H) For coating lines subject to the limitations of Section 218.204(p) ~~of this Subpart~~, the weight of VOM per volume of coatings or solids, as applicable, for each coating, as applied each day on each coating line.

I) For coating lines subject to the limitations of Section 218.204(q) ~~of this Subpart~~, the weight of VOM per volume of each coating, or the weight of VOM per volume of solids in each coating, as applicable, as applied each day on each coating line.

J) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line.

K) The method by which the owner or operator will create and maintain records each day as required in subsection (d)(2) ~~of this Section~~.

L) An example of the format in which the records required in subsection (d)(2) ~~of this Section~~ will be kept.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject coating line ~~shall~~ must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line.

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line.

C) On and after March 15, 1998, for coating lines subject to the limitations of Section 218.204(l)(2)(A) or (B) ~~of this Subpart~~, the weight of VOM per weight of solids in each coating as applied each day on each coating line.

D) For coating lines subject to the limitations of Section 218.204(a)(2)(A) ~~of this Subpart~~, the weight of VOM per volume of solids in each coating as applied each day on each coating line.

E) For coating lines subject to the limitations of Section 218.204(c)(2) ~~of this Subpart~~, the weight of VOM per weight of solids (or the weight of VOM per weight of coatings, as applicable) in each coating as applied each day on each coating line.

F) For coating lines subject to the limitations of Section 218.204(g)(2) or (h)(2) ~~of this Subpart~~, the weight of VOM per volume of each coating (or the weight of VOM per volume of solids in each coating, as applicable) as applied each day on each coating line.

G) For coating lines subject to the limitations of Section 218.204(p) ~~of this Subpart~~, the weight of VOM per volume of coatings or solids, as applicable, for each coating, as applied each day on each coating line.

H) For coating lines subject to the limitations of Section 218.204(q) ~~of this Subpart~~, the weight of VOM per volume of each coating, or the weight of VOM per volume of solids in each coating, as applicable, as applied each day on each coating line.

I) The daily-weighted average VOM content of all coatings as applied on each coating line as defined in Section 218.104 ~~of this Part~~.

3) On and after a date consistent with Section 218.106 ~~of this Part~~, the owner or operator of a subject coating line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 218.205 ~~of this Subpart~~ ~~shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with this Subpart from Section 218.205 ~~of this Subpart~~ to Section 218.204 or Section 218.207 ~~of this Subpart~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c)(1) or (e)(1) ~~of this Section~~, as applicable. Upon changing the method of compliance with this Subpart from Section 218.205 to Section 218.204 or Section 218.207 ~~of this Subpart~~, the owner or operator ~~shall~~ mustl comply with all requirements of subsection (c) or (e) ~~of this Section~~, as applicable.

e) Any owner or operator of a coating line subject to the limitations of Section 218.207 ~~of this Subpart~~ and complying by means of Section 218.207(c), (d), (e), (f), (g), (h), (l), (m), or (n) ~~of this Subpart shall~~must comply with the following:

1) By a date consistent with Section 218.106 ~~of this Part~~, or upon initial start-up of a new coating line, or upon changing the method of compliance for an existing coating line from Section 218.204 or Section 218.205 ~~of this Subpart~~ to Section 218.207 ~~of this Subpart~~, the owner or operator of the subject coating line ~~shall~~ must perform all tests and submit to the Agency the results of all tests and calculations necessary to demonstrate that the subject coating line will be in compliance with Section 218.207 ~~of this Subpart~~ on and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject coating line ~~shall~~ must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The weight of VOM per volume of coating solids as applied each day on each coating line, if complying ~~pursuant to~~under Section

218.207(b)(2) ~~of this Subpart~~.

B) Control device monitoring data.

C) A log of operating time for the capture system, control device, monitoring equipment, and the associated coating line.

D) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) On and after a date consistent with Section 218.106 ~~of this Part~~, the owner or operator of a subject coating line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 218.207 ~~of this Subpart shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with this Subpart from Section 218.207 ~~of this Subpart~~ to Section 218.204 or Section 218.205 ~~of this Subpart~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c)(1) or (d)(1) ~~of this Section~~, respectively. Upon changing the method of compliance with this Subpart from Section 218.207 ~~of this Subpart~~ to Section 218.204 or Section 218.205 ~~of this Subpart~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c) or (d) ~~of this Section~~, respectively.

f) Any owner or operator of a primer surfacer operation or topcoat operation, or combined primer surfacer and topcoat operation, subject to the limitations of Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) ~~of this Subpart shall~~must comply with the following:

1) By a date consistent with Section 218.106 ~~of this Part~~, or upon initial start-up of a new coating operation, the owner or operator of a subject coating operation ~~shall~~ must certify to the Agency that the operation will be in compliance with Section 218.204 ~~of this Subpart~~ on and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date. The certification ~~shall~~ must include:

A) The name and identification number of each coating operation that will comply by means of Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) ~~of this Subpart~~ and the name and

identification number of each coating line in each coating operation.

B) The name and identification number of each coating as applied on each coating line in the coating operation.

C) The weight of VOM per volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line.

D) The transfer efficiency and control efficiency measured for each coating line.

E) Test reports, including raw data and calculations documenting the testing performed to measure transfer efficiency and control efficiency.

F) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line.

G) The method by which the owner or operator will create and maintain records each day as required in subsection (f)(2) ~~of this Section~~.

H) An example format for presenting the records required in subsection (f)(2) ~~of this Section~~.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject coating operation ~~shall~~ must collect and record all of the following information each day for each operation and maintain the information at the source for ~~a period of~~ three years:

A) All information necessary to demonstrate compliance with the topcoat protocol referenced in Section 218.105(b)(1)(B) and to calculate the daily-weighted average VOM emissions from the coating operations in kg/l (lbs/gal) of coating solids deposited in ~~accordance~~ compliance with the proposal submitted, and approved ~~pursuant to~~under Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) ~~of this Subpart~~ including:

i) The name and identification number of each coating as applied on each coating operation.

ii) The weight of VOM per volume of each coating (minus

water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating operation.

B) If a control device or devices are used to control VOM emissions, control device monitoring data; a log of operating time for the capture system, control device, monitoring equipment and the associated coating operation; and a maintenance log for the capture system, control device, and monitoring equipment, detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after a date consistent with Section 218.106 ~~of this Part~~ or on and after the initial start-up date, the owner or operator of a subject coating operation ~~shall~~ must determine and record the daily VOM emissions in kg/l (lbs/gal) of coating solids deposited in ~~accordance~~ compliance with the proposal submitted and approved ~~pursuant to~~under Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) ~~of this Subpart~~ within 10 days ~~from~~ after the end of the month and maintain this information at the source for ~~a period of~~ three years.

4) On and after a date consistent with Section 218.106 ~~of this Part~~, the owner or operator of a subject coating operation ~~shall~~ must notify the Agency in the following instances:

A) Any record showing a violation of Section 218.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) ~~of this Subpart shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 15 days ~~from~~ after the end of the month in which the violation occurred.

B) The owner or operator ~~shall~~ must notify the Agency of any change to the operation at least 30 days before the change is effected. The Agency ~~shall~~ must determine whether or not compliance testing is required. If the Agency determines that compliance testing is required, then the owner or operator ~~shall~~ must submit a testing proposal to the Agency within 30 days and test within 30 days after the approval of the proposal by the Agency and USEPA.

g) On and after a date consistent with Section 218.106(e) ~~of this Part~~, or on and after the initial startup date, whichever is later, the owner or operator of a coating line subject to the requirements of Section 218.218 ~~of this Subpart shall~~must comply with the following:

1) By May 1, 2011, or upon initial startup, whichever is later, submit a certification to the Agency that includes a description of the practices and

procedures that the source will follow to ensure compliance with the applicable requirements in Section 218.218 ~~of this Subpart~~;

2) Notify the Agency of any violation of Section 218.218 ~~of this Subpart~~ by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following the occurrence of~~after the violation; and

3) Maintain at the source all records required by this subsection (g) for a minimum of three years from the date the document was created and make those records available to the Agency upon request.

h) On and after a date consistent with Section 218.106 ~~of this Part~~, or on and after the initial start-up date, whichever is later, the owner or operator of a coating line subject to the requirements of Section 218.219 ~~of this Subpart shall~~must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes:

A) A description of the practices and procedures that the source will follow to ensure compliance with the applicable requirements in Section 218.219 ~~of this Subpart~~;

B) For sources subject to Section 218.219(a)(6), the work practices plan specified in that Section;

C) For sources subject to Section 218.219(b)(6), the application methods used to apply coatings on the subject coating line;

2) Notify the Agency of any violation of Section 218.219 ~~of this Subpart~~ by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following the occurrence of~~after the violation; and

3) Maintain at the source all records required by this subsection (h) for a minimum of three years from the date the document was created and make those records available to the Agency upon request.

i) On and after a date consistent with Section 218.106(f) ~~of this Part~~, or on and after the initial start-up date, whichever is later, the owner or operator of a flat wood paneling coating line subject to the requirements in Section 218.217 ~~of this Subpart shall~~must comply with the following:

1) By August 1, 2010, or upon initial start-up, whichever is later, submit a certification to the Agency that includes a description of the practices and

procedures that the source will follow to ensure compliance with the applicable requirements in Section 218.217(c) and (d) ~~of this Subpart~~; and

2) Notify the Agency of any violation of Section 218.217 ~~of this Subpart~~ by providing a description of the violation and copies of records documenting ~~such~~ the violation to the Agency within 30 days ~~following the occurrence of~~after the violation.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.212 Cross-Line Averaging to Establish Compliance for Coating Lines

a) On and after March 15, 1996, any owner or operator of a coating line subject to the limitations ~~set forth~~ in Section 218.204 ~~of this Subpart~~, except coating lines subject to the limitations in Section 218.204(a)(2), (c)(2), (g)(2), (h)(2), (p), or (q) ~~of this Subpart~~, and with coating lines in operation ~~prior to~~before January 1, 1991 (pre-existing coating lines), may, for pre-existing coating lines only, elect to comply with the requirements of this Section, rather than complying with the applicable emission limitations ~~set forth~~ in Section 218.204, if an operational change of the type described ~~below~~ in this subsection has been made after January 1, 1991, to one or more pre-existing coating lines at the source. An operational change occurs when a pre-existing coating line is replaced with a line using lower VOM coating for the same purpose as the replaced line (replacement line). A source electing to rely on this Section to demonstrate compliance with ~~the requirements of~~ this Subpart ~~shall~~ must operate ~~pursuant to~~under federally enforceable permit conditions approved by the Agency and USEPA.

b) An owner or operator of pre-existing coating lines subject to a VOM content limitation in Section 218.204 ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart must establish, by use of the equations in subsection (d) ~~of this Section~~, that the calculated actual daily VOM emissions from all participating coating lines, as defined in this subsection, are less than the calculated daily allowable VOM emissions from the same group of coating lines. For any pre-existing coating line to be aggregated for the purposes of Section 218.212, 218.213, or 218.214 ~~of this Subpart~~ ("participating coating lines"), the source must establish that:

1) All coatings applied on the participating coating line ~~shall,~~must at all times~~,~~ have a VOM content less than or equal to the applicable VOM content limitation for ~~such~~ the coating listed in Appendix H ~~of this Part~~; and

2) On the date the source elects to rely on this Section to demonstrate compliance with this Subpart, all coatings applied on the participating coating line are not already in compliance with the VOM content limitation for ~~such~~ the coating effective on or after March 15, 1996; or the

participating coating line is a replacement line~~,~~ as defined in subsection (a) ~~of this Section~~ with an operational change occurring on or after January 1, 1991.

c) Notwithstanding subsection (a) ~~of this Section~~, any owner or operator of a coating line subject to the limitations ~~set forth~~ in Section 218.204 ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart, may also include as a participating coating line, until December 31, 1999, only, any replacement line that satisfies all of the following conditions:

1) The replacement line is operated as a powder coating line;

2) The replacement line was added after July 1, 1988; and

3) The owner or operator also includes as a participating coating line one or more coating lines that satisfy the criteria of a replacement line, as described in subsection (a) ~~of this Section~~.

d) To demonstrate compliance with this Section, a source ~~shall~~ must establish the following:

1) An alternative daily emission limitation ~~shall~~ must be determined for all participating coating lines at the source ~~according to~~under subsection (d)(2) ~~of this Section~~. All participating coating lines ~~shall~~ must be factored in each day to demonstrate compliance. ~~Provided~~ If compliance is established ~~pursuant to the requirements~~under in this subsection, nothing in this Section requires daily operation of each participating line. Actual daily emissions from all participating coating lines (E_d) ~~shall~~ must never exceed the alternative daily emission limitation (A_d) and must be calculated by ~~use of~~ the following equation:

$$E_d = \sum_{i=1}^{n} V_i C_i$$

where:

E_d = Actual daily VOM emissions from participating coating lines in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of coatings applied by all participating coating lines at the source;

V_i = Volume of each coating applied for the day in units of l/day (gal/day) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

2) The alternative daily emission limitation (A_d) ~~shall~~ must be determined for all participating coating lines at the source on a daily basis as follows:

$$A_d = A_i + A_p$$

where A_i and A_p are defined in subsections (d)(2)(A) and (d)(2)(B) ~~of this Section~~.

A) The portion of the alternative daily emissions limitation for coating operations at a source using non-powder coating (A_l) ~~shall~~ must be determined for all ~~such~~ participating non-powder coating lines on a daily basis as follows:

$$A_i = \sum_{i=1}^{n} V_i L_i \left(\frac{D_i - C_i}{D_i - L_i} \right)$$

where:

A_i = The VOM emissions allowed for the day in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of coatings applied in the participating coating lines;

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

D_i = The density of VOM in each coating applied. For the purposes of calculating A_l, the density is 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM);

V_i = Volume of each coating applied for the day in units of l (gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

L_i = The VOM emission limitation for each coating applied, as specified in Section 218.204 ~~of this Subpart~~, in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

B) The portion of the alternative daily emission limitation for coating operations at a source using powdered coating (A_p) ~~shall~~ must be determined for all ~~such~~ participating powder coating lines at the source on a daily basis as follows:

$$A_p = \sum_{h=1}^{m} \sum_{j=1}^{n} \frac{V_j L_j D_j K_h}{\left(D_j - L_j\right)}$$

where:

A_p = The VOM emissions allowed for the day in units of kg/day (lbs/day);

h = Subscript denoting a specific powder coating line;

j = Subscript denoting a specific powder coating applied;

m = Total number of participating powder coating lines;

n = Total number of powder coatings applied in the participating coating lines;

D_j = The assumed density of VOM in liquid coating, 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM);

V_j = Volume of each powder coating consumed for the day in units of l (gal) of coating;

L_j = The VOM emission limitation for each coating applied, as specified in Section 218.204 ~~of this Subpart~~, in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

K = A constant for each individual coating line representing the ratio of the volume of coating solids consumed on the liquid coating system that has been replaced to the volume of powder coating consumed on the replacement line to accomplish the same coating job. This value ~~shall~~ must be determined by the source based on tests conducted and records maintained ~~pursuant to the requirements of~~under Section 218.213 ~~of this Subpart~~ demonstrating the amount of coating solids consumed as both liquid powder. Test methods and recordkeeping requirements ~~shall~~ must be approved by the Agency and USEPA and ~~shall~~ must be ~~contained~~ in the source's operating permit as federally enforceable permit conditions, subject to the following restrictions:

•) K cannot exceed 0.9 for non-recycled powder coating systems; or

•) K cannot exceed 2.0 for recycled powder coating systems.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.213 Recordkeeping and Reporting for Cross-Line Averaging Participating Coating Lines

Any owner or operator of a coating line that elects to comply by means of Section 218.212 ~~of this Subpart shall~~must establish the following:

a) By the date consistent with Section 218.210(f) ~~of this Subpart~~, or upon initial start-up of a new coating line replacing a pre-existing coating line, as defined in Section 218.212 ~~of this Subpart~~, or upon changing the method of compliance for a pre-existing coating line from the requirements of Section 218.204 or Section 218.207 ~~of this Subpart~~ to the requirements of Section 218.212 ~~of this Subpart~~, the owner or operator of the source ~~shall~~ must certify to the Agency that each participating coating line, as determined in ~~accordance~~ compliance with Section 218.212 ~~of this Subpart~~, will be in compliance with Section 218.212 ~~of this Subpart~~ on and after a date consistent with Section 218.210(f) ~~of this Subpart~~, or on and after the initial start-up date of ~~such~~ the participating coating lines. ~~Such~~ The certification ~~shall~~ must also include:

1) The name and identification number of each participating coating line;

2) The name and identification number of each coating as applied on each participating coating line;

3) The weight of VOM per volume of each coating and the volume of each coating (minus water and any compounds which are specifically exempted ~~form~~ from the definition of VOM) as applied each day on each participating coating line;

4) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each participating coating line;

5) The method by which the owner or operator will create and maintain records each day as required in subsection (b) ~~of this Section~~;

6) An example of the format in which the records required in subsection (b) ~~of this Section~~ will be kept;

7) A statement that all coatings used on participating coating lines have a VOM content less than or equal to the applicable VOM limitation for ~~such~~ the coating ~~set forth within~~in Appendix H ~~of this Part~~, and that all lines either:

A) Underwent a change in operations incorporating a lower VOM coating on each applicable participating coating line after ~~the date of~~ January 1, 1991; or

B) Are not in compliance and continued compliance with the coating limitations in Section 218.204 ~~of this Subpart~~, compliance with which is required on or after March 15, 1996.

8) The method by which the owner or operator has calculated K, for the equation ~~contained~~ in Section 218.212(d)(2)(B) ~~of this Subpart~~, if applicable.

b) On and after a date consistent with Section 218.210(f) ~~of this Subpart~~, or on and after the initial start-up date, the owner or operator of a source electing to comply with the requirements of this Subpart by means of Section 218.212 ~~of this Subpart shall~~must collect and record the following information on a daily basis for each participating coating line and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on each participating coating line;

2) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the

definition of VOM) as applied on each participating coating line on a daily basis; and

3) The daily weighted average VOM content of all coatings as applied on each coating line as defined at 35 Ill. Adm. Code 211.1230.

c) On and after a date consistent with Section 218.210(f) ~~of this Subpart~~, the owner or operator of participating coating lines ~~shall~~must:

1) Notify the Agency within 30 days ~~following an occurrence of~~after a violation of Section 218.212 ~~of this Subpart~~; and

2) Send to the Agency any record showing a violation of Section 218.212 ~~of this Subpart~~ within 30 days ~~following the occurrence of~~after a violation.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.214 Changing Compliance Methods

a) At least 30 calendar days before changing the method of compliance with this Subpart from Section 218.212 ~~of this Subpart~~ to Section 218.204 or Section 218.207 ~~of this Subpart~~, the owner or operator of a source relying on Section 218.212 to demonstrate compliance with this Subpart for one or more pre-existing coating lines ~~shall~~ must comply with all requirements of Section 218.211(c)(1) or (e)(1) ~~of this Subpart, respectively~~.

b) Upon changing the method of compliance with this Subpart from Section 218.212 to Section 218.204 or Section 218.207 ~~of this Subpart~~, the owner or operator of a source ~~shall~~ must comply with the requirements of Section 218.211(c) or (e) ~~of this Subpart, respectively~~.

c) The owner or operator ~~shall~~ must certify that all remaining participating coating lines, if any, comply and continue to comply with the requirements of Section 218.212 ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.215 Wood Furniture Coating Averaging Approach

a) On and after March 15, 1998, any owner or operator of a source subject to the limitations of Section 218.204(l) ~~of this Subpart~~ may elect to comply with the requirements of this Section rather than complying with the applicable emission limitations ~~set forth~~ in Section 218.204(l)(2)(A) or (B) ~~of this Subpart~~. The source must continue to comply with the limitations ~~set forth~~ in Section 218.204(l)(3) and (4) ~~of this Subpart~~. A source electing to rely on this Section to demonstrate compliance with the requirements of this Subpart ~~shall~~ must operate ~~pursuant~~

~~to~~under federally enforceable permit conditions approved by the Agency and USEPA.

b) An owner or operator of a source subject to the limitations of Section 218.204(l) ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart must establish, by use of subsection (b)(1) or (b)(2) ~~of this Section~~, that, on a daily basis, actual emissions from the affected source are less than or equal to ninety percent of the allowable emissions, that is $V_a \leq V_p$:

1) Option I:

A) $V_a = \sum_{i=1}^{n} \left(ER_{TC_i} \times TC_i \right)$; and

B) $V_p = 0.9 \times \sum_{i=1}^{n} \left(0.8 \times TC_i \right)$

2) Option II:

A) $$V_a = \sum_{i=1}^{n} \left[\left(ER_{TC_i} \times TC_i \right) + \left(ER_{SE_i} \times SE_i \right) + \left(ER_{WC_i} \times WC_i \right) + \left(ER_{PC_i} \times PC_i \right) + \left(ER_{ST_i} \times ST_i \right) \right]; and$$

B) $$V_p = 0.9 \times \sum_{i=1}^{n} \left[\left(1.8 \times TC_i \right) + \left(1.9 \times SE_i \right) + \left(9.0 \times WC_i \right) + \left(1.2 \times PC_i \right) + \left(0.791 \times ST_i \right) \right]$$

where:

V_a = Actual VOM emissions from the source;

V_p = 90% of the allowable VOM emissions from the source;

n = Number of different wood furniture coatings as applied each day on each coating line;

i = Subscript denoting an individual coating;

TC_i = kilograms of solids in topcoat "i" used;

SE_i = kilograms of solids in sealer "i" used;

WC_i = kilograms of solids in wash coat "i" used;

PC_i = kilograms of solids in non-topcoat pigmented coat "i" used;

ST_i = liters of stain "i" used;

ER_{TCi} = VOM content of topcoat "i" in kg VOM/kg solids, as applied;

ER_{SEi} = VOM content of sealer "i" in kg VOM/kg solids, as applied;

ER_{WCi} = VOM content of washcoat "i" in kg VOM/kg solids, as applied;

ER_{PCi} = VOM content of non-topcoat pigmented coat "i" in kg VOM/kg solids, as applied;

ER_{STi} = VOM content of stain "i" in kg VOM/liter (kg/l), as applied;

c) Within ~~the structure of~~ the source's federally enforceable permit conditions, an owner or operator of a source electing to rely on this Section to demonstrate compliance with this Subpart ~~shall~~ must provide to the Agency:

1) The name and identification number of each participating coating line;

2) The name and identification number of each coating as applied on each participating coating line;

3) A summary of how averaging will be used to meet the emission limitations;

4) Documentation that $V_a \leq V_p$, as calculated in subsection (b)(1) or (2) ~~of this Section~~;

5) A description of which types of coating materials will be included in the source's averaging program, which may include stains, basecoats, washcoats, sealers, and topcoats. Coating materials that are applied using continuous coaters may be used in an averaging program only if the source can determine the amount of coating used each day;

6) A description of methods and procedures for quantifying emissions on a daily basis, including methods to determine the VOM content of each coating and the daily usage of each coating; and

7) A summary of the monitoring, recordkeeping, and reporting procedures that will be used to demonstrate daily compliance with the ~~inequalities~~ options in subsections (b)(1) and (2) ~~of this Section~~. These procedures ~~shall be structured such that~~must allow the Agency and the owner or operator of the source ~~can~~ to determine the source's compliance status for

any given day.

d) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must, for each coating line relying on this Section, collect and record the following information on a daily basis and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on the coating line;

2) The weight of VOM per weight of solids (kg VOM/kg solids) and the weight of solids (kg) of each coating as applied on each coating line on a daily basis;

3) Certified product data sheets for each coating; and

4) The calculations showing the source has met the conditions of the ~~inequalities~~ options in subsection (b)(1) or (2) ~~of this Section~~.

e) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must:

1) Notify the Agency within 30 calendar days ~~following an occurrence of~~after a violation of this Section; and

2) Send to the Agency any record showing a violation of this Section within 30 calendar days ~~following the occurrence of~~after a violation.

f) At least 30 calendar days before changing the method of compliance with this Subpart from ~~reliance on~~ this Section to ~~reliance on~~ Section 218.204(l)(2)(A) or (B) ~~of this Subpart~~, the owner or operator of a source relying on this Section to demonstrate compliance with this Subpart for one or more wood furniture coating lines ~~shall~~must:

1) Comply with all requirements of Section 218.211(c)(1) ~~of this Subpart~~; and

2) Certify that all remaining coating lines relying on this Section to comply with the requirements of this Subpart, if any, comply and continue to comply with the requirements of this Section.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.216 Wood Furniture Coating Add-On Control Use

The owner or operator of a source subject to the requirements of Section 218.204(l)(2) ~~of this Subpart~~ may choose to comply with those limitations ~~by relying on~~under Section 218.204(l)(2)(D) ~~of this Subpart~~ if the owner or operator meets all of the following requirements ~~are met~~:

a) For each coating applied, determine the overall control efficiency needed to demonstrate compliance using the following equation:

$$R = \left[\frac{(C - L)}{C}\right] \times 100$$

where:

R = the necessary overall capture and control efficiency of the control system, as a percentage;

C = the VOM content of the coating, in kilograms of VOM per kilograms of coating solids (kg VOM/kg solids), as applied;

L = the emission limitation for that coating~~, as given in~~ under Section 218.204(l)(2)(B) ~~of this Subpart~~.

b) Calculate the equivalent overall capture and control efficiency of the control device using the procedures of Section 218.105(c), (d), and (e) ~~of this Part~~.

c) Demonstrate that the equivalent overall capture and control efficiency calculated using the procedures in Section 218.105(c), (d), and (e) ~~of this Part~~ is equal to or greater than the largest value of R calculated for each coating by the equation in subsection (a) ~~of this Section~~.

d) Install, calibrate, operate, and maintain the applicable monitoring equipment for the control device ~~as specified in~~under Section 218.105(d) ~~of this Part~~.

e) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must, for each coating line relying on this Section, collect and record the following information on a daily basis and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on the coating line;

2) The weight of VOM per weight of solids (kg VOM/kg solids) of each coating as applied on each coating line on a daily basis;

3) Certified product data sheets for each coating;

4) Control device monitoring data;

5) A log of operating time for the capture system, control device, monitoring equipment, and the associated coating line; and

6) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

f) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must:

1) Notify the Agency within 30 calendar days ~~following an occurrence of~~after a violation of this Section; and

2) Send to the Agency any record showing a violation of this Section within 30 calendar days ~~following the occurrence of~~after a violation.

g) At least 30 calendar days before changing the method of compliance with this Subpart from ~~reliance on~~ this Section to ~~reliance on~~ Section 218.204(l)(2)(A) or (B) ~~of this Subpart~~, the owner or operator of a source relying on this Section to demonstrate compliance with this Subpart for one or more wood furniture coating lines ~~shall~~must:

1) Comply with all requirements of Section 218.211(c)(1) ~~of this Subpart~~; and

2) Certify that all remaining coating lines relying on this Section to comply with the requirements of this Subpart, if any, comply and continue to comply with the requirements of this Section.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.217 Wood Furniture Coating and Flat Wood Paneling Coating Work Practice Standards

a) Spray booth cleaning. Each owner or operator of a source subject to the limitations of Section 218.204(l) ~~of this Subpart shall~~must not use compounds containing more than 8.0 percent~~,~~ by weight~~,~~ of VOM for cleaning spray booth components other than conveyors, continuous coaters and their enclosures, and metal filters, unless the spray booth is being refurbished. If the spray booth is being refurbished~~, that is,~~ by replacing the spray booth coating or other material used to cover the booth ~~is being replaced~~, the affected source ~~shall~~ must use no

more than 1.0 gallon of organic solvent to prepare the booth ~~prior to~~before applying the booth coating.

b) Application equipment requirements. ~~No~~ An owner or operator of a source subject to the limitations of Section 218.204(l) ~~of this Subpart shall~~muat not use conventional air spray guns to apply coating materials to wood furniture except under the circumstances ~~specified~~ in subsections (b)(1) through (4) ~~of this Section~~:

1) To apply coating materials that have a VOM content no greater than 1.0 kg VOM/kg solids (1.0 lb VOM/lb solids), as applied;

2) For repair coating under the following circumstances:

A) The coating materials are applied after the completion of the coating operation; or

B) The coating materials are applied after the stain and before any other type of coating material is applied, and the coating materials are applied from a container that has a volume of no more than 2.0 gallons;

3) If the spray gun is aimed and triggered automatically~~,~~ rather than manually; or

4) If emissions from the finishing application station are directed to a control device ~~pursuant to~~under Section 218.216 ~~of this Subpart~~.

c) Cleaning and storage requirements. Each owner or operator of a source subject to the limitations of Section 218.204(l) or (p) ~~of this Subpart shall~~must:

1) Keep, store, and dispose of all coating, cleaning, and washoff materials in closed containers;

2) Pump or drain all organic solvent used for line cleaning into closed containers;

3) Collect all organic solvent used to clean spray guns in closed containers; and

4) Control emissions from washoff operations by using closed tanks.

d) Additional cleaning and storage requirements for flat wood paneling coating lines. Every owner or operator of a source subject to the limitations of Section 218.204(p) ~~of this Subpart shall~~must:

1) Minimize spills of VOM-containing coatings, thinners, and cleaning materials and clean up spills immediately;

2) Minimize emissions of VOM during the cleaning of storage, mixing, and conveying equipment;

3) Keep mixing vessels that contain VOM-containing coatings and other VOM-containing materials closed except when specifically in use;

4) On and after January 1, 2012, convey VOM-containing coatings, thinners, and cleaning materials in closed containers or pipes.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.218 Work Practice Standards for Paper Coatings, Metal Furniture Coatings, and Large Appliance Coatings

a) On and after May 1, 2011, every owner or operator of a source subject to the requirements of Section 218.204(c) ~~of this Subpart shall~~must:

1) Store all VOM-containing cleaning materials in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing cleaning materials;

4) Convey VOM-containing cleaning materials from one location to another in closed containers or pipes; and

5) Minimize VOM emissions from the cleaning of storage, mixing, and conveying equipment.

b) On and after May 1, 2011, every owner or operator of a source subject to the requirements of Section 218.204(g) or 218.204(h) ~~of this Subpart shall~~must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials, and clean up spills immediately;

4) Convey VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials from one location to another in closed containers or pipes;

5) Minimize VOM emissions from the cleaning of storage, mixing, and conveying equipment; and

6) Apply all coatings using one or more of the following application methods:

A) Electrostatic spray;

B) High volume low pressure (HVLP) spray;

C) Flow coating. For the purposes of this subsection (b), flow coating means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

D) Roll coating;

E) Dip coating, including electrodeposition. For purposes of this subsection (b), electrodeposition means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

F) Brush coating, if subject to the requirements of Section 218.204(h); or

G) Another coating application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if ~~such~~ the method is approved in writing by the Agency.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.219 Work Practice Standards for Automobile and Light-Duty Truck Assembly Coatings and Miscellaneous Metal and Plastic Parts Coatings

a) Every owner or operator of a coating line subject to the requirements of Section 218.204(a)(2) ~~of this Subpart shall~~must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, and coating-related waste materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing coatings, thinners, and coating-related waste materials;

4) Convey VOM-containing coatings, thinners, and coating-related waste materials from one location to another in closed containers or pipes;

5) Minimize VOM emissions from cleaning of storage, mixing, and conveying equipment;

6) Develop and implement a work practice plan to minimize VOM emissions from cleaning and from purging of equipment associated with coating lines subject to the limitations in Section 218.204(a)(2). The plan ~~shall~~ must specify practices and procedures that the source will follow to ensure that VOM emissions from the operations listed in this subsection (a)(6) are minimized. If the owner or operator of the subject coating line has already implemented a work practice plan for the coating line ~~pursuant to~~under Subpart IIII of 40 CFR 63, incorporated by reference in Section 218.112 ~~of this Part~~, the owner or operator may revise the plan as necessary to comply with this Section.

A) Vehicle body wiping;

B) Coating line purging;

C) Flushing of coating systems;

D) Cleaning of spray booth grates, walls, and equipment; and

~~F~~E) Cleaning of external spray booth areas.

b) Except as provided in subsection (c) ~~of this Section~~, every owner or operator of a coating line described in Section 218.204(q) ~~of this Subpart shall~~must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing these materials;

3) Minimize spills of VOM-containing coatings, thinners, coating-related

waste materials, and cleaning materials;

4) Convey VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials from one location to another in closed containers or pipes;

5) Minimize VOC emissions from cleaning of application, storage, mixing, and conveying equipment by ensuring that equipment cleaning is performed without atomizing the cleaning solvent and all spent solvent is captured in closed containers; and

6) Apply all coatings using one or more of the following application methods:

A) Electrostatic spray;

B) High volume low pressure (HVLP) spray;

C) Flow coating. For the purposes of this subsection (b)(6)(C), flow coating means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

D) Roll coating;

E) Dip coating, including electrodeposition. For purposes of this subsection (b)(6)(E), electrodeposition means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

F) Airless spray;

G) Air-assisted airless spray; or

H) Another coating application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if the method is approved in writing by the Agency.

c) Notwithstanding subsection (b) ~~of this Section~~, the application method limitations in subsection (b)(6) ~~shall~~ do not apply to the following:

1) Coating lines complying with Section 218.207(n)(1);

2) For metal parts and products coating operations: touch-up coatings, repair coatings, textured finishes, stencil coatings, safety-indicating coatings,

solid-film lubricants, electric-insulating and thermal-conducting coatings, magnetic data storage disk coatings, and plastic extruded onto metal parts to form a coating;

3) For pleasure craft surface coating operations: extreme high gloss coatings;

4) For plastic parts and products coating operations: airbrush operations using 18.9 liters (5 gallons) or less of coating per year;

5) For ammunition sealant operations: cap sealants and mouth waterproofing sealants.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART G: USE OF ORGANIC MATERIAL

Section 218.301 Use of Organic Material

~~No~~ A person ~~shall~~ must not cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission unit, except as provided in Sections 218.302, 218.303, 218.304 ~~of this Part~~ and the ~~following~~ exception~~: If~~ that, if no odor nuisance exists, then the limitation of this Subpart ~~shall apply~~applies only to photochemically reactive material.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.302 Alternative Standard

Emissions of organic material in excess of those permitted by Section 218.301 ~~of this Part~~ are allowable if ~~such~~ the emissions are controlled by one of the following methods:

a) Flame, thermal, or catalytic incineration ~~so as~~ either ~~to reduce such~~reducing the emissions to 10 ppm equivalent methane (molecular weight 16) or less, or ~~to convert~~converting 85 percent of the hydrocarbons to carbon dioxide and water; or,

b) A vapor recovery system which adsorbs and/or condenses at least 85 percent of the total uncontrolled organic material that would otherwise be emitted to the atmosphere; or,

c) Any other air pollution control equipment ~~approved by the Agency and approved by the USEPA as a SIP revision~~ capable of reducing by 85 percent or more the uncontrolled organic material that would be otherwise emitted to the atmosphere that is approved by the Agency and approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.303 Fuel Combustion Emission Units

~~The provisions of~~ Sections 218.301 and 218.302 ~~of this Part shall~~doi not apply to fuel combustion emission units.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.304 Operations with Compliance Program

~~The provisions of~~ Sections 218.301 and 218.302 ~~of this Part shall~~do not apply to any owner, operator, user, or manufacturer of paint, varnish, lacquer, coatings, or printing ink whose compliance program and project completion schedule, as required by 35 Ill. Adm. Code 201, provided for ~~the reduction of~~reducing organic material used in ~~such~~ the process to 20 percent or less of total volume by May 30, 1977.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART H: PRINTING AND PUBLISHING

Section 218.401 Flexographic and Rotogravure Printing

a) ~~No~~ An owner or operator of a subject flexographic or rotogravure printing line ~~shall~~ must not apply at any time any coating or ink unless the VOM content does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(1) or (a)(2), as applicable. Compliance with this Section must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(c) ~~of this Part~~. As an alternative to compliance with this subsection, a subject printing line may meet the requirements of subsection (b) or (c).

1) ~~Prior to~~Before August 1, 2010, either:

A Forty percent VOM by volume of the coating and ink (minus water and any compounds which are specifically exempted from the definition of VOM); or

B) Twenty-five percent VOM by volume of the volatile content in the coating and ink; and

2) On and after August 1, 2010:

A) For owners or operators of flexographic or rotogravure printing lines that do not print flexible packaging, either:

i) Forty percent VOM by volume of the coating and ink (minus water and any compounds that are specifically exempted from the definition of VOM); or

ii) Twenty-five percent VOM by volume of the volatile content in the coating and ink;

B) For owners or operators of flexographic or rotogravure printing lines that print flexible packaging, or that print flexible packaging and non-flexible packaging on the same line, either:

i) 0.8 kg VOM/kg (0.8 lbs VOM/lb) solids applied; or

ii) 0.16 kg VOM/kg (0.16 lbs VOM/lb) inks and coatings applied.

b) Weighted Averaging Alternative

1) ~~Prior to~~Before August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by volume, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(1)(A) (as determined by subsection (b)(1)(A)) or subsection (a)(1)(B)) (as determined by subsection (b)(1)(B). Compliance with this subsection must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(d) ~~of this Part~~.

A) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specifie~~d in subsection (a)(1)(A) ~~of this Section~~.

$$VOM_{(i)(A)} = \frac{\sum_{i=1}^{n} C_i L_i \left(V_{si} + V_{VOMi}\right)}{\sum_{i-1}^{n} L_i \left(V_{si} + V_{VOMi}\right)}$$

where:

$VOM_{(i)(A)}$ = The weighted average VOM content in units of percent VOM by volume of all coatings and inks (minus water and any compounds that are specifically exempted from the definition of VOM) used each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on a printing line;

C_i = The VOM content in units of percent VOM by volume of each coating or ink as applied (minus water and any compounds that are specifically exempted from the definition of VOM);

L_i = The liquid volume of each coating or ink as applied in units of l (gal);

V_{si} = The volume fraction of solids in each coating or ink as applied; and

V_{VOMi} = The volume fraction of VOM in each coating or ink as applied.

B) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specifie~~d in subsection (a)(1)(B) ~~of this Section~~.

$$VOM_{(i)(B)} = \frac{\sum_{i=1}^{n} C_i L_i V_{VMi}}{\sum_{i-1}^{n} L_i V_{VMi}}$$

where:

$VOM_{(i)(B)}$ = The weighted average VOM content in units of percent VOM by volume of the volatile content of all coatings and inks used each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on each printing line;

C_i = The VOM content in units of percent VOM by volume of the volatile matter in each coating or ink as applied;

L_i = The liquid volume of each coating or ink as applied in units of l (gal) and

V_{VMi} = The volume fraction of volatile matter in each coating or ink as applied.

2) On and after August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line that does not print flexible packaging ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by weight, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(2)(A)(i) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(1)(A)) or (a)(2)(A)(ii) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(1)(B)) ~~of this Section~~. Compliance with this subsection (b)(2) ~~shall~~ must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(d) ~~of this Subpart~~.

3) On and after August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by weight, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(2)(B)(i) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(3)(A)) or subsection (a)(2)(B)(ii) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(3)(B)) ~~of this Section~~. Compliance with this subsection (b)(3) ~~shall~~ must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(d) ~~of this Subpart~~.

A) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(2)(B)(i) ~~of this Section~~.

$$VOM_{(A)} = \frac{\sum_{i-1}^{n} C_i W_i}{\sum_{i=1}^{n} W_i}$$

where:

$VOM_{(A)}$ = The weighted average VOM content in units of kg VOM per kg (lbs VOM per lb) solids of all coatings and inks used each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on a printing line;

C_i = The VOM content in units of kg VOM per kg (lbs VOM per lb) solids of each coating or ink as applied;

W_i = Weight of solids in each coating or ink, as applied, in units of kg (lb).

B) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(2)(B)(ii) ~~of this Section~~.

$$VOM_{(B)} = \frac{\sum_{i-1}^{n} C_i L_i}{\sum_{i=1}^{n} L_i}$$

where:

$VOM_{(B)}$ = The weighted average VOM content in units of kg (lbs) VOM per weight in kg (lbs) of all coatings or inks as applied each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on each printing line;

C_i = The VOM content in units of kg (lbs) VOM per weight in kg (lbs) of each coating or ink as applied;

L_i = The weight of each coating or ink, as applied, in units of kg (lb).

c) Capture System and Control Device Requirements

1) ~~Prior to~~Before August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the requirements in subsection (c)(1)(A)(i), (c)(1)(A)(ii), or (c)(1)(A)(iii), as well as subsections ~~(c)(1)(D)~~(c)(1)(B), (c)(5), and (c)(6).

A One of:

i) A carbon adsorption system is used that reduces the captured VOM emissions by at least 90 percent by weight; or

ii) An incineration system is used that reduces the captured VOM emissions by at least 90 percent by weight; or

iii) An alternative VOM emission reduction system is used that is demonstrated to have at least a 90 percent control device efficiency, approved by the Agency and approved by USEPA as a SIP revision; and

B) The printing line is equipped with a capture system and control device that provides an overall reduction in VOM emissions of at least:

i) 75 percent where a publication rotogravure printing line is employed; or

ii) 65 percent where a packaging rotogravure printing line is employed; or

iii) 60 percent where a flexographic printing line is employed;

2) On and after August 1, 2010, ~~no~~ an owner or operator of a flexographic or rotogravure printing line that does not print flexible packaging and that is equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the

requirements in subsection (c)(1)(A)(i), (c)(1)(A)(ii), or (c)(1)(A)(iii), as well as subsections (c)(1)(B), (c)(5), and (c)(6) ~~of this Section~~;

3) On and after August 1, 2010, ~~no~~ an owner or operator of a flexographic or rotogravure printing line that prints flexible packaging and that is equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the requirements in subsections (c)(5) and (c)(6) ~~of this Section~~ and the capture system and control device provides an overall reduction in VOM emissions of at least:

A) 65 percent in cases in which a subject printing line was first constructed at the subject source ~~prior to~~before March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source ~~prior to~~before January 1, 2010; or

B) 70 percent when a subject printing line was first constructed at the subject source ~~prior to~~before March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source on and after January 1, 2010; or

C) 75 percent when a subject printing line was first constructed at the subject source on and after March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source ~~prior to~~before January 1, 2010; or

D) 80 percent when a subject printing line was first constructed at the subject source on and after March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source on and after January 1, 2010;

4) On and after August 1, 2010, the owner or operator of a flexographic or rotogravure printing line that prints flexible packaging and non-flexible packaging on the same line and that is equipped with a control device ~~shall be~~is subject to the requirements of ~~either~~ subsection (c)(1)(B) or (c)(3) ~~of this Section~~, whichever is more stringent, as well as subsections (c)(5) and (c)(6) ~~of this Section~~;

5) The control device is equipped with the applicable monitoring equipment ~~specified~~ in Section 218.105(d)(2) ~~of this Part~~ and, except as provided in Section 218.105(d)(3) ~~of this Part~~, the monitoring equipment is installed, calibrated, operated, and maintained according to vendor specifications at all times the control device is in use; and

6) The capture system and control device are operated at all times when the subject printing line is in operation. The owner or operator ~~shall~~ must

demonstrate compliance with this subsection by using the applicable capture system and control device test methods and procedures ~~specified~~ in Section 218.105(c) through ~~Section~~ 218.105(f) ~~of this Part~~ and by complying with the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(e) ~~of this Part~~. The owner or operator of a printing line subject to the requirements in subsection (c)(1)(B) or (c)(2) ~~of this Section~~ that performed all testing necessary to demonstrate compliance with subsection (c)(1)(B) ~~prior to~~before August 1, 2010, is not required to retest ~~pursuant to~~under this subsection (c)(6). The owner or operator of a printing line subject to the requirements in subsection (c)(3) ~~shall~~ must perform testing in compliance with this subsection (c)(6), even if the owner or operator already performed ~~such~~ the testing ~~prior to~~before August 1, 2010, unless the ~~following~~ testing meets the conditions ~~are met~~in subsections (A) through (E). Nothing in this subsection (c)(6), however, ~~shall limit~~limits the Agency's ability to require that the owner or operator perform testing ~~pursuant to~~under 35 Ill. Adm. Code 201.282:

A) On and after May 1, 2000, the owner or operator of the subject printing line performed all testing necessary to demonstrate compliance with subsection (c)(1)(B);

B) ~~Such~~ The testing also demonstrated an overall control efficiency equal to or greater than the applicable control efficiency requirements in subsection (c)(3);

C) The owner or operator submitted the results of ~~such~~ the tests to the Agency, and the Agency did not reject the tests ~~were not rejected by the Agency~~;

D) The same capture system and control device subject to the tests referenced in subsection (c)(6)(A) ~~of this Section~~ is still being used by the subject printing line; and

E) The owner or operator complies with all recordkeeping and reporting requirements in Section 218.404(e)(1)(B).

d) ~~No~~ An owner or operator of subject flexographic or rotogravure printing lines that print flexible packaging or print flexible packaging and non-flexible packaging on the same line ~~shall~~ must not cause or allow VOM containing cleaning materials, including used cleaning towels, associated with the subject flexographic or rotogravure printing lines to be kept, stored, or disposed of in any manner other than in closed containers, or conveyed from one location to another in any manner other than in closed containers or pipes, except when specifically in use.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 218.402 Applicability

a) Except as otherwise provided in Section 218.401, the limitations of Section 218.401 ~~of this Subpart~~ apply to all flexographic and rotogravure printing lines at a subject source. Sources with flexographic and/or rotogravure printing lines are subject sources if:

1) Total maximum theoretical emissions of VOM from all flexographic and rotogravure printing lines (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines) at the source ever exceed 90.7 Mg (100 tons) per calendar year and the flexographic and rotogravure printing lines (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines) at the source are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision; or

2) The flexographic and rotogravure printing lines (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines) at the source have a combined potential to emit 22.7 Mg (25 tons) or more of VOM per year.

b) The limitations of Section 218.401(d) ~~shall~~ apply to all owners or operators of flexographic or rotogravure printing lines that print flexible packaging, or that print flexible packaging and non-flexible packaging on the same line, at a source where the combined emissions of VOM from all flexographic and rotogravure printing lines total 6.8 kg/day (15 lbs/day) or more (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines), in the absence of air pollution control equipment.

c) Upon achieving compliance with this Subpart, the flexographic and rotogravure printing lines are not required to meet ~~Subpart G (~~Section 218.301 or 218.302 ~~of this Part)~~. Flexographic and rotogravure printing lines exempt from this Subpart are subject to ~~Subpart G (~~Section 218.301 or 218.302 ~~of this Part)~~. Rotogravure or flexographic equipment used for both roll printing and paper coating is subject to this Subpart.

d) Once subject to the limitations of Section 218.401, a flexographic or rotogravure printing line is always subject to the limitations of Section 218.401 ~~of this Part~~.

e) Any owner or operator of any flexographic or rotogravure printing line that is exempt from any of the limitations of Section 218.401 ~~of this Part~~ because of the criteria in this Section is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 218.404(b) and (f) ~~of this Part~~, as applicable.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.403 Compliance Schedule

Every owner or operator of a flexographic and/or rotogravure printing line ~~shall~~ must comply with the applicable requirements of Section 218.401 and Section 218.404 ~~of this Part in accordance with~~according to the applicable compliance schedule or schedules ~~specified~~ in subsection (a), (b), (c), (d), (e), (f), or (g):

a) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that is exempt from the limitations of Section 218.401 ~~of this Part~~ because of the criteria in Section 218.402(a) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 218.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 218.404(b) ~~of this Part~~.

b) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 218.401(a)(1) ~~of this Part shall~~muist not operate ~~said~~ that printing line on or after a date consistent with Section 218.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 218.401(a)(1) and Section 218.404(c) ~~of this Part~~.

c) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 218.401(b)(1) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 218.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 218.401(b)(1) and Section 218.404(d) ~~of this Part~~.

d) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 218.401(c)(1)(B) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 218.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, the applicable provisions in Sections 218.401(c) and 218.404(e) ~~of this Part~~.

e) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 218.401(a)(2), (b)(2), or (b)(3) or ~~complying by means of~~ Section 218.401(c)(2), (c)(3), or (c)(4), ~~shall~~ must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 218.401(a)(2), (b)(2) or (b)(3), and Section 218.401(c), as applicable, and all applicable provisions in Section 218.404 ~~of this Part~~.

f) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, ~~shall~~ must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 218.401(d) and Section 218.404(g) ~~of this Part~~.

g) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, and that is exempt from the limitations of Section 218.401(d) because of the criteria in Section 218.402(b) ~~of this Part shall~~must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 218.402(b) and Section 218.404(f) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.404 Recordkeeping and Reporting

a) The VOM content of each coating and ink and the efficiency of each capture system and control device ~~shall~~ must be determined by the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~ to establish the records required under this Section.

b) Any owner or operator of a printing line which is exempted from any of the limitations of Section 218.401 ~~of this Part~~ because of the criteria in Section 218.402(a) ~~of this Part shall~~must comply with the following:

1) By a date consistent with Section 218.106 ~~of this Part~~ or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, by January 1, 2012, the owner or operator of a flexographic or rotogravure printing line to which this subsection (b) ~~is applicable shall~~applies must certify to the Agency that the flexographic and rotogravure printing line is exempt under ~~the provisions of~~ Section 218.402(a) ~~of this Part~~. ~~Such~~ The certification ~~shall~~ must include:

A) A declaration that the flexographic and rotogravure printing line is exempt from the limitations of the criteria in Section 218.401 ~~of this Part~~ because of Section 218.402(a) ~~of this Part~~; and

B) Calculations that demonstrate that the combined potential to emit of all flexographic and rotogravure printing lines at the source never equals or exceeds 22.7 Mg (25 tons) of VOM per year, and that total maximum theoretical emissions of VOM from all flexographic and rotogravure printing lines at the source never exceed 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices. Total maximum theoretical emissions of VOM for a flexographic or rotogravure printing source is the sum of maximum theoretical emissions of VOM from each flexographic and rotogravure printing line at the source. The following equation ~~shall~~ must be used to calculate

total maximum theoretical emissions of VOM per calendar year before the application of capture systems and control devices for each flexographic and rotogravure printing line at the source:

$$E_p = A \times B + 1095\,(C \times D \times F)$$

where:

E_p = Total maximum theoretical emissions of VOM from one flexographic or rotogravure printing line in units of kg/year (lbs/year);

A = Weight of VOM per volume of solids of the coating or ink with the highest VOM content as applied each year on the printing line in units of kg VOM/l (lbs VOM/gal) of coating or ink solids;

B = Total volume of solids for all coatings and inks that can potentially be applied each year on the printing line in units of l/year (gal/year). The method by which the owner or operator accurately calculated the volume of each coating and ink as applied and the amount that can potentially be applied each year on the printing line ~~shall~~ must be described in the certification to the Agency;

C = Weight of VOM per volume of material for the cleanup material or solvent with the highest VOM content as used each year on the printing line in units of kg/l (lbs VOM/gal);

D = The greatest volume of cleanup material or solvent used in any 8-hour period;

F = The highest fraction of cleanup material or solvent which is not recycled or recovered for offsite disposal during any 8-hour period.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, on and after January 1, 2012, the owner or operator of a flexographic and rotogravure printing line referenced in this subsection ~~shall~~ must collect and record all of the following information each year for each printing line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content and the volume of each coating and ink as applied each year on each printing line.

3) On and after a date consistent with Section 218.106 ~~of this Part~~, or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, on and after January 1, 2012, the owner or operator of a flexographic and rotogravure printing line exempted from the limitations of Section 218.401 ~~of this Part~~ because of the criteria in Section 218.402(a) ~~of this Part~~ ~~shall~~must notify the Agency of any record showing that total maximum theoretical emissions of VOM from all printing lines exceed 90.7 Mg (100 tons) in any calendar year before the application of capture systems and control devices, or that the combined potential to emit of all flexographic and rotogravure printing lines at the source equals or exceeds 22.7 Mg (25 tons) of VOM in any calendar year, by sending a copy of ~~such~~ the record to the Agency within 30 days after the exceedance occurs.

c) Any owner or operator of a printing line subject to the limitations of Section 218.401 ~~of this Part~~ and complying by means of Section 218.401(a) ~~of this Part~~ ~~shall~~must comply with the following:

1) By a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or upon initial start-up of a new printing line, or upon changing the method of compliance ~~from~~ for an existing subject printing line from Section 218.401(b) or Section 218.401(c) ~~of this Part~~ to Section 218.401(a) ~~of this Part~~, the owner or operator of a subject printing line ~~shall~~ must certify to the Agency that the printing line will be in compliance with Section 218.401(a) ~~of this Part~~ on and after a date consistent with Section 218.106 ~~of this Part,~~ or Section 218.403(e), as applicable, or on and after the initial start-up date. The owner or operator of a printing line subject to the requirements in Section 218.401(a)(2)(B) ~~shall~~ must certify in ~~accordance~~ compliance with this subsection (c)(1) even if the owner or operator of ~~such~~ the line submitted a certification ~~prior to~~before January 1, 2010. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content of each coating and ink as applied each day on each printing line.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or on and after the initial start-up date, the owner or operator of a printing line subject to the limitations of Section 218.401 ~~of this Part~~ and complying by means of Section 218.401(a) ~~of this~~

~~Part shall~~must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content of each coating and ink as applied each day on each printing line.

3) On and after a date consistent with Section 218.106~~ of this Part~~, or Section 218.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 218.401(a) ~~of this Part shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(a) ~~of this Part~~ to Section 218.401(b) or (c)~~ of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (d)(1) or (e)(1)~~ of this Section~~, respectively. Upon changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(a) ~~of this Part~~ to Section 218.401(b) or (c)~~ of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (d) or (e)~~ of this Section~~, respectively.

d) Any owner or operator of a printing line subject to the limitations of Section 218.401 ~~of this Part~~ and complying by means of Section 218.401(b) ~~shall~~ must comply with the following:

1) By a date consistent with Section 218.106~~ of this Part~~, or Section 218.403(e), as applicable, or upon initial start-up of a new printing line, or upon changing the method of compliance for an existing subject printing line from Section 218.401(a) or (c) ~~of this Part~~ to Section 218.401(b)~~ of this Part~~, the owner or operator of the subject printing line ~~shall~~ must certify to the Agency that the printing line will be in compliance with Section 218.401(b) ~~of this Part~~ on and after a date consistent with Section 218.106~~ of this Part~~, or Section 218.403(e), as applicable, or on and after the initial start-up date. The owner or operator of a printing line subject to the requirements in Section 218.401(b)(3) ~~shall~~ must certify in compliance with this subsection (d)(1) even if the owner or operator of ~~such~~ the line submitted a certification ~~prior to~~before January 1, 2010. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each printing line which will comply by means of Section 218.401(b) ~~of this Part~~.

B) The name and identification number of each coating and ink available for use on each printing line.

C) The VOM content of each coating and ink as applied each day on each printing line.

D) The method by which the owner or operator will accurately calculate the volume~~,~~ or weight of solids, as applicable, of each coating and ink as applied each day on each printing line, and on and after January 1, 2012, the weight of each coating or ink.

E) The method by which the owner or operator will create and maintain records each day as required in subsection (d)(2) ~~of this Section~~.

F) An example of the format in which the records required in subsection (d)(2) ~~of this Section~~ will be kept.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or on and after the initial start-up date, the owner or operator of a printing line subject to the limitations of Section 218.401 ~~of this Part~~ and complying by means of Section 218.401(b) ~~of this Part shall~~must collect and record all of the following information each day for each printing line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content and the volume~~,~~ or weight of solids, as applicable, of each coating and ink as applied each day on each printing line, and on and after January 1, 2012, the weight of each coating or ink.

C) The daily-weighted average VOM content of all coatings and inks as applied on each printing line.

3) On and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 218.401(b) ~~of this Part~~

~~shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(b) ~~of this Part~~ to Section 218.401(a) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c)(1) or (e)(1) ~~of this Section~~, respectively. Upon changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(b) ~~of this Part~~ to Section 218.401(a) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c) or (e) ~~of this Section~~, respectively.

e) Any owner or operator of a printing line subject to the limitations of Section 218.401 ~~of this Part~~ and complying by means of Section 218.401(c) ~~of this Part~~ ~~shall~~must comply with the following:

1) By a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or upon initial start-up of a new printing line, or upon changing the method of compliance for an existing printing line from Section 218.401(a) or (b) ~~of this Part~~ to Section 218.401(c) ~~of this Part~~, the owner or operator of the subject printing line ~~shall~~ must either:

A) Perform all tests and submit to the Agency the results of all tests and calculations necessary to demonstrate that the subject printing line will be in compliance with Section 218.401(c) ~~of this Part~~ on and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or on and after the initial start-up date; or

B) If not required to perform ~~such~~ testing ~~pursuant to~~under Section 218.401(c)(6), submit a certification to the Agency that includes:

i) A declaration that the owner or operator is not required to perform testing ~~pursuant to~~under Section 218.401(c)(6);

ii) The dates that testing demonstrating compliance with Section 218.401(c)(3) was performed; and

iii) The dates that the results of such testing were submitted to the Agency.

2) On and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, or on and after the initial start-up date, the owner or operator of a printing line subject to the limitations of Section

218.401 ~~of this Part~~ and complying by means of Section 218.401(c) ~~of this Part shall~~must collect and record all of the following information each day for each printing line and maintain the information at the facility for ~~a period of~~ three years:

A) Control device monitoring data.

B) A log of operating time for the capture system, control device, monitoring equipment, and the associated printing line.

C) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after a date consistent with Section 218.106 ~~of this Part~~, or Section 218.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 218.401(c) ~~of this Part shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(c) ~~of this Part~~ to Section 218.401(a) or (b) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c)(1) or (d)(1) ~~of this Section~~, respectively. Upon changing the method of compliance with Section 218.401 ~~of this Part~~ from Section 218.401(c) ~~of this Part~~ to Section 218.401(a) or (b) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c) or (d) ~~of this Section~~, respectively.

4) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, the owner or operator of a printing line subject to the requirements in Section 218.401(c)(3) or (c)(4) ~~shall~~ must submit to the Agency records documenting the date the printing line was constructed at the subject source and the date the control device for ~~such~~ the printing line was constructed at the subject source.

f) Any owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, and that is exempt from the limitations of Section 218.401(d) because of the criteria in Section 218.402(b) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, and upon modification of a printing line, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from the requirements in Section 218.401(d) because of the criteria in Section 218.402(b);

B) Calculations that demonstrate that combined emissions of VOM from all flexographic and rotogravure printing lines (including inks and solvents used for cleanup operations associated with ~~such~~ the printing lines) at the source never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment;

2) On and after January 1, 2012, collect and record the following information each day for each subject printing line:

A) The name and identification number of each coating, ink, and cleaning solvent as applied each day on each printing line;

B) The VOM content of each coating and ink (measured in weight of VOM per volume of coating or ink, or in weight of VOM per weight of coating or ink) as applied each day on each printing line, and the volume or weight of each coating or ink, as applicable;

C) The weight of VOM per volume of each cleaning solvent and the volume of each cleaning solvent used each day on each printing line;

D) The total daily emissions of VOM from each printing line (including solvents used for cleanup operations associated with the printing line) and the sum of daily emissions from all subject printing lines at the source; and

3) Notify the Agency in writing if the combined emissions of VOM from all flexographic and rotogravure printing lines (including inks and solvents used for cleanup operations associated with the flexographic and rotogravure lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs

g) Any owner or operator of a printing line subject to the limitations of Section 218.401(d) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, submit a certification to the Agency describing the

practices and procedures that the owner or operator will follow to ensure compliance with the limitations of Section 218.401(d); and

2) Notify the Agency of any violation of Section 218.401(d) by sending a description of the violation and copies of records documenting ~~such~~ the violations to the Agency within 30 days ~~following the occurrence of~~after the violation.

h) All records required by subsections (f) and (g) ~~of this Section shall~~must be retained for at least three years and ~~shall~~ must be made available to the Agency upon request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.405 Lithographic Printing: Applicability

a) Every owner or operator of lithographic printing lines is subject to the recordkeeping and reporting requirements in Section 218.411 ~~of this Subpart~~.

b) ~~Prior to~~Before August 1, 2010, Sections 218.407 through 218.410 ~~of this Subpart shall~~ apply to:

1) All owners or operators of heatset web offset lithographic printing lines unless:

A) Total maximum theoretical emissions of VOM from all heatset web offset lithographic printing lines (including solvents used for cleanup operations associated with heatset web offset lithographic printing lines) at the source never exceed 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices. To determine a source's total maximum theoretical emissions of VOM for the purposes of this subsection (b)(1)(A), the owner or operator ~~shall~~ must use the calculations ~~set forth~~ in Section 218.411(a)(1)(C) ~~of this Subpart~~; or

B) Federally enforceable permit conditions or SIP revision for all heatset web offset lithographic printing lines at the source requires the owner or operator to limit production or capacity of these printing lines to total VOM emissions of 90.7 Mg/yr (100 TPY) or less, before the application of capture systems and control devices;

2) All owners or operators of lithographic printing lines, unless the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) never exceed 45.5 kg/day (100 lbs/day), as determined in ~~accordance~~ compliance with Section 218.411(a)(1)(B),

before the application of capture systems and control devices.

c) On and after August 1, 2010:

1) The requirements in Section 218.407(a)(1)(B) through (a)(1)(E) and 218.407(b) and all applicable provisions in Sections 218.409 through 218.411 ~~of this Subpart shall~~ apply to all owners or operators of heatset web offset lithographic printing lines, if the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) ever exceed 45.5 kg/day (100 lbs/day), calculated in ~~accordance~~ compliance with Section 218.411(b)(2)(B), before the application of capture systems and control devices;

2) The requirements in Section 218.407(a)(1)(A) and (a)(2) through (a)(5) and all applicable provisions in Sections 218.409 through 218.411 ~~of this Subpart shall~~ apply to all owners or operators of lithographic printing lines if the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) ever equal or exceed 6.8 kg/day (15 lbs/day), calculated in ~~accordance~~ compliance with Section 218.411(b)(1)(B), before the application of capture systems and control devices;

3) Notwithstanding subsection (c)(2) ~~of this Section~~, at sources where the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) equal or exceed 6.8 kg/day (15 lbs/day) but do not exceed 45.5 kg/day (100 lbs/day), calculated in ~~accordance~~ compliance with Section 218.411(b)(1)(B), before the application of capture systems and control devices, the following exclusions ~~shall~~ apply unless the owner or operator of the source certifies ~~pursuant to~~under Section 218.411(g)(1)(B) that the source will not make use of any such exclusions:

A) ~~The requirements of~~ Section 218.407(a)(1)(A), (a)(2), and (a)(3) ~~of this Subpart shall~~does not apply to lithographic printing lines with a total fountain solution reservoir of less than 3.8 liters (1 gallon);

B) ~~The requirements of~~ Section 218.407(a)(3) ~~of this Subpart shall~~does not apply to sheet-fed offset lithographic printing lines with maximum sheet size of 11x17 inches or smaller;

C) ~~The requirements of~~ Section 218.407(a)(4) ~~of this Subpart shall~~does not apply to up to a total of 416.3 liters (110 gallons) per

year of cleaning materials used on all lithographic printing lines at the source;

D) ~~The requirements of~~ Section 218.407(a)(4)(A)(i) ~~shall~~ does not apply to lithographic printing lines at the source. Instead, ~~the requirements of~~ Section 218.407(a)(4)(A)(ii) ~~shall apply~~applies to ~~such~~ those lines.

d) If a lithographic printing line at a source is or becomes subject to one or more of the limitations in Section 218.407 ~~of this Subpart~~, the lithographic printing lines at the source are always subject to the applicable provisions of this Subpart.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.406 Provisions Applying to Heatset Web Offset Lithographic Printing Prior to March 15, 1996 (Repealed)

(Source: Repealed at 34 Ill. Reg. 9069, effective June 25, 2010)

Section 218.407 Emission Limitations and Control Requirements for Lithographic Printing Lines

a) ~~No~~ An owner or operator of lithographic printing lines subject to the requirements of this Subpart ~~shall~~must not:

1) Cause or allow the operation of any heatset web offset lithographic printing line unless:

A) The total VOM content in the as-applied fountain solution meets one of the following conditions:

i) 1.6 percent or less, by weight;

ii) 3 percent or less, by weight, and the temperature of the fountain solution is maintained below ~~15.6°C (60°F)~~15.6 °c (60 °F), measured at the reservoir or the fountain tray; or

iii) 5 percent or less, by weight, and the as-applied fountain solution contains no alcohol;

B) The air pressure in the dryer is maintained lower than the air pressure of the press room, such that air flow through all openings in the dryer, other than the exhaust, is into the dryer at all times when the printing line is operating;

C) An afterburner is installed and operated so that VOM emissions

(excluding methane and ethane) from the press dryer exhausts are reduced as follows:

i) ~~Prior to~~Before August 1, 2010, by 90 percent, by weight, or to a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon); and

ii) On and after August 1, 2010, by at least 90 percent, by weight, for afterburners first constructed at the source ~~prior to~~before January 1, 2010; by at least 95 percent, by weight, for afterburners first constructed at the source on or after January 1, 2010; or to a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon);

D) The afterburner complies with all monitoring provisions ~~specified~~ in Section 218.410(c) ~~of this Subpart~~; and

E) The afterburner is operated at all times when the printing line is in operation, except the afterburner may be shut down between November 1 and April 1 ~~as provided in~~under Section 218.107 ~~of this Part~~;

2) Cause or allow the operation of any non-heatset web offset lithographic printing line unless the VOM content of the as-applied fountain solution is 5 percent or less, by weight, and the as-applied fountain solution contains no alcohol;

3) Cause or allow the operation of any sheet-fed offset lithographic printing line unless:

A) The VOM content of the as-applied fountain solution is 5 percent or less, by weight; or

B) The VOM content of the as-applied fountain solution is 8.5 percent or less, by weight, and the temperature of the fountain solution is maintained below ~~15.6°C (60°F)~~15.6 ºC (60 ºF), measured at the reservoir or the fountain tray;

4) Cause or allow the use of a cleaning solution on any lithographic printing line unless:

A) The VOM content of the as-used cleaning solution is less than or equal to:

i) 30 percent, by weight; or

ii) On and after August 1, 2010, for owners or operators of sources that meet the applicability criteria in Section 218.405(c)(3) and do not certify ~~pursuant to~~under Section 218.411(g)(1)(B) that the source will not make use of any of the exclusions in Section 218.405(c)(3), 70 percent, by weight; or

B) The VOM composite partial vapor pressure of the as-used cleaning solution is less than 10 mmHg at ~~20°C (68°F)~~20 ºC (68 ºF);

5) Cause or allow VOM containing cleaning materials, including used cleaning towels, associated with any lithographic printing line to be kept, stored, or disposed of in any manner other than in closed containers, except when specifically in use.

b) An owner or operator of a heatset web offset lithographic printing line subject to the requirements of subsection (a)(1)(C) ~~of this Section~~ may use a control device other than an afterburner, if:

1) The control device reduces VOM emissions from the press dryer exhausts as follows:

A) ~~Prior to~~Before August 1, 2010, by at least 90 percent, by weight, or to a maximum control device exhaust outlet concentration of 20 ppmv (as carbon); and

B) On and after August 1, 2010:

i) By at least 90 percent, by weight, for control devices first constructed at the source ~~prior to~~before January 1, 2010;

ii) By at least 95 percent, by weight, for control devices first constructed at the source on or after January 1, 2010; or

iii) To a maximum control device exhaust outlet concentration of 20 ppmv (as carbon);

2) The owner or operator submits to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; and

3) The use of the control device with testing, monitoring, and recordkeeping in ~~accordance~~ compliance with this plan is approved by the Agency and USEPA as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.408 Compliance Schedule for Lithographic Printing On and After March 15, 1996 (Repealed)

(Source: Repealed at 34 Ill. Reg. 9069, effective June 25, 2010)

Section 218.409 Testing for Lithographic Printing

a) Testing to demonstrate compliance with the requirements of Section 218.407 ~~of this Subpart shall~~must be conducted by January 1, 2012, unless ~~such~~ the testing was conducted on or after May 9, 1995, the test was conducted ~~pursuant to~~under a test method approved by USEPA, the current operating conditions and operating capacity of the press are consistent with the operation of the press during ~~such~~ the testing, and the test results were submitted to the Agency. If an owner or operator of a printing line performed ~~such~~ the testing ~~prior to~~before May 9, 1995, the owner or operator ~~shall~~ must either retest ~~pursuant to~~under this Section or submit to the Agency all information necessary to demonstrate that the prior testing was conducted ~~pursuant to~~under a test method approved by USEPA, and that the current operating conditions and operating capacity of the press are consistent with the operation of the press during prior testing. ~~Thereafter, testing shall~~Testing must then be conducted by the owner or operator within 90 days after a request by the Agency, or as otherwise specified in this Subpart. ~~Such~~ The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting ~~such~~ the testing to allow the Agency to be present during ~~such~~ the testing.

b) The methods and procedures of Section 218.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with the requirements of Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under

the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

C) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

4) Notwithstanding the criteria or requirements in Method 25 that ~~specifies~~ specify a minimum probe temperature of ~~129°C (265°F)~~129 ºC (265 ºF), the probe must be heated to at least the gas stream temperature of the dryer exhaust, typically close to ~~176.7°C (350°F)~~176.7 ºC (350 ºF);

5) During testing, the printing lines ~~shall~~ must be operated at representative operating conditions and flow rates; and

6) During testing, an air flow direction indicating device, such as a smoke stick, ~~shall~~ must be used to demonstrate 100 percent emissions capture efficiency for the dryer in ~~accordance~~ compliance with Section 218.407(a)(1)(B) ~~of this Subpart~~.

c) Testing to demonstrate compliance with the VOM content limitations in Section 218.407(a)(1)(A), (a)(2), (a)(3), and (a)(4)(A) ~~of this Subpart~~, and to determine the VOM content of fountain solutions, fountain solution additives, cleaning solvents, cleaning solutions, and inks (~~pursuant to the requirements of~~under Section 218.411(a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Subpart~~, as applicable~~, shall~~) must be conducted upon request of the Agency or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) The manufacturer's specifications for VOM content for fountain solution additives, cleaning solvents, and inks may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 218.105(a) ~~of this Part~~; ~~provided,~~ however, Method 24 ~~shall~~ must be used to determine compliance.

d) Testing to demonstrate compliance with the requirements of Section 218.407(b) ~~of this Subpart shall~~must be conducted ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA as federally enforceable permit conditions ~~pursuant to~~under Section 218.407(b) ~~of this Subpart~~.

e) Testing to determine the VOM composite partial vapor pressure of cleaning solvents, cleaning solvent concentrates, and as-used cleaning solutions ~~shall~~ must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~specified~~ in Section 218.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.410 Monitoring Requirements for Lithographic Printing

a) Fountain Solution Temperature

1) The owner or operator of any lithographic printing lines relying on the temperature of the fountain solution to demonstrate compliance ~~shall~~ must install, maintain, and continuously operate a temperature monitor of the fountain solution in the reservoir or fountain tray, as applicable.

2) The temperature monitor must be capable of reading with an accuracy of ~~1°C or 2°C~~1 ºC or 2 ºF, and must be attached to an automatic~~,~~ continuous recording device such as a strip chart, recorder, or computer~~,~~ with at least the same accuracy~~,~~ that is installed, calibrated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications. If the automatic~~,~~ continuous recording device malfunctions, the owner or operator ~~shall~~ must record the temperature of the fountain solution at least once every two operating hours. The automatic~~,~~ continuous recording device ~~shall~~ must be repaired or replaced as soon as practicable.

b) Fountain Solution VOM Content. The owner or operator of any lithographic printing lines subject to Section 218.407(a)(1)(A), (a)(2) or (a)(3) ~~of this Subpart shall~~must:

1) For a fountain solution to which VOM is not added automatically:

A) Maintain records of the VOM content of the fountain solution in ~~accordance~~ compliance with Section 218.411(e)(2)(C); or

B) Take a sample of the as-applied fountain solution from the fountain tray or reservoir, as applicable, each time a fresh batch of fountain solution is prepared or each time VOM is added to an existing batch of fountain solution in the fountain tray or reservoir, and ~~shall~~ determine compliance with the VOM content limitation of the as-applied fountain solution by using one of the following options:

i) With a refractometer or hydrometer with a visual, analog, or digital readout and with an accuracy of 0.5 percent. The refractometer or hydrometer must be calibrated with a standard solution for the type of VOM used in the fountain solution, in ~~accordance~~ compliance with manufacturer's specifications, against measurements performed to determine compliance. The refractometer or hydrometer must be corrected for temperature at least once per 8-hour shift or once per batch of fountain solution prepared or modified, whichever is longer; or

ii) With a conductivity meter if it is demonstrated that a refractometer and hydrometer cannot distinguish between compliant and noncompliant fountain solution for the type and amount of VOM in the fountain solution. A source may use a conductivity meter if it demonstrates that both hydrometers and refractometers fail to provide significantly different measurements for standard solutions containing 95 percent, 100 percent, and 105 percent of the applicable VOM content limit. The conductivity meter reading for the fountain solution must be referenced to the conductivity of the incoming water. A standard solution ~~shall~~ must be used to calibrate the conductivity meter for the type of VOM used in the fountain solution, in ~~accordance~~ compliance with manufacturer's specifications;

2) For fountain solutions to which VOM is added at the source with automatic feed equipment, determine the VOM content of the as-applied fountain solution based on the setting of the automatic feed equipment which makes additions of VOM up to a pre-set level. Records ~~must be retained~~ of the VOM content of the fountain solution must be retained in ~~accordance~~ compliance with Section 218.411(e)(2)(D) ~~of this Subpart~~. The equipment used to make automatic additions must be installed, calibrated, operated, and maintained in ~~accordance~~ compliance with

manufacturer's specifications.

c) Afterburners for Heatset Web Offset Lithographic Printing Lines. If an afterburner is used to demonstrate compliance, the owner or operator of a heatset web offset lithographic printing line subject to Section 218.407(a)(1)(C) ~~of this Subpart shall~~must:

1) Install, calibrate, maintain, and operate temperature monitoring devices with an accuracy of ~~3°C or 5°F~~3 ºC or 5 ºF on the afterburner in ~~accordance~~ compliance with Section 218.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the afterburner is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

d) Other Control Devices for Heatset Web Offset Lithographic Printing Lines. If a control device other than an afterburner is used to demonstrate compliance, the owner or operator of a heatset web offset lithographic printing line subject to this Subpart ~~shall~~ must install, maintain, calibrate, and operate ~~such~~ the monitoring equipment ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 218.407(b) ~~of this Subpart~~.

e) Cleaning Solution

1) The owner or operator of any lithographic printing line relying on the VOM content of the cleaning solution to comply with Section 218.407(a)(4)(A) ~~of this Subpart~~ must:

A) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

i) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

ii) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 218.407(a)(4)(A) ~~of this Subpart~~;

B) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the ~~usage~~ use of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 218.411(f)(2) ~~of this Subpart~~.

2) The owner or operator of any lithographic printing line relying on the vapor pressure of the cleaning solution to comply with Section 218.407(a)(4)(B) ~~of this Subpart~~ must keep records for ~~such~~ the cleaning solutions used on any such lines ~~as set forth in~~under Section 218.411(f)(2)(C) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.411 Recordkeeping and Reporting for Lithographic Printing

a) Exempt Units ~~prior to~~before August 1, 2010. An owner or operator of lithographic printing lines exempt from ~~the limitations of~~ Section 218.407 ~~of this Subpart prior to~~before August 1, 2010, because of the criteria in Section 218.405(b) ~~of this Subpart, shall~~must comply with the following:

1) Upon initial start-up of a new lithographic printing line, and upon modification of a lithographic printing line, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from the control requirements in Section 218.407 ~~of this Part~~ because of the criteria in Section 218.405(b) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives, and cleaning solvents, the tests methods and procedures ~~set forth~~ in Section 218.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from fountain solutions and cleaning solvents used on lithographic printing lines at the source, no retention factor is used;

C) Either a declaration that the source, through federally enforceable permit conditions, has limited its maximum theoretical emissions of VOM from all heatset web offset lithographic printing lines (including solvents used for cleanup operations associated with heatset web offset printing lines) at the source to no more than 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices or calculations which demonstrate that the source's total maximum theoretical emissions of VOM do not exceed 90.7 Mg/yr (100 tons/yr). Total maximum theoretical emissions of VOM for a heatset web offset lithographic printing source is the sum of maximum theoretical emissions of VOM from each heatset web offset lithographic printing line at the source. The following equation ~~shall~~ must be used to calculate total maximum theoretical emissions of VOM per calendar year in the absence of air pollution control equipment for each heatset web offset lithographic printing line at the source:

$$E_p = (R \times A \times B) + (C \times D) + 1095 \quad (F \times G \times H)$$

where:

E_p = Total maximum theoretical emissions of VOM from one heatset web offset printing line in units of kg/yr (lb/yr);

A = Weight of VOM per volume of solids of ink with the highest VOM content as applied each year on the printing line in units of kg/l (lb/gal) of solids;

B = Total volume of solids for all inks that can potentially be applied each year on the printing line in units of 1/yr (gal/yr). The method by which the owner or operator accurately calculated the volume of each ink as applied and the amount that can potentially be applied each year on the printing line ~~shall~~ must be described in the certification to the Agency;

C = Weight of VOM per volume of fountain solution with the highest VOM content as applied each year on the printing line in units of kg/l (lb/gal);

D = The total volume of fountain solution that can potentially be used each year on the printing line in units of 1/yr (gal/yr). The method by which the owner or operator accurately calculated the volume of each fountain solution used and the amount that can potentially be used each year on the printing line ~~shall~~ must be described in the certification to the Agency;

F = Weight of VOM per volume of material for the cleanup material or solvent with the highest VOM content as used each year on the printing line in units of kg/l (lb/gal) of ~~such~~ the material;

G = The greatest volume of cleanup material or solvent used in any 8-hour period;

H = The highest fraction of cleanup material or solvent that is not recycled or recovered for offsite disposal during any 8-hour period;

R = The multiplier representing the amount of VOM not retained in the substrate being used. For paper, R = 0.8. For metal, plastic, or other impervious substrates, R = 1.0;

D) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all such tests have been properly conducted in ~~accordance~~ compliance with Section 218.409(c)(1) ~~of this Subpart~~;

2) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines)

at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs. ~~Such~~ This notification ~~shall~~ must include a copy of all records of ~~such~~ the event.

b) Exempt Units on and after August 1, 2010

1) Lithographic Printing Lines Exempt ~~pursuant to~~under Section 218.405(c)(2). By August 1, 2010, or upon initial start-up of a new lithographic printing line, whichever is later, and upon modification of a lithographic printing line, an owner or operator of lithographic printing lines exempt from ~~the limitations in~~ Section 218.407 ~~of this Subpart~~ because of the criteria in Section 218.405(c)(2) ~~of this Subpart shall~~must submit a certification to the Agency that includes the information ~~specified~~ in either subsections (b)(1)(A), (b)(1)(B), and (b)(1)(D) ~~of this Section~~ or subsections (b)(1)(A) and (b)(1)(C) ~~of this Section~~, as applicable. An owner or operator complying with subsection (b)(1)(B) ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(1)(E) ~~of this Section~~. An owner or operator complying with subsection (b)(1)(C) ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(1)(F) ~~of this Section~~:

A) A declaration that the source is exempt from ~~the requirements in~~ Section 218.407 ~~of this Subpart~~ because of the criteria in Section 218.405(c)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source do not equal or exceed 6.8 kg/day (15 lbs/day), before the use of capture systems and control devices, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives and cleaning solvents, the test methods and procedures ~~set forth~~ in Section 218.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from cleaning solutions used on lithographic printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is demonstrated to be less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and the shop towels are kept in closed containers. For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and for shop towels that are not kept in closed containers, no emission adjustment factor is used;

C) As an alternative to the calculations in subsection (b)(1)(B), a statement that the source uses less than the amount of material ~~specified~~ in subsection (b)(1)(C)(i) or (ii), as applicable, during each calendar month. A source may determine that it emits ~~below~~ less than 6.8 kg/day (15 lbs/day) of VOM based upon compliance with ~~such~~ the material use limitations. If the source exceeds this amount of material use in a ~~given~~ calendar month, the owner or operator must, within 15 days after the end of that month, complete the emissions calculations of subsection (b)(1)(B) to determine daily emissions for applicability purposes. If the source ever exceeds this amount of material use for six consecutive calendar months, it is no longer eligible to use this subsection (b)(1)(C) as an alternative to the calculations in subsection (b)(1)(B). If a source has both heatset web offset and either nonheatset web offset or sheetfed lithographic printing operations, or has all three types of printing operations, the owner or operator may not ~~make~~ use ~~of~~ this alternative and must use the calculations in subsection (b)(1)(B).

i) The sum of all sheetfed and nonheatset web offset lithographic printing operations at the source: 242.3 liters (64 gallons) of cleaning solvent and fountain solution additives, combined; or

ii) The sum of all heatset web offset lithographic printing operations at the source: 204.1 kg (450 lbs) of ink, cleaning solvent, and fountain solution additives, combined;

D) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all ~~such~~ tests have been properly conducted in ~~accordance~~ compliance with Section 218.409(c)(1) ~~of this Subpart~~;

E) For sources complying with subsection (b)(1)(B) ~~of this Section~~, notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs. If ~~such~~ emissions of VOM at the source equal or exceed 6.8 kg/day (15 lbs/day) but do not exceed 45.5 kg/day (100 lbs/day), the source ~~shall~~ must comply with ~~the requirements in~~ subsection (b)(2) ~~of this Section~~;

F) For sources complying with subsection (b)(1)(C) ~~of this Section~~, comply with the following:

i) Maintain material use records showing that the source uses less than the amount of material ~~specified~~ in subsections (b)(1)(C)(i) and (b)(1)(C)(ii) during each calendar month, or, if the source exceeds the material use limitations, records showing that the source exceeded the limitations but did not emit 6.8 kg/day (15 lbs/day) or more of VOM, and provide ~~such~~ the records to the Agency upon request. On and after January 1, 2012, ~~such~~ the records ~~shall~~ must include the name, identification number, and VOM content of each cleaning solvent and fountain solution additive used per calendar month, the volume of each cleaning solvent and fountain solution additive used per calendar month for each sheetfed and nonheatset web offset lithographic printing operation, and the weight of each cleaning solvent,

ink, and fountain solution additive used per calendar month for each heatset web offset lithographic printing operation;

ii) Notify the Agency in writing if the source exceeds the material use limitations for six consecutive calendar months, or if the source changes its method of compliance from subsection (b)(1)(C) to subsection (b)(1)(B) ~~of this Section~~, within 30 days after the event occurs;

2) Heatset web offset lithographic printing lines exempt ~~pursuant to~~under Section 218.405(c)(1) but not exempt ~~pursuant to~~under Section 218.405(c)(2). By August 1, 2010, or upon initial start-up of a new heatset web offset lithographic printing line, whichever is later, and upon modification of a heatset web offset lithographic printing line, an owner or operator of heatset web offset lithographic printing lines that are exempt from ~~the limitations in~~ Section 218.407 ~~of this Subpart pursuant to~~under ~~the criteria in~~ Section 218.405(c)(1) ~~of this Subpart~~, but that are not exempt ~~pursuant to the criteria in~~under Section 218.405(c)(2) ~~of this Subpart~~, ~~shall~~ must submit a certification to the Agency that includes the information ~~specified~~ in subsections (b)(2)(A) through (b)(2)(C) ~~of this Section~~. ~~Such~~ The owner or operator ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(2)(D) ~~of this Section~~:

A) A declaration that the source is exempt from the control requirements in Section 218.407 ~~of this Subpart~~ because of the criteria in Section 218.405(c)(1) ~~of this Subpart~~, but is not exempt ~~pursuant to~~under the criteria in Section 218.405(c)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, as follows (the following methodology ~~shall~~ must also be used to calculate whether a source exceeds 45.5 kg/day (100 lbs/day) for ~~purposes of~~ determining eligibility for the exclusions ~~set forth~~ in Section 218.415(c)(3), in ~~accordance~~ compliance with Sections 218.411(g)(2)(A)(i):

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount

by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives, and cleaning solvents, the test methods and procedures ~~set forth~~ in Section 218.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines;

iv) To determine VOM emissions from cleaning solvents used on lithographic printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from cleaning solution in shop towels if the VOM composite vapor pressure of ~~such~~ the cleaning solution is demonstrated to be less than 10 mmHg measured at ~~20°C (68°F)~~20 ºC (68 ºF) and the shop towels are kept in closed containers. For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg measured at ~~20°C (68°F)~~20 ºC (68 ºF) and for shop towels that are not kept in closed containers, no emission adjustment factor is used;

C) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all ~~such~~ tests have been properly conducted in ~~accordance~~ complaince with Section 218.409(c)(1) ~~of this Subpart~~;

D) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs.

c) Unless complying with subsections (b)(1)(C) and (b)(1)(F) ~~of this Section~~, an owner or operator of lithographic printing lines subject to ~~the requirements of~~ subsection (a) or (b) ~~of this Section shall~~must collect and record either the information ~~specified~~ in subsection (c)(1) or (c)(2) ~~of this Section~~ for all lithographic printing lines at the source:

1) Standard recordkeeping, including the following:

A) The name and identification of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

B) A daily record which shows whether a lithographic printing line at the source was in operation on that day;

C) The VOM content and the volume of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

D) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each fountain solution additive, cleaning solvent, and lithographic ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month;

E) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Section~~, as applicable;

2) Purchase and inventory recordkeeping, including the following:

A) The name, identification, and VOM content of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

B) Inventory records from the beginning and end of each month indicating the total volume of each fountain solution additive, lithographic ink, and cleaning solvent to be used on any lithographic printing line at the source;

C) Monthly purchase records for each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line at the source;

D) A daily record which shows whether a lithographic printing line at

the source was in operation on that day;

E) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each fountain solution additive, cleaning solvent, and lithographic ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month based on the monthly inventory and purchase records required to be maintained ~~pursuant to~~under subsections (c)(2)(A), (c)(2)(B), and (c)(2)(C) ~~of this Section~~;

F) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Section~~, as applicable.

d) An owner or operator of a heatset web offset lithographic printing line subject to the control requirements of Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ ~~shall~~must comply with the following:

1) By August 1, 2010, upon initial start-up of a new printing line, and upon initial start-up of a new control device for a heatset web offset printing line, submit a certification to the Agency that includes the following:

A) An identification of each heatset web offset lithographic printing line at the source;

B) A declaration that each heatset web offset lithographic printing line is in compliance with ~~the requirements of~~ Section 218.407(a)(1)(B), (a)(1)(C), (a)(1)(D), and (a)(1)(E) or (b) ~~of this Subpart~~, as appropriate;

C) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ and the date that ~~such~~ the device was first constructed at the source;

D) The control requirements in Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ with which the lithographic printing line is complying;

E) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable; and

F) A declaration that the monitoring equipment required under Section 218.407(a)(1)(D) or (b) ~~of this Subpart~~, as applicable, has been properly installed and calibrated according to manufacturer's specifications;

2) If testing of the afterburner or other approved control device is conducted ~~pursuant to~~under Section 218.409(b) ~~of this Subpart~~, the owner or operator ~~shall~~must, within 90 days after conducting ~~such~~ the testing, submit a copy of all test results to the Agency and ~~shall~~ must submit a certification to the Agency that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the lithographic printing lines are in compliance with Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable, have been properly performed;

B) A statement whether the lithographic printing lines are or are not in compliance with Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable; and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 218.410(c) or (d) ~~of this Subpart~~, as applicable;

3) Except as provided in subsection (d)(3)(D)(ii) ~~of this Section~~, collect and record daily the following information for each heatset web offset lithographic printing line subject to ~~the requirements of~~ Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~:

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 218.410(c) or (d) ~~of this Subpart~~, as applicable;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated printing line;

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages; and

D) A log detailing checks on the air flow direction or air pressure of the dryer and press room to ensure compliance with ~~the requirements~~ of Section 218.407(a)(1)(B) ~~of this Subpart~~ as follows:

i) ~~Prior to~~Before August 1, 2010, at least once per 24-hour period while the line is operating; and

ii) On and after August 1, 2010, at least once per calendar month while the line is operating

4) Notify the Agency in writing of any violation of Section 218.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ within 30 days after the occurrence of ~~such~~ the violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation;

5) If changing its method of compliance between subsections (a)(1)(C) and (b) of Section 218.407 ~~of this Subpart~~, certify compliance for the new method of compliance in ~~accordance~~ compliance with subsection (d)(1) ~~of this Section~~ at least 30 days before making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with ~~the requirements of~~ Section 218.407(a)(1)(B), (a)(1)(C), (a)(1)(D), and (a)(1)(E) ~~of this Subpart~~, or Section 218.407(b) ~~of this Subpart~~, as applicable.

e) An owner or operator of a lithographic printing line subject to Section 218.407(a)(1)(A), (a)(2), or (a)(3) ~~of this Subpart shall~~must:

1) By August 1, 2010, and upon initial start-up of a new lithographic printing line, certify to the Agency that fountain solutions used on each lithographic printing line will be in compliance with the applicable VOM content limitation. ~~Such~~ The certification ~~shall~~ must include:

A) Identification of each lithographic printing line at the source, by type, e.g., heatset web offset, non-heatset web offset, or sheet-fed offset;

B) Identification of each centralized fountain solution reservoir and each lithographic printing line that it serves;

C) A statement that the fountain solution will comply with the VOM content limitations in Section 218.407(a)(1)(A), (a)(2), or (a)(3), as applicable;

D) Initial documentation that each type of fountain solution will comply with the applicable VOM content limitations, including copies of manufacturer's specifications, ~~test results, if any,~~ formulation data and calculations, and any test rsults;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitation, e.g., a refractometer, hydrometer, conductivity meter, or recordkeeping procedures with detailed description of the compliance

methodology; and

F) A sample of the records that will be kept ~~pursuant to~~under subsection (e)(2)~~ of this Section~~.

2) Collect and record the following information for each fountain solution:

A) The name and identification of each batch of fountain solution prepared for use on one or more lithographic printing lines, the lithographic printing lines or centralized reservoir using ~~such~~ the batch of fountain solution, and the applicable VOM content limitation for the batch;

B) If an owner or operator uses a hydrometer, refractometer, or conductivity meter~~, pursuant to~~ under Section 218.410(b)(1)(B)~~,~~ to demonstrate compliance with the applicable VOM content limit in Section 218.407(a)(1)(A), (a)(2), or (a)(3)~~ of this Subpart~~:

i) The date and time of preparation, and each subsequent modification, of the batch;

ii) The results of each measurement taken in ~~accordance~~ compliance with Section 218.410(b)~~ of this Subpart~~;

iii) Documentation of the periodic calibration of the meter in accordance with the manufacturer's specifications, including date and time of calibration, personnel conducting the calibration, identity of standard solution, and resultant reading; and

iv) Documentation of the periodic temperature adjustment of the meter, including date and time of adjustment, personnel conducting the adjustment, and results;

C) If the VOM content of the fountain solution is determined ~~pursuant to~~under Section 218.410(b)(1)(A)~~ of this Subpart~~, for each batch of as-applied fountain solution:

i) Date and time of preparation and each subsequent modification of the batch;

ii) Volume or weight, as applicable, and VOM content of each component used in, or subsequently added to, the fountain solution batch;

iii) Calculated VOM content of the as-applied fountain

solution; and

iv) Any other information necessary to demonstrate compliance with the applicable VOM content limits in Section 218.407(a)(1)(A), (a)(2) and (a)(3) ~~of this Subpart~~, as specified in the source's operating permit;

D) If the VOM content of the fountain solution is determined ~~pursuant to~~under Section 218.410(b)(2) ~~of this Subpart~~, for each setting:

i) VOM content limit corresponding to each setting;

ii) Date and time of initial setting and each subsequent setting;

iii) Documentation of the periodic calibration of the automatic feed equipment in ~~accordance~~ compliance with the manufacturer's specifications; and

iv) Any other information necessary to demonstrate compliance with the applicable VOM content limits in Section 218.407(a)(1)(A), (a)(2) and (a)(3) ~~of this Subpart~~, as specified in the source's operating permit;

E) If the owner or operator relies on the temperature of the fountain solution to comply with ~~the requirements in~~ Section 218.407(a)(1)(A)(ii) or (a)(3)(B) ~~of this Subpart~~:

i) The temperature of the fountain solution at each printing line, as monitored in ~~accordance~~ compliance with Section 218.410(a); and

ii) A maintenance log for the temperature monitoring devices and automatic~~,~~ continuous temperature recorders detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) Notify the Agency in writing of any violation of Section 218.407 ~~of this Subpart~~ within 30 days after the occurrence of ~~such~~ the violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation.

f) For lithographic printing line cleaning operations, an owner or operator of a lithographic printing line subject to ~~the requirements of~~ Section 218.407 ~~of this Subpart shall~~must:

1) By August 1, 2010, and upon initial start-up of a new lithographic printing

line, certify to the Agency that all cleaning solutions, other than those excluded ~~pursuant to~~under Section 218.405(c)(3)(C), and the handling of all cleaning materials, will be in compliance with ~~the requirements of~~ Section 218.407(a)(4)(A) or (a)(4)(B) and (a)(5). ~~of this Subpart, and such~~The certification ~~shall~~ must also include:

A) A statement that the cleaning solution will comply with the limitations in Section 218.407(a)(4);

B) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

C) A sample of the records that will be kept ~~pursuant to~~under subsection (f)(2) ~~of this Section~~; and

D) A description of the practices that ensure that VOM-containing cleaning materials are kept in closed containers;

2) Collect and record the following information for each cleaning solution used on each lithographic printing line:

A) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.407(a)(4)(A) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.409(c) ~~of this Subpart~~;

iii) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

iv) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

v) The VOM content of the as-used cleaning solution, with supporting calculations; and

vi) A calibration log for the automatic equipment, detailing periodic checks;

B) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.407(a)(4)(A) ~~of this Subpart~~, and that is not prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.409(c) ~~of this Subpart~~;

iv) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

v) The VOM content of the as-used cleaning solution, with supporting calculations. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM content may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 218.105(a) ~~of this Part~~;

C) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 218.407(a)(4)(B) ~~of this Subpart~~:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 218.409(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 218.105(a) and 218.110 ~~of this Part~~;

iv) The total amount of each cleaning solvent used to prepare the as-used cleaning solution; and

v) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 218.409(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 218.105(a) and 218.110 ~~of this Part~~;

D) The date, time, and duration of scheduled inspections performed to confirm the proper use of closed containers to control VOM emissions, and any instances of improper use of closed containers, with descriptions of actual practice and corrective action taken, if any;

3) Notify the Agency in writing of any violation of Section 218.407 ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation.

g) The owner or operator of lithographic printing lines subject to one or more of the exclusions ~~set forth~~ in Section 218.405(c)(3) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new lithographic printing line that is subject to one or more of the exclusions ~~set forth~~ in Section 218.405(c)(3), whichever is later, submit a certification to the Agency that includes either:

A) A declaration that the source is subject to one or more of the exclusions ~~set forth~~ in Section 218.405(c)(3) and a statement indicating which ~~such~~ exclusions apply to the source; or

B) A declaration that the source will not make use of any of the exclusions ~~set forth~~ in Section 218.405(c)(3);

2) Unless the source has certified in ~~accordance~~ compliance with subsection (g)(1)(B) ~~of this Section~~ that it will not make use of any of the exclusions ~~set forth~~ in Section 218.405(c)(3):

A) Collect and record the following information for all lithographic printing lines at the source:

i) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, determined in ~~accordance~~ compliance with the calculations in subsection (b)(2)(B) ~~of this Section~~;

ii) The name, identification, and volume of all cleaning materials used per calendar month on lithographic printing lines at the source that do not comply with the cleaning material limitations in Section 218.407(a)(4) ~~of this Subpart~~;

B) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs;

3) If changing from ~~utilization of~~using the exclusions ~~set forth~~ in Section 218.405(c)(3) to opting out of ~~such~~ the exclusions ~~pursuant to~~under subsection (g)(1)(B) ~~of this Section~~, or if there is a change at the source such that the exclusions no longer apply, certify compliance in ~~accordance~~ compliance with subsection (g)(1)(B) ~~of this Section~~ within 30 days after making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with the applicable requirements of Section 218.407 ~~of this Subpart~~;

4) If changing from opting out of the exclusions ~~set forth~~ in Section 218.405(c)(3) ~~pursuant to~~under subsection (g)(1)(B) ~~of this Section~~ to ~~utilization of such~~using the exclusions, certify compliance in ~~accordance~~ compliance with subsection (g)(1)(A) ~~of this Section~~ within 30 days after making ~~such~~ the change.

h) The owner or operator ~~shall~~ must maintain all records required by this Section at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all records available to the Agency upon request.

i) Provisions for Calculation of Emissions from Heatset Web Offset Lithographic Printing Operations. To calculate VOM emissions from heatset web offset lithographic printing operations for purposes other than the applicability thresholds ~~specified~~ in Section 218.405 ~~of this Subpart~~, sources may use the

following emission adjustment factors (for Annual Emissions Reports or permit limits, for example):

1) A factor of 0.80 may be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines;

2) To determine VOM emissions from fountain solutions that contain no alcohol, an emission adjustment factor may be used to account for carryover into the dryer, except when using an impervious substrate.

A) The VOM emitted from the fountain solution ~~shall~~ must be calculated using the following equation:

$$VOM_{fs} = 0.30 \times VOM_{tot} + (0.70 \times VOM_{tot}) = \times (1 - DE)$$

where:

VOM_{tot} = Total VOM in the fountain solution;

VOM_{fs} = VOM emitted from the fountain solution;

DE = Destruction efficiency of the control device on the associated dryer, in decimal form (i.e., 95% control is represented as 0.95). If no control device is present, DE = 0;

B) For fountain solutions that contain alcohol, impervious substrates such as metal or plastic, or non-heatset lithographic presses, no emission adjustment factor is used;

3) To determine VOM emissions from cleaning solutions used on heatset web offset lithographic printing lines at the source, an emission adjustment factor of 0.50 may be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and the shop towels are kept in closed containers. To determine VOM emissions from automatic blanket wash solution with a VOM composite vapor pressure of less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F), an emission adjustment factor may be used to account for carryover into the dryer, except when using an impervious substrate.

A) The VOM emitted from the automatic blanket wash solution ~~shall~~ must be calculated using the following equation.

$$VOM_{bw} = 0.60 \times VOM_{tot} + (0.40 \times VOM_{tot}) \times (1 - DE)$$

where:

VOM_{tot}	=	Total VOM in the blanket wash;
VOM_{tow}	=	VOM emitted from the blanket wash;
DE	=	Destruction efficiency of the control device on the associated dryer, in decimal form (i.e., 95% control is represented as 0.95). If no control device is present, DE = 0;

B) For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F), for shop towels that are not kept in closed containers, and for impervious substrates such as metal or plastic, no emission adjustment factor is used.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.412 Letterpress Printing Lines: Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after August 1, 2010, the limitations in Sections 218.413 through 218.416 ~~of this Subpart shall~~ apply to:

1) All heatset web letterpress printing lines at a source if all heatset web letterpress printing lines (including solvents used for cleanup operations associated with heatset web letterpress printing lines) at the source have a total potential to emit 22.7 Mg (25 tons) or more of VOM per year; and

2) All letterpress printing lines at a source where the combined emissions of VOM from all letterpress printing lines at the source (including solvents used for cleanup operations associated with the letterpress printing lines) ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, calculated in ~~accordance~~ compliance with Section 218.417(b)(1)(B).

b) Notwithstanding subsection (a) ~~of this Section~~, the requirements of Section 218.413(a)(2) ~~of this Subpart shall~~do not apply to up to 416.3 liters (110 gallons) per year of cleaning materials used on letterpress printing lines at a subject source.

c) On and after August 1, 2010, the recordkeeping and reporting requirements in Section 218.417 ~~of this Subpart shall~~ apply to all owners or operators of letterpress printing lines.

d) If a letterpress printing line at a source is or becomes subject to one or more of the limitations in Section 218.413 ~~of this Subpart~~, the letterpress printing lines at the source are always subject to the applicable provisions of this Subpart.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.413 Emission Limitations and Control Requirements for Letterpress Printing Lines

a) ~~No~~ An owner or operator of letterpress printing lines subject to ~~the requirements of~~ this Subpart ~~shall~~must not:

1) Cause or allow the operation of any heatset web letterpress printing line that meets the applicability requirements of Section 218.412(a)(1) unless:

A) The air pressure in the dryer is maintained lower than the air pressure of the press room, such that air flow through all openings in the dryer, other than the exhaust, is into the dryer at all times when the printing line is operating;

B) An afterburner is installed and operated so that VOM emissions (excluding methane and ethane) from the press dryer exhausts are reduced as follows:

i) By 90 percent, by weight, for afterburners first constructed at the source ~~prior to~~before January 1, 2010;

ii) By 95 percent, by weight, for afterburners first constructed at the source on or after January 1, 2010; or

iii) To a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon);

C) The afterburner complies with all monitoring provisions ~~specified~~ in Section 218.416(a) ~~of this Subpart~~; and

D) The afterburner is operated at all times when the printing line is in operation, except the afterburner may be shut down between November 1 and April 1 ~~as provided in~~under Section 218.107 ~~of this Part~~;

2) Cause or allow the use of a cleaning solution on any letterpress printing line unless:

A) The VOM content of the as-used cleaning solution is less than or equal to 70 percent, by weight; or

B) The VOM composite partial vapor pressure of the as-used cleaning solution is less than 10 mmHg at ~~20°C (68°F)~~20 °C (68 °F);

3) Cause or allow VOM-containing cleaning materials, including used cleaning towels, associated with any letterpress printing line to be kept, stored, or disposed of in any manner other than in closed containers, except when specifically in use.

b) An owner or operator of a heatset web letterpress printing line subject to ~~the requirements of~~ subsection (a)(1)(B) ~~of this Section~~ may use a control device other than an afterburner, if:

1) The control device reduces VOM emissions from the press dryer exhausts as follows:

A) By 90 percent, by weight, for control devices first constructed at the source ~~prior to~~before January 1, 2010;

B) By 95 percent, by weight, for control devices first constructed at the source on or after January 1, 2010; or

C) To a maximum control device exhaust outlet concentration of 20 ppmv (as carbon);

2) The owner or operator submits a plan to the Agency detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; and

3) The use of the control device in ~~accordance~~ compliance with this plan is approved by the Agency and USEPA as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.415 Testing for Letterpress Printing Lines

a) Testing to demonstrate compliance with ~~the requirements of~~ Section 218.413 ~~of this Subpart shall~~must be conducted by the owner or operator by January 1, 2012, unless ~~such~~ the testing has been conducted within the two years immediately preceding January 1, 2012. ~~Thereafter, testing shall~~Testing must then be conducted by the owner or operator within 90 days after a request by the Agency, or as otherwise specified in this Subpart. ~~Such~~ The testing ~~shall~~ must be

conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting ~~such~~ the testing to allow the Agency to be present during ~~such~~ the testing.

b) The methods and procedures of Section 218.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

C) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust

concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

4) Notwithstanding the criteria or requirements in Method 25 which ~~specifies~~ specify a minimum probe temperature of ~~129°C (265°F)~~129 °C (265 °F), the probe must be heated to at least the gas stream temperature of the dryer exhaust, typically close to ~~176.7°C (350°F)~~176.7 °C (350 °F);

5) During testing, the printing lines ~~shall~~ must be operated at representative operating conditions and flow rates; and

6) During testing, an air flow direction indicating device~~,~~ such as a smoke stick ~~shall~~ must be used to demonstrate 100 percent emissions capture efficiency for the dryer in ~~accordance~~ compliance with Section 218.413(a)(1)(A) ~~of this Subpart~~.

c) Testing to demonstrate compliance with the VOM content limitations in Section 218.413(a)(2)(A) ~~of this Subpart,~~ and to determine the VOM content of cleaning solvents, cleaning solutions, and inks (~~pursuant to the requirements of~~under Section 218.417(b)(1)(B) ~~of this Subpart~~), ~~shall~~ must be conducted upon request of the Agency, or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures specified in Section 218.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24, incorporated by reference in Section 218.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) The manufacturer's specifications for VOM content for cleaning solvents and inks may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 218.105(a) ~~of this Part~~; ~~provided,~~ however, Method 24 ~~shall~~ must be used to determine compliance.

d) Testing to demonstrate compliance with ~~the requirements of~~ Section 218.413(b) ~~of this Subpart shall~~must be conducted ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA as federally enforceable permit conditions ~~pursuant to~~under Section 218.413(b) ~~of this Subpart~~.

e) Testing to determine the VOM composite partial vapor pressure of cleaning solvents, cleaning solvent concentrates, and as-used cleaning solutions ~~shall~~ must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~specified~~ in Section 218.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.416 Monitoring Requirements for Letterpress Printing Lines

a) Afterburners for Heatset Web Letterpress Printing Lines. If an afterburner is used to demonstrate compliance, the owner or operator of a heatset web letterpress printing line subject to Section 218.413(a)(1)(B) ~~of this Subpart shall~~must:

1) Install, calibrate, maintain, and operate temperature monitoring devices with an accuracy of ~~3ºC or 5ºF~~3 ºC or 5 ºF on the afterburner in ~~accordance~~ compliance with Section 218.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the afterburner is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

b) Other Control Devices for Heatset Web Letterpress Printing Lines. If a control device other than an afterburner is used to demonstrate compliance, the owner or operator of a heatset web letterpress printing line subject to this Subpart ~~shall~~ must install, maintain, calibrate, and operate ~~such~~ the monitoring equipment ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 218.413(b) ~~of this Subpart~~.

c) Cleaning Solution

1) The owner or operator of any letterpress printing line relying on the VOM content of the cleaning solution to comply with Section 218.413(a)(2)(A) ~~of this Subpart~~ must:

A) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

i) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

ii) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 218.413(a)(2)(A) ~~of this Subpart~~;

B) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the ~~usage~~ use of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 218.417(c)(2) ~~of this Subpart~~.

2) The owner or operator of any letterpress printing line relying on the vapor pressure of the cleaning solution to comply with Section 218.413(a)(2)(B) ~~of this Subpart~~ must keep records for ~~such~~ the cleaning solutions used on any such lines ~~as set forth in~~under Section 218.417(e)(2)(C) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.417 Recordkeeping and Reporting for Letterpress Printing Lines

a) By August 1, 2010, or upon initial start-up of a new heatset web letterpress printing line, whichever is later, and upon modification of a heatset web letterpress printing line, an owner or operator of a heatset web letterpress printing line exempt from any of the limitations of Section 218.413 ~~of this Subpart~~ because of the criteria in Section 218.412(a)(1) ~~shall~~ must submit a certification to the Agency that includes:

1) A declaration that the source is exempt from ~~the requirements in~~ Section 218.413 ~~of this Subpart~~ because of the criteria in Section 218.412(a)(1) ~~of this Subpart~~;

2) Calculations which demonstrate that the source's total potential to emit VOM does not equal or exceed 22.7 Mg (25 tons) per year.

b) An owner or operator of a letterpress printing line exempt from any of the limitations of Section 218.413 ~~of this Subpart~~ because of the criteria in Section 218.412(a)(2) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new letterpress printing line, whichever is later, and upon modification of a letterpress printing line, submit a certification to the Agency that includes the information ~~specified~~ in ~~either~~ subsections (b)(1)(A) through (b)(1)(C) ~~of this Section,~~ or subsections (b)(1)(A) and (b)(1)(D) ~~of this Section~~, as applicable:

A) A declaration that the source is exempt from the control requirements in Section 218.413 ~~of this Part~~ because of the criteria in Section 218.412(a)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all letterpress printing lines (including inks and solvents used for cleanup operations associated with the letterpress printing

lines) at the source never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all letterpress printing lines at the source (including solvents used for cleanup operations associated with the letterpress printing lines) and divide this amount by the number of days during that calendar month that letterpress printing lines at the source were in operation;

ii) To determine the VOM content of the inks and cleaning solvents, the tests methods and procedures ~~set forth~~ in Section 218.415(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on letterpress printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from cleaning solutions used on letterpress printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and the shop towels are kept in closed containers. Otherwise, no retention factor is used;

C) A description and the results of all tests used to determine the VOM content of inks and cleaning solvents, and a declaration that all such tests have been properly conducted in ~~accordance~~ compliance with Section 218.415(c)(1) ~~of this Subpart~~;

D) As an alternative to the calculations in subsection (b)(1)(B), a statement that the source uses less than the amount of material ~~specified~~ in subsections (b)(1)(D)(i) or (b)(1)(D)(ii), as applicable, during each calendar month. A source may determine that it emits

~~below~~ less than 6.8 kg/day (15 lbs/day) of VOM based upon compliance with ~~such~~ the material use limitations. If the source exceeds this amount of material use in a ~~given~~ calendar month, the owner or operator must, within 15 days ~~of~~ after the end of that month, complete the emissions calculations of subsection (b)(1)(B) to determine daily emissions for applicability purposes. If the source ever exceeds this amount of material use for six consecutive calendar months, it is no longer eligible to use this subsection as an alternative to the calculations in subsection (b)(1)(B).

i) The sum of all sheetfed and nonheatset web letterpress printing operations at the source: 242.3 liters (64 gallons) of cleaning solvent; or

ii) The sum of all heatset web letterpress printing operations at the source: 204.1 kg (450 lbs) of ink and cleaning solvent;

2) For sources complying with subsection (b)(1)(B) ~~of this Section~~, notify the Agency in writing if the combined emissions of VOM from all letterpress printing lines (including inks and solvents used for cleanup operations associated with the letterpress printing lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs;

3) For sources complying with subsection (b)(1)(D) ~~of this Section~~, comply with the following:

A) Maintain material use records showing that the source uses less than the amount of material ~~specified~~ in subsections (b)(1)(D)(i) and (b)(1)(D)(ii) during each calendar month, or, if the source exceeds the material use limitations, records showing that the source exceeded the limitations but did not emit 6.8 kg/day (15 lbs/day) or more of VOM. On and after January 1, 2012, ~~such~~ the records ~~shall~~ must include the name, identification number, and VOM content of each cleaning solvent and ink used per calendar month, the volume of each cleaning solvent used per calendar month for each sheetfed and nonheatset web letterpress printing operation, and the weight of each cleaning solvent and ink used per calendar month for each heatset web letterpress printing operation;

B) Notify the Agency in writing if the source exceeds the material use limitations for six consecutive calendar months, or if the source changes its method of compliance from subsection (b)(1)(D) to subsection (b)(1)(B) ~~of this Section~~, within 30 days after the event occurs.

c) Unless complying with subsections (b)(1)(D) and (b)(3) ~~of this Section~~, on and after August 1, 2010, an owner or operator of a letterpress printing line exempt from any of the limitations in Section 218.413 ~~of this Subpart~~ because of the criteria in Section 218.412(a)(1) or (a)(2) ~~shall~~ must collect and record either the information ~~specified~~ in subsection (c)(1) or (c)(2) ~~of this Section~~ for all letterpress printing lines at the source:

1) Standard recordkeeping, including the following:

A) The name and identification of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

B) A daily record that shows whether a letterpress printing line at the source was in operation on that day;

C) The VOM content and the volume of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

D) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each cleaning solvent and letterpress ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month; and

E) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (b)(1)(B) ~~of this Section~~;

2) Purchase and inventory recordkeeping, including the following:

A) The name, identification, and VOM content of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

B) Inventory records from the beginning and end of each month indicating the total volume of each letterpress ink, and cleaning solvent to be used on any letterpress printing line at the source;

C) Monthly purchase records for each letterpress ink and cleaning solvent used on any letterpress printing line at the source;

D) A daily record that shows whether a letterpress printing line at the source was in operation on that day;

E) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each

cleaning solvent and letterpress ink (with the applicable ink VOM emission adjustment factor) used at the source, calculated each month based on the monthly inventory and purchase records required to be maintained ~~pursuant to~~under subsections (c)(2)(A), (c)(2)(B), and (c)(2)(C) ~~of this Section~~; and

F) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (b)(1)(B) ~~of this Section~~;

d) An owner or operator of a heatset web letterpress printing lines subject to the control requirements of Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ ~~shall~~must comply with the following:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, and upon initial start-up of a new control device for a heatset web printing line, submit a certification to the Agency that includes the following:

A) An identification of each heatset web letterpress printing line at the source;

B) A declaration that each heatset web letterpress printing line is in compliance with ~~the requirements of~~ Section 218.413 (a)(1) or (b) ~~of this Subpart~~, as appropriate;

C) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, and the date that ~~such~~ the device was first constructed at the subject source;

D) The control requirements in Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ with which the letterpress printing line is complying;

E) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable; and

F) A declaration that the monitoring equipment required under Section 218.413(a)(1)(C) or (b) ~~of this Subpart~~, as applicable, has been properly installed and calibrated according to manufacturer's specifications;

2) If testing of the afterburner or other approved control device is conducted ~~pursuant to~~under Section 218.415(b) ~~of this Subpart~~, the owner or operator ~~shall~~must, within 90 days after conducting ~~such~~ the testing, submit a copy

of all test results to the Agency and ~~shall~~ must submit a certification to the Agency that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the letterpress printing lines is in compliance with Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable, have been properly performed;

B) A statement whether the heatset web letterpress printing lines are or are not in compliance with Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable; and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 218.416(a) or (b) ~~of this Subpart~~, as applicable;

3) Except as provided in subsection (d)(3)(D) ~~of this Section~~, collect and record daily the following information for each heatset web letterpress printing line subject to ~~the requirements of~~ Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~:

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 218.416(a) or (b) ~~of this Subpart~~, as applicable;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated printing line;

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages; and

D) A log detailing checks on the air flow direction or air pressure of the dryer and press room to ensure compliance with ~~the requirements of~~ Section 218.413(a)(1)(A) ~~of this Subpart~~ at least once per calendar month while the line is operating;

4) Notify the Agency in writing of any violation of Section 218.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation;

5) If changing the method of compliance between Sections 218.413(a)(1)(B) and 218.413(b) ~~of this Subpart~~, certify compliance for the new method of compliance ~~in accordance with~~under Section 218.413(b) at least 30 days before making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with ~~the requirements of~~ Section 218.413(a)(1) ~~of this Subpart~~, or Section 218.413(b) ~~of this Subpart~~, as applicable.

e) For letterpress printing line cleaning operations, an owner or operator of a letterpress printing line subject to ~~the requirements of~~ Section 218.413 ~~of this Subpart shall~~must:

1) By August 1, 2010, or upon initial start-up of a new letterpress printing line, whichever is later, certify to the Agency that all cleaning solutions, other than those excluded ~~pursuant to~~under Section 218.412(b), and the handling of all cleaning materials will be in compliance with ~~the requirements of~~ Section 218.413(a)(2)(A) or (a)(2)(B) and (a)(3) ~~of this Subpart~~. ~~Such~~ The certification ~~shall~~ must include:

A) A statement that the cleaning solution will comply with the limitations in Section 218.413(a)(2);

B) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

C) A sample of the records that will be kept ~~pursuant to~~under subsection (e)(2) ~~of this Section~~; and

D) A description of the practices that ensure that VOM-containing cleaning materials are kept in closed containers;

2) Collect and record the following information for each cleaning solution used on each letterpress printing line:

A) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.413(a)(2)(A) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.415(c) ~~of this Subpart~~;

iii) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

iv) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

v) The VOM content of the as-used cleaning solution, with supporting calculations; and

vi) A calibration log for the automatic equipment, detailing periodic checks;

B) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.413(a)(2)(A) ~~of this Subpart~~, and that is not prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.415(c) ~~of this Subpart~~;

iv) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

v) The VOM content of the as-used cleaning solution, with supporting calculations. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM content may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 218.105(a~~) of this Part~~;

C) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 218.413(a)(2)(B) ~~of this Subpart~~:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 218.415(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 218.105(a) and 218.110 ~~of this Part~~;

iv) The total amount of each cleaning solvent used to prepare the as-used cleaning solution; and

v) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 218.415(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 218.105(a) and 218.110 ~~of this Part~~;

D) The date, time, and duration of scheduled inspections performed to confirm the proper use of closed containers to control VOM emissions, and any instances of improper use of closed containers, with descriptions of actual practice and corrective action taken, if any;

E) The amount of cleaning materials used on letterpress printing lines at the source that do not comply with the cleaning material limitations ~~set forth~~ in Section 218.413(a)(2) ~~of this Subpart~~;

3) Notify the Agency in writing of any violation of Section 218.413 ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation.

f) The owner or operator ~~shall~~ must maintain all records required by this Section at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all records available to the Agency upon request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART Q: LEAKS FROM SYNTHETIC ORGANIC CHEMICAL AND POLYMER MANUFACTURING PLANT

Section 218.421 General Requirements

The owner or operator of a plant which processes more than 3660 mg/yr (4033 tons/year) gaseous and light liquid VOM, and whose components are used to manufacture the synthetic organic chemicals or polymers listed in Appendix A, ~~shall~~ must comply with this Subpart. ~~The provisions of this~~This Subpart ~~are applicable~~applies to components containing 10 percent or more by weight VOM as determined by ASTM ~~method~~ methods E-168, E-169 and E-260, incorporated by reference in Section 218.112~~ of this Part~~. Those components that are not process unit components are exempt from this Subpart. A component ~~shall be~~is considered to be leaking if the VOM is equal to~~,~~ or ~~is~~ greater than 10,000 ppmv as methane or hexane as determined by USEPA Reference Method 21, ~~as specified at~~ 40 CFR 60, Appendix A, incorporated by reference in Section 218.112~~ of this Part~~, there is an indication of liquids dripping, or ~~indication by~~ a sensor indicares that a seal or barrier fluid system has failed. ~~The provisions of this~~This Subpart ~~are~~ does not ~~applicable~~ apply if the equipment components are used to produce heavy liquid chemicals only from heavy liquid feed or raw materials.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.422 Inspection Program Plan for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 218.421 ~~of this Part shall~~must prepare an inspection program plan which contains, at a minimum:

a) An identification of all components and the period in which each will be monitored ~~pursuant to~~under Section 218.423~~ of this Part~~.

b) The format for the monitoring log required by Section 218.425~~ of this Part~~.

c) A description of the monitoring equipment to be used when complying with Section 218.423~~ of this Part~~; and

d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service, all leaking components, and components exempted under Section 218.423(j) ~~of this Part such~~so that they are obvious and can be located by both plant personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.423 Inspection Program for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to this Subpart ~~shall~~must, for the ~~purposes~~ purpose of detecting leaks, conduct a component inspection program using the test methods ~~specified~~ in Method 21, 40 CFR 60, Appendix A (1986), incorporated by reference in Section 218.112 ~~of this Part~~, consistent with the following provisions:

a) Test annually those components operated near extreme temperature or pressure such that they would be unsafe to routinely monitor and those components which would require ~~the elevation of~~elevating monitoring personnel higher than two meters above permanent worker access structures or surfaces.

b) Test quarterly all other pressure relief valves in gas service, pumps in light liquid service, valves in light liquid service and in gas service, and compressors.

c) If ~~less than or equal to~~ 2 percent or fewer of the valves in light liquid service and in gas service tested ~~pursuant to~~under subsection (b) ~~of this Section~~ are found to leak for five consecutive quarters, no leak tests shall be required for the next three consecutive quarters. ~~Thereafter, leak~~Leak tests ~~shall~~ must resume for the next quarter. If that test shows ~~less than or equal to~~ 2 percent or fewer of the valves in light liquid service and in gas service are leaking, then no tests are required for the next three quarters. If more than 2 percent are leaking, then tests are required for the next five quarters.

d) Observe visually all pump seals weekly.

e) Test immediately any pump seal from which liquids are observed dripping.

f) Test any relief valve within 24 hours after it has vented to the atmosphere.

g) Routine instrument monitoring of flanges, valves which are not externally regulated, ~~flanges,~~ and equipment in heavy liquid service~~,~~ is not required. However, any flange, valve which is not externally regulated, ~~flange~~ or piece of equipment in heavy liquid service that is found to be leaking on the basis of sight, smell, or sound ~~shall~~ must be repaired as soon as practicable but no later than 30 days after the leak is found.

h) Test immediately after repair any component that was found leaking.

i) Within one hour of ~~its detection~~detecting a leak, a weatherproof~~,~~ readily visible tag~~,~~ in bright colors such as red or yellow~~,~~ bearing an identification number and the date on which the leak was detected, must be affixed on the leaking component and remain in place until the leaking component is repaired.

j) The following components are exempt from the monitoring requirements in this Section:

1) Any component that is in vacuum service, and

2) Any pressure relief valve that is connected to an operating flare header or vapor recovery device.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.424 Repairing Leaks

All leaking components must be repaired and retested as soon as practicable but no later than 15 days after the leak is found unless the leaking component cannot be repaired until the process unit is shut down. Records of repairing and retesting must be maintained in ~~accordance~~ compliance with ~~Section~~ Sections 218.425 and 218.426 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.425 Recordkeeping for Leaks

a) The owner or operator of a synthetic organic chemical or polymer manufacturing plant ~~shall~~ must maintain a leaking components monitoring log which ~~shall~~ must contain, at a minimum, the following information:

1) The name of the process unit where the component is located;

2) The type of component (e.g., valve, seal);

3) The identification number of the component;

4) The date on which a leaking component is discovered;

5) The date on which a leaking component is repaired;

6) The date and instrument reading of the recheck procedure after a leaking component is repaired;

7) A record of the calibration of the monitoring instrument;

8) The identification number of leaking components which cannot be repaired until process unit shutdown; and

9) The total number of valves in light liquid service and in gas service inspected; and the total number and ~~the~~ percentage of these valves found leaking during the monitoring period.

b) Copies of the monitoring log ~~shall~~ must be retained by the owner or operator for a minimum of two years after the date on which the record was made or the report was prepared.

c) Copies of the monitoring log ~~shall~~ must be made available to the Agency, upon verbal or written request, ~~prior to~~before or at the time of inspection ~~pursuant to~~under Section 4(d) of the Environmental Protection Act ~~(Act) (Ill. Rev. Stat. 1991, ch. 111 1/2, pars. 1001 et seq.) [415 ILCS 5/1 et seq.]~~[415 ILCS 5/4(d)] at any reasonable time.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.426 Report for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 218.421 through 218.430 ~~of this Part shall~~must:

a) Submit quarterly reports to the Agency on or before March 31, June 30, September 30, and December 31 of each year, listing the following:

1) all leaking components identified ~~pursuant to~~under Section 218.423 ~~of this Part~~ but not repaired within 15 days~~,~~;

2) all leaking components awaiting process unit shutdown~~,~~;

3) the total number of components inspected~~,~~;

4) the type of components inspected~~, and~~;

5) the total number of components found leaking~~,~~;

6) the total number of valves in light liquid service and in gas service inspected; and

7) the number and percentage of valves in light liquid service and in gas service found leaking.

b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Section 218.421 through 218.427 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.427 Alternative Program for Leaks

The Agency ~~shall~~ may approve an alternative program of monitoring, recordkeeping, or reporting to that prescribed in this Subpart ~~upon a demonstration by the owner or operator of~~

~~such plant~~if an owner or operator of a plant demonstrates that the alternative program will provide source personnel and Agency personnel with an equivalent ability to identify and repair leaking components. Any alternative program can be allowed if approved by the Agency and approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.428 Open-Ended Valves

a) Each open-ended valve ~~shall~~ must be equipped with a cap, blind flange, plug, or a second valve, except during operations requiring fluid flow through the open-ended valve.

b) Each open-ended valve equipped with a second valve ~~shall~~ must be operated in a manner such that the valve on the process fluid end is closed before the second valve is closed.

c) Components which are open-ended valves and which serve as a sampling connection ~~shall~~ must be controlled such that they comply with subsection (c)(1), (c)(2), or (c)(3) ~~below~~. This requirement does not apply to in-situ sampling systems.

1) A closed purge system or closed vent system ~~shall~~ must return purged process fluid to the process line with no detectable VOM emissions to the atmosphere, or

2) A closed purge system or closed vent system ~~shall~~ must collect and recycle purged process fluid to the process line with no detectable VOM emissions to the atmosphere, or

3) Purged process fluid ~~shall~~ must be transported to a control device that complies with ~~the requirements of~~ Section 218.429 ~~of this Part~~. If a container is used to transport purged process fluid to the control device, the container ~~shall~~ must be a closed container designed and used to reduce the VOM emissions vented from purged process fluid after transfer to no detectable VOM emissions as determined by USEPA Reference Method 21, ~~as specified in~~ 40 CFR 60, Appendix A (1990 or 1991), incorporated by reference in Section 218.112 ~~of this Part~~. For purposes of this Section, the phrase "after transfer" ~~shall refer~~refers to the time at which the entire amount of purged process fluid resulting from a flushing or cleaning of the sample line enters the container~~, provided,~~; however, that purged process fluid may be transferred from the initial container to another closed container ~~prior to~~before disposal, e.g., to a bulk waste storage container.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.429 Standards for Control Devices

Control devices used to comply with Section 218.428(c) ~~of this Part shall~~must comply with the following:

a) If the control device is a vapor recovery system (for example, condensers and adsorbers), it ~~shall~~ must be designed and operated to recover the VOM emissions vented to it with an efficiency of 95 percent or greater.

b) If the control device is an enclosed combustion device, it ~~shall~~ must be designed and operated to reduce the VOM emissions vented to it with an efficiency of 95 percent or greater, or to provide a minimum residence time of 0.75 seconds at a minimum temperature of ~~816° C~~816 ºC.

c) If the control device is a flare, it ~~shall~~must:

1) Be designed for and operated with no visible emissions as determined by USEPA Reference Method 22, 40 CFR 60, Appendix A (1986), incorporated by reference in Section 218.112, except for periods not to exceed a total of 5 minutes during any 2 consecutive hours.

2) Be operated with a pilot flame present at all times and ~~shall~~ must be monitored with a thermocouple or any other equivalent device to detect the presence of the pilot flame.

3) Be steam-assisted, air assisted, or nonassisted.

4) Be used only with the net heating value of the gas being combusted being 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or with the net heating value of the gas being combusted being 7.45 MJ/scm or greater if the flare is nonassisted. The net heating value of the gas being combusted ~~shall~~ must be calculated using the following equation:

$$H_r = K \sum_{i=1}^{n} C_i H_i$$

Where:

H_r = Net heating value of the sample in MJ/scm; where the net enthalpy per mole of offgas is based on combustion at ~~25ºC~~ 25 ºC and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20ºC~~20 ºC;

K = Constant, 1.740×10^{-7} (1/ppm) (g-mole/scm) (MJ/Kcal)

where

standard temperature for (g-mole/scm) is ~~20°C~~20 °C;

C_i = Concentration of sample component i, in ppm, as measured by USEPA Reference Method 18, 40 CFR 60, Appendix A (1986), and ASTM D 2504-83, both incorporated by reference in Section 218.112;

H_i = Net heat of combustion of sample component i, kcal/g mole. The heats of combustion may be determined using ASTM D 2382-83, incorporated by reference in Section 218.112 ~~of this Part~~, if published values are not available or cannot be calculated.

5) Steam-assisted and nonassisted flares ~~shall~~ must be designed and operated with an exit velocity, as determined by dividing the volumetric flowrate (in units of standard temperature and pressure), as determined by USEPA Reference Method 2 or 2A, 40 CFR 60, Appendix A (1986) incorporated by reference in Section 218.112 ~~of this Part~~, as appropriate, by the unobstructed (free) cross sectional area of the flare tip, less than 18 m/sec (60 ft/sec).

6) Air-assisted flares ~~shall~~ must be designed and operated with an exit velocity less than the maximum permitted velocity, V_{max}, as determined by the following equation:

$V_{max} = 8.706 + 0.7084 (H_r)$;

V_{max} = Maximum permitted velocity, m/sec;

8.706 = Constant;

0.7084 = Constant;

H_r = The net heating value as determined in subsection (c) (4) ~~of this Section~~.

d) The owner or operator must maintain the following information pertaining to closed vent systems and control devices subject to Section 218.429 ~~shall be maintained by the owner or operator~~. These records ~~shall~~ must be updated as necessary to describe current operation and equipment. The records ~~shall~~ must be retained at a readily accessible location at the source for a minimum of two years after the control device is permanently shutdown.

1) Detailed schematics, design specifications, and piping and instrumentation diagrams;

2) The dates and description of any changes in design specifications;

3) A description of the parameter or parameters monitored and recorded as required in subsection (f)(1) to ensure that the control devices are operated and maintained in conformance with their design and an explanation why that parameter (or parameters) was selected for monitoring.

e) The control device ~~shall~~ must be operated at all times when emissions may be vented to it.

f) Owners and operators of control devices used to comply with this Subpart ~~shall~~ must monitor each control device to ensure that the control device is operated and maintained in conformance with its designs at all times that emissions may be vented to it. This monitoring ~~shall~~ must be conducted in ~~accordance~~ complaince with Section 218.429(d)(3). The records prepared as part of this monitoring activity ~~shall~~ must include the dates of startup and shutdown of control devices and identify periods when the devices are not operated as designed, including periods when a flare pilot light does not have a flame.

g) ~~The requirements of subsections~~Subsections (d), (e) and (f) ~~shall~~ do not apply to a combustion device located at the source used for disposal of purged process fluid which is subject to the Burning of Hazardous Waste in Boilers and Industrials Furnaces (BIF) rules, 40 CFR Parts 260, 261, 264, 265, 266, and 270, or which is subject to the Resource Conservation and Recovery Act (RCRA) rules, 35 Ill. Adm. Code Parts 703, 720, 721, 724, 725, and 726. The owner or operator of ~~such~~ the combustion device ~~shall~~ must satisfy applicable provisions of the RCRA or BIF rules.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.430 Compliance Date (Repealed)

(Source: Repealed at 17 Ill. Reg. 16636, effective September 27, 1993)

Section 218.431 Applicability

a) ~~The provisions of~~ Sections 218.431 through 218.436 ~~of this Subpart shall~~ apply to:

1) Every owner or operator of any chemical manufacturing process unit that manufactures~~,~~ as a primary product~~,~~ one or more of the chemicals listed in Appendix A ~~of this Part~~ and that chemical manufacturing process unit causes or allows any reactor or distillation unit, either individually or in tandem, to discharge one or more process vent streams either directly to the atmosphere or to a recovery system; and

2) All continuous distillation and reactor process emission units not subject to Section 218.520 through 218.527 ~~of this Part~~, and located within Stepan Company's Millsdale manufacturing facility, Elwood, Illinois.

b) Notwithstanding subsection (a) ~~of this Section~~, the control requirements ~~set forth within~~of Section 218.432 ~~of this Subpart shall~~do not apply to the following:

1) Any process vent stream with a total resource effectiveness (TRE) index value greater than 1.0. However, ~~such~~ the process vent stream remains subject to the performance testing requirements ~~contained~~ in Section 218.433 ~~of this Subpart~~ and the reporting and recordkeeping requirements ~~contained~~ in Section 218.435 ~~of this Subpart~~;

2) Any reactor or distillation unit that is designed and operated as a batch operation;

3) Any reactor or distillation unit that is part of a polymer manufacturing operation;

4) Any reactor or distillation unit that is part of the chemical manufacturing process unit with a total design capacity of less than 1 gigagram (1,100 tons) per year for all chemicals produced~~,~~ as a primary product~~,~~ within that process unit. However, ~~such~~ the operations remain subject to the reporting and recordkeeping requirements ~~contained~~ in Section 218.435(d) ~~of this Subpart~~;

5) Any vent stream with a flow rate less than 0.0085 scm/min or a total VOM concentration of less than 500 ppmv, less methane and ethane, as measured by Method 18, or a concentration of VOM of less than 250 ppmv as measured by Method 25A. However, ~~such~~ the operations remain subject to the performance testing requirement ~~listed~~ in Section 218.433 ~~of this Subpart~~, as well as the reporting and recordkeeping requirements ~~contained~~ in Section 218.435 ~~of this Subpart~~; or

6) Any reactor or distillation unit included within an Early Reduction Program, as specified in 40 CFR 63, and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.432 Control Requirements

a) Every owner or operator of a source subject to the requirements of this Subpart, as determined by Section 218.431 ~~of this Subpart~~, ~~shall~~ must either:

1) Reduce emissions of VOM, less methane or ethane, by 98 weight-percent, or to 20 ppmv, on a dry basis, corrected to 3 percent oxygen, whichever is less stringent;

2) If a boiler or process heater is used to comply with this Subpart, the vent stream ~~shall~~ must be introduced into the flame zone of the boiler or process heater; or

3) If a flare is used to comply with this Subpart, it ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 218.112 ~~of this Part~~. The flare operation requirements of 40 CFR 60.18 do not apply if a process~~,~~ not subject to this Subpart~~,~~ vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

b) Notwithstanding subsection (a) or (c) ~~of this Section~~, and subject to subsection (b)(2) ~~of this Section~~:

1) ~~No~~ An owner or operator of a source subject to Section 218.432 ~~of this Subpart shall~~must not cause or allow VOM to be emitted through an existing control device unless the control device is operated to achieve:

A) 90 percent control of the VOM emissions vented to it; or

B) VOM emissions concentration of less than 50 ppmv, on a dry basis.

2) Any existing control device subject to subsection (a) ~~of this Section~~ is required to meet the 98 percent emissions limit ~~set forth~~ in subsection (a)(1) upon the earlier ~~to occur~~ of the date the control device is replaced for any reason, including~~, but not limited to,~~ normal maintenance,

malfunction, accident, and obsolescence, or December 31, 1999. A control device is considered to be replaced when:

A) All of the device is replaced; or

B) When the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a device that complies with the 98% emissions limitation in subsection (a)(1) ~~of this Section~~.

c) For each individual vent stream within a chemical manufacturing process unit with a TRE index value greater than 1.0, the owner or operator ~~shall~~ must maintain process vent stream parameters that retain a calculated TRE index value greater than 1.0 by means of recovery. Any recovery device ~~shall~~ must have as its primary purpose the capture of chemicals for use, reuse, or sale. The TRE index value ~~shall~~ must be calculated at the outlet of the final recovery device.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.433 Performance and Testing Requirements

a) For the purpose of demonstrating compliance with the TRE index value in Section 218.432(c) ~~of this Subpart~~, an engineering assessment ~~shall~~ must be made to determine process vent stream flow rate, net heating value, and VOM emission rate for the representative operating conditions expected to yield the lowest TRE index value. The source ~~shall~~ must also calculate the TRE index values ~~pursuant to~~under the equations ~~contained within~~in Appendix G (b)(1) ~~of this Part~~.

1) If the TRE index value calculated using ~~such~~ the engineering assessment and the TRE equation in Appendix G (b)(1) ~~of this Part~~ is greater than 4.0, then the owner or operator is exempt from performing the measurements ~~specified~~ in Appendix G (a) ~~of this Part~~.

2) If the TRE index value calculated using ~~such~~ the engineering assessment and the TRE equation in Appendix G (b)(1) ~~of this Part~~ is less than or equal to 4.0, then the owner or operator ~~shall~~ must perform the measurements ~~specified~~ in Appendix G (a) ~~of this Part~~. An owner or operator of a source may, in the alternative, elect to comply with the control requirements ~~specified~~ in Section 218.432 ~~of this Subpart~~ rather than performing the measurements in Appendix G (a) ~~of this Part~~.

3) An engineering assessment ~~shall~~ must include~~, but is not limited to,~~ the following:

A) Previous test results, ~~provided~~ if the tests are representative of current operating practices at the chemical manufacturing process unit;

B) Bench-scale or pilot-scale test data of the process under representative operating conditions;

C) Maximum flow rate, as stated within a permit limit, applicable to the process vent;

D) Design analysis based on accepted chemical engineering principles, measurable process parameters, or physical or chemical laws or properties. Examples of analytical methods include~~, but are not limited to,~~ the following:

i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;

ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities;

iii) Estimation of VOM concentrations based on saturation conditions; and

iv) Estimation of maximum expected net heating value based on the stream concentration of each organic compound, or, alternatively, as if all VOM in the stream were the compound with the highest heating value.

E) All data, assumptions, and procedures used in the engineering assessment ~~shall~~ must be documented.

b) For the purpose of demonstrating compliance with the control requirements in Section 218.432~~ of this Subpart~~, the chemical manufacturing process unit ~~shall~~ must be run at representative operating conditions and flow rates during any performance test.

c) The following methods in 40 CFR 60, incorporated by reference at Section 218.112~~ of this Part~~, ~~shall~~ must be used to demonstrate compliance with the reduction efficiency requirement ~~listed~~ in Section 218.432(a)(1)~~ of this Subpart~~.

1) Method 1 or 1A, incorporated by reference at Section 218.112~~ of this Part~~, as appropriate, for ~~selection of the~~selecting sampling sites. The control device inlet sampling site for determination of vent stream molar composition or VOM content, less methane and ethane, reduction efficiency ~~shall~~ must be located after the last recovery device but ~~prior~~

~~to~~before the inlet of the control device, ~~prior to~~before any dilution of the process vent stream, and ~~prior to~~before release to the atmosphere.

2) Method 2, 2A, 2C, or 2D, incorporated by reference at Section 218.112 ~~of this Part~~, as appropriate, for determination of gas stream volumetric flow rate.

3) The emission rate correction factor, integrated sampling, and analysis procedure of Method 3, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to determine the oxygen concentration (% 0_{2d}) for the purpose of determining compliance with the 20 ppmv limitation. The sampling site for determining compliance with the 20 ppmv limitation ~~shall~~ must be the same site used for the VOM samples, and samples ~~shall~~ must be taken at the same time that the VOM samples are taken. The VOM concentration corrected to 3 percent oxygen (C_c) ~~shall~~ must be computed using the following formula:

$$C_c = C_{vom} \times \frac{17.9}{20.9 - \%O_{2d}}$$

where:

C_c = Concentration of VOM (minus methane and ethane) corrected to 3 percent O_2, dry basis, ppmv.

C_{vom} = Concentration of VOM (minus methane and ethane), dry basis, ppmv.

$\%O_{2d}$ = Concentration of oxygen, dry basis, percent by volume.

4) Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, to determine the concentration of VOM, less methane and ethane, at the outlet of the control device when determining compliance with the 20 ppmv limitation in Section 218.432(a)(1) ~~of this Subpart~~, or at both the control device inlet and outlet when the reduction efficiency of the control device is to be determined.

A) The minimum sampling time for each run ~~shall~~ must be 1 hour in which either an integrated sample or four grab samples ~~shall~~ must be taken. If grab sampling is used, then the samples ~~shall~~ must be taken at 15-minute intervals.

B) The emission reduction (R) of VOM, less methane and ethane, ~~shall~~ must be determined using the following formula:

$$R = \frac{(E_i - E_o)}{E_i} \times 100$$

where:

R = Emission reduction, percent by weight.

E_i = Mass rate of VOM (minus methane and ethane) entering the control device, kg VOM/hr.

E_o = Mass rate of VOM, less methane and ethane discharged to the atmosphere, kg VOM/hr.

C) The mass rates of VOM (E_i, E_o) ~~shall~~ must be computed using the following formula:

$$E_i = K_2 \left(\sum_{j=1}^{n} C_{ij} M_{ij}\right) Q_i$$

$$E_o = K_2 \left(\sum_{j=1}^{n} C_{oj} M_{oj}\right) Q_o$$

where:

C_{ij}, C_{oj} = Concentration of sample component "j" of the gas stream at the inlet and outlet of the control device, respectively, dry basis, ppmv.

M_{ij},M_{oj}= Molecular weight of sample component "j" of the gas stream at the inlet and outlet of the control device, respectively, grams per gram-mole.

Q_i, Q_o = Flow rate of gas stream at the inlet and outlet of the control device, respectively, dry scm/min.

K_2 = 2.494×10^{-6} (liters per minute) (gram-mole per scm) (kg/g) (min/hr), where standard temperature for (gram-mole per scm) is ~~20°C~~20 °C.

D) The representative VOM concentration (C_{vom}) is the sum of each of the individual components of VOM (C_j) and ~~shall~~ must be computed for each run using the following:

$$C_{vom} = \sum_{j=1}^{n} C_j$$

where:

C_{vom} = Concentration of VOM (minus methane and ethane), dry basis, ppmv.

C_j = Concentration of sample component "j", dry basis, ppmv.

n = Number of components in the sample.

5) When a boiler or process heater with a design heat input capacity of 44 megawatts or greater, or a boiler or process heater into which the process vent stream is introduced with the primary fuel, is used to comply with the control requirements, an initial performance test is not required.

d) When a flare is used to comply with the control requirements of this rule, the flare ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 218.112 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.434 Monitoring Requirements

a) The owner or operator of a source subject to the control requirements in Section 218.432 ~~of this Subpart~~ that uses an incinerator to comply with the VOM emission limitation ~~specified~~ in Section 218.432 (a) (1) ~~shall~~ must install, calibrate, maintain, and operate, according to manufacturer's specifications, a temperature monitoring device equipped with a continuous recorder and having an accuracy of ±1 percent of the temperature measured expressed in ~~degress~~ degrees Celsius, or ±0.5 ºC ~~±0.5 °C~~, whichever is greater.

1) Where an incinerator other than a catalytic incinerator is used, a temperature monitoring device ~~shall~~ must be installed in the firebox.

2) Where a catalytic incinerator is used, temperature monitoring devices ~~shall~~ must be installed in the gas stream immediately before and after the catalyst bed.

b) The owner or operator of a source that uses a flare to comply with Section 218.432 (a) (2) ~~of this Subpart shall~~must install, calibrate, maintain, and operate, according to manufacturer's specifications, a heat-sensing device~~,~~ such as an

ultraviolet beam sensor or thermocouple~~,~~ at the pilot light to indicate continuous presence of a flame.

c) The owner or operator of a source that uses a boiler or process heater with a design heat input capacity less than 44 megawatts to comply with Section 218.432(a) (1) ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's specifications~~,~~ a temperature monitoring device in the firebox. The monitoring device ~~shall~~ must be equipped with a continuous recorder with an accuracy of ±1 percent of the temperature being measured expressed in degrees Celsius or ±0.5 ºC~~±0.5 °C~~, whichever is greater. Any boiler or process heater in which all vent streams are introduced with primary fuel is exempt from this requirement.

d) The owner or operator of a process vent with a TRE index value of 4.0 or less that uses one or more product recovery devices ~~shall~~ must install either an organic monitoring device equipped with a continuous recorder or the monitoring equipment specified in subsections (d)(1), (d)(2), (d)(3), or (d)(4) ~~of this Section~~, depending on the type of recovery device used. All monitoring equipment ~~shall~~ must be installed, calibrated, and maintained according to the manufacturer's specifications.

1) Where an absorber is the final recovery device in the recovery system, a scrubbing liquid temperature monitoring device and a specific gravity monitoring device, each equipped with a continuous recorder, ~~shall~~ must be used.

2) Where a condenser is the final recovery device in the recovery system, a condenser exit (product side) temperature monitoring device equipped with a continuous recorder and having an accuracy of ±1 percent of the temperature being monitored expressed in degrees Celsius or ±0.5 ºC~~±0.5 °C~~, whichever is greater.

3) Where a carbon adsorber is the final recovery device in the recovery system, an integrating regeneration steam flow monitoring device having an accuracy of ±10 percent, capable of recording the total regeneration steam mass flow for each regeneration cycle; and a carbon bed temperature monitoring device having an accuracy of ±1 percent of the temperature being monitored expressed in degrees Celsius of ±0.5 ºC~~±0.5 °C~~, capable of recording the carbon bed temperature after each regeneration and within 15 minutes of completing any cooling cycle.

4) Where a scrubber is used with an incinerator, boiler, or, in the case of halogenated vent streams, a process heater, the following monitoring equipment is required for the scrubber:

A) A pH monitoring device equipped with a continuous recorder to monitor the pH of the scrubber effluent; and

B) Flow meters equipped with a continuous recorder at the scrubber influent for liquid flow and the scrubber inlet for gas stream flow.

e) The owner or operator of a process vent using a vent system that contains bypass lines capable of diverting a vent stream away from the control device associated with a process vent ~~shall~~ must comply with either subsection (e)(1) or (e)(2) ~~of this Section~~. Equipment needed for safety purposes, including~~, but not limited to,~~ pressure relief devices, ~~are~~ is not subject to this subsection.

1) The owner or operator ~~shall~~ must install, calibrate, maintain, and operate a flow indicator that provides a record of vent stream flow at least once every 15 minutes. The flow indicator ~~shall~~ must be installed at the entrance to any bypass line that could divert the vent stream away from the control device to the atmosphere.

2) The owner or operator ~~shall~~ must secure the bypass line valve in the closed position with a car-seal or a lock-and-key type configuration. A visual inspection of the seal or closure mechanism ~~shall~~ must be performed at least once every month to ensure that the valve is maintained in the closed position and the vent stream is not diverted through the bypass line.

f) The owner or operator of a process vent may monitor by an equivalent alternative means or parameters other than those ~~listed~~ in subsections (a) through (d) ~~of this Section~~. Any equivalent alternative ~~shall~~ must be approved by the Agency and USEPA~~,~~ and contained in the source's operating permit as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.435 Recordkeeping and Reporting Requirements

a) Every owner or operator of a reactor or distillation unit with a TRE index value of 4.0 or less ~~shall~~ must keep for a minimum of three years records~~, for a minimum of 3 years,~~ of the following parameters measured during a performance test or TRE determination required under Section 218.433 ~~of this Subpart~~, and required to be monitored under Section 218.434 ~~of this Subpart~~.

1) Every owner or operator of a source that seeks to demonstrate compliance with Section 218.432(a) (1) ~~of this Subpart through the use of~~by using either a thermal or catalytic incinerator ~~shall~~ must maintain records of the following:

A) The average firebox temperature of the incinerator (or the average temperature upstream and downstream of the catalyst bed for a catalytic incinerator), measured at least every 15 minutes and averaged over the same time period of the performance testing; and

B) The percent reduction of VOM determined ~~as specified in~~under Section 218.433(c) ~~of this Subpart~~ achieved by the incinerator, or the concentration of VOM (ppmv, by compound) determined ~~as specified in~~under Section 218.433(c) ~~of this Subpart~~ at the outlet of the control device, on a dry basis, corrected to 3 percent oxygen.

2) Every owner or operator of a source that seeks to demonstrate compliance with Section 218.432(a)(1) ~~of this Subpart through the use of~~by using a boiler or process heater ~~shall~~ must maintain the records ~~described below~~in subsections (a)(2)(A) and (a)(2)(B). Any boiler or process heater in which all vent streams are introduced with primary fuel are exempt from these requirements.

A) A description of the location at which the vent stream is introduced into the boiler or process heater; and

B) The average combustion temperature of the boiler or process heater with a design heat input capacity of less than 44 megawatt measured at least every 15 minutes and averaged over the same time period of the performance testing.

3) Every owner or operator of a source that seeks to demonstrate compliance with Section 218.432(a)(2) ~~of this Subpart through use of~~by using a smokeless flare~~,~~ or flare design (i.e., steam-assisted, air-assisted, or nonassisted)~~, shall~~ must maintain records of all visible emission readings, heat content determinations, flow rate measurements, and exit velocity determinations made during the performance test~~,~~; continuous records of the flare pilot flame monitoring~~,~~; and records of all periods of operations during which the pilot flame is absent.

4) Every owner or operator of a source that seeks to demonstrate compliance with Section 218.432(b) ~~of this Subpart shall~~must maintain records of the following:

A) Where an absorber is the final recovery device in the recovery system, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the Agency and USEPA), and average exit temperature of the absorbing liquid measured at least every 15 minutes and averaged over the same time period as the performance testing (both

measured while the vent stream is normally routed and constituted);

B) Where a condenser is the final recovery device in the recovery system, the average exit (product side) temperature measured at least every 15 minutes and averaged over the same time period as the performance testing while the vent stream is normally routed and constituted;

C) Where a carbon absorber is the final recovery device in the recovery system, the total steam mass or volumetric flow measured at least every 15 minutes and averaged over the same time period as the performance testing (full carbon bed cycle), the temperature of the carbon bed after regeneration (and within 15 minutes of completion of any cooling ~~cycle(s))~~cycle or cycles), and duration of the carbon bed steaming cycle (all measured while the vent stream is normally routed and constituted);

D) As an alternative to subsection (a)(4)(A), (a)(4)(B), or (a)(4)(C) ~~of this Section~~, the concentration level or reading indicated by the organic monitoring device at the outlet of the absorber, condenser, or carbon absorber, measured at least every 15 minutes and averaged over the same time period as the performance testing (measured while the vent stream is normally routed and constituted); or

E) All measurements and calculations performed to determine the flow rate, VOM concentration, heating value, and TRE index value of the vent stream.

b) Every owner or operator of a reactor or distillation unit with a TRE index value of less than 4.0 ~~shall be~~is subject to the exceedence reporting requirements of the draft Enhanced Monitoring Guidelines as published at 58 Fed. Reg. 54648 (October 22, 1993).

c) Every owner or operator of a source seeking to comply with Section 218.432(b) ~~of this Subpart shall~~must maintain records of the following:

1) Any changes in production capacity, feedstock type, catalyst type, or of any replacement, removal, or addition of recovery equipment or reactors and distillation units; and

2) Any recalculation of the flow rate, VOM concentration, or TRE index value calculated ~~according to~~under subsection (c) of Appendix G ~~of this Part~~.

d) Every owner or operator of a source claiming a design capacity of less than 1 gigagram (1,100 tons) per year~~, as contained in~~ under Section 218.431(b) ~~of this Subpart, shall~~must maintain records of the design capacity or any changes in equipment or operations that may affect the design capacity.

e) Every owner or operator of a source claiming a vent stream flow rate or vent stream concentration exemption level~~, as contained in~~ under Section 218.431(b)(5) ~~of this Subpart, shall~~must maintain records to indicate that the stream flow rate is less than 0.0085 scm/min or the vent stream concentration is less than 500 ppmv.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.436 Compliance Date

Every owner or operator of ~~an~~ a source subject to Sections 218.431, 218.432, 218.433, 218.434, or 218.435 ~~of this Subpart shall~~must comply with its standards, limitations, and mandates by March 15, 1996.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART R: PETROLEUM REFINING AND RELATED INDUSTRIES; ASPHALT MATERIALS

Section 218.441 Petroleum Refinery Waste Gas Disposal

a) Except as provided in subsection (b) or (c)~~ of this Section~~, ~~no~~ a person ~~shall~~ must not cause or allow the discharge of organic materials in excess of 100 ppm equivalent methane (molecular weight 16.0) into the atmosphere from:

1) Any catalyst regenerator of a petroleum cracking system; or

2) Any petroleum fluid coker; or

3) Any other waste gas stream from any petroleum or petrochemical manufacturing process.

b) Exception. Existing sources subject to subsection (a)(3) ~~of this Section~~ may~~,~~ alternatively, at their election, comply with the organic material emission limitations ~~imposed by 35 Ill. Adm. Code~~ under Section 218.301 or 218.302.~~;~~ ~~provided, however, that~~However, there ~~shall~~ must be no increase in emissions from ~~such~~ the sources above the level of emissions ~~in existence~~ on May 3, 1979.

c) New Sources. Sources subject to subsection (a)(3)~~ of this Section~~, construction of which commenced on or after January 1, 1977, may, at their election, comply with the following emission limitations:

1) A maximum of eight pounds per hour of organic material; or

2) Emission of organic material in excess of the limitation of subsection (c)(1) ~~of this Section~~ is allowable if ~~such~~ the emissions are controlled by air pollution control methods or equipment approved by the Agency capable of reducing by 85 percent or more the uncontrolled organic material that would otherwise be emitted to the atmosphere. ~~Such~~ The methods or equipment must be approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.442 Vacuum Producing Systems

~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not cause or allow the operation of any vacuum producing system unless the condensers, hot wells, and accumulators of any such system are equipped with vapor loss control equipment including~~, but not limited to,~~ piping, valves, flame arrestors, and hot wellcovers~~,~~ to vent any VOM with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3°K (70°F)~~294.3 °K (70 °F) to a heater, fire box, flare, refinery fuel gas system, or other equipment or system of equal emission control as approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision. This Section ~~shall~~ does not apply to vacuum producing systems on lube units.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.443 Wastewater (Oil/Water) Separator

~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not operate any wastewater (oil/water) separator at a petroleum refinery unless the separator is equipped with air pollution control equipment capable of reducing by 85 percent or more the uncontrolled organic material emitted to the atmosphere. If no odor nuisance exists, the limitation of this Section ~~shall~~ does not apply if the vapor pressure of the organic material is below 10.34 kPa (1.5 psia) at ~~294.3°K (70°F)~~294.3 °K (70 °F) at all times.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.444 Process Unit Turnarounds

a) ~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not cause or allow a refinery process unit turnaround except in compliance with an operating procedure as approved by the Agency.

b) Unless a procedure was already on file with the Agency by November 1, 1979, as part of an approved operating permit ~~no later than November 1, 1979~~, the owner or operator of a petroleum refinery ~~shall~~ must submit to the Agency for approval a

detailed procedure for reducing emissions of VOM during refinery process unit turnarounds from organic material with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3°K (70°F)~~294.3 °K (70 °F). The Agency ~~shall~~ must not approve the procedure unless it provides for:

1) Depressurization of the refinery process unit or vessel to a flare, refinery fuel gas system, or other equipment or system of equal emission control~~, as approved by the Agency and approved by the USEPA as a SIP revision,~~ until the internal pressure from the vessel or unit is less than 5.0 psig before allowing the vessel to be vented to the atmosphere, as approved by the Agency and by USEPA as a SIP revision;

2) Recordkeeping of the following items:

A) Each date that a refinery unit or vessel is shut down; and

B) The total estimated quantity of VOM emitted to the atmosphere and the duration of the emission in hours.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.445 Leaks: General Requirements

The owner or operator of a petroleum refinery ~~shall~~must:

a) Develop a monitoring program plan consistent with ~~the provisions of~~ Section 218.446;

b) Conduct a monitoring program consistent with ~~the provisions of~~ Section 218.447;

c) Record all leaking components which have a volatile organic material concentration exceeding 10,000 ppm consistent with ~~the provisions of~~ Section 218.448;

d) Identify each component consistent with the monitoring program plan submitted ~~pursuant to~~under Section 218.446;

e) Repair and retest the leaking components as soon as possible within 22 days after the leak is found, but no later than June 1 for the purposes of Section 218.447(a)(1), unless the leaking components cannot be repaired until the unit is shut down for turnaround; and

f) Report to the Agency consistent with ~~the provisions of~~ Section 218.449.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.446 Monitoring Program Plan for Leaks

The owner or operator of a petroleum refinery ~~shall~~ must prepare a monitoring program plan which contains, at a minimum:

a) An identification of all refinery components and the period in which each will be monitored ~~pursuant to~~under Section 218.447 ~~of this Part~~;

b) The format for the monitoring log required by Section 218.448 ~~of this Part~~;

c) A description of the monitoring equipment to be used ~~pursuant to~~under Section 218.447 ~~of this Part~~; and

d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service and all leaking components ~~such that~~so they are obvious to ~~both~~ refinery personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.447 Monitoring Program for Leaks

a) The owner or operator of a petroleum refinery subject to Section 218.445 ~~of this Part shall~~must, for the purpose of detecting leaks, conduct a component monitoring program consistent with the following provisions:

1) Test all pump seals, pipeline valves in liquid service, and process drains once between March 1 and June 1 of each year~~,~~ by methods ~~referenced~~ in Section 218.105(g) ~~of this Part, all pump seals, pipeline valves in liquid service and process drains~~;

2) Test all pressure relief valves in gaseous service, pipeline valves in gaseous service, and compressor seals once each quarter of each calendar year~~,~~ by methods ~~referenced~~ in Section 218.105(g) ~~of this Part, all pressure relief valves in gaseous service, pipeline valves in gaseous service and compressor seals~~;

3) Inaccessible valves may be tested once each calendar year instead of once each quarter of each calendar year;

4) ~~Observe visually~~Visually observe all pump seals weekly;

5) ~~Test immediately~~Immediately test any pump seal from which liquids are observed dripping;

6) Test any relief valve within 24 hours after it has vented to the atmosphere; and

7) Test immediately after repair any component that was found leaking.

b) Storage tank valves and pressure relief devices connected to an operating flare header or vapor recovery device are exempt from the monitoring requirements in subsection (a) ~~of this Section~~.

c) The Agency or ~~the~~ USEPA may require more frequent monitoring than would otherwise be required by subsection (a) for components which are demonstrated to have a history of leaking.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.448 Recordkeeping for Leaks

a) The owner or operator of a petroleum refinery ~~shall~~ must maintain a ~~leaking components~~ monitoring log of leaking components, which ~~shall~~ must contain, at a minimum~~, the following information~~:

1) The name of the process unit where the component is located;

2) The type of component (e.g., valve, seal);

3) The identification number of the component;

4) The date on which a leaking component is discovered;

5) The date on which a leaking component is repaired;

6) The date and instrument reading of the recheck procedure after a leaking component is repaired;

7) A record of the calibration of the monitoring instrument;

8) The identification number of leaking components which cannot be repaired until turnaround; and

9) The total number of components inspected and the total number of components found leaking during that monitoring period.

b) Copies of the monitoring log ~~shall~~ must be retained by the owner or operator for a minimum of two years after the date on which the record was made or the report prepared.

c) Copies of the monitoring log ~~shall~~ must be made available to the Agency, upon verbal or written request, at any reasonable time.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.449 Reporting for Leaks

The owner or operator of a petroleum refinery ~~shall~~must:

a) Submit a report to the Agency ~~prior to~~before the 1st day of both July and September listing all leaking components identified ~~pursuant to~~under Section 218.447 ~~of this Part~~ but not repaired within 22 days, all leaking components awaiting unit turnaround, the total number of components inspected, and the total number of components found leaking;

b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Sections 218.445 through 218.448 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.450 Alternative Program for Leaks

The Agency may approve an alternative program of monitoring, recordkeeping, or reporting to that prescribed in Sections 218.446 through 218.449 ~~of this Part~~ upon a demonstration by the owner or operator of a petroleum refinery that the alternative program will provide refinery, Agency, and USEPA personnel with an equivalent ability to identify and repair leaking components. Any alternative program can be allowed only if approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.451 Sealing Device Requirements

Except for safety pressure relief valves, ~~no~~ an owner or operator of a petroleum refinery ~~shall~~ must not install or operate a valve at the end of a pipe or line containing VOMs unless the pipe or line is sealed with a second valve, blind flange, plug, cap, or other sealing device. The sealing device may be removed only when a sample is being taken or during maintenance operations.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.452 Compliance Schedule for Leaks

The owner or operator of a petroleum refinery ~~shall~~ must adhere to the increments of progress ~~contained~~ in the following schedule:

a) Have submitted to the Agency a monitoring program consistent with Section 218.446 ~~of this Part prior to~~before September 1, 1990.

b) Have submitted to the Agency the first monitoring report ~~pursuant to~~under Section 218.449 ~~of this Part prior to~~before October 1, 1990.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.453 Compliance Dates (Repealed)

(Source: Repealed at 17 Ill. Reg. 16636, effective September 27, 1993)

SUBPART S: RUBBER AND MISCELLANEOUS PLASTIC PRODUCTS

Section 218.461 Manufacture of Pneumatic Rubber Tires

The owner or operator of an undertread cementing, ~~treadend~~ tread end cementing, or bead dipping operation at a pneumatic rubber tire manufacturing source ~~shall~~ must install and operate:

a) A capture system~~,~~ with minimum capture efficiency of 65 percent by weight of VOM for ~~treadend~~ tread end cementing or bead dipping operations and a capture system with a minimum capture efficiency of 55.5 percent by weight of VOM for undertread cementing; and

b) A control device that meets the requirements of one of the following:

1) A carbon adsorption system designed and operated ~~in a manner such that there is~~with at least a 90 percent removal of VOM by weight from the gases ducted to the control device;

2) An afterburning system that oxidizes at least 90 percent of the captured nonmethane VOMs (VOM measured as total combustible carbon) to carbon dioxide and water; and

3) An alternative VOM emission reduction system demonstrated to have at least a 90 percent overall reduction efficiency and approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.462 Green Tire Spraying Operations

The owner or operator of a green tire spraying operation at a pneumatic rubber tire manufacturing source ~~shall~~must:

a) Install and operate:

1) A capture system with a minimum capture efficiency of 90 percent by weight of VOM; and

2) A control device that meets the requirements of one of the following:

A) A carbon adsorption system designed and operated ~~in a manner such that there is~~with at least 90 percent removal of VOM by weight from the gases ducted to the control device;

B) An afterburning system that oxidizes at least 90 percent of the captured nonmethane VOM (measured as total combustible carbon) to carbon dioxide and water; or

C) An alternative VOM emission reduction system demonstrated to have at least a 90 percent overall reduction efficiency and approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision.

b) Substitute for the normal solvent-based mold release compound water-based sprays containing:

1) No more than five percent by volume of VOM as applied for the inside of tires;

2) No more than ten percent by volume of VOM as applied for the outside of tires.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.463 Alternative Emission Reduction Systems

In lieu of complying with Section 218.461 or 218.462 ~~of this Part~~, the owner or operator of an emission source may ~~utilize~~ use an alternative volatile organic emission reduction system, including an alternative production process, which is demonstrated to be equivalent to Section 218.461 or 218.462 ~~of this Part~~ on the basis of emissions of volatile organic material. A ~~treadend~~ tread end cementing operation ~~shall~~ must be considered equivalent to Section 218.461 or 218.462 ~~of this Part~~ for the purposes of this Section if the total volatile organic emission from ~~such~~ the operation is 10 grams or less per tire.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.464 Emission Testing

a) Upon a reasonable request by the Agency, the owner or operator of a VOM emission source required to comply with a limit of Sections 218.461 through 218.464 ~~of this Part shall~~must conduct emissions testing~~,~~ at ~~such~~ that person's own expense~~,~~ to demonstrate compliance.

b) A person planning to conduct a VOM emission test to demonstrate compliance ~~shall~~ must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the tests so the Agency may observe the test.

