**RECOMMENDATION**

The Illinois Environmental Protection Agency (“Illinois EPA”) hereby files its Recommendation pursuant to Section 125.204 of the regulations of the Illinois Pollution Control Board, 35 Ill. Adm. Code 125.204.

1. On December 28, 2007, the Illinois EPA received a request from Wildcat Farms, LLC-Dallas City (log number TC-40-07, Exhibit A) for an Illinois EPA recommendation regarding the tax certification of water pollution control facilities pursuant to 35 Ill. Adm. Code 125.204.
2. The applicant’s address is: Wildcat Farms, LLC  
2558 North County Road 2150  
Dallas City, Illinois 62330
3. The proposed water pollution control facilities in this request are located at Section 28, T7N, R6W of the 4th P.M. in Hancock County, at the above street address and consist of the following:

Livestock waste management facilities consisting of one concrete pit (48 ft. x 52 ft. x 2 ft. deep) and the portion of the plastic slotted flooring over the manure pit in Building # 1; one concrete pit (61 ft. x 280 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pit in Building # 2; one concrete pit (118 ft. x 441 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pits in Building # 3; one concrete pit (159 ft. x 473 ft. x 2 ft. deep) and the portion of the plastic and cast iron slotted flooring over the manure pit in Building # 4; one concrete pit (118 ft. x 441 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pit in Building # 5; one steel glass lined manure storage tank with concrete base (176 ft. in diameter x

19 ft. deep); and approximately 800 ft. of 10 inch diameter PVC manure transfer piping.

These livestock waste management facilities are used to collect, transport and/or store livestock wastes prior to cropland application, and are further described in Exhibit A.

4. Section 11-10 of the Property Tax Code, 35 ILCS 200/11-10 (2006), defines “pollution control facilities” as:

“any system, method, construction, device or appliance appurtenant thereto or any portion of any building or equipment, that is designed, constructed, installed or operated for the primary purpose of: (a) eliminating, preventing, or reducing air or water pollution ...or (b) treating, pretreating, modifying or disposing of any potential solid, liquid or gaseous pollutant which if released without treatment, pretreatment modification or disposal might be harmful, detrimental or offensive to human, plant or animal life, or to property.”

5. Pollution control facilities are entitled to preferential tax treatment, 35 ILCS 200/11-5.
6. Based on the information in the application and the purpose of the facilities, it is the Illinois EPA’s engineering judgment that the described facilities may be considered “pollution control facilities,” pursuant to 35 Ill. Adm. Code 125.200(a), with the primary purpose of eliminating, preventing, or reducing water pollution, or as otherwise provided in 35 Ill. Adm. Code 125.200, and are eligible for tax certification from the Board.

WHEREFORE, the Illinois EPA recommends that the Board issue the

requested tax certification.

Division of Legal Counsel

DEC 12 2008

Environmental Protection  
Agency

The Bureau of Water received a request on December 28, 2007 from Wildcat Farms, LLC for an Illinois EPA recommendation regarding the tax certification of water pollution control facilities pursuant to 35 Il. Adm. Code 125.204. We offer the following recommendation.

The water pollution control facilities in this request include the following:

Wildcat Farms, LLC  
2558 North County Road 2150  
Dallas City, IL 62330

Section 28, T7N, R6W of the 4th P.M. in Hancock County

Livestock waste management facilities consisting of one concrete pit (48 ft. x 52 ft. x 2 ft. deep) and the portion of the plastic slotted flooring over the manure pit in Building # 1; one concrete pit (61 ft. x 280 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pit in Building # 2; one concrete pit (118 ft. x 441 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pits in Building # 3; one concrete pit (159 ft. x 473 ft. x 2 ft. deep) and the portion of the plastic and cast iron slotted flooring over the manure pit in Building # 4; one concrete pit (118 ft. x 441 ft. x 2 ft. deep) and the portion of the concrete slotted flooring over the manure pit in Building # 5; one steel glass lined manure storage tank with concrete base (176 ft. in diameter x 19 ft. deep); and approximately 800 ft. of 10 inch diameter PVC manure transfer piping. These livestock waste management facilities are used to collect, transport, and/or store livestock wastes prior to cropland application.

These facilities are further described in the enclosed applications and supporting documents.

Based on the information included in this submittal, it is our engineering judgment that the above proposed facilities may be considered "Pollution Control Facilities" under 35 IAC 125.200(a), with the primary purpose of eliminating, preventing, or reducing water pollution, or as otherwise provided in this section, and therefore eligible for tax certification from the Illinois Pollution Control Board. The Bureau of Water therefore recommends that the Board issue the requested tax certification for these facilities.

If you have any questions regarding the above, please contact James Allison at 217/782-3362.

Pam,

Please indicate if the manure pits are the dimensions of the buildings. Yes If any are different from the building please specify which location, which building, and what are the dimensions.

