- Temperature and dissolved oxygen standards be implemented to protect fish and help them flourish.

Over the years, the entire CAWS system has changed dramatically. The water, once full of raw sewage and industrial filth, has vastly improved through the leadership of agencies like the Metropolitan Water Reclamation District and its Tunnel and Reservoir Plan. Public access has increased considerably as local governments incorporated these rivers into their master planning. The City of Chicago, the Chicago Park District, and suburbs like Blue Island and Skokie have poured millions into river access for paddling, fishing, and crew. And so much work has been done to improve habitat and control pollution that in the Chicago River system, species of fish have climbed from under 10 to nearly 70, including game fish favorites like large-mouth bass and bluegill and yellow perch.

Because a review like this only comes along every 20 years, right now we have a once-in-a-generation opportunity to continue our momentum by supporting the Illinois EPA recommendations so we can make the next quantum leap forward in water quality.

There is no magic bullet and or all-in-one measure that can eliminate water pollution but we know that if we want the Chicago River to continue to improve and serve our communities as a recreational, natural and economic resource, disinfection and the rest of the Illinois EPA's recommendations are essential.

I believe that as a society it is our moral obligation to ensure that we work to achieve the highest potential for shared resources, including and especially water. And as stewards of these natural resources, we should not be seeking the minimum in improvement, but the maximum.

Thank you,

Thomas L. Keaveny