SUBPART T: PHARMACEUTICAL MANUFACTURING

Section 218.480 Applicability

a) ~~The rules of this~~This Subpart, except for Sections 218.483 through 218.485 ~~of this Part~~, ~~apply~~ applies to all emission units of VOM, including ~~but not limited to~~ reactors, distillation units, dryers, storage tanks for VOL, equipment for the transfer of VOL, filters, crystallizers, washers, laboratory hoods, pharmaceutical coating operations, mixing operations, and centrifuges used in manufacturing, including packaging, of pharmaceuticals, and emitting more than 6.8 kg/day (15 lbs/day) and more than 2,268 kg/year (2.5 tons/year) of VOM. If such an emission unit emits less than 2,268 kg/year (2.5 tons/year) of VOM, ~~the requirements of~~ this Subpart still ~~apply~~ applies to the emission unit if VOM emissions from the emission unit exceed 45.4 kg/day (100 lbs/day).

b) Notwithstanding subsection (a) ~~of this Section~~, the air suspension coater/dryer, fluid bed dryers, tunnel dryers, and Accelacotas located in Libertyville Township, Lake County, Illinois ~~shall be~~are exempt from ~~the rules of~~ this Subpart, except for Sections 218.483 through 218.485, if emissions of VOM not vented to air pollution control equipment do not exceed the following levels:

1) For the air suspension coater/dryer: 2,268 kg/year (2.5 tons/year);

2) Except ~~as set forth in~~under subsection ~~218.480(b)(4) of this Section~~(b)(4), for each fluid bed dryer: 4,535 kg/year (5.0 tons/year);

3) Except ~~as set forth in~~under subsection ~~218.480(b)(4) of this Section~~(b)(4), for each tunnel dryer: 6,803 kg/year (7.5 tons/year);

4) For fluid bed dryers #1, #2, and #3 and for tunnel dryers #1, #2, #3, and #4, the combined total annual emissions from the dryers listed in this subsection ~~218.480(b)(4) shall~~(b)(4) must not exceed 18,688 kg/year (20.6

tons/year).

[(BOARD NOTE: tunnel Tunnel dryers are otherwise referred to as warm air dryers]; and.)

5) For each Accelacota: 6,803 kg/year (7.5 tons/year).

c) Sections 218.483 through 218.485 of this Part apply to a source having one or more emission units that:

1) Are used to manufacture pharmaceuticals, and

2) Emit more than 6.8 kg/day (15 lbs/day) of VOM and more than 2,268 kg/year (2.5 tons/year) of VOM, or, if less than 2,268 kg/year (2.5 tons/year), these Sections still apply if emissions from one or more sources exceed 45.4 kg/day (100 lbs/day).

d) No An owner or operator shall must not violate any condition in a permit when the condition results in exclusion of an emission unit from this Subpart.

e) Any pharmaceutical manufacturing source that becomes subject to the provisions of this Subpart at any time shall remainremains subject to the provisions of this Subpart at all times.

f) Emissions subject to this Subpart shall must be controlled at all times consistent with the requirements set forth inof this Subpart.

g) Any control device required pursuant tounder this Subpart shall must be operated at all times when the source it is controlling is operated.

h) Determinations of daily and annual emissions for purposes of this Section shall must be made using both data on the hourly emission rate (or the emissions per unit of throughput) and appropriate daily and annual data from records of emission unit operation (or material throughput or material consumption data). In the absence of representative test data pursuant tounder Section 218.487 of this Part for the hourly emission rate (or the emissions per unit of throughput), such these items shall must be calculated using engineering calculations, including the methods described in Appendix B of "Control of Volatile Organic Emissions from Manufacturing of Synthesized Pharmaceutical Products" (EPA-450/2-78-029), incorporated by reference in Section 218.112 of this Part. (This subsection shall must not affect the Agency's or the USEPA's authority to require emission tests to be performed pursuant tounder Section 218.487 of this Part.)

i) Equipment and operations emitting VOM at a source subject to subsection (a) or (c) of this Section and used to produce pharmaceutical products or a pharmaceutical-like product such as a hormone, enzyme, or antibiotic, shall must

be deemed to be engaged in the manufacture of pharmaceuticals for the purposes of this Subpart.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.481 Control of Reactors, Distillation Units, Crystallizers, Centrifuges, and Vacuum Dryers

a) The owner or operator ~~shall~~ must equip all reactors, distillation units, crystallizers, centrifuges, and vacuum dryers that are used to manufacture pharmaceuticals with surface condensers or other air pollution control equipment listed in subsection (b) ~~of this Section~~. If a surface condenser is used, it ~~shall~~ must be operated ~~such~~ so that the condenser outlet gas temperature does not exceed:

1) ~~248.2 °K (-13° F)~~248.2 °K (-13 °F) when condensing VOM of vapor pressure greater than 40.0 kPa (5.8 psi) at ~~294.3° K (70° F)~~294.3 °K (70 °F), or

2) ~~258.2 °K (5 °F)~~258.2 °K (5 °F) when condensing VOM of vapor pressure greater than 20.0 kPa (2.9 psi) at 294.3 °K (70 °F)~~294.3° K (70° F)~~, or

3) ~~273.2 °K~~273.2 °K (32 °F) when condensing VOM of vapor pressure greater than 10.0 kPa (1.5 psi) at 294.3 °K (70 °F)~~294.3 ° K (70° F)~~, or

4) ~~283.2 °K (50° F)~~283.2 °K (50 °F) when condensing VOM of vapor pressure greater than 7.0 kPa (1.0 psi) at 294.3 °K (70 °F)~~294.3° K (70° F)~~, or

5) ~~298.2 °K (77 °F)~~298.2 °K (77 °F) when condensing VOM of vapor pressure greater than 3.45 kPa (0.5 psi) at 294.3 °K (70 °F)~~294.3° K (70° F)~~.

b) If a scrubber, carbon adsorber, thermal afterburner, catalytic afterburner, or other air pollution control equipment other than a surface condenser is used, ~~such~~ the equipment ~~shall~~ must provide a reduction in the emissions of VOM of 90 percent or more.

c) The owner or operator ~~shall~~ must enclose all centrifuges used to manufacture pharmaceuticals and that have an exposed VOL surface, where the VOM in the VOL has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 °K (70 °F)~~294.3° K (70° F)~~, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.482 Control of Air Dryers, Production Equipment Exhaust Systems and Filters

a) The owner or operator of an air dryer or production equipment exhaust system used to manufacture pharmaceuticals ~~shall~~ must control the emissions of VOM from ~~such~~ the emission unit by air pollution control equipment which reduces by 90 percent or more the VOM that would otherwise be emitted into the atmosphere.

b) The owner or operator ~~shall~~ must enclose all rotary vacuum filters and other filters used to manufacture pharmaceuticals and that have an exposed VOL surface, where the VOM in the VOL has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 ºK (70 ºF)~~294.3º K (70º F)~~, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.483 Material Storage and Transfer

The owner or operator of a pharmaceutical manufacturing source ~~shall~~must:

a) Provide a vapor balance system that is at least 90 percent effective in reducing VOM emissions from truck or railcar deliveries to storage tanks with capacities equal to or greater than 7.57 m^3 (2,000 gal) that store VOL with vapor pressures greater than 28.0 kPa (4.1 psi) at 294.3 ºK (70 ºF)~~294.3ºK (70ºF)~~, and

b) Install, operate, and maintain pressure/vacuum conservation vents set at 0.2 kPa (0.03 psi) or greater on all storage tanks that store VOL with vapor pressures greater than 10 kPa (1.5 psi) at 294.3 ºK (70 ºF)~~294.3ºK (70ºF)~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.484 In-Process Tanks

The owner or operator ~~shall~~ must install covers on all in-process tanks used to manufacture pharmaceuticals and containing a VOL at any time. These covers must remain closed, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.485 Leaks

The owner or operator of a pharmaceutical manufacturing source ~~shall~~ must repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15 days after the leak is found. If the leaking component

cannot be repaired until the process unit is shut down, the leaking component must then be repaired before the unit is restarted.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.486 Other Emission Units

The owner or operator of a washer, laboratory hood, tablet coating operation, mixing operation, or any other process emission unit not subject to Sections 218.481 through 218.485 ~~of this Part,~~ and used to manufacture pharmaceuticals ~~shall~~ must control the emissions of VOM from ~~such~~ the emission units by:

a) Air pollution control equipment which reduces by 81 percent or more the VOM that would otherwise be emitted to the atmosphere, or

b) A surface condenser which captures all the VOM which would otherwise be emitted to the atmosphere and ~~which~~ meets the requirements of Section 218.481(a) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.487 Testing

a) Upon request by the Agency or ~~the~~ USEPA, the owner or operator of any VOM source subject to this Subpart or exempt from this Subpart ~~by virtue of the provisions of~~ under Section 218.480 ~~of this Part shall,~~must at ~~his~~ its own expense~~,~~ demonstrate compliance to the Agency and ~~the~~ USEPA by the methods or procedures ~~listed~~ in Section 218.105(f)(1) ~~of this Part~~.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency and ~~the~~ USEPA of that intent ~~not less than~~at least 30 calendar days before the planned initiation of the test.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.488 Monitoring for Air Pollution Control Equipment

a) At a minimum, continuous monitors for the following parameters ~~shall~~ must be installed on air pollution control equipment used to control sources subject to this Subpart:

1) Destruction device combustion temperature.

2) Temperature rise across a catalytic afterburner bed.

3) VOM concentration on a carbon adsorption unit to determine breakthrough.

4) Outlet gas temperature of a refrigerated condenser.

5) Temperature of a non-refrigerated condenser coolant supply system.

b) Each monitor ~~shall~~ must be equipped with a recording device.

c) Each monitor ~~shall~~ must be calibrated quarterly.

d) Each monitor ~~shall~~ must operate at all times while the associated control equipment is operating.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.489 Recordkeeping for Air Pollution Control Equipment

a) The owner or operator of a pharmaceutical manufacturing source ~~shall~~ must maintain the following records:

1) Parameters ~~listed~~ in Section 218.488(a) ~~of this Part shall~~must be recorded.

2) For emission units subject to Section 218.481 ~~of this Part~~, the vapor pressure of VOM being controlled ~~shall~~ must be recorded for every process.

b) For any leak subject to Section 218.485 ~~of this Part~~ which cannot be readily repaired within one hour after detection, the following records ~~shall~~ must be kept:

1) The name of the leaking equipment,

2) The date and time the leak is detected,

3) The action taken to repair the leak, and

4) The date and time the leak is repaired.

c) The following records ~~shall~~ must be kept for emission units subject to Section 218.484 ~~of this Part~~ which contain VOL:

1) For maintenance and inspection:

A) The date and time each cover is opened,

B) The length of time the cover remains open, and

C) The reason why the cover is opened.

2) For production and sampling, detailed written procedures or manufacturing directions specifying the circumstances under which covers may be opened and the procedures for opening covers.

d) For each emission unit used in the manufacture of pharmaceuticals for which the owner or operator of a pharmaceutical manufacturing source claims emission standards are not applicable~~,~~ because the emissions are below the applicability cutoffs in Section 218.480(a) or 218.480(b) ~~of this Part~~, the owner or operator ~~shall~~must:

1) Maintain a demonstration including detailed engineering calculations of the maximum daily and annual emissions for each such emission unit showing that the emissions are below the applicability cutoffs in Section 218.480(a) or 218.480(b) ~~of this Part~~, as appropriate, for the current and prior calendar years;

2) Maintain appropriate operating records for each such emission source to identify whether the applicability cutoffs in Section 218.480(a) or 218.480(b) ~~of this Part~~, as appropriate, are ever exceeded; and

3) Provide written notification to the Agency and ~~the~~ USEPA within 30 days ~~of~~ after a determination that such an emission unit has exceeded the applicability cutoffs in Section 218.480(a) or 218.480(b) ~~of this Part~~, as appropriate.

e) Records required under subsection (a) ~~of this Section shall~~must be maintained by the owner or operator for a minimum of two years after the date on which they are made.

f) Copies of the records ~~shall~~ must be made available to the Agency or ~~the~~ USEPA upon verbal or written request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

Section 218.500 Applicability for Batch Operations

a) The control requirements ~~set forth~~ in Section 218.501 ~~of this Subpart shall~~ apply to:

1) Process vents associated with batch operations at sources identified by any of the following four-digit standard industrial classification ("SIC") codes, as defined in the 1987 edition of the Federal Standard Industrial Classification Manual: SIC 2821, 2833, 2834, 2861, 2865, 2869, and 2879, incorporated by reference in Section 218.112; and

2) All batch operations at Stepan Company's Millsdale manufacturing facility, Elwood, Illinois.

b) ~~The requirements of~~ Sections 218.500 through 218.506 ~~shall~~ do not apply to:

1) Any emission unit included ~~within the category specified~~ in ~~35 Ill. Adm. Code 218,~~ Subpart B or T;

2) Any emission unit included ~~within the category specified~~ in Sections 218.520 through 218.527 ~~of this Subpart~~; and

3) Any emission unit included within an Early Reduction Program~~, as specified in~~ under 40 CFR Part 63~~,~~ and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.

c) The following single unit operations and batch process trains are subject to this Subpart but are considered to be de minimis and ~~are, therefore,~~ exempt from the control requirements of Section 218.501 ~~of this Subpart~~. However, the recordkeeping and reporting requirements in Section 218.505 ~~of this Subpart shall~~ apply to ~~such~~ these de minimis single unit operations and batch process trains:

1) Within a batch operation, any single unit operation with uncontrolled total annual mass emissions of less than or equal to 500 lb/yr of VOM. ~~Such~~ These single unit operations are also excluded from the calculation of the total annual mass emissions for a batch process train. If the uncontrolled total annual mass emissions from ~~such~~ an exempt single unit operation exceed 500 lb/yr of VOM in any subsequent year, the source ~~shall~~ must calculate applicability in ~~accordance~~ compliance with subsection (d) ~~of this Section~~ for both the individual single unit operation and the batch process train containing the single unit operation; and

2) Any batch process train containing process vents that have~~,~~ in the aggregate~~,~~ uncontrolled total annual mass emissions, as determined in ~~accordance~~ compliance with Section 218.502(a) ~~of this Subpart~~, of less than 30,000 lb/yr of VOM for all products manufactured in ~~such~~ the batch process train.

d) The applicability equations in subsection (e) ~~of this Section~~, which require the calculation of uncontrolled total annual mass emissions and flow rate value, ~~shall~~ must be used to determine whether a single unit operation or a batch process train is subject to the control requirements ~~set forth~~ in Section 218.501 ~~of this Subpart~~. The applicability equation ~~shall~~ must be applied to the following:

1) Any single unit operation with uncontrolled total annual mass emissions that exceed 500 lb/yr and with a VOM concentration greater than 500 ppmv. In this individual determination, no applicability analysis ~~shall~~ must be performed for any single unit operation with a VOM concentration of less than or equal to 500 ppmv; and

2) Any batch process train containing process vents which~~,~~ in the aggregate~~,~~ have uncontrolled total annual mass emissions of 30,000 lb/yr or more of VOM from all products manufactured in the batch process train. Any single unit operation with uncontrolled total annual mass emissions exceeding 500 lb/yr, regardless of VOM concentration, ~~shall~~ must be included in the aggregate applicability analysis.

e) Applicability equations

1) The applicability equations in this subsection are specific to volatility.

2) For purposes of this subsection, the following abbreviations apply:

A) FR = Vent stream flow rate, scfm;

B) UTAME = Uncontrolled total annual mass emissions of VOM, expressed as lb/yr;

C) WAV = Weighted average volatility;

D) $MVOM_i$ = Mass of VOM component i;

E) $MWVOM_i$= Molecular weight of VOM component i; and

F) VP_i = Vapor pressure of VOM component i.

3) Weighted average volatility ~~shall~~ must be calculated as follows:

$$WAV = \frac{\sum_{i=1}^{n} \left[(VP_i) \times \frac{(MVOM_i)}{(MWVOM_i)} \right]}{\sum_{i=1}^{n} \left[\frac{(MVOM_i)}{(MWVOM_i)} \right]}$$

4) For purposes of determining applicability, flow rate values ~~shall~~ must be calculated as follows:

A) Low WAV has a vapor pressure less than or equal to 75 mmHg at ~~20°C (68°F),~~20 ºC (68 ºF) and ~~shall~~ must use the following equation:

FR = [0.07 (UTAME)] - 1,821

B) Moderate WAV has a vapor pressure greater than 75 mmHg but less than or equal to 150 mmHg at 20 ºC (68 ºF)~~20°C (68°F),~~ and ~~shall~~ must use the following equation:

FR = [0.031 (UTAME)] - 494

C) High WAV has a vapor pressure greater than 150 mmHg at 20 ºC (68 ºF)~~20°C (68°F),~~ and ~~shall~~ must use the following equation:

FR = [0.013 (UTAME)] - 301

5) To determine the vapor pressure of VOM, the applicable methods and procedures in Section 218.111 ~~of this Part shall~~ apply.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.501 Control Requirements for Batch Operations

a) Every owner or operator of a single unit operation with an average flow rate, as determined in ~~accordance~~ compliance with Section 218.502(b)~~ of this Subpart~~, below the flow rate value calculated by the applicability equations ~~contained~~ in Section 218.500(e)~~ of this Subpart~~, ~~shall~~ must reduce uncontrolled VOM emissions from ~~such~~ the single unit operation by an overall efficiency, on average, of at least 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle.

b) Every owner or operator of a batch process train with an average flow rate, as determined in ~~accordance~~ compliance with Section 218.502(b)(2)~~ of this Subpart~~, below the flow rate value calculated by the applicability equations ~~contained~~ in Section 218.500(e)~~ of this Subpart~~, ~~shall~~ must reduce uncontrolled VOM emissions from ~~such~~ the batch process train by an overall efficiency, on average, of at least 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle. For purposes of demonstrating compliance with the emission limitations ~~set forth~~ in this Section, any control device meeting the criteria in subsection (c) ~~of this Section shall~~must be deemed to achieve a control efficiency of 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle, as applicable.

c) Notwithstanding subsections (a) or (b)~~ of this Section~~, any source that has installed on or before March 15, 1995, any control device which is demonstrated to the Agency's satisfaction to be unable to meet the applicable control requirements of this Section, scrubber, or shell and tube condenser using a non-

refrigerated cooling media, and ~~such~~ the device achieves at least 81 percent control efficiency of VOM emissions, ~~is required to~~must meet the 90 percent emission limitation or 20 ppmv VOM concentration ~~set forth~~ in subsections (a) or (b) ~~of this Section~~, as applicable, upon the earlier ~~to occur~~ of the date the device is replaced for any reason, including~~, but not limited to,~~ normal maintenance, malfunction, accident, and obsolescence, or December 31, 1999. A scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of this subsection, is considered replaced when:

1) All of the device is replaced; or

2) ~~When either~~Either the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a control device that complies with the 90 percent emission limitation or 20 ppmv VOM concentration level in subsection (a) ~~of this Section~~, as applicable.

d) If a boiler or process heater is used to comply with this Section, the vent stream ~~shall~~ must be introduced into the flame zone of the boiler or process heater.

e) If a flare is used to comply with this Section, it ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 218.112 ~~of this Part~~. The flare operation requirements of 40 CFR 60.18 do not apply if a process~~,~~ not subject to this Subpart~~,~~ vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.502 ~~Determination of~~Determining Uncontrolled Total Annual Mass Emissions and Average Flow Rate Values for Batch Operations

a) Uncontrolled total annual mass emissions ~~shall~~ must be determined by the following methods:

1) Direct process vent emissions measurements taken ~~prior to~~before any release to the atmosphere, following any recovery device, and ~~prior to~~before any control device, ~~provided such~~if the measurements conform with the requirements of measuring the mass flow rate of VOM incoming to the control device ~~as set forth~~ in Section 218.503(f)(2), (f)(3)(A) and (f)(3)(B) ~~of this Subpart~~; or

2) Engineering estimates of the uncontrolled VOM emissions from a process vent or process vents, in the aggregate, within a batch process train, using either the potential or permitted number of batch cycles per year or total production ~~as represented in~~under the source's operating permit as follows:

A) Engineering estimates of the uncontrolled VOM emissions ~~shall~~ must be based upon accepted chemical engineering principles, measurable process parameters, or physical or chemical laws and their properties. Examples of methods include~~, but are not limited to,~~ the following:

i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;

ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities; and

iii) Estimation of VOM concentrations based on saturation conditions.

B) All data, assumptions, and procedures used in any engineering estimate ~~shall~~ must be documented.

b) Average flow rate ~~shall~~ must be determined by any of the following methods:

1) Direct process vent flow rate measurements taken ~~prior to~~before any release to the atmosphere, following any recovery device, and ~~prior to~~before any control device, ~~provided such~~if the measurements conform with the requirements of measuring incoming volumetric flow rate ~~set forth~~ in Section 218.503(e)(2) ~~of this Subpart~~;

2) Average flow rate for a single unit operation having multiple emission events or batch process trains ~~shall~~ must be the weighted average flow rate, calculated as follows:

$$WAF = \frac{\sum_{i=1}^{n} \{AFR_i \times ADE_i\}}{\sum_{i=1}^{n} (ADE_i)}$$

where:

WAF = Actual weighted average flow rate for a single unit operation or batch process train;

AFR_i = Average flow rate per emission event;

ADE_i = Annual duration of emission event; and

n = Number of emission events.

For purposes of this formula, ~~the term~~ "emission event" ~~shall be defined as~~means a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded vapor space when the single unit operation is heated is also an emission event. Both ~~of these~~ examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, according to Section 218.503(f)(2) ~~of this Subpart~~, then ~~such~~ the event is not an emission event for purposes of this Section.

3) Engineering estimates calculated in ~~accordance~~ compliance with ~~the requirements in~~ subsection (a)(2) ~~of this Section~~.

c) For purposes of determining the average flow rate for steam vacuuming systems, the steam flow ~~shall~~ must be included in the average flow rate calculation.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.503 Performance and Testing Requirements for Batch Operations

a) Upon the Agency's request, the owner or operator of a batch operation ~~shall~~ must conduct testing to demonstrate compliance with Section 218.501 ~~of this Subpart~~. The owner or operator ~~shall,~~must at its own expense~~,~~ conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.503(d), (e), and (f) ~~of this Subpart~~.

b) Notwithstanding subsection (a) ~~of this Section~~, flares and process boilers used to comply with control requirements of Section 218.501 ~~of this Subpart shall be~~are exempt from performance testing requirements.

c) When a flare is used to comply with the control requirements of Section 218.501 ~~of this Subpart~~, the flare ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 218.112 ~~of this Part~~.

d) The owner or operator of a batch operation that is exempt from the control requirements of Section 218.501 ~~of this Subpart shall~~must demonstrate~~,~~ upon the Agency's request~~,~~ the absence of oversized gas moving equipment in any manifold. Gas moving equipment ~~shall~~ must be considered oversized if it exceeds the maximum requirements of the exhaust flow rate by more than 30 percent.

e) For the purpose of demonstrating compliance with the control requirements in Section 218.501 ~~of this Subpart~~, the batch operation ~~shall~~ must be run at representative operating conditions and flow rates during any performance test.

f) The following methods in 40 CFR 60, Appendix A, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance with the reduction efficiency requirement ~~set forth~~ in Section 218.501 ~~of this Subpart~~:

1) Method 1 or 1A, as appropriate, for selection of the sampling sites if the flow measuring device is not a rotameter. The control device inlet sampling site for determination of vent stream VOM composition reduction efficiency ~~shall~~ must be ~~prior to~~before the control device and after the control device;

2) Method 2, 2A, 2C, or 2D, as appropriate, for determination of gas stream volumetric flow rate flow measurements, which ~~shall~~ must be taken continuously. No traverse is necessary when the flow measuring device is an ultrasonic probe;

3) Method 25A or Method 18, if applicable, to determine the concentration of VOM in the control device inlet and outlet;

A) The sampling time for each run ~~shall~~ must be as follows:

i) For batch cycles less than eight hours in length, readings ~~shall~~ must be taken continuously over the entire length of the batch cycle with a maximum of 15-minute intervals between measurements if using Method 25A. If using Method 18, readings ~~shall~~ must be taken continuously with a maximum of 15-minute intervals between measurements throughout the batch cycle unless it becomes necessary to change the impinger train, in which case a 30-minute interval ~~shall~~ must not be exceeded.

ii) For batch cycles of eight hours and greater in length, the owner or operator may either test in ~~accordance~~ compliance with the test procedures ~~defined~~ in subsection (f)(3)(A)(i) ~~of this Section~~ or the owner or operator may elect to perform tests~~, pursuant to~~ under either Method 25A or Method 18~~,~~ only during those portions of each emission event which define the emission profile of each emission event occurring within the batch cycle. For each emission event of less than four hours in duration, the owner or operator ~~shall~~ must test continuously over the entire emission event ~~as set forth in~~under subsection (f)(3)(A)(i) ~~of this Section~~. For each emission event of greater than

four hours in duration, the owner or operator ~~shall~~ may elect ~~either~~ to perform a minimum of three ~~one hour~~one-hour test runs during the emission event or ~~shall~~ test continuously over the entire emission event within each single unit operation in the batch process train. To demonstrate that the portion of the emission event to be tested ~~define~~ defines the emission profile for the emission event, the owner or operator electing to rely on this option ~~shall~~ must develop an emission profile for the entire emission event. ~~Such~~ The emission profile ~~shall~~ must be based upon either process knowledge or test data collected. Examples of information that could constitute process knowledge include~~, but are not limited to,~~ calculations based on material balances and process stoichiometry. Previous test results may be used ~~provided such~~if the results are still relevant to the current process vent stream conditions.

iii) For purposes of subsection (f)(3) ~~of this Section~~, ~~the term~~ "emission event" ~~shall be defined as~~means a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded single unit operation vapor space when the vessel is heated is also an emission event. Both ~~of these~~ examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, in ~~accordance~~ compliance with subsection (f)(2) ~~of this Section~~, then ~~such~~ the event is not an emission event for purposes of this Section.

B) The mass emission rate from the process vent or inlet to the control device ~~shall~~ must be determined by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in ~~accordance~~ compliance with subsection (f)(1) ~~of this Section~~ throughout the batch cycle;

C) The mass emission rate from the control device outlet ~~shall~~ must be obtained by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in ~~accordance~~ compliance with subsection (f)(1) ~~of this Section~~ throughout the batch cycle; and

D) The efficiency of the control device ~~shall~~ must be determined by integrating the mass emission rates obtained in subsections (f)(3)(B) and (f)(3)(C) ~~of this Section,~~ over the time of the batch cycle and dividing the difference in inlet and outlet mass flow totals by the inlet mass flow total.

g) Upon request by the Agency to conduct testing, an owner or operator of a batch operation which has installed a scrubber, a shell and tube condenser using a non-refrigerated cooling media, or any other control device which meets the criteria of Section 218.501(c) ~~of this Subpart~~, ~~shall~~ must demonstrate that ~~such~~ the device achieves the control efficiency ~~applicable within~~under Section 218.501 ~~of this Subpart~~ upon the earlier ~~to occur~~ of the date the device is replaced or December 31, 1999.

h) The owner or operator of a batch operation may propose an alternative test method or procedures to demonstrate compliance with the control requirements ~~set forth~~ in Section 218.501 ~~of this Subpart~~. ~~Such~~ The method or procedures ~~shall~~ must be approved by the Agency and USEPA ~~as evidenced by~~through federally enforceable permit conditions.

i) In the absence of a request by the Agency to conduct performance testing in ~~accordance~~ compliance with ~~the provisions of~~ this Section, a source may demonstrate compliance by ~~the use of~~using engineering estimates or process stoichiometry.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.504 Monitoring Requirements for Batch Operations

a) Every owner or operator using an afterburner to comply with Section 218.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~,~~ temperature monitoring devices with an accuracy of ± 1 percent of the temperature being measured expressed in degrees Celsius, equipped with continuous recorders.

1) Where a catalytic afterburner is used, temperature monitoring devices ~~shall~~ must be installed in the gas stream immediately before and after the catalyst bed.

2) Where an afterburner other than a catalytic afterburner is used, a temperature monitoring device ~~shall~~ must be installed in the combustion chamber.

b) Every owner or operator using a flare to comply with Section 218.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~,~~ a heat sensing device~~,~~ such as an ultra-violet beam

sensor or thermocouple~~,~~ at the pilot light to indicate continuous presence of a flame.

c) Every owner or operator using a scrubber to comply with ~~this~~ Section 218.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~, the following~~:

1) A temperature monitoring device for scrubbant liquid having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees Celsius and a specific gravity device for scrubbant liquid, each equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration of VOM exiting the control device based on a detection principle such as infra-red photoionization~~,~~ or thermal conductivity, each equipped with a continuous recorder.

d) Every owner or operator using a condenser to comply with Section 218.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~, the following~~:

1) A condenser exit temperature monitoring device equipped with a continuous recorder and having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees Celsius; or

2) A VOM monitoring device used to indicate the concentration of VOM such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

e) Every owner or operator using a carbon absorber to comply with this Subpart ~~shall~~ must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's specifications~~, the following equipment~~:

1) An integrating regeneration steam flow monitoring device having an accuracy of ±10 percent~~,~~ and a carbon bed temperature monitoring device having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees Celsius, both equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration level of VOM exiting ~~such~~ the device based on a detection principle such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

f) Every owner or operator using a boiler or process heater with a design heat input capacity less than 44 Mw to comply with Section 218.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's

specifications~~,~~ a temperature monitoring device in the firebox with an accuracy of ± 1 percent of the temperature being measured expressed in degrees Celsius, equipped with a continuous recorder. Any boiler or process heater in which all process vent streams are introduced with primary fuel is exempt from this requirement.

g) The owner or operator of a process vent ~~shall~~ will be permitted to monitor by an alternative method or may monitor parameters other that those ~~listed~~ in subsections (a) through (f) ~~of this Section,~~ if approved by the Agency and USEPA. ~~Such~~ The alternative method or parameters ~~shall~~ must be ~~contained~~ in the source's operating permit as federally enforceable permit conditions.

h) Notwithstanding subsections (a) through (g) ~~of this Section~~, sources using a scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of Section 218.501(c) ~~of this Subpart,~~ are required to monitor compliance with ~~the requirements of~~ this Subpart on and after the earlier ~~to occur~~ of the date ~~such~~ the device is replaced for any reason or December 31, 1999.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.505 Reporting and Recordkeeping for Batch Operations

a) Every owner or operator of a de minimis single unit operation or batch process train exempt under Section 218.500(c)(1) or (c)(2) ~~of this Subpart shall~~must keep records of the uncontrolled total annual mass emissions for any de minimis single unit operation or batch process train, as applicable, and documentation verifying these values or measurements. The documentation ~~shall~~ must include the engineering calculations, any measurements made in ~~accordance~~ compliance with Section 218.503 ~~of this Subpart~~, and the potential or permitted number of batch cycles per year~~,~~ or, in the alternative, total production as represented in the source's operating permit.

b) Every owner or operator of a single unit operation exempt under Section 218.500 (b) (3) or (d) ~~of this Subpart shall~~must keep the following records:

1) The uncontrolled total annual mass emissions and documentation verifying these values or measurements. The documentation ~~shall~~ must include any engineering calculations, any measurements made in ~~accordance~~ compliance with Section 218.503 ~~of this Subpart~~, and the potential or permitted number of batch cycles per year~~,~~ or, in the alternative, total production ~~as represented in~~under the source's operating permit.

2) The average flow rate in scfm and documentation verifying this value.

c) Every owner or operator of a batch operation subject to the control requirements of Section 218.501 ~~of this Subpart shall~~must keep records of the following parameters required to be monitored under Section 218.504 ~~of this Subpart~~:

1) If using a thermal or catalytic afterburner to comply with Section 218.501 ~~of this Subpart~~, records indicating the average combustion chamber temperature of the afterburner (or the average temperature upstream and downstream of the catalyst bed for a catalytic afterburner), measured continuously and averaged over the same time period as the performance test;

2) If using a flare (i.e., steam-assisted, air-assisted, or nonassisted) to comply with Section 218.501 ~~of this Subpart~~, continuous records of the flare pilot flame monitoring and records of all periods of operations during which the pilot flame is absent.

3) If using any of the following as a control device, the following records:

A) Where a scrubber is used, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the Agency) and the average exit temperature of the absorbing liquid, measured continuously and averaged over the same time period as the performance test (both measured while the vent stream is routed normally);

B) Where a condenser is used, the average exit (product side) temperature measured continuously and averaged over the same time period as the performance test while the vent stream is routed normally;

C) Where a carbon adsorber is used, the total steam mass flow measured continuously and averaged over the same time period as the performance test (full carbon bed cycle), temperature of the carbon bed after regeneration (and within 15 minutes after completion of any cooling cycle(s)), and duration of the carbon bed steaming cycle (all measured while the vent stream is routed normally); or

D) As an alternative to subsection (c)(3)(A), (c)(3)(B), or (c)(3)(C) ~~of this Section~~, at a minimum, records indicating the concentration level or reading indicated by the VOM monitoring device at the outlet of the scrubber, condenser, or carbon adsorber, measured continuously and averaged over the same time period as the performance test (while the vent stream is routed normally).

d) Every owner or operator of a single unit operation claiming a vent stream

concentration exemption level~~, as set forth in~~ under Section 218.500(d)(1) ~~of this Subpart, shall~~must maintain records to indicate the vent stream concentration is less than or equal to 500 ppmv~~,~~ and ~~shall~~ must notify the Agency in writing if the vent stream concentration at any time equals or exceeds 500 ppmv, within 60 days after ~~such~~ the event. ~~Such~~ The notification ~~shall~~ musy include a copy of all records of ~~such~~ the event.

e) An owner or operator of a batch operation subject to the control requirements of Section 218.501 ~~of this Subpart~~ may maintain alternative records other than those ~~listed~~ in subsection (c) ~~of this Section~~. Any alternative recordkeeping ~~shall~~ must be approved by the Agency and USEPA and ~~shall~~ must be ~~contained~~ in the source's operating permit as federally enforceable permit conditions.

f) Notwithstanding subsections (a) through (e) ~~of this Section~~, any owner or operator of a batch operation which uses either a scrubber, shell and tube condenser using non-refrigerated cooling media, or other control device meeting the criteria of Section 218.501(c) ~~of this Subpart, is required to~~must monitor compliance with ~~the requirements of~~ this Subpart on and after the earlier ~~to occur~~ of the date ~~such~~ the device is replaced for any reason or December 31, 1999.

g) The owner or operator of a de minimis single unit operation or batch process train exempt from the control requirements of Section 218.500(c) ~~of this Subpart~~ ~~shall~~must notify the Agency in writing if the uncontrolled total annual mass emissions from ~~such~~ the de minimis single unit operation or batch process train exceed the threshold in Section 218.500(c)(1) or (c)(2) ~~of this Subpart~~, respectively, within 60 days after the event occurs. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the event.

h) Every owner or operator of a batch operation required to keep records under this Section ~~shall~~ must maintain ~~such~~ the records at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all ~~such~~ of the records available to the Agency upon request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.506 Compliance Date

Every owner or operator of a batch operation subject to Sections 218.500 through 218.506 ~~of this Subpart shall~~must comply with its ~~standards, limitations and mandates~~requirements by March 15, 1996, or upon initial start up, whichever is later.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.520 Emission Limitations for Air Oxidation Processes

a) ~~No~~ A person ~~shall~~ must not cause or allow the emission of VOM from any process vent stream unless the process vent stream is vented to a combustion device which is designed and operated either:

1) To reduce the volatile organic emissions vented to it with an efficiency of at least ~~ninety-eight percent (~~98%~~)~~ by weight; or

2) To emit VOM at a concentration less than ~~twenty parts per million~~20 ppm by volume, dry basis.

b) Combustion Device at a Phthalic Anhydride Air Oxidation Process

1) Notwithstanding subsection (a) ~~above,~~ and subject to subsection (b)(2) ~~below~~, ~~no~~ a person ~~shall~~ must not cause or allow the emissions of VOM through an existing combustion device at a phthalic anhydride air oxidation process, unless the combustion device is operated to achieve:

A) 90% control of the volatile organic emissions vented to it; or

B) VOM emissions concentration of less than 50 ~~parts per million~~ppm by volume, dry basis.

2) Any existing combustion device subject to subsection (b)(1) ~~above is required to~~must meet the 98 percent emissions limit ~~set forth~~ in subsection (a) ~~above~~ either upon replacing the combustion device for any reasons, including~~, but not be limited to,~~ normal maintenance, malfunction, accident, and obsolescence, or ~~the date of~~ December 31, 1999, whichever comes first. A combustion device is considered to be replaced when:

A) All of the device is replaced; or

B) When the cost of the repair of the device or the cost of replacement of part of the device exceeds 50% of the cost of replacing the entire device with a device which complies.

c) The limitations of subsection (a) ~~above shall~~ apply to any process vent stream or combination of process vent streams with a Total Resource Effectiveness Index (TRE) less than or equal to 6.0. TRE ~~shall~~ must be determined by the following methods:

1) If an air oxidation process has more than one process vent stream, TRE ~~shall~~ must be the more stringent of either the TRE based upon a combination of the process vent streams or the TRE based upon each individual process vent stream.

2) The TRE of a process vent stream and the TRE of a combination of process vent streams, whichever is applicable, ~~shall~~ must be determined according to the following equation:

TRE = E(-1) [a + bF(n) + cF + dFH + e(FxH)(n) + fF(0.5)]

where:

n =	0.88;
TRE =	Total resource effectiveness index;
F =	Vent stream flowrate (scm/min), at a standard temperature of ~~20°C~~20 ºC;
E =	Hourly measured emissions in kg/hr;
H =	Net heating value of vent stream (MJ/scm), where the net enthalpy per mole of offgas is based on combustion at ~~25ºC~~ 25 ºC and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20º C~~20 ºC, as in the definition of "Flow";
a, b, c, d, e, and f=	Coefficients obtained by use of Appendix D.

3) For nonchlorinated process vent streams, if the net heating value~~,~~ H~~,~~ is greater than 3.6 MJ/scm, F ~~shall~~ must be replaced by F' for purposes of calculating TRE. F' is computed as follows:

F' = FH / 3.6

where F and H are as defined in subsection (c)(2) ~~of this Section~~.

4) The actual numerical values used in the equation ~~described~~ in subsection (c)(2) ~~shall~~ must be determined as follows:

A) All reference methods and procedures for determining the flow (F), hourly emissions (E), and net heating (H)~~,~~ value ~~shall~~ must be in compliance with Appendix C.

B) All coefficients ~~described~~ in subsection (c)(2) ~~of this Section~~ ~~shall~~must be in ~~accordance~~ compliance with Appendix D.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.521 Definitions (Repealed)

(Source: Repealed at 17 Ill. Reg. 16636, effective September 27, 1993)

Section 218.522 Savings Clause

The owner or operator of an air oxidation process with a TRE of 1.0 or less ~~shall~~ must have complied with ~~the requirements of~~ Section 218.520(a) ~~of this Subpart~~ by the dates ~~set forth~~ in Section 218.106(a) and (b) ~~of this Part~~. Sources that are subject to 218.520(b) ~~of this Subpart~~ that become subject to the control requirements of 218.520(a) ~~of this Subpart~~ after the compliance dates ~~set out~~ in 218.106(a) and (b) ~~of this Part shall~~must comply with the timetable ~~set forth within~~in Section 218.520(b).

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.523 Compliance

The emissions limitations for air oxidation processes ~~located~~ in Section 218.520(a) ~~of this Subpart are applicable~~apply to air oxidation processes on October 25, 1994.

a) An owner or operator of an air oxidation process with a TRE of 6.0 or less that is subject to ~~the requirements of~~ Section 218.520(a) ~~of this Subpart~~ on October 25, 1994 ~~shall~~, must comply with ~~the provisions of~~ Section 218.520(a) by December 31, 1999, or upon startup of the emission unit, whichever comes first. This subsection does not supersede the Savings Clause in Section 218.522 ~~of this Part~~.

b) An owner or operator of an air oxidation process that becomes subject to ~~the requirements of~~ Section 218.520(a) ~~of this Subpart~~ after October 25, 1994 ~~shall~~, must comply with ~~the requirements of~~ Section 218.520(a) upon startup of the emission unit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.524 ~~Determination of~~Determining Applicability

a) Sources subject to ~~the requirements of~~ Section 218.520(a) ~~of this Subpart~~ either through application of Section 218.520(c) ~~of this Subpart~~ or ~~through~~ continued application under Section 218.522 ~~of this Subpart shall~~must continue to be subject to the applicable limitations even if operations change so as to result in a TRE that is above that which initially made the regulation applicable to the source's operations.

b) Notwithstanding Section 218.520(c) ~~of this Subpart~~, any air oxidation process that ~~utilizes~~ uses a combustion device to control process vent streams at any time ~~shall~~ must maintain the process in compliance with ~~the provisions of~~ Section 218.520(a) ~~of this Subpart~~ at all times ~~thereafter~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.525 Emission Limitations for Air Oxidation Processes (Renumbered)

(Source: Section 218.525 renumbered to Section 218.520 at 18 Ill. Reg. 16950, effective November 15, 1994)

Section 218.526 Testing and Monitoring

a) Upon reasonable request by the Agency, the owner or operator of an air oxidation process ~~shall~~ must demonstrate compliance with this Subpart by ~~use of~~using the methods ~~specified~~ in Appendix C. This Section does not limit the USEPA's authority~~,~~ under the Clean Air Act~~,~~ to require demonstrations of compliance.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the tests so that the Agency may observe the test.

SUBPART W: AGRICULTURE

Section 218.541 Pesticide Exception

~~The provisions of~~ Sections 218.301 and 218.302 ~~of this Part shall~~do not apply to the spraying or use of insecticides, herbicides, or other pesticides.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART X: CONSTRUCTION

Section 218.561 Architectural Coatings

~~No~~ A person ~~shall~~ must not cause or allow the sale or use of any architectural coating containing more than 20 percent by volume of photo-chemically reactive material in containers having a capacity of more than one gallon.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.562 Paving Operations

~~The provisions of~~ Sections 218.301 and 218.302 ~~of this Part shall~~do not apply to the application of paving asphalt and pavement marking paint from sunrise to sunset.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.563 Cutback Asphalt

a) ~~No~~ A person ~~shall~~ must not cause or allow the use or application of cutback asphalt for paving, resurfacing, reconditioning, repairing, or otherwise maintaining a roadway unless:

1) The use or application of the cutback asphalt commences on or after October 1 of any year and ~~such~~ the use or application is completed by April 30 of the following year; or

2) The cutback asphalt is a long-life stockpile material which remains in stock after April 30 of each year, which ~~and as such it~~ may be used until depleted for patching potholes and for other similar repair work; or

3) The cutback asphalt is to be used solely as an asphalt prime coat.

b) Sources subject to this Section are not required to submit or obtain an Agency approved compliance plan or project completion schedule under 35 Ill. Adm. Code 201, Subpart H.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART Y: GASOLINE DISTRIBUTION

Section 218.581 Bulk Gasoline Plants

a) Subject to subsection (e) ~~of this Section~~, ~~no~~ a person ~~may~~ must not cause or allow the transfer of gasoline from a delivery vessel into a stationary storage tank located at a bulk gasoline plant unless:

1) The delivery vessel and the stationary storage tank are each equipped with a vapor collection system that meets the requirements of subsection (d)(4) ~~of this Section~~;

2) Each vapor collection system is operating;

3) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Sections 218.584 (b) or (d) ~~of this Part~~;

4) The pressure relief valve(s) on the stationary storage tank and the delivery vessel are set to release at no less than 0.7 psi or the highest pressure allowed by state or local fire codes or the guidelines of the National Fire Prevention Association; and

5) The stationary storage tank is equipped with a submerged loading pipe.

b) Subject to subsection (f) ~~of this Section~~, ~~no~~ a person ~~may~~ must not cause or allow the transfer of gasoline from a stationary storage tank located at a bulk gasoline plant into a delivery vessel unless:

1) The requirements ~~set forth~~ in subsections (a)(1) through (a)(4) ~~of this Section~~ are met; and

2) Equipment is available at the bulk gasoline plant to provide for the submerged filling of the delivery vessel or the delivery vessel is equipped for bottom loading.

c) Subject to subsection (e) ~~of this Section~~, each owner of a stationary storage tank located at a bulk gasoline plant ~~shall~~must:

1) Equip each stationary storage tank with a vapor control system that meets the requirements of subsection (a) or (b) ~~of this Section~~, whichever is applicable;

2) Provide instructions to the operator of the bulk gasoline plant describing necessary maintenance operations and procedures ~~for prompt notification of~~that promptly notify the owner in case ~~of~~ any ~~malfunction of a~~ vapor control system malfunctions; and

3) Repair, replace, or modify any worn out or malfunctioning component or element of design.

d) Subject to subsection (e) ~~of this Section~~, each operator of a bulk gasoline plant ~~shall~~must:

1) Maintain and operate each vapor control system in ~~accordance~~ compliance with the owner's instructions;

2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system; ~~and~~

3) Maintain gauges, meters, or other specified testing devices in proper working order;

4) Operate the bulk plant vapor collection system and gasoline loading equipment in a manner that prevents:

A) Gauge pressure from exceeding 45.7 cm (18 in.) of water and vacuum from exceeding 15.2 cm (6 in.) of water, as measured as close as possible to the vapor hose connection; and

B) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", Appendix B, EPA 450/2-78-051, ~~(~~incorporated by reference in Section 218.112~~) of this Part~~; and

C) Avoidable leaks of liquid during loading or unloading operations.

5) Provide a pressure tap or equivalent on the bulk plant vapor collection system ~~in order~~ to allow the determination of compliance with subsection (d)(4)(A) ~~of this Section~~; and

6) Within 15 business days after discovery of any leak by the owner, the operator, the Agency, or ~~the~~ USEPA, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A) or (B) ~~of this Section~~.

e) The requirements of subsections (a), (c), and (d) ~~of this Section shall~~do not apply to:

1) Any stationary storage tank with a capacity of less than 2,177 1 (575 gal); or

2) Any bulk gasoline plant whose daily gasoline throughput is less than 15,140 1 (4,000 gal/day) on a thirty-day rolling average.

f) ~~The requirements of subsection~~Subsection (b) ~~of this Section shall apply~~applies only to bulk gasoline plants whose daily gasoline throughput is greater than or equal to 15,140 1 (4,000 gal/day) on a thirty-day rolling average.

g) Any bulk gasoline plant which is ever subject to subsections (a), (b), (c), or (d) ~~shall~~ must always be subject to these ~~paragraphs~~subsections.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.582 Bulk Gasoline Terminals

a) ~~No~~ A person ~~shall~~ must not cause or allow the transfer of gasoline into any delivery vessel from any bulk gasoline terminal unless:

1) The bulk gasoline terminal is equipped with a vapor control system that limits emission of VOM to 80 mg /l (0.00067 lbs/gal) of gasoline loaded;

2) The vapor control system is operating and all vapors displaced in the loading of gasoline to the delivery vessel are vented only to the vapor control system;

3) There is no liquid drainage from the loading device when it is not in use;

4) All loading and vapor return lines are equipped with fittings which are vapor tight; and

5) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Section 218.584(b) or (d) ~~of this Part~~; or, if the terminal is driver-loaded, the terminal owner or operator ~~shall~~ will be deemed to be in compliance with this Section when terminal access authorization is limited to those owners and/or operators of delivery vessels who have provided a current certification as required by Section 218.584(c)(3) ~~of this Part~~.

b) The operator of a bulk gasoline terminal ~~shall~~must:

1) Operate the terminal vapor collection system and gasoline loading equipment in a manner that prevents:

A) Gauge pressure from exceeding 18 inches of water and vacuum from exceeding 6 inches of water as measured as close as possible to the vapor hose connection; and

B) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in EPA 450/2-78-051 Appendix B, incorporated by reference in Section 218.112 ~~of this Part~~; and

C) Avoidable leaks of liquid during loading or unloading operations.

2) Provide a pressure tap or equivalent on the terminal vapor collection system in order to allow the determination of compliance with Section 218.582(d)(1)(A) ~~of this Part~~; and

3) Within 15 business days after discovery of the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (c)(1)(A) or (B) ~~of this Section~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.583 Gasoline Dispensing Operations – Storage Tank Filling Operations

a) Subject to subsection (b), ~~no~~ a person ~~shall~~ must not cause or allow the transfer of gasoline from any delivery vessel into any stationary storage tank at a gasoline dispensing operation unless:

1) The tank is equipped with a submerged loading pipe; and

2) The vapors displaced from the storage tank during filling are processed by a vapor control system that includes one or more of the following:

A) A vapor collection system that meets the requirements of subsection (d)(4); or

B) A refrigeration-condensation system or any other system approved by the USEPA as a SIP revision~~,~~ that recovers at least 90 percent by weight of all vaporized organic material from the equipment being controlled; and

C) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Section 218.584(b) or (d) ~~of this Part~~; and

3) By March 15, 1995, all tank vent pipes are equipped with pressure/vacuum relief valves with the following design specifications:

A) The pressure/vacuum relief valve ~~shall~~ must be set to resist a pressure of at least 3.5 inches water column and to resist a vacuum of no less than 6.0 inches water column; or

B) The pressure/vacuum relief valve ~~shall~~ must meet the requirements of Section 218.586(c) ~~of this Part~~; and

4) The owner or operator of a gasoline dispensing operation demonstrates compliance with subsection (a)(3) ~~of this Section,~~ by March 15, 1995, or 30 days after installation of each pressure/vacuum relief valve, whichever is later, and then at least annually ~~thereafter~~, by measuring and recording the pressure indicated by a pressure/vacuum gauge at each tank vent pipe. The test ~~shall~~ must be performed on each tank vent pipe within two hours after product delivery into the respective storage tank. For manifold tank vent systems, observations at any point within the system ~~shall~~ must be adequate. The owner or operator ~~shall~~ must maintain any records required by this subsection for ~~a period of~~ three years.

b) ~~The requirements of subsections~~Subsections (a)(2) and (a)(3) ~~shall~~ do not apply to transfers of gasoline to a stationary storage tank at a gasoline dispensing operation if:

1) The tank is equipped with a floating roof~~,~~ or other system of equal or better emission control approved by the Agency and approved by ~~the~~ USEPA as a SIP revision;

2) The tank has a capacity of less than 2000 gallons and was in place and operating before January 1, 1979; or

3) The tank has a capacity of less than 575 gallons.

c) Subject to subsection (b), each owner of a gasoline dispensing operation ~~shall~~must:

1) Install all control systems and make all process modifications required by subsection (a);

2) Provide instructions to the operator of the gasoline dispensing operation describing necessary maintenance operations and procedures for prompt notification of the owner in case of any malfunction of a vapor control system; and

3) Repair, replace, or modify any worn out or malfunctioning component or element of design.

d) Subject to subsection (b), each operator of a gasoline dispensing operation ~~shall~~must:

1) Maintain and operate each vapor control system in ~~accordance~~ compliance with the owner's instructions;

2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system;

3) Maintain gauges, meters, or other specified testing devices in proper working order;

4) Operate the vapor collection system and delivery vessel unloading points in a manner that prevents:

A) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in EPA 450/2-78-051 appendix B, incorporated by reference in Section 218.112~~ of this Part~~; and

B) Avoidable leaks of liquid during the filling of storage tanks; and

5) Within 15 business days after discovery of the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A).

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.584 Gasoline Delivery Vessels

a) Any delivery vessel equipped for vapor control by use of vapor collection equipment:

1) ~~Shall~~ Must have a vapor space connection that is equipped with fittings which are vapor tight;

2) ~~Shall~~ Must have its hatches closed at all times during loading or unloading operations, unless a top loading vapor recovery system is used;

3) ~~Shall~~ Must not internally exceed a gauge pressure of 18 inches of water or a vacuum of 6 inches of water;

4) ~~Shall~~ Must be designed and maintained to be vapor tight at all times during normal operations;

5) ~~Shall~~ Must not be refilled in Illinois at other than:

A) A bulk gasoline terminal that complies with ~~the requirements of~~ Section 218.582 ~~of this Part~~; or

B) A bulk gasoline plant that complies with ~~the requirements of~~ Section 218.581(b) ~~of this Part~~.

6) ~~Shall~~ Must be tested annually in ~~accordance~~ compliance with Method 27, 40 CFR 60, Appendix A, incorporated by reference in Section 218.105. Each vessel must be repaired and retested within 15 business days after discovery of the leak by the owner, operator, or the Agency, when it fails to sustain:

A) A pressure drop of no more than three inches of water in five minutes; and

B) A vacuum drop of no more than three inches of water in five minutes.

b) Any delivery vessel meeting the requirements of subsection (a) ~~of this Section shall~~must have a sticker affixed to the tank adjacent to the tank manufacturer's data plate which contains the tester's name, the tank identification number, and

the date of the test. The sticker ~~shall~~ must be in a form prescribed by the Agency, and, for those delivery vessels subject to 35 Ill. Adm. Code 215 as of December 31, 1987 ~~shall~~, must have been displayed ~~no later than~~by December 31, 1987.

c) The owner or operator of a delivery vessel ~~shall~~must:

1) Maintain copies of any test required under subsection (a)(6) ~~of this Section~~ for ~~a period of~~ 3 years;

2) Provide copies of these tests to the Agency upon request; and

3) Provide annual test result certification to bulk gasoline plants and terminals where the delivery vessel is loaded.

d) Any delivery vessel which has undergone and passed a test in another state which has a USEPA-approved leak testing and certification program will satisfy the requirements of subsection (a) ~~of this Section~~. Delivery vessels must display a sticker, decal, or stencil approved by the state where tested or comply with the requirements of subsection (b) ~~of this Section~~. All such stickers, decals, or stencils ~~shall~~ must have been displayed ~~no later than~~by December 31, 1987, for delivery vessels subject to 35 Ill. Adm. Code 215 as of December 31, 1987.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.585 Gasoline Volatility Standards (Repealed)

(Source: Repealed at 37 Ill. Reg. 1699, effective January 28, 2013)

Section 218.586 Gasoline Dispensing Operations - Motor Vehicle Fueling Operations

a) Definitions. For the purposes of this Section, the following definitions apply.

1) "Average monthly volume" means the amount of motor vehicle fuel dispensed per month from a gasoline dispensing operation based upon a monthly average for the 2-year period of November 1990 through October 1992, or, if not available, the monthly average for the most recent twelve calendar months. Monthly averages are to include only those months when the operation was operating.

2) "Certified" means any vapor collection and control system which has been tested and approved by CARB as having a vapor recovery and removal efficiency of at least 95% (by weight) ~~shall~~ will constitute a certified vapor collection and control system. CARB testing and approval is ~~pursuant to~~under the CARB manual, incorporated by reference at Section 218.112 ~~of this Part~~.

3) "Completion of installation" means the successful passing of one or more of the following tests applicable to the installed vapor collection and control system: Dynamic Backpressure Test, Pressure Decay/Leak Test, and Liquid Blockage Test, incorporated by reference at Section 218.112 ~~of this Part~~.

4) "CARB" means California Air Resources Board, P.O. Box 2815, Sacramento, CA 95812.

5) "Employee" means any person who performs work for an employer.

6) "Operation" means any building, structure, installation, operation, or combination ~~thereof~~ of them located on contiguous properties and under common ownership that provides for the dispensing of motor vehicle fuel.

7) "Gasoline dispensing operation" means any operation where motor vehicle fuel is dispensed into motor vehicle fuel tanks or portable containers from a storage tank with a capacity of 2176 liters (575 gallons) or more.

8) "Modification" means any change, removal, or addition, other than an identical replacement, of any component contained within the vapor collection and control system.

9) "Motor vehicle" means any self-propelled vehicle powered by an internal combustion engine, ~~including, but not limited to,~~ automobiles and trucks. ~~Specifically excluded from this definition are~~This definition specifically excludes watercraft and aircraft.

10) "Motor vehicle fuel" means any petroleum distillate having a Reid vapor pressure of more than 27.6 kilopascals (kPa) (four pounds per square inch) and which is used to power motor vehicles.

11) "Owner or operator" means any person who owns, leases, operates, manages, supervises, or controls (directly or indirectly) a gasoline dispensing operation.

12) Reid vapor pressure for gasoline ~~shall~~ must be measured in ~~accordance~~ compliance with the method ASTM D323-08, incorporated by reference in Section 218.112 ~~of this Part~~.

13) "Vapor collection and control system" means any system certified by CARB which limits the discharge to the atmosphere of motor vehicle fuel vapors displaced during the dispensing of motor vehicle fuel into motor vehicle fuel tanks.

b) Applicability. ~~The provisions of subsection~~Subsection (c) ~~shall apply~~applies to any gasoline dispensing operation which dispenses an average monthly volume of more than 10,000 gallons of motor vehicle fuel per month. Compliance ~~shall be required and~~must be demonstrated ~~in accordance with the schedule provided~~by the deadline in subsection (d).

c) Vapor Collection and Control Systems. ~~No~~ An owner or operator of a gasoline dispensing operation subject to ~~the requirements of~~ subsection (b) ~~shall~~ must not cause or allow the dispensing of motor vehicle fuel at any time from a motor fuel dispenser unless the dispenser is equipped with and ~~utilizes~~ uses a vapor collection and control system which is properly installed and operated ~~as provided in~~under this subsection (c):

1) Any vapor collection and control system installed, used, or maintained has been CARB certified.

2) Any vapor collection and control system ~~utilized~~ used is maintained in ~~accordance~~ compliance with the manufacturer's specifications and the certification.

3) No elements or components of a vapor collection and control system are modified, removed, replaced, or otherwise rendered inoperative in a manner which prevents the system from performing in ~~accordance~~ compliance with its certification and design specifications.

4) A vapor collection and control system has no defective, malfunctioning, or missing components.

5) Operators and employees of the gasoline dispensing operation are trained and instructed in the proper operation and maintenance of a vapor collection and control system.

6) Instructions are posted in a conspicuous and visible place within the motor fuel dispensing area and describe the proper method of dispensing motor vehicle fuel with the use of the vapor collection and control system.

d) Compliance. In conjunction with ~~the compliance provisions of~~ Section 218.105 of this Part, gasoline dispensing operations subject to ~~the requirements of~~ subsection (c) ~~shall~~ must comply and demonstrate compliance according to the following:

1) Gasoline dispensing operations that operate at any time ~~prior to~~before January 1, 2014 ~~shall~~, must comply with subsection (c) until decommissioning is allowed and commenced in ~~accordance~~ compliance with subsections (i)(l) and (i)(2)(B).

2) ~~The provisions of subsection~~Subsection (c) ~~shall~~ does not apply to any new gasoline dispensing operation that commences operating for the first time on or after January 1, 2014.

e) Except as provided in subsection (d), any gasoline dispensing operation that becomes subject to ~~the provisions of~~ subsection (c) at any time ~~shall~~ must remain subject to ~~the provisions of~~ subsection (c) at all times.

f) Upon request by the Agency, the owner or operator of a gasoline dispensing operation which claims to be exempt from ~~the requirements of~~ subsection (c) ~~shall~~ must submit ~~records~~ to the Agency within 30 calendar days ~~from~~ after the date of the request records which demonstrate that the gasoline dispensing operation is in fact exempt.

g) Recordkeeping and Reporting:

1) Any gasoline dispensing operation subject to subsection (c) ~~shall~~ must retain at the operation copies of the registration information required ~~at~~ by subsection (h).

2) Except as provided in subsection (g)(4), records and reports required ~~pursuant to~~under this subsection (g) ~~shall~~ must be made available to the Agency upon request.

3) Records and reports~~,~~ which ~~shall~~ must be maintained by the owner or operator of a gasoline dispensing operation subject to subsection (c)~~, shall~~ must clearly demonstrate:

A) That a certified vapor collection and control system has been installed and tested to verify its performance according to its specifications.

B) That proper maintenance has been conducted in ~~accordance~~ compliance with the manufacturer's specifications and requirements.

C) The time ~~period~~ and duration of all malfunctions of the vapor collection and control system.

D) The motor vehicle fuel throughput of the operation for each calendar month of the previous year.

E) That operators and employees are trained and instructed in the proper operation and maintenance of the vapor collection and control system and informed as to the potential penalties associated with the violation of any provision of this Section.

4) Any and all records relating to decommissioning ~~shall~~ must be maintained by the owner or operator of a gasoline dispensing operation for ~~a period of~~ 5 years after completion of decommissioning in ~~accordance~~ compliance with subsection (i). For purposes of this subsection (g)(4), "records" include~~, but are not limited to,~~ any documents, papers, reports, test results, logs, invoices, forms, certifications, and receipts that relate to decommissioning. Records relating to decommissioning ~~shall~~ must be made available to the Agency or its designee within 30 minutes after the Agency's, or its designee's, request.

h) Any gasoline dispensing operation subject to subsection (c) ~~shall~~ must comply with the following registration requirements:

1) Upon the installation of a vapor collection and control system, the owner or operator of the gasoline dispensing operation ~~shall~~ must submit to the Agency a registration which provides at minimum the operation name and address, signature of the owner or operator, the CARB Executive Order Number for the vapor collection and control system to be ~~utilized~~used, the number of nozzles (excluding diesel or kerosene) used for motor vehicle refueling, the monthly average volume of motor vehicle fuel dispensed, the location (including contact person's name, address, and telephone number) of records and reports required by this Section, and the date of completion of installation of the vapor collection and control system.

2) The registration ~~shall~~ must be submitted to the Agency within 30 days after completion of the installation.

3) A copy of the registration information ~~shall~~ must be maintained at the gasoline dispensing operation.

4) Upon the modification of an existing vapor collection and control system, the owner or operator of the gasoline dispensing operation ~~shall~~ must submit to the Agency a registration that details the changes to the information provided in the previous registration of the vapor collection and control system and which includes the signature of the owner or operator. The registration must be submitted to the Agency within 30 days after completion of the modification.

i) Decommissioning. The owner or operator of a gasoline dispensing operation subject at any time to subsection (c) ~~shall~~ must decommission vapor collection and control systems in ~~accordance~~ complaince with ~~the provisions of~~ this subsection (i).

1) Compliance

A) Beginning January 1, 2014, an owner or operator of a gasoline dispensing operation may commence decommissioning of vapor collection and control systems. The decommissioning of vapor collection and control systems must be conducted in ~~accordance~~ compliance with ~~all of the provisions specified in~~ subsection (i)(2).

B) No later than December 31, 2016, an owner or operator of a gasoline dispensing operation ~~shall~~ must complete the decommissioning of all vapor collection and control systems in ~~accordance~~ compliance with ~~all of the provisions specified in~~ subsection (i)(2).

2) Decommissioning Procedures and Standards. The decommissioning of vapor collection and control systems ~~shall~~ must be conducted as follows:

A) The owner or operator of a gasoline dispensing operation ~~shall~~ must complete and submit a notice of intent form~~,~~ provided by the Agency~~,~~ notifying the Agency of its intent to decommission. The completed notice of intent form ~~shall~~ must be submitted to the Agency at least 10 days ~~prior to~~before commencing decommissioning in ~~accordance~~ compliance with subsection (i)(2)(B);

B) The owner or operator of a gasoline dispensing operation ~~shall~~ must decommission vapor collection and control systems in ~~accordance~~ compliance with ~~all of the procedures specified in~~ Section 14.6, except Section 14.6.14, of the Petroleum Equipment Institute's "Recommended Practices for Installation and Testing of Vapor-Recovery Systems at Vehicle-Fueling Sites", PEI/RP 300-09 (PEI), incorporated by reference at Section 218.112~~ of this Part~~. In addition to Section 14.6 of the PEI, the following requirements apply to decommissioning:

i) All decommissioning procedures, except testing, ~~shall~~ must be performed only by a contractor who is both registered with the Illinois Department of Agriculture, Bureau of Weights and Measures, in the 3-A Gasoline Pump Meters Code ~~pursuant to~~under Section 8.1 of the Weights and Measures Act [225 ILCS 470/8.1] and licensed by the Office of the State Fire Marshal (OSFM) in the installation/retrofitting licensure module ~~pursuant to~~under the Petroleum Equipment Contractors Licensing Act [225 ILCS 729] and implementing regulations at 41 Ill. Adm. Code 172. ~~Any such~~The contractor ~~shall~~ must also have the appropriate dispenser-manufacturer certification and training, if any. ~~In the event that~~If product piping must be

broken or an OSFM permit is otherwise required for any component of the work, the contractor ~~shall~~ must ensure that the OSFM-permitted work is performed by the appropriate OSFM-licensed contractor and personnel;

ii) Decommissioning procedures related to testing ~~shall~~ must be performed only by a contractor who is licensed by OSFM in the tank tightness testing licensure module ~~pursuant to~~under the Petroleum Equipment Contractors Licensing Act and implementing regulations at 41 Ill. Adm. Code 172; and

iii) The pressure decay test required by the PEI ~~shall~~ must be passed in ~~accordance~~ compliance with Appendix A of the PEI. The tie-tank test required by the PEI ~~shall~~ must be conducted and passed in ~~accordance~~ compliance with CARB TP201.3C to ensure that all tanks are properly vented; and

C) The owner or operator of a gasoline dispensing operation and the contractors that performed the decommissioning ~~shall~~ must complete and sign a decommissioning checklist and certification, provided by the Agency, documenting the decommissioning procedures performed. Within 30 days after completion of the decommissioning procedures ~~specified by~~under subsection (i)(2)(B), the owner or operator ~~shall~~ must provide the completed checklist and certification and the test results to the Agency.

Section 218.607 Standards for Petroleum Solvent Dry Cleaners

a) The owner or operator of a petroleum solvent dry cleaning dryer ~~shall~~ must either:

1) Limit emissions of VOM to the atmosphere to an average of 3.5 kilograms of VOM per 100 kilograms dry weight of articles dry cleaned, or

2) Install and operate a solvent recovery dryer in a manner such that the dryer remains closed and the recovery phase continues until a final solvent flow rate of 50 milliliters per minute is attained.

b) The owner or operator of a petroleum solvent filtration system ~~shall~~ must either:

1) Reduce the VOM content in all filtration wastes to 1.0 kilogram or less per 100 kilograms dry weight of articles dry cleaned~~,~~ before disposal~~,~~ and exposure to the atmosphere, or

2) Install and operate a cartridge filtration system~~,~~ and drain the filter cartridges in their sealed housings for 8 hours or more before their removal.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.608 Operating Practices for Petroleum Solvent Dry Cleaners

~~In order to~~To minimize fugitive solvent emissions, the owner or operator of a petroleum solvent dry cleaning source ~~shall~~ must employ good housekeeping practices including the following:

a) General Housekeeping Requirements

1) Equipment containing solvent (washers, dryers, extractors, and filters) ~~shall~~ must remain closed at all times except during load transfer and maintenance. Lint filter and button trap covers ~~shall~~ must remain closed except when solvent-laden material is being removed.

2) Cans, buckets, barrels, and other containers of solvent or of solvent-laden material ~~shall~~ must be covered except when in use.

3) Solvent-laden material ~~shall~~ must be exposed to the atmosphere only for the minimum time necessary for load transfer.

b) Installation and operation of equipment:

1) All cartridge filters ~~shall~~ must be enclosed and operated in ~~accordance~~ compliance with the procedures and specifications recommended by the manufacturer for the cartridge filter. After installation, the cartridges ~~shall~~ must be inspected, monitored, and maintained in ~~accordance~~ compliance with the manufacturer's recommendations; and

2) Vents on containers for new solvent and for solvent-containing waste ~~shall~~ must be constructed and maintained ~~so as~~ to minimize solvent vapor emissions. Criteria for ~~the minimization of~~minimizing solvent vapor emissions include ~~the elimination of~~eliminating solvent buckets and barrels standing open to the atmosphere~~,~~ and ~~the repair of~~repairing gaskets and seals that expose solvent-rich environments to the atmosphere, to be determined through visual inspection.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.609 Program for Inspection and Repair of Leaks

a) The owner or operator of a petroleum solvent dry cleaning source ~~shall~~ must conduct the following visual inspections on a weekly basis:

1) Washers, dryers, solvent filters, settling tanks, vacuum stills, and containers and conveyors of petroleum solvent ~~shall~~ must be inspected for visible leaks of solvent liquid.

2) Pipes, hoses, and fittings ~~shall~~ must be inspected for active dripping or dampness.

3) Pumps and filters ~~shall~~ must be inspected for leaks around seals and access covers.

4) Gaskets and seals ~~shall~~ must be inspected for wear and defects.

b) Leaks of petroleum solvent liquid and vapors ~~shall~~ must be repaired within three working days ~~of~~ after detection, unless necessary replacement parts are not on site.

1) If necessary, repair parts ~~shall~~ must be ordered within three working days ~~of detection of~~after detecting the leak.

2) The leak ~~shall~~ must be repaired within three days ~~of~~ after delivery of necessary parts.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.610 Testing and Monitoring

a) Compliance with Sections 218.607(b)(2), 218.608, and 218.609 ~~of this Part shall~~must be determined by visual inspection; and

b) Compliance with Sections 218.607(a)(2) and (b)(1) ~~of this Part shall~~must be determined by methods ~~described~~ in EPA-450/3-82-009 (1982), incorporated by reference in Section 218.112 ~~of this Part~~.

c) If a control device is used to comply with Section 218.607(a)(1) ~~of this Part~~, then compliance ~~shall~~ must be determined using 40 CFR 60 Appendix A, Method 25 (1984), incorporated by reference in Section 218.112 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.611 Applicability for Petroleum Solvent Dry Cleaners

~~The provisions of~~ Sections 218.607 through 218.610 ~~of this Part shall~~ apply to petroleum solvent dry cleaning sources that:

a) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM~~,~~ and are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision; or

b) Have a potential to emit 22.7 Mg (25 tons) or more of VOM per year.

SUBPART AA: PAINT AND INK MANUFACTURING

Section 218.620 Applicability

a) This Subpart ~~shall apply~~applies to all paint and ink manufacturing sources which:

1) Include process emission units not subject to Subparts B, E, F (excluding Section 218.204(l)~~ of this Part~~), H (excluding Section 218.405~~ of this Part~~), Q, R, S, T (excluding Section 218.486~~ of this Part~~), V, X, Y, ~~or~~ Z, or BB~~ of this Part~~; and which as a group both:

A) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

B) Are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment~~,~~ through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision, or

2) Produce more than 7,570,820 1 (2,000,000 gal) per calendar year of paint or ink formulations, which contain less than 10 percent (by weight) water, and ink formulations not containing as the primary solvents water, Magie oil, or glycol.

b) This Subpart ~~shall~~ also ~~apply~~ applies to all paint and ink manufacturing sources which:

1) Have the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from process emission units that:

A) Are not regulated by Subparts B, E, F, H, Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB~~ of this Part~~, or

B) Are not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks and clean-up solvents operations, or

2) Produce more than 1,892,705 1 (500,000 gal) per calendar year of paint or ink formulations which contain less than 10% (by weight) water, and ink formulations not containing as the primary solvents water, Magie oil, or glycol.

c) For the purposes of this Subpart, VOM emissions in the absence of air pollution control equipment are the emissions of VOM which would result if no air pollution control equipment were used.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.621 Exemption for Waterbase Material and Heatset-Offset Ink

~~The requirements of~~ Sections 218.624, ~~and~~ 218.625, and ~~Section~~ 218.628(a) ~~of this Part shall~~do not apply to equipment while it is being used to produce either:

a) Paint or ink formulations which contain 10 percent or more (by weight) water, or

b) Inks containing Magie oil and glycol as the primary solvent.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.623 Permit Conditions (Repealed)

(Source: Repealed at 18 Ill. Reg. 1945, effective January 24, 1994)

Section 218.624 Open-Top Mills, Tanks, Vats or Vessels

~~No~~ A person ~~shall~~ must not operate an open-top mill, tank, vat, or vessel with a volume of more than 45 l (12 gal) for the production of paint or ink unless:

a) The mill, tank, vat, or vessel is equipped with a cover which completely covers the mill, tank, vat, or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. ~~Such~~ The cover ~~shall~~ must extend at least 1.27 cm (0.5 in) beyond the outer rim of the opening or be attached to the rim.

b) The cover remains closed except when production, sampling, maintenance, or inspection procedures require access.

c) The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.625 Grinding Mills

a) ~~No~~ A person ~~shall~~ must not operate a grinding mill for the production of paint or ink which is not maintained in ~~accordance~~ compliance with the manufacturer's specifications.

b) ~~No~~ A person ~~shall~~ must not operate a grinding mill fabricated or modified after ~~the effective date of this Subpart~~August 16, 1991, which is not equipped with fully enclosed screens.

c) The manufacturer's specifications ~~shall~~ must be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.626 Storage Tanks

a) The owner or operator ~~shall~~ must equip tanks storing VOL with a vapor pressure greater than 10 kPa (1.5 psi) at ~~20°C (68°F)~~20 °C (68 °F) with pressure/vacuum conservation vents set as a minimum at +/-0.2 kPa (0.029 psi). These controls ~~shall~~ must be operated at all times. An alternative air pollution control system may be used if it results in a greater emission reduction than these controls. Any alternative control system can be allowed only if approved by the Agency and approved by ~~the~~ USEPA as a SIP revision.

b) Stationary VOL storage containers with a capacity greater than 946 1 (250 gal) ~~shall~~ must be equipped with a submerged-fill pipe or bottom fill. These controls ~~shall~~ must be operated at all times. An alternative control system can be allowed only if approved by the Agency and approved by ~~the~~ USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.628 Leaks

The owner or operator of a paint or ink manufacturing source ~~shall, for the purpose of detecting leaks,~~must conduct ~~an~~ the following equipment monitoring program ~~as set forth below~~to detect leaks:

a) Each pump ~~shall~~ must be checked by visual inspection each calendar week for ~~indications of~~ leaks~~, that is,~~ indicated by liquids dripping from the pump seal. If there are indications of liquids dripping from the pump seal, the pump ~~shall~~ must be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected.

b) Any pump, valve, pressure relief valve, sampling connection, open-ended valve and flange, or connector containing a fluid which is at least 10 percent VOM by weight and which appears to be leaking on the basis of sight, smell, or sound ~~shall~~ must be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected.

c) A ~~weather proof,~~ readily visible weather-proof tag~~,~~ in bright colors such as red or yellow~~,~~ bearing an identification number and the date on which the leak was detected ~~shall~~ must be attached to leaking equipment. The tag may be removed ~~upon repair, that is, when the equipment is adjusted or otherwise altered~~when the equipment has been repaired, including adjustment or other alteration, to allow operation without leaking.

d) When a leak is detected, the owner or operator ~~shall~~ must record the date of detection and repair, and the record ~~shall~~ must be retained at the source for at least two years from the date of each detection or each repair attempt. The record ~~shall~~ must be made available to any person upon verbal or written request during business hours.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.630 Clean Up

a) ~~No~~ A person ~~shall~~ must not clean paint or ink manufacturing equipment with organic solvent unless the equipment being cleaned is completely covered or enclosed except for an opening no larger than necessary to allow safe clearance for proper operation of the cleaning equipment, considering the method and materials being used.

b) ~~No~~ A person ~~shall~~ must store organic wash solvent only in ~~other than~~ closed containers, unless closed containers are demonstrated to be a safety hazard, ~~or~~ and must not dispose of organic wash solvent in a manner such that more than 20 percent by weight is allowed to evaporate into the atmosphere.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.636 Compliance Schedule

Every owner or operator of a source subject to the control requirements of this Subpart ~~shall~~ must comply with the requirements ~~thereof~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.637 Recordkeeping and Reporting

a) Upon request by the Agency, the owner or operator of an emission source which claims to be exempt from ~~the requirements of~~ this Subpart ~~shall~~ must submit records to the Agency within 30 calendar days ~~from~~ after the date of the request which document that the emission source is ~~in fact~~ exempt from this Subpart. These records ~~shall~~ include ~~(but are not limited to)~~ the percent water (by weight)

in the paint or ink being produced and the quantity of Magie oil, glycol, and other solvents in the ink being produced.

b) Every owner or operator of a source which is subject to ~~the requirements of~~ this Subpart ~~shall~~ must maintain all records necessary to demonstrate compliance with ~~those requirements~~it at the source for three years.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART BB: POLYSTYRENE PLANTS

Section 218.640 Applicability

~~The provisions of this~~This Subpart ~~shall apply~~applies to polystyrene plants which:

a) ~~Which use~~Use continuous processes to manufacture polystyrene - polybutadiene co-polymer; and

b) ~~Which fall~~Fall within Standard Industrial Classification Group No. 282, Industry No. 2821, except that the manufacture of polystyrene resins need not be the primary manufacturing process at the plant.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.642 Emissions Limitation at Polystyrene Plants

~~No~~ A person ~~shall~~ must not cause or allow the emissions of VOM from the material recovery section to exceed 0.12 kg of ~~Volatile Organic Material~~VOM per 1000 kg of polystyrene resin produced.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.644 Emissions Testing

a)) Upon a reasonable request by the Agency, the owner or operator of a polystyrene plant subject to this Subpart ~~shall~~ must at ~~his~~ its own expense demonstrate compliance by ~~use of the following method:~~ 40 CFR 60, Appendix A, Method 25 - Determination of Total Gaseous Non-Methane Organic Emissions as Carbon (1984), incorporated by reference in Section 218.112 ~~of this Part~~.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the ~~tests~~ test so the Agency may observe the test.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART CC: POLYESTER RESIN PRODUCT MANUFACTURING PROCESS

Section 218.660 Applicability

a) Potential to emit:

1) A source is subject to this Subpart if it is not subject to ~~the requirements of~~ Subparts PP, QQ, RR, and TT and:

A) Not regulated by Subparts B, E, F, H, Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB ~~of this Subpart~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvent operations.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (a)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's polyester resin products manufacturing process emission units and associated handling of materials, cleanup activity, and formulation activity, if any, which are not regulated by Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, or DD ~~of this Subpart~~.

b) If a source ceases to fulfill the criteria of subsection (a) ~~above~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a polyester resin products manufacturing process emissions unit which was subject to the control requirements of Section 218.666 ~~of this Part~~.

c) For the purposes of this Subpart, an emission unit ~~shall~~ must be considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart, or the applicability criteria of the Subpart are not met.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.666 Control Requirements

a) Every owner or operator of a polyester resin products manufacturing process subject to this Subpart ~~shall~~ must comply with the operating requirements ~~below~~in this section:

1) Any of the following:

A) Use polyester resin material with a monomer content as follows:

i) For polyester resin materials used for products requiring corrosion resistant or fire retardant materials, a monomer content of no more than 48% by weight as applied;

ii) For polyester resin materials for products requiring a tensile strength of 10,000 psi or more, including tooling resins, a monomer content of no more than 48% by weight as applied;

iii) For clear gel coat, a monomer content of no more than 50% by weight as applied;

iv) For other pigmented gel coats, a monomer content of no more than 45% by weight as applied; or

v) For all other polyester resin materials, a monomer content of no more than 35% by weight as applied.

B) Use a closed-mold system or pultrusion system which will result in less than 4% weight loss of polyester resin materials;

C) Use vapor suppressed polyester resin approved by the Agency in the source's permit such that weight loss from VOM emissions does not exceed 60 grams per square meter of exposed surface area during molding; or

D) Use any materials or processes that are demonstrated to the satisfaction of the Agency to achieve VOM emission levels equivalent to any of the above. This alternative must be approved by the Agency and ~~the~~ by USEPA in a federally enforceable permit or as a SIP revision.

2) For spraying operations, in addition to the requirements specified in ~~Section 218.666(a)(1) above~~subsection (a)(1), use only high-volume low pressure (HVLP), airless, air-assisted airless, or electrostatic spray equipment, except for touch-up and repair using a hand-held, air-atomized spray gun which has a container for polyester resin material as part of the gun.

b) Any owner or operator of a polyester resin products manufacturing process subject to this Subpart ~~shall~~ must use closed containers for all polyester resin materials, cleaning materials which contain VOM (including waste cleaning materials), and other materials that contain VOM (including waste resin

materials) in such a manner as to effectively control VOM emissions to the atmosphere and in ~~accordance~~ compliance with the practices ~~described~~ in the certification ~~pursuant to~~under Section 218.670(b)(2)(A).

c) Any owner or operator of a polyester resin products manufacturing process subject to this Subpart which formulates polyester resin material at the source ~~shall~~ must comply with the following operating requirements:

1) A cover ~~shall~~ must be in place on any tank, vat, or vessel with a capacity greater than 7.5 liters (2 gallons), including a container in which polyester resin materials are delivered to the source, while polyester resin materials are being formulated. The cover ~~shall~~must:

A) Completely cover the tank, vat, or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft;

B) Extend at least 1.27 cm (0.5 inch) beyond the outer rim of the opening or be attached to the rim;

C) Remain closed except when adding or removing material or when sampling or inspection procedures require access; and

D) Be maintained in good condition such that, when in place, the cover maintains contact with the rim of the opening for at least 90% of the circumference of the rim.

2) Carry out emissions ~~shall~~ must be minimized when a mixer used for formulation of polyester resin material is being removed from a tank, vat, or vessel containing polyester resin material by allowing the material retained on the mixer blades to drain back into the tank, vat, or vessel before the mixer is completely removed from the tank, vat, or vessel.

d) Any owner or operator of polyester resin products manufacturing processes subject to this Subpart which as a group use more than 4 gallons per day of cleaning materials which contain more than 200 grams of VOM per liter (1.7 pound per gallon) ~~shall~~ must use a solvent recovery system for ~~such~~ the materials. Solvent recovery may be done at the source or by using an off-site commercial solvent recovery service. The waste residue from a solvent recovery system located at the source ~~shall~~ must not contain more than 20% VOM by weight.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.667 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with the requirements ~~thereof~~ on and after ~~the~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.668 Testing

a) Testing Methods.

1) The VOM content of fresh cleaning materials ~~shall~~ must be determined from supplier data or by sampling and analysis using EPA Reference Method 24, incorporated by reference in Section 218.112 ~~of this Part~~.

2) The VOM content of waste residue from a solvent recovery system ~~shall~~ must be determined by sampling and analysis using EPA Reference Method 24, incorporated by reference in Section 218.112 ~~of the Part~~.

3) The monomer content of polyester resin materials ~~shall~~ must be determined:

A) From supplier data and operating data;

B) By sampling and analysis by the methods ~~set forth~~ in SCAQMD Method 312-91, incorporated by reference in Section 218.112 ~~of this Part~~; or

C) By site-specific sampling and analysis methods approved by the Agency and USEPA in a federally enforceable permit.

4) The weight loss from polyester resin material in a closed-mold system or pultrusion system during molding ~~shall~~ must be determined:

A) From supplier data and operating data;

B) By testing of VOM emissions by the methods ~~set forth~~ in Section 218.105; or

C) By material balance as follows: Separately weigh the polyester resin materials and the reinforcement materials before they are introduced into the mold. Weigh the molded product after it has cooled so that it can be manually handled but no sooner than one hour after removal of the product from the mold. The percent weight loss ~~shall~~ must be determined according to the following equation:

$$PWL = [1 - (C-B)] \times 100$$

A

Where,

PWL = Percent Weight Loss;
A = Weight of polyester resin materials;
B = Weight of reinforcement material;
C = Weight of cooled molded product after at least one hour elapsed time.

D) By site-specific sampling and analysis methods approved by the Agency and USEPA in a federally enforceable permit.

5) The weight loss from a vapor suppressed polyester resin material square meter of exposed surface area ~~shall~~ must be determined:

A) From supplier data and operating data;

B) By sampling and analysis by the methods ~~set forth~~ in SCAQMD Method 309-91, incorporated by reference in Section 218.112; or

C) By site-specific sampling and analysis methods approved by the Agency and USEPA in a federally enforceable permit.

6) In the event of a difference between data obtained by sampling and analysis and other data, the data from sampling and analysis ~~shall~~ must govern.

b) When in the opinion of the Agency it is necessary to conduct sampling and analysis to demonstrate compliance with Section 218.668 ~~of this Part~~, the owner or operator of a polyester resin products manufacturing process subject to ~~the requirements of~~ this Subpart ~~shall,~~must at ~~his~~ its own expense~~,~~ conduct ~~such~~ the sampling and analysis in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in subsection (a) ~~above~~. The Agency's decision to invoke this subsection may be based on such factors including~~, but not limited to,~~ a change in operation of the polyester resin products manufacturing process~~,~~ or a reasonable belief that a previous test resulted in erroneous data.

c) Nothing in this Section ~~shall limit~~limits the authority of USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require sampling and analysis.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.670 Recordkeeping and Reporting for Exempt Emission Units

Upon request by the Agency, the owner or operator of a polyester resin manufacturing process which is exempt from ~~the requirements of~~ Subpart CC ~~of this Part shall~~must submit to the Agency records that document that the polyester resin product manufacturing process is exempt from those requirements. These records ~~shall~~ must be submitted within 30 calendar days ~~from~~ after the date of the request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.672 Recordkeeping and Reporting for Subject Emission Units

a) Any owner or operator of a polyester resin products manufacturing process which is subject to ~~the requirements of~~ this Subpart ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of a process subject to this Subpart, the owner or operator of the subject process ~~shall~~ must certify to the Agency that the process will be in compliance with Section 218.666(a) ~~of this Subpart~~ on and after ~~a~~ the applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date as demonstrated by testing in ~~accordance~~ compliance with Section 218.668 ~~of this Subpart~~. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each polyester resin products manufacturing process at the source;

B) The name and identification number of each polyester resin material used in these processes, the means by which it may be applied, and the classification of the polyester resin material under Section 218.666(a)(1)(A) ~~of this Subpart~~;

C) The particular operating requirement with which each polyester resin material will comply, the actual monomer content of the material (percent by weight), and other relevant data to show compliance with the operating requirement, including:

i) For each polyester resin material which is classified as a material used for products requiring corrosion resistant or fire retardant materials, a material used for products requiring tensile strength of 10,000 psi or more, or a clear gel coat, justification for ~~such~~ the classification if the material is applied to comply with the monomer content limitation of Section 218.666(a)(1)(A)(i), (ii), or (iii), respectively, ~~of this Subpart~~;

ii) For each polyester resin material which is applied in a closed-mold or pultrusion system so as to comply with Section 218.666(a)(1)(B) ~~of this Subpart~~, the weight loss from the polyester resin material (percent by weight) during molding;

iii) For each polyester resin material which is vapor suppressed ~~so as~~ to comply with Section 218.666(a)(1)(C) ~~of this Subpart~~, the type and content (percent by weight) of catalyst in the materials, the maximum process temperature for resin application, the maximum gel time, and the weight loss (grams per square meter exposed surface) during molding; and

iv) For each polyester resin material which is approved by the Agency and ~~the~~ USEPA in a federally enforceable permit or as a SIP revision ~~so as~~ to comply with Section 218.666(a)(1)(D) ~~of this Subpart~~, information showing the VOM emissions level which is achieved and the VOM emissions which would result from compliance with Section 218.666(a)(1)(A), (B) or (C).

D) A description of the testing which was performed~~,~~ in ~~accordance~~ compliance with Section 218.668 ~~of this Part,~~ to determine the monomer content of polyester resin materials and the information in subsections (a)(1)(C)(ii), (iii) and (iv) and (a)(1)(D) ~~above~~, including data, calculations, and descriptions and results of the sampling and analysis that the owner or operator has relied upon to show compliance with Sections 218.666(a)(1) and (2) ~~of this Subpart~~;

E) For spraying operations, the equipment for spraying polyester resin materials and the equipment for touch up and repair;

F) The method by which the owner or operator will create and maintain records required in subsections (b)(2) and (b)(3) ~~below~~; and

G) An example of the format in which the records required in subsections (b)(2) and (b)(3) ~~below~~ will be kept.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or on and after initial start-up date, the owner or operator of a subject process ~~shall~~ must collect and record the following information to maintain a complete record of all polyester resin materials which are used

by such polyester resin products manufacturing process. This information ~~shall~~ must be maintained at the source for ~~a period of~~ three years:

A) The name and identification number of each polyester resin material used in the process;

B) The particular operating requirement with which each polyester resin material will comply, the actual monomer content of the material (percent by weight), and other relevant data to show compliance with the operating requirement, including:

i) For each polyester resin material which is classified as a material used for products requiring corrosion resistant or fire retardant materials, a material used for products requiring tensile strength of 10,000 psi or more, or a clear gel coat, justification for ~~such~~ the classification if the material is applied to comply with the monomer content limitation of Section 218.666(a)(1)(A)(i), (ii), or (iii), respectively~~, of this Subpart~~;

ii) For each polyester resin material which is applied in a closed-mold or pultrusion system ~~so as~~ to comply with Section 218.666(a)(1)(B) ~~of this Subpart~~, the weight loss from the polyester resin material (percent by weight) during molding;

iii) For each polyester resin material which is vapor suppressed ~~so as~~ to comply with Section 218.666(a)(1)(C) ~~of this Subpart~~, the type and content (percent by weight) of catalyst in the material, the maximum process temperature for resin application, the maximum gel time, and the weight loss (grams per square meter exposed surface) during molding; and

iv) For each polyester resin material which is approved by the Agency and ~~the~~ USEPA in a federally enforceable permit or as a SIP revision ~~so as~~ to comply with Section 218.666(a)(1)(D) ~~of this Subpart~~, information showing the VOM emission level which is achieved and the VOM emissions which would result from compliance with Section 218.666(a)(1)(A), (B), or (C) ~~of this Subpart~~;

C) A description of the testing which was performed~~,~~ in ~~accordance~~ compliance with Section 218.668 ~~of this Part,~~ to determine the monomer content of polyester resin materials and the information in subsections (a)(1)(C)(ii), (iii) and (iv) and (a)(1)(D) ~~above~~,

including data, calculations, and descriptions and results of the sampling and analysis that the owner or operator has relied upon to show compliance with Section 218.666(a)(1) ~~of this Subpart~~;

D) The processes and applications for which each polyester resin material may be used in compliance with applicable operating requirements, including:

i) For each polyester resin material which is classified as a material used for products requiring corrosion resistant or fire retardant material or a material used for products requiring tensile strength of 10,000 psi or more which is applied to comply with the monomer content limitation of Section 218.666(a)(1)(A)(i) or (ii), respectively, ~~of this Subpart,~~ the required products or circumstances for the materials' use;

ii) For each polyester resin material which is applied in a closed-mold or pultrusion system ~~so as~~ to comply with Section 218.666(a)(1)(B) ~~of this Subpart~~, the required process temperature and minimum mold cycle time or maximum pultrusion speed;

iii) For each polyester resin material which is vapor suppressed ~~so as~~ to comply with Section 218.666(a)(1)(C) ~~of this Subpart~~, the required thickness of the manufactured product, the type and amount of catalyst in the resin, and the maximum process temperature and maximum gel time; and

iv) For each polyester resin material which is approved by the Agency and approved by ~~the~~ USEPA as a SIP revision ~~so as~~ to comply with Section 218.666(a)(1)(D) ~~of this Subpart~~, the required process operating conditions or product specifications; and

E) For each polyester resin material which is applied in a spraying operation, the type of spray equipment with which the material will be applied ~~so as~~ to comply with Section 218.666(a)(2) ~~of this Subpart~~.

3) On and after ~~the~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject process ~~shall~~ must collect and record all of the following information each day for each process and maintain the information at the source for ~~a period of~~ three years:

A) The name, identification number, and amount of each polyester resin material applied on each process; and

B) The specific data ~~identified pursuant to~~under Section 218.672(a)(2)(D) ~~of this Subpart~~ to confirm that the polyester resin material was applied in such a manner that it complied with the applicable operating requirement.

4) On and after ~~a~~ an pplicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject process ~~shall~~ must notify the Agency:

A) Of any violation of the operating requirements of this Subpart by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation; and

B) At least 30 calendar days before changing the method of compliance with this Subpart from ~~one operating requirement among~~ Section 218.666(a)(1)(A), (B), (C), or (D) ~~of this Subpart~~ to another operating requirement, of compliance with all requirements of subsection (a)(1) ~~above~~. Upon changing the method of compliance with this Subpart from one operating requirement to another, the owner or operator ~~shall~~ must comply with all applicable requirements of subsection (a) ~~above~~.

b) Any owner or operator of a polyester resin product manufacturing process subject to ~~the requirements of~~ Subpart CC ~~of this Part shall~~must comply with the following:

1) On ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or upon initial start-up of a new source, the owner or operator of the source ~~shall~~ must certify to the Agency that the source will be in compliance with Sections 218.666(b) and (d) ~~of this Subpart~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part,~~ or on or after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) A description of the handling practices for polyester resin material, cleaning materials which contain VOM, and waste materials which contain VOM, including the use of closed containers and a statement that these practices effectively control VOM emissions to the atmosphere; and

B) The usage on a daily basis of each cleanup material which contains VOM, the VOM content per liter of each such material, and whether a reclamation system is required by Section 218.666(d) ~~of~~

~~this Subpart~~ for ~~such~~ the material or will be used; a description of the solvent recovery practices if recovery is required or will be used; and a statement that, where a solvent recovery system is required and will be at the source, ~~that~~ the waste residue contains 20% or less VOM by weight.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part,~~ or on and after the initial start-up date, the owner or operator of the process ~~shall~~ must collect and record all the following information and maintain the information at the source for ~~a period of~~ three years:

A) The date, time, and duration of scheduled inspections performed to confirm the proper use of closed containers to control VOM emissions, and any instances of improper use of closed containers, with descriptions of actual practice and corrective action taken, if any;

B) Information on a daily basis confirming the proper use of a recovery system if one is required or is used, including operation of a recovery system at the source to produce a waste residue that is 20% or less VOM by weight and information identifying any observation of noncompliance; and

C) Information on a daily basis on the use of cleaning materials which contain more than 200 grams of VOM per liter (1.7 pound per gallon) if a recovery system is not required or is not used. This information ~~shall~~ must include the name, identification number, amount used, and VOM content of each such cleaning material.

3) On and after ~~a~~ an pplicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject process ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ this Subpart with respect to handling practices and solvent recovery for cleaning materials by sending a copy of all such records to the Agency within 30 days ~~following~~ after the calendar quarter in which ~~such~~ the violation occurred; or

B) Within 30 calendar days ~~of~~ after changing the handling practices for polyester resin materials, cleaning materials, and waste materials or changing source practice with respect to a solvent recovery system for cleaning materials, describing the change.

c) Any owner or operator of a polyester resin product manufacturing process subject to ~~the requirements of~~ this Subpart that formulates polyester resin material at the source ~~shall~~ must comply with the following:

1) On ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or upon initial start-up of a new emission unit, the owner or operator of the source ~~shall~~ must certify to the Agency that the emission unit will be in compliance with Section 218.666(c) ~~of this Subpart~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) A description of the equipment used for formulation of polyester resin materials, including the types of tanks, vats, and vessels and their size and the types of mixers and the covers associated with this equipment; and

B) A description of the practices used to minimize VOM emissions to the atmosphere from formulation activity, including the use and maintenance of covers on tanks, vats, and vessels and drainage of mixers.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or on and after the initial start-up date, the owner or operator of the process ~~shall~~ must collect and record all the following information and maintain the information at the source for ~~a period of~~ three years:

A) The date, time, and duration of scheduled inspections to confirm the proper use and maintenance of covers on vats, vessels, and tanks and proper drainage of mixers and any instance of improper use, with description of actual practice and corrective action taken, if any;

B) A maintenance log for covers on vats, vessels, and tanks, detailing all routine and non-routine maintenance performed and initial use of new covers, including dates of such activities

.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject process ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ this Subpart with respect to formulation of polyester resin material by sending a copy of all such records to the Agency within 30 days ~~following~~ after the calendar quarter in which ~~such~~ the violation occurred~~:~~; or

B) Within 30 calendar days ~~of~~ after changing the handling practices for formulation of polyester resin materials, describing the change.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART DD: AEROSOL CAN FILLING

Section 218.680 Applicability

a) Potential to emit:

1) A source is subject to this Subpart if it is not subject to ~~the requirements of~~ Subparts PP, QQ, RR, and TT and has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units that are:

A) Not regulated by Subparts B, E, F (excluding Section 218.204(l)), H (excluding Section 218.405), Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB ~~of this Subpart~~; or

B) Not ~~including~~ included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean up solvent operations.

2) If a source is subject to this Subpart ~~as provided above~~under subsectin (a)(1), the requirements of this Subpart ~~shall~~ apply to a source's aerosol can filling lines and propellant booster pumps~~,~~ which are not regulated by or addressed by Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, or CC ~~of this Subpart~~.

b) If a source ceases to meet the criteria of subsection (a), ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to an aerosol can filling line and propellant booster pump which was subject to the control requirements of Section 218.686 ~~of this Part~~.

c) For the purposes of this Subpart, an emission unit ~~shall~~ must be considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.686 Control Requirements

a) Every owner or operator of an aerosol can filling line that is filling cans with a propellant which contains propane, butane, or other VOM subject to this Subpart ~~shall~~ must comply with the following requirements:

1) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emission of at least 81% from the propellant filling area, also known as the gas house, on each line; or

2) As an alternative to compliance with subsection (a)(1) ~~of this Subpart~~, the owner or operator of an aerosol can filling line ~~shall~~ must comply with the following requirements:

A) Fill all cans, other than trial runs of cans to verify product quality, using through-the-valve fill or enhanced under-the-cup fill to minimize loss of VOM propellant; or use a reclamation system to recover surplus VOM propellant; or use another system approved in a federally enforceable permit which achieves at least 75% reduction of the emissions of under-the-cup fill;

B) Fill on a monthly basis at least 90% of cans filled on such aerosol can filling lines that are capable of being filled by the through-the-valve method with through-the-valve fill. All cans ~~shall~~ must be considered capable of being filled by the through-the-valve method unless, as demonstrated by the records required by Section 218.692(b)(2) ~~of this Part~~, the valve assembly is not adaptable to the through-the-valve fill; through-the-valve fill cannot be accomplished with at least 85% of the under-the-cup operating rate in cans per minute of filling; or performance, that is the discharge of the can's contents to accomplish its intended function, is negatively affected by through-the-valve fill considering factors such as propellant solubility in the can's contents and the amount of turbulence which the contents may experience during propellant filling; and

C) Verify proper filling of cans with a VOM monitoring system in the gas house. This system may monitor VOM concentration as a percentage of the lower explosive limit.

b) Every owner or operator of a propellant booster pump associated with an aerosol can filling line subject to this Subpart ~~shall~~ must comply with one of the following requirements:

1) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emission of at least 81% from each pump. If the pumps are located in the gas house of a filling line, compliance with

this reduction may be achieved by the combination of the pumps located in the gas house and the propellant filling area; or

2) Work practices to prevent leaks from a pump, meaning a loss of VOM from the pump above background levels. Work practices ~~shall~~ must include changing seals every four ~~(4)~~ weeks and plungers every 16 weeks unless a pump monitoring procedure approved in a federally enforceable permit establishes otherwise.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.688 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance or verify effectiveness with Section 218.686 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.690 Recordkeeping and Reporting for Exempt Emission Units

Upon request by the Agency, the owner or operator of an aerosol can filling line or propellant booster pump which is exempt from ~~the requirements of~~ Subpart DD ~~of this Part shall~~must submit to the Agency records documenting that the aerosol can filling line or propellant booster pump is exempt from those requirements. These records ~~shall~~ must be submitted within 30 calendar days ~~from~~ after the date of the request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.692 Recordkeeping and Reporting for Subject Emission Units

a) Any owner or operator of an aerosol can filling line or propellant booster pump which is subject to ~~the requirements of~~ Subpart DD ~~of this Part~~ and complying by ~~means of~~ the use of emission capture and control equipment ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of an aerosol can filling line or propellant booster pump, the owner or operator of the subject line or pump ~~shall~~ must demonstrate to the Agency that the subject line or pump will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section

218.106 ~~of this Part~~, or on and after the initial start-up date by submitting to the Agency all calculations and other supporting data, including descriptions and results of any tests the owner or operator may have performed.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject line or pump ~~shall~~ must collect and record all of the following information each day and maintain the information at the source for ~~a period of~~ three years:

A) Control device monitoring data;

B) A log of operating time for the capture system, control device, monitoring equipment, and the associated lines and pumps; and

C) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject line or pump ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ Subpart DD ~~of this Part~~ by sending a copy of any records showing the violation to the Agency within 30 days ~~following~~ after the occurrence of the violation; and

B) At least 30 calendar days before changing the method of compliance with Subpart DD ~~of this Part~~ from the use of capture systems and control devices to methods of filling cans, including use of a reclamation system or pump work practice, the owner or operator ~~shall~~ must comply with ~~the requirements of~~ subsections (b)(1) or (c)(1) ~~below~~, respectively. Upon changing the method of compliance with Subpart DD ~~of this Part~~ from the use of capture systems and control devices to compliance with the methods of filling cans or work practices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsections (b) or (c) ~~below~~, respectively.

b) Any owner or operator of an aerosol can filling line which is subject to ~~the requirements of~~ Subpart DD ~~of this Par~~t and complying by means of the methods of filling cans including use of a reclamation system ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of a line subject to Subpart DD ~~of this Part~~, the

owner or operator of the subject line ~~shall~~ must certify to the Agency that the line will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each line which will comply by means of the methods of filling cans;

B) The name and manufacturer's description of the can filling system;

C) Calculations and other data to demonstrate the propellant losses with these systems, including a description and results of any test the owner or operator has performed;

D) Technical and production data, along with calculations to demonstrate that the required percentage of cans capable of being filled by means of through-the-valve fill will be filled using through-the-valve fill;

E) For a reclamation system, the parameters which will be monitored to demonstrate proper system operation, with justification;

F) For a system approved in a federally enforceable permit, identification of ~~such~~ the permit; and

G) An example of the records which will be kept ~~pursuant to subsections~~under (b)(2) and (b)(3) ~~below~~.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or on and after the initial start-up date, the owner or operator of a subject line ~~shall~~ must collect and record the following information for each type of product that is not filled by the through-the-valve method. Information need be provided ~~pursuant~~ only ~~to~~ under subsections (B), (C), (D), and (E) ~~below~~ to the extent that the information is relied upon by the owner or operator to demonstrate that a product is not capable of being filled by through-the-valve method. For this purpose, each formulation in a particular type of can with a particular type of valve assembly ~~shall~~ must be addressed separately as a unique product considering the range of models of cans and valve assemblies, e.g., suppliers, sizes, and weights of the type used for such product:

A) Identifying information for the product type, including identification and description of the cans' contents, type, and model of cans~~,~~; type and models of valve assembly~~,~~; and type of propellant and nominal propellant charge;

B) Whether the valve assembly is able to be through-the-valve filled;

C) Under-the-cup operating rate and projected through-the-valve fill operating rate;

D) Information addressing the impact of through-the-valve fill on performance;

E) Other supporting data; and

F) Whether the product is deemed capable of being filled by the through-the-valve method.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~ or on and after the initial start-up date, the owner or operator of a subject line ~~shall~~ must collect and record all of the following information each day for each line and maintain the information at the source for ~~a period of~~ three years:

A) Operating data for the line and fill systems;

B) For a reclamation system, system monitoring data; and

C) Number of cans filled which are capable of being filled by means of through-the-valve fill, determined in ~~accordance~~ compliance with the records kept ~~pursuant to~~under subsection (b)(2) ~~above~~ and percentage of ~~such~~ the cans actually filled using through-the-valve fill.

4) On and after the applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject line ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ Subpart DD ~~of this Part~~ by sending a copy of any record showing the violation to the Agency within 30 days ~~following~~ after the calendar quarter in which the violation occurred;

B) At least 30 calendar days before changing the method of compliance with Subpart DD ~~of this Part,~~ from the methods of filling cans to the use of capture systems and control devices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a)(1) ~~above~~. Upon changing the method of compliance, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a) ~~above~~.

c) Any owner or operator of a propellant booster pump which is subject to ~~the requirements of~~ Subpart DD ~~of this Part~~ and complying by means of work practices~~, shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of a pump subject to Subpart DD ~~of this Part~~, the owner or operator of the subject pump ~~shall~~ must certify to the Agency that the pump will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each pump which will comply by means of work practices;

B) The work practices which will be followed for the pump, including the means which will be used to determine whether the pump is leaking~~, that is, experiencing~~indicated by loss of VOM compared to background levels;

C) For work practices approved in a federally enforceable permit, identification of ~~such~~ the permit; and

D) An example of the records which will be kept ~~pursuant to~~under subsection (c)(2) ~~below~~.

2) On and after ~~the~~ an applicab;e date ~~consistent with~~under Section 218.106 ~~of this Part,~~ or on and after the initial start-up date, the owner or operator of a subject pump ~~shall~~ must collect and record all of the following information each day for each pump and maintain the information at the source for ~~a period of~~ three years:

A) Operating data for each pump, including date and time a leak in a pump is detected, date and time a leaking pump is removed from service, and action taken to repair a pump; and

B) A maintenance log for the pump, detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject pump ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ Subpart DD ~~of this Part~~ by sending a copy of any record showing the violation to the Agency within 30 days ~~following~~ after the ~~occurrence of~~ the violation;

B) At least 30 calendar days before changing the method of compliance with Subpart DD ~~of this Part~~ from work practices to use of emission capture and control equipment, the owner or operator ~~shall~~ must submit a revised certification ~~pursuant to~~under subsection (a)(1) ~~above~~. Upon changing the method of compliance

with Subpart DD ~~of this Part~~, the owner or operator ~~shall~~ must comply with ~~all applicable requirements of~~ subsection (a) ~~above~~.

SUBPART GG: MARINE TERMINALS

Section 218.760 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to sources that load or who are permitted to load gasoline or crude oil.

b) ~~The requirements of this~~This Subpart ~~shall~~ does not apply to the following activities:

1) Loading of liquids associated with the fueling of marine vessels; or

2) ~~The transfer of~~Transferring liquids from one marine vessel to another marine vessel.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.762 Control Requirements

a) Except as provided at subsection (c) ~~of this Section~~, every owner or operator of a marine terminal subject to ~~the requirements of~~ this Subpart ~~shall~~ must equip each terminal with a vapor collection and control system that:

1) Captures the vapors displaced during the loading event and reduces overall VOM emissions by at least 95% by weight through the use of either a vapor combustion system or a vapor recovery system;

2) Is maintained and operated so that it prevents visible liquid leaks, significant odors, and visible fumes in the liquid transfer and the vapor collection lines~~,~~ and appurtenances during loading; and

3) Has been certified as required by Coast Guard regulations ~~found~~ at 33 CFR 154.

b) ~~From~~ During the regulatory control period of May 1 to September 15, ~~the regulatory control period,~~ every owner or operator of a marine terminal subject to ~~the requirements of~~ this Subpart ~~shall~~ must load gasoline or crude oil only into marine vessels that are:

1) Equipped with vapor collection equipment that has been certified as required by Coast Guard regulations ~~found~~ at 46 CFR 39;

2) Connected to the vapor collection system; and

3) Vapor-tight as described in ~~the following~~ subsections (b)(3)(A), (b)(3)(B), (b)(3)(C), or (b)(3)(D) ~~of this Secti~~on:

A) The owner or operator of the marine terminal ~~shall~~ must load each marine vessel with a vacuum assisted vapor collection system, instrumented in such a way that the pump(s) transferring gasoline or crude oil to the marine vessel will not operate unless the vapor collection system is properly connected and properly operating.

B) As an alternative to subsection (b)(3)(A) ~~of this Section~~, the owner or operator of the marine terminal ~~shall~~ must obtain documentation ~~as described in~~under Section 218.770(b) ~~of this Subpart~~ that the marine vessel has been vapor-tightness tested within either the preceeding 12 months or the preceding 14 months, if the test is

being conducted as part of the Coast Guard's reinspection of the vessel required under 46 CFR 31.10-17, using Method 21 of Part 60, Appendix A, incorporated by reference at Section 218.112 ~~of this Part~~, as described in Section 218.768(b) ~~of this Subpart~~.

C) If there is no documentation of a successful leak test conducted on the marine vessel in either the preceeding 12 months or in the preceding 14 months, if the test is being conducted as part of the Coast Guard's reinspection of the vessel required under 46 CFR 31.10-17, the owner or operator of the marine terminal ~~shall~~ must require that a leak test of the marine vessel be conducted during the final 20 percent of loading of the marine vessel or ~~shall~~ must not load the vessel. The test ~~shall~~ must be conducted when the marine vessel is being loaded at the maximum liquid transfer rate for that transfer operation. The owner or operator of the marine terminal ~~shall~~ must require that the documentation ~~described in~~under Section 218.770(b) ~~of this Subpart~~ is completed ~~prior to~~before the departure of the vessel.

D) If the marine vessel has failed its most recent vapor-tightness leak test at the marine terminal, before the marine vessel can be loaded, the owner or operator of the marine terminal ~~shall~~ must require that the owner or operator of the marine vessel provide documentation that the leaks detected during the previous vapor-tightness leak test have been repaired and that the marine vessel has been vapor-tightness tested since the leak(s) has been repaired ~~pursuant to~~under subsection (b)(3)(B) ~~of this Section~~.

c) As an alternative to the control requirements of subsections (a) and (b) ~~of this Section~~, an owner or operator of a marine terminal subject to the control requirements of this Subpart may comply by showing:

1) Operation of a vapor collection and control system for the loading of gasoline or crude oil from marine vessels in ~~accordance~~ compliance with the regulations adopted by the USEPA ~~pursuant to~~under Sections 112(d) or 183(f) of the CAA;

2) Reduction of VOM emissions equivalent to the levels in Appendix E ~~of this Part~~ through a federally enforceable emission reduction plan; or

3) An alternate procedure ~~to those described that has been~~ approved by the Agency and ~~the~~ USEPA in a federally enforceable permit or as a SIP revision.

d) Nothing in this Subpart ~~shall supersede~~supersedes any U.S. Coast Guard regulation that is more stringent than ~~that contained in~~ this Subpart.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.764 Compliance Certification

By May 1, 1996, or upon initial startup, or upon change in method of compliance, the owner or operator of a source subject to ~~the requirements of~~ this Subpart must certify compliance with ~~the requirements of~~ this Subpart by submitting to the Agency the following:

a) If complying with Sections 218.762(a) and (b), or (c)(1), or (c)(3) ~~of this Subpart~~:

1) The type of vapor collection and control system ~~utilized~~used;

2) The date the system was installed;

3) A demonstration that the vapor collection and control system achieves an overall efficiency of 95%;

4) A copy of the U.S. Coast Guard certification required under 33 CFR 154; and

5) The location (including the contact person's name, address, and telephone number) of the records required by Section 218.770 ~~of this Subpart~~.

b) If complying with Section 218.762(c)(2) ~~of this Subpart~~, a federally enforceable emission reduction plan.

c) If not loading during the 1996 regulatory control period or the 1996 and 1997 regulatory control periods, a statement that the source will not be loading gasoline or crude oil, the regulatory control period affected, and a date certain when the requirements of subsection (a) ~~above~~ will be met. Further, if the owner or operator is also required to comply with the control requirements for marine vessel loading adopted ~~pursuant to~~under Section 112(d) or Section 183(f) of the CAA, then the ~~above~~ statement of not loading may extend to subsequent regulatory control periods until installment and operation of the control equipment is required under Section 112(d) or Section 183(f) of the CAA.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.766 Leaks

The owner or operator of a marine terminal ~~shall~~ must comply with ~~the requirements of~~ Section 218.445 ~~of this Part~~ with respect to all equipment associated with the vapor collection and control system required by Section 218.762(a) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.768 Testing and Monitoring

a) Compliance with Section 218.762(a)(2) ~~of this Subpart shall~~must be determined by visual inspection and by the leak detection methods ~~contained~~ in Section 218.105(g)~~ of this Part~~.

b) If the control device used to comply with Section 218.762(a)(1) ~~of this Subpart~~ is a flare, compliance ~~shall~~ must be determined by methods ~~described~~ in Section 218.429(c)~~ of this Part~~.

c) For all other control devices used to comply with Section 218.762(a)(1)~~ of this Subpart~~, compliance ~~shall~~ must be determined by methods ~~described~~ in Section 218.105(d) and (f)~~ of this Part~~.

d) Compliance with Section 218.762(b)(3) ~~of this Subpart shall~~must be determined by one of the methods ~~described~~ in this Section:

1) A marine vessel loaded in ~~accordance~~ compliance with Section 218.762(b)(3)(A) ~~of this Subpart~~ through the use of a vacuum assisted vapor collection system is assumed to be vapor-tight for the purposes of this Subpart.

2) A vapor-tightness test for marine vessels ~~shall~~ must be conducted to include the final 20 percent of loading of each product tank of the marine vessel, and it ~~shall~~ must be applied to any potential sources of vapor leaks on the vessel ~~pursuant to~~under Method 21 of 40 CFR 60, Appendix A, incorporated by reference at Section 218.112~~ of this Part~~. A reading of 10,000 ppmv or greater as methane ~~shall constitute~~constitutes a leak.

3) As an alternative to subsection (d)(2)~~ of this Section~~, an owner or operator of a marine terminal may use the vapor-tightness test ~~described~~ in 40 CFR 61.304(f), incorporated by reference at Section 218.112~~ of this Part~~.

e) When in the opinion of the Agency or USEPA it is necessary to conduct testing to demonstrate compliance with or verify effectiveness of the vapor collection and control system required by Section 218.762(a), (c)(1), or (c)(3)~~ of this Subpart~~, the owner or operator of a marine terminal ~~shall~~,must at its own expense~~,~~ conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in subsections (a), (b), or (c)~~ of this Section~~, as applicable.

f) An owner or operator of a marine terminal planning to conduct a VOM emissions test to demonstrate compliance with Sections 218.762(a), (c)(1), or (c)(3) ~~of this Subpart shall~~must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the tests so that the Agency may observe the test.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.770 Recordkeeping and Reporting

a) The owner or operator of sources complying with Sections ~~219.762(a)~~218.762(a) and (b), or (c)(1), or (c)(3) ~~of this Subpart shall~~must maintain records regarding the marine terminal~~,~~ and each time a marine vessel is loaded during the regulatory control period. The records ~~shall~~ must include ~~but are not limited to~~:

1) ~~The date(s)~~Each date and ~~the time(s)~~time at which the marine vessel was loaded from the marine terminal;

2) The name, type, identification number, and owner of the vessel loaded;

3) The type and amount of liquid loaded into the marine vessel;

4) Records of any leaks found, repair attempts, and the results of the required fugitive monitoring and maintenance program, including appropriate dates, test methods, instrument readings, repair results, and corrective action taken as required by Sections 218.762(a)(2) and 218.766 ~~of this Subpart~~;

5) A copy of the Coast Guard certification demonstrating that the marine terminal's vapor collection and control system has been certified as required by Coast Guard regulations ~~found~~ at 33 CFR 154; and

6) A copy of the Coast Guard certification demonstrating that the marine vessel has been inspected and certified as required by Coast Guard regulations ~~found~~ at 46 CFR 39. If a copy of the Coast Guard certificate is not available at the time of loading, then the date that the marine vessel was last inspected and the authorization that the marine vessel has functioning vapor control equipment must be recorded from the certificate. ~~Further, a~~A copy of the certificate must be obtained by the owner or operator of the marine terminal within 21 days after the loading event.

b) Owners or operators complying with Sections 218.762(b)(3)(B), (b)(3)(C), or (b)(3)(D) ~~shall additionally~~must also maintain the following records concerning the vapor-tightness of the marine vessel:

1) Test title;

2) Owner of the marine vessel tested;

3) The identification number of the marine vessel tested;

4) Testing location;

5) Tester name and signature;

6) Witnessing inspector, name, signature, and affiliation; and

7) Test results.

c) Owners or operators complying with ~~the requirements of~~ Section 218.762(c)(2) ~~of this Subpart shall~~must maintain records of daily product volumes loaded to demonstrate that the applicable emission reduction ~~specified~~ in Appendix E ~~of this Part~~ has been achieved.

d) Owners or operators certifying compliance under Section 218.764(c) ~~shall~~ must maintain the records ~~specified~~ in subsections (a)(1), (a)(2), and (a)(3) ~~above~~.

e) All records required by subsections (a), (b), (c), and (d) ~~of this Section shall~~must be maintained for at least three years and ~~shall~~ must be made available to the Agency upon request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART HH: MOTOR VEHICLE REFINISHING

Section 218.780 Emission Limitations

a) Except as provided in Section 218.782 ~~of this Subpart~~, ~~no~~ an owner or operator of a motor vehicle refinishing operation ~~shall~~ must not coat motor vehicles, mobile equipment, or their parts and components, unless all coatings, except touch-up coatings, never exceed the VOM content limitations in this Section, expressed as units of VOM per volume of coating applied at each coating applicator, minus water and any compounds that are specifically exempted from the definition of VOM. The VOM content limitations are as follows:

		kg/l	(lb/gal)
1)	Pretreatment wash primer	0.78	(6.5)
2)	Precoat	0.66	(5.5)
3)	Primer/primer surfacer coating	0.58	(4.8)
4)	Primer sealer	0.55	(4.6)
5)	Topcoat system or basecoat/clearcoat	0.60	(5.0)
6)	Three or four stage topcoat system	0.63	(5.2)

7)	Specialty coatings	0.84	(7.0)
8)	Anti-glare/safety coating	0.84	(7.0)

b) All coating ~~shall~~ must be used according to manufacturer's specifications. If a coating requires the addition of a reducer, hardener, or other additive, in some combination, this addition must not cause the coating, as applied, to exceed the applicable VOM content limitation.

c) Specialty coatings ~~shall~~ must represent no more than 5 percent, by volume, of all coatings applied at a source on a monthly basis.

d) The following equations ~~shall~~ must be used to calculate the VOM content of topcoat systems:

1) The VOM content of basecoat/clearcoat systems ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following equation:

$VOM\ T_{bc/cc} = (VOM_{bc} + 2\ VOM_{cc})/3$

Where:

$VOM\ T_{bc/cc}$ = The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definitionof VOM), in the basecoat (bc) and clearcoat (cc) system;

VOM_{bc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given basecoat; and

VOM_{cc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

2) The VOM content for a ~~three-stage~~three-stage coating system ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following formula:

$VOM\ T_{ms}$ = $(VOM_{bc} + VOM_{mc} + 2\ VOM_{cc})/4$

Where:

$VOM\ T_{ms}$ = The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), in the basecoat, midcoat, and clearcoat system;

VOM_{bc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given basecoat;

VOM_{mc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given midcoat; and

VOM_{cc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

3) The VOM content for a ~~four stage~~four-stage coating system ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following formula:

$VOM\ T_{ms}$ = $(VOM_{bc} + VOM_{mc1} + VOM_{mc2} + 2\ VOM_{cc})\ /5$

Where:

$VOM\ T_{ms}$ = The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), in the basecoat, midcoats, and clearcoat system;

VOM_{bc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any

compounds which are specifically exempted from the definition of VOM), of any given basecoat;

VOM_{mc1} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of the first midcoat;

VOM_{mc2} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of the second midcoat; and

VOM_{cc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.782 Alternative Control Requirements

As an alternative to complying with the VOM content limitations in Section 218.780 ~~of this Subpart~~, the owner or operator of a motor vehicle refinishing operation may operate control equipment that reduces VOM emissions at the source by at least 90 percent ~~as provided in either~~under subsection (a) or (b) ~~of this Section~~.

a) An owner or operator may operate an afterburner or carbon adsorber; or

b) An owner or operator may use an equivalent alternative control plan, other than an afterburner or carbon adsorber, if approved by the Agency and USEPA through federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.784 Equipment Specifications

Every owner or operator of a motor vehicle refinishing operation, unless the source uses less than 20 gallons of coating per calendar year from all motor vehicle refinishing operations combined, ~~shall~~must:

a) Coat motor vehicles, mobile equipment, or their parts and components using one of the following coating applicators:

1) Electrostatic spray equipment calibrated, operated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications;

2) High Volume Low Pressure (HVLP) spray equipment calibrated, operated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications; or

3) An equivalent coating applicator technology that is demonstrated by the manufacturer to achieve transfer efficiency comparable to the HVLP spray equipment technology ~~listed~~ in subsection (a)(2) ~~of this Section~~ for a comparable operation, and for which written approval has been obtained from USEPA. The owner or operator must maintain documentation of USEPA's approval at the motor vehicle refinishing operation; and

b) Clean all coating applicators with a device that:

1) Recirculates solvent during the cleaning process;

2) Collects spent solvent so it is available for disposal or recycling; and

3) Minimizes evaporation of solvents during cleaning, rinsing, draining, and storage.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.786 Surface Preparation Materials

Every owner or operator of a motor vehicle refinishing operation ~~only shall~~must use only surface preparation materials that never exceed the following VOM content limitations for the specified substrate:

		kg/l	(lb/gal)
a)	Plastic parts	0.78	(6.5)
b)	Other substrates	0.17	(1.4)

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.787 Work Practices

a) Every owner or operator of a motor vehicle refinishing operation ~~shall~~ must ensure that fresh and spent solvent, cloth or paper used to apply solvents for surface preparation or cleanup, waste paint, and sludge are stored in closed containers.

b) Every owner or operator of a motor vehicle refinishing operation that is exempt from the equipment specifications in Section 218.784 ~~of this Subpart~~ because it uses less than 20 gallons of coating per year ~~shall~~ must direct solvent used to

clean coating applicator equipment and paint lines into a container for proper disposal or recycling.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.788 Testing

a) Upon request by the Agency, the owner or operator of a motor vehicle refinishing operation ~~shall,~~must at its own expense~~,~~ conduct tests to demonstrate compliance with Sections 218.780, 218.782, or 218.786 ~~of this Subpart,~~ in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~ and ~~shall~~must:

1) Notify the Agency 30 days ~~prior to~~before conducting ~~such~~ the tests; and

2) Submit all test results to the Agency within 45 days after conducting the ~~requisite~~ tests.

b) For purposes of this Section, surface preparation materials ~~shall~~ must be treated as coatings.

c) Nothing in this Section ~~shall limit~~limits the authority of USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing~~,~~ or ~~shall affect~~affects the authority of USEPA under Section 114 of the Clean Air Act (42 U.S.C. 7414 (1990)).

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.789 Monitoring and Recordkeeping for Control Devices

a) Every owner or operator of a motor vehicle refinishing operation that complies with this Subpart ~~pursuant to~~under Section 218.782 ~~of this Subpart shall~~must:

1) Install and operate equipment to continuously monitor each control device as specified in Section 218.105(d)(2)(A) ~~of this Part~~;

2) Keep records of parameters for control devices as monitored ~~pursuant to~~under subsection (a)(1) ~~of this Section~~;

3) Keep logs of operating time of the control device and monitoring equipment;

4) Keep logs of maintenance of the control device and monitoring equipment; and

5) Maintain all records required in this Section for the most recent consecutive ~~three year~~three-year period and make all such records available to the Agency immediately upon request.

b) An owner or operator may monitor with an alternative method or monitor other parameters than specified in subsection (a)(1) ~~of this Section~~, if approved by the Agency and USEPA through federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.790 General Recordkeeping and Reporting (Repealed)

(Source: Repealed at 30 Ill. Reg. 9684, effective May 15, 2006)

Section 218.791 Compliance Date

Every owner or operator of a motor vehicle refinishing operation ~~shall~~ must comply with ~~the requirements of~~ this Subpart by March 15, 1996, upon modification or upon initial startup.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART II: FIBERGLASS BOAT MANUFACTURING MATERIALS

Section 218.890 Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after May 1, 2012, ~~the requirements of~~ this Subpart ~~shall apply~~applies to the owners or operators of sources that manufacture hulls or decks of boats from fiberglass~~,~~ or that build molds to make hulls or decks of boats from fiberglass~~,~~ and that emit 6.8 kg/day (15 lbs/day) or more of VOM, calculated in ~~accordance~~ compliance with Section 218.894(a)(1)(B), from open molding resin and gel coat operations, resin and gel coat mixing operations, and resin and gel coat application equipment cleaning operations~~,~~ in the absence of air pollution control equipment. If a source is subject to this Subpart based upon ~~such~~ these criteria, ~~the limitations of~~ this Subpart ~~shall apply~~applies to the manufacture of all fiberglass boat parts at the source.

b) Notwithstanding subsection (a) ~~of this Section~~, ~~the requirements of~~ this Subpart ~~shall~~ does not apply to the following:

1) Surface coatings applied to fiberglass boats;

2) Industrial adhesives used in the assembly of fiberglass boats. Polyester resin putties used to assemble fiberglass parts ~~shall~~ must not be considered industrial adhesives for purposes of this exclusion;

3) Closed molding operations.

c) If a source is or becomes subject to one or more of the limitations in this Subpart, the source is always subject to the applicable provisions of this Subpart.

d) The owner or operator of a source exempt from the limitations of this Subpart because of the criteria in this Section is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 218.894(a) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.891 Emission Limitations and Control Requirements

a) Except as provided in subsection (f) ~~of this Section~~, ~~no~~ an owner or operator of a source subject to ~~the requirements of~~ this Subpart ~~shall~~ must not use a subject resin or gel coat at the source unless the resin and gel coat comply with subsection

(b)(1) or (b)(2), (c), or (d) ~~of this Section~~, as well as with subsections (e), (g), and (h) ~~of this Section~~. For sources complying ~~pursuant to~~under subsection (b) or (c) ~~of this Section~~, if the non-monomer VOM content of a resin or gel coat exceeds 5 percent, by weight, the excess non-monomer VOM ~~shall~~ must be added to the monomer VOM content of the resin or gel coat. The excess non-monomer VOM ~~shall~~ must be calculated in ~~accordance~~ compliance with the following equation:

$$\text{Excess Non-Monomer VOM} = \text{Non-monomer VOM Content} - 5 \text{ percent, by weight}$$

b) VOM Content Limitations

1) Except as provided in subsection (e) ~~of this Section~~, the monomer VOM content of a subject resin or gel coat ~~shall~~ must not exceed the following limitations:

		Weighted average monomer VOM content (weight percent)
A)	Production resin	
i)	Atomized spray	28
ii)	Non-atomized	35
B)	Pigmented gel coat	33
C)	Clear gel coat	48
D)	Tooling resin	
i)	Atomized	30
ii)	Non-atomized	39
E)	Tooling gel coat	40

2) Except as provided in subsection (e) ~~of this Section~~, the weighted average monomer VOM content of a subject resin or gel coat ~~shall~~ must not exceed the applicable limitation ~~set forth~~ in subsection (b)(1) ~~of this Section~~ on a 12-month rolling average basis. Equation 1 ~~below shall~~must be used to determine the weighted average monomer VOM content for resin and gel coat materials.

Equation 1:

$$\text{Weighted Average Monomer VOM Content} = \frac{\sum_{i=1}^{n} M_i VOM_i}{\sum_{i=1}^{n} M_i}$$

where:

M_i = Mass of open molding resin or gel coat (i) used in the past 12 months in an operation, in megagrams;

VOM_i = Monomer VOM content, by weight percent, of open molding resin or gel coat (i) used in the past 12 months in an operation;

n = Number of different open molding resins or gel coats used in the past 12 months in an operation.

c) Emissions Averaging Alternative. The owner or operator of a source subject to ~~the requirements of~~ this Subpart may elect to include some or all of the subject resin and gel coat operations at the source in the emissions averaging alternative. Resin and gel coat operations ~~utilizing~~ using the emissions averaging alternative ~~shall~~ must comply with a source-specific monomer VOM mass emission limit on a 12-month rolling average basis, calculated at the end of each calendar month. All subject resin and gel coat operations that do not ~~utilize~~ use the emissions averaging alternative ~~shall~~ must comply with ~~the requirements in~~ subsection (b) or (d) ~~of this Section, as well as with~~and all other applicable requirements in this Section.

1) The owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 2 to determine the source-specific monomer VOM mass emission limit for resin and gel coats included in the emissions average:

Equation 2:

$$\text{Monomer VOM Limit} = 46(M_R) + 159(M_{PG}) + 291(M_{CG}) + 54(M_{TR}) + 214(M_{TG})$$

where:

Monomer VOM Limit = Total allowable monomer VOM that can be emitted from the open molding operations included in the average, expressed in kilograms per 12-month period;

M_R = Mass of production resin used in the past 12 months, excluding any materials that are exempt, expressed in megagrams (Mg);

M_{PG} = Mass of pigmented gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{CG} = Mass of clear gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{TR} = Mass of tooling resin used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{TG} = Mass of tooling gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg.

The numerical coefficients associated with each term on the right hand side of Equation 2 are the allowable monomer VOM emission rates for that particular material in units of kg VOM/Mg of material used.

2) At the end of the first 12-month averaging period, and at the end of each subsequent month, the owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 3 to calculate the monomer VOM emissions from the resin and gel coat operations included in the emissions average. The monomer VOM emissions calculated using Equation 3 ~~shall~~ must not exceed the monomer VOM limit calculated using Equation 2.

Equation 3:

$$\text{Monomer VOM Emissions} = (PV_R)(M_R)+(PV_{PG})(M_{PG})+(PV_{CG})(M_{CG})+(PV_{TR})(M_{TR})+(PV_{TG})(M_{TG})$$

where:

Monomer VOM Emissions = Monomer VOM emissions calculated using the monomer VOM emission equations for each operation included in the average, expressed in kilograms;

PV_R = Weighted-average monomer VOM emission rate for production resin used in the past 12 months, expressed

in kg/Mg, calculated in ~~accordance~~ compliance with Equation 4 in subsection (c)(3);

M_R = Mass of production resin used in the past 12 months, expressed in Mg;

PV_{PG} = Weighted-average monomer VOM emission rate for pigmented gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{PG} = Mass of pigmented gel coat used in the past 12 months, expressed in Mg;

PV_{CG} = Weighted-average monomer VOM emission rate for clear gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~ underEquation 4;

M_{CG} = Mass of clear gel coat used in the past 12 months, expressed in Mg;

PV_{TR} = Weighted-average monomer VOM emission rate for tooling resin used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~ underEquation 4;

M_{TR} = Mass of tooling resin used in the past 12 months, expressed in Mg;

PV_{TG} = Weighted-average monomer VOM emission rate for tooling gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{TG} = Mass of tooling gel coat used in the past 12 months, expressed in Mg.

3) For purposes of Equation 3, the owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 4 to calculate the weighted-average monomer VOM emission rate for the previous 12 months for each resin and gel coat operation included in the emissions average, except as provided in subsection (e)~~ of this Section~~.

Equation 4:

$$PV_{OP} = \frac{\sum_{i=1}^{n} M_i PV_i}{\sum_{i=1}^{n} M_i}$$

where:

PV_{OP} = Weighted-average monomer VOM emission rate for each open molding operation (PV_R, PV_{PG}, PV_{CG}, PV_{TR}, and PV_{TG}) included in the average, expressed in kg of monomer VOM per Mg of material applied;

M_i = Mass of resin or gel coat (i) used within an operation in the past 12 months, expressed in Mg;

n = Number of different open molding resins and gel coats used within an operation in the past 12 months;

PV_i = The monomer VOM emission rate for resin or gel coat (i) used within an operation in the past 12 months, expressed in kg of monomer VOM per Mg of material applied. The monomer VOM emission rate formulas in subsection (c)(4) ~~of this Section shall~~must be used to compute PV_i. If a source includes filled resins in the emissions average, the source ~~shall~~ must use the value of PV_F, calculated using Equation 5 in subsection (e)(3) ~~of this Section~~, as the value of PV_i for those resins;

i = Subscript denoting a specific open molding resin or gel coat applied.

4) For purposes of Equation 4 and subsection (e)(3) ~~of this Section~~, the following monomer VOM emission rate formulas ~~shall~~ must apply. ~~Such~~ These formulas calculate monomer VOM emission rates in terms of kg of monomer VOM per Mg of resin or gel coat applied. "VOM%" means the monomer VOM content as supplied, expressed as a weight percent value between 0 and 100 percent:

A) Production resin, tooling resin:

i) Atomized: $0.014 \times (\text{Resin VOM\%})^{2.425}$

ii) Atomized, plus vacuum bagging with roll-out: $0.01185 \times (\text{Resin VOM\%})^{2.425}$

iii) Atomized, plus vacuum bagging without roll-out: 0.00945 x (Resin VOM%)$^{2.425}$

iv) Nonatomized: 0.014 x (Resin VOM%)$^{2.275}$

v) Nonatomized, plus vacuum bagging with roll-out: 0.0110 x (Resin VOM%)$^{2.275}$

vi) Nonatomized, plus vacuum bagging without roll-out: 0.0076 x (Resin VOM%)$^{2.275}$

B) Pigmented gel coat, clear gel coat, tooling gel coat: 0.445 x (Gel Coat VOM%)$^{1.675}$

d) Capture System and Control Device Requirements. ~~No~~ An owner or operator of a source subject to ~~the requirements of~~ this Subpart that is ~~utilizing~~ using a capture system and control device for a subject resin or gel coat operation ~~shall~~ must not conduct that operation unless the following requirements are satisfied:

1) An afterburner or carbon adsorber is installed and operated that meets the limitations ~~set forth~~ in this subsection (d). The owner or operator may use an emissions control system other than an afterburner or carbon adsorber if that device complies with all limitations in this subsection (d), the owner or operator submits a plan to the Agency detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device, and the plan is approved by the Agency and approved by USEPA as a SIP revision;

2) The VOM emissions at the outlet of the control device meet an emissions limitation determined using Equation 2 in subsection (c)(1) ~~of this Section~~. In Equation 2, however, instead of using the mass of each material used over the past 12 months to determine the emission limitation, the owner or operator ~~shall~~ must use the mass of each material used during the applicable control device performance test;

3) The owner or operator complies with all testing and monitoring requirements ~~set forth~~ in Section 218.892 ~~of this Subpart~~.

e) Filled Resins. For all filled production and tooling resins, the owner or operator of a source subject to this Subpart ~~shall~~ must adjust the monomer VOM emission rates determined ~~pursuant to~~under subsections (b) and (c) ~~of this Section~~ using Equation 5 in subsection (e)(3). If complying ~~pursuant to~~under subsection (b), the emission rate determined using Equation 5 ~~shall~~ must not exceed the limitations ~~set forth~~ in subsections (e)(1) and (e)(2) ~~of this Section~~. If complying ~~pursuant to~~under subsection (c), the value of PV_F, calculated using Equation 5~~,~~ ~~shall~~ must be used as the value of PV_i in Equation 4~~, as set forth~~ in subsection (c)(3) ~~of this~~

~~Section~~. If the non-monomer VOM content of a filled resin exceeds 5 percent, by weight, based on the unfilled resin, the excess non-monomer VOM ~~shall~~ must be added to the monomer VOM content in ~~accordance~~ complaince with the equation ~~set forth~~ in subsection (a).

1) Tooling Resin: 54 kg (119.1 lbs) monomer VOM/Mg filled resin applied;

2) Production Resin: 46 kg (101.4 lbs) monomer VOM/Mg filled resin applied;

3) Equation 5:

$$PV_F = PV_U \times \frac{100 - \%Filler}{100}$$

where:

PV_F = The as-applied monomer VOM emission rate for the filled production resin or tooling resin, expressed in kg monomer VOM per Mg of filled material;

PV_U = The monomer VOM emission rate for the unfilled resin, before filler is added, expressed in kg monomer VOM per Mg, as calculated using the formulas in Section 218.891(c)(4) ~~of this Subpart~~;

% Filler = The weight-percent of filler in the as-applied filled resin system.

f) The limitations in subsections (a) through (e) ~~of this Section shall~~do not apply to the following materials. These materials ~~shall~~ must instead comply with the applicable requirements ~~set forth~~ in subsections (f)(1) through (f)(3).

1) Production resins, including skin coat resins, that must meet specifications for use in military vessels or must be approved by the United States Coast Guard for use in the construction of lifeboats, rescue boats, and other life-saving appliances approved under 46 CFR Subchapter Q, incorporated by reference in Section 218.112 ~~of this Part~~, or for use in the construction of small passenger vessels regulated by 40 CFR Subchapter T, incorporated by reference in Section 218.112 ~~of this Part~~. The owner or operator of a source subject to this Subpart ~~shall~~ must apply all such resins with nonatomizing resin application equipment;

2) Production and tooling resins, and pigmented, clear, and tooling gel coats used for part or mold repair and touch ups. These materials ~~shall~~ must not

exceed 1 percent, by weight, of all resins and gel coats used at a subject source on a 12-month rolling average basis;

3) Pure, 100 percent vinylester resins used for skin coats. The owner or operator of a source subject to this Subpart ~~shall~~ must apply these resins with non-atomizing resin application equipment, and the total amount of the resins ~~shall~~ must not exceed 5 percent, by weight, of all resins used at the subject source on a 12-month rolling-average basis.

g) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not use VOM-containing cleaning solutions to remove cured resins and gel coats from fiberglass boat manufacturing application equipment. Additionally, ~~no~~ an owner or operator ~~shall~~ must not use VOM-containing cleaning solutions for routine cleaning of application equipment unless:

1) The VOM content of the cleaning solution is less than or equal to 5 percent, by weight; or

2) The composite vapor pressure of the cleaning solution is less than or equal to 0.50 mmHg at ~~68°F~~68 ºF.

h) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not use resin or gel coat mixing containers with a capacity equal to or greater than 208 liters (55 gallons), including those used for on-site mixing of putties and polyputties, unless ~~such~~ the containers have covers with no visible gaps in place at all times, except when material is being manually added to or removed from a container or when mixing or pumping equipment is being placed in or removed from a container.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.892 Testing and Monitoring Requirements

a) Testing to demonstrate compliance with ~~the requirements of~~ Section 218.891 ~~of this Subpart shall~~must be conducted by the owner or operator by May 1, 2012~~. Thereafter~~, after which testing ~~shall~~ must be conducted within 90 days after a request by the Agency, or as otherwise specified in this Subpart. The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting the testing to allow the Agency to be present during testing.

b) Testing to demonstrate compliance with the monomer VOM content limitations for resin and gel coat materials in Section 218.891(b) ~~of this Subpart shall~~must be conducted upon request of the Agency, or as otherwise specified in this Subpart, in ~~accordance~~ compliance with SCAQMD 312-91, incorporated by reference in Section 218.112 ~~of this Part~~.

c) The owner or operator of a source complying with this Subpart ~~pursuant to~~under Section 218.891(d) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, and upon start-up of a new control device, conduct an initial performance test of the control device in ~~accordance~~ compliance with this subsection (c) that demonstrates compliance with the emission limitation determined ~~pursuant to~~under Section 218.891(d).

2) ~~Subsequent to~~After the initial performance test ~~described in~~under subsection (c)(1) ~~of this Section~~, conduct at least one performance test per calendar year. Performance tests used to demonstrate compliance with Section 218.891(d) ~~shall~~ must be conducted at least six months apart, unless the performance test is being conducted ~~following~~ after an exceedance of operating parameters ~~as described in~~under subsection (c)(3) ~~of this Section~~, or ~~per a request~~when requested by the Agency.

3) Monitor and record relevant operating parameters, including the control efficiency of the control device and the amount of materials used in the fiberglass boat manufacturing process, during each control device performance test used to demonstrate compliance with Section 218.891(d). The owner or operator ~~shall~~ must continue to operate the fiberglass boat manufacturing process within the parameters until another performance test is conducted that demonstrates compliance with Section 218.891(d). The owner or operator ~~shall~~ must monitor the parameters at all times when the control device is in operation. If the fiberglass boat manufacturing process exceeds any operating parameter by more than 10 percent, the owner or operator ~~shall~~ must conduct additional performance testing in ~~accordance~~ compliance with this Section within 10 operating days after the exceedance.

4) The methods and procedures of Section 218.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 218.891(d) ~~of this Subpart~~, as follows:

A) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

B) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~;

C) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 218.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

i) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

ii) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

iii) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest again using Method 25;

D) Notwithstanding the criteria or requirements in Method 25, which specifies a minimum probe temperature of ~~129°C (265°F)~~129 °C (265 °F), the probe must be heated to at least the gas stream temperature of the dryer exhaust, typically close to ~~176.7°C (350°F)~~176.7 °C (350 °F); and

E) During testing, the fiberglass boat manufacturing operation ~~shall~~ must be operated at representative operating conditions and flow rates.

5) If an afterburner is used to demonstrate compliance, the owner or operator ~~shall~~must:

A) Install, calibrate, operate, and maintain temperature monitoring devices with an accuracy of ~~3°C~~ 3 °C or ~~5°F~~ 5 °F on the emissions control system in ~~accordance~~ compliance with Section 218.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliamnce with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the emissions control system is operating; and

B) Install, calibrate, operate, and maintain in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

6) If a carbon adsorber is used to demonstrate compliance, the owner or operator ~~shall~~ must use Agency and USEPA approved continuous monitoring equipment that is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use. The continuous monitoring equipment ~~shall~~ must monitor the VOM concentration of each carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.

7) If an emissions control system other than an afterburner or carbon adsorber is used to demonstrate compliance, the owner or operator ~~shall~~ must install, maintain, calibrate, and operate the monitoring equipment ~~as set forth in~~in compliance with the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 218.891(d).

d) Testing to demonstrate compliance with the VOM content limitations for cleaning solutions in Section 218.891(g) ~~of this Subpart~~, and with the non-monomer VOM content limitations for resin and gel coat materials in Section 218.891(a) ~~of this Subpart, shall~~must be conducted upon request of the Agency, or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures ~~specified~~ in Section 218.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) For cleaning solvents, the manufacturer's specifications for VOM content may be used if the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 218.105(a) ~~of this Part~~; ~~provided,~~ however, Method 24 ~~shall~~ must be used to determine compliance. In the event of

any inconsistency between a Method 24 test and the manufacturer's specifications, the Method 24 test ~~shall~~ must govern.

e) The owner or operator of a source subject to this Subpart and relying on the VOM content of the cleaning solution to comply with Section 218.891(g)(1) ~~of this Subpart shall~~must:

1) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

A) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

B) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 218.891(g)(1);

2) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the usage of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 218.894(g) ~~of this Subpart~~.

f) Testing to demonstrate compliance with the VOM composite partial vapor pressure limitation for cleaning solvents ~~set forth~~ in Section 218.891(g) ~~of this Subpart shall~~must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~set forth~~ in Section 218.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.894 Recordkeeping and Reporting Requirements

a) The owner or operator of a source exempt from ~~the limitations of~~ this Subpart because of the criteria in Section 218.890(a) ~~of this Subpart shall~~must:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the following:

A) A declaration that the source is exempt from the requirements in this Subpart because of the criteria in Section 218.890(a);

B) Calculations that demonstrate that combined emissions of VOM from all subject fiberglass boat manufacturing operations (including solvents used for cleanup operations associated with the fiberglass boat manufacturing operation) at the source never equal

or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment. To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from fiberglass boat manufacturing operations at the source (including solvents used for cleanup operations associated with the fiberglass boat manufacturing operations) and divide the amount by the number of days during that calendar month that the fiberglass boat manufacturing operations were in operation;

2) Collect and record the following information and provide copies of the records to the Agency upon request:

A) The total pounds of all resins and gel coats used per calendar month;

B) The total gallons of all cleanup materials used per calendar month;

C) The VOM content of each resin, gel coat, and cleanup material used per calendar month;

D) The total VOM emissions, in pounds, for all resins, gel coats, and cleanup materials employed per calendar month, before the application of control systems and devices.

3) Notify the Agency of any record that shows that the combined emissions of VOM from subject fiberglass boat manufacturing operations at the source, including related cleaning activities, ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs, and provide copies of the record upon request by the Agency.

b) All sources subject to ~~the requirements of~~ this Subpart ~~shall~~must:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, and upon start-up of a new fiberglass boat manufacturing operation at the source, submit a certification to the Agency that includes:

A) Identification of each subject fiberglass boat manufacturing operation as of the date of certification;

B) A declaration that all subject fiberglass boat manufacturing operations, including related cleaning operations, are in compliance with ~~the requirements of~~ this Subpart;

C) The limitation with which each subject fiberglass boat manufacturing operation will comply (i.e., the VOM content

limitation, the emissions averaging alternative, or the emissions control system alternative);

D) Initial documentation that each subject fiberglass boat manufacturing operation will comply with the applicable limitation, including copies of manufacturer's specifications, test results (if any), formulation data, and calculations;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

F) A description of the practices and procedures that the source will follow to ensure compliance with ~~the limitations in~~ Section 218.891(h) ~~of this Subpart~~;

G) A description of each fiberglass boat manufacturing operation exempt ~~pursuant to~~under Section 218.890(b) ~~of this Subpart~~, if any;

H) A description of materials subject to Section 218.891(f) ~~of this Subpart~~, if any, used in each fiberglass boat manufacturing operation;

2) At least 30 calendar days before changing the method of compliance ~~in accordance with~~under Section 218.891(b), (c), and (d), notify the Agency in writing of the change. The notification ~~shall~~ must include a demonstration of compliance with the newly applicable subsection;

3) Notify the Agency in writing of any violation of ~~the requirements of~~ this Subpart within 30 days ~~following the occurrence of~~after the violation and provide records documenting the violation upon request by the Agency;

4) Retain all records required by this Section for at least three years and make those records available to the Agency upon request.

c) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the limitations of~~ Section 218.891 ~~of this Subpart~~ and complying by means of Section 218.891(b) ~~shall~~ must comply with the following.

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each subject resin and gel coat as applied each day by each subject fiberglass boat manufacturing operation;

2) Collect and record the following information each day for each fiberglass boat manufacturing operation complying with Section 218.891(b):

A) The name, identification number, and VOM content of each subject resin and gel coat as applied each day by each fiberglass boat manufacturing operation; and

B) If complying with Section 218.891(b)(2), the mass of each open molding resin or gel coat as applied each month by each subject fiberglass boat manufacturing operation and the weighted average VOM content of all subject resins and gel coats as applied by each subject fiberglass boat manufacturing operation.

d) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the requirements of~~ Section 218.891 ~~of this Subpart~~ and complying by means of Section 218.891(c) ~~shall~~must:

1) On and after May 1, 2012, collect and record the following information each month:

A) The amount of production resin, pigmented gel coat, clear gel coat, tooling resin, and tooling gel coat used in each subject fiberglass boat manufacturing operation;

B) The VOM content of each production resin, pigmented gel coat, clear gel coat, tooling resin, and tooling gel coat used in each subject fiberglass boat manufacturing operation;

C) Total monthly VOM emissions for all subject fiberglass boat manufacturing operations;

2) At the end of the first 12-month averaging period, and at the end of each subsequent month, collect and record the following information:

A) The monomer VOM mass emission limit for all subject fiberglass boat manufacturing operations for the applicable 12-month averaging period, with supporting calculations;

B) The total actual emissions of VOM from all subject fiberglass boat manufacturing operations for the applicable 12-month averaging period.

e) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the requirements of~~ Section 218.891 ~~of this Subpart~~ and complying by means of Section 218.891(d) ~~shall~~must:

1) By May 1, 2012, or upon initial start-up, whichever is later, and upon start-up of a new control device, submit a certification to the Agency that includes the following:

   A) The type of control device used to comply with the requirements of Section 218.891(d);

   B) The results of all tests and calculations necessary to demonstrate compliance with ~~the requirements of~~ Section 218.891(d); and

   C) A declaration that the monitoring equipment required under Section 218.892 ~~of this Subpart~~ has been properly installed and calibrated according to manufacturer's specifications;

2) Within 90 days after conducting testing ~~pursuant to~~under Section 218.892, submit to the Agency a copy of all test results, as well as a certification that includes the following:

   A) A declaration that all tests and calculations necessary to demonstrate whether the fiberglass boat manufacturing operation is in compliance with Section 218.891(d) have been properly performed;

   B) A statement whether the fiberglass boat manufacturing operations are or are not in compliance with Section 218.891(d);

   C) The emissions limitation applicable during the control device performance test, with supporting calculations;

   D) The operating parameters of the fiberglass boat manufacturing process during testing, as monitored in ~~accordance~~ compliance with Section 218.892;

3) Collect and record daily the following information for each fiberglass boat manufacturing operation subject to ~~the requirements of~~ Section 218.891(d), and submit that information to the Agency upon request:

   A) Afterburner or other approved control device monitoring data in accordance with Section 218.892~~ of this Subpart~~;

   B) A log of operating time for the control device and monitoring equipment;

   C) A maintenance log for the control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages;

D) Information to substantiate that the fiberglass boat manufacturing operation is operating in compliance with the parameters determined ~~pursuant to~~under Section 218.892.

f) The owner or operator of a source subject to the requirements in Section 218.891(f) ~~of this Subpart shall~~must collect and record the following information for each fiberglass boat manufacturing operation:

1) The name and identification number of each material subject to Section 218.891(f) as applied each day by each subject fiberglass boat manufacturing operation;

2) If subject to Section 218.891(f)(2), the amount of production and tooling resins, and pigmented, clear, and tooling gel coats used for part or mold repair and touch-ups, used each month at the subject source, and the total amount of all resins and gel coats used each month at the subject source;

3) If subject to Section 218.891(f)(3), the amount of pure, 100 percent vinylester resins used for skin coats each month at the subject source, and the total amount of all resins used each month at the subject source.

g) The owner or operator of a source subject to ~~the requirements of~~ Section 218.891 ~~of this Subpart shall~~must collect and record the following information for each cleaning solution used in each fiberglass boat manufacturing operation:

1) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.891(g) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

A) The name and identification of each cleaning solution;

B) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.892(d) ~~of this Subpart~~;

C) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

D) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

E) The VOM content of the as-used cleaning solution, with supporting calculations; and

F) A calibration log for the automatic equipment, detailing periodic checks;

2) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 218.891(g), and that is not prepared at the source with automatic equipment:

A) The name and identification of each cleaning solution;

B) Date and time of preparation, and each subsequent modification, of the batch;

C) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 218.892(d);

D) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

E) The VOM content of the as-used cleaning solution, with supporting calculations;

3) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 218.891(g):

A) The name and identification of each cleaning solution;

B) Date and time of preparation, and each subsequent modification, of the batch;

C) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 218.892(f) ~~of this Subpart~~;

D) The total amount of each cleaning solvent, including water, used to prepare the as-used cleaning solution; and

E) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 218.110 ~~of this Part~~.

