RECEIVED
CLERK'S OFFICE
MAY 27 2011
STATE OF ILLINOIS
Pollution Control Board

May 26, 2011

Mr. John Therriault
100 West Randolph St., Ste 11-500
Chicago, IL 60601

Dear Mr. Therriault,

As a supporter of American Rivers, I am writing to ask you to kill the pathogens that are contained in the sewage released into the Chicago River every day.

Directly connected to the toilets of Cook County, more than 70 percent of the water in the river is from MWRD plants, and while it receives basic treatment, pathogens remain from human sewage that can harm the thousands of people who use the river. These microorganisms are of particular concern for some special populations, like kids, who have a higher risk of contracting a waterborne illness and have no way of knowing what is in the water. Due to this pollution concern, American Rivers has named the Chicago River one of America's Most Endangered RiversTM of 2011.

The Chicago River has become a true community resource with all kinds of wildlife, new riverfront parks, residential communities, restaurants, and businesses that are dependent on a healthy river. As a region we have spent billions of dollars to clean up the river, but we have not finished the job.

As you know, the U.S. EPA has recently notified Illinois EPA that they must enact stricter regulations that protect the public from the polluted water of the Chicago River. I request that you proactively take steps to tackle the issue of disinfection to protect the citizens of Chicago.

The Clean Water Act requires that we continually improve our waterways to the greatest extent possible. The law clearly states that we need to keep trying until we get it right. The Illinois EPA, and now the U.S. EPA, have recognized that it is time to improve our water quality and establish new standards for how we treat the river. We support the national and state EPA, and call on you to take responsibility for cleaning up the sewage effluent in Chicago's water.

Please begin work immediately to implement the changes needed to begin disinfection of the water destined for the Chicago River.

Thank you for considering my request.

Sincerely,

Sincerely,

Miss Anna Rough
724 S St Asaph St
Alexandria, VA 22314-4349

Subject: Protect Chicago River from Dirty Sewage

PC#930

Greetings,

As a supporter of American Rivers, I am writing to ask you to kill the pathogens that are contained in the sewage released into the Chicago River every day.

Directly connected to the toilets of Cook County, more than 70 percent of the water in the river is from MWRD plants, and while it receives basic treatment, pathogens remain from human sewage that can harm the thousands of people who use the river. These microorganisms are of particular concern for some special populations, like kids, who have a higher risk of contracting a waterborne illness and have no way of knowing what is in the water. Due to this pollution concern, American Rivers has named the Chicago River one of America's Most Endangered Rivers(TM) of 2011.

The Chicago River has become a true community resource with all kinds of wildlife, new riverfront parks, residential communities, restaurants, and businesses that are dependent on a healthy river. As a region we have spent billions of dollars to clean up the river, but we have not finished the job.

As you know, the U.S. EPA has recently notified Illinois EPA that they must enact stricter regulations that protect the public from the polluted water of the Chicago River. I request that you proactively take steps to tackle the issue of disinfection to protect the citizens of Chicago.

The Clean Water Act requires that we continually improve our waterways to the greatest extent possible. The law clearly states that we need to keep trying until we get it right. The Illinois EPA, and now the U.S. EPA, have recognized that it is time to improve our water quality and establish new standards for how we treat the river. We support the national and state EPA, and call on you to take responsibility for cleaning up the sewage effluent in Chicago's water.

Please begin work immediately to implement the changes needed to begin disinfection of the water destined for the Chicago River.

Thank you for considering my request.

Sincerely,

Kristina Golemanova
Gabrovo, Bulgaria
