(July 1, 2022 through December 31, 2022)	)	(Identical-in-Substance
	)	Rulemaking - Public Water Supply)

Proposed Rule. Proposal for Public Comment.

OPINION AND ORDER OF THE BOARD (by M. Gibson):

SUMMARY OF THIS ACTION

The Board today proposes amendments to Illinois rules that are "identical in substance" (IIS) to drinking water regulations adopted by the United States Environmental Protection Agency (USEPA) during the second half of 2022. USEPA did not amend the federal National Primary Drinking Water Regulations (NPDWRs) during this period, but it granted summary approval to seven additional alternative test procedures (ATPs) for analyzing contaminants in drinking water. The Board adds these additional ATPs to the Illinois drinking water monitoring rules.

Sections 7.2 and 17.5 of the Illinois Environmental Protection Act (Act) (415 ILCS 5/7.2, 17.5 (2020)) provide for the Board's quick adoption of rules that are identical in substance to regulations that USEPA adopts to implement Sections 1412(b), 1414(c), 1417(a), and 1445(a) of the federal Safe Drinking Water Act (SDWA) (42 U.S.C. §§ 300g-1(a), 300g-3(c), 300g-6(a), 300j-4(a) (2017)). The NPDWRs implement these sections of SDWA. SDWA regulations are found at 40 C.F.R. 141 through 143. Section 17.5 of the Act also provides that Title VII of the Act and Section 5 of the Illinois Administrative Procedure Act (APA) (5 ILCS 100/5-35, 5-40 (2020)) do not apply to the Board's adoption of identical-in-substance rules.

The Board will cause the proposed amendments to be published in the *Illinois Register* and receive public comments for at least 45 days after publication. The Board expects to adopt final rules by September 7, 2023.

This opinion first sets out a timetable for completing this rulemaking. The Board then identifies USEPA's actions that resulted in this rulemaking and discusses the proposed amendments. The text of the Board's proposed amendments is appended to this opinion and order. The Board invites public comment on the proposed amendments.

EXTENSION OF DUE DATE AND REASONS FOR DELAY

The Board finds it necessary to set forth reasons for delay and extend the due date for final Board adoption of amendments.

Under Section 7.2(b) of the Act (415 ILCS 5/7.2(b) (2020)), the Board must complete this rulemaking within one year after the corresponding federal action. Based on the date USEPA approved additional methods, the Board's deadline to adopt final rules in this docket is

August 17, 2023. The Board finds it necessary to extend the date for completion until October 1, 2023.

The Board utilized resources to complete the much more complex rulemaking which includes the Lead and Copper Rule updates. The Board now moves these SDWA updates simultaneously with other pending IIS SDWA rules. The Board anticipates completion of the present amendments no later than October 1, 2023.

TIMETABLE TO COMPLETE RULEMAKING

Adopting this proposal for public comment today will allow the Board to complete this rulemaking by September 18, 2023, barring unforeseen delays. The Board intends to adhere the following schedule:

Board order proposing amendments:	**June 1, 2023**
Submission for *Illinois Register* publication:	June 9, 2023
Estimated *Illinois Register* publication:	June 23, 2023
Estimated End of 45-day public comment period:	August 7, 2023
Board order adopting amendments:	**September 7, 2023**
Estimate of when rules take effect:	**September 18, 2023**
Estimated *Illinois Register* publication:	September 29, 2023

DISCUSSION

This discussion considers adding the new ATPs into the analytical methods incorporated by reference in Illinois' primary drinking water rules.

Incorporation of Newly Approved Analytical Methods

Section 1401(1) of SDWA authorizes USEPA to summarily approve ATPs for demonstrating compliance with the NPDWRs. SDWA requires that the ATPs be equally effective as methods USEPA already approved by rulemaking. *See* 42 U.S.C. § 300f(1) (2022).

On August 17, 2022, USEPA granted expedited approval to seven ATPs for analysis of contaminants in drinking water. 87 Fed. Reg. 50575 (Aug. 17, 2022). The seven methods consist of one new method developed by USEPA, three updated methods from ASTM International, and three new methods developed by vendors. The methods apply to a wide range of drinking water analyses.

The Board incorporates by reference the new ATPs into the Illinois rules. The Board does not deviate from the substance of USEPA's approval of the methods. There are three structural differences between USEPA's rules and the corresponding Illinois rules. To accommodate these differences, the Board proposes text that differs from the federal text. The following paragraphs describe the Board's changes.

First, the Board revises the structure of the methods listings. USEPA generally lists all methods in tables—both those adopted by rule and the ATPs. The methods appear in subsection format in the Illinois rules. Further, USEPA lists the ATPs in an appendix to the rules and not

with the methods adopted by rulemaking. The Illinois rules combine USEPA's ATPs with methods USEPA approved by rule.

Second, for Illinois rules, the APA allows incorporation by reference, and the reference "must fully identify the incorporated matter." 5 ILCS 100/5-75 (2020). The Board defines short-form names for the analytical methods with the incorporation by reference and uses the short-form names to refer to the methods in the rules.

Third, the Board treats method sources differently than USEPA. The Board assigns methods and documents containing methods a defined short-form name. The Board combines a short-form name definition with the incorporation by reference for the method. The Board arranged the short-form name definitions-incorporations by reference (D-IBRs) alphabetically in a single listing in 35 Ill. Adm. Code 611.102(a).

The Identical-in-Substance Rulemaking Addendum—Proposed (IIS-RA(P)) for this proceeding includes three tables. Table 1 lists USEPA revisions that the Board does not include in this proceeding. Table 2 lists deviations from the literal text of the USEPA revisions. Table 3 lists Board corrections and revisions that do not directly derive from the current USEPA amendments. The IIS-RA(P) is in the docket for this proceeding (R23-9), available to review and download on the Board's website (https://pcb.illinois.gov/) through the Clerk's Office On-Line (COOL).