SUBPART JJ: MISCELLANEOUS INDUSTRIAL ADHESIVES

Section 218.900 Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after May 1, 2012, ~~the requirements of~~ this Subpart ~~shall apply~~applird to miscellaneous industrial adhesive application operations at sources where the total actual VOM emissions from all such operations, including related cleaning activities, equal or exceed 6.8 kg/day (15 lbs/day), calculated in ~~accordance~~ compliance with Section 218.904(a)(1)(B), in the absence of air pollution control equipment.

b) Notwithstanding subsection (a) ~~of this Section~~:

1) ~~The requirements of this~~This Subpart ~~shall~~ does not apply to miscellaneous industrial adhesive application operations associated with the following:

A) Aerospace coatings;

B) Metal furniture coatings;

C) Large appliance coatings;

D) Flat wood paneling coatings;

E) Paper, film, and foil coatings;

F) Lithographic printing;

G) Letterpress printing;

H) Flexible package printing;

I) Coil coating;

J) Fabric coating;

K) Rubber tire manufacturing.

2) ~~The requirements of~~ Section 218.901(b) through (e) ~~of this Subpart shall~~do not apply to the following:

A) Adhesives or adhesive primers being tested or evaluated in any research and development operation or quality assurance or analytical laboratory;

B) Adhesives or adhesive primers used in the assembly, repair, or manufacture of aerospace or undersea-based weapon systems;

C) Adhesives or adhesive primers used in medical equipment manufacturing operations;

D) Cyanoacrylate adhesive application operations;

E) Aerosol adhesive and aerosol adhesive primer application operations;

F) Operations using polyester bonding putties to assemble fiberglass parts at fiberglass boat manufacturing facilities and at other reinforced plastic composite manufacturing facilities;

G) Operations using adhesives and adhesive primers that are supplied to the manufacturer in containers with a net volume of 0.47 liters (16 oz) or less, or a net weight of 0.45 kg (1 lb) or less.

c) If a miscellaneous industrial adhesive application operation at a source is or becomes subject to one or more of the limitations in this Subpart, the miscellaneous industrial adhesive application operation is always subject to the applicable provisions of this Subpart.

d) The owner or operator of a source exempt from the emission limitations and control requirements of this Subpart because of the criteria in subsection (a) ~~of this Section~~ is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 218.904(a)~~ of this Subpart~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.901 Emission Limitations and Control Requirements

a) The owner or operator of a source subject to ~~the requirements of~~ this Subpart ~~shall~~ must comply with the limitations in subsection (b), (c), or (d)~~ of this Section~~, as well as with the limitations in subsections (e) and (f)~~ of this Section~~. Notwithstanding this requirement, sources subject to Section 218.900(b)(2) ~~shall~~ must comply with the limitations in subsection (f) ~~of this Section~~ only.

b) The owner or operator of adhesive application operations listed in this subsection (b) ~~shall~~ must comply with the following VOM emission limitations, minus water and any compounds that are specifically exempted from the definition of VOM, as applied. If an adhesive is used to bond dissimilar substrates together, the substrate category with the highest VOM emission limitation ~~shall apply~~applies:

	kg VOM/l adhesive or adhesive	lb VOM/gal adhesive or adhesive

			primer applied	primer applied
1)	General adhesive application operations			
	A)	Reinforced plastic composite	0.200	(1.7)
	B)	Flexible vinyl	0.250	(2.1)
	C)	Metal	0.030	(0.3)
	D)	Porous material (except wood)	0.120	(1.0)
	E)	Rubber	0.250	(2.1)
	F)	Wood	0.030	(0.3)
	G)	Other substrates	0.250	(2.1)
2)	Specialty adhesive application operations			
	A)	Ceramic tile installation	0.130	(1.1)
	B)	Contact adhesive	0.250	(2.1)
	C)	Cove base installation	0.150	(1.3)
	D)	Indoor floor covering installation	0.150	(1.3)
	E)	Outdoor floor covering installation	0.250	(2.1)
	F)	Installation of perimeter bonded sheet flooring	0.660	(5.5)
	G)	Metal to urethane/rubber molding or casting	0.850	(7.1)
	H)	Motor vehicle adhesive	0.250	(2.1)
	I)	Motor vehicle weatherstrip adhesive	0.750	(6.3)
	J)	Multipurpose construction	0.200	(1.7)
	K)	Plastic solvent welding (acrylonitrile butadiene styrene (ABS) welding)	0.400	(3.3)

L)	Plastic solvent welding (except ABS welding)	0.500	(4.2)
M)	Sheet rubber lining installation	0.850	(7.1)
N)	Single-ply roof membrane installation/repair (except ethylene ~~propylenediene~~ propylene diene monomer (EPDM) roof membrane)	0.250	(2.1)
O)	Structural glazing	0.100	(0.8)
P)	Thin metal laminate	0.780	(6.5)
Q)	Tire repair	0.100	(0.8)
R)	Waterproof resorcinol glue	0.170	(1.4)

3) Adhesive primer application operations

A)	Motor vehicle glass bonding primer	0.900	(7.5)
B)	Plastic solvent welding adhesive primer	0.650	(5.4)
C)	Single-ply roof membrane adhesive primer	0.250	(2.1)
D)	Other adhesive primer	0.250	(2.1)

c) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not operate a miscellaneous industrial adhesive application operation unless the daily-weighted average VOM content of subject adhesives as applied each day by the operation, calculated in ~~accordance~~ compliance with subsection (c)(1) ~~of this Section~~, is less than or equal to the emissions limitation calculated in ~~accordance~~ compliance with subsection (c)(2) ~~of this Section~~.

1) Weighted Average of VOM Content of Adhesives Applied Each Day

$$VOM_{WA} = \frac{\sum_{i=1}^{n} V_i VOM_i}{\sum_{i=1}^{n} V_i}$$

where:

VOM_{WA} = The weighted average VOM content in units of kg (lbs) VOM per volume in l (gal) of all subject adhesives as applied each day;

i = Subscript denoting a specific adhesive as applied;

n = The number of different adhesives as applied each day by each miscellaneous industrial adhesive application operation;

V_i = The volume of each adhesive, as applied, in units of l (gal);

VOM_i = The VOM content in units of kg (lbs) VOM per volume in l (gal) of each adhesive as applied;

2) Allowable Weighted Average VOM Limit for an Averaging Operation

$$Limit_{WA} = \frac{\sum_{i=1}^{n} V_i Limit_i}{\sum_{i=1}^{n} V_i}$$

where:

$Limit_{WA}$ = The allowable weighted average VOM limit in units of kg (lbs) VOM per volume in l (gal) of all subject adhesives as applied each day in a single operation;

i = Subscript denoting a specific adhesive as applied;

n = The number of different adhesives as applied each day by each miscellaneous industrial adhesive application operation;

V_i = The volume of each adhesive, as applied, in units of l (gal);

$Limit_i$ = The VOM limit, taken from subsection (b) ~~of this Section~~, in units of kg (lbs) VOM per volume in l (gal) of each adhesive as applied.

d) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not operate a miscellaneous industrial adhesive application operation employing a capture system and control device unless either:

1) An afterburner or carbon adsorption system is used that provides at least 85 percent reduction in the overall emissions of VOM from the application operation;

2) An alternative capture and control system is used that provides at least 85 percent reduction in the overall emissions of VOM from the application operation and is approved by the Agency and approved by USEPA as a SIP revision. The owner or operator ~~shall~~ must submit to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; or

3) The owner or operator complies with the applicable limitation ~~set forth~~ in subsection (b) ~~of this Section~~ by ~~utilizing~~ using a combination of low-VOM adhesives and an afterburner or carbon adsorption system. The owner or operator may use an alternative capture and control system if the owner or operator submits to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the capture and control system and the system is approved by the Agency and approved by USEPA as a SIP revision.

e) The owner or operator of a source subject to this Subpart ~~shall~~ must apply all miscellaneous industrial adhesives using one or more of the following methods:

1) Electrostatic spray;

2) High volume low pressure (HVLP) spray;

3) Flow coating. For the purposes of this Subpart, "flow coating" means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

4) Roll coating or hand application, including non-spray application methods similar to hand or mechanically powered caulking gun, brush, or direct hand application;

5) Dip coating, including electrodeposition. For purposes of this Subpart, "electrodeposition" means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

6) Airless spray;

7) Air-assisted airless spray; or

8) Another adhesive application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if the method is approved in writing by the Agency.

f) The owner or operator of a source subject to this Subpart ~~shall~~ must comply with the following work practices for each subject miscellaneous adhesive application operation at the source:

1) Store all VOM-containing adhesives, adhesive primers, process-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials;

4) Convey VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials from one location to another in closed containers or pipes; and

5) Minimize VOM emissions from the cleaning of application, storage, mixing, and conveying equipment by ensuring that equipment cleaning is performed without atomizing the cleaning solvent and all spent solvent is captured in closed containers.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.902 Testing Requirements

a) Testing to demonstrate compliance with ~~the requirements of~~ this Subpart ~~shall~~ must be conducted by the owner or operator by May 1, 2012, after which~~.~~ ~~Thereafter,~~ testing ~~shall~~ must be conducted within 90 days after a request by the Agency, or as otherwise provided in this Subpart. The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting the testing to allow the Agency to be present during testing.

b) Testing to demonstrate compliance with the VOM content limitations in Section 218.901(b) ~~of this Subpart shall~~must be conducted as follows:

1) Method 24, incorporated by reference in Section 218.112 ~~of this Part~~, ~~shall~~ must be used for non-reactive adhesives. If it is demonstrated to the satisfaction of the Agency and the USEPA that plant adhesive formulation data are equivalent to Method 24 results, formulation data may be used. In the event of any inconsistency between a Method 24 test and a facility's formulation data, the Method 24 test will govern;

2) Appendix A of 40 CFR 63, Subpart PPPP, incorporated by reference in Section 218.112 ~~of this Part~~, ~~shall~~ must be used for reactive adhesives.

3) The manufacturer's specifications for VOM content for adhesives may be used if the specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in subsections (b)(1) and (b)(2) ~~of this Section~~, as applicable.

c) For afterburners and carbon adsorbers, the methods and procedures of Section 218.105(d) through (f) ~~of this Part shall~~must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 218.901(d) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the emissions control system, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 218.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used, except under the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the emissions control system is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the emissions control system and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon;

C) Due to the high efficiency of the emissions control system, the anticipated VOM concentration at the emissions control system

exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

D) During testing, the cleaning equipment ~~shall~~ must be operated at representative operating conditions and flow rates.

d) An owner or operator using an emissions control system other than an afterburner or carbon adsorber ~~shall~~ must conduct testing to demonstrate compliance with ~~the requirements of~~ Section 218.901(d) ~~as set forth~~ in the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 218.901(d)(3).

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.903 Monitoring Requirements

a) If an afterburner is used to demonstrate compliance, the owner or operator of a source subject to Section 218.901(d) ~~of this Subpart shall~~must:

1) Install, calibrate, operate, and maintain temperature monitoring devices with an accuracy of ~~3°C~~ 3 °C or ~~5°F~~ 5 °F on the emissions control system in ~~accordance~~ compliance with Section 218.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the emissions control system is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

b) If a carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to Section 218.901(d) ~~of this Subpart shall~~must use Agency and USEPA approved continuous monitoring equipment that is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use. The continuous monitoring equipment ~~shall~~ must

monitor the VOM concentration of each carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.

c) If an emissions control system other than an afterburner or carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to Section 218.901(d) ~~of this Subpart shall~~must install, maintain, calibrate, and operate the monitoring equipment ~~as set forth in~~under the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 218.901(d)(3).

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.904 Recordkeeping and Reporting Requirements

a) The owner or operator of a source exempt from the limitations of this Subpart because of the criteria in Section 218.900(a) ~~of this Subpart shall~~must comply with the following:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from ~~the requirements of~~ this Section because of the criteria in Section 218.900(a);

B) Calculations that demonstrate that combined emissions of VOM from miscellaneous industrial adhesive application operations at the source, including related cleaning activities, never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment. To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from miscellaneous industrial adhesive application operations at the source (including related cleaning activities) and divide this amount by the number of days during that calendar month that miscellaneous industrial adhesive application operations at the source were in operation;

2) Collect and record the following information each month for each miscellaneous industrial adhesive application operation, maintain the information at the source for ~~a period of~~ three years, and provide the information to the Agency upon request:

A) The name and identification number of each adhesive as applied by each miscellaneous industrial adhesive application operation; and

B) The weight of VOM per volume and the volume of each adhesive (minus water and any compounds which are specifically exempted

from the definition of VOM) as applied each month by each miscellaneous industrial adhesive application operation;

3) Notify the Agency of any record that shows that the combined emissions of VOM from miscellaneous industrial adhesive application operations at the source, including related cleaning activities, ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs, and provide copies of those records upon request by the Agency.

b) All sources subject to ~~the requirements of~~ this Subpart ~~shall~~must:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

A) Identification of each subject adhesive application operation as of the date of certification;

B) A declaration that all subject adhesive application operations are in compliance with ~~the requirements of~~ this Subpart;

C) The limitation with which each subject adhesive application operation will comply (i.e., the VOM content limitation, the daily weighted averaging alternative, or the emissions control system alternative);

D) Initial documentation that each subject adhesive application operation will comply with the applicable limitation, including copies of manufacturer's specifications, test results (if any), formulation data, and calculations;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

F) A description of the practices and procedures that the source will follow to ensure compliance with ~~the limitations in~~ Section 218.901(f)~~ of this Subpart~~;

G) A description of each adhesive application operation exempt ~~pursuant to~~under Section 218.900(b)(2)~~ of this Subpart~~, if any; and

H) The application methods used by each subject adhesive application operation;

2) At least 30 calendar days before changing the method of compliance ~~in accordance with~~under Section 218.901(b), (c), and (d), notify the Agency

in writing of the change. The notification ~~shall~~ must include a demonstration of compliance with the newly applicable subsection;

3) Notify the Agency in writing of any violation of ~~the requirements of~~ this Subpart within 30 days ~~following the occurrence of~~after the violation and provide records documenting the violation upon request by the Agency;

4) Retain all records required by this Section for at least three years and make those records available to the Agency upon request.

c) The owner or operator of an adhesive application operation subject to ~~the limitations of~~ Section 218.901 ~~of this Subpart~~ and complying by means of Section 218.901(b) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon the initial start-up date, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each adhesive as applied by each subject adhesive application operation;

2) Collect and record the name, identification number, and VOM content of each adhesive as applied each day by each adhesive application operation complying with Section 218.901(b).

d) The owner or operator of an adhesive application operation subject to ~~the limitations of~~ Section 218.901 ~~of this Subpart~~ and complying by means of Section 218.901(c) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each adhesive as applied by each subject adhesive application operation;

2) Collect and record the following information each day for each adhesive application operation complying by means of Section 218.901(c):

A) The name, identification number, VOM content, and volume of each adhesive as applied each day by each subject adhesive application operation;

B) The daily weighted average VOM content of all adhesives as applied by each subject adhesive application operation.

e) The owner or operator of an adhesive application operation subject to ~~the requirements of~~ Section 218.901 ~~of this Subpart~~ and complying by means of Section 218.901(d) ~~shall~~must:

1) By May 1, 2012, or upon the initial start-up date, whichever is later, and upon initial start-up of a new control device, submit a certification to the Agency that includes the following:

A) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 218.901(d);

B) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 218.901(d); and

C) A declaration that the monitoring equipment required under Section 218.903 ~~of this Subpart~~ has been properly installed and calibrated according to manufacturer's specifications;

2) Within 90 days after conducting testing ~~pursuant to~~under Section 218.902 ~~of this Subpart~~, submit to the Agency a copy of all test results, as well as a certification that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the adhesive application operations are in compliance with Section 218.901(d) have been properly performed;

B) A statement whether the adhesive application operations are or are not in compliance with Section 218.901(d); and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 218.903 ~~of this Subpart~~;

3) Collect and record daily the following information for each adhesive application operation subject to ~~the requirements of~~ Section 218.901(d):

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 218.903 ~~of this Subpart~~;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated application unit; and

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART PP: MISCELLANEOUS FABRICATED PRODUCT MANUFACTURING PROCESSES

Section 218.920 Applicability

a) Maximum theoretical emissions:

1) A source is subject to this Subpart if it contains process emission units not regulated by Subparts B, E, F (excluding Section 218.204(l)), H (excluding Section 218.405), Q, R, S, T~~,~~ (excluding Section 218.486), V, X, Y, Z ~~or~~ BB ~~of this Part~~, which as a group both:

A) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM, and

B) Are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment, through production or capacity limitations contained in a federally enforceable permit or a SIP revision.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (a)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous fabricated product manufacturing process emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, or BB ~~of this Part~~.

b) Potential to emit:

1) A source is subject to this Subpart if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units that are:

A) Not regulated by Subparts B, E, F, H, Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (b)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous fabricated product manufacturing process emission units, which are:

A) Not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, CC, or DD ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

c) If a source ceases to fulfill the criteria of subsections (a) and/or (b) ~~above~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous fabricated products manufacturing process emission unit which was subject to the control requirements of Section 218.926 ~~of this Part~~.

d) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 0.91 Mg (1.0 ton) per calendar year if the total emissions from ~~such~~ the emission units not complying with Section 218.926 ~~of this Part does~~do not exceed 4.5 Mg (5.0 tons) per calendar year~~, provided that~~; however, this provision ~~shall~~ does not apply to an emission unit which is a leather coating line or operation at a source where the criteria of Section 218.920(a) ~~above~~ are not met.

e) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

f) For the purposes of this Subpart, VOM emissions in the absence of air pollution control equipment are the emissions of VOM which would result if no air pollution control equipment were used.

g) The control requirements in Subpart PP ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene

resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin and not including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source; and iron and steel production.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.923 Permit Conditions (Repealed)

(Source: Repealed at 18 Ill. Reg. 1994, effective January 24, 1994)

Section 218.926 Control Requirements

Every owner or operator of miscellaneous fabricated product manufacturing process emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~of this Section~~:

a) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit; or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 218.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) For coating lines:

1) The daily-weighted average VOM content ~~shall~~ must not exceed 0.42 kg VOM/1 (3.5 lbs VOM/gal) of coating as applied (minus water and any compounds which are specifically exempted from the definition of VOM) during any day. Owners and operators complying with this limitation are not required to comply with Section 218.301 ~~of this Part~~; or

2) For application of coatings to leather at a source where the criteria of Section 218.290(a) are not met:

A) For application of stain coating to leather, other than specialty leather, either

i) The VOM contained in stain coatings, other than stain coatings applied to specialty leather, as applied at the source in any consecutive 12-month period ~~shall~~ must not exceed 10 tons; or

ii) The application of stain coatings ~~shall~~ must comply with Section 218.926(b)(2)(C) ~~below~~; or

B) For application of coatings to specialty leather, the total VOM content of all coatings, including stains, as applied to a category of specialty leather, ~~shall~~ must not exceed 38 lbs per 1000 square feet of ~~such~~ the specialty leather produced, determined on a monthly basis:

$$C = E/A$$

Where:

C= The VOM contained in all coatings applied to a category of specialty leather in units of lbs/square feet;

E= The total VOM content of all coatings applied to the category of specialty leather during each month in units of lbs determined as the sum of the VOM content of each coating applied during the month to such leather;

A= The total area of the category of specialty leather produced in the month in units of square feet, determined as the sum of the area of each type of leather item produced during the month based on the number of ~~such~~ the items produced and the area of ~~such~~ the item, measured or established in ~~accordance~~ complaince with procedures ~~set~~ in a federally enforceable permit; or

C) For application of coatings to leather, except for ~~such~~ coatings ~~as are~~ complying by means of Section 218.926(b)(2)(A) or (B) ~~above~~, either

i) The VOM content of each coating ~~shall~~ must not exceed 0.42 kg VOM/1 (3.5 lbs VOM/gal) of coating as applied (minus water and any compounds which are specifically exempted from the definition of VOM). Owners and operators complying with this limitation are not subject to Section 218.301 ~~of this Part~~; or

ii) The daily-weighted average VOM content ~~shall~~ must not exceed 0.42 ~~KgVom/l~~kg VOM/l (3.5 lbs ~~Vom/gal~~VOM/gal) of coating as applied as provided in Section 218.916(b)(1) ~~above~~; or

c) An equivalent alternative control plan which has been approved by the Agency and the USEPA in federally enforceable permit or as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.927 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with ~~the~~ those requirements ~~thereof~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.928 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 281.926, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.929 Cementable and Dress or Performance Shoe Leathers

a) ~~The rule requirements of this~~This Section ~~apply~~ applies to a leather manufacturing facility located at 2015 North Elston Avenue, Chicago, Illinois. The VOM emission limits ~~set forth~~ in this Section ~~shall only~~ apply only to the following types of select grade of chrome tanned, bark/polymer retanned specialty leathers:

1) Cementable Shoe Leather is leather which is:

A) Hot stuffed without the presence of water, fat liquored, or wet stuffed by direct contact with wax, grease, polymers, and oils in liquefied form at elevated temperatures. The content of wax, grease, polymers, and oils embedded into the leather ~~shall~~ must be over 12 percent but less than 25 percent by weight, measured on a dry weight basis. Applicable leathers ~~shall~~ must be determined using the equation below:

$12\% < P < 25\%$

Where:

P = W\L x 100

P = percent content of wax, grease, polymer, and oils

W = weight of wax, grease, polymers, and oils in pounds added to the leather

L = dry weight of the leather in pounds before addition of wax, greases, polymers, and oils;

B) Finished with coating materials which adhere to the leather surface that feels oily; and

C) Used primarily for manufacture of shoes and cannot meet the definition for specialty leather ~~pursuant to~~under 35 Ill. Adm. Code Section 211.6170.

2) Dress or Performance Shoe Leather is leather which is:

A) Finished with coating materials containing water emulsified materials using water miscible solvent materials to protect the leather and pigmented coating; and

B) Used primarily for manufacture of sewn shoes where the leather must be capable of soaking with a fine, dressy finish that cannot meet the lbs. per gallon VOM limitations ~~set forth~~ in Section 218.926 ~~of this Subpart~~ and cannot meet the definition for specialty leather pursuant to 35 Ill. Adm. Code 211.6170.

3) ~~The requirements of this~~This Section ~~do~~ does not apply to the production of ~~those~~ specialty leathers that meet the definition of specialty leathers ~~pursuant to~~under 35 Ill. Adm. Code 211.6170 or to the production of leathers that can meet the control requirements of Section 218.926 ~~of this Subpart~~.

4) The 10-ton exemption for stain ~~pursuant to~~under Section 218.926(b)(2)(i) ~~of this Subpart~~ does not apply to leathers produced ~~pursuant to~~under the requirements of this Section.

b) The production of specialty leather as defined in subsection (a) ~~of this Section~~ is subject to the following limitations:

1) For both water resistant and non-water resistant leathers, the leather will be designated as water resistant or non-water resistant in the shipping room by using ASTM D2099-00, as incorporated by reference in Section 218.112 ~~of this Part~~.

2) For non-water resistant leathers, the total VOM emissions ~~shall~~ must not exceed 14.0 lbs. VOM/1,000 square feet of leather produced on a 12-month rolling average basis.

3) For water resistant leathers, the total VOM emissions ~~shall~~ must not exceed 24.0 lbs. VOM/1,000 square feet of leather produced on a 12-month rolling average basis.

4) The total emissions of VOM from leathers produced ~~pursuant to~~under the emission limits in this Section ~~shall~~ must not exceed 20 tons per year.

c) The owner or operator ~~shall~~ must comply with its approved standard operating and maintenance procedures (SOMP). The SOMP ~~will~~ must contain the following elements:

1) A procedure to minimize the volatilization of solvents during the measuring of coating proportions and/or mixing of coatings.

2) A procedure to minimize VOM fugitive losses from the coating and solvent storage rooms. Procedures should include methods of securely sealing containers and methods to clean up accidental spills.

3) A procedure to minimize solvent usage or VOM losses during equipment cleanup and during transport (including the transferring of coatings from the mixing areas to the coating lines).

d) The owner or operator ~~shall~~ must perform the reporting and record keeping ~~consistent with the requirements of~~under Section 218.929 ~~of this Subpart~~ and Section 39.5 of the Act (415 ILCS 5/39.5), and ~~shall~~ must include at a minimum the following:

1) The VOM content and gallons of each coating and the total pounds of VOM of all coatings applied to each category of leather, e.g., cementable non-water resistant, dress water resistant, by batch during each month; and

2) The total area of each category of leather produced during the month based on the number of items produced and the area of ~~such~~ the items, measured or established in ~~accordance~~ compliance with procedures ~~set forth~~ in a federally enforceable permit.

Notwithstanding the requirements of subsections (d)(1) and (d)(2) ~~of this Section~~, the owner or operator may comply with an equivalent alternative plan for reporting and recordkeeping that has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART QQ: MISCELLANEOUS FORMULATION MANUFACTURING PROCESSES

Section 218.940 Applicability

a) Maximum theoretical emissions:

1) A source is subject to this Subpart if it contains process emission units not regulated by Subparts B, E, F (excluding Section 218.204(l)), H (excluding Section 218.405), Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB of this Part, which as a group both:

A) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM, and

B) Are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP or FIP revision.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (a)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous formulation manufacturing process emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, or BB of this Part.

b) Potential to emit:

1) A source is subject to this Subpart if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units that are:

A) Not regulated by Subparts B, E, F, H, Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (b)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous formulation manufacturing process emission units which are:

A) Not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, T, V, X, Y, Z, AA, BB, CC, or DD ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

c) If a source ceases to fulfill the criteria of subsections (a) and/or (b) ~~above~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous formulation manufacturing process emission unit which was subject to the control requirements of Section 218.946 ~~of this Part~~.

d) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 2.3 Mg (2.5 tons) per calendar year if the total emissions from ~~such~~ the emission units not complying with this Section ~~does~~ do not exceed 4.5 Mg (5.0 tons) per calendar year.

e) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

f) For the purposes of this Subpart, VOM emissions in the absence of air pollution control equipment are the emissions of VOM which would result if no air pollution control equipment were used.

g) The control requirements in Subpart QQ ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of

the resin and not including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source; and iron and steel production.

h) The control requirements of this Subpart ~~shall~~ do not apply to the solvation mixers at the container sealant manufacturing facility located at 6050 West 51st Street in Chicago, Illinois.

Section 218.943 Permit Conditions (Repealed)

(Source: Repealed at 18 Ill. Reg. 1945, effective January 24, 1994)

Section 218.946 Control Requirements

Every owner or operator of a miscellaneous formulation manufacturing process emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a) or (b) ~~below~~.

a) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 218.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) An equivalent alternative control plan which has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.947 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with ~~the~~ those requirements ~~thereof~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.948 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 218.946 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at

~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART RR: MISCELLANEOUS ORGANIC CHEMICAL MANUFACTURING PROCESSES

Section 218.960 Applicability

a) Maximum theoretical emissions:

1) A source is subject to this Subpart if it contains process emission units not regulated by Subparts B, E, F (excluding Section 218.204(l)), H (excluding Section 218.405), Q, R, S, T~~,~~ (excluding Section 218.486)~~,~~ V, X, Y, Z~~,~~ or BB ~~of this Part~~, which as a group both:

A) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM, and

B) Are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (a)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous organic chemical manufacturing process emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, or BB ~~of this Part~~.

b) Potential to emit:

1) A source is subject to this Subpart if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units other than VOM leaks from components that are:

A) Not regulated by Subparts B, E, F, H, Q, R, S, T (excluding Section 218.486), V, X, Y, Z, or BB ~~of this Part~~, or

B) Not included in one of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines),

plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

2) If a source is subject to this Subpart ~~as provided above~~under subsection (b)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's miscellaneous organic chemical manufacturing process emission units which are:

A) Not included within the categories specified in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, CC, or DD ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

c) If a source ceases to fulfill the criteria of subsections (a) and/or (b) ~~above~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous organic chemical manufacturing process emission unit which was subject to the control requirements of Section 218.966 ~~of this Part~~.

d) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 0.91 Mg (1.0 ton) per calendar year if the total emissions from ~~such~~ the emission units not complying with Section 218.966 ~~of this Part does~~do not exceed 4.5 Mg (5.0 tons) per calendar year.

e) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

f) For the purposes of this Subpart, VOM emissions in the absence of air pollution control equipment are the emissions of VOM which would result if no air pollution control equipment were used.

g) The control requirements in Subpart RR ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board, including

storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin and not including storage and extrusion of scrap where blowing agent is added to the polysytrene resin at the source; and iron and steel production.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.963 Permit Conditions (Repealed)

(Source: Repealed at 18 Ill. Reg. 1945, effective January 24, 1994)

Section 218.966 Control Requirements

Every owner or operator of a miscellaneous organic chemical manufacturing process emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~of this Section~~.

a) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 218.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) An equivalent alternative control plan which has been approved by the Agency and USEPA in a federally enforceable permit or as a SIP revision.

c) Any leaks from components subject to the control requirements of this Subpart ~~shall~~ must be subject to the following control measures by March 15, 1995:

1) Repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15 days after the leak is found, unless the leaking component cannot be repaired until the process unit is shut down, in which case the leaking component must be repaired before the unit is restarted.

2) For any leak which cannot be readily repaired within one hour after detection, the following records~~, as set forth in this subsection, shall~~ must be kept. These records ~~shall~~ must be maintained by the owner or operator

for a minimum of two years after the date on which they are made. Copies of the records ~~shall~~ must be made available to the Agency or USEPA upon verbal or written request.

A) The name and identification of the leaking component;

B) The date and time the leak is detected;

C) The action taken to repair the leak; and

D) The date and time the leak is repaired.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.967 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with ~~the requirements of~~ this Subpart on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.968 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 218.966 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART TT: OTHER EMISSION UNITS

Section 218.980 Applicability

a) Maximum theoretical emissions:

1) A source is subject to this Subpart if it contains process emission units not regulated by Subparts B, E, F (excluding Section 218.204(l) ~~of this Part~~), H (excluding Section 218.405 ~~of this Part~~), Q, R, S, T (excluding Section 218.486 ~~of this Part~~), V, X, Y, Z, or BB ~~of this Part~~, which as a group both:

A) Have maximum theoretical emissions of 90.7 Mg (100 tons) or more per calendar year of VOM, and

B) Are not limited to less than 90.7 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision.

2) If a source is subject to this Subpart as provided in this Subpart, ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's VOM emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, PP, QQ, or RR ~~of this Part~~ or which are not exempted from permitting requirements ~~pursuant to~~under 35 Ill. Adm. Code 201.146.

b) Potential to emit:

1) A source is subject to this Subpart if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units, other than furnaces at glass container manufacturing sources and VOM leaks from components, that are:

A) Not regulated by Subparts B, E, F, H, Q, R, S, T~~,~~ (excluding Section 218.486 ~~of this Part~~), V, X, Y, Z, or BB ~~of this Part~~, or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

2) If a source is subject to this Subpart as provided ~~above~~under subsection (b)(1), ~~the requirements of~~ this Subpart ~~shall apply~~applies to a source's VOM emission units, which are:

A) Not included within any of the categories specified in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, CC, DD, PP, QQ, or RR ~~of this Part~~, or which are not exempted from permitting requirements ~~pursuant to~~under 35 Ill. Adm. Code 201.146 (excluding Section 201.146 (o) and (p)), or

B) Not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, wood furniture, plastic parts coating (business machines),

plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks, and clean-up solvents operations.

c) If a source ceases to fulfill the criteria of subsections (a) and/or (b) ~~of this Section~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to an emission unit which was ever subject to the control requirements of Section 219.986 ~~of this Part~~.

d) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 2.3 Mg (2.5 tons) per calendar year if the total emissions from ~~such~~ the emission units not complying with Section 219.986 ~~of this Part does~~do not exceed 4.5 Mg (5.0 tons) per calendar year.

e) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart~~,~~ if it is subject to the limits of that Subpart. An emission unit is considered not regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

f) The control requirements in Subpart TT ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene or polyethylene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene or polyethylene resin by the producer of the resin, and not including storage and extrusion of scrap where blowing agent is added to the polystyrene or polyethylene resin at the source; ~~and~~ iron and steel production; and furnaces at glass container manufacturing sources.

Section 218.983 Permit Conditions (Repealed)

(Source: Repealed at 18 Ill. Reg. 1945, effective January 24, 1994)

Section 218.986 Control Requirements

Every owner or operator of an emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), (c), (d), or (e) ~~below~~.

a) Emission capture and control equipment which achieves an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 218.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) For coating lines, the daily-weighted average VOM content ~~shall~~ must not exceed 0.42 kg VOM/l (3.5 lbs VOM/gal) of coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied during any day. Owners and operators complying with this Section are not required to comply with Section 218.301 ~~of this Part~~, or

c) An equivalent alternative control plan which has been approved by the Agency and the USEPA in federally enforceable permit or as a SIP revision.

d) Non-contact process water cooling towers which are subject to the control requirements of this Subpart ~~shall~~ must comply with the following control measures no later than March 15, 1995, or upon initial start-up:

1) The owner or operator of a non-contact process water cooling tower ~~shall~~ must perform the following actions to control emissions of volatile organic material (VOM) from ~~such a~~the tower:

A) Inspect and monitor ~~such~~ theh tower to identify leaks of VOM into the water~~, as further specified in~~ under subsection (d)(3) ~~below~~;

B) When a leak is identified, initiate and carry out steps to identify the specific leaking component or components as soon as practicable~~, as further specified in~~ under subsection (d)(4) ~~below~~.

C) When a leaking component is identified which:

i) Can be removed from service without disrupting production, remove the component from service;

ii) Cannot be removed from service without disrupting production, undertake repair of the component at the next reasonable opportunity to do so including any period when the component is out of service for scheduled maintenance~~, as further specified in~~ under subsection (d)(4) ~~below~~;

D) Maintain records of inspection and monitoring activities, identification of leaks and leaking components, elimination and repair of leaks, and operation of equipment as related to these activities~~, as further specified in~~ under subsection (d)(5) ~~below~~.

2) A VOM leak ~~shall~~ must be considered to exist in a non-contact process water cooling water system if the VOM emissions or VOM content exceed background levels as determined by monitoring conducted in ~~accordance~~ compliance with subsection (d)(3)(A) ~~below~~.

3) The owner or operator of ~~an~~ a non-contact process water cooling tower ~~shall~~ must carry out an inspection and monitoring program to identify VOM leaks in the cooling water system.

A) The owner or operator of a non-contact process water cooling tower ~~shall~~ must submit to the Agency a proposed monitoring program, accompanied by technical justification for the program, including justification for the sampling location(s), parameter(s) selected for measurement, monitoring and inspection frequency, and the criteria used relative to the monitored parameters to determine whether a leak exists as specified in subsection (d)(2) ~~above~~e.

B) This inspection and monitoring program for non-contact process water cooling towers ~~shall~~ must include~~, but shall not be limited to~~:

i) Monitoring of each ~~such~~ tower with a water flow rate of 25,000 gallons per minute or more at a petroleum refinery at least weekly and monitoring of other towers at least monthly;

ii) Inspection of each ~~such~~ tower at least weekly if monitoring is not performed at least weekly.

C) This inspection and monitoring program ~~shall~~ must be carried out in ~~accordance~~ compliance with written procedures which the Agency ~~shall~~ must specify as a condition in a federally enforceable operating permit. These procedures ~~shall~~ must include the VOM background levels for the cooling tower as established by the owner or operator through monitoring; describe the locations at which samples will be taken; identify the parameter(s) to be measured, the frequency of measurements, and the procedures for monitoring each such tower, ~~that is,~~including taking ~~of~~ samples and other subsequent handling and analyzing of samples; provide the criteria used to determine that a leak exists ~~as specified in~~under subsection (d)(2) ~~above~~; and describe the records which will be maintained.

D) A non-contact process water cooling tower is exempt from ~~the requirements of~~ subsections (d)(3)(B) and (d)(3)(C) ~~above~~ if all equipment where leaks of VOM into cooling water may occur is operated at a minimum pressure in the cooling water of at least 35 kPa greater than the maximum pressure in the process fluid.

4) The repair of a leak in a non-contact process water cooling tower ~~shall be~~is considered to be completed in an acceptable manner as follows:

A) Efforts to identify and locate the leaking components are initiated as soon as practicable, but in no event later than three days after detection of the leak in the cooling water tower;

B) Leaking components ~~shall~~ must be repaired or removed from service as soon as possible, but no later than 30 days after the leak in the cooling water tower is detected, unless the leaking components cannot be repaired until the next scheduled shutdown for maintenance.

5) The owner or operator of a non-contact process water cooling tower ~~shall~~ must keep records ~~as set forth below in~~under this subsection. These records ~~shall~~ must be retained at a readily accessible location at the source and ~~shall~~ must be available for inspection and copying by the Agency for at least 3 years:

A) Records of inspection and monitoring activity;

B) Records of each leak identified in ~~such~~ a tower, with date, time, and nature of observation or measured level of parameter;

C) Records of activity to identify leaking components, with date initiated, summary of components inspected with dates, and method of inspection and observations;

D) Records of activity to remove a leaking component from service or repair a leaking component, with date initiated and completed, description of actions taken, and the basis for determining the leak in ~~such~~ the tower has been eliminated. If the leaking component is not identified, repaired, or eliminated within 30 days ~~of~~ after initial identification of a leak in ~~such~~ the tower, this report ~~shall~~ must include specific reasons why the leak could not be eliminated sooner, including all other intervening periods when the process unit was out of service, actions taken to minimize VOM losses ~~prior to~~before elimination of the leak, and any actions taken to prevent the recurrence of a leak of this type.

6) The owner or operator of a non-contact process water cooling tower ~~shall~~ must submit to the Agency an annual report ~~to the Agency~~ which provides:

A) The number of leaks identified in each cooling tower;

B) A general description of activity to repair or eliminate leaks which were identified;

C) Identification of each leak which was not repaired in 30 days ~~from~~ after the date of identification of a leak in ~~such a~~the tower, with description of the leaks~~,~~ and explanation why the leak was not repaired in 30 days;

D) Identification of any periods when required inspection and monitoring activities were not carried out.

e) Any leaks from components subject to the control requirements of this Subpart ~~shall~~ must be subject to the following control measures by March 15, 1995:

1) Repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15 days after the leak is found, unless the leaking component cannot be repaired until the next process unit shutdown, in which case the leaking component must be repaired before the unit is restarted.

2) For any leak which cannot be readily repaired within one hour after detection, the following records~~, as set forth below in this subsection, shall~~ must be kept. These records ~~shall~~ must be maintained by the owner or operator for a minimum of two years after the date on which they are made. Copies of the records ~~shall~~ must be made available to the Agency or USEPA upon verbal or written request.

A) The name and identification of the leaking component;

B) The date and time the leak is detected;

C) The action taken to repair the leak; and

D) The date and time the leak is repaired.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.987 Compliance Schedule

Every owner or operator of an emissions unit which is subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ this Subpart on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106~~ of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.988 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 218.986 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART UU: RECORDKEEPING AND REPORTING

Section 218.990 Exempt Emission Units

Upon request by the Agency, the owner or operator of an emission unit which is exempt from ~~the requirements of~~ Subparts PP, QQ, RR, TT, or Section 218.208(b) ~~of this Part shall~~must submit records to the Agency within 30 calendar days ~~from~~ after the date of the request that document that the emission unit is exempt from those requirements.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.991 Subject Emission Units

a) Any owner or operator of a VOM emission unit which is subject to ~~the requirements of~~ Subpart PP, QQ, RR, or TT and complying by the use of emission capture and control equipment ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of a new emission unit, the owner or operator of the subject VOM emission unit ~~shall~~ mustl demonstrate to the Agency that the subject emission unit will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date by submitting to the Agency all calculations and other supporting data, including descriptions and results of any tests the owner or operator may have performed.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject VOM source ~~shall~~ must collect and record all of the following information each day and maintain the information at the source for ~~a period of~~ three years:

A) Control device monitoring data.

B) A log of operating time for the capture system, control device, monitoring equipment, and the associated emission source.

C) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject VOM emission source ~~shall~~ must notify the Agency:

A) Of any violation of ~~the requirements of~~ Subpart PP, QQ, RR, or TT by sending a copy of any record showing a violation to the Agency within 30 days ~~following the occurrence of~~after the violation;

B) At least 30 calendar days before changing the method of compliance with Subpart PP or TT from the use of capture systems and control devices to the use of complying coatings, the owner or operator ~~shall~~ must comply with all requirements of subsection (b)(1) ~~above~~. Upon changing the method of compliance with Subpart PP or TT from the use of capture systems and control devices to the use of complying coatings, the owner or operator ~~shall~~ must comply with all requirements of subsection (b) ~~above~~.

4) Testing.

A) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with this Subpart, the owner or operator of a VOM emission source subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 218.105 ~~of this Part~~.

B) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

b) Any owner or operator of a coating line which is subject to ~~the requirements of~~ Subpart PP or TT and complying by means of the daily-weighted average VOM content limitation ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or upon initial start-up of a coating line subject to Subpart PP or TT, the owner or operator of the subject coating line ~~shall~~ must certify to the Agency that the coating line will be in compliance on and after ~~a~~ an

applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each coating line which will comply by means of daily-weighted average VOM content limitation;

B) The name and identification number of each coating as applied on each coating line;

C) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line;

D) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line;

E) The method by which the owner or operator will create and maintain records each day as required in subsection (b)(2) ~~above~~; and

F) An example of the format in which the records required in subsection (b)(2) ~~above~~ will be kept.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject coating line ~~shall~~ must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line;

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line; and

C) The daily-weighted average VOM content of all coatings as applied on each coating line as defined in Section 218.104 ~~of this Part~~.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject coating line ~~shall~~ must notify the Agency:

A) Of a violation of ~~the requirements of~~ Subpart PP or TT by sending a copy of any record showing a violation to the Agency within 30 days ~~following the occurrence of~~after the violation;

B) At least 30 calendar days before changing the method of compliance with Subpart PP or TT from the use of complying coatings to the use capture systems and control devices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a)(1)~~ above~~. Upon changing the method of compliance with Subpart PP or TT from the use of complying coatings to the use capture systems and control devices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a)~~ above~~.

c) Any owner or operator of a VOM source which is subject to ~~the requirements of~~ Subpart PP, QQ, RR, or TT and complying by means of an equivalent alternative control plan which has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision ~~shall~~ must comply with the recordkeeping and reporting requirements ~~specified~~ in the alternative control plan.

d) Any owner or operator of a leather coating operation, i.e., the group of all coating lines at a source engaged in application of stain to leather other than specialty leather~~,~~; or the group of all coating lines at a source engaged in applying coatings, including stain, to a category of specialty leather~~,~~; or the group of all coating lines at a source engaged in application of coatings to leather complying by means of the VOM content of each gallon of coating as applied, which is subject to ~~the requirements of~~ Subpart PP which is complying by means of Section 218.926(b)(2)(A), (B), or (C)(i), respectively, ~~of this Part shall~~must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 218.106~~ of this Part~~, or upon initial start-up of a leather coating operation which is complying by means of Section 218.926(b)(2)(A), (B) or (C)(i)~~ of this Part~~, the owner or operator of the subject leather coating operation ~~shall~~ must certify to the Agency that the leather coating operation will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106~~ of this Part~~, or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) A description of the leather coating operation, including identification of the applicable requirement with which it will comply, i.e., Section 218.926(b)(2)(A), (B), or (C)(i)~~ of this Part~~;

B) A description of the types of leather produced and a demonstration that all leather produced qualifies as specialty leather and is in a single category of specialty leather, if the leather coating operation is complying by means of Section 218.926(b)(2)(B)~~ of this Part~~;

C) The name and identification number of each coating line in the leather coating operation;

D) The name, identification number, and type, i.e., stain or "other," of each coating as applied in the leather coating operation;

E) The weight of VOM per volume as applied and the volume of each coating as applied in the leather coating operation on a monthly basis if the leather coating operation is complying by means of Section 218.296(b)(2)(A) or (B) ~~of this Part~~, or otherwise the weight of VOM per volume of coating as applied (minus water and any compounds which are specifically exempted from the definition of VOM);

F) The production of leather in square feet on a monthly basis, including the number of each leather item produced and the area of ~~such~~ the item, if the leather coating operation is complying by means of Section 218.926(b)(2)(B);

G) A demonstration that the leather coating operation complies with the applicable requirement among Section 218.926(b)(2)(A) or (B) ~~of this Part~~, if applicable, expressed in the terms of ~~such~~ the requirement, i.e., total tons of VOM contained in stain coatings other than stain coating during a consecutive 12-month period or lb VOM/1000 square feet of specialty leather produced on a monthly basis, accompanied by the calculations by which it was determined;

H) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied in the leather coating operation on a monthly basis, if the leather coating operation is complying by means of Section 218.926(b)(2)(A) or (B);

I) The instrument or method by which the owner or operator will accurately measure or calculate the area of such category of leather produced on a monthly basis if the leather coating operation is complying by means of Section 218.926(b)(2)(B);

J) The method by which the owner or operator will create and maintain monthly records as required in subsection (d)(2) ~~below~~; and

K) An example of the format in which the records required in subsection (d)(2) below will be kept.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a

subject leather coating operation ~~shall~~ must collect and record all of the following information for the leather coating operation on a monthly basis and maintain the information at the source for ~~a period of~~ three years:

A) The name, identification number, and type of each coating as applied in the leather coating operation;

B) Records of the leather produced in the leather coating operation which identify all leather produced in the operation and confirm it qualifies as the specified category of specialty leather, if the leather coating operation is complying by means of Section 218.926(b)(2)(B~~) of this Part~~;

C) The weight of VOM per volume and the volume of each coating as applied in the leather coating operation on a monthly basis determined in ~~accordance~~ compliance with ~~the procedures described pursuant to~~ Section 218.991(d)(1)(H) ~~above~~ if the leather coating operation is complying by means of Section 218.926(b)(2)(A) or (B), or otherwise the greatest weight of VOM per volume of coating as applied (minus water and any compounds which are specifically exempted from the definition of VOM);

D) The production of leather in square feet on a monthly basis, including the number of each leather item produced and the area of such item determined in ~~accordance~~ compliance with ~~the procedures described pursuant to~~ Section 218.991(d)(1)(I) ~~above~~ and ~~as set forth as~~ a federally enforceable permit condition, if the leather coating operation is complying by means of Section 218.926(b)(2)(B) ~~of this Part~~;

E) A demonstration that the leather coating operation complies with the applicable requirement among Section 218.926(b)(2)(A) or (B) of this Part, if applicable, expressed in the terms of ~~such~~ theh requirement, i.e., total tons of VOM contained in stain coatings other than stain coating during a consecutive 12-month period or lb VOM/1000 square feet of specialty leather produced on a monthly basis, accompanied by the calculations by which it was determined;

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 218.106 ~~of this Part~~, the owner or operator of a subject leather coating operation ~~shall~~ must notify the Agency:

A) Of any violation of ~~the requirements of~~ Subpart PP by sending a copy of any record showing a violation to the Agency within 30 days ~~following the occurrence of~~after the violation;

B) At least 30 calendar days before changing the method of compliance with Subpart PP from the use of complying coatings to the use capture systems and control devices or daily-weighted average VOM content limitation, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a)(1) or (b)(1) ~~above~~, respectively. Upon changing the method of compliance with Subpart PP from the use of complying coatings to the use of capture systems and control devices or daily-weighted average VOM content limitation, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a) or (b) ~~above~~, respectively.

a) CAS numbers refer to the Chemical Abstracts Registery numbers assigned to specific chemicals, isomers, or mixtures of chemicals. Some isomers or mixtures that are covered by the standards do ~~no~~ not have CAS numbers assigned to them. The standards apply to all of the chemicals listed, whether CAS numbers have been assigned or not.

b) No CAS number(s) have been assigned to this chemical, to its isomers, or mixtures containing these chemicals.

c) CAS numbers for some of the isomers are listed~~: the~~. The standards apply to all of the isomers and mixtures, even if CAS numbers have not been assigned.

Section 218.Appendix B VOM Measurement Techniques for Capture Efficiency (Repealed)

(Source: Repealed at 30 Ill. Reg. 9684, effective May 15, 2006)

Section 218.APPENDIX C Reference Methods and Procedures

Introduction

This Appendix presents the reference methods and procedures required for implementing Reasonably Available Control Technology (RACT). Methods and procedures are identified for two types of RACT implementation:

a) Determination of VOM destruction efficiency for evaluating compliance with the 98 weight percent VOM reduction or 20 ppmv emission limit ~~specified~~ in Sections 218.520 through 218.527 ~~of this Part~~; and

b) Determination of offgas flowrate, hourly emissions, and stream net heating value for calculating TRE.

All reference methods identified in this Appendix refer to the reference methods ~~specified~~ at 40 CFR 60, Appendix A, incorporated by reference in Section 218.112 ~~of this Part~~.

VOM DESTRUCTION EFFICIENCY DETERMINATION

The following reference methods and procedures are required for determining compliance with the percent destruction efficiency ~~specified~~ in Sections 218.520 through 218.527 ~~of this Part~~.

a) Reference Method 1 or 1A for selection of the sampling site. The control device inlet sampling site for determination of vent stream molar composition or total organic compound destruction efficiency ~~shall~~ must be ~~prior to~~before the inlet of any control device and after all recovery devices.

b) Reference Methods 2, 2A, 2C or 2D for determination of the volumetric flowrate.

c) Reference Method 3 to measure oxygen concentration of the air dilution correction. The emission sample ~~shall~~ must be corrected to 3 percent oxygen.

d) Reference Method 18 to determine the concentration of total organic compounds (minus methane and ethane) in the control device outlet and total organic compound reduction efficiency of the control device.

TRE DETERMINATION

The following reference methods and procedures are required for determining the offgas flowrate, hourly emissions, and the net heating value of the gas combusted to calculate the vent stream TRE.

a) Reference Method 1 or 1A for selection of the sampling site. The sampling site for the vent stream flowrate and molar composition determination ~~prescribed~~ in subsections (b) and (c) ~~shall~~ must be ~~prior to~~before the inlet of any combustion device, ~~prior to~~before any post-reactor dilution of the stream with air and ~~prior to~~before any post-reactor introduction of halogenated compounds into the vent stream. Subject to the preceding restrictions on the sampling site, it ~~shall~~ must be after the final recovery device. If any gas stream other than the air oxidation vent stream is normally conducted through the recovery system of the affected facility, ~~such~~ the stream ~~shall~~ must be rerouted or turned off while the vent stream is sampled, but ~~shall~~ must be routed normally ~~prior to~~before the measuring of the initial value of the monitored parameters for determining compliance with the recommended RACT. If the air oxidation vent stream is normally routed through any equipment which is not a part of the air oxidation process as defined in 35 Ill. Adm. Code 211.350, ~~such~~ the equipment ~~shall~~ must be bypassed by the vent stream while the vent stream is sampled, but ~~shall~~ must not be bypassed during the measurement of the initial value of the monitored parameters for determining compliance with Subpart V.

b) The molar composition of the vent stream ~~shall~~ must be determined using the following methods:

1) Reference Method 18 to measure the concentration of all organics, including those containing halogens, unless a significant portion of the compounds of interest are polymeric (high molecular weight), can polymerize before analysis or have low vapor pressures, in which case Reference Method 25(a) ~~shall~~ must be used.

2) ASTM D1946-67 (reapproved 1977), incorporated by reference in Section 218.112 ~~of this Part~~, to measure the concentration of carbon monoxide and hydrogen.

3) Reference Method 4 to measure the content of water vapor, if necessary.

c) The volumetric flowrate ~~shall~~ must be determined using Reference Method 2, 2A, 2C or 2D, as appropriate.

d) The net heating value of the vent stream ~~shall~~ must be calculated using the following equation:

$$H = K \sum_{i=1}^{n} C_i \, H_i$$

where:

H = Net heating value of the sample, MJ/ppm, where the net enthalpy per mole of offgas is based on combustion at ~~25° C~~25 °C and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20°C~~20 °C, as in the definition of F (vent stream flowrate) ~~below~~in subsection (e)

K = Constant~~,~~ 1.740 X 10(-7) (1/ppm) (mole/scm) (MJ/kcal) where standard temperature for mole/scm is ~~20°C~~20 °C

C[i] = Concentration of sample component i, reported on a wet basis, in ppm, as measured by Reference Method 18 or ASTM D1946-67 (reapproved 1977), incorporated by reference in Section 218.112 ~~of this Part~~.

H[i] = Net heat of combustion of sample component i, kcal/mole based on combustion at ~~25 C~~25 °C and 760 mm Hg. If published values are not available or cannot be calculated, the heats of combustion of vent stream components are required to be determined using ASTM D2382-76, incorporated by reference in Section 218.112 ~~of this Part~~.

e) The emission rate of total organic compounds in the process vent stream ~~shall~~ must be calculated using the following equation:

$$E = K\,F \sum_{i=1}^{n} Ci\,Mi$$

where:

E = Emission rate of total organic compounds (minus methane and ethane) in the sample in kg/hr;

K = Constant 2.494 X 10(-6) (1/ppm) (mole/scm) (kg/g) (min/hr), where standard temperature for (mole/scm) is ~~20°C~~20 °C;

Mi = Molecular weight of sample component i (g/mole)

F = Vent stream flowrate (scm/min), at a standard temperature of ~~20°C~~20 °C

f) The total vent stream concentration (by volume) of compounds containing halogens (ppmv, by compound) ~~shall~~ must be summed from the individual concentrations of compounds containing halogens which were measured by Reference Method 18.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 218.APPENDIX D Coefficients for the Total Resource Effectiveness Index (TRE) Equation

This Appendix contains values for the total resource effectiveness index (TRE) equation in Subpart V.

If a flow rate falls exactly on the boundary between the indicated ranges, the operator ~~shall~~ must use the row in which the flow rate is maximum.

COEFFICIENTS FOR TRE EQUATION FOR CHLORINATED PROCESS VENT STREAMS WITH NET HEATING VALUE LESS THAN OR EQUAL TO 3.5 MJ/scm

FLOW RATE (scm/min)

Section 218.APPENDIX E List of Affected Marine Terminals

The following table identifies the expected volatile organic material (VOM) emission reductions, in pounds per day in 1996, from the control of the marine vessel loading of gasoline and crude oil from the listed sources, their successors and assigns. ~~Such~~ The reduction of VOM emissions must occur after November 1990 and ~~may~~ must not include reductions resulting from compliance with any federally required controls or from any measures included in any State Implementation Plan adopted by the State of Illinois to satisfy any other Clean Air Act requirement.

Facility	Permit/Source	Reduction
Mobil-Joliet Refining Corp. Facility ID# 197800AAA	88010021045	1,595
Texaco Refining Facility ID # 197810AAA	84050048007	541
UNO-VEN Company	88010019055	549

Facility ID # 197090AAI

Section 218.Appendix G TRE Index Measurements for SOCMI Reactors and Distillation Units

For purposes of ~~Subpart Q,~~ Sections 218.431 through 218.435, the following apply:

a) The following test methods ~~shall~~ must be used to determine compliance with the total resource effectiveness ("TRE") index value:

1) Method 1 or 1A, incorporated by reference at Section 218.112 ~~of this Part~~, as appropriate, for selection of the sampling site.

A) The sampling site for the vent stream molar composition determination and flow rate ~~prescribed~~ in subsections (a)(2) and (a)(3) ~~of this Appendix shall~~must be, except for the situations ~~outlined~~ in subsection (a)(1)(B), after the final recovery device, if a recovery system is present, ~~prior to~~before the inlet of any control device, and ~~prior to~~before any post-reactor or post-distillation unit introduction of halogenated compounds into the vent stream. No traverse site selection method is needed for vents smaller than 10 cm in diameter.

B) If any gas stream other than the reactor or distillation unit vent stream is normally conducted through the final recovery device:

i) The sampling site for vent stream flow rate and molar composition ~~shall~~ must be ~~prior to~~before the final recovery device and ~~prior to~~before the point at which any nonreactor or nondistillation unit vent stream or stream from a nonaffected reactor or distillation unit is introduced. Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to measure organic compound concentrations at this site.

ii) The efficiency of the final recovery device is determined by measuring the organic compound concentrations using Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, at the inlet to the final recovery device after the introduction of all vent streams and at the outlet of the final recovery device.

iii) The efficiency of the final recovery device determined according to subsection (a)(1)(B)(ii) ~~of this Appendix~~

~~shall~~must be applied to the organic compound concentrations measured according to subsection (a) (1) (B) (i) ~~of this Appendix~~ to determine the concentrations of organic compounds from the final recovery device attributable to the reactor or distillation unit vent stream. The resulting organic compound concentrations are then used to perform the calculations ~~outlined~~ in subsection (a)(4) ~~of this Appendix~~.

2) The molar composition of the vent stream ~~shall~~ must be determined as follows:

A) Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, to measure the concentration of organic compounds including those containing halogens;

B) ASTM D1946-77, incorporated by reference at Section 218.112 ~~of this Part~~, to measure the concentration of carbon monoxide and hydrogen; and

C) Method 4, incorporated by reference at Section 218.112 ~~of this Part~~, to measure the content of water vapor.

3) The volumetric flow rate ~~shall~~ must be determined using Method 2, 2A, 2C, or 2D, incorporated by reference at Section 218.112 ~~of this Part~~, as appropriate.

4) The emission rate of VOM (minus methane and ethane) (E_{VOM}) in the vent stream ~~shall~~ must be calculated using the following formula:

$$E_{VOM} = K_2 \sum_{j=1}^{n} C_j M_j Q_s$$

where:

E_{VOM} = Emission rate of VOM (minus methane and ethane) in the sample, kg/hr.

K_2 = Constant, 2.494 x 10^{-6} (l/ppmv)(g-mole/scm)(kg/g)(min/hr), where standard temperature for (g-mole/scm) is ~~20°C~~20 °C.

C_j = Concentration of compound j, on a dry basis, in ppmv as measured by Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, as indicated in Section 218.433(c)(3) ~~of this Part~~.

M_j = Molecular weight of sample j, g/g-mole.

Q_s = Vent stream flow rate (scm) at a temperature of ~~20°C~~20 °C.

5) The total vent stream concentration (by volume) of compounds containing halogens (ppmv, by compound) ~~shall~~ must be summed from the individual concentrations of compounds containing halogens which were measured by Method 18, incorporated by reference at Section 218.112 ~~of this Part~~.

6) The net heating value of the vent stream ~~shall~~ must be calculated using the following:

$$HT = K_1 \sum_{j=1}^{n} C_j H_j \ (1\text{-}B_{WS})$$

where:

H_T = Net heating value of the sample (MJ/scm), where the net ~~enthaply~~ enthalpy per mole of vent stream is based on combustion of ~~25°C~~25 °C and 760 mmHG, but the standard temperature for determining the volume corresponding to one mole is ~~20°C~~20 °C, as in the definition of Q_s (vent stream flow rate).

K_1 = Constant~~,~~ 1.740 x 10^{-7} $(ppmv)^{-1}$ (g-mole/scm), (MJ/KCal), where standard temperature for (g-mole/scm) is ~~20°C~~20 °C.

B_{ws} = Water vapor content of the vent stream, proportion by volume; except that if the vent stream passes through a final stream jet and is not condensed, it ~~shall~~ must be assumed that B_{ws} = 0.023 in order to correct to 2.3 percent moisture.

C_j = Concentration on a dry basis of compound j in ppmv, as measured for all organic compounds by Method 18, incorporated by reference at Section 218.112 ~~of this Part~~, and measured for hydrogen and carbon monoxide by using ASTM D1946-77, incorporated by reference at Section 218.112 ~~of this Part~~.

H_j = Net heat of combustion of compound j, kCal/g-mole, based on combustion at ~~25°C~~25 °C and 760 mmHG. The heats of combustion of vent stream components ~~shall~~ must be determined using ASTM D2382-83, incorporated by reference at Section 218.112 ~~of this Part~~, if published values are not available or cannot be calculated.

b) 1) The TRE index value of the vent ~~shall~~ must be calculated using the following:

$$TRE = \frac{1\,[a + b\,(Q_s) + c\,(H_T) + d\,(E_{VOM})]}{E_{VOM}}$$

where:

TRE = TRE index value.

E_{VOM} = Hourly emission rate of VOM (kg/hr) as calculated in subsection (a)(4) ~~of this Appendix~~.

Q_s = Vent stream flow rate scm/min at a standard temperature of ~~20°C~~20 °C.

H_T = Vent stream net heating value (MJ/scm), as calculated in subsection (a)(6) ~~of this Appendix~~.

E_{VOM} = Hourly emission rate of VOM (minus methane and ethane), (kg/hr) as calculated in subsection (a)(4) ~~of this Appendix~~.

a,b, c,d = Value of coefficients presented below are:

		Value of Coefficients			
Type of Stream	**Control Device Basis**	**a**	**b**	**c**	**d**
Nonhalogenated	Flare	2.129	0.183	-0.005	0.359
Thermal incinerator zero (0) Percent heat Recovery		3.075	0.021	-0.037	0.018
Thermal incinerator70 Percent heat Recovery		3.803	0.032	-0.042	0.007
Halogenated	Thermal incinerator and scrubber	5.470	0.181	-0.040	0.004

2) Every owner or operator of a vent stream ~~shall~~ must use the applicable coefficients identified for values a, b, c, and d in subsection (b)(1) ~~of this Appendix~~ to calculate the TRE index value based on a flare, a thermal incinerator with zero percent heat recovery, and a thermal incinerator with 70 percent heat recovery, and ~~shall~~ must select the lowest TRE index value.

3) Every owner or operator of a reactor or distillation unit with a halogenated vent stream, determined as any stream with a total concentration of halogen atoms contained in organic compounds of 200 ppmv or greater, ~~shall~~ must use the applicable coefficients identified for values a, b, c, and d in subsection (b) (1) ~~of this Appendix~~ to calculate the TRE index value based on a thermal incinerator and scrubber.

c) Every owner or operator of a source seeking to comply with Section 218.432 (b) ~~of this Part shall~~must recalculate the flow rate and VOM concentration for each affected vent stream whenever process changes are made. Examples of process changes include~~, but are not limited to,~~ changes in production capacity, feedstock type, or catalyst type, or whenever there is replacement, removal, or addition of recovery equipment. The flow rate and VOM concentration ~~shall~~ must be recalculated based on test data, or on best engineering estimates of the effects of the change to the recovery system.

d) Whenever a process change, as defined in Section 218.435(c) ~~of this Subpart~~, yields a TRE index value of 1.0 or less, the owner or operator ~~shall~~ must notify and submit a report to the Agency ~~according to the requirements specified in~~under Section 218.435(c) ~~of this Subpart,~~ within 180 calendar days after the process change and ~~shall~~ must conduct a performance test ~~according to the methods and procedures required by~~under Section 218.433 ~~of this Part~~.

e) For the purpose of demonstrating that a process vent stream has a VOM concentration below 500 ppmv, the following ~~shall~~ mustl be used:

1) The sampling site ~~shall~~ must be selected as specified in Section 218.433(c)(1) ~~of this Part~~.

2) Method 18 or Method 25A of 40 CFR Part 60, Appendix A, incorporated by reference at Section 218.112 ~~of this Part~~, ~~shall~~ must be used to measure concentration; alternatively, any other method or data that has been validated according to the protocol in Method 301 of 40 CFR Part 63, Appendix A, incorporated by reference at Section 218.112 ~~of this Part~~, may be used.

3) Where Method 18 is used, the following procedures ~~shall~~ must be used to calculate ppmv concentration:

i) The minimum sampling time for each run ~~shall~~ must be 1 hour in which either an integrated sample or four grab samples ~~shall~~ must be taken. If grab sampling is used, then the samples ~~shall~~ must be taken at approximately equal intervals in time, such as ~~15 minute~~15-minute intervals during the run.

ii) The concentration of VOM ~~shall~~ must be calculated using Method 18 according to Section 218.433(c)(4) ~~of this Part~~.

4) Where Method 25A is used, the following procedures ~~shall~~ must be used to calculate ppmv VOM concentration:

i) Method 25A ~~shall~~ must be used only if a single VOM is greater than 50 percent of total VOM, by volume, in the process vent stream.

ii) The vent stream composition may be determined by either process knowledge, test data collected using an appropriate Reference Method, or a method of data collection validated according to the protocol in Method 301 of 40 CFR Part 63, Appendix A, incorporated by reference at Section 218.112 ~~of this Part~~. Examples of information that constitute process knowledge include calculations based on material balances, process stoichiometry, or previous test results ~~provided~~ if the results are still relevant to the current process vent stream conditions.

iii) The VOM used as the calibration gas for Method 25A ~~shall~~ must be the single VOM present at greater than 50 percent of the total VOM by volume.

iv) The span value for Method 25A ~~shall~~ must be 50 ppmv.

v) Use of Method 25A is acceptable if the response from the high-level calibration gas is at least 20 times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.

vi) The concentration of VOM ~~shall~~ must be corrected to 3 percent oxygen using the procedures and equation in Section 218.433(c)(3) ~~of this Part~~.

5) The owner or operator ~~shall~~ must demonstrate that the concentration of VOM, including methane and ethane, measured by Method 25A is below 250 ppmv to qualify for the low concentration exclusion in Section 218.431 ~~of this Part~~.

Section 218.APPENDIX H Baseline VOM Content Limitations for Subpart F, Section 218.212 Cross-Line Averaging

This Appendix contains limitations for purposes of determining compliance with ~~the requirements in~~ Section 218.212 ~~of this Part~~. A source must establish that, at very least, each

participating coating line used for purposes of cross-line averaging meets the Federal Implementation Plan level of VOM content, as listed below. The emission limitations for participating coating lines that must not be exceeded are as follows:

		kg/l	lb/gal
a)	Automobile or Light-Duty Truck Coating		
1)	Prime coat	0.14	(1.2)
2)	Primer surface coat	1.81	(15.1)

(Note: The primer surface coat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation ~~shall~~ must be based on the daily-weighted average from an entire primer surface operation. Compliance ~~shall~~ must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 218.105(b) and the recordkeeping and reporting requirements ~~specified~~ in Section 218.211(f). Testing to demonstrate compliance ~~shall~~ must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 218.205 does not apply to the primer surface limitation.)

		kg/l	lb/gal
3)	Topcoat	1.81	(15.1)

(Note: The topcoat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation ~~shall~~ must be based on the daily-weighted average from an entire topcoat operation. Compliance ~~shall~~ must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 218.105(b) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 218.211(f). Testing to demonstrate compliance ~~shall~~ must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 218.205 ~~of this Part~~ does not apply to the topcoat limitation.)

		kg/l	lb/gal
4)	Final repair coat	0.58	(4.8)

		kg/l	lb/gal
b)	Can Coating		
1)	Sheet basecoat and overvarnish	0.34	(2.8)
2)	Exterior basecoat and overvarnish	0.34	(2.8)

	3)	Interior body spray coat	0.51	(4.2)
	4)	Exterior end coat	0.51	(4.2)
	5)	Side seam spray coat	0.66	(5.5)
	6)	End sealing compound coat	0.44	(3.7)

		kg/l	lb/gal
c)	Paper Coating	0.35	(2.9)

(Note: The paper coating limitation ~~shall~~ does not apply to any owner or operator of any paper coating line on which flexographic or rotogravure printing is performed if the paper coating line complies with the emissions limitations in Section 218.401 ~~of this Part~~. In addition, screen printing on paper is not regulated as paper coating~~,~~ but is regulated under Subpart TT ~~of this Part~~.)

		kg/l	lb/gal
d)	Coil Coating	0.31	(2.6)
e)	Fabric Coating	0.35	(2.9)
f)	Vinyl Coating	0.45	(3.8)
g)	Metal Furniture Coating		
	1) Air Dried	0.36	(3.0)
	2) Baked	0.36	(3.0)
h)	Large Appliance Coating		
	1) Air Dried	0.34	(2.8)
	2) Baked	0.34	(2.8)

(Note: The limitation ~~shall~~ does not apply to the use of quick-drying lacquers for repair of scratches and nicks that occur during assembly, ~~provided that~~if the volume of coating does not exceed 0.95 l (1 quart) in any one rolling eight-hour period.)

		kg/l	lb/gal
i)	Magnet Wire Coating	0.20	(1.7)
j)	Miscellaneous Metal Parts and Products Coating		

1)	Clear coating		0.52	(4.3)
2)	Extreme performance coating			
	A)	Air Dried	0.42	(3.5)
	B)	Baked	0.42	(3.5)
3)	Steel pail and drum interior coating		0.52	(4.3)
4)	All other coatings			
	A)	Air Dried	0.42	(3.5)
	B)	Baked	0.36	(3.0)

k)	Heavy Off-Highway Vehicle Products Coating	kg/l	lb/gal
1)	Extreme performance prime coat	0.42	(3.5)
2)	Extreme performance top- coat (air dried)	0.42	(3.5)
3)	Final repair coat (air dried)	0.42	(3.5)
4)	All other coatings are subject to the emission limitations for miscellaneous metal parts and products coatings in subsection (j) ~~above~~.		

l)	Wood Furniture Coating	kg/l	lb/gal
1)	Clear topcoat	0.67	(5.6)
2)	Opaque stain	0.56	(4.7)
3)	Pigmented coat	0.60	(5.0)
4)	Repair coat	0.67	(5.6)
5)	Sealer	0.67	(5.6)
6)	Semi-transparent stain	0.79	(6.6)
7)	Wash coat	0.73	(6.1)

(Note: An owner or operator of a wood furniture coating operation subject to this Section ~~shall~~ must apply all coatings, with the exception of no more

than 37.8 l (10 gal) of coating per day used for touch-up and repair operations, using one or more of the following application systems: airless spray application system, air-assisted airless spray application system, electrostatic spray application system, electrostatic bell or disc spray application system, heated airless spray application system, roller coating, brush or wipe coating application system, dip coating application system, or high volume low pressure (HVLP) application system.)

			kg/l	lb/gal
m)	Existing Diesel-Electric Locomotive Coating Lines in Cook County			
	1)	Extreme performance prime coat	0.42	(3.5)
	2)	Extreme performance topcoat (air dried)	0.42	(3.5)
	3)	Final repair coat (air dried)	0.42	(3.5)
	4)	High-temperature aluminum coating	0.72	(6.0)
	5)	All other coatings	0.36	(3.0)
n)	Plastic Parts Coating: Automotive/Transportation		kg/l	lb/gal
	1)	Interiors		
		A) Baked		
		i) Color Coat	0.49	(4.1)
		ii) Primer	0.46	(3.8)
		B) Air Dried		
		i) Color Coat	0.38	(3.2)
		ii) Primer	0.42	(3.5)
	2)	Exteriors (flexible and non-flexible)		
		A) Baked		
		i) Primer	0.60	(5.0)
		ii) Primer non-flexible	0.54	(4.5)

		iii)	Clear Coat	0.52	(4.3)
		iv)	Color Coat	0.55	(4.6)
	B)	Air Dried			
		i)	Primer	0.66	(5.5)
		ii)	Clear coat	0.54	(4.5)
		iii)	Color coat (red & black)	0.67	(5.6)
		iv)	Color coat (others)	0.61	(5.1)
3)	Specialty				
	A)	Vacuum metallizing basecoats, texture basecoats		0.66	(5.5)
	B)	Black coatings, reflective argent coatings, air bag cover coatings, and soft coatings		0.71	(5.9)
	C)	Gloss reducers, vacuum metallizing topcoats, and texture topcoats		0.77	(6.4)
	D)	Stencil coatings, adhesion primers, ink pad coatings, electrostatic prep coatings, and resist coatings		0.82	(6.8)
	E)	Head lamp lens coatings		0.89	(7.4)

o) Plastic Parts Coating: Business Machine	kg/l	lb/gal	
1) Primer	0.14	(1.2)	
2) Color coat (non-texture coat)	0.28	(2.3)	
3) Color coat (texture coat)	0.28	(2.3)	
4) Electromagnetic interference/radio frequency interference (EMI/RFI) shielding coatings	0.48	(4.0)	

5) Specialty Coatings

A)	Soft coat	0.52	(4.3)
B)	Plating resist	0.71	(5.9)
C)	Plating sensitizer	0.85	(7.1)*

SUBPART A: GENERAL PROVISIONS

Section 219.100 Introduction

a) This Part contains standards and limitations for emissions of organic material and volatile organic material from stationary sources located in the Metro East area~~,~~ ~~which is~~ comprised of Madison, Monroe, and St. Clair Counties.

b) Sources subject to this Part may be subject to ~~the following~~:

1) Permits required under 35 Ill. Adm. Code 201 and

2) Air quality standards under 35 Ill. Adm. Code 243.

c) This ~~part~~ Part is divided into Subparts ~~which are~~ grouped as follows:

1) Subpart A: General Provisions;

2) Subparts B-F: Emissions from equipment and operations in common to more than one industry;

3) Subpart G: Emissions from use of organic material;

4) Subparts H-RR: Rules for various industry groups~~.~~;

5) Subpart TT: Rules for emission units not otherwise addressed~~.~~; and

6) Subpart UU: Recordkeeping and reporting for equipment and operation addressed by Subparts PP, QQ, RR, and TT.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.101 Savings Clause

a) Every owner or operator of an emission unit formerly subject to 35 Ill. Adm. Code 215 ~~shall~~ must have complied with its standards and limitations by the dates and schedules applicable to the emission unit in ~~accordance~~ compliance with Part 215 or upon initial start-up. ~~All~~ No compliance dates or schedules ~~found in~~under Part 215 are ~~not~~ superseded by this Part and remain in full force and effect.

b) ~~Nothing in~~As this Part ~~as it~~ is amended, ~~from time to time shall~~nothing must relieve the owner or operator of a source subject to ~~the requirements of~~ this Part of the obligation to have complied with applicable requirements by the compliance dates ~~set forth~~ in Section 219.106 ~~of this Subpart~~ or in specific Subparts of this Part, even though those compliance dates have been superseded by subsequent amendments.

Section 219.104 Definitions

The definitions of 35 Ill. Adm. Code 211 apply to this Part.

(Source: Amended at 17 Ill. Reg. 16918, effective September 27, 1993)

Section 219.105 Test Methods and Procedures

a) Coatings, Inks, and Fountain Solutions
The following test methods and procedures must be used to determine compliance of as applied coatings, inks, and fountain solutions with the limitations ~~set forth~~ in this Part.

1) Sampling: Samples collected for analyses must be one-liter taken into a one-liter container at a location and time such that the sample will be representative of the coating as applied (i.e., the sample must include any dilution solvent or other VOM added during the manufacturing process). The container must be tightly sealed immediately after the sample is taken. Any solvent or other VOM added after the sample is taken must be measured and accounted for in the calculations in subsection (a)(3) ~~of this Section~~. For multiple package coatings, separate samples of each component must be obtained. A mixed sample must not be obtained as it will cure in the container. Sampling procedures must follow the guidelines ~~presented~~ in:

A) ASTM D 3925-81 (1985), ~~standard practice for sampling liquid paints and related pigment coating. This practice is~~Standard Practice for Sampling Liquid Paints and Related Pigment Coating, incorporated by reference in Section 219.112.

B) ASTM E 300-86, ~~standard practice for sampling industrial chemicals. This practice is~~Standard Practice for Sampling Industrial Chemicals, incorporated by reference in Section 219.112.

2) Analyses: The applicable analytical methods ~~specified~~ in this subsection (a)(2) must be used to determine the composition of coatings, inks, or fountain solutions as applied.

A) Method 24 of 40 CFR 60, appendix A, incorporated by reference in Section 219.112, must be used to determine the VOM content and density of coatings. If it is demonstrated to the satisfaction of the Agency and the USEPA that plant coating formulation data are equivalent to Method 24 results, formulation data may be used. In the event of any inconsistency between a Method 24 test and a

facility's formulation data, the Method 24 test will govern.

B) Method 24A of 40 CFR 60, appendix A, incorporated by reference in Section 219.112, must be used to determine the VOM content and density of rotogravure printing inks and related coatings. If it is demonstrated to the satisfaction of the Agency and the USEPA that the plant coating formulation data are equivalent to Method 24A results, formulation data may be used. In the event of any inconsistency between a Method 24A test and formulation data, the Method 24A test will govern.

C) The following ASTM methods are the analytical procedures for determining VOM:

i) ASTM D 1475-85, "Standard Test Method for Density of Paint, Varnish, Lacquer, and Related Products",~~: Standard test method for density of paint, varnish, lacquer and related products. This test method is~~ incorporated by reference in Section 219.112.

ii) ASTM D 2369-87, "Standard Test Method for Volatile Content of a Coating",~~: Standard test method for volatile content of a coating. This test method is~~ incorporated by reference in Section 219.112.

iii) ASTM D 3792-86, "Standard Test Method for Water Content of Water Reducible Pains by Direct Injection into a Gas Chromatograph",~~: Standard test method for water content of water-reducible paints by direct injection into a gas chromatograph. This test method is~~ incorporated by reference in Section 219.112.

iv) ASTM D 4017-81 (1987), "Standard Test Method for Water Content in Paints and Paint Materials by the Karl Fischer Method", ~~: Standard test method for water content in paints and paint materials by the Karl Fischer method. This test method is~~ incorporated by reference in Section 219.112.

v) ASTM D 4457-85, "Standard Test Method for Determination of Dichloromethane and 1,1,1, Trichloroethane in Paints and Coatings by Direct Injection into a Gas Chromatograph, incorporated by reference in Section 219.112~~: Standard test method for determination of dichloromethane and 1,1,1, trichloroethane in paints and coatings by direct injection into a gas chromatograph.~~ (The

procedure ~~delineated above~~ can be used to develop protocols for any compounds specifically exempted from the definition of VOM.) ~~This test method is incorporated by reference in Section 219.112.~~

vi) ASTM D 2697-86, "Standard Test Method for Volume Nonvolatile Matter in Clear or Pigmented Coatings",~~: Standard test method for volume non-volatile matter in clear or pigmented coatings. This test method is~~ incorporated by reference in Section 219.112.

vii) ASTM D 3980-87, "Standard Practice for Interlaboratory Testing of Paint and Related Materials",~~: Standard practice for interlaboratory testing of paint and related materials. This practice is~~ incorporated by reference in Section 219.112.

viii) ASTM E 180-85, "Standrd Practice for Determining the Precision Data of ASTM Methods for Analysis of and Testing of Industrial Chemicals",~~: Standard practice for determining the precision of ASTM methods for analysis of and testing of industrial chemicals. This practice is~~ incorporated by reference in Section 219.112.

ix) ASTM D 2372-85, "Standard Method of Separation or Vehicle from Solvent-Reducible Paints",~~: Standard method of separation of vehicle from solvent-reducible paints. This method is~~ incorporated by reference in Section 219.112.

D) Use of an adaptation to any of the analytical methods ~~specified~~ in subsections (a)(2)(A), (B), and (C) may not be used unless approved by the Agency and USEPA. An owner or operator must submit sufficient documentation for the Agency and USEPA to find that the analytical methods ~~specified~~ in subsections (a)(2)(A), (B), and (C) will yield inaccurate results and that the proposed adaptation is appropriate.

3) Calculations: Calculations for determining the VOM content, water content, and ~~the~~ content of any compounds ~~which are~~ specifically exempted from the definition of VOM of coatings, inks, and fountain solutions as applied must follow the guidance ~~provided~~ in the following documents:

A) "A ~~Guide~~ Guideline for Surface Coating Calculation", July 1986, EPA-340/1-86-016, incorporated by reference in Section 219.112.

B) "Procedures for Certifying Quantity of Volatile Organic Compounds Emitted by Paint, Ink and Other Coatings" (revised June 1986), EPA-450/3-84-019, incorporated by reference in Section 219.112.

C) "A Guide for Graphic Arts Calculations", August 1988, EPA-340/1-88-003, incorporated by reference in Section 219.112.

b) Automobile or Light-Duty Truck Test Protocol

1) The protocol for testing, including determining the transfer efficiency of coating applicators, at primer surfacer operations and topcoat operations at an automobile or light-duty truck assembly source must follow the procedures in the following:

A) ~~Prior to~~ Before May 1, 2012: "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Topcoat Operations" ("topcoat protocol"), December 1988, EPA-450/3-88-018, incorporated by reference in Section 219.112.

B) On and After May 1, 2012: "Protocol for Determining the Daily Volatile Organic Compound Emission Rate of Automobile and Light-Duty Truck Primer-Surfacer and Topcoat Operations" ("topcoat protocol"), September 2008, EPA-453/R-08-002, incorporated by reference in Section 219.112.

2) ~~Prior to~~Before testing ~~pursuant to~~under the applicable topcoat protocol, the owner or operator of a coating operation subject to the topcoat or primer surfacer limit in Section 219.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(E) must submit a detailed testing proposal specifying the method by which testing will be conducted and how compliance will be demonstrated consistent with the applicable topcoat protocol. The proposal must include~~;, at a minimum,~~

A) a comprehensive plan (including a rationale) for determining the transfer efficiency at each booth through ~~the use of~~ in-plant or pilot testing~~,~~;

B) the selection of coatings to be tested (for the purpose of determining transfer efficiency), including the rationale for coating groupings~~,~~;

C) the method for determining the analytic VOM content of as applied coatings and the formulation solvent content of as applied coatings~~,~~; and

D) a description of the records of coating VOM content as applied and coating's usage that will be kept to demonstrate compliance.

3) ~~Upon approval of the proposal by~~When the Agency and USEPA approve the proposal, the compliance demonstration for a coating line may proceed.

c) Capture System Efficiency Test Protocols

1) Applicability

~~The requirements of subsection~~Subsection (c)(2) must apply to all VOM emitting process emission units employing capture equipment (e.g., hoods, ducts), except those ~~cases noted~~ in this subsection (c)(1).

A) If an emission unit is equipped with ~~(~~or uses~~)~~ a permanent total enclosure (PTE) that meets Agency and USEPA specifications, and which directs all VOM to a control device, then the emission unit is exempted from the requirements ~~describe~~d in subsection (c)(2). The Agency and USEPA specifications to determine whether a structure is considered a PTE are ~~given~~ in Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112. In this instance, the capture efficiency is assumed to be 100 percent, and the emission unit is still required to measure control efficiency using appropriate test methods ~~as specified~~ in subsection (d).

B) If an emission unit is equipped with ~~(~~or uses~~)~~ a control device designed to collect and recover VOM (e.g., carbon adsorber), an explicit measurement of capture efficiency is not necessary ~~provided that~~ if the conditions ~~given below~~in this subsection (c)(1)(B) are met. The overall control of the system can be determined by directly comparing the input liquid VOM to the recovered liquid VOM. The general procedure for use in this situation is ~~give~~n in 40 CFR 60.433, incorporated by reference in Section 219.112, with the following additional restrictions:

i) The source owner or operator must obtain data each operating day for the solvent usage and solvent recovery to permit ~~the determination of~~determining the solvent recovery efficiency of the system each operating day using a 7-day rolling period. The recovery efficiency for each operating day is computed as the ratio of the total recovered solvent for that day and the most recent prior 6 operating days to the total solvent usage for the same 7-day period

used for the recovered solvent, rather than a 30-day weighted average ~~as given in~~under 40 CFR 60.433, incorporated by reference in Section 219.112. This ratio must be expressed as a percentage. The ratio must be computed within 72 hours ~~following~~ after each 7-day period. A source that believes that the 7-day rolling period is not appropriate may use an alternative multi-day rolling period not to exceed 30 days, with the approval of the Agency and USEPA. In addition, the criteria in subsection (c)(1)(B)(ii) or (c)(1)(B)(iii) must be met.

ii) The solvent recovery system (i.e., capture and control system) must be dedicated to a single coating line, printing line, or other discrete activity that by itself is subject to an applicable VOM emission standard.

iii) ~~However if~~If the solvent recovery system controls more than one coating line, printing line, or other discrete activity that by itself is subject to an applicable VOM emission standard, the overall control (i.e., the total recovered VOM divided by the sum of liquid VOM input from all lines and other activities venting to the control system) must meet or exceed the most stringent standard applicable to any line or other discrete activity venting to the control system.

2) Capture Efficiency Protocols

The capture efficiency of an emission unit must be measured using one of the protocols ~~given below~~in this subsection (c)(2). Appropriate test methods to be ~~utilized~~ used in each of the capture efficiency protocols are ~~described~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112. Any error margin associated with a test method or protocol may not be incorporated into the results of a capture efficiency test. If these techniques are not suitable for a particular process, then an alternative capture efficiency protocol may be used~~, pursuant to the provisions of~~under Section 219.108(b).

A) Gas/gas method using temporary total enclosure (TTE). The Agency and USEPA specifications to determine whether a temporary enclosure is considered a TTE are ~~given~~ in Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{G_w}{G_w + F_w}$$

where:

CE = capture efficiency, decimal fraction;

G_w = mass of VOM captured and delivered to control device using a TTE;

F_w = mass of uncaptured VOM that escapes from a TTE.

Method 204B or 204C ~~contained~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain G_w. Method 204D in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain F_w.

B) Liquid/gas method using TTE. The Agency and USEPA specifications to determine whether a temporary enclosure is considered a TTE are ~~given~~ in Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{L - F_W}{L}$$

where:

CE = capture efficiency, decimal fraction;

L = mass of liquid VOM input to process emission unit;

F_w = mass of uncaptured VOM that escapes from a TTE.

Method 204A or 204F ~~contained~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain L. Method 204 in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain F_w.

C) Gas/gas method using the building or room (building or room enclosure), in which the affected coating line, printing line, or other emission unit is located, as the enclosure, as determined by Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112, and in which "F_B" and "G" are measured while operating only the affected line or emission unit. All fans and blowers in the building or room must be operated as they would under normal production. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{G}{G + F_B}$$

where:

CE = capture efficiency, decimal fraction;

G = mass of VOM captured and delivered to control device;

F_B = mass of uncaptured VOM that escapes from building enclosure.

Method 204B or 204C ~~contained~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain G. Method 204E in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain F_B.

D) Liquid/gas method using the building or room (building or room enclosure), in which the affected coating line, printing line, or other emission unit is located, as the enclosure as determined by Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112, and in which "F_B" and "L" are measured while operating only the affected line emission unit. All fans and blowers in the building or room must be operated as they would under normal production. The capture efficiency equation to be used for this protocol is:

$$CE = \frac{L - F_B}{L}$$

where:

CE = capture efficiency, decimal fraction;

L = mass of liquid VOM input to process emission unit;

F_B = mass of uncaptured VOM that escapes from building enclosure.

Method 204A or 204F ~~contained~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain L. Method 204E in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, is used to obtain F_B.

E) Mass balance using Data Quality Objective (DQO) or Lower Confidence Limit (LCL) protocol. For a liquid/gas input where an owner or operator is using the DQO/LCL protocol and not using an enclosure as described in Method 204 of appendix M of 40 CFR 51, incorporated by reference in Section 219.112, the VOM content of the liquid input (L) must be determined using Method 204A or 204F in appendix M of 40 CFR 51, incorporated by reference in Section 219.112. The VOM content of the captured gas stream (G) to the control device must be determined using Method 204B or 204C in appendix M of 40 CFR 51, incorporated by reference in Section 219.112. The results of capture efficiency calculations (G/L) must satisfy the DQO or LCL statistical analysis methodology ~~as described~~ in Section 3 of USEPA's "Guidelines for Determining Capture Efficiency", incorporated by reference at Section 219.112 ~~of this Part~~. Where capture efficiency testing is done to determine emission reductions for the purpose of establishing emission credits for offsets, shutdowns, and trading, the LCL protocol cannot be used for these applications. In enforcement cases, the LCL protocol cannot confirm non-compliance; capture efficiency must be determined using a protocol under subsection (c)(2)(A), (B), (C) or (D), the DQO protocol of this subsection (c)(2)(E), or an alternative protocol ~~pursuant to~~under Section 219.108(b).

BOARD NOTE: Where LCL was used in testing emission units that are the subject of later requests for establishing emission credits for offsets, shutdowns, and trading, prior LCL results may not be relied upon to determine the appropriate amount of credits. Instead, to establish the appropriate amount of credits, additional testing may be required that would satisfy the protocol of Section 219.105(c)(2)(A), (B), (C) or (D), the DQO protocol of Section 219.105(c)(2)(E), or an alternative protocol ~~pursuant to~~under Section 219.108(b).

3) Simultaneous testing of multiple lines or emission units with a common control device. If an owner or operator has multiple lines sharing a common control device, the capture efficiency of the lines may be tested simultaneously, subject to the following provisions:

A) Multiple line testing must meet the criteria of Section 4 of USEPA's "Guidelines for Determining Capture Efficiency", incorporated by reference at Section 219.112;

B) The most stringent capture efficiency required for any individual line or unit must be met by the aggregate of lines or units; and

C) Testing of all the lines of emission units must be performed with the same capture efficiency test protocol.

4) Recordkeeping and Reporting

A) All owners or operators ~~affected by~~to which this subsection applies must maintain on file a copy of the capture efficiency protocol submitted to the Agency and the USEPA ~~on file~~. All results of the appropriate test methods and capture efficiency protocols must be reported to the Agency within 60 days after the test date. A copy of the results must be kept on file with the source for ~~a period of~~ 3 years.

B) If any changes are made to capture or control equipment, then the source ~~is required to~~must notify the Agency and the USEPA of these changes and a new test may be required by the Agency or the USEPA.

C) The source must notify the Agency 30 days ~~prior to~~before performing any capture efficiency or control test. At that time, the source must notify the Agency which capture efficiency protocol and control device test methods will be used. Notification of the actual date and expected time of testing must be submitted a minimum of 5 working days ~~prior to~~before the actual date of the test. The Agency may at its discretion accept notification with shorter advance notice ~~provided that such~~if those arrangements do not interfere with the Agency's ability to review the protocol ~~and/or~~or observe testing.

D) Sources ~~utilizing~~ using a PTE must demonstrate that this enclosure meets the requirement ~~given in~~of Method 204 in appendix M of 40 CFR 51, incorporated by reference in Section 219.112, for a PTE during any testing of their control device.

E) Sources ~~utilizing~~ using a TTE must demonstrate that their TTE meets the requirements ~~given in~~of Method 204 in appendix M or 40 CFR 51, incorporated by reference in Section 219.112, for a TTE during any testing of their control device. The source must also provide documentation that the quality assurance criteria for a TTE have been achieved.

F) Any source ~~utilizing~~ using the DQO or LCL protocol must submit the following information to the Agency with each test report:

i) A copy of all test methods, Quality Assurance/Quality Control procedures, and calibration procedures to be used

from those ~~described~~ in appendix M of 40 CFR 51, incorporated by reference in Section 219.112;

ii) A table with information on each sample taken, including the sample identification and the VOM content of the sample;

iii) The quantity of material used for each test run;

iv) The quantity of captured VOM for each test run;

v) The capture efficiency calculations and results for each test run;

vi) The DQO and/or LCL calculations and results; and

vii) The Quality Assurance/Quality Control results, including how often the instruments were calibrated, the calibration results, and the calibration gases used.

d) Control Device Efficiency Testing and Monitoring

1) The control device efficiency must be determined by simultaneously measuring the inlet and outlet gas phase VOM concentrations and gas volumetric flow rates in ~~accordance~~ compliance with the gas phase test methods ~~specified~~ in subsection (f).

2) An owner or operator:

A) That uses an afterburner or carbon adsorber to comply with any ~~Section~~ section of this Part must use Agency and USEPA approved continuous monitoring equipment which is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use except as provided in subsection (d)(3). The continuous monitoring equipment must monitor the following parameters:

i) For each afterburner which does not have a catalyst bed, the combustion chamber temperature of each afterburner.

ii) For each afterburner which has a catalyst bed, commonly known as a catalytic afterburner, the temperature rise across each catalytic afterburner bed or VOM concentration of exhaust.

iii) For each carbon adsorber, the VOM concentration of each

carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.

B) Must install, calibrate, operate, and maintain~~,~~ in accordance with manufacturer's specifications~~,~~ a continuous recorder on the temperature monitoring device, such as a strip chart, recorder or computer, having an accuracy of ± 1 percent of the temperature measured, expressed in degrees Celsius or ± 0.5° C, whichever is greater.

C) Of an automobile or light-duty truck primer surfacer operation or topcoat operation subject to subsection (d)(2)(A) must keep a separate record of the following data for the control devices, unless alternative provisions are ~~stated~~ in a permit ~~pursuant to~~under Title V of the ~~Clean Air Act~~CAA:

i) For thermal afterburners for which combustion chamber temperature is monitored, all 3-hour periods of operation in which the average combustion temperature was more than 28 °C (50 °F) below the average combustion temperature measured during the most recent performance test that demonstrated that the operation was in compliance.

ii) For catalytic afterburners for which temperature rise is monitored, all 3-hour periods of operation in which the average gas temperature before the catalyst bed is more than 28 °C (50 °F) below the average gas temperature immediately before the catalyst bed measured during the most recent performance test that demonstrated that the operation was in compliance.

iii) For catalytic afterburners and carbon adsorbers for which VOM concentration is monitored, all 3-hour periods of operation during which the average VOM concentration or the reading of organics in the exhaust gases is more than 20 percent greater than the average exhaust gas concentration or reading measured by the organic monitoring device during the most recent determination of the recovery efficiency of a carbon adsorber or performance test for a catalytic afterburner, which determination or test that demonstrated that the operation was in compliance.

3) An owner or operator that uses a carbon adsorber to comply with Section 219.401 may operate the adsorber during periods of monitoring equipment malfunction~~, provided that~~ if:

A) The owner or operator notifies the Agency and USEPA in writing ~~the Agency and USEPA,~~ within 10 days after the conclusion of any 72 hour period during which the adsorber is operated and the associated monitoring equipment is not operational~~,~~ of ~~such~~ the monitoring equipment failure and provides the duration of the malfunction, a description of the repairs made to the equipment, and the total to date of all hours in the calendar year during which the adsorber was operated and the associated monitoring equipment was not operational;

B) During ~~such~~ the period of malfunction the adsorber is operated using timed sequences as the basis for periodic regeneration of the adsorber;

C) The period of such adsorber operation does not exceed 360 hours in any calendar year without the approval of the Agency and USEPA; and

D) The total of all hours in the calendar year during which the adsorber was operated and the associated monitoring equipment was not operational must be reported~~,~~ in writing~~,~~ to the Agency and USEPA by January 31 of the following calendar year.

e) Overall Efficiency

1) The overall efficiency of the emission control system must be determined as the product of the capture system efficiency and the control device efficiency or by the liquid/liquid test protocol ~~as specified~~ in 40 CFR 60.433, incorporated by reference in Section 219.112, (and revised by subsection (c)(1)(B)) for each solvent recovery system. ~~In those cases in which~~When the overall efficiency is being determined for an entire line, the capture efficiency used to calculate the product of the capture and control efficiency is the total capture efficiency over the entire line.

2) For coating lines which are both chosen by the owner or operator to comply with Section 219.207(a), (d), (e), (f), (g), (l), or (m), or (n) by the alternative in Section 219.207(b)(2) and meet the criteria allowing them to comply with Section 219.207 instead of Section 219.204, the overall efficiency of the capture system and control device, as determined by the test methods and procedures ~~specified~~ in subsections (c), (d), and (e)(1), must be no less than the equivalent overall efficiency ~~that must be~~ calculated by the following equation:

$$E = \frac{VOM_a - VOM_l}{VOM_a} \times 100$$

where:

E = Equivalent overall efficiency of the capture system and control device as a percentage;

VOM_a = Actual VOM content of a coating, or the daily-weighted average VOM content of two or more coatings (if more than one coating is used), as applied to the subject coating line as determined by the applicable test methods and procedures ~~specified~~ in subsection (a)(4)(i) ~~of this Part~~ in units of kg VOM/1 (lb VOM/gal) of coating solids as applied;

VOM_1 = The VOM emission limit ~~specified~~ in Sections 219.204 or 219.205 ~~of this Part~~ in units of kg VOM/1 (lb VOM/gal) of coating solids as applied.

f) Volatile Organic Material Gas Phase Source Test Methods
The methods in 40 CFR 60, appendix A, incorporated by reference in Section 219.112, ~~of this Part delineated in this subsection (f)~~ must be used to determine control device efficiencies.

1) 40 CFR 60, appendix A, Method 18, 25, or 25A, incorporated by reference in Section 219.11,2 as appropriate to the conditions at the site, must be used to determine VOM concentration. Method selection must be based on ~~consideration of~~considering the diversity of organic species present and their total concentration and ~~on consideration of~~ the potential presence of interfering gases. Except as indicated in subsections (f)(1)(A) and (B) ~~below~~, the test must consist of three separate runs, each lasting a minimum of 60 ~~min~~minutes, unless the Agency and the USEPA determine that process variables dictate shorter sampling times.

A) When the method is to be used to determine the efficiency of a carbon adsorption system with a common exhaust stack for all the individual adsorber vessels, the test must consist of three separate runs, each coinciding with one or more complete sequences through the adsorption cycles of all the individual adsorber vessels.

B) When the method is to be used to determine the efficiency of a carbon adsorption system with individual exhaust stacks for each adsorber vessel, each adsorber vessel must be tested individually. The test for each adsorber vessel must consist of three separate runs. Each run must coincide with one or more complete adsorption cycles.

2) 40 CFR 60, appendix A, Method 1 or 1A, incorporated by reference in

Section 219.112, must be used for sample and velocity traverses.

3) 40 CFR 60, appendix A, Method 2, 2A, 2C, or 2D, incorporated by reference in Section 219.112, must be used for velocity and volumetric flow rates.

4) 40 CFR 60, appendix A, Method 3, incorporated by reference in Section 219.112, must be used for gas analysis.

5) 40 CFR 60, appendix A, Method 4, incorporated by reference in Section 219.112, must be used for stack gas moisture.

6) 40 CFR 60, appendix A, Methods 2, 2A, 2C, 2D, 3, and 4, incorporated by reference in Section 219.112, must be performed, as applicable, at least twice during each test run.

7) ~~Use of an~~An adaptation to any of the test methods ~~specified~~ in subsections (f)(1), (2), (3), (4), (5), and (6) may not be used unless approved by the Agency and the USEPA on a ~~case by case~~case-by-case basis. An owner or operator must submit sufficient documentation for the Agency and the USEPA to find that the test methods ~~specified~~ in subsections (f)(1), (2), (3), (4), (5), and (6) will yield inaccurate results and that the proposed adaptation is appropriate.

g) Leak Detection Methods for Volatile Organic Material
Owners or operators required by this Part to carry out a leak detection monitoring program must comply with the following requirements:

1) Leak Detection Monitoring

A) Monitoring must comply with 40 CFR 60, appendix A, Method 21, incorporated by reference in Section 219.112.

B) The detection instrument must meet the performance criteria of Method 21.

C) The instrument must be calibrated before use on each day of its use by the methods ~~specified~~ in Method 21.

D) Calibration gases must be:

i) Zero air (less than 10 ppm of hydrocarbon in air); and

ii) A mixture of methane or n-hexane and air at a concentration of approximately, but no less than, 10,000 ppm methane or n-hexane.

E) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Method 21.

2) When equipment is tested for compliance with no detectable emissions as required, the test must comply with the following requirements:

A) The requirements of subsections (g)(1)(A) through (g)(1)(E) must apply.

B) The background level must be determined ~~as stated in~~under Method 21.

3) Leak detection tests must be performed consistent with:

A) "APTI Course SI 417 ~~controlling~~ Controlling Volatile Organic Compound Emissions from Leaking Process Equipment", EPA-450/2-82-015, incorporated by reference in Section 219.112.

B) "Portable Instrument User's Manual for Monitoring ~~VOM~~ VOC Sources", EPA-340/1-86-015, incorporated by reference in Section 219.112.

C) "Protocols for Generating Unit-Specific Emission Estimates for Equipment Leaks of ~~VOM~~ VOC and VHAP", EPA-450/3-88-010, incorporated by reference in Section 219.112.

D) "Petroleum Refinery Enforcement Manual", EPA-340/1-80-008, incorporated by reference in Section 219.112.

h) Bulk Gasoline Delivery System Test Protocol

1) The method for determining the emissions of gasoline from a vapor recovery system ~~are delineated in~~is at 40 CFR 60, subpart XX, section 60.503, incorporated by reference in Section 219.112.

2) Other tests must be performed consistent with:

A) "Inspection Manual for Control of Volatile Organic Emissions from Gasoline Marketing Operations: Appendix D", EPA-340/1-80-012, incorporated by reference in Section 219.112.

B) "Control of Hydrocarbons from Tank Truck Gasoline Loading Terminals: Appendix A", EPA-450/2-77-026, incorporated by reference in Section 219.112.

i) Notwithstanding other requirements of this Part, upon request of the Agency where it is necessary to demonstrate compliance, an owner or operator of an emission unit ~~which is~~ subject to this Part must, at ~~his~~ its own expense, conduct tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specific~~ in this Part. Nothing in this Section limits the authority of the USEPA under the Clean Air Act, as amended, to require testing.

j) Cleaning Solvents Subject to Section 219.219(g)

1) For aqueous and semiaqueous cleaning solvents, manufacturers' supplied data must be used to determine the water content.

2) For hand-wipe cleaning solvents required in Section 219.219(g)(2), manufacturers' supplied data or standard engineering reference texts or other equivalent methods must be used to determine the vapor pressure or VOM composite vapor pressure for blended cleaning solvents.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.106 Compliance Dates

a) Except as provided in subsection (b), (c), (d), (e), or (f), compliance with ~~the requirements of~~ this Part is required by May 15, 1992, consistent with ~~the provisions of~~ Section 219.103.

b) As this Part is amended ~~from time to time~~, compliance dates ~~included~~ in the specific Subparts supersede the requirements of this Section, except as limited by Section 219.101(b).

c) Any owner or operator of a source subject to ~~the requirements of~~ Section 219.204(c)(2), 219.204(g)(2), or 219.204(h)(2) must comply with the applicable requirements in the applicable subsections, as well as all applicable requirements in Sections 219.205 through 219.214 and 219.218, by May 1, 2012.

d) Any owner or operator of a source subject to ~~the requirements of~~ Section 219.204(o) must comply with the requirements in Section 219.204(o), as well as all applicable requirements in Sections 219.205 through 219.211, 219.214, and 219.217 by August 1, 2010.

e) Any owner or operator of a source subject to ~~the requirements of~~ Section 219.204(a)(2) or 219.204(q) must comply with the applicable requirements in those Sections, as well as all applicable requirements in Sections 219.205 through 219.214 and 219.219, by May 1, 2011.

f) Any owner of operator of a source subject to ~~the requirements of~~ Section 219.204(r) must comply with the requirements in Section 219.204(r), as well as all applicable requirements in Sections 219.205, 219.207, 219.208, 219.211, and 219.219 by July 1, 2021.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.107 ~~Operation of~~ Operating Afterburners

~~The operation of~~Operating any natural gas fired afterburner and capture system used to comply with this Part is not required ~~during the period of~~from November 1 of any year to April 1 of the following year ~~provided that the operation of such~~if operating the devices is not required for ~~purposes of~~ occupational safety or health, or for the control of toxic substances, odor nuisances, or other regulated pollutants.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.108 Exemptions, Variations, and Alternative Means of Control or Compliance Determinations

Notwithstanding ~~the provisions of~~ any other Sections of this Part:

a) Any exemptions, variations, or alternatives to the control requirements, emission limitations, or test methods ~~set forth~~ in this Part ~~shall~~ must be effective only when approved by the Agency and ~~approved~~ by the USEPA as a SIP revision.

b) Any equivalent alternative control plans, equivalent device, or other equivalent practice authorized by the Agency where this Part provides for ~~such~~ the alternative or equivalent practice or equivalent variations or alterations to test methods approved by the Agency ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.109 Vapor Pressure of Volatile Organic Liquids

a) If the VOL consists of only a single compound, the vapor pressure ~~shall~~ must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112~~ of this Part)~~ , or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Fried, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's Chemical Engineer's Handbook, McGraw-Hill Book Company (1984); CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company (1986-87); and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company (1985).

b) If the VOL is a mixture, the vapor pressure ~~shall~~ must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112, ~~of this Part)~~ or by the following equation:

$$P_{vol} = \sum_{i=1}^{n} P_i X_i$$

where:

P_{vol} = Total vapor pressure of the mixture;

n = Number of components in the mixture;

I = Subscript denoting an individual component;

P_i = Vapor pressure of a component determined in ~~accordance~~ compliance with subsection (a) ~~of this Section~~;

X_i = Mole fraction of the component in the total mixture.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.110 Vapor Pressure of Organic Material or Solvent

a) If the organic material or solvent consists of only a single compound, the vapor pressure must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112 of this Part~~)~~, or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Fried, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's Chemical Engineer's Handbook, McGraw-Hill Book Company (1984); CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company (1986-87); and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company (1985).

b) Except as provided in subsection (d), if the organic material or solvent is in a mixture made up of both organic material compounds and compounds which are not organic material, the vapor pressure must be determined by the following equation:

$$P_{om} = \frac{\sum_{i=1}^{n} P_i X_i}{\sum_{i=1}^{n} X_i}$$

where:

P_{om} = Total vapor pressure of the portion of the mixture which is composed of organic material;

n = Number of organic material components in the mixture;

I = Subscript denoting an individual component;

P_i = Vapor pressure of an organic material component determined in ~~accordance~~ compliance with subsection (a);

X_i = Mole fraction of the organic material component of the total organic mixture.

c) If the organic material or solvent is in a mixture made up only of organic material compounds, the vapor pressure must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112~~),~~ or by the ~~above~~ equation in subsection (b).

d) For hand-wipe cleaning solvents used at aerospace facilities subject to Section 219.219(g)(2), the composite vapor pressure of a cleaning solvent consisting of multiple components must be determined by the following equation:

$$PP_c = \sum_{i=1}^{n} \frac{\frac{W_i}{MW_1} \times VP_i}{\frac{W_w}{MW_w} + \sum_{j=1}^{n} \frac{W_j}{MW_j} + \sum_{i=1}^{n} \frac{W_i}{MW_i}}$$

where:

PP_c = Composite vapor pressure of the cleaning solvent in mmHg at 20 °C;

n = Number of components in the cleaning solvent;

i = Subscript denoting an individual VOM-containing component;

j	=	Subscript denoting an individual non-VOM component;
W_i	=	Weight of a VOM-containing component in grams;
W_j	=	Weight of a non-VOM component in grams;
W_w	=	Weight of water in grams;
MW_i	=	Molecular weight a VOM-containing component in grams per gram-mole;
MW_j	=	Molecular weight of a non-VOM component in grams per gram-mole
MW_w	=	Molecular weight of water in grams per gram-mole;
VP_i	=	Vapor pressure of a VOM-containing component in mmHg at 20 °C.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.111 Vapor Pressure of Volatile Organic Material

a) If the VOM consists of only a single compound, the vapor pressure ~~shall~~ must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112, ~~of this Part)~~ or the vapor pressure may be obtained from a publication such as: Boublik, T., V. Fried, and E. Hala, "The Vapor Pressure of Pure Substances," Elsevier Scientific Publishing Co., New York (1973); Perry's Chemical Engineer's Handbook, McGraw-Hill Book Company (1984); CRC Handbook of Chemistry and Physics, Chemical Rubber Publishing Company (1986-87); and Lange's Handbook of Chemistry, John A. Dean, editor, McGraw-Hill Book Company (1985).

b) If the VOM is in a mixture made up of both VOM compounds and compounds which are not VOM, the vapor pressure ~~shall~~ must be determined by the following equation:

$$P_{vom} = \frac{\sum_{i=1}^{n} P_i X_i}{\sum_{i=1}^{n} X_i}$$

where:

P_{vom} = Total vapor pressure of the portion of the mixture which is composed of VOM;

n = Number of VOM components in the mixture;

i = Subscript denoting an individual component;

P_i = Vapor pressure of a VOM component determined in ~~accordance~~ compliance with subsection (a) ~~of this Section~~;

X_i = Mole fraction of the VOM component of the total organic mixture.

c) If the VOM is in a mixture made up of only VOM compounds, the vapor pressure ~~shall~~ must be determined by ASTM Method D2879-86, ~~(~~incorporated by reference in Section 219.112, ~~of this Part)~~ or by the ~~above~~ equation in subsection (b).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.112 Incorporations by Reference

The following materials are incorporated by reference and do not contain any subsequent additions or amendments:

Section 219.113 Monitoring for Negligibly-Reactive Compounds

The requirements of 35 Ill. Adm. Code 215.109, which allows the Agency to require testing and monitoring for negligibly-reactive compound as a precondition to ~~their exemption~~exempting them from the definition of "volatile organic compound", ~~shall apply~~applies to owners and operators of sources subject to this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART B: ORGANIC EMISSIONS FROM STORAGE AND LOADING OPERATIONS

Section 219.119 Applicability for VOL

~~The limitations of~~ Section 219.120 ~~of this Subpart shall~~must apply to all storage containers of volatile organic liquid (VOL) with a maximum true vapor pressure of 0.5 psia or greater in any stationary tank, reservoir, or other container of 151 cubic meters (40,000 gal) capacity or greater, except ~~to vessels as provided below~~:

a) Vessels with a capacity greater than or equal to 40,000 gallons storing a liquid with a maximum true pressure of less than 0.5 psia;

b) Vessels of coke oven by-product plants;

c) Pressure vessels designed to operate in excess of 29.4 psia and without emissions to the atmosphere;

d) Vessels permanently attached to mobile vehicles such as trucks, rail cars, barges, or ships;

e) Vessels storing petroleum liquids; or

f) Vessels used to store beverage alcohol.

g) Vessels with storage capacity less than 40,000 gallons must comply with Section 218.129(f).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.120 Control Requirements for Storage Containers of VOL

a) Every owner or operator storing VOL in a vessel of 40,000 gallons or greater with a maximum true vapor pressure equal to 0.75 psia but less than 11.1 psia ~~shall~~ must reduce VOM emissions from storage tanks, reservoirs, or other containers as follows:

1) Each fixed roof tank ~~shall~~ must be equipped with an internal floating roof that meets the following specifications or that is equipped with a vapor control system that meets the specifications ~~contained~~ in subsection (a)(4) ~~below~~:

A) The internal floating roof ~~shall~~ must rest or float on the liquid surface (but not necessarily in complete contact with it) inside a storage vessel that has a fixed roof. The internal floating roof ~~shall~~ must be floating on the liquid surface at all times, except during initial fill and ~~during those intervals~~ when the storage vessel is

completely emptied and subsequently refilled. When the roof is resting on the leg supports, the process of filling, emptying, or refilling ~~shall~~ must be continuous and ~~shall~~ must be accomplished as rapidly as possible.

B) Each internal floating roof ~~shall~~ must be equipped with one of the following closure devices between the wall of the storage vessel and the edge of the internal floating roof:

i) ~~A foam- or liquid-filled seal mounted in contact with the liquid (liquid-mounted seal).~~ A liquid-mounted seal ~~means~~, which is a foam- or liquid-filled seal mounted in contact with the liquid between the wall of the storage vessel and the floating roof continuously around the circumference of the tank;

ii) Two seals mounted one above the other so that each forms a continuous closure that completely covers the space between the wall of the storage vessel and the edge of the internal floating roof. The lower seal may be vapor-mounted, but both must be continuous; or

iii) A mechanical shoe seal, which is a metal sheet held vertically against the wall of the storage vessel by springs or weighted levers and is connected by braces to the floating roof. A flexible coated fabric (envelope) spans the annular space between the metal sheet and the floating roof.

C) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and the rim space vents is to provide a projection below the liquid surface.

D) Each opening in the internal floating roof except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains is to be equipped with a cover or lid which is to be maintained in a closed position at all times (i.e., no visible gap) except when the device is in actual use. The cover or lid ~~shall~~ must be equipped with a gasket. Covers on each access hatch and automatic gauge float well ~~shall~~ must be bolted except when they are in use.

E) Automatic bleeder vents ~~shall~~ must be equipped with a gasket and are to be closed at all times when the roof is floating except when the roof is being floated off or is being landed on the roof leg supports.

F) Rim space vents ~~shall~~ must be equipped with a gasket and are to be set to open only when the internal floating roof is not floating or at the manufacturer's recommended setting.

G) Each penetration of the internal floating roof for the purpose of sampling ~~shall~~ must be a sample well. The sample well ~~shall~~ must have a slit fabric cover that covers at least 90 percent of the opening.

H) Each penetration of the internal floating roof that allows for passage of a ladder ~~shall~~ must have a gasketed sliding cover.

2) During the next scheduled tank cleaning or before March 15, 2004, whichever comes first, each internal floating roof tank ~~shall~~ must meet the specifications ~~set forth~~ in subsections (a)(1)(A) through (H) ~~above~~.

3) Each external floating roof tank ~~shall~~ must meet the following specifications:

A) Each external floating roof ~~shall~~ must be equipped with a closure device between the wall of the storage vessel and the roof edge. The closure device is to consist of two seals, one above the other. The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.

i) Except as provided in Section 219.127(b)(4) ~~of this Subpart~~, the primary seal ~~shall~~ must completely cover the annular space between the edge of the floating roof and tank wall and ~~shall~~ must be either a liquid mounted seal or a shoe seal.

ii) The secondary seal ~~shall~~ must completely cover the annular space between the external floating roof and the wall of the storage vessel in a continuous fashion except as allowed in Section 219.127(b)(4) ~~of this Subpart~~.

iii) The tank ~~shall~~ must be equipped with the closure device after the next scheduled tank cleaning, but no later than March 15, 2004.

B) Except for automatic bleeder vents and rim space vents, each opening in a noncontact external floating roof ~~shall~~ must provide a projection below the liquid surface. Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof is to be equipped with a gasketed cover, seal, or lid that is to be maintained in a closed position at all times (i.e., no visible

gap) except when the device is in actual use. Automatic bleeder vents are to be closed at all times when the roof is floating except when the roof is being floated off or is being landed on the roof leg supports. Rim vents are to be set open when the roof is being floated off the roof leg supports or at the manufacturer's recommended setting. Automotive bleeder vents and rim space vents are to be gasketed. Each emergency roof drain is to be provided with a slotted membrane fabric cover that covers at least 90 percent of the area of the opening.

C) The roof ~~shall~~ must be floating on the liquid at all times (i.e., off the roof leg supports) except when the tank is completely emptied and subsequently refilled. The process of filling, emptying, or refilling when the roof is resting on the leg supports ~~shall~~ must be continuous and ~~shall~~ must be accomplished as rapidly as possible.

4) A closed vent system and control device ~~respectively shall~~must meet the following specifications:

A) The closed vent system ~~shall~~ must be designed to collect all VOM vapors and gases discharged from the storage vessel and operated with no detectable emissions as indicated by an instrument reading of less than 500 ppm above background and visual inspections, as determined by the methods ~~specified~~ in 40 CFR 60.485(c), incorporated by reference at Section 219.112(d) ~~of this Part~~.

B) The control device ~~shall~~ must be designed and operated to reduce inlet VOM emissions by 95 percent or greater. If a flare is used as the control device, it ~~shall~~ must meet the specifications ~~described~~ in the general control device requirements of 40 CFR 60.18, incorporated by reference at Section 219.112(d) ~~of this Part~~.

5) An alternative emission control plan equivalent to the requirements of subsection (a)(1), (a)(2), (a)(3), or (a)(4) ~~above~~ that has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision.

b) The owner or operator of each storage vessel with a design capacity equal to or greater than 40,000 gallons which contains VOL that, as stored, has a maximum true vapor pressure greater than or equal to 11.1 psia ~~shall~~ must equip each storage vessel with a closed vent system and control device as specified in subsection (a)(4) ~~above~~.

c) Notwithstanding subsection (b) ~~of this Section~~, where an owner or operator can demonstrate that the control device installed on a storage vessel on or before December 31, 1992, was designed to reduce inlet VOM emission by greater than

or equal to 90 percent but less than 95 percent, the control device ~~shall~~ must be operated to reduce inlet VOM emission by 90 percent or greater.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.121 Storage Containers of VPL

~~No~~ A person ~~shall~~ must not cause or allow the storage of any volatile petroleum liquid (VPL) with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3°K (70°F)~~294.3 ºK (70 ºF) or any gaseous organic material in any stationary tank, reservoir, or other container of more than 151 cubic meters (40,000 gal.) capacity unless ~~such~~ the tank, reservoir, or other container:

a) Is a pressure tank capable of withstanding the vapor pressure of ~~such~~ the liquid or the pressure of the gas~~, so as~~ to prevent vapor or gas loss to the atmosphere at all times; or

b) Is designed and equipped with one of the following vapor loss control devices:

1) A floating roof which rests on the surface of the VPL and is equipped with a closure seal or seals between the roof edge and the tank wall. ~~Such~~ The floating roof ~~shall~~ must not be permitted if the VPL has a vapor pressure of 86.19 kPa (12.5 psia) or greater at ~~294.3°K (70°F)~~294.3 ºK (70 ºF). ~~No~~ A person ~~shall~~ must not cause or allow the emission of air contaminants into the atmosphere from any gauging or sampling devices attached to such tanks, except during sampling or maintenance operations.

2) A vapor recovery system consisting of:

A) A vapor gathering system capable of collecting 85% or more of the uncontrolled VOM that would be otherwise emitted to the atmosphere; and

B) A vapor disposal system capable of processing ~~such~~ VOM ~~so as~~ to prevent its emission to the atmosphere. ~~No~~ A person ~~shall~~ must not cause or allow the emission of ~~a~~ air contaminants into the atmosphere from any gauging or sampling devices attached to ~~such~~ a tank, reservoir, or other container except during sampling.

3) Other equipment or means of equal efficiency approved by the Agency ~~according to the provisions of~~under 35 Ill. Adm. Code 201, and ~~further~~ processed consistent with Section 219.108 of this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.122 Loading Operations

a) ~~No~~ A person ~~shall~~ must not cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere during the loading of any organic material from the aggregate loading pipes of any loading area having through-put of greater than 151 cubic meters per day (40,000 gal/day) into any railroad tank car, tank truck, or trailer unless ~~such~~ the loading area is equipped with submerged loading pipes or a device that is equally effective in controlling emissions and is approved by the Agency ~~according to the provisions of~~under 35 Ill. Adm. Code 201~~,~~ and ~~further~~ processed consistent with Section 219.108 ~~of this Part~~.

b) ~~No~~ A person ~~shall~~ must not cause or allow the loading of any organic material into any stationary tank having a storage capacity of greater than 946 1 (250 gal), unless ~~such~~ the tank is equipped with a permanent submerged loading pipe or an equivalent device approved by the Agency ~~according to the provisions of~~under 35 Ill. Adm. Code 201~~,~~ and ~~further~~ processed consistent with Section 219.108 ~~of this Part~~, or unless ~~such~~ the tank is a pressure tank ~~as described in~~under Section 219.121(a) ~~of this Part~~ or is fitted with a recovery system ~~as described in~~under Section 219.121(b)(2) ~~of this Part~~.

c) Exception: If no odor nuisance exists, ~~the limitations of~~ this Section ~~shall~~ applies only ~~apply~~ to ~~the~~ loading ~~of~~ VOL with a vapor pressure of 17.24 kPa (2.5 psia) or greater at ~~294.3° K (70 F°)~~294.3 ºK (70 ºF).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.123 Petroleum Liquid Storage Tanks

a) ~~The requirements of subsection~~Subsection (b) ~~of this Section shall~~must not apply to any stationary storage tank:

1) Equipped before January 1, 1979, with one of the vapor loss control devices ~~specified~~ in Section 219.121(b) ~~of this Part~~, except Section 219.121(b)(1) ~~of this Part~~;

2) With a capacity of less than 151.42 cubic meters (40,000 gal);

3) With a capacity of less than 1,600 cubic meters (422,400 gal) and used to store produced crude oil and condensate ~~prior to~~before custody transfer;

4) With a capacity of less than 1,430 cubic meters (378,000 gal) and used to store produced oil or condensate in crude oil gathering;

5) Subject to new source performance standards for storage vessels of petroleum liquid, 40 CFR 60, as regulations promulgated by the U.S. Environmental Protection Agency under Section 111 of the Clean Air Act (42 USC 7411), as amended. *The provisions of Section 111 of the Clean Air Act . . . are applicable in this State and are enforceable under ~~the~~*

~~*Environmental Protection Act*~~the Environmental Protection Act ~~(Ill. Rev. Stat. 1991, ch. 111½, par. 1009.1(b))~~ [415 ILCS 5/9.1(b)];

6) In which volatile petroleum liquid is not stored; or

7) Which is a pressure tank ~~as described in~~under Section 219.121(a) ~~of this Part~~.

b) Subject to subsection (a), ~~of this Section no~~an owner or operator of a stationary storage tank ~~shall~~ must not cause or allow the storage of any VOL in the tank unless:

1) The tank is equipped with one of the vapor loss control devices ~~specified in~~under Section 219.121(b) ~~of this Part~~;

2) There are no visible holes, tears, or other defects in the seal or any seal fabric or material of any floating roof;

3) All openings of any floating roof deck, except stub drains, are equipped with covers, lids, or seals such that:

A) The cover, lid, or seal is in the closed position at all times except when petroleum liquid is transferred to or from the tank;

B) Automatic bleeder vents are closed at all times except when the roof is floated off or landed on the roof leg supports; and

C) Rim vents, if provided, are set to open when the roof is being floated off the roof leg supports or at the manufacturer's recommended setting;

4) Routine inspections of floating roof seals are conducted through roof hatches once every six months;

5) A complete inspection of the cover and seal of any floating roof tank is made whenever the tank is emptied for reasons other than the transfer of petroleum liquid during the normal operation of the tank, or whenever repairs are made as a result of any semi-annual inspection or incidence of roof damage or defect; and

6) A record of the results of each inspection conducted under subsection (b)(4) or (b)(5) ~~of this Section~~ is maintained.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.124 External Floating Roofs

a) In addition to meeting the requirements of Section 219.123(b) ~~of this Part~~, ~~no~~ an owner or operator of a stationary storage tank equipped with an external floating roof ~~shall~~ must not cause or allow the storage of any volatile petroleum liquid in the tank unless:

1) The tank has been fitted:

A) With a continuous secondary seal extending from the floating roof to the tank wall (rim mounted secondary seal), or

B) With any other equipment or means of equal efficiency approved by the Agency ~~according to the provisions of~~ under 35 Ill. Adm. Code 201, and ~~further~~ processed consistent with Section 219.108 ~~of this Part~~.

2) Each seal closure device meets the following requirements:

A) The seal is intact and uniformly in place around the circumference of the floating roof between the floating roof and tank wall; and

B) The accumulated area of gaps exceeding 0.32 centimeter (1/8 inch) in width between the secondary seal and the tank wall ~~shall~~ must not exceed 21.2 square centimeters per meter of tank diameter (1.0 square inch per foot of tank diameter). Compliance with this requirement ~~shall~~ must be determined by:

i) Physically measuring the length and width of all gaps around the entire circumference of the secondary seal in each place where a 0.32 cm (0.125 in.) uniform diameter probe passes freely (without forcing or binding against the seal) between the seal and the tank wall; and

ii) Summing the area of the individual gaps.

3) Emergency roof drains are provided with slotted membrane fabric covers or equivalent covers across at least 90 percent of the area of the opening;

4) Openings are equipped with projections into the tank which remain below the liquid surface at all times;

5) Inspections are conducted ~~prior to~~before May 1 of each year to ~~insure~~ ensure compliance with subsection (a) ~~of this Section~~;

6) The secondary seal gap is measured ~~prior to~~before May 1 of each year and within 30 days ~~of~~ after a written request to demonstrate compliance with subsection (2)(B) ~~of this Section~~;

7) Records of the types of volatile petroleum liquid stored, the maximum true vapor pressure of the liquid as stored, the results of the inspections, and the results of the secondary seal gap measurements are maintained and available to the Agency, upon verbal or written request, at any reasonable time for a minimum of two years after the date on which the record was made.

b) Subsection (a) ~~above~~ does not apply to any stationary storage tank equipped with an external floating roof:

1) Exempted under Section 219.123(a)(2) through 219.123(a)(6) ~~of this Part~~;

2) Of welded construction equipped with a metallic type shoe seal having a secondary seal from the top of the shoe seal to the tank wall (shoe-mounted secondary seal);

3) Of welded construction equipped with a metallic type shoe seal, a liquid-mounted foam seal, a liquid-mounted liquid-filled-type seal, or other closure device of equivalent control efficiency approved by the Agency in which a petroleum liquid with a true vapor pressure less than 27.6 kPa (4.0 psia) at ~~294.3° K (70°F)~~294.3 ºK (70 ºF) is stored; or

4) Used to store crude oil with a pour point of ~~50°F~~50 ºF or higher as determined by ASTM Standard D97-66, incorporated by reference in Section 219.112 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.125 Compliance Dates

Every owner or operator of a VOL or VPL storage vessel subject to ~~the requirements of~~ this Subpart ~~shall~~ must comply with ~~the requirements of~~ this Subpart ~~accordance with the compliance schedule specified~~by the deadline in the applicable subsection ~~below~~:

a) Every owner or operator of a VPL storage vessel ~~of the type included in~~under Sections 219.121, 219.123, and 219.124 ~~of this Subpart shall~~must have complied with ~~the requirements of~~ Sections 219.121, 219.123, and 219.124 by the date ~~set forth~~ in Section 219.106(a) or (b) ~~of this Part~~.

b) Every owner or operator of a VOL storage vessel ~~of the type identified in~~under Section 219.119 ~~of this Subpart shall~~must comply with ~~the requirements of~~ Section 219.120 ~~of this Subpart~~ as follows:

1) For fixed roof tanks (Section 219.120(a)(1) ~~of this Subpart~~), by March 15, 1996.

2) For internal floating roof tanks (Section 219.120(a)(2) ~~of this Subpart~~), either during the next scheduled tank cleaning or by March 15, 2004, whichever comes first;

3) For external floating roof tanks (Section 219.120(a)(3) ~~of this Subpart~~), either during the next scheduled tank cleaning or by March 15, 2004, whichever comes first; and

4) For closed vent system and control device equipped tanks (Section 219.120(a)(4) ~~of this Subpart~~), by March 15, 1996.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.126 Compliance Plan (Repealed)

(Source: Repealed at 17 Ill. Reg. 16918, effective September 27, 1993)

Section 219.127 Testing VOL Operations

The owner or operator of each storage vessel specified in Section 219.119 ~~of this Subpart~~ ~~shall~~must comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~below~~. The applicable subsection for a particular storage vessel depends on the control equipment installed to meet the requirements of this Subpart.

a) After installing the control equipment necessary for the source to comply with ~~the requirements of~~ Section 219.120(a)(1) or (2) ~~of this Subpart~~ (permanently affixed roof and internal floating roof), each owner or operator ~~shall~~must:

1) Visually inspect the internal floating roof, the primary seal, and the secondary seal (if one is in service) ~~prior to~~before filling the storage vessel with VOL. If there are holes, tears, or other openings in the primary seal, the secondary seal, or the seal fabric or defects in the internal floating roof, or both, the owner or operator ~~shall~~ must repair the items before filling the storage vessel.

2) For vessels equipped with a liquid-mounted or mechanical shoe primary seal, visually inspect the internal floating roof and the primary seal or the secondary seal (if one is in service) through manholes and roof hatches on the fixed roof at least once every 12 months after initial fill. If the internal floating roof is not resting on the surface of the VOL inside the storage vessel, or if there is liquid accumulated on the roof, or if the seal is detached, or if there are holes or tears in the seal fabric, the owner or

operator ~~shall~~ must repair the items or empty and remove the storage vessel from service within 45 days. If a failure that is detected during inspections required in this subsection cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, the owner or operator may request a 30-day extension from the Agency in the inspection report required in Section 219.129(a)(3) ~~of this Subpart~~. ~~Such a~~The request for an extension must document that alternate storage capacity is unavailable and specify a schedule of actions the owner or operator will take that will assure that the control equipment will be repaired or the vessel will be emptied within 30 days.

3) For vessels equipped with both primary and secondary seals:

A) Visually inspect the vessel as specified in subsection (a)(4) ~~below~~ at least every 5 years; or

B) Visually inspect the vessel as specified in subsection (a)(2) ~~above~~.

4) Visually inspect the internal floating roof, the primary seal, the secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the storage vessel is emptied and degassed. If the internal floating roof has defects, the primary seal has holes, tears, or other openings in the seal, or if the seal fabric or the secondary seal has holes, tears, or other openings in the seal, or if the seal fabric or the gaskets no longer close off the liquid surfaces from the atmosphere, or if the slotted membrane has more than 10 percent open area, the owner or operator ~~shall~~ must repair the items as necessary so that none of the conditions ~~specified~~ in this subsection exist before refilling the storage vessel with VOL. In no event ~~shall~~ must inspections conducted in ~~accordance~~ compliance with this ~~provision~~ subsection occur at intervals greater than 10 years in the case of vessels subject to the annual visual inspection ~~as specified in~~under subsections (a)(2) and (a)(3)(B) ~~above~~ and at intervals no greater than 5 years in the case of vessels ~~specified in~~under subsection (a)(3)(A) ~~above~~.

5) Notify the Agency in writing at least 30 days ~~prior to the~~befpre filling or refilling ~~of~~ each storage vessel for which an inspection is required by subsections (a)(1) and (a)(4) ~~above~~ to afford the Agency the opportunity to have an observer present. If the inspection required by subsection (a)(4) ~~above~~ is not planned and the owner or operator could not have known about the inspection 30 days ~~in advance of~~before refilling the tank, the owner or operator ~~shall~~ must notify the Agency at least 7 days ~~prior to the~~before refilling ~~of~~ the storage vessel. Notification ~~shall~~ must be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be made in writing

and sent by express mail so that it is received by the Agency at least 7 days ~~prior to the~~before refilling.

b) The owner or operator of external floating roof tanks ~~shall~~must:

1) Determine the gap areas and maximum gap widths between the primary seal and the wall of the storage vessel and between the secondary seal and the wall of the storage vessel.

A) Measurements of gaps between the tank wall and the primary seal (seal gaps) ~~shall~~ must be performed during the hydrostatic testing of the vessel or within 60 days after the initial fill with VOL and then at least once every 5 years ~~thereafter~~.

B) Measurements of gaps between the tank wall and the secondary seal ~~shall~~ must be performed within 60 days after the initial fill with VOL and then at least once per year ~~thereafter~~.

C) If any source ceases to store VOL for ~~a period of 1~~one year or more, subsequent introduction of VOL into the vessel ~~shall~~ must be considered an initial fill for the purposes of subsections (b)(1)(A) and (b)(1)(B) ~~above~~.

2) Determine gap widths and areas in the primary and secondary seals individually according to the following procedures:

A) Measure seal gaps, if any, at one or more floating roof levels when the roof is floating off the roof leg supports;

B) Measure seal gaps around the entire circumference of the tank in each place where a 1/8 inch in diameter uniform probe passes freely (without forcing or binding against seal) between the seal and the wall of the storage vessel and measure the circumferential distance of each ~~such~~ location; and

C) Determine the total surface area of each gap described in subsection (b)(2)(B) ~~above~~ by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each ~~such~~ width by its respective circumferential distance.

3) Add the gap surface area of each gap location for the primary seal and the secondary seal individually and divide the sum for each by the nominal diameter of the tank and compare each ratio to the ~~respective~~ standards in subsection (b)(4) ~~below~~.

4) Make necessary repairs or empty the storage vessel within 45 days after identification in any inspection for seals not meeting the requirements ~~listed~~ in subsections (b)(4)(A) and (B) ~~below~~:

A) The accumulated area of gaps between the tank wall and the mechanical shoe or liquid-mounted primary seal ~~shall~~ must not exceed 10 in. ~~(2)~~ per foot of tank diameter, and the width of any portion of any gap ~~shall~~ must not exceed 1.5 in. There ~~are to~~must not be ~~no~~ holes, tears, or other openings in the shoe, seal fabric, or seal envelope.

B) The secondary seal ~~is to~~must meet the following requirements:

i) The secondary seal ~~is to~~must be installed above the primary seal so that it completely covers the space between the roof edge and the tank wall except as provided in subsection (b)(2)(C) ~~above~~.

ii) The accumulated area of gaps between the tank wall and the secondary seal used in combination with a metallic shoe or liquid-mounted primary seal ~~shall~~ must not exceed 1.0 in.~~(2)~~ per foot of tank diameter, and the width of any portion of any gap ~~shall~~ must not exceed 0.5 in. There ~~shall~~ must not be ~~no~~ gaps between the tank wall and the secondary seal when used in combination with vapor mounted primary seal.

iii) There ~~are to~~must not be ~~no~~ holes, tears, or other openings in the seal or seal fabric.

C) If a failure ~~that i~~s detected during inspections required in Section 219.127(b)(1) ~~of this Subpart~~ cannot be repaired within 45 days and if the vessel cannot be emptied within 45 days, the owner or operator may request a 30-day extension from the Agency in the inspection report required in Section 219.129(b)(4) ~~of this Subpart~~. ~~Such~~ The extension request must include a demonstration of unavailability of alternate storage capacity and ~~a specification of~~ a specific schedule that will assure that the control equipment will be repaired or the vessel will be emptied as soon as possible.

5) Notify the Agency 30 days ~~in advance of~~before any gap measurements required by subsection (b)(1) ~~above~~ to afford the Agency the opportunity to have an observer present.

6) Visually inspect the external floating roof, ~~the~~ primary seal, secondary seal, and fittings each time the vessel is emptied and degassed.

A) If the external floating roof has defects~~,~~; if the primary seal has holes, tears, or other openings in the seal or the seal fabric~~,~~; or if the secondary seal has holes, tears, or other openings in the seal or the seal fabric, the owner or operator ~~shall~~ must repair the items as necessary so that none of the conditions ~~specified~~ in this subsection exist before filling or refilling the storage vessel with VOL.

B) For all the inspections required by subsection (b)(6) ~~above~~, the owner or operator ~~shall~~ must notify the Agency in writing at least 30 days ~~prior to the~~before filling or refilling ~~of~~ each storage vessel to afford the Agency the opportunity to inspect the storage vessel ~~prior to~~before refilling. If the inspection required by subsection (b)(6) ~~above~~ is not planned and the owner or operator could not have known about the inspection 30 days ~~in advance of~~before refilling the tank, the owner or operator ~~shall~~ must notify the Agency at least 7 days ~~prior to the~~before refilling ~~of~~ the storage vessel. Notification ~~shall~~ must be made by telephone immediately followed by written documentation demonstrating why the inspection was unplanned. Alternatively, this notification including the written documentation may be sent by express mail so that it is received by the Agency at least 7 days ~~prior to~~ the refilling.

c) The owner or operator of each source ~~that is~~ equipped with a closed vent system and a flare to meet the requirements of Section 219.120(a)(4) ~~of this Subpart~~ ~~shall~~must meet ~~the requirements specified in~~ the general control device requirements of 40 CFR 60.18(e) and (f), incorporated by reference at Section 219.112(d) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.128 Monitoring VOL Operations

a) Except as provided in subsection (d), the owner or operator of each storage vessel with a design capacity greater than or equal to 40,000 gallons storing a liquid with a maximum true vapor pressure that is normally less than 0.75 psia ~~shall~~ must notify the Agency within 30 days when the maximum true vapor pressure of the liquid exceeds 0.75 psia.

b) Available data on the storage temperature may be used to determine the maximum true vapor pressure.

1) For vessels operated above or below ambient temperatures, the maximum true vapor pressure is calculated based upon the highest expected calendar-month average of the storage temperature. For vessels operated

at ambient temperatures, the maximum true vapor pressure is calculated based upon the maximum local monthly average ambient temperature as reported by the National Weather Service.

2) For other liquids, the vapor pressure must be:

A) Determined by ASTM Method D2879-83, incorporated by reference at Section 219.112(a) ~~of this Part~~;

B) Measured by an appropriate method approved by the Agency and USEPA; or

C) Calculated by an appropriate method approved by the Agency and USEPA.

c) The owner or operator of each vessel storing a mixture of indeterminate or variable composition ~~shall~~ must be subject to the following:

1) ~~Prior to~~Before the initial filling of the vessel, the maximum true vapor pressure for the range of anticipated liquid compositions to be stored ~~will~~ must be determined using the methods ~~described~~ in subsection (b).

2) For vessels in which the vapor pressure of the anticipated liquid composition is 0.5 psia or greater but less than 0.75 psia, an initial physical test of the vapor pressure is required; then a physical test is required at least once every 6 months ~~thereafter is required as determined by~~using one of the following methods:

A) ASTM Method D2879-83, incorporated by reference at Section 219.112(a) ~~of this Part~~;

B) ASTM Method D323-08, incorporated by reference at Section 219.112(a) ~~of this Part~~; or

C) ~~As measured by an~~An appropriate method approved by the Agency.

d) The owner or operator of each vessel equipped with a closed vent system and control device meeting the specifications of Section 219.120 ~~of this Subpart~~ is exempt from the requirements of subsections (a) and (b).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.129 Recordkeeping and Reporting for VOL Operations

The owner or operator of each storage vessel specified in Section 219.120(a) ~~of this Subpart shall~~mujst maintain records and furnish reports as required by subsection (a), (b), or (c) ~~below~~ as appropriate for the control equipment installed to meet the requirements of Section 219.120. The owner or operator ~~shall~~ must keep copies of all reports and records required by this Section, except for the records required by subsection (c)(1) ~~below~~, for at least 3 years. The records required by subsection (c)(1) ~~below shall~~must be kept for the life of the control equipment.

a) After installing control equipment in ~~accordance~~ compliance with Section 219.120(a)(1) or (2) ~~of this Subpart~~ (fixed roof and internal floating roof), the owner or operator ~~shall~~must:

1) Furnish the Agency with a report that describes the control equipment and certifies that the control equipment meets the specifications of Sections 219.120(a)(1) and 219.127(a)(1) ~~of this Subpart~~;

2) Keep a record of each inspection performed as required by Section 219.127(a)(1), (a)(2), (a)(3), and (a)(4) ~~of this Subpart~~. Each record ~~shall~~ must identify the storage vessel on which the inspection was performed and ~~shall~~ must contain the date the vessel was inspected and the observed condition of each component of the control equipment (seals, internal floating roof, and fittings);

3) If any of the conditions ~~described~~ in Section 219.127(a)(2) ~~of this Subpart~~ are detected during the annual visual inspection required by Section 219.127(a)(2), report to the Agency within 30 days after the inspection the identity of the storage vessel, the nature of the defects, and the date the storage vessel was emptied or the nature of and date the repair was made; and

4) After each inspection required by Section 219.127(a)(3) ~~of this Subpart~~ where holes or tears in the seal or seal fabric, or defects in the internal floating roof, or other control equipment defects ~~listed~~ in Section 219.127(a)(3)(B) ~~of this Subpart~~ are discovered, report to the Agency within 30 days after the inspection the identity of the storage vessel and the reason it did not meet the specifications of Section 219.120(a)(1) or (2) or Section 219.127(a) ~~of this Subpart~~, and list each repair made.

b) After installing control equipment in ~~accordance~~ compliance with Section 219.120(a)(3) ~~of this Subpart~~ (external floating roof), the owner or operator ~~shall~~must:

1) Furnish the Agency with a report that describes the control equipment and certify that the control equipment meets the specifications of Sections 219.120(a)(3) and 219.127(b)(2), (b)(3), and (b)(4) ~~of this Subpart~~;

2) Within 60 days after performing the seal gap measurements required by Section 219.127(b)(1) ~~of this Subpart~~, furnish the Agency with a report that contains:

A) The date of measurement;

B) The raw data obtained in the measurement; and

C) The calculations ~~of this Subpart~~ described in Section 219.127(b)(2) and (b)(3) ~~of this Subpart~~;

3) Maintain records of each gap measurement performed as required by Section 219.127(b) ~~of this Subpart~~. ~~Such~~ The records ~~shall~~ must identify the storage vessel in which the measurement was performed and ~~shall~~ must contain:

A) The date of measurement;

B) The raw data obtained in the measurement; and

C) The calculations described in Section 219.127(b)(2) and (b)(3) ~~of this Subpart~~;

4) After each seal gap measurement that detects gaps exceeding the limitations ~~specified by~~at Section 219.127(b)(4) ~~of this Subpart~~, submit a report to the Agency within 30 days after the inspection identifying the vessel and containing the information ~~specified~~ in subsection (b)(2) ~~above~~ and the date the vessel was emptied or the repairs were made and the date of repair.

c) After installing control equipment in ~~accordance~~ compliance with Section 219.127(a)(4) or (b)(1) ~~of this Subpart~~ (closed vent system and control device other than a flare), the owner or operator ~~shall~~ must maintain ~~the following records~~:

1) A copy of the operating plan; and

2) The measured values of the parameters monitored in ~~accordance~~ compliance with Section 219.127(c)(2) ~~of this Subpart~~.

d) After installing a closed vent system and flare to comply with Section 219.127 ~~of this Subpart~~, the owner or operator ~~shall~~must:

1) Provide the Agency with a report containing the measurements required by 40 CFR 60.18(f)(1), (2), (3), (4), (5), and (6), incorporated by reference

at Section 219.112(d) ~~of this Part~~, within 6 months after the initial start-up date;

2) Maintain records of all periods of operation during which the flare pilot flame is absent; and

3) Report semiannually all periods recorded under 40 CFR 60.115b(d)(2), incorporated by reference at Section 219.112(d) ~~of this Part~~, in which the pilot flame was absent.

e) The owner or operator ~~shall~~ must maintain all records required by this Section, except for the records required by subsection (f) ~~below~~, for at least 3 years. The records required by subsection (f) ~~below shall~~must be kept for the life of the source.

f) The owner or operator of each storage vessel specified in Section 219.119 ~~of this Subpart shall~~must maintain readily accessible records of the dimension of the storage vessel and an analysis of the capacity of the storage vessel. Each storage vessel with a design capacity less than 40,000 gallons is not subject to ~~no provision of~~ this Part other than ~~those required by maintaining~~the requirement to maintain readily accessible records of the dimensions of the storage vessel and analysis of the capacity of the storage vessel.

g) Except as provided in Section 219.128(c) and (d) ~~of this Subpart~~, the owner or operator of each storage vessel subject to ~~the requirements in~~ Section 219.120 with a design capacity greater than or equal to 40,000 gallons storing a liquid with a maximum true vapor pressure greater than or equal to 0.5 psia but less than 0.75 psia ~~shall~~ must maintain a record of the VOL storage, the period of storage, and the maximum true vapor pressure of the VOL during the ~~respective~~ torage period.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART C: ORGANIC EMISSIONS FROM MISCELLANEOUS EQUIPMENT

Section 219.141 Separation Operations

a) ~~No~~ A person ~~shall~~ must not use any single or multiple compartment effluent water separator which receives effluent water containing 757 1/day (200 gal/day) or more of organic material from any equipment processing, refining, treating, storing, or handling organic material unless ~~such~~ the effluent water separator is equipped with air pollution control equipment capable of reducing by 85 percent or more the uncontrolled organic material emitted to the atmosphere. Exception: If no odor nuisance exists, the limitations of this subsection ~~shall~~ do not apply if the vapor pressure of the organic material is below 17.24 kPa (2.5 psia) at ~~294.3°K (70°F)~~294.3 ºK (70 º.F)

b) Subsection (a) ~~of this Section shall~~must not apply to water and crude oil separation in the production of Illinois crude oil, if the vapor pressure of ~~such~~ the crude oil is less than 34.5 kPa (5 psia).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.142 Pumps and Compressors

~~No~~ A person ~~shall~~ must not cause or allow the discharge of more than 32.8 ml (2 cu in) of VOL with vapor pressure of 17.24 kPa (2.5 psia) or greater at ~~294.3° K (70°F)~~294.3 ºK (70 º F) into the atmosphere from any pump or compressor in any 15 minute period at standard conditions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.143 Vapor Blowdown

~~No~~ A person ~~shall~~ must not cause or allow the emission of organic material into the atmosphere from any vapor blowdown system or any safety relief valve, except ~~such~~ safety relief valves not capable of causing an excessive release, unless ~~such~~ the emission is controlled:

a) To 10 ppm equivalent methane (molecular weight 16.0) or less; or,

b) By combustion in a smokeless flare; or,

c) By other air pollution control equipment approved by the Agency ~~according to the provisions of~~under 35 Ill. Adm. Code 201, and ~~further~~ processed ~~consistent with~~under Section 219.108 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.144 Safety Relief Valves

Section 219.143 ~~of this Part shall~~must not apply to any set of unregulated safety relief valves capable of causing excessive releases~~, provided~~ if the owner or operator ~~thereof,~~ by October 1, 1972, supplied the Agency with ~~the following~~:

a) A historical record of each ~~such~~ set (or, if ~~such~~ the records were unavailable, of similar sets which, by virtue of operation under similar circumstances, may reasonably have been presumed to have the same or greater frequency of excessive releases) for a three-year period immediately preceding October 1, 1972, indicating:

1) Dates on which excessive releases occurred from each ~~such~~ set; and

2) Duration in minutes of each ~~such~~ excessive release; and

3) Quantities ~~(~~in pounds~~)~~ of mercaptans and/or hydrogen sulfide emitted into the atmosphere during each ~~such~~ excessive release.

b) Proof, using ~~such~~ three-year historical records, that no excessive release is likely to occur from any ~~such~~ set either alone or in combination with ~~such~~ excessive releases from other sets owned or operated by the same person and located within a ten-mile radius from the center point of any ~~such~~ set, more frequently than ~~3~~ three times in any ~~12 month~~12-month period;

c) Accurate maintenance records ~~pursuant to the requirements of~~under subsection (a) ~~of this Section~~; and,

d) Proof, at three-year intervals, using ~~such~~ three-year historical records, that ~~such~~ the set conforms to ~~the requirements of~~ subsection (c) ~~of this Section~~.

SUBPART E: SOLVENT CLEANING

Section 219.181 Solvent Cleaning Degreasing Operations

~~The requirements of~~ Sections 219.182, 219.183, 219.184, and 219.186 ~~of this Subpart shall~~must apply to all cold cleaning, open top vapor degreasing, and conveyorized degreasing operations which use volatile organic materials.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.182 Cold Cleaning

a) Operating Procedures: ~~No~~ A person ~~shall~~ must not operate a cold cleaning degreaser unless:

1) Waste solvent is stored in covered containers only and not disposed of in such a manner that more than 20% of the waste solvent (by weight) is allowed to evaporate into the atmosphere;

2) The cover of the degreaser is closed when parts are not being handled; and

3) Parts are drained until dripping ceases.

b) Equipment Requirements: ~~No~~ A person ~~shall~~ must not operate a cold cleaning degreaser unless:

1) The degreaser is equipped with a cover which is closed whenever parts are not being handled in the cleaner. The cover ~~shall~~ must be designed to be easily operated with one hand or with the mechanical assistance of

springs, counter-weights, or a powered system if:

A) The solvent vapor pressure is greater than 2 kPa (15 mmHg or 0.3 psi) measured at ~~38° C (100° F)~~38 °C (100 °F);

B) The solvent is agitated; or

C) The solvent is heated above ambient room temperature.

2) The degreaser is equipped with a device for draining cleaned parts. The drainage device ~~shall~~ must be constructed so that parts are enclosed under the cover while draining unless:

A) The solvent vapor pressure is less than 4.3 kPa (32 mmHg or 0.6 psi) measured at ~~38° C (100° F)~~38 °C (100 °F); or

B) An internal drainage device cannot be fitted into the cleaning system, in which case the drainage device may be external.

3) The degreaser is equipped with one of the following control devices if the vapor pressure of the solvent is greater than 4.3 kPa (32 mmHg or 0.6 psi) measured at ~~38° C (100° F)~~38 °C (100 °F) or if the solvent is heated above ~~50° C (120° F)~~50 °C (120 °F) or its boiling point:

A) A freeboard height of 7/10 of the inside width of the tank or 91 cm (36 in), whichever is less; or

B) Any other equipment or system of equivalent emission control as approved by the Agency and ~~further~~ processed ~~consistent with~~under Section 219.108 ~~of this Part~~. ~~Such a~~The system may include a water cover, refrigerated chiller, or carbon adsorber.

4) A permanent conspicuous label summarizing the operating procedure is affixed to the degreaser; and

5) If a solvent spray is used, the degreaser is equipped with a solid fluid stream spray, rather than a fine, atomized, or shower spray.

c) Material and Control Requirements:

1) On and after March 15, 1999, ~~no~~ a person ~~shall~~must not:

A) Cause or allow the sale of solvent with a vapor pressure which exceeds 2.0 mmHg (0.038 psi) measured at ~~20° C (68° F)~~20 °C (68 °F) in units greater than five gallons~~,~~ for use in cold cleaning degreasing operations ~~located~~ in the area ~~covered by~~described in

Section 219.103 ~~of this Part~~.

B) Operate a cold cleaning degreaser with a solvent vapor pressure which exceeds 2.0 mmHg (0.038 psi) measured at ~~20° C (68° F)~~20 °C (68 °F).

2) On and after March 15, 2001, ~~no~~ a person ~~shall~~must not:

A) Cause or allow the sale of solvent with a vapor pressure which exceeds 1.0 mmHg (0.019 psi) measured at ~~20° C (68° F)~~20 °C (68 °F) in units greater than five gallons~~,~~ for use in cold cleaning degreasing operations ~~located~~ in the area ~~covered by~~described in Section 219.103 ~~of this Part~~.

B) Operate a cold cleaning degreaser with a solvent vapor pressure which exceeds 1.0 mmHg (0.019 psi) measured at 20° C (68° F).

3) On and after May 30, 2007, ~~no~~ a person ~~shall~~must not:

A) Cause or allow the sale of solvent with a vapor pressure which exceeds 1.0 mmHg (0.019 psi) measured at ~~20° C (68° F)~~20 °C (68 °F) in units greater than five gallons~~,~~ for use in cold cleaning degreasing operations ~~located~~ in the area ~~covered by~~described in Section 219.103 ~~of this Part~~, unless the purchaser provides a copy of a valid State or federal construction or operating permit or a copy of the Federal Register demonstrating that the purchaser is in compliance with ~~the control requirements of~~ subsection (c)(4) ~~of this Section~~ or is exempt under subsection (f) or (g) ~~of this Section~~.

B) Operate a cold cleaning degreaser with a solvent vapor pressure which exceeds 1.0 mmHg (0.019 psi) measured at ~~20° C (68° F)~~20 °C (68 °F), unless the person is in compliance with ~~the control requirements of~~ subsection (c)(4) ~~of this Section~~ or is exempt under subsection (f) or (g) ~~of this Section~~.

4) Control Requirements:

A) A person may operate a cold cleaning degreaser using solvent with a vapor pressure greater than 1.0 mmHg (0.019 psi) but less than 56 mmHg (1.064 psi) measured at ~~20° C (68° F)~~20 °C (68 °F) ~~provided~~ if add-on control devices demonstrating at least 95 percent overall capture and control of emissions are used. The add-on controls may include~~, but are not limited to,~~ carbon adsorbers or afterburners.

B) An equivalent alternative control plan may be used to meet the control requirements of this Section ~~pursuant to~~under Section 219.108 ~~of this Part~~. ~~Pursuant to~~Under the material requirements of subsection (c)(3)(B) ~~of this Section~~, a solvent with a vapor pressure of 1.0 mmHg (0.019 psi) measured at ~~20° C (68° F)~~20 ºC (68 ºF) ~~shall~~ must be the basis for assessment of equivalent emissions from any equivalent alternative control plan. If used as an equivalent alternative control plan, an add-on control must demonstrate at least a 95 percent overall capture and control efficiency. A control plan approved by the Agency ~~shall~~ must be effective only when included in a federally enforceable permit or approved by the USEPA as a SIP revision ~~pursuant to~~under Section 219.108 ~~of this Part~~.

C) Add-on controls operating at a source ~~prior to~~before May 30, 2007, ~~shall~~ must be tested by August 31, 2007. Add-on controls constructed on or after May 30, 2007, ~~shall~~ must be tested within 90 days after initial startup. Testing procedures and recordkeeping for add-on controls and equivalent alternative controls subject to subsections (c)(4)(A) and (B) ~~of this Section~~ are to be performed ~~pursuant to~~under Section 219.105 (c), (d), (e), and (f) ~~of this Part~~.

d) Recordkeeping and Reporting Requirements: On and after March 15, 1999:

1) All persons subject to ~~the requirements of~~ subsections (c)(1)(A), (c)(2)(A), and (c)(3)(A) ~~of this Section~~ must maintain records which include for each sale:

A) The name and address of the solvent purchaser;

B) The date of sale;

C) The type of solvent;

D) The unit volume of solvent;

E) The total volume of solvent; and

F) The vapor pressure of the solvent measured in mmHg at ~~20º C (68º F)~~20 ºC (68 ºF).

2) All persons subject to ~~the requirements of~~ subsections (c)(1)(B), (c)(2)(B), and (c)(3)(B) ~~of this Section~~ must maintain records which include for each purchase:

A) The name and address of the solvent supplier;

B) The date of purchase;

C) The type of solvent;

D) The vapor pressure of the solvent measured in mmHg at ~~20° C (68° F)~~20 ºC (68 ºF); and

E) For any mixture of solvents, the vapor pressure of the mixture, as used, measured in mmHg at ~~20° C (68° F)~~20 ºC (68 ºF).

