SUPPLEMENTAL STATEMENT (by Mr. Dumelle)

The December 8, 1972 transcript in this case contains many references to experimental changes in the technique of stemming the drill holes with chips instead of drill dust as a possibility for alleviating the dust nuisance to the nearby residents (R. 25-26, 41, 110-111, 117-121).

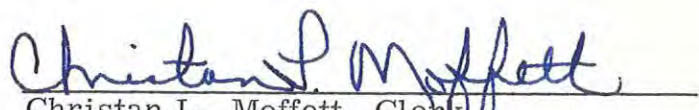

While the opinion and order did not require experiments with different techniques of stemming I would urge Denny and Simpson, Inc. to follow the program agreed to by Mr. Billy Anderson (R. 125) and to retain the technique that most reduces the dust nuisance.

The quarry operators seem to have made a good faith effort to do whatever they can to minimize the effects of their operation on the neighborhood and changes in methods of stemming might produce significant reductions of dust emissions.

Jacob D. Dumelle
Board Member

I, Christan L. Moffett, Clerk of the Illinois Pollution Control Board, hereby certify the above Supplemental Statement was submitted on the 23rd day of February, 1973.

Christan L. Moffett, Clerk
Illinois Pollution Control Board