In addition answer the following:

TC-39-07 -- Deer View, LLC

- What is the flooring material of the slurry stores? Steel reinforced concrete

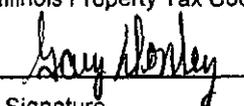

TC-40-07 -- Wildcat Farms, LLC

- What is the flooring of the slurry store? Steel reinforced concrete

Attached Sheet in Support of Application for Certification of Pollution Control Facility  
For Wildcat Farm LLC

Page 1 Section D of the form -

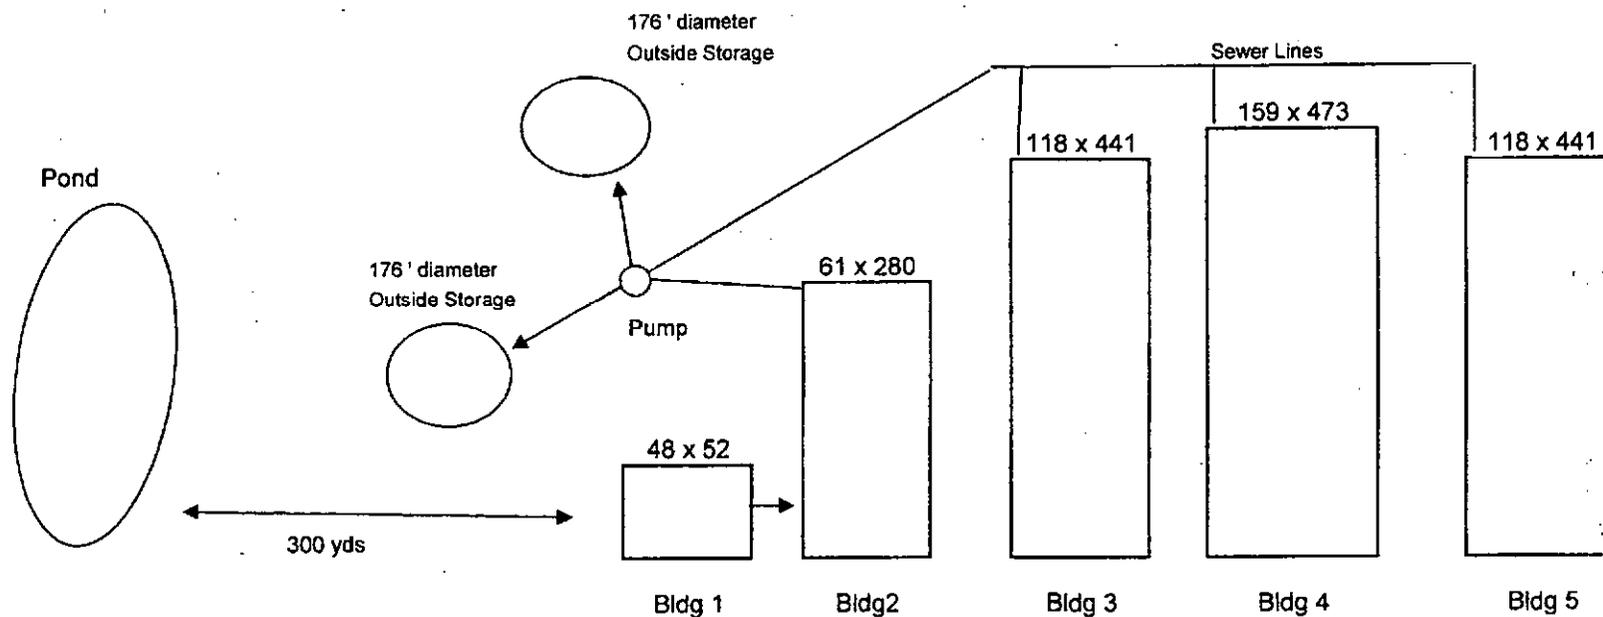

Wildcat Farm LLC is a swine farm with 5 separate buildings that house swine. Each of these building has manure storage capacity in below ground level concrete pits. Also integrated into the design is specially designed flooring material that separates the animals from the manure holding area yet allows the manure to pass thru the floor into the holding area. In buildings 1 & 4 there are two special types of flooring that allow for the manure to pass into the storage area. A portion of the flooring in building 4 is made from cast iron with a slatted pattern. In building 1 & a portion of building 4 the flooring is made of slatted plastic material. In buildings 2, 3 & 5 the floor is made of steel reinforced concrete slats. All of these floor types efficiently allow for the manure to pass into the storage area.

The manure storage area beneath each building is approx 2 ft deep. Primary manure storage is accomplished by two above ground storage tanks that will hold approx 12 months worth of manure produced by the facility. The outside storage units are 176 ft in diameter & 19 feet tall. They are constructed of steel with a glass like material covering to resist corrosion. Underground sewer lines allow for gravity transfer of manure from the buildings to a central pump location. The underground sewer lines are made with 10" PVC. There is approx 800 feet of this pipe that connects the buildings to the special pump found in the lift station. Manure is then pumped from this "lift station" into the storage tanks. Manure is retained by these structures to prevent it from leaving the farm and reaching surrounding water sources. The nearest body of water is a pond approx 300 yards from the nearest building. Multiple times each year the manure is pumped out of the pits and injected into surrounding farmland at ergonomically appropriate rates. Collection efficiency of this design of pollution control facility is 100%.

On the accompanying diagram the buildings are identified as Buildings 1-5 with approx. dimensions listed at the top of each. The diagram also shows the pattern of the underground sewer lines that drain the buildings manure to the lift station where the material is pumped into the storage tanks.