3) All persons subject to ~~the requirements of~~ subsection (c)(4) ~~of this Section~~ must maintain records~~,~~ which include for each purchase:

A) The name and address of the solvent supplier;

B) The date of purchase;

C) The type of solvent;

D) The unit volume of solvent;

E) The total volume of solvent;

F) The vapor pressure of the solvent measured in mmHg at ~~20° C (68° F)~~20 ºC (68 ºF); and

G) For any mixture of solvents, the vapor pressure of the mixture, as used, measured in mmHg at ~~20° C (68° F)~~20 ºC (68 ºF).

4) All persons subject to ~~the requirements of~~ subsection (c)(4) ~~of this Section shall~~must maintain records documenting the use of good operating practices consistent with the equipment manufacturer's specifications for the cold cleaning degreasers and add-on control equipment. At a minimum these records ~~shall~~ must include:

A) Records for periodic inspection of the cold cleaning degreasers and add-on control equipment with date of inspection, individual performing the inspection, and nature of inspection;

B) Records for repair of malfunctions and breakdowns with identification and description of incident, date identified, date repaired, nature of repair, and the amount of VOM that escaped into the atmosphere as a result of the incident;

C) Control device monitoring and recording data; and

D) A daily log of operating time for the control device, monitoring equipment, and all associated degreasers.

5) All persons subject to ~~the requirements of~~ subsection (c) ~~of this Section~~ ~~shall~~must notify the Agency at least 30 days before changing the method of compliance between subsection (c)(3) and (c)(4) ~~of this Section~~. ~~Such~~ The notification ~~shall~~ must include compliance with the newly applicable subsection.

6) All persons subject to ~~the requirements of~~ subsection (b) or (c) ~~of this Section shall~~must notify the Agency of any violation of subsection (b) or (c) ~~of this Section~~ by sending a description of the violation and copies of records documenting ~~such~~ the violations to the Agency within 30 days ~~following~~ after the occurrence of the violation.

e) All records required by subsection (d) ~~of this Section shall~~must be retained for three years and ~~shall~~ must be made available to the Agency upon request.

f) The cleaning of electronic components as defined in 35 Ill. Adm. Code ~~Section~~ 211.1885 is exempt from the requirements of subsection (c) ~~of this Section~~.

g) Any cold cleaning taking place in a Detrex cold batch degreaser Model #2D-CC-SPL Size 24-4-10, or substantial equivalent, including automated loading of parts~~,~~ and totally enclosed operation (excluding loading and unloading) and permitted by the Agency, is exempt from the requirements of subsection (c) ~~of this Section~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.183 Open Top Vapor Degreasing

a) Operating Requirements: ~~No~~ A person ~~shall~~ must not operate an open top vapor degreaser unless:

1) The cover of the degreaser is closed when workloads are not being processed through the degreaser;

2) Solvent carryout emissions are minimized by:

A) Racking parts to allow complete drainage;

B) Moving parts in and out of the degreaser at less than 3.3 m/min (11 ft/min);

C) Holding the parts in the vapor zone until condensation ceases;

D) Tipping out any pools of solvent on the cleaned parts before removal from the vapor zone; and

E) Allowing parts to dry within the degreaser until visually dry.

3) Porous or absorbent materials, such as cloth, leather, wood, or rope are not degreased;

4) Less than half of the degreaser's open top area is occupied with a workload;

5) The degreaser is not loaded to the point where the vapor level would drop more than 10 cm (4 in) when the workload is removed from the vapor zone;

6) Spraying is done below the vapor level only;

7) Solvent leaks are repaired immediately;

8) Waste solvent is stored in covered containers only and not disposed of in such a manner that more than 20% of the waste solvent (by weight) is allowed to evaporate into the atmosphere;

9) Water is not visually detectable in solvent exiting from the water separator; and

10) Exhaust ventilation exceeding 20 cubic meters per minute per square meter (65 cubic feet per minute per square foot) of degreaser open area is not used, unless necessary to meet the requirements of the Occupational Safety and Health Act (29 ~~U.S.C. Section~~USC 651 et seq.).

b) Equipment Requirements: ~~No~~ A person ~~shall~~ must not operate an open top vapor degreaser unless:

1) The degreaser is equipped with a cover designed to open and close easily without disturbing the vapor zone;

2) The degreaser is equipped with the following switches:

A) One which shuts off the sump heat source if the amount of condenser coolant is not sufficient to maintain the designed vapor level; ~~and~~

B) One which shuts off the spray pump if the vapor level drops more than 10 cm (4 in) below the bottom condenser coil; and

C) One which shuts off the sump heat when the vapor level exceeds the design level.

3) A permanent conspicuous label summarizing the operating procedure is affixed to the degreaser;

4) The degreaser is equipped with one of the following devices:

A) A freeboard height of 3/4 of the inside width of the degreaser tank or 91 cm (36 in), whichever is less; and if the degreaser opening is greater than 1 square meter (10.8 ft^2), a powered or mechanically assisted cover; or

B) Any other equipment or system of equivalent emission control ~~as~~ approved by the Agency and ~~further~~ processed ~~consistent with~~under Section 219.108 ~~of this Part~~. ~~Such~~ The equipment or system may include a refrigerated chiller, an enclosed design, or a carbon adsorption system.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.184 Conveyorized Degreasing

a) Operating Requirements: ~~No~~ A person ~~shall~~ must not operate a conveyorized degreaser unless:

1) Exhaust ventilation exceeding 20 cubic meters per minute per square meter (65 cubic feet per minute per square foot) of area of loading and unloading opening is not used, unless necessary to meet the requirements of the Occupational Safety and Health Act (29 ~~U.S.C. Section~~USC 651 et seq.);

2) Solvent carryout emissions are minimized by:

A) Racking parts for best drainage; and

B) Maintaining the vertical conveyor speed at less than 3.3 m/min (11 ft/min);

3) Waste solvent is stored in covered containers only and not disposed of in such a manner that more than 20% of the waste solvent (by weight) is allowed to evaporate into the atmosphere;

4) Solvent leaks are repaired immediately;

5) Water is not visually detectable in solvent exiting from the water separator; and

6) Downtime covers are placed over entrances and exits of conveyorized degreasers immediately after the conveyors and exhausts are shut down and not removed until just before start-up.

b) Equipment Requirements: ~~No~~ A person ~~shall~~ must not operate a conveyorized degreaser unless:

1) The degreaser is equipped with a drying tunnel, rotating (tumbling) basket, or other equipment sufficient to prevent cleaned parts from carrying out solvent liquid or vapor;

2) The degreaser is equipped with the following switches:

A) One which shuts off the sump heat source if the amount of condenser coolant is not sufficient to maintain the designed vapor level;

B) One which shuts off the spray pump or the conveyor if the vapor level drops more than 10 cm (4 in) below the bottom condenser coil; and

C) One which shuts off the sump heat when the vapor level exceeds the design level;

3) The degreaser is equipped with openings for entrances and exits that silhouette workloads so that the average clearance between the parts and the edge of the degreaser opening is less than 10 cm (4 in) or less than 10 percent of the width of the opening;

4) The degreaser is equipped with downtime covers for closing off entrances and exits when the degreaser is shut down; and

5) The degreaser is equipped with one of the following control devices, if the air/vapor interface is larger than 2.0 square meters (21.6 ft^2):

A) A carbon adsorption system with ventilation greater than or equal to 15 cubic meters per minute per square meter (50 cubic feet per minute per square foot) of air/vapor area when downtime covers are open, and exhausting less than 25 ppm of solvent by volume averaged over a complete adsorption cycle; or

B) Any other equipment or system of equivalent emission control ~~as~~ approved by the Agency~~,~~ and ~~further~~ processed ~~consistent~~

~~with~~under Section 219.108 ~~of this Part~~. ~~Such~~ The equipment or system may include a refrigerated chiller.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.185 Compliance Schedule (Repealed)

(Source: Repealed at 17 Ill. Reg. 16918, effective September 27, 1993)

Section 219.186 Test Methods

The following test methods ~~shall~~ must be used to demonstrate compliance with this Subpart:

a) Vapor pressures ~~shall~~ must be determined by using the procedure ~~specified~~ in Section 219.110 ~~of this Part~~.

b) Exhaust ventilation rates ~~shall~~ must be determined by using the procedures ~~specified~~ in Section 219.105(f)(3) ~~of this Part~~.

c) The performance of control devices ~~shall~~ must be determined by using the procedures ~~specified~~ in Section 219.105(f) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.187 Other Industrial Solvent Cleaning Operations

a) Applicability. On and after January 1, 2012:

1) Except as provided in subsection (a)(2), the requirements of this Section apply to all cleaning operations that use organic materials at sources that emit a total of 226.8 kg per calendar month (500 lbs per calendar month) or more of VOM~~,~~ in the absence of air pollution control equipment~~,~~ from cleaning operations at the source other than cleaning operations identified in subsection (a)(2). For purposes of this Section, "cleaning operation" means the process of cleaning products, product components, tools, equipment, or general work areas during production, repair, maintenance, or servicing, including ~~but not limited to~~ spray gun cleaning, spray booth cleaning, large and small manufactured components cleaning, parts cleaning, equipment cleaning, line cleaning, floor cleaning, and tank cleaning~~,~~ at sources with emission units;

2) Notwithstanding subsection (a)(1):

A) The following cleaning operations are exempt from the requirements of subsections (b), (c), (d), (e), (f), and (g):

i) Cleaning operations subject to ~~the limitations in~~ Sections 219.182, 219.183, or 219.184;

ii) Janitorial cleaning;

iii) Stripping of cured coatings, inks, or adhesives;

iv) Cleaning operations in printing pre-press areas, including the cleaning of film processors, color scanners, plate processors, film cleaning, and plate cleaning;

B) Cleaning operations for emission units within the following categories are exempt from the requirements of subsections (b), (c), (d), (e), (f), and (g):

i) Flexible package printing;

ii) Lithographic printing;

iii) Letterpress printing;

iv) Flat wood paneling coating;

v) Large appliance coating;

vi) Metal furniture coating;

vii) Paper, film, and foil coating;

viii) Wood furniture coating;

ix) Plastic parts coating;

x) Miscellaneous metal parts coating;

xi) Fiberglass boat manufacturing;

xii) Miscellaneous industrial adhesives;

xiii) Auto and light-duty truck assembly coating; and

xiv) Aerospace facilities;

C) The following cleaning operations are exempt from the requirements of subsections (b), (c), (f), and (g):

i) Cleaning of solar cells, laser hardware, scientific instruments, and high-precision optics;

ii) Cleaning conducted as part of performance laboratory tests on coatings, adhesives, or inks; research and development operations; or laboratory tests in quality assurance laboratories;

iii) Cleaning of paper-based gaskets and clutch assemblies where rubber is bonded to metal by means of an adhesive;

iv) Cleaning of cotton swabs to remove cottonseed oil before cleaning of high-precision optics;

v) Cleaning of medical device and pharmaceutical manufacturing operations if the facility uses no more than 5.7 liters (1.5 gallons) per day of solvents for ~~such~~ that cleaning;

vi) Cleaning of adhesive application equipment used for thin metal laminating;

vii) Cleaning of electronic or electrical cables;

viii) Touch-up cleaning performed on printed circuit boards where surface mounted devices have already been attached;

ix) Cleaning of coating and adhesive application processes ~~utilized~~ used to manufacture transdermal drug delivery products using no more than three gallons per day of ethyl acetate;

x) Cleaning of application equipment used to apply coatings on satellites and radiation effect coatings;

xi) Cleaning of application equipment used to apply solvent-borne fluoropolymer coatings;

xii) Cleaning of ultraviolet or electron beam adhesive application;

xiii) Cleaning of sterilization indicating ink application equipment if the facility uses no more than 5.7 liters (1.5 gallons) per day of solvents for ~~such~~ that cleaning;

xiv) Cleaning of metering rollers, dampening rollers, and printing plates;

xv) Cleaning of numismatic dies; and

xvi) Cleaning operations associated with digital printing;

xvii) Cleaning with aerosol products if the facility uses no more than 4.7 liters (1.25 gallons) per day of those products;

xviii) Cleaning of plastic-based or vinyl-based substrates for use in the screen printing process when using UV curable ink and coating systems;

xix) Cleaning conducted as part of performance tests on coatings, adhesives, or inks that are in research and development and that are not yet commercially used for the applications for which they are being tested. This exemption is limited to the use of up to a total of 90.9 liters (24 gallons) per calendar month and 416.3 liters (110 gallons) of cleaning solvent per calendar year for that cleaning.

b) Material and Control Requirements. An owner or operator of a source subject to this Section, other than manufacturers of coatings, inks, adhesives, or resins, must not perform any cleaning operation subject to this Section unless the owner or operator meets the requirements in subsection (b)(1), (b)(2), or (b)(3). An owner or operator of a source that manufactures coatings, inks, adhesives, or resins must not perform any cleaning operation subject to this Section unless the owner or operator meets the requirements in at least one of the following subsections: (b)(1), (b)(2), (b)(3), (b)(4), or (b)(5).

1) The VOM content of the as-used cleaning solutions does not exceed the following emissions limitations:

A) Product cleaning during manufacturing process or surface preparation for coating, adhesive, or ink application:

		kg/l	lb/gal
i)	Electrical apparatus components and electronic components	0.10	0.83
ii)	Medical device and pharmaceutical manufacturing	0.80	6.7

B) Repair and maintenance cleaning:

		kg/l	lb/gal
i)	Electrical apparatus components and electronic components	0.10	0.83
ii)	Medical device and pharmaceutical manufacturing: tools, equipment, and machinery	0.80	6.7
iii)	Medical device and pharmaceutical manufacturing: general work surfaces	0.60	5.0

C) Cleaning of ink application equipment:

		kg/l	lb/gal
i)	Rotogravure printing that does not print flexible packaging	0.10	0.83
ii)	Screen printing, including screen reclamation activities	0.50	4.2
iii)	Ultraviolet ink and electron beam ink application equipment, except screen printing	0.65	5.4
iv)	Flexographic printing that does not print flexible packaging	0.10	0.83

		kg/l	lb/gal
D)	Cleaning of equipment used in the manufacture of coatings, inks, adhesives, or resins	0.20	1.67

		kg/l	lb/gal
E)	All other cleaning operations not subject to a specific limitation in subsections (b)(1)(A) through (b)(1)(D)	0.050	0.42

2) The VOM composite vapor pressure of each as-used cleaning solution used does not exceed 8.0 mmHg measured at 20 ^{o}C (68 ^{o}F);

3) An afterburner or carbon adsorber is installed and operated that reduces VOM emissions from the subject cleaning operation by at least 85 percent overall, or for sources that manufacture coatings, inks, adhesives, or

resins, an afterburner or carbon adsorber is installed and operated that reduces VOM emissions from the subject cleaning operation by at least 80 percent overall and has a 90 percent efficiency. The owner or operator may use an emissions control system other than an afterburner or carbon adsorber if ~~such~~ the device reduces VOM emissions from the subject cleaning operation in ~~accordance~~ compliance with the applicable capture and control requirements of this subsection (b)(3), the owner or operator submits a plan to the Agency detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for ~~such~~ the control device, and ~~such~~ the plan is approved by the Agency and USEPA within federally enforceable permit conditions;

4) For sources that manufacture coatings, inks, adhesives, or resins, the owner or operator complies with the following work practices:

A) Equipment being cleaned is maintained leak-free;

B) VOM-containing cleaning materials are drained from the cleaned equipment upon ~~completion of~~completing cleaning;

C) VOM-containing cleaning materials, including waste solvent, are not stored or disposed of in ~~such~~ a manner that will cause or allow evaporation into the atmosphere; and

D) VOM-containing cleaning materials are stored in closed containers;

5) Sources that manufacture coatings, inks, adhesives, or resins may ~~utilize~~ use solvents that do not comply with subsection (b)(1) or (b)(2) ~~provided that~~if all of the following requirements are met:

A) No more than 228 l (60 gal) of fresh solvent is used per calendar month. Solvent that is reused or recycled, either onsite or offsite, for further use in equipment cleaning or in the manufacture of coatings, inks, adhesives, or resins, must not be included in this limit;

B) Solvents, including cleanup solvents, are collected and stored in closed containers; and

C) Records are maintained in ~~accordance~~ compliance with subsection (e)(6).

c) The owner or operator of a subject source must demonstrate compliance with this Section by using the applicable test methods and procedures ~~specified~~ in

subsection (g) and by complying with the recordkeeping and reporting requirements ~~specified~~ in subsection (e).

d) Operating Requirements. The owner or operator of a source subject to this Section must comply with the following for each subject cleaning operation. These requirements are in addition to work practices ~~specified~~ in subsections (b)(4) and (b)(5), as applicable:

1) Cover open containers and properly cover and store applicators used to apply cleaning solvents;

2) Minimize air circulation around the cleaning operation;

3) Dispose of all used cleaning solutions, cleaning towels, and applicators used to apply cleaning solvents in closed containers;

4) ~~Utilize~~ Use equipment practices that minimize emissions;

5) When using cleaning solvent for wipe cleaning, sources that manufacture coatings, inks, adhesives, or resins must:

A) Cover open containers used for the storage of spent or fresh organic compounds used for cleanup or coating, ink, adhesive, or resin removal; and

B) Cover open containers used for the storage or disposal of cloth or paper impregnated with organic compounds that are used for cleanup or coating, ink, adhesive, or resin removal.

e) Recordkeeping and Reporting Requirements

1) The owner or operator of a source exempt from ~~the limitations of~~ this Section because of the criteria in subsection (a)(1) must comply with the following:

A) By January 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

i) A declaration that the source is exempt from ~~the requirements of~~ this Section because of the criteria in subsection (a)(1);

ii) Calculations that demonstrate that combined emissions of VOM from cleaning operations at the source, other than cleaning operations ~~identified~~ in subsection (a)(2), never

equal or exceed 226.8 kg/month (500 lbs/month)~~,~~ in the absence of air pollution control equipment. An emission adjustment factor of 0.50 must be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is demonstrated to be less than 10 mmHg at 20 ºC (68 ºF) and the used shop towels are kept in closed containers. For cleaning solutions with VOM composite vapor pressure ~~of~~ equal to or greater than 10 mmHg measured at 20 ºC (68 ºF) and for shop towels that are not kept in closed containers, an emission adjustment factor must not be used;

B) On and after January 1, 2012, collect and record the following information each month for each cleaning operation, other than cleaning operations ~~identified~~ in subsection (a)(2):

i) The name and identification of each VOM-containing cleaning solution as applied in each cleaning operation;

ii) The VOM content of each cleaning solution as applied in each cleaning operation;

iii) The weight of VOM per volume and the volume of each as-used cleaning solution; and

iv) The total monthly VOM emissions from cleaning operations at the source;

C) Notify the Agency of any record that shows that the combined emissions of VOM from cleaning operations at the source, other than cleaning operations ~~identified~~ in subsection (a)(2), ever equal or exceed 226.8 kg/month (500 lbs/month), in the absence of air pollution control equipment, within 30 days after the event occurs.

2) All sources subject to this Section must:

A) By January 1, 2012 or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

i) A declaration that all subject cleaning operations are in compliance with this Section;

ii) Identification of each subject cleaning operation and each VOM-containing cleaning solution used as of the date of certification in ~~such~~ the operation;

iii) If complying with the emissions control system requirement, what type of emissions control system will be used;

iv) Initial documentation that each subject cleaning operation will comply with the applicable limitation, including copies of manufacturer's specifications, test results (if any), formulation data, and calculations;

v) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

vi) A description of the practices and procedures that the source will follow to ensure compliance with ~~the limitations in~~ subsection (d)~~,~~ and, if applicable, subsection (b)(4); and

vii) A description of each cleaning operation exempt under subsection (a)(2), if any, and a listing of the emission units on which the exempt cleaning operation is performed;

B) At least 30 calendar days before changing the method of compliance between subsections (b)(1), (b)(2), (b)(4), or (b)(5) and subsection (b)(3), notify the Agency in writing of the change. The notification must include a demonstration of compliance with the newly applicable subsection;

3) All sources complying with this Section under subsection (b)(1) must collect and record the following information for each cleaning solution used:

A) For each cleaning solution that is prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) The VOM content of each cleaning solvent in the cleaning solution;

iii) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

iv) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

v) The VOM content of the as-used cleaning solution, with supporting calculations; and

vi) A calibration log for the automatic equipment, detailing periodic checks;

B) For each batch of cleaning solution that is not prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) Date, time of preparation, and each subsequent modification of the batch;

iii) The VOM content of each cleaning solvent in the cleaning solution;

iv) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

v) The VOM content of the as-used cleaning solution, with supporting calculations. For cleaning solutions that are not prepared at the site but are used as purchased, the manufacturer's specifications for VOM content may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a);

4) All sources complying with this Section under ~~the requirements of~~ subsection (b)(2) ~~of this Section~~ must collect and record the following information for each cleaning solution used:

A) The name and identification of each cleaning solution;

B) Date, time of preparation, and each subsequent modification of the batch;

C) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~

compliance with the applicable methods and procedures ~~specified~~ in Section 219.110;

D) The total amount of each cleaning solvent used to prepare the as-used cleaning solution; and

E) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with the applicable methods and procedures ~~specified~~ in Section 219.110;

5) All sources complying with this Section under subsection (b)(3) must comply with the following:

A) By January 1, 2012, or upon initial start-up of the source, whichever is later, and upon initial start-up of a new emissions control system, include in the certification required by subsection (e)(3) a declaration that the monitoring equipment required under subsection (f) has been properly installed and calibrated according to manufacturer's specifications;

B) If testing of an emissions control system is conducted under subsection (g), the owner or operator must, within 90 days after conducting ~~such~~ the testing, submit a copy of all test results to the Agency and must submit a certification to the Agency that includes the following:

i) A declaration that all tests and calculations necessary to demonstrate compliance with subsection (b)(3) have been properly performed;

ii) A statement whether the subject cleaning operation is or is not in compliance with subsection (b)(3);

iii) The operating parameters of the emissions control system during testing, as monitored in ~~accordance~~ compliance with subsection (f);

C) Collect and record daily the following information for each cleaning operation subject to ~~the requirements of~~ subsection (b)(3):

i) Emissions control system monitoring data in ~~accordance~~ compliance with subsection (f), as applicable;

ii) A log of operating time for the emissions control system, monitoring equipment, and associated cleaning equipment;

iii) A maintenance log for the emissions control system and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages;

D) Maintain records documenting the use of good operating practices consistent with the equipment manufacturer's specifications for the cleaning equipment being used and the emissions control system equipment. At a minimum, these records must include:

i) Records for periodic inspection of the cleaning equipment and emissions control system equipment with date of inspection, individual performing the inspection, and nature of inspection;

ii) Records for repair of malfunctions and breakdowns with identification and description of incident, date identified, date repaired, nature of repair, and the amount of VOM released into the atmosphere as a result of the incident;

6) All sources complying with this Section under subsection (b)(5) must collect and record monthly the following information for each cleaning operation subject to subsection (b)(5):

A) The name, identification, and volume of each VOM-containing cleaning solution as applied in each cleaning operation;

B) The volume of each fresh cleaning solvent used for cleaning coating, ink, adhesive, or resin manufacturing equipment;

C) The volume of cleaning solvent recovered for either offsite or onsite reuse or recycling for further use in the cleaning of coating, ink, adhesive, or resin manufacturing equipment;

7) The owner or operator of a source with cleaning operations that fall under one or more of the exclusions in subsection (a)(2)(C)(v), (a)(2)(C)(xiii) or (a)(2)(C)(xvii), including sources exempt from ~~the limitations of~~ this Section ~~because of the criteria in~~under subsection (a)(1), must:

A) By January 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes a declaration that the source has cleaning operations that fall under one or more of the exclusions in subsection (a)(2)(C)(v), (a)(2)(C)(xiii) or (a)(2)(C)(xvii), and a statement identifying each

such cleaning operation and the exclusion applicable to each cleaning operation;

B) Collect and record the name, identification, and volume of each cleaning solvent as applied each day in each cleaning operation that falls under one or more of the exclusions in subsection (a)(2)(C)(v), (a)(2)(C)(xiii), or (a)(2)(C)(xvii); and

C) Notify the Agency in writing if the amount of cleaning solvent used in the cleaning of medical device and pharmaceutical manufacturing operations or of sterilization indicating ink application equipment at the source ever exceeds 5.7 liters (1.5 gallons) per day, or if the amount of aerosol cleaning products used at the source ever exceeds 4.7 liters (1.25 gallons) per day, within 30 days after the exceedance occurs;

8) The owner or operator of a source with cleaning operations that fall under one or more of the exclusions in subsection (a)(2)(C)(xviii) or (a)(2)(C)(xix), including sources exempt from ~~the limitations of t~~this Section ~~because of the criteria in~~under subsection (a)(1), must:

A) By January 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes a declaration that the source has cleaning operations that fall under one or more of the exclusions in subsection (a)(2)(C)(xviii) or (a)(2)(C)(xix), and a statement identifying each ~~such~~ cleaning operation and the exclusion applicable to each cleaning operation;

B) Collect and record the name identification, volume, and VOM content of each cleaning solvent as applied each month in each cleaning operation that falls under one or more of the exclusions in subsection (a)(2)(C)(xviii) or (a)(2)(C)(xix);

C) For cleaning operations that fall under the exclusion in subsection (a)(2)(C)(xviii), collect and record each month information demonstrating that the exempt cleaning solvent is being used exclusively for the cleaning of plastic-based or vinyl-based substrates for use in the screen printing process when using UV curable ink and coating systems; and

D) For cleaning operations that fall under the exclusion in subsection (a)(2)(C)(xix), collect and record each month information demonstrating that the exempt cleaning solvent is being used exclusively for production line performance testing of coatings that

are in research and development and are not yet commercially used for the applications for which they are being tested;

9) All sources subject to subsections (b) and (d) must notify the Agency of any violation of subsection (b) or (d) by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following~~ after the occurrence of the violation;

10) All records required by this subsection (e) must be ~~kept~~ retained by the source for at least three years and must be made available to the Agency upon request.

f) Monitoring Requirements

1) If an afterburner is used to demonstrate compliance, the owner or operator of a source subject to subsection(b)(3) must:

A) Install, calibrate, operate, and maintain temperature monitoring devices with an accuracy of 3 °C or 5 °F on the emissions control system in ~~accordance~~ compliance with Section 219.105(d)(2) and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring must be performed at all times when the emissions control system is operating; and

B) Install, calibrate, operate, and maintain~~,~~ in accordance with manufacturer's specifications~~,~~ a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer~~,~~ with at least the same accuracy as the temperature monitor;

2) If a carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to subsection (b)(3) must use Agency and USEPA approved continuous monitoring equipment that is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use. The continuous monitoring equipment must monitor the VOM concentration of each carbon adsorption bed or the exhaust of the bed next in sequence to be desorbed;

3) If an emissions control system other than an afterburner or carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to subsection (b)(3) must install, maintain, calibrate, and operate ~~such~~ the monitoring equipment ~~as stated in~~under the owner's or operator's plan approved by the Agency and USEPA under subsection (b)(3).

g) Testing Requirements

1) Testing to demonstrate compliance with ~~the requirements of~~ this Section must be conducted by the owner or operator within 90 days after a request by the Agency, or as otherwise specified in this Section. The testing must be conducted at the expense of the owner or operator, and the owner or operator must notify the Agency in writing 30 days ~~in advance of~~before conducting the testing to allow the Agency to be present during the testing;

2) Testing to demonstrate compliance with the VOM content limitations in subsection (b)(1)~~,~~ and to determine the VOM content of cleaning solvents and cleaning solutions~~,~~ must be conducted as follows:

A) The applicable test methods and procedures ~~specified~~ in Section 219.105(a) must be used; ~~provided,~~ however, Method 24, incorporated by reference in Section 219.112, must be used to demonstrate compliance; or

B) The manufacturer's specifications for VOM content for cleaning solvents may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a); ~~provided,~~ however, Method 24 must be used to determine compliance. In the event of any inconsistency between a Method 24 test and the manufacturer's specifications, the Method 24 test must govern;

3) Testing to determine the VOM composite partial vapor pressure of cleaning solvents, cleaning solvent concentrates, and as-used cleaning solutions must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~specified~~ in Section 219.110;

4) For afterburners and carbon adsorbers, the methods and procedures of Section 219.105(d) through (f) must be used for testing to demonstrate compliance with ~~the requirements of~~ subsection (b)(3), as follows:

A) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112;

B) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112;

C) To determine the VOM concentration of the exhaust stream entering and exiting the emissions control system, Method 25 or

25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

i) The allowable outlet concentration of VOM from the emissions control system is less than 50 ppmv, as carbon;

ii) The VOM concentration at the inlet of the emissions control system and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

iii) Due to the high efficiency of the emissions control system, the anticipated VOM concentration at the emissions control system exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

D) During testing, the cleaning equipment must be operated at representative operating conditions and flow rates;

5) An owner or operator using an emissions control system other than an afterburner or carbon adsorber must conduct testing to demonstrate compliance with ~~the requirements of~~ subsection (b)(3) ~~as stated in~~under the owner's or operator's plan approved by the Agency and USEPA as federally enforceable permit conditions under subsection (b)(3).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.204 Emission Limitations

Except as provided in Sections 219.205, 219.207, 219.208, 219.212, 219.215, and 219.216, an owner or operator of a coating line must not apply at any time any coating in which the VOM content exceeds the following emission limitations for the specified coating. Except as otherwise

provided in subsections (a), (c), (g), (h), (j), (l), (n), (o), (q), and (r), compliance with the emission limitations marked with an asterisk in this Section is required on and after March 15, 1996, and compliance with emission limitations not marked with an asterisk is required until March 15, 1996. The following emission limitations are expressed in units of VOM per volume of coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied at each coating applicator, except where noted. Compounds which are specifically exempted from the definition of VOM should be treated as water for the purpose of calculating the "less water" part of the coating composition. Compliance with this Subpart must be demonstrated through the applicable coating analysis test methods and procedures ~~specified~~ in Section 219.105(a) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(c) except where noted. (Note: The equation ~~presented~~ in Section 219.206 must be used to calculate emission limitations for determining compliance by add-on controls, credits for transfer efficiency, emissions trades and cross-line averaging.) The emission limitations are as follows:

a)	Automobile or Light-Duty Truck Coating		kg/l	lb/gal
	1)	~~Prior to~~Before May 1, 2012:		
		A) Prime coat	0.14 0.14*	(1.2) (1.2)*
		B) Primer surface coat	1.81 1.81*	(15.1) (15.1)*

BOARD NOTE: The primer surface coat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation must be based on the daily-weighted average from an entire primer surface operation. Compliance must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(A) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the primer surface limitation.)

		kg/l	lb/gal
C)	Topcoat	1.81 1.81*	(15.1) (15.1)*

BOARD NOTE: The topcoat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation must be based on the daily-weighted average from an entire topcoat operation. Compliance must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(A) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing

proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the topcoat limitation.)

D)	Final repair coat	kg/l 0.58 0.58*	lb/gal (4.8) (4.8)*

2) On and after May 1, 2012, subject automobile and light-duty truck coating lines must comply with the following limitations. These limitations must not apply to materials supplied in containers with a net volume of 0.47 liters (16 oz) or less, or a net weight of 0.45 kg (1 lb) or less:

A) Electrodeposition primer (EDP) operations. For purposes of this subsection (a)(2)(A), "electrodeposition" means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created.

		kg VOM/l coating solids applied	lb VOM/gal coating solids applied
i)	When solids turnover ratio (R_T) is greater than or equal to 0.160	0.084	(0.7)
ii)	When R_T is greater than or equal to 0.040 and less than 0.160	$0.084 \times 350^{0.160-R_T}$	$(0.084 \times 350^{0.160-R_T} \times 8.34)$

B) Primer surfacer operations

		kg VOM/l coating solids deposited	lb VOM/gal coating solids deposited
i)	VOM content limitation	1.44	(12.0)

ii) Compliance with the limitation in subsection (a)(2)(B)(i) must be based on the daily-weighted average from an entire primer surfacer operation. Compliance must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(B) and the

recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the primer surfacer limitation.

C) Topcoat operations

		kg VOM/l coating solids deposited	lb VOM/gal coating solids deposited
i)	VOM content limitation	1.44	(12.0)

ii) Compliance with the limitation in subsection (a)(2)(C)(i) must be based on the daily-weighted average from an entire topcoat operation. Compliance must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(B) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the topcoat limitation.

D) Combined primer surfacer and topcoat operations

		kg VOM/l coating solids deposited	lb VOM/gal coating solids deposited
i)	VOM content limitation	1.44	(12.0)

ii) Compliance with the limitation in subsection (a)(2)(D)(i) must be based on the daily-weighted average from the combined primer surfacer and topcoat operations. Compliance must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(B) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance must be performed in ~~accordance~~

compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the combined primer surfacer and topcoat limitation.

E) Final repair coat operations

		kg/l coatings	lb/gal coatings
i)	VOM content limitation	0.58	(4.8)

ii) Compliance with the final repair operations limitation in subsection (a)(2)(E)(i) must be on an occurrence-weighted average basis, calculated in ~~accordance~~ compliance with the equation below, in which clear coatings must have a weighting factor of 2 and all other coatings must have a weighting factor of 1. For purposes of this subsection (a)(2)(E)(ii), an "occurrence" is the application of the combination of coatings that constitute a final repair coat for a single automobile or light-duty truck. Section 219.205 does not apply to the final repair coat limitation.

$$VOM_{tot} = \frac{2VOM_{cc} + \sum_{i=1}^{n} VOM_i}{n+2}$$

where:

VOM_{tot} = Total VOM content of all coatings, as applied, on an occurrence weighted average basis, and used to determine compliance with this subsection (a)(2)(E).

i = Subscript denoting a specific coating applied.

n = Total number of coatings applied in the final repair operation, other than clear coatings.

VOM_{cc} = The VOM content, as applied, of the clear coat used in the final repair operation.

VOM_i = The VOM content of each coating used in the final repair operation, as applied, other than clear coatings.

F) Miscellaneous Materials. For reactive adhesives subject to this subsection (a)(2)(F), compliance must be demonstrated in ~~accordance~~ compliance with the methods and procedures ~~set forth~~ in appendix A to Subpart PPPP of 40 CFR 63, incorporated by reference in Section 219.112.

		kg/l	lb/gal
i)	Glass bonding primer	0.90	(7.51)
ii)	Adhesive	0.25	(2.09)
iii)	Cavity wax	0.65	(5.42)
iv)	Trunk sealer	0.65	(5.42)
v)	Deadener	0.65	(5.42)
vi)	Gasket/gasket sealing material	0.20	(1.67)
vii)	Underbody coating	0.65	(5.42)
viii)	Trunk interior coating	0.65	(5.42)
ix)	Bedliner	0.20	(1.67)
x)	Weatherstrip adhesive	0.75	(6.26)
xi)	Lubricating wax/compound	0.70	(5.84)

b) Can Coating		kg/l	lb/gal
1)	Sheet basecoat and overvarnish		
	A) Sheet basecoat	0.34 0.26*	(2.8) (2.2)*
	B) Overvarnish	0.34 0.34	(2.8) (2.8)*
2)	Exterior basecoat and overvarnish	0.34 0.25*	(2.8) (2.1)*
3)	Interior body spray coat		
	A) Two piece	0.51	(4.2)

		0.44*	(3.7)*
	B) Three piece	0.51 0.51*	(4.2) (4.2)*
4)	Exterior end coat	0.51 0.51*	(4.2) (4.2)*
5)	Side seam spray coat	0.66 0.66*	(5.5) (5.5)*
6)	End sealing compound coat	0.44 0.44*	(3.7) (3.7)*

c) Paper Coating

1)	~~Prior to~~Before May 1, 2011:	kg/l 0.28	lb/gal (2.3)
2)	On and after May 1, 2011, the owner or operator must comply with either the limit in weight of VOM per weight of solids applied or weight of VOM per weight of coatigs applied:	kg VOM/kg (lb VOM/lb) solids applied	kg VOM/kg (lb VOM/lb) coatings applied
	A) Pressure sensitive tape and label surface coatings	0.20 (0.20)	(0.067) (0.067)
	B) All other paper coatings	0.40 (0.40)	(0.08) (0.08)

3) The paper coating limitation in this subsection (c) does not apply to any owner or operator of any paper coating line on which flexographic, rotogravure, lithographic, or letterpress printing is performed if the paper coating line complies with the applicable emissions limitations in Subpart H. In addition, screen printing on paper is not regulated as paper coating~~,~~ but is regulated under Subpart TT. On and after May 1, 2011, the paper coating limitation also does not apply to coating performed on or in-line with any digital printing press, or to size presses and on-machine coaters on papermaking machines applying sizing or water-based clays.

d)	Coil Coating		kg/l 0.31 0.20*	lb/gal (2.6) (1.7)*
e)	Fabric Coating		0.35 0.28*	(2.9) (2.3)*
f)	Vinyl Coating		0.45 0.28*	(3.8) (2.3)*
g)	Metal Furniture Coating			
	1)	~~Prior to~~Before May 1, 2011:	kg/l	lb/gal
		A) Air dried	0.34	(2.8)
		B) Baked	0.28	(2.3)
	2)	On and after May 1, 2011, the owner or operator must comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied:	kg/l (lb/gal) (coatings applied)	kg/l (lb/gal) solids applied
		A) General, One Component	0.275 (2.3)	0.40 (3.3)
		B) General, Multi-Component		
		i) Air dried	0.340 (2.8)	0.55 (4.5)
		ii) Baked	0.360 (3.0)	0.61 (5.1)
		C) Extreme High Gloss		
		i) Air dried	0.340 (2.8)	0.55 (4.5)
		ii) Baked	0.360 (3.0)	0.61 (5.1)
		D) Extreme Performance		
		i) Air dried	0.420 (3.5)	0.80 (6.7)
		ii) Baked	0.360	0.61

		(3.0)	(5.1)
E)	Heat Resistant		
i)	Air dried	0.420 (3.5)	0.80 (6.7)
ii)	Baked	0.360 (3.0)	0.61 (5.1)
F)	Metallic	0.420 (3.5)	0.80 (6.7)
G)	Pretreatment Coatings	0.420 (3.5)	0.80 (6.7)
H)	Solar Absorbent		
i)	Air dried	0.420 (3.5)	0.80 (6.7)
ii)	Baked	0.360 (3.0)	0.61 (5.1)

3) On and after May 1, 2011, the limitations in this subsection (g) do not apply to stencil coatings, safety-indicating coatings, solid-film lubricants, electric-insulating and thermal-conducting coatings, touch-up and repair coatings, or coating applications ~~utilizing~~ using hand-held aerosol cans.

h) Large Appliance Coating

1)	~~Prior to~~Before May 1, 2011:	kg/l	lb/gal
A)	Air dried	0.34	(2.8)
B)	Baked	0.28	(2.3)

2)	On and after May 1, 2011, the owner or operator must comply with either the limit in weight of VOM per volume of coatings applied of weight of VOM per volume of solids applied:	kg/l (lb/gal) (coatings applied)	kg/l (lb/gal) solids applied
A)	General, One Component	0.275 (2.3)	0.40 (3.3)
B)	General, Multi-Component		
i)	Air dried	0.340	0.55

		(2.8)	(4.5)
	ii) Baked	0.275 (2.3)	0.40 (3.3)
C)	Extreme High Gloss		
	i) Air dried	0.340 (2.8)	0.55 (4.5)
	ii) Baked	0.360 (3.0)	0.61 (5.1)
D)	Extreme Performance		
	i) Air dried	0.420 (3.5)	0.80 (6.7)
	ii) Baked	0.360 (3.0)	0.61 (5.1)
E)	Heat Resistant		
	i) Air dried	0.420 (3.5)	0.80 (6.7)
	ii) Baked	0.360 (3.0)	0.61 (5.1)
F)	Metallic	0.420 (3.5)	0.80 (6.7)
G)	Pretreatment Coatings	0.420 (3.5)	0.80 (6.7)
H)	Solar Absorbent		
	i) Air dried	0.420 (3.5)	0.80 (6.7)
	ii) Baked	0.360	0.61

3) The limitations in this subsection (h) do not apply to the use of quick-drying lacquers for repair of scratches and nicks that occur during assembly, ~~provided that~~if the volume of coating does not exceed 0.95 1 (1 quart) in any one rolling eight-hour period. On and after May 1, 2011, these limitations also do not apply to stencil coatings, safety-indicating coatings, solid-film lubricants, electric-insulating and thermal-conducting coatings, touch-up and repair coatings, or coating applications ~~utilizing~~ using hand-held aerosol cans.

		kg/l	lb/gal
i)	Magnet Wire Coating	0.20	(1.7)
		0.20*	(1.7)*
j)	~~Prior to~~Before May 1, 2012: Miscellaneous Metal Parts and Products Coating		
	1) Clear coating	0.52	(4.3)
		0.52*	(4.3)*
	2) Extreme performance coating		
	A) Air dried	0.42	(3.5)
		0.42*	(3.5)*
	B) Baked	0.42	(3.5)
		0.40*	(3.3)*
	3) Steel pail and drum interior coating	0.52	(4.3)
		0.52*	(4.3)*
	4) All other coatings		
	A) Air dried	0.42	(3.5)
		0.40*	(3.3)*
	B) Baked	0.36	(3.0)
		0.34*	(2.8)*
	5) Metallic Coating		
	A) Air dried	0.42	(3.5)
		0.42*	(3.5)*
	B) Baked	0.36	(3.0)
		0.36	(3.0)*

6) For purposes of subsection (j)(5), "metallic coating" means a coating which contains more than ¼ lb/gal of metal particles, as applied.

BOARD NOTE: On and after May 1, 2012, the limitations in Section 219.204(q) apply to this category of coating.

		kg/l	lb/gal
k)	Heavy Off-Highway Vehicle Products Coating		
	1) Extreme performance prime coat	0.42	(3.5)
		0.42*	(3.5)*

2)	Extreme performance topcoat (air dried)	0.42 0.42*	(3.5) (3.5)*
3)	Final repair coat (air dried)	0.42 0.42*	(3.5) (3.5)*

4) All other coatings are subject to the emission limitations for miscellaneous metal parts and products coatings in subsection (j).

l) Wood Furniture Coating

1) Limitations before March 15, 1998:

		kg/l	lb/gal
A)	Clear topcoat	0.67	(5.6)
B)	Opaque stain	0.56	(4.7)
C)	Pigmented coat	0.60	(5.0)
D)	Repair coat	0.67	(5.6)
E)	Sealer	0.67	(5.6)
F)	Semi-transparent stain	0.79	(6.6)
G)	Wash coat	0.73	(6.1)

BOARD NOTE: ~~Prior to~~Before March 15, 1998, an owner or operator of a wood furniture coating operation subject to this Section must apply all coatings, with the exception of no more than 37.8 l (10 gal) of coating per day used for touch-up and repair operations, using one or more of the following application systems: airless spray application system, air-assisted airless spray application system, electrostatic spray application system, electrostatic bell or disc spray application system, heated airless spray application system, roller coating, brush or wipe coating application system, dip coating application system, or high volume low pressure (HVLP) application system.)

2) On and after March 15, 1998, wood furniture sealers and topcoats must comply with one of the limitations specified in subsections (l)(2)(A) through (E):

		kg VOM/kg solids	lb VOM/lb solids
A)	Topcoat	0.8	(0.8)
B)	Sealers and topcoats with the following limits:		

i)	Sealer other than acid-cured alkyd amino vinyl sealer	1.9	(1.9)
ii)	Topcoat other than acid-cured alkyd amino conversion varnish topcoat	1.8	(1.8)
iii)	Acid-cured alkyd amino vinyl sealer	2.3	(2.3)
iv)	Acid-cured alkyd amino conversion varnish topcoat	2.0	(2.0)

C) Meet the provisions of Section 219.215 for use of an averaging approach;

D) Achieve a reduction in emissions equivalent to the requirements of subsection (l)(2)(A) or (B), as calculated using Section 219.216; or

E) Use a combination of the methods specified in subsections (l)(2)(A) through (D).

3) Other wood furniture coating limitations on and after March 15, 1998:

		kg/l	lb/gal
A)	Opaque stain	0.56	(4.7)
B)	Non-topcoat pigmented coat	0.60	(5.0)
C)	Repair coat	0.67	(5.6)
D)	Semi-transparent stain	0.79	(6.6)
E)	Wash coat	0.73	(6.1)

4) Other wood furniture coating requirements on and after March 15, 1998:

A) A source subject to the limitations of subsection (l)~~,~~ (2) or (3) and ~~utilizing~~ using one or more wood furniture coating spray booths must not use strippable spray booth coatings containing more than 0.8 kg VOM/kg solids (0.8 lb VOM/lb solids), as applied.

B) Any source subject to the limitations of subsection (l)~~,~~ (2) or (3) must comply with Section 219.217.

C) Any source subject to the limitations of subsection (l)(2)(A) or (B) and ~~utilizing~~ using one or more continuous coaters, must for each continuous coater, use an initial coating which complies with the

limitations of subsection (l)(2)(A) or (B). The viscosity of the coating in each reservoir must always be greater than or equal to the viscosity of the initial coating in the reservoir. The owner or operator must:

i) Monitor the viscosity of the coating in the reservoir with a viscosity meter or by testing the viscosity of the initial coating and retesting the coating in the reservoir each time solvent is added;

ii) Collect and record the reservoir viscosity and the amount and weight of VOM per weight of solids of coating and solvent each time coating or solvent is added; and

iii) Maintain these records at the source for ~~a period of~~ three years.

m)	~~Prior to~~Before May 1, 2012: Plastic Parts Coating: Automotive/Transportation		kg/l	lb/gal
1)	Interiors			
	A)	Baked		
		i) Color coat	0.49*	(4.1)*
		ii) Primer	0.46*	(3.8)*
	B)	Air dried

		ii) Primer	0.42*	(3.5)*
2)	Exteriors (flexible and non-flexible)			
	A)	Baked		
		i) Primer	0.60*	(5.0)*
		ii) Primer non-flexible	0.54*	(4.5)*
		iii) Clear coat	0.52*	(4.3)*
		iv) Color coat	0.55*	(4.6)*
	B)	Air dried		
		i) Primer	0.66*	(5.5)*

	ii)	Clear coat	0.54*	(4.5)*
	iii)	Color coat (red & black)	0.67*	(5.6)*
	iv)	Color coat (others)	0.61*	(5.1)*
3)	Specialty			
	A)	Vacuum metallizing basecoats, texture basecoats	0.66*	(5.5)*
	B)	Black coatings, reflective argent coatings, air bag cover coatings, and soft coatings	0.71*	(5.9)*
	C)	Gloss reducers, vacuum metallizing topcoats, and texture topcoats	0.77*	(6.4)*
	D)	Stencil coatings, adhesion primers, ink pad coatings, electrostatic prep coatings, and resist coatings	0.82*	(6.8)*
	E)	Head lamp lens coatings	0.89*	(7.4)*

BOARD NOTE: On and after May 1, 2012, the limitations in Section 219.204(q) apply to this category of coating.

n)	~~Prior to~~Before May 1, 2012: Plastic Parts Coating: Business Machine		kg/l	lb/gal
1)	Primer		0.14*	(1.2)*
2)	Color coat (non-texture coat)		0.28*	(2.3)*
3)	Color coat (texture coat)		0.28*	(2.3)*
4)	Electromagnetic interference/radio frequency interference (EMI/RFI) shielding coatings		0.48*	(4.0)*
5)	Specialty Coatings			
	A)	Soft coat	0.52*	(4.3)*
	B)	Plating resist	0.71*	(5.9)*
	C)	Plating sensitizer	0.85*	(7.1)*

BOARD NOTE: On and after May 1, 2012, the limitations in Section 219.204(q) apply to this category of coating.

o) Flat Wood Paneling Coatings. On and after August 1, 2010, flat wood paneling coatings must comply with one of the following limitations:

1) 0.25 kg VOM/l of coatings (2.1 lb VOM/gal coatings); or

2) 0.35 kg VOM/l solids (2.9 lb VOM/gal solids).

BOARD NOTE: The Board has omitted subsection (p) and adopted a subsection (q) ~~in order~~ to ~~preserve consistent labeling with similar requirements in~~be consistent with 35 Ill. Adm. Code 218.

q) Miscellaneous Metal Parts and Products Coatings and Plastic Parts and Products Coatings On and after May 1, 2012. On and after May 1, 2012, the owner or operator of a miscellaneous metal or plastic parts coating line must comply with the limitations in subsection (q). The limitations in subsection (q) do not apply to ~~aerosol coating products, powder coatings, or~~ primer sealants and ejection cartridge sealants used in ammunition manufacturing, aerosol coating products, or powder coatings. Primer sealants and ejection cartridge sealants are regulated under Subpart TT.

1) Metal Parts and Products. For purposes of this subsection (q)(1), "corrosion resistant basecoat" means a water-borne epoxy coating applied via an electrodeposition process to a metal surface ~~prior to~~before spray coating, for the purpose of enhancing corrosion resistance. The limitations in this subsection (q)(1) do not apply to stencil coats, safety-indicating coatings, solid-film lubricants, electric-insulating and thermal-conducting coatings, magnetic data storage disk coatings, and plastic extruded onto metal parts to form a coating. The limitations in Section 219.219 apply to these coatings unless specifically excluded. The owner or operator must comply with either the limit in weight of VOM per volume of coatings applies or weight of VOM per volume os solids applied.

2) Plastic Parts and Products: Miscellaneous. For purposes of this subsection (q)(2), miscellaneous plastic parts and products are plastic parts and products that are not subject to subsection (q)(3), (q)(4), (q)(5), or (q)(6). The limitations in subsection (q)(2) do not apply to touch-up and repair coatings; stencil coats applied on clear or transparent substrates; clear or translucent coatings; coatings applied at a paint manufacturing facility while conducting performance tests on the coatings; any individual coating category used in volumes less than 189.2 liters (50 gallons) in any one calendar year, if the total usage of all such coatings does not exceed 756.9 liters (200 gallons) per calendar year per source and substitute compliant coatings are not available; reflective coatings applied to highway cones; mask coatings that are less than 0.5 mm thick (dried) if the area coated is less than 25 square inches; electromagnetic interference/radio frequency interference (EMI/RFI) shielding coatings; and heparin-benzalkonium chloride (HBAC)-containing coatings applied to medical devices if the total usage of all such coatings does not exceed 378.4 liters (100 gallons) per calendar year per source. The limitations in Section 219.219 apply to these coatings unless specifically excluded. The owner or operator must comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.

		kg/l (lb/gal) coatings	kg/l (lb/gal) solids
A)	General one component coating	0.28 (2.3)	0.40 (3.35)
B)	General multi-component	0.42 (3.5)	0.80 (6.67)

C)	Electric dissipating coatings and shock-free coatings	0.80 (6.7)	8.96 (74.7)
D)	Extreme performance (2-pack coatings)	0.42 (3.5)	0.80 (6.67)

i)	Vacuum metallizing basecoats	0.66 (5.5)	2.62 (21.8)
ii)	Vacuum metallizing topcoats	0.77 (6.4)	6.06 (49.1)

F) Red, yellow, and black coatings: Subject coating lines must comply with a limit determined by multiplying the appropriate limit in subsections (q)(3)(A) through (q)(3)(C) by 1.15.

4) Plastic Parts and Products: Business Machine. The limitations of this subsection (q)(4) do not apply to vacuum metallizing coatings, gloss reducers, texture topcoats, adhesion primers, electrostatic preparation coatings, stencil coats, and resist coats other than plating resist coats. The limitations in Section 219.219 apply to these coatings unless specifically excluded. The owner or operator must comply with either the limit in weight of VOM per volume of coatings applied or weight of VOM per volume of solids applied.

		kg/l (lb/gal) coatings	kg/l (lb/gal) solids
A)	Primers	0.35 (2.9)	0.57 (4.80)

r) Aerospace Facilities. On and after July 1, 2021, the owner or operator of an aerospace facility must comply with the coating limitations in this subsection (r). The limitations in this subsection (r) do not apply to the following activities in which coating of aerospace components and vehicles may take place: research and development, quality control, laboratory testing, and electronic parts and assemblies (except for coating of completed assemblies). The limitations in this subsection (r) also do not apply to aerospace facility operations involving space vehicles or rework operations performed on antique aerospace vehicles or components. The coating limitations in subsection (r)(2) do not apply to aerosol coatings, Department of Defense classified coatings, or the use of separate formulations of aerospace specialty coatings in volumes of less than 50 gallons per year, subject to a maximum exemption of 200 gallons for all such formulations applied annually.

Section 219.205 Daily-Weighted Average Limitations

An owner or operator of a coating line subject to the limitations of Section 219.204 and complying by means of this Section must not operate the subject coating line unless the owner or operator has demonstrated compliance with subsection (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), or (k) (depending upon the category of coating) through the applicable coating analysis test methods and procedures ~~specified~~ in Section 219.105(a) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(d):

a) An owner or operator of a coating line subject to only one of the limitations from among Section 219.204(a)(1)(A), (a)(1)(D), (a)(2)(A), (a)(2)(E), (a)(2)(F), (c)(1), (d), (e), (f), (i), or (o) must not apply coatings on any such coating line, during any day, whose daily-weighted average VOM content exceeds the emission limitation to which the coatings are subject.

b) ~~Prior to~~Before May 1, 2012, an owner or operator of a miscellaneous metal parts and products coating line subject to the limitations of Section 219.204(j) must not apply coatings to miscellaneous metal parts or products on the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met.

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(j) during the same day (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to

the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(j), during the same day, the owner or operator must have a site-specific proposal approved by the Agency and approved by the USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

c) An owner or operator of a can coating line subject to the limitations of Section 219.204(b) must not operate the subject coating line using a coating with a VOM content in excess of the limitations ~~specified~~ in Section 219.204(b) unless all of the following requirements are met:

1) An alternative daily emission limitation for the can coating operation, i.e., for all of the can coating lines at the source, must be determined according to subsection (c)(2). Actual daily emissions must never exceed the alternative daily emission limitation and must be calculated by use of the following equation.

$$E_b = \sum_{i=1}^{n} V_i C_i$$

where:

E_d = Actual VOM emissions for the day in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of coatings applied in the can coating operation, i.e., all can coating lines at the source;

V_i = Volume of each coating applied for the day in units of l/day (gal/day) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

2) The alternative daily emission limitation (A_d) must be determined for the can coating operation, i.e., for all of the can coating lines at the source, on a daily basis as follows:

$$A_d = \sum_{i=1}^{n} V_i L_i \frac{(D_i - C_i)}{(D_i - L_i)}$$

where:

A_d = The VOM emissions allowed for the day in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of surface coatings applied in the can coating operation;

C_i = The VOM content of each surface coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

D_i = The density of VOM in each coating applied. For the purposes of calculating A_d, the density is 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM);

V_i = Volume of each surface coating applied for the day in units of l (gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

L_i = The VOM emission limitation for each surface coating applied as specified in Section 219.204(b) in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

d) An owner or operator of a heavy off-highway vehicle products coating line subject to the limitations of Section 219.204(k) must not apply coatings to heavy off-highway vehicle products on the subject coating line unless the requirements ~~of~~ subsection (d)(1) or (d)(2) are met.

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(k)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(k), during the same day,

the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and approved by the USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

e) An owner or operator of a wood furniture coating line subject to the limitations of Section 219.204(l)(1) or (l)(3) must not apply coatings to wood furniture on the subject coating line unless the requirements of subsection (e)(1) or (e)(2), in addition to the requirements ~~specified~~ in the note to Section 219.204(l)(1), are met.

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(l)(1) or (l)(3)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.67 kg/l (5.6 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(l)(1) or (l)(3), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and approved by the USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

f) ~~Prior to~~Before May 1, 2012, an owner or operator of a plastic parts coating line subject to the limitations of Section 219.204(m) or (n) must not apply coatings to business machine or automotive/transportation plastic parts on the subject coating line unless the requirements of subsection (f)(1) or (f)(2) are met.

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(m) or (n)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(m) or (n), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

g) An owner or operator of a metal furniture coating line subject to the limitations of Section 219.204(g) must not apply coatings on the subject coating line unless the requirements of subsection (g)(1) or (g)(2) are met:

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(g)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.34 kg/l (2.8 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(g), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

h) An owner or operator of a large appliance coating line subject to the limitations of Section 219.204(h) must not apply coatings on the subject coating line unless the requirements of subsection (h)(1) or (h)(2) of this Section are met.

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(h)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.34 kg/l (2.8 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(h), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

i) On and after May 1, 2011, an owner or operator of a paper coating line subject to the limitations of Section 219.204(c) must not apply coatings on the subject coating line unless the requirements in subsection (i)(1) or (i)(2) are met:

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(c) during the same day (e.g., all coatings used on the line are

subject to 0.40 kg/kg solids (0.08 kg/kg coatings)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(c) during the same day, the owner or operator must have a site-specific proposal approved by the Agency and approved by USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

j) On and after May 1, 2012, an owner or operator of a miscellaneous metal parts and products coating line, plastic parts or products coating line, pleasure craft surface coating line, or motor vehicle materials coating line subject to the limitations of Section 219.204(q) must not apply coatings on the subject coating line unless the requirements of subsection (j)(1) or (j)(2) are met:

1) For each coating line that applies multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(q)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used; or

2) For each coating line that applies coatings subject to more than one numerical emission limitation in Section 219.204(q), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal approved by the Agency and approved by USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

k) An owner or operator of an aerospace facility subject to the limitations of Section 219.204(r) must not apply coatings at the subject facility unless the requirements of subsection (k)(1) or (k)(2) are met:

1) For each averaging plan that involves multiple coatings, all of which are subject to the same numerical emission limitation within Section 219.204(r)~~,~~ during the same day (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), the daily-weighted average VOM content must not exceed the coating VOM content limit corresponding to the category of coating used;

2) For each averaging plan that involves coatings subject to more than one numerical emission limitation in Section 219.204(r), during the same day, the owner or operator must have a ~~site specific~~site-specific proposal

approved by the Agency and approved by USEPA as a SIP revision. To receive approval, the requirements of USEPA's Emissions Trading Policy Statement (and related policy), 51 Fed. Reg. 43814 (December 4, 1986), must be satisfied.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.206 Solids Basis Calculation

Limitations in terms of kg (lbs) of VOM emissions per 1 (gal) of solids as applied at each coating applicator ~~shall~~ must be determined by the following equation:

$$S = \frac{C}{1 - (C/D)}$$

where:

S = The limitation on VOM emissions in terms of kg VOM/1 (lbsVOM/gal) of solids;

C = The limitation on VOM emissions in terms of kg/l (lbs/gal) of coating (minus water and any compounds which are specifically excluded from the definition of VOM) ~~specified~~ in Section 219.204;

D = The density of VOM in the coating. For the purposes of calculating S, the density is 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.207 Alternative Emission Limitations

a) Any owner or operator of a coating line subject to Section 219.204, except coating lines subject to Section 219.204(q)(6), may comply with this Section~~,~~ rather than with Section 219.204~~,~~ if a capture system and control device are operated at all times the coating line is in operation and the owner or operator demonstrates compliance with subsection (c), (d), (e), (f), (g), (h), (i), (j), (k), (l), (m), or (n) (depending upon the source category) through the applicable coating analysis and capture system and control device efficiency test methods and procedures specified in Section 219.105 and the recordkeeping and reporting requirements specified in Section 219.211(e); and the control device is equipped with the applicable monitoring equipment specified in Section 219.105(d) and the monitoring equipment is installed, calibrated, operated, and maintained according to vendor specifications at all times the control device is in use. A capture system and control device~~,~~ which does not demonstrate compliance with subsection (c),

(d), (e), (f), (g), (h), (i), (j), (k), (l), (m), or (n) may be used as an alternative to compliance with Section 219.204 only if the alternative is approved by the Agency and approved by the USEPA as a SIP revision.

b) Alternative Add-On Control Methodologies

1) The coating line is equipped with a capture system and control device that provides 81 percent reduction in the overall emissions of VOM from the coating line and the control device has a 90 percent efficiency; or

2) The system used to control VOM from the coating line is demonstrated to have an overall efficiency sufficient to limit VOM emissions to no more than what is allowed under Section 219.204. Use of any control system other than an afterburner, carbon adsorption, condensation, or absorption scrubber system can be allowed only if approved by the Agency and approved by the USEPA as a SIP revision. The use of transfer efficiency credits can be allowed only if approved by the Agency and approved by the USEPA as a SIP revision. Baseline transfer efficiencies and transfer efficiency test methods must be approved by the Agency and the USEPA. ~~Such~~ The overall efficiency is to be determined as follows:

A) Obtain the emission limitation from the appropriate subsection in Section 219.204;

B) Unless complying with an emission limitation in Section 219.204 that is already expressed in terms of weight of VOM per volume of solids, calculate "S" according to the equation in Section 219.206. For coating lines subject to an emission limitation in Section 219.204 that is already expressed in terms of weight of VOM per volume of solids, "S" is equal to ~~such~~ the emission limitation;

C) Calculate the overall efficiency required according to Section 219.105(e). For the purposes of calculating this value, according to the equation in Section 219.105(e)(2), VOM_1 is equal to the value of "S" as determined in subsection (b)(2)(B) ~~of this Section~~. If the coating line is subject to an emission limitation in Section 219.204 that is already expressed in terms of weight of VOM per volume of solids, VOM_1 is equal to that emission limitation.

c) An owner or operator of a coating line subject to only one of the emission limitations from among Section 219.204(a)(1)(A), (a)(1)(D), (a)(2)(A),(a)(2)(E), (a)(2)(F), (c)(1), (d), (e), (f), or (i) and equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met. An owner or operator of a coating line subject to Section 219.204(a)(1)(B) (a) (1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) and equipped with a capture system and control device must not operate the coating

line unless the owner or operator demonstrates compliance with ~~such~~ the limitation in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b)(1)(A) or (b)(1)(B), as applicable.

d) An owner or operator of a miscellaneous metal parts and products coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(j) (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2).

e) An owner or operator of a heavy off-highway vehicle products coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(k) (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met.

f) An owner or operator of a wood furniture coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(l) (e.g., all coatings used on the line are subject to 0.67 kg/l (5.6 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met. If compliance is achieved by meeting the requirements in subsection (b)(2), then the provisions in the note to Section 219.204(l) must also be met.

g) An owner or operator of a can coating line equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (g)(1) or (g)(2) are met.

1) An alternative daily emission limitation for the can coating operation, i.e., for all of the can coating lines at the source, must be determined according to Section 219.205(c)(2). Actual daily emissions must not exceed the alternative daily emission limitation and must be calculated by use of the following equation:

$$E_d = \sum_{i=1}^{n} V_i C_i \left(1 - F_i\right)$$

where:

E_d = Actual VOM emissions for the day in units of kg/day (lbs/day);

i = Subscript denoting the specific coating applied;

n = Total number of surface coatings as applied in the can coating operation;

V_i = Volume of each coating as applied for the day in units of l/day (gal/day) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

F_i = Fraction, by weight, of VOM emissions from the surface coating, reduced or prevented from being emitted to the ambient air. This is the overall efficiency of the capture system and control device.

2) The coating line is equipped with a capture system and control device that provide 75 percent reduction in the overall emissions of VOM from the coating line, and the control device has a 90 percent efficiency.

h) An owner or operator of a plastic parts coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(m) or (n) (e.g., all coatings used on the line are subject to 0.42 kg/l (3.5 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met.

i) ~~Prior to~~Before May 1, 2011, an owner or operator of a metal furniture coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(g) (e.g., all coatings used on the line are subject to 0.34 kg/l (2.8 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2).

j) ~~Prior to~~Before May 1, 2011, an owner or operator of a large appliance coating line that applies one or more coatings during the same day, all of which are subject to the same numerical emission limitation within Section 219.204(h) (e.g., all coatings used on the line are subject to 0.34 kg/l (2.8 lbs/gal)), and that is equipped with a capture system and control device must not operate the subject coating line unless the requirements in subsection (b)(1) or (b)(2) are met.

k) On and after May 1, 2011, an owner or operator of a paper coating line, metal furniture coating line, or large appliance coating line that is equipped with a

capture system and control device must not operate the subject coating line unless either:

1) The capture system and control device provide at least 90 percent reduction in the overall emissions of VOM from the coating line; or

2) The owner or operator complies with the applicable limitation ~~set forth~~ in Section 219.204 by ~~utilizing~~ using a combination of low-VOM coatings and a capture system and control device.

l) An owner or operator of a flat wood paneling coating line that is equipped with a capture system and control device must not operate the subject coating line unless either:

1) The capture system and control device provide at least 90 percent reduction in the overall emissions of VOM from the coating line; or

2) The owner or operator of the flat wood paneling coating line complies with all requirements ~~set forth~~ in subsection (b)(2).

m) On and after May 1, 2011, an owner or operator of a miscellaneous metal parts and products coating line, plastic parts and products coating line, or pleasure craft surface coating line that is equipped with a capture system and control device must not operate the subject coating line unless:

1) The capture system and control device provide at least 90 percent reduction in the overall emissions of VOM from the coating line; or

2) The owner or operator of the coating line complies with all requirements in subsection (b)(2).

n) An owner or operator of an aerospace facility that is equipped with a capture system and control device must not operate the subject aerospace coating operation unless:

1) The capture system and control device provide at least 90 percent reduction in the overall emissions of VOM from the aerospace coating operation; or

2) The owner or operator of the aerospace coating operation complies with all requirements ~~set forth~~ in subsection (b)(2).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.208 Exemptions From Emission Limitations

a) Exemptions for all coating categories except wood furniture coating and aerospace facilities. The limitations of this Subpart do not apply to coating lines within a source~~,~~ that otherwise would be subject to the same subsection of Section 219.204 (because they belong to the same coating category, e.g., can coating), ~~provided that~~if combined actual emissions of VOM from all lines at the source subject to that subsection never exceed 6.8 kg/day (15 lbs/day) before ~~the application of~~applying capture systems and control devices. (For example, can coating lines within a source would not be subject to the limitations of Section 219.204(b) if the combined actual emissions of VOM from the can coating lines never exceed 6.8 kg/day (15 lbs/day) before the application of capture systems and control devices.) ~~Prior to~~Before May 2012, volatile organic material emissions from heavy off-highway vehicle products coating lines must be combined with VOM emissions from miscellaneous metal parts and products coating lines to determine applicability. On and after May 1, 2012, VOM emissions from heavy off-highway vehicle products coating lines must be combined with VOM emissions from miscellaneous metal parts and products coating lines and plastic parts and products coating lines to determine applicability. Any owner or operator of a coating source must comply with the applicable coating analysis test methods and procedures ~~specified~~ in Section 219.105(a) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(a) if total VOM emissions from the subject coating lines are always less than or equal to 6.8 kg/day (15 lbs/day) before ~~the application of~~applying capture systems and control devices and~~, therefore,~~ are not subject to the limitations of Section 219.204. Once a category of coating lines at a source is subject to the limitations in Section 219.204 the coating lines are always subject to the limitations in Section 219.204.

b) Applicability for Wood Furniture Coating

1) The limitations of this Subpart apply to a source's wood furniture coating lines if the source contains process emission units~~,~~ not regulated by Subparts B, E, F (excluding Section 219.204(l)), H (excluding Section 219.405), Q, R, S, T (excluding Section 219.486), V, X, Y, Z or BB, which as a group both:

A) Have ~~a~~ maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

B) Are not limited to less than 91 Mg (100 tons) of VOM per calendar year if no air pollution control equipment were used, through production or capacity limitations ~~contained~~ in a federally enforceable permit or SIP revision.

2) The limitations of this Subpart apply to a source's wood furniture coating lines~~,~~ on and after March 15, 1996, if the source contains process emission

units~~,~~ which~~,~~ as a group, have a potential to emit 22.7 Mg (25 tons) or more of VOM per calendar year and have not limited emissions to less than 22.7 Mg (25 tons) of VOM per calendar year through production or capacity limitations ~~contained~~ in a federally enforceable operating permit or SIP revision, and that:

A) Are not regulated by Subparts B, E, F (excluding Section 219.204(l)), H, Q, R, S, T (excluding Section 219.486), V, X, Y, Z or BB; and

B) Are not included in any of the following categories: synthetic organic chemical manufacturing industry (SOCMI) distillation, SOCMI reactors, plastic parts coating (business machines), plastic parts coating (other), offset lithography, industrial wastewater, autobody refinishing, SOCMI batch processing, volatile organic liquid storage tanks and clean-up solvents operations.

3) If a source ceases to fulfill the criteria of subsection (b)(1) or (b)(2), the limitations of Section 219.204(l) continue to apply to any wood furniture coating line which was ever subject to the limitations of Section 219.204(l).

4) For the purposes of this subsection (b), an emission unit is considered to be regulated by a Subpart if it is subject to the limitations of that Subpart. An emission unit is not considered regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

5) Any owner or operator of a wood furniture coating line to which the limitations of this Subpart are not applicable due to the criteria in this subsection (b) must, upon request by the Agency or the USEPA, submit records to the Agency and the USEPA within 30 calendar days ~~from~~ after the date of the request that document that the coating line is exempt from the limitations of this Subpart.

c) On and after March 15, 1996, the limitations of this Subpart do not apply to touch-up and repair coatings used by a coating source described by Section 219.204(b), (d), (f), (g), (i), and (q)(5)~~; provided that~~if the source-wide volume of these coatings used does not exceed 0.95 1 (1 quart) per eight-hour period or exceed 209 1/yr (55 gal/yr) for any rolling 12 month period. Recordkeeping and reporting for touch-up and repair coatings must be consistent with subsection (d).

d) ~~Prior to~~Before May 1, 2012, the limitations of this Subpart do not apply to touch-up and repair coatings used by a coating source described by Section 219.204(j), (m), and (n)~~, provided that~~ if the source-wide volume of the coatings used does

not exceed 0.95 l (1 quart) per eight-hour period or exceed 209 l/yr (55 gal/yr) for any rolling ~~twelve month~~12-month period. Recordkeeping and reporting for touch-up and repair coatings must be consistent with subsection (e).

e) On and after March 15, 1996, the owner or operator of a coating line or a group of coating lines using touch-up and repair coatings that are exempted from the limitations of Section 219.204(b), (d), (f), (g), (i), (j), (m), (n), and (q)(5) ~~because of the provisions of~~by subsection (c) or (d) must:

1) Collect and record the name, identification number, and volume used of each touch-up and repair coating, as applied on each coating line, per eight-hour period and per month;

2) Perform calculations on a daily basis, and maintain at the source records of ~~such~~ the calculations, of the combined volume of touch-up and repair coatings used source-wide for each eight-hour period;

3) Perform calculations on a monthly basis, and maintain at the source records of ~~such~~ the calculations, of the combined volume of touch-up and repair coatings used source-wide for the month and the rolling 12 month period;

4) Prepare and maintain at the source an annual summary of the information required to be compiled under subsections (e)(1) and (e)(2) on or before January 31 of the following year;

5) Maintain at the source for a minimum ~~period~~ of three years all records required to be kept under this subsection (e) and make the records available to the Agency upon request;

6) Notify the Agency in writing if the use of touch-up and repair coatings at the source ever exceeds a volume of 0.95 1 (1 quart) per eight-hour period or exceeds 209 1/yr (55 gal/yr) for any rolling ~~12 month~~12-month period within 30 days after any such exceedance. The notification must include a copy of any records of the exceedance; and

7) "Touch-up and repair coatings" means, for purposes of ~~35 Ill. Adm. Code~~Section 219.208, any coating used to cover minor scratches and nicks that occur during manufacturing and assembly processes.

f) Applicability for Aerospace Facilities

1) Except as provided in subsection (f)(4), the requirements of this Subpart apply to an aerospace facility's aerospace coating operations and cleaning operations on and after July 1, 2021, if the source contains process emission units that, as a group, have a potential to emit 22.7 Mg (25 tons)

or more of VOM per calendar year and have not limited emissions to less than 22.7 Mg (25 tons) of VOM per calendar year through production or capacity limitations ~~contained~~ in a federally enforceable permit or SIP revision.

2) If a source ceases to fulfill the criteria of subsection (f)(1), the requirements of this Subpart continue to apply to any aerospace facility that was ever subject to the requirements of this Subpart.

3) The limitations of Section 219.204(r)(2) do not apply to touch-up coatings at aerospace facilities~~, provided that~~ if the combined source-wide volume of the coatings that do not comply with the limitations of Section 219.204(r)(2) used at an aerospace facility does not exceed 2.85 l (3 quarts) per 24-hour period or exceed 209 l/yr (55 gal/yr) for any rolling 12-month period. Recordkeeping and reporting for touch-up coatings must be consistent with Section 219.211(j)(2).

4) The requirements in Section 219.211(k) apply to an aerospace facility's aerospace coating operations and cleaning operations on and after July 1, 2021, if the source contains process emission units that, as a group, have a potential to emit less than 22.7 Mg (25 tons) of VOM per calendar year or have limited emissions to less than 22.7 Mg (25 tons) of VOM per calendar year through production or capacity limitations ~~contained~~ in a federally enforceable permit or SIP revision.

Section 219.209 Exemption From General Rule on Use of Organic Material

No owner or operator of a coating line subject to the limitations of Section 219.204 ~~of this Part~~ is required to meet the limitations of ~~Subpart G (~~Section 219.301 or 219.302~~) of this Part,~~ after the date by which the coating line is required to meet Section 219.204 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.210 Compliance Schedule

Every owner or operator of a coating line (of a type included within Section 219.204 ~~of this Subpart~~) ~~shall~~ must comply with the requirements of Section 219.204, 219.205, 219.207, or 219.208 and Section 219.211 or Sections 219.212 and 219.213 ~~of this Subpart~~ in ~~accordance~~ compliance with the appropriate compliance schedule ~~as specified~~ in subsection (a), (b), (c), (d), (e), (f), (g), (h), or (i) ~~of this Section~~:

a) ~~No~~ An owner or operator of a coating line that is exempt from the limitations of Section 219.204 ~~of this Subpart~~ because of the criteria in Section 219.208(a) or (b) ~~of this Subpart shall~~must not operate ~~said~~ the coating line on or after a date

consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.211(b) ~~of this Subpart~~.

b) ~~No~~ An owner or operator of a coating line complying by means of Section 219.204 ~~of this Subpart shall~~must not operate ~~said~~ the coating line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Sections 219.204 and 219.211(c) ~~of this Subpart~~.

c) ~~No~~ An owner or operator of a coating line complying by means of Section 219.205 ~~of this Subpart shall~~must not operate ~~said~~ the coating line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Sections 219.205 and 219.211(d) ~~of this Subpart~~.

d) ~~No~~ An owner or operator of a coating line complying by means of Section 219.207 ~~of this Subpart shall~~must not operate ~~said~~ the coating line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Sections 219.207 and 219.211(e) ~~of this Subpart~~.

e) ~~No~~ An owner or operator of a coating line subject to one or more of the emission limitations ~~contained~~ in Section 219.204 ~~of this Subpart~~ on or after March 15, 1996, choosing to comply ~~by means of~~under Section 219.204, 219.205, or 219.207 ~~of this Subpart, shall~~must not operate ~~said~~ the coating line on or after March 15, 1996, unless the owner or operator complies with and continues to comply with~~, respectively,~~ the applicable requirements in Section 219.204~~,~~ or the alternative control options in Section 219.205 or 219.207 and the requirements of Section 219.211.

f) ~~No~~ An owner or operator of a coating line subject to one or more of the emission limitations ~~contained~~ in Section 219.204 ~~of this Subpart~~ on or after March 15, 1996, choosing to comply ~~by means of~~under Section 219.212 ~~of this Subpart, shall~~must not operate ~~said~~ the coating line on or after March 15, 1996, unless the owner or operator complies with and continues to comply with the requirements of Sections 219.212 and 219.213 ~~of this Subpart~~.

g) ~~No~~ An owner or operator of a coating line subject to the emission limitations in Section 219.204(c)(2), (g)(2), or (h)(2) ~~of this Subpart shall~~must not operate that coating line on or after a date consistent with Section 219.106(c) ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.204(c)(2), (g)(2), or (h)(2), as applicable, or the alternative control options in Section 219.205 or 219.207, and all applicable requirements in Sections 219.211 and 219.218 ~~of this Subpart~~.

h) ~~No~~ An owner or operator of a coating line subject to the emission limitations ~~contained~~ in Section 219.204(o) ~~of this Subpart shall~~must not operate that coating line on or after a date consistent with Section 219.106(d) ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.204(o) or the alternative control options in Section 219.205 or 219.207, and the requirements of Sections 219.211 and 219.217 ~~of this Subpart~~, as applicable.

i) ~~No~~ An owner or operator of a coating line subject to the emission limitations in Section 219.204(a)(2) or (q) ~~of this Subpart~~, or subject to the limitations in Section 219.219 ~~of this Subpart, shall~~must not operate the coating line on or after a date consistent with Section 219.106(e) ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.204(a)(2) or (q), if applicable, or the alternative control options in Section 219.205 or 219.207, and all applicable requirements in Sections 219.211 and 219.219 ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.211 Recordkeeping and Reporting

a) The VOM content of each coating and the efficiency of each capture system and control device must be determined by the applicable test methods and procedures ~~specified~~ in Section 219.105 to establish the records required under this Section.

b) Any owner or operator of a coating line that is exempted from the limitations of Section 219.204 because of Section 219.208(a) or (b) must comply with the following:

1) For sources exempt from Section 219.208(a), by a date consistent with Section 219.106, the owner or operator of a coating line or group of coating lines referenced in subsection (b) must certify to the Agency that the coating line or group of coating lines is exempt under ~~the provisions of~~ Section 219.208(a). The certification must include:

A) A declaration that the coating line is exempt from the limitations of Section 219.204 because of Section 219.208(a); and

B) Calculations that demonstrate that the combined VOM emissions from the coating line and all other coating lines in the same category never exceed 6.8 kg (15 lbs) per day before the application of capture systems and control devices. The following equation must be used to calculate total VOM emissions:

$$T_e = \sum_{j=1}^{m} \sum_{i=1}^{n} \left(A_i B_i\right)_j$$

where:

T_e = Total VOM emissions from coating lines each day before the application of capture systems and control devices in units of kg/day (lbs/day);

m = Number of coating lines at the source that otherwise would be subject to the same subsection of Section 219.104 (because they belong to the same category, e.g., can coating);

j = Subscript denoting an individual coating line;

n = Number of different coatings as applied each day on each coating line;

i = Subscript denoting an individual coating;

A_i = Weight of VOM per volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line in units of kg VOM/l (lbs VOM/gal); and

B_i = Volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line in units of l/day (gal/day). The instrument or method by which the owner or operator accurately measured or calculated the volume of each coating as applied on each coating line each day must be described in the certification to the Agency.

2) For sources exempt under Section 219.208(b), by March 15, 1998, or upon initial start-up, the owner or operator of a coating line or a group of coating lines referenced in subsection (b) must certify to the Agency that the source is exempt under ~~the provisions of~~ Section 219.208(b). The certification must include:

A) A declaration that the source is exempt from the limitations of Section 219.204(l) because of Section 219.208(b); and

B) Calculations that demonstrate that the source meets the criteria of exemption because of Section 219.208(b).

3) For sources exempt under Section 219.208(a), on and after a date consistent with Section 219.106, the owner or operator of a coating line or

group of lines referenced in this subsection (b) must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line; and

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line.

4) For sources exempt under Section 219.208(b), on and after March 15, 1998, the owner or operator of a coating line or group of coating lines referenced in this subsection (b) must collect and record all of the following information for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line; and

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied on each coating line on a monthly basis.

5) On and after a date consistent with Section 219.106, the owner or operator of a coating line or group of coating lines exempted from the limitations of Section 219.204 because of Section 219.208(a) must notify the Agency of any record showing that total VOM emissions from the coating line or group of coating lines exceed 6.8 kg (15 lbs) in any day before the application of capture systems and control devices by sending a copy of ~~such~~ the record to the Agency within 30 days after the exceedance occurs.

6) On and after March 15, 1998, any owner or operator of a source exempt from the limitations of Section 219.204(l) because of Section 219.208(b) must notify the Agency if the source's VOM emissions exceed the limitations of Section 219.208(b) by sending a copy of calculations showing ~~such an~~the exceedance within 30 days after the change occurs.

c) Any owner or operator of a coating line subject to the limitations of Section 219.204 other than Section 219.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), (a)(2)(D), or (r) and complying by means of Section 219.204 must comply with the following:

1) By a date consistent with Section 219.106, or upon initial start-up of a new coating line, or upon changing the method of compliance from an existing subject coating line from Section 219.205, Section 219.207, Section 219.215, or Section 219.216 to Section 219.204; the owner or operator of a subject coating line must certify to the Agency that the coating line will be in compliance with Section 219.204 on and after a date consistent with Section 219.106, or on and after the initial start-up date. The certification must include:

   A) The name and identification number of each coating as applied on each coating line;

   B) The weight of VOM per volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line;

   C) On and after March 15, 1998, for coating lines subject to the limitations of Section 219.204(l)(2)(A) or (B), the weight of VOM per weight of solids in each coating as applied each day on each coating line;

   D) For coating lines subject to the limitations of Section 219.204(c)(2), the weight of VOM per weight of solids (or the weight of VOM per weight of coatings, as applicable) in each coating as applied each day on each coating line;

   E) For coating lines subject to the limitations of Section 219.204(g)(2) or (h)(2), the application methods used to apply coatings on the subject coating line and the weight of VOM per volume of each coating (or the weight of VOM per volume of solids in each coating, as applicable) as applied each day on each coating line;

   F) For coating lines subject to the limitations of Section 219.204(o), the weight of VOM per volume of coatings or solids, as applicable, for each coating as applied each day on each coating line;

   G) For coating lines subject to the limitations of Section 219.204(a)(2)(A), the weight of VOM per volume of solids in each coating as applied each day on each coating line, and the solids turnover ratio of the EDP operation, with supporting calculations;

   H) For coating lines subject to the limitations of Section 219.204(a)(2)(E), the weight of VOM per volume and volume of each coating used in the final repair coat operation, and the weight of VOM per volume of the final repair coat as applied, calculated on an occurrence weighted average basis;

I) For coating lines subject to the limitations of Section 219.204(q), the weight of VOM per volume of each coating, or the weight of VOM per volume of solids in each coating, as applied, as applied each day on each coating line.

2) On and after a date consistent with Section 219.106, or on and after the initial start-up date, the owner or operator of a subject coating line must collect and record all of the following information each day, unless otherwise specified, for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line;

B) The weight of VOM per volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line;

C) On and after March 15, 1998, for coating lines subject to the limitations of Section 219.204(l)(2)(A) or (B), the weight of VOM per weight of solids in each coating as applied each day on each coating line and certified product data sheets for each coating;

D) On and after March 15, 1998, for wood furniture coating spray booths subject to the limitation of Section 219.204(l)(4)(A), the weight of VOM per weight of solids in each strippable spray booth coating as applied each day on each spray booth and certified product data sheets for each coating;

E) For coating lines subject to the limitations of Section 219.204(c)(2), the weight of VOM per weight of solids (or the weight of VOM per weight of coatings, as applicable) in each coating as applied each day on each coating line, and certified product data sheets for each coating;

F) For coating lines subject to the limitations of Section 219.204(g)(2) or 219.204(h)(2), the weight of VOM per volume of each coating (or the weight of VOM per volume of solids in each coating, as applicable) as applied each day on each coating line, and certified product data sheets for each coating;

G) For coating lines subject to the limitations of Section 219.204(o), the weight of VOM per volume of coatings or solids, as applicable, for each coating, as applied each day on each coating line;

H) For coating lines subject to the limitations of Section 219.204(a)(2)(A), the weight of VOM per volume of solids in each coating as applied each day on each coating line, certified product data sheets for each coating, and the solid turnover ratio for the EDP operation, calculated on a calendar monthly basis, with supporting calculations;

I) For coating lines subject to the limitations of Section 219.204(a)(2)(E), the weight of VOM per volume and volume of each coating used in the final repair coat operation, the weight of VOM per volume of the final repair coat as applied, calculated on an occurrence weighted average basis, and certified product data sheets for each coating;

J) For coating lines subject to the limitations of Section 219.204(q), the weight of VOM per volume of each coating, or the weight of VOM per volume of solids in each coating, as applicable, as applied each day on each coating line, and certified product data sheets for each coating.

3) On and after a date consistent with Section 219.106, the owner or operator of a subject coating line must notify the Agency in the following instances:

A) Any record showing violation of Section 219.204 must be reported by sending a copy of the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance from Section 219.204 to Section 219.205 or Section 219.207, the owner or operator must comply with all requirements of subsection (d)(1) or (e)(1), as applicable. Upon changing the method of compliance from Section 219.204 to Section 219.205 or Section 219.207, the owner or operator must comply with all requirements of subsection (d) or (e), as applicable.

d) Any owner or operator of a coating line subject to the limitations of Section 219.204 and complying by means of Section 219.205 must comply with the following:

1) By a date consistent with Section 219.106, or upon initial start-up of a new coating line, or upon changing the method of compliance for an existing subject coating line from Section 219.204 or Section 219.207 to Section 219.205; the owner or operator of the subject coating line must certify to the Agency that the coating line will be in compliance with Section

219.205 on and after a date consistent with Section 219.106, or on and after the initial start-up date. The certification must include:

A) The name and identification number of each coating line which will comply by means of Section 219.205.

B) The name and identification number of each coating as applied on each coating line.

C) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line.

D) On and after March 15, 1998, for coating lines subject to the limitations of Section 219.204(l)(2)(A) or (B), the weight of VOM per weight of solids in each coating as applied each day on each coating line.

E) For coating lines subject to the limitations of Section 219.204(a)(2)(A), the weight of VOM per volume of solids in each coating as applied each day on each coating line.

F) For coating lines subject to the limitations of Section 219.204(c)(2), the weight of VOM per weight of solids (or the weight of VOM per weight of coatings, as applicable) in each coating as applied each day on each coating line.

G) For coating lines subject to the limitations of Section 219.204(g)(2) or (h)(2), the weight of VOM per volume of each coating (or the weight of VOM per volume of solids in each coating, as applicable) as applied each day on each coating line.

H) For coating lines subject to the limitations of Section 219.204(o), the weight of VOM per volume of coatings or solids, as applicable, for each coating, as applied each day on each coating line.

I) For coating lines subject to the limitations of Section 219.204(q), the weight of VOM per volume of each coating, or the weight of VOM per volume of solids in each coating, as applicable, as applied each day on each coating line.

J) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line.

K) The method by which the owner or operator will create and maintain records each day as required in subsection (d)(2).

L) An example of the format in which the records required in subsection (d)(2) will be kept.

2) On and after a date consistent with Section 219.106, or on and after the initial start-up date, the owner or operator of a subject coating line must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line.

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) as applied each day on each coating line.

C) On and after March 15, 1998, for coating lines subject to the limitations of Section 219.204(l)(2)(A) or (B), the weight of VOM per weight of solids in each coating as applied each day on each coating line.

D) For coating lines subject to the limitations of Section 219.204(a)(2)(A), the weight of VOM per volume of solids in each coating as applied each day on each coating line.

E) For coating lines subject to the limitations of Section 219.204(c)(2), the weight of VOM per weight of solids (or the weight of VOM per weight of coatings, as applicable) in each coating as applied each day on each coating line.

F) For coating lines subject to the limitations of Section 219.204(g)(2) or (h)(2), the weight of VOM per volume of each coating (or the weight of VOM per volume of solids in each coating, as applicable) as applied each day on each coating line.

G) For coating lines subject to the limitations of Section 219.204(o), the weight of VOM per volume of coatings or solids, as applicable, for each coating, as applied each day on each coating line.

H) For coating lines subject to the limitations of Section 219.204(q), the weight of VOM per volume of each coating, or the weight of

VOM per volume of solids in each coating, as applicable, as applied each day on each coating line.

I) The daily-weighted average VOM content of all coatings as applied on each coating line as defined in Section 219.104.

3) On and after a date consistent with Section 219.106, the owner or operator of a subject coating line must notify the Agency in the following instances:

A) Any record showing violation of Section 219.205 must be reported by sending a copy of the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with this Subpart from Section 219.205 to Section 219.204 or Section 219.207, the owner or operator must comply with all requirements of subsection (c)(1) or (e)(1), as applicable. Upon changing the method of compliance with this Subpart from Section 219.205 to Section 219.204 or Section 219.207, the owner or operator must comply with all requirements of subsection (c) or (e), as applicable.

e) Any owner or operator of a coating line subject to the limitations of Section 219.207 and complying by means of Section 219.207(c), (d), (e), (f), (g), (h), or (k), (l), (m), or (n) must comply with the following:

1) By a date consistent with Section 219.106, or upon initial start-up of a new coating line, or upon changing the method of compliance for an existing coating line from Section 219.204 or Section 219.205 to Section 219.207, the owner or operator of the subject coating line must perform all tests and submit to the Agency the results of all tests and calculations necessary to demonstrate that the subject coating line will be in compliance with Section 219.207 on and after a date consistent with Section 219.106, or on and after the initial start-up date.

2) On and after a date consistent with Section 219.106, or on and after the initial start-up date, the owner or operator of a subject coating line must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The weight of VOM per volume of coating solids as applied each day on each coating line, if complying ~~with~~ under Section 219.207(b)(2).

B) Control device monitoring data.

C) A log of operating time for the capture system, control device, monitoring equipment, and the associated coating line.

D) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) On and after a date consistent with Section 219.106, the owner or operator of a subject coating line must notify the Agency in the following instances:

A) Any record showing violation of Section 219.207 must be reported by sending a copy of the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with this Subpart from Section 219.207 to Section 219.204 or Section 219.205, the owner or operator must comply with all requirements of subsection (c)(1) or (d)(1), respectively. Upon changing the method of compliance with this Subpart from Section 219.207 to Section 219.204 or Section 219.205, the owner or operator must comply with all requirements of subsection (c) or (d), respectively.

f) Any owner or operator of a primer surfacer operation or topcoat operation, or combined primer surfacer and topcoat operation, subject to the limitations of Section 219.204(a)(1)(B), (a)(1)(B), (a)(2)(C), or (a)(2)(D) must comply with the following:

1) By a date consistent with Section 219.106, or upon initial start-up of a new coating operation, the owner or operator of a subject coating operation must certify to the Agency that the operation will be in compliance with Section 219.204 on and after a date consistent with Section 219.106, or on and after the initial start-up date. The certification must include:

A) The name and identification number of each coating operation that will comply by means of Section 219.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) and the name and identification number of each coating line in each coating operation.

B) The name and identification number of each coating as applied on each coating line in the coating operation.

C) The weight of VOM per volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line.

D) The transfer efficiency and control efficiency measured for each coating line.

E) Test reports, including raw data and calculations documenting the testing performed to measure transfer efficiency and control efficiency.

F) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line.

G) The method by which the owner or operator will create and maintain records each day as required in subsection (f)(2).

H) An example format for presenting the records required in subsection (f)(2).

2) On and after a date consistent with Section 219.106, or on and after the initial start-up date, the owner or operator of a subject coating operation must collect and record all of the following information each day for each topcoat or primer surfacer coating operation and maintain the information at the source for ~~a period of~~ three years:

A) All information necessary to demonstrate compliance with the topcoat protocol referenced in Section 219.105(b)(1)(B) and to calculate the daily-weighted average VOM emissions from the coating operations in kg/l (lbs/gal) of coating solids deposited in ~~accordance~~ compliance with the proposal submitted, and approved under Section 219.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) including:

i) The name and identification number of each coating as applied on each coating operation.

ii) The weight of VOM per volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating operation.

B) If a control device or devices are used to control VOM emissions, control device monitoring data; a log of operating time for the capture system, control device, monitoring equipment and the

associated coating operation; and a maintenance log for the capture system, control device, and monitoring equipment, detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after a date consistent with Section 219.106 or on and after the initial start-up date, the owner or operator of a subject coating operation must determine and record the daily VOM emissions in kg/l (lbs/gal) of coating solids deposited in ~~accordance~~ compliance with the proposal submitted and approved under Section 219.204 (a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) within 10 days ~~from~~ after the end of the month and maintain this information at the source for ~~a period of~~ three years.

4) On and after a date consistent with Section 219.106, the owner or operator of a subject coating operation must notify the Agency in the following instances:

A) Any record showing a violation of Section 219.204(a)(1)(B), (a)(1)(C), (a)(2)(B), (a)(2)(C), or (a)(2)(D) must be reported by sending a copy of the record to the Agency within 15 days ~~from~~ afterr the end of the month in which the violation occurred.

B) The owner or operator must notify the Agency of any change to the operation at least 30 days before the change is effected. The Agency must determine whether or not compliance testing is required. If the Agency determines that compliance testing is required, then the owner or operator must submit a testing proposal to the Agency within 30 days and test within 30 days after the approval of the proposal by the Agency and USEPA.

g) On and after a date consistent with Section 219.106(c), or on and after the initial start-up date, whichever is later, the owner or operator of a coating line subject to the requirements of Section 219.218 must comply with the following:

1) By May 1, 2011, or upon initial start-up, whichever is later, submit a certification to the Agency that includes a description of the practices and procedures that the source will follow to ensure compliance with the applicable requirements in Section 219.218;

2) Notify the Agency of any violation of Section 219.218 by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following the occurrence of~~after the violation; and

3) Maintain at the source all records required by this subsection (g) for a minimum of three years from the date the document was created and make those records available to the Agency upon request.

h) On and after a date consistent with Section 219.106, or on and after the initial start-up date, whichever is later, the owner or operator of a coating line subject to ~~the requirements of~~ Section 219.219, except aerospace facilities, must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes:

A) A description of the practices and procedures that the source will follow to ensure compliance with the applicable requirements in Section 219.219;

B) For sources subject to Section 219.219(a)(6), the work practices plan specified in that Section;

C) For sources subject to Section 219.219(b)(6), the application methods used to apply coatings on the subject coating line;

2) Notify the Agency of any violation of Section 219.219 by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following the occurrence of~~after the violation; and

3) Maintain at the source all records required by this subsection (h) for a minimum of three years from the date the document was created and make those records available to the Agency upon request.

i) On and after a date consistent with Section 219.106(d), or on and after the initial start-up date, whichever is later, the owner or operator of a flat wood paneling coating line subject to the requirements in Section 219.217 must comply with the following:

1) By August 1, 2010, or upon initial start-up, whichever is later, submit a certification to the Agency that includes a description of the practices and procedures that the source will follow to ensure compliance with the applicable requirements in Section 219.217(c) and (d); and

2) Notify the Agency of any violation of Section 219.217 by providing a description of the violation and copies of records documenting ~~such~~ the violation to the Agency within 30 days ~~following the occurrence of~~after the violation.

j) On and after July 1, 2021, the owner or operator of an aerospace facility subject to the requirements of this Subpart under Section 219.208(f)(1) must comply with the following:

1) Each owner or operator using coatings listed in Section 219.204(r) must:

A) Maintain a current list of coatings in use, with category and VOM content as applied; and

B) Record coating usage on an annual basis.

2) Each owner or operator using touch-up coatings that do not meet the limitations of Section 219.204(r)(2) must:

A) Collect and record the name, identification number, and volume used of each touch-up coating that does not meet the limitations of Section 219.204(r)(2), as applied in each aerospace coating operation, per 24-hour period and per month;

B) Perform calculations on a daily basis, and maintain at the source records of those calculations, of the combined volume of touch-up coatings that do not meet the limitations of Section 219.204(r)(2) used source-wide for each 24-hour period;

C) Perform calculations on a monthly basis, and maintain at the source records of those calculations, of the combined volume of touch-up coatings that do not meet the limitations of Section 219.204(r)(2) used source-wide for the month and the rolling 12-month period;

D) Prepare and maintain at the source an annual summary of the information required to be compiled under subsections (j)(2)(A), (j)(2)(B), and (j)(2)(C) on or before January 31 of the following year;

E) Maintain at the source for a minimum ~~period~~ of three years all records required to be kept under this subsection (j)(2) and make those records available to the Agency upon request; and

F) Notify the Agency in writing, within 30 days after any exceedance, if the combined use of touch-up coatings that do not meet the limitations of Section 219.204(r)(2) at the source ever exceeds a volume of 2.85 l (3 quarts) per 24-hour period or exceeds 209 l/yr (55 gal/yr) for any rolling 12-month period. The notification must include a copy of any records of the exceedance.

3) Each owner or operator using cleaning solvents required by Section 219.219(e) or (g) must:

A) For aqueous and semiaqueous hand-wipe cleaning solvents, maintain a list of materials used, with corresponding water contents;

B) For vapor pressure compliant hand-wipe cleaning solvents:

i) Maintain a current list of cleaning solvents in use with their respective vapor pressures or, for blended solvents, VOM composite vapor pressures; and

ii) Record cleaning solvent usage on an annual basis; and

C) For cleaning solvents with a vapor pressure greater than 45 mmHg used in exempt hand-wipe cleaning operations:

i) Maintain a list of exempt hand-wipe cleaning processes; and

ii) Record cleaning solvent usage on an annual basis.

4) Each owner or operator using control equipment under Section 219.207(n) must meet all applicable testing, monitoring, and recordkeeping requirements of Section 219.105(c), (d), and (e).

5) By July 1, 2021, or upon initial start-up, whichever is later, the owner or operator of an aerospace facility must submit a certification to the Agency that includes a description of the practices and procedures that the source will follow to ensure compliance with the applicable requirements of Section 219.219(e) and (g).

6) Each owner and operator of an aerospace facility must notify the Agency of any violation of this Part by providing a description of the violation and copies of records documenting the violation to the Agency within 30 days ~~following the occurrence of~~after the violation.

k) Exempt Aerospace Facilities

1) For aerospace facilities that are exempt under Section 219.208(f)(1), by July 1, 2021, or upon initial start-up, the owner or operator of an aerospace facility must certify to the Agency that the source is exempt under that subsection. The certification must include:

A) A declaration that the source is exempt under Section

219.208(f)(1); and

B) Calculations that demonstrate that the source meets the criteria for exemption.

2) For sources exempt under Section 219.208(f)(1), on and after July 1, 2021, the owner or operator of an aerospace facility must collect and record all of the following information for each aerospace coating operation and cleaning operation, as applicable, and maintain the information at the source for ~~a period of~~ three years. The owner or operator must, upon request by the Agency or USEPA, submit the information to the Agency and USEPA within 30 calendar days ~~from~~ after the date of the request, along with any other documentation necessary to demonstrate that the aerospace facility is exempt from the requirements of this Subpart:

A) The name and identification number of each coating applied and cleaning solvent used; and

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds that are specifically exempted from the definition of VOM) applied and cleaning solvent used on a monthly basis.

3) On and after July 1, 2021, any owner or operator of an aerospace facility exempt under Section 219.208(f)(1) must notify the Agency if the source's VOM emissions exceed the criteria in Section 219.208(f)(1) by sending a copy of calculations showing the exceedance within 30 days after the exceedance occurs.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.212 Cross-Line Averaging to Establish Compliance for Coating Lines

a) On and after March 15, 1996, any owner or operator of a coating line subject to the limitations ~~set forth~~ in Section 219.204 ~~of this Subpart~~, except coating lines subject to the limitations in Section 219.204(a)(2), (c)(2), (g)(2), (h)(2), (o) or (q) ~~of this Subpart~~, and with coating lines in operation ~~prior to~~before January 1, 1991 (pre-existing coating lines), may, for pre-existing coating lines only, elect to comply with the requirements of this Section, rather than complying with the applicable emission limitations ~~set forth~~ in Section 219.204, if an operational change of the type described ~~below~~ in this subsection has been made after January 1, 1991, to one or more pre-existing coating lines at the source. An operational change occurs when a pre-existing coating line is replaced with a line using lower VOM coating for the same purpose as the replaced line (replacement line). A source electing to rely on this Section to demonstrate compliance with ~~the requirements of~~ this Subpart ~~shall~~ must operate ~~pursuant to~~under federally

enforceable permit conditions approved by the Agency and USEPA.

b) An owner or operator of pre-existing coating lines subject to a VOM content limitation in Section 219.204 ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart must establish, by use of the equations in subsection (d) ~~of this Section~~, that the calculated actual daily VOM emissions from all participating coating lines, as defined in this subsection, are less than the calculated daily allowable VOM emissions from the same group of coating lines. For any pre-existing coating line to be aggregated for the purposes of Section 219.212, 219.213, or 219.214 ~~of this Subpart~~ (participating coating lines), the source must establish that:

1) All coatings applied on the participating coating line ~~shall,~~must at all times~~,~~ have a VOM content less than or equal to the applicable VOM content limitation for ~~such~~ the coating listed in Appendix H ~~of this Part~~; and

2) On the date the source elects to rely on this Section to demonstrate compliance with this Subpart, all coatings applied on the participating coating line are not already in compliance with the VOM content limitation for ~~such~~ the coating effective on or after March 15, 1996; or the participating coating line is a replacement line~~,~~ as defined in subsection (a) ~~of this Section~~ with an operational change occurring on or after January 1, 1991.

c) Notwithstanding subsection (a) ~~of this Section~~, any owner or operator of a coating line subject to the limitations ~~set forth~~ in Section 219.204 ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart, may also include as a participating coating line, until December 31, 1999, only, any replacement line that satisfies all of the following conditions:

1) The replacement line is operated as a powder coating line;

2) The replacement line was added after July 1, 1988; and

3) The owner or operator also includes as a participating coating line one or more coating lines that satisfy the criteria of a replacement line, as described in subsection (a) ~~of this Section~~.

d) To demonstrate compliance with this Section, a source ~~shall~~ must establish the following:

1) An alternative daily emission limitation ~~shall~~ must be determined for all participating coating lines at the source ~~according to~~under subsection (d)(2) ~~of this Section~~. All participating coating lines ~~shall~~ must be factored in each day to demonstrate compliance. ~~Provided~~ If compliance

is established ~~pursuant to the requirements in~~under this subsection, nothing in this Section requires daily operation of each participating line. Actual daily emissions from all participating coating lines (E_d) ~~shall~~ must never exceed the alternative daily emission limitation (A_d) and ~~shall~~ must be calculated by ~~use of~~ the following equation:

$$E_d = \sum_{i=1}^{n} V_i C_i$$

where:

E_d = Actual daily VOM emissions from participating coating lines in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of coatings applied by all participating coating lines at the source;

V_i = Volume of each coating applied for the day in units of l/day (gal/day) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

2) The alternative daily emission limitation (A_d) ~~shall~~ must be determined for all participating coating lines at the source on a daily basis as follows:

$$A_d = A_i + A_p$$

where A_i and A_p are defined in subsections (d)(2)(A) and (d)(2)(B) ~~of this Section~~.

A) The portion of the alternative daily emissions limitation for coating operations at a source using non-powder coating (A_i) ~~shall~~ must be determined for all ~~such~~ participating non-powder coating lines on a daily basis as follows:

$$A_i = \sum_{i=1}^{n} V_i L_i \frac{(D_i - C_i)}{(D_i - L_i)}$$

where:

A_i = The VOM emissions allowed for the day in units of kg/day (lbs/day);

i = Subscript denoting a specific coating applied;

n = Total number of coatings applied by all participating coating lines at the source;

C_i = The VOM content of each coating as applied in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM);

D_i = The density of VOM in each coating applied. For the purposes of calculating A_i, the density is 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM);

V_i = Volume of each coating applied for the day in units of l (gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

L_i = The VOM emission limitation for each coating applied, as specified in Section 219.204 ~~of this Subpart~~, in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM).

B) The portion of the alternative daily emission limitation for coating operations at a source using powdered coating (A_p) ~~shall~~ must be determined for all ~~such~~ participating powder coating lines at the source on a daily basis as follows:

$$A_p = \sum_{h=1}^{m} \sum_{j=1}^{n} \frac{V_j L_j D_j K_h}{\left(D_j - L_j\right)}$$

where:

A_p = The VOM emissions allowed for the day in units of kg/day (lbs/day);

h = Subscript denoting a specific powder coating line;

j = Subscript denoting a specific powder coating applied;

m = Total number of participating powder coating lines;

n = Total number of powder coatings applied in the participating coating lines;

D_j = The assumed density of VOM in liquid coating, 0.882 kg VOM/l VOM (7.36 lbs VOM/gal VOM);

V_j = Volume of each powder coating consumed for the day in units of l (gal) of coating;

L_j = The VOM emission limitation for each coating applied, as specified in Section 219.204 of this Subpart, in units of kg VOM/l (lbs VOM/gal) of coating (minus water and any compounds that are specifically exempted from the definition of VOM); and

K = A constant for each individual coating line representing the ratio of the volume of coating solids consumed on the liquid coating system that has been replaced to the volume of powder coating consumed on the replacement line to accomplish the same coating job. This value ~~shall~~ must be determined by the source based on tests conducted and records maintained ~~pursuant to the requirements of~~under Section 219.213 ~~of this Subpart~~ demonstrating the amount of coating solids consumed as both liquid and powder. Tests methods and recordkeeping requirements ~~shall~~ must be approved by the Agency and USEPA and ~~contained~~ must be in the source's operating permit as federally enforceable permit conditions, subject to the following restrictions:

i) K cannot exceed 0.9 for non-recycled powder coating systems; or

ii) K cannot exceed 2.0 for recycled powder coating systems.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.213 Recordkeeping and Reporting for Cross-Line Averaging Participating Coating Lines

Any owner or operator of a coating line that elects to comply by means of Section 219.212 ~~of this Subpart shall~~must establish the following:

a) By the date consistent with Section 219.210(f) ~~of this Subpart~~, or upon initial start-up of a new coating line replacing a pre-existing coating line, as defined in Section 219.212 ~~of this Subpart~~, or upon changing the method of compliance for a pre-existing coating line from the requirements of Section 219.204 or Section 219.207 ~~of this Subpart~~ to the requirements of Section 219.212 ~~of this Subpart~~, the owner or operator of the source ~~shall~~ must certify to the Agency that each participating coating line, as determined in Section 219.212 ~~of this Subpart~~, will be in compliance with Section 219.212 ~~of this Subpart~~ on and after a date consistent with Section 219.210(f) ~~of this Subpart~~, or on and after the initial start-up date of ~~such~~ the participating coating lines. ~~Such~~ The certification ~~shall~~ must also include:

1) The name and identification number of each participating coating line;

2) The name and identification number of each coating as applied on each participating coating line;

3) The weight of VOM per volume of each coating and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each participating coating line;

4) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each participating coating line;

5) The method by which the owner or operator will create and maintain records each day as required in subsection (b) ~~of this Section~~;

6) An example of the format in which the records required in subsection (b) ~~of this Section~~ will be kept;

7) A statement that all coatings used on participating coating lines have a VOM content less than or equal to the applicable VOM limitation for ~~such~~ the coating ~~set forth~~ in Appendix H ~~of this Part~~, and that all lines either:

A) Underwent a change in operations incorporating a lower VOM coating on each applicable participating coating line after ~~the date of~~ January 1, 1991; or

B) Are not in compliance and continued compliance with the coating limitations in Section 219.204 ~~of this Subpart~~, compliance with which is required on or after March 15, 1996.

8) The method by which the owner or operator has calculated K, for the equation ~~contained~~ in Section 219.212(d)(2)(B) ~~of this Subpart~~, if applicable.

b) On and after a date consistent with Section 219.210(f) ~~of this Subpart~~, or on and after the initial start-up date, the owner or operator of a source electing to comply with the requirements of this Subpart by means of Section 219.212 ~~of this Subpart shall~~must collect and record the following information on a daily basis for each participating coating line and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on each participating coating line;

2) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied on each participating coating line on a daily basis; and

3) The daily weighted average VOM content of all coatings as applied on each coating line as defined at 35 Ill. Adm. Code 211.1230.

c) On and after a date consistent with Section 219.210(f) ~~of this Subpart~~, the owner or operator of participating coating lines ~~shall~~must:

1) Notify the Agency within 30 days ~~following an occurrence of~~after a violation of Section 219.212 ~~of this Subpart~~; and

2) Send to the Agency any record showing a violation of Section 219.212 ~~of this Subpart~~ within 30 days ~~following the occurrence of~~after a violation.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.214 Changing Compliance Methods

a) At least 30 calendar days before changing the method of compliance with this Subpart from Section 219.212 ~~of this Subpart~~ to Section 219.204 or Section 219.207 ~~of this Subpart~~, the owner or operator of a source relying on Section 219.212 to demonstrate compliance with this Subpart for one or more pre-existing coating lines ~~shall~~ must comply with all requirements of Section 219.211 (c)(1) or (e)(1) ~~of this Subpart, respectively~~.

b) Upon changing the method of compliance with this Subpart from Section 219.212 to Section 219.204 or Section 219.207 ~~of this Subpart~~, the owner or operator of a

source ~~shall~~ must comply with the requirements of Section 219.211(c) or (e) ~~of this Subpart, respectively~~.

c) The owner or operator ~~shall~~ must certify that all remaining participating coating lines, if any, comply and continue to comply with the requirements of Section 219.212 ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.215 Wood Furniture Coating Averaging Approach

a) On and after March 15, 1998, any owner or operator of a source subject to the limitations of Section 219.204(l) ~~of this Subpart~~ may elect to comply with the requirements of this Section rather than complying with the applicable emission limitations ~~set forth~~ in Section 219.204(l)(2)(A) or (B) ~~of this Subpart~~. The source must continue to comply with the limitations ~~set forth~~ in Sections 219.204(l)(3) and (4) ~~of this Subpart~~. A source electing to rely on this Section to demonstrate compliance with the requirements of this Subpart ~~shall~~ must operate ~~pursuant to~~under federally enforceable permit conditions approved by the Agency and USEPA.

b) An owner or operator of a source subject to the limitations of Section 219.204(l) ~~of this Subpart~~ and electing to rely on this Section to demonstrate compliance with this Subpart must establish, by use of subsection (b)(1) or (b)(2) ~~of this Section~~, that, on a daily basis, actual emissions from the affected source are less than or equal to ninety percent of the allowable emissions, that is $V_a \leq V_p$:

1) Option I:

A) $$V_a = \sum_{i=1}^{n}\left(ER_{TC_i} \times TC_i\right); \text{ and}$$

B) $$V_p = 0.9 \times \sum_{i=1}^{n}\left(0.8 \times TC_i\right)$$

2) Option II:

A) $$V_a = \sum_{i=1}^{n}\Big[\ \left(ER_{TC_i} \times TC_i\right) + \left(ER_{SE_i} \times SE_i\right) + \left(ER_{WC_i} \times WC_i\right) + \left(ER_{PC_i} \times PC_i\right) + \left(ER_{ST_i} \times ST_i\right)\ \Big]; and$$

B) $$V_p = 0.9 \times \sum_{i=1}^{n} \left[\left(1.8 \times TC_i\right) + \left(1.9 \times SE_i\right) + \left(9.0 \times WC_i\right) + \left(1.2 \times PC_i\right) + \left(0.791 \times ST_i\right) \right]$$

where:

V_a = Actual VOM emissions from the source;

V_p = 90% of the allowable VOM emissions from the source;

n = Number of different wood furniture coatings as applied each day on each coating line;

i = Subscript denoting an individual coating;

TC_i = kilograms of solids in topcoat "i" used;

SE_i = kilograms of solids in sealer "i" used;

WC_i = kilograms of solids in wash coat "i" used;

PC_i = kilograms of solids in non-topcoat pigmented coat "i" used;

ST_i = liters of stain "i" used;

ER_{TCi} = VOM content of topcoat "i" in kg VOM/kg solids, as applied;

ER_{SEi} = VOM content of sealer "i" in kg VOM/kg solids, as applied;

ER_{WCi} = VOM content of washcoat "i" in kg VOM/kg solids, as applied;

ER_{PCi} = VOM content of non-topcoat pigmented coat "i" in kg VOM/kg solids, as applied;

ER_{STi} = VOM content of stain "i" in kg VOM/liter (kg/l), as applied;

c) Within ~~the structure of~~ the source's federally enforceable permit conditions, an owner or operator of a source electing to rely on this Section to demonstrate compliance with this Subpart ~~shall~~ must provide to the Agency:

1) The name and identification number of each participating coating line;

2) The name and identification number of each coating as applied on each participating coating line;

3) A summary of how averaging will be used to meet the emission limitations;

4) Documentation that $V_a \leq V_p$, as calculated in subsection (b)(1) or (2) ~~of this Section~~;

5) A description of which types of coating materials will be included in the source's averaging program, which may include stains, basecoats, washcoats, sealers, and topcoats. Coating materials that are applied using continuous coaters may be used in an averaging program only if the source can determine the amount of coating used each day;

6) A description of methods and procedures for quantifying emissions on a daily basis, including methods to determine the VOM content of each coating and the daily usage of each coating; and

7) A summary of the monitoring, recordkeeping, and reporting procedures that will be used to demonstrate daily compliance with the ~~inequalities~~ options in subsections (b)(1) and (2) ~~of this Section~~. These procedures ~~shall be structured such that~~must allow the Agency and the owner or operator of the source ~~can~~ to determine the source's compliance status for any given day.

d) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must, for each coating line relying on this Section, collect and record the following information on a daily basis and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on the coating line;

2) The weight of VOM per weight of solids (kg VOM/kg solids) and the weight of solids (kg) of each coating as applied on each coating line on a daily basis;

3) Certified product data sheets for each finishing material; and

4) The calculations showing the source has met the conditions of the ~~inequalities~~ options in subsection (b)(1) or (2) ~~of this Section~~.

e) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must:

1) Notify the Agency within 30 calendar days ~~following an occurrence~~

~~of~~after a violation of this Section; and

2) Send to the Agency any record showing a violation of this Section within 30 calendar days ~~following the occurrence of~~after a violation.

f) At least 30 calendar days before changing the method of compliance with this Subpart from ~~reliance on~~ this Section to ~~reliance on~~ Section 219.204(l)(2)(A) or (B) ~~of this Subpart~~, the owner or operator of a source relying on this Section to demonstrate compliance with this Subpart for one or more wood furniture coating lines ~~shall~~must:

1) Comply with all requirements of Section 219.211(c)(1) ~~of this Subpart~~; and

2) Certify that all remaining coating lines relying on this Section to comply with the requirements of this Subpart, if any, comply and continue to comply with the requirements of this Section.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.216 Wood Furniture Coating Add-On Control Use

The owner or operator of a source subject to the requirements of Section 219.204(l)(2) ~~of this Subpart~~ may choose to comply with those limitations ~~by relying on~~under Section 219.204(l)(2)(D) ~~of this Subpart~~ if the owner or operator of the source meets all of the following requirements:

a) For each coating applied, determine the overall control efficiency needed to demonstrate compliance using the following equation:

$$R = \left[\frac{(C - L)}{C}\right] \times 100$$

where:

R = the necessary overall capture and control efficiency of the control system, as a percentage;

C = the VOM content of the coating, in kilograms of VOM per kilograms of coating solids (kg VOM/kg solids), as applied;

L = the emission limitation for that coating~~, as given in~~ under Section 219.204(l)(2)(B) ~~of this Subpart~~.

b) Calculate the equivalent overall capture and control efficiency of the control device using the procedures of subsections 219.105(c), (d), and (e) ~~of this Part~~.

c) Demonstrate that the equivalent overall capture and control efficiency calculated using the procedures in subsections 219.105(c), (d), and (e) ~~of this Part~~ is equal to or greater than the largest value of R calculated for each coating by the equation in subsection (a) ~~of this Section~~.

d) Install, calibrate, operate, and maintain the applicable monitoring equipment for the control device ~~as specified in~~under Section 219.105(d) ~~of this Part~~.

e) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must, for each coating line relying on this Section, collect and record the following information on a daily basis and maintain the information at the source for ~~a period of~~ three years:

1) The name and identification number of each coating as applied on the coating line;

2) The weight of VOM per weight of solids (kg VOM/kg solids) of each coating as applied on each coating line on a daily basis;

3) Certified product data sheets for each coating;

4) Control device monitoring data;

5) A log of operating time for the capture system, control device, monitoring equipment, and the associated coating line; and

6) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

f) On and after March 15, 1998, or on and after the initial start-up date, the owner or operator of a source electing to rely on this Section to comply with the requirements of this Subpart ~~shall~~must:

1) Notify the Agency within 30 calendar days ~~following an occurrence of~~after a violation of this Section; and

2) Send to the Agency any record showing a violation of this Section within 30 calendar days ~~following the occurrence of~~after a violation.

g) At least 30 calendar days before changing the method of compliance with this Subpart from ~~reliance on~~ this Section to ~~reliance on~~ Section 219.204(l)(2)(A) or (B) ~~of this Subpart~~, the owner or operator of a source relying on this Section to demonstrate compliance with this Subpart for one or more wood furniture coating

lines ~~shall~~must:

1) Comply with all requirements of Section 219.211(c)(1) ~~of this Subpart~~; and

2) Certify that all remaining coating lines relying on this Section to comply with the requirements of this Subpart, if any, comply and continue to comply with the requirements of this Section.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.217 Wood Furniture Coating and Flat Wood Paneling Coating Work Practice Standards

a) Spray booth cleaning. Each owner or operator of a source subject to the limitations of Section 219.204(l) ~~of this Subpart shall~~must not use compounds containing more than 8.0 percent~~,~~ by weight~~,~~ of VOM for cleaning spray booth components other than conveyors, continuous coaters and their enclosures, and metal filters, unless the spray booth is being refurbished. If the spray booth is being refurbished~~, that is,~~ by replacing the spray booth coating or other material used to cover the booth ~~is being replaced~~, the affected source ~~shall~~ must use no more than 1.0 gallon of organic solvent to prepare the booth ~~prior to~~before applying the booth coating.

b) Application equipment requirements. ~~No~~ An owner or operator of a source subject to the limitations of Section 219.204(l) ~~of this Subpart shall~~must not use conventional air spray guns to apply coating materials to wood furniture except under the circumstances ~~specified~~ in subsections (b)(1) through (4) ~~of this Section~~:

1) To apply coating materials that have a VOM content no greater than 1.0 kg VOM/kg solids (1.0 lb VOM/lb solids), as applied;

2) For repair coating under the following circumstances:

A) The coating materials are applied after the completion of the coating operation; or

B) The coating materials are applied after the stain and before any other type of coating material is applied, and the coating materials are applied from a container that has a volume of no more than 2.0 gallons;

3) If the spray gun is aimed and triggered automatically, rather than manually; or

4) If emissions from the finishing application station are directed to a control device ~~pursuant to~~under Section 219.216 ~~of this Subpart~~.

c) Cleaning and storage requirements. Each owner or operator of a source subject to the limitations of Section 219.204(l) or (o) ~~of this Subpart shall~~must:

1) Keep, store, and dispose of all coating, cleaning, and washoff materials in closed containers;

2) Pump or drain all organic solvent used for line cleaning into closed containers;

3) Collect all organic solvent used to clean spray guns in closed containers; and

4) Control emissions from washoff operations by using closed tanks.

d) Additional cleaning and storage requirements for flat wood paneling coating lines. Every owner or operator of a source subject to the limitations of Section 219.204(o) ~~of this Subpart shall~~must:

1) Minimize spills of VOM-containing coatings, thinners, and cleaning materials and clean up spills immediately;

2) Minimize emissions of VOM during the cleaning of storage, mixing, and conveying equipment; and

3) Keep mixing vessels that contain VOM-containing coatings and other VOM-containing materials closed except when specifically in use.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.218 Work Practice Standards for Paper Coatings, Metal Furniture Coatings, and Large Appliance Coatings

a) On and after May 1, 2011, every owner or operator of a source subject to the requirements of Section 219.204(c) ~~of this Subpart shall~~must:

1) Store all VOM-containing cleaning materials in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing cleaning materials;

4) Convey VOM-containing cleaning materials from one location to another in closed containers or pipes; and

5) Minimize VOM emissions from the cleaning of storage, mixing, and conveying equipment.

b) On and after May 1, 2011, every owner or operator of a source subject to the requirements of Section 219.204(g) or 219.204(h) ~~of this Subpart shall~~must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials, and clean up spills immediately;

4) Convey VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials from one location to another in closed containers or pipes;

5) Minimize VOM emissions from the cleaning of storage, mixing, and conveying equipment; and

6) Apply all coatings using one or more of the following application methods:

A) Electrostatic spray;

B) High volume low pressure (HVLP) spray;

C) Flow coating. For the purposes of this subsection (b), flow coating means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

D) Roll coating;

E) Dip coating, including electrodeposition. For purposes of this subsection (b), electrodeposition means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

F) Brush coating, if subject to the requirements of Section 219.204(h); or

G) Another coating application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if ~~such~~ the method is approved in writing by the Agency.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.219 Work Practice Standards for Aerospace Facilities, Automobile and Light-Duty Truck Assembly Coatings and Miscellaneous Metal and Plastic Parts Coatings

a) Every owner or operator of a coating line subject to the requirements of Section 219.204(a)(2) must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, and coating-related waste materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing coatings, thinners, and coating-related waste materials;

4) Convey VOM-containing coatings, thinners, and coating-related waste materials from one location to another in closed containers or pipes;

5) Minimize VOM emissions from cleaning of storage, mixing, and conveying equipment;

6) Develop and implement a work practice plan to minimize VOM emissions from cleaning and from purging of equipment associated with coating lines subject to the limitations in Section 219.204(a)(2). The plan must specify practices and procedures that the source will follow to ensure that VOM emissions from the operations listed in this subsection (a)(6) are minimized. If the owner or operator of the subject coating line has already implemented a work practice plan for the coating line under Subpart IIII of 40 CFR 63, incorporated by reference in Section 219.112, the owner or operator may revise the plan as necessary to comply with this Section.

A) Vehicle body wiping;

B) Coating line purging;

C) Flushing of coating systems;

D) Cleaning of spray booth grates, walls, and equipment; and

F) Cleaning of external spray booth areas.

b) Except as provided in subsection (c), every owner or operator of a coating line described in Section 219.204(q) must:

1) Store all VOM-containing coatings, thinners, coating-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing these materials;

3) Minimize spills of VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials;

4) Convey VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials from one location to another in closed containers or pipes;

5) Minimize VOC emissions from cleaning of application, storage, mixing, and conveying equipment by ensuring that equipment cleaning is performed without atomizing the cleaning solvent and all spent solvent is captured in closed containers; and

6) Apply all coatings using one or more of the following application methods:

A) Electrostatic spray;

B) High volume low pressure (HVLP) spray;

C) Flow coating. For the purposes of this subsection (b)(6)(C), flow coating means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

D) Roll coating;

E) Dip coating, including electrodeposition. For purposes of this subsection (b)(6)(E), electrodeposition means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the

substrate due to the electrochemical potential difference that is created;

F) Airless spray;

G) Air-assisted airless spray; or

H) Another coating application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if the method is approved in writing by the Agency.

c) Notwithstanding subsection (b), the application method limitations in subsection (b)(6) do not apply to the following:

1) Coating lines complying with Section 219.207(m)(1);

2) For metal parts and products coating operations: touch-up coatings, repair coatings, textured finishes, stencil coatings, safety-indicating coatings, solid-film lubricants, electric-insulating and thermal-conducting coatings, magnetic data storage disk coatings, and plastic extruded onto metal parts to form a coating;

3) For pleasure craft surface coating operations: extreme high gloss coatings;

4) For plastic parts and products coating operations: airbrush operations using 18.9 liters (5 gallons) or less of coating per year.

5) For ammunition sealant operations: cap sealants and mouth waterproofing sealants.

d) Subsections (e) and (g) do not apply to the following activities in which cleaning of aerospace components and vehicles may take place: research and development, quality control, laboratory testing, and cleaning of electronic parts and assemblies (except for cleaning of completed assemblies). Subsections (e) and (g) also do not apply to aerospace facility operations involving space vehicles or rework operations performed on antique aerospace vehicles or components. Subsections (e) and (g) also do not apply to aqueous cleaning solvents.

e) Except as provided in subsections (d) and (f), every owner or operator of an aerospace facility must:

1) Ensure that all fresh and used cleaning solvents, except semi-aqueous cleaning solvents, used in solvent cleaning operations are stored in containers that must be kept closed at all times except when filling or emptying;

2) Ensure that mixing and storage containers used for VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing these materials;

3) Ensure that cloth and paper, or other absorbent applicators, moistened with cleaning solvents are stored in closed containers (cotton-tipped swabs used for very small cleaning operations are exempt);

4) Minimize spills of VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials;

5) Convey VOM-containing coatings, thinners, coating-related waste materials, and cleaning materials from one location to another in closed containers or pipes;

6) Minimize VOM emissions from cleaning of application, storage, mixing, and conveying equipment by ensuring that equipment cleaning is performed without atomizing the cleaning solvent and all spent solvent is captured in closed containers; and

7) Apply all coatings using one or more of the following application methods:

A) Electrostatic spray;

B) High volume low pressure (HVLP) spray;

C) Flow coating. For the purposes of this subsection (e)(7)(C), flow coating means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

D) Roll coating;

E) Dip coating, including electrodeposition. For purposes of this subsection (e)(7)(E), electrodeposition means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

F) Brush coating;

G) Cotton-tipped swab application; or

H) Another coating application method capable of achieving a transfer

efficiency equal to or better than that achieved by HVLP spraying, if the method is approved in writing by the Agency.

f) The application method limitations in subsection (e)(7) do not apply to the following:

1) Any situation that normally requires the use of an airbrush or an extension on the spray gun to properly reach limited access spaces;

2) The application of aerospace specialty coatings;

3) The application of coatings that contain fillers that adversely affect atomization with HVLP spray guns and that the Agency has determined cannot be applied by any of the application methods ~~specified~~ in subsection (e)(7);

4) The application of coatings that normally have a dried film thickness of less than 0.0013 centimeter (0.0005 inch) and that the Agency has determined cannot be applied by any of the application methods ~~specified~~ in subsection (e)(7);

5) The use of airbrush application methods for stenciling, lettering, and other identification markings;

6) The use of hand-held spray can application methods; and

7) Application of touch-up and repair coatings.

g) Cleaning Operations at Aerospace Facilities

1) Hand-wipe Cleaning at Aerospace Facilities. Hand-wipe cleaning (excluding cleaning of spray gun equipment performed in ~~accordance~~ compliance with subsection (g)(3)) must use cleaning solvents that meet the definition of aqueous cleaning solvent or have a composite vapor pressure of 45 mmHg (24.1 in. H_2O) or less at 20 °C (68 °F).

2) The following cleaning operations are exempt from the requirements of subsection (g)(1):

A) Cleaning during the manufacture, assembly, installation, maintenance, or testing of components of breathing oxygen systems that are exposed to the breathing oxygen;

B) Cleaning during the manufacture, assembly, installation, maintenance, or testing of parts, subassemblies, or assemblies that are exposed to strong oxidizers or reducers (e.g., nitrogen

tetroxide, liquid oxygen, hydrazine);

C) Cleaning and surface activation ~~prior to~~before adhesive bonding;

D) Cleaning of electronic parts and assemblies containing electronic parts;

E) Cleaning of aircraft fluid systems and ground support equipment fluid systems that are exposed to the fluid, including air-to-air heat exchangers and hydraulic fluid systems;

F) Cleaning of fuel cells, fuel tanks, and confined spaces;

G) Surface cleaning of solar cells, coated optics, and thermal control surfaces;

H) Cleaning during fabrication, assembly, installation, and maintenance of upholstery, curtains, carpet, and other textile materials used on the interior of the aircraft;

I) Cleaning of metallic and nonmetallic materials used in honeycomb cores during the manufacture or maintenance of these cores, and cleaning of the completed cores used in the manufacture of aerospace vehicles or components;

J) Cleaning of aircraft transparencies, polycarbonate, or glass substrates;

K) Cleaning and solvent usage associated with research and development, quality control, or laboratory testing;

L) Cleaning operations, using nonflammable liquids, conducted within 5 feet of energized electrical systems. Energized electrical systems means any AC or DC electrical circuit on an assembled aircraft once electrical power is connected, including interior passenger and cargo areas, wheel wells, and tail sections; and

M) Cleaning operations identified as essential uses under the Montreal Protocol for which the USEPA Administrator has allocated essential use allowances or exemptions in 40 CFR 82.4.

3) Spray Gun Cleaning at Aerospace Facilities. Spray gun cleaning, in which spray guns are used for the application of coatings or any other materials that require the spray guns to be cleaned, must be cleaned by one or more of the following methods:

A) Enclosed System

i) Clean the spray gun in an enclosed system that is closed at all times except when inserting or removing the spray gun. Cleaning must consist of forcing solvent through the gun.

ii) Each owner or operator using an enclosed spray gun cleaner must visually inspect the seals and all other potential sources of leaks at least once per month. Each inspection must occur while the spray gun cleaner is in operation. If leaks are found in the enclosed system, the enclosed cleaner must be shut down until the leak is repaired or its use is permanently discontinued.

B) Nonatomized cleaning. Clean the spray gun by placing cleaning solvent in the pressure pot and forcing it through the gun with the atomizing cap in place. Atomizing air must not be used. Direct the cleaning solvent from the spray gun into a vat, drum, or other waste container that is closed when not in use.

C) Disassembled spray gun cleaning. Disassemble the spray gun and clean the components by hand in a vat, which must remain closed at all times except when in use. Alternatively, soak the components in a vat, which must remain closed during the soaking period and when not inserting or removing components.

D) Atomizing cleaning. Clean the spray gun by forcing the cleaning solvent through the gun and direct the resulting atomized spray into a waste container that is fitted with a device designed to capture the atomized cleaning solvent emissions.

4) Flush Cleaning at Aerospace Facilities. For cleaning solvents used in flush cleaning of parts, assemblies, and coating line components, the used cleaning solvent (except for semiaqueous cleaning solvents) must be emptied into an enclosed container or collection system that is kept closed when not in use or captured with wipers, ~~provided~~ if they comply with the housekeeping requirements of subsections (e)(1) through (3). Aqueous cleaning solvents are exempt from these requirements.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART G: USE OF ORGANIC MATERIAL

Section 219.301 Use of Organic Material

~~No~~ A person ~~shall~~ must not cause or allow the discharge of more than 3.6 kg/hr (8 lbs/hr) of organic material into the atmosphere from any emission unit, except as provided in Sections 219.302, 219.303, 219.304 ~~of this Part~~ and the ~~following~~ exception~~: If~~ that, if no odor nuisance exists, then the limitation of this Subpart ~~shall apply~~applies only to photochemically reactive material.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.302 Alternative Standard

Emissions of organic material in excess of those permitted by Section 219.301 ~~of this Part~~ are allowable if ~~such~~ the emissions are controlled by one of the following methods:

a) Flame, thermal, or catalytic incineration ~~so as~~ either ~~to reduce such~~reducing the emissions to 10 ppm equivalent methane (molecular weight 16) or less, or ~~to convert~~converting 85 percent of the hydrocarbons to carbon dioxide and water; or,

b) A vapor recovery system which adsorbs and/or condenses at least 85 percent of the total uncontrolled organic material that would otherwise be emitted to the atmosphere; or,

c) Any other air pollution control equipment ~~approved by the Agency and approved by the USEPA as a SIP revision~~ capable of reducing by 85 percent or more the uncontrolled organic material that would be otherwise emitted to the atmosphere that is approved by the Agency and approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.303 Fuel Combustion Emission Units

~~The provisions of~~ Sections 219.301 and 219.302 ~~of this Part shall~~do not apply to fuel combustion emission units.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.304 Operations with Compliance Program

~~The provisions of~~ Sections 219.301 and 219.302 ~~of this Part shall~~do not apply to any owner, operator, user, or manufacturer of paint, varnish, lacquer, coatings, or printing ink whose compliance program and project completion schedule, as required by 35 Ill. Adm. Code 201, provided for ~~the reduction of~~reducing organic material used in ~~such~~ the process to 20 percent or less of total volume by May 30, 1977.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART H: PRINTING AND PUBLISHING

Section 219.401 Flexographic and Rotogravure Printing

a) ~~No~~ An owner or operator of a subject flexographic or rotogravure printing line ~~shall~~ must not apply at any time any coating or ink unless the VOM content does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(1) or (a)(2), as applicable. Compliance with this Section must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 219.105(a) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(c) ~~of this Part~~. As an alternative to compliance with this subsection, a subject printing line may meet the requirements of subsection (b) or (c).

1) ~~Prior to~~Before August 1, 2010, either:

A) Forty percent VOM by volume of the coating and ink (minus water and any compounds which are specifically exempted from the definition of VOM); or

B) Twenty-five percent VOM by volume of the volatile content in the coating and ink; and

2) On and after August 1, 2010:

A) For owners or operators of flexographic or rotogravure printing lines that do not print flexible packaging, either:

i) Forty percent VOM by volume of the coating and ink (minus water and any compounds that are specifically exempted from the definition of VOM); or

ii) Twenty-five percent VOM by volume of the volatile content in the coating and ink;

B) For owners or operators of flexographic or rotogravure printing lines that print flexible packaging, or that print flexible packaging and non-flexible packaging on the same line, either:

i) 0.8 kg VOM/kg (0.8 lbs VOM/lb) solids applied; or

ii) 0.16 kg VOM/kg (0.16 lbs VOM/lb) inks and coatings applied.

b) Weighted Averaging Alternative

1) ~~Prior to~~Before August 1, 2010, ~~no~~ an owner or operator of a subject

flexographic or rotogravure printing line ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by volume~~.~~, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(1)(A) (as determined by subsection (b)(1)(A)) or subsection (a)(1)(B) (as determined by subsection (b)(1)(B) ~~of this Section~~). Compliance with this subsection must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 219.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(d) ~~of this Part~~.

A) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(1)(A) ~~of this Section~~.

$$VOM_{(i)(A)} = \frac{\sum_{i=1}^{n} C_i L_i (V_{si} + V_{VOMi})}{\sum_{i=1}^{n} L_i (V_{si} + V_{VOMi})}$$

where:

$VOM_{(i)(A)}$ = The weighted average VOM content in units of percent VOM by volume of all coatings and inks (minus water and any compounds that are specifically exempted from the definition of VOM) used each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on a printing line;

C_i = The VOM content in units of percent VOM by volume of each coating or ink as applied (minus water and any compounds that are specifically exempted from the definition of VOM);

L_i = The liquid volume of each coating or ink as applied in units of l (gal);

V_{si} = The volume fraction of solids in each coating or ink as applied;

V_{VOMi} = The volume fraction of VOM in each coating or ink as applied.

B) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(1)(B) ~~of this Section~~.

$$VOM_{(i)(B)} = \frac{\sum_{i=1}^{n} C_i L_i V_{VMi}}{\sum_{i=1}^{n} L_i V_{VMi}}$$

where:

$VOM_{(i)(B)}$ = The weighted average VOM content in units of percent VOM by volume of the volatile content of all coatings and inks used each day;

i = Subscript denoting a specific coating or ink as applied;

n = The number of different coatings and/or inks as applied each day on a printing line;

C_i = The VOM content in units of percent VOM by volume of the volatile matter in each coating or ink as applied;

L_i = The liquid volume of each coating or ink as applied in units of l (gal);

V_{VMi} = The volume fraction of volatile matter in each coating or ink as applied.

2) On and after August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line that does not print flexible packaging ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by weight, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(2)(A)(i) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(1)(A)) or (a)(2)(A)(ii) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(1)(B)) of this Section. Compliance with this subsection (b)(2) ~~shall~~ must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 219.105(a) ~~of~~

~~this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(d) ~~of this Subpart~~.

3) On and after August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, ~~shall~~ must not apply coatings or inks on the subject printing line unless the weighted average, by weight, VOM content of all coatings and inks as applied each day on the subject printing line does not exceed the limitation ~~specified~~ in ~~either~~ subsection (a)(2)(B)(i) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(3)(A)) or subsection (a)(2)(B)(ii) (calculated in ~~accordance~~ compliance with the equation in subsection (b)(3)(B)) ~~of this Section~~. Compliance with this subsection (b)(3) ~~shall~~ must be demonstrated through the applicable coating or ink analysis test methods and procedures ~~specified~~ in Section 219.105(a) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(d) ~~of this Subpart~~.

A) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(2)(B)(i) ~~of this Section~~.

$$VOM_{(A)} = \frac{\sum_{i=1}^{n} C_i W_i}{\sum_{i=1}^{n} W_i}$$

where:

$VOM_{(A)}$	=	The weighted average VOM content in units of kg VOM per kg (lbs VOM per lb) solids of all coatings and inks used each day;
i	=	Subscript denoting a specific coating or ink as applied;
n	=	The number of different coatings and/or inks as applied each day on a printing line;
C_i	=	The VOM content in units of kg VOM per kg (lbs VOM per lb) solids of each coating or ink as applied;
W_i	=	Weight of solids in each coating or ink, as applied, in units of kg (lb).

B) The following equation ~~shall~~ must be used to determine if the weighted average VOM content of all coatings and inks as applied each day on the subject printing line exceeds the limitation ~~specified~~ in subsection (a)(2)(B)(ii) ~~of this Section~~.

$$VOM_{(B)} = \frac{\sum_{i=1}^{n} C_i L_i}{\sum_{i=1}^{n} L_i}$$

where:

$VOM_{(B)}$	=	The weighted average VOM content in units of kg (lbs) VOM per weight in kg (lbs) of all coatings or inks as applied each day;
i	=	Subscript denoting a specific coating or ink as applied;
n	=	The number of different coatings and/or inks as applied each day on each printing line;
C_i	=	The VOM content in units of kg (lbs) VOM per weight in kg (lbs) of each coating or ink as applied;
L_i	=	The weight of each coating or ink, as applied, in units of kg (lb).

c) Capture System and Control Device Requirements

1) ~~Prior to~~Before August 1, 2010, ~~no~~ an owner or operator of a subject flexographic or rotogravure printing line equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the requirements in subsection (c)(1)(A)(i), (c)(1)(A)(ii), or (c)(1)(A)(iii), as well as subsections (c)(1)(B), (c)(5), and (c)(6).

A) One of:

i) A carbon adsorption system is used that reduces the captured VOM emissions by at least 90 percent by weight; or

ii) An incineration system is used that reduces the captured

VOM emissions by at least 90 percent by weight; or

iii) An alternative VOM emission reduction system is used that is demonstrated to have at least a 90 percent control device efficiency, approved by the Agency and approved by USEPA as a SIP revision; and

B) The printing line is equipped with a capture system and control device that provides an overall reduction in VOM emissions of at least:

i) 75 percent where a publication rotogravure printing line is employed; or

ii) 65 percent where a packaging rotogravure printing line is employed; or

iii) 60 percent where a flexographic printing line is employed;

2) On and after August 1, 2010, ~~no~~ an owner or operator of a flexographic or rotogravure printing line that does not print flexible packaging and that is equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the requirements in subsection (c)(1)(A)(i), (c)(1)(A)(ii), or (c)(1)(A)(iii), as well as subsections (c)(1)(B), (c)(5), and (c)(6) ~~of this Section~~;

3) On and after August 1, 2010, ~~no~~ an owner or operator of a flexographic or rotogravure printing line that prints flexible packaging and that is equipped with a capture system and control device ~~shall~~ must not operate the subject printing line unless the owner or operator meets the requirements in subsections (c)(5) and (c)(6) ~~of this Section~~ and the capture system and control device provides an overall reduction in VOM emissions of at least:

A) 65 percent in cases in which a subject printing line was first constructed at the subject source ~~prior to~~before March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source ~~prior to~~before January 1, 2010; or

B) 70 percent when a subject printing line was first constructed at the subject source ~~prior to~~before March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source on or after January 1, 2010; or

C) 75 percent when a subject printing line was first constructed at the subject source on or after March 14, 1995, and ~~utilizes~~ uses a

control device that was first constructed at the subject source ~~prior to~~before January 1, 2010; or

D) 80 percent when a subject printing line was first constructed at the subject source on or after March 14, 1995, and ~~utilizes~~ uses a control device that was first constructed at the subject source on or after January 1, 2010;

4) On and after August 1, 2010, the owner or operator of a flexographic or rotogravure printing line that prints flexible packaging and non-flexible packaging on the same line and that is equipped with a control device ~~shall be~~is subject to the requirements of ~~either~~ subsection (c)(1)(B) or (c)(3) ~~of this Section~~, whichever is more stringent, as well as subsections (c)(5) and (c)(6) ~~of this Section~~;

5) The control device is equipped with the applicable monitoring equipment ~~specified~~ in Section 219.105(d)(2) ~~of this Part~~ and, except as provided in Section 219.105(d)(3) ~~of this Part~~, the monitoring equipment is installed, calibrated, operated ,and maintained according to vendor specifications at all times the control device is in use; and

6) The capture system and control device are operated at all times when the subject printing line is in operation. The owner or operator ~~shall~~ must demonstrate compliance with this subsection by using the applicable capture system and control device test methods and procedures ~~specified~~ in Section 219.105(c) ~~of this Part~~ through ~~Section~~ 219.105(f) ~~of this Part~~ and by complying with the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(e) ~~of this Part~~. The owner or operator of a printing line subject to the requirements in subsection (c)(1)(B) or (c)(2) ~~of this Section~~ that performed all testing necessary to demonstrate compliance with subsection (c)(1)(B) ~~prior to~~before August 1, 2010, is not required to retest ~~pursuant to~~under this subsection (c)(6). The owner or operator of a printing line subject to the requirements in subsection (c)(3) ~~shall~~ must perform testing in compliance with this subsection (c)(6), even if the owner or operator already performed ~~such~~ the testing ~~prior to~~before August 1, 2010, unless the ~~following~~ testing meets the conditions ~~are met~~in subsections (A) through (E). Nothing in this subsection (c)(6), however, ~~shall limit~~limits the Agency's ability to require that the owner or operator perform testing ~~pursuant to~~under 35 Ill. Adm. Code 201.282:

A) On or after May 1, 2000, the owner or operator of the subject printing line performed all testing necessary to demonstrate compliance with subsection (c)(1)(B);

B) ~~Such~~ The testing also demonstrated an overall control efficiency equal to or greater than the applicable control efficiency requirements in subsection (c)(3);

C) The owner or operator submitted the results of ~~such~~ the tests to the Agency, and the Agency did not reject the tests ~~were not rejected by the Agency~~;

D) The same capture system and control device subject to the tests referenced in subsection (c)(6)(A) ~~of this Section~~ is still being used by the subject printing line; and

E) The owner or operator complies with all recordkeeping and reporting requirements in Section 219.404(e)(1)(B).

d) ~~No~~ An owner or operator of subject flexographic or rotogravure printing lines that print flexible packaging or print flexible packaging and non-flexible packaging on the same line ~~shall~~ must not cause or allow VOM containing cleaning materials, including used cleaning towels, associated with the subject flexographic or rotogravure printing lines to be kept, stored, or disposed of in any manner other than in closed containers, or conveyed from one location to another in any manner other than in closed containers or pipes, except when specifically in use.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.402 Applicability

a) Except as otherwise provided in Section 219.401, the limitations of Section 219.401 ~~of this Subpart~~ apply to all flexographic and rotogravure printing lines at a subject source. All sources with flexographic-and/or rotogravure printing lines are subject sources unless:

1) Total maximum theoretical emissions of VOM from all flexographic and rotogravure printing lines (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines), at the source never exceed 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices, or

2) A federally enforceable permit or SIP revision for all flexographic and rotogravure printing lines at a source requires the owner or operator to limit production or capacity of these printing lines to reduce total VOM emissions from all flexographic and rotogravure printing lines to 90.7 Mg (100 tons) or less per calendar year before the application of capture systems and control devices.

b) The limitations of Section 219.401(d) ~~shall~~ apply to all owners or operators of flexographic or rotogravure printing lines that print flexible packaging, or that print flexible packaging and non-flexible packaging on the same line, at a source where the combined emissions of VOM from all flexographic and rotogravure printing lines total 6.8 kg/day (15 lbs/day) or more (including solvents used for cleanup operations associated with flexographic and rotogravure printing lines), in the absence of air pollution control equipment.

c) Upon achieving compliance with this Subpart, the flexographic and rotogravure printing lines are not required to meet ~~Subpart G (~~Section 219.301 or 219.302 ~~of this Part)~~. Flexographic and rotogravure printing lines exempt from this Subpart are subject to ~~Subpart G (~~Section 219.301 or 219.302 ~~of this Part)~~. Rotogravure or flexographic equipment used for both roll printing and paper coating is subject to this Subpart.

d) Once subject to the limitations of Section 219.401 ~~of this Part~~, a flexographic or rotogravure printing line is always subject to the limitations of Section 219.401 ~~of this Part~~.

e) Any owner or operator of any flexographic or rotogravure printing line that is exempt from any of the limitations of Section 219.401 ~~of this Part~~ because of the criteria in this Section is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 219.404(b) and (f) ~~of this Part~~, as applicable.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.403 Compliance Schedule

Every owner or operator of a flexographic and/or rotogravure printing line ~~shall~~ must comply with the applicable requirements of Section 219.401 and Section 219.404 ~~of this Part in accordance with~~according to the applicable compliance schedule or schedules ~~specified~~ in subsection (a), (b), (c), (d), (e), (f) or (g):

a) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that is exempt from the limitations of Section 219.401 ~~of this Part~~ because of the criteria in Section 219.402(a) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.404(b) ~~of this Part~~.

b) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 219.401(a)(1) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.401(a)(1) ~~of this Part~~ and Section 219.404(c) ~~of this Part~~.

c) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 219.401(b)(1) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, Section 219.401(b)(1) and Section 219.404(d) ~~of this Part~~.

d) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 219.401(c)(1)(B) ~~of this Part shall~~must not operate ~~said~~ that printing line on or after a date consistent with Section 219.106 ~~of this Part~~, unless the owner or operator has complied with, and continues to comply with, the applicable provisions in Sections 219.401(c) and 219.404(e) ~~of this Part~~.

e) ~~No~~ An owner or operator of a flexographic or rotogravure printing line complying by means of Section 219.401(a)(2), (b)(2), or (b)(3) or ~~complying by means of~~ Section 219.401(c)(2), (c)(3), or (c)(4), ~~shall~~ must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 219.401(a)(2), (b)(2) or (b)(3), and Section 219.401(c), as applicable, and all applicable provisions in Section 219.404 ~~of this Part~~.

f) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, ~~shall~~ must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 219.401(d) and Section 219.404(g) ~~of this Part~~.

g) ~~No~~ An owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, and that is exempt from the limitations of Section 219.401(d) because of the criteria in Section 219.402(b) ~~of this Part shall~~must not operate the printing line on or after August 1, 2010, unless the owner or operator has complied with, and continues to comply with, Section 219.402(b) and Section 219.404(f) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.404 Recordkeeping and Reporting

a) The VOM content of each coating and ink and the efficiency of each capture system and control device ~~shall~~ must be determined by the applicable test methods and procedures ~~specified~~ in Section 219.105 ~~of this Part~~ to establish the records required under this Section.

b) Any owner or operator of a printing line which is exempted from any of the limitations of Section 219.401 ~~of this Part~~ because of the criteria in Section 219.402(a) ~~of this Part shall~~must comply with the following:

1) By a date consistent with Section 219.106 ~~of this Part~~, or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, by January 1, 2012, the owner or operator of a flexographic and rotogravure printing line to which this subsection (b) ~~is applicable shall~~applies must certify to the Agency that the flexographic and rotogravure printing line is exempt under ~~the provisions of~~ Section 219.402(a) ~~of this Part~~. ~~Such~~ The certification shall include:

A) A declaration that the flexographic and rotogravure printing line is exempt from the limitations of the criteria in Section 219.401 because of Section 219.402(a) ~~of this Part~~; and

B) Calculations that demonstrate that total maximum theoretical emissions of VOM from all flexographic and rotogravure printing lines at the source never exceed 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices. Total maximum theoretical emissions of VOM for a flexographic or rotogravure printing source is the sum of maximum theoretical emissions of VOM from each flexographic and rotogravure printing line at the source. The following equation ~~shall~~ must be used to calculate total maximum theoretical emissions of VOM per calendar year before the application of capture systems and control devices for each flexographic and rotogravure printing line at the source:

$$E_p = A \times B + 1095\left(C \times D \times F\right)$$

where:

E_p = Total maximum theoretical emissions of VOM from one flexographic or rotogravure printing line in units of kg/year (lbs/year);

A = Weight of VOM per volume of solids of the coating or ink with the highest VOM content as applied each year on the printing line in units of kg VOM/l (lbs VOM/gal) of coating or ink solids;

B = Total volume of solids for all coatings and inks that can potentially be applied each year on the printing line in units of 1/year (gal/year). The method by which the owner or operator accurately calculated the volume of each coating and ink as applied and the amount that can potentially be applied each year on the printing line ~~shall~~ must be described

in the certification to the Agency;

C = Weight of VOM per volume of material for the cleanup material or solvent with the highest VOM content as used each year on the printing line in units of kg/l (lbs VOM/gal) of ~~such~~ the material;

D = The greatest volume of cleanup material or solvent used in any 8-hour period;

F = The highest fraction of cleanup material or solvent which is not recycled or recovered for offsite disposal during any 8-hour period.

2) On and after a date consistent with Section 219.106 ~~of this Part~~, or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, on and after January 1, 2012, the owner or operator of a facility referenced in this subsection ~~shall~~ must collect and record all of the following information each year for each printing line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content and the volume of each coating and ink as applied each year on each printing line.

3) On and after a date consistent with Section 219.106 ~~of this Part~~, or, for flexographic or rotogravure printing lines that print flexible packaging or that print flexible packaging and non-flexible packaging on the same line, on and after January 1, 2012, the owner or operator of a facility exempted from the limitations of Section 219.401 ~~of this Part~~ because of the criteria in Section 219.402(a) ~~of this Part shall~~must notify the Agency of any record showing that total maximum theoretical emissions of VOM from all printing lines exceed 90.7 Mg (100 tons) in any calendar year before the application of capture systems and control devices by sending a copy of ~~such~~ the record to the Agency within 30 days after the exceedance occurs.

c) Any owner or operator of a printing line subject to the limitations of Section 219.401 ~~of this Part~~ and complying by means of Section 219.401(a) ~~of this Part shall~~must comply with the following:

1) By a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or upon initial start-up of a new printing line, or

upon changing the method of compliance ~~from~~ for an existing subject printing line from Section 219.401(b) or Section 219.401(c) to Section 219.401(a) ~~of this Part~~, the owner or operator of a subject printing line ~~shall~~ must certify to the Agency that the printing line will be in compliance with Section 219.401(a) ~~of this Part~~ on and after a date consistent with Section 219.106 ~~of this Part,~~ or Section 219.403(e), as applicable, or on and after the initial start-up date. The owner or operator of a printing line subject to the requirements in Section 219.401(a)(2)(B) ~~shall~~ must certify in ~~accordance~~ compliance with this subsection (c)(1) even if the owner or operator of ~~such~~ the line submitted a certification ~~prior to~~before January 1, 2010. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content of each coating and ink as applied each day on each printing line.

2) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or on and after the initial start-up date, the owner or operator of a printing line subject to the limitations of Section 219.401 ~~of this Part~~ and complying by means of Section 219.401(a) ~~of this Part shall~~must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content of each coating and ink as applied each day on each printing line.

3) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 219.401(a) ~~of this Part shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(a) to Section 219.401(b) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (d)(1) or (e)(1) ~~of this Section~~, respectively. Upon changing the

method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(a) to Section 219.401(b) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (d) or (e) ~~of this Section~~, respectively.

d) Any owner or operator of a printing line subject to the limitations of Section 219.401 ~~of this Part~~ and complying by means of Section 219.401(b) ~~of this Part~~ ~~shall~~must comply with the following:

1) By a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or upon initial start-up of a new printing line, or upon changing the method of compliance for an existing subject printing line from Section 219.401(a) or (c) to Section 219.401(b) ~~of this Part~~, the owner or operator of the subject printing line ~~shall~~ must certify to the Agency that the printing line will be in compliance with Section 219.401(b) ~~of this Part~~ on and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, on and after the initial start-up date. The owner or operator of a printing line subject to the requirements in Section 219.401(b)(3) ~~shall~~ must certify in ~~accordance~~ compliance with this subsection (d)(1) even if the owner or operator of ~~such~~ the line submitted a certification ~~prior to~~before January 1, 2010. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each printing line which will comply by means of Section 219.401(b) ~~of this Part~~.

B) The name and identification number of each coating and ink available for use on each printing line.

C) The VOM content of each coating and ink as applied each day on each printing line.

D) The method by which the owner or operator will accurately calculate the volume~~,~~ or weight of solids, as applicable, of each coating and ink as applied each day on each printing line, and on and after January 1, 2012, the weight of each coating or ink.

E) The method by which the owner or operator will create and maintain records each day as required in subsection (d)(2) ~~of this Section~~.

F) An example of the format in which the records required in subsection (d)(2) ~~of this Section~~ will be kept.

2) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or on and after the initial start-up date, the

owner or operator of a printing line subject to the limitations of Section 219.401 and complying by means of Section 219.401(b) ~~of this Part shall~~must collect and record all of the following information each day for each printing line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating and ink as applied on each printing line.

B) The VOM content and the volume~~,~~ or weight of solids, as applicable, of each coating and ink as applied each day on each printing line, and on and after January 1, 2012, the weight of each coating or ink.

C) The daily-weighted average VOM content of all coatings and inks as applied on each printing line.

3) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 219.401(b) ~~of this Part shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(b) to Section 219.401(a) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c)(1) or (e)(1) ~~of this Section~~, respectively. Upon changing the method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(b) to Section 219.401(a) or (c) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c) or (e) ~~of this Section~~, respectively.

e) Any owner or operator of a printing line subject to the limitations of Section 219.401 ~~of this Part~~ and complying by means of Section 219.401(c) ~~of this Part shall~~must comply with the following:

1) By a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or upon initial start-up of a new printing line, or upon changing the method of compliance for an existing printing line from Section 219.401(a) or (b) to Section 219.401(c) ~~of this Part~~, the owner or operator of the subject printing line ~~shall~~ must either:

A) Perform all tests and submit to the Agency the results of all tests and calculations necessary to demonstrate that the subject printing line will be in compliance with Section 219.401(c) ~~of this Part~~ on and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or on and after the initial start-up date; or

B) If not required to perform such testing ~~pursuant to~~under Section 219.401(c)(6), submit a certification to the Agency that includes:

i) A declaration that the owner or operator is not required to perform testing ~~pursuant to~~under Section 219.401(c)(6);

ii) The dates that testing demonstrating compliance with Section 219.401(c)(3) was performed; and

iii) The dates that the results of such testing were submitted to the Agency.

2) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, or on and after the initial start-up date, the owner or operator of a printing line subject to the limitations of Section 219.401 ~~of this Part~~ and complying by means of Section 219.401(c) ~~of this Part shall~~must collect and record all of the following information each day for each printing line and maintain the information at the facility for ~~a period of~~ three years:

A) Control device monitoring data.

B) A log of operating time for the capture system, control device, monitoring equipment, and the associated printing line.

C) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after a date consistent with Section 219.106 ~~of this Part~~, or Section 219.403(e), as applicable, the owner or operator of a subject printing line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of Section 219.401(c) ~~of this Part shall~~must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(c) to Section 219.401(a) or (b) ~~of this Part~~, the owner or operator ~~shall~~ mustl comply with all requirements of subsection (c)(1) or (d)(1) ~~of this Section~~, respectively. Upon changing the method of compliance with Section 219.401 ~~of this Part~~ from Section 219.401(c) to Section 219.401(a) or (b) ~~of this Part~~, the owner or operator ~~shall~~ must comply with all requirements of subsection (c) or (d) ~~of this Section~~, respectively.

4) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, the owner or operator of a printing line subject to the requirements in Section 219.401(c)(3) or (c)(4) ~~shall~~ must submit to the Agency records documenting the date the printing line was constructed at the subject source and the date the control device for ~~such~~ the printing line was constructed at the subject source.

f) Any owner or operator of a flexographic or rotogravure printing line that prints flexible packaging, or that prints flexible packaging and non-flexible packaging on the same line, and that is exempt from the limitations of Section 219.401(d) because of the criteria in Section 219.402(b) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, and upon modification of a printing line, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from the requirements in Section 219.401(d) because of the criteria in Section 219.402(b);

B) Calculations that demonstrate that combined emissions of VOM from all flexographic and rotogravure printing lines (including inks and solvents used for cleanup operations associated with ~~such~~ the printing lines) at the source never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment;

2) On and after January 1, 2012, collect and record the following information each day for each subject printing line:

A) The name and identification number of each coating, ink, and cleaning solvent as applied each day on each printing line;

B) The VOM content of each coating and ink (measured in weight of VOM per volume of coating or ink, or in weight of VOM per weight of coating or ink) as applied each day on each printing line, and the volume or weight of each coating or ink, as applicable;

C) The weight of VOM per volume of each cleaning solvent and the volume of each cleaning solvent used each day on each printing line;

D) The total daily emissions of VOM from each printing line (including solvents used for cleanup operations associated with the printing line) and the sum of daily emissions from all subject printing lines at the source; and

3) Notify the Agency in writing if the combined emissions of VOM from all flexographic and rotogravure printing lines (including inks and solvents used for cleanup operations associated with the flexographic and rotogravure lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs.

g) Any owner or operator of a printing line subject to the limitations of Section 219.401(d) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, submit a certification to the Agency describing the practices and procedures that the owner or operator will follow to ensure compliance with the limitations of Section 219.401(d); and

2) Notify the Agency of any violation of Section 219.401(d) by sending a description of the violation and copies of records documenting ~~such~~ the violations to the Agency within 30 days ~~following the occurrence of~~after the violation.

h) All records required by subsections (f) and (g) ~~of this Section shall~~must be retained for at least three years and ~~shall~~ must be made available to the Agency upon request.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.405 Lithographic Printing: Applicability

a) Every owner or operator of lithographic printing lines is subject to the recordkeeping and reporting requirements in Section 219.411 ~~of this Subpart~~.

b) ~~Prior to~~Before August 1, 2010, Sections 219.407 through 219.410 ~~of this Subpart shall~~must apply to:

1) All owners or operators of heatset web offset lithographic printing lines unless:

A) Total maximum theoretical emissions of VOM from all heatset web offset lithographic printing lines (including solvents used for cleanup operations associated with heatset web offset lithographic printing lines) at the source never exceed 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices. To determine a source's total maximum theoretical emissions of VOM for the purposes of this subsection (b)(1)(A), the owner or operator ~~shall~~ must use the calculations ~~set forth~~ in Section 219.411(a)(1)(C) ~~of this Subpart~~; or

B) Federally enforceable permit conditions or SIP revision for all heatset web offset lithographic printing lines at the source requires the owner or operator to limit production or capacity of these printing lines to total VOM emissions of 90.7 Mg/yr (100 TPY) or less, before the application of capture systems and control devices;

2) All owners or operators of lithographic printing lines, unless the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) never exceed 45.5 kg/day (100 lbs/day), as determined in ~~accordance~~ compliance with Section 219.411(a)(1)(B), before the application of capture systems and control devices.

c) On and after August 1, 2010:

1) The requirements in Section 219.407(a)(1)(B) through (a)(1)(E) and 219.407(b) and all applicable provisions in Sections 219.409 through 219.411 ~~of this Subpart shall~~ apply to all owners or operators of heatset web offset lithographic printing lines, if the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) ever exceed 45.5 kg/day (100 lbs/day), calculated in ~~accordance~~ compliance with Section 219.411(b)(2)(B), before the application of capture systems and control devices;

2) The requirements in Section 219.407(a)(1)(A) and (a)(2) through (a)(5) and all applicable provisions in Sections 219.409 through 219.411 ~~of this Subpart shall~~ apply to all owners or operators of lithographic printing lines if the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) ever equal or exceed 6.8 kg/day (15 lbs/day), calculated in ~~accordance~~ compliance with Section 219.411(b)(1)(B), before the application of capture systems and control devices;

3) Notwithstanding subsection (c)(2) ~~of this Section~~, at sources where the combined emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) equal or exceed 6.8 kg/day (15 lbs/day) but do not exceed 45.5 kg/day (100 lbs/day), calculated in ~~accordance~~ compliance with Section 219.411(b)(1)(B), before the application of capture systems and control devices, the following exclusions ~~shall~~ apply unless the owner or operator of the source certifies ~~pursuant to~~under Section 219.411(g)(1)(B) that the source will not make use of any ~~such~~ the exclusions:

A) ~~The requirements of~~ Section 219.407(a)(1)(A), (a)(2), and (a)(3) ~~of this Subpart shall~~does not apply to lithographic printing lines with a total fountain solution reservoir of less than 3.8 liters (1 gallon);

B) ~~The requirements of~~ Section 219.407(a)(3) ~~of this Subpart shall~~does not apply to sheet-fed offset lithographic printing lines with maximum sheet size of 11x17 inches or smaller;

C) ~~The requirements of~~ Section 219.407(a)(4) ~~of this Subpart shall~~does not apply to up to a total of 416.3 liters (110 gallons) per year of cleaning materials used on all lithographic printing lines at the source;

D) ~~The requirements of~~ Section 219.407(a)(4)(A)(i) ~~shall~~ does not apply to lithographic printing lines at the source. Instead, ~~the requirements of~~ Section 219.407(a)(4)(A)(ii) ~~shall apply~~applies to ~~such~~ those lines.

d) If a lithographic printing line at a source is or becomes subject to one or more of the limitations in Section 219.407 ~~of this Subpart~~, the lithographic printing lines at the source are always subject to the applicable provisions of this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.406 Provisions Applying to Heatset Web Offset Lithographic Printing Prior to March 15, 1996 (Repealed)

(Source: Repealed at 34 Ill. Reg. 9253, effective June 25, 2010

Section 219.407 Emission Limitations and Control Requirements for Lithographic Printing Lines

a) ~~No~~ An owner or operator of lithographic printing lines subject to the requirements of this Subpart ~~shall~~must not:

1) Cause or allow the operation of any heatset web offset lithographic printing line unless:

A) The total VOM content in the as-applied fountain solution meets one of the following conditions:

i) 1.6 percent or less, by weight;

ii) 3 percent or less, by weight, and the temperature of the fountain solution is maintained below ~~15.6°C (60°F)~~15.6 ºC (60 ºF), measured at the reservoir or the fountain tray; or

iii) 5 percent or less, by weight, and the as-applied fountain solution contains no alcohol;

B) The air pressure in the dryer is maintained lower than the air pressure of the press room, such that air flow through all openings in the dryer, other than the exhaust, is into the dryer at all times when the printing line is operating;

C) An afterburner is installed and operated so that VOM emissions (excluding methane and ethane) from the press dryer exhausts are reduced as follows:

i) ~~Prior to~~Before August 1, 2010, by 90 percent, by weight, or to a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon); and

ii) On and after August 1, 2010, by at least 90 percent, by weight, for afterburners first constructed at the source ~~prior to~~before January 1, 2010; by at least 95 percent, by weight, for afterburners first constructed at the source on or after January 1, 2010; or to a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon);

D) The afterburner complies with all monitoring provisions ~~specified~~ in Section 219.410(c) ~~of this Subpart~~; and

E) The afterburner is operated at all times when the printing line is in operation, except the afterburner may be shut down between November 1 and April 1 ~~as provided in~~under Section 219.107 ~~of this Part~~;

2) Cause or allow the operation of any non-heatset web offset lithographic printing line unless the VOM content of the as-applied fountain solution is 5 percent or less, by weight, and the as-applied fountain solution contains

no alcohol;

3) Cause or allow the operation of any sheet-fed offset lithographic printing line unless:

A) The VOM content of the as-applied fountain solution is 5 percent or less, by weight; or

B) The VOM content of the as-applied fountain solution is 8.5 percent or less, by weight, and the temperature of the fountain solution is maintained below ~~15.6°C (60°F)~~15.6 ºC (60 ºF), measured at the reservoir or the fountain tray;

4) Cause or allow the use of a cleaning solution on any lithographic printing line unless:

A) The VOM content of the as-used cleaning solution is less than or equal to:

i) 30 percent, by weight; or

ii) On and after August 1, 2010, for owners or operators of sources that meet the applicability criteria in Section 219.405(c)(3) and do not certify ~~pursuant to~~under Section 219.411(g)(1)(B) that the source will not make use of any of the exclusions in Section 219.405(c)(3), 70 percent, by weight; or

B) The VOM composite partial vapor pressure of the as-used cleaning solution is less than 10 mmHg at ~~20°C (68°F)~~20 ºC (68 ºF);

5) Cause or allow VOM containing cleaning materials, including used cleaning towels, associated with any lithographic printing line to be kept, stored, or disposed of in any manner other than in closed containers, except when specifically in use.

b) An owner or operator of a heatset web offset lithographic printing line subject to the requirements of ~~Section 219.407(a)(1)(C) of this Subpart~~subsection (a)(1)(C) may use a control device other than an afterburner, if:

1) The control device reduces VOM emissions from the press dryer exhausts as follows:

A) ~~Prior to~~Before August 1, 2010, by at least 90 percent, by weight, or to a maximum control device exhaust outlet concentration of 20 ppmv (as carbon); and

B) On and after August 1, 2010:

i) By at least 90 percent, by weight, for control devices first constructed at the source ~~prior to~~before January 1, 2010;

ii) By at least 95 percent, by weight, for control devices first constructed at the source on or after January 1, 2010; or

iii) To a maximum control device exhaust outlet concentration of 20 ppmv (as carbon);

2) The owner or operator submits to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; and

3) The use of the control device with testing, monitoring, and recordkeeping in ~~accordance~~ compliance with this plan is approved by the Agency and USEPA as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.408 Compliance Schedule for Lithographic Printing On and After March 15, 1996 (Repealed)

(Source: Repealed at 34 Ill. Reg. 9253, effective June 25, 2010)

Section 219.409 Testing for Lithographic Printing

a) Testing to demonstrate compliance with the requirements of Section 219.407 ~~of this Subpart shall~~must be conducted by January 1, 2012, unless ~~such~~ the testing was conducted on or after May 9, 1995, the test was conducted ~~pursuant to~~under a test method approved by USEPA, the current operating conditions and operating capacity of the press are consistent with the operation of the press during ~~such~~ the testing, and the test results were submitted to the Agency. If an owner or operator of a printing line performed ~~such~~ the testing ~~prior to~~before May 9, 1995, the owner or operator ~~shall~~ must either retest ~~pursuant to~~under this Section or submit to the Agency all information necessary to demonstrate that the prior testing was conducted ~~pursuant to~~under a test method approved by USEPA, and that the current operating conditions and operating capacity of the press are consistent with the operation of the press during prior testing. ~~Thereafter, testing shall~~Testing must then be conducted by the owner or operator within 90 days after a request by the Agency, or as otherwise specified in this Subpart. ~~Such~~ The testing ~~shall~~ must be conducted at the expense of the owner or operator and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting ~~such~~ the testing to allow the Agency to be present during

~~such~~ the testing.

b) The methods and procedures of Section 219.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with the requirements of Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

C) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

4) Notwithstanding the criteria or requirements in Method 25 that ~~specifies~~ specify a minimum probe temperature of ~~129ºC (265ºF)~~129 ºC (265 ºF), the probe must be heated to at least the gas stream temperature of the dryer exhaust, typically close to ~~176.7ºC (350ºF)~~176.7 ºC (350 ºF);

5) During testing, the printing lines ~~shall~~ must be operated at representative operating conditions and flow rates; and

6) During testing, an air flow direction indicating device, such as a smoke stick, ~~shall~~ must be used to demonstrate 100 percent emissions capture efficiency for the dryer in ~~accordance~~ compliance with Section 219.407(a)(1)(B) ~~of this Subpart~~.

c) Testing to demonstrate compliance with the VOM content limitations in Section 219.407(a)(1)(A), (a)(2), (a)(3), and (a)(4)(A) ~~of this Subpart~~, and to determine the VOM content of fountain solutions, fountain solution additives, cleaning solvents, cleaning solutions, and inks (~~pursuant to the requirements of~~under Section 219.411(a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Subpart~~, as applicable), ~~shall~~ must be conducted upon request of the Agency or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures ~~specified~~ in Section 219.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) The manufacturer's specifications for VOM content for fountain solution additives, cleaning solvents, and inks may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a) ~~of this Part~~; ~~provided,~~ however, Method 24 ~~shall~~ must be used to determine compliance.

d) Testing to demonstrate compliance with the requirements of Section 219.407(b) ~~of this Subpart shall~~must be conducted ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA as federally enforceable permit conditions ~~pursuant to~~under Section 219.407(b) ~~of this Subpart~~.

e) Testing to determine the VOM composite partial vapor pressure of cleaning solvents, cleaning solvent concentrates, and as-used cleaning solutions ~~shall~~ must be conducted in ~~accordance~~ complaince with the applicable methods and procedures ~~specified~~ in Section 219.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.410 Monitoring Requirements for Lithographic Printing

a) Fountain Solution Temperature

1) The owner or operator of any lithographic printing lines relying on the temperature of the fountain solution to demonstrate compliance ~~shall~~ must install, maintain, and continuously operate a temperature monitor of the fountain solution in the reservoir or fountain tray, as applicable.

2) The temperature monitor must be capable of reading with an accuracy of ~~1°C or 2°F~~1 ºC or 2 ºF, and must be attached to an automatic~~,~~ continuous recording device such as a strip chart, recorder, or computer~~,~~ with at least the same accuracy~~,~~ that is installed, calibrated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications. If the automatic~~,~~ continuous recording device malfunctions, the owner or operator ~~shall~~ must record the temperature of the fountain solution at least once every two operating hours. The automatic~~,~~ continuous recording device ~~shall~~ must be repaired or replaced as soon as practicable.

b) Fountain Solution VOM Content. The owner or operator of any lithographic printing lines subject to Section 219.407(a)(1)(A), (a)(2) or (a)(3) ~~of this Subpart~~ ~~shall~~must:

1) For a fountain solution to which VOM is not added automatically:

A) Maintain records of the VOM content of the fountain solution in ~~accordance~~ compliance with Section 219.411(e)(2)(C); or

B) Take a sample of the as-applied fountain solution from the fountain tray or reservoir, as applicable, each time a fresh batch of fountain solution is prepared or each time VOM is added to an existing batch of fountain solution in the fountain tray or reservoir, and ~~shall~~ determine compliance with the VOM content limitation of the as-applied fountain solution by using one of the following options:

i) With a refractometer or hydrometer with a visual, analog, or digital readout and with an accuracy of 0.5 percent. The refractometer or hydrometer must be calibrated with a standard solution for the type of VOM used in the fountain solution, in ~~accordance~~ compliance with manufacturer~~'~~'s specifications, against measurements performed to determine compliance. The refractometer or hydrometer must be corrected for temperature at least once per 8-hour shift or once per batch of fountain solution prepared or modified, whichever is longer; or

ii) With a conductivity meter if it is demonstrated that a

refractometer and hydrometer cannot distinguish between compliant and noncompliant fountain solution for the type and amount of VOM in the fountain solution. A source may use a conductivity meter if it demonstrates that both hydrometers and refractometers fail to provide significantly different measurements for standard solutions containing 95 percent, 100 percent, and 105 percent of the applicable VOM content limit. The conductivity meter reading for the fountain solution must be referenced to the conductivity of the incoming water. A standard solution ~~shall~~ must be used to calibrate the conductivity meter for the type of VOM used in the fountain solution, in ~~accordance~~ compliance with manufacturer's specifications;

2) For fountain solutions to which VOM is added at the source with automatic feed equipment, determine the VOM content of the as-applied fountain solution based on the setting of the automatic feed equipment which makes additions of VOM up to a pre-set level. Records ~~must be retained~~ of the VOM content of the fountain solution must be retained in ~~accordance~~ compliance with Section 219.411(e)(2)(D) ~~of this Subpart~~. The equipment used to make automatic additions must be installed, calibrated, operated, and maintained in ~~accordance~~ compliance with manufacturer's specifications.

c) Afterburners for Heatset Web Offset Lithographic Printing Lines. If an afterburner is used to demonstrate compliance, the owner or operator of a heatset web offset lithographic printing line subject to Section 219.407(a)(1)(C) ~~of this Subpart shall~~must:

1) Install, calibrate, maintain, and operate temperature monitoring devices with an accuracy of ~~3°C or 5F°~~3 ºC or 5 ºF on the afterburner in ~~accordance~~ compliance with Section 219.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the afterburner is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer~~'~~'s specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

d) Other Control Devices for Heatset Web Offset Lithographic Printing Lines. If a control device other than an afterburner is used to demonstrate compliance, the owner or operator of a heatset web offset lithographic printing line subject to this Subpart ~~shall~~ must install, maintain, calibrate, and operate ~~such~~ the monitoring equipment ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by

the Agency and USEPA ~~pursuant to~~under Section 219.407(b) ~~of this Subpart~~.

e) Cleaning Solution

1) The owner or operator of any lithographic printing line relying on the VOM content of the cleaning solution to comply with Section 219.407(a)(4)(A) ~~of this Subpart~~ must:

A) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

i) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

ii) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 219.407(a)(4)(A) ~~of this Subpart~~;

B) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the ~~usage~~ user of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 219.411(f)(2) ~~of this Subpart~~.

2) The owner or operator of any lithographic printing line relying on the vapor pressure of the cleaning solution to comply with Section 219.407(a)(4)(B) ~~of this Subpart~~ must keep records for ~~such~~ the cleaning solutions used on any such lines ~~as set forth in~~under Section 219.411(f)(2)(C) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.411 Recordkeeping and Reporting for Lithographic Printing

a) Exempt Units ~~prior to~~before August 1, 2010. An owner or operator of lithographic printing lines exempt from ~~the limitations of~~ Section 219.407 ~~of this Subpart prior to~~before August 1, 2010, because of the criteria in Section 219.405(b) ~~of this Subpart, shall~~must comply with the following:

1) Upon initial start-up of a new lithographic printing line, and upon modification of a lithographic printing line, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from the control requirements in Section 219.407 ~~of this Part~~ because of the criteria in Section 219.405(b) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives, and cleaning solvents, the tests methods and procedures ~~set forth~~ in Section 219.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ musr be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from fountain solutions and cleaning solvents used on lithographic printing lines at the source, no retention factor is used;

C) Either a declaration that the source, through federally enforceable permit conditions, has limited its maximum theoretical emissions of VOM from all heatset web offset lithographic printing lines (including solvents used for cleanup operations associated with

heatset web offset printing lines) at the source to no more than 90.7 Mg (100 tons) per calendar year before the application of capture systems and control devices or calculations which demonstrate that the source's total maximum theoretical emissions of VOM do not exceed 90.7 Mg/yr (100 tons/yr). Total maximum theoretical emissions of VOM for a heatset web offset lithographic printing source is the sum of maximum theoretical emissions of VOM from each heatset web offset lithographic printing line at the source. The following equation ~~shall~~ must be used to calculate total maximum theoretical emissions of VOM per calendar year in the absence of air pollution control equipment for each heatset web offset lithographic printing line at the source:

$$E_p = (R \times A \times B) + (C \times D) + 1095\,(F \times G \times H)$$

where:

E_d = Total maximum theoretical emissions of VOM from one heatset web offset printing line in units of kg/yr (lb/yr);

A = Weight of VOM per volume of solids of ink with the highest VOM content as applied each year on the printing line in units of kg/l (lb/gal) of solids;

B = Total volume of solids for all inks that can potentially be applied each year on the printing line in units of l/yr (gal/yr). The method by which the owner or operator accurately calculated the volume of each ink as applied and the amount that can potentially be applied each year on the printing line ~~shall~~ must be described in the certification to the Agency;

C = Weight of VOM per volume of fountain solution with the highest VOM content as applied each year on the printing line in units of kg/l (lb/gal);

D = The total volume of fountain solution that can potentially be used each year on the printing line in units of l/yr (gal/yr). The method by which the owner or operator accurately calculated the volume of each fountain solution used and the amount that can potentially be used each year on the printing line ~~shall~~ must be described in the certification to the Agency;

F = Weight of VOM per volume of material for the cleanup

material or solvent with the highest VOM content as used each year on the printing line in units of kg/l (lb/gal) of ~~such~~ the material;

G = The greatest volume of cleanup material or solvent used in any 8-hour period;

H = The highest fraction of cleanup material or solvent that is not recycled or recovered for offsite disposal during any 8-hour period;

R = The multiplier representing the amount of VOM not retained in the substrate being used. For paper, R = 0.8. For metal, plastic, or other impervious substrates, R = 1.0;

D) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all such tests have been properly conducted in ~~accordance~~ compliance with Section 219.409(c)(1) ~~of this Subpart~~;

2) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs. ~~Such~~ This notification ~~shall~~ must include a copy of all records of ~~such~~ the event.

b) Exempt Units on and after August 1, 2010

1) Lithographic Printing Lines Exempt ~~pursuant to~~under Section 219.405(c)(2). By August 1, 2010, or upon initial start-up of a new lithographic printing line, whichever is later, and upon modification of a lithographic printing line, an owner or operator of lithographic printing lines exempt from ~~the limitations in~~ Section 219.407 ~~of this Subpart~~ because of the criteria in Section 219.405(c)(2) ~~of this Subpart shall~~must submit a certification to the Agency that includes the information ~~specified~~ in either subsections (b)(1)(A), (b)(1)(B), and (b)(1)(D) ~~of this Section~~, or subsections (b)(1)(A) and (b)(1)(C) ~~of this Section~~, as applicable. An owner or operator complying with subsection (b)(1)(B) ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(1)(E) ~~of this Section~~. An owner or operator complying with subsection (b)(1)(C) ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(1)(F) ~~of this Section~~:

A) A declaration that the source is exempt from ~~the requirements in~~ Section 219.407 ~~of this Subpart~~ because of the criteria in Section 219.405(c)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source do not equal or exceed 6.8 kg/day (15 lbs/day), before the use of capture systems and control devices, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives and cleaning solvents, the test methods and procedures ~~set forth~~ in Section 219.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from cleaning solutions used on lithographic printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is demonstrated to be less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and the shop towels are kept in closed containers. For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg

measured at ~~20°C (68°F)~~20 °C (68 °F) and for shop towels that are not kept in closed containers, no emission adjustment factor is used;

C) As an alternative to the calculations in subsection (b)(1)(B), a statement that the source uses less than the amount of material ~~specified~~ in subsection (b)(1)(C)(i) or (ii), as applicable, during each calendar month. A source may determine that it emits ~~below~~ less than 6.8 kg/day (15 lbs/day) of VOM based upon compliance with ~~such~~ the material use limitations. If the source exceeds this amount of material use in a ~~given~~ calendar month, the owner or operator must, within 15 days after the end of that month, complete the emissions calculations of subsection (b)(1)(B) to determine daily emissions for applicability purposes. If the source ever exceeds this amount of material use for six consecutive calendar months, it is no longer eligible to use this subsection (b)(1)(C) as an alternative to the calculations in subsection (b)(1)(B). If a source has both heatset web offset and either nonheatset web offset or sheetfed lithographic printing operations, or has all three types of printing operations, the owner or operator may not ~~make~~ use ~~of~~ this alternative and must use the calculations in subsection (b)(1)(B).

i) The sum of all sheetfed and nonheatset web offset lithographic printing operations at the source: 242.3liters (64 gallons) of cleaning solvent and fountain solution additives, combined; or

ii) The sum of all heatset web offset lithographic printing operations at the source: 204.1 kg (450 lbs) of ink, cleaning solvent, and fountain solution additives, combined;

D) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all ~~such~~ tests have been properly conducted in ~~accordance~~ compliance with Section 219.409(c)(1) ~~of this Subpart~~;

E) For sources complying with subsection (b)(1)(B) ~~of this Section~~, notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs. If ~~such~~ emissions of VOM at the source equal or exceed 6.8 kg/day (15

lbs/day) but do not exceed 45.5 kg/day (100 lbs/day), the source ~~shall~~ must comply with ~~the requirements in~~ subsection (b)(2) ~~of this Section~~;

F) For sources complying with subsection (b)(1)(C) ~~of this Section~~, comply with the following:

i) Maintain material use records showing that the source uses less than the amount of material ~~specified~~ in subsections (b)(1)(C)(i) and (b)(1)(C)(ii) during each calendar month, or, if the source exceeds the material use limitations, records showing that the source exceeded the limitations but did not emit 6.8 kg/day (15 lbs/day) or more of VOM, and provide ~~such~~ the records to the Agency upon request. On and after January 1, 2012, ~~such~~ the records ~~shall~~ must include the name, identification number, and VOM content of each cleaning solvent and fountain solution additive used per calendar month, the volume of each cleaning solvent and fountain solution additive used per calendar month for each sheetfed and nonheatset web offset lithographic printing operation, and the weight of each cleaning solvent, ink, and fountain solution additive used per calendar month for each heatset web offset lithographic printing operation;

ii) Notify the Agency in writing if the source exceeds the material use limitations for six consecutive calendar months, or if the source changes its method of compliance from subsection (b)(1)(C) to subsection (b)(1)(B) ~~of this Section~~, within 30 days after the event occurs;

2) Heatset web offset lithographic printing lines exempt ~~pursuant to~~under Section 219.405(c)(1) but not exempt ~~pursuant to~~under Section 219.405(c)(2). By August 1, 2010, or upon initial start-up of a new heatset web offset lithographic printing line, whichever is later, and upon modification of a heatset web offset lithographic printing line, an owner or operator of heatset web offset lithographic printing lines that are exempt from ~~the limitations in~~ Section 219.407 ~~of this Subpart pursuant to the criteria in~~under Section 219.405(c)(1) ~~of this Subpart~~, but that are not exempt ~~pursuant to the criteria in~~under Section 219.405(c)(2) ~~of this Subpart~~, ~~shall~~ must submit a certification to the Agency that includes the information ~~specified~~ in subsections (b)(2)(A) through (b)(2)(C) ~~of this Section~~. ~~Such~~ The owner or operator ~~shall~~ must also comply with ~~the requirements in~~ subsection (b)(2)(D) ~~of this Section~~:

A) A declaration that the source is exempt from the control requirements in Section 219.407 ~~of this Subpart~~ because of the

criteria in Section 219.405(c)(1) ~~of this Subpart~~, but is not exempt ~~pursuant to~~under the criteria in Section 219.405(c)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, as follows (the following methodology ~~shall~~ must also be used to calculate whether a source exceeds 45.5 kg/day (100 lbs/day) for ~~purposes of~~ determining eligibility for the exclusions ~~set forth~~ in Section 219.405(c)(3), in ~~accordance~~ compliance with Section 219.411(g)(2)(A)(i)):

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all lithographic printing lines at the source (including solvents used for cleanup operations associated with the lithographic printing lines) and divide this amount by the number of days during that calendar month that lithographic printing lines at the source were in operation;

ii) To determine the VOM content of the inks, fountain solution additives, and cleaning solvents, the test methods and procedures ~~set forth~~ in Section 219.409(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on lithographic printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines;

iv) To determine VOM emissions from cleaning solvents used on lithographic printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from cleaning solution in shop towels if the VOM composite vapor pressure of ~~such~~ the cleaning

solution is demonstrated to be less than 10 mmHg measured at ~~20°C (68°F)~~20 ºC (68 ºF) and the shop towels are kept in closed containers. For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg measured at ~~20°C (68°F)~~20 ºC (68 ºF) and for shop towels that are not kept in closed containers, no emission adjustment factor is used;

C) A description and the results of all tests used to determine the VOM content of inks, fountain solution additives, and cleaning solvents, and a declaration that all ~~such~~ tests have been properly conducted in ~~accordance~~ complaince with Section 219.409(c)(1) ~~of this Subpart~~;

D) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs.

c) Unless complying with subsections (b)(1)(C) and (b)(1)(F) ~~of this Section~~, an owner or operator of lithographic printing lines subject to ~~the requirements of~~ subsection (a) or (b) ~~of this Section shall~~must collect and record either the information ~~specified~~ in subsection (c)(1) or (c)(2) ~~of this Section~~ for all lithographic printing lines at the source:

1) Standard recordkeeping, including the following:

A) The name and identification of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

B) A daily record which shows whether a lithographic printing line at the source was in operation on that day;

C) The VOM content and the volume of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

D) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each fountain solution additive, cleaning solvent, and lithographic ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month; and

E) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Section~~, as applicable;

2) Purchase and inventory recordkeeping, including the following:

A) The name, identification, and VOM content of each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line, recorded each month;

B) Inventory records from the beginning and end of each month indicating the total volume of each fountain solution additive, lithographic ink, and cleaning solvent to be used on any lithographic printing line at the source;

C) Monthly purchase records for each fountain solution additive, lithographic ink, and cleaning solvent used on any lithographic printing line at the source;

D) A daily record which shows whether a lithographic printing line at the source was in operation on that day;

E) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each fountain solution additive, cleaning solvent, and lithographic ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month based on the monthly inventory and purchase records required to be maintained ~~pursuant to~~under subsections (c)(2)(A), (c)(2)(B), and (c)(2)(C) ~~of this Section~~;

F) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (a)(1)(B), (b)(1)(B), or (b)(2)(B) ~~of this Section~~, as applicable.

d) An owner or operator of a heatset web offset lithographic printing line subject to the control requirements of Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart shall~~must comply with the following:

1) By August 1, 2010, upon initial start-up of a new printing line, and upon initial start-up of a new control device for a heatset web offset printing line, submit a certification to the Agency that includes the following:

A) An identification of each heatset web offset lithographic printing line at the source;

B) A declaration that each heatset web offset lithographic printing line

is in compliance with ~~the requirements of~~ Section 219.407 (a)(1)(B), (a)(1)(C), (a)(1)(D) and (a)(1)(E) or (b) ~~of this Subpart~~, as appropriate;

C) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ and the date that ~~such~~ the device was first constructed at the source;

D) The control requirements in Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ with which the lithographic printing line is complying;

E) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable; and

F) A declaration that the monitoring equipment required under Section 219.407(a)(1)(D) or (b) ~~of this Subpart~~, as applicable, has been properly installed and calibrated according to manufacturer's specifications;

2) If testing of the afterburner or other approved control device is conducted ~~pursuant to~~under Section 219.409(b) ~~of this Subpart~~, the owner or operator ~~shall~~must, within 90 days after conducting ~~such~~ the testing, submit a copy of all test results to the Agency and ~~shall~~ must submit a certification to the Agency that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the lithographic printing lines are in compliance with Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable, have been properly performed;

B) A statement whether the lithographic printing lines are or are not in compliance with Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~, as applicable; and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 219.410(c) or (d) ~~of this Subpart~~, as applicable;

3) Except as provided in subsection (d)(3)(D)(ii) ~~of this Section~~, collect and record daily the following information for each heatset web offset lithographic printing line subject to ~~the requirements of~~ Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~:

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 219.410(c) or (d) ~~of this Subpart~~, as applicable;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated printing line;

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages; and

D) A log detailing checks on the air flow direction or air pressure of the dryer and press room to ensure compliance with ~~the requirements of~~ Section 219.407(a)(1)(B) ~~of this Subpart~~ as follows:

i) ~~Prior to~~Before August 1, 2010, at least once per 24-hour period while the line is operating; and

ii) On and after August 1, 2010, at least once per calendar month while the line is operating;

4) Notify the Agency in writing of any violation of Section 219.407(a)(1)(C) or (b)(1) ~~of this Subpart~~ within 30 days after the occurrence of ~~such~~ the violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation;

5) If changing its method of compliance between subsections (a)(1)(C) and (b) of Section 219.407 ~~of this Subpart~~, certify compliance for the new method of compliance in ~~accordance~~ compliance with subsection (d)(1) ~~of this Section~~ at least 30 days before making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with ~~the requirements of~~ Section 219.407(a)(1)(B), (a)(1)(C), (a)(1)(D), and (a)(1)(E) ~~of this Subpart~~, or Section 219.407(b) ~~of this Subpart~~, as applicable.

e) An owner or operator of a lithographic printing line subject to Section 219.407(a)(1)(A), (a)(2), or (a)(3) ~~of this Subpart shall~~must:

1) By August 1, 2010, and upon initial start-up of a new lithographic printing line, certify to the Agency that fountain solutions used on each lithographic printing line will be in compliance with the applicable VOM content limitation. ~~Such~~ The certification ~~shall~~ must include:

A) Identification of each lithographic printing line at the source, by type, e.g., heatset web offset, non-heatset web offset, or sheet-fed offset;

B) Identification of each centralized fountain solution reservoir and each lithographic printing line that it serves;

C) A statement that the fountain solution will comply with the VOM content limitations in Section 219.407(a)(1)(A), (a)(2), or (a)(3), as applicable;

D) Initial documentation that each type of fountain solution will comply with the applicable VOM content limitations, including copies of manufacturer's specifications, ~~test results, if any,~~ formulation data and calculations, and any test results;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitation, e.g., a refractometer, hydrometer, conductivity meter, or recordkeeping procedures with detailed description of the compliance methodology; and

F) A sample of the records that will be kept ~~pursuant to~~under subsection (e)(2) ~~of this Section~~.

2) Collect and record the following information for each fountain solution:

A) The name and identification of each batch of fountain solution prepared for use on one or more lithographic printing lines, the lithographic printing lines or centralized reservoir using ~~such~~ the batch of fountain solution, and the applicable VOM content limitation for the batch;

B) If an owner or operator uses a hydrometer, refractometer, or conductivity meter~~, pursuant to~~ under Section 219.410(b)(1)(B)~~,~~ to demonstrate compliance with the applicable VOM content limit in Section 219.407(a)(1)(A), (a)(2), or (a)(3) ~~of this Subpart~~:

i) The date and time of preparation, and each subsequent modification, of the batch;

ii) The results of each measurement taken in ~~accordance~~ compliance with Section 219.410(b) ~~of this Subpart~~;

iii) Documentation of the periodic calibration of the meter in accordance with the manufacturer's specifications,

including date and time of calibration, personnel conducting the calibration, identity of standard solution, and resultant reading; and

iv) Documentation of the periodic temperature adjustment of the meter, including date and time of adjustment, personnel conducting the adjustment, and results;

C) If the VOM content of the fountain solution is determined ~~pursuant to~~under Section 219.410(b)(1)(A) ~~of this Subpart~~, for each batch of as-applied fountain solution:

i) Date and time of preparation and each subsequent modification of the batch;

ii) Volume or weight, as applicable, and VOM content of each component used in, or subsequently added to, the fountain solution batch;

iii) Calculated VOM content of the as-applied fountain solution; and

iv) Any other information necessary to demonstrate compliance with the applicable VOM content limits in Section 219.407(a)(1)(A), (a)(2) and (a)(3) ~~of this Subpart~~, as specified in the source's operating permit;

D) If the VOM content of the fountain solution is determined ~~pursuant to~~under Section 219.410(b)(2) ~~of this Subpart~~, for each setting:

i) VOM content limit corresponding to each setting;

ii) Date and time of initial setting and each subsequent setting;

iii) Documentation of the periodic calibration of the automatic feed equipment in ~~accordance~~ compliance with the manufacturer's specifications; and

iv) Any other information necessary to demonstrate compliance with the applicable VOM content limits in Section 219.407(a)(1)(A), (a)(2) and (a)(3) ~~of this Subpart~~, as specified in the source's operating permit.

E) If the owner or operator relies on the temperature of the fountain solution to comply with ~~the requirements in~~ Section 219.407(a)(1)(A)(ii) or (a)(3)(B) ~~of this Subpart~~:

i) The temperature of the fountain solution at each printing line, as monitored in ~~accordance~~ compliance with Section 219.410(a); and

ii) A maintenance log for the temperature monitoring devices and automatic~~,~~ continuous temperature recorders detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

3) Notify the Agency in writing of any violation of Section 219.407 ~~of this Subpart~~ within 30 days after the occurrence of ~~such~~ the violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation.

f) For lithographic printing line cleaning operations, an owner or operator of a lithographic printing line subject to ~~the requirements of~~ Section 219.407 ~~of this Subpart shall~~must:

1) By August 1, 2010, and upon initial start-up of a new lithographic printing line, certify to the Agency that all cleaning solutions, other than those excluded ~~pursuant to~~under Section 219.405(c)(3)(C), and the handling of all cleaning materials, will be in compliance with ~~the requirements of~~ Section 219.407(a)(4)(A) or (a)(4)(B) and (a)(5). ~~of this Subpart, and such~~The certification ~~shall~~ must also include:

A) A statement that the cleaning solution will comply with the limitations in Section 219.407(a)(4);

B) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

C) A sample of the records that will be kept ~~pursuant to~~under subsection (f)(2) ~~of this Section~~; and

D) A description of the practices that ensure that VOM-containing cleaning materials are kept in closed containers;

2) Collect and record the following information for each cleaning solution used on each lithographic printing line:

A) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.407(a)(4)(A) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.409(c) ~~of this Subpart~~;

iii) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

iv) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

v) The VOM content of the as-used cleaning solution, with supporting calculations; and

vi) A calibration log for the automatic equipment, detailing periodic checks;

B) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.407(a)(4)(A) ~~of this Subpart~~, and that is not prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.409(c) ~~of this Subpart~~;

iv) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

v) The VOM content of the as-used cleaning solution, with supporting calculations. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM content may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a) ~~of this Part~~;

C) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 219.407(a)(4)(B) ~~of this Subpart~~:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 219.409(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 219.105(a) and 219.110 ~~of this Part~~;

iv) The total amount of each cleaning solvent used to prepare the as-used cleaning solution; and

v) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 219.409(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 219.105(a) and 219.110 ~~of this Part~~;

D) The date, time, and duration of scheduled inspections performed to confirm the proper use of closed containers to control VOM emissions, and any instances of improper use of closed containers, with descriptions of actual practice and corrective action taken, if any;

3) Notify the Agency in writing of any violation of Section 219.407 ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation.

g) The owner or operator of lithographic printing lines subject to one or more of the exclusions ~~set forth~~ in Section 219.405(c)(3) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new lithographic printing line that is subject to one or more of the exclusions ~~set forth~~ in Section 219.405(c)(3), whichever is later, submit a certification to the Agency that includes either:

   A) A declaration that the source is subject to one or more of the exclusions ~~set forth~~ in Section 219.405(c)(3) and a statement indicating which such exclusions apply to the source; or

   B) A declaration that the source will not make use of any of the exclusions ~~set forth~~ in Section 219.405(c)(3);

2) Unless the source has certified in ~~accordance~~ compliance with subsection (g)(1)(B) ~~of this Section~~ that it will not make use of any of the exclusions ~~set forth~~ in Section 219.405(c)(3):

   A) Collect and record the following information for all lithographic printing lines at the source:

      i) Calculations that demonstrate that combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source never exceed 45.5 kg/day (100 lbs/day) before the use of capture systems and control devices, determined in ~~accordance~~ compliance with the calculations in subsection (b)(2)(B) ~~of this Section~~;

      ii) The name, identification, and volume of all cleaning materials used per calendar month on lithographic printing lines at the source that do not comply with the cleaning material limitations in Section 219.407(a)(4) ~~of this Subpart~~;

   B) Notify the Agency in writing if the combined emissions of VOM from all lithographic printing lines (including inks, fountain solutions, and solvents used for cleanup operations associated with the lithographic printing lines) at the source ever exceed 45.5 kg/day (100 lbs/day), before the use of capture systems and control devices, within 30 days after the event occurs;

3) If changing from ~~utilization of~~using the exclusions ~~set forth~~ in Section 219.405(c)(3) to opting out of ~~such~~ the exclusions ~~pursuant to~~under subsection (g)(1)(B) ~~of this Section~~, or if there is a change at the source such that the exclusions no longer apply, certify compliance in ~~accordance~~

compliance with subsection (g)(1)(B) ~~of this Section~~ within 30 days after making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with the applicable requirements of Section 219.407 ~~of this Subpart~~;

4) If changing from opting out of the exclusions ~~set forth~~ in Section 219.405(c)(3) ~~pursuant to~~under subsection (g)(1)(B) ~~of this Section~~ to ~~utilization of such~~using the exclusions, certify compliance in ~~accordance~~ compliance with subsection (g)(1)(A) ~~of this Section~~ within 30 days after making ~~such~~ the change.

h) The owner or operator ~~shall~~ must maintain all records required by this Section at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all records available to the Agency upon request.

i) Provisions for Calculation of Emissions from Heatset Web Offset Lithographic Printing Operations. To calculate VOM emissions from heatset web offset lithographic printing operations for purposes other than the applicability thresholds ~~specified~~ in Section 219.405 ~~of this Subpart~~, sources may use the following emission adjustment factors (for Annual Emissions Reports or permit limits, for example):

1) A factor of 0.80 may be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines;

2) To determine VOM emissions from fountain solutions that contain no alcohol, an emission adjustment factor may be used to account for carryover into the dryer, except when using an impervious substrate.

A) The VOM emitted from the fountain solution ~~shall~~ must be calculated using the following equation:

$$VOM_{fs} = 0.30 \times VOM_{tot} + \left(0.70 \times VOM_{tot}\right) \times \left(1 - DE\right)$$

where:

VOM_{tot} = Total VOM in the fountain solution;

VOM_{fs} = VOM emitted from the fountain solution;

DE = Destruction efficiency of the control device on the associated dryer, in decimal form (i.e., 95%

control is represented as 0.95). If no control device is present, DE = 0;

B) For fountain solutions that contain alcohol, impervious substrates such as metal or plastic, or non-heatset lithographic presses, no emission adjustment factor is used;

3) To determine VOM emissions from cleaning solutions used on heatset web offset lithographic printing lines at the source, an emission adjustment factor of 0.50 may be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F) and the shop towels are kept in closed containers. To determine VOM emissions from automatic blanket wash solution with a VOM composite vapor pressure of less than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F), an emission adjustment factor may be used to account for carryover into the dryer, except when using an impervious substrate.

A) The VOM emitted from the automatic blanket wash solution ~~shall~~ must be calculated using the following equation:

$$VOM_{bw} = 0.60 \times VOM_{tot} + \left(0.40 \times VOM_{tot}\right) \times \left(1 - DE\right)$$

where:

VOM_{tot} = Total VOM in the blanket wash;

VOM_{bw} = VOM emitted from the blanket wash;

DE = Destruction efficiency of the control device on the associated dryer, in decimal form (i.e., 95% control is represented as 0.95). If no control device is present, DE = 0;

B) For cleaning solutions with VOM composite vapor pressures of equal to or greater than 10 mmHg measured at ~~20°C (68°F)~~20 °C (68 °F), for shop towels that are not kept in closed containers, and for impervious substrates such as metal or plastic, no emission adjustment factor is used.

Section 219.412 Letterpress Printing Lines: Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after August 1, 2010, the limitations in Sections 219.413 through 219.416 ~~of this Subpart shall~~ apply to:

1) All heatset web letterpress printing lines at a source if all heatset web letterpress printing lines (including solvents used for cleanup operations associated with heatset web letterpress printing lines) at the source have a total potential to emit 22.7 Mg (25 tons) or more of VOM per year; and

2) All letterpress printing lines at a source where the combined emissions of VOM from all letterpress printing lines at the source (including solvents used for cleanup operations associated with the letterpress printing lines) ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, calculated in ~~accordance~~ compliance with Section 219.417(b)(1)(B).

b) Notwithstanding subsection (a)~~ of this Section~~, the requirements of Section 219.413(a)(2) ~~of this Subpart shall~~do not apply to up to 416.3 liters (110 gallons) per year of cleaning materials used on letterpress printing lines at a subject source.

c) On and after August 1, 2010, the recordkeeping and reporting requirements in Section 219.417 ~~of this Subpart shall~~ apply to all owners or operators of letterpress printing lines.

d) If a letterpress printing line at a source is or becomes subject to one or more of the limitations in Section 219.413~~ of this Subpart~~, the letterpress printing lines at the source are always subject to the applicable provision of this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.413 Emission Limitations and Control Requirements for Letterpress Printing Lines

a) ~~No~~ An owner or operator of letterpress printing lines subject to ~~the requirements of~~ this Subpart ~~shall~~must not:

1) Cause or allow the operation of any heatset web letterpress printing line that meets the applicability requirements of Section 219.412(a)(1) unless:

A) The air pressure in the dryer is maintained lower than the air pressure of the press room, such that air flow through all openings in the dryer, other than the exhaust, is into the dryer at all times when the printing line is operating;

B) An afterburner is installed and operated so that VOM emissions (excluding methane and ethane) from the press dryer exhausts are reduced as follows:

i) By 90 percent, by weight, for afterburners first constructed at the source ~~prior to~~before January 1, 2010;

ii) By 95 percent, by weight, for afterburners first constructed at the source on or after January 1, 2010; or

iii) To a maximum afterburner exhaust outlet concentration of 20 ppmv (as carbon);

C) The afterburner complies with all monitoring provisions ~~specified~~ in Section 219.416(a)~~ of this Subpart~~; and

D) The afterburner is operated at all times when the printing line is in operation, except the afterburner may be shut down between November 1 and April 1 ~~as provided in~~under Section 219.107~~ of this Part~~;

2) Cause or allow the use of a cleaning solution on any letterpress printing line unless:

A) The VOM content of the as-used cleaning solution is less than or equal to 70 percent, by weight; or

B) The VOM composite partial vapor pressure of the as-used cleaning solution is less than 10 mmHg at ~~20°C (68°F)~~20 °C (68 °F);

3) Cause or allow VOM-containing cleaning materials, including used cleaning towels, associated with any letterpress printing line to be kept, stored, or disposed of in any manner other than in closed containers, except when specifically in use.

b) An owner or operator of a heatset web letterpress printing line subject to ~~the requirements of~~ subsection (a)(1)(B) ~~of this Section~~ may use a control device other than an afterburner, if:

1) The control device reduces VOM emissions from the press dryer exhausts as follows:

A) By 90 percent, by weight, for control devices first constructed at the source ~~prior to~~before January 1, 2010;

B) By 95 percent, by weight, for control devices first constructed at the source on or after January 1, 2010; or

C) To a maximum control device exhaust outlet concentration of 20 ppmv (as carbon);

2) The owner or operator submits a plan to the Agency detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; and

3) The use of the control device in ~~accordance~~ compliance with this plan is approved by the Agency and USEPA as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.415 Testing for Letterpress Printing Lines

a) Testing to demonstrate compliance with ~~the requirements of~~ Section 219.413 ~~of this Subpart shall~~must be conducted by the owner or operator by January 1, 2012, unless ~~such~~ the testing has been conducted within the two years immediately preceding January 1, 2012. ~~Thereafter, testing shall~~Testing must then be conducted by the owner or operator within 90 days after a request by the Agency, or as otherwise specified in this Subpart. ~~Such~~ The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting ~~such~~ the testing to allow the Agency to be present during ~~such~~ the testing.

b) The methods and procedures of Section 219.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

C) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

4) Notwithstanding the criteria or requirements in Method 25 which ~~specifies~~ specify a minimum probe temperature of ~~129°C (265°F)~~129 °C (265 °F), the probe must be heated to at least the gas stream temperature of the dryer exhaust, typically close to ~~176.7°C (350°F)~~176.7 °C (350 °F);

5) During testing, the printing lines ~~shall~~ must be operated at representative operating conditions and flow rates; and

6) During testing, an air flow direction indicating device, such as a smoke stick, ~~shall~~ must be used to demonstrate 100 percent emissions capture efficiency for the dryer in ~~accordance~~ compliance with Section 219.413(a)(1)(A) ~~of this Subpart~~.

c) Testing to demonstrate compliance with the VOM content limitations in Section 219.413(a)(2)(A) ~~of this Subpart,~~ and to determine the VOM content of cleaning solvents, cleaning solutions, and inks (~~pursuant to the requirements of~~under Section 219.417(b)(1)(B) ~~of this Subpart~~), ~~shall~~ must be conducted upon request of the Agency, or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures ~~specified~~ in Section 219.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24, incorporated by reference in Section 219.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) The manufacturer's specifications for VOM content for cleaning solvents and inks may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a) ~~of this Part; provided~~, however, Method 24 ~~shall~~ mustl be used to determine compliance.

d) Testing to demonstrate compliance with ~~the requirements of~~ Section 219.413(b) ~~of this Subpart shall~~must be conducted ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA as federally enforceable permit conditions ~~pursuant to~~under Section 219.413(b) ~~of this Subpart~~.

e) Testing to determine the VOM composite partial vapor pressure of cleaning solvents, cleaning solvent concentrates, and as-used cleaning solutions ~~shall~~ must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~specified~~ in Section 219.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.416 Monitoring Requirements for Letterpress Printing Lines

a) Afterburners for Heatset Web Letterpress Printing Lines. If an afterburner is used to demonstrate compliance, the owner or operator of a heatset web letterpress printing line subject to Section 219.413(a)(1)(B) ~~of this Subpart shall~~must:

1) Install, calibrate, maintain, and operate temperature monitoring devices with an accuracy of ~~3°C or 5°F~~3 °C or 5 °F on the afterburner in ~~accordance~~ compliance with Section 219.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the afterburner is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

b) Other Control Devices for Heatset Web Letterpress Printing Lines. If a control device other than an afterburner is used to demonstrate compliance, the owner or operator of a heatset web letterpress printing line subject to this Subpart ~~shall~~ must install, maintain, calibrate, and operate ~~such~~ the monitoring equipment ~~as set forth in~~under the ~~owner~~ owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 219.413(b) ~~of this Subpart~~.

c) Cleaning Solution

1) The owner or operator of any letterpress printing line relying on the VOM content of the cleaning solution to comply with Section 219.413(a)(2)(A) ~~of this Subpart~~ must:

A) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

i) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

ii) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 219.413(a)(2)(A) ~~of this Subpart~~;

B) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the ~~usage~~ use of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 219.417(c)(2) ~~of this Subpart~~.

2) The owner or operator of any letterpress printing line relying on the vapor pressure of the cleaning solution to comply with Section 219.413(a)(2)(B) ~~of this Subpart~~ must keep records for ~~such~~ cleaning solutions used on any such lines ~~as set forth in~~under Section 219.417(e)(2)(C) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.417 Recordkeeping and Reporting for Letterpress Printing Lines

a) By August 1, 2010, or upon initial start-up of a new heatset web letterpress printing line, whichever is later, and upon modification of a heatset web letterpress printing line, an owner or operator of a heatset web letterpress printing line exempt from any of the limitations of Section 219.413 ~~of this Subpart~~ because of the criteria in Section 219.412(a)(1) ~~shall~~ must submit a certification to the Agency that includes:

1) A declaration that the source is exempt from ~~the requirements in~~ Section 219.413 ~~of this Subpart~~ because of the criteria in Section 219.412(a)(1) ~~of this Subpart~~;

2) Calculations which demonstrate that the source's total potential to emit VOM does not equal or exceed 22.7 Mg (25 tons) per year.

b) An owner or operator of a letterpress printing line exempt from any of the limitations of Section 219.413 ~~of this Subpart~~ because of the criteria in Section 219.412(a)(2) ~~shall~~must:

1) By August 1, 2010, or upon initial start-up of a new letterpress printing line, whichever is later, and upon modification of a letterpress printing line, submit a certification to the Agency that includes the information ~~specified~~ in ~~either~~ subsections (b)(1)(A) through (b)(1)(C) ~~of this Section,~~ or subsections (b)(1)(A) and (b)(1)(D) ~~of this Section~~, as applicable:

A) A declaration that the source is exempt from the control requirements in Section 219.413 ~~of this Part~~ because of the criteria in Section 219.412(a)(2) ~~of this Subpart~~;

B) Calculations that demonstrate that combined emissions of VOM from all letterpress printing lines (including inks and solvents used for cleanup operations associated with the letterpress printing lines) at the source never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, as follows:

i) To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from all letterpress printing lines at the source (including solvents used for cleanup operations associated with the letterpress printing lines) and divide this amount by the number of days during that calendar month that letterpress printing lines at the source were in operation;

ii) To determine the VOM content of the inks and cleaning solvents, the tests methods and procedures ~~set forth~~ in Section 219.415(c) ~~of this Subpart shall~~must be used;

iii) To determine VOM emissions from inks used on letterpress printing lines at the source, an ink emission adjustment factor of 0.05 ~~shall~~ must be used in calculating emissions from all non-heatset inks except when using an impervious substrate, and a factor of 0.80 ~~shall~~ must be used in calculating emissions from all heatset inks to account for VOM retention in the substrate except when using an impervious substrate. For impervious substrates such as metal or plastic, no emission adjustment factor is used. The VOM content of the ink, as used, ~~shall~~ must be multiplied by this factor to determine the amount of VOM emissions from the use of ink on the printing lines; and

iv) To determine VOM emissions from cleaning solutions used on letterpress printing lines at the source, an emission adjustment factor of 0.50 ~~shall~~ must be used in calculating emissions from used shop towels if the VOM composite vapor pressure of each associated cleaning solution is less than 10 mmHg measured at ~~20°C (68°F)~~20 ºC (68 ºF) and the shop towels are kept in closed containers. Otherwise, no retention factor is used;

C) A description and the results of all tests used to determine the VOM content of inks and cleaning solvents, and a declaration that all such tests have been properly conducted in ~~accordance~~ compliance with Section 219.415(c)(1) ~~of this Subpart~~;

D) As an alternative to the calculations in subsection (b)(1)(B), a statement that the source uses less than the amount of material ~~specified~~ in subsection (b)(1)(D)(i) or (b)(1)(D)(ii), as applicable, during each calendar month. A source may determine that it emits ~~below~~ less than 6.8 kg/day (15 lbs/day) of VOM based upon compliance with ~~such~~ the material use limitations. If the source exceeds this amount of material use in a ~~given~~ calendar month, the owner or operator must, within 15 days ~~of~~ after the end of that month, complete the emissions calculations of subsection (b)(1)(B) to determine daily emissions for applicability purposes. If the source ever exceeds this amount of material use for six consecutive calendar months, it is no longer eligible to use this subsection as an alternative to the calculations in subsection (b)(1)(B). If a source has both heatset web and either nonheatset web or sheetfed letterpress printing operations, or has all three types of printing operations, the owner or operator may not make use of this alternative and must use the calculations in subsection (b)(1)(B).

i) The sum of all sheetfed and nonheatset web letterpress printing operations at the source: 242.3 liters (64 gallons) of cleaning solvent; or

ii) The sum of all heatset web letterpress printing operations at the source: 204.1 kg (450 lbs) of ink and cleaning solvent;

2) For sources complying with subsection (b)(1)(B) ~~of this Section~~, notify the Agency in writing if the combined emissions of VOM from all letterpress printing lines (including inks and solvents used for cleanup operations associated with the letterpress printing lines) at the source ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs;

3) For sources complying with subsection (b)(1)(D) ~~of this Section~~, comply with the following:

A) Maintain material use records showing that the source uses less than the amount of material ~~specified~~ in subsections (b)(1)(D)(i) and (b)(1)(D)(ii) during each calendar month, or, if the source exceeds the material use limitations, records showing that the source exceeded the limitations but did not emit 6.8 kg/day (15 lbs/day) or more of VOM. On and after January 1, 2012, ~~such~~ the records ~~shall~~ must include the name, identification number, and VOM content of each cleaning solvent and ink used per calendar month, the volume of each cleaning solvent used per calendar month for each sheetfed and nonheatset web letterpress printing operation, and the weight of each cleaning solvent and ink used per calendar month for each heatset web letterpress printing operation;

B) Notify the Agency in writing if the source exceeds the material use limitations for six consecutive calendar months, or if the source changes its method of compliance from subsection (b)(1)(D) to subsection (b)(1)(B) ~~of this Section~~, within 30 days after the event occurs.

c) Unless complying with subsections (b)(1)(D) and (b)(3) ~~of this Section~~, on and after August 1, 2010, an owner or operator of a letterpress printing line exempt from any of the limitations in Section 219.413 ~~of this Subpart~~ because of the criteria in Section 219.412(a)(1) or (a)(2) ~~shall~~ must collect and record either the information ~~specified~~ in subsection (c)(1) or (c)(2) ~~of this Section~~ for all letterpress printing lines at the source:

1) Standard recordkeeping, including the following:

A) The name and identification of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

B) A daily record that shows whether a letterpress printing line at the source was in operation on that day;

C) The VOM content and the volume of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

D) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each cleaning solvent and letterpress ink (with the applicable ink VOM emission adjustment) used at the source, calculated each month; and

E) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (b)(1)(B) ~~of this Section~~;

2) Purchase and inventory recordkeeping, including the following:

A) The name, identification, and VOM content of each letterpress ink and cleaning solvent used on any letterpress printing line, recorded each month;

B) Inventory records from the beginning and end of each month indicating the total volume of each letterpress ink, and cleaning solvent to be used on any letterpress printing line at the source;

C) Monthly purchase records for each letterpress ink and cleaning solvent used on any letterpress printing line at the source;

D) A daily record that shows whether a letterpress printing line at the source was in operation on that day;

E) The total VOM emissions at the source each month, determined as the sum of the product of usage and VOM content for each cleaning solvent and letterpress ink (with the applicable ink VOM emission adjustment factor) used at the source, calculated each month based on the monthly inventory and purchase records required to be maintained ~~pursuant to~~under subsections (c)(2)(A), (c)(2)(B), and (c)(2)(C) ~~of this Section~~; and

F) The VOM emissions in lbs/day for the month, calculated in ~~accordance~~ compliance with subsection (b)(1)(B) ~~of this Section~~.

d) An owner or operator of a heatset web letterpress printing lines subject to the control requirements of Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ ~~shall~~must comply with the following:

1) By August 1, 2010, or upon initial start-up of a new printing line, whichever is later, and upon initial start-up of a new control device for a heatset web printing line, submit a certification to the Agency that includes the following:

A) An identification of each heatset web letterpress printing line at the source;

B) A declaration that each heatset web letterpress printing line is in compliance with ~~the requirements of~~ Section 219.413(a)(1) or (b) ~~of this Subpart~~, as appropriate;

C) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, and the date that ~~such~~ the device was first constructed at the subject source;

D) The control requirements in Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ with which the letterpress printing line is complying;

E) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable; and

F) A declaration that the monitoring equipment required under Section 219.413(a)(1)(C) or (b) ~~of this Subpart~~, as applicable, has been properly installed and calibrated according to manufacturer's specifications;

2) If testing of the afterburner or other approved control device is conducted ~~pursuant to~~under Section 219.415(b) ~~of this Subpart~~, the owner or operator ~~shall~~must, within 90 days after conducting ~~such~~ the testing, submit a copy of all test results to the Agency and ~~shall~~ must submit a certification to the Agency that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the letterpress printing lines is in compliance with Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable, have been properly performed;

B) A statement whether the heatset web letterpress printing lines are or are not in compliance with Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~, as applicable; and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 219.416(a) or (b) ~~of this Subpart~~, as applicable;

3) Except as provided in subsection (d)(3)(D) ~~of this Section~~, collect and record daily the following information for each heatset web letterpress printing line subject to ~~the requirements of~~ Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~:

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 219.416(a) or (b) ~~of this Subpart~~, as applicable;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated printing line;

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages; and

D) A log detailing checks on the air flow direction or air pressure of the dryer and press room to ensure compliance with ~~the requirements of~~ Section 219.413(a)(1)(A) ~~of this Subpart~~ at least once per calendar month while the line is operating;

4) Notify the Agency in writing of any violation of Section 219.413(a)(1)(B) or (b)(1) ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the violation;

5) If changing the method of compliance between Sections 219.413(a)(1)(B) and 219.413(b) ~~of this Subpart~~, certify compliance for the new method of compliance ~~in accordance with~~under Section 219.413(b) at least 30 days before making ~~such~~ the change, and perform all tests and calculations necessary to demonstrate that ~~such~~ the printing lines will be in compliance with ~~the requirements of~~ Section 219.413(a)(1) ~~of this Subpart~~, or Section 219.413(b) ~~of this Subpart~~, as applicable.

e) For letterpress printing line cleaning operations, an owner or operator of a letterpress printing line subject to ~~the requirements of~~ Section 219.413 ~~of this Subpart shall~~must:

1) By August 1, 2010, or upon initial start-up of a new letterpress printing line, whichever is later, certify to the Agency that all cleaning solutions, other than those excluded ~~pursuant to~~under Section 219.412(b), and the handling of all cleaning materials will be in compliance with ~~the requirements of~~ Section 219.413(a)(2)(A) or (a)(2)(B) and (a)(3) ~~of this Subpart~~. ~~Such~~ The certification ~~shall~~ must include:

A) A statement that the cleaning solution will comply with the limitations in Section 219.413(a)(2);

B) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

C) A sample of the records that will be kept ~~pursuant to~~under subsection (e)(2)~~ of this Section~~; and

D) A description of the practices that ensure that VOM-containing cleaning materials are kept in closed containers;

2) Collect and record the following information for each cleaning solution used on each letterpress printing line:

A) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.413(a)(2)(A) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.415(c)~~ of this Subpart~~;

iii) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

iv) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

v) The VOM content of the as-used cleaning solution, with supporting calculations; and

vi) A calibration log for the automatic equipment, detailing periodic checks;

B) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.413(a)(2)(A)~~ of this Subpart~~, and that is not prepared at the source with automatic equipment:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.415(c) ~~of this Subpart~~;

iv) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

v) The VOM content of the as-used cleaning solution, with supporting calculations. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM content may be used if ~~such~~ the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a) ~~of this Part~~;

C) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 219.413(a)(2)(B) ~~of this Subpart~~:

i) The name and identification of each cleaning solution;

ii) Date and time of preparation, and each subsequent modification, of the batch;

iii) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 219.415(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~ compliance with methods ~~specified~~ in Sections 219.105(a) and 219.110 ~~of this Part~~;

iv) The total amount of each cleaning solvent used to prepare the as-used cleaning solution; and

v) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 219.415(e) ~~of this Subpart~~. For cleaning solutions that are used as purchased, the manufacturer's specifications for VOM composite partial vapor pressure may be used if ~~such~~ the manufacturer's specifications are based on results of tests conducted in ~~accordance~~

compliance with methods ~~specified~~ in Sections 219.105(a) and 219.110 ~~of this Part~~;

D) The date, time, and duration of scheduled inspections performed to confirm the proper use of closed containers to control VOM emissions, and any instances of improper use of closed containers, with descriptions of actual practice and corrective action taken, if any;

E) The amount of cleaning materials used on letterpress printing lines at the source that do not comply with the cleaning material limitations ~~set forth~~ in Section 219.413(a)(2) ~~of this Subpart~~;

3) Notify the Agency in writing of any violation of Section 219.413 ~~of this Subpart~~ within 30 days after the ~~occurrence of such~~ violation. ~~Such~~ The notification ~~shall~~ musl include a copy of all records of ~~such~~ the violation.

f) The owner or operator ~~shall~~ must maintain all records required by this Section at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all records available to the Agency upon request.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART Q: LEAKS FROM SYNTHETIC ORGANIC CHEMICAL AND POLYMER MANUFACTURING PLANT

Section 219.421 General Requirements

The owner or operator of a plant which processes more than 3660 mg/yr (4033 tons/year) gaseous and light liquid VOM, and whose components are used to manufacture the synthetic organic chemicals or polymers listed in Appendix A, ~~shall~~ must comply with this Subpart. ~~The provisions of this~~This Subpart ~~are applicable~~applies to components containing 10 percent or more by weight VOM as determined by ASTM ~~method~~ methods E-168, E-169 and E-260, incorporated by reference in Section 219.112 ~~of this Part~~. Those components that are not process unit components are exempt from this Subpart. A component ~~shall be~~is considered to be leaking if the VOM is equal to~~,~~ or ~~is~~ greater than 10,000 ppmv as methane or hexane as determined by USEPA Reference Method 21, ~~as specified at~~ 40 CFR 60, Appendix A, incorporated by reference in Section 219.112 ~~of this Part~~, there is an indication of liquids dripping, or ~~indication by~~ a sensor indicates that a seal or barrier fluid system has failed. ~~The provisions of this~~This Subpart ~~are~~ does not ~~applicable~~ apply if the equipment components are used to produce heavy liquid chemicals only from heavy liquid feed or raw materials.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.422 Inspection Program Plan for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 219.421 ~~of this Part shall~~must prepare an inspection program plan which contains, at a minimum:

a) An identification of all components and the period in which each will be monitored ~~pursuant to~~under Section 219.423 ~~of this Part~~.

b) The format for the monitoring log required by Section 219.425 ~~of this Part~~.

c) A description of the monitoring equipment to be used when complying with Section 219.423 ~~of this Part~~, and

d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service, all leaking components, and components exempted under Section 219.423(j) ~~of this Part such that~~so they are obvious and can be located by both plant personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.423 Inspection Program for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to this Subpart ~~shall~~must, for the ~~purposes~~ purpose of detecting leaks, conduct a component inspection program using the test methods ~~specified~~ in Method 21, 40 CFR 60, Appendix A (1986), incorporated by reference in Section 219.112 ~~of this Part~~, consistent with the following provisions:

a) Test annually those components operated near extreme temperature or pressure such that they would be unsafe to routinely monitor and those components which would require ~~the elevation of~~elevating monitoring personnel higher than two meters above permanent worker access structures or surfaces.

b) Test quarterly all other pressure relief valves in gas service, pumps in light liquid service, valves in light liquid service and in gas service, and compressors.

c) If ~~less than or equal to~~ 2 percent or fewer of the valves in light liquid service and in gas service tested ~~pursuant to~~under subsection (b) ~~of this Section~~ are found to leak for five consecutive quarters, no leak tests shall be required for the next three consecutive quarters. ~~Thereafter, leak~~Leak tests ~~shall~~ must resume for the next quarter. If that test shows ~~less than or equal to~~ 2 percent or fewer of the valves in light liquid service and in gas service are leaking, then no tests are required for the next three quarters. If more than 2 percent are leaking, then tests are required for the next five quarters.

d) Observe visually all pump seals weekly.

e) Test immediately any pump seal from which liquids are observed dripping.

f) Test any relief valve within 24 hours after it has vented to the atmosphere.

g) Routine instrument monitoring of flanges, valves which are not externally regulated, ~~flanges,~~ and equipment in heavy liquid service~~,~~ is not required. However, any flange, valve which is not externally regulated, ~~flange~~ or piece of equipment in heavy liquid service that is found to be leaking on the basis of sight, smell, or sound ~~shall~~ must be repaired as soon as practicable but no later than 30 days after the leak is found.

h) Test immediately after repair any component that was found leaking.

i) Within one hour of ~~its detection~~detecting a leak, a weatherproof~~,~~ readily visible tag~~,~~ in bright colors such as red or yellow~~,~~ bearing an identification number and the date on which the leak was detected, must be affixed on the leaking component and remain in place until the leaking component is repaired.

j) The following components are exempt from the monitoring requirements in this Section:

1) Any component that is in vacuum service, and

2) Any pressure relief valve that is connected to an operating flare header or vapor recovery device.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.424 Repairing Leaks

All leaking components must be repaired and retested as soon as practicable but no later than 15 days after the leak is found unless the leaking component cannot be repaired until the process unit is shut down. Records of repairing and retesting must be maintained in ~~accordance~~ compliance with ~~Section~~ Sections 219.425 and 219.426 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.425 Recordkeeping for Leaks

a) The owner or operator of a synthetic organic chemical or polymer manufacturing plant ~~shall~~ must maintain a leaking components monitoring log which ~~shall~~ must contain, at a minimum, the following information:

1) The name of the process unit where the component is located;

2) The type of component (e.g., valve, seal);

3) The identification number of the component;

4) The date on which a leaking component is discovered;

5) The date on which a leaking component is repaired;

6) The date and instrument reading of the recheck procedure after a leaking component is repaired;

7) A record of the calibration of the monitoring instrument;

8) The identification number of leaking components which cannot be repaired until process unit shutdown; and

9) The total number of valves in light liquid service and in gas service inspected; and the total number and ~~the~~ percentage of these valves found leaking during the monitoring period.

b) Copies of the monitoring log ~~shall~~ must be retained by the owner or operator for a minimum of two years after the date on which the record was made or the report was prepared.

c) Copies of the monitoring log ~~shall~~ must be made available to the Agency, upon verbal or written request, ~~prior to~~before or at the time of inspection ~~pursuant to~~under Section 4(d) of the Environmental Protection Act ~~(Act) (Ill. Rev. Stat. 1991, ch. 1111/2, pars. 1001 et seq.) [415 ILCS 5/1 et seq.]~~[415 ILCS 5/4(d)] at any reasonable time.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.426 Report for Leaks

The owner or operator of a synthetic organic chemical or polymer manufacturing plant subject to Section 219.421 through 219.430 ~~of this Part shall~~must:

a) Submit quarterly reports to the Agency on or before March 31, June 30, September 30, and December 31 of each year, listing the following:

1) all leaking components identified ~~pursuant to~~under Section 219.423 ~~of this Part~~ but not repaired within 15 days~~,~~;

2) all leaking components awaiting process unit shutdown~~,~~;

3) the total number of components inspected~~,~~;

4) the type of components inspected~~, and~~;

5) the total number of components found leaking~~,~~;

6) the total number of valves in light liquid service and in gas service inspected; and

7) the number and percentage of valves in light liquid service and in gas service found leaking.

b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Section 219.421 through 219.427 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.427 Alternative Program for Leaks

The Agency ~~shall~~ may approve an alternative program of monitoring, recordkeeping, or reporting to that prescribed in this Subpart ~~upon a demonstration by the owner or operator of such plant~~if an owner or operator of a plantdemonstrates that the alternative program will provide source personnel and Agency personnel with an equivalent ability to identify and repair leaking components. Any alternative program can be allowed when approved by the Agency and approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.428 Open-Ended Valves

a) Each open-ended valve ~~shall~~ must be equipped with a cap, blind flange, plug, or a second valve, except during operations requiring fluid flow through the open-ended valve.

b) Each open-ended valve equipped with a second valve ~~shall~~ must be operated in a manner such that the valve on the process fluid end is closed before the second valve is closed.

c) Components which are open-ended valves and which serve as a sampling connection ~~shall~~ must be controlled such that they comply with subsection (c)(1), (c)(2), or (c)(3) ~~below~~. This requirement does not apply to in-situ sampling systems.

1) A closed purge system or closed vent system ~~shall~~ must return purged process fluid to the process line with no detectable volatile organic material emissions to the atmosphere, or

2) A closed purge system or closed vent system ~~shall~~ must collect and recycle purged process fluid to the process line with no detectable volatile organic material emissions to the atmosphere, or

3) Purged process fluid ~~shall~~ must be transported to a control device that complies with ~~the requirements of~~ Section 219.429 ~~of this Part~~. If a container is used to transport purged process fluid to the control device, the container ~~shall~~ must be a closed container designed and used to reduce the VOM emissions vented from purged process fluid after transfer to no detectable VOM emissions as determined by USEPA Reference Method 21, ~~as specified in~~ 40 CFR 60, Appendix A (1990 or 1991), incorporated by reference in Section 219.112 ~~of this Part~~. For purposes of this Section, the phrase "after transfer" ~~shall refer~~refers to the time at which the entire amount of purged process fluid resulting from a flushing or cleaning of the sample line enters the container~~, provided,~~; however, that purged process fluid may be transferred from the initial container to another closed container ~~prior to~~before disposal, e.g., to a bulk waste storage container.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.429 Standards for Control Devices

Control devices used to comply with Section 219.428(c) ~~of this Part shall~~must comply with the following:

a) If the control device is a vapor recovery system (for example, condensers and adsorbers), it ~~shall~~ must be designed and operated to recover the volatile organic material emissions vented to it with an efficiency of 95 percent or greater.

b) If the control device is an enclosed combustion device, it ~~shall~~ must be designed and operated to reduce the volatile organic material emissions vented to it with an efficiency of 95 percent or greater, or to provide a minimum residence time of 0.75 seconds at a minimum temperature of ~~816° C~~816 ºC.

c) If the control device is a flare, it ~~shall~~must:

1) Be designed for and operated with no visible emissions as determined by USEPA Reference Method 22, 40 CFR 60, Appendix A (1986), incorporated by reference in Section 219.112 ~~of this Part~~, except for periods not to exceed a total of 5 minutes during any 2 consecutive hours.

2) Be operated with a pilot flame present at all times and ~~shall~~ must be monitored with a thermocouple or any other equivalent device to detect the presence of the pilot flame.

3) Be steam-assisted, air-assisted, or nonassisted.

4) Be used only with the net heating value of the gas being combusted being 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or with the net heating value of the gas being combusted being 7.45 MJ/scm or greater if the flare is nonassisted. The net heating value of the gas being combusted ~~shall~~ must be calculated using the following equation:

$$H_r = K \sum_{i=1}^{n} C_i H_i$$

where:

H_r = Net heating value of the sample in MJ/scm; where the net enthalpy per mole of offgas is based on combustion at ~~25° C~~25 ºC and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20° C~~20 ºC;

K = Constant, 1.740×10^{-7} (1/ppm)(g-mole/scm) (MJ/Kcal)

where

standard temperature for (g-mole/scm) is ~~20° C~~20 ºC;

C_i = Concentration of sample component i, in ppm, as measured by USEPA Reference Method 18, 40 CFR 60, Appendix A (1986), and ASTM D 2504-83, both incorporated by reference in Section 219.112 ~~of this Part~~;

H_i = Net heat of combustion of sample component i, kal/g mole. The heats of combustion may be determined using ASTM D 2382-83, incorporated by reference in Section 219.112 ~~of this Part~~, if published values are not available or cannot be calculated

5) Steam-assisted and nonassisted flares ~~shall~~ must be designed and operated with an exit velocity, as determined by dividing the volumetric flowrate (in units of standard temperature and pressure), as determined by USEPA Reference Method 2 or 2A, 40 CFR 60, Appendix A (1986) incorporated by reference in Section 219.112 ~~of this Part~~, as appropriate; by the unobstructed (free) cross sectional area of the flare tip, less than 18 m/sec (60 ft/sec).

6) Air-assisted flares ~~shall~~ must be designed and operated with an exit velocity less than the maximum permitted velocity, V_{max}, as determined by the following equation:

$V_{max} = 8.706 + 0.7084(H_r)$;

V_{max} = Maximum permitted velocity, m/sec;

8.706 = Constant;

0.7084 = Constant;

H_r = The net heating value as determined in subsection (c)(4) ~~of this section~~.

d) The owner or operator must maintain the following information pertaining to closed vent systems and control devices subject to Section 219.429 ~~shall be maintained by the owner or operator~~. These records ~~shall~~ must be updated as necessary to describe current operation and equipment. The records ~~shall~~ must be retained at a readily accessible location at the source for a minimum of two years after the control device is permanently shutdown.

1) Detailed schematics, design specifications, and piping and instrumentation diagrams;

2) The dates and description of any changes in design specifications;

3) A description of the parameter or parameters monitored and recorded as required in subsection (f)(1) to ensure that the control devices are operated and maintained in conformance with their design and an explanation why that parameter (or parameters) was selected for monitoring.

e) The control device ~~shall~~ must be operated at all times when emissions may be vented to it.

f) Owners and operators of control devices used to comply with this Subpart ~~shall~~ must monitor each control device to ensure that the control device is operated and maintained in conformance with its designs at all times that emissions may be vented to it. This monitoring ~~shall~~ mustl be conducted in ~~accordance~~ compliance with Section 219.429(d)(3). The records prepared as part of this monitoring activity ~~shall~~ must include the dates of startup and shutdown of control devices and identify periods when the devices are not operated as designed, including periods when a flare pilot light does not have a flame.

g) ~~The requirements of subsections~~Subsections (d), (e) and (f) ~~shall~~ do not apply to a combustion device located at the source used for disposal of purged process fluid

which is subject to the Burning of Hazardous Waste in Boilers and Industrials Furnaces (BIF) rules, 40 CFR 260, 261, 264, 265, 266, and 270, or which is subject to the Resource Conservation and Recovery Act (RCRA) rules, 35 Ill. Adm. Code Parts 703, 720, 721, 724, 725, and 726. The owner or operator of ~~such~~ the cumbustion device ~~shall~~ must satisfy applicable provisions of the RCRA or BIF rules.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.430 Compliance Date (Repealed)

(Source: Repealed at 17 Ill. Reg. 16918, effective September 27, 1993)

Section 219.431 Applicability

a) ~~The provisions of~~ Sections 219.431 through 219.436 ~~of this Subpart shall~~ apply to every owner or operator of any chemical manufacturing process unit that manufactures~~,~~ as a primary product~~,~~ one or more of the chemicals listed in Appendix A ~~of this Part~~ and that chemical manufacturing process unit causes or allows any reactor or distillation unit, either individually or in tandem, to discharge one or more process vent streams either directly to the atmosphere or to a recovery system.

b) Notwithstanding subsection (a) ~~of this Section~~, the control requirements ~~set forth within~~in Section 219.432 ~~of this Subpart shall~~do not apply to the following:

1) Any process vent stream with a total resource effectiveness (TRE) index value greater than 1.0. However, ~~such~~ theh process vent stream remains subject to the performance testing requirements ~~contained~~ in Section 219.433 ~~of this Subpart~~ and the reporting and recordkeeping requirements ~~contained~~ in Section 219.435 ~~of this Subpart~~;

2) Any reactor or distillation unit that is designed and operated as a batch operation;

3) Any reactor or distillation unit that is part of a polymer manufacturing operation;

4) Any reactor or distillation unit that is part of the chemical manufacturing process unit with a total design capacity of less than 1 gigagram (1,100 tons) per year for all chemicals produced~~,~~ as a primary product~~,~~ within that process unit. However, ~~such~~ theh operations remain subject to the reporting and recordkeeping requirements ~~contained~~ in Section 219.435(d) ~~of this Subpart~~;

5) Any vent stream with a flow rate less than 0.0085 scm/min or a total VOM concentration of less than 500 ppmv, less methane and ethane, as measured by Method 18, or a concentration of VOM of less than 250 ppmv as measured by Method 25A. However, ~~such~~ theh operations remain subject to the performance testing requirement ~~listed~~ in Section 219.433 ~~of this Subpart~~, as well as the reporting and recordkeeping requirements ~~contained~~ in Section 219.435 ~~of this Subpart~~; or

6) Any reactor or distillation unit included within an Early Reduction Program, as specified in 40 CFR 63, and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.432 Control Requirements

a) Every owner or operator of a source subject to ~~the requirements of~~ this Subpart, as determined by Section 219.431 ~~of this Subpart~~, ~~shall~~ must either:

1) Reduce emissions of VOM, less methane or ethane, by 98 weight-percent, or to 20 ppmv, on a dry basis, corrected to 3 percent oxygen, whichever is less stringent;

2) If a boiler or process heater is used to comply with this Subpart, the vent stream ~~shall~~ must be introduced into the flame zone of the boiler or process heater; or

3) If a flare is used to comply with this Subpart, it ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 219.112 ~~of this Part~~. The flare operation requirements of 40 CFR 60.18 do not apply if a process~~,~~ not subject to this Subpart~~,~~ vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

b) Notwithstanding subsection (a) or (c) ~~of this Section~~, and subject to subsection (b)(2) ~~of this Section~~:

1) ~~No~~ An owner or operator of a source subject to Section 219.432 ~~of this Subpart shall~~must not cause or allow VOM to be emitted through an existing control device unless the control device is operated to achieve:

A) 90 percent control of the VOM emissions vented to it; or

B) VOM emissions concentration of less than 50 ppmv, on a dry basis.

2) Any existing control device subject to subsection (a) ~~of this Section~~ is required to meet the 98 percent emissions limit ~~set forth~~ in subsection (a)(1) upon the earlier ~~to occur~~ of the date the control device is replaced for any reason, including~~, but not limited to,~~ normal maintenance, malfunction, accident, and obsolescence, or December 31, 1999. A control device is considered to be replaced when:

A) All of the device is replaced; or

B) When the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a device that complies with the 98% emissions limitation in subsection (a)(1)~~ of this Section~~.

c) For each individual vent stream within a chemical manufacturing process unit with a TRE index value greater than 1.0, the owner or operator ~~shall~~ must maintain process vent stream parameters that retain a calculated TRE index value greater than 1.0 by means of recovery. Any recovery device ~~shall~~ must have as its primary purpose the capture of chemicals for use, reuse, or sale. The TRE index value ~~shall~~ must be calculated at the outlet of the final recovery device.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.433 Performance and Testing Requirements

a) For the purpose of demonstrating compliance with the TRE index value in Section 219.432(c)~~ of this Subpart~~, an engineering assessment ~~shall~~ must be made to determine process vent stream flow rate, net heating value, and VOM emission rate for the representative operating conditions expected to yield the lowest TRE index value. The source ~~shall~~ must also calculate the TRE index values ~~pursuant to~~under the equations ~~contained within~~in Appendix G (b)(1)~~ of this Part~~.

1) If the TRE index value calculated using ~~such~~ the engineering assessment and the TRE equation in Appendix G (b)(1) ~~of this Part~~ is greater than 4.0, then the owner or operator is exempt from performing the measurements ~~specified~~ in Appendix G (a)~~ of this Part~~.

2) If the TRE index value calculated using ~~such~~ the engineering assessment and the TRE equation in Appendix G (b)(1) ~~of this Part~~ is less than or equal to 4.0, then the owner or operator ~~shall~~ must perform the measurements ~~specified~~ in Appendix G (a)~~ of this Part~~. An owner or operator of a source may, in the alternative, elect to comply with the

control requirements ~~specified~~ in Section 219.432 ~~of this Subpart~~ rather than performing the measurements in Appendix G (a) ~~of this Part~~.

3) An engineering assessment ~~shall~~ must include~~, but is not limited to,~~ the following:

A) Previous test results, ~~provided~~ if the tests are representative of current operating practices at the chemical manufacturing process unit;

B) Bench-scale or pilot-scale test data of the process under representative operating conditions;

C) Maximum flow rate, as stated within a permit limit, applicable to the process vent;

D) Design analysis based on accepted chemical engineering principles, measurable process parameters, or physical or chemical laws or properties. Examples of analytical methods include~~, but are not limited to,~~ the following:

i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;

ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities;

iii) Estimation of VOM concentrations based on saturation conditions; and

iv) Estimation of maximum expected net heating value based on the stream concentration of each organic compound, or, alternatively, as if all VOM in the stream were the compound with the highest heating value.

E) All data, assumptions, and procedures used in the engineering assessment ~~shall~~ must be documented.

b) For the purpose of demonstrating compliance with the control requirements in Section 219.432 ~~of this Subpart~~, the chemical manufacturing process unit ~~shall~~ must be run at representative operating conditions and flow rates during any performance test.

c) The following methods in 40 CFR 60, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance with the reduction efficiency requirement ~~listed~~ in Section 219.432(a)(1) ~~of this Subpart~~.

1) Method 1 or 1A, incorporated by reference at Section 219.112 ~~of this Part~~, as appropriate, for ~~selection of the~~selecting sampling sites. The control device inlet sampling site for determination of vent stream molar composition or VOM content, less methane and ethane, reduction efficiency ~~shall~~ must be located after the last recovery device but ~~prior to~~before the inlet of the control device, ~~prior to~~before any dilution of the process vent stream, and ~~prior to~~before release to the atmosphere.

2) Method 2, 2A, 2C, or 2D, incorporated by reference at Section 219.112 ~~of this Part~~, as appropriate, for determination of gas stream volumetric flow rate.

3) The emission rate correction factor, integrated sampling, and analysis procedure of Method 3, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to determine the oxygen concentration ($\%O_{2d}$) for the purpose of determining compliance with the 20 ppmv limitation. The sampling site for determining compliance with the 20 ppmv limitation ~~shall~~ must be the same site used for the VOM samples, and samples ~~shall~~ must be taken at the same time that the VOM samples are taken. The VOM concentration corrected to 3 percent oxygen (C_c) ~~shall~~ must be computed using the following formula:

$$C_c = C_{VOM} \times \frac{17.9}{20.9 - \%O_{2d}}$$

where:

C_c = Concentration of VOM (minus methane and ethane) corrected to 3 percent O_2, dry basis, ppmv

C_{VOM} = Concentration of VOM (minus methane and ethane), dry basis, ppmv.

$\%O_{2d}$ = Concentration of oxygen, dry basis, percent by volume.

4) Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, to determine the concentration of VOM, less methane and ethane, at the outlet of the control device when determining compliance with the 20 ppmv limitation in Section 219.432(a)(1) ~~of this Subpart~~, or at both the control device inlet and outlet when the reduction efficiency of the control device is to be determined.

A) The minimum sampling time for each run ~~shall~~ must be 1 hour in which either an integrated sample or four grab samples ~~shall~~ must be taken. If grab sampling is used then the samples ~~shall~~ must be taken at 15-minute intervals.

B) The emission reduction (R) of VOM, less methane and ethane, ~~shall~~ must be determined using the following formula:

$$R = \frac{(E_i - E_o)}{E_i} \times 100$$

where:

R = Emission reduction, percent by weight.

E_i = Mass rate of VOM (minus methane and ethane) entering the control device, kg VOM/hr.

E_o = Mass rate of VOM, less methane and ethane discharged to the atmosphere, kg VOM/hr.

C) The mass rates of VOM (E_i, E_o) ~~shall~~ must be computed using the following formula:

$$E_i = K_2 \left(\sum_{j=1}^{n} C_{ij} M_{ij}\right) Q_i$$

$$E_o = K_2 \left(\sum_{j=1}^{n} C_{oj} M_{oj}\right) Q_o$$

where:

C_{ij}, C_{oj} = Concentration of sample component "j" of the gas stream at the inlet and outlet of the control device, respectively, dry basis, ppmv.

M_{ij}, M_{oj} = Molecular weight of sample component "j" of the gas stream at the inlet and outlet of the control device, respectively, grams per gram-mole.

Q_i, Q_o = Flow rate of gas stream at the inlet and outlet of the control device, respectively, dry scm/min.

K_2 = 2.494 x 10^{-6} (liters per minute)(gram-mole per scm)(kg/g)(min/hr), where standard temperature for (gram-mole per scm) is ~~20°C~~20 ºC.

D) The representative VOM concentration (C_{VOM}) is the sum of each of the individual components of VOM (C_j) and ~~shall~~ must be computed for each run using the following:

$$C_{VOM} = \sum_{j=1}^{n} C_j$$

where:

C_{VOM} = Concentration of VOM (minus methane and ethane), dry basis, ppmv.

C_j = Concentration of sample component "j", dry basis, ppmv.

n = Number of components in the sample.

5) When a boiler or process heater with a design heat input capacity of 44 megawatts or greater, or a boiler or process heater into which the process vent stream is introduced with the primary fuel, is used to comply with the control requirements, an initial performance test is not required.

d) When a flare is used to comply with the control requirements of this rule, the flare ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 219.112 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.434 Monitoring Requirements

a) The owner or operator of a source subject to the control requirements in Section 219.432 ~~of this Subpart~~ that uses an incinerator to comply with the VOM emission limitation ~~specified~~ in Section 219.432(a)(1) ~~shall~~ must install, calibrate, maintain, and operate, according to manufacturer's specifications, a temperature monitoring device equipped with a continuous recorder and having an accuracy of ±1 percent of the temperature measured expressed in degress Celsius, or ±0.5 ºC~~±0.5 ° C~~, whichever is greater.

1) Where an incinerator other than a catalytic incinerator is used, a temperature monitoring device ~~shall~~ must be installed in the firebox.

2) Where a catalytic incinerator is used, temperature monitoring devices ~~shall~~ must be installed in the gas stream immediately before and after the catalyst bed.

b) The owner or operator of a source that uses a flare to comply with Section 219.432(a)(2) ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~,~~ a heat-sensing device, such as an ultraviolet beam sensor or thermocouple, at the pilot light to indicate continuous presence of a flame.

c) The owner or operator of a source that uses a boiler or process heater with a design heat input capacity less than 44 megawatts to comply with Section 219.432(a)(1) ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's specifications~~,~~ a temperature monitoring device in the firebox. The monitoring device ~~shall~~ must be equipped with a continuous recorder with an accuracy of ±1 percent of the temperature being measured expressed in degrees Celsius or ±0.5 ºC~~±0.5 ° C~~, whichever is greater. Any boiler or process heater in which all vent streams are introduced with primary fuel is exempt from this requirement.

d) The owner or operator of a process vent with a TRE index value of 4.0 or less that uses one or more product recovery devices ~~shall~~ must install either an organic monitoring device equipped with a continuous recorder or the monitoring equipment specified in subsection (d)(1), (d)(2), (d)(3), or (d)(4) ~~of this Section~~, depending on the type of recovery device used. All monitoring equipment ~~shall~~ must be installed, calibrated, and maintained according to the manufacturer's specifications.

1) Where an absorber is the final recovery device in the recovery system, a scrubbing liquid temperature monitoring device and a specific gravity monitoring device, each equipped with a continuous recorder, ~~shall~~ must be used.

2) Where a condenser is the final recovery device in the recovery system, a condenser exit (product side) temperature monitoring device equipped with a continuous recorder and having an accuracy of ±1 percent of the temperature being monitored expressed in degrees Celsius or ±0.5 ºC~~±0.5 ° C~~, whichever is greater.

3) Where a carbon adsorber is the final recovery device in the recovery system, an integrating regeneration steam flow monitoring device having an accuracy of ±10 percent, capable of recording the total regeneration steam mass flow for each regeneration cycle; and a carbon bed temperature monitoring device having an accuracy of ±1 percent of the temperature being monitored expressed in degrees Celsius of ±0.5

ºC~~±0.5 ° C~~, capable of recording the carbon bed temperature after each regeneration and within 15 minutes of completing any cooling cycle.

4) Where a scrubber is used with an incinerator, boiler, or, in the case of halogenated vent streams, a process heater, the following monitoring equipment is required for the scrubber:

A) A pH monitoring device equipped with a continuous recorder to monitor the pH of the scrubber effluent; and

B) Flow meters equipped with a continuous recorder at the scrubber influent for liquid flow and the scrubber inlet for gas stream flow.

e) The owner or operator of a process vent using a vent system that contains bypass lines capable of diverting a vent stream away from the control device associated with a process vent ~~shall~~ must comply with either subsection (e)(1) or (e)(2) ~~of this Section~~. Equipment needed for safety purposes, including~~, but not limited to,~~ pressure relief devices, ~~are~~ is not subject to this subsection.

1) The owner or operator ~~shall~~ must install, calibrate, maintain, and operate a flow indicator that provides a record of vent stream flow at least once every 15 minutes. The flow indicator ~~shall~~ must be installed at the entrance to any bypass line that could divert the vent stream away from the control device to the atmosphere.

2) The owner or operator ~~shall~~ must secure the bypass line valve in the closed position with a car-seal or a lock-and-key type configuration. A visual inspection of the seal or closure mechanism ~~shall~~ must be performed at least once every month to ensure that the valve is maintained in the closed position and the vent stream is not diverted through the bypass line.

f) The owner or operator of a process vent may monitor by an equivalent alternative means or parameters other than those ~~listed~~ in subsections (a) through (d) ~~of this Section~~. Any equivalent alternative ~~shall~~ must be approved by the Agency and USEPA~~,~~ and contained in the source's operating permit as federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.435 Recordkeeping and Reporting Requirements

a) Every owner or operator of a reactor or distillation unit with a TRE index value of 4.0 or less ~~shall~~ must keep for a minimum of three years records~~, for a minimum of 3 years,~~ of the following parameters measured during a performance test or

TRE determination required under Section 219.433 ~~of this Subpart~~, and required to be monitored under Section 219.434 ~~of this Subpart~~.

1) Every owner or operator of a source that seeks to demonstrate compliance with Section 219.432(a)(1) ~~of this Subpart through the use of~~by using either a thermal or catalytic incinerator ~~shall~~ must maintain records of the following:

   A) The average firebox temperature of the incinerator (or the average temperature upstream and downstream of the catalyst bed for a catalytic incinerator), measured at least every 15 minutes and averaged over the same time period of the performance testing; and

   B) The percent reduction of VOM determined ~~as specified in~~under Section 219.433(c) ~~of this Subpart~~ achieved by the incinerator, or the concentration of VOM (ppmv, by compound) determined ~~as specified in~~under Section 219.433(c) ~~of this Subpart~~ at the outlet of the control device, on a dry basis, corrected to 3 percent oxygen.

2) Every owner or operator of a source that seeks to demonstrate compliance with Section 219.432(a)(1) ~~of this Subpart through the use of~~by using a boiler or process heater ~~shall~~ must maintain the records ~~described below~~in subsections (a)(2)(A) and (a)(2)(B). Any boiler or process heater in which all vent streams are introduced with primary fuel are exempt from these requirements.

   A) A description of the location at which the vent stream is introduced into the boiler or process heater; and

   B) The average combustion temperature of the boiler or process heater with a design heat input capacity of less than 44 megawatt measured at least every 15 minutes and averaged over the same time period of the performance testing.

3) Every owner or operator of a source that seeks to demonstrate compliance with Section 219.432(a)(2) ~~of this Subpart through use of~~by using a smokeless flare~~,~~ or flare design (i.e., steam-assisted, air-assisted, or nonassisted ~~shall~~) must maintain records of all visible emission readings, heat content determinations, flow rate measurements, and exit velocity determinations made during the performance test~~,~~; continuous records of the flare pilot flame monitoring~~,~~; and records of all periods of operations during which the pilot flame is absent.

4) Every owner or operator of a source that seeks to demonstrate compliance with Section 219.432(b) ~~of this Subpart shall~~must maintain records of the following:

A) Where an absorber is the final recovery device in the recovery system, the exit specific gravity (or alternative parameter~~)~~ which is a measure of the degree of absorbing liquid saturation, if approved by the Agency and USEPA), and average exit temperature of the absorbing liquid measured at least every 15 minutes and averaged over the same time period as the performance testing (both measured while the vent stream is normally routed and constituted);

B) Where a condenser is the final recovery device in the recovery system, the average exit (product side) temperature measured at least every 15 minutes and averaged over the same time period as the performance testing while the vent stream is normally routed and constituted;

C) Where a carbon absorber is the final recovery device in the recovery system, the total steam mass or volumetric flow measured at least every 15 minutes and averaged over the same time period as the performance testing (full carbon bed cycle), the temperature of the carbon bed after regeneration (and within 15 minutes of completion of any cooling ~~cycle(s))~~cycle or cycles), and duration of the carbon bed steaming cycle (all measured while the vent stream is normally routed and constituted);

D) As an alternative to subsection (a)(4)(A), (a)(4)(B), or (a)(4)(C) ~~of this Section~~, the concentration level or reading indicated by the organic monitoring device at the outlet of the absorber, condenser, or carbon absorber, measured at least every 15 minutes and averaged over the same time period as the performance testing (measured while the vent stream is normally routed and constituted); or

E) All measurements and calculations performed to determine the flow rate, VOM concentration, heating value, and TRE index value of the vent stream.

b) Every owner or operator of a reactor or distillation unit with a TRE index value of less than 4.0 ~~shall be~~is subject to the exceedance reporting requirements of the draft Enhanced Monitoring Guidelines as published at 58 Fed. Reg. 54648 (October 22, 1993).

c) Every owner or operator of a source seeking to comply with Section 219.432(b) ~~of this Subpart shall~~must maintain records of the following:

1) Any changes in production capacity, feedstock type, catalyst type, or of any replacement, removal, or addition of recovery equipment or reactors and distillation units; and

2) Any recalculation of the flow rate, VOM concentration, or TRE index value calculated ~~according to~~under subsection (c) of Appendix G ~~of this Part~~.

d) Every owner or operator of a source claiming a design capacity of less than 1 gigagram (1,100 tons) per year~~, as contained in~~ under Section 219.431(b) ~~of this Subpart, shall~~must maintain records of the design capacity or any changes in equipment or operations that may affect the design capacity.

e) Every owner or operator of a source claiming a vent stream flow rate or vent stream concentration exemption level~~, as contained in~~ under Section 219.431(b)(5) ~~of this Subpart, shall~~must maintain records to indicate that the stream flow rate is less than 0.0085 scm/min or the vent stream concentration is less than 500 ppmv.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.436 Compliance Date

Every owner or operator of ~~an~~ a source subject to Sections 219.431, 219.432, 219.433, 219.43,4 or 219.435 ~~of this Subpart shall~~must comply with its standards, limitations, and mandates by March 15, 1996.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART R: PETROLEUM REFINING AND RELATED INDUSTRIES; ASPHALT MATERIALS

Section 219.441 Petroleum Refinery Waste Gas Disposal

a) Except as provided in subsection (b) or (c) ~~of this Section~~, ~~no~~ a person ~~shall~~ must not cause or allow the discharge of organic materials in excess of 100 ppm equivalent methane (molecular weight 16.0) into the atmosphere from:

1) Any catalyst regenerator of a petroleum cracking system; or

2) Any petroleum fluid coker; or

3) Any other waste gas stream from any petroleum or petrochemical manufacturing process.

b) Exception. Existing sources subject to subsection (a)(3) ~~of this Section~~ may~~,~~ alternatively, at their election, comply with the organic material emission limitations ~~imposed by 35 Ill. Adm. Code~~under Sections 219.301 or 219.302.~~;~~ ~~provided, however, that~~ However, there ~~shall~~ must be no increase in emissions from ~~such~~ the sources above the level of emissions ~~in existence~~ on May 3, 1979.

c) New Sources. Sources subject to subsection (a)(3) ~~of this Section~~, construction of which commenced on or after January 1, 1977, may, at their election, comply with the following emission limitations:

1) A maximum of eight pounds per hour of organic material; or

2) Emission of organic material in excess of the limitation of subsection (c)(1) ~~of this Section~~ is allowable if ~~such~~ the emissions are controlled by air pollution control methods or equipment approved by the Agency capable of reducing by 85 percent or more the uncontrolled organic material that would otherwise be emitted to the atmosphere. ~~Such~~ The methods or equipment must be approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.442 Vacuum Producing Systems

~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not cause or allow the operation of any vacuum producing system unless the condensers, hot wells, and accumulators of any such system are equipped with vapor loss control equipment including~~, but not limited to,~~ piping, valves, flame arrestors, and hot well covers~~,~~ to vent any volatile organic material with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3°K (70°F)~~294.3 ºK (70 ºF) to a heater, fire box, flare, refinery fuel gas system, or other equipment or system of equal emission control as approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision. This Section ~~shall~~ does not apply to vacuum producing systems on lube units.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.443 Wastewater (Oil/Water) Separator

~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not operate any wastewater (oil/water) separator at a petroleum refinery unless the separator is equipped with air pollution control equipment capable of reducing by 85 percent or more the uncontrolled organic material emitted to the atmosphere. If no odor nuisance exists, the limitation of this Section ~~shall~~ does not apply if the vapor pressure of the organic material is below 10.34 kPa (1.5 psia) at ~~294.3°K (70°F)~~294.3 ºK (70 ºF) at all times.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.444 Process Unit Turnarounds

a) ~~No~~ An owner or operator of a petroleum refinery ~~shall~~ must not cause or allow a refinery process unit turnaround except in compliance with an operating procedure as approved by the Agency.

b) Unless a procedure was already on file with the Agency by November 1, 1979, as part of an approved operating permit ~~no later than November 1, 1979~~, the owner or operator of a petroleum refinery ~~shall~~ must submit to the Agency for approval a detailed procedure for reducing emissions of volatile organic material during refinery process unit turnarounds from organic material with a vapor pressure of 10.34 kPa (1.5 psia) or greater at ~~294.3°K (70°F)~~294.3 ºK (70 ºF). The Agency ~~shall~~ must not approve the procedure unless it provides for:

1) Depressurization of the refinery process unit or vessel to a flare, refinery fuel gas system, or other equipment or system of equal emission control~~, as approved by the Agency and approved by the USEPA as a SIP revision,~~ until the internal pressure from the vessel or unit is less than 5.0 psig before allowing the vessel to be vented to the atmosphere, as approved by the Agency and by USEPA as a SIP revision;

2) Recordkeeping of the following items:

A) Each date that a refinery unit or vessel is shut down; and

B) The total estimated quantity of volatile organic material emitted to the atmosphere and the duration of the emission in hours.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.445 Leaks: General Requirements

The owner or operator of a petroleum refinery ~~shall~~must:

a) Develop a monitoring program plan consistent with ~~the provisions of~~ Section 219.446 ~~of this Part~~;

b) Conduct a monitoring program consistent with ~~the provisions of~~ Section 219.447 ~~of this Part~~;

c) Record all leaking components which have a volatile organic material concentration exceeding 10,000 ppm consistent with ~~the provisions of~~ Section 219.448 ~~of this Part~~;

d) Identify each component consistent with the monitoring program plan submitted ~~pursuant to~~under Section 219.446 ~~of this Part~~;

e) Repair and retest the leaking components as soon as possible within 22 days after the leak is found, but no later than June 1 for the purposes of Section 219.447(a)(1) ~~of this Part~~, unless the leaking components cannot be repaired until the unit is shut down for turnaround; and

f) Report to the Agency consistent with ~~the provisions of~~ Section 219.449 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.446 Monitoring Program Plan for Leaks

The owner or operator of a petroleum refinery ~~shall~~ must prepare a monitoring program plan which contains, at a minimum:

a) An identification of all refinery components and the period in which each will be monitored ~~pursuant to~~under Section 219.447 ~~of this Part~~;

b) The format for the monitoring log required by Section 219.448 ~~of this Part~~;

c) A description of the monitoring equipment to be used ~~pursuant to~~under Section 219.447 ~~of this Part~~; and

d) A description of the methods to be used to identify all pipeline valves, pressure relief valves in gaseous service and all leaking components ~~such that~~so they are obvious to ~~both~~ refinery personnel performing monitoring and Agency personnel performing inspections.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.447 Monitoring Program for Leaks

a) The owner or operator of a petroleum refinery subject to Section 219.445 ~~of this Part shall~~must, for the purpose of detecting leaks, conduct a component monitoring program consistent with the following provisions:

1) Test all pump seals, pipeline valves in liquid service, and process drains once between March 1 and June 1 of each year~~,~~ by methods ~~referenced~~ in Section 219.105(g) ~~of this Part, all pump seals, pipeline valves in liquid service and process drains~~;

2) Test all pressure relief valves in gaseous service, pipeline valves in gaseous service, and compressor seals once each quarter of each calendar year~~,~~ by methods ~~referenced~~ in Section 219.105(g) ~~of this Part, all pressure~~

~~relief valves in gaseous service, pipeline valves in gaseous service and compressor seals~~;

3) Inaccessible valves may be tested once each calendar year instead of once each quarter of each calendar year;

4) ~~Observe visually~~Visually observe all pump seals weekly;

5) ~~Test immediately~~Immediately test any pump seal from which liquids are observed dripping;

6) Test any relief valve within 24 hours after it has vented to the atmosphere; and

7) Test immediately after repair any component that was found leaking.

b) Storage tank valves and pressure relief devices connected to an operating flare header or vapor recovery device are exempt from the monitoring requirements in subsection (a) ~~of this Section~~.

c) The Agency may require more frequent monitoring than would otherwise be required by subsection (a) ~~of this Section~~ for components which are demonstrated to have a history of leaking.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.448 Recordkeeping for Leaks

a) The owner or operator of a petroleum refinery ~~shall~~ must maintain a ~~leaking components~~ monitoring log of leaking components, which ~~shall~~ must contain, at a minimum~~, the following information~~:

1) The name of the process unit where the component is located;

2) The type of component (e.g., valve, seal);

3) The identification number of the component;

4) The date on which a leaking component is discovered;

5) The date on which a leaking component is repaired;

6) The date and instrument reading of the recheck procedure after a leaking component is repaired;

7) A record of the calibration of the monitoring instrument;

8) The identification number of leaking components which cannot be repaired until turnaround; and

9) The total number of components inspected and the total number of components found leaking during that monitoring period.

b) Copies of the monitoring log ~~shall~~ must be retained by the owner or operator for a minimum of two years after the date on which the record was made or the report prepared.

c) Copies of the monitoring log ~~shall~~ must be made available to the Agency, upon verbal or written request, at any reasonable time.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.449 Reporting for Leaks

The owner or operator of a petroleum refinery ~~shall~~must:

a) Submit a report to the Agency ~~prior to~~before the 1st day of both July and September listing all leaking components identified ~~pursuant to~~under Section 219.447 ~~of this Part~~ but not repaired within 22 days, all leaking components awaiting unit turnaround, the total number of components inspected, and the total number of components found leaking;

b) Submit a signed statement with the report attesting that all monitoring and repairs were performed as required under Sections 219.445 through 219.448 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.450 Alternative Program for Leaks

The Agency may approve an alternative program of monitoring, recordkeeping, or reporting to that prescribed in Sections 219.446 through 219.449 ~~of this Part~~ upon a demonstration by the owner or operator of a petroleum refinery that the alternative program will provide refinery, Agency, and USEPA personnel with an equivalent ability to identify and repair leaking components. Any alternative program can be allowed only if approved by the USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.451 Sealing Device Requirements

Except for safety pressure relief valves, ~~no~~ an owner or operator of a petroleum refinery ~~shall~~ must not install or operate a valve at the end of a pipe or line containing volatile organic

materials unless the pipe or line is sealed with a second valve, blind flange, plug, cap, or other sealing device. The sealing device may be removed only when a sample is being taken or during maintenance operations.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.452 Compliance Schedule for Leaks

The owner or operator of a petroleum refinery ~~shall~~ must adhere to the increments of progress ~~contained~~ in the following schedule:

a) Submit to the Agency a monitoring program consistent with Section 219.446 ~~of this Part prior to~~before July 1, 1991 or a date consistent with Section 219.106 ~~of this Part~~.

b) Submit to the Agency the first monitoring report ~~pursuant to~~under Section 219.449 ~~of this Part prior to~~before August 1, 1991 or a date consistent with Section 219.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.453 Compliance Dates (Repealed)

(Source: Repealed at 17 Ill Reg. 16918, effective September 27, 1993)

SUBPART S: RUBBER AND MISCELLANEOUS PLASTIC PRODUCTS

Section 219.461 Manufacture of Pneumatic Rubber Tires

The owner or operator of an undertread cementing, ~~treadend~~ tread end cementing, or bead dipping operation at a pneumatic rubber tire manufacturing source ~~shall~~ must install and operate:

a) A capture system~~,~~ with minimum capture efficiency of 65 percent by weight of VOM for ~~treadend~~ tread end cementing or bead dipping operations and a capture system with a minimum capture efficiency of 55.5 percent by weight of VOM for undertread cementing; and

b) A control device that meets the requirements of one of the following:

1) A carbon adsorption system designed and operated ~~in a manner such that there is~~with at least a 90 percent removal of VOM by weight from the gases ducted to the control device;

2) An afterburning system that oxidizes at least 90 percent of the captured nonmethane VOM (VOM measured as total combustible carbon) to carbon dioxide and water; and

3) An alternative VOM emission reduction system demonstrated to have at least a 90 percent overall reduction efficiency and approved by the Agency and ~~approved~~ by ~~the~~ USEPA.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.462 Green Tire Spraying Operations

The owner or operator of a green tire spraying operation at a pneumatic rubber tire manufacturing source ~~shall~~must:

a) Install and operate:

1) A capture system with a minimum capture efficiency of 90 percent by weight of VOM; and

2) A control device that meets the requirements of one of the following:

A) A carbon adsorption system designed and operated ~~in a manner such that there is~~with at least 90 percent removal of VOM by weight from the gases ducted to the control device;

B) An afterburning system that oxidizes at least 90 percent of the captured nonmethane VOM (measured as total combustible carbon) to carbon dioxide and water; or

C) An alternative VOM emission reduction system demonstrated to have at least a 90 percent overall reduction efficiency approved by the Agency and ~~approved~~ by ~~the~~ USEPA as a SIP revision.

b) Substitute for the normal solvent-based mold release compound water-based sprays containing:

1) No more than five percent by volume of VOM as applied for the inside of tires;

2) No more than ten percent by volume of VOM as applied for the outside of tires.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.463 Alternative Emission Reduction Systems

In lieu of complying with Section 219.461 or 219.462 ~~of this Part~~, the owner or operator of an emission source may ~~utilize~~ use an alternative volatile organic emission reduction system,

including an alternative production process, which is demonstrated to be equivalent to Section 219.461 or 219.462 ~~of this Part~~ on the basis of emissions of volatile organic material. A ~~treadend~~ tread end cementing operation ~~shall~~ must be considered equivalent to Section 219.461 or 219.462 ~~of this Part~~ for the purposes of this Section if the total volatile organic emission from ~~such~~ the operation is 10 grams or less per tire.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.464 Emission Testing

a) Upon a reasonable request by the Agency, the owner or operator of a VOM source required to comply with a limit of Sections 219.461 through 219.464 ~~of this Part shall~~must conduct emissions testing~~,~~ at ~~such~~ that person's own expense~~,~~ to demonstrate compliance.

b) A person planning to conduct a VOM emission test to demonstrate compliance ~~shall~~ must notify the Agency of that intent ~~not less than~~at least ~~-~~30 days before the planned initiation of the tests so the Agency may observe the test.

SUBPART T: PHARMACEUTICAL MANUFACTURING

Section 219.480 Applicability

a) ~~The rules of this~~This Subpart, except for Sections 219.483 through 219.485 ~~of this Part~~, ~~apply~~ applies to all emission units of VOM, including ~~but not limited to~~ reactors, distillation units, dryers, storage tanks for VOL, equipment for the transfer of VOL, filters, crystallizers, washers, laboratory hoods, pharmaceutical coating operations, mixing operations, and centrifuges used in manufacturing, including packaging, of pharmaceuticals, and emitting more than 6.8 kg/day (15 lbs/day) and more than 2,268 kg/year (2.5 tons/year) of VOM. If such emission unit emits less than 2,268 kg/year (2.5 tons/year) of VOM, ~~the requirements of~~ this Subpart still ~~apply~~ applies to the emission unit if VOM emissions from the emission unit exceed 45.4 kg/day (100 lbs/day).

b) Sections 219.483 through 219.485 ~~of this Part~~ apply to a source having one or more emission units that:

1) Are used to manufacture pharmaceuticals, and

2) Emit more than 6.8 kg/day (15 lbs/day) of VOM and more than 2,268 kg/year (2.5 tons/year) of VOM, or, if less than 2,268 kg/year (2.5 tons/year), these Sections still apply if emissions from one or more sources exceed 45.4 kg/day (100 lbs/day).

c) ~~No~~ An owner or operator ~~shall~~ must not violate any condition in a permit when the condition results in exclusion of an emission unit from this Subpart.

d) Any pharmaceutical manufacturing source that becomes subject to ~~the provisions of~~ this Subpart at any time ~~shall remain~~remains subject to ~~the provisions of~~ this Subpart at all times.

e) Emissions subject to this Subpart ~~shall~~ must be controlled at all times consistent with the requirements ~~set forth in~~of this Subpart.

f) Any control device required ~~pursuant to~~under this Subpart ~~shall~~ must be operated at all times when the source it is controlling is operated.

g) Determinations of daily and annual emissions for purposes of this Section ~~shall~~ must be made using both data on the hourly emission rate (or the emissions per unit of throughput) and appropriate daily and annual data from records of emission unit operation (or material throughput or material consumption data). In the absence of representative test data ~~pursuant to~~under Section 219.487 ~~of this Part~~ for the hourly emission rate (or the emissions per unit of throughput), ~~such~~ these items ~~shall~~ must be calculated using engineering calculations, including the methods ~~described~~ in Appendix B of "Control of Volatile Organic Emissions from Manufacturing of Synthesized Pharmaceutical Products" (EPA-450/2-78-029), incorporated by reference in Section 219.112 ~~of this Part~~.

~~(~~This subsection ~~shall~~ must not affect the Agency's or ~~the~~ USEPA's authority to require emission tests to be performed ~~pursuant to~~under Section 219.487 ~~of this Part~~.)

h) Equipment and operations emitting VOM at a source subject to subsection (a) or (c) ~~of this Section~~ and used to produce pharmaceutical products or a pharmaceutical-like product such as a hormone, enzyme, or antibiotic~~, shall~~ must be deemed to be engaged in the manufacture of pharmaceuticals for the purposes of this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.481 Control of Reactors, Distillation Units, Crystallizers, Centrifuges, and Vacuum Dryers

a) The owner or operator ~~shall~~ must equip all reactors, distillation units, crystallizers, centrifuges, and vacuum dryers that are used to manufacture pharmaceuticals with surface condensers or other air pollution control equipment listed in subsection (b) ~~of this Section~~. If a surface condenser is used, it ~~shall~~ must be operated ~~such~~ so that the condenser outlet gas temperature does not exceed:

1) ~~248.2° K (-13°F)~~248.2 ºK (-13 ºF) when condensing VOM of vapor pressure greater than 40.0 kPa (5.8 psi) at 294.3 ºK (70 ºF)~~294.3° K (70°F)~~, or

2) ~~258.2° K (5°F)~~258.2 ºK (5 ºF) when condensing VOM of vapor pressure greater than 20.0 kPa (2.9 psi) at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~, or

3) ~~273.2° K (32°F~~273.2 ºK (32 ºF) when condensing VOM of vapor pressure greater than 10.0 kPa (1.5 psi) at 294.3 ºK (70 ºF)~~294.3° K (70°F)~~, or

4) ~~283.2° K (50°F)~~283.2 ºK (50 ºF) when condensing VOM of vapor pressure greater than 7.0 kPa (1.0 psi) at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~, or

5) ~~298.2°K (77° F)~~298.2 ºK (77 ºF) when condensing VOM of vapor pressure greater than 3.45 kPa (0.5 psi) at 294.3 ºK (70 ºF)~~294.3° K (70°F)~~.

b) If a scrubber, carbon adsorber, thermal afterburner, catalytic afterburner, or other air pollution control equipment other than a surface condenser is used, ~~such~~ the equipment ~~shall~~ must provide a reduction in the emissions of VOM of 90 percent or more.

c) The owner or operator ~~shall~~ must enclose all centrifuges used to manufacture pharmaceuticals and that have an exposed VOL surface, where the VOM in the VOL has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.482 Control of Air Dryers, Production Equipment Exhaust Systems and Filters

a) The owner or operator of an air dryer or production equipment exhaust system used to manufacture pharmaceuticals ~~shall~~ must control the emissions of VOM from ~~such~~ the emission units by air pollution control equipment which reduces by 90 percent or more the VOM that would otherwise be emitted into the atmosphere.

b) The owner or operator ~~shall~~ must enclose all rotary vacuum filters and other filters used to manufacture pharmaceuticals and that have an exposed VOL surface, where the VOM in the VOL has a vapor pressure of 3.45 kPa (0.5 psi) or more at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.483 Material Storage and Transfer

The owner or operator of a pharmaceutical manufacturing source ~~shall~~must:

a) Provide a vapor balance system that is at least 90 percent effective in reducing VOM emissions from truck or railcar deliveries to storage tanks with capacities equal to or greater than 7.57 m^3 (2,000 gal) that store VOL with vapor pressures greater than 28.0 kPa (4.1 psi) at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~, and

b) Install, operate, and maintain pressure/vacuum conservation vents set at 0.2 kPa (0.03 psi) or greater on all storage tanks that store VOL with vapor pressures greater than 10 kPa (1.5 psi) at 294.3 ºK (70 ºF)~~294.3°K (70°F)~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.484 In-Process Tanks

The owner or operator ~~shall~~ must install covers on all in-process tanks used to manufacture pharmaceuticals and containing a VOL at any time. These covers must remain closed, except as production, sampling, maintenance, or inspection procedures require operator access.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.485 Leaks

The owner or operator of a pharmaceutical manufacturing source ~~shall~~ must repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15 days after the leak is found. If the leaking component cannot be repaired until the process unit is shut down, the leaking component must then be repaired before the unit is restarted.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.486 Other Emission Units

The owner or operator of a washer, laboratory hood, tablet coating operation, mixing operation, or any other process emission unit not subject to Sections 219.481 through 219.485 ~~of this Part,~~

and used to manufacture pharmaceuticals ~~shall~~ must control the emissions of VOM from ~~such~~ the emission units by:

a) Air pollution control equipment which reduces by 81 percent or more the VOM that would otherwise be emitted to the atmosphere, or

b) A surface condenser which captures all the VOM which would otherwise be emitted to the atmosphere and ~~which~~ meets the requirements of Section 219.481(a) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.487 Testing

a) Upon request by the Agency or ~~the~~ USEPA, the owner or operator of any VOM source subject to this Subpart or exempt from this Subpart ~~by virtue of the provisions of~~under Section 219.480 ~~of this Part shall,~~ must at ~~his~~ its own expense~~,~~ demonstrate compliance to the Agency and ~~the~~ USEPA by the methods or procedures ~~listed~~ in Section 219.105(f)(1) ~~of this Part~~.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency and the USEPA of that intent ~~not less than~~at least 30 calendar days before the planned initiation of the test.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.488 Monitoring for Air Pollution Control Equipment

a) At a minimum, continuous monitors for the following parameters ~~shall~~ must be installed on air pollution control equipment used to control sources subject to this Subpart:

1) Destruction device combustion temperature.

2) Temperature rise across a catalytic afterburner bed.

3) VOM concentration on a carbon adsorption unit to determine breakthrough.

4) Outlet gas temperature of a refrigerated condenser.

5) Temperature of a non-refrigerated condenser coolant supply system.

b) Each monitor ~~shall~~ must be equipped with a recording device.

c) Each monitor ~~shall~~ must be calibrated quarterly.

d) Each monitor ~~shall~~ must operate at all times while the associated control equipment is operating.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.489 Recordkeeping for Air Pollution Control Equipment

a) The owner or operator of a pharmaceutical manufacturing source ~~shall~~ must maintain the following records:

1) Parameters ~~listed~~ in Section 219.488(a) ~~of this Part shall~~must be recorded.

2) For emission units subject to Section 219.481 ~~of this Part~~, the vapor pressure of VOM being controlled ~~shall~~ must be recorded for every process.

b) For any leak subject to Section 219.485 ~~of this Part~~ which cannot be readily repaired within one hour after detection, the following records ~~shall~~ must be kept:

1) The name of the leaking equipment,

2) The date and time the leak is detected,

3) The action taken to repair the leak, and

4) The date and time the leak is repaired.

c) The following records ~~shall~~ must be kept for emission units subject to Section 219.484 ~~of this Part~~ which contain VOL:

1) For maintenance and inspection:

A) The date and time each cover is opened,

B) The length of time the cover remains open, and

C) The reason why the cover is opened.

2) For production and sampling, detailed written procedures or manufacturing directions specifying the circumstances under which covers may be opened and the procedures for opening covers.

d) For each emission unit used in the manufacture of pharmaceuticals for which the owner or operator of a pharmaceutical manufacturing source claims emission standards are not applicable~~,~~ because the emissions are below the applicability

cutoffs in Section 219.480(a) or 219.480(b) ~~of this Part~~, the owner or operator ~~shall~~must:

1) Maintain a demonstration including detailed engineering calculations of the maximum daily and annual emissions for each such emission unit showing that the emissions are below the applicability cutoffs in Section 219.480(a) or 219.480(b) ~~of this Part~~, as appropriate, for the current and prior calendar years;

2) Maintain appropriate operating records for each such emission source to identify whether the applicability cutoffs in Section 219.480(a) or 219.480(b) ~~of this Part~~, as appropriate, are ever exceeded; and

3) Provide written notification to the Agency and ~~the~~ USEPA within 30 days ~~of~~ after a determination that such an emission unit has exceeded the applicability cutoffs in Section 219.480(a) or 219.480(b) ~~of this Part~~, as appropriate.

e) Records required under subsection (a) ~~of this Section shall~~must be maintained by the owner or operator for a minimum of two years after the date on which they are made.

f) Copies of the records ~~shall~~ must be made available to the Agency or the USEPA upon verbal or written request.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART V: BATCH OPERATIONS AND AIR OXIDATION PROCESSES

Section 219.500 Applicability for Batch Operations

a) The control requirements ~~set forth~~ in Section 219.501 ~~of this Subpart shall~~ apply to process vents associated with batch operations at sources identified by any of the following four-digit standard industrial classification ("SIC") codes, as defined in the 1987 edition of the Federal Standard Industrial Classification Manual: SIC 2821, 2833, 2834, 2861, 2865, 2869, and 2879, incorporated by reference in Section 219.112

b) ~~The requirements of~~ Sections 219.500 through 219.506 ~~shall~~ do not apply to:

1) Any emission unit included ~~within the category specified~~ in ~~35 Ill. Adm. Code 219,~~ Subpart B or T;

2) Any emission unit included ~~within the category specified~~ in Sections 219.520 through 219.527 ~~of this Subpart~~; and

3) Any emission unit included within an Early Reduction Program~~, as specified in~~ under 40 CFR Part 63, and published in 57 Fed. Reg. 61970 (December 29, 1992), evidenced by a timely enforceable commitment approved by USEPA.

c) The following single unit operations and batch process trains are subject to this Subpart but are considered to be de minimis and ~~are, therefore,~~ exempt from the control requirements of Section 219.501 ~~of this Subpart~~. However, the recordkeeping and reporting requirements in Section 219.505 ~~of this Subpart shall~~ apply to ~~such~~ these de minimis single unit operations and batch process trains:

1) Within a batch operation, any single unit operation with uncontrolled total annual mass emissions of less than or equal to 500 lb/yr of VOM. ~~Such~~ These single unit operations are also excluded from the calculation of the total annual mass emissions for a batch process train. If the uncontrolled total annual mass emissions from ~~such~~ an exempt single unit operation exceed 500 lb/yr of VOM in any subsequent year, the source ~~shall~~ must calculate applicability in ~~accordance~~ compliance with subsection (d~~) of this Section~~ for both the individual single unit operation and the batch process train containing the single unit operation; and

2) Any batch process train containing process vents that have~~,~~ in the aggregate~~,~~ uncontrolled total annual mass emissions, as determined in ~~accordance~~ compliance with Section 219.502(a) ~~of this Subpart~~, of less than 30,000 lb/yr of VOM for all products manufactured in such batch process train.

d) The applicability equations in subsection (e) ~~of this Section~~, which require the calculation of uncontrolled total annual mass emissions and flow rate value, ~~shall~~ must be used to determine whether a single unit operation or a batch process train is subject to the control requirements ~~set forth~~ in Section 219.501 ~~of this Subpart~~. The applicability equation ~~shall~~ must be applied to the following:

1) Any single unit operation with uncontrolled total annual mass emissions that exceed 500 lb/yr and with a VOM concentration greater than 500 ppmv. In this individual determination, no applicability analysis ~~shall~~ must be performed for any single unit operation with a VOM concentration of less than or equal to 500 ppmv; and

2) Any batch process train containing process vents which, in the aggregate, have uncontrolled total annual mass emissions of 30,000 lb/yr or more of VOM from all products manufactured in the batch process train. Any single unit operation with uncontrolled total annual mass emissions exceeding 500 lb/yr, regardless of VOM concentration, ~~shall~~ must be included in the aggregate applicability analysis.

e) Applicability equations

1) The applicability equations in this subsection are specific to volatility.

2) For purposes of this subsection, the following abbreviations apply:

A) FR = Vent stream flow rate, scfm;

B) UTAME = Uncontrolled total annual mass emissions of VOM, expressed as lb/yr;

C) WAV = Weighted average volatility;

D) $MVOM_i$ = Mass of VOM component i;

E) $MWVOM_i$= Molecular weight of VOM component i; and

F) VP_i = Vapor pressure of VOM component i.

3) Weighted average volatility ~~shall~~ must be calculated as follows:

$$WAV = \frac{\sum_{i=1}^{n} [(VP_i) \times (MVOM_i)]}{\sum_{i=1}^{n} [(MWVOM_i)]} = \frac{\sum_{i=1}^{n} [(MVOM_i)]}{\sum_{i=1}^{n} [(MWVOM_i)]}$$

4) For purposes of determining applicability, flow rate values ~~shall~~ must be calculated as follows:

A) Low WAV has a vapor pressure less than or equal to 75 mmHg at 20 ºC (68 ºF)~~20°C (68°F),~~ and ~~shall~~ must use the following equation:

FR = [0.07 (UTAME)] - 1,821

B) Moderate WAV has a vapor pressure greater than 75 mmHg but less than or equal to 150 mmHg at 20 ºC (68 ºF)~~20°C (68°F),~~ and ~~shall~~ must use the following equation:

FR = [0.031 (UTAME)] - 494

C) High WAV has a vapor pressure greater than 150 mmHg at 20 ºC (68 ºF)~~20°C (68°F),~~ and ~~shall~~ must use the following equation:

FR = [0.013 (UTAME)] - 301

5) To determine the vapor pressure of VOM, the applicable methods and procedures in Section 219.111 ~~of this Part shall~~ apply.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.501 Control Requirements for Batch Operations

a) Every owner or operator of a single unit operation with an average flow rate, as determined in ~~accordance~~ compliance with Section 219.502(b) ~~of this Subpart~~, below the flow rate value calculated by the applicability equations ~~contained~~ in Section 219.500(e) ~~of this Subpart~~, ~~shall~~ must reduce uncontrolled VOM emissions from ~~such~~ the single unit operation by an overall efficiency, on average, of at least 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle.

b) Every owner or operator of a batch process train with an average flow rate, as determined in ~~accordance~~ compliance with Section 219.502(b)(2) ~~of this Subpart~~, below the flow rate value calculated by the applicability equations ~~contained~~ in Section 219.500(e) ~~of this Subpart~~, ~~shall~~ must reduce uncontrolled VOM emissions from ~~such~~ the batch process train by an overall efficiency, on average, of at least 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle. For purposes of demonstrating compliance with the emission limitations ~~set forth~~ in this Section, any control device meeting the criteria in subsection (c) ~~of this Section shall~~must be deemed to achieve a control efficiency of 90 percent~~,~~ or 20 ppmv~~,~~ per batch cycle, as applicable.

c) Notwithstanding subsection (a) or (b) ~~of this Section~~, any source that has installed on or before March 15, 1995, any control device which is demonstrated to the Agency's satisfaction to be unable to meet the applicable control requirements of this Section, scrubber, or shell and tube condenser using a non-refrigerated cooling media, and ~~such~~ the device achieves at least 81 percent control efficiency of VOM emissions, is required to meet the 90 percent emission limitation or 20 ppmv VOM concentration ~~set forth~~ in subsection (a) or (b) ~~of this Section~~, as applicable, upon the earlier ~~to occur~~ of the date the device is replaced for any reason, including~~, but not limited to,~~ normal maintenance, malfunction, accident, and obsolescence, or December 31, 1999. A scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of this subsection, is considered replaced when:

1) All of the device is replaced; or

2) ~~When either~~Either the cost to repair the device or the cost to replace part of the device exceeds 50 percent of the cost of replacing the entire device with a control device that complies with the 90 percent emission limitation

or 20 ppmv VOM concentration level in subsection (a) ~~of this Section~~, as applicable.

d) If a boiler or process heater is used to comply with this Section, the vent stream ~~shall~~ must be introduced into the flame zone of the boiler or process heater.

e) If a flare is used to comply with this Section, it ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 219.112 ~~of this Part~~. The flare operation requirements of 40 CFR 60.18 do not apply if a process~~,~~ not subject to this Subpart~~,~~ vents an emergency relief discharge into a common flare header and causes the flare servicing the process subject to this Subpart to not comply with one or more of the provisions of 40 CFR 60.18.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.502 ~~Determination of~~Determining Uncontrolled Total Annual Mass Emissions and Actual Weighted Average Flow Rate Values for Batch Operations

a) Uncontrolled total annual mass emissions ~~shall~~ must be determined by the following methods:

1) Direct process vent emissions measurements taken ~~prior to~~before any release to the atmosphere, following any recovery device, and ~~prior to~~before any control device, ~~provided such~~if the measurements conform with the requirements of measuring the mass flow rate of VOM incoming to the control device ~~as set forth~~ in Section 219.503(f)(2), (f)(3)(A) and (f)(3)(B) ~~of this Subpart~~; or

2) Engineering estimates of the uncontrolled VOM emissions from a process vent or process vents, in the aggregate, within a batch process train, using either the potential or permitted number of batch cycles per year or total production ~~as represented in~~under the source's operating permit as follows:

A) Engineering estimates of the uncontrolled VOM emissions ~~shall~~ must be based upon accepted chemical engineering principles, measurable process parameters, or physical or chemical laws and their properties. Examples of methods include~~, but are not limited to,~~ the following:

i) Use of material balances based on process stoichiometry to estimate maximum VOM concentrations;

ii) Estimation of maximum flow rate based on physical equipment design such as pump or blower capacities; and

iii) Estimation of VOM concentrations based on saturation conditions.

B) All data, assumptions and procedures used in any engineering estimate ~~shall~~ must be documented.

b) Average flow rate ~~shall~~ must be determined by any of the following methods:

1) Direct process vent flow rate measurements taken ~~prior to~~before any release to the atmosphere, following any recovery device, and ~~prior to~~before any control device, ~~provided such~~if the measurements conform with the requirements of measuring incoming volumetric flow rate ~~set forth~~ in Section 219.503(e)(2) ~~of this Subpart~~;

2) Average flow rate for a single unit operation having multiple emission events or batch process trains ~~shall~~ must be the weighted average flow rate, calculated as follows:

$$WAF = \frac{\sum_{i=1}^{n} [AFR_i \times ADE_i]}{\sum_{i=1}^{n} (ADE_i)}$$

where:

WAF = Actual weighted average flow rate for a single unit operation or batch process train;

AFR_i = Average flow rate per emission event;

ADE_i = Annual duration of emission event; and

n = Number of emission events.

For purposes of this formula, ~~the term~~ "emission event" ~~shall be defined as~~means a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded vapor space when the single unit operation is heated is also an emission event. Both ~~of these~~ examples of emission events and others may occur in the same single unit operation during the course of the batch

cycle. If the flow rate measurement for any emission event is zero, according to Section 218.503(f)(2) ~~of this Subpart~~, then ~~such~~ the event is not an emission event for purposes of this Section.

3) Engineering estimates calculated in ~~accordance~~ compliance with ~~the requirements in~~ subsection (a)(2) ~~of this Section~~.

c) For purposes of determining the average flow rate for steam vacuuming systems, the steam flow ~~shall~~ must be included in the average flow rate calculation.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.503 Performance and Testing Requirements for Batch Operations

a) Upon the Agency's request, the owner or operator of a batch operation ~~shall~~ must conduct testing to demonstrate compliance with Section 219.501 ~~of this Subpart~~. The owner or operator ~~shall,~~must at its own expense~~,~~ conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.503(d), (e), and (f) ~~of this Subpart~~.

b) Notwithstanding subsection (a) ~~of this Section~~, flares and process boilers used to comply with control requirements of Section 219.501 ~~of this Subpart shall be~~are exempt from performance testing requirements.

c) When a flare is used to comply with the control requirements of Section 219.501 ~~of this Subpart~~, the flare ~~shall~~ must comply with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference at Section 219.112 ~~of this Part~~.

d) The owner or operator of a batch operation that is exempt from the control requirements of Section 219.501 ~~of this Subpart shall~~must demonstrate~~,~~ upon the Agency's request~~,~~ the absence of oversized gas moving equipment in any manifold. Gas moving equipment ~~shall~~ must be considered oversized if it exceeds the maximum requirements of the exhaust flow rate by more than 30 percent.

e) For the purpose of demonstrating compliance with the control requirements in Section 219.501 ~~of this Subpart~~, the batch operation ~~shall~~ must be run at representative operating conditions and flow rates during any performance test.

f) The following methods in 40 CFR 60, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance with the reduction efficiency requirement ~~set forth~~ in Section 219.501 ~~of this Subpart~~:

1) Method 1 or 1A, as appropriate, for selection of the sampling sites if the flow measuring device is not a rotameter. The control device inlet sampling site for determination of vent stream VOM composition

reduction efficiency ~~shall~~ must be ~~prior to~~before the control device and after the control device;

2) Method 2, 2A, 2C, or 2D, as appropriate, for determination of gas stream volumetric flow rate flow measurements, which ~~shall~~ must be taken continuously. No traverse is necessary when the flow measuring device is an ultrasonic probe;

3) Method 25A or Method 18, if applicable, to determine the concentration of VOM in the control device inlet and outlet;

A) The sampling time for each run ~~shall~~ must be as follows:

i) For batch cycles less than eight hours in length, readings ~~shall~~ must be taken continuously over the entire length of the batch cycle with a maximum of 15-minute intervals between measurements if using Method 25A. If using Method 18, readings ~~shall~~ must be taken continuously with a maximum of 15-minute intervals between measurements throughout the batch cycle unless it becomes necessary to change the impinger train, in which case a 30-minute interval ~~shall~~ must not be exceeded.

ii) For batch cycles of eight hours and greater in length, the owner or operator may either test in ~~accordence~~ compliance with the test procedures ~~defined~~ in subsection (f)(3)(A)(i) ~~of this Section~~ or the owner or operator may elect to perform tests~~, pursuant to~~ under either Method 25A or Method 18, only during those portions of each emission event which define the emission profile of each emission event occurring within the batch cycle. For each emission event of less than four hours in duration, the owner or operator ~~shall~~ must test continuously over the entire emission event ~~as set forth in~~under subsection (f)(3)(A)(i) ~~of this Section~~. For each emission event of greater than four hours in duration, the owner or operator ~~shall~~ may elect ~~either~~ to perform a minimum of three ~~one hour~~one-hour test runs during the emission event or ~~shal~~l test continuously over the entire emission event within each single unit operation in the batch process train. To demonstrate that the portion of the emission event to be tested ~~define~~ defines the emission profile for the emission event, the owner or operator electing to rely on this option ~~shall~~ must develop an emission profile for the entire emission event. ~~Such~~ The emission profile ~~shall~~ must be based upon either process knowledge or test data collected.

Examples of information that could constitute process knowledge include~~, but are not limited to,~~ calculations based on material balances and process stoichiometry. Previous test results may be used ~~provided such~~if the results are still relevant to the current process vent stream conditions.

iii) For purposes of subsection (f)(3)~~ of this Section~~, ~~the term~~ "emission event" ~~shall be defined as~~means a discrete period of venting that is associated with a single unit operation. For example, a displacement of vapor resulting from the charging of a single unit operation with VOM will result in a discrete emission event that will last through the duration of the charge and will have an average flow rate equal to the rate of the charge. The expulsion of expanded single unit operation vapor space when the vessel is heated is also an emission event. Both ~~of these~~ examples of emission events and others may occur in the same single unit operation during the course of the batch cycle. If the flow rate measurement for any emission event is zero, in ~~accordance~~ compliance with subsection (f)(2)~~ of this Section~~, then ~~such~~ the event is not an emission event for purposes of this Section.

B) The mass emission rate from the process vent or inlet to the control device ~~shall~~ must be determined by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in ~~accordance~~ compliance with subsection (f)(1) ~~of this Section~~ throughout the batch cycle;

C) The mass emission rate from the control device outlet ~~shall~~ must be obtained by combining concentration and flow rate measurements taken simultaneously at sampling sites selected in ~~accordance~~ compliance with subsection (f)(1) ~~of this Section~~ throughout the batch cycle; and

D) The efficiency of the control device ~~shall~~ must be determined by integrating the mass emission rates obtained in subsections (f)(3)(B) and (f)(3)(C) ~~of this Section,~~ over the time of the batch cycle and dividing the difference in inlet and outlet mass flow totals by the inlet mass flow total.

g) Upon request by the Agency to conduct testing, an owner or operator of a batch operation which has installed a scrubber, a shell and tube condenser using a non-refrigerated cooling media, or any other control device which meets the criteria of Section 219.501(c)~~ of this Subpart~~, ~~shall~~ must demonstrate that ~~such~~ the device

achieves the control efficiency ~~applicable within~~under Section 219.501 ~~of this Subpart~~ upon the earlier ~~to occur~~ of the date the device is replaced or December 31, 1999.

h) The owner or operator of a batch operation may propose an alternative test method or procedures to demonstrate compliance with the control requirements ~~set forth~~ in Section 219.501 ~~of this Subpart~~. ~~Such~~ The method or procedures ~~shall~~ mustl be approved by the Agency and USEPA ~~as evidenced by~~through federally enforceable permit conditions.

i) In the absence of a request by the Agency to conduct performance testing in ~~accordance~~ compliance with ~~the provisions of~~ this Section, a source may demonstrate compliance by ~~the use of~~using engineering estimates or process stoichiometry.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.504 Monitoring Requirements for Batch Operations

a) Every owner or operator using an afterburner to comply with Section 219.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~,~~ temperature monitoring devices with an accuracy of ± 1 percent of the temperature being measured expressed in degrees Celsius, equipped with continuous recorders.

1) Where a catalytic afterburner is used, temperature monitoring devices ~~shall~~ must be installed in the gas stream immediately before and after the catalyst bed.

2) Where an afterburner other than a catalytic afterburner is used, a temperature monitoring device ~~shall~~ must be installed in the combustion chamber.

b) Every owner or operator using a flare to comply with Section 219.501 ~~of this Subpart, shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~,~~ a heat sensing device~~,~~ such as an ultra-violet beam sensor or thermocouple~~,~~ at the pilot light to indicate continuous presence of a flame.

c) Every owner or operator using a scrubber to comply with ~~this~~ Section 219.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~, the following~~:

1) A temperature monitoring device for scrubbant liquid having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees

Celsius and a specific gravity device for scrubbant liquid, each equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration of VOM exiting the control device based on a detection principle such as infra-red photoionization~~,~~ or thermal conductivity, each equipped with a continuous recorder.

d) Every owner or operator using a condenser to comply with Section 219.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to manufacturer's specifications~~, the following~~:

1) A condenser exit temperature monitoring device equipped with a continuous recorder and having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees Celsius; or

2) A VOM monitoring device used to indicate the concentration of VOM such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

e) Every owner or operator using a carbon adsorber to comply with this Subpart ~~shall~~ must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's specifications~~, the following equipment~~:

1) An integrating regeneration steam flow monitoring device having an accuracy of ± 10 percent~~,~~ and a carbon bed temperature monitoring device having an accuracy of ± 1 percent of the temperature being monitored expressed in degrees Celsius, both equipped with a continuous recorder; or

2) A VOM monitoring device used to indicate the concentration level of VOM exiting ~~such~~ the device based on a detection principle such as infra-red, photoionization, or thermal conductivity, each equipped with a continuous recorder.

f) Every owner or operator using a boiler or process heater with a design heat input capacity less than 44 Mw to comply with Section 219.501 ~~of this Subpart shall~~must install, calibrate, maintain, and operate~~,~~ according to the manufacturer's specifications~~,~~ a temperature monitoring device in the firebox with an accuracy of ±1 percent of the temperature being measured expressed in degrees Celsius, equipped with a continuous recorder. Any boiler or process heater in which all process vent streams are introduced with primary fuel is exempt from this requirement.

g) The owner or operator of a process vent ~~shall~~ will be permitted to monitor by an alternative method or may monitor parameters other that those ~~listed~~ in subsections (a) through (f) ~~of this Section,~~ if approved by the Agency and

USEPA. ~~Such~~ The alternative method or parameters ~~shall~~ must be ~~contained~~ in the source's operating permit as federally enforceable permit conditions.

h) Notwithstanding subsections (a) through (g) ~~of this Section~~, sources using a scrubber, shell and tube condenser using a non-refrigerated cooling media, or other control device meeting the criteria of Section 219.501(c) ~~of this Subpart,~~ are required to monitor compliance with ~~the requirements of~~ this Subpart on and after the earlier ~~to occur~~ of the date ~~such~~ the device is replaced for any reason or December 31, 1999.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.505 Reporting and Recordkeeping for Batch Operations

a) Every owner or operator of a de minimis single unit operation or batch process train exempt under Section 219.500(c)(1) or (c)(2) ~~of this Subpart shall~~must keep records of the uncontrolled total annual mass emissions for any de minimis single unit operation or batch process train, as applicable, and documentation verifying these values or measurements. The documentation ~~shall~~ must include the engineering calculations, any measurements made in ~~accordance~~ compliance with Section 219.503 ~~of this Subpart~~, and the potential or permitted number of batch cycles per year~~,~~ or, in the alternative, total production as represented in the source's operating permit.

b) Every owner or operator of a single unit operation exempt under Section 219.500(b)(3) or (d) ~~of this Subpart shall~~must keep the following records:

1) The uncontrolled total annual mass emissions and documentation verifying these values or measurements. The documentation ~~shall~~ must include any engineering calculations, any measurements made in ~~accordance~~ compliance with Section 219.503 ~~of this Subpart~~, and the potential or permitted number of batch cycles per year or, in the alternative, total production ~~as represented in~~under the source's operating permit.

2) The average flow rate in scfm and documentation verifying this value.

c) Every owner or operator of a batch operation subject to the control requirements of Section 219.501 ~~of this Subpart shall~~must keep records of the following parameters required to be monitored under Section 219.504 ~~of this Subpart~~:

1) If using a thermal or catalytic afterburner to comply with Section 219.501 ~~of this Subpart~~, records indicating the average combustion chamber temperature of the afterburner (or the average temperature upstream and downstream of the catalyst bed for a catalytic afterburner), measured

continuously and averaged over the same time period as the performance test;

2) If using a flare (i.e., steam-assisted, air-assisted or nonassisted) to comply with Section 219.501 ~~of this Subpart~~, continuous records of the flare pilot flame monitoring and records of all periods of operations during which the pilot flame is absent.

3) If using any of the following as a control device, the following records:

A) Where a scrubber is used, the exit specific gravity (or alternative parameter which is a measure of the degree of absorbing liquid saturation, if approved by the Agency) and the average exit temperature of the absorbing liquid, measured continuously and averaged over the same time period as the performance test (both measured while the vent stream is routed normally);

B) Where a condenser is used, the average exit (product side) temperature measured continuously and averaged over the same time period as the performance test while the vent stream is routed normally;

C) Where a carbon adsorber is used, the total steam mass flow measured continuously and averaged over the same time period as the performance test (full carbon bed cycle), temperature of the carbon bed after regeneration (and within 15 minutes after completion of any cooling cycle<u>s</u>(s)), and duration of the carbon bed steaming cycle (all measured while the vent stream is routed normally); or

D) As an alternative to subsections (c)(3)(A), (c)(3)(B), or (c)(3)(C) ~~of this Section~~, at a minimum, records indicating the concentration level or reading indicated by the VOM monitoring device at the outlet of the scrubber, condenser, or carbon adsorber, measured continuously and averaged over the same time period as the performance test (while the vent stream is routed normally).

d) Every owner or operator of a single unit operation claiming a vent stream concentration exemption level~~, as set forth in~~ <u>under</u> Section 218.500(d)(1) ~~of this Subpart, shall~~<u>must</u> maintain records to indicate the vent stream concentration is less than or equal to 500 ppmv~~,~~ and ~~shall~~ <u>must</u> notify the Agency in writing if the vent stream concentration at any time equals or exceeds 500 ppmv~~,~~ within 60 days after ~~such~~ <u>the</u> event. ~~Such~~ <u>The</u> notification shall include a copy of all records of ~~such~~ <u>the</u> event.

e) An owner or operator of a batch operation subject to the control requirements of Section 219.501 ~~of this Subpart~~ may maintain alternative records other than those ~~listed~~ in subsection (c) ~~of this Section~~. Any alternative recordkeeping ~~shall~~ must be approved by the Agency and USEPA and ~~shall~~ must be ~~contained~~ in the source's operating permit as federally enforceable permit conditions.

f) Notwithstanding subsections (a) through (e) ~~of this Section~~, any owner or operator of a batch operation which uses either a scrubber, shell and tube condenser using non-refrigerated cooling media, or other control device meeting the criteria of Section 219.501(c) ~~of this Subpart, is required to~~must monitor compliance with ~~the requirements of~~ this Subpart on and after the earlier ~~to occur~~ of the date ~~such~~ the device is replaced for any reason or December 31, 1999.

g) The owner or operator of a de minimis single unit operation or batch process train exempt from the control requirements of Section 219.500(c) ~~of this Subpart shall~~must notify the Agency in writing if the uncontrolled total annual mass emissions from ~~such~~ the de minimis single unit operation or batch process train exceed the threshold in Section 219.500(c)(1) or (c)(2) ~~of this Subpart~~, respectively, within 60 days after the event occurs. ~~Such~~ The notification ~~shall~~ must include a copy of all records of ~~such~~ the event.

h) Every owner or operator of a batch operation required to keep records under this Section ~~shall~~ must maintain ~~such~~ the records at the source for a minimum ~~period~~ of three years and ~~shall~~ must make all ~~such~~ of the records available to the Agency upon request.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.506 Compliance Date

Every owner or operator of a batch operation subject to Sections 219.500 through 219.506 ~~of this Subpart shall~~must comply with its ~~standards, limitations and mandates~~requirements by March 15, 1996, or upon initial start up, whichever is later.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.520 Emission Limitations for Air Oxidation Processes

a) ~~No~~ A person ~~shall~~ must not cause or allow the emission of ~~volatile organic material (~~VOM~~)~~ from any process vent stream unless the process vent stream is vented to a combustion device which is designed and operated either:

1) To reduce the volatile organic emissions vented to it with an efficiency of at least ~~ninety-eight percent (~~98%~~)~~ by weight; or

2) To emit VOM at a concentration less than ~~twenty parts per million~~20 ppm by volume, dry basis.

b) Combustion Device at a Phthalic Anhydride Air Oxidation Process

1) Notwithstanding subsection (a) ~~above,~~ and subject to subsection (b)(2) ~~below~~, ~~no~~ a person ~~shall~~ must not cause or allow the emissions of VOM through an existing combustion device at a phthalic anhydride air oxidation process, unless the combustion device is operated to achieve:

A) 90% control of the volatile organic emissions vented to it; or

B) VOM emissions concentration of less than 50 ~~parts per million~~ppm by volume, dry basis.

2) Any existing combustion device subject to subsection (b)(1) ~~above~~ is required to meet the 98 percent emissions limit ~~set forth~~ in subsection (a) ~~above~~ either upon replacing the combustion device for any reasons, including~~, but not be limited to,~~ normal maintenance, malfunction, accident, and obsolesence, or ~~the date of~~ December 31, 1999, whichever comes first. A combustion device is considered to be replaced when:

A) All of the device is replaced; or

B) When the cost of the repair of the device or the cost of replacement of part of the device exceeds 50% of the cost of replacing the entire device with a device which complies.

c) The limitations of subsection (a) ~~above shall~~ apply to any process vent stream or combination of process vent streams with a Total Resource Effectiveness Index (TRE) less than or equal to 6.0. TRE ~~shall~~ must be determined by the following methods:

1) If an air oxidation process has more than one process vent stream, the TRE ~~shall~~ must be the more stringent of either the TRE based upon a combination of the process vent streams or the TRE based upon each individual process vent stream.

2) The TRE of a process vent stream and the TRE of a combination of process vent streams, whichever is applicable, ~~shall~~ must be determined according to the following equation:

$$TRE = E(-1)\,[a + bF(n) + cF + dFH + e(FH)(n) + fF(0.5)]$$

where:

n = 0.88;
TRE = Total resource effectiveness index;
F = Vent stream flowrate (scm/min), at a standard temperature of ~~20°C~~20 °C;

E = Hourly measured emissions in kg/hr;

H = Net heating value of vent stream (MJ/scm), where the net enthalpy per mole of offgas is based on combustion at ~~25°C~~25 ºC and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20°C~~20 ºC, as in the definition of "Flow";

a,b,c,d,e, and f= Coefficients obtained by use of Appendix D.

3) For nonchlorinated process vent streams, if the net heating value~~,~~ H~~,~~ is greater than 3.6 MJ/scm, F ~~shall~~ must be replaced by F' for purposes of calculating TRE. F' is computed as follows:

F' = FH / 3.6

where F and H are as defined in subsection (c)(2).

4) The actual numerical values used in the equation ~~described~~ in subsection (c)(2) ~~shall~~ must be determined as follows:

A) All reference methods and procedures for determining the flow (F), hourly emissions (E), and net heating (H)~~,~~ value ~~shall~~ must be in ~~accordance~~ compliance with Appendix C.

B) All coefficients described in subsection (c)(2) ~~of this Section shall~~must be in ~~accordance~~ compliance with Appendix D.

Section 219.521 Definitions (Repealed)

(Source: Repealed at 17 Ill. Reg. 16918, effective September 27, 1993)

Section 219.522 Savings Clause

The owner or operator of an air oxidation process with a TRE of 1.0 or less ~~shall~~ must have complied with ~~the requirements of~~ Section 219.520(a) ~~of this Subpart~~ by the dates ~~set forth~~ in Section 219.106(a) and (b) ~~of this Part~~. Sources that are subject to 219.520(b) ~~of this Subpart~~ that become subject to the control requirements of 219.520(a) ~~of this Subpart~~ after the compliance dates ~~set out~~ in 219.106(a) and (b) ~~of this Part shall~~must comply with the timetable ~~set forth within~~in Section 219.520(b).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.523 Compliance

The emissions limitations for air oxidation processes ~~located~~ in Section 219.520(a) ~~of this Subpart are applicable~~apply to air oxidation processes on October 25, 1994.

a) An owner or operator of an air oxidation process with a TRE of 6.0 or less that is subject to ~~the requirements of~~ Section 219.520(a) ~~of this Subpart~~ on October 25, 1994 ~~shall~~, must comply with ~~the provisions of~~ Section 219.520(a) by December 31, 1999, or upon startup of the emission unit, whichever comes first. This subsection does not supersede the Savings Clause in Section 219.522 ~~of this Part~~.

b) An owner or operator of an air oxidation process that becomes subject to ~~the requirements of~~ Section 219.520(a) ~~of this Subpart~~ after October 25, 1994 ~~shall~~, must comply with ~~the requirements of~~ Section 219.520(a) upon startup of the emission unit.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.524 ~~Determination of~~Determining Applicability

a) Sources subject to ~~the requirements of~~ Section 219.520(a) ~~of this Subpart~~ either through application of Section 219.520(c) ~~of this Subpart~~ or ~~through~~ continued application under Section 219.522 ~~of this Subpart shall~~must continue to be subject to the applicable limitations even if operations change so as to result in a TRE that is above that which initially made the regulation applicable to the source's operations.

b) Notwithstanding Section 219.520(c) ~~of this Subpart~~, any air oxidation process that ~~utilizes~~ uses a combustion device to control process vent streams at any time ~~shall~~ must maintain the process in compliance with ~~the provisions of~~ Section 219.520(a) ~~of this Subpart~~ at all times ~~thereafter~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.525 Emission Limitations for Air Oxidation Processes (Renumbered)

(Source: Section 219.525 renumbered to Section 219.520 at 18 Ill. Reg. 16980, effective November 15, 1994)

Section 219.526 Testing and Monitoring

a) Upon reasonable request by the Agency, the owner or operator of an air oxidation process ~~shall~~ must demonstrate compliance with this Subpart by ~~use of~~using the methods ~~specified~~ in Appendix C. This Section does not limit the USEPA's authority~~,~~ under the Clean Air Act~~,~~ to require demonstrations of compliance.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency of that intent ~~not less than~~at least

30 days before the planned initiation of the tests so that the Agency may observe the test.

(Source: Repealed at 17 Ill. Reg. 16918, effective September 27, 1993)

SUBPART W: AGRICULTURE

Section 219.541 Pesticide Exception

~~The provisions of~~ Sections 219.301 and 219.302 ~~of this Part shall~~do not apply to the spraying or use of insecticides, herbicides, or other pesticides.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART X: CONSTRUCTION

Section 219.561 Architectural Coatings

~~No~~ A person ~~shall~~ must not cause or allow the sale or use of any architectural coating containing more than 20 percent by volume of photo-chemically reactive material in containers having a capacity of more than one gallon.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.562 Paving Operations

~~The provisions of~~ Sections 219.301 and 219.302 ~~of this Part shall~~do not apply to the application of paving asphalt and pavement marking paint from sunrise to sunset.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.563 Cutback Asphalt

a) ~~No~~ A person ~~shall~~ must not cause or allow the use or application of cutback asphalt for paving, resurfacing, reconditioning, repairing, or otherwise maintaining a roadway unless:

1) The use or application of the cutback asphalt commences on or after October 1 of any year and ~~such~~ the use or application is completed by April 30 of the following year; or

2) The cutback asphalt is a long-life stockpile material which remains in stock after April 30 of each year, which ~~and as such it~~ may be used until depleted for patching potholes and for other similar repair work; or

3) The cutback asphalt is to be used solely as an asphalt prime coat.

b) Sources subject to this Section are not required to submit or obtain an Agency approved compliance plan or project completion schedule under 35 Ill. Adm. Code 201, Subpart H.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART Y: GASOLINE DISTRIBUTION

Section 219.581 Bulk Gasoline Plants

a) Subject to subsection (e) ~~of this Section~~, ~~no~~ a person ~~may~~ must not cause or allow the transfer of gasoline from a delivery vessel into a stationary storage tank located at a bulk gasoline plant unless;

1) The delivery vessel and the stationary storage tank are each equipped with a vapor collection system that meets the requirements of subsection (d)(4) ~~of this Section~~;

2) Each vapor collection system is operating;

3) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Sections 219.584 (b) or (d) ~~of this Part~~;

4) The pressure relief valve(s) on the stationary storage tank and the delivery vessel are set to release at no less than 0.7 psi or the highest pressure allowed by state or local fire codes or the guidelines of the National Fire Prevention Association; and

5) The stationary storage tank is equipped with a submerged loading pipe.

b) Subject to subsection (f) ~~of this Section~~, ~~no~~ a person ~~may~~ must not cause or allow the transfer of gasoline from a stationary storage tank located at a bulk gasoline plant into a delivery vessel unless:

1) The requirements ~~set forth~~ in subsections (a)(1) through (a)(4) ~~of this Section~~ are met; and

2) Equipment is available at the bulk gasoline plant to provide for the submerged filling of the delivery vessel or the delivery vessel is equipped for bottom loading.

c) Subject to subsection (e) of this Section, each owner of a stationary storage tank located at a bulk gasoline plant shall:

1) Equip each stationary storage tank with a vapor control system that meets the requirements of subsection (a) or (b) of this Section, whichever is applicable;

2) Provide instructions to the operator of the bulk gasoline plant describing necessary maintenance operations and procedures ~~for prompt notification of~~that promptly notify the owner in case of any ~~malfunction of a~~ vapor control system malfunctions; and

3) Repair, replace, or modify any worn out or malfunctioning component or element of design.

d) Subject to subsection (e)~~ of this Section~~, each operator of a bulk gasoline plant ~~shall~~must:

1) Maintain and operate each vapor control system in ~~accordance~~ compliance with the owner's instructions;

2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system; ~~and~~

3) Maintain gauges, meters, or other specified testing devices in proper working order;

4) Operate the bulk plant vapor collection system and gasoline loading equipment in a manner that prevents:

A) Gauge pressure from exceeding 45.7 cc (18 in.) of water and vacuum from exceeding 15.2 cm (6 in.) of water, as measured as close as possible to the vapor hose connection; and

B) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in "Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection Systems", Appendix B, EPA 450/2-78-051, ~~(~~incorporated by reference in Section 219.112~~ of this Part)~~; and

C) Avoidable leaks of liquid during loading or unloading operations.