USEPA Method 904.0, Revision 1.0

This newly approved method is Revision 1.0 of a previously approved USEPA 904.0 from 1980 for radium-228. *See* 40 CFR § 141.25(a). The previously approved method describes a single-point calibration, contains no quality control specifications, and provides no calculation for the drinking water detection limit. Revision 1.0 was developed in response to comments from stakeholders requesting a method revision that provides clearly defined calibration and quality control criteria. The stakeholders sought to assure a more robust procedure capable of yielding consistent and reliable analytical results.

USEPA determined that Method 904.0, Revision 1.0 is equally effective for determining radium-228 in drinking water samples, relative to the approved method, and therefore approved Revision 1.0.

ASTM International

USEPA compared recent versions of three ASTM International methods to earlier versions that are currently approved. The revisions involve primarily editorial changes such as updated references, definitions, terminology, procedural clarifications, and reorganization of text. The revised methods do not differ from the already approved versions when it comes to sample collection and handling protocols, sample preparation, analytical methodology, and method performance data. The methods include:

D 4785-20 (ASTM 2020a) – Radioactive iodine, gamma emitters (40 CFR § 141.25(a));

D 4107-20 (ASTM 2020b) – Tritium (40 CFR § 141.25(a)); and

D 5317-20 (ASTM 2020c) – 2,4-D, Pentachlorophenol, Picloram, 2,4,5-TP (40 CFR § 141.24(e)(1)).

Compared to earlier versions that are currently approved, USEPA found the above methods equally effective and therefore approved their use.

Tintometer Lovibond TB 3500 Method

This USEPA-approved method measures the drinking water turbidity of a captured sample using a Lovibond white light emitting diode (LED) portable turbidimeter (Tintometer 2020a). *See* 40 CFR § 141.74(a)(1). The Tintometer Lovibond TB 3500 Method uses white LED nephelometry in a portable turbidimeter to measure turbidity in drinking water. The LED emits white light in the visible spectrum between 380 nanometers (nm) and 780 nm, with spectral peak response between 400 nm and 600 nm. USEPA compared the intensity of light scattered by a drinking water sample under defined conditions with the intensity of light scattered by a standard reference suspension.

Comparing the method's performance to the approved Hach FilterTrak Method 10133 (Hach Company 2000) and the continuous online process Tintometer Lovibond PTV 1000 method (Tintometer 2016a), USEPA found it equally effective and approved the method.

Tintometer Lovibond TB 5000 Method

This USEPA-approved method measures the drinking water turbidity of a captured sample using a Lovibond 660-nm LED portable turbidimeter (Tintometer 2021c). *See* 40 CFR § 141.74(a)(1). The Tintometer Lovibond TB 5000 Method uses LED nephelometry in a portable turbidimeter to measure turbidity in drinking water. The LED emits 660-nm light to reduce interferences due to dissolved organics and sample color. USEPA compared the intensity of light scattered by a drinking water sample under defined conditions with the intensity of light scattered by a standard reference suspension.

Comparing the method's performance to the approved Hach FilterTrak Method 10133 (Hach Company 2000) and the continuous online process Tintometer Lovibond PTV 2000 method (Tintometer 2016b), USEPA found it equally effective and approved the method.

Tintometer Lovibond TB 6000 Method

This USEPA-approved method measures the drinking water turbidity of a captured sample using a Lovibond portable laser turbidimeter (Tintometer 2021d). *See* 40 CFR § 141.74(a)(1). The Tintometer Lovibond TB 6000 Method uses laser nephelometry in a portable turbidimeter to measure turbidity in drinking water. The method uses a laser diode with a peak emitting center wavelength between 650 nm and 690 nm. The method is based on comparing the intensity of light scattered by a drinking water sample under defined conditions with the intensity of light scattered by a standard reference suspension.

Comparing the method's performance to the approved Hach FilterTrak Method 10133 (Hach Company 2000) and the continuous online process Tintometer Lovibond PTV 6000 method (Tintometer 2016c), USEPA found it equally effective and approved the method.

PUBLIC COMMENTS

The Board requests comments on the proposed amendments. The Board specifically requests comment on whether the proposed amendments ensure that Illinois' primary drinking water rules remain consistent with the NPDWRs.

The Board will receive public comments on this proposal for at least 45 days following its publication in the *Illinois Register*. After that time, the Board will immediately consider adopting final amendments, making any necessary changes made evident through the public comments. The Board expects to file any adopted rules with the Secretary of State immediately after adoption, likely by August 7, 2023, according to the timetable above.

ORDER

The Board directs the Clerk to provide notice in the *Illinois Register* of the appended proposed amendments to the Illinois primary drinking water rules.

I, Don A. Brown, Clerk of the Illinois Pollution Control Board, certify that the Board adopted the above opinion and order on June 1, 2023, by a vote of 3-0.

[1] denotes that, for the particular contaminant, a nitrogen-phosphorus detector should be substituted for the electron capture detector in USEPA 505 (95) (or another approved method should be used) to determine alachlor, atrazine, and simazine if lower detection limits are required.

[2] denotes that Syngenta AG-625 (01) may not be used for the analysis of atrazine in any system where chlorine dioxide is used for drinking water treatment. In samples from all other systems, any result for atrazine generated by Syngenta AG-625 (01) that is greater than one-half the maximum contaminant level (MCL) (in other words, greater than 0.0015 mg/ℓ or 1.5 µg/ℓ) must be confirmed using another approved method for this contaminant and should use additional volume of the original sample collected for compliance monitoring. In instances where a result from Syngenta AG-625 (01) triggers such confirmatory testing, the confirmatory result is to be used to determine compliance.