5) Provide a pressure tap or equivalent on the bulk plant vapor collection system ~~in order~~ to allow the determination of compliance with subsection (d)(4)(A) ~~of this Section~~; and

6) Within 15 business days after discovery of any leak by the owner, the operator, the Agency, or ~~the~~ USEPA, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A) or (B) ~~of this Section~~.

e) The requirements of subsections (a), (c), and (d) ~~of this Section shall~~do not apply to:

1) Any stationary storage tank with a capacity of less than 2,177 1 (575 gal); or

2) Any bulk gasoline plant whose daily gasoline throughput is less than 15,140 1 (4,000 gal/day) on a thirty-day rolling average.

f) ~~The requirements of subsection~~Subsection (b) ~~shall apply~~applies only to bulk gasoline plants whose daily gasoline throughput is greater than or equal to 15,140 1 (4,000 gal/day) on a thirty-day rolling average.

g) Any bulk gasoline plant which is ever subject to subsections (a), (b), (c), or (d) ~~of this Section shall~~must always be subject to these ~~paragraphs~~subsections.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.582 Bulk Gasoline Terminals

a) ~~No~~ A person ~~shall~~ must tno cause or allow the transfer of gasoline into any delivery vessel from any bulk gasoline terminal unless:

1) The bulk gasoline terminal is equipped with a vapor control system that limits emission of VOM to 80 mg/1 (0.00067 lbs/gal) of gasoline loaded;

2) The vapor control system is operating and all vapors displaced in the loading of gasoline to the delivery vessel are vented only to the vapor control system;

3) There is no liquid drainage from the loading device when it is not in use;

4) All loading and vapor return lines are equipped with fittings which are vapor tight; and

5) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Section 219.584(b) or (d) ~~of this Part~~; or, if the

terminal is driver-loaded, the terminal owner or operator ~~shall~~ will be deemed to be in compliance with this Section when terminal access authorization is limited to those owners and/or operators of delivery vessels who have provided a current certification as required by Section 219.584(c)(3) ~~of this Part~~.

b) The operator of a bulk gasoline terminal ~~shall~~must:

1) Operate the terminal vapor collection system and gasoline loading equipment in a manner that prevents:

A) Gauge pressure from exceeding 18 inches of water and vacuum from exceeding 6 inches of water as measured as close as possible to the vapor hose connection; and

B) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in EPA 450/2-78-051 Appendix B, incorporated by reference in Section 219.112 ~~of this Part~~; and

C) Avoidable leaks of liquid during loading or unloading operations.

2) Provide a pressure tap or equivalent on the terminal vapor collection system in order to allow the determination of compliance with Section 219.582(d)(1)(A) ~~of this Part~~; and

3) Within 15 business days after discovery of the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (c)(1)(A) or (B) ~~of this Section~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.583 Gasoline Dispensing Operations - Storage Tank Filling Operations

a) Subject to subsection (b) below, no person shall cause or allow the transfer of gasoline from any delivery vessel into any stationary storage tank at a gasoline dispensing operation unless:

1) The tank is equipped with a submerged loading pipe; and

2) The vapors displaced from the storage tank during filling are processed by a vapor control system that includes one or more of the following:

A) A vapor collection system that meets the requirements of subsection (d)(4) ~~below~~; or

B) A refrigeration-condensation system or any other system approved by the Agency and approved by ~~the~~ USEPA as a SIP revision~~,~~ that recovers at least 90 percent by weight of all vaporized organic material from the equipment being controlled; and

C) The delivery vessel displays the appropriate sticker ~~pursuant to the requirements of~~under Section 219.584(b) or (d) ~~of this Part~~; and

3) By March 15, 1995, all tank vent pipes are equipped with pressure/vacuum relief valves with the following design specifications:

A) The pressure/vacuum relief valve ~~shall~~ must be set to resist a pressure of at least 3.5 inches water column and to resist a vacuum of no less than 6.0 inches water column; or

B) The pressure/vacuum relief valve ~~shall~~ must meet the requirements of 35 Ill. Adm. Code 218.586(c); and

4) The owner or operator of a gasoline dispensing operation demonstrates compliance with subsection (a)(3) ~~of this Section,~~ by March 15, 1995, or 30 days after installation of each pressure/vacuum relief valve, whichever is later, and then at least annually ~~thereafter~~, by measuring and recording the pressure indicated by a pressure/vacuum gauge at each tank vent pipe. The test ~~shall~~ must be performed on each tank vent pipe within two hours after product delivery into the respective storage tank. For manifolded tank vent systems, observations at any point within the system ~~shall~~ must be adequate. The owner or operator ~~shall~~ must maintain any records required by this subsection for ~~a period of~~ three years.

b) ~~The requirements of subsections~~Subsections (a)(2) and (a)(3) ~~above shall~~do not apply to transfers of gasoline to a stationary storage tank at a gasoline dispensing operation if:

1) The tank is equipped with a floating roof~~,~~ or other system of equal or better emission control as approved by the Agency and approved by ~~the~~ USEPA as a SIP revision;

2) The tank has a capacity of less than 2000 gallons and was in place and operating before January 1, 1979; or

3) The tank has a capacity of less than 575 gallons.

c) Subject to subsection (b) above, each owner of a gasoline dispensing operation ~~shall~~must:

1) Install all control systems and make all process modifications required by subsection (a) ~~above~~;

2) Provide instructions to the operator of the gasoline dispensing operation describing necessary maintenance operations and for prompt notification of the owner in case of any malfunction of a vapor control system; and

3) Repair, replace, or modify any worn out or malfunctioning component or element of design.

d) Subject to subsection (b) ~~above~~, each operator of a gasoline dispensing operation ~~shall~~must:

1) Maintain and operate each vapor control system in ~~accordance~~ compliance with the owner's instructions;

2) Promptly notify the owner of any scheduled maintenance or malfunction requiring replacement or repair of a major component of a vapor control system;

3) Maintain gauges, meters, or other specified testing devices in proper working order;

4) Operate the vapor collection system and delivery vessel unloading points in a manner that prevents:

A) A reading equal to or greater than 100 percent of the lower explosive limit (LEL measured as propane) when tested in ~~accordance~~ compliance with the procedure ~~described~~ in EPA 450/2-78-051 Appendix B, incorporated by reference at Section 219.112 ~~of this Part~~, and

B) Avoidable leaks of liquid during the filling of storage tanks; and

5) Within 15 business days after discovery of the leak by the owner, operator, or the Agency, repair and retest a vapor collection system which exceeds the limits of subsection (d)(4)(A).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.584 Gasoline Delivery Vessels

a) Any delivery vessel equipped for vapor control by use of vapor collection equipment:

1) ~~Shall~~ Must have a vapor space connection that is equipped with fittings which are vapor tight;

2) ~~Shall~~ Must have its hatches closed at all times during loading or unloading operations, unless a top loading vapor recovery system is used;

3) ~~Shall~~ Must not internally exceed a gauge pressure of 18 inches of water or a vacuum of 6 inches of water;

4) ~~Shall~~ Must be designed and maintained to be vapor tight at all times during normal operations;

5) ~~Shall~~ Must not be refilled in Illinois at other than:

A) A bulk gasoline terminal that complies with ~~the requirements of~~ Section 219.582 ~~of this Part~~ or

B) A bulk gasoline plant that complies with ~~the requirements of~~ Section 219.581(b) ~~of this Part~~.

6) ~~Shall~~ Must be tested annually in ~~accordance~~ compliance with Method 27, 40 CFR 60, Appendix A, incorporated by reference in Section 219.105 ~~of this Part~~. Each vessel must be repaired and retested within 15 business days after discovery of the leak by the owner, operator, or the Agency, when it fails to sustain:

A) A pressure drop of no more than three inches of water in five minutes; and

B) A vacuum drop of no more than three inches of water in five minutes.

b) Any delivery vessel meeting the requirements of subsection (a) ~~of this Section shall~~must have a sticker affixed to the tank adjacent to the tank manufacturer's data plate which contains the tester's name, the tank identification number, and the date of the test. The sticker ~~shall~~ must be in a form prescribed by the Agency, and, for those delivery vessels subject to 35 Ill. Adm. Code 215 as of December 31, 1987 ~~shall~~, must have been displayed ~~no later than~~by December 31, 1987.

c) The owner or operator of a delivery vessel ~~shall~~must:

1) Maintain copies of any test required under subsection (a)(6) ~~of this Section~~ for ~~a period of~~ 3 years;

2) Provide copies of these tests to the Agency upon request; and

3) Provide annual test result certification to bulk gasoline plants and terminals where the delivery vessel is loaded.

d) Any delivery vessel which has undergone and passed a test in another state which has a USEPA-approved leak testing and certification program will satisfy the requirements of subsection (a) ~~of this Section~~. Delivery vessels must display a sticker, decal, or stencil approved by the state where tested or comply with the requirements of subsection (b) ~~of this Section~~. All such stickers, decals, or stencils ~~shall~~ must have been displayed ~~no later than~~by December 31, 1987, for delivery vessels subject to 35 Ill. Adm. Code 215 as of December 31, 1987.

Section 219.607 Standards for Petroleum Solvent Dry Cleaners

a) The owner or operator of a petroleum solvent dry cleaning dryer ~~shall~~ must either:

1) Limit emissions of volatile organic material to the atmosphere to an average of 3.5 kilograms of VOM per 100 kilograms dry weight of articles dry cleaned, or

2) Install and operate a solvent recovery dryer in a manner such that the dryer remains closed and the recovery phase continues until a final solvent flow rate of 50 ml per minute is attained.

b) The owner or operator of a petroleum solvent filtration system ~~shall~~ must either:

1) Reduce the VOM content in all filtration wastes to 1.0 kilogram or less per 100 kg dry weight of articles dry cleaned~~,~~ before disposal~~,~~ and exposure to the atmosphere, or

2) Install and operate a cartridge filtration system~~,~~ and drain the filter cartridges in their sealed housings for 8 hours or more before their removal.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.608 Operating Practices for Petroleum Solvent Dry Cleaners

~~In order to~~To minimize fugitive solvent emissions, the owner or operator of a petroleum solvent dry cleaning source ~~shall~~ must employ good housekeeping practices including the following:

a) General Housekeeping Requirements

1) Equipment containing solvent (washers, dryers, extractors, and filters) ~~shall~~ must remain closed at all times except during load transfer and maintenance. Lint filter and button trap covers ~~shall~~ must remain closed except when solvent-laden material is being removed.

2) Cans, buckets, barrels, and other containers of solvent or of solvent-laden material ~~shall~~ must be covered except when in use.

3) Solvent-laden material ~~shall~~ must be exposed to the atmosphere only for the minimum time necessary for load transfer.

b) Installation and operation of equipment:

1) All cartridge filters ~~shall~~ must be enclosed and operated in ~~accordance~~ compliance with the procedures and specifications recommended by the manufacturer for the cartridge filter. After installation, the cartridges ~~shall~~ must be inspected, monitored, and maintained in ~~accordance~~ compliance with the manufacturer's recommendations; and

2) Vents on containers for new solvent and for solvent-containing waste ~~shall~~ must be constructed and maintained ~~so as~~ to minimize solvent vapor emissions. Criteria for ~~the minimization of~~minimizing solvent vapor emissions include ~~the elimination of~~eliminating solvent buckets and barrels standing open to the atmosphere~~,~~ and ~~the repair of~~repairing gaskets and seals that expose solvent-rich environments to the atmosphere, to be determined through visual inspection.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.609 Program for Inspection and Repair of Leaks

a) The owner or operator of a petroleum solvent dry cleaning source ~~shall~~ must conduct the following visual inspections on a weekly basis:

1) Washers, dryers, solvent filters, settling tanks, vacuum stills, and containers and conveyors of petroleum solvent ~~shall~~ must be inspected for visible leaks of solvent liquid.

2) Pipes, hoses, and fittings ~~shall~~ must be inspected for active dripping or dampness.

3) Pumps and filters ~~shall~~ must be inspected for leaks around seals and access covers.

4) Gaskets and seals ~~shall~~ must be inspected for wear and defects.

b) Leaks of petroleum solvent liquid and vapors ~~shall~~ must be repaired within three working days ~~of~~ after detection, unless necessary replacement parts are not on site.

1) If necessary, repair parts ~~shall~~ must be ordered within three working days ~~of detection of~~after detecting the leak.

2) The leak ~~shall~~ must be repaired within three days ~~of~~ after delivery of necessary parts.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.610 Testing and Monitoring

a) Compliance with Sections 219.607(b)(2), 219.608, and 219.609 ~~of this Part shall~~must be determined by visual inspection; and

b) Compliance with Sections 219.607(a)(2) and (b)(1) ~~of this Part shall~~must be determined by methods ~~described~~ in EPA-450/3-82-009 (1982), incorporated by reference in Section 219.112 ~~of this Part~~.

c) If a control device is used to comply with Section 219.607(a)(1) ~~of this Part~~, then compliance ~~shall~~ must be determined using 40 CFR 60 Appendix A, Method 25 (1984), incorporated by reference in Section 219.112 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.611 Exemption for Petroleum Solvent Dry Cleaners

~~The provisions of~~ Sections 219.607 through 219.610 ~~of this Part shall~~do not apply to petroleum solvent dry cleaning sources whose emissions of volatile organic material do not exceed 91 Mg (100 tons) per year in the absence of pollution control equipment or whose emissions of VOM, as limited by the operating permit, will not exceed 91 Mg (100 tons) per year in the absence of pollution control equipment.

SUBPART AA: PAINT AND INK MANUFACTURING

Section 219.620 Applicability

a) This Subpart ~~shall apply~~applies to all paint and ink manufacturing sources which:

1) Include process emission units not subject to Subparts B, E, F (excluding Section 219.204(l) ~~of this Part~~), H (excluding Section 219.405 ~~of this Part~~), Q, R, S, T (excluding Section 219.486 ~~of this Part~~), V, X, Y, Z, or BB ~~of this Part~~; and which as a group both:

A) Have maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

B) Are not limited to less than 91 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment~~,~~ through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision, or

2) Produce more than 7,570,820 l (2,000,000 gal) per calendar year of paint or ink formulations, which contain less than 10 percent (by weight) water, and ink formulations not containing as the primary solvents water, Magie oil, or glycol.

b) For the purposes of this Subpart, uncontrolled VOM emissions are the emissions of VOM which would result if no air pollution control equipment were used.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.621 Exemption for Waterbase Material and Heatset-Offset Ink

~~The requirements of~~ Sections 219.624, ~~and~~ 219.625, and ~~Section~~ 219.628(a) ~~of this Part shall~~do not apply to equipment while it is being used to produce either:

a) Paint or ink formulations which contain 10 percent or more (by weight) water, or

b) Inks containing Magie oil and glycol as the primary solvent.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.623 Permit Conditions

~~No~~ A person ~~shall~~ must not violate any condition in a permit when the condition results in exclusion of the source or an emission unit from this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.624 Open-Top Mills, Tanks, Vats or Vessels

~~No~~ A person ~~shall~~ must not operate an open-top mill, tank, vat, or vessel with a volume of more than 45 l (12 gal) for the production of paint or ink unless:

a) The mill, tank, vat, or vessel is equipped with a cover which completely covers the mill, tank, vat, or vessel opening except for an opening no larger than necessary to allow for safe clearance for a mixer shaft. ~~Such~~ The cover ~~shall~~ must extend at least 1.27 cm (0.5 in.) beyond the outer rim of the opening or be attached to the rim.

b) The cover remains closed except when production, sampling, maintenance, or inspection procedures require access.

c) The cover is maintained in good condition such that, when in place, it maintains contact with the rim of the opening for at least 90 percent of the circumference of the rim.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.625 Grinding Mills

a) ~~No~~ A person ~~shall~~ must not operate a grinding mill for the production of paint or ink which is not maintained in ~~accordance~~ compliance with the manufacturer's specifications.

b) ~~No~~ A person ~~shall~~ must not operate a grinding mill fabricated or modified after ~~the effective date of this Subpart~~August 16, 1991, which is not equipped with fully enclosed screens.

c) The manufacturer's specifications ~~shall~~ must be kept on file at the plant by the owner or operator of the grinding mill and be made available to any person upon verbal or written request during business hours.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.626 Storage Tanks

a) The owner or operator ~~shall~~ must equip tanks storing VOL with a vapor pressure greater than 10 kPa (1.5 psi) at ~~20°C (68°F)~~20 ºC (68 ºF) with pressure/vacuum conservation vents set as a minimum at +/-0.2 kPa (0.029 psi). These controls ~~shall~~ must be operated at all times. An alternative air pollution control system may be used if it results in a greater emission reduction than these controls. Any alternative control system can be allowed only if approved by the Agency and approved by ~~the~~ USEPA as a SIP revision.

b) Stationary VOL storage containers with a capacity greater than 946 1 (250 gal) ~~shall~~ must be equipped with a submerged-fill pipe or bottom fill. These controls ~~shall~~ must be operated at all times. An alternative control system can be allowed only if approved by the Agency and approved by ~~the~~ USEPA as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.628 Leaks

The owner or operator of a paint or ink manufacturing source ~~shall, for the purpose of detecting leaks,~~must conduct ~~an~~ the following equipment monitoring program ~~as set forth below~~to detect leaks:

a) Each pump ~~shall~~ must be checked by visual inspection each calendar week for ~~indications of~~ leaks~~, that is,~~ indicated by liquids dripping from the pump seal. If there are indications of liquids dripping from the pump seal, the pump ~~shall~~ must be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected.

b) Any pump, valve, pressure relief valve, sampling connection, open-ended valve and flange, or connector containing a fluid which is at least 10 percent VOM by weight and which appears to be leaking on the basis of sight, smell, or sound ~~shall~~ must be repaired as soon as practicable, but no later than 15 calendar days after the leak is detected.

c) A ~~weather proof,~~ readily visible weather-proof tag~~,~~ in bright colors such as red or yellow~~,~~ bearing an identification number and the date on which the leak was detected ~~shall~~ must be attached to leaking equipment. The tag may be removed ~~upon repair, that is, when the equipment is adjusted or otherwise altered~~when the equipment has been repaired, including adjustment or other alteration. to allow operation without leaking.

d) When a leak is detected, the owner or operator ~~shall~~ must record the date of detection and repair, and the record ~~shall~~ must be retained at the source for at least two years from the date of each detection or each repair attempt. The record ~~shall~~ must be made available to any person upon verbal or written request during business hours.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.630 Clean Up

a) ~~No~~ A person ~~shall~~ must not clean paint or ink manufacturing equipment with organic solvent unless the equipment being cleaned is completely covered or enclosed except for an opening no larger than necessary to allow safe clearance for proper operation of the cleaning equipment, considering the method and materials being used.

b) ~~No~~ A person ~~shall~~ must store organic wash solvent only in ~~other than~~ closed containers, unless closed containers are demonstrated to be a safety hazard, ~~or~~ and must not dispose of organic wash solvent in a manner such that more than 20 percent by weight is allowed to evaporate into the atmosphere.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.636 Compliance Schedule

Every owner or operator of a source subject to the control requirements of this Subpart ~~shall~~ must comply with the requirements ~~thereof~~ on and after ~~a~~ an pplicable date ~~consistent with~~under Section 219.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.637 Recordkeeping and Reporting

a) Upon request by the Agency, the owner or operator of a source which claims to be exempt from ~~the requirements of~~ this Subpart ~~shall~~ must submit records to the Agency within 30 calendar days ~~from~~ after the date of the request which document that the source is ~~in fact~~ exempt from this Subpart. These records ~~shall~~ include ~~(but are not limited to)~~ the percent water (by weight) in the paint or ink being produced and the quantity of Magie oil, glycol, and other solvents in the ink being produced.

b) Every owner or operator of a source which is subject to ~~the requirements of~~ this Subpart ~~shall~~ must maintain all records necessary to demonstrate compliance with ~~those requirements~~it at the source for three years.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART BB: POLYSTYRENE PLANTS

Section 219.640 Applicability

~~The provisions of this~~This Subpart ~~shall apply~~applies to polystyrene plants which:

a) ~~Which use~~Use continuous processes to manufacture polystyrene - polybutadiene co-polymer; and

b) ~~Which fall~~Fall within Standard Industrial Classification Group No. 282, Industry No. 2821, except that the manufacture of polystyrene resins need not be the primary manufacturing process at the plant.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.642 Emissions Limitation at Polystyrene Plants

~~No~~ A person ~~shall~~ must not cause or allow the emissions of VOM from the material recovery section to exceed 0.12 kg of VOM per 1000 kg of polystyrene resin produced.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.644 Emissions Testing

a) Upon a reasonable request by the Agency, the owner or operator of a polystyrene plant subject to this Subpart ~~shall~~ must at ~~his~~ its own expense demonstrate compliance by ~~use of the following method:~~ 40 CFR 60, Appendix A, Method 25 - Determination of Total Gaseous Non-Methane Organic Emissions as Carbon (1984), incorporated by reference in Section 219.112 ~~of this Part~~.

b) A person planning to conduct a VOM emissions test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the ~~tests~~ test so the Agency may observe the test.

(Source: Amended at 20 Ill. Reg. 14462, effective October 28, 1996)

SUBPART GG: MARINE TERMINALS

Section 219.760 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to sources that load or who are permitted to load gasoline or crude oil.

b) ~~The requirements of this~~This Subpart ~~shall~~ does not apply to the following activities:

1) Loading of liquids associated with the fueling of marine vessels; or

2) ~~The transfer of~~Transferring liquids from one marine vessel to another marine vessel.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.762 Control Requirements

a) Except as provided at subsection (c) ~~of this Section~~, every owner or operator of a marine terminal subject to ~~the requirements of~~ this Subpart ~~shall~~ must equip each terminal with a vapor collection and control system that:

1) Captures the vapors displaced during the loading event and reduces overall VOM emissions by at least 95% by weight through the use of either a vapor combustion system or a vapor recovery system;

2) Is maintained and operated so that it prevents visible liquid leaks, significant odors, and visible fumes in the liquid transfer and the vapor collection lines~~,~~ and appurtenances during loading; and

3) Has been certified as required by Coast Guard regulations ~~found~~ at 33 CFR 154.

b) ~~From~~ During the regulatory period of May 1 to September 15, ~~the regulatory control period,~~ every owner or operator of a marine terminal subject to ~~the requirements of~~ this Subpart ~~shall~~ must load gasoline or crude oil only into marine vessels that are:

1) Equipped with vapor collection equipment that has been certified as required by Coast Guard regulations ~~found~~ at 46 CFR 39;

2) Connected to the vapor collection system; and

3) Vapor-tight as described in ~~the following~~ subsections (b)(3)(A), (b)(3)(B), (b)(3)(C), or (b)(3)(D) ~~of this Section~~:

A) The owner or operator of the marine terminal ~~shall~~ must load each marine vessel with a vacuum assisted vapor collection system, instrumented in such a way that the pump(s) transferring gasoline or crude oil to the marine vessel will not operate unless the vapor collection system is properly connected and properly operating.

B) As an alternative to subsection (b)(3)(A) ~~of this Section~~, the owner or operator of the marine terminal ~~shall~~ must obtain documentation ~~as described in~~under Section 219.770(b) ~~of this Subpart~~ that the marine vessel has been vapor-tightness tested within either the preceding 12 months or the preceding 14 months, if the test is being conducted as part of the Coast Guard's reinspection of the vessel required under 46 CFR 31.10-17, using Method 21 of Part 60, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~, as described in Section 219.768(b) ~~of this Subpart~~.

C) If there is no documentation of a successful leak test conducted on the marine vessel in either the preceding 12 months or in the preceding 14 months, if the test is being conducted as part of the Coast Guard's reinspection of the vessel required under 46 CFR 31.10-17, the owner or operator of the marine terminal ~~shall~~ must require that a leak test of the marine vessel be conducted during the final 20 percent of loading of the marine vessel or ~~shall~~ must not load the vessel. The test ~~shall~~ must be conducted when the marine vessel is being loaded at the maximum liquid transfer rate for that transfer operation. The owner or operator of the marine terminal ~~shall~~ must require that the documentation ~~described in~~under Section 219.770(b) ~~of this Subpart~~ is completed ~~prior to~~before departure of the vessel.

D) If the marine vessel has failed its most recent vapor-tightness leak test at the marine terminal, before the marine vessel can be loaded, the owner or operator of the marine terminal ~~shall~~ must require that the owner or operator of the marine vessel provide documentation that the leaks detected during the previous vapor-tightness leak test have been repaired and that the marine vessel has been vapor-tightness tested since the leak(s) has been repaired ~~pursuant to~~under subsection (b)(3)(B) ~~of this Section~~.

c) As an alternative to the control requirements of subsections (a) and (b) ~~of this Section~~, an owner or operator of a marine terminal subject to the control requirements of this Subpart may comply by showing:

1) Operation of a vapor collection and control system for the loading of gasoline or crude oil from marine vessels in ~~accordance~~ compliance with

the regulations adopted by the USEPA ~~pursuant to~~under Sections 112(d) or 183(f) of the CAA;

2) Reduction of VOM emissions equivalent to the levels in Appendix E ~~of this Part~~ through a federally enforceable emission reduction plan; or

3) An alternate procedure ~~to those described that has been~~ approved by the Agency and ~~the~~ USEPA in a federally enforceable permit or as a SIP revision.

d) Nothing in this Subpart ~~shall supersede~~supersedes any U.S. Coast Guard regulation that is more stringent than ~~that contained in~~ this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.764 Compliance Certification

By May 1, 1996, or upon initial startup, or upon change in method of compliance, the owner or operator of a source subject to ~~the requirements of~~ this Subpart must certify compliance with ~~the requirements of~~ this Subpart by submitting to the Agency the following:

a) If complying with Sections 219.762(a) and (b), or (c)(1), or (c)(3) ~~of this Subpart~~:

1) The type of vapor collection and control system ~~utilized~~used;

2) The date the system was installed;

3) A demonstration that the vapor collection and control system achieves an overall efficiency of 95%;

4) A copy of the U.S. Coast Guard certification required under 33 CFR 154; and

5) The location (including the contact person's name, address, and telephone number) of the records required by Section 219.770 ~~of this Subpart~~.

b) If complying with Section 219.762(c)(2) ~~of this Subpart~~, a federally enforceable emission reduction plan.

c) If not loading during the 1996 regulatory control period or the 1996 and 1997 regulatory control periods, a statement that the source will not be loading gasoline or crude oil, the regulatory control period affected, and a date certain when the requirements of subsection (a) ~~above~~ will be met. Further, if the owner or operator is also required to comply with the control requirements for marine vessel loading adopted ~~pursuant to~~under Section 112(d) or Section 183(f) of the CAA, then the ~~above~~ statement of not loading may extend to subsequent

regulatory control periods until installment and operation of the control equipment is required under Section 112(d) or Section 183(f) of the CAA.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.766 Leaks

The owner or operator of a marine terminal ~~shall~~ must comply with ~~the requirements of~~ Section 219.445 ~~of this Part~~ with respect to all equipment associated with the vapor collection and control system required by Section 219.762(a) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.768 Testing and Monitoring

a) Compliance with Section 219.762(a)(2) ~~of this Subpart shall~~must be determined by visual inspection and by the leak detection methods ~~contained~~ in Section 219.105(g) ~~of this Part~~.

b) If the control device used to comply with Section 219.762(a)(1) ~~of this Subpart~~ is a flare, compliance ~~shall~~ must be determined by methods ~~described~~ in Section 219.429(c) ~~of this Part~~.

c) For all other control devices used to comply with Section 219.762(a)(1) ~~of this Subpart~~, compliance ~~shall~~ must be determined by methods ~~described~~ in Section 219.105(d) and (f) ~~of this Part~~.

d) Compliance with Section 219.762(b)(3) ~~of this Subpart shall~~must be determined by one of the methods ~~described~~ in this Section:

1) A marine vessel loaded in ~~accordance~~ compliance with Section 219.762(b)(3)(A) ~~of this Subpart~~ through the use of a vacuum assisted vapor collection system is assumed to be vapor-tight for the purposes of this Subpart.

2) A vapor-tightness test for marine vessels ~~shall~~ must be conducted to include the final 20 percent of loading of each product tank of the marine vessel, and it ~~shall~~ must be applied to any potential sources of vapor leaks on the vessel ~~pursuant to~~under Method 21 of 40 CFR 60, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. A reading of 10,000 ppmv or greater as methane ~~shall constitute~~constitutes a leak.

3) As an alternative to subsection (d)(2) ~~of this Section~~, an owner or operator of a marine terminal may use the vapor-tightness test ~~described~~ in 40 CFR 61.304(f), incorporated by reference at Section 219.112 ~~of this Part~~.

e) When in the opinion of the Agency or USEPA it is necessary to conduct testing to demonstrate compliance with or verify effectiveness of the vapor collection and control system required by Section 219.762(a), (c)(1), or (c)(3) ~~of this Subpart~~, the owner or operator of a marine terminal ~~shall,~~must at its own expense~~,~~ conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in subsections (a), (b), or (c) ~~of this Section~~, as applicable.

f) An owner or operator of a marine terminal planning to conduct a VOM emissions test to demonstrate compliance with Sections 219.762(a), (c)(1), or (c)(3) ~~of this Subpart shall~~must notify the Agency of that intent ~~not less than~~at least 30 days before the planned initiation of the tests so that the Agency may observe the test.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.770 Recordkeeping and Reporting

a) The owner or operator of sources complying with Sections 219.762(a) and (b), or (c)(1), or (c)(3) ~~of this Subpart shall~~must maintain records regarding the marine terminal~~,~~ and each time a marine vessel is loaded during the regulatory control period. The records ~~shall~~ must include ~~but are not limited to~~:

1) ~~The date(s)~~Each date and ~~the time(s)~~time at which the marine vessel was loaded from the marine terminal;

2) The name, type, identification number, and owner of the vessel loaded;

3) The type and amount of liquid loaded into the marine vessel;

4) Records of any leaks found, repair attempts, and the results of the required fugitive monitoring and maintenance program, including appropriate dates, test methods, instrument readings, repair results, and corrective action taken as required by Sections 219.762(a)(2) and 219.766 ~~of this Subpart~~;

5) A copy of the Coast Guard certification demonstrating that the marine terminal's vapor collection and control system has been certified as required by Coast Guard regulations ~~found~~ at 33 CFR 154; and

6) A copy of the Coast Guard certification demonstrating that the marine vessel has been inspected and certified as required by Coast Guard regulations ~~found~~ at 46 CFR 39. If a copy of the Coast Guard certificate is not available at the time of loading, then the date that the marine vessel was last inspected and the authorization that the marine vessel has functioning vapor control equipment must be recorded from the certificate. ~~Further, a~~A copy of the certificate must be obtained by the owner or operator of the marine terminal within 21 days after the loading event.

b) Owners or operators complying with Sections 219.762(b)(3)(B), (b)(3)(C), or (b)(3)(D) ~~shall additionally~~must also maintain the following records concerning the vapor-tightness of the marine vessel:

1) Test title;

2) Owner of the marine vessel tested;

3) The identification number of the marine vessel tested;

4) Testing location;

5) Tester name and signature;

6) Witnessing inspector, name, signature, and affiliation; and

7) Test results.

c) Owners or operators complying with ~~the requirements of~~ Section 219.762(c)(2) ~~of this Subpart shall~~must maintain records of daily product volumes loaded to demonstrate that the applicable emission reduction ~~specified~~ in Appendix E ~~of this Part~~ has been achieved.

d) Owners or operators certifying compliance under Section 219.764(c) ~~shall~~ must maintain the records ~~specified~~ in subsections (a)(1), (a)(2), and (a)(3) ~~above~~.

e) All records required by subsections (a), (b), (c), and (d) ~~of this Section shall~~must be maintained for at least three years and ~~shall~~ must be made available to the Agency upon request.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART HH: MOTOR VEHICLE REFINISHING

Section 219.780 Emission Limitations

a) Except as provided in Section 219.782 ~~of this Subpart~~, ~~no~~ an owner or operator of a motor vehicle refinishing operation ~~shall~~ must not coat motor vehicles, mobile equipment, or their parts and components, unless all coatings, except touch-up coatings, never exceed the VOM content limitations in this Section, expressed as units of VOM per volume of coating applied at each coating applicator, minus water and any compounds that are specifically exempted from the definition of VOM. The VOM content limitations are as follows:

	kg/l	(lb/gal)

1)	Pretreatment wash primer	0.78	(6.5)
2)	Precoat	0.66	(5.5)
3)	Primer/primer surfacer coating	0.58	(4.8)
4)	Primer sealer	0.55	(4.6)
5)	Topcoat system or basecoat/clearcoat	0.60	(5.0)
6)	Three or four stage topcoat system	0.63	(5.2)
7)	Specialty coatings	0.84	(7.0)
8)	Anti-glare/safety coating	0.84	(7.0)

b) All coating ~~shall~~ must be used according to manufacturer's specifications. If a coating requires the addition of a reducer, hardener, or other additive, in some combination, this addition must not cause the coating, as applied, to exceed the applicable VOM content limitation.

c) Specialty coatings ~~shall~~ must represent no more than 5 percent, by volume, of all coatings applied at a source on a monthly basis.

d) The following equations ~~shall~~ must be used to calculate the VOM content of topcoat systems:

1) The VOM content of basecoat/clearcoat systems ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following equation:

VOM $T_{bc/cc} = (VOM_{bc} + 2\ VOM_{cc})/3$

Where:

VOM $T_{bc/cc}$ = The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), in the basecoat (bc) and clearcoat (cc) system;

VOM_{bc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given basecoat; and

VOM_{cc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

2) The VOM content for a ~~three stage~~three-stage coating system ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following formula:

$VOM\ T_{ms} = (VOM_{bc} + VOM_{mc} + 2\ VOM_{cc})/4$

Where:

$VOM\ T_{ms}$ = The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), in the basecoat, midcoat, and clearcoat system;

VOM_{bc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given basecoat;

VOM_{mc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given midcoat; and

VOM_{cc} = The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

3) The VOM content for a ~~four stage~~four-stage coating system ~~shall~~ must be calculated in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), according to the following formula:

$VOM\ T_{ms} = (VOM_{bc} + VOM_{mc1} + VOM_{mc2} + 2\ VOM_{cc})/5$

Where:

$VOM\ T_{ms}$ =	The weighted average of the VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), in the basecoat, midcoats, and clearcoat system;
VOM_{bc} =	The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given basecoat;
VOM_{mc1} =	The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of the first midcoat;
VOM_{mc2} =	The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of the second midcoat; and
VOM_{cc} =	The VOM content, as applied, in units of kg VOM/l (lbs VOM/gal) of coating, (minus water and any compounds which are specifically exempted from the definition of VOM), of any given clearcoat.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.782 Alternative Control Requirements

As an alternative to complying with the VOM content limitations in Section 219.780 ~~of this Subpart~~, the owner or operator of a motor vehicle refinishing operation may operate control equipment that reduces VOM emissions at the source by at least 90 percent ~~as provided in either~~under subsection (a) or (b) ~~of this Section~~.

a) An owner or operator may operate an afterburner or carbon adsorber; or

b) An owner or operator may use an equivalent alternative control plan, other than an afterburner or carbon adsorber, if approved by the Agency and USEPA through federally enforceable permit conditions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.784 Equipment Specifications

Every owner or operator of a motor vehicle refinishing operation, unless the source uses less than 20 gallons of coating per calendar year from all motor vehicle refinishing operations combined, ~~shall~~must:

a) Coat motor vehicles, mobile equipment, or their parts and components using one of the following coating applicators:

1) Electrostatic spray equipment calibrated, operated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications;

2) High Volume Low Pressure (HVLP) spray equipment calibrated, operated, and maintained in ~~accordance~~ compliance with the manufacturer's specifications; or

3) An equivalent coating applicator technology that is demonstrated by the manufacturer to achieve transfer efficiency comparable to the HVLP spray equipment technology ~~listed~~ in subsection (a)(2) ~~of this Section~~ for a comparable operation, and for which written approval has been obtained from USEPA. The owner or operator must maintain documentation of USEPA's approval at the motor vehicle refinishing operation; and

b) Clean all coating applicators with a device that:

1) Recirculates solvent during the cleaning process;

2) Collects spent solvent so it is available for disposal or recycling; and

3) Minimizes evaporation of solvents during cleaning, rinsing, draining, and storage.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.786 Surface Preparation Materials

Every owner or operator of a motor vehicle refinishing operation ~~only shall~~must use only surface preparation materials that never exceed the following VOM content limitations for the specified substrate:

		kg/l	(lb/gal)
a)	Plastic parts	0.78	(6.5)

b) Other substrates 0.17 (1.4)

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.787 Work Practices

a) Every owner or operator of a motor vehicle refinishing operation ~~shall~~ must ensure that fresh and spent solvent, cloth or paper used to apply solvents for surface preparation or cleanup, waste paint, and sludge are stored in closed containers.

b) Every owner or operator of a motor vehicle refinishing operation that is exempt from the equipment specifications in Section 219.784 ~~of this Subpart~~ because it uses less than 20 gallons of coating per year ~~shall~~ must direct solvent used to clean coating applicator equipment and paint lines into a container for proper disposal or recycling.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.788 Testing

a) Upon request by the Agency, the owner or operator of a motor vehicle refinishing operation ~~shall,~~mst at its own expense~~,~~ conduct tests to demonstrate compliance with Sections 219.780, 219.782 or 219.786 ~~of this Subpart~~, in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105 ~~of this Part~~ and ~~shall~~must:

1) Notify the Agency 30 days ~~prior to~~ beforeconducting ~~such~~ the tests; and

2) Submit all test results to the Agency within 45 days after conducting the ~~requisite~~ tests.

b) For purposes of this Section, surface preparation materials ~~shall~~ must be treated as coatings.

c) Nothing in this Section ~~shall limit~~limits the authority of USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing~~,~~ or ~~shall affect~~affects the authority of USEPA under Section 114 of the Clean Air Act (42 U.S.C. 7414 (1990)).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.789 Monitoring and Recordkeeping for Control Devices

a) Every owner or operator of a motor vehicle refinishing operation that complies with this Subpart ~~pursuant to~~under Section 219.782 ~~of this Subpart shall~~must:

1) Install and operate equipment to continuously monitor each control device as specified in Section 219.105(d)(2)(A) ~~of this Part~~;

2) Keep records of parameters for control devices as monitored ~~pursuant to~~under subsection (a)(1) ~~of this Section~~;

3) Keep logs of operating time of the control device and monitoring equipment;

4) Keep logs of maintenance of the control device and monitoring equipment; and

5) Maintain all records required in this Section for the most recent consecutive ~~three year~~three-year period and make all such records available to the Agency immediately upon request.

b) An owner or operator may monitor with an alternative method or monitor other parameters than specified in subsection (a)(1) ~~of this Section~~, if approved by the Agency and USEPA through federally enforceable permit conditions.

SUBPART II: FIBERGLASS BOAT MANUFACTURING MATERIALS

Section 219.890 Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after May 1, 2012, ~~the requirements of~~ this Subpart ~~shall apply~~applies to the owners or operators of sources that manufacture hulls or decks of boats from fiberglass~~,~~ or that build molds to make hulls or decks of boats from fiberglass~~,~~ and that emit 6.8 kg/day (15 lbs/day) or more of VOM, calculated in ~~accordance~~ compliance with Section 219.894(a)(1)(B), from open molding resin and gel coat operations, resin and gel coat mixing operations, and resin and gel coat application equipment cleaning operations~~,~~ in the absence of air pollution control equipment. If a source is subject to this Subpart based upon ~~such~~ these criteria, ~~the limitations of~~ this Subpart ~~shall apply~~applies to the manufacture of all fiberglass boat parts at the source.

b) Notwithstanding subsection (a) ~~of this Section~~, ~~the requirements of~~ this Subpart ~~shall~~ does not apply to the following:

1) Surface coatings applied to fiberglass boats;

2) Industrial adhesives used in the assembly of fiberglass boats. Polyester resin putties used to assemble fiberglass parts ~~shall~~ must not be considered industrial adhesives for purposes of this exclusion;

3) Closed molding operations.

c) If a source is or becomes subject to one or more of the limitations in this Subpart, the source is always subject to the applicable provisions of this Subpart.

d) The owner or operator of a source exempt from the limitations of this Subpart because of the criteria in this Section is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 219.894(a) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.891 Emission Limitations and Control Requirements

a) Except as provided in subsection (f) ~~of this Section~~, ~~no~~ an owner or operator of a source subject to the requirements of this Subpart ~~shall~~ must not use a subject resin or gel coat at the source unless the resin and gel coat comply with subsection (b)(1) or (b)(2), (c), or (d) ~~of this Section~~, as well as with subsections (e), (g), and (h) ~~of this Section~~. For sources complying ~~pursuant to~~under subsection (b) or (c) ~~of this Section~~, if the non-monomer VOM content of a resin or gel coat exceeds 5 percent, by weight, the excess non-monomer VOM ~~shall~~ must be added to the monomer VOM content of the resin or gel coat. The excess non-monomer VOM ~~shall~~ must be calculated in ~~accordance~~ compliance with the following equation:

$$\text{Excess Non-Monomer VOM} = \text{Non-monomer VOM Content} - 5 \text{ percent, by weight}$$

b) VOM Content Limitations

1) Except as provided in subsection (e) ~~of this Section~~, the monomer VOM content of a subject resin or gel coat ~~shall~~ must not exceed the following limitations:

		Weighted average monomer VOM content (weight percent)
A)	Production resin	
i)	Atomized spray	28
ii)	Non-atomized	35
B)	Pigmented gel coat	33
C)	Clear gel coat	48

D)	Tooling resin		
	i)	Atomized	30
	ii)	Non-atomized	39
E)	Tooling gel coat		40

2) Except as provided in subsection (e) ~~of this Section~~, the weighted average monomer VOM content of a subject resin or gel coat ~~shall~~ must not exceed the applicable limitation ~~set forth~~ in subsection (b)(1) ~~of this Section~~ on a 12-month rolling average basis. Equation 1 ~~shall~~ must be used to determine the weighted average monomer VOM content for resin and gel coat materials.

Equation 1:

$$\text{Weighted Average Monomer VOM Content} = \frac{\sum_{i=1}^{n} M_i VOM_i}{\sum_{i=1}^{n} M_i}$$

where:

M_i = Mass of open molding resin or gel coat (i) used in the past 12 months in an operation, in megagrams;

VOM_i = Monomer VOM content, by weight percent, of open molding resin or gel coat (i) used in the past 12 months in an operation;

n = Number of different open molding resins or gel coats used in the past 12 months in an operation.

c) Emissions Averaging Alternative. The owner or operator of a source subject to ~~the requirements of~~ this Subpart may elect to include some or all of the subject resin and gel coat operations at the source in the emissions averaging alternative. Resin and gel coat operations ~~utilizing~~ using the emissions averaging alternative ~~shall~~ must comply with a source-specific monomer VOM mass emission limit on a 12-month rolling average basis, calculated at the end of each calendar month. All subject resin and gel coat operations that do not ~~utilize~~ use the emissions averaging alternative ~~shall~~ must comply with ~~the requirements in~~ subsection (b) or (d) ~~of this Section, as well as with~~and all other applicable requirements in this Section.

1) The owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 2 to determine the source-specific monomer VOM mass emission limit for resin and gel coats included in the emissions average:

Equation 2:

$$\text{Monomer VOM Limit} = 46(M_R) + 159(M_{PG}) + 291(M_{CG}) + 54(M_{TR}) + 214(M_{TG})$$

where:

Monomer VOM Limit = Total allowable monomer VOM that can be emitted from the open molding operations included in the average, expressed in kilograms per 12-month period;

M_R = Mass of production resin used in the past 12 months, excluding any materials that are exempt, expressed in megagrams (Mg);

M_{PG} = Mass of pigmented gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{CG} = Mass of clear gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{TR} = Mass of tooling resin used in the past 12 months, excluding any materials that are exempt, expressed in Mg;

M_{TG} = Mass of tooling gel coat used in the past 12 months, excluding any materials that are exempt, expressed in Mg.

The numerical coefficients associated with each term on the right hand side of Equation 2 are the allowable monomer VOM emission rates for that particular material in units of kg VOM/Mg of material used.

2) At the end of the first 12-month averaging period, and at the end of each subsequent month, the owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 3 to calculate the monomer VOM emissions from the resin and gel coat operations included in the emissions average. The monomer VOM emissions calculated using Equation 3 ~~shall~~ mustl not exceed the monomer VOM limit calculated using Equation 2.

Equation 3:

$$\text{Monomer VOM Emissions} = (PV_R)(M_R)+(PV_{PG})(M_{PG})+(PV_{CG})(M_{CG})+(PV_{TR})(M_{TR})+(PV_{TG})(M_{TG})$$

where:

Monomer VOM Emissions = Monomer VOM emissions calculated using the monomer VOM emission equations for each operation included in the average, expressed in kg;

PV_R = Weighted-average monomer VOM emission rate for production resin used in the past 12 months, expressed in kg/Mg, calculated in ~~accordance~~ compliance with Equation 4 in subsection (c)(3);

M_R = Mass of production resin used in the past 12 months, expressed in Mg;

PV_{PG} = Weighted-average monomer VOM emission rate for pigmented gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{PG} = Mass of pigmented gel coat used in the past 12 months, expressed in Mg;

PV_{CG} = Weighted-average monomer VOM emission rate for clear gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{CG} = Mass of clear gel coat used in the past 12 months, expressed in Mg;

PV_{TR} = Weighted-average monomer VOM emission rate for tooling resin used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{TR} = Mass of tooling resin used in the past 12 months, expressed in Mg;

PV_{TG} = Weighted-average monomer VOM emission rate for tooling gel coat used in the past 12 months, expressed in kg/Mg, calculated ~~pursuant to~~under Equation 4;

M_{TG} = Mass of tooling gel coat used in the past 12 months, expressed in Mg.

3) For purposes of Equation 3, the owner or operator of a source subject to this subsection (c) ~~shall~~ must use Equation 4 ~~below~~ to calculate the weighted-average monomer VOM emission rate for the previous 12 months for each resin and gel coat operation included in the emissions average, except as provided in subsection (e)~~ of this Section~~.

Equation 4:

$$PV_{OP} = \frac{\sum_{i=1}^{n} M_i PV_i}{\sum_{i=1}^{n} M_i}$$

where:

PV_{OP} = Weighted-average monomer VOM emission rate for each open molding operation (PV_R, PV_{PG}, PV_{CG}, PV_{TR}, and PV_{TG}) included in the average, expressed in kg of monomer VOM per Mg of material applied;

M_i = Mass of resin or gel coat (i) used within an operation in the past 12 months, expressed in Mg;

n = Number of different open molding resins and gel coats used within an operation in the past 12 months;

PV_i = The monomer VOM emission rate for resin or gel coat (i) used within an operation in the past 12 months, expressed in kg of monomer VOM per Mg of material applied. The monomer VOM emission rate formulas in subsection (c)(4) ~~of this Section shall~~must be used to compute PV_i. If a source includes filled resins in the emissions average, the source ~~shall~~ must use the value of PV_F, calculated using Equation 5 in subsection (e)(3)~~ of this Section~~, as the value of PV_i for those resins;

i = Subscript denoting a specific open molding resin or gel coat applied.

4) For purposes of Equation 4 and subsection (e)(3)~~ of this Section~~, the following monomer VOM emission rate formulas ~~shall~~ must apply. ~~Such~~ These formulas calculate monomer VOM emission rates in terms of kg of monomer VOM per Mg of resin or gel coat applied. "VOM%" means the

monomer VOM content as supplied, expressed as a weight percent value between 0 and 100 percent:

A) Production resin, tooling resin:

i) Atomized: 0.014 x (Resin VOM%)$^{2.425}$

ii) Atomized, plus vacuum bagging with roll-out: 0.01185 x (Resin VOM%)$^{2.425}$

iii) Atomized, plus vacuum bagging without roll-out: 0.00945 x (Resin VOM%)$^{2.425}$

iv) Nonatomized: 0.014 x (Resin VOM%)$^{2.275}$

v) Nonatomized, plus vacuum bagging with roll-out: 0.0110 x (Resin VOM%)$^{2.275}$

vi) Nonatomized, plus vacuum bagging without roll-out: 0.0076 x (Resin VOM%)$^{2.275}$

B) Pigmented gel coat, clear gel coat, tooling gel coat: 0.445 x (Gel Coat VOM%)$^{1.675}$

d) Capture System and Control Device Requirements. ~~No~~ An owner or operator of a source subject to ~~the requirements of~~ this Subpart that is utilizing a capture system and control device for a subject resin or gel coat operation ~~shall~~ must not conduct that operation unless the following requirements are satisfied:

1) An afterburner or carbon adsorber is installed and operated that meets the limitations ~~set forth~~ in this subsection (d). The owner or operator may use an emissions control system other than an afterburner or carbon adsorber if that device complies with all limitations in this subsection (d~~),~~); the owner or operator submits a plan to the Agency detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device~~,~~; and the plan is approved by the Agency and approved by USEPA as a SIP revision;

2) The VOM emissions at the outlet of the control device meet an emissions limitation determined using Equation 2 in subsection (c)(1) ~~of this Section~~. In Equation 2, however, instead of using the mass of each material used over the past 12 months to determine the emission limitation, the owner or operator ~~shall~~ must use the mass of each material used during the applicable control device performance test;

3) The owner or operator complies with all testing and monitoring requirements ~~set forth~~ in Section 219.892 ~~of this Subpart~~.

e) Filled Resins. For all filled production and tooling resins, the owner or operator of a source subject to this Subpart ~~shall~~ must adjust the monomer VOM emission rates determined ~~pursuant to~~under subsections (b) and (c) ~~of this Section~~ using Equation 5 in subsection (e)(3). If complying ~~pursuant to~~under subsection (b), the emission rate determined using Equation 5 ~~shall~~ must not exceed the limitations ~~set forth~~ in subsections (e)(1) and (e)(2) ~~of this Section~~. If complying ~~pursuant to~~under subsection (c), the value of PV_F, calculated using Equation 5~~, shall~~ must be used as the value of PV_i in Equation 4~~, as set forth~~ in subsection (c)(3) ~~of this Section~~. If the non-monomer VOM content of a filled resin exceeds 5 percent, by weight, based on the unfilled resin, the excess non-monomer VOM ~~shall~~ must be added to the monomer VOM content in ~~accordance~~ compliance with the equation ~~set forth~~ in subsection (a).

1) Tooling Resin: 54 kg (119.1 lbs) monomer VOM/Mg filled resin applied;

2) Production Resin: 46 kg (101.4 lbs) monomer VOM/Mg filled resin applied;

3) Equation 5:

$$PV_F = PV_U \times \frac{(100 - \%Filler)}{100}$$

where:

PV_F = The as-applied monomer VOM emission rate for the filled production resin or tooling resin, expressed in kg monomer VOM per Mg of filled material;

PV_U = The monomer VOM emission rate for the unfilled resin, before filler is added, expressed in kg monomer VOM per Mg, as calculated using the formulas in Section 219.891(c)(4) ~~of this Subpart~~;

% Filler = The weight-percent of filler in the as-applied filled resin system.

f) The limitations in subsections (a) through (e) ~~of this Section shall~~do not apply to the following materials. These materials ~~shall~~ must instead comply with the applicable requirements ~~set forth~~ in subsections (f)(1) through (f)(3).

1) Production resins, including skin coat resins, that must meet specifications for use in military vessels or must be approved by the United States Coast

Guard for use in the construction of lifeboats, rescue boats, and other life-saving appliances approved under 46 CFR Subchapter Q, incorporated by reference in Section 219.112 ~~of this Part~~, or for use in the construction of small passenger vessels regulated by 40 CFR Subchapter T, incorporated by reference in Section 219.112 ~~of this Part~~. The owner or operator of a source subject to this Subpart ~~shall~~ must apply all such resins with nonatomizing resin application equipment;

2) Production and tooling resins, and pigmented, clear, and tooling gel coats used for part or mold repair and touch ups. These materials ~~shall~~ must not exceed 1 percent, by weight, of all resins and gel coats used at a subject source on a 12-month rolling average basis;

3) Pure, 100 percent vinylester resins used for skin coats. The owner or operator of a source subject to this Subpart ~~shall~~ must apply these resins with non-atomizing resin application equipment, and the total amount of the resins ~~shall~~ must not exceed 5 percent, by weight, of all resins used at the subject source on a 12-month rolling-average basis.

g) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not use VOM-containing cleaning solutions to remove cured resins and gel coats from fiberglass boat manufacturing application equipment. Additionally, ~~no~~ an owner or operator ~~shall~~ must not use VOM-containing cleaning solutions for routine cleaning of application equipment unless:

1) The VOM content of the cleaning solution is less than or equal to 5 percent, by weight; or

2) The composite vapor pressure of the cleaning solution is less than or equal to 0.50 mmHg at ~~68°F~~68 ºF.

h) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not use resin or gel coat mixing containers with a capacity equal to or greater than 208 liters (55 gallons), including those used for on-site mixing of putties and polyputties, unless ~~such~~ the containers have covers with no visible gaps in place at all times, except when material is being manually added to or removed from a container or when mixing or pumping equipment is being placed in or removed from a container.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.892 Testing and Monitoring Requirements

a) Testing to demonstrate compliance with ~~the requirements of~~ Section 219.891 ~~of this Subpart shall~~must be conducted by the owner or operator by May 1, 2012~~. Thereafter~~, after which testing ~~shall~~ must be conducted within 90 days after a

request by the Agency, or as otherwise specified in this Subpart. The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting the testing to allow the Agency to be present during testing.

b) Testing to demonstrate compliance with the monomer VOM content limitations for resin and gel coat materials in Section 219.891(b) ~~of this Subpart shall~~must be conducted upon request of the Agency, or as otherwise specified in this Subpart, in ~~accordance~~ compliance with SCAQMD 312-91, incorporated by reference in Section 219.112 ~~of this Part~~.

c) The owner or operator of a source complying with this Subpart ~~pursuant to~~under Section 219.891(d) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, and upon start-up of a new control device, conduct an initial performance test of the control device in ~~accordance~~ compliance with this subsection (c) that demonstrates compliance with the emission limitation determined ~~pursuant to~~under Section 219.891(d).

2) ~~Subsequent to~~After the initial performance test ~~described in~~under subsection (c)(1) ~~of this Section~~, conduct at least one performance test per calendar year. Performance tests used to demonstrate compliance with Section 219.891(d) ~~shall~~ must be conducted at least six months apart, unless the performance test is being conducted ~~following~~ after an exceedance of operating parameters ~~as described in~~under subsection (c)(3) of this Section, or ~~per a request~~when requested by the Agency.

3) Monitor and record relevant operating parameters, including the control efficiency of the control device and the amount of materials used in the fiberglass boat manufacturing process, during each control device performance test used to demonstrate compliance with Section 219.891(d). The owner or operator ~~shall~~ must continue to operate the fiberglass boat manufacturing process within the parameters until another performance test is conducted that demonstrates compliance with Section 219.891(d). The owner or operator ~~shall~~ must monitor the parameters at all times when the control device is in operation. If the fiberglass boat manufacturing process exceeds any operating parameter by more than 10 percent, the owner or operator ~~shall~~ must conduct additional performance testing in ~~accordance~~ compliance with this Section within 10 operating days after the exceedance;

4) The methods and procedures of Section 219.105(d) and (f) ~~shall~~ must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 219.891(d) ~~of this Subpart~~, as follows:

A) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. The sampling sites for determining efficiency in reducing VOM from the dryer exhaust ~~shall~~ must be located between the dryer exhaust and the control device inlet, and between the outlet of the control device and the exhaust to the atmosphere;

B) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~;

C) To determine the VOM concentration of the exhaust stream entering and exiting the control device, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used except under the following circumstances, in which case Method 25A must be used:

i) The allowable outlet concentration of VOM from the control device is less than 50 ppmv, as carbon;

ii) The VOM concentration at the inlet of the control device and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon; and

iii) Due to the high efficiency of the control device, the anticipated VOM concentration at the control device exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest again using Method 25.

D) Notwithstanding the criteria or requirements in Method 25, which specifies a minimum probe temperature of ~~129°C (265°F)~~129 ºC (265 ºF), the probe must be heated to at least the gas stream

temperature of the dryer exhaust, typically close to ~~176.7°C (350°F~~176.7 ºC (350 ºF)); and

E) During testing, the fiberglass boat manufacturing operation ~~shall~~ must be operated at representative operating conditions and flow rates.

5) If an afterburner is used to demonstrate compliance, the owner or operator ~~shall~~must:

A) Install, calibrate, operate, and maintain temperature monitoring devices with an accuracy of ~~3°C~~3 ºC or ~~5°F~~5 ºF on the emissions control system in ~~accordance~~ compliance with Section 219.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliancewith the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the emissions control system is operating; and

B) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

6) If a carbon adsorber is used to demonstrate compliance, the owner or operator ~~shall~~ must use Agency and USEPA approved continuous monitoring equipment that is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use. The continuous monitoring equipment ~~shall~~ must monitor the VOM concentration of each carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.

7) If an emissions control system other than an afterburner or carbon adsorber is used to demonstrate compliance, the owner or operator ~~shall~~ must install, maintain, calibrate, and operate the monitoring equipment ~~as set forth in~~in compliance with the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 219.891(d).

d) Testing to demonstrate compliance with the VOM content limitations for cleaning solutions in Section 219.891(g) ~~of this Subpart~~, and with the non-monomer VOM content limitations for resin and gel coat materials in Section 219.891(a) ~~of this Subpart~~, ~~shall~~ must be conducted upon request of the Agency, or as otherwise specified in this Subpart, as follows:

1) The applicable test methods and procedures ~~specified~~ in Section 219.105(a) ~~of this Part shall~~must be used; ~~provided,~~ however, Method 24,

incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to demonstrate compliance; or

2) For cleaning solvents, the manufacturer's specifications for VOM content may be used if the manufacturer's specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in Section 219.105(a) ~~of this Part~~; ~~provided,~~ however, Method 24 ~~shall~~ must be used to determine compliance. In the event of any inconsistency between a Method 24 test and the manufacturer's specifications, the Method 24 test ~~shall~~ must govern.

e) The owner or operator of a source subject to this Subpart and relying on the VOM content of the cleaning solution to comply with Section 219.891(g)(1) ~~of this Subpart shall~~must:

1) For cleaning solutions that are prepared at the source with equipment that automatically mixes cleaning solvent and water (or other non-VOM):

A) Install, operate, maintain, and calibrate the automatic feed equipment in ~~accordance~~ compliance with manufacturer's specifications to regulate the volume of each of the cleaning solvent and water (or other non-VOM), as mixed; and

B) Pre-set the automatic feed equipment so that the consumption rates of the cleaning solvent and water (or other non-VOM), as applied, comply with Section 219.891(g)(1);

2) For cleaning solutions that are not prepared at the source with automatic feed equipment, keep records of the usage of cleaning solvent and water (or other non-VOM) ~~as set forth in~~under Section 219.894(g) ~~of this Subpart~~.

f) Testing to demonstrate compliance with the VOM composite partial vapor pressure limitation for cleaning solvents ~~set forth~~ in Section 219.891(g) ~~of this Subpart shall~~must be conducted in ~~accordance~~ compliance with the applicable methods and procedures ~~set forth~~ in Section 219.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.894 Recordkeeping and Reporting Requirements

a) The owner or operator of a source exempt from ~~the limitations of~~ this Subpart because of the criteria in Section 219.890(a) ~~of this Subpart shall~~must:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the following:

A) A declaration that the source is exempt from the requirements in this Subpart because of the criteria in Section 219.890(a);

B) Calculations that demonstrate that combined emissions of VOM from all subject fiberglass boat manufacturing operations (including solvents used for cleanup operations associated with the fiberglass boat manufacturing operation) at the source never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment. To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from fiberglass boat manufacturing operations at the source (including solvents used for cleanup operations associated with the fiberglass boat manufacturing operations) and divide the amount by the number of days during that calendar month that the fiberglass boat manufacturing operations were in operation;

2) Collect and record the following information and provide copies of the records to the Agency upon request:

A) The total pounds of all resins and gel coats used per calendar month;

B) The total gallons of all cleanup materials used per calendar month;

C) The VOM content of each resin, gel coat, and cleanup material used per calendar month;

D) The total VOM emissions, in pounds, for all resins, gel coats, and cleanup materials employed per calendar month, before the application of control systems and devices.

3) Notify the Agency of any record that shows that the combined emissions of VOM from subject fiberglass boat manufacturing operations at the source, including related cleaning activities, ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs, and provide copies of the record upon request by the Agency.

b) All sources subject to ~~the requirements of~~ this Subpart ~~shall~~must:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, and upon start-up of a new fiberglass boat manufacturing operation at the source, submit a certification to the Agency that includes:

A) Identification of each subject fiberglass boat manufacturing operation as of the date of certification;

B) A declaration that all subject fiberglass boat manufacturing operations, including related cleaning operations, are in compliance with ~~the requirements of~~ this Subpart;

C) The limitation with which each subject fiberglass boat manufacturing operation will comply (i.e., the VOM content limitation, the emissions averaging alternative, or the emissions control system alternative);

D) Initial documentation that each subject fiberglass boat manufacturing operation will comply with the applicable limitation, including copies of manufacturer's specifications, test results (if any), formulation data, and calculations;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

F) A description of the practices and procedures that the source will follow to ensure compliance with ~~the limitations in~~ Section 219.891(h) ~~of this Subpart~~;

G) A description of each fiberglass boat manufacturing operation exempt ~~pursuant to~~under Section 219.890(b) ~~of this Subpart~~, if any;

H) A description of materials subject to Section 219.891(f) ~~of this Subpart~~, if any, used in each fiberglass boat manufacturing operation;

2) At least 30 calendar days before changing the method of compliance ~~in accordance with~~under Section 219.891(b), (c), and (d), notify the Agency in writing of the change. The notification ~~shall~~ must include a demonstration of compliance with the newly applicable subsection;

3) Notify the Agency in writing of any violation of ~~the requirements of~~ this Subpart within 30 days ~~following the occurrence of~~after the violation and provide records documenting the violation upon request by the Agency;

4) Retain all records required by this Section for at least three years and make those records available to the Agency upon request.

c) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the limitations of~~ Section 219.891 ~~of this Subpart~~ and complying by means of Section 219.891(b) ~~shall~~ must comply with the following.

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each subject resin and gel coat as applied each day by each subject fiberglass boat manufacturing operation;

2) Collect and record the following information each day for each fiberglass boat manufacturing operation complying with Section 219.891(b):

A) The name, identification number, and VOM content of each subject resin and gel coat as applied each day by each fiberglass boat manufacturing operation; and

B) If complying with Section 219.891(b)(2), the mass of each open molding resin or gel coat as applied each month by each subject fiberglass boat manufacturing operation and the weighted average VOM content of all subject resins and gel coats as applied by each subject fiberglass boat manufacturing operation.

d) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the requirements of~~ Section 219.891 ~~of this Subpart~~ and complying by means of Section 219.891(c) ~~shall~~must:

1) On and after May 1, 2012, collect and record the following information each month:

A) The amount of production resin, pigmented gel coat, clear gel coat, tooling resin, and tooling gel coat used in each subject fiberglass boat manufacturing operation;

B) The VOM content of each production resin, pigmented gel coat, clear gel coat, tooling resin, and tooling gel coat used in each subject fiberglass boat manufacturing operation;

C) Total monthly VOM emissions for all subject fiberglass boat manufacturing operations;

2) At the end of the first 12-month averaging period, and at the end of each subsequent month, collect and record the following information:

A) The monomer VOM mass emission limit for all subject fiberglass boat manufacturing operations for the applicable 12-month averaging period, with supporting calculations;

B) The total actual emissions of VOM from all subject fiberglass boat manufacturing operations for the applicable 12-month averaging period.

e) The owner or operator of a fiberglass boat manufacturing operation subject to ~~the requirements~~ of Section 219.891 ~~of this Subpart~~ and complying by means of Section 219.891(d) ~~shall~~must:

1) By May 1, 2012, or upon initial start-up, whichever is later, and upon start-up of a new control device, submit a certification to the Agency that includes the following:

A) The type of control device used to comply with ~~the requirements of~~ Section 219.891(d);

B) The results of all tests and calculations necessary to demonstrate compliance with ~~the requirements of~~ Section 219.891(d); and

C) A declaration that the monitoring equipment required under Section 219.892 ~~of this Subpart~~ has been properly installed and calibrated according to manufacturer's specifications;

2) Within 90 days after conducting testing ~~pursuant to~~under Section 219.892, submit to the Agency a copy of all test results, as well as a certification that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the fiberglass boat manufacturing operation is in compliance with Section 219.891(d) have been properly performed;

B) A statement whether the fiberglass boat manufacturing operations are or are not in compliance with Section 219.891(d);

C) The emissions limitation applicable during the control device performance test, with supporting calculations;

D) The operating parameters of the fiberglass boat manufacturing process during testing, as monitored in ~~accordance~~ compliance with Section 219.892;

3) Collect and record daily the following information for each fiberglass boat manufacturing operation subject to ~~the requirements of~~ Section 219.891(d), and submit that information to the Agency upon request:

A) Afterburner or other approved control device monitoring data in accordance with Section 219.892 ~~of this Subpart~~;

B) A log of operating time for the control device and monitoring equipment;

C) A maintenance log for the control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages;

D) Information to substantiate that the fiberglass boat manufacturing operation is operating in compliance with the parameters determined ~~pursuant to~~under Section 219.892.

f) The owner or operator of a source subject to ~~the requirements in~~ Section 219.891(f) ~~of this Subpart shall~~must collect and record the following information for each fiberglass boat manufacturing operation:

1) The name and identification number of each material subject to Section 219.891(f) as applied each day by each subject fiberglass boat manufacturing operation;

2) If subject to Section 219.891(f)(2), the amount of production and tooling resins, and pigmented, clear, and tooling gel coats used for part or mold repair and touch-ups, used each month at the subject source, and the total amount of all resins and gel coats used each month at the subject source;

3) If subject to Section 219.891(f)(3), the amount of pure, 100 percent vinylester resins used for skin coats each month at the subject source, and the total amount of all resins used each month at the subject source.

g) The owner or operator of a source subject to ~~the requirements of~~ Section 219.891 ~~of this Subpart shall~~must collect and record the following information for each cleaning solution used in each fiberglass boat manufacturing operation:

1) For each cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.891(g) ~~of this Subpart~~ and that is prepared at the source with automatic equipment:

A) The name and identification of each cleaning solution;

B) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.892(d) ~~of this Subpart~~;

C) Each change to the setting of the automatic equipment, with date, time, description of changes in the cleaning solution constituents (e.g., cleaning solvents), and a description of changes to the proportion of cleaning solvent and water (or other non-VOM);

D) The proportion of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution;

E) The VOM content of the as-used cleaning solution, with supporting calculations; and

F) A calibration log for the automatic equipment, detailing periodic checks;

2) For each batch of cleaning solution for which the owner or operator relies on the VOM content to demonstrate compliance with Section 219.891(g), and that is not prepared at the source with automatic equipment:

A) The name and identification of each cleaning solution;

B) Date and time of preparation, and each subsequent modification, of the batch;

C) The VOM content of each cleaning solvent in the cleaning solution, as determined in ~~accordance~~ compliance with Section 219.892(d);

D) The total amount of each cleaning solvent and water (or other non-VOM) used to prepare the as-used cleaning solution; and

E) The VOM content of the as-used cleaning solution, with supporting calculations;

3) For each batch of cleaning solution for which the owner or operator relies on the vapor pressure of the cleaning solution to demonstrate compliance with Section 219.891(g):

A) The name and identification of each cleaning solution;

B) Date and time of preparation, and each subsequent modification, of the batch;

C) The molecular weight, density, and VOM composite partial vapor pressure of each cleaning solvent, as determined in ~~accordance~~ compliance with Section 219.892(f) ~~of this Subpart~~;

D) The total amount of each cleaning solvent, including water, used to prepare the as-used cleaning solution; and

E) The VOM composite partial vapor pressure of each as-used cleaning solution, as determined in ~~accordance~~ compliance with Section 219.110 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART JJ: MISCELLANEOUS INDUSTRIAL ADHESIVES

Section 219.900 Applicability

a) Except as provided in subsection (b) ~~of this Section~~, on and after May 1, 2012, ~~the requirements of~~ this Subpart ~~shall apply~~applies to miscellaneous industrial adhesive application operations at sources where the total actual VOM emissions from all such operations, including related cleaning activities, equal or exceed 6.8 kg/day (15 lbs/day), calculated in ~~accordance~~ compliance with Section 219.904(a)(1)(B), in the absence of air pollution control equipment.

b) Notwithstanding subsection (a) ~~of this Section~~:

1) ~~The requirements of this~~This Subpart ~~shall~~ does not apply to miscellaneous industrial adhesive application operations associated with the following:

A) Aerospace coatings;

B) Metal furniture coatings;

C) Large appliance coatings;

D) Flat wood paneling coatings;

E) Paper, film, and foil coatings;

F) Lithographic printing;

G) Letterpress printing;

H) Flexible package printing;

I) Coil coating;

J) Fabric coating;

K) Rubber tire manufacturing.

2) ~~The requirements of~~ Section 219.901(b) through (e) ~~of this Subpart shall~~do not apply to the following:

A) Adhesives or adhesive primers being tested or evaluated in any research and development operation or quality assurance or analytical laboratory;

B) Adhesives or adhesive primers used in the assembly, repair, or manufacture of aerospace or undersea-based weapon systems;

C) Adhesives or adhesive primers used in medical equipment manufacturing operations;

D) Cyanoacrylate adhesive application operations;

E) Aerosol adhesive and aerosol adhesive primer application operations;

F) Operations using polyester bonding putties to assemble fiberglass parts at fiberglass boat manufacturing facilities and at other reinforced plastic composite manufacturing facilities;

G) Operations using adhesives and adhesive primers that are supplied to the manufacturer in containers with a net volume of 0.47 liters (16 oz) or less, or a net weight of 0.45 kg (1 lb) or less.

c) If a miscellaneous industrial adhesive application operation at a source is or becomes subject to one or more of the limitations in this Subpart, the miscellaneous industrial adhesive application operation is always subject to the applicable provisions of this Subpart.

d) The owner or operator of a source exempt from the emission limitations and control requirements of this Subpart because of the criteria in subsection (a) ~~of this Section~~ is subject to the recordkeeping and reporting requirements ~~specified~~ in Section 219.904(a) ~~of this Subpart~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.901 Emission Limitations and Control Requirements

a) The owner or operator of a source subject to ~~the requirements of~~ this Subpart ~~shall~~ must comply with the limitations in subsection (b), (c), or (d) ~~of this Section~~, as well as with the limitations in subsections (e) and (f) ~~of this Section~~.

Notwithstanding this requirement, sources subject to Section 219.900(b)(2) ~~shall~~ must comply with the limitations in subsection (f) ~~of this Section~~ only.

b) The owner or operator of adhesive application operations listed in this subsection (b) ~~shall~~ must comply with the following VOM emission limitations, minus water and any compounds that are specifically exempted from the definition of VOM, as applied. If an adhesive is used to bond dissimilar substrates together, the substrate category with the highest VOM emission limitation ~~shall apply~~applies:

			kg VOM/l adhesive or adhesive primer applied	lb VOM/gal adhesive or adhesive primer applied
1)	General adhesive application operations			
	A)	Reinforced plastic composite	0.200	(1.7)
	B)	Flexible vinyl	0.250	(2.1)
	C)	Metal	0.030	(0.3)
	D)	Porous material (except wood)	0.120	(1.0)
	E)	Rubber	0.250	(2.1)
	F)	Wood	0.030	(0.3)
	G)	Other substrates	0.250	(2.1)
2)	Specialty adhesive application operations			
	A)	Ceramic tile installation	0.130	(1.1)
	B)	Contact adhesive	0.250	(2.1)
	C)	Cove base installation	0.150	(1.3)
	D)	Indoor floor covering installation	0.150	(1.3)
	E)	Outdoor floor covering installation	0.250	(2.1)
	F)	Installation of perimeter bonded sheet flooring	0.660	(5.5)
	G)	Metal to urethane/rubber molding or casting	0.850	(7.1)
	H)	Motor vehicle adhesive	0.250	(2.1)

I)	Motor vehicle weatherstrip adhesive	0.750	(6.3)
J)	Multipurpose construction	0.200	(1.7)
K)	Plastic solvent welding (acrylonitrile butadiene styrene (ABS) welding)	0.400	(3.3)
L)	Plastic solvent welding (except ABS welding)	0.500	(4.2)
M)	Sheet rubber lining installation	0.850	(7.1)
N)	Single-ply roof membrane installation/repair (except ethylene ~~propylenediene~~ propylene diene monomer (EPDM) roof membrane)	0.250	(2.1)
O)	Structural glazing	0.100	(0.8)
P)	Thin metal laminate	0.780	(6.5)
Q)	Tire repair	0.100	(0.8)
R)	Waterproof resorcinol glue	0.170	(1.4)

3) Adhesive primer application operations

A)	Motor vehicle glass bonding primer	0.900	(7.5)
B)	Plastic solvent welding adhesive primer	0.650	(5.4)
C)	Single-ply roof membrane adhesive primer	0.250	(2.1)
D)	Other adhesive primer	0.250	(2.1)

c) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not operate a miscellaneous industrial adhesive application operation unless the daily-weighted average VOM content of subject adhesives as applied each day by the operation, calculated in ~~accordance~~ compliance with subsection (c)(1) ~~of this Section~~, is less than or equal to the emissions limitation calculated in ~~accordance~~ compliance with subsection (c)(2) ~~of this Section~~.

1) Weighted Average of VOM Content of Adhesives Applied Each Day

$$VOM_{WA} = \frac{\sum_{i=1}^{n} V_i VOM_i}{\sum_{i=1}^{n} V_i}$$

where:

VOM_{WA} = The weighted average VOM content in units of kg (lbs) VOM per volume in l (gal) of all subject adhesives as applied each day;

i = Subscript denoting a specific adhesive as applied;

n = The number of different adhesives as applied each day by each miscellaneous industrial adhesive application operation;

V_i = The volume of each adhesive, as applied, in units of l (gal);

VOM_i = The VOM content in units of kg (lbs) VOM per volume in l (gal) of each adhesive as applied;

2) Allowable Weighted Average VOM Limit for an Averaging Operation

$$Limit_{WA} = \frac{\sum_{i=1}^{n} V_i Limit_i}{\sum_{i=1}^{n} V_i}$$

where:

$Limit_{WA}$ = The allowable weighted average VOM limit in units of kg (lbs) VOM per volume in l (gal) of all subject adhesives as applied each day in a single operation;

i = Subscript denoting a specific adhesive as applied;

n = The number of different adhesives as applied each day by each miscellaneous industrial adhesive application operation;

V_i = The volume of each adhesive, as applied, in units of l (gal);

$Limit_i$ = The VOM limit, taken from subsection (b) ~~of this Section~~, in units of kg (lbs) VOM per volume in l (gal) of each adhesive as applied.

d) ~~No~~ An owner or operator of a source subject to this Subpart ~~shall~~ must not operate a miscellaneous industrial adhesive application operation employing a capture system and control device unless either:

1) An afterburner or carbon adsorption system is used that provides at least 85 percent reduction in the overall emissions of VOM from the application operation;

2) An alternative capture and control system is used that provides at least 85 percent reduction in the overall emissions of VOM from the application operation and is approved by the Agency and approved by USEPA as a SIP revision. The owner or operator ~~shall~~ must submit to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the control device; or

3) The owner or operator complies with the applicable limitation ~~set forth~~ in subsection (b) ~~of this Section~~ by ~~utilizing~~ using a combination of low-VOM adhesives and an afterburner or carbon adsorption system. The owner or operator may use an alternative capture and control system if the owner or operator submits to the Agency a plan ~~to the Agency~~ detailing appropriate monitoring devices, test methods, recordkeeping requirements, and operating parameters for the capture and control system and the system is approved by the Agency and approved by USEPA as a SIP revision.

e) The owner or operator of a source subject to this Subpart ~~shall~~ must apply all miscellaneous industrial adhesives using one or more of the following methods:

1) Electrostatic spray;

2) High volume low pressure (HVLP) spray;

3) Flow coating. For the purposes of this Subpart, "flow coating" means a non-atomized technique of applying coating to a substrate with a fluid nozzle with no air supplied to the nozzle;

4) Roll coating or hand application, including non-spray application methods similar to hand or mechanically powered caulking gun, brush, or direct hand application;

5) Dip coating, including electrodeposition. For purposes of this Subpart, "electrodeposition" means a water-borne dip coating process in which opposite electrical charges are applied to the substrate and the coating. The coating is attracted to the substrate due to the electrochemical potential difference that is created;

6) Airless spray;

7) Air-assisted airless spray; or

8) Another adhesive application method capable of achieving a transfer efficiency equal to or better than that achieved by HVLP spraying, if the method is approved in writing by the Agency.

f) The owner or operator of a source subject to this Subpart ~~shall~~ must comply with the following work practices for each subject miscellaneous adhesive application operation at the source:

1) Store all VOM-containing adhesives, adhesive primers, process-related waste materials, cleaning materials, and used shop towels in closed containers;

2) Ensure that mixing and storage containers used for VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials are kept closed at all times except when depositing or removing those materials;

3) Minimize spills of VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials;

4) Convey VOM-containing adhesives, adhesive primers, process-related waste materials, and cleaning materials from one location to another in closed containers or pipes; and

5) Minimize VOM emissions from the cleaning of application, storage, mixing, and conveying equipment by ensuring that equipment cleaning is performed without atomizing the cleaning solvent and all spent solvent is captured in closed containers.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.902 Testing Requirements

a) Testing to demonstrate compliance with ~~the requirements of~~ this Subpart ~~shall~~ mustl be conducted by the owner or operator by May 1, 2012, after which~~.~~ ~~Thereafter,~~ testing ~~shall~~ must be conducted within 90 days after a request by the Agency, or as otherwise provided in this Subpart. The testing ~~shall~~ must be conducted at the expense of the owner or operator, and the owner or operator ~~shall~~ must notify the Agency in writing 30 days ~~in advance of~~before conducting the testing to allow the Agency to be present during testing.

b) Testing to demonstrate compliance with the VOM content limitations in Section 219.901(b) ~~of this Subpart shall~~must be conducted as follows:

1) Method 24, incorporated by reference in Section 219.112 ~~of this Part~~, ~~shall~~ must be used for non-reactive adhesives. If it is demonstrated to the satisfaction of the Agency and the USEPA that plant adhesive formulation data are equivalent to Method 24 results, formulation data may be used. In the event of any inconsistency between a Method 24 test and a facility's formulation data, the Method 24 test will govern;

2) Appendix A of 40 CFR 63, Subpart PPPP, incorporated by reference in Section 219.112 ~~of this Part~~, ~~shall~~ must be used for reactive adhesives;

3) The manufacturer's specifications for VOM content for adhesives may be used if the specifications are based on results of tests of the VOM content conducted in ~~accordance~~ compliance with methods ~~specified~~ in subsections (b)(1) and (b)(2) ~~of this Section~~, as applicable.

c) For afterburners and carbon adsorbers, the methods and procedures of Section 219.105(d) through (f) ~~of this Part shall~~must be used for testing to demonstrate compliance with ~~the requirements of~~ Section 219.901(d) ~~of this Subpart~~, as follows:

1) To select the sampling sites, Method 1 or 1A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~;

2) To determine the volumetric flow rate of the exhaust stream, Method 2, 2A, 2C, or 2D, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~;

3) To determine the VOM concentration of the exhaust stream entering and exiting the emissions control system, Method 25 or 25A, as appropriate, 40 CFR 60, appendix A, incorporated by reference in Section 219.112 ~~of this Part~~. For thermal and catalytic afterburners, Method 25 must be used, except under the following circumstances, in which case Method 25A must be used:

A) The allowable outlet concentration of VOM from the emissions control system is less than 50 ppmv, as carbon;

B) The VOM concentration at the inlet of the emissions control system and the required level of control result in exhaust concentrations of VOM of 50 ppmv, or less, as carbon;

C) Due to the high efficiency of the emissions control system, the anticipated VOM concentration at the emissions control system exhaust is 50 ppmv or less, as carbon, regardless of inlet concentration. If the source elects to use Method 25A under this option, the exhaust VOM concentration must be 50 ppmv or less, as carbon, and the required destruction efficiency must be met for the source to have demonstrated compliance. If the Method 25A test results show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, a retest is required. The retest ~~shall~~ must be conducted using either Method 25 or Method 25A. If the retest is conducted using Method 25A and the test results again show that the required destruction efficiency apparently has been met, but the exhaust concentration is above 50 ppmv, as carbon, the source must retest using Method 25;

D) During testing, the cleaning equipment ~~shall~~ must be operated at representative operating conditions and flow rates.

d) An owner or operator using an emissions control system other than an afterburner or carbon adsorber ~~shall~~ must conduct testing to demonstrate compliance with ~~the requirements of~~ Section 219.901(d) ~~as set forth~~ in the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 219.901(d)(3).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.903 Monitoring Requirements

a) If an afterburner is used to demonstrate compliance, the owner or operator of a source subject to Section 219.901(d) ~~of this Subpart shall~~must:

1) Install, calibrate, operate, and maintain temperature monitoring devices with an accuracy of ~~3°C~~3 ºC or ~~5°F~~5 ºF on the emissions control system in ~~accordance~~ compliance with Section 219.105(d)(2) ~~of this Part~~ and in ~~accordance~~ compliance with the manufacturer's specifications. Monitoring ~~shall~~ must be performed at all times when the emissions control system is operating; and

2) Install, calibrate, operate, and maintain, in ~~accordance~~ compliance with manufacturer's specifications, a continuous recorder on the temperature monitoring devices, such as a strip chart, recorder, or computer, with at least the same accuracy as the temperature monitor.

b) If a carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to Section 219.901(d) ~~of this Subpart shall~~must use Agency and USEPA approved continuous monitoring equipment that is installed, calibrated, maintained, and operated according to vendor specifications at all times the control device is in use. The continuous monitoring equipment ~~shall~~ must monitor the VOM concentration of each carbon adsorption bed exhaust or the exhaust of the bed next in sequence to be desorbed.

c) If an emissions control system other than an afterburner or carbon adsorber is used to demonstrate compliance, the owner or operator of a source subject to Section 219.901(d) ~~of this Subpart shall~~must install, maintain, calibrate, and operate the monitoring equipment ~~as set forth in~~under the owner's or operator's plan approved by the Agency and USEPA ~~pursuant to~~under Section 219.901(d)(3).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.904 Recordkeeping and Reporting Requirements

a) The owner or operator of a source exempt from the limitations of this Subpart because of the criteria in Section 219.900(a) ~~of this Subpart shall~~must comply with the following:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

A) A declaration that the source is exempt from ~~the requirements of~~ this Section because of the criteria in Section 219.900(a);

B) Calculations that demonstrate that combined emissions of VOM from miscellaneous industrial adhesive application operations at the source, including related cleaning activities, never equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment. To calculate daily emissions of VOM, the owner or operator ~~shall~~ must determine the monthly emissions of VOM from miscellaneous industrial adhesive application operations at the source (including related cleaning activities) and divide this amount by the number of days during that calendar month that miscellaneous industrial adhesive application operations at the source were in operation;

2) Collect and record the following information each month for each miscellaneous industrial adhesive application operation, maintain the information at the source for ~~a period of~~ three years, and provide the information to the Agency upon request:

A) The name and identification number of each adhesive as applied by each miscellaneous industrial adhesive application operation; and

B) The weight of VOM per volume and the volume of each adhesive (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each month by each miscellaneous industrial adhesive application operation;

3) Notify the Agency of any record that shows that the combined emissions of VOM from miscellaneous industrial adhesive application operations at the source, including related cleaning activities, ever equal or exceed 6.8 kg/day (15 lbs/day), in the absence of air pollution control equipment, within 30 days after the event occurs, and provide copies of those records upon request by the Agency.

b) All sources subject to ~~the requirements of~~ this Subpart ~~shall~~must:

1) By May 1, 2012, or upon initial start-up of the source, whichever is later, submit a certification to the Agency that includes:

A) Identification of each subject adhesive application operation as of the date of certification;

B) A declaration that all subject adhesive application operations are in compliance with ~~the requirements of~~ this Subpart;

C) The limitation with which each subject adhesive application operation will comply (i.e., the VOM content limitation, the daily weighted averaging alternative, or the emissions control system alternative);

D) Initial documentation that each subject adhesive application operation will comply with the applicable limitation, including copies of manufacturer's specifications, test results (if any), formulation data, and calculations;

E) Identification of the methods that will be used to demonstrate continuing compliance with the applicable limitations;

F) A description of the practices and procedures that the source will follow to ensure compliance with ~~the limitations in~~ Section 219.901(f) ~~of this Subpart~~;

G) A description of each adhesive application operation exempt ~~pursuant to~~under Section 219.900(b)(2) ~~of this Subpart~~, if any; and

H) The application methods used by each subject adhesive application operation;

2) At least 30 calendar days before changing the method of compliance ~~in accordance with~~under Section 219.901(b), (c), and (d), notify the Agency in writing of the change. The notification ~~shall~~ must include a demonstration of compliance with the newly applicable subsection;

3) Notify the Agency in writing of any violation of ~~the requirements of~~ this Subpart within 30 days ~~following the occurrence of~~after the violation and provide records documenting the violation upon request by the Agency;

4) Retain all records required by this Section for at least three years and make those records available to the Agency upon request.

c) The owner or operator of an adhesive application operation subject to ~~the limitations of~~ Section 219.901 ~~of this Subpart~~ and complying by means of Section 219.901(b) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon the initial start-up date, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each adhesive as applied by each subject adhesive application operation;

2) Collect and record the name, identification number, and VOM content of each adhesive as applied each day by each adhesive application operation complying with Section 219.901(b).

d) The owner or operator of an adhesive application operation subject to ~~the limitations of~~ Section 219.901 ~~of this Subpart~~ and complying by means of Section 219.901(c) ~~shall~~ must comply with the following:

1) By May 1, 2012, or upon initial start-up, whichever is later, submit a certification to the Agency that includes the name, identification number, and VOM content of each adhesive as applied by each subject adhesive application operation;

2) Collect and record the following information each day for each adhesive application operation complying by means of Section 219.901(c):

A) The name, identification number, VOM content, and volume of each adhesive as applied each day by each subject adhesive application operation;

B) The daily weighted average VOM content of all adhesives as applied by each subject adhesive application operation.

e) The owner or operator of an adhesive application operation subject to ~~the requirements of~~ Section 219.901 ~~of this Subpart~~ and complying by means of Section 219.901(d) ~~shall~~must:

1) By May 1, 2012, or upon the initial start-up date, whichever is later, and upon initial start-up of a new control device, submit a certification to the Agency that includes the following:

A) The type of afterburner or other approved control device used to comply with ~~the requirements of~~ Section 219.901(d);

B) The results of all tests and calculations necessary to demonstrate compliance with the control requirements of Section 219.901(d); and

C) A declaration that the monitoring equipment required under Section 219.903 ~~of this Subpart~~ has been properly installed and calibrated according to manufacturer's specifications;

2) Within 90 days after conducting testing ~~pursuant to~~under Section 219.902 ~~of this Subpart~~, submit to the Agency a copy of all test results, as well as a certification that includes the following:

A) A declaration that all tests and calculations necessary to demonstrate whether the adhesive application operations are in compliance with Section 219.901(d) have been properly performed;

B) A statement whether the adhesive application operations are or are not in compliance with Section 219.901(d); and

C) The operating parameters of the afterburner or other approved control device during testing, as monitored in ~~accordance~~ compliance with Section 219.903 ~~of this Subpart~~;

3) Collect and record daily the following information for each adhesive application operation subject to ~~the requirements of~~ Section 219.901(d):

A) Afterburner or other approved control device monitoring data in ~~accordance~~ compliance with Section 219.903 ~~of this Subpart~~;

B) A log of operating time for the afterburner or other approved control device, monitoring equipment, and the associated application unit; and

C) A maintenance log for the afterburner or other approved control device and monitoring equipment detailing all routine and non-routine maintenance performed, including dates and duration of any outages.

SUBPART PP: MISCELLANEOUS FABRICATED PRODUCT MANUFACTURING PROCESSES

Section 219.920 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to a source's miscellaneous fabricated product manufacturing process emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, or BB if the source is subject to this Subpart. A source is subject to this Subpart if it contains process emission units~~,~~ not regulated by Subparts B, E, F (excluding Section 219.204(1) ~~of this Part~~), H (excluding Section 219.405 ~~of this Part~~), Q, R, S, T, (excluding Section 219.486 ~~of this Part~~), V, X, Y, Z, or BB of this Part~~;~~ which as a group both:

1) Have maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

2) Are not limited to less than 91 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment, through production or capacity limitations contained in a federally enforceable permit or a SIP revision.

b) If a source ceases to fulfill the criteria of subsection (a) ~~above~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous fabricated products manufacturing process emission unit which was ever subject to the control requirements of Section 219.926 ~~of this Part~~.

c) No limits under this Subpart ~~shall~~ apply to emission units with emissions of VOM to the atmosphere less than or equal to 0.91 Mg (1.0 ton) per calendar year if the total emissions from ~~such~~ the emission units not complying with Section 219.926 ~~of this Part does~~do not exceed 4.5/Mg (5.0 tons) per calendar year.

d) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is not considered regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

e) For the purposes of this Subpart, uncontrolled VOM emissions are the emissions of VOM which would result if no air pollution control equipment were used.

f) The control requirements in Subpart PP ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin and not including storage and extrusion of scrap where blowing agent is added to the polystrene resin at the source; and iron and steel production.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.923 Permit Conditions

~~No~~ A person ~~shall~~ must not violate any condition in a permit when the condition results in exclusion of the source or an emission unit from this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.926 Control Requirements

Every owner or operator of miscellaneous fabricated product manufacturing process emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~of this Section~~:

a) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 219.112, e.g., a coating line, a printing line, a process unit, a

wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) For coating lines, the daily-weighted average VOM content ~~shall~~ must not exceed 0.42 kg VOM/1 (3.5 lbs VOM/gal) of coating as applied (minus water and any compounds which are specifically exempted from the definition of VOM) during any day. Owners and operators complying with this Section are not required to comply with Section 219.301 ~~of this Part~~, or

c) An equivalent alternative control plan which has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.927 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with ~~the~~ those requirements ~~thereof~~ on and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.928 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 219.926 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART QQ: MISCELLANEOUS FORMULATION MANUFACTURING PROCESSES

Section 219.940 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to a source's miscellaneous formulation manufacturing process emission units~~,~~ which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, or BB ~~of this Part~~ if the source is subject to this Subpart. A source is subject to this Subpart if it contains process emission units~~,~~ not regulated by Subparts B, E, F (excluding Section 219.204(1) ~~of this Part~~), H (excluding Section

219.405 ~~of this Part~~), Q, R, S, T (excluding Section 219.486 ~~of this Part~~), V, X, Y, Z, or BB ~~of this Part~~; which as a group both:

1) Have maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

2) Are not limited to less than 91 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment, through production or capacity limitations ~~contained~~ in a federally enforceable permit or a SIP revision.

b) If a source ceases to fulfill the criteria of subsection (a) ~~of this Section, the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous formulation manufacturing process emission unit which was ever subject to the control requirements of Section 219.946 ~~of this Part~~.

c) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 2.3 Mg (2.5 tons) per calendar year if the total emissions from ~~such~~ the emission units not complying with this Section ~~does~~ do not exceed 4.5 Mg (5.0 tons) per calendar year.

d) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is not considered regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

e) For the purposes of this Subpart, uncontrolled VOM emissions are the emissions of VOM which would result if no air pollution control equipment were used.

f) The control requirements in Subpart QQ ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin and not including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source; and iron and steel production.

Section 219.948 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 219.946 ~~of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105 ~~of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART RR: MISCELLANEOUS ORGANIC CHEMICAL MANUFACTURING PROCESSES

Section 219.960 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to a source's miscellaneous organic chemical manufacturing process emission units which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, or BB ~~of this Part~~, if the source is subject to this Subpart. A source is subject to this Subpart if it contains process emission units~~,~~ not regulated by Subparts B, E, F (excluding Section 219.204(l) ~~of this Part~~), H (excluding Section 219.405 ~~of this Part~~), Q, R, S, T~~,~~ (excluding Section 219.486 ~~of this Part~~), V, X, Y, Z, or BB ~~of this Part;~~ which as a group both:

1) Have maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

2) Are not limited to less than 91 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment, through production or capacity limitations contained in a federally enforceable permit or a SIP revision.

b) If a source ceases to fulfill the criteria of ~~Subsection~~ subsection (a) ~~of this Section~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to a miscellaneous organic chemical manufacturing process emission unit which was ever subject to the control requirements of Section 219.966 ~~of this Part~~.

c) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 0.91 Mg (1.0 ton) per calendar year if the total emissions from ~~such~~ the emission units not complying with Section 219.966 ~~of this Part does~~do not exceed 4.5 Mg (5.0 tons) per calendar year.

d) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is not considered regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

e) For the purposes of this Subpart, uncontrolled VOM emissions are the emissions of VOM which would result if no air pollution control equipment were used.

f) The control requirements in Subpart RR ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery plants); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin by the producer of the resin and not including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source; and iron and steel production.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.963 Permit Conditions

~~No~~ A person ~~shall~~ must not violate any condition in a permit when the condition results in exclusion of the source or an emission unit from this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.966 Control Requirements

Every owner or operator of a miscellaneous organic chemical manufacturing process emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), or (c) ~~of this Section~~.

a) Emission capture and control techniques which achieve an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 219.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) An equivalent alternative control plan which has been approved by the Agency and the USEPA in federally enforceable permit or as a SIP revision.

c) Any leaks from components subject to the control requirements of this Subpart ~~shall~~ must be subject to the following control measures by March 15, 1995:

1) Repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15

days after the leak is found, unless the leaking component cannot be repaired until the next process unit shutdown, in which case the leaking component must be repaired before the unit is restarted.

2) For any leak which cannot be readily repaired within one hour after detection, the following records~~, as set forth in this subsection, shall~~ must be kept. These records ~~shall~~ must be maintained by the owner or operator for a minimum of two years after the date on which they are made. Copies of the records ~~shall~~ must be made available to the Agency or USEPA upon verbal or written request.

A) The name and identification of the leaking component;

B) The date and time the leak is detected;

C) The action taken to repair the leak; and

D) The date and time the leak is repaired.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.967 Compliance Schedule

Every owner or operator of an emission unit subject to the control requirements of this Subpart ~~shall~~ must comply with ~~the requirements of~~ this Subpart on and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106~~ of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.968 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 219.966~~ of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105~~ of this Part~~.

b) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART TT: OTHER EMISSION UNITS

Section 219.980 Applicability

a) ~~The requirements of this~~This Subpart ~~shall apply~~applies to a source's VOM emission units~~,~~ which are not included within any of the categories ~~specified~~ in Subparts B, E, F, H, Q, R, S, T, V, X, Y, Z, AA, BB, PP, QQ, or RR ~~of this Part,~~ or are not exempted from permitting requirements ~~pursuant to~~under 35 Ill. Adm. Code 201.146, if the source is subject to this Subpart. A source is subject to this Subpart if it contains process emission units~~,~~ not regulated by Subparts B, E, F (excluding Section 219.204(l) ~~of this Part~~), H (excluding Section 219.405 ~~of this Part~~), Q, R, S, T, (excluding Section 218.486 ~~of this Part~~), V, X, Y, Z~~,~~ or BB ~~of this Part~~, which as a group both:

1) Have maximum theoretical emissions of 91 Mg (100 tons) or more per calendar year of VOM if no air pollution control equipment were used, and

2) Are not limited to less than 91 Mg (100 tons) of VOM emissions per calendar year in the absence of air pollution control equipment, through production or capacity limitations contained in a federally enforceable permit or a SIP revision.

b) If a source ceases to fulfill the criteria of subsection (a) ~~of this Section~~, ~~the requirements of~~ this Subpart ~~shall continue~~continues to apply to an emission unit which was ever subject to the control requirements of Section 219.986 ~~of this Part~~.

c) ~~No limits~~Limits under this Subpart ~~shall~~ do not apply to emission units with emissions of VOM to the atmosphere less than or equal to 2.3 Mg (2.5 tons) per calendar year if the total emissions from ~~such~~ the emission unit not complying with Section 219.986 ~~of this Part does~~do not exceed 4.5 Mg (5.0 tons) per calendar year.

d) For the purposes of this Subpart, an emission unit ~~shall be~~is considered regulated by a Subpart if it is subject to the limits of that Subpart. An emission unit is not considered regulated by a Subpart if it is not subject to the limits of that Subpart, e.g., the emission unit is covered by an exemption in the Subpart or the applicability criteria of the Subpart are not met.

e) The control requirements in Subpart TT ~~shall~~ do not apply to sewage treatment plants; vegetable oil extraction and processing; coke ovens (including by-product recovery); fuel combustion units; bakeries; barge loading facilities; jet engine test cells; production of polystyrene foam insulation board including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source, but not including blending and preliminary expansion of resin ~~prior to~~before molding where a blowing agent is incorporated into the polystyrene resin by the producer of the resin; production of polystyrene or polyethylene foam packaging not including blending and preliminary expansion of resin ~~prior to~~before molding where blowing agent is incorporated into the polystyrene resin

by the producer of the resin; and not including storage and extrusion of scrap where blowing agent is added to the polystyrene resin at the source; and iron and steel production.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.983 Permit Conditions

~~No~~ A person ~~shall~~ must not violate any condition in a permit when the condition results in exclusion of the source or an emission unit from this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.986 Control Requirements

Every owner or operator of an emission unit subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ subsection (a), (b), (c), (d) or (e) ~~of this Section~~.

a) Emission capture and control equipment which achieves an overall reduction in uncontrolled VOM emissions of at least 81 percent from each emission unit, or

(~~Board Note~~BOARD NOTE: For the purpose of this provision, an emission unit is any part or activity at a source of a type that by itself is subject to control requirements in other Subparts of this Part or 40 CFR 60, incorporated by reference in Section 219.112, e.g., a coating line, a printing line, a process unit, a wastewater system, or other equipment, or is otherwise any part or activity at a source.)

b) For coating lines, the daily-weighted average VOM content ~~shall~~ must not exceed 0.42 kg VOM/1 (3.5 lbs VOM/gal) of coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied during any day. Owners and operators complying with this Section are not required to comply with Section 219.301 ~~of this Part~~, or

c) An equivalent alternative control plan which has been approved by the Agency and the USEPA in a federally enforceable permit or as a SIP revision.

d) Non-contact process water cooling towers which are subject to the control requirements of this Subpart ~~shall~~ must comply with the following control measures no later than March 15, 1995, or upon initial startup:

1) The owner or operator of a non-contact process water cooling tower ~~shall~~ must perform the following actions to control emissions of volatile organic material (VOM) from ~~such a~~the tower:

A) Inspect and monitor ~~such~~ the tower to identify leaks of VOM into the water~~, as further specified in~~ under subsection (d)(3) ~~of this Section~~;

B) When a leak is identified, initiate and carry out steps to identify the specific leaking component or components as soon as practicable~~, as further specified in~~ under subsection (d)(4) ~~of this Section~~;

C) When a leaking component is identified which:

i) Can be removed from service without disrupting production, remove the component from service;

ii) Cannot be removed from service without disrupting production, undertake repair of the component at the next reasonable opportunity to do so including any period when the component is out of service for scheduled maintenance~~, as further specified in~~ under subsection (d)(4) ~~of this Section~~;

D) Maintain records of inspection and monitoring activities, identification of leaks and leaking components, elimination and repair of leaks, and operation of equipment as related to these activities~~, as further specified in~~ under subsection (d)(5) ~~of this Section~~.

2) A VOM leak ~~shall~~ must be considered to exist in a non-contact process water cooling water system if the VOM emissions or VOM content exceed background levels as determined by monitoring conducted in ~~accordance~~ compliance with subsection (d)(3)(A) ~~of this Section~~.

3) The owner or operator of ~~an~~ a non-contact process water cooling tower ~~shall~~ must carry out an inspection and monitoring program to identify VOM leaks in the cooling water system.

A) The owner or operator of a non-contact process water cooling tower ~~shall~~ must submit to the Agency a proposed monitoring program, accompanied by technical justification for the program, including justification for the program, including justification for the sampling location(s), parameter(s) selected for measurement, monitoring and inspection frequency, and the criteria used relative to the monitored parameters to determine whether a leak exists as specified in subsection (d)(2) ~~of this Section~~.

B) This inspection and monitoring program for non-contact process water cooling towers ~~shall~~ must include~~, but shall not be limited to~~:

i) Monitoring of each ~~such~~h tower with a water flow rate of 25,000 gallons per minute or more at a petroleum refinery at least weekly and monitoring of other towers at least monthly;

ii) Inspection of each ~~such~~ tower at least weekly if monitoring is not performed at least weekly.

C) This inspection and monitoring program ~~shall~~ must be carried out in ~~accordance~~ compliance with written procedures which the Agency ~~shall~~ must specify as a condition in a federally enforceable operating permit. These procedures ~~shall~~ must include the VOM background levels for the cooling tower as established by the owner or operator through monitoring; describe the locations at which samples will be taken; identify the parameter(s) to be measured, the frequency of measurements, and the procedures for monitoring each such tower, ~~that is,~~including taking ~~of~~ samples and other subsequent handling and analyzing of samples; provide the criteria used to determine that a leak exists ~~as specified in~~under subsection (d)(2) ~~of this Section~~; and describe the records which will be maintained.

D) A non-contact process water cooling tower is exempt from ~~the requirements of~~ subsections (d)(3)(B) and (d)(3)(C) ~~of this Section~~, if all equipment, where leaks of VOM into cooling water may occur, is operated at a minimum pressure in the cooling water of at least 35 kPa greater than the maximum pressure in the process fluid.

4) The repair of a leak in a non-contact process water cooling tower ~~shall be~~is considered to be completed in an acceptable manner as follows:

A) Efforts to identify and locate the leaking components are initiated as soon as practicable, but in no event later than three days after detection of the leak in the cooling water tower;

B) Leaking components ~~shall~~ must be repaired or removed from service as soon as possible but no later than 30 days after the leak in the cooling water tower is detected, unless the leaking components cannot be repaired until the next scheduled shutdown for maintenance.

5) The owner or operator of a non-contact process water cooling tower ~~shall~~ must keep records ~~as set forth below in~~under this subsection. These records ~~shall~~ must be retained at a readily accessible location at the source

and ~~shall~~ must be available for inspection and copying by the Agency for at least 3 years:

A) Records of inspection and monitoring activity;

B) Records of each leak identified in ~~such~~ a tower, with date, time, and nature of observation or measured level of parameter;

C) Records of activity to identify leaking components, with date initiated, summary of components inspected with dates, and method of inspection and observations;

D) Records of activity to remove a leaking component from service or repair a leaking component, with date initiated and completed, description of actions taken, and the basis for determining the leak in ~~such~~ the tower has been eliminated. If the leaking component is not identified, repaired, or eliminated within 30 days ~~of~~ after initial identification of a leak in ~~such~~ the tower, this report ~~shall~~ must include specific reasons why the leak could not be eliminated sooner, including all other intervening periods when the process unit was out of service, actions taken to minimize VOM losses ~~prior to~~before elimination of the leak and any actions taken to prevent the recurrence of a leak of this type.

6) The owner or operator of a non-contact process water cooling tower ~~shall~~ must submit to the Agency an annual report ~~to the Agency~~ which provides:

A) The number of leaks identified in each cooling tower;

B) A general description of activity to repair or eliminate leaks which were identified;

C) Identification of each leak which was not repaired in 30 days ~~from~~ after the date of identification of a leak in ~~such a~~the tower, with description of the leaks~~,~~ and explanation why the leak was not repaired in 30 days;

D) Identification of any periods when required inspection and monitoring activities were not carried out.

e) Any leaks from components subject to the control requirements of this Subpart ~~shall~~ must be subject to the following control measures by March 15, 1995:

1) Repair any component from which a leak of VOL can be observed. The repair ~~shall~~ must be completed as soon as practicable but no later than 15

days after the leak is found, unless the leaking component cannot be repaired until the next process unit shutdown, in which case the leaking component must be repaired before the unit is restarted.

2) For any leak which cannot be readily repaired within one hour after detection, the following records~~, as set forth below in this subsection, shall~~must be kept. These records ~~shall~~ must be maintained by the owner or operator for a minimum of two years after the date on which they are made. Copies of the records ~~shall~~ must be made available to the Agency or USEPA upon verbal or written request.

A) The name and identification of the leaking component;

B) The date and time the leak is detected;

C) The action taken to repair the leak; and

D) The date and time the leak is repaired.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.987 Compliance Schedule

Every owner or operator of an emissions unit which is subject to this Subpart ~~shall~~ must comply with ~~the requirements of~~ this Subpart on and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106~~ of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.988 Testing

a) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with Section 219.986~~ of this Part~~, the owner or operator of a VOM emission unit subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105.

b) Nothing in this Section shall limit the authority of the USEPA pursuant to the Clean Air Act, as amended, to require testing.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART UU: RECORDKEEPING AND REPORTING

Section 219.990 Exempt Emission Units

Upon request by the Agency, the owner or operator of an emission unit which is exempt from ~~the requirements of~~ Subparts PP, QQ, RR, TT, or Section 219.208(b) ~~of this Part shall~~must submit records to the Agency within 30 calendar days ~~from~~ after the date of the request that document that the emission unit is exempt from those requirements.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.991 Subject Emission Units

a) Any owner or operator of a VOM emission unit which is subject to ~~the requirements of~~ Subpart PP, QQ, RR, or TT and complying by the use of emission capture and control equipment ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or upon initial start-up of a new emission unit, the owner or operator of the subject VOM emission unit ~~shall~~ must demonstrate to the Agency that the subject emission unit will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or on and after the initial start-up date by submitting to the Agency all calculations and other supporting data, including descriptions and results of any tests the owner or operator may have performed.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject VOM source ~~shall~~ must collect and record all of the following information each day and maintain the information at the source for ~~a period of~~ three years:

A) Control device monitoring data.

B) A log of operating time for the capture system, control device, monitoring equipment, and the associated emission source.

C) A maintenance log for the capture system, control device, and monitoring equipment detailing all routine and non-routine maintenance performed including dates and duration of any outages.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, the owner or operator of a subject VOM source ~~shall~~ must notify the Agency in the following instances:

A) Any record showing a violation of ~~the requirements of~~ Subpart PP, QQ, RR, or TT ~~shall~~ must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Subpart PP or TT from the use of capture systems and control devices to the use of complying coatings, the owner or operator ~~shall~~ must comply with all requirements of subsection (b)(1) ~~of this Section~~. Upon changing the method of compliance with Subpart PP or TT from the use of capture systems and control devices to the use of complying coatings, the owner or operator shall comply with all requirements of subsection (b) ~~of this Section~~.

4) Testing

A) When in the opinion of the Agency it is necessary to conduct testing to demonstrate compliance with this Subpart, the owner or operator of a VOM emission source subject to ~~the requirements of~~ this Subpart ~~shall~~must, at ~~his~~ its own expense, conduct ~~such~~ the tests in ~~accordance~~ compliance with the applicable test methods and procedures ~~specified~~ in Section 219.105 ~~of this Part~~.

B) Nothing in this Section ~~shall limit~~limits the authority of the USEPA ~~pursuant to~~under the Clean Air Act, as amended, to require testing.

b) Any owner or operator of a coating line which is subject to ~~the requirements of~~ Subpart PP or TT and complying by means of the daily-weighted average VOM content limitation ~~shall~~ must comply with the following:

1) By ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or upon initial start-up of a coating line subject to Subpart PP or TT, the owner or operator of the subject coating line ~~shall~~ must certify to the Agency that the coating line will be in compliance on and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or on and after the initial start-up date. ~~Such~~ The certification ~~shall~~ must include:

A) The name and identification number of each coating line which will comply by means of the daily-weighted average VOM content limitation.

B) The name and identification number of each coating as applied on each coating line.

C) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted

from the definition of VOM) as applied each day on each coating line.

D) The instrument or method by which the owner or operator will accurately measure or calculate the volume of each coating as applied each day on each coating line.

E) The method by which the owner or operator will create and maintain records each day as required in subsection (b)(2).

F) An example of the format in which the records required in subsection (b)(2) ~~of this Section~~ will be kept.

2) On and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, or on and after the initial start-up date, the owner or operator of a subject coating line ~~shall~~ must collect and record all of the following information each day for each coating line and maintain the information at the source for ~~a period of~~ three years:

A) The name and identification number of each coating as applied on each coating line.

B) The weight of VOM per volume and the volume of each coating (minus water and any compounds which are specifically exempted from the definition of VOM) as applied each day on each coating line.

C) The daily-weighted average VOM content of all coatings as applied on each coating line as defined in Section 219.104 ~~of this Part~~.

3) On and after ~~a~~ an applicable date ~~consistent with~~under Section 219.106 ~~of this Part~~, the owner or operator of a subject coating line ~~shall~~ must notify the Agency in the following instances:

A) Any record showing violation of ~~the requirements of~~ Subpart PP or TT ~~shall~~ must be reported by sending a copy of ~~such~~ the record to the Agency within 30 days ~~following the occurrence of~~after the violation.

B) At least 30 calendar days before changing the method of compliance with Subpart PP or TT from the use of complying coatings to the use capture systems and control devices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a)(1) ~~of this Section~~. Upon changing the method of compliance with Subpart PP or TT from the use of complying coatings to the

use capture systems and control devices, the owner or operator ~~shall~~ must comply with ~~all requirements of~~ subsection (a) ~~of this Section~~.

c) Any owner or operator of a VOM emission source which is subject to ~~the requirements of~~ Subpart PP, QQ, RR, or TT and complying by means of an alternative control plan which has been approved by the Agency and approved by the USEPA as a SIP revision ~~shall~~ must comply with the recordkeeping and reporting requirements ~~specified~~ in the alternative control plan.

Section 219.APPENDIX A List of Chemicals Defining Synthetic Organic Chemical and Polymer Manufacturing

CAS No.[a]	Chemical
105-57-7	Acetal
75-07-0	Acetaldehyde
107-89-1	Acetaldol
60-35-5	Acetamide
103-84-4	Acetanilide
64-19-7	Acetic acid
108-24-7	Acetic anhydride
67-64-1	Acetone
75-86-5	Acetone cyanohydrin
75-05-8	Acetonitrile
98-86-2	Acetophenone
75-36-5	Acetyl chloride
74-86-2	Acetylene
107-02-8	Acrolein
79-06-1	Acrylamide
79-10-7	Acrylic acid & esters
107-13-1	Acrylonitrile
124-04-9	Adipic acid
111-69-3	Adiponitrile
[b]	Alkyl naphthalenes
107-18-6	Allyl alcohol
107-05-1	Allyl chloride
1321-11-5	Aminobenzoic acid
111-41-1	Aminoethylethanolamine
123-30-8	p-aminophenol
628-63-7, 123-92-2	Amyl acetates
71-47-0[c]	Amyl alcohols
110-58-7	Amyl amine

543-59-9	Amyl chloride
110-68-7[c]	Amyl mercaptans
1322-06-1	Amyl phenol
62-53-3	Aniline
142-04-1	Aniline hydrochloride
29191-52-4	Anisidine
100-66-3	Anisole
118-92-3	Anthranilic acid
84-65-1	Anthraquinone
100-52-7	Benzaldehyde
55-21-0	Benzamide
71-43-2	Benzene
98-48-6	Benzenedisulfonic acid
98-11-3	Benzenesulfonic acid
134-81-6	Benzil
76-93-7	Benzilic acid
65-85-0	Benzoic acid
119-53-9	Benzoin
100-47-0	Benzonitrile
119-61-9	Benzophenone
98-07-7	Benzotrichloride
98-88-4	Benzoyl chloride
100-51-6	Benzyl alcohol
100-46-9	Benzylamine
120-51-4	Benzyl benzoate
100-44-7	Benzyl chloride
98-87-3	Benzyl dichloride
92-52-4	Biphenyl
80-05-7	Bisphenol A
10-86-1	Bromobenzene
27497-51-4	Bromonaphthalene
106-99-0	Butadiene
106-98-9	l-butene
123-86-4	n-butyl acetate
141-32-2	n-butyl acrylate
71-36-3	n-butyl alcohol
78-92-2	s-butyl alcohol
75-65-0	t-butyl alcohol
109-73-9	n-butylamine
13952-84-6	s-butylamine
75-64-9	t-butylamine
98-73-7	p-tert-butyl benzoic acid
107-88-0	1,3-butylene glycol
123-72-8	n-butyraldehyde
107-92-6	Butyric acid
106-31-0	Butyric anhydride

109-74-0	Butyronitrile
105-60-2	Caprolactam
75-1-50	Carbon disulfide
558-13-4	Carbon tetrabromide
55-23-5	Carbon tetrachloride
9004-35-7	Cellulose acetate
79-11-8	Chloroacetic acid
108-42-9	m-chloroaniline
95-51-2	o-chloroaniline
106-47-8	p-chloroaniline
35913-09-8	Chlorobenzaldehyde
108-90-7	Chlorobenzene
118-91-2, 535-80-8, 74-11-3[c]	Chlorobenzoic acid
2136-81-4, 2136-89-2, 5216-25-1[c]	Chlorobenzotrichloride
1321-03-5	Chlorobenzoyl chloride
75-45-6	Chlorodifluoroethane
25497-29-4	Chlorodifluoromethane
67-66-3	Chloroform
25586-43-0	Chloronaphthalene
88-73-3	o-chloronitrobenzene

Section 219.APPENDIX B VOM Measurement Techniques for Capture Efficiency (Repealed)

(Source: Repealed at 30 Ill. Reg. 9799, effective May 15, 2006)

Section 219.APPENDIX C Reference Methods and Procedures

Introduction

This Appendix presents the reference methods and procedures required for implementing Reasonably Available Control Technology (RACT). Methods and procedures are identified for two types of RACT implementation:

a) Determination of VOM destruction efficiency for evaluating compliance with the 98 weight percent VOM reduction or 20 ppmv emission limit ~~specified~~ in Sections 219.520 through 219.527 ~~of this Part~~; and

b) Determination of offgas flowrate, hourly emissions and stream net heating value for calculating TRE.

All reference methods identified in this Appendix refer to the reference methods ~~specified~~ at 40 CFR 60, Appendix A, incorporated by reference in Section 219.112 ~~of this Part~~.

VOM DESTRUCTION EFFICIENCY DETERMINATION

The following reference methods and procedures are required for determining compliance with the percent destruction efficiency ~~specified~~ in Sections 219.520 through 219.527 ~~of this Part~~.

a) Reference Method 1 or 1A for selection of the sampling site. The control device inlet sampling site for determination of vent stream molar composition or total organic compound destruction efficiency ~~shall~~ must be ~~prior to~~before the inlet of any control device and after all recovery devices.

b) Reference Methods 2, 2A, 2C or 2D for determination of the volumetric flowrate.

c) Reference Method 3 to measure oxygen concentration of the air dilution correction. The emission sample ~~shall~~ must be corrected to 3 percent oxygen.

d) Reference Method 18 to determine the concentration of total organic compounds (minus methane and ethane) in the control device outlet and total organic compound reduction efficiency of the control device.

TRE DETERMINATION

The following reference methods and procedures are required for determining the offgas flowrate, hourly emissions, and the net heating value of the gas combusted to calculate the vent stream TRE.

a) Reference Method 1 or 1A for selection of the sampling site. The sampling site for the vent stream flowrate and molar composition determination ~~prescribed~~ in subsections (b) and (c) ~~shall~~ must be ~~prior to~~before the inlet of any combustion device, ~~prior to~~before any post-reactor dilution of the stream with air and ~~prior to~~before any post-reactor introduction of halogenated compounds into the vent stream. Subject to the preceding restrictions on the sampling site, it ~~shall~~ must be after the final recovery device. If any gas stream other than the air oxidation vent stream is normally conducted through the recovery system of the affected facility, ~~such~~ the stream ~~shall~~ must be rerouted or turned off while the vent stream is sampled, but ~~shall~~ must be routed normally ~~prior to~~before the measuring of the initial value of the monitored parameters for determining compliance with the recommended RACT. If the air oxidation vent stream is normally routed through any equipment which is not a part of the air oxidation process as defined in 35 Ill. Adm. Code 211.350, ~~such~~ the equipment ~~shall~~ must be bypassed by the vent stream while the vent stream is sampled, but ~~shall~~ must not be bypassed during the measurement of the initial value of the monitored parameters for determining compliance with Subpart V.

b) The molar composition of the vent stream ~~shall~~ must be determined using the following methods:

1) Reference Method 18 to measure the concentration of all organics, including those containing halogens, unless a significant portion of the compounds of interest are polymeric (high molecular weight), can polymerize before analysis or have low vapor pressures, in which case Reference Method 25(a) ~~shall~~ must be used.

2) ASTM D1946-67 (reapproved 1977), incorporated by reference in Section 219.112 ~~of this Part~~, to measure the concentration of carbon monoxide and hydrogen.

3) Reference Method 4 to measure the content of water vapor, if necessary.

c) The volumetric flowrate ~~shall~~ must be determined using Reference Method 2, 2A, 2C or 2D, as appropriate.

d) The net heating value of the vent stream ~~shall~~ must be calculated using the following equation:

$$H = K \sum_{i=1}^{n} C_i H_i$$

where:

H= Net heating value of the sample, MJ/scm, where the net enthalpy per mole of offgas is based on combustion at ~~25°C~~25 ºC and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mole is ~~20° C~~20 ºC, as in the definition of F (vent stream flowrate) ~~below~~in subsection (e)

K= Constant, 1.740 x 10(-7) (1/ppm) (mole/scm) (MJ/kal) where standard temperature for mole/scm is ~~20°C~~20 ºC

C_i= Concentration of sample component i, reported on a wet basis, in ppm, as measured by Reference Method 18 or ASTM D1946-67 (reapproved 1977), incorporated by reference in Section 219.112 ~~of this Part~~.

H_i= Net heat of combustion of sample component i, kcal/mole based on combustion at ~~25°C~~25 ºC and 760 mm Hg. If published values are not available or cannot be calculated, the heats of combustion of vent stream components are required to be determined using ASTM D2382-76, incorporated by reference in Section 219.112 ~~of this Part~~.

e) The emission rate of total organic compounds in the process vent stream ~~shall~~ must be calculated using the following equation:

$$E = K F \sum_{i=1}^{n} C_i M_i$$

where:

E= Emission rate of total organic compounds (minus methane and ethane) in the sample in kg/hr;

K= Constant 2.494 x 10(-6) (1/ppm) (mole/scm) (kg/g) (min/hr), where standard temperature for (mole/scm) is ~~20°C~~20 ºC;

M_i= Molecular weight of sample component i (g/mole);

F= Vent stream flowrate (scm/min), at a standard temperature of ~~20°C~~20 ºC

f) The total vent stream concentration (by volume) of compounds containing halogens (ppmv, by compound) ~~shall~~ must be summed from the individual concentrations of compounds containing halogens which were measured by Reference Method 18.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.APPENDIX D: Coefficients for the Total Resource Effectiveness Index (TRE) Equation

This Appendix contains values for the total resource effectiveness index (TRE) equation in Subpart V.

If a flow rate falls exactly on the boundary between the indicated ranges, the operator ~~shall~~ must use the row in which the flow rate is maximum.

COEFFICIENTS FOR TRE EQUATION FOR CHLORINATED PROCESS VENT STREAMS WITH NET HEATING VALUE LESS THAN OR EQUAL TO 3.5 MJ/scm

FLOW RATE (scm/min)

Section 219.APPENDIX G TRE Index Measurements for SOCMI Reactors and Distillation Units

For purposes of ~~Subpart Q,~~ Sections 219.431 through 219.435, the following apply:

a) The following test methods ~~shall~~ must be used to determine compliance with the total resource effectiveness ("TRE") index value:

1) Method 1 or 1A, incorporated by reference at Section 219.112 ~~of this Part~~, as appropriate, for selection of the sampling site.

A) The sampling site for the vent stream molar composition determination and flow rate ~~prescribed~~ in subsections (a)(2) and (a)(3) ~~of this Appendix shall~~must be, except for the situations ~~outlined~~ in subsection (a)(1)(B), after the final recovery device, if a recovery system is present, ~~prior to~~before the inlet of any control device, and ~~prior to~~before any post-reactor or post-distillation unit introduction ~~of~~ halogenated compounds into the vent stream. No traverse site selection method is needed for vents smaller than 10 cm in diameter.

B) If any gas stream other than the reactor or distillation unit vent stream is normally conducted through the final recovery device:

i) The sampling site for vent stream flow rate and molar composition ~~shall~~ must be ~~prior to~~before the final recovery device and ~~prior to~~before the point at which any nonreactor or nondistillation unit vent stream or stream from a nonaffected reactor or distillation unit is introduced. Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to measure organic compound concentrations at this site.

ii) The efficiency of the final recovery device is determined by measuring the organic compound concentrations using Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, at the inlet to the final recovery device after the introduction of all vent streams and at the outlet of the final recovery device.

iii) The efficiency of the final recovery device determined according to subsection (a)(1)(B)(ii) ~~of this Appendix shall~~must be applied to the organic compound concentrations measured according to subsection (a)(1)(B)(i) ~~of this Appendix~~ to determine the concentrations of organic compounds from the final recovery device attributable to the reactor or distillation unit vent stream. The resulting organic compound concentrations are then used to perform the calculations ~~outlined~~ in subsection (a)(4) ~~of this Appendix~~.

2) The molar composition of the vent stream ~~shall~~ must be determined as follows:

A) Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, to measure the concentration of organic compounds including those containing halogens;

B) ASTM D1946-77, incorporated by reference at Section 219.112 ~~of this Part~~, to measure the concentration of carbon monoxide and hydrogen; and

C) Method 4, incorporated by reference at Section 219.112 ~~of this Part~~, to measure the content of water vapor.

3) The volumetric flow rate ~~shall~~ must be determined using Method 2, 2A, 2C, or 2D, incorporated by reference at Section 219.112 ~~of this Part~~, as appropriate.

4) The emission rate of VOM (minus methane and ethane) (E_{VOM}) in the vent stream ~~shall~~ must be calculated using the following formula:

$$E_{VOM} = K_2 \sum_{j=1}^{n} C_j M_j Q_s$$

where:

E_{VOM} = Emission rate of VOM (minus methane and ethane) in the sample, kg/hr.

K_2 = Constant, 2.494 x 10^6 (l/ppmv)(g-mole/scm)(kg/g)(min/hr), where standard temperature for (g-mole/scm) is ~~20 °C~~20 °C.

C_j = Concentration of compound j, on a dry basis, in ppmv as measured by Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, as indicated in Section 219.433(c)(3) ~~of this Part~~.

M_j = Molecular weight of sample j, g/g-mole.

Q_s = Vent stream flow rate (scm) at a temperature of ~~20 °C~~20 ºC.

5) The total vent stream concentration (by volume) of compounds containing halogens (ppmv, by compound) ~~shall~~ must be summed from the individual concentrations of compounds containing halogens which were measured by Method 18, incorporated by reference at Section 219.112 ~~of this Part~~.

6) The net heating value of the vent stream ~~shall~~ must be calculated using the following:

$$H_T = K_1 \sum_{j=1}^{n} C_j H_j (1-B_{ws})$$

where:

H_T = Net heating value of the sample (MJ/scm), where the net ~~enthaply~~ enthalpy per mole of vent stream is based on combustion of ~~25 °C~~25 ºC and 760 mmHG, but the standard temperature for determining the volume corresponding to one mole is ~~20 °C~~20 ºC as in the definition of Q_s (vent stream flow rate).

K_1 = Constant, 1.740×10^{-7} $(ppmv)^{-1}$ (g-mole/scm), (MJ/KCal), where standard temperature for (g-mole/scm) is ~~20 °C~~20 ºC.

B_{ws} = Water vapor content of the vent stream, proportion by volume; except that if the vent stream passes through a final stream jet and is not condensed, it ~~shall~~ must be assumed that $B_{ws} = 0.023$ in order to correct to 2.3 percent moisture.

C_j = Concentration on a dry basis of compound j in ppmv, as measured for all organic compounds by Method 18, incorporated by reference at Section 219.112 ~~of this Part~~, and measured for hydrogen and carbon monoxide by using ASTM D1946-77, incorporated by reference at Section 219.112 ~~of this Part~~.

H_j = Net heat of combustion of compound j, kCal/g- mole, based on combustion at ~~25 °C~~25 ºC and 760 mmHG. The heats of combustion of vent stream components ~~shall~~ must be determined

using ASTM D2382-83, incorporated by reference at Section 219.112 ~~of this Part~~, if published values are not available or cannot be calculated.

b)

1) The TRE index value of the vent ~~shall~~ must be calculated using the following:

$$TRE = \frac{1\ [a + b\ (Q_s) + c\ (H_T) + d\ (E_{VOM})]}{E_{VOM}}$$

where:

TRE = TRE index value.

E_{VOM} = Hourly emission rate of VOM (kg/hr) as calculated in subsection (a)(4) ~~of this Appendix~~.

Q_s = Vent stream flow rate scm/min at a standard temperature of ~~20 °C~~20 ºC.

H_T = Vent stream net heating value (MJ/scm), as calculated in subsection (a)(6) ~~of this Appendix~~.

E_{VOM} = Hourly emission rate of VOM (minus methane and ethane), (kg/hr) as calculated in subsection (a)(4) ~~of this Appendix~~.

a,b, c,d = Value of coefficients presented below are:

Type of Stream	Control Device Basis	Value of Coefficients a	b	c	d
Nonhalogenated					
	Flare	2.129	0.183	-0.005	0.359
	Thermal incinerator zero (0) Percent heat Recovery	3.075	0.021	-0.037	0.018
	Thermal incinerator 70 Percent heat Recovery	3.803	0.032	-0.042	0.007
Halogenated					
	Thermal incinerator and scrubber	5.470	0.181	-0.040	0.004

2) Every owner or operator of a vent stream ~~shall~~ must use the applicable coefficients identified for values a, b, c, and d in subsection (b)(1) ~~of this Appendix~~ to calculate the TRE index value based on a flare, a thermal incinerator with zero percent heat recovery, and a thermal incinerator with 70 percent heat recovery, and ~~shall~~ must select the lowest TRE index value.

3) Every owner or operator of a reactor or distillation unit with a halogenated vent stream, determined as any stream with a total concentration of halogen atoms contained in organic compounds of 200 ppmv or greater, ~~shall~~ must use the applicable coefficients identified for values a, b, c, and d in subsection (b)(1) ~~of this Appendix~~ to calculate the TRE index value based on a thermal incinerator and scrubber.

c) Every owner or operator of a source seeking to comply with Section 219.432(b) ~~of this Part shall~~must recalculate the flow rate and VOM concentration for each affected vent stream whenever process changes are made. Examples of process changes include~~, but are not limited to,~~ changes in production capacity, feedstock type, or catalyst type, or whenever there is replacement, removal, or addition of recovery equipment. The flow rate and VOM concentration ~~shall~~ must be recalculated based on test data, or on best engineering estimates of the effects of the change to the recovery system.

d) Whenever a process change, as defined in Section 219.435(c) ~~of this Subpart~~, yields a TRE index value of 1.0 or less, the owner or operator ~~shall~~ must notify and submit a report to the Agency ~~according to the requirements specified in~~under Section 219.435(c) ~~of this Subpart,~~ within 180 calendar days after the process change and ~~shall~~ must conduct a performance test ~~according to the methods and procedures required by~~under Section 219.433 ~~of this Part~~.

e) For the purpose of demonstrating that a process vent stream has a VOM concentration below 500 ppmv, the following ~~shall~~ must be used:

1) The sampling site ~~shall~~ must be selected as specified in Section 219.433(c)(1) ~~of this Part~~.

2) Method 18 or Method 25A of 40 CFR Part 60, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~, ~~shall~~ must be used to measure concentration; alternatively, any other method or data that has been validated according to the protocol in Method 301 of 40 CFR Part 63, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~, may be used.

3) Where Method 18 is used, the following procedures ~~shall~~ must be used to calculate ppmv concentration:

i) The minimum sampling time for each run ~~shall~~ must be 1 hour in which either an integrated sample or four grab samples ~~shall~~ must be taken. If grab sampling is used, then the samples ~~shall~~ must be taken at approximately equal intervals in time, such as ~~15 minute~~15-minuite intervals during the run.

ii) The concentration of VOM ~~shall~~ must be calculated using Method 18 according to Section 219.433(c)(4) ~~of this Part~~.

4) Where Method 25A is used, the following procedures ~~shall~~ must be used to calculate ppmv VOM concentration:

i) Method 25A ~~shall~~ must be used only if a single VOM is greater than 50 percent of total VOM, by volume, in the process vent stream.

ii) The vent stream composition may be determined by either process knowledge, test data collected using an appropriate Reference Method, or a method of data collection validated according to the protocol in Method 301 of 40 CFR Part 63, Appendix A, incorporated by reference at Section 219.112 ~~of this Part~~. Examples of information that constitute process knowledge include calculations based on material balances, process stoichiometry, or previous test results ~~provided~~ if the results are still relevant to the current process vent stream conditions.

iii) The VOM used as the calibration gas for Method 25A ~~shall~~ must be the single VOM present at greater than 50 percent of the total VOM by volume.

iv) The span value for Method 25A ~~shall~~ must be 50 ppmv.

v) Use of Method 25A is acceptable if the response from the high-level calibration gas is at least 20 times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.

vi) The concentration of VOM ~~shall~~ must be corrected to 3 percent oxygen using the procedures and equation in Section 219.433(c)(3) ~~of this Part~~.

5) The owner or operator ~~shall~~ must demonstrate that the concentration of VOM, including methane and ethane, measured by Method 25A is below 250 ppmv to qualify for the low concentration exclusion in Section 219.431 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 219.APPENDIX H Baseline VOM Content Limitations for Subpart F, Section 219.212 Cross-Line Averaging

This Appendix contains limitations for purposes of determining compliance with ~~the requirements in~~ Section 219.212 ~~of this Part~~. A source must establish that, at very least, each participating coating line used for purposes of cross-line averaging meets the Federal Implementation Plan level of VOM content, as listed below. The emission limitations for participating coating lines that must not be exceeded are as follows:

		kg/l	lb/gal
a)	Automobile or Light-Duty Truck Coating		
1)	Prime coat	0.14	(1.2)
2)	Primer surface coat	1.81	(15.1)

(Note: The primer surface coat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation ~~shall~~ must be based on the daily-weighted average from an entire primer surface operation. Compliance ~~shall~~ must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b) and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance ~~shall~~ must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 does not apply to the primer surface limitation.)

		kg/l	lb/gal
3)	Topcoat	1.81	(15.1)

(Note: The topcoat limitation is in units of kg (lbs) of VOM per l (gal) of coating solids deposited. Compliance with the limitation ~~shall~~ must be based on the daily-weighted average from an entire topcoat operation. Compliance ~~shall~~ must be demonstrated in ~~accordance~~ compliance with the topcoat protocol ~~referenced~~ in Section 219.105(b) ~~of this Part~~ and the recordkeeping and reporting requirements ~~specified~~ in Section 219.211(f). Testing to demonstrate compliance ~~shall~~ must be performed in ~~accordance~~ compliance with the topcoat protocol and a detailed testing proposal approved by the Agency and USEPA specifying the method of demonstrating compliance with the protocol. Section 219.205 ~~of this Part~~ does not apply to the topcoat limitation.)

			kg/l	lb/gal
	4)	Final repair coat	0.58	(4.8)
b)	Can Coating		kg/l	lb/gal
	1)	Sheet basecoat and overvarnish	0.34	(2.8)
	2)	Exterior basecoat and overvarnish	0.34	(2.8)
	3)	Interior body spray coat	0.51	(4.2)
	4)	Exterior end coat	0.51	(4.2)
	5)	Side seam spray coat	0.66	(5.5)
	6)	End sealing compound coat	0.44	(3.7)
			kg/l	lb/gal
c)	Paper Coating		0.35	(2.9)

(Note: The paper coating limitation ~~shall~~ does not apply to any owner or operator of any paper coating line on which flexographic or rotogravure printing is performed if the paper coating line complies with the emissions limitations in Section 219.401 ~~of this Part~~. In addition, screen printing on paper is not regulated as paper coating~~,~~ but is regulated under Subpart TT ~~of this Part~~.)

			kg/l	lb/gal
d)	Coil Coating		0.31	(2.6)
e)	Fabric Coating		0.35	(2.9)
f)	Vinyl Coating		0.45	(3.8)
g)	Metal Furniture Coating			
	1)	Air Dried	0.36	(3.0)
	2)	Baked	0.36	(3.0)
h)	Large Appliance Coating			
	1)	Air Dried	0.34	(2.8)

	2)	Baked	0.34	(2.8)

(Note: The limitation ~~shall~~ does not apply to the use of quick-drying lacquers for repair of scratches and nicks that occur during assembly, ~~provided that~~if the volume of coating does not exceed 0.95 l (1 quart) in any one rolling eight-hour period.)

			kg/l	lb/gal
i)	Magnet Wire Coating		0.20	(1.7)
j)	Miscellaneous Metal Parts and Products Coating			
	1)	Clear coating	0.52	(4.3)
	2)	Extreme performance coating		
		A) Air Dried	0.42	(3.5)
		B) Baked	0.42	(3.5)
	3)	Steel pail and drum interior coating	0.52	(4.3)
	4)	All other coatings		
		A) Air Dried	0.42	(3.5)
		B) Baked	0.36	(3.0)
k)	Heavy Off-Highway Vehicle Products Coating		kg/l	lb/gal
	1)	Extreme performance prime coat	0.42	(3.5)
	2)	Extreme performance top-coat (air dried)	0.42	(3.5)
	3)	Final repair coat (air dried)	0.42	(3.5)
	4)	All other coatings are subject to the emission limitations for miscellaneous metal parts and products coatings in subsection (j) ~~above~~.		

			kg/l	lb/gal
l)	Wood Furniture Coating			
	1)	Clear topcoat	0.67	(5.6)
	2)	Opaque stain	0.56	(4.7)
	3)	Pigmented coat	0.60	(5.0)
	4)	Repair coat	0.67	(5.6)
	5)	Sealer	0.67	(5.6)
	6)	Semi-transparent stain	0.79	(6.6)
	7)	Wash coat	0.73	(6.1)

(Note: An owner or operator of a wood furniture coating operation subject to this Section ~~shall~~ must apply all coatings, with the exception of no more than 37.8 l (10 gal) of coating per day used for touch-up and repair operations, using one or more of the following application systems: airless spray application system, air-assisted airless spray application system, electrostatic spray application system, electrostatic bell or disc spray application system, heated airless spray application system, roller coating, brush or wipe coating application system, dip coating application system, or high volume low pressure (HVLP) application system.)

m) Plastic Parts Coating: Automotive/Transportation

				kg/l	lb/gal
	1)	Interiors			
		A)	Baked

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: EMISSION STANDARDS AND LIMITATIONS FOR STATIONARY SOURCES

PART 220
NONMETHANE ORGANIC COMPOUNDS

SUBPART A: GENERAL PROVISIONS

Section

SUBPART B: MSW LANDFILLS

Section

AUTHORITY: Implementing and authorized by Sections 4, 9.1, 27, and 28.5 of the Illinois Environmental Protection Act [415 ILCS 5/4, 9.1, 27, and 28.5].

SOURCE: Adopted in Docket R98-28 at 22 Ill. Reg.11790, effective July 31, 1998; amended in R18-21 at 48 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 220.100 Purpose

This Part contains emission control requirements for municipal solid waste (MSW) landfills in ~~accordance~~ compliance with section 111(d) and subpart B of the Clean Air Act.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.110 Definitions

The definitions in this Section apply only to ~~the provisions of~~ this Part. Unless otherwise defined ~~herein and unless~~in this Section or a different meaning of a term is clear from its context, the ~~definitions of~~ terms ~~used~~ in this Part ~~shall~~ have the ~~meanings specified by~~definitions in 35 Ill. Adm. Code 201.102, 211, and 810.103.

"Active collection system" means a gas collection system that uses gas mover equipment.

"Active landfill" means a landfill in which solid waste is being placed or a landfill that is planning to accept waste in the future.

"Commercial waste" means all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding household and industrial wastes.

"Controlled landfill" means any landfill at which collection and control systems are required under this Part as a result of the NMOC emission rate. The landfill is considered controlled at the time an application for a construction permit for a collection and control system is submitted to the Agency in compliance with Sections 220.220 and 220.230 ~~of this Part~~.

"Design capacity" means the maximum amount of solid waste a landfill can accept, ~~as indicated~~ in terms of volume or mass, as specified in the permit(s) issued ~~pursuant to~~under Section 21(d) of the Act for the source plus any in-place waste not accounted for in the permit(s); if no design capacity is specified in a permit, then the design capacity ~~shall~~ must be calculated using good engineering practices; or if the landfill is closed ~~pursuant to~~under the applicable regulations in 35 Ill. Adm. Code.Subtitle G, the actual capacity ~~specified~~ in the closure plan. If the owner or operator chooses to convert the design capacity from volume to mass or from mass to volume to demonstrate its design capacity is less than 2.5 million Mg or 2.5 million m^3, the calculation must include a site-specific density, which must be recalculated annually.

"Disposal facility" means all contiguous land and structures, and improvements on the land used for the disposal of solid waste. Portions of the disposal facility may be separated by access roads.

"Emission rate cutoff" means the threshold annual emission rate to which a landfill compares its estimated emission rate to determine if control under this Part is required.

"Enclosed combustor" means an enclosed firebox. Examples include~~, but are not limited to,~~ an enclosed flare, a boiler, and an internal combustion engine.

"Flare" means an open combustor without enclosure or shroud.

"Gas mover equipment" means the equipment (i.e., fan, blower, compressor) used to

transport landfill gas through the header system.

"Household waste" means any solid waste (including garbage, trash, and sanitary waste in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas). ~~(Section 3.89 of the Act)~~[415 ILCS 5/3.230]

"Inactive landfill" means a landfill in which solid waste is no longer being placed, and that is no longer permitted to accept waste under Section 21 of the Act or has a federally enforceable permit condition prohibiting the acceptance of additional waste. If an inactive landfill is subsequently permitted to accept additional waste and additional solid waste is placed in the landfill, the landfill is no longer inactive.

"Industrial waste" means solid waste generated by manufacturing or industrial processes that is not a hazardous waste regulated under Subtitle C of RCRA, 40 CFR 264 and 265. Such waste may include~~, but is not limited to,~~ waste resulting from the following manufacturing processes: electric power generation; fertilizer/agricultural chemicals; food and related products/by-products; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment; and water treatment. This term does not include mining waste or oil and gas waste.

"Interior well" means any well or similar collection component located inside the perimeter of the landfill. A perimeter well located outside the landfilled waste is not an interior well.

"Landfill" means an area of land or an excavation in which wastes are placed for permanent disposal, and that is not a land application unit, surface impoundment, or an underground injection well. For the purposes of this Part, landfills include waste piles.

"Lateral expansion" means a horizontal expansion of the waste boundaries of an existing MSW landfill. A lateral expansion is not a modification for the purposes of filing an amended design capacity report ~~pursuant to~~under Section 220.210(a)~~ of this Part~~, unless it results in an increase in the design capacity of the landfill.

"Modification" means an increase in the permitted volume design capacity of the landfill by either horizontal or vertical expansion.

"Municipal solid waste (MSW)" means household waste.

"Municipal solid waste (MSW) landfill" means an entire disposal facility or landfill in a contiguous geographical space where household waste is placed in or on land. An MSW landfill may also receive other types of RCRA Subtitle D wastes such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste,

and industrial solid waste. Portions of an MSW landfill may be separated by access roads. An MSW landfill may be publicly or privately owned or operated.

"Municipal solid waste (MSW) landfill emissions" means gas generated by decomposition of organic waste deposited in an MSW landfill or derived from the evolution of organic compounds in the waste.

"Nondegradable waste" means any waste that does not decompose through chemical breakdown or microbiological activity. Examples include~~, but are not limited to,~~ concrete, municipal waste combustor ash, and metals.

"Nonmethane organic compounds (NMOC)" means nonmethane organic compounds, as measured according to ~~the provisions of~~ Section 220.260 ~~of this Part~~.

"Passive collection system" means a gas collection system that uses solely positive pressure within the landfill to move the gas rather than using gas mover equipment.

"Putrescible waste" means a solid waste that contains organic matter capable of being decomposed by microorganisms so as to cause a malodor, gases, or other offensive conditions, or which is capable of providing food for birds and vectors. Putrescible wastes may form a contaminated leachate from microbiological degradation, chemical processes, and physical processes. Putrescible waste includes~~, but is not limited to,~~ garbage, offal, dead animals, general household waste, and commercial waste. All solid wastes that do not meet the definitions of inert or chemical wastes ~~shall~~ must be considered putrescible wastes.

"Sludge" means any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, ~~exclusive of~~but excludes the treated effluent from a wastewater treatment plant.

"Solid waste" means a waste that is defined as an inert waste, ~~as~~ a putrescible waste, ~~as~~ a chemical waste, or ~~as~~ a special waste, and which is also not defined as a hazardous waste ~~pursuant to~~under 35 Ill. Adm. Code 721.

"Sufficient density" means any number, spacing, and combination of collection system components, including vertical wells, horizontal collectors, and surface collectors, necessary to maintain emission and migration control as determined by measures of performance ~~set forth~~ in this Part.

"Sufficient extraction rate" means a rate sufficient to maintain a negative pressure at all wellheads in the collection system without causing air infiltration, including any wellheads connected to the system as a result of expansion or excess surface emissions, for the life of the blower.

SUBPART B: MSW LANDFILLS

Section 220.200 Applicability

a) Except as provided in subsection (b) ~~of this Section~~, an owner or operator of an MSW landfill for which construction or modification commenced before May 30, 1991, is subject to ~~the requirements of~~ this Subpart if the landfill has accepted waste at any time since November 8, 1987, or has additional design capacity available for future waste deposition.

b) Any MSW landfill that commenced construction, reconstruction, or modification on or after May 30, 1991, is subject to ~~the requirements of~~ 40 CFR 60, Subpart WWW, in lieu of ~~the requirements of~~ this Part.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.210 Compliance Requirements and Schedule

a) Each owner or operator of an MSW landfill having a design capacity less than 2.5 million Mg by mass or 2.5 million m^3 by volume ~~shall~~ must submit an initial design capacity report to the Agency ~~as provided in~~under Section 220.280(a) ~~of this Subpart~~. The owner or operator may calculate design capacity in either Mg or m^3 for comparison with the exemption values. Any density conversions ~~shall~~ must be documented and submitted with the report. If the landfill is subsequently modified, then the owner or operator ~~shall~~ must submit to the Agency an amended design capacity report ~~as provided for in~~under Section 220.280(a)(3) ~~of this Subpart~~. Submittal of an initial design capacity report and, if applicable, an amended design capacity report ~~shall~~ must fulfill the requirements of this Subpart. ~~Pursuant to~~Under Section 220.200(b) ~~of this Subpart~~, modification of an MSW landfill will subject it to ~~the requirements of~~ 40 CFR 60, Subpart WWW.

b) An owner or operator of an MSW landfill having a design capacity equal to or greater than 2.5 million Mg and 2.5 million m^3 ~~shall~~ must submit an initial design capacity report and initial emissions rate report to the Agency~~, as provided~~

~~in~~under Section 220.280(a) and (b) ~~of this Subpart~~, and comply with either subsection (c) or (d) ~~of this Section~~.

c) For MSW landfills with an NMOC emissions rate less than 50 Mg/yr, the owner or operator ~~shall~~must:

1) Submit an emission rate report~~, as provided by~~under Section 220.280(b) ~~of this Subpart,~~ to the Agency; and

2) Recalculate the NMOC emission rate using the procedures ~~specified~~ in Section 220.260(a) ~~of this Subpart~~ until ~~such time as~~ the calculated NMOC emission rate is equal to or greater than 50 Mg/yr, at which time ~~the provisions of~~ subsection (d) ~~of this Section shall~~must apply, or the landfill is inactive.

d) For MSW landfills with emissions equal to or greater than 50 Mg/yr, calculated ~~pursuant to~~under Section 220.260(a) ~~of this Subpart~~, within 30 months after the date when the first annual NMOC emission rate report equals or exceeds 50 Mg/yr, an owner or operator ~~shall~~must:

1) Install and operate:

A) A gas collection and control system meeting the gas collection system and control requirements of Sections 220.220 and 220.230 ~~of this Subpart~~; or

B) An alternate gas collection and control system using alternate procedures for gas collection and control, determining compliance, monitoring, operation, testing, recordkeeping, or reporting instead of those ~~provided for~~ in this Subpart, as approved by the Agency or Board, ~~as~~ meeting the requirements in Section 220.220(d) or (e), or Section 220.230(d) or (e) ~~of this Subpart~~. ~~Such~~ The alternate system ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision.

2) Certify compliance: Within 6 months ~~of~~ after initial startup or upon change in method of compliance, or by October 31, 2001, whichever is later, the owner or operator of an MSW landfill subject to ~~the control requirements of~~ this Subpart must certify compliance with ~~the requirements of~~ this Subpart by submitting to the Agency the following:

A) A description of the gas collection and control system used;

B) The date the system was installed; and

C) A demonstration that the control system meets the requirements of

Section 220.230 ~~of this Subpart~~:

i) For active collection systems: the reduction efficiency or ppmv must be established by a performance test using the test methods required ~~pursuant to~~under Section 220.260(d) ~~of this Subpart~~; or

ii) For open flares: compliance with ~~the requirements of~~ 40 CFR 60.18, incorporated by reference in Section 220.130 ~~of this Part~~, must be established.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.220 Gas Collection System Requirements

a) Each owner or operator of an MSW landfill having a design capacity equal to or greater than 2.5 million Mg and 2.5 million m^3, and a calculated NMOC emission rate equal to or greater than 50 Mg/yr, must install and operate a gas collection system that meets the requirements of either subsection (b), (c), (d), or (e) ~~of this Section~~ and:

1) Handles maximum expected gas flow rate from the entire area of the MSW landfill that warrants control ~~pursuant to~~under subsection (b)(1)(D) ~~of this Section~~ for the period required in Section 220.250(h) ~~of this Subpart~~, as calculated ~~pursuant to~~under Section 220.240(a) ~~of this Subpart~~;

2) Collects gas from each area, cell, or group of cells in the landfill in which the initial solid waste has been placed for a period of:

A) 5 years or more, if active; or

B) 2 years or more if closed or at final grade;

3) Is designed to minimize off-site migration of subsurface gas;

4) Routes all the collected gas to a control system that complies with ~~the requirements in~~ Section 220.230 ~~of this Subpart~~; and

5) Collects and treats gas in ~~accordance~~ compliance with the applicable requirements of 35 Ill. Adm. Code.Subtitle G.

b) Active Collection Systems:

1) Active collection wells, horizontal collectors, surface collectors, or other extraction devices ~~shall~~ must be sited at a sufficient density throughout all

gas producing areas using the following procedures:

A) The collection devices within the interior and along the perimeter areas ~~shall~~ must be designed to achieve comprehensive control of surface gas emissions.

B) The sites for gas collection devices, as determined in subsection (b)(1)(A) ~~of this Section~~, ~~shall~~ must address landfill gas migration issues and augmentation of the collection system through the use of active or passive systems at the landfill perimeter or exterior.

C) Collect gas at a sufficient extraction rate, as defined at Section 220.110 ~~of this Part~~.

D) The placement of gas collection devices determined in subsection (b)(1)(A) ~~of this Section shall~~must control all gas producing areas, except as provided by this subsection (b)(1)(D).

i) Any segregated area of asbestos or nondegradable material may be excluded from collection, if documented ~~as provided~~ under Section 220.280(f)(3) ~~of this Subpart~~. The documentation ~~shall~~ must provide the nature, date of deposition, location, and amount of asbestos or nondegradable material deposited in the area~~,~~ and ~~shall~~ must be provided to the Agency upon request.

ii) Any nonproductive area of the landfill may be excluded from control provided that the total of all excluded areas can be shown to contribute less than 1 percent of the total amount of NMOC emissions from the landfill. The amount, location, and age of the material ~~shall~~ must be documented and provided to the Agency upon request. A separate NMOC emissions estimate ~~shall~~ must be made for each section proposed for exclusion, and the sum of all such sections ~~shall~~ must be compared to the NMOC emissions estimate for the entire landfill, as calculated ~~pursuant to~~under Section 220.260 ~~of this Subpart~~. Emissions from each section ~~shall~~ must be computed using the following equation:

$$Q_i = 2k L_o M_i (e^{-kt_i})(C_{NMOC})(3.6x10^{-9})$$

where:

Q_i = NMOC emission rate from the i^{th} section, Mg/yr

k = methane generation rate constant, yr^{-1}
L_o = methane generation potential, m^3 per Mg solid waste
M_i = mass of degradable solid waste in the i^{th} section, Mg
t_i = age of the solid waste in the i^{th} section, years
C_{NMOC} = concentration of NMOC, ppmv
3.6×10^{-9} = conversion factor

The values for k and C_{NMOC} determined in field testing ~~shall~~ must be used, if field testing has been performed in determining the NMOC emission rate or the radii of influence (the distance from the well center to a point in the landfill where the pressure gradient applied by the blower or compressor approaches zero). If field testing has not been performed, the default values for k, L_o, and C_{NMOC} provided in Section 220.260(a)(1) ~~of this Subpart shall~~must be used. The mass of nondegradable solid waste contained within the given section may be subtracted from the total mass of the section when estimating emissions, provided the nature, location, age, and amount of the nondegradable material is documented.

2) The gas collection devices ~~shall~~ must be constructed using the following equipment or procedures:

A) The landfill gas extraction components ~~shall~~ must be constructed of polyvinyl chloride (PVC), high density polyethylene (HDPE) pipe, fiberglass, stainless steel, or other nonporous corrosion resistant material of suitable dimensions to convey projected amounts of gases; withstand installation, static, and settlement forces; and withstand planned overburden or traffic loads. The collection system ~~shall~~ must extend as necessary to comply with emission and migration standards. Collection devices, such as wells and horizontal collectors, ~~shall~~ must be perforated to allow gas entry without head loss sufficient to impair performance across the intended extent of control. Perforations ~~shall~~ must be situated with regard to the need to prevent excessive air infiltration.

B) Vertical wells ~~shall~~ must be placed so as not to endanger underlying liners and ~~shall~~ must address the occurrence of water within the landfill. Holes and trenches constructed for piped wells and horizontal collectors ~~shall~~ must be of sufficient cross-section so as to allow for their proper construction and completion including, for example, centering of pipes and placement of gravel backfill. Collection devices ~~shall~~ must be designed so as not to

allow indirect short circuiting of air into the cover, refuse into the collection system, or gas into the air. Any gravel used around pipe perforations should be of a dimension so as not to penetrate or block perforations.

C) Collection devices may be connected to the collection header pipes below or above the landfill surface. The connector assembly ~~shall~~ must include a positive closing throttle valve, any necessary seals and couplings, access couplings, and at least one sampling port. The collection devices ~~shall~~ must be constructed of PVC, HDPE, fiberglass, stainless steel, or other nonporous material of suitable thickness.

3) The landfill gas ~~shall~~ must be conveyed to a gas control system through the collection header pipe(s). The gas mover equipment ~~shall~~ must be sized to handle the maximum gas generation flow rate expected for the period of intended use ~~pursuant to~~under Section 220.250(h) ~~of this Subpart~~ using the following procedures:

A) For existing gas collection systems, the flow data ~~shall~~ must be used to project the maximum flow rate. If no flow data exists, the procedures in subsection (b)(3)(B) ~~of this Section shall~~must be used.

B) For new gas collection systems, the maximum flow rate ~~shall~~ must be in ~~accordance~~ compliance with Section 220.240(a) ~~of this Subpart.~~

c) Passive Collection Systems:

1) A passive collection system ~~shall~~ must be installed with liners on the bottom and all sides in all areas in which gas is to be collected. The liners ~~shall~~ must meet all requirements ~~specified~~ in 35 Ill. Adm. Code 811.306.

2) The collection and control system ~~shall~~ must either conform with the specifications for active collection systems in subsection (a) ~~of this Section~~ or the owner or operator must obtain the Agency' s approval for alternate provisions ~~as provided for in~~under subsection (d) ~~of this Section~~.

d) Alternate Collection Systems:

An owner or operator seeking to install an alternate gas collection system ~~shall~~ must demonstrate to the Agency that ~~such~~ the collection system is capable of capturing the maximum expected gas flow rate from the entire area of the MSW landfill, for the period required in Section 220.250(h) ~~of this Subpart~~, as calculated ~~pursuant to~~under Section 220.240(a) ~~of this Subpart~~, and in an

equivalent manner to that required by this Section. Any alternate gas collection system must be approved by the Agency. ~~Such~~ The alternate ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision. The alternate ~~shall~~ must include any alternate procedures for collection, control, compliance, monitoring, operation, testing, reporting, and recordkeeping that are appropriate.

e) Alternate Emissions Standard:

~~Pursuant to~~Under Section 28.1 of the Act [415 ILCS 5/28.1], and in ~~accordance~~ compliance with 35 Ill. Adm. Code 106, Subpart G, provisions for adjusted standards, adjusted standards for alternate emissions standards, or alternate emissions standards with an alternate compliance schedule ~~shall~~ must be granted by the Board, to the extent consistent with federal law. An owner or operator seeking an alternate emissions standard or an alternate emissions standard with an alternate compliance schedule must demonstrate to the Board that, with respect to the MSW landfill, the control requirements meet one or more of the criteria ~~listed~~ in this subsection (e) pursuant to 40 CFR 60.24(f). Any such request must be approved by the Board. Such alternate ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision. Any alternate ~~shall~~ must include any procedures for collection, control, compliance, monitoring, operation, testing, reporting, and recordkeeping that are appropriate and a demonstration that the control requirements~~, as contained~~ in this Subpart, as they apply to the MSW landfill, meet one or more of the following criteria:

1) Unreasonable cost of control resulting from plant age, location, or basic process design;

2) Physical impossibility of installing necessary control equipment; or

3) Other factors specific to the MSW landfill that support an alternate emissions standard or alternate emissions standard with final compliance date.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.230 Gas Control System Requirements

Each owner and operator of an MSW landfill subject to the control requirements of this Subpart must install and operate a gas collection system that routes all the collected gas to a gas control system that complies with ~~the requirements in~~ subsection (f) and either install a gas control system, as described in either subsection (a), (b), or (c)~~ of this Section,~~ or obtain approval of and install an alternate gas control system ~~pursuant to~~under subsection (d) or (e)~~ of this Section~~.

a) An open flare designed and operated in ~~accordance~~ compliance with 40 CFR 60.18, incorporated by reference in Section 220.130 of this Part.

b) A control system designed and operated to reduce NMOC by 98 weight-percent, or, when an enclosed combustion device is used for control, to either reduce NMOC by 98 weight-percent or reduce the outlet NMOC concentration to less than 20 ppmv, dry basis as hexane at 3 percent oxygen. The reduction efficiency or ppmv must be established by an initial performance test required ~~pursuant to~~under Section 220.210(d)(2), using the test methods required under Section 220.260(d) ~~of this Subpart~~:

1) If a boiler or process heater is used as the control device, the landfill gas stream ~~shall~~ must be introduced into the flame zone.

2) The control device ~~shall~~ must be operated within the parameter ranges established during the initial or most recent performance test. The operating parameters to be monitored are ~~specified~~ in Section 220.270 ~~of this Subpart~~. The initial performance test must be performed within 6 months after startup or by October 31, 2001, whichever is later.

c) A treatment system that processes the collected gas for subsequent sale or use. All emissions from any atmospheric vent from the gas treatment system ~~shall~~ must be subject to ~~the requirements of~~ subsection (b) ~~of this Section~~.

d) An alternate gas control system approved by the Agency. An owner or operator seeking to install an alternate gas control system ~~shall~~ must demonstrate to the Agency that such collection system is capable of control equivalent to subsection (b) ~~of this Section~~. ~~Such~~ The alternate ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision. The alternate ~~shall~~ must include any alternate procedures for collection, control, compliance, monitoring, operation, testing, reporting, and recordkeeping that are appropriate.

e) ~~Pursuant to~~Under Section 28.1 of the Act [415 ILCS 5/28.1], and in ~~accordance~~ compliance with 35 Ill. Adm. Code 106, Subpart G, provisions for adjusted standards, adjusted standards for alternate emissions standards or alternate emissions standards with an alternate compliance schedule ~~shall~~ must be granted by the Board, to the extent consistent with federal law. An owner or operator seeking an alternate emissions standard or an alternate emissions standard with an alternate compliance schedule must demonstrate to the Board that, with respect to the MSW landfill, the control requirements meet one or more of the criteria ~~listed~~ in this subsection (e), ~~pursuant to~~under 40 CFR 60.24(f). Any such request must be approved by the Board. ~~Such~~ The alternate ~~shall~~ must be effective only when included in a federally enforceable permit or approved as a SIP revision. Any alternate ~~shall~~ must include any procedures for collection, control, compliance, monitoring, operation, testing, reporting, and recordkeeping that are appropriate and a demonstration that the control requirements ~~as contained~~ in this Subpart, as they apply to the MSW landfill, meet one or more of the following criteria:

1) Unreasonable cost of control resulting from plant age, location, or basic process design;

2) Physical impossibility of installing necessary control equipment; or

3) Other factors specific to the MSW landfill that support an alternate emissions standard or alternate emissions standard with final compliance date.

f) Gas control systems must be operated in ~~accordance~~ compliance with a permit issued ~~pursuant to~~under the applicable requirements of 35 Ill. Adm. Code.Subtitle G.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.240 Compliance Procedures for Gas Collection Systems

a) The methods ~~specified~~ in subsections (a)(1) through (a)(6) ~~of this Section~~ ~~shall~~must be used to determine whether the gas collection system is in compliance with Section 220.220 ~~of this Subpart~~.

1) To calculate the maximum expected gas generation flow rate from the MSW landfill, one of the following equations ~~shall~~ must be used. The k and L_o kinetic factors ~~shall~~ must be those published in the Compilation of Air Pollutant Emission Factors (AP-42) incorporated by reference in Section 220.130 ~~of this Part~~, or other site-specific emission factors approved by the Agency. If k has been determined ~~as specified in~~under Section 220.260(a)(4) ~~of this Subpart~~, the value of k determined from the test ~~shall~~ must be used. A value of no more than 15 years ~~shall~~ must be used for the intended use period of the gas mover equipment, the variable t. The active life of the landfill is the age of the landfill plus the estimated number of years until closure.

A) For sites with unknown year-to-year solid waste acceptance rate:

$$Q_m = 2L_oR(e^{-kc}-e^{-kt})$$

where:

Q_m	=	maximum expected gas generation flow rate, m^3/yr
L_o	=	methane generation potential, m^3 per Mg solid waste
R	=	average annual acceptance rate, Mg/yr
k	=	methane generation rate constant, yr^{-1}
t	=	age in years of the landfill at equipment installation plus time the owner or operator intends to use the

gas mover equipment or active life of the landfill, whichever is less. If the equipment is installed after closure, t in years is the age of the landfill at installation.

c = time since closure, years (for an active landfill c = 0 and $e^{-kc}=1$)

B) For sites with known year-to-year solid waste acceptance rates:

$$Q_m = \sum_{i=1}^{n} 2\,k L_o M_i (e^{-kt_i})$$

where:

Q_m = maximum expected gas generation flow rate, m^3/yr
k = methane generation rate constant, yr^{-1}
L_o = methane generation potential, m^3 per Mg solid waste
M_i = mass of solid waste in the i^{th} section, Mg
t_i = age of the i^{th} section, yr

C) If a collection and control system has been installed, actual flow data may be used to project the maximum expected gas generation flow rate instead of, or in conjunction with, the equations in subsections (a)(1)(A) and (a)(1)(B) ~~of this Section~~. If the landfill is still accepting waste, the actual measured flow data will not equal the maximum expected gas generation rate, so calculations made using the equations in subsection (a)(1)(A) or (a)(1)(B) ~~of this Section~~ or other methods shall be used to predict the maximum gas generation rate over the intended period of use of the gas control system equipment.

2) For the purpose of determining the sufficient number of gas collectors, the owner or operator ~~shall~~ must design a system of vertical wells, horizontal collectors, or other type of collection device, capable of controlling and extracting gas from all portions of the landfill sufficient to meet the operational and performance standards of Sections 220.220 through 220.250. ~~Such~~ The design must be approved by the Agency as part of an air construction permit or a CAAPP permit, if the gas collection system was installed ~~prior to~~before July 31, 1998.

3) For the purpose of demonstrating whether the gas collection system flow rate of an active collection system is sufficient, the owner or operator ~~shall~~ must measure gauge pressure in the gas collection header at each individual well monthly. If positive pressure exists, action ~~shall~~ must be initiated to correct the exceedence within 5 calendar days, except for the

three conditions ~~allowed~~ under Section 220.250(b) ~~of this Subpart~~. If negative pressure cannot be achieved without excess air infiltration within 15 calendar days after the first measurement, the gas collection system ~~shall~~ must be expanded to correct the exceedence within 120 days after the initial measurement of positive pressure. Any attempted corrective measure must not cause exceedences of other operational or performance standards. An alternate timeline for correcting the exceedence may be submitted to the Agency for approval.

4) Owners or operators are not required to expand the system, as required in subsection (a)(3) ~~of this Section~~, during the first 180 days after gas collection system startup.

5) For purposes of identifying whether excess air infiltration into the landfill is occurring, the owner or operator ~~shall~~ must monitor each well on a monthly basis for temperature and nitrogen or oxygen~~, as provided in~~ under Section 220.250(c) ~~of this Subpart~~. If a well exceeds one of these operating parameters, action ~~shall~~ must be initiated to correct the exceedence within 5 calendar days. If correction of the exceedence cannot be achieved within 15 calendar days after the first measurement, the gas collection system ~~shall~~ must be expanded to correct the exceedence within 120 days after the initial exceedence. An alternate timeline for correcting the exceedence may be submitted to the Agency for approval.

6) An owner or operator using a collection system that does not conform to ~~the specifications provided in~~ Section 220.220(b) or (c) ~~of this Subpart~~ ~~shall~~must provide information satisfactory to the Agency~~, as specified in~~under Section 220.220(d) ~~of this Subpart~~, demonstrating that off-site migration is being controlled.

b) To comply with the operational standards in Section 220.250(a) ~~of this Subpart~~, each owner or operator of a controlled landfill ~~shall~~ must install each well or design component as specified in a construction permit issued by the Agency. Each well ~~shall~~ must be installed no later than 60 days after the date on which the initial solid waste has been in place for a period of:

1) 5 years or more if active; or

2) 2 years or more if closed or at final grade.

c) The following procedures ~~shall~~ must be used for compliance with the surface methane operational standard ~~as provided~~ in Section 220.250(d) ~~of this Subpart~~.

1) After installation of the collection system, the owner or operator ~~shall~~ must monitor surface concentrations of methane along the entire perimeter of the collection area and along a pattern that traverses the landfill at 30-

meter intervals (or site-specific established spacing) for each collection area on a quarterly basis using an organic vapor analyzer, flame ionization detector, or other portable monitor meeting the specifications ~~provided~~ in subsection (d) ~~of this Section~~.

2) The background concentration ~~shall~~ must be determined by moving the probe inlet upwind and downwind outside the boundary of the landfill at a distance of at least 30 meters from the perimeter wells.

3) Surface emission monitoring ~~shall~~ must be performed in ~~accordance~~ compliance with section 4.3.1 of Method 21 of Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, except that the probe inlet ~~shall~~ must be placed within 5 to 10 cm of the ground. Monitoring ~~shall~~ must be performed during typical meteorological conditions.

4) Any reading of 500 ppm or more above background at any location ~~shall~~ must be recorded as a monitored exceedence and the actions ~~specified~~ in subsections (c)(4)(A) through (c)(4)(E) ~~of this Section shall~~must be taken. As long as the actions ~~specified~~ below are taken, the exceedence is not a violation of ~~the operational requirements of~~ Section 220.250(d) ~~of this Subpart~~.

A) The location of each monitored exceedence ~~shall~~ must be marked and the location recorded.

B) Cover maintenance or adjustments to the vacuum of the adjacent wells to increase the gas collection in the vicinity of each exceedence ~~shall~~ must be made and the location ~~shall~~ must be remonitored within 10 calendar days after detecting the exceedence.

C) If the remonitoring of the location shows a second exceedence, additional corrective action ~~shall~~ must be taken, and the location ~~shall~~ must be monitored again within 10 days after the second exceedence. If the remonitoring shows a third exceedence for the same location, the action ~~specified~~ in subsection (c)(4)(E) ~~of this Section shall~~must be taken. No further monitoring of that location is required until the action ~~specified~~ in subsection (c)(4)(E) ~~of this Section~~ has been taken.

D) If the remonitoring of the location does not show an exceedence~~, as specified by~~under subsection (c)(4)(B) or (c)(4)(C), the location ~~shall~~ must be remonitored 1 month from the initial exceedence. If the 1 month remonitoring shows a concentration less than 500 ppm above background, no further monitoring of that location is

required until the next quarterly monitoring period. If the 1 month remonitoring shows an exceedence, the actions ~~specified~~ in subsection (c)(4)(C) or (c)(4)(E) ~~of this Section~~, as appropriate, ~~shall~~ must be taken.

E) For any location where there are three monitored exceedences within a quarterly period, a new well or other collection device ~~shall~~ must be installed within 120 calendar days after the initial exceedence. An alternate remedy to the exceedence, such as upgrading the blower, header pipes, or control device, and a corresponding timeline for installation may be submitted to the Agency for approval.

5) The owner or operator ~~shall~~ must implement a program to monitor for cover integrity and implement cover repairs as necessary on a monthly basis.

d) The following instrumentation specifications and procedures for surface emission monitoring devices apply to the monitoring required by subsection(c) ~~of this Section~~:

1) The portable analyzer ~~shall~~ must meet the instrument specifications ~~provided~~ in Section 3, Method 21, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, except that methane ~~shall~~ must replace all references to VOC.

2) The calibration gas ~~shall~~ must be methane, diluted to a nominal concentration of 500 ppm in air.

3) To meet the performance evaluation requirements in Section 3.1.3, Method 21, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, the instrument evaluation procedures of Section 4.4 of Method 21, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, shall be used.

4) The calibration procedures ~~provided~~ in Section 4.2, Method 21, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part,~~ ~~shall~~must be followed immediately before commencing a surface monitoring survey.

e) ~~The~~ MSW landfill owners or operators are required to comply with ~~the provisions of~~ this Subpart at all times, except during periods of start-up, shutdown, or malfunction, provided that the duration of start-up, shutdown, or malfunction must not exceed 5 days for collection systems and must not exceed 1 hour for treatment or control devices.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.250 Operational Standards for Collection and Control Systems

Each owner or operator of an MSW landfill with a gas collection and control system ~~shall~~must:

a) Operate the collection system such that gas is collected from each area, cell, or group of cells in the MSW landfill in which the initial solid waste has been in place for:

1) 5 years or more if active; or

2) 2 years or more if closed or at final grade.

b) Operate the collection system with negative pressure at each wellhead except under the following conditions:

1) A fire or increased well temperature. The owner or operator ~~shall~~ must record instances when positive pressure occurs in efforts to avoid a fire. These records ~~shall~~ must be submitted with the annual reports ~~as provided in~~under Section 220.280(e)(1) ~~of this Subpart~~.

2) Use of a geomembrane or synthetic cover. The owner or operator ~~shall~~ must develop pressure limits associated with such a cover that must be approved by the Agency.

3) A decommissioned well. A well may experience a static positive pressure after shut down to accommodate for declining flows. All design changes ~~shall~~ must be approved by the Agency.

c) Operate each interior wellhead in the collection system with a landfill gas temperature less than ~~55°C (131°F)~~55 ºC (131 ºC) and with either a nitrogen level less than 20 percent or an oxygen level less than 5 percent. The owner or operator may establish a higher operating temperature, nitrogen, or oxygen value at a particular well. A higher operating value demonstration that provides supporting data to show that the elevated parameter does not cause fires or significantly inhibit anaerobic decomposition by killing methagens must be approved by the Agency before ~~such~~ the higher operating value may be used. Operating values ~~shall~~ must be determined as follows:

1) The nitrogen level ~~shall~~ must be determined using Method 3C, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~.

2) The oxygen level ~~shall~~ must be determined by an oxygen meter using Method 3A, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, except that:

A) The span ~~shall~~ must be set so that the regulatory limit is between 20 and 50 percent of the span;

B) A data recorder is not required;

C) Only two calibration gases are required, a zero and span, and ambient air may be used as the span;

D) A calibration error check is not required; and

E) The allowable sample bias, zero drift, and calibration drift are plus or minus 10 percent.

d) Operate the collection system so that the methane concentration is less than 500 ppm above background at the surface of the landfill. To determine if this level is exceeded, the owner or operator ~~shall~~ must conduct surface testing around the perimeter of the collection area and along a pattern that traverses the landfill at 30-meter intervals and where visual observations indicate elevated concentrations of landfill gas, such as distressed vegetation and cracks or seeps in the cover. An initial surface monitoring design plan ~~shall~~ must be developed and included as part of the operating permit application (e.g., a CAAPP permit application) that includes a topographical map with the monitoring route and the rationale for any site-specific deviations from the 30-meter intervals. Areas with steep slopes or other dangerous areas may be excluded from the surface testing. The monitoring plan ~~shall~~ must be updated as necessary. Updated copies must be sent to the Agency and kept on-site at the MSW landfill.

e) Operate the gas collection and control system such that all collected gases are vented to a control system designed and operated in compliance with Sections 220.230, 220.250, and 220.270 ~~of this Subpart~~. In the event the collection or control system is inoperable, the gas mover system ~~shall~~ must be shut down, and all valves in the collection and control system contributing to venting of the gas to the atmosphere ~~shall~~ must be closed within 1 hour.

f) Operate the gas collection and control or treatment system at all times, except during shutdown or malfunction, provided that the duration of start-up, shutdown, or malfunction must not exceed 5 days for collection systems and must not exceed 1 hour for treatment or control devices.

g) If monitoring demonstrates that the operational requirements in subsection (b), (c), or (d) ~~of this Section~~ are not met, take corrective action ~~as specified in~~under Section 220.240(a)(3), (a)(5), or (c)(4) ~~of this Subpart~~. If ~~such~~ corrective actions are taken ~~as specified in~~under Section 220.240(a)(3), (a)(5), or (c)(4) ~~of this Subpart~~, the monitored exceedence is not a violation of the operational requirements in this Section.

h) The collection and control system may be capped or removed provided:

1) The landfill is no longer accepting solid waste;

2) A system removal report has been submitted to the Agency~~, as provided in~~ under Section 220.280(d) ~~of this Subpart~~;

3) The collection and control system has been operating a minimum of 15 years;

4) The calculated NMOC gas produced by the landfill is less than 50 Mg/yr on three successive test dates, ~~pursuant to~~under the procedures ~~specified~~ in Section 220.260(b) ~~of this Subpart~~. The test dates ~~shall~~ must be no less than 90 days apart, and no more than 180 days apart; and

5) The system is not required to satisfy any applicable requirement of 35 Ill. Adm. Code.Subtitle G.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.260 Test Methods and Procedures

a) The landfill owner or operator ~~shall~~ must calculate the NMOC emission rate using the equation ~~provided~~ in either subsection (a)(1)(A) or ~~subsection~~ (a)(1)(B) ~~of this Section~~ and make a determination that the emission rate is less than 50 Mg/yr, ~~pursuant to~~under subsection (a)(2), (a)(3), (a)(4), or (e), or install a gas collection and control system ~~pursuant to~~under Sections 220.220 and 220.230 ~~of this Subpart~~. However, both equations may be used if the actual year-to-year solid waste acceptance rate is known ~~pursuant to~~under subsection (a)(1)(A) ~~of this Section~~, for part of the life of the landfill and the actual year-to-year solid waste acceptance rate is unknown, ~~pursuant to~~under subsection (a)(1)(B) ~~of this Section~~, for part of the life of the landfill. If the NMOC emission rate calculated in this subsection is less than 50 Mg/yr, then the landfill owner ~~shall~~ must submit an emission rate report ~~as provided in~~under Section 220.280(b) ~~of this Subpart~~, and ~~shall~~ must recalculate the NMOC mass emission rate as required under Section 220.210(c) ~~of this Subpart~~.

1) The values to be used in both equations are 0.05/yr for k, 170 m^3 per Mg for L_o, and 4,000 ppmv as hexane for the C_{NMOC}.

A) The following equation ~~shall~~ must be used if the actual year-to-year solid waste acceptance rate is known:

$$M_{NMOC} = \sum_{i=1}^{n} 2kL_o M_i (e^{-kt_i})(C_{NMOC})(3.6x10^{-9})$$

where:

M_{NMOC}	=	Total NMOC emission rate from the landfill, Mg/yr
k	=	methane generation rate constant, yr^{-1}
L_o	=	methane generation potential, m^3 per Mg solid waste
M_i	=	mass of solid waste in the i^{th} section, Mg
t_i	=	age of the solid waste in the i^{th} section, years
C_{NMOC}	=	concentration of NMOC, ppmv as hexane
3.6×10^{-9}	=	conversion factor

The mass of nondegradable solid waste may be subtracted from the total mass of solid waste in a particular section of the landfill when calculating the value for M_i if documentation of the nature and amount of such wastes is maintained.

B) The following equation ~~shall~~ must be used if the actual year-to-year solid waste acceptance rate is unknown:

$$M_{NMOC} = 2L_o R(e^{-kc} - e^{-kt})(C_{NMOC})(3.6 \times 10^{-9})$$

where:

M_{NMOC}	=	Total NMOC emission rate from the landfill, Mg/yr
L_o	=	methane generation potential, m^3 per Mg solid waste
R	=	average annual acceptance rate, Mg/yr
k	=	methane generation rate constant, $year^{-1}$
t	=	age of landfill, years
C_{NMOC}	=	concentration of NMOC, ppmv as hexane
c	=	time since closure, years (for active landfill c = 0 and $e^{-kc} = 1$)
3.6×10^{-9}	=	conversion factor

The mass of nondegradable solid waste may be subtracted from the average annual acceptance rate when calculating a value for R, if documentation of the nature and amount of such wastes is maintained.

2) Tier 1. The landfill owner or operator ~~shall~~ must calculate the NMOC mass emission rate using the equations ~~provided~~ in subsection (a)(1)(A) or (a)(1)(B) ~~of this Section~~. The owner or operator ~~shall~~ must compare the calculated NMOC mass emission rate to the standard of 50 Mg/yr using the default values for the NMOC mass emission rate and the methane generation rate constant.

3) Tier 2. The landfill owner or operator ~~shall~~ must calculate the NMOC mass emission rate using the equations ~~provided~~ in subsection (a)(1)(A) or (a)(1)(B) ~~of this Section~~ using the average NMOC concentration from the collected samples instead of the default value in the equations ~~provided~~ in subsection (a)(1) ~~of this Section~~. The landfill owner or operator ~~shall~~ must determine the NMOC concentration using the following sampling procedure: The landfill owner or operator ~~shall~~ must install at least 2 sample probes per hectare of landfill surface that has retained waste for at least 2 years. If the landfill is larger than 25 hectares in area, only 50 samples are required. The sample probes should be located to avoid known areas of nondegradable solid waste. The owner or operator ~~shall~~ must collect and analyze one sample of landfill gas from each probe to determine the NMOC concentration using Method 25C or Method 18 of Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~. If using Method 18, the minimum list of compounds to be tested ~~shall~~ must be those ~~published~~ in the Compilation of Air Pollutant Emission Factors (AP-42), incorporated by reference in Section 220.130 ~~of this Part~~. If composite sampling is used, equal volumes shall be taken from each sample probe. If more than the required number of samples are taken, all samples ~~shall~~ must be used in the analysis. Divide the NMOC concentration from Method 25C by 6 to convert from C_{NMOC} as carbon to C_{NMOC} as hexane. The owner or operator ~~shall~~ must retest the site-specific NMOC concentration every 5 years using the methods ~~specified~~ in this Section.

4) Tier 3. The landfill owner or operator ~~shall~~ must estimate the NMOC mass emission rate using equations in subsection (a)(1)(A) or (a)(1)(B) ~~of this Section~~ and using a site-specific methane generation rate constant k, and the site-specific NMOC concentration as determined in subsection (a)(3) ~~of this Section~~ instead of the default values ~~provided~~ in subsection (a)(1) ~~of this Section~~. The site-specific methane generation rate constant ~~shall~~ must be determined using the procedures ~~provided~~ in Method 2E, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~. The calculation of the methane generation rate constant is performed only once, and the value obtained is used in all subsequent annual NMOC emission rate calculations. In addition, ~~pursuant to~~under subsection (a)(3) ~~of this Section~~, the owner or operator ~~shall~~ must retest the site-specific NMOC concentration every 5 years using the methods ~~specified~~ in that subsection.

b) After the installation of a collection and control system in compliance with Sections 220.220 and 220.230 ~~of this Subpart~~, the owner or operator ~~shall~~ must calculate the NMOC emission rate for purposes of determining when the system can be removed ~~as provided in~~under Section 220.250(h) ~~of this Subpart~~, using the following equation:

$M_{NMOC} = 1.89 \times 10^{-3} Q_{LFG} C_{NMOC}$

where:

M_{NMOC} = mass emission rate of NMOC (Mg/yr)
Q_{LFG} = flow rate of landfill gas (m^3/minute)
C_{NMOC} = NMOC concentration (ppmv as hexane)

1) The flow rate of landfill gas (Q_{LFG}) ~~shall~~ must be determined by measuring the total landfill gas flow rate at the common header pipe that leads to the control device using a gas flow measuring device calibrated according to ~~the provisions of~~ Section 4 of Method 2E, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~.

2) The average NMOC concentration (C_{NMOC}) ~~shall~~ must be determined by collecting and analyzing landfill gas sampled from the common header pipe before the gas moving or condensate removal equipment ~~using the procedures in~~under Method 25C or Method 18, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~. If using Method 18, the minimum list of compounds to be tested ~~shall~~ must be those ~~published~~ in the Compilation of Air Pollutant Emission Factors (AP-42), incorporated by reference in Section 220.130 ~~of this Part~~. The sample location on the common header pipe ~~shall~~ must be before any condensate removal or other gas refining units. The landfill owner or operator ~~shall~~ must divide the NMOC concentration from Method 25C by 6 to convert C_{NMOC} as carbon to C_{NMOC} as hexane.

c) If the gas collection system complies with ~~the provisions in~~ Section 220.220 ~~of this Subpart~~ and is already installed, the owner or operator ~~shall~~ must estimate the NMOC emission rate using the procedures ~~provided~~ in subsection (b) ~~of this Section~~. For areas of the landfill where the owner or operator has not been required to install a well yet, ~~he/she~~he or she may select an appropriate method from subsection (a) ~~of this Section~~ to estimate emissions.

d) For the performance test required in Section 220.210(d)(2) ~~of this Subpart~~, Method 25C or Method 18, Appendix A, 40 CFR 60, incorporated by reference in Section 220.130 ~~of this Part~~, ~~shall~~ must be used to determine compliance with 98 weight-percent efficiency or the 20 ppmv outlet concentration level, unless another method to demonstrate compliance has been approved by the Agency ~~as provided by~~under Section 220.230(d) ~~of this Subpart~~. If using Method 18, the minimum list of compounds to be tested ~~shall~~ must be those ~~published~~ in the Compilation of Air Pollutant Emission Factors (AP-42), incorporated by reference in Section 220.130 ~~of this Part~~. The following equation ~~shall~~ must be used to calculate efficiency:

Control efficiency = $(NMOC_{in} - NMOC_{out})/(NMOC_{in})$

where:

$NMOC_{in}$ = mass of NMOC entering control device
$NMOC_{out}$ = mass of NMOC exiting control device

e) The owner or operator may use other methods to determine the NMOC concentration, site-specific k, or landfill gas flow rate, as an alternate to the methods required in subsection (a)(3) and (a)(4) ~~of this Section~~, if the method has been approved by the Agency~~, as provided for in~~under Section 220.220(d) or Section 220.230(d) ~~of this Subpart~~.

f) The owner or operator may use the procedures ~~described~~ in AP-42, Compilation of Air Pollutant Emission Factors, incorporated by reference in Section 220.130 ~~of this Part~~, to estimate emissions ~~pursuant to~~under the annual emission report required in 35 Ill. Adm. Code 210.302(a). The most recent values for k, L_o, and NMOC concentration reported in AP-42 ~~shall~~ must be used to calculate emissions. To determine applicability of or compliance with ~~the requirements of~~ this Part, the owner or operator must use the tiered emission estimates ~~provided~~ in subsections (a)(1) through (a)(4) ~~of this Section~~.

g) Testing:

1) Upon a request by the Agency, the owner or operator of an MSW landfill ~~shall~~ must at ~~his~~ its own expense demonstrate compliance with the applicable requirements of this Subpart using the appropriate test method.

2) An owner or operator planning to conduct a test to demonstrate compliance with this Subpart ~~shall~~ must notify the Agency of that intent not less than 30 days before the planned initiation of the tests so that the Agency may observe the test.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.270 Monitoring of Operations

a) Active gas collection systems. Each owner or operator of an active gas collection system ~~shall~~ must install a sampling port and a thermometer, other temperature measuring device, or an access port for temperature measurements at each wellhead and:

1) Measure the gauge pressure in the gas collection header on a monthly basis~~, as provided in~~ under Section 220.240(a)(3) ~~of this Subpart~~; and

2) Monitor the temperature and nitrogen or oxygen concentration in the landfill gas on a monthly basis~~, as provided in~~ under Section 220.240(a)(5)

~~of this Subpart~~.

b) Enclosed combustors. Each owner or operator of an enclosed combustor ~~shall~~ must calibrate, maintain, and operate according to the manufacturer' s specifications, the following equipment:

1) A temperature monitoring device equipped with a continuous recorder and having a minimum accuracy of plus or minus 1 percent of the temperature being measured, expressed in degrees Celsius, or plus or minus ~~0.5°C~~0.5 °C, whichever is greater. A temperature monitoring device is not required for boilers or process heaters with design heat input capacity greater than 44 MW.

2) A device that records flow to or bypass of the control device. The owner or operator ~~shall~~ must either:

A) Install, calibrate, and maintain a gas flow rate measuring device that ~~shall~~ must record the flow to the control device every 15 minutes; or

B) Secure the bypass line valve in the closed position with a car-seal or a lock-and-key type configuration. A visual inspection of the seal or closure mechanism ~~shall~~ must be performed at least once every month to ensure that the valve is maintained in the closed position and that the gas flow is not diverted through the bypass line.

c) Open flare. Each owner or operator of an open flare ~~shall~~ must install, calibrate, maintain, and operate according to the manufacturer' s specifications the following equipment:

1) A heat sensing device, such as an ultraviolet beam sensor or thermocouple, at the pilot light or the flame itself to indicate the continuous presence of a flame.

2) A device that records flow to or bypass of the flare. The owner or operator ~~shall~~ must either:

A) Install, calibrate, and maintain a gas flow rate measuring device that ~~shall~~ must record the flow to the control device at least every 15 minutes; or

B) Secure the bypass line valve in the closed position with a car-seal or lock-and-key type configuration. A visual inspection of the seal or closure mechanism ~~shall~~ must be performed at least once every month to ensure that the valve is maintained in the closed position

and that the gas flow is not diverted through the bypass line.

d) Each owner or operator seeking to install a collection or control system that does not meet the specifications in Section 220.220(b) or (c) ~~of this Subpart, shall~~must provide information satisfactory to the Agency ~~as provided in~~under Sections 220.220(d) and 220.230(d) ~~of this Subpart~~, describing the design and operation of the collection system, the operating parameters that would indicate proper performance, and appropriate monitoring procedures.

e) Each owner or operator ~~shall~~ must monitor surface concentrations of methane according to the instrument specifications and procedures ~~provided~~ in Section 220.240(c) and (d) ~~of this Subpart~~. Any inactive landfill that has no monitored exceedences of the operational standard in three consecutive quarterly monitoring periods must resume annual monitoring. Any methane reading of 500 ppm or more above the background detected during the annual monitoring returns the monitoring frequency for that landfill to quarterly.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.280 Reporting Requirements

a) Each owner and operator ~~shall~~ must submit a design capacity report to the Agency.

1) The initial design capacity report ~~shall~~ must be submitted no later than October 29, 1998.

2) The initial design capacity report ~~shall~~ must contain the following information:

A) A map or plot of the landfill providing the size and location of the landfill and identifying all areas where solid waste may be landfilled ~~according to the provisions of~~under the State or RCRA construction or operating permit.

B) The maximum design capacity of the landfill. If the maximum design capacity is specified in a State construction or RCRA permit, a copy of the permit specifying the maximum design capacity of the landfill ~~shall~~ must be provided. If the maximum design capacity of the landfill is not specified in a permit, the maximum design capacity ~~shall~~ must be calculated using good engineering practices. The calculations ~~shall~~ must be provided, along with the relevant parameters (e.g., depth of solid waste, solid waste acceptance rate, and compaction practices, as applicable), as part of the report. The Agency may request other reasonable information as may be necessary to verify the maximum design

capacity of the landfill.

3) An amended design capacity report ~~shall~~ must be submitted to the Agency providing notification of an increase in the design capacity of the landfill within 90 days after an increase in the maximum design capacity of the landfill to or above 2.5 million Mg and 2.5 million m^3. This increase in design capacity may result from an increase in the permitted volume or an increase in the density of the landfill as documented in the annual recalculation required in Section 220.290 (f) ~~of this Subpart~~.

b) Each owner and operator with a total design capacity equal to or greater than 2.5 million Mg and 2.5 million m^3 ~~shall~~ must submit an NMOC emission rate report to the Agency initially and by June 1 annually thereafter, except ~~as provided for in~~under subsections (b)(1) and (b)(4) ~~of this Section~~. The Agency may request such additional information as may be necessary to verify the reported NMOC emission rate. The NMOC emission rate report ~~shall~~ must contain an annual or 5-year estimate of the NMOC emission rate calculated ~~using the formula and procedures in~~under Section 220.260(a) ~~of this Subpart~~, as applicable. The annual NMOC emission rate report required by this subsection must be submitted with the annual emissions report required ~~pursuant to~~under 35 Ill. Adm. Code 201.302(a).

1) The initial NMOC emission rate report may be combined with the initial design capacity report required in subsection (a) ~~of this Section~~. The first NMOC emission report ~~shall~~ must be filed with the Agency by October 29, 1998. Subsequent NMOC emission reports ~~shall~~ must be filed with the Agency by June 1 of the subsequent year, except as provided for in subsection (b)(2) ~~of this Section~~.

2) Using Tier 1, if the estimated NMOC emission rate as reported in the annual report to the Agency is less than 50 Mg/yr in each of the next 5 consecutive years, the owner or operator may elect to submit an estimate of the NMOC emission rate for the next 5-year period in lieu of the annual report. This estimate ~~shall~~ must include the current amount of solid waste in-place and the estimated waste acceptance rate for each year of the 5 years for which an NMOC emission rate is estimated. All data and calculations upon which this estimate is based ~~shall~~ must be provided to the Agency. This estimate shall be revised at least once every 5 years. If the actual waste acceptance rate exceeds the estimated waste acceptance rate in any year reported in the 5-year estimate, a revised 5-year estimate ~~shall~~ must be submitted to the Agency. The revised estimate ~~shall~~ must cover the 5-year period beginning with the year in which the actual waste acceptance rate exceeded the estimated waste acceptance rate.

3) The NMOC emission rate report ~~shall~~ must include all the data, calculations, sample reports, and measurements used to estimate the

annual or 5-year emissions.

4) All owners and operators of MSW landfills with a total design capacity of 2.5 million Mg and 2.5 million m^3 are required to submit an annual emissions report ~~pursuant to~~under 35 Ill. Adm. Code 201.302(a). MSW landfills that have installed a gas collection and control system that meets the requirements of this Subpart are not required to submit an annual NMOC emission rate report but are required to submit an annual emissions report ~~pursuant to~~under 35 Ill. Adm. Code 201.302(a). ~~Further, owners~~Owners or operators filing a 5-year estimate of NMOC emissions ~~pursuant to~~under subsection (b)(2) ~~of this Section~~ may use a 5-year estimate for NMOC, so long as they file an annual emission report and meet the requirements of subsection (b)(2)~~ of this Section~~.

c) Each owner or operator subject to ~~the provisions of~~ Section 220.220(a) ~~of this Subpart shall~~must submit an application for a construction permit containing the information ~~listed~~ in subsection (c)(3) ~~of this Section~~ to the Agency within 1 year after the first report, required under subsection (b)~~ of this Section~~, in which the emission rate exceeds 50 Mg/yr, except as follows:

1) If the owner or operator elects to recalculate the NMOC emission rate after Tier 2 NMOC sampling and analysis ~~as provided in~~under Section 220.260(a)(3) ~~of this Subpart~~ and the resulting rate is less than 50 Mg/yr, annual periodic reporting ~~shall~~ must be resumed, using the Tier 2 determined site-specific NMOC concentration, until the calculated emission rate is equal to or greater than 50 Mg/yr or the landfill is inactive. The revised NMOC emission rate report, with the recalculated emission rate based on NMOC sampling and analysis, ~~shall~~ must be submitted within 1 year after the first calculated exceedence of 50 Mg/yr.

2) If the owner or operator elects to recalculate the NMOC emission rate after determining a site-specific methane generation rate constant k, as provided in Tier 3 in Section 220.260(a)(4)~~ of this Subpart~~, and the resulting emission rate is less than 50 Mg/yr, annual periodic reporting ~~shall~~ must be resumed or the landfill is inactive. The resulting site-specific methane generation rate constant k ~~shall~~ must be used in the emission rate calculation until ~~such time as~~ the emission rate calculation results in an exceedence. The revised NMOC emission rate report based on ~~the provisions of~~ Section 220.260(a)(4) ~~of this Subpart~~ and the resulting site-specific methane generation rate constant k ~~shall~~ must be submitted to the Agency within 1 year after the first calculated emission rate exceeding 50 Mg/yr.

3) In addition to the information required by 35 Ill. Adm. Code 201.152, the following ~~shall~~ must be included in the construction permit application for the collection system required ~~pursuant to~~under Section 220.280(c)~~ of this~~

~~Subpart~~: depths of refuse, refuse gas generation rates and flow characteristics, cover properties, gas system expandibility, leachate and condensate management, accessibility, compatibility with filling operations, integration with closed landfill end use, air intrusion control, corrosion resistance, fill settlement, and resistance to the refuse decomposition heat.

d) Each owner or operator of a controlled landfill ~~shall~~ must submit the information required by this subsection (d) to the Agency 30 days ~~prior to~~before removal or cessation of operation of the control equipment. The Agency may request such additional information as may be necessary to verify that all of the conditions for removal of equipment ~~in accordance with~~under Section 220.250(h) ~~of this Subpart~~ have been met.

1) Certification that the operation of the collection and control system is no longer required ~~pursuant to~~under 35 Ill. Adm. Code.Subtitle G;

2) Documentation demonstrating that the 15-year minimum control period has expired; and

3) Dated copies of the 3 successive NMOC emission rate reports~~, as provided for in~~under Section 220.250(h) ~~of this Subpart,~~ demonstrating that the landfill is no longer producing 50 Mg/yr or greater of NMOC, ~~pursuant to~~under Section 220.260(b) ~~of this Section~~.

e) Each owner or operator of a landfill ~~shall~~ must submit to the Agency annual reports of the recorded information in subsections (e)(1) through (e)(6) ~~of this Section~~. The initial annual report ~~shall~~ must be submitted within 180 days after installation and start-up of the collection and control system~~,~~ and may be included with the report of the initial performance test required ~~pursuant to~~under Section 220.210(d)(2) ~~of this Subpart~~. For enclosed combustion devices and flares, reportable exceedences are defined under Section 220.290(c) ~~of this Subpart~~.

1) Value and length of time for exceedence of applicable parameters monitored under Section 220.270(a), (b), (c), and (d) ~~of this Subpart~~.

2) Description and duration of all periods when the gas stream is diverted from the control device through a bypass line or the indication of bypass flow ~~as specified~~ under Section 220.270 ~~of this Subpart~~.

3) Description and duration of all periods when the control device was not operating for a period exceeding 1 hour and length of time the control device was not operating.

4) All periods when the collection system was not operating in excess of 5 days.

5) The location of each exceedence of the 500 ppm methane concentration~~,~~ ~~as provided in~~ under Section 220.250(d) ~~of this Subpart~~, and the concentration recorded at each location for which an exceedence was recorded in the previous month.

6) The date of installation and the location of each well or collection system expansion added ~~pursuant to~~under subsections (a)(3), (b), and (c)(4) of Section 220.240 ~~of this Subpart~~.

f) Each owner or operator ~~shall~~ must include the following information with the initial performance test report and any subsequent performance tests required ~~pursuant to~~under Section 220.210(d)(2) ~~of this Subpart~~.

1) A diagram of the collection system showing collection system positioning including all wells, horizontal collectors, surface collectors, or other gas extraction devices, including the locations of any areas excluded from collection and the proposed sites for the future collection system expansion;

2) The data upon which the sufficient density of wells, horizontal collectors, surface collectors, or other gas extraction devices and the gas mover equipment sizing are based;

3) The documentation of the presence of asbestos or nondegradable material for each area from which collection wells have been excluded based on the presence of asbestos or nondegradable material;

4) The sum of gas generation flow rates for all areas from which collection wells have been excluded based on nonproductivity and the calculations of gas generation flow rate for each excluded area;

5) Provisions for increasing gas mover equipment capacity with increased gas generation flow rate, if the present gas mover equipment is inadequate to move the maximum flow rate expected over the life of the landfill; and

6) The provisions for the control of off-site migration of gas.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 220.290 Recordkeeping Requirements

Each owner or operator of an MSW landfill ~~shall~~ must keep for at least 5 years, unless another time period is specified in this Section, up-to-date, readily accessible, on-site records of the following:

a) For the life of the landfill, the design capacity report in which the landfill became equal to or greater than 2.5 million Mg and 2.5 million m^3, the current amount of solid waste in-place, and the year-by-year waste acceptance rate. Off-site records may be maintained if they are retrievable within 4 hours. Either paper copy or electronic formats are acceptable.

b) For the life of the control equipment, the data ~~listed~~ in subsections (b)(1) through (b)(4) ~~of this Section~~ as measured during the initial performance test or compliance determination. Records of the control device vendor specifications ~~shall~~ must be maintained until removal.

1) Active collection systems:

A) The maximum expected gas generation flow rate as calculated in Section 220.240(a) ~~of this Subpart~~. The owner or operator may use another method to determine the maximum gas generation flow rate, if the method has been approved by the Agency.

B) The density of wells, horizontal collectors, surface collectors, or other gas extraction devices determined ~~using the procedures specified in~~under Section 220.220(b)(1)(A) ~~of this Subpart~~.

2) Enclosed combustion device other than a boiler or process heater with a design heat input capacity greater 44 MW:

A) The combustion temperature measured at least every 15 minutes and averaged over the same time period as the performance test.

B) The percent reduction of NMOC determined ~~as specified in~~under Section 220.230(b) ~~of this Subpart~~ achieved by the control device.

3) Boilers or process heaters of any size: a description of the location at which the collected gas vent stream is introduced into the boiler or process heater over the same time period as the performance testing.

4) Open flare: the flare type (i.e., steam-assisted, air-assisted, or nonassisted), all visible emission readings, heat content determination, flow rate or bypass flow rate measurements, and exit velocity determinations made during the performance test as specified in 40 CFR 60.18, incorporated by reference in Section 220.130 ~~of this Part~~; continuous records of the flare pilot flame or flare flame monitoring, and records of all periods of operations during which the flare pilot flame or the flare flame is absent.

c) Continuous records of the equipment operating parameters ~~specified~~ to be monitored in Section 220.270 ~~of this Subpart~~ as well as up-to-date, readily accessible records for periods of operation during which the parameter boundaries

established during the most recent performance test are exceeded.

1) The following constitute exceedences that ~~shall~~ must be recorded and reported under Section 220.280(e) ~~of this Subpart~~:

A) For enclosed combustors, except for boilers and process heaters with design heat input of 44 MW (150 mmbtu/hr) or greater, all 3-hour periods of operation during which the average combustion temperature was more than ~~28°C (82°F)~~28 ºC (82 ºF) below the average combustion temperature during the most recent performance test at which compliance with Section 220.230(b) ~~of this Subpart~~ was determined.

B) For boilers or process heaters, whenever there is a change in the location at which the vent stream is introduced into the flame zone, as required ~~pursuant to~~under subsection (b)(2)(A) ~~of this Section~~.

2) Continuous records of the indication of flow to the control device or the indication of bypass flow or records of monthly inspections of car-seals or lock-and-key configurations used to seal bypass lines, specified ~~pursuant to~~under Section 220.270 ~~of this Subpart~~.

3) For boilers or process heaters with a design heat input capacity of 44 MW or greater, records of all periods of operation of boiler or process heater. (Examples of such records include records of steam use, fuel use, or monitoring data collected pursuant to State, local, or federal regulatory requirements.)

4) For open flares, records of the flame or flare pilot flame monitoring specified under Section 220.270(c) ~~of this Subpart~~, and all periods of operation in which the flare pilot flame or the flare flame is absent.

d) For the life of the collection system, a plot map showing each existing and planned collector in the system and providing a unique identification location label for each collector, including:

1) The location of all newly installed collectors ~~as specified~~ under Section 220.240(b) ~~of this Part~~.

2) The nature, date of deposition, amount, and location of asbestos-containing or nondegradable waste excluded from collection~~, as provided in~~ under Section 220.220(b)(1)(D)(i) ~~of this Subpart~~, as well as any nonproductive areas excluded from collection~~, as provided in~~ under Section 220.220(b)(1)(D)(ii) ~~of this Subpart~~.

e) All collection and control system exceedences of the operational standards in

Section 220.250 ~~of this Subpart~~, the reading the subsequent month whether or not the second reading is an exceedence, and the location of each exceedence.

f) Owners or operators who convert design capacity from volume to mass or mass to volume to demonstrate that landfill design capacity is less than 2.5 million Mg or 2.5 million m^3, as provided in the definition of "design capacity", ~~shall~~ must keep records of the annual recalculation of site-specific density, design capacity, and the supporting documentation.

SUBPART B: CONSUMER AND COMMERCIAL PRODUCTS

Section 223.200 Purpose

The purpose of this Subpart is to limit emissions of volatile organic materials (VOMs) by requiring reductions in the VOM content of consumer and commercial products.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.201 Applicability

Except as provided in Section 223.230, unless another date is specified, this Subpart ~~shall~~ must apply to any person who sells, supplies, offers for sale, or manufactures consumer products on or after July 1, 2009, for use in Illinois.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.203 Definitions for Subpart B

The definitions ~~contained~~ in this Section apply only to ~~the provisions of~~ this Subpart. Unless otherwise defined in this Section, the ~~definitions of~~ terms used in this Subpart ~~shall~~ must have the ~~meanings specified for those terms~~definitions in 35 Ill. Adm. Code 211.

"Adhesive" means any product that is used to bond one surface to another by attachment. This does not include products used on humans and animals, adhesive tape, contact paper, wallpaper, shelf liners, or any other product with an adhesive incorporated onto or in an inert substrate. For "Contact Adhesive", adhesive does not include units of product, less packaging, that consist of more than one gallon. For "Construction, Panel, and Floor Covering Adhesive"~~,~~ and "General Purpose Adhesive", "Adhesive" does not include units of product, less packaging, that weigh more than one pound and consist of more than 16 fluid ounces. This limitation does not apply to aerosol adhesives.

"Adhesive Remover" means a product designed to remove adhesive from either a specific substrate or a variety of substrates. "Adhesive Remover" does not include products that remove adhesives intended exclusively for use on humans or animals.

For the purpose of this definition and the "Adhesive Remover" subcategories listed in this definition, the term "Adhesive" ~~shall~~ must mean a substance used to bond one or more materials. Adhesive includes~~, but is not limited to,~~ caulks, sealants, glues, or similar substances used for the purpose of forming a bond.

"Floor and Wall Covering Adhesive Remover" means a product designed or labeled to remove floor or wall coverings and associated adhesive from the underlying substrate.

"Gasket or Thread Locking Adhesive Remover" means a product designed or labeled to remove gaskets or thread locking adhesives. Products labeled for dual use as a paint stripper and gasket remover and/or thread locking adhesive remover are considered "Gasket or Thread Locking Adhesive Remover".

"General Purpose Adhesive Remover" means a product designed or labeled to remove cyanoacrylate adhesives as well as non-reactive adhesives or residue from a variety of substrates. "General Purpose Adhesive Remover" includes~~, but is not limited to,~~ the following: products that remove thermoplastic adhesives, pressure sensitive adhesives, dextrine or starchbased adhesives, casein glues, rubber or latex-based adhesives, and products that remove stickers, decals, stencils, or similar materials. "General Purpose Adhesive Remover" does not include "Floor or Wall Covering Adhesive Remover".

"Specialty Adhesive Remover" means a product designed to remove reactive adhesives from a variety of substrates. Reactive adhesives include adhesives that require a hardener or catalyst in order for the bond to occur. Examples of reactive adhesives include~~, but are not limited to~~ epoxies, urethanes, and silicones. "Specialty Adhesive Remover" does not include "Gasket or Thread Locking Adhesive Remover".

"Aerosol Adhesive" means an aerosol product in which the spray mechanism is permanently housed in a nonrefillable can designed for hand-held application without the need for ancillary hoses or spray equipment. This does not include "special purpose spray adhesives", "mist spray adhesives" and "web spray adhesives".

"Aerosol Cooking Spray" means any aerosol product designed either to reduce sticking on cooking and baking surfaces or to be applied on food, or both.

"Aerosol Product" means a pressurized spray system that dispenses product ingredients by means of a propellant contained in a product or a product's container, or by means of a mechanically induced force. "Aerosol Product" does not include "Pump Spray".

"Agricultural Use" means the use of any pesticide or method or device for the control of pests in connection with the commercial production, storage, or processing of any animal or plant crop. This does not include the sale or use of pesticides in properly labeled packages or containers that are intended for home use, use in structural pest control, or industrial or institutional use. For the purposes of this definition only:

"Home Use" means use in a household or its immediate environment;

"Structural Pest Control" means a use requiring a license under the Structural Pest Control Act [225 ILCS 235];

"Industrial Use" means use for or in a manufacturing, mining, or chemical process or use in the operation of factories, processing plants, and similar sites**;** ~~or~~and

"Institutional Use" means use within the lines of, or on property necessary for the operation of~~,~~ buildings such as hospitals, schools, libraries, auditoriums, and office complexes.

"Air Freshener" means any consumer product including~~, but not limited to,~~ sprays, wicks, powders, and crystals, designed for the purpose of masking odors, or freshening, cleaning, scenting, or deodorizing the air. "Air Freshener" does not include products that are used on the human body, products that function primarily as cleaning products as indicated on a product label, "Toilet/Urinal Care Products", disinfectant products claiming to deodorize by killing germs on surfaces, or institutional and industrial disinfectants when offered for sale solely through institutional and industrial channels of distribution. "Air Freshener" does include spray disinfectants and other products that are expressly represented for use as air fresheners, except institutional and industrial disinfectants when offered for sale through institutional and industrial channels of distribution. To determine whether a product is an air freshener, all verbal and visual representations regarding product use on the label or packaging and in the product's literature and advertising may be considered. The presence of, and representations about, a product's fragrance and ability to deodorize (resulting from surface application) ~~shall~~ must not constitute a claim of air freshening.

"All Other Carbon-Containing Compounds" means all other compounds that contain at least one carbon atom and are not listed under Section 223.205(a) or are a "LVP-VOM".

"All Other Forms" means all consumer product forms for which no form-specific VOM standard is specified. Unless specified otherwise by the applicable VOM standard, "All Other Forms" include~~, but is not limited to,~~ solids, liquids, wicks, powders, crystals, and cloth or paper wipes (towelettes).

"Alternative Control Plan" or "ACP" means any emissions averaging program approved by the Agency ~~pursuant to the provisions of~~under this Subpart.

"Antimicrobial Hand or Body Cleaner or Soap" means a cleaner or soap that is designed to reduce the level of microorganisms on the skin through germicidal activity. This includes~~, but is not limited to,~~ antimicrobial hand or body washes/cleaners, foodhandler hand washes, healthcare personnel hand washes, pre-operative skin preparations and surgical scrubs. "Antimicrobial Hand or Body Cleaner or Soap" does not include prescription drug products, antiperspirants, "Astringent/Toner", deodorant, "Facial Cleaner or Soap", "~~General-use~~General-Use Hand or Body Cleaner or Soap", "Hand Dishwashing Detergent" (including antimicrobial), "~~Heavy-duty~~Heavy-Duty Hand Cleaner or Soap", "Medicated Astringent/Medicated Toner", or "Rubbing Alcohol".

"Antiperspirant" means any product, including~~, but not limited to,~~ aerosols, roll-ons, sticks, pumps, pads, creams, and squeeze-bottles, that is intended by the manufacturer to be used to reduce perspiration in the human axilla by at least 20 percent in at least 50 percent of a target population.

"Anti-Static Product" means a product that is labeled to eliminate, prevent, or inhibit the accumulation of static electricity. "Anti-Static Product" does not include "Electronic Cleaner", "Floor Polish or Wax", "Floor Coating", and products that meet the definition of "Aerosol Coating Product" or "Architectural Coating".

"Appurtenance" means any accessory to a stationary structure coated at the site of installation, whether installed or detached, including~~, but not limited to,~~ bathroom and kitchen fixtures, cabinets, concrete forms, doors, elevators, fences, hand railings, heating equipment, air conditioning equipment, and other fixed mechanical equipment or stationary tools, lampposts, partitions, pipes and piping systems, rain gutters and downspouts, stairways, fixed ladders, catwalks and fire escapes, and window screens.

"Architectural Coating" means a coating to be applied to stationary structures or the appurtenances at the site of installation, to portable buildings at the site of installation, to pavements, or to curbs. Coatings applied in shop applications or to non-stationary structures such as airplanes, ships, boats, railcars, and automobiles, and adhesives are not considered "Architectural Coatings" for the purposes of this Subpart.

"Astringent/Toner" means any product not regulated as a drug by the United States Food and Drug Administration (FDA) that is applied to the skin for the purpose of cleaning or tightening pores. This category also includes clarifiers and substrate-impregnated products. This category does not include any hand, face, or body cleaner or soap product, "Medicated Astringent/Medicated Toner", cold cream, lotion, or antiperspirant.

"Automotive Brake Cleaner" means a cleaning product designed to remove oil, grease, brake fluid, brake pad material, or dirt from motor vehicle brake mechanisms.

"Automotive Hard Paste Wax" means an automotive wax or polish that is designed to protect and improve the appearance of automotive paint surfaces, and is a solid at room temperature, and contains 0% water by formulation.

"Automotive Instant Detailer" means a product designed for use in a pump spray that is applied to the painted surface of automobiles and wiped off ~~prior to~~before the product ~~being~~ is allowed to dry.

“Automotive Rubbing or Polishing Compound” means a product designed primarily to remove oxidation, old paint, scratches or swirl marks, and other defects from the painted surfaces of motor vehicles without leaving a protective barrier.

“Automotive Wax, Polish, Sealant, or Glaze” means a product designed to seal out moisture, increase gloss, or otherwise enhance a motor vehicle’s painted surfaces. This includes~~, but is not limited to,~~ products designed for use in autobody repair shops and drive-through car washes, as well as products designed for the general public. The term does not include “Automotive Rubbing or Polishing Compounds”, automotive wash and wax products, surfactant-containing car wash products, and products designed for use on unpainted surfaces such as bare metal, chrome, glass, or plastic.

"Automotive Windshield Washer Fluid" means any liquid designed for use in a motor vehicle windshield washer system either as an antifreeze or for the purpose of cleaning, washing, or wetting the windshield. This does not include fluids placed by the manufacturer in a new vehicle.

"Bathroom and Tile Cleaner" means a product designed to clean tile or surfaces in bathrooms. The term does not include products designed primarily to clean toilet bowls, toilet tanks, or urinals.

"Bug and Tar Remover" means a product labeled to remove either or both of the following from painted motor vehicle surfaces without causing damage to the finish: biological-type residues such as insect carcasses, tree sap and road grime such as road tar, roadway paint markings, and asphalt.

"Carburetor or Fuel-Injection Air Intake Cleaners" means a product designed to remove fuel deposits, dirt, or other contaminants from a carburetor, choke, throttle body of a fuel-injection system, or associated linkages, excluding products designed exclusively to be introduced directly into the fuel lines or fuel storage tank ~~prior to~~before introduction into the carburetor or fuel injectors.

"Carpet and Upholstery Cleaner" means a cleaning product designed for the purpose of eliminating dirt and stains on rugs, carpeting, and the interior of motor vehicles and/or on household furniture or objects upholstered or covered with fabrics such as wool, cotton, nylon, or other synthetic fabrics. This includes~~, but is not limited to,~~ products that make fabric protectant claims. The term does not include "General Purpose Cleaners", "Spot Removers", vinyl or leather cleaners, dry cleaning fluids, or products designed exclusively for use at industrial facilities engaged in furniture or carpet manufacturing.

"Charcoal Lighter Material" means any combustible material designed to be applied on, incorporated in, added to, or used with charcoal to enhance ignition. The term does not include any of the following: electrical starters and probes, metallic cylinders using paper tinder, natural gas, propane, and fat wood.

"Colorant" means any pigment or coloring material used in a consumer product for an aesthetic effect or to dramatize an ingredient.

"Construction, Panel, and Floor Covering Adhesive" means any one-component adhesive that is designed exclusively for the installation, remodeling, maintenance, or repair of

structural and building components that include~~, but are not limited to,~~ beams, trusses, studs, paneling (including~~, but not limited to,~~ drywall or drywall laminates, fiberglass reinforced plastic (FRP), plywood, particle board, insulation board, pre-decorated hardboard or tileboard), ceiling and acoustical tile, molding, fixtures, countertops or countertop laminates, cove or wall bases, flooring or subflooring, or floor or wall coverings (including~~, but not limited to~~, wood or simulated wood covering, carpet, carpet pad or cushion, vinyl-backed carpet, flexible flooring material, nonresilient flooring material, mirror tiles and other types of tiles, and artificial grass). The term does not include "Floor Seam Sealer".

"Consumer" means any person who purchases or acquires any consumer product for personal, family, household, or institutional use. Persons acquiring a consumer product for resale are not "consumers" for that product.

"Consumer Product" means a chemically formulated product used by household and institutional consumers including~~, but not limited to,~~ detergents, cleaning compounds, polishes, floor finishes, cosmetics, personal care products, home lawn and garden products, disinfectants, sanitizers, aerosol paints, and automotive specialty products. "Consumer Product" does not include other paint products, furniture coatings, or architectural coatings. As used in this Subpart, "Consumer Product" ~~shall~~ must also refer to "Aerosol Adhesive", including an "Aerosol Adhesive" used for consumer, industrial, or commercial uses.

"Contact Adhesive" means an adhesive that is designed for application to both surfaces to be bonded together, and is allowed to dry before the two surfaces are placed in contact with each other, and forms an immediate bond that is impossible, or difficult, to reposition after both adhesive-coated surfaces are placed in contact with each other, and does not need sustained pressure or clamping of surfaces after the adhesive-coated surfaces have been brought together using sufficient momentary pressure to establish full contact between both surfaces. The term does not include rubber cements that are primarily intended for use on paper substrates. "Contact Adhesive" also does not include vulcanizing fluids that are designed and labeled for tire repair only.

"Contact Adhesive - General Purpose" means any contact adhesive that is not a "Contact Adhesive - Special Purpose".

"Contact Adhesive - Special Purpose" means a contact adhesive that is used to bond melamine-covered board, unprimed metal, unsupported vinyl, Teflon, ultra-high molecular weight polyethylene, rubber, or high pressure laminate or wood veneer 1/16 inch or less in thickness to any porous or nonporous surface, and is sold in units of product, less packaging, that contain more than eight fluid ounces, or is used in automotive applications that are either automotive under the hood applications requiring heat, oil, or gasoline resistance or body-side molding, automotive weatherstrip, or decorative trim.

"Container/Packaging" means the part or parts of the consumer or institutional product that ~~s~~erve only to contain, enclose, incorporate, deliver, dispense, wrap, or store the chemically formulated substance or mixture of substances that is solely responsible for accomplishing the purposes for which the product was designed or intended. This includes any article onto or into which the principal display panel and other accompanying literature or graphics are incorporated, etched, printed, or attached.

"Crawling Bug Insecticide" means any insecticide product that is designed for use against ants, cockroaches, or other household crawling arthropods, including~~, but not limited to,~~ mites, silverfish, or spiders, excluding products designed to be used exclusively on humans or animals, or any house dust mite product. For the purposes of this definition only:

> "House dust mite product" means a product whose label, packaging, or accompanying literature states that the product is suitable for use against house dust mites, but does not indicate that the product is suitable for use against ants, cockroaches, or other household crawling arthropods.
>
> "House dust mite" means mites that feed primarily on skin cells shed in the home by humans and pets and that belong to the phylum Arthropoda, the subphylum Chelicerata, the class Arachnida, the subclass Acari, the order Astigmata, and the family Pyroglyphidae.

"Date-Code" means the day, month, and year on which the consumer product was manufactured, filled, or packaged, or a code indicating that date.

"Deodorant" means:

> For products manufactured before July 1, 2009: any product including~~, but not limited to,~~ aerosols, roll-ons, sticks, pumps, pads, creams, and squeeze-bottles that is intended by the manufacturer to be used to minimize odor in the human axilla by retarding the growth of bacteria that cause the decomposition of perspiration.
>
> For products manufactured on or after July 1, 2009: any product including~~, but not limited to,~~ aerosols, roll-ons, sticks, pumps, pads, creams, and squeeze-bottles that indicates or depicts on the container or packaging, or on any sticker or label affixed to the container or packaging, that the product can be used on or applied to the human axilla to provide a scent and/or minimize odor. A "Deodorant Body Spray" product that indicates or depicts on the container or packaging, or on any sticker or label affixed to the container or packaging that it can be used on or applied to the human axilla is a "Deodorant".

"Deodorant Body Spray" means:

> For products manufactured before July 1, 2009, a "Personal Fragrance Product" with 20 percent or less fragrance.

For products manufactured on or after July 1, 2009, a "Personal Fragrance Product" with 20 percent or less fragrance, that is designed for application all over the human body to provide a scent. A "Deodorant Body Spray" product that indicates or depicts on the container or packaging, or on any sticker or label affixed to the container or packaging, that it can be used on or applied to the human axilla, is a "Deodorant".

"Device" means any instrument or contrivance (other than a firearm) designed for trapping, destroying, repelling, or mitigating any pest or any other form of plant or animal life (other than man and other than bacterium, virus, or another microorganism on or in living man or other living animals), but not including equipment used for the application of pesticides when sold separately from the device.

"Disinfectant" means any product intended to destroy or irreversibly inactivate infectious or other undesirable bacteria, pathogenic fungi, or viruses on surfaces or inanimate objects and whose label is registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA, 7 USC 136 et seq.). "Disinfectant" does not include any of the following: products designed solely for use on humans or animals, products designed for agricultural use, products designed solely for use in swimming pools, therapeutic tubs, or hot tubs, products that, as indicated on the principal display panel or label, are designed primarily for use as bathroom and tile cleaners, glass cleaners, general purpose cleaners, toilet bowl cleaners, or metal polishes.

"Double Phase Aerosol Air Freshener" means an aerosol air freshener with the liquid contents in two or more distinct phases that require the product container to be shaken before use to mix the phases, producing an emulsion.

"Dry Cleaning Fluid" means any non-aqueous liquid product designed and labeled exclusively for use on fabrics that are labeled "dry clean only", such as clothing or drapery or "S-coded" fabrics. This includes~~, but is not limited to,~~ those products used by commercial dry cleaners and commercial businesses that clean fabrics such as draperies at the customer's residence or work place. The term does not include "Spot Remover" or "Carpet and Upholstery Cleaner". For the purposes of this definition, "S-coded fabric" means an upholstery fabric designed to be cleaned only with water-free spot cleaning products as specified by the Joint Industry Fabric Standards Committee.

"Dusting Aid" means a product designed to assist in removing dust and other soils from floors and other surfaces without leaving a wax or silicone based coating. The term does not include "Pressurized Gas Duster".

"Electrical Cleaner" means a product labeled to remove heavy soils such as grease, grime, or oil from electrical equipment, including~~, but not limited to,~~ electric motors, armatures, relays, electric panels, or generators. The term does not include "General Purpose Cleaner", "General Purpose Degreaser", "Dusting Aid", "Electronic Cleaner", "Energized

Electrical Cleaner", "Pressurized Gas Duster", "Engine Degreaser", "Anti-Static Product", or products designed to clean the casings or housings of electrical equipment.

"Electronic Cleaner" means a product labeled for the removal of dirt, moisture, dust, flux, or oxides from the internal components of electronic or precision equipment such as circuit boards, and the internal components of electronic devices, including~~, but not limited to,~~ radios, compact disc (CD) players, digital video disc (DVD) players, and computers. "Electronic Cleaner" does not include "General Purpose Cleaner", "General Purpose Degreaser", "Dusting Aid", "Pressurized Gas Duster", "Engine Degreaser", "Electrical Cleaner", "Energized Electrical Cleaner", "Anti-Static Product", or products designed to clean the casings or housings of electronic equipment.

"Energized Electrical Cleaner" means a product that meets both of the following criteria:

The product is labeled to clean and/or degrease electrical equipment, where cleaning and/or degreasing is accomplished when electrical current exists, or when there is a residual electrical potential from a component, such as a capacitor.

The product label clearly displays the statements: "Energized equipment use only. Not to be used for motorized vehicle maintenance, or their parts."

This does not include "Electronic Cleaner".

"Engine Degreaser" means a cleaning product designed to remove grease, grime, oil, and other contaminants from the external surfaces of engines and other mechanical parts.

"Existing Product" means any formulation of the same product category and form sold, supplied, manufactured, or offered for sale in Illinois ~~prior to~~before the effective date in Section 223.205, or any identical formulation.

"Fabric Protectant" means a product designed to be applied to fabric substrates to protect the surface from soiling from dirt and other impurities or to reduce absorption of liquid into the fabric's fibers. The term does not include waterproofers, products designed for use solely on leather, or products designed for use solely on fabrics labeled "dry clean only" and sold in containers of 10 fluid ounces or less.

"Fabric Refresher" means a product labeled to neutralize or eliminate odors on non-laundered fabric including~~, but not limited to,~~ soft household surfaces, rugs, carpeting, draperies, bedding, automotive interiors, footwear, athletic equipment, or clothing or on household furniture or objects upholstered or covered with fabrics such as~~, but not limited to,~~ wool, cotton, or nylon. "Fabric Refresher" does not include "Anti-static Product", "Carpet and Upholstery Cleaner", "Soft Household Surface Sanitizers", "Footwear or Leather Care Product", "Spot Remover", or "Disinfectant", or products labeled for application to both fabric and human skin.

For the purposes of this definition only, "Soft Household Surface Sanitizer" means a product labeled to neutralize or eliminate odors on the listed surfaces above whose label is registered as a sanitizer under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA, 7 USC 136 et seq.).

"Facial Cleaner or Soap" means a cleaner or soap designed primarily to clean the face including~~, but not limited to,~~ facial cleansing creams, semisolids, liquids, lotions, and substrate-impregnated forms. The term does not include prescription drug products, "Antimicrobial Hand or Body Cleaner or Soap", "Astringent/Toner", "~~General use~~General-Use Hand or Body Cleaner or Soap", "Medicated Astringent/Medicated Toner", or "Rubbing Alcohol".

"Fat Wood" means pieces of wood kindling with high naturally-occurring levels of sap or resin that enhance ignition of the kindling, excluding any kindling with substances added to enhance flammability, such as wax-covered or wax-impregnated wood-based products.

"Faux Finishing Coating" means a coating labeled and formulated as a stain or a glaze to create artistic effects including~~, but not limited to,~~ dirt, old age, smoke damage, and simulated marble and wood grain.

"Flea and Tick Insecticide" means any insecticide product that is designed for use against fleas, ticks, their larvae, or their eggs. The term does not include products that are designed to be used exclusively on humans or animals and their bedding.

"Flexible Flooring Material" means asphalt, cork, linoleum, no-wax, rubber, seamless vinyl, and vinyl composite flooring.

"Floor Coating" means an opaque coating that is labeled and formulated for application to flooring, including~~, but not limited to,~~ decks, porches, steps, and other horizontal surfaces that may be subjected to foot traffic.

"Floor Polish or Wax" means a wax, polish, or any other product designed to polish, protect, or enhance floor surfaces by leaving a protective coating that is designed to be periodically replenished. The term does not include "Spray Buff Products", products designed solely for the purpose of cleaning floors, floor finish strippers, products designed for unfinished wood floors, and coatings subject to architectural coatings regulations.

"Floor Seam Sealer" means any product designed and labeled exclusively for bonding, fusing, or sealing (coating) seams between adjoining rolls of installed flexible sheet flooring.

"Floor Wax Stripper" means a product designed to remove natural or synthetic floor polishes or waxes through breakdown of the polish or wax polymers, or by dissolving or emulsifying the polish or wax. This does not include aerosol floor wax strippers or products designed to remove floor wax solely through abrasion.

"Flying Bug Insecticide" means any insecticide product that is designed for use against flying insects or other flying arthropods, including ~~but not limited to~~ flies, mosquitoes, moths, or gnats. The term does not include "Wasp and Hornet Insecticide", products that are designed to be used exclusively on humans or animals, or any moth-proofing product.

> For purposes of this definition only, "Moth-Proofing Product" means a product whose label, packaging, or accompanying literature indicates that the product is designed to protect fabrics from damage by moths, but does not indicate that the product is suitable for use against flying insects or other flying arthropods.

"Footwear or Leather Care Product" means any product designed or labeled to be applied to footwear or to other leather articles/components to maintain, enhance, clean, protect, or modify the appearance, durability, fit, or flexibility of the footwear or leather article/component. Footwear includes both leather and non-leather foot apparel. "Footwear or Leather Care Product" does not include "Fabric Protectant", "General Purpose Adhesive", "Contact Adhesive", "Vinyl/Fabric/Leather/Polycarbonate Coating", "Rubber and Vinyl Protectant", "Fabric Refresher", products solely for deodorizing, or sealant products with adhesive properties used to create external protective layers greater than two millimeters thick.

"Fragrance" means a substance or complex mixture of aroma chemicals, natural essential oils, and other functional components with a combined vapor pressure not in excess of two mm of Hg at ~~20°C~~20 °C, the sole purpose of which is to impart an odor or scent, or to counteract a malodor.

"Furniture Maintenance Product" means a wax, polish, conditioner, or any other product designed for the purpose of polishing, protecting, or enhancing finished wood surfaces other than floors. The term does not include "Dusting Aids", "Wood Cleaners", products designed solely for the purpose of cleaning, and products designed to leave a permanent finish such as stains, sanding sealers, and lacquers.

"Furniture Coating" means any paint designed for application to room furnishings including~~, but not limited to,~~ cabinets (kitchen, bath, and vanity), tables, chairs, beds, and sofas.

"~~"~~Gel~~"~~" means a colloid in which the disperse phase has combined with the continuous phase to produce a semisolid material, such as jelly.

"~~"~~General Purpose Adhesive~~"~~" means any non-aerosol adhesive designed for use on a variety of substrates. The term does not include contact adhesives, construction, panel, and floor covering adhesives, adhesives designed exclusively for application on one specific category of substrates (i.e., substrates that are composed of similar materials, such as different types of metals, paper products, ceramics, plastics, rubbers, or vinyls), or adhesives designed exclusively for use on one specific category of articles (i.e., articles

that may be composed of different materials but perform a specific function, such as gaskets, automotive trim, weather-stripping, or carpets).

"General Purpose Cleaner" means a product designed for general all-purpose cleaning, in contrast to cleaning products designed to clean specific substrates in certain situations. This includes products designed for general floor cleaning, kitchen or countertop cleaning, and cleaners designed to be used on a variety of hard surfaces, and does not include "General Purpose Degreasers" and "Electronic Cleaners".

"General Purpose Degreaser" means any product labeled to remove or dissolve grease, grime, oil, and other oil-based contaminants from a variety of substrates, including automotive or miscellaneous metallic parts. This does not include "Engine Degreaser", "General Purpose Cleaner", "Adhesive Remover", "Electronic Cleaner", "Electrical Cleaner", "Energized Electrical Cleaner", "Metal Polish/Cleanser", products used exclusively in "Solvent Cleaning Tanks or Related Equipment", or products that are sold exclusively to establishments that manufacture or construct goods or commodities, and labeled "not for retail sale".

> "Solvent Cleaning Tanks or Related Equipment" includes~~, but is not limited to,~~ cold cleaners, vapor degreasers, conveyorized degreasers, film cleaning machines, or products designed to clean miscellaneous metallic parts by immersion in a container.

"General-Use Hand or Body Cleaner or Soap" means a cleaner or soap designed to be used routinely on the skin to clean or remove typical or common dirt and soils, including~~, but not limited to,~~ hand or body washes, dual-purpose shampoo-body cleaners, shower or bath gels, and moisturizing cleaners or soaps. The term does not include prescription drug products, "Antimicrobial Hand or Body Cleaner or Soap", "Astringent/Toner", "Facial Cleaner or Soap", "Hand Dishwashing Detergent" (including antimicrobial), "~~Heavy-duty~~Heavy-Duty Hand Cleaner or Soap", "Medicated Astringent/Medicated Toner", or "Rubbing Alcohol".

"Glass Cleaner" means a cleaning product designed primarily for cleaning surfaces made of glass. The term does not include products designed solely for the purpose of cleaning optical materials used in eyeglasses, photographic equipment, scientific equipment, and photocopying machines.

"Graffiti Remover" means a product labeled to remove spray paint, ink, marker, crayon, lipstick, nail polish, or shoe polish from a variety of non-cloth or nonfabric substrates. The term does not include "Paint Remover or Stripper", "Nail Polish Remover", or "Spot Remover". Products labeled for dual use as both a paint stripper and graffiti remover are considered "Graffiti Removers".

"Hair Mousse" means a hairstyling foam designed to facilitate styling of a coiffure and provide limited holding power.

"Hair Shine" means any product designed for the primary purpose of creating a shine when applied to the hair. This includes~~, but is not limited to,~~ dual-use products designed primarily to impart a sheen to the hair. The term does not include "Hair Spray", "Hair Mousse", "Hair Styling Product", "Hair Styling Gel", or products whose primary purpose is to condition or hold the hair.

"Hair Spray" means:

For products manufactured before July 1, 2009, a consumer product designed primarily for the purpose of dispensing droplets of a resin on and into a hair coiffure that will impart sufficient rigidity to the coiffure to establish or retain the style for a period of time.

For products manufactured on or after July 1, 2009, a consumer product that is applied to styled hair and is designed or labeled to provide sufficient rigidity to hold, retain and/or finish the style of the hair for a period of time. This includes aerosol hair sprays, pump hair sprays, spray waxes; color, glitter, or sparkle hairsprays that make finishing claims; and products that are both a styling and finishing product. This does not include spray products that are intended to aid in styling but do not provide finishing of a hairstyle. For the purposes of this Subpart, "finish" or "finishing" means the maintaining and/or holding of previously styled hair for a period of time. For the purposes of this Subpart, "styling" means forming, sculpting, or manipulating the hair to temporarily alter the hair's shape.

"Hair Styling Gel" means a consumer product manufactured before July 1, 2009, that is a high viscosity, often gelatinous, product that contains a resin and is designed for application to hair to aid in styling and sculpting of the hair coiffure.

"Hair Styling Product" means a consumer product manufactured on or after July 1, 2009, that is designed or labeled for application to wet, damp, or dry hair to aid in defining, shaping, lifting, styling and/or sculpting of the hair. This includes~~, but is not limited to,~~ hair balm, clay, cream, creme, curl straightener, gel, liquid, lotion, paste, pomade, putty, root lifter, serum, spray gel, stick, temporary hair straightener, wax, spray products that aid in styling but do not provide finishing of a hairstyle, and leave-in volumizers, detanglers and/or conditioners that make styling claims. This does not include "Hair Mousse", "Hair Shine", "Hair Spray", or shampoos and/or conditioners that are rinsed from the hair prior to styling. For the purposes of this Subpart, "finish" or "finishing" means the maintaining and/or holding of previously styled hair for a period of time. For the purposes of this Subpart, "styling" means forming, sculpting, or manipulating the hair to temporarily alter the hair's shape.

"Heavy-Duty Hand Cleaner or Soap" means a product designed to clean or remove difficult dirt and soils such as oil, grease, grime, tar, shellac, putty, printer's ink, paint, graphite, cement, carbon, asphalt, or adhesives from the hand with or without the use of water. The term does not include prescription drug products, "Antimicrobial Hand or

Body Cleaner or Soap", "Astringent/Toner", "Facial Cleaner or Soap", "~~General-use~~General-Use Hand or Body Cleaner or Soap", "Medicated Astringent/Medicated Toner" or "Rubbing Alcohol".

"Herbicide" means a pesticide product designed to kill or retard a plant's growth, but excludes products that are for agricultural use, or restricted materials that require a permit for use and possession.

"High Volatility Organic Material" or "HVOM" or "High Volatility Organic Compound" or "HVOC" means any volatile organic material or volatile organic compound that exerts a vapor pressure greater than 80 millimeters of Mercury (mm Hg) when measured at ~~20°C~~20 °C.

"Household Product" means any consumer product that is primarily designed to be used inside or outside of living quarters or residences that are occupied or intended for occupation by individuals, including the immediate surroundings.

"Illinois Sales" means the sales (net pounds of product, less packaging and container, per year) in Illinois for either the calendar year immediately ~~prior to~~before the year that the registration is due or, if that data is not available, any consecutive 12 month period commencing no earlier than two years ~~prior to~~before the due date of the registration. If direct sales data for Illinois is not available, sales may be estimated by prorating national or regional sales data by population.

"Industrial Use" means use for or in a manufacturing, mining, or chemical process or use in the operation of factories, processing plants, and similar sites.

"Insecticide" means a pesticide product that is designed for use against insects or other arthropods, but excluding products that are for agricultural use or for a use that requires a structural pest control license under the Structural Pest Control Act [225 ILCS 235], or restricted materials that require a permit for use and possession.

"Insecticide Fogger" means any insecticide product designed to release all or most of its content, as a fog or mist, into indoor areas during a single application.

"Institutional Product" or "Industrial and Institutional (I&I) Product" means a consumer product that is designed for use in the maintenance or operation of an establishment that manufactures, transports, or sells goods or commodities, or provides services for profit, or is engaged in the nonprofit promotion of a particular public, educational, or charitable cause. "Establishments" include~~, but are not limited to,~~ government agencies, factories, schools, hospitals, sanitariums, prisons, restaurants, hotels, stores, automobile service and parts centers, health clubs, theaters, or transportation companies. This does not include household products and products that are incorporated into or used exclusively in the manufacture or construction of the goods or commodities at the site of the establishment.

"Label" means any written, printed, or graphic matter affixed to, applied to, attached to, blown into, formed into, molded into, embossed on, or appearing upon any consumer product or consumer product package, for purposes of branding, identifying, or giving information with respect to the product or to the contents of the package.

"Lacquer" means a clear or opaque wood coating, including clear lacquer sanding sealers, formulated with cellulosic or synthetic resins to dry by evaporation without chemical reaction and to provide a solid, protective film.

"Laundry Prewash" means a product that is designed for application to a fabric ~~prior to~~before laundering and that supplements and contributes to the effectiveness of laundry detergents and/or provides specialized performance.

"Laundry Starch Product" means a product that is designed for application to a fabric, either during or after laundering, to impart and prolong a crisp, fresh look and may also act to help ease ironing of the fabric. This includes~~, but is not limited to,~~ fabric finish, sizing, and starch.

"Lawn and Garden Insecticide" means an insecticide product labeled primarily to be used in household lawn and garden areas to protect plants from insects or other arthropods. Notwithstanding ~~the requirements of~~ Section 223.260, aerosol "Lawn and Garden Insecticides" may claim to kill insects or other arthropods.

"Liquid" means a substance or mixture of substances that is capable of a visually detectable flow as determined under ASTM D-4359-90, incorporated by reference in Section 223.120, or an equivalent method approved by the California Air Resources Board. This does not include powders or other materials that are composed entirely of solid particles.

"Lubricant" means a product designed to reduce friction, heat, noise, or wear between moving parts, or to loosen rusted or immovable parts or mechanisms. This does not include automotive power steering fluids; products for use inside power generating motors, engines, and turbines, and their associated power-transfer gearboxes; two cycle oils or other products designed to be added to fuels; products for use on the human body or animals; or products that are sold exclusively to establishments that manufacture or construct goods or commodities, and labeled "not for retail sale".

"LVP Content" means the total weight, in pounds, of LVP compounds in an ACP product multiplied by 100 and divided by the product's total net weight (in pounds, excluding container and packaging), expressed to the nearest 0.1.

"LVP-VOM" or "LVP-VOC" means a chemical material or mixture or compound that contains at least one carbon atom and meets one of the following:

Has a vapor pressure less than 0.1 mm Hg at ~~20°C~~20 ºC, as determined by CARB Method 310, incorporated by reference in Section 223.120; or

Is a chemical material or compound with more than 12 carbon atoms, or a chemical mixture comprised solely of material or a compound with more than 12 carbon atoms as verified by formulation data, and the vapor pressure and boiling point are unknown; or

Is a chemical material or compound with a boiling point greater than ~~216°C~~216 °C, as determined by CARB Method 310, incorporated by reference in Section 223.120; or

Is the weight percent of a chemical mixture that boils above ~~216° C~~216 °C, as determined by CARB Method 310, incorporated by reference in Section 223.120.

For the purposes of this definition, "chemical material or compound" means a molecule of definite chemical formula and isomeric structure, and "chemical mixture" means a substrate comprised of two or more chemical materials or compounds.

"Medicated Astringent/Medicated Toner" means any product regulated as a drug by the FDA that is applied to the skin for the purpose of cleaning or tightening pores. This includes~~, but is not limited to,~~ clarifiers and substrate-impregnated products. The term does not include hand, face, or body cleaner or soap products, "Astringent/Toner", cold cream, lotion, antiperspirants, or products that must be purchased with a doctor's prescription.

"Medium Volatility Organic Material" or "MVOM" or "Medium Volatility Organic Compound" or "MVOC" means any volatile organic material or volatile organic compound that exerts a vapor pressure greater than two mm Hg and less than or equal to 80 mm Hg when measured at ~~20°C~~20 °C.

"Metal Polish /Cleanser" means any product designed primarily to improve the appearance of finished metal or metallic or metallized surfaces by physical or chemical action. To "improve the appearance" means to remove or reduce stains, impurities, or oxidation from surfaces or to make surfaces smooth and shiny. This includes~~, but is not limited to,~~ metal polishes used on brass, silver, chrome, copper, stainless steel, and other ornamental metals. The term does not include "Automotive Wax, Polish, Sealant or Glaze", wheel cleaner, "Paint Remover or Stripper", products designed and labeled exclusively for automotive and marine detailing, or products designed for use in degreasing tanks.

"Mist Spray Adhesive" means any aerosol that is not a special purpose spray adhesive and that delivers a particle or mist spray, resulting in the formation of fine, discrete particles that yield a generally uniform and smooth application of adhesive to the substrate.

"Multi-Purpose Dry Lubricant" means any lubricant designed and labeled to provide lubricity by depositing a thin film of graphite, molybdenum disulfide (moly), or polytetrafluoroethylene or closely related fluoropolymer (Teflon) on surfaces, and designed for general purpose lubrication or for use in a wide variety of applications.

"Multi-Purpose Lubricant" means any lubricant designed for general purpose lubrication, or for use in a wide variety of applications. The term does not include "~~Multi-purpose~~Multi-Purpose Dry Lubricants", "Penetrants", or "Silicone-based Multi-purpose Lubricants".

"Multi-Purpose Solvent" means any organic liquid designed to be used for a variety of purposes, including cleaning or degreasing of a variety of substrates, or thinning, dispersing, or dissolving other organic materials. This includes solvents used in institutional facilities, except for laboratory reagents used in analytical, educational, research, scientific, or other laboratories. This does not include solvents used in cold cleaners, vapor degreasers, conveyorized degreasers or film cleaning machines, or solvents that are incorporated into, or used exclusively in the manufacture or construction of the goods or commodities at the site of the establishment.

"Nail Polish" means any clear or colored coating designed for application to the fingernails or toenails, including ~~but not limited to~~ lacquers, enamels, acrylics, base coats, and top coats.

"Nail Polish Remover" means a product designed to remove nail polish and coatings from fingernails or toenails.

"Non-Aerosol Product" means any consumer product that is not dispensed by a pressurized spray system.

"Non-Carbon Containing Compound" means any compound that does not contain any carbon atoms.

"Nonresilient Flooring" means flooring of a mineral content that is not flexible. This includes terrazzo, marble, slate, granite, brick, stone, ceramic tile, and concrete.

"Non-Selective Terrestrial Herbicide" means a terrestrial herbicide product that is toxic to plants without regard to species.

"Oven Cleaner" means any cleaning product designed to clean and to remove dried food deposits from oven walls.

"Paint" means any pigmented liquid or liquefiable or mastic composition designed for application to a substrate in a thin layer that is converted to an opaque solid film after application and is used for protection, decoration, or identification, or to serve some functional purpose such as the filling or concealing of surface irregularities or the modification of light and heat radiation characteristics.

"“Paint Remover or Stripper”" means any product designed to strip or remove paints or other related coatings, by chemical action, from a substrate without markedly affecting the substrate. This does not include "“Multi-purpose Solvents”", paint brush cleaners, products designed and labeled exclusively as "“Graffiti Removers”", and hand cleaner products that claim to remove paints and other related coatings from skin.

"“Penetrant”" means a lubricant designed and labeled primarily to loosen metal parts that have bonded together due to rusting, oxidation, or other causes. The term does not include "“Multi-purpose Lubricants”" that claim to have penetrating qualities, but are not labeled primarily to loosen bonded parts.

"“Personal Fragrance Product”" means any product that is applied to the human body or clothing for the primary purpose of adding a scent or masking a malodor, including cologne, perfume, aftershave, and toilet water. This does not include "“Deodorant”"; medicated products designed primarily to alleviate fungal or bacterial growth on feet or other areas of the body; mouthwashes and breath fresheners and deodorizers; lotions, moisturizers, powders, or other skin care products used primarily to alleviate skin conditions such as dryness and irritations; products designed exclusively for use on human genitalia; soaps, shampoos, and products primarily used to clean the human body; and fragrance products designed to be used exclusively on non-human animals.

"Pesticide" means and includes any substance or mixture of substances labeled, designed, or intended for use in preventing, destroying, repelling, or mitigating any pest, or any substance or mixture of substances labeled, designed, or intended for use as a defoliant, desiccant, or plant regulator, provided that the term "Pesticide" will not include any substance, mixture of substances, or device the United States Environmental Protection Agency does not consider to be a pesticide.

"Photograph Coating" means a coating designed and labeled exclusively to be applied to finished photographs to allow corrective retouching, protection of the image or changes in gloss level, or to cover fingerprints.

"Pressurized Gas Duster" means a pressurized product labeled to remove dust from a surface solely by means of mass air or gas flow, including surfaces such as photographs, photographic film negatives, computer keyboards, and other types of surfaces that cannot be cleaned with solvents. This does not include "Dusting Aid".

"Principal Display Panel or Panels" means that part, or those parts, of a label that are so designed as to most likely be displayed, presented, shown, or examined under normal and customary conditions of display or purchase. Whenever a principal display panel appears more than once, all requirements pertaining to the "Principal Display Panel" ~~shall~~ must pertain to all such "Principal Display Panels".

"Product Brand Name" means the name of the product exactly as it appears on the principal display panel of the product.

"Product Category" means the applicable category, defined in this Section and limited in Section 223.205(a), that best describes the product.

"Product Form" for the purpose of complying with Section 223.270 only, means the applicable form that most accurately describes the product's dispensing form, as follows:

A = Aerosol Product
S = Solid
P = Pump Spray
L = Liquid
SS = Semisolid
O = Other

"Product Line" means a group of products of identical form and function belonging to the same product category or categories.

"Pump Spray" means a packaging system in which the product ingredients within the container are not under pressure and in which the product is expelled only while a pumping action is applied to a button, trigger, or other actuator.

"Responsible ACP Party" means the company, firm, or establishment listed on the ACP product's label. If the label lists two or more companies, firms, or establishments, the "Responsible ACP Party" is the party the ACP product was "manufactured for" or "distributed by", as noted on the label.

"Restricted Materials" means pesticides established as restricted materials under applicable Illinois statutes or regulations.

"Roll-On Product" means any antiperspirant or deodorant that dispenses active ingredients by rolling a wetted ball or wetted cylinder on the affected area.

"Rubber and Vinyl Protectant" means any product designed to protect, preserve, or renew vinyl, rubber, and plastic on vehicles, tires, luggage, furniture, and household products such as vinyl covers, clothing, and accessories. This does not include products primarily designed to clean the wheel rim, such as aluminum or magnesium wheel cleaners, and tire cleaners that do not leave an appearance-enhancing or protective substance on the tire.

"Rubbing Alcohol" means any product containing isopropyl alcohol (also called isopropanol) or denatured ethanol and labeled for topical use, usually to decrease germs in minor cuts and scrapes, to relieve minor muscle aches, as a rubefacient, and for massage.

"Rust Preventive Coating" means a coating formulated exclusively for nonindustrial use to prevent the corrosion of metal surfaces and labeled as specified in Section 223.320(f).

"Sanding Sealer" means a clear or semi-transparent wood coating labeled and formulated for application to bare wood to seal the wood and to provide a coat that can be abraded to create a smooth surface for subsequent applications of coatings. A "Sanding Sealer" that also meets the definition of a "Lacquer" is not included in this category, but it is included in the "Lacquer" category.

"Sealant and Caulking Compound" means any product with adhesive properties that is designed to fill, seal, waterproof, or weatherproof gaps or joints between two surfaces. This does not include roof cements and roof sealants, insulating foams, removable caulking compounds, clear/paintable/water resistant caulking compounds, floor seam sealers, products designed exclusively for automotive uses, or sealers that are applied as continuous coatings. The term also does not include units of product, less packaging, that weigh more than one pound and consist of more than 16 fluid ounces.

> For the purposes of this definition only, "removable caulking compound" means a compound that temporarily seals windows or doors for three to six month time intervals. "Clear/paintable/water resistant caulking compound" means a compound that contains no appreciable level of opaque fillers or pigments; transmits most or all visible light through the caulk when cured; is paintable; and is immediately resistant to precipitation upon application.

"Semisolid" means a product that, at room temperature, will not pour, but will spread or deform easily, including ~~but not limited to~~ gels, pastes, and greases.

"Shaving Cream" means an aerosol product that dispenses a foam lather intended to be used with a blade or cartridge razor, or other wet-shaving system, in the removal of facial or other body hair. The term does not include "Shaving Gel".

"Shaving Gel" means an aerosol product that dispenses a post-foaming semisolid designed to be used with a blade, cartridge razor, or other shaving system in the removal of facial or other body hair. This does not include "Shaving Cream".

"Silicone-Based Multi-Purpose Lubricant" means any lubricant designed and labeled to provide lubricity primarily through the use of silicone compounds including~~, but not limited to,~~ polydimethylsiloxane, and designed and labeled for general purpose lubrication, or for use in a wide variety of applications. The term does not include products designed and labeled exclusively to release manufactured products from molds.

"Single Phase Aerosol Air Freshener" means an aerosol air freshener with the liquid contents in a single homogeneous phase and that does not require that the product container be shaken before use.

"Solid" means a substance or mixture of substances that, either whole or subdivided (such as the particles comprising a powder), is not capable of visually detectable flow as

determined under ASTM D4359-90, incorporated by reference in Section 223.120, or an equivalent method approved by the California Air Resources Board.

"Special Purpose Spray Adhesive" means an aerosol adhesive that meets any of the following definitions:

"Mounting Adhesive" means an aerosol adhesive designed to permanently mount photographs, artwork, and any other drawn or printed media to a backing (paper, board, cloth, etc.) without causing discoloration to the artwork.

"Flexible Vinyl Adhesive" means an aerosol adhesive designed to bond flexible vinyl to substrates. Flexible vinyl means a nonrigid polyvinyl chloride plastic with at least five percent, by weight, of plasticizer content. A plasticizer is a material, such as a high boiling point organic solvent, that is incorporated into a plastic to increase its flexibility, workability, or distensibility, and may be determined using ASTM E260-96, incorporated by reference in Section 223.120, or from product formulation data or an equivalent method approved by the CARB.

"Polystyrene Foam Adhesive" means an aerosol adhesive designed to bond polystyrene foam to substrates.

"Automobile Headliner Adhesive" means an aerosol adhesive designed to bond together layers in motor vehicle headliners.

"Polyolefin Adhesive" means an aerosol adhesive designed to bond polyolefins to substrates.

"Laminate Repair/Edgebanding Adhesive" means an aerosol adhesive designed for:

The touch-up or repair of items laminated with high pressure laminates (e.g., lifted edges, delaminates, etc.); or

The touch-up, repair, or attachment of edgebanding materials, including ~~but not limited to~~ other laminates, synthetic marble, veneers, wood molding, and decorative metals.

For the purposes of this definition "high pressure laminate" means sheet materials that consist of paper, fabric, or other core material that have been laminated at temperatures exceeding ~~265° F~~265 ºF, and at pressures between 1,000 and 1,400 psi.

"Automotive Engine Compartment Adhesive" means an aerosol adhesive designed for use in motor vehicle under-the-hood applications that require oil and

plasticizer resistance, as well as high shear strength, at temperatures of 200 to ~~275° F~~275 ºF.

"Spot Remover" means any product labeled to clean localized areas~~,~~ or remove localized spots or stains on cloth or fabric such as drapes, carpets, upholstery, and clothing, that does not require subsequent laundering to achieve stain removal. This does not include "Dry Cleaning Fluid", "Laundry Prewash", or "Multi-Purpose Solvent".

"Spray Buff Product" means a product designed to restore a worn floor finish in conjunction with a floor buffing machine and special pad.

"Stick Product" means any antiperspirant or deodorant that contains active ingredients in a solid matrix form and that dispenses the active ingredients by frictional action on the affected area.

"Structural Waterproof Adhesive" means an adhesive whose bond lines are resistant to conditions of continuous immersion in fresh or salt water and that conforms with Federal Specification MMM-A-181D (Type 1, Grade A), incorporated by reference in Section 223.120, and MIL-A-4605 (Type A, Grade A and Grade C), per the Federal Consumer Products Regulation (40 CFR 59, subpart C), incorporated by reference in Section 223.120.

"Terrestrial" means to live on or grow from land.

"Tire Sealant and Inflation" means any pressurized product that is designed to temporarily inflate and seal a leaking tire.

"Toilet/Urinal Care Product" means any product designed or labeled to clean and/or to deodorize toilet bowls, toilet tanks, or urinals. Toilet bowls, toilet tanks, or urinals include~~, but are not limited to,~~ toilets or urinals connected to permanent plumbing in buildings and other structures, portable toilets or urinals placed at temporary or remote locations, and toilets or urinals in vehicles such as buses, recreational motor homes, boats, ships, and aircraft. This does not include "Bathroom and Tile Cleaner" or "General Purpose Cleaner".

"Type A Propellant" means a compressed gas, such as CO_2, N_2, N_2O, or compressed air, that is used as a propellant, and is either incorporated with the product or contained in a separate chamber within the product's packaging.

"Type B Propellant" means any halocarbon that is used as a propellant, including chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs), and hydrofluorocarbons (HFCs).

"Type C Propellant" means any propellant that is not a Type A or Type B propellant, including propane, isobutane, n-butane, and dimethyl ether (also known as dimethyl oxide).

"Undercoating" means any aerosol product designed to impart a protective, non-paint layer to the undercarriage, trunk interior, and/or firewall of motor vehicles to prevent the formation of rust or to deaden sound. This includes~~, but is not limited to,~~ rubberized, mastic, or asphaltic products.

"Usage Directions" means the text or graphics on the product's principal display panel, label, or accompanying literature that describes to the end user how and in what quantity the product is to be used.

"Vinyl/Fabric/Leather/Polycarbonate Coating" means a coating designed and labeled exclusively to coat vinyl, fabric, leather, or polycarbonate substrates.

"VOM Content" means, for purposes of this Subpart, except for charcoal lighter products, the total weight of VOM in a product expressed as a percentage of the product weight (exclusive of the container or packaging), as determined ~~pursuant to~~under Section 223.285(a) and (b).

For charcoal lighter material products only,

$$VOC\ Content = \frac{(Certified\ Emissions\ x\ 100)}{Certified\ Use\ Rate}$$

Certified Emissions = The emissions level for products approved by the Agency under Section 223.220, as determined ~~pursuant to~~under South Coast Air Quality Management District Rule 1174, Ignition Method Compliance Certification Protocol (February 27, 1991), incorporated by reference at Section 223.120, expressed to the nearest 0.001 pound CH_2 per start.

Certified Use Rate = The usage level for products approved by the Agency under Section 223.220, as determined ~~pursuant to~~under South Coast Air Quality Management District Rule 1174, Ignition Method Compliance Certification Protocol (February 27, 1991), incorporated by reference at Section 223.120, expressed to the nearest 0.001 pound certified product used per start.

For purposes of Subpart C~~ of this Part~~, "VOM Content" means the weight of VOM per volume of coating, calculated according to the procedures ~~specified~~ in Section 223.340(a).

"Wasp and Hornet Insecticide" means any insecticide product that is designed for use against wasps, hornets, yellow jackets, or bees by allowing the user to spray from a distance a directed stream or burst at the intended insects, or their hiding place.

"Waterproofer" means a product designed and labeled exclusively to repel water from fabric or leather substrates, excluding "Fabric Protectants".

"Wax" means a material or synthetic thermoplastic substance generally of high molecular weight hydrocarbons or high molecular weight esters of fatty acids or alcohols, except glycerol and high polymers (plastics). This includes~~, but is not limited to,~~ substances derived from the secretions of plants and animals such as carnuba wax and beeswax, substances of a mineral origin such as ozocerite and paraffin, and synthetic polymers such as polyethylene.

"Web Spray Adhesive" means any aerosol adhesive that is not a mist spray or special purpose spray adhesive.

"Wood Cleaner" means a product labeled to clean wooden materials, including ~~but not limited to~~ decking, fences, flooring, logs, cabinetry, and furniture. The term does not include "Dusting Aid", "General Purpose Cleaner", "Furniture Maintenance Product", "Floor Wax Stripper", "Floor Polish or Wax", or products designed and labeled exclusively to preserve or color wood.

"Wood Floor Wax" means wax-based products for use solely on wood floors.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.205 Standards

a) Except as provided in Section 223.207, 223.230, 223.240, or 223.245, ~~no~~ a person ~~shall~~ must not sell, supply, offer for sale, or manufacture for sale in Illinois any consumer product manufactured on or after the date specified below that contains VOMs in excess of the limits specified in this subsection:

	Affected Product	July 1, 2009 % VOM by Weight	July 1, 2012 % VOM by Weight
1)	Adhesive Removers		
A)	Floor or Wall Covering		5
B)	Gasket or Thread Locking		50
C)	General Purpose		20

	D)	Specialty		70
2)	Adhesives – Spray			
	A)	Mist Spray	65	
	B)	Web Spray	55	
	C)	Special Purpose Spray Adhesives		
		i) Mounting, Automotive Engine Compartment, and Flexible Vinyl	70	
		ii) Polystyrene Foam and Automotive Headliner	65	
		iii) Polyolefin and Laminate Repair/Edgebanding	60	
3)	Adhesives – Construction, Panel and Floor Contact		15	
4)	Adhesives – Contact			
	A)	General Purpose		55
	B)	Special Purpose		80
5)	Adhesives – General Purpose		10	
6)	Adhesives – Structural Waterproof		15	
7)	Air Fresheners			
	A)	Single-Phase Aerosol	30	
	B)	Double Phase Aerosol	25	
	C)	Liquids / Pump Sprays	18	
	D)	Solids / Gel	3	
8)	Antiperspirants			
	A)	Aerosol	40 HVOM 10 MVOM	

	B)	Non-Aerosol	0 HVOM 0 MVOM
9)	Anti-static Product, Non-Aerosol		11
10)	Automotive Brake Cleaners	45	
11)	Automotive Rubbing or Polishing Compound	17	
12)	Automotive Wax, Polish, Sealant, or Glaze		
	A)	Hard Paste Waxes	45
	B)	Instant Detailers	3
	C)	All Other Forms	15
13)	Automotive Windshield Washer Fluids	35	
14)	Bathroom and Tile Cleaners		
	A)	Aerosol	7
	B)	All Other Forms	5
15)	Bug and Tar Remover	40	
16)	Carburetor or Fuel-Injection Air Intake Cleaners	45	
17)	Carpet and Upholstery Cleaners		
	A)	Aerosol	7

b) ~~No~~ A person ~~shall~~ must not sell, supply, offer for sale, or manufacture for sale in Illinois, on or after July 1, 2009, any antiperspirant or deodorant that contains any compound listed in this subsection (b):

Benzene

Ethylene Dibromide

Ethylene Dichloride

Hexavalent Chromium

Asbestos

Cadmium (metallic cadmium and cadmium compounds)

Carbon Tetrachloride

Trichloroethylene

Chloroform

Vinyl Chloride

Inorganic Arsenic

Nickel (metallic nickel and inorganic nickel compounds)

Perchloroethylene

Formaldehyde

1,3-Butadiene

Inorganic Lead

Dibenzo-p-dioxins and dibenzofurans chlorinated in the 2,3,7 and 8 positions and containing 4,5,6 or 7 chlorine atoms

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.206 Diluted Products

a) For consumer products for which the label, packaging, or accompanying literature specifically states that the product should be diluted with water or non-VOM solvent prior to use, the limits specified in Section 223.205(a) must apply to the product only after the minimum recommended dilution has taken place.

b) For purposes of subsection (a) ~~of this Section~~, the minimum recommended dilution ~~shall~~ must not include recommendations for incidental use of a concentrated product to deal with limited special applications such as hard-to-remove soils or stains.

c) For consumer products for which the label, packaging, or accompanying literature states that the product should be diluted with any VOM solvent prior to use, the limits specified in Section 223.205(a) ~~shall~~ must apply to the product only after the maximum recommended dilution has taken place.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.207 Products Registered under FIFRA

For ~~those~~ consumer products ~~that are~~ registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA, 7 USC 136 through 136y), incorporated by reference in Section 223.120, the effective date of the VOM standards will be one year after the effective date ~~specified~~ in Section 223.205.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.208 Requirements for Aerosol Adhesives

a) As specified in California Code Section 41712(h)(2), incorporated by reference in Section 223.120, the standards for aerosol adhesives apply to all uses of aerosol adhesives, including consumer, industrial, and commercial uses. Except as otherwise provided in Sections 223.207, 223.230, 223.240, and 223.245, ~~no~~ a person ~~shall~~ must not sell, supply, offer for sale, use, or manufacture for sale in Illinois any aerosol adhesive that, at the time of sale, use, or manufacture, contains VOMs in excess of the specified standard.

b) Special Purpose Spray Adhesive.

1) In order to qualify as a Special Purpose Spray Adhesive, the product must meet one or more of the definitions for Special Purpose Spray Adhesive ~~specified~~ in Section 223.203, but if the product label indicates that the product is suitable for use on any substrate or application not listed in one of the definitions for Special Purpose Spray Adhesive, then the product ~~shall~~ must be classified as either a Web Spray Adhesive or a Mist Spray Adhesive.

2) If a product meets more than one of the definitions ~~specified~~ in Section 223.203 for Special Purpose Spray Adhesive and is not classified as a Web Spray Adhesive or Mist Spray Adhesive under Section 223.203, then the VOC limit for the product ~~shall~~ must be the lowest applicable VOM limit specified in Section 223.205(a).

c) Effective July 1, 2009, ~~no~~ a person ~~shall~~ must not sell, supply, offer for sale, or manufacture for use in Illinois any aerosol adhesive that contains any of the following compounds: methylene chloride, perchloroethylene, or trichloroethylene. These requirements do not apply to any Aerosol Adhesive containing methylene chloride, perchloroethylene, or trichloroethylene that is present as an impurity in a combined amount equal to or less than 0.01% by weight.

d) All aerosol adhesives must comply with the labeling requirements ~~specified~~ in Section 223.265.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.209 Requirements for Floor Wax Strippers

On or after July 1, 2009, ~~no~~ a person ~~shall~~ must not sell, supply, offer for sale, or manufacture for use in Illinois any floor wax stripper unless the following requirements are met:

a) The label of each non-aerosol floor wax stripper must specify a dilution ratio for light or medium build-up of polish that results in an as-used VOM concentration of three percent by weight or less;

b) If a non-aerosol floor wax stripper is also intended to be used for removal of heavy build-up of polish, the label of that floor wax stripper must specify a dilution ratio for heavy build-up of polish that results in an as-used VOM concentration of 12% by weight or less; and

c) The term "light build-up", "medium build-up", or "heavy build-up" is not specifically required, as long as comparable terminology is used.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.210 Products Containing Ozone-Depleting Compounds

a) For any consumer product for which standards are specified under Section 223.205(a), ~~no~~ a person ~~shall~~ must not sell, supply, offer for sale, or manufacture for sale in Illinois any consumer product that contains any of the following ozone-depleting compounds:

1) Trichlorofluoromethane (CFC-11);

2) Dichlorodifluoromethane (CFC-12);

3) 1,1,1-trichloro-2,2,2-trifluoroethane (CFC-113);

4) 1-chloro-1,1-difluoro-2-chloro-2,2-difluoroethane (CFC-114);

5) Chloropentafluoroethane (CFC-115);

6) Bromochlorodifluoromethane (Halon 1211);

7) Bromotrifluoromethane (Halon 1301);

8) Dibromotetrafluoroethane (Halon 2402);

9) Chlorodifluoromethane (HCFC-22);

10) 2,2-dichloro-1,1,1-trifluoroethane (HCFC-123);

11) 2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124);

12) 1,1-dichloro-1-fluoroethane (HCFC-141b);

13) 1-chloro-1,1-difluoroethane (HCFC-142b);

14) 1,1,1-trichloroethane; and

15) Carbon tetrachloride.

b) The requirements in subsection (a) ~~of this Section shall~~must not apply to any product formulation existing as of July 1, 2009, that complies with Section 223.205(a) or is reformulated to meet Section 223.205(a), provided the ozone-depleting compound content of the reformulated product does not increase.

c) The requirements in subsection (a) ~~of this Section shall~~must not apply to any ozone depleting compounds that may be present as impurities in a consumer product in an amount equal to or less than 0.01% by weight of the product.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.211 Requirements for Adhesive Removers, Aerosol Adhesives, Contact Adhesives, Electrical Cleaners, Electronic Cleaners, Footwear or Leather Care Products, General Purpose Degreasers, and Graffiti Removers

a) ~~No~~ A person ~~shall~~ must not sell, supply, offer for sale, or manufacture for use in Illinois any Adhesive Removers, Contact Adhesives, Electrical Cleaners, Electronic Cleaners, Footwear or Leather Care Products, General Purpose Degreasers, or Graffiti Removers manufactured on or after July 1, 2012, that contain any of the following compounds: methylene chloride, perchloroethylene, or trichloroethylene

b) ~~Impurities~~

The requirements of subsection (a) do not apply to any Adhesive Removers, Contact Adhesives, Electrical Cleaners, Electronic Cleaners, Footwear or Leather Care Products, General Purpose Degreasers, or Graffiti Removers containing methylene chloride, perchloroethylene, or trichloroethylene that is present as an impurity in a combined amount equal to or less than 0.01% by weight.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.220 Requirements for Charcoal Lighter Material

a) ~~No~~ A person ~~shall~~ must not sell, supply, or offer for sale on or after July 1, 2009, any charcoal lighter material product unless, at the time of the transaction, the manufacturer can demonstrate that it has been issued an effective certification by the CARB under the Consumer Products provisions under 17 California Code of Regulations § 94509(h), incorporated by reference in Section 223.120. This certification remains in effect for Illinois for as long as the CARB certification remains in effect.

b) Alternatively, the person may demonstrate that at the time of the transaction the manufacturer had been issued a certification by an air pollution agency of another state and USEPA that was current at the time of the transaction.

c) Upon request by the Agency, a manufacturer claiming to have a certification as specified in subsection (a) ~~of this Section,~~ must submit to the Agency a copy of the certification decision, including all conditions applicable to the certification established by CARB or the air pollution agency of another state and USEPA.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.230 Exemptions

a) This Subpart ~~shall~~ must not apply to any consumer product manufactured in Illinois for shipment and use outside of Illinois, as long as the manufacturer or distributor can demonstrate both that the consumer product is intended for shipment and use outside of Illinois, and that the manufacturer or distributor has taken reasonable, prudent precautions to assure that the consumer product is not distributed to Illinois. This exemption ~~shall~~ must not apply to consumer products that are sold, supplied, or offered for sale by any person to retail outlets in Illinois.

b) For antiperspirants or deodorants, ethanol ~~shall~~ must not be considered a medium volatility organic material (MVOM) for purposes of the content standards ~~specified~~ in Section 223.205(a).

c) The VOM limits ~~specified~~ in Section 223.205(a) ~~shall~~ must not apply to fragrances up to a combined level of two percent by weight contained in any consumer product and ~~shall~~ must not apply to colorants up to a combined level of two percent by weight contained in any antiperspirant or deodorant.

d) ~~The requirements of~~ Section 223.205(a) for antiperspirants or deodorants ~~shall~~ must not apply to those volatile organic materials that contain more than 10 carbon atoms per molecule and for which the vapor pressure is unknown, or that have a vapor pressure of two mm Hg or less at ~~20°C~~20 C°.

e) The VOM limits specified in Section 223.205(a) ~~shall~~ must not apply to any LVP-VOM.

f) ~~The requirements of~~ Section 223.250 ~~shall~~ must not apply to consumer products registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA, 7 USC 136 through 136y).

g) The VOM limits ~~specified~~ in Section 223.205(a) ~~shall~~ must not apply to air fresheners that are comprised entirely of fragrance, less compounds not defined as VOMs under Section 211.7150 or exempted under subsection (f).

h) The VOM limits ~~specified~~ in Section 223.205(a) ~~shall~~ must not apply to air fresheners and insecticides containing at least 98% para-dichlorobenzene.

i) The VOM limits ~~specified~~ in Section 223.205(a) ~~shall~~ must not apply to adhesives sold in containers of one fluid ounce or less.

j) The VOM limits ~~specified~~ in Section 223.205(a) ~~shall~~ must not apply to bait station insecticides. For the purpose of this section, bait station insecticides are containers enclosing an insecticidal bait that is not more than 0.5 ounce by weight, when the bait is designed to be ingested by insects and is composed of solid material feeding stimulants with less than five percent active ingredients.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.240 Innovative Product Exemption

a) Any manufacturer of consumer products which have been granted an Innovative Product exemption by the CARB under the Innovative Products provisions in 17 California Code of Regulations § 94511 or 94503.5, both incorporated by reference in Section 223.120, ~~shall~~ must be exempt from the limits in Section 223.205(a) for the period of time that the CARB Innovative Products exemption remains in effect, provided that all consumer products within the CARB Innovative Products exemption are ~~contained~~ in the limits in Section 223.205(a). Any manufacturer claiming ~~such~~ an exemption on this basis must submit to the Agency a copy of the CARB Innovative Product exemption decision (i.e., the Executive Order), including all conditions established by the CARB applicable to the exemption.

b) Recordkeeping and Availability of Requested Information.

1) All information specified in the Innovative Product exemption approving an Innovative Product application ~~shall~~ must be maintained by the responsible party for a minimum of three years after the expiration of the exemption. The records ~~shall~~ must be clearly legible and maintained in good condition during this period.

2) The records ~~specified~~ in subsection (b)(1) ~~shall~~ must be made available to the Agency, or its authorized representative, upon request.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.245 Alternative Compliance Plans

a) The purpose of this Section is to provide an alternative method to comply with the limits in Section 223.205(a). This alternative is provided by allowing responsible ACP parties the option of voluntarily entering into separate ACPs for consumer products, as specified in this Subpart. Only responsible ACP parties for consumer products may enter into an ACP.

b) Any manufacturer of consumer products that has been granted an ACP Agreement by the CARB under ~~the provisions in~~ 17 CCR §§ 94540-94555, incorporated by reference in Section 223.120, ~~shall~~ must be exempt from the limits in Section 223.205(a) for the period of time that the CARB ACP Agreement remains in effect, provided that all ACP products used for emissions credits within the CARB ACP Agreement are ~~contained~~ in Section 223.205(a). Any manufacturer claiming ~~such~~ an ACP Agreement on this basis must submit to the Agency a copy of the CARB ACP decision (i.e., the Executive Order), including all conditions established by the CARB applicable to the exemption.

c) Recordkeeping and Availability of Requested Information.

1) All information specified in the ACP Agreement approving an ACP ~~shall~~ must be maintained by the responsible ACP party for a minimum of three years after the expiration of the ACP. The records ~~shall~~ must be clearly legible and maintained in good condition during this period.

2) The records ~~specified~~ in subsection (c)(1) ~~shall~~ must be made available to the Agency or its authorized representative upon request.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.250 Product Dating

a) Each manufacturer of a consumer product subject to Section 223.205(a) ~~shall~~ must clearly display on each consumer product container or package the day, month, and year on which the product was manufactured, or a code indicating such date.

b) A manufacturer who uses the following code to indicate the date of manufacture ~~shall~~ must not be subject to ~~the requirements of~~ Section 223.255(a), if the code is represented separately from other codes on the product container so that it is easily recognizable:

YY DDD = year year day day day

Where:

YY = Two digits representing the year in which the product was manufactured

DDD = Three digits representing the day of the year on which the product was manufactured, with "001" representing the first day of the year, "002" representing the second day of the year, and so forth (i.e., the "Julian date")

c) This date or code ~~shall~~ must be displayed on each consumer product container or package no later than the effective date of the applicable standard ~~specified~~ in Section 223.205(a).

d) The date or date-code information ~~shall~~ must be located on the container or inside the cover/cap so that it is readily observable or obtainable by simply removing the cap/cover without irreversibly disassembling any part of the container or packaging. For the purposes of this subsection, information may be displayed on the bottom of a container as long as it is clearly legible without removing any product packaging.

e) ~~The requirements of this~~This Section ~~shall~~ must not apply to products containing no VOMs (as defined in Section 223.203), or containing VOMs at 0.10% by weight or less.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.255 Additional Product Dating Requirements

a) ~~No~~ A person ~~shall~~ must not erase, alter, deface, or otherwise remove or make illegible any date or code indicating the date of manufacture from any regulated product container without the express authorization of the manufacturer. ~~No~~ A manufacturer ~~shall~~ must not affix a date-code that is not true for the date the item was manufactured.

b) Date-code explanations for codes indicating the date of manufacture are public information and may not be claimed as confidential.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.260 Most Restrictive Limit

a) ~~Products manufactured before July 1, 2009, and FIFRA-registered Insecticides manufactured before July 1, 2010.~~

Notwithstanding the definition of product category in Section 223.203, if anywhere on the principal display panel of any consumer product manufactured before July 1, 2009, or any FIFRA-registered insecticide manufactured before July 1, 2010, any representation is made that the product may be used as, or is suitable for use as, a consumer product for which a lower VOC limit is specified in Section 223.205(a), then the lowest VOC limit shall apply. This requirement does not apply to general purpose cleaners, antiperspirant/deodorant products, and insecticide foggers.

b) ~~Products manufactured on or after July 1, 2009, and FIFRA-registered insecticides manufactured on or after July 1, 2010.~~

Notwithstanding the definition of product category in Section 223.203, if anywhere on the container or packaging of any consumer product manufactured on or after July 1, 2009, or any FIFRA-registered insecticide manufactured on or after July 1, 2010, or on any sticker or label affixed to the container or packaging, any representation is made that the product may be used as, or is suitable for use as, a consumer product for which a lower VOC limit is specified in Section 223.205(a), then the lowest VOM limit shall apply. This requirement does not apply to general purpose cleaners, antiperspirant/deodorant products, and insecticide foggers.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.265 Additional Labeling Requirements for Aerosol Adhesives, Adhesive Removers, Electronic Cleaners, Electrical Cleaners, Energized Electrical Cleaners, and Contact Adhesives

a) In addition to the requirements ~~specified~~ in Sections 223.250, 223.260, and 223.270, both the manufacturer and responsible party for each aerosol adhesive, adhesive remover, electronic cleaner, electrical cleaner, energized electrical cleaner, and contact adhesive product subject to this Subpart ~~shall~~ must ensure that all products clearly display the following information on each product container manufactured on or after July 1, 2009.

1) The product category ~~as specified in~~under Section 223.205(a) or an abbreviation of the category ~~shall~~ must be displayed.

2) The applicable VOM standard for the product ~~that is specified in~~under Section 223.205(a), except for energized electrical cleaner, expressed as a percentage by weight, ~~shall~~ must be displayed unless the product is included in an alternative control plan approved by the Agency~~, as~~

~~provided in~~ under Sections 223.240 and 223.245, and the product exceeds the applicable VOM standard.

3) If the product is included in an alternative control plan approved by the Agency, and the product exceeds the applicable VOM standard ~~specified~~ in Section 223.205(a), the product ~~shall~~ must be labeled with ~~the term~~ "ACP" or "ACP product".

4) If the product is classified as a special purpose spray adhesive, the applicable substrate and/or application or an abbreviation of the substrate and/or application that qualifies the product as special purpose ~~shall~~ must be displayed.

5) If the manufacturer or responsible party uses an abbreviation as allowed by this Section, an explanation of the abbreviation must be filed with the Agency before the abbreviation is used.

b) The information required in Section 223.250(a) ~~shall~~ must be displayed on the product container ~~such that~~so it is readily observable without removing or disassembling any portion of the product container or packaging. For the purposes of this subsection, information may be displayed on the bottom of a container as long as it is clearly legible without removing any product packaging.

c) ~~No~~ A person ~~shall~~ must not remove, alter, conceal, or deface the information required in subsection (a) ~~prior to~~before final sale of the product.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.270 Reporting Requirements

a) Within 90 days after written request by the Agency, a responsible party must submit to the Agency any of the following information:

1) The name, address, and telephone number of the responsible party and the name and telephone number of the party's designated contact person;

2) For each product subject to Section 223.205(a):

A) The product brand name;

B) The product label;

C) The product category to which the consumer product belongs;

D) The applicable product form(s) listed separately; and

E) An identification of the product as a household product, institutional product, or both;

3) Separate Illinois sales in pounds per year, to the nearest pound, and the method used to calculate Illinois sales for each product form;

4) For information submitted by multiple companies, an identification of each company that is submitting relevant data separate from that submitted by the responsible party. All information from each company ~~shall~~ must be submitted by the date requested by the Agency;

5) For each product brand name and form, the net percent by weight of the total product, less container and packaging, comprised of the following, rounded to the nearest 0.1%:

A) Total Section 223.205(a) compounds;

B) Total LVP-VOMs that are not fragrances;

C) Total all other carbon-containing compounds that are not fragrances;

D) Total all non-carbon-containing compounds;

E) Total fragrance;

F) For products containing greater than 2% by weight fragrance:

i) The percent of fragrance that is LVP-VOMs; and

ii) The percent of fragrance that is all other carbon-containing compounds; and

G) Total paradichlorobenzene;

6) For each product brand name and form, the identity, including the specific chemical name and associated Chemical Abstract Services (CAS) number, of the following:

A) Each Section 223.205(a) compound; and

B) Each LVP-VOM that is not a fragrance; and

7) If the product includes a propellant, the following:

A) The weight percent comprised of propellant for each product; and

B) An identification of the type of propellant, such as Type A, Type B, Type C, or a blend of the different types.

b) In addition to the requirements of subsection (a)(6), the responsible party ~~shall~~ must report or ~~shall~~ arrange to have reported to the Agency, upon request, the net percent by weight of each ozone-depleting compound that is:

1) Listed in Section 223.210(a); and

2) Contained in a product subject to reporting under subsection (a) any amount greater than 0.1% by weight.

c) In addition, all manufacturers must submit to the Agency, upon request, the information requested in subsections (a) and (b) ~~above~~ upon commencement of the selling of each such product in Illinois.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.275 Special Recordkeeping Requirements for Consumer Products that Contain Perchloroethylene or Methylene Chloride

a) The requirements of this Section ~~shall~~ must apply to all responsible parties for consumer products that are subject to Section 223.205(a) and contain perchloroethylene or methylene chloride and energized electrical cleaners as defined in Section 223.203 that contain perchloroethylene or methylene chloride. For the purposes of this Section, a product "contains perchloroethylene or methylene chloride" if the product contains 1.0% or more by weight (exclusive of the container or packaging) of either perchloroethylene or methylene chloride.

b) For each consumer product that contains perchloroethylene or methylene chloride, within 90 days after a written request by the Agency, the responsible party ~~shall~~ must report the following information for products sold in Illinois:

1) The product brand name and a copy of the product label with legible usage instructions;

2) The product category to which the consumer product belongs;

3) The applicable product forms (listed separately);

4) For each product form ~~listed~~ in subsection (b)(3), the total sales in Illinois during the calendar year to the nearest pound (exclusive of the container or packaging), and the method used for calculating the Illinois sales; and

5) The weight percent, to the nearest 0.10%, of perchloroethylene and methylene chloride in the consumer product.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.280 Calculating Illinois Sales

If direct sales data for Illinois are not available, sales may be estimated by prorating national or regional sales data by population.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.285 Test Methods

a) Testing to determine compliance with ~~the requirements of~~ this Subpart ~~shall~~ must be performed using CARB Method 310, Determination of Volatile Organic Materials (VOM) in Consumer Products, ~~which is~~ incorporated by reference in Section 223.120.

b) Compliance with ~~the requirements of~~ this Subpart may also be demonstrated through calculation of the VOM content from records of the amounts of constituents used to make the product ~~pursuant to~~under the following criteria:

1) Accurate manufacturing records ~~shall~~ must be kept for each day of production of the amount and chemical composition of the individual product constituents;

2) Records required by subsection (b)(1) ~~shall~~ must be kept for at least three years;

3) For subsection (b)(4), the following ~~shall~~ must apply:

A) "A" means the total net weight of unit excluding container and packaging;

B) "B" means the total weight of all VOMs per unit; and

C) "C" means the total weight of all exempted VOMs per unit;

4) For the purposes of this section, the VOM content ~~shall~~ must be calculated by subtracting the total weight of VOMs exempted under Section 223.230 per unit from the total weight of all VOMs per unit, divided by the total net weight of unit excluding container and packaging and the product, multiplied by 100 as in the formula below:

VOM Content = B - C x 100

5) If product records appear to demonstrate compliance with the VOM limits, but these records are contradicted by product testing performed using CARB Method 310, the results of CARB Method 310 shall take precedence over the product records and may be used to establish a violation of the requirements of this Subpart.

c) Testing to determine whether a product is a liquid or solid ~~shall~~ must be performed using ASTM D4359-90, ~~which is~~ incorporated by reference in Section 223.120, or an equivalent method approved by the CARB.

d) Testing to determine compliance with the certification requirements for charcoal lighter material shall be performed using the procedures ~~specified~~ in ~~the~~ SCAQMD Test Protocol Rule 1174, Ignition Method Compliance Certification Protocol, ~~which is~~ incorporated by reference in Section 223.120.

e) Testing to determine distillation points of petroleum distillate-based charcoal lighter materials ~~shall~~ must be performed using ASTM D86-07b, which is incorporated by reference in Section 223.120, or an equivalent method approved by the CARB.

f) ~~No~~ A person ~~shall~~ must not create, alter, falsify, or otherwise modify records ~~in such a way~~so that the records do not accurately reflect the constituents used to manufacture a product, the chemical composition of the individual product, and any other test, processes, or records used in connection with product manufacture.

(Source: Amended at 48 Ill. Reg_____, effective _____)

SUBPART C: ARCHITECTURAL AND INDUSTRIAL MAINTENANCE COATINGS

Section 223.300 Purpose

The purpose of this Subpart is to limit emissions of VOMs by requiring reductions in the VOM content of architectural and industrial maintenance coatings and required work practices to minimize VOM emissions in the application of architectural and industrial maintenance coatings to surfaces.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.305 Applicability

This Subpart is applicable to any person who supplies, sells, offers for sale, or manufactures any architectural coating for use within the State of Illinois, as well as any person who applies or solicits the application of any architectural coating within Illinois. This Subpart does not apply

to:

a) Any architectural coating that is sold or manufactured for use outside of the State of Illinois or for shipment to other manufacturers for reformulation or repackaging.

b) Any aerosol coating product.

c) Any architectural coating that is sold in a container with a volume of one liter (1.057 quart) or less. For the purposes of this subsection, the volume of architectural coating in a container ~~shall~~ must be considered the total volume of coating that is packaged as a unit of retail sale or for use by the consumer.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.307 Definitions for Subpart C

The definitions ~~contained~~ in this Section apply only to ~~the provisions of~~ this Subpart. Unless otherwise defined in this Section, ~~the definitions of~~ terms used in this Subpart ~~shall~~ must have the ~~meanings specified for those terms~~definitions in 35 Ill. Adm. Code 211.

"Adhesive" means any chemical substance that is applied for the purpose of bonding two surfaces together other than by mechanical means.

"Aerosol Coating Product" means a pressurized coating product containing pigments or resins that dispenses product ingredients by means of a propellant, and is packaged in a disposable can for hand-held application or for use in specialized equipment for ground traffic/marking applications.

"Antenna Coating" means a coating labeled and formulated exclusively for application to equipment and associated structural appurtenances that are used to receive or transmit electromagnetic signals.

"Antifouling Coating" means a coating labeled and formulated for application to submerged stationary structures and their appurtenances to prevent or reduce the attachment of marine or freshwater biological organisms. To qualify as an "Antifouling Coating", the coating must be registered with USEPA under the Federal Insecticide, Fungicide and Rodenticide Act (7 USC 136 et seq.)

"Appurtenance" means any accessory to a stationary structure coated at the site of installation, whether installed or detached, including~~, but not limited to,~~ bathroom and kitchen fixtures, cabinets, concrete forms, doors, elevators, fences, hand railings, heating equipment, air conditioning equipment, and other fixed mechanical equipment or stationary tools, lampposts, partitions, pipes and piping systems, rain gutters and downspouts, stairways, fixed ladders, catwalks and fire escapes, and window screens.

"Architectural Coating" means a coating to be applied to stationary structures or the appurtenances at the site of installation, to portable buildings at the site of installation, to pavements, or to curbs. Coatings applied in shop applications or to non-stationary structures, such as airplanes, ships, boats, railcars, and automobiles, and adhesives are not considered architectural coatings for the purposes of this Subpart.

"Bitumens" means black or brown materials including~~, but not limited to,~~ asphalt, tar, pitch, and asphaltite that are soluble in carbon disulfide, consist mainly of hydrocarbons, and are obtained from natural deposits or as residues from the distillation of crude petroleum or coal.

"Bituminous Roof Coating" means a coating that incorporates "Bitumens" that is labeled and formulated exclusively for roofing.

"Bituminous Roof Primer" means a primer that incorporates "Bitumens" that is labeled and formulated exclusively for roofing.

"Bond Breaker" means a coating labeled and formulated for application between layers of concrete to prevent a freshly poured top layer of concrete from bonding to the layer over which it is poured.

"Calcamine Recoaters" means flat solvent-born coatings formulated and recommended specifically for recoating calcamine-painted ceilings and other calcamine-painted substrates.

"Clear Brushing Lacquers" means clear wood finishes, excluding clear lacquer sanding sealers, formulated with nitrocellulose or synthetic resins to dry by solvent evaporation without chemical reaction and to provide a solid, protective film, which are intended exclusively for application by brush and which are labeled as specified in Section 223.320(e).

"Clear Wood Coatings" means clear and semi-transparent coatings, including lacquers and varnishes, applied to wood substrates to provide a transparent or translucent solid film.

"Coating" means a material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. ~~Such~~ These materials include~~, but are not limited to,~~ paints, varnishes, sealers, and stains.

"Colorant" means concentrated pigment dispersion in water, solvent, and/or binder that is added to an architectural coating after packaging in sale units to produce the desired color.

"Concrete Curing Compound" means a coating labeled and formulated for application to freshly poured concrete to retard the evaporation of water.

"Concrete Surface Retarder" means a mixture of retarding ingredients such as extender pigments, primary pigments, resin, and solvent that interact chemically with the cement to prevent hardening on the surface where the retarder is applied, allowing the retarded mix of cement and sand at the surface to be washed away to create an exposed aggregate finish.

"Conversion Varnish" means a clear acid-curing coating with an alkyd or other resin blended with amino resins and supplied as a single component or two-component product. Conversion varnishes produce a hard, durable, clear finish designed for professional application to wood flooring. Film formation is the result of an acid-catalyzed condensation reaction, affecting a transetherification at the reactive ethers of the amino resins.

"Dry Fog Coating" means a coating labeled and formulated only for spray application such that overspray droplets dry before subsequent contact with incidental surfaces in the vicinity of the surface coating activity.

"Exempt Compound" means a compound identified as exempt under the definition of Volatile Organic Material (VOM) in Part 211.7150. The exempt compound content of a coating ~~shall~~ must be determined by USEPA Method 24 or South Coast Air Quality Management District (SCAQMD) Method 303-91 (Revised February 1993), incorporated by reference in Section 223.120.

"Faux Finishing Coating" means a coating labeled and formulated as a stain or a glaze to create artistic effects including~~, but not limited to,~~ dirt, old age, smoke damage, and simulated marble and wood grain.

"Fire-Resistive Coating" means an opaque coating labeled and formulated to protect the structural integrity by increasing the fire endurance of interior or exterior steel and other structural materials that has been fire tested and rated by a testing agency and approved by building code officials for use in bringing assemblies of structural materials into compliance with federal, State, and local building code requirements. The fire-resistive coating and the testing agency must be approved by building code officials. The fire-resistive coating ~~shall~~ must be tested in ~~accordance~~ compliance with ASTM E119-98, incorporated by reference in Section 223.120.

"Fire-Retardant Coating" means a coating labeled and formulated to retard ignition and flame spread that has been fire tested and rated by a testing agency approved by building code officials for use in bringing building and construction materials into compliance with federal, State, and local building code requirements. The fire-retardant coating and the testing agency must be approved by building code officials. The fire-retardant coating ~~shall~~ must be tested in ~~accordance~~ compliance with ASTM E84-07, incorporated by reference in Section 223.120.

"Flat Coating" means a coating that is not defined under any other definition in this Section and that registers gloss less than 15 on an 85-degree meter or less than five on a

60-degree meter according to ASTM D523-89 (1999), incorporated by reference in Section 223.120.

"Floor Coating" means an opaque coating that is labeled and formulated for application to flooring, including~~, but not limited to,~~ decks, porches, steps, and other horizontal surfaces, that may be subjected to foot traffic.

"Flow Coating" means a coating labeled and formulated exclusively for use by electric power companies or their subcontractors to maintain the protective coating systems present on utility transformer units.

"Form-Release Compound" means a coating labeled and formulated for application to a concrete form to prevent the freshly poured concrete from bonding to the form. The form may consist of wood, metal, or some material other than concrete.

"Graphic Arts Coating or Sign Paint" means a coating labeled and formulated for hand-application by artists using brush or roller techniques to indoor and outdoor signs (excluding structural components) and murals, including letter enamels, poster colors, copy blockers, and bulletin enamels.

"High-Temperature Coating" means a high performance coating, excluding engine paint, labeled and formulated for application to substrates exposed continuously or intermittently to temperatures above ~~204°C (400°F)~~204 ºC (500 ºF).

"Impacted Immersion Coating" means a high performance maintenance coating formulated and recommended for application to steel structures subject to immersion in turbulent, debris-laden water. These coatings are specifically resistant to high-energy impact damage by floating ice or debris.

"Industrial Maintenance Coating" means a high performance architectural coating, including primers, sealers, undercoaters, intermediate coats, and topcoats, formulated for application to substrates exposed to one or more of the following extreme environmental conditions, and labeled as specified in Section 223.320(d):

Immersion in water, wastewater, or chemical solutions (aqueous and non-aqueous solutions), or chronic exposures of interior surfaces to moisture condensation;

Acute or chronic exposure to corrosive, caustic, or acidic agents, or to chemicals, chemical fumes, or chemical mixtures or solutions;

Repeated exposure to temperatures above ~~121°C (250°F)~~121 ºC (250 ºF);

Repeated (frequent) heavy abrasion, including mechanical wear and repeated (frequent) scrubbing with industrial solvents, cleansers, or scouring agents; or

Exterior exposure of metal structures and structural components.

"Lacquer" means a clear or opaque wood coating, including clear lacquer sanding sealers, formulated with cellulosic or synthetic resins to dry by evaporation without chemical reaction and to provide a solid, protective film.

"Low-Solids Coating" means a coating containing 0.12 kilogram or less of solids per liter (1 pound or less of solids per gallon) of coating material.

"Magnesite Cement Coating" means a coating labeled and formulated for application to magnesite cement decking to protect the magnesite cement substrate from erosion by water.

"Mastic Texture Coating" means a coating labeled and formulated to cover holes and minor cracks and to conceal surface irregularities, and is applied in a single coat of at least 10 mils (0.010 inch) dry film thickness.

"Metallic Pigmented Coating" means a coating containing at least 48 grams of elemental metallic pigment per liter of coating as applied (0.4 pounds per gallon), when tested in ~~accordance~~ compliance with SCAQMD Method 318-95, incorporated by reference in Section 223.120.

"Multi-Color Coating" means a coating that is packaged in a single container and that exhibits more than one color when applied in a single coat.

"Non-flat Coating" means a coating that is not defined under any other definition in this Section and that registers a gloss of 15 or greater on an 85-degree meter and five or greater on a 60-degree meter according to ASTM D523-89, incorporated by reference in Section 223.120, or an equivalent method approved by the California Air Resources Board.

"Non-Flat High-Gloss Coating" means a non-flat coating that registers a gloss of 70 or above on a 60-degree meter according to ASTM D523-89 (1999), incorporated by reference into Section 223.120, or an equivalent method approved by the CARB.

"Nonindustrial Use" means any use of architectural coatings except in the construction or maintenance of any of the following: facilities used in the manufacturing of goods and commodities; transportation infrastructure, including highways, bridges, airports, and railroads; facilities used in mining activities, including petroleum extraction; utilities infrastructure, including power generation and distribution; and water treatment and distribution systems.

"Nuclear Coating" means a protective coating formulated and recommended to seal porous surfaces such as steel (or concrete) that otherwise would be subject to intrusions by radioactive materials. These coatings must be resistant to long-term (service life) cumulative radiation exposure (ASTM D4082-02, incorporated by reference in Section

223.120), relatively easy to decontaminate, and resistant to various chemicals to which the coatings are likely to be exposed (ASTM Method D 3912-95, incorporated by reference in Section 223.120).

"Post-Consumer Coating" means a finished coating that would have been disposed of in a landfill, having completed its usefulness to a consumer, and does not include manufacturing wastes.

"Pre-Treatment Wash Primer" means a primer that contains a minimum of 0.5 acid, by weight, when tested in ~~accordance~~ compliance with ASTM D1613-03, incorporated by reference into Section 223.120, or an equivalent method approved by the CARB, that is labeled and formulated for application directly to bare metal surfaces to provide corrosion resistance and to promote adhesion of subsequent topcoats.

"Primer" means a coating labeled and formulated for application to a substrate to provide a firm bind between the substrate and subsequent coats.

"Quick-Dry Enamel" means a non-flat coating that is labeled as specified in Section 223.320(h) and that is formulated to have the following characteristics:

Is capable of being applied directly from the container under normal conditions with ambient temperatures between 16 and ~~27°C~~27 ºC (60 and ~~80°F~~80 ºF); and

When tested in ~~accordance~~ compliance with ASTM D1640-03, incorporated by reference in Section 223.120, or an equivalent method approved by the CARB, sets to touch in two hours or less, is tack free in four hours or less, and dries hard in eight hours or less by the mechanical test method; and

Has a dried film gloss of 70 or above on a 60-degree meter.

"Quick-Dry Primer Sealer and Undercoater" means a "Primer", "Sealer", or "Undercoater" that is dry to the touch in 30 minutes and can be recoated in two hours when tested in ~~accordance~~ compliance with ASTM D1640-03, incorporated by reference in Section 223.120, or an equivalent method approved by the CARB.

"Recycled Coating" means an architectural coating formulated ~~such~~ so that not less than 50 percent of the total weight consists of secondary and post-consumer coating, with not less than 10 percent of the total weight consisting of post-consumer coating.

"Residence" means areas where people reside or lodge, including~~, but not limited to,~~ single and multiple family dwellings, condominiums, mobile homes, apartment complexes, motels, and hotels.

"Roof Coating" means a nonbituminous coating labeled and formulated exclusively for application to roofs for the primary purpose of preventing penetration of the substrate by water or reflecting heat and ultraviolet radiation. Metallic pigmented roof coatings that

qualify as metallic pigmented coatings ~~shall~~ must not be considered in this category, but ~~shall~~ must be considered to be in the metallic pigmented coatings category.

"Rust Preventive Coating" means a coating formulated exclusively for nonindustrial use to prevent the corrosion of metal surfaces and labeled as specified in Section 223.320(f).

"Sanding Sealer" means a clear or semi-transparent wood coating labeled and formulated for application to bare wood to seal the wood and to provide a coat that can be abraded to create a smooth surface for subsequent applications of coatings. A "Sanding Sealer" that also meets the definition of a "Lacquer" is not included in this category, but it is included in the "Lacquer" category.

"Sealer" means a coating labeled and formulated for application to a substrate for one or more of the following purposes: to prevent subsequent coatings from being absorbed by the substrate, or to prevent harm to subsequent coatings by materials in the substrate.

"Secondary Coating (Rework)" means a fragment of a finished coating or a finished coating from a manufacturing process that has converted resources into a commodity of real economic value, but does not include excess virgin resources of the manufacturing process.

"Shellac" means a clear or opaque coating formulated solely with the resinous secretions of the lac beetle (Laciffer lacca), thinned with alcohol, and formulated to dry by evaporation without a chemical reaction.

"Shop Application" means the application of a coating to a product or a component of a product in or on the premises of a factory or a shop as part of a manufacturing, production, or repairing process (e.g., original equipment manufacturing coatings).

"Solicit" means to require for use or to specify by written or oral contract.

"Specialty Primer, Sealer, and Undercoater" means a coating labeled as specified in Section 223.320(g) and that is formulated for application to a substrate to seal fire, smoke, or water damage; to condition excessively chalky surfaces; to seal in efflorescence, or to block stains. An excessively chalky surface is one that is defined as having a chalk rating of four or less as determined by ASTM D4214-98, incorporated by reference in Section 223.120, or an equivalent method approved by the CARB.

"Stain" means a clear, semitransparent, or opaque coating labeled and formulated to change the color of a surface, but not conceal the grain pattern or texture.

"Stone Consolidant" means a coating that is labeled and formulated for application to stone substrates to repair historical structures that have been damaged by weathering or other decay mechanisms. "Stone Consolidants" must penetrate into stone substrates to create bonds between particles and consolidate deteriorated material. "Stone Consolidants" must be specified and used in ~~accordance~~ compliance with ASTM E2167-

01, incorporated by reference in Section 223.120. "Stone Consolidants" are for professional use only and must be labeled as such, in ~~accordance~~ compliance with the labeling requirements in Section 223.320.

"Swimming Pool Coating" means a coating labeled and formulated to coat the interior of swimming pools and to resist swimming pool chemicals.

"Swimming Pool Repair and Maintenance Coating" means a rubber-based coating labeled and formulated to be used over existing rubber-based coatings for the repair and maintenance of swimming pools.

"Temperature-Indicator Safety Coating" means a coating labeled and formulated as a color-changing indicator coating for the purpose of monitoring the temperature and safety of the substrate, underlying piping, or underlying equipment, and for application to substrates exposed continuously or intermittently to temperatures above ~~204°C (400°F)~~204 ºC (400 ºF).

"Thermoplastic Rubber Coating and Mastics" means a coating or mastic formulated and recommended for application to roofing or other structural surfaces and that incorporates no less than 40 percent by weight of thermoplastic rubbers in the total resin solids and may also contain other ingredients, including~~, but not limited to,~~ fillers, pigments, and modifying resins.

"Tint Base" means an architectural coating to which colorant is added after packaging in sale units to produce a desired color.

"Traffic Marking Coating" means a coating labeled and formulated for marking and striping streets, highways, or other traffic surfaces, including~~, but not limited to,~~ curbs, berets, driveways, parking lots, sidewalks, and airport runways.

"Undercoater" means a coating labeled and formulated to provide a smooth surface for subsequent coatings.

"Varnish" means a clear or semitransparent wood coating, excluding lacquers and shellacs, formulated to dry by chemical reaction on exposure to air. Varnishes may contain small amounts of pigment to color a surface, or to control the final sheen or gloss of the finish.

"VOC Content" ~~shall~~ must have the same meaning as "VOM Content."

"VOM Content" means the weight of VOM per volume of coating, calculated according to the procedures ~~specified~~ in Section 223.340(a).

"Waterproofing Concrete/Masonry Sealers" means clear or pigmented sealers that are formulated for sealing concrete and masonry to provide resistance against water, alkalis, acids, ultraviolet light, or staining.

"Waterproofing Sealer" means a coating labeled and formulated for application to a porous substrate for the primary purpose of preventing the penetration of water.

"Wood Preservative" means a coating labeled and formulated to protect exposed wood from decay or insect attack that is registered with USEPA under the Federal Insecticide, Fungicide, and Rodenticide Act (7 USC 136, et seq.).

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.310 Standards

a) VOM Content Limits: Except as provided in subsection (c), ~~no~~ a person ~~shall~~ must not manufacture, blend, or repackage for sale within Illinois, supply, sell, or offer for sale within Illinois, or solicit for application or apply within Illinois, any architectural coating manufactured on or after July 1, 2009, ~~that contains a~~with VOM content ~~in excess of~~exceeding the ~~corresponding~~ limit specified below:

	Coating Category	**VOM Content Limit Grams/Liter (Pounds/Gallon)**	
1)	Flat Coatings	100	(0.8)
2)	Non-Flat Coatings	150	(1.3)
3)	Non-Flat-High-Gloss Coatings	250	(2.1)
	Specialty Coatings		
4)	Antenna Coatings	530	(4.4)
5)	Antifouling Coatings	400	(3.3)
6)	Bituminous Roof Coatings	300	(2.5)
7)	Bituminous Roof Primers	350	(2.9)
8)	Bond Breakers	350	(2.9)
9)	Calcamine Recoaters	475	(4.0)
10)	Clear Wood Coatings		
	A) Clear Brushing Lacquers	680	(5.7)
	B) Lacquers		

	(including lacquer sanding sealers)	550	(4.6)
C)	Sanding Sealers (other than lacquer sanding sealers)	350	(2.9)
D)	Varnishes	350	(2.9)
11)	Concrete Curing Compounds	350	(2.9)
	Concrete Surface Retarder	780	(6.5)
12)	Conversion Varnish	725	(6.0)
13)	Dry Fog Coatings	400	(3.3)
14)	Faux Finishing Coatings	350	(2.9)
15)	Fire-Resistive Coatings	350	(2.9)
16)	Fire-Retardant Coatings		
A)	Clear	650	(5.4)
B)	Opaque	350	(2.9)
17)	Floor Coatings	250	(2.1)
18)	Flow Coatings	420	(3.5)
19)	Form-Release Compounds	250	(2.1)
20)	Graphic Arts Coatings (Sign Paints)	500	(4.2)
21)	High-Temperature Coatings	420	(3.5)
22)	Impacted Immersion Coating	780	(6.5)
23)	Industrial Maintenance Coatings	340	(2.8)
24)	Low-Solids Coatings	120	(1.0)
25)	Magnesite Cement Coatings	450	(3.8)
26)	Mastic Texture Coatings	300	(2.5)
27)	Metallic Pigmented Coatings	500	(4.2)

28)	Multi-Color Coatings	250	(2.1)
29)	Nuclear Coating	450	(3.8)
30)	Pre-Treatment Wash Primers	420	(3.5)
31)	Primers, Sealers, and Undercoaters	200	(1.7)
32)	Quick-Dry Enamels	250	(2.1)
33)	Quick-Dry Primers, Sealers and Undercoaters	200	(1.7)
34)	Recycled Coatings	250	(2.1)
35)	Roof Coatings	250	(2.1)
36)	Rust Preventive Coatings	400	(3.3)
37)	Shellacs		
	A) Clear	730	(6.1)
	B) Opaque	550	(4.6)
38)	Specialty Primers, Sealers, and Undercoaters	350	(2.9)
39)	Stains	250	(2.1)
40)	Stone Consolidants	450	(3.8)
41)	Swimming Pool Coatings	340	(2.8)
42)	Swimming Pool Repair and Maintenance Coatings	340	(2.8)
43)	Temperature-Indicator Safety Coatings	550	(4.6)
44)	Thermoplastic Rubber Coatings and Mastics	550	(4.6)
45)	Traffic Marking Coatings	150	(1.3)
46)	Waterproofing Concrete/Masonry Sealers	400	(3.3)
47)	Waterproofing Sealers	250	(2.1)
48)	Wood Preservatives	350	(2.9)

BOARD NOTE: Conversion factor: one pound VOM per gallon (U.S.) = 119.95 grams per liter.

b) Limits are ~~expressed~~ in grams of VOM per liter of coating thinned to the manufacturer's maximum recommendation, excluding the volume of any water, exempt compounds, or colorant added to tint bases. "Manufacturers maximum recommendation" means the maximum recommendation for thinning ~~that is indicated~~ on the label or lid of the coating container.

c) Most Restrictive VOM Limit. If anywhere on the container of any architectural coating, or any label or sticker affixed to the container, or in any sales, advertising, or technical literature supplied by a manufacturer or anyone acting on the manufacturer's behalf, any representation is made that indicates that the coating meets the definition of or is recommended for use for more than one of the coating categories ~~listed~~ in subsection (a), then the most restrictive VOM content limit ~~shall~~ must apply. This provision does not apply to the coating categories ~~specified~~ in subsections (c)(1) through (c)(21):

1) Lacquer coatings (including lacquer sanding sealers);

2) Metallic pigmented coatings;

3) Shellacs;

4) Fire-retardant coatings;

5) Pretreatment wash primers;

6) Industrial maintenance coatings;

7) Low-solids coatings;

8) Wood preservatives;

9) High-temperature coatings;

10) Temperature-indicator safety coatings;

11) Antenna coatings;

12) Antifouling coatings;

13) Flow coatings;

14) Bituminous roof primers;

15) Specialty primers, sealers, and undercoaters;

16) Conversion varnish;

17) Calcimine recoaters;

18) Impacted immersion coatings;

19) Nuclear coatings;

20) Thermoplastic rubber coating and mastics;

21) Concrete surface retarder.

d) Painting Practices. All architectural coating containers used to apply their contents to a surface directly from the container by pouring, siphoning, brushing, rolling, padding, ragging, or other means ~~shall~~ must be closed when not in use. These architectural coatings containers include~~, but are not limited to,~~ drums, buckets, cans, pails, trays, or other application containers. Containers of any VOM-containing materials used for thinning and cleanup ~~shall~~ must also be closed when not in use.

e) Thinning. ~~No~~ A person who applies or solicits the application of any architectural coating ~~shall~~ must apply a coating that is thinned to exceed the applicable VOM limit ~~specified~~ in subsection (a).

f) Rust Preventive Coatings. ~~No~~ A person ~~shall~~ must not apply or solicit the application of any rust preventive coating for industrial use unless the rust preventive coating complies with the industrial maintenance coating VOM limit ~~specified~~ in subsection (a). If the coating is also regulated under another Part, the more restrictive limit ~~shall~~ must apply.

g) Coatings Not Listed in Subsection (a). For any coating that does not meet any of the definitions for the specialty coatings categories ~~listed~~ in subsection (a), the VOM content limit ~~shall~~ must be determined by classifying the coating as a flat coating, a non-flat coating, or a non-flat high-gloss coating, based on its gloss, as defined in Section 223.307, and the corresponding flat or non-flat coating limit ~~shall~~ must apply.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.320 Container Labeling Requirements

Each manufacturer of any architectural coatings subject to this Subpart ~~shall~~ must display the information ~~listed~~ in subsections (a) through (j) on the coating container in which the coating is sold or distributed (or on its label).

a) Date-Code. The date the coating was manufactured, or a date-code representing the date, ~~shall~~ must be indicated on the label, lid, or bottom of the container. If the manufacturer uses a date-code for any coating, the manufacturer ~~shall~~ must file an explanation of each code with the Agency upon request.

b) Thinning Recommendations. A statement of the manufacturer's recommendation regarding thinning of the coating ~~shall~~ must be indicated on the label or lid of the container. This requirement does not apply to the thinning of architectural coatings with water. If thinning of the coating ~~prior to~~before use is not necessary, the recommendation must specify that the coating is to be applied without thinning.

c) VOM or VOC Content. Each container of any coating subject to this Subpart ~~shall~~ must display either the maximum or the actual VOM content of the coating, as supplied, or the actual VOM content including the maximum thinning as recommended by the manufacturer. VOM content ~~shall~~ must be displayed in grams of VOM per liter of coating. VOM content displayed ~~shall~~ must be calculated using product formulation data~~,~~ or ~~shall be~~ determined using the test methods in Section 223.340(b). The equations in Section 223.340(a) ~~shall~~ must be used to calculate VOM content. In each of the above cases, the term "VOC content" ~~shall~~ must have the same meaning as "VOM content".

d) Industrial Maintenance Coatings. In addition to the information ~~specified~~ in subsections (a), (b), and (c), each manufacturer of any industrial maintenance coating subject to this Subpart ~~shall~~ must display on the label or the lid of the container in which the coating is sold or distributed one or more of the following descriptions:

1) ~~"~~"For industrial use only"~~"~~,

2) ~~"~~"For professional use only", or

3) "Not for residential use" or "Not intended for residential use".

e) Clear Brushing Lacquers. The labels of all clear brushing lacquers ~~shall~~ must prominently display the statements "For brush application only" and "This product must not be thinned or sprayed".

f) Rust Preventive Coatings. The labels of all rust preventive coatings ~~shall~~ must prominently display the statement "For Metal Substrates Only."

g) Specialty Primers, Sealers, and Undercoaters. The labels of all specialty primers, sealers, and undercoaters ~~shall~~ must prominently display one or more of the following descriptions.

1) "For blocking stains;"

2) "For fire-damaged substrates;"

3) "For smoke-damaged substrates;"

4) "For water-damaged substrates;"

5) "For excessively chalky substrates."

h) Quick-Dry Enamels. The labels of all quick dry enamels ~~shall~~ must prominently display the words "Quick Dry" and the dry hard time.

i) Non-Flat High-Gloss Coatings. The labels of all non-flat high-gloss coatings ~~shall~~ must prominently display the words "High Gloss."

j) Stone Consolidants. ~~Effective~~ On and after July 1, 2010, the labels of all stone consolidants ~~shall~~ must prominently display the statement "Stone Consolidant - For Professional Use Only".

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.330 Reporting Requirements

a) Clear Brushing Lacquers. Within 90 days after written request by the Agency, each manufacturer of clear brushing lacquers ~~shall~~ must report the following information for products sold in Illinois:

1) The number of gallons of clear brushing lacquers sold in the State during the preceding calendar year; and

2) The method used by the manufacturer to calculate State sales.

b) Rust Preventive Coatings. Within 90 days after written request by the Agency, each manufacturer of rust preventive coatings ~~shall~~ must report the following information for products sold in Illinois.

1) The number of gallons of rust preventive coatings sold in the State during the preceding calendar year; and

2) The method used by the manufacturer to calculate State sales.

c) Specialty Primers, Sealers, and Undercoaters. Within 90 days after written request by the Agency, each manufacturer of specialty primers, sealers, and undercoaters ~~shall~~ must report the following information for products sold in Illinois:

1) The number of gallons of specialty primers, sealers, and undercoaters sold in the State during the preceding calendar year; and

2) The method used by the manufacturer to calculate State sales.

d) Toxic Exempt Compounds. For each architectural coating that contains perchloroethylene or methylene chloride, within 90 days after written request by the Agency, the manufacturer ~~shall~~ must report the following information for products sold in Illinois:

1) The product brand name and a copy of the product label with legible usage instructions;

2) The product category ~~listed~~ in Section 223.310(a) to which the coating belongs;

3) The total sales in Illinois~~,~~ during the calendar year~~,~~ to the nearest gallon; and

4) The volume percent~~,~~ to the nearest 0.10 percent~~,~~ of perchloroethylene and methylene chloride in the coating.

e) Recycled Coatings.

1) Within 90 days after written request by the Agency, manufacturers of recycled coatings must submit a letter to the Agency self-certifying their status as a Recycled Paint Manufacturer.

2) Within 90 days after written request by the Agency, each recycled coatings manufacturer ~~shall~~ must report the following information for products sold in Illinois:

A) The number of gallons of recycled coatings sold in the State during the preceding calendar year; and

B) The method used by the manufacturer to calculate State sales.

f) Bituminous Coatings. Within 90 days after written request by the Agency, each manufacturer of bituminous roof coatings or bituminous roof primers ~~shall~~ must report the following information for products sold in Illinois.

1) The number of gallons of bituminous roof coatings or bituminous roof primers sold in the State during the preceding calendar year; and

2) The method used by the manufacturer to calculate State sales.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.340 Compliance Provisions and Test Methods

a) Calculation of VOM Content. For the purpose of determining compliance with the VOM content limits in Section 223.310(a), the VOM content of a coating ~~shall~~ must be determined by using the procedures ~~described~~ in subsection (a)(1) or (a)(2), as appropriate. The VOM content of a tint base ~~shall~~ must be determined without colorant that is added after the tint base is manufactured.

1) With the exception of low solids coatings, determine the VOM content in grams of VOM per liter of coating thinned to the manufacturer's maximum recommendation, excluding the volume of any water and exempt compounds. Determine the VOM content as follows:

$$\text{VOM Content} = \frac{(Ws - Ww - Wem)}{(Vm - Vw - Vem)}$$

Where:

VOM content = grams of VOM per liter of coating
Ws = weight of volatiles, in grams
Ww = weight of water, in grams
Wem = weight of exempt materials, in grams
Vm = volume of coating, in liters
Vw = volume of water, in liters
Vem = volume of exempt materials, in liters

2) For low solids coatings, determine the VOM content in units of grams of VOM per liter of coating thinned to the manufacturer's maximum recommendation, including the volume of any water and exempt compounds. Determine the VOM content as follows:

$$\text{VOM Content (ls)} = \frac{(Ws - Ww - Wem}{(Vm)}$$

Where:

VOM content (ls) = the VOM content of a low solids coating in grams per liter of coating
Ws = weight of volatile, in grams

Ww = weight of water, in grams
Wem = weight of exempt materials, in grams
Vm = volume of coating, in liters

b) VOM Content of Coatings. To determine the physical properties of a coating in order to perform the calculations in subsection (a), the reference method for VOM content is USEPA Method 24, incorporated by reference in Section 223.120, except as provided in Sections 223.350 and 223.360. An alternative method to determine the VOM content of coatings is SCAQMD Method 304-91, incorporated by reference in Section 223.120. The exempt compounds content ~~shall~~ must be determined by SCAQMD Method 303-91, incorporated by reference in Section 223.120. To determine the VOM content of a coating, the manufacturer may use USEPA Method 24, or an equivalent alternative method ~~as provided in~~under Section 223.350, formulation data, or any other reasonable means for predicting that the coating has been formulated as intended (e.g., quality assurance checks, recordkeeping). However, if there are any inconsistencies between the results of a Method 24 test and any other means for determining VOM content, the Method 24 results will govern, except when an equivalent alternative method is approved ~~as specified in~~under Section 223.350. The Agency may require the manufacturer to conduct a Method 24 analysis.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.350 Alternative Test Methods

Other test methods demonstrated to provide results that are acceptable for purposes of determining compliance with Section 223.340(b), after review and approval in writing by the Agency and USEPA, may also be used.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.360 Methacrylate Traffic Coating Markings

Analysis of methacrylate multi-component coatings used as traffic marking coatings ~~shall~~ must be conducted according to a modification of USEPA Method 24, incorporated by reference in Section 223.120, or an equivalent method approved by the CARB. This method has not been approved for methacrylate multi-component coatings used for purposes other than as traffic marking coatings or for other classes of multi-component coatings.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 223.370 Test Methods

The following test methods are incorporated by reference in Section 223.120, and ~~shall~~ must be used to test coatings subject to ~~the provisions of~~ this Subpart:

a) Flame Spread Index. The flame spread index of a fire-retardant coating ~~shall~~ must be determined by ASTM E84-07, Standard Test Method for Surface Burning Characteristics of Building Materials (see Section 223.307, Fire-Retardant Coating) or an equivalent method approved by the CARB.

b) Fire-Resistance Rating. The fire-resistance rating of a fire-resistive coating ~~shall~~ must be determined by ASTM E119-05a, Standard Test Methods for Fire Tests of Building Construction Materials (see Section 223.307, Fire-Resistive Coating), or an equivalent method approved by the CARB.

c) Gloss Determination. The gloss of a coating ~~shall~~ must be determined by ASTM D523-89, Standard Test Method for Specular Gloss (see Section 223.307, Flat Coating, Non-Flat Coating, Non-Flat High-Gloss Coating, and Quick-Dry Enamel), or an equivalent method approved by the CARB.

d) Metal Content of Coatings. The metallic content of a coating ~~shall~~ must be determined by SCAQMD Method 318-95, Determination of Weight Percent Elemental Metal in Coatings by X-Ray Diffraction, SCAQMD Laboratory Methods of Analysis for Enforcement Samples (see Section 223.307, Metallic Pigmented Coating).

e) Acid Content of Coatings. The acid content of a coating ~~shall~~ must be determined by ASTM D1613-03, Standard Test Method for Acidity in Volatile Solvents and Chemical Intermediates Used in Paint, Varnish, Lacquer and Related Products (see Section 223.307, Pre-Treatment Wash Primer), or an equivalent method approved by the CARB.

f) Drying Times. The set-to-touch, dry-hard, dry-to-touch and dry-to-recoat times of a coating ~~shall~~ must be determined by ASTM Designation D 1640-03, Standard Methods for Drying, Curing, or Film Formation of Organic Coatings at Room Temperature (see Section 223.307, Quick-Dry Enamel and Quick-Dry Primer, Sealer, and Undercoater). The tack free time of a quick-dry enamel coating ~~shall~~ must be determined by the Mechanical Test Method of ASTM D1640-03, or an equivalent method approved by the CARB.

g) Surface Chalkiness. The chalkiness of a surface ~~shall~~ must be determined using ASTM D4214-98 Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films (see Section 223.307, Specialty Primer, Sealer, and Undercoater), or an equivalent method approved by the CARB.

h) Exempt Compounds - Siloxanes. Exempt compounds that are cyclic, branched, or linear, completely methylated siloxanes ~~shall~~ must be analyzed as exempt compounds for compliance with Section 223.340 by BAAQMD Method 43, Determination of Volatile Methylsiloxanes in Solvent-Based Coatings, Inks, and Related Materials, BAAQMD Manual of Procedures, Volume III, (see Section 223.307, VOM content, and Section 223.340(b)).

i) Exempt Compounds - Parachlorobenzotrifluoride (PCBTF). The exempt compound parachlorobenzotrifluoride ~~shall~~ must be analyzed as an exempt compound for compliance with Section 223.340 by BAAQMD Method 41, Determination of Volatile Organic Compounds in Solvent-Based Coatings and Related Materials Containing Parachlorobenzotrifluoride, BAAQMD Manual of Procedures, Volume III (see Section 223.307, VOM Content, and Section 223.340(b)).

j) Exempt Compounds. The content of compounds exempt under USEPA Method 24 ~~shall~~ must be analyzed by SCAQMD Method 303-91, Determination of Exempt Compounds, SCAQMD Laboratory Methods of Analysis for Enforcement Samples (see Section 223.307, VOM Content, and Section 223.340(b)).

k) VOM Content of Coatings. The VOM content of a coating ~~shall~~ must be determined by USEPA Method 24 ~~as it exists~~ in Appendix A of 40 CFR 60, Determination of Volatile Matter Content, Water Content, Density, Volume Solids, and Weight Solids of Surface Coatings (see Section 223.340(b)), or an equivalent method approved by the CARB.

l) Alternative VOM Content of Coatings. The VOM content of coatings may be analyzed by either USEPA Method 24 or SCAQMD Method 304-91, Determination of Volatile Organic Compounds (VOC) in Various Materials, SCAQMD Laboratory Methods of Analysis for Enforcement Samples (see Section 223.340(b)

m) Methacrylate Traffic Marking Coatings. The VOM content of methacrylate muticomponent coatings used as traffic marking coatings ~~shall~~ must be analyzed by ~~the procedures in~~ 40 CFR 59, subpart D, appendix A, Determination of Volatile Matter Content of Methacrylate Multicomponent Coatings Used as Traffic Marking Coatings (see Section 223.360), or an equivalent method approved by the CARB.

Section 225.120 Abbreviations and Acronyms

Unless otherwise specified within this Part, the abbreviations used in this Part must be the same as those ~~found~~ in 35 Ill. Adm. Code 211. ~~The~~ This Part uses the following abbreviations and acronyms ~~are used in this Part~~:

Act	Environmental Protection Act [415 ILCS 5]
ACI	activated carbon injection
AETB	Air Emission Testing Body
Agency	Illinois Environmental Protection Agency
Btu	British thermal unit
CAA	Clean Air Act [42 USC 7401 et seq.]
CAAPP	Clean Air Act Permit Program
CAIR	Clean Air Interstate Rule
CASA	Clean Air Set-Aside
CEMS	continuous emission monitoring system
CO_2	carbon dioxide
CPS	Combined Pollutant Standard
CGO	converted gross electrical output
CRM	certified reference materials
CUTE	converted useful thermal energy
DAHS	data acquisition and handling system
dscm	dry standard cubic meters
EGU	electric generating unit
ESP	electrostatic precipitator
FGD	flue gas desulfurization
fpm	feet per minute
GO	gross electrical output
GWh	gigawatt hour
HI	heat input

Hg	mercury
hr	hour
ISO	International Organization for Standardization
kg	kilogram
lb	pound
MPS	Multi-Pollutant Standard
MSDS	Material Safety Data Sheet
MW	megawatt
Mwe	megawatt electrical
MWh	megawatt hour
NAAQS	National Ambient Air Quality Standards
NIST	National Institute of Standards and Technology
NO_x	nitrogen oxides
NTRM	NIST Traceable Reference Material
NUSA	New Unit Set-Aside
ORIS	Office of Regulatory Information Systems
O_2	oxygen
$PM_{2.5}$	particles less than 2.5 micrometers in diameter
QA	quality assurance
QAMO	quality-assured monitor operating
QC	quality control
RATA	relative accuracy test audit
RGFM	reference gas flow meter
SO_2	sulfur dioxide
SNCR	selective noncatalytic reduction
~~TTBS~~	~~Temporary Technology Based Standard~~
TCGO	total converted useful thermal energy
UTE	useful thermal energy
USEPA	United States Environmental Protection Agency
yr	year

Section 225.130 Definitions

The following definitions apply for the purposes of this Part. Unless otherwise defined in this Section or a different meaning for a term is clear from its context, the terms used in this Part have the ~~meanings specified~~definitions in 35 Ill. Adm. Code 211.

"Agency" means~~*"Agency" means*~~ *the Illinois Environmental Protection Agency.* [415 ILCS 5/3.105]

"Averaging demonstration" means, with regard to Subpart B ~~of this Part~~, a demonstration of compliance that is based on the combined performance of EGUs at two or more sources.

"Base Emission Rate" means, for a group of EGUs subject to emission standards for NOx and SO_2 ~~pursuant to~~under Section 225.233, the average emission rate of NO_x or SO_2 from the EGUs, in pounds per million Btu heat input, for calendar years 2003 through 2005 (or, for seasonal NO_x, the 2003 through 2005 ozone seasons), as determined from the data collected and quality assured by the USEPA, ~~pursuant to~~under the 40 CFR 72 and 96 federal Acid Rain and NO_x Budget Trading Programs, for the emissions and heat input of that group of EGUs.

"Board" means~~*"Board" means*~~ *the Illinois Pollution Control Board. [415 ILCS 5/3.130]*

"Boiler" means an enclosed fossil or other fuel-fired combustion device used to produce heat and to transfer heat to recirculating water, steam, or other medium.

"Bottoming-cycle cogeneration unit" means a cogeneration unit in which the energy input to the unit is first used to produce useful thermal energy and at least some of the reject heat from the useful thermal energy application or process is then used for electricity production.

"CAIR authorized account representative" means, for the purpose of general accounts, a responsible natural person who is authorized, in ~~accordance~~ compliance with 40 CFR 96, subparts BB, FF, BBB, FFF, BBBB, and FFFF, to transfer and otherwise dispose of CAIR NO_x, SO_2, and NO_x Ozone Season allowances, as applicable, held in the CAIR NO_x, SO_2, and NO_x Ozone Season general account, and for the purpose of a CAIR NO_x compliance account, a CAIR SO_2 compliance account, or a CAIR NO_x Ozone Season compliance account, the CAIR designated representative of the source.

"CAIR designated representative" means, for a CAIR NO_x source, a CAIR SO_2 source, and a CAIR NO_x Ozone Season source, and each CAIR NO_x unit, CAIR SO_2 unit, and CAIR NO_x Ozone Season unit at the source, the natural person who is authorized by the owners and operators of the source and all such units at the source, in ~~accordance~~ compliance with 40 CFR 96, subparts BB, FF, BBB, FFF, BBBB, and FFFF, as applicable, to represent and legally bind each owner and operator in matters pertaining to the CAIR NO_x Annual Trading Program, CAIR SO_2 Trading Program, and CAIR NO_x Ozone Season Trading Program, as applicable. For any unit that is subject to one or more of the following programs: CAIR NO_x Annual Trading Program, CAIR SO_2 Trading Program, CAIR NO_x Ozone Season Trading Program, or the federal Acid Rain Program, the designated representative for the unit must be the same natural person for all programs applicable to the unit.

"Coal" means any solid fuel classified as anthracite, bituminous, subbituminous, or lignite by the American Society for Testing and Materials (ASTM) Standard Specification for Classification of Coals by Rank D388-77, 90, 91, 95, 98a, or 99 (Reapproved 2004), incorporated by reference in Section 225.140.

"Coal-derived fuel" means any fuel (whether in a solid, liquid, or gaseous state) produced by the mechanical, thermal, or chemical processing of coal.

"Coal-fired" means:

For purposes of Subparts B, or for purposes of allocating allowances under Sections 225.435, 225.445, 225.535, and 225.545, combusting any amount of coal or coal-derived fuel, alone or in combination with any amount of any other fuel, during a specified year;

Except as provided above, combusting any amount of coal or coal-derived fuel, alone or in combination with any amount of any other fuel.

"Cogeneration unit" means, for the purposes of Subparts C, D, and E, a stationary, fossil fuel-fired boiler or a stationary, fossil fuel-fired combustion turbine of which both of the following conditions are true:

It uses equipment to produce electricity and useful thermal energy for industrial, commercial, heating, or cooling purposes through the sequential use of energy; and

It produces either of the following during the 12-month period beginning on the date the unit first produces electricity and during any subsequent calendar year after that in which the unit first produces electricity:

For a topping-cycle cogeneration unit, both of the following:

Useful thermal energy not less than five percent of total energy output; and

Useful power that, when added to one-half of useful thermal energy produced, is not less than 42.5 percent of total energy input, if useful thermal energy produced is 15 percent or more of total energy output, or not less than 45 percent of total energy input if useful thermal energy produced is less than 15 percent of total energy output; or

For a bottoming-cycle cogeneration unit, useful power not less than 45 percent of total energy input.

"Combined cycle system" means a system comprised of one or more combustion turbines, heat recovery steam generators, and steam turbines configured to improve overall efficiency of electricity generation or steam production.

"Combustion turbine" means:

An enclosed device comprising a compressor, a combustor, and a turbine and in which the flue gas resulting from the combustion of fuel in the combustor passes through the turbine, rotating the turbine; and

If the enclosed device described in the above paragraph of this definition is combined cycle, any associated duct burner, heat recovery steam generator, and steam turbine.

"Commence commercial operation" means, for the purposes of Subparts B of this Part, with regard to an EGU that serves a generator, to have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation. Such This date must remain the unit's date of commencement of operation even if the EGU is subsequently modified, reconstructed, or repowered. For the purposes of Subparts C, D, and E, "commence commercial operation" is as defined in Section 225.150.

"Commence construction" means, for the purposes of Section Sections 225.460(f), 225.470, 225.560(f), and 225.570, that the owner or owner's designee has obtained all necessary preconstruction approvals (e.g., zoning) or permits and either has:

Begun, or caused to begin, a continuous program of actual on-site construction of the source, to be completed within a reasonable time; or

Entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of actual construction of the source to be completed within a reasonable time.

For purposes of this definition:

"Construction" shall must be determined as any physical change or change in the method of operation, including but not limited to fabrication, erection, installation, demolition, or modification of projects eligible for CASA allowances, as set forth inunder Sections 225.460 and 225.560.

"A reasonable time" shall be determined considering but not limited to the following factors: the nature and size of the project, the extent of design engineering, the amount of off-site preparation, whether equipment can be fabricated or can be purchased, when the project begins (considering both the seasonal nature of the construction activity and the existence of other projects competing for construction labor at the same time, the place of the environmental permit in the sequence of corporate and overall governmental approval), and the nature of the project sponsor (e.g., private, public, regulated).

"Commence operation", for purposes of Subparts C, D, and E, means:

To have begun any mechanical, chemical, or electronic process, including, for the purpose of a unit, start-up of a unit's combustion chamber, except as provided in 40 CFR 96.105, 96.205, or 96.305, as incorporated by reference in Section 225.140.

For a unit that undergoes a physical change (other than replacement of the unit by a unit at the same source) after the date the unit commences operation ~~as set forth in~~under the first paragraph of this definition, ~~such~~ that date will remain the date of commencement of operation of the unit, which will continue to be treated as the same unit.

For a unit that is replaced by a unit at the same source (e.g., repowered)~~,~~ after the date the unit commences operation ~~as set forth in~~under the first paragraph of this definition, ~~such~~ that date will remain the replaced unit's date of commencement of operation, and the replacement unit will be treated as a separate unit with a separate date for commencement of operation ~~as set forth in~~under this definition as appropriate.

"Common stack" means a single flue through which emissions from two or more units are exhausted.

"Compliance account" means:

For the purposes of Subparts D and E, a CAIR NO_x Allowance Tracking System account, established by USEPA for a CAIR NO_x source or CAIR NO_x Ozone Season source ~~pursuant to~~under 40 CFR 96, subparts FF and FFFF in which any CAIR NO_x allowance or CAIR NO_x Ozone Season allowance allocations for the CAIR NO_x units or CAIR NO_x Ozone Season units at the source are initially recorded and in which are held any CAIR NO_x or CAIR NO_x Ozone Season allowances available for use for a control period in order to meet the source's CAIR NO_x or CAIR NO_x Ozone Season emissions limitations in ~~accordance~~ compliance with Sections 225.410 and 225.510~~,~~ and 40 CFR 96.154 and 96.354, as incorporated by reference in Section 225.140. CAIR NO_x allowances may not be used for compliance with the CAIR NO_x Ozone Season Trading Program and CAIR NO_x Ozone Season allowances may not be used for compliance with the CAIR NO_x Annual Trading Program; or

For the purposes of Subpart C, a "compliance account" means a CAIR SO_2 compliance account, established by the USEPA for a CAIR SO_2 source ~~pursuant to~~under 40 CFR 96, subpart FFF, in which any SO_2 units at the source are initially recorded and in which are held any SO_2 allowances available for use for a control period in order to meet the source's CAIR SO_2 emissions limitations in ~~accordance~~ compliance with Section 225.310 and 40 CFR 96.254, as incorporated by reference in Section 225.140.

"Control period" means:

For the CAIR SO_2 and NO_x Annual Trading Programs in Subparts C and D, the period beginning January 1 of a calendar year, except as provided in Sections 225.310(d)(3) and 225.410(d)(3), and ending on December 31 of the same year, inclusive; or

For the CAIR NO_x Ozone Season Trading Program in Subpart E, the period beginning May 1 of a calendar year, except as provided in Section 225.510(d)(3), and ending on September 30 of the same year, inclusive.

"Electric generating unit" or "EGU" means a fossil fuel-fired stationary boiler, combustion turbine, or combined cycle system that serves a generator that has a nameplate capacity greater than 25 MWe and produces electricity for sale.

"Excepted monitoring system" means a sorbent trap monitoring system, as defined in this Section.

"Flue" means a conduit or duct through which gases or other matter is exhausted to the atmosphere.

"Fossil fuel" means natural gas, petroleum, coal, or any form of solid, liquid, or gaseous fuel derived from such material.

"Fossil fuel-fired" means the combusting of any amount of fossil fuel, alone or in combination with any other fuel in any calendar year.

"Generator" means a device that produces electricity.

"Gross electrical output" means the total electrical output from an EGU before making any deductions for energy output used in any way related to the production of energy. For an EGU generating only electricity, the gross electrical output is the output from the turbine/generator set.

"Heat input" means, for the purposes of Subparts C, D, and E, a specified period of time, the product (in mmBtu/hr) of the gross calorific value of the fuel (in Btu/lb) divided by 1,000,000 Btu/mmBtu and multiplied by the fuel feed rate into a combustion device (in lb of fuel/time), as measured, recorded, and reported to USEPA by the CAIR designated representative and determined by USEPA in ~~accordance~~ compliance with 40 CFR 96, subpart HH, HHH, or HHHH, if applicable, and excluding the heat derived from preheated combustion air, recirculated flue gases, or exhaust from other sources.

"Higher heating value" or "HHV" means the total heat liberated per mass of fuel burned (Btu/lb), when fuel and dry air at standard conditions undergo complete combustion and all resultant products are brought to their standard states at standard conditions.

"Input mercury" means the mass of mercury that is contained in the coal combusted within an EGU.

"Integrated gasification combined cycle" or "IGCC" means a coal-fired electric utility steam generating unit that burns a synthetic gas derived from coal in a combined-cycle gas turbine. No coal is directly burned in the unit during operation.

"Long-term cold storage" means the complete shutdown of a unit intended to last for an extended period of time (at least two calendar years) where notice for long-term cold storage is provided under 40 CFR 75.61(a)(7).

"Nameplate capacity" means, starting from the initial installation of a generator, the maximum electrical generating output (in MWe) that the generator is capable of producing on a steady-state basis and during continuous operation (when not restricted by seasonal or other deratings) as of such installation as specified by the manufacturer of the generator or, starting from the completion of any subsequent physical change in the generator resulting in an increase in the maximum electrical generating output (in MWe) that the generator is capable of producing on a steady-state basis and during continuous operation (when not restricted by seasonal or other deratings), such increased maximum amount as of completion as specified by the person conducting the physical change.

"NIST traceable elemental mercury standards" means either:

1) Compressed gas cylinders having known concentrations of elemental mercury, which have been prepared according to the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards"; or

2) Calibration gases having known concentrations of elemental mercury, produced by a generator that fully meets the performance requirements of the "EPA Traceability Protocol for Qualification and Certification of Elemental Mercury Gas Generators," or an interim version of that protocol until ~~such time as~~ a final protocol is issued.

"NIST traceable source of oxidized mercury" means a generator that is capable of providing known concentrations of vapor phase mercuric chloride ($HgCl_2$), and that fully meets the performance requirements of the "EPA Traceability Protocol for Qualification and Certification of Mercuric Chloride Gas Generators," or an interim version of that protocol until ~~such time as~~ a final protocol is issued.

"Oil-fired unit" means a unit combusting fuel oil for more than 15.0 percent of the annual heat input in a specified year and not qualifying as coal-fired.

"Output-based emission standard" means, for the purposes of Subpart B ~~of this Part~~, a maximum allowable rate of emissions of mercury per unit of gross electrical output from an EGU.

"Potential electrical output capacity" means 33 percent of a unit's maximum design heat input, expressed in mmBtu/hr divided by 3.413 mmBtu/MWh, and multiplied by 8,760 hr/yr.

"Project sponsor" means a person or an entity, including ~~but not limited to~~ the owner or operator of an EGU or a not-for-profit group, that provides the majority of funding for an energy efficiency and conservation, renewable energy, or clean technology project ~~as listed in~~under Sections 225.460 and 225.560, unless another person or entity is designated by a written agreement as the project sponsor for the purpose of applying for NO_x allowances or NO_x Ozone Season allowances from the CASA.

"Rated-energy efficiency" means the percentage of thermal energy input that is recovered as useable energy in the form of gross electrical output, useful thermal energy, or both that is used for heating, cooling, industrial processes, or other beneficial uses as follows:

For electric generators, rated-energy efficiency is calculated as one kilowatt hour (3,413 Btu) of electricity divided by the unit's design heat rate using the higher heating value of the fuel, and expressed as a percentage.

For combined heat and power projects, rated-energy efficiency is calculated using the following formula:

$$REE = ((GO + UTE)/HI) \times 100$$

Where:

REE	=	Rated-energy efficiency, expressed as percentage.
GO	=	Gross electrical output of the system expressed in Btu/hr.
UTE	=	Useful thermal output from the system that is used for heating, cooling, industrial processes, or other beneficial uses, expressed in Btu/hr.
HI	=	Heat input, based upon the higher heating value of fuel, in Btu/hr.

"Repowered" means, for the purposes of an EGU, replacement of a coal-fired boiler with one of the following coal-fired technologies at the same source as the coal-fired boiler:

Atmospheric or pressurized fluidized bed combustion;

Integrated gasification combined cycle;

Magnetohydrodynamics;

Direct and indirect coal-fired turbines;

Integrated gasification fuel cells; or

As determined by the USEPA in consultation with the United States Department of Energy, a derivative of one or more of the technologies under this definition and any other coal-fired technology capable of controlling multiple combustion emissions simultaneously with improved boiler or generation efficiency and with significantly greater waste reduction relative to the performance of technology in widespread commercial use as of January 1, 2005.

"Rolling 12-month basis" means, for the purposes of Subparts B ~~of this Part~~, a determination made on a monthly basis from the relevant data for a particular calendar month and the preceding 11 calendar months (total of 12 months of data), with two exceptions. For determinations involving one EGU, calendar months in which the EGU does not operate (zero EGU operating hours) must not be included in the determination~~,~~ and must be replaced by a preceding month or months in which the EGU does operate, so that the determination is still based on 12 months of data. For determinations involving two or more EGUs, calendar months in which none of the EGUs covered by the determination operates (zero EGU operating hours) must not be included in the determination~~,~~ and must be replaced by preceding months in which at least one of the EGUs covered by the determination does operate, so that the determination is still based on 12 months of data.

"Sorbent Trap Monitoring System" means the equipment required by Appendix B ~~of this Part~~ for the continuous monitoring of Hg emissions, using paired sorbent traps containing iodated charcoal (IC) or other suitable reagents. This excepted monitoring system consists of a probe, the paired sorbent traps, an umbilical line, moisture removal components, an air tight sample pump, a gas flow meter, and an automated data acquisition and handling system. The monitoring system samples the stack gas at a rate proportional to the stack gas volumetric flowrate. The sampling is a batch process. Using the sample volume measured by the gas flow meter and the results of the analyses of the sorbent traps, the average mercury concentration in the stack gas for the sampling period is determined in units of micrograms per dry standard cubic meter (µg/dscm). Mercury mass emissions for each hour in the sampling period are calculated using the average Hg concentration for that period, in conjunction with contemporaneous hourly measurements of the stack gas flow rate, corrected for the stack moisture content.

"Total energy output" means, with respect to a cogeneration unit, the sum of useful power and useful thermal energy produced by the cogeneration unit.

"Useful thermal energy" means, for the purpose of a cogeneration unit, the thermal energy that is made available to an industrial or commercial process, excluding any heat contained in condensate return or makeup water:

Used in a heating application (e.g., space heating or domestic hot water heating); or

Used in a space cooling application (e.g., thermal energy used by an absorption chiller).

Section 225.150 Commence Commercial Operation

Commence commercial operation means, for the purposes of Subparts C, D, and E, with regard to a unit:

a) To have begun to produce steam, gas, or other heated medium used to generate electricity for sale or use, including test generation, except as provided in 40 CFR 96.105, 96.205, or 96.305, as incorporated by reference in Section 225.140.

1) For a unit that is a CAIR SO_2 unit, CAIR NO_x unit, or a CAIR NO_x Ozone Season unit ~~pursuant to~~under Sections 225.305, 225.405, and 225.505, respectively, on the date the unit commences commercial operation on the

later of November 15, 1990, or the date the unit commences commercial operation as defined in subsection (a) ~~of this Section~~ and that subsequently undergoes a physical change (other than replacement of the unit by a unit at the same source), ~~such~~ that date will remain the unit's date of commencement of commercial operation, which will continue to be treated as the same unit.

2) For a unit that is a CAIR SO_2 unit, CAIR NO_x unit, or a CAIR NO_x Ozone Season unit ~~pursuant to~~under Sections 225.305, 225.405, and 225.505, respectively, on the later of November 15, 1990 or the date the unit commences commercial operation as defined in subsection (a) ~~of this Section~~ and that is subsequently replaced by a unit at the same source (e.g., repowered), ~~such~~ that date will remain the replaced unit's date of commencement of commercial operation, and the replacement unit will be treated as a separate unit with a separate date for commencement of commercial operation as defined in subsection (a) or (b) ~~of this Section~~ as appropriate.

b) Notwithstanding subsection (a) ~~of this Section~~ and except as provided in 40 CFR 96.105, 96.205, or 96.305 for a unit that is not a CAIR SO_2 unit, CAIR NO_x unit, or a CAIR NO_x Ozone Season unit ~~pursuant to~~under Section 225.305, 225.405, or 225.505, respectively, on the later of November 15, 1990 or the date the unit commences commercial operation as defined in subsection (a) ~~of this Section~~, the unit's date for commencement of commercial operation will be the date on which the unit becomes a CAIR SO_2 unit, CAIR NO_x unit, or CAIR NO_x Ozone Season unit ~~pursuant to~~under Section 225.305, 225.405, or 225.505, respectively.

1) For a unit with a date for commencement of commercial operation as defined in subsection (b) ~~of this Section~~ and that subsequently undergoes a physical change (other than replacement of the unit by a unit at the same source), ~~such~~ that date will remain the unit's date of commencement of commercial operation, which ~~shall~~ will continue to be treated as the same unit.

2) For a unit with a date for commencement of commercial operation as defined in subsection (b) ~~of this Section~~ and that is subsequently replaced by a unit at the same source (e.g., repowered), ~~such~~ that date will remain the replaced unit's date of commencement of commercial operation, and the replacement unit will be treated as a separate unit with a separate date for commencement of commercial operation as defined in subsection (a) or (b) ~~of this Section~~ as appropriate.

SUBPART B: CONTROL OF MERCURY EMISSIONS FROM COAL-FIRED ELECTRIC GENERATING UNITS

Section 225.200 Purpose

The purpose of this Subpart B is to control the emissions of mercury from coal-fired EGUs operating in Illinois.

Section 225.202 Measurement Methods

Measurement of mercury must be according to the following:

a) Continuous emission monitoring ~~pursuant to~~under Appendix B ~~to this Part~~ or an alternative emissions monitoring system, alternative reference method for measuring emissions, or other alternative to the emissions monitoring and measurement requirements of Sections 225.240 through 225.290, if ~~such~~ that alternative is submitted to the Agency in writing and approved in writing by the Manager of the Bureau of Air's Compliance Section

b) ASTM D3173-03, Standard Test Method for Moisture in the Analysis Sample of Coal and Coke (Approved April 10, 2003), incorporated by reference in Section 225.140.

c) ASTM D3684-01, Standard Test Method for Total Mercury in Coal by the Oxygen Bomb Combustion/Atomic Absorption Method (Approved October 10, 2001), incorporated by reference in Section 225.140.

d) ASTM D5865-04, Standard Test Method for Gross Calorific Value of Coal and Coke (Approved April 1, 2004), incorporated by reference in Section 225.140.

e) ASTM D6414-01, Standard Test Method for Total Mercury in Coal and Coal Combustion Residues by Acid Extraction or Wet Oxidation/Cold Vapor Atomic Absorption (Approved October 10, 2001), incorporated by reference in Section 225.140.

f) ASTM D6722-01, Standard Test Method for Total Mercury in Coal and Coal Combustion Residues by Direct Combustion Analysis (2001), incorporated by reference in Section 225.140.

g) ASTM D6784-02, Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method) (Approved April 10, 2002), incorporated by reference in Section 225.140.

h) Emissions testing ~~pursuant to~~under Methods 29, 30A, and 30B in Appendix A-8 to 40 CFR 60.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.205 Applicability

The following stationary coal-fired boilers and stationary coal-fired combustion turbines, and the stationary boilers listed in Appendix A, regardless of the type of fuel combusted, are EGUs and are subject to this Subpart B:

a) Except as provided in subsection (b) ~~of this Section~~, a unit serving, at any time since the start-up of the unit's combustion chamber, a generator with nameplate capacity of more than 25 MWe producing electricity for sale.

b) For a unit that qualifies as a cogeneration unit during the 12-month period starting on the date the unit first produces electricity and continues to qualify as a cogeneration unit, a cogeneration unit serving at any time a generator with nameplate capacity of more than 25 MWe and supplying in any calendar year more than one-third of the unit's potential electric output capacity or 219,000 MWh, whichever is greater, to any utility power distribution system for sale. If a unit qualifies as a cogeneration unit during the 12-month period starting on the date the unit first produces electricity but subsequently no longer qualifies as a cogeneration unit, the unit must be subject to subsection (a) ~~of this Section~~ starting on the day on which the unit first no longer qualifies as a cogeneration unit.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.210 Compliance Requirements

a) Permit Requirements.

The owner or operator of each source with one or more EGUs subject to this Subpart B at the source must apply for a CAAPP permit that addresses the applicable requirements of this Subpart B.

b) Monitoring and Testing Requirements.

1) Except as otherwise indicated in this Subpart, the owner or operator of each source and each EGU at the source must comply with either the monitoring requirements of Sections 225.240 through 225.290 ~~of this Subpart B~~, the periodic emissions testing requirements of Section 225.239 ~~of this Subpart B~~, or an alternative emissions monitoring system, alternative reference method for measuring emissions, or other alternative to the emissions monitoring and measurement requirements of Sections 225.240 through 225.290, if ~~such~~ that alternative is submitted to the Agency in writing and approved in writing by the Manager of the Bureau of Air's Compliance Section.

2) Except as otherwise indicated in this Subpart, the compliance of each EGU with the mercury requirements of Sections 225.230 and 225.237 ~~of this Subpart B~~ must be determined by the emissions measurements recorded and reported in ~~accordance~~ compliance with either Sections 225.240 through 225.290 ~~of this Subpart B~~, Section 225.239 ~~of this Subpart B~~, or an alternative emissions monitoring system, alternative reference method for measuring emissions, or other alternative to the emissions monitoring and measurement requirements of Sections 225.240 through 225.290, if ~~such~~ that alternative is submitted to the Agency in writing and approved in writing by the Manager of the Bureau of Air's Compliance Section.

c) Mercury Emission Reduction Requirements
The owner or operator of any EGU subject to this Subpart B must comply with applicable requirements for control of mercury emissions of Section 225.230 or Section 225.237 ~~of this Subpart B~~.

d) Recordkeeping and Reporting Requirements
Unless otherwise provided, the owner or operator of a source with one or more EGUs at the source must keep on site at the source each of the documents listed in subsections (d)(1) through (d)(3) ~~of this Section~~ for ~~a period of~~ five years from the date the document is created. This period may be extended, in writing by the Agency, for cause, at any time beforeprior to the end of five years.

1) All emissions monitoring information gathered in ~~accordance~~ compliance with Sections 225.240 through 225.290 and all periodic emissions testing information gathered in ~~accordance~~ compliance with Section 225.239.

2) Copies of all reports, compliance certifications, and other submissions and all records made or required or documents necessary to demonstrate compliance with the requirements of this Subpart B.

3) Copies of all documents used to complete a permit application and any other submission under this Subpart B.

e) Liability.

1) The owner or operator of each source with one or more EGUs must meet the requirements of this Subpart B.

2) Any provision of this Subpart B that applies to a source must also apply to the owner and operator of ~~such~~ that source and to the owner or operator of each EGU at the source.

3) Any provision of this Subpart B that applies to an EGU must also apply to the owner or operator of such EGU.

f) Effect on Other Authorities. No provision of this Subpart B may be construed as exempting or excluding the owner or operator of a source or EGU from compliance with any other provision of an approved State Implementation Plan, a permit, the Act, or the CAA.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.220 Clean Air Act Permit Program (CAAPP) Permit Requirements

a) Application Requirements.

1) Each source with one or more EGUs subject to the requirements of this Subpart B is required to submit a CAAPP permit application that addresses all applicable requirements of this Subpart B, applicable to each EGU at the source.

2) For any EGU that commenced commercial operation:

A) on or before December 31, 2008, the owner or operator of such EGUs must submit an initial permit application or application for CAAPP permit modification that meets the requirements of this Section on or before December 31, 2008.

B) after December 31, 2008, the owner or operator of any such EGU must submit an initial CAAPP permit application or application for CAAPP modification that meets the requirements of this Section not later than 180 days before initial startup of the EGU, unless the construction permit issued for the EGU addresses the requirements of this Subpart B.

b) Contents of Permit Applications.

In addition to other information required for a complete application for CAAPP permit or CAAPP permit modification, the application must include the following information:

1) The ORIS (Office of Regulatory Information Systems) or facility code assigned to the source by the U.S. Department of Energy, Energy Information Administration, if applicable.

2) Identification of each EGU at the source.

3) The intended approach to the monitoring requirements of Sections 225.240 through 225.290~~ of this Subpart B~~, or, in the alternative, the

applicant may include its intended approach to the testing requirement of Section 225.239 ~~of this Subpart B~~.

4) The intended approach to the mercury emission reduction requirements of Section 225.230 or 225.237 ~~of this Subpart B~~, as applicable.

c) Permit Contents.

1) Each CAAPP permit issued by the Agency for a source with one or more EGUs subject to the requirements of this Subpart B must contain federally enforceable conditions addressing all applicable requirements of this Subpart B, which conditions must be a complete and segregable portion of the source's entire CAAPP permit.

2) In addition to conditions related to the applicable requirements of this Subpart B, each such CAAPP permit must also contain the information specified under subsection (b) ~~of this Section~~.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.230 Emission Standards for EGUs at Existing Sources

a) Emission Standards.

1) Except as provided in Sections 225.230(b) and (d), 225.232 through 225.235, 225.239, and 225.291 through 225.299 ~~of this Subpart B~~, beginning July 1, 2009, the owner or operator of a source with one or more EGUs subject to this Subpart B that commenced commercial operation on or before December 31, 2008, must comply with one of the following standards for each EGU on a rolling 12-month basis:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90-percent reduction of input mercury.

2) For an EGU complying with subsection (a)(1)(A) ~~of this Section~~, the mercury emission rate during quality-assured monitor operating (QAMO) hours of the EGU for each 12-month rolling period, as monitored in ~~accordance~~ compliance with this Subpart B and calculated as follows, must not exceed the applicable emission standard:

$$ER = \sum_{i=1}^{12} E_i \div \sum_{i=1}^{12} O_i$$

Where:

ER = Mercury emissions rate of the EGU during QAMO hours for the particular 12-month rolling period, expressed in lb/GWh.

E_i = Mercury emissions of the EGU during QAMO hours, in lbs, in an individual month in the 12-month rolling period, as determined in ~~accordance~~ compliance with the emissions monitoring provisions of this Subpart B.

O_i = Gross electrical output of the EGU during QAMO hours, in GWh, in an individual month in the 12-month rolling period, as determined in ~~accordance~~ compliance with Section 225.263 ~~of this Subpart B~~.

3) For an EGU complying with subsection (a)(1)(B) ~~of this Section~~, the actual control efficiency for mercury emissions achieved by the EGU for each 12-month rolling period, as monitored in ~~accordance~~ compliance with this Subpart B and calculated as follows, must meet or exceed the applicable efficiency requirement:

$$CE = 100 \times \{1 - (\sum_{i=1}^{12} E_i \div \sum_{i=1}^{12} I_i)\}$$

Where:

CE = Control efficiency for mercury emissions of the EGU during QAMO hours for the particular 12-month rolling period, expressed as a percent.

E_i = Mercury emissions of the EGU, in lbs during QAMO hours, in an individual month in the 12-month rolling period, as determined in ~~accordance~~ compliance with the emissions monitoring provisions of this Subpart B.

I_i = Amount of mercury in the fuel fired in the EGU during QAMO hours, in lbs, in an individual month in the 12-month rolling period, as determined in ~~accordance~~ compliance with Section 225.265 ~~of this Subpart B~~. I_i is determined by multiplying the amount of mercury in the fuel fired in the EGU in month *i* by the number of QAMO hours in that month, and dividing that product by the number of EGU operating hours in that month.

b) Alternative Emission Standards for Single EGUs.

1) As an alternative to compliance with the emission standards in subsection (a) ~~of this Section~~, the owner or operator of the EGU may comply with the emission standards of this Subpart B by demonstrating that the emissions of mercury from the EGU are less than the allowable emissions of mercury from the EGU on a rolling 12-month basis.

2) For the purpose of demonstrating compliance with the alternative emission standards of this subsection (b), for each rolling 12-month period, the emissions of mercury from the EGU, as monitored in ~~accordance~~ compliance with this Subpart B, must not exceed the allowable emissions of mercury from the EGU, ~~as further provided by~~under the following formulas:

$$E_{12} \leq A_{12}$$

$$E_{12} = \sum_{i=1}^{12} E_i$$

$$A_{12} = \sum_{i=1}^{12} A_i$$

Where:

E_{12} = Mercury emissions of the EGU during QAMO hours for the particular 12-month rolling period.

A_{12} = Allowable mercury emissions of the EGU during QAMO hours for the particular 12-month rolling period.

E_i = Mercury emissions of the EGU during QAMO hours in an individual month in the 12-month rolling period.

A_i = Allowable mercury emissions of the EGU during QAMO hours in an individual month in the 12-month rolling period, based on either the input mercury to the unit ($A_{Input\ i}$) or the electrical output from the EGU ($A_{Output\ i}$), as selected by the owner or operator of the EGU for that given month. A_i is determined by multiplying the allowable mercury emissions based on either input mercury or electrical output in month i by the number of QAMO hours in that month, and dividing that product by the number of EGU operating hours in that month.

$A_{Input\ i}$ = Allowable mercury emissions of the EGU in an individual month based on the input mercury to the EGU, calculated as 10.0 percent (or 0.100) of the input mercury to the EGU.

$A_{Output\ i}$ = Allowable mercury emissions of the EGU in a particular month based on the electrical output from the EGU, calculated as the product of the output based mercury limit, i.e., 0.0080 lb/GWh, and the electrical output from the EGU, in GWh.

3) If the owner or operator of an EGU does not conduct the necessary sampling, analysis, and recordkeeping, in ~~accordance~~ compliance with Section 225.265 ~~of this Subpart B~~, to determine the mercury input to the

EGU, the allowable emissions of the EGU must be calculated based on the electrical output of the EGU.

c) If two or more EGUs are served by common stacks and the owner or operator conducts monitoring for mercury emissions in the common stacks, as provided for by Sections 1.14 through 1.18 of Appendix B ~~to this Part~~, such that the mercury emissions of each EGU are not determined separately, compliance of the EGUs with the applicable emission standards of this Subpart B must be determined as if the EGUs were a single EGU.

d) Alternative Emission Standards for Multiple EGUs.

1) As an alternative to compliance with the emission standards of subsection (a) ~~of this Section~~, the owner or operator of a source with multiple EGUs may comply with the emission standards of this Subpart B by demonstrating that the emissions of mercury from all EGUs at the source during QAMO hours are less than the allowable emissions of mercury from all EGUs at the source on a rolling 12-month basis.

2) For the purposes of the alternative emission standard of subsection (d)(1) ~~of this Section~~, for each rolling 12-month period, the emissions of mercury from all the EGUs at the source during QAMO hours, as monitored in ~~accordance~~ compliance with this Subpart B, must not exceed the sum of the allowable emissions of mercury from all the EGUs at the source, as ~~further~~ provided by the following formulas:

$$E_S \leq A_S$$

$$E_S = \sum_{i=1}^{n} E_i$$

$$A_S = \sum_{i=1}^{n} A_i$$

Where:

E_S = Sum of the mercury emissions of the EGUs at the source during QAMO hours.
A_S = Sum of the allowable mercury emissions of the EGUs at the source during QAMO hours.
E_i = Mercury emissions of an individual EGU at the source during QAMO hours, as determined in ~~accordance~~ compliance with subsection (b)(2) ~~of this Section~~.

A_i = Allowable mercury emissions of an individual EGU at the source during QAMO hours, as determined in ~~accordance~~ compla\iance with subsection (b)(2)~~ of this Section~~.
n = Number of EGUs covered by the demonstration.

3) If an owner or operator of a source with two or more EGUs that is relying on this subsection (d) to demonstrate compliance fails to meet the requirements of this subsection (d) in a given 12-month rolling period, all EGUs at such source covered by the compliance demonstration are considered out of compliance with the applicable emission standards of this Subpart B for the entire last month of that period.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.232 Averaging Demonstrations for Existing Sources

a) Through December 31, 2013, as an alternative to compliance with the emission standards of Section 225.230(a)~~ of this Subpart B~~, the owner or operator of an EGU may comply with the emission standards of this Subpart B by means of an Averaging Demonstration (Demonstration) that demonstrates that the emissions of mercury from the EGU and other EGUs at the source and other EGUs at other sources covered by the Demonstration are less than the allowable emissions of mercury from all EGUs covered by the Demonstration on a rolling 12-month basis.

b) The EGUs at each source covered by a Demonstration must also comply with one of the following emission standards on a source-wide basis for the period covered by the Demonstration:

1) An emission standard of 0.020 lb mercury/GWh gross electrical output; or

2) A minimum 75 percent reduction of input mercury.

c) For the purpose of this Section, compliance must be demonstrated using the equations in Section 225.230(a)(2), (a)(3), or (d)(2), as applicable, addressing all EGUs at the sources covered by the Demonstration, rather than by using only the EGUs at one source.

d) Limitations on Demonstrations.

1) The owners or operators of more than one existing source with EGUs can only participate in Demonstrations that include other existing sources that they own or operate.

2) Single Existing Source Demonstrations

A) The owner or operator of only a single existing source with EGUs (i.e., City~~,~~ Water, Light & Power, City of Springfield, ID 167120AAO; Kincaid Generating Station, ID 021814AAB; and Southern Illinois Power Cooperative/Marion Generating Station, ID 199856AAC) can only participate in Demonstrations with other such owners or operators of a single existing source of EGUs.

B) Participation in Demonstrations under this Section by the owner or operator of only a single existing source with EGUs must be authorized through federally enforceable permit conditions for each such source participating in the Demonstration.

e) A source may be included in only one Demonstration during each rolling 12-month period.

f) The owner or operator of EGUs using Demonstrations to show compliance with this Subpart B must complete the determination of compliance for each 12-month rolling period no later than 60 days ~~following~~ after the end of the period.

g) If averaging is used to demonstrate compliance with this Subpart B, the effect of a failure to demonstrate compliance will be that the compliance status of each source must be determined under Section 225.230 ~~of this Subpart B~~ as if the sources were not covered by a Demonstration.

h) For purposes of this Section, if the owner or operator of any source that participates in a Demonstration with an owner or operator of a source that does not maintain the required records, data, and reports for the EGUs at the source, or that does not submit copies of such records, data, or reports to the Agency upon request, then the effect of this failure will be deemed to be a failure to demonstrate compliance, and the compliance status of each source must be determined under Section 225.230 ~~of this Subpart B~~ as if the sources were not covered by a Demonstration.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.233 Multi-Pollutant Standards (MPS)

a) General

1) As an alternative to compliance with the emissions standards of Section 225.230(a), the owner of eligible EGUs may elect for those EGUs to demonstrate compliance ~~pursuant to~~under this Section, which establishes control requirements and standards for emissions of NO_x and SO_2, as well as for emissions of mercury.

2) For the purpose of this Section, the following requirements apply:

A) An eligible EGU is an EGU that is located in Illinois and which commenced commercial operation on or before December 31, 2004; and

B) Ownership of an eligible EGU is determined based on direct ownership, by the holding of a majority interest in a company that owns the EGU or EGUs, or by the common ownership of the company that owns the EGU, whether through a parent-subsidiary relationship, as a sister corporation, or as an affiliated corporation with the same parent corporation, provided that the owner has the right or authority to submit a CAAPP application on behalf of the EGU.

3) The owner of one or more EGUs electing to demonstrate compliance with this Subpart B ~~pursuant to~~under this Section must submit an application for a CAAPP permit modification to the Agency, as provided in Section 225.220, that includes the information ~~specified~~ in subsection (b) and which clearly states the owner's election to demonstrate compliance ~~pursuant to~~under this Section 225.233.

A) If the owner of one or more EGUs elects to demonstrate compliance with this Subpart ~~pursuant to~~under this Section, then all EGUs it owns in Illinois as of July 1, 2006, as defined in subsection (a)(2)(B), must be thereafter subject to the standards and control requirements of this Section, except as provided in subsection (a)(3)(B). Such EGUs must be referred to as a Multi-Pollutant Standard (MPS) Group.

B) Notwithstanding the foregoing, the owner may exclude from an MPS Group any EGU scheduled for permanent shutdown that the owner so designates in its CAAPP application required to be submitted ~~pursuant to~~under subsection (a)(3), with compliance for such units to be achieved ~~by means of~~under Section 225.235.

4) Notwithstanding any contrary provision in this subsection (a), on and after January 1, 2019:

A) The following EGUs shall be merged into a new MPS Group: Baldwin Units 1, 2, and 3; Coffeen Units 1 and 2; Duck Creek Unit 1; E.D. Edwards Units 2 and 3; Havana Unit 9; Hennepin Units 1 and 2; Joppa Units 1, 2, 3, 4, 5, and 6; and Newton Unit 1. If one or more of the above EGUs are transferred to a different owner, such EGU or EGUs will become a separate MPS Group on and after the date of transfer. For purposes of this Section, "transfer"

means sale, conveyance, transfer, or other change in ownership of an EGU; and

B) No other EGUs except for those listed in subsection (a)(4)(A) are subject to the requirements of this Section.

5) When an EGU is subject to the requirements of this Section, the requirements apply to all owners or operators of the EGU.

b) Notice of Intent

The owner of one or more EGUs that intends to comply with this Subpart B ~~by means of~~under this Section must notify the Agency of its intention by December 31, 2007. The following information must accompany the notification:

1) The identification of each EGU that will be complying with this Subpart B ~~by means of~~under the multi-pollutant standards ~~contained~~ in this Section, with evidence that the owner has identified all EGUs that it owned in Illinois as of July 1, 2006, and which commenced commercial operation on or before December 31, 2004;

2) If an EGU identified in subsection (b)(1) is also owned or operated by a person different than the owner submitting the notice of intent, a demonstration that the submitter has the right to commit the EGU or authorization from the responsible official for the EGU accepting the application;

3) The Base Emission Rates for the EGUs, with copies of supporting data and calculations;

4) A summary of the current control devices installed and operating on each EGU and identification of the additional control devices that will likely be needed for the each EGU to comply with emission control requirements of this Section, including identification of each EGU in the MPS group that will be addressed by subsection (c)(1)(B), with information showing that the eligibility criteria for this subsection (b) are satisfied; and

5) Identification of each EGU that is scheduled for permanent shutdown, as provided by Section 225.235, which will not be part of the MPS Group and which will not be demonstrating compliance with this Subpart B pursuant to this Section.

c) Control Technology Requirements for Emissions of Mercury

1) Requirements for EGUs in an MPS Group

A) For each EGU in an MPS Group other than an EGU that is addressed by subsection (c)(1)(B) for the period beginning July 1, 2009 (or December 31, 2009, for an EGU for which an ~~SO2~~ SO_2 scrubber or fabric filter is being installed to be in operation by December 31, 2009), and ending on December 31, 2014 (or such earlier date that the EGU is subject to the mercury emission standard in subsection (d)(1)), the owner or operator of the EGU must install, to the extent not already installed, and properly operate and maintain one of the following emission control devices:

i) A Halogenated Activated Carbon Injection System, complying with the sorbent injection requirements of subsection (c)(2) ~~of this Section~~, except as may be otherwise provided by subsection (c)(4), and followed by a Cold-Side Electrostatic Precipitator or Fabric Filter; or

ii) If the boiler fires bituminous coal, a Selective Catalytic Reduction (SCR) System and an SO_2 Scrubber.

B) An owner of an EGU in an MPS Group has two options under this subsection (c). For an MPS Group that contains EGUs smaller than 90 gross MW in capacity, the owner may designate any such EGUs to be not subject to subsection (c)(1)(A). Or, for an MPS Group that contains EGUs with gross MW capacity of less than 115 MW, the owner may designate any such EGUs to be not subject to subsection (c)(1)(A), provided that the aggregate gross MW capacity of the designated EGUs does not exceed 4% of the total gross MW capacity of the MPS Group. For any EGU subject to one of these two options, unless the EGU is subject to the emission standards in subsection (d)(2), beginning on January 1, 2013, and continuing until such date that the owner or operator of the EGU commits to comply with the mercury emission standard in subsection (d)(2), the owner or operator of the EGU must install and properly operate and maintain a Halogenated Activated Carbon Injection System that complies with the sorbent injection requirements of subsection (c)(2), except as may be otherwise provided by subsection (c)(4), and followed by either a Cold-Side Electrostatic Precipitator or Fabric Filter. The use of a properly installed, operated, and maintained Halogenated Activated Carbon Injection System that meets the sorbent injection requirements of subsection (c)(2) is defined as the "principal control technique."

2) For each EGU for which injection of halogenated activated carbon is required by subsection (c)(1), the owner or operator of the EGU must

inject halogenated activated carbon in an optimum manner, which, except as provided in subsection (c)(4), is defined as all of the following:

A) The use of an injection system designed for effective absorption of mercury, considering the configuration of the EGU and its ductwork;

B) The injection of halogenated activated carbon manufactured by Alstom, Norit, or Sorbent Technologies, Calgon Carbon's FLUEPAC CF Plus, or Calgon Carbon's FLUEPAC MC Plus, or the injection of any other halogenated activated carbon or sorbent that the owner or operator of the EGU has demonstrated to have similar or better effectiveness for control of mercury emissions; and

C) The injection of sorbent at the following minimum rates, as applicable:

i) For an EGU firing subbituminous coal, 5.0 lbs per million actual cubic feet or, for any cyclone-fired EGU that will install a scrubber and baghouse by December 31, 2012, and which already meets an emission rate of 0.020 lbs mercury/GWh gross electrical output or at least 75 percent reduction of input mercury, 2.5 lbs per million actual cubic feet;

ii) For an EGU firing bituminous coal, 10.0 lbs per million actual cubic feet for any cyclone-fired EGU that will install a scrubber and baghouse by December 31, 2012, and which already meets an emission rate of 0.020 lbs mercury/GWh gross electrical output or at least 75 percent reduction of input mercury, 5.0 lbs per million actual cubic feet;

iii) For an EGU firing a blend of subbituminous and bituminous coal, a rate that is the weighted average of the above rates, based on the blend of coal being fired; or

iv) A rate or rates set lower by the Agency, in writing, than the rate specified in any of subsections (c)(2)(C)(i), (c)(2)(C)(ii), or (c)(2)(C)(iii) on a unit-specific basis, provided that the owner or operator of the EGU has demonstrated that such rate or rates are needed so that carbon injection will not increase particulate matter emissions or opacity so as to threaten noncompliance with applicable requirements for particulate matter or opacity.

D) For the purposes of subsection (c)(2)(C), the flue gas flow rate shall be the gas flow rate in the stack for all units except for those equipped with activated carbon injection prior to a hot-side electrostatic precipitator; for units equipped with activated carbon injection prior to a hot-side electrostatic precipitator, the flue gas flow rate shall be the gas flow rate at the inlet to the hot-side electrostatic precipitator, which shall be determined as the stack flow rate adjusted through the use of Charles' Law for the differences in gas temperatures in the stack and at the inlet to the electrostatic precipitator ($V_{esp} = V_{stack} \times T_{esp}/T_{stack}$, where V = gas flow rate in acf and T = gas temperature in Kelvin or Rankine).

3) The owner or operator of an EGU that seeks to operate an EGU with an activated carbon injection rate or rates that are set on a unit-specific basis pursuant to subsection (c)(2)(C)(iv) must submit an application to the Agency proposing such rate or rates, and must meet the requirements of subsections (c)(3)(A) and (c)(3)(B), subject to the limitations of subsections (c)(3)(C) and (c)(3)(D):

A) The application must be submitted as an application for a new or revised federally enforceable operating permit for the EGU, and it must include a summary of relevant mercury emission data for the EGU, the unit-specific injection rate or rates that are proposed, and detailed information to support the proposed injection rate or rates; and

B) This application must be submitted no later than the date that activated carbon must first be injected. For example, the owner or operator of an EGU that must inject activated carbon ~~pursuant to~~under subsection (c)(1)(A) must apply for unit-specific injection rate or rates by July 1, 2009. Thereafter, the owner or operator of the EGU may supplement its application; and

C) Any decision of the Agency denying a permit or granting a permit with conditions that set a lower injection rate or rates may be appealed to the Board ~~pursuant to~~under Section 39 of the Act; and

D) The owner or operator of an EGU may operate at the injection rate or rates proposed in its application until a final decision is made on the application, including a final decision on any appeal to the Board.

4) During any evaluation of the effectiveness of a listed sorbent, an alternative sorbent, or other technique to control mercury emissions, the owner or operator of an EGU need not comply with the requirements of

subsection (c)(2) for any system needed to carry out the evaluation, as further provided as follows:

A) The owner or operator of the EGU must conduct the evaluation in ~~accordance~~ compliance with a formal evaluation program submitted to the Agency at least 30 days ~~prior to~~before commencement of the evaluation;

B) The duration and scope of the evaluation may not exceed the duration and scope reasonably needed to complete the desired evaluation of the alternative control technique, as initially addressed by the owner or operator in a support document submitted with the evaluation program;

C) The owner or operator of the EGU must submit a report to the Agency no later than 30 days after the conclusion of the evaluation that describes the evaluation conducted and which provides the results of the evaluation; and

D) If the evaluation of the alternative control technique shows less effective control of mercury emissions from the EGU than was achieved with the principal control technique, the owner or operator of the EGU must resume use of the principal control technique. If the evaluation of the alternative control technique shows comparable effectiveness to the principal control technique, the owner or operator of the EGU may either continue to use the alternative control technique in a manner that is at least as effective as the principal control technique, or it may resume use of the principal control technique. If the evaluation of the alternative control technique shows more effective control of mercury emissions than the control technique, the owner or operator of the EGU must continue to use the alternative control technique in a manner that is more effective than the principal control technique, so long as it continues to be subject to this subsection (c).

5) In addition to complying with the applicable recordkeeping and monitoring requirements in Sections 225.240 through 225.290, the owner or operator of an EGU that elects to comply with this Subpart B by means of this Section must also comply with the following additional requirements:

A) For the first 36 months that injection of sorbent is required, it must maintain records of the usage of sorbent, the flue gas flow rate from the EGU (and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and

in the stack), and the sorbent feed rate, in pounds per million actual cubic feet of flue gas, on a weekly average;

B) After the first 36 months that injection of sorbent is required, it must monitor activated sorbent feed rate to the EGU, gas flow rate in the stack, and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack. It must automatically record this data and the sorbent carbon feed rate, in pounds per million actual cubic feet of flue gas, on an hourly average; and

C) If a blend of bituminous and subbituminous coal is fired in the EGU, it must keep records of the amount of each type of coal burned and the required injection rate for injection of activated carbon, on a weekly basis.

6) Until June 30, 2012, as an alternative to the CEMS or excepted monitoring system (sorbent trap system) monitoring, recordkeeping, and reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU may elect to comply with the emissions testing, monitoring, recordkeeping, and reporting requirements in Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), (i)(3) and (4), and (j)(1).

7) In addition to complying with the applicable reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU that elects to comply with this Subpart B by means of this Section must also submit quarterly reports for the recordkeeping and monitoring conducted pursuant to subsection (c)(5).

d) Emission Standards for Mercury

1) For each EGU in an MPS Group that is not addressed by subsection (c)(1)(B), beginning January 1, 2015 (or such earlier date when the owner or operator of the EGU notifies the Agency that it will comply with these standards) and continuing thereafter, the owner or operator of the EGU must comply with one of the following standards on a rolling 12-month basis:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90-percent reduction of input mercury.

2) For each EGU in an MPS Group ~~that has been~~ addressed under subsection (c)(1)(B), beginning on the date when the owner or operator of the EGU

notifies the Agency that it will comply with these standards and continuing thereafter, the owner or operator of the EGU must comply with one of the following standards on a rolling 12-month basis:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90-percent reduction of input mercury.

3) Compliance with the mercury emission standard or reduction requirement of this subsection (d) must be calculated in accordance with Section 225.230(a) or (d), or Section 225.232 until December 31, 2013.

4) Until June 30, 2012, as an alternative to demonstrating compliance with the emissions standards in this subsection (d), the owner or operator of an EGU may elect to comply with the emissions testing requirements in Section 225.239(a)(4) and (b), (c), (d), (e), (f), (g), (h), (i), and (j).

e) Emission Standards for NO_x and SO_2

1) NO_x Emission Standards

A) Beginning in calendar year 2012 and continuing through calendar year 2018, for the EGUs in each MPS Group, the owner and operator of the EGUs must comply with an overall NO_x annual emission rate of no more than 0.11 lb/mmBtu or an emission rate equivalent to 52 percent of the Base Annual Rate of NO_x emissions, whichever is more stringent.

B) Beginning in the 2012 ozone season and continuing through the 2018 ozone season, for the EGUs in each MPS Group, the owner and operator of the EGUs must comply with an overall NO_x seasonal emission rate of no more than 0.11 lb/mmBtu or an emission rate equivalent to 80 percent of the Base Seasonal Rate of NO_x emissions, whichever is more stringent.

C) Except as otherwise provided in subsections (f), (g), and (h), beginning in calendar year 2019 and continuing in each calendar year thereafter, the owner and operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined annual NO_x emissions in excess of 19,000 tons from all EGUs.

D) Except as otherwise provided in subsections (f), (g), and (h), beginning in calendar year 2019 and continuing in each calendar year thereafter, from May 1 to September 30 the owner and

operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined NO_x emissions in excess of 11,500 tons from all EGUs.

E) On and after January 1, 2019, the owner and operator of any of Baldwin Units 1 and 2, Coffeen Units 1 and 2, Duck Creek Unit 1, E.D. Edwards Unit 3, and Havana Unit 9 must comply with the following:

i) Operate each existing selective catalytic reduction (SCR) control system on each EGU in ~~accordance~~ compliance with good operating practices and at all times when the unit it serves is in operation, provided that such operation of the SCR control system is consistent with the technological limitations, manufacturers' specifications, and good engineering and maintenance practices for the SCR control system. During any such period in which the SCR is not operational, the owner and operator must minimize emissions to the extent reasonably practicable. All NO_x emissions from each EGU, regardless of whether the SCR is operational or non-operational, must be included in determining compliance with the emission standards ~~set forth~~ under subsections (e)(1)(C), (e)(1)(D), (f)(1), (g)(1), and (h)(1), as applicable.

ii) From May 1 through September 30, comply with a combined NO_x average emission rate of no more than 0.10 lb/mmBtu. Averaging is only allowed among EGUs in the same MPS Group.

2) SO_2 Emission Standards

A) Beginning in calendar year 2013 and continuing in calendar year 2014, for the EGUs in each MPS Group, the owner and operator of the EGUs must comply with an overall SO_2 annual emission rate of 0.33 lb/mmBtu or a rate equivalent to 44 percent of the Base Rate of SO_2 emissions, whichever is more stringent.

B) Beginning in calendar year 2015 and continuing through calendar year 2018, for the EGUs in each MPS Group, the owner and operator of the EGUs must comply with an overall annual emission rate for SO_2 of 0.25 lbs/mmBtu or a rate equivalent to 35 percent of the Base Rate of SO_2 emissions, whichever is more stringent.

C) Except as otherwise provided in ~~subsection~~ subsections (f), (g), and (h), beginning in calendar year 2019 and continuing in each

calendar year thereafter, the owner and operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined annual SO_2 emissions in excess of 34,500 tons from all EGUs.

D) Beginning in calendar year 2019 and continuing in each calendar year thereafter, the owner and operator of Joppa Units 1, 2, 3, 4, 5, and 6 must not cause or allow to be discharged into the atmosphere combined annual SO_2 emissions in excess of 19,860 tons from such EGUs.

f) Transfer of EGUs in an MPS Group

1) If EGUs in an MPS Group are transferred to a different owner:

A) For the MPS Group from which EGUs are transferred: The combined emissions limitations for the MPS Group ~~set forth~~ in this Section, as applicable, must be adjusted by subtracting from those limitations the applicable allocation amounts ~~set forth~~ in Columns A, B, and C in subsection (f)(2) that are attributable to the transferred EGUs. The owner and operator of the MPS Group must comply with the adjusted emissions limitations beginning with the year in which the transfer occurs.

B) For a new MPS Group consisting of the acquired EGUs:

i) The owner and operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined annual NO_x emissions in excess of the applicable annual NO_x limitation from all EGUs. The applicable annual NO_x limitation shall be the sum of the allocation amounts attributable to all EGUs in the MPS Group ~~set forth~~ in Column A of subsection (f)(2).

ii) From May 1 through September 30, the owner and operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined NO_x emissions in excess of the applicable seasonal NO_x limitation from all EGUs. The applicable seasonal NO_x limitation shall be the sum of the allocation amounts attributable to all EGUs in the MPS Group ~~set forth~~ in Column B of subsection (f)(2).

iii) The owner and operator of the EGUs in an MPS Group must not cause or allow to be discharged into the atmosphere combined annual SO_2 emissions in excess of

the applicable annual SO_2 limitation from all EGUs. The applicable annual SO_2 limitation shall be the sum of the unit allocation amounts attributable to all EGUs in the MPS Group ~~set forth~~ in Column C of subsection (f)(2).

iv) Notwithstanding subsections (f)(1)(B)(i) through (iii), if all the EGUs ~~set forth~~ under subsection (a)(4)(A) are transferred to the same owner on the same date, the owner and operator of the EGUs in the new MPS Group must comply with the emission limitations under subsection (e); the allocation amounts in subsection (f)(2) shall not apply.

C) The owner and operator of the EGUs as of the last day of the applicable compliance period must demonstrate compliance with the emission standards of this Section for the entire applicable compliance period. In determining compliance, such owner and operator must include in their calculations emissions from the EGUs for the entire applicable compliance period; the prior owner and operator shall not include in their calculations emissions from the EGUs for the applicable compliance period.

D) Nothing in this subsection (f) relieves owners and operators of EGUs in an MPS Group from any of the other requirements ~~set forth~~ in this Section, including the mercury standards in subsection (d).

2) Allocation Amounts in the Event of Transfer of EGUs

		Column A. No_x Allocation Amount (TPY in the Event of Transfer	Column B. NO_x Allocation Amount (May1 through Sept 30 Tons) in the Event of Transfer	Column C. SO_2 Allocation Amount (TPY) in the Event of Transfer
A)	Baldwin	4,570	2,700	3,760
B)	Havana	1,370	810	940
C)	Hennepin	1,140	675	3,760
D)	Coffeen	1,520	900	150
E)	Duck Creek	1,070	630	150

F)	Edwards	2,280	1,350	6,300
G)	Joppa	3,960	2,340	11,290
H)	Newton	2,050	1,215	6,300

3) If EGUs in an MPS Group are transferred to a different owner:

A) The transferring owner must notify the Agency's Bureau of Air, Compliance Section, in writing within seven days after the date of transfer. The notification must include the following information:

i) Name and address of the transferring owner and operator;

ii) List of the EGUs transferred;

iii) For the remaining EGUs in the MPS Group, calculations ~~pursuant to~~under subsection (f)(1)(A) demonstrating the adjusted combined annual NO_x emissions limitation, the adjusted combined NO_x emissions limitation from May 1 through September 30, and the adjusted combined annual SO_2 emissions limitation that are applicable to the MPS Group;

iv) Name and address of the new owner and operator; and

v) Date of transfer.

B) The acquiring owner must notify the Agency's Bureau of Air, Compliance Section, in writing within seven days after the date of transfer. The notification must include the following information:

i) Name and address of the acquiring owner and operator;

ii) Name and address of the transferring owner and operator;

iii) List of the EGUs acquired;

iv) Calculations ~~pursuant to~~under subsection (f)(1)(B) demonstrating the combined annual NO_x emissions limitation, the combined NO_x emissions limitation from May 1 through September 30, and the combined annual SO_2 emissions limitation that are applicable to the acquiring owner and operator's MPS Group; and

v) Date of transfer.

g) Permanent Shutdown of EGUs in an MPS Group

1) If one or more EGUs in an MPS Group are permanently shut down:

A) Such EGU or EGUs are no longer part of an MPS Group and no longer subject to the requirements of this Section.

B) The combined emissions limitations for the MPS Group ~~set forth~~ in this Section, as applicable, must be adjusted by subtracting from those limitations the applicable allocation amounts ~~set forth~~ in Columns A, B, and C in subsection (g)(2) that are attributable to the shut-down EGU or EGUs. The owner and operator of the MPS Group must comply with the adjusted emissions limitations, beginning with the compliance period or periods during which the permanent shutdown occurs. For the purposes of this Section, "permanent shutdown" occurs on the date the owner or operator of the EGUs submits a written request to the Agency to modify its operating permit to reflect the shutdown of the EGU or EGUs, or to withdraw the permit for the source. In determining compliance with the adjusted emission limitations, the owner and operator must include in their calculations emissions from the shut-down EGU or EGUs for the entire applicable compliance period.

C) Nothing in this subsection (g) relieves owners and operators of EGUs in an MPS Group from any of the other requirements ~~set forth~~ in this Section, including the mercury standards in subsection (d).

2) Allocation Amounts in the Event of Shutdown of EGUs

		Column A. No_x Allocation Amount (TPY) for Shutdown	Column B. NO_x Allocation (May 1 through Sept 30 Tons) for Shutdown	Column C. SO_2 Allocation Amount (TPY) for Shutdown
A)	Baldwin 1	1,560	920	1,290
B)	Baldwin 2	1,450	860	1,200
C)	Baldwin 3	1,560	920	1,270

D)	Havana 9	1,370	810	940
E)	Hennepin 1	270	160	910
F)	Hennepin 2	870	500	2,860
G)	Coffeen 1	570	340	60
H)	Coffeen 2	960	560	90
I)	Duck Creek 1	1,070	630	150
J)	Edwards 2	960	560	2,640
K)	Edwards 3	1,330	780	3,660
L)	Joppa 1	660	390	1,880
M)	Joppa 2	660	390	1,880
N)	Joppa 3	660	390	1,880
O)	Joppa 4	660	390	1,880
P)	Joppa 5	660	390	1,880
Q)	Joppa 6	660	390	1,880
R)	Newton 1	2,050	1,215	6,300

3) If one or more EGUs in an MPS Group are permanently shut down, the owner must notify the Agency's Bureau of Air, Compliance Section, in writing within seven days after the date of shutdown. Such notification must include the following information:

A) Name and address of the owner and operator;

B) List of the EGUs permanently shut down;

C) For the remaining EGUs in the MPS Group, calculations ~~pursuant to~~under subsection (g)(1)(B) demonstrating the adjusted combined annual NO_x emissions limitation, the adjusted combined NO_x emissions limitation from May 1 through September 30, and the adjusted combined annual SO_2 emissions limitation that are applicable to the MPS Group; and

D) Date of permanent shutdown, which is the date the owner or operator submitted a written request to the Agency to modify its operating permit to reflect the shutdown or to withdraw the permit for the source.

i) Requirements for NO_x and SO_2 Allowances.

1) The owner or operator of EGUs in an MPS Group must not sell or trade to any person or otherwise exchange with or give to any person NO_x allowances allocated to the EGUs in the MPS Group for vintage years 2012 and beyond that would otherwise be available for sale, trade, or exchange as a result of actions taken to comply with the standards in subsection (e). Such allowances that are not retired for compliance must be surrendered to the Agency on an annual basis, beginning in calendar year 2013 This provision does not apply to the use, sale, exchange, gift, or trade of allowances among the EGUs in an MPS Group.

2) The owners or operators of EGUs in an MPS Group must not sell or trade to any person or otherwise exchange with or give to any person SO_2 allowances allocated to the EGUs in the MPS Group for vintage years 2013 and beyond that would otherwise be available for sale or trade as a result of actions taken to comply with the standards in subsection (e). Such allowances that are not retired for compliance, or otherwise surrendered pursuant to a consent decree to which the State of Illinois is a party, must be surrendered to the Agency on an annual basis, beginning in calendar year 2014. This provision does not apply to the use, sale, exchange, gift, or trade of allowances among the EGUs in an MPS Group.

3) The provisions of this subsection (i) do not restrict or inhibit the sale or trading of allowances that become available from one or more EGUs in a MPS Group as a result of holding allowances that represent over-compliance with the NO_x or SO_2 standard in subsection (e), once such a standard becomes effective, whether such over-compliance results from control equipment, fuel changes, changes in the method of operation, unit shutdowns, or other reasons.

4) For purposes of this subsection (i), NO_x and SO_2 allowances mean allowances necessary for compliance with Sections 225.310, 225.410, or 225.510, 40 CFR 72, or Subparts AA and AAAA of 40 CFR 96, or any future federal NO_x or SO_2 emissions trading programs that modify or replace these programs. This Section does not prohibit the owner or operator of EGUs in an MPS Group from purchasing or otherwise obtaining allowances from other sources as allowed by law for purposes of complying with federal or state requirements, except as specifically set forth in this Section.

5) By March 1, 2010, and continuing each year thereafter, the owner or operator of EGUs in an MPS Group must submit a report to the Agency that demonstrates compliance with the requirements of this subsection (i) for the previous calendar year, and which includes identification of any allowances that have been surrendered to the USEPA or to the Agency and any allowances that were sold, gifted, used, exchanged, or traded because they became available due to over-compliance. All allowances that are required to be surrendered must be surrendered by August 31, unless USEPA has not yet deducted the allowances from the previous year. A final report will be submitted to the Agency by August 31 of each year, verifying that the actions described in the initial report have taken place or, if such actions have not taken place, an explanation of all changes that have occurred and the reasons for such changes. If USEPA has not deducted the allowances from the previous year by August 31, the final report will be due, and all allowances required to be surrendered must be surrendered, within 30 days after such deduction occurs.

j) Recordkeeping

On and after January 1, 2019, and continuing each year thereafter, the owner and operator of the EGUs in an MPS Group must keep and maintain all records necessary to demonstrate compliance with this Section, including ~~but not limited to~~ those listed in subsections (j)(1) and (j)(2). Copies of such records must be kept at the source and maintained for at least five years from the date the document is created and must be submitted by the owner and operator to the Agency within 30 days after receipt of a written request by the Agency.

1) All emissions monitoring information gathered in ~~accordance~~ compliance with 40 CFR 75.

2) Copies of all reports and compliance certifications required under subsection (k) ~~of this Section~~.

k) Reporting

1) ~~Prior to~~Before January 1, 2019, compliance with the NO_x and SO_2 emission standards must be demonstrated in ~~accordance~~ compliance with Sections 225.310, 225.410, and 225.510. The owner or operator of EGUs must complete the demonstration of compliance before March 1 of the following year for annual standards and before November 1 for seasonal standards, by which date a compliance report must be submitted to the Agency.

2) On and after January 1, 2019, and continuing each year thereafter, the owner and operator of the EGUs in an MPS Group must demonstrate

compliance with the applicable requirements ~~set forth~~ in this subsection (k)(2).

A) Beginning in 2020, and continuing each year thereafter, the owner and operator of EGUs in an MPS Group must submit to the Agency's Bureau of Air, Compliance Section, a report demonstrating compliance with the annual emissions standards in subsections (e)(1)(C), (e)(2)(C), (e)(2)(D), (f)(1), (g)(1), and (h)(1), as applicable, and with the requirements of subsection (e)(1)(E)(i), as applicable, on or before March 1 of each year. The compliance report must include the following for the preceding calendar year:

i) Actual emissions of each pollutant, ~~expressed~~ in tons, for each individual EGU in the MPS Group.

ii) Combined actual emissions of each pollutant, ~~expressed~~ in tons, for all EGUs in the MPS Group.

iii) Combined actual emissions of SO_2, ~~expressed~~ in tons, for all Joppa EGUs.

iv) A statement indicating whether each existing SCR control system on Baldwin Units 1 and 2, Coffeen Units 1 and 2, Duck Creek Unit 1, E.D. Edwards Unit 3, and Havana Unit 9 was operated in ~~accordance~~ compliance with good operating practices and at all times when the unit it serves was in operation, consistent with the technological limitations, manufacturers' specifications, and good engineering and maintenance practices for the SCR control system.

v) A statement indicating whether the EGUs in an MPS Group were operated in compliance with the requirements of this Section.

vi) A certification by a responsible official that states the following:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my

knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

B) By November 1 of each year, the owner and operator of EGUs in an MPS Group must submit to the Agency's Bureau of Air, Compliance Section, a report demonstrating compliance with the seasonal emissions standards under subsections (e)(1)(D), (e)(1)(E)(ii), (f)(1), (g)(1), and (h)(1), as applicable. The compliance report must include the following for the preceding May 1 through September 30:

i) Actual emissions of NO_x, ~~expressed~~ in tons, for each individual EGU in the MPS Group.

ii) Combined actual emissions of NO_x, ~~expressed~~ in tons, of all EGUs in the MPS Group.

iii) NO_x average emission rate (lbs/mmBtu) for each of Baldwin Units 1 and 2; Coffeen Units 1 and 2; Duck Creek Unit 1; E.D. Edwards Unit 3; and Havana Unit 9, as applicable.

iv) Combined NO_x average emission rate (lbs/mmBtu) for Baldwin Units 1 and 2; Coffeen Units 1 and 2; Duck Creek Unit 1; E.D. Edwards Unit 3; and Havana Unit 9, as applicable under subsection (e)(1)(E)(ii).

v) A statement indicating whether the EGUs in an MPS Group were operated in compliance with the requirements of this Section.

vi) A certification by a responsible official that states the following:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting

false information, including the possibility of fine and imprisonment for knowing violations.

3) For each EGU in an MPS Group, the owner or operator must notify the Agency of deviations from any of the requirements of this Section within 30 days after discovery of the deviations. At a minimum, these notifications must include a description of the deviations, a discussion of the possible cause of the deviations, and a description of any corrective actions and preventative measures taken.

4) Within 30 days after the beginning of a period during which the SCR control system on any of Baldwin Unit 1, Baldwin Unit 2, Coffeen Unit 1, Coffeen Unit 2, Duck Creek Unit 1, E.D. Edwards Unit 3, or Havana Unit 9 is not operated when the EGU it serves is in operation, the owner and operator must notify the Agency's Bureau of Air, Compliance Section, in writing. This notification must include, at a minimum, a description of why the SCR control system was not operated, the time frames during which the SCR control system was not operated, and the steps taken to minimize emissions during those time frames.

l) EGU Shutdowns

1) By September 23, 2019, the owner or operator of the EGUs in the MPS group ~~specified~~ in subsection (a)(4)(A) must submit documentation to the regional transmission operator, Midcontinent Independent System Operator (MISO), that meets all applicable regulatory requirements necessary to obtain MISO approval to permanently cease operating one or more EGUs from that MPS Group with an aggregate capacity of at least 2,000 MW (calculated on a nameplate basis) of coal-fired electric generation.

2) The owner or operator must permanently cease operating each coal-fired EGU identified in the documentation within 60 days after receiving notification from MISO that the owner or operator may cease operating that unit, but in no event later than December 31, 2019, except as follows:

A) If MISO determines that operation of a coal-fired EGU is required to continue to operate to maintain transmission reliability, the owner or operator may continue operating the EGU but must use its best efforts to resolve the reliability requirement with MISO and cease operation of the EGU as soon as practicable.

B) If MISO has not yet approved the cessation of operation of an EGU by December 31, 2019, the owner or operator may continue operating the EGU but must continue to seek a resolution with

MISO until such time as MISO approves the cessation of operation of the unit.

C) The owner or operator must permanently cease operating an EGU ~~referenced~~ in subsection (l)(2)(A) or (B) no later than 30 days after receipt of MISO's notification that the owner or operator may cease operating the unit.

3) The owner or operator of the EGUs in the MPS Group must submit the following notifications to the Agency's Bureau of Air, Compliance Section, to demonstrate compliance with this subsection (l):

A) By October 7, 2019, the owner or operator must submit a notification to the Agency containing the date that the owner or operator submitted the documentation required by subsection (l)(1) to MISO and a certification that the owner or operator has designated in that documentation EGUs from the MPS Group with an aggregate capacity of at least 2,000 MW of coal-fired electric generation for permanent cessation of operations.

B) Within 30 days after the owner's or operator's receipt of MISO's response regarding whether an EGU in the MPS Group may cease operations or is required to continue to operate to maintain transmission reliability, but for responses received on or before December 31, 2019, in no event later than January 7, 2020, the owner or operator must notify the Agency of MISO's decision and identify each EGU to which the decision applies. If an EGU is required to continue operation, the notification to the Agency must also describe the status of resolving the transmission reliability requirement. If MISO has not yet responded regarding one or more EGUs by December 31, 2019, the owner or operator must notify the Agency by January 7, 2020, identifying each EGU still awaiting a response. The owner or operator must update the Agency on the status of either resolving any transmission reliability requirement or receipt of MISO's response by the end of each calendar month until MISO approves the cessation of operation.

C) Within seven days after the permanent cessation of operations of an EGU under this subsection (l), the owner or operator must submit a notification to the Agency identifying the EGU in the MPS Group that has permanently ceased operation, the nameplate capacity of that EGU, and the date the EGU permanently ceased operations.

Section 225.234 Temporary Technology-Based Standard for EGUs at Existing Sources

a) General.

1) At a source with EGUs that commenced commercial operation on or before December 31, 2008, for an EGU that meets the eligibility criteria in subsection (b) ~~of this Section~~, the owner or operator of the EGU may temporarily comply with the requirements of this Section through June 30, 2015, as an alternative to compliance with the mercury emission standards in Section 225.230, as provided in subsections (c), (d), and (e) ~~of this Section~~.

2) An EGU that is complying with the emission control requirements of this Subpart B by operating ~~pursuant to~~under this Section may not be included in a compliance demonstration involving other EGUs during the period that is operating ~~pursuant to~~under this Section.

3) The owner or operator of an EGU that is complying with this Subpart B by means of the temporary alternative emission standards of this Section is not excused from any of the applicable monitoring, recordkeeping, and reporting requirements ~~set forth~~ in Sections 225.240 through 225.290.

4) Until June 30, 2012, as an alternative to the CEMS (or an excepted monitoring system) monitoring, recordkeeping, and reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU may elect to comply with the emissions testing, monitoring, recordkeeping, and reporting requirements in Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), (i)(3) and (4), and (j)(1).

b) Eligibility.

To be eligible to operate an EGU ~~pursuant to~~under this Section, the following criteria must be met for the EGU:

1) The EGU is equipped and operated with the air pollution control equipment or systems that include injection of halogenated activated carbon and either a cold-side electrostatic precipitator or a fabric filter.

2) The owner or operator of the EGU is injecting halogenated activated carbon in an optimum manner for control of mercury emissions, which must include injection of Alstom, Norit, Sorbent Technologies, Calgon Carbon's FLUEPAC CF Plus, Calgon Carbon's FLUEPAC MC Plus, or other halogenated activated carbon that the owner or operator of the EGU has demonstrated to have similar or better effectiveness for control of mercury emissions, at least at the ~~following~~ rates ~~set forth~~ in subsections (b)(2)(A) through (b)(2)(D) ~~of this Section~~, unless other provisions for injection of halogenated activated carbon are established in a federally

enforceable operating permit issued for the EGU, using an injection system designed for effective absorption of mercury, considering the configuration of the EGU and its ductwork. For the purposes of this subsection (b)(2), the flue gas flow rate ~~shall~~ must be the flow rate in the stack for all units except for those equipped with activated carbon injection prior to a hot-side electrostatic precipitator; for units equipped with activated carbon injection prior to a hot-side electrostatic precipitator, the flue gas flow rate ~~shall~~ must be the gas flow rate at the inlet to the hot-side electrostatic precipitator, which ~~shall~~ must be determined as the stack flow rate adjusted through the use of Charles' Law for the differences in gas temperatures in the stack and at the inlet to the electrostatic precipitator ($V_{esp} = V_{stack} \times T_{esp}/T_{stack}$, where V = gas flow rate in acf and T = gas temperature in Kelvin or Rankine).

A) For an EGU firing subbituminous coal, 5.0 lbs per million actual cubic feet.

B) For an EGU firing bituminous coal, 10.0 lbs per million actual cubic feet.

C) For an EGU firing a blend of subbituminous and bituminous coal, a rate that is the weighted average of the above rates, based on the blend of coal being fired.

D) A rate or rates set on a unit-specific basis that are lower than the rate specified above to the extent that the owner or operator of the EGU demonstrates that such rate or rates are needed so that carbon injection would not increase particulate matter emissions or opacity so as to threaten compliance with applicable regulatory requirements for particulate matter or opacity.

3) The total capacity of the EGUs that operate ~~pursuant to~~under this Section does not exceed the applicable of the following values:

A) For the owner or operator of more than one existing source with EGUs, 25 percent of the total rated capacity, in MW, of all the EGUs at the existing sources that it owns or operates, other than any EGUs operating ~~pursuant to~~under Section 225.235 ~~of this Subpart B~~.

B) For the owner or operator of only a single existing source with EGUs (i.e., City~~,~~ Water, Light & Power, City of Springfield, ID 167120AAO; Kincaid Generating Station, ID 021814AAB; and Southern Illinois Power Cooperative/Marion Generating Station, ID 199856AAC), 25 percent of the total rated capacity, in MW, of

all the EGUs at the existing sources, other than any EGUs operating ~~pursuant to~~under Section 225.235.

c) Compliance Requirements.

1) Emission Control Requirements.

The owner or operator of an EGU that is operating ~~pursuant to~~under this Section must continue to maintain and operate the EGU to comply with the criteria for eligibility for operation ~~pursuant to~~under this Section, except during an evaluation of the current sorbent, alternative sorbents, or other techniques to control mercury emissions, as provided by subsection (e)~~ of this Section~~.

2) Monitoring and Recordkeeping Requirements.

In addition to complying with all applicable monitoring and recordkeeping requirements in Sections 225.240 through 225.290 or Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), and (i)(3) and (4), the owner or operator of an EGU operating ~~pursuant to~~under this Section must also:

A) Through December 31, 2012, it must maintain records of the usage of activated carbon, the flue gas flow rate from the EGU (and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack), and the activated carbon feed rate, in pounds per million actual cubic feet of flue, on a weekly average.

B) Beginning January 1, 2013, it must monitor activated carbon feed rate to the EGU, gas flow rate in the stack, and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack. It must automatically record this data and the activated carbon feed rate, in pounds per million actual cubic feet of flue, on an hourly average.

C) If a blend of bituminous and subbituminous coal is fired in the EGU, it must maintain records of the amount of each type of coal burned and the required injection rate for injection of halogenated activated carbon, on a weekly basis.

3) Notification and Reporting Requirements.

In addition to complying with all applicable reporting requirements in Sections 225.240 through 225.290 or Section 225.239(f)(1), (f)(2), and

(j)(1), the owner or operator of an EGU operating ~~pursuant to~~under this Section must also submit the following notifications and reports to the Agency:

A) Written notification ~~prior to~~before the month in which any of the following events will occur:

i) The EGU will no longer be eligible to operate under this Section due to a change in operation;

ii) The type of coal fired in the EGU will change; the mercury emission standard with which the owner or operator is attempting to comply for the EGU will change; or

iii) Operation under this Section will be terminated.

B) Quarterly reports for the recordkeeping and monitoring or emissions testing conducted ~~pursuant to~~under subsection (c)(2) ~~of this Section~~.

C) Annual reports detailing activities conducted for the EGU to further improve control of mercury emissions, including the measures taken during the past year and activities planned for the current year.

d) Applications to Operate under the Technology-Based Standard

1) Application Deadlines.

A) The owner or operator of an EGU that is seeking to operate the EGU ~~pursuant to~~under this Section must submit an application to the Agency no later than three months ~~prior to~~before the date on which compliance with Section 225.230 ~~of this Subpart B~~ would otherwise have to be demonstrated. For example, the owner or operator of an EGU that is applying to operate the EGU ~~pursuant to~~under this Section on June 30, 2010, when compliance with applicable mercury emission standards must be first demonstrated, must apply by March 31, 2010 to operate under this Section.

B) Unless the Agency finds that the EGU is not eligible to operate ~~pursuant to~~under this Section or that the application for operation ~~pursuant to~~under this Section does not meet the requirements of subsection (d)(2) ~~of this Section~~, the owner or operator of the EGU is authorized to operate the EGU ~~pursuant to~~under this Section beginning 60 days after receipt of the application by the Agency.

C) The owner or operator of an EGU operating ~~pursuant to~~under this Section must reapply to operate ~~pursuant to~~under this Section:

i) If it operated the EGU ~~pursuant to~~under this Section 225.234 during the period of June 2010 through December 2012, and it seeks to operate the EGU ~~pursuant to~~under this Section 225.234 during the period from January 2013 through June 2015.

(ii) If it is planning a physical change to or a change in the method of operation of the EGU, control equipment, or practices for injection of activated carbon that is expected to reduce the level of control of mercury emissions.

2) Contents of Application. An application to operate an EGU ~~pursuant to~~under this Section 225.234 must be submitted as an application for a new or revised federally enforceable operating permit for the EGU, and it must include the following documents and information:

A) A formal request to operate ~~pursuant to~~under this Section showing that the EGU is eligible to operate ~~pursuant to~~under this Section and describing the reason for the request, the measures that have been taken for control of mercury emissions, and factors preventing more effective control of mercury emissions from the EGU.

B) The applicable mercury emission standard in Section 225.230(a) with which the owner or operator of the EGU is attempting to comply and a summary of relevant mercury emission data for the EGU.

C) If a unit-specific rate or rates for carbon injection are proposed ~~pursuant to~~under subsection (b)(2) ~~of this Section~~, detailed information to support the proposed injection rates.

D) An action plan describing the measures that will be taken while operating under this Section to improve control of mercury emissions. This plan must address measures such as evaluation of alternative forms or sources of activated carbon, changes to the injection system, changes to operation of the unit that affect the effectiveness of mercury absorption and collection, changes to the particulate matter control device to improve performance, and changes to other emission control devices. For each measure contained in the plan, the plan must provide a detailed description

of the specific actions that are planned, the reason that the measure is being pursued and the range of improvement in control of mercury that is expected, and the factors that affect the timing for carrying out the measure, together with the current schedule for the measure.

e) Evaluation of Alternative Control Techniques for Mercury Emissions.

1) During an evaluation of the effectiveness of the current sorbent, alternative sorbent, or other technique to control mercury emissions, the owner or operator of an EGU operating ~~pursuant to~~under this Section need not comply with the eligibility criteria for operation ~~pursuant to~~under this Section as needed to carry out an evaluation of the practicality and effectiveness of such technique, subject to the following limitations:

A) The owner or operator of the EGU must conduct the evaluation in ~~accordance~~ compliance with a formal evaluation program that it has submitted to the Agency at least 30 days ~~prior to~~before beginning the evaluation.

B) The duration and scope of the formal evaluation program must not exceed the duration and scope reasonably needed to complete the desired evaluation of the alternative control technique, as initially addressed by the owner or owner in a support document that it has submitted with the formal evaluation program ~~pursuant to~~under subsection (e)(1)(A) ~~of this Section~~.

C) Notwithstanding 35 Ill. Adm. Code 201.146(hhh), the owner or operator of the EGU must obtain a construction permit for any new or modified air pollution control equipment to be constructed as part of the evaluation of the alternative control technique.

D) The owner or operator of the EGU must submit a report to the Agency, no later than 90 days after the conclusion of the formal evaluation program, describing the evaluation that was conducted, and providing the results of the formal evaluation program.

2) If the evaluation of the alternative control technique shows less effective control of mercury emissions from the EGU than achieved with the prior control technique, the owner or operator of the EGU must resume use of the prior control technique. If the evaluation of the alternative control technique shows comparable control effectiveness, the owner or operator of the EGU may either continue to use the alternative control technique in an optimum manner or resume use of the prior control technique. If the evaluation of the alternative control technique shows more effective control of mercury emissions, the owner or operator of the EGU must

continue to use the alternative control technique in an optimum manner, if it continues to operate ~~pursuant to~~under this Section.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.235 Units Scheduled for Permanent Shut Down

a) The emission standards of Section 225.230(a) are not applicable to an EGU that will be permanently shut down as described in this Section:

1) The owner or operator of an EGU that relies on this Section must complete the following actions before June 30, 2009:

A) Have notified the Agency that it is planning to permanently shut down the EGU by the applicable date ~~specified~~ in subsection (a)(3) or (4)~~ of this Section~~. This notification must include a description of the actions that have already been taken to allow the shut down of the EGU and a description of the future actions that must be accomplished to complete the shut down of the EGU, with the anticipated schedule for those actions and the anticipated date of permanent shut down of the unit.

B) Have applied for a construction permit or be actively pursuing a federally enforceable agreement that requires the EGU to be permanently shut down in ~~accordance~~ compliance with this Section.

C) Have applied for revisions to the operating permits for the EGU to include provisions that terminate the authorization to operate the unit in ~~accordance~~ compliance with this Section.

2) The owner or operator of an EGU that relies on this Section must, before June 30, 2010, complete the following actions:

A) Have obtained a construction permit or entered into a federally enforceable agreement as described in subsection (a)(1)(B)~~ of this Section~~; or

B) Have obtained revised operating permits in ~~accordance~~ compliance with subsection (a)(1)(C)~~ of this Section~~.

3) The plan for permanent shut down of the EGU must provide for the EGU to be permanently shut down by no later than the applicable date specified below:

A) If the owner or operator of the EGU is not constructing a new EGU or other generating unit to specifically replace the existing EGU, by December 31, 2010.

B) If the owner or operator of the EGU is constructing a new EGU or other generating unit to specifically replace the existing EGU, by December 31, 2011.

4) The owner or operator of the EGU must permanently shut down the EGU by the date specified in subsection (a)(3) ~~of this Section~~, unless the owner or operator submits a demonstration to the Agency before the specified date showing that circumstances beyond its reasonable control (such as protracted delays in construction activity, unanticipated outage of another EGU, or protracted shakedown of a replacement unit) have occurred that interfere with the plan for permanent shut down of the EGU, in which case the Agency may accept the demonstration as substantiated and extend the date for shut down of the EGU as follows:

A) If the owner or operator of the EGU is not constructing a new EGU or other generating unit to specifically replace the existing EGU, for up to one year, i.e., permanent shut down of the EGU to occur by no later than December 31, 2011; or

B) If the owner or operator of the EGU is constructing a new EGU or other generating unit to specifically replace the existing EGU, for up to 18 months, i.e., permanent shutdown of the EGU to occur by no later than June 30, 2013; provided, however, that after December 31, 2012, the existing EGU must only operate as a back-up unit to address periods when the new generating units are not in service.

b) Notwithstanding Sections 225.230 and 225.232, any EGU that is not required to comply with Section 225.230 ~~pursuant to~~under this Section must not be included when determining whether any other EGUs at the source or other sources are in compliance with Section 225.230.

c) If an EGU, for which the owner or operator of the source has relied upon this Section in lieu of complying with Section 225.230(a) is not permanently shut down as required by this Section, the EGU must be considered to be a new EGU subject to the emission standards in Section 225.237(a) beginning in the month after the EGU was required to be permanently shut down, in addition to any other penalties that may be imposed for failure to permanently shut down the EGU in ~~accordance~~ compliance with this Section.

d) An EGU that has completed the requirements of subsection (a) ~~of this Section~~ is exempt from the monitoring and testing requirements in Sections 225.239 and 225.240.

e) An EGU that is scheduled for permanent shut down ~~pursuant to~~under Section 225.294(b) is exempt from the monitoring and testing requirements in Sections 225.239 and 225.240.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.237 Emission Standards for New Sources with EGUs

a) Standards.

1) Except as provided in Sections 225.238 and 225.239, the owner or operator of a source with one or more EGUs, but that previously had not had any EGUs that commenced commercial operation before January 1, 2009, must comply with one of the following emission standards for each EGU on a rolling 12-month basis:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90 percent reduction of input mercury.

2) For this purpose, compliance may be demonstrated using the equations in Section 225.230(a)(2), (a)(3), or (b)(2).

b) The initial 12-month rolling period for which compliance with the emission standards of subsection (a)(1) ~~of this Section~~ must be demonstrated for a new EGU will commence on the date that the initial performance testing commences under 40 CFR 60.8. The CEMS (or excepted monitoring system) monitoring required by this Subpart B for mercury emissions from the EGU must be certified ~~prior to~~before this date. ~~Thereafter, compliance~~Compliance must then be demonstrated on a rolling 12-month basis based on calendar months.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.238 Temporary Technology-Based Standard for New Sources with EGUs

a) General.

1) At a source with EGUs that previously had not had any EGUs that commenced commercial operation before January 1, 2009, for an EGU that meets the eligibility criteria in subsection (b) ~~of this Section~~, as an alternative to compliance with the mercury emission standards in Section

225.237, the owner or operator of the EGU may temporarily comply with the requirements of this Section, through December 31, 2018, as further provided in subsections (c), (d), and (e) ~~of this Section~~.

2) An EGU that is complying with the emission control requirements of this Subpart B by operating ~~pursuant to~~under this Section may not be included in a compliance demonstration involving other EGUs at the source during the period that the temporary technology-based standard is in effect.

3) The owner or operator of an EGU that is complying with this Subpart B ~~pursuant to~~under this Section is not excused from applicable monitoring, recordkeeping, and reporting requirements of Sections 225.240 through 225.290.

4) Until June 30, 2012, as an alternative to the CEMS (or excepted monitoring system) monitoring, recordkeeping, and reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU may elect to comply with the emissions testing, monitoring, recordkeeping, and reporting requirements in Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), (i)(3) and (4), and (j)(1).

b) Eligibility.

To be eligible to operate an EGU ~~pursuant to~~under this Section, the following criteria must be met for the EGU:

1) The EGU is subject to Best Available Control Technology (BACT) for emissions of sulfur dioxide, nitrogen oxides, and particulate matter, and the EGU is equipped and operated with the air pollution control equipment or systems specified below, as applicable to the category of EGU:

A) For coal-fired boilers, injection of sorbent or other mercury control technique (e.g., reagent) approved by the Agency.

B) For an EGU firing fuel gas produced by coal gasification, processing of the raw fuel gas prior to combustion for removal of mercury with a system using a sorbent or other mercury control technique approved by the Agency.

2) For an EGU for which injection of a sorbent or other mercury control technique is required ~~pursuant to~~under subsection (b)(1) ~~of this Section~~, the owner or operator of the EGU is injecting sorbent or other mercury control technique in an optimum manner for control of mercury emissions, which must include injection of Alstom, Norit, Sorbent Technologies, Calgon Carbon's FLUEPAC CF Plus, Calgon Carbon's FLUEPAC MC Plus, or other sorbent or other mercury control technique that the owner or

operator of the EGU demonstrates to have similar or better effectiveness for control of mercury emissions, at least at the rate ~~set forth~~ in the appropriate of subsections (b)(2)(A) through (b)(2)(C) ~~of this Section~~, unless other provisions for injection of sorbent or other mercury control technique are established in a federally enforceable operating permit issued for the EGU, with an injection system designed for effective absorption of mercury. For the purposes of this subsection (b)(2), the flue gas flow rate ~~shall~~ must be the gas flow rate in the stack for all units except for those equipped with activated carbon injection prior to a hot-side electrostatic precipitator; for units equipped with activated carbon injection prior to a hot-side electrostatic precipitator, the flue gas flow rate ~~shall~~ must be the gas flow rate at the inlet to the hot-side electrostatic precipitator, which ~~shall~~ must be determined as the stack flow rate adjusted through the use of Charles' Law for the differences in gas temperatures in the stack and at the inlet to the electrostatic precipitator ($V_{esp} = V_{stack} \times T_{esp}/T_{stack}$, where V = gas flow rate in acf and T = gas temperature in Kelvin or Rankine).

A) For an EGU firing subbituminous coal, 5.0 pounds per million actual cubic feet.

B) For an EGU firing bituminous coal, 10.0 pounds per million actual cubic feet.

C) For an EGU firing a blend of subbituminous and bituminous coal, a rate that is the weighted average of the above rates, based on the blend of coal being fired.

D) A rate or rates set on a unit-specific basis that are lower than the rate ~~specified~~ in subsections (b)(2)(A), (B), and (C) ~~of this Section~~, to the extent that the owner or operator of the EGU demonstrates that such rate or rates are needed so that sorbent injection or other mercury control technique would not increase particulate matter emissions or opacity so as to threaten compliance with applicable regulatory requirements for particulate matter or opacity or cause a safety issue.

c) Compliance Requirements.

1) Emission Control Requirements.

The owner or operator of an EGU that is operating ~~pursuant to~~under this Section must continue to maintain and operate the EGU to comply with the criteria for eligibility for operation under this Section, except during an evaluation of the current sorbent, alternative sorbents, or other techniques

to control mercury emissions, as provided by subsection (e) ~~of this Section~~.

2) Monitoring and Recordkeeping Requirements.

In addition to complying with all applicable monitoring and recordkeeping requirements in Sections 225.240 through 225.290 or Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), and (i)(3) and (4), the owner or operator of a new EGU operating ~~pursuant to~~under this Section must also:

A) Monitor sorbent feed rate to the EGU, gas flow rate in the stack, and if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack. It must automatically record this data and the sorbent feed rate, in pounds per million actual cubic feet of flue gas at the injection point, on an hourly average.

B) If a blend of bituminous and subbituminous coal is fired in the EGU, maintain records of the amount of each type of coal burned and the required injection rate for injection of sorbent, on a weekly basis.

C) If a mercury control technique other than sorbent injection is approved by the Agency, monitor appropriate parameter for that control technique as specified by the Agency.

3) Notification and Reporting Requirements.

In addition to complying with all applicable reporting requirements of Sections 225.240 through 225.290 or Section 225.239(f)(1) and (2) and (j)(1), the owner or operator of an EGU operating ~~pursuant to~~under this Section must also submit the following notifications and reports to the Agency:

A) Written notification ~~prior to~~before the month in which any of the following events will occur: the EGU will no longer be eligible to operate under this Section due to a change in operation; the type of coal fired in the EGU will change; the mercury emission standard with which the owner or operator is attempting to comply for the EGU will change; or operation under this Section will be terminated.

B) Quarterly reports for the recordkeeping and monitoring or emissions testing conducted ~~pursuant to~~under subsection (c)(2) ~~of this Section~~.

C) Annual reports detailing activities conducted for the EGU to further improve control of mercury emissions, including the measures taken during the past year and activities planned for the current year.

d) Applications to Operate under the Technology-Based Standard.

1) Application Deadlines.

A) The owner or operator of an EGU that is seeking to operate the EGU ~~pursuant to~~under this Section must submit an application to the Agency no later than three months ~~prior to~~before the date that compliance with Section 225.237 would otherwise have to be demonstrated.

B) Unless the Agency finds that the EGU is not eligible to operate ~~pursuant to~~under this Section or that the application for operation under this Section does not meet the requirements of subsection (d)(2)~~ of this Section~~, the owner or operator of the EGU is authorized to operate the EGU pursuant to this Section beginning 60 days after receipt of the application by the Agency.

C) The owner or operator of an EGU operating ~~pursuant to~~under this Section must reapply to operate ~~pursuant to~~under this Section if it is planning a physical change to or a change in the method of operation of the EGU, control equipment, or practices for injection of sorbent or other mercury control technique that is expected to reduce the level of control of mercury emissions.

2) Contents of Application.

An application to operate ~~pursuant to~~under this Section must be submitted as an application for a new or revised federally enforceable operating permit for the new EGU, and it must include the following information:

A) A formal request to operate ~~pursuant to~~under this Section showing that the EGU is eligible to operate ~~pursuant to~~under this Section and describing the reason for the request, the measures that have been taken for control of mercury emissions, and factors preventing more effective control of mercury emissions from the EGU.

B) The applicable mercury emission standard in Section 225.237 with which the owner or operator of the EGU is attempting to comply and a summary of relevant mercury emission data for the EGU.

C) If a unit-specific rate or rates for sorbent or other mercury control technique injection are proposed ~~pursuant to~~under subsection (b)(2)~~ of this Section~~, detailed information to support the proposed injection rates.

D) An action plan describing the measures that will be taken while operating ~~pursuant to~~under this Section to improve control of mercury emissions. This plan must address measures such as evaluation of alternative forms or sources of sorbent or other mercury control technique, changes to the injection system, changes to operation of the unit that affect the effectiveness of mercury absorption and collection, and changes to other emission control devices. For each measure contained in the plan, the plan must provide a detailed description of the specific actions that are planned, the reason that the measure is being pursued and the range of improvement in control of mercury that is expected, and the factors that affect the timing for carrying out the measure, with the current schedule for the measure.

e) Evaluation of Alternative Control Techniques for Mercury Emissions.

1) During an evaluation of the effectiveness of the current sorbent, alternative sorbent, or other technique to control mercury emissions, the owner or operator of an EGU operating ~~pursuant to~~under this Section does not need to comply with the eligibility criteria for operation ~~pursuant to~~under this Section as needed to carry out an evaluation of the practicality and effectiveness of such technique, further subject to the following limitations:

A) The owner or operator of the EGU must conduct the evaluation in ~~accordance~~ compliance with a formal evaluation program that it has submitted to the Agency at least 30 days ~~prior to~~before beginning the evaluation.

B) The duration and scope of the formal evaluation program must not exceed the duration and scope reasonably needed to complete the desired evaluation of the alternative control technique, as initially addressed by the owner or operator in a support document that it has submitted with the formal evaluation program ~~pursuant to~~under subsection (e)(1)(A)~~ of this Section~~.

C) Notwithstanding 35 Ill. Adm. Code 201.146(hhh), the owner or operator of the EGU must obtain a construction permit for any new or modified air pollution control equipment to be constructed as part of the evaluation of the alternative control technique.

D) The owner or operator of the EGU must submit a report to the Agency no later than 90 days after the conclusion of the formal evaluation program describing the evaluation that was conducted and providing the results of the formal evaluation program.

2) If the evaluation of the alternative control technique shows less effective control of mercury emissions from the EGU than was achieved with the prior control technique, the owner or operator of the EGU must resume use of the prior control technique. If the evaluation of the alternative control technique shows comparable effectiveness, the owner or operator of the EGU may either continue to use the alternative control technique in an optimum manner or resume use of the prior control technique. If the evaluation of the alternative control technique shows more effective control of mercury emissions, the owner or operator of the EGU must continue to use the alternative control technique in an optimum manner, if it continues to operate ~~pursuant to~~ under this Section.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.239 Periodic Emissions Testing Alternative Requirements

a) General.

1) As an alternative to demonstrating compliance with the emissions standards of Sections 225.230(a) or 225.237(a), the owner or operator of an EGU may elect to demonstrate compliance ~~pursuant to~~under the emission standards in subsection (b) ~~of this Section~~ and the use of quarterly emissions testing as an alternative to the use of CEMS or an excepted monitoring system.

2) The owner or operator of an EGU that elects to demonstrate compliance ~~pursuant to~~under this Section must comply with the testing, recordkeeping, and reporting requirements of this Section in addition to other applicable recordkeeping and reporting requirements in this Subpart.

3) The alternative method of compliance provided under this subsection may only be used until June 30, 2012, after which a CEMS (or an excepted monitoring system) certified in accordance with Section 225.250 ~~of this Subpart B~~ must be used.

4) If an owner or operator of an EGU demonstrating compliance pursuant to Section 225.230, 225.233(d)(1) or (2), 225.237, or 225.294(e)(1)(A) discontinues use of CEMS (or an excepted monitoring system) before collecting a full 12 months of data and elects to demonstrate compliance ~~pursuant to~~under this Section, the data collected ~~prior to~~before that point

must be averaged to determine compliance for such period. In such case, for purposes of calculating an emission standard or mercury control efficiency using the equations in Section 225.230(a) or (b), the "12" in the equations will be replaced by a variable equal to the number of full and partial months for which the owner or operator collected data from a CEMS or an excepted monitoring system.

b) Emission Limits.

1) Existing Units: Beginning July 1, 2009, the owner or operator of a source with one or more EGUs subject to this Subpart B that commenced commercial operation on or before June 30, 2009, must comply with one of the following standards for each EGU, as determined through quarterly emissions testing according to subsections (c), (d), (e), and (f) ~~of this Section~~:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90-percent reduction of input mercury.

2) New Units: Beginning within the first 2,160 hours after the commencement of commercial operations, the owner or operator of a source with one or more EGUs subject to this Subpart B that commenced commercial operation after June 30, 2009, must comply with one of the following standards for each EGU, as determined through quarterly emissions testing in accordance with subsections (c), (d), (e), and (f) ~~of this Section~~:

A) An emission standard of 0.0080 lb mercury/GWh gross electrical output; or

B) A minimum 90-percent reduction of input mercury.

c) Initial Emissions Testing Requirements for New Units. The owner or operator of an EGU that commenced commercial operation after June 30, 2009, and that is complying by means of this Section must conduct an initial performance test in ~~accordance~~ compliance with the requirements of subsections (d) and (e) ~~of this Section~~ within the first 2,160 hours after the commencement of commercial operations.

d) Emissions Testing Requirements.

1) ~~Subsequent to~~After the initial performance test, emissions tests must be performed on a quarterly calendar basis in ~~accordance~~ compliance with the ~~requirements of~~ subsections (d), (e), and (f) ~~of this Section~~;

2) Notwithstanding ~~the provisions in~~ subsection (d)(1)(1), owners or operators of EGUs demonstrating compliance under Section 225.233 or Sections 225.291 through 225.299, and which have not opted in to the emission ~~limit provisions~~limits of Section 225.233(d)(1) or (d)(2), or Section 225.294(c) ~~pursuant to~~under Section 225.294(e)(1)(B), must perform emissions testing on a semi-annual calendar basis, where the periods consist of the months of January through June and July through December, in ~~accordance~~ compliance with ~~the requirements of~~ subsections (d), (e), and (f)(1) and (2) ~~of this Section~~;

3) Emissions tests which demonstrate compliance with this Subpart must be performed at least 45 days apart. However, if an emissions test fails to demonstrate compliance with this Subpart or the emissions test is being performed ~~subsequent to~~after a significant change in the operations of an EGU under subsection (h)(2) ~~of this Section~~, the owner or operator of an EGU may perform additional emissions tests using the same test protocol previously submitted in the same period, with less than 45 days in between emissions tests;

4) A minimum of three and a maximum of nine emissions test runs, lasting at least one hour each, ~~shall~~ must be conducted and averaged to determine compliance. All test runs performed will be reported.

5) If the EGU shares a common stack with one or more other EGUs, the owner or operator of the EGU will conduct emissions testing in the duct to the common stack from each unit, unless the owner or operator of the EGU considers the combined emissions measured at the common stack as the mass emissions of mercury for the EGUs for recordkeeping and compliance purposes.

6) If an owner or operator of an EGU demonstrating compliance ~~pursuant to~~under this Section later elects to demonstrate compliance ~~pursuant to~~under the CEMS monitoring provisions (or excepted monitoring system provisions) in Section 225.240 ~~of this Subpart~~, the owner or operator must comply with the emissions monitoring deadlines in Section 225.240(b)(4) ~~of this Subpart~~.

e) Emissions Testing Procedures.

1) The owner or operator must conduct a compliance test in ~~accordance~~ compliance with Method 29, 30A, or 30B of 40 CFR 60, Appendix A, as incorporated by reference in Section 225.140;

2) Mercury emissions or control efficiency must be measured while the affected unit is operating at or above 90% of peak load;

3) For units complying with the control efficiency standard of subsection (b)(1)(B) or (b)(2)(B) ~~of this Section~~, Section 225.233(d)(1)(B) or (d)(2)(B) and electing to demonstrate compliance ~~pursuant to~~under Section 225.233(d)(4), or Section 225.294(c)(2) ~~pursuant to~~under Section 225.294(e)(1)(B), the owner or operator must perform coal sampling as follows:

A) in ~~accordance~~ compliance with Section 225.265 ~~of this Subpart~~ at least once during each day of testing; and

B) in ~~accordance~~ compliance with Section 225.265 ~~of this Subpart~~, once each month in those months when emissions testing is not performed unless the boiler did not operate or combust coal at all during that month;

4) For units complying with the output-based emission standard of subsection (b)(1)(A) or (b)(2)(A) ~~of this Section~~, the owner or operator must monitor gross electrical output for the duration of the testing.

5) The owner or operator of an EGU may use an alternative emissions testing method if such alternative is submitted to the Agency in writing and approved in writing by the Manager of the Bureau of Air's Compliance Section.

f) Notification Requirements.

1) The owner or operator of an EGU must submit a testing protocol as described in USEPA's Emission Measurement Center's Guideline Document #42 to the Agency at least 45 days ~~prior to~~before a scheduled emissions test, except as provided in Section 225.239(h)(2) and (h)(3). Upon written request directed to the Manager of the Bureau of Air's Compliance Section, the Agency may, in its sole discretion, waive the 45-day requirement. Such waiver ~~shall~~ must only be effective if it is provided in writing and signed by the Manager of the Bureau of Air's Compliance Section, or his or her designee;

2) Notification of a scheduled emissions test must be submitted to the Agency in writing, directed to the Manager of the Bureau of Air's Compliance Section, at least 30 days ~~prior to~~before the expected date of the emissions test. Upon written request directed to the Manager of the Bureau of Air's Compliance Section, the Agency may, in its sole discretion, waive the 30-day notification requirement. Such waiver ~~shall~~ must only be effective if it is provided in writing and signed by the Manager of the Bureau of Air's Compliance Section, or his or her designee. Notification of the actual date and expected time of testing must

be submitted in writing, directed to the Manager of the Bureau of Air's Compliance Section, at least five working days ~~prior to~~before the actual date of the test;

3) For an EGU that has elected to demonstrate compliance by use of the emission standards of subsection (b) ~~of this Section~~, if an emissions test performed under the requirements of this Section fails to demonstrate compliance with the limits of subsection (b) ~~of this Section~~, the owner or operator of an EGU may perform a new emissions test using the same test protocol previously submitted in the same period, by notifying the Manager of the Bureau of Air's Compliance Section or his or her designee of the actual date and expected time of testing at least five working days ~~prior to~~before the actual date of the test. The Agency may, in its sole discretion, waive this five-day notification requirement. Such waiver ~~shall~~ must only be effective if it is provided in writing and signed by the Manager of the Bureau of Air's Compliance Section, or his or her designee;

4) In addition to the testing protocol required by subsection (f)(1) ~~of this Section~~, the owner or operator of an EGU that has elected to demonstrate compliance by use of the emission standards of subsection (b) ~~of this Section,~~ that opts into Section 225.233(d)(1) or (d)(2) early and elects to demonstrate compliance ~~pursuant to~~under Section 225.233(d)(4), or that opts into Section 225.294(c) ~~pursuant to~~under Section 225.294(e)(1)(B), must submit a Continuous Parameter Monitoring Plan to the Agency at least 45 days ~~prior to~~before a scheduled emissions test. Upon written request directed to the Manager of the Bureau of Air's Compliance Section, the Agency may, in its sole discretion, waive the 45-day requirement. The waiver ~~shall~~ must only be effective if it is provided in writing and signed by the Manager of the Bureau of Air's Compliance Section, or his or her designee. The Continuous Parameter Monitoring Plan must detail how the EGU will continue to operate within the parameters enumerated in the testing protocol and how those parameters will ensure compliance with the applicable mercury limit. For example, the Continuous Parameter Monitoring Plan must include coal sampling as described in Section 225.239(e)(3) ~~of this Subpart~~ and must ensure that an EGU that performs an emissions test using a blend of coals continues to operate using that same blend of coal. If the Agency disapproves the Continuous Parameter Monitoring Plan, the owner or operator of the EGU has 30 days ~~from~~ after the date of receipt of the disapproval to submit more detailed information in ~~accordance~~ compliance with the Agency's request.

g) Compliance Determination.

1) Each successful quarterly emissions test shall determine compliance with this Subpart for that quarter, except for days in the quarter before and after a failed test and until a successful re-test as described in subsection(g)(2) ~~of this Section~~, where the quarterly periods consist of the months of January through March, April through June, July through September, and October through December;

2) If emissions testing conducted ~~pursuant to~~under this Section fails to demonstrate compliance, the owner or operator of the EGU will be deemed to have been out of compliance with this Subpart beginning on the first day of the current quarter, the last day of certified CEMS data (or certified data from an excepted monitoring system) demonstrating compliance, or the date on which a significant change was made ~~pursuant to~~under subsection (h)(2) ~~of this Section~~ if such a change was made, whichever is later; the EGU will remain out of compliance until a subsequent emissions test successfully demonstrates compliance with the limits of this Section.

h) Operation Requirements.

1) The owner or operator of an EGU that has elected to demonstrate compliance by use of the emission standards of subsection (b) ~~of this Section~~ must continue to operate the EGU commensurate with the Continuous Parameter Monitoring Plan until another Continuous Parameter Monitoring Plan is developed and submitted to the Agency in conjunction with the next compliance demonstration, in ~~accordance~~ compliance with subsection (f)(4) ~~of this Section~~.

2) If the owner or operator makes a significant change to the operations of an EGU subject to this Section, such as changing from bituminous to subbituminous coal or any other change that would render the most recent test no longer representative of current operations according to the parameters listed in the Continuous Parameter Monitoring Plan, the owner or operator must submit a testing protocol to the Agency within seven operating days ~~of~~ after the significant change and perform an emissions test within 30 days after the change if the change takes place more than 30 days before the end of the current calendar quarter, or within 30 days ~~of~~ after the beginning of the new quarter if the change takes place less than 30 days before the end of the current calendar quarter. In addition, the owner or operator of an EGU that has elected to demonstrate compliance by use of the emission standards of subsection (b) ~~of this Section~~, Section 225.233(d)(1) or (d)(2), or Section 225.294(c) ~~pursuant to~~under Section 225.294(e)(1)(B) must submit an updated Continuous Parameter Monitoring Plan within seven operating days ~~of~~ after the significant change.

3) If a blend of bituminous and subbituminous coal is fired in the EGU, the owner or operator of the EGU must ensure that the EGU continues to operate using the same blend that was used during the most recent successful emissions test. If the blend of coal changes, the owner or operator of the EGU must re-test in ~~accordance~~ compliance with subsections (d), (e), (f), and (g) ~~of this Section~~ within 30 days ~~of~~ after the change in coal blend, notwithstanding the requirement of subsection (d)(3) ~~of this Section~~ that there must be 45 days between emissions tests.

i) Recordkeeping.

1) The owner or operator of an EGU must comply with all applicable recordkeeping and reporting requirements in this Section.

2) Continuous Parameter Monitoring. The owner or operator of an EGU must maintain records to substantiate that the EGU is operating in compliance with the parameters ~~listed~~ in the Continuous Parameter Monitoring Plan, detailing the parameters that impact mercury reduction and including the following records related to the emissions of mercury:

A) For an EGU for which the owner or operator is complying with this Subpart B ~~pursuant to~~under Section 225.239(b)(1)(B) or 225.239(b)(2)(B), records of the daily mercury content of coal used (parts per million) and the daily and quarterly input mercury (lbs).

B) For an EGU for which the owner or operator of an EGU complying with this Subpart B ~~pursuant to~~under Section 225.239(b)(1)(A) or 225.239(b)(2)(A), records of the daily and quarterly gross electrical output (MWh) on an hourly basis.

3) The owner or operator of an EGU using activated carbon injection must also comply with the following requirements:

A) Maintain records of the usage of sorbent, the exhaust gas flow rate from the EGU, and the sorbent feed rate, in pounds per million actual cubic feet of exhaust gas at the injection point, on a weekly average;

B) If a blend of bituminous and subbituminous coal is fired in the EGU, keep records of the amount of each type of coal burned and the required injection rate for injection of activated carbon, on a weekly basis.

4) The owner or operator of an EGU must retain all records required by this Section at the source for a period of five years from the date the document

is created, unless otherwise provided in the CAAPP permit issued for the source, and must make a copy of any record available to the Agency promptly upon request. This period may be extended in writing by the Agency, for cause, at any time ~~prior to~~before the end of five years.

5) The owner or operator of an EGU demonstrating compliance ~~pursuant to~~under this Section must monitor and report the heat input rate at the unit level.

6) The owner or operator of an EGU demonstrating compliance ~~pursuant to~~under this Section must perform and report coal sampling in ~~accordance~~ compliance with subsection ~~225.239~~(e)(3).

j) Reporting Requirements.

1) An owner or operator of an EGU ~~shall~~ must submit to the Agency a Final Source Test Report for each periodic emissions test within 45 days after the test is completed. The Final Source Test Report will be directed to the Manager of the Bureau of Air's Compliance Section, or his or her designee, and include at a minimum:

A) A summary of results;

B) A description of test methods, including a description of sampling points, sampling train, analysis equipment, and test schedule, and a detailed description of test conditions, including:

i) Process information, including ~~but not limited to~~ modes of operation, process rate, and fuel or raw material consumption;

ii) Control equipment information (i.e., equipment condition and operating parameters during testing);

iii) A discussion of any preparatory actions taken (i.e., inspections, maintenance, and repair); and

iv) Data and calculations, including copies of all raw data sheets and records of laboratory analyses, sample calculations, and data on equipment calibration.

2) The owner or operator of a source with one or more EGUs demonstrating compliance with Subpart B in ~~accordance~~ compliance with this Section must submit to the Agency a Quarterly Certification of Compliance within 45 days ~~following~~ after the end of each calendar quarter. Quarterly certifications of compliance must certify whether compliance existed for

each EGU for the calendar quarter covered by the certification. If the EGU failed to comply during the quarter covered by the certification, the owner or operator must provide the reasons the EGU or EGUs failed to comply and a full description of the noncompliance (i.e., tested emissions rate, coal sample data, etc.). In addition, for each EGU, the owner or operator must provide the following appropriate data to the Agency ~~as set forth in~~under this Section.

A) A list of all emissions tests performed within the calendar quarter covered by the Certification and submitted to the Agency for each EGU, including the dates on which such tests were performed.

B) Any deviations or exceptions each month and discussion of the reasons for such deviations or exceptions.

C) All Quarterly Certifications of Compliance required to be submitted must include the following certification by a responsible official:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

3) Deviation Reports. For each EGU, the owner or operator must promptly notify the Agency of deviations from any of the requirements of this Subpart B. At a minimum, these notifications must include a description of such deviations within 30 days after discovery of the deviations, and a discussion of the possible cause of such deviations, any corrective actions, and any preventative measures taken.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.240 General Monitoring and Reporting Requirements

Except as otherwise indicated in this Subpart, the owner or operator of an EGU must comply with the monitoring, recordkeeping, and reporting requirements ~~as provided~~ in this Section, Sections 225.250 through 225.290 ~~of this Subpart B~~, and Sections 1.14 through 1.18 of Appendix B ~~to this Part~~. If the EGU utilizes a common stack with units that are not EGUs and the owner or operator of the EGU does not conduct emissions monitoring in the duct to the

common stack from each EGU, the owner or operator of the EGU must conduct emissions monitoring in ~~accordance~~ compliance with Section 1.16(b)(2) of Appendix B ~~to this Part~~ and this Section, including monitoring in the duct to the common stack from each unit that is not an EGU, unless the owner or operator of the EGU counts the combined emissions measured at the common stack as the mass emissions of mercury for the EGUs for recordkeeping and compliance purposes.

a) Requirements for installation, certification, and data accounting. The owner or operator of each EGU must:

1) Install all monitoring systems required ~~pursuant to~~under this Section and Sections 225.250 through 225.290 for monitoring mercury mass emissions (including all systems required to monitor mercury concentration, stack gas moisture content, stack gas flow rate, and CO_2 or O_2 concentration, as applicable, in ~~accordance~~ compliance with Sections 1.15 and 1.16 of Appendix B ~~to this Part~~).

2) Successfully complete all certification tests required ~~pursuant to~~under Section 225.250 and meet all other requirements of this Section, Sections 225.250 through 225.290, and Sections 1.14 through 1.18 of Appendix B ~~to this Part~~ applicable to the monitoring systems required under subsection (a)(1) ~~of this Section~~.

3) Record, report, and assure the quality of the data from the monitoring systems required under subsection (a)(1) ~~of this Section~~.

4) If the owner or operator elects to use the low mass emissions excepted monitoring methodology for an EGU that emits no more than 464 ounces (29 pounds) of mercury per year ~~pursuant to~~under Section 1.15(b) of Appendix B ~~to this Part~~, it must perform emissions testing in ~~accordance~~ compliance with Section 1.15(c) of Appendix B ~~to this Part~~ to demonstrate that the EGU is eligible to use this excepted emissions monitoring methodology, as well as comply with all other applicable requirements of Section 1.15(b) through (f) of Appendix B ~~to this Part~~. Also, the owner or operator must submit a copy of any information required to be submitted to the USEPA ~~pursuant to~~under these provisions to the Agency. The initial emissions testing to demonstrate eligibility of an EGU for the low mass emissions excepted methodology must be conducted by the applicable of the following dates:

A) If the EGU has commenced commercial operation before July 1, 2008, at least by July 1, 2009, or 45 days ~~prior to~~before relying on the low mass emissions excepted methodology, whichever date is later.

B) If the EGU has commenced commercial operation on or after July 1, 2008, at least 45 days ~~prior to~~before the applicable date ~~specified pursuant to~~under subsection (b)(2) ~~of this Section~~ or 45 days ~~prior to~~before relying on the low mass emissions excepted methodology, whichever date is later.

b) Emissions Monitoring Deadlines. The owner or operator must meet the emissions monitoring system certification and other emissions monitoring requirements of subsections (a)(1) and (a)(2) ~~of this Section~~ on or before the applicable of the following dates. The owner or operator must record, report, and quality-assure the data from the emissions monitoring systems required under subsection (a)(1) ~~of this Section~~ on and after the applicable of the following dates:

1) For the owner or operator of an EGU that commences commercial operation before July 1, 2008, by July 1, 2009, except that an EGU in an MPS Group for which an SO_2 scrubber or fabric filter is being installed to be in operation by December 31, 2009, as described in Section 225.233(c)(1)(A), shall have a date of January 1, 2010.

2) For the owner or operator of an EGU that commences commercial operation on or after July 1, 2008, by 90 unit operating days or 180 calendar days, whichever occurs first, after the date on which the EGU commences commercial operation.

3) For the owner or operator of an EGU for which construction of a new stack or flue or installation of add-on mercury emission controls, a flue gas desulfurization system, a selective catalytic reduction system, a fabric filter, or a compact hybrid particulate collector system is completed after the applicable deadline ~~pursuant to~~under subsection (b)(1) or (b)(2) ~~of this Section~~, by 90 unit operating days or 180 calendar days, whichever occurs first, after the date on which emissions first exit to the atmosphere through the new stack or flue, add-on mercury emission controls, flue gas desulfurization system, selective catalytic reduction system, fabric filter, or compact hybrid particulate collector system.

4) For an owner or operator of an EGU that originally elected to demonstrate compliance ~~pursuant to~~under the emissions testing requirements in Section 225.239, by the first day of the calendar quarter following the last emissions test demonstrating compliance with Section 225.239.

c) The owner or operator of an EGU that does not meet the applicable emissions monitoring date ~~set forth~~ in subsection (b) ~~of this Section~~ for any emissions monitoring system required ~~pursuant to~~under subsection (a)(1) ~~of this Section~~ must begin periodic emissions testing in ~~accordance~~ compliance with Section 225.239.

d) Prohibitions.

1) No owner or operator of an EGU may use any alternative emissions monitoring system, alternative reference method for measuring emissions, or other alternative to the emissions monitoring and measurement requirements of this Section and Sections 225.250 through 225.290, unless such alternative is submitted to the Agency in writing and approved in writing by the Manager of the Bureau of Air's Compliance Section, or his or her designee.

2) No owner or operator of an EGU may operate its EGU so as to discharge, or allow to be discharged, mercury emissions to the atmosphere without accounting for such emissions in ~~accordance~~ compliance with the applicable provisions of this Section, Sections 225.250 through 225.290, and Sections 1.14 through 1.18 of Appendix B ~~to this Part~~, unless demonstrating compliance ~~pursuant to~~under Section 225.239, as applicable.

3) No owner or operator of an EGU may disrupt the CEMS (or excepted monitoring system), any portion ~~thereof~~of it, or any other approved emission monitoring method, and thereby avoid monitoring and recording mercury mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in ~~accordance~~ compliance with the applicable provisions of this Section, Sections 225.250 through 225.290, and Sections 1.14 through 1.18 of Appendix B ~~to this Part~~.

4) No owner or operator of an EGU may retire or permanently discontinue use of the CEMS (or excepted monitoring system) or any component ~~thereof~~of it, or any other approved monitoring system ~~pursuant to~~under this Subpart B, except under any one of the following circumstances:

A) The owner or operator is monitoring emissions from the EGU with another certified monitoring system that has been approved, in ~~accordance~~ compliance with the applicable provisions of this Section, Sections 225.250 through 225.290 ~~of this Subpart B~~, and Sections 1.14 through 1.18 of Appendix B ~~to this Part~~, by the Agency for use at that EGU and that provides emission data for the same pollutant or parameter as the retired or discontinued monitoring system; or

B) The owner or operator submits notification of the date of certification testing of a replacement monitoring system for the retired or discontinued monitoring system in ~~accordance~~ compliance with Section 225.250(a)(3)(A).

C) The owner or operator is demonstrating compliance ~~pursuant to~~under the applicable subsections of Section 225.239.

e) Long-term Cold Storage.
The owner or operator of an EGU that is in long-term cold storage is subject to the ~~provisions of~~ 40 CFR 75.4 and 40 CFR 75.64, incorporated by reference in Section 225.140, relating to monitoring, recordkeeping, and reporting for units in long-term cold storage.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.250 Initial Certification and Recertification Procedures for Emissions Monitoring

a) The owner or operator of an EGU must comply with the following initial certification and recertification procedures for a CEMS or an excepted monitoring system ~~pursuant to~~under Section 1.3 of Appendix B ~~to this Part~~ required by Section 225.240(a)(1). The owner or operator of an EGU that qualifies for, and for which the owner or operator elects to use, the low-mass-emissions excepted methodology ~~pursuant to~~under Section 1.15(b) of Appendix B ~~to this Part~~ must comply with the procedures ~~set forth~~ in subsection (c) ~~of this Section~~.

1) Requirements for Initial Certification. The owner or operator of an EGU must ensure that, for each CEMS (or excepted monitoring system) required by Section 225.240(a)(1) (including the automated data acquisition and handling system), the owner or operator successfully completes all of the initial certification testing required ~~pursuant to~~under Section 1.4 of Appendix B ~~to this Part~~ by the applicable deadline in Section 225.240(b). In addition, whenever the owner or operator of an EGU installs a monitoring system to meet the requirements of this Subpart B in a location where no such monitoring system was previously installed, the owner or operator must successfully complete the initial certification requirements of Section 1.4 of Appendix B ~~to this Part~~.

2) Requirements for Recertification. Whenever the owner or operator of an EGU makes a replacement, modification, or change in any certified CEMS, or an excepted monitoring system ~~pursuant to~~under Section 1.3 of Appendix B ~~to this Part~~, and required by Section 225.240(a)(1), that may significantly affect the ability of the system to accurately measure or record mercury mass emissions or heat input rate or to meet the quality-assurance and quality-control requirements of Section 1.5 of Appendix B ~~to this Part~~ or Exhibit B to Appendix B ~~to this Part~~, the owner or operator of an EGU must recertify the monitoring system in ~~accordance~~ compliance with Section 1.4(b) of Appendix B ~~to this Part~~. Furthermore, whenever the owner or operator of an EGU makes a replacement, modification, or change to the flue gas handling system or the EGU's operation that may

significantly change the stack flow or concentration profile, the owner or operator must recertify each CEMS, and each excepted monitoring system pursuant to Section 1.3 to Appendix B ~~to this Part~~, whose accuracy is potentially affected by the change, all in ~~accordance~~ compliance with Section 1.4(b) to Appendix B ~~to this Part~~. Examples of changes to a CEMS that require recertification include~~, but are not limited to,~~ replacement of the analyzer, complete replacement of an existing CEMS, or change in location or orientation of the sampling probe or site.

3) Approval Process for Initial Certification and Recertification. Subsections (a)(3)(A) through (a)(3)(D) ~~of this Section~~ apply to both initial certification and recertification of a CEMS (or an excepted monitoring system) required by Section 225.240(a)(1). For recertifications, the words "certification" and "initial certification" are to be read as the word "recertification", the word "certified" is to be read as the word "recertified", and the procedures ~~set forth~~ in Section 1.4(b)(5) of Appendix B ~~to this Part~~ are to be followed in lieu of the procedures ~~set forth~~ in subsection (a)(3)(E) ~~of this Section~~.

A) Notification of Certification. The owner or operator must submit written notice of the dates of certification testing to the Agency, directed to the Manager of the Bureau of Air's Compliance Section, in ~~accordance~~ compliance with Section 225.270.

B) Certification Application. The owner or operator must submit to the Agency a certification application for each monitoring system. A complete certification application must include the information ~~specified~~ in 40 CFR 75.63, incorporated by reference in Section 225.140.

C) Provisional Certification Date. The provisional certification date for a monitoring system must be determined in ~~accordance~~ compliance with Section 1.4(a)(3) of Appendix B ~~to this Part~~. A provisionally certified monitoring system may be used ~~pursuant to~~under this Subpart B for a period not to exceed 120 days after receipt by the Agency of the complete certification application for the monitoring system ~~pursuant to~~under subsection (a)(3)(B) ~~of this Section~~. Data measured and recorded by the provisionally certified monitoring system, in ~~accordance~~ compliance with the requirements of Appendix B ~~to this Part~~, will be considered valid quality-assured data (retroactive to the date and time of provisional certification), provided that the Agency does not invalidate the provisional certification by issuing a notice of disapproval within 120 days after the date of receipt by the Agency of the complete certification application.

D) Certification Application Approval Process. The Agency must issue a written notice of approval or disapproval of the certification application to the owner or operator within 120 days after receipt of the complete certification application required by subsection (a)(3)(B) ~~of this Section~~. ~~In the event~~If the Agency does not issue a written notice of approval or disapproval within the 120-day period, each monitoring system that meets the applicable performance requirements of Appendix B ~~to this Part~~ and which is included in the certification application will be deemed certified for use pursuant to this Subpart B.

i) Approval Notice. If the certification application is complete and shows that each monitoring system meets the applicable performance requirements of Appendix B ~~to this Part~~, then the Agency must issue a written notice of approval of the certification application within 120 days after receipt.

ii) Incomplete Application Notice. If the certification application is not complete, then the Agency must issue a written notice of incompleteness that sets a reasonable date by which the owner or operator must submit the additional information required to complete the certification application. If the owner or operator does not comply with the notice of incompleteness by the specified date, the Agency may issue a notice of disapproval ~~pursuant to~~under subsection (a)(3)(D)(iii) ~~of this Section~~. The 120-day review period will not begin before receipt of a complete certification application.

iii) Disapproval Notice. If the certification application shows that any monitoring system does not meet the performance requirements of Appendix B ~~to this Part~~, or if the certification application is incomplete and the requirement for disapproval ~~pursuant to~~under subsection (a)(3)(D)(ii) ~~of this Section~~ is met, the Agency must issue a written notice of disapproval of the certification application. Upon issuance of such notice of disapproval, the provisional certification is invalidated, and the data measured and recorded by each uncertified monitoring system will not be considered valid quality-assured data beginning with the date and hour of provisional certification (as defined ~~pursuant to~~under Section 1.4(a)(3) of Appendix B ~~to this Part~~). The owner or operator must follow the procedures for loss of certification ~~set forth~~ in subsection (a)(3)(E) ~~of~~

~~this Section~~ for each monitoring system that is disapproved for initial certification.

iv) Audit Decertification. The Agency may issue a notice of disapproval of the certification status of a monitor in ~~accordance~~ compliance with Section 225.260(c).

E) Procedures for Loss of Certification. If the Agency issues a notice of disapproval of a certification application ~~pursuant to~~under subsection (a)(3)(D)(iii) ~~of this Section~~ or a notice of disapproval of certification status ~~pursuant to~~under subsection (a)(3)(D)(iv) ~~of this Section~~, the owner or operator must fulfill the following requirements:

i) The owner or operator must submit a notification of certification retest dates and a new certification application in ~~accordance~~ compliance with subsections (a)(3)(A) and (B) ~~of this Section~~.

ii) The owner or operator must repeat all certification tests or other requirements that were failed by the monitoring system, as indicated in the Agency's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

b) Exemption.

1) If an emissions monitoring system has been previously certified in ~~accordance~~ compliance with Appendix B ~~to this Part~~ and the applicable quality assurance and quality control requirements of Section 1.5 and Exhibit B to Appendix B ~~to this Part~~ are fully met, the monitoring system will be exempt from the initial certification requirements of this Section.

2) The recertification provisions of this Section apply to an emissions monitoring system required by Section 225.240(a)(1) exempt from initial certification requirements ~~pursuant to~~under subsection (a)(1) ~~of this Section~~.

c) Initial certification and recertification procedures for EGUs using the mercury low mass emissions excepted methodology ~~pursuant to~~under Section 1.15(b) of Appendix B ~~to this Part~~. The owner or operator that has elected to use the mercury-low-mass-emissions-excepted methodology for a qualified EGU ~~pursuant to~~under Section 1.15(b) to Appendix B ~~to this Part~~ must meet the applicable certification and recertification requirements in Section 1.15(c) through (f) to Appendix B ~~to this Part~~.

d) Certification Applications. The owner or operator of an EGU must submit an application to the Agency within 45 days after completing all initial certification or recertification tests required ~~pursuant to~~under this Section, including the information required ~~pursuant to~~under 40 CFR 75.63, incorporated by reference in Section 225.140.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.260 Out of Control Periods and Data Availability for Emission Monitors

a) Out of control periods must be determined in ~~accordance~~ compliance with Section 1.7 of Appendix B.

b) Monitor data availability for all EGUs using a CEMS (or an excepted monitoring system) ~~shall~~ must be greater than or equal to 75 percent; that is, quality assured data must be recorded by a certified primary monitor, a certified redundant or non-redundant backup monitor, or reference method for that unit at least 75 percent of the time the unit is in operation. Monitor data availability must be determined in ~~accordance~~ compliance with Section 1.8 of Appendix B following initial certification of the required CO_2, O_2, flow monitor, or mercury concentration or moisture monitoring systems at a particular unit or stack location; monitor data availability ~~shall~~ must be determined on a calendar quarterly basis until June 30, 2012, and on a rolling 12-month average basis from July 1, 2012~~,~~ forward (the first such 12-month period will cover July 1, 2012~~,~~ through June 30, 2013). Compliance with the percent reduction standard in Section 225.230(a)(1)(B), 225.233(d)(1)(B) or (d)(2)(B), 225.237(a)(1)(B), or 225.294(c)(2), or the emissions concentration standard in Section 225.230(a)(1)(A), 225.233(d)(1)(A) or (d)(2)(A), 225.237(a)(1)(A), or 225.294(c)(1), can only be demonstrated if the monitor data availability is equal to or greater than 75 percent

c) Audit Decertification. Whenever both an audit of an emissions monitoring system and a review of the initial certification or recertification application reveal that any emissions monitoring system should not have been certified or recertified because it did not meet a particular performance specification or other requirement ~~pursuant to~~under Section 225.250 or the applicable provisions of Appendix B ~~to this Part~~, both at the time of the initial certification or recertification application submission and at the time of the audit, the Agency must issue a notice of disapproval of the certification status of such monitoring system. For the purposes of this subsection (c), an audit must be either a field audit or an audit of any information submitted to the Agency. By issuing the notice of disapproval, the Agency revokes prospectively the certification status of the emissions monitoring system. The data measured and recorded by the monitoring system ~~shall~~ must not be considered valid quality-assured data from the date of issuance of the notification of the revoked certification status until the date and time that the owner or operator completes subsequently approved initial

certification or recertification tests for the monitoring system. The owner or operator ~~shall~~ must follow the applicable initial certification or recertification procedures in Section 225.250 for each disapproved monitoring system.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.261 Additional Requirements to Provide Heat Input Data

The owner or operator of an EGU that monitors and reports mercury mass emissions using a mercury concentration monitoring system and a flow monitoring system must also monitor and report the heat input rate at the EGU level using the procedures ~~set forth~~ in Appendix B ~~to this Part~~.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.263 Monitoring of Gross Electrical Output

The owner or operator of an EGU complying with this Subpart B by means of Section 225.230(a)(1) or using electrical output (O_i) and complying by means of Section 225.230(b) or (d) or Section 225.232 must monitor gross electrical output of the associated generator(s) in MWh on an hourly basis.

Section 225.265 Coal Analysis for Input Mercury Levels

a) The owner or operator of an EGU complying with this Subpart B by means of Section 225.230(a)(1)(B); using input mercury levels (I_i) and complying by means of Section 225.230(b) or (d) or Section 225.232; electing to comply with the emissions testing, monitoring, and recordkeeping requirements under Section 225.239; demonstrating compliance under Section 225.233, except an EGU in an MPS Group that elects to comply with the emission standard in Section 225.233(d)(1)(A) or (d)(2)(A); or demonstrating compliance under Sections 225.291 through 225.299, except an EGU in a CPS Group that elects to comply with the emission standard in Section 225.294(c)(1) or that opts into the emission standard in Section 225.294(c)(1) ~~pursuant to~~under Section 225.294(e)(1) or that has permanently ceased combusting coal must fulfill the following requirements:

1) Perform sampling of the coal combusted in the EGU for mercury content. The owner or operator of such EGU must collect a minimum of one 2-lb. grab sample from the belt feeders anywhere between the crusher house or breaker building and the boiler or, in cases in which a crusher house or breaker building is not present, at a reasonable point close to the boiler of a subject EGU, according to the schedule in subsections (a)(1)(A) through (C). The sample must be taken in a manner that provides a representative mercury content for the coal burned on that day. If multiple samples are tested, the owner or operator must average those tests to arrive at the final

mercury content for that time period. The owner or operator of the EGU must perform coal sampling as follows:

A) EGUs complying by means of Section 225.233, except an EGU in an MPS Group that elects to comply with the control efficiency standard in Section 225.233(d)(1)(B) or (d)(2)(B) or elects to comply with Section 225.233(d)(4), or Sections 225.291 through 225.299, except an EGU in a CPS Group that elects to comply with the control efficiency standard in Section 225.294(c)(2) or that opts into the emission standard in Section 225.294(c)(2) pursuant to Section 225.294(e)(1) must perform such coal sampling at least once per month unless the boiler did not operate or combust coal at all during that month;

B) EGUs complying by means of the emissions testing, monitoring, and recordkeeping requirements under Section 225.239 or Section 225.233(d)(4), or EGUs that opt into the emission standard in Section 225.294(c)(2) ~~pursuant to~~under Section 225.294(e)(1)(B), must perform such coal sampling according to the schedule ~~provided~~ in Section 225.239(e)(3) ~~of this Subpart~~;

C) All other EGUs subject to this requirement, including EGUs in an MPS or CPS Group electing to comply with the control efficiency standard in Section 225.233(d)(1)(B) or (d)(2)(B), Section 225.294(c)(2), or Section 225.294(c)(2) ~~pursuant to~~under Section 225.294(e)(1)(A), must perform such coal sampling on a daily basis when the boiler is operating and combusting coal.

2) Analyze the grab coal sample for the following:

A) Determine the heat content using ASTM D5865-04, incorporated by reference in Section 225.140, or an equivalent method approved in writing by the Agency.

B) Determine the moisture content using ASTM D3173-03, incorporated by reference in Section 225.140, or an equivalent method approved in writing by the Agency.

C) Measure the mercury content using ASTM D6414-01, ASTM D3684-01, ASTM D6722-01, each incorporated by reference in Section 225.140, or an equivalent method approved in writing by the Agency.

3) The owner or operator of multiple EGUs at the same source using the same crusher house or breaker building may take one sample per crusher house or breaker building, rather than one per EGU.

4) The owner or operator of an EGU must use the data analyzed ~~pursuant to~~under subsection (b) ~~of this Section~~ to determine the mercury content in terms of parts per million.

b) The owner or operator of an EGU that must conduct sampling and analysis of coal ~~pursuant to~~under subsection (a) ~~of this Section~~ must begin such activity by the following date:

1) If the EGU is in daily service, at least 30 days before the start of the month for which such activity will be required.

2) If the EGU is not in daily service, on the day that the EGU resumes operation.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.270 Notifications

The owner or operator of a source with one or more EGUs must submit written notice to the Agency according to ~~the provisions in~~ 40 CFR 75.61, incorporated by reference in Section 225.140, for each EGU or group of EGUs monitored at a common stack and each non-EGU monitored ~~pursuant to~~under Section 1.16(b)(2)(B) of Appendix B ~~to this Part~~.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.290 Recordkeeping and Reporting

a) General Provisions.

1) Except as otherwise indicated in this Subpart, the owner or operator of an EGU must comply with all applicable recordkeeping and reporting requirements in this Section and with all applicable recordkeeping and reporting requirements of Section 1.18 to Appendix B ~~to this Part~~.

2) The owner or operator of an EGU must maintain records for each month identifying the emission standard in Section 225.230(a) or 225.237(a) ~~of this Section~~ with which it is complying or that is applicable for the EGU and the following records related to the emissions of mercury that the EGU is allowed to emit:

A) For an EGU for which the owner or operator is complying with this Subpart B by means of Section 225.230(a)(1)(B) or 225.237(a)(1)(B) or using input mercury levels to determine the allowable emissions of the EGU, records of the daily mercury content of coal used (parts per million) and the daily and monthly

input mercury (lbs), which must be kept in the file pursuant to Section 1.18(a) of Appendix B ~~to this Part~~.

B) For an EGU for which the owner or operator of an EGU complying with this Subpart B by means of Section 225.230(a)(1)(A) or 225.237(a)(1)(A) or using electrical output to determine the allowable emissions of the EGU, records of the daily and monthly gross electrical output (GWh), which must be kept in the file required ~~pursuant to~~under Section 1.18(a) of Appendix B ~~to this Part~~.

3) The owner or operator of an EGU must maintain records of the following data for each EGU:

A) Monthly emissions of mercury from the EGU.

B) For an EGU for which the owner or operator is complying by means of Section 225.230(b) or (d) ~~of this Subpart B~~, records of the monthly allowable emissions of mercury from the EGU.

4) The owner or operator of an EGU that is participating in an Averaging Demonstration ~~pursuant to~~under Section 225.232 of this Subpart B must maintain records identifying all sources and EGUs covered by the Demonstration for each month and, within 60 days after the end of each calendar month, calculate and record the actual and allowable mercury emissions of the EGU for the month and the applicable 12-month rolling period.

5) The owner or operator of an EGU must maintain the following records related to quality assurance activities conducted for emissions monitoring systems:

A) The results of quarterly assessments conducted ~~pursuant to~~under Section 2.2 of Exhibit B to Appendix B ~~to this Part~~; and

B) Daily/weekly system integrity checks ~~pursuant to~~under Section 2.6 of Exhibit B to Appendix B ~~to this Part~~.

6) The owner or operator of an EGU must retain all records required by this Section at the source for ~~a period of~~ five years from the date the document is created unless otherwise provided in the CAAPP permit issued for the source and must make a copy of any record available to the Agency upon request. This period may be extended in writing by the Agency, for cause, at any time ~~prior to~~before the end of five years.

b) Quarterly Reports. The owner or operator of a source with one or more EGUs using CEMS or excepted monitoring systems at any time during a calendar quarter must submit quarterly reports to the Agency as follows:

1) Source information such as source name, source ID number, and the period covered by the report.

2) A list of all EGUs at the source that identifies the applicable Part 225 monitoring and reporting requirements with which each EGU is complying for the reported quarter, including the following EGUs, which are excluded from subsection (b)(3) ~~of this Section~~:

A) All EGUs using the periodic emissions testing provisions of Section 225.239, 225.233(d)(4), or Section 225.294(c) ~~pursuant to~~under Section 225.294(e)(1)(B) for the quarter.

B) All EGUs using the low mass emissions (LME) excepted monitoring methodology ~~pursuant to~~under Section 1.15(b) of Appendix B ~~to this Part~~.

3) For only those EGUs using CEMS or excepted monitoring systems at any time during a calendar quarter:

A) An indication of whether the identified EGUs were in compliance with all applicable monitoring, recordkeeping, and reporting requirements of Part 225 for the entire reporting period.

B) The total quarterly operating hours of each EGU.

C) The CEMS or excepted monitoring system QAMO hours on a quarterly basis and percentage data availability on a quarterly or rolling 12-month basis (for each concluding 12-month period in that quarter), as appropriate according to the schedule ~~provided~~ in Section 225.260(b). The data availability ~~shall~~ must be determined in ~~accordance~~ compliance with Section 1.8 (CEMS) or 1.9 (excepted monitoring system) of Appendix B ~~to this Part~~.

D) The average monthly mercury concentration of the coal combusted in each EGU in parts per million (determined by averaging all analyzed coal samples in the month) and the quarterly total amount of mercury (calculated by multiplying the total amount of coal combusted each month by the average monthly mercury concentration and converting to ounces, then adding together for the quarter) of the coal combusted in each EGU. If the EGU is complying by means of Section 225.230(a)(1)(A),

225.233(d)(1)(A), 225.233(d)(2)(A) or 225.294(c)(1), reporting of the data in this subsection (b)(3)(D) is not required.

E) The quarterly mercury mass emissions (in ounces), determined from the QAMO hours in ~~accordance~~ compliance with Section 4.2 of Exhibit C to Appendix B ~~to this Part~~. If the EGU is complying by means of Section 225.230(a)(1)(A), 225.233(d)(1)(A), 225.233(d)(2)(A), or 225.294(c)(1), reporting of the data in this subsection (b)(3)(E) is not required.

F) The average monthly and quarterly mercury control efficiency. This is determined by dividing the mercury mass emissions recorded during QAMO hours, calculated each month and quarter, by the total amount of mercury in the coal combusted weighted by the monitor availability (total mercury content multiplied by the percent monitor availability, or QAMO hours divided by total hours) for each month and quarter. If the DAHS for the EGU has the ability to record the amount of coal combusted during QAMO hours, the average monthly and quarterly control efficiency ~~shall~~ must be reported without the calculation in this subsection (b)(3)(F). If the EGU is complying by means of Section 225.230(a)(1)(A), 225.233(d)(1)(A), 225.233(d)(2)(A) or 225.294(c)(1), reporting of the data in this subsection (b)(3)(F) is not required.

G) The average monthly and quarterly mercury emission rate (in lb/GWh) for each EGU, determined in ~~accordance~~ compliance with Section 225.230(a)(2). Only those EGUs complying by means of Section 225.230(a)(1)(A), 225.233(d)(1)(A), 225.233(d)(2)(A) or 225.294(c)(1) are required to report the data in this subsection (b)(3)(G).

H) The 12-month rolling average control efficiency (percentage) or emission rate (in lb/GWh) for each month in the reporting period, as applicable (or the rolling average control efficiency or emission rate for a lesser number of months if a full 12 months of data is not available). This applicable data is determined according to the following requirements:

i) The 12-month rolling average control efficiency is required for those sources complying by means of Section 225.230(a)(1)(B), 225.233(d)(1)(B), 225.233(d)(2)(B), 225.294(c)(2), 225.230(b), 225.230(d), 225.232(b)(2), or 225.237(a)(1)(B).

ii) The 12-month rolling average emission rate is required for those sources complying by means of Section 225.230(a)(1)(A), 225.233(d)(1)(A), 225.233(d)(2)(A), or 225.294(c)(1), 225.230(b), 225.230(d), 225.232(b)(1), or 225.237(a)(1)(A).

I) If the CEMS or excepted monitoring system percentage data availability was less than 95.0 percent of the total operating time for the EGU, the date and time identifying each period during which the CEMS was inoperative, except for routine zero and span checks; the nature of CEMS repairs or adjustments and a summary of quality assurance data consistent with Appendix B ~~to this Part~~, i.e., the dates and results of the Linearity Tests and any RATAs during the quarter; a listing of any days when a required daily calibration was not performed; and the date and duration of any periods when the CEMS was unavailable or out-of-control as addressed by Section 225.260.

4) The owner or operator must submit each quarterly report to the Agency within 45 days ~~following~~ after the end of the calendar quarter covered by the report, except that the owner or operator of an EGU that used an excepted monitoring system at any time during a calendar quarter must submit each quarterly report within 60 days ~~following~~ after the end of the calendar quarter covered by the report.

c) Compliance Certification. The owner or operator of a source with one or more EGUs must submit to the Agency a compliance certification in support of each quarterly report based on reasonable inquiry of those persons with primary responsibility for ensuring that all of the EGUs' emissions are correctly and fully monitored. The certification must state:

1) That the monitoring data submitted were recorded in ~~accordance~~ compliance with the applicable requirements of this Section, Sections 225.240 through 225.270, ~~and~~ Section 225.290 ~~of this Subpart B~~, and Appendix B ~~to this Part~~, including the quality assurance procedures and specifications; and

2) For an EGU with add-on mercury emission controls, a flue gas desulfurization system, a selective catalytic reduction system, or a compact hybrid particulate collector system for all hours where mercury data is unavailable or out-of-control that:

A) The mercury add-on emission controls, flue gas desulfurization system, selective catalytic reduction system, or compact hybrid particulate collector system was operating within the range of

parameters listed in the quality assurance/quality control program pursuant to Exhibit B to Appendix B ~~to this Part~~; or

B) With regard to a flue gas desulfurization system or a selective catalytic reduction system, quality-assured SO_2 emission data recorded in ~~accordance~~ compliance with the 40 CFR 75 document that the flue gas desulfurization system was operating properly, or quality-assured NO_x emission data recorded in ~~accordance~~ compliance with the 40 CFR 75 document that the selective catalytic reduction system was operating properly, as applicable.

d) Annual Certification of Compliance.

1) The owner or operator of a source with one or more EGUs subject to this Subpart B must submit to the Agency an Annual Certification of Compliance with this Subpart B no later than May 1 of each year and must address compliance for the previous calendar year. Such certification must be submitted to the Agency, Air Compliance Section, and the Air Regional Field Office.

2) Annual Certifications of Compliance must indicate whether compliance existed for each EGU for each month in the year covered by the Certification and it must certify to that effect. In addition, for each EGU, the owner or operator must provide the following appropriate data ~~as set forth~~ in subsections (d)(2)(A) through (d)(2)(E) ~~of this Section~~, together with the data ~~set forth~~ in subsection (d)(2)(F) ~~of this Section~~:

A) If complying with this Subpart B by means of Section 225.230(a)(1)(A) or 225.237(a)(1)(A):

i) Emissions rate during QAMO hours, in lb/GWh, for each 12-month rolling period ending in the year covered by the Certification;

ii) Emissions during QAMO hours, in lbs, and gross electrical output, in GWh, for each 12-month rolling period ending in the year covered by the Certification; and

iii) Emissions during QAMO hours, in lbs, and gross electrical output, in GWh, for each month in the year covered by the Certification and in the previous year.

B) If complying with this Subpart B by means of Section 225.230(a)(1)(B) or 225.237(a)(1)(B):

i) Control efficiency for emissions during QAMO hours for each 12-month rolling period ending in the year covered by the Certification, expressed as a percent;

ii) Emissions during QAMO hours, in lbs, and mercury content in the fuel fired in such EGU, in lbs, for each 12-month rolling period ending in the year covered by the Certification; and

iii) Emissions during QAMO hours, in lbs, and mercury content in the fuel fired in such EGU, in lbs, for each month in the year covered by the Certification and in the previous year.

C) If complying with this Subpart B by means of Section 225.230(b):

i) Emissions and allowable emissions during QAMO hours for each 12-month rolling period ending in the year covered by the Certification; and

ii) Emissions and allowable emissions during QAMO hours and which standard of compliance the owner or operator was utilizing for each month in the year covered by the Certification and in the previous year.

D) If complying with this Subpart B by means of Section 225.230(d):

i) Emissions and allowable emissions during QAMO hours for all EGUs at the source for each 12-month rolling period ending in the year covered by the Certification; and

ii) Emissions and allowable emissions during QAMO hours, and which standard of compliance the owner or operator was utilizing for each month in the year covered by the Certification and in the previous year.

E) If complying with this Subpart B by means of Section 225.232:

i) Emissions and allowable emissions during QAMO hours for all EGUs at the source in an Averaging Demonstration for each 12-month rolling period ending in the year covered by the Certification; and

ii) Emissions and allowable emissions during QAMO hours, with the standard of compliance the owner or operator was utilizing for each EGU at the source in an Averaging

Demonstration for each month for all EGUs at the source in an Averaging Demonstration in the year covered by the Certification and in the previous year.

F) Any deviations or exceptions each month and discussion of the reasons for such deviations or exceptions.

3) All Annual Certifications of Compliance required to be submitted must include the following certification by a responsible official:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

4) The owner or operator of an EGU must submit its first Annual Certification of Compliance to address calendar year 2009 or the calendar year in which the EGU commences commercial operation, whichever is later. Notwithstanding subsection (d)(2) ~~of this Section~~, in the Annual Certifications of Compliance that are required to be submitted by May 1, 2010, and May 1, 2011, to address calendar years 2009 and 2010, respectively, the owner or operator is not required to provide 12-month rolling data for any period that ends before June 30, 2010.

e) Deviation Reports. For each EGU, the owner or operator must promptly notify the Agency of deviations from ~~requirements of~~ this Subpart B. At a minimum, these notifications must include a description of such deviations within 30 days after discovery of the deviations, and a discussion of the possible cause of such deviations, any corrective actions, and any preventative measures taken.

f) Quality Assurance RATA Reports. The owner or operator of an EGU must submit to the Agency, Air Compliance and Enforcement Section, the quality assurance RATA report for each EGU or group of EGUs monitored at a common stack and each non-EGU ~~pursuant to~~under Section 1.16(b)(2)(B) of Appendix B ~~to this Part~~, within 45 days after completing a quality assurance RATA.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.291 Combined Pollutant Standard: Purpose

The purpose of Sections 225.291 through 225.299 (~~hereinafter~~ referred to as the Combined Pollutant Standard ("CPS")) is to allow an alternate means of compliance with the emissions standards for mercury in Section 225.230(a) for specified EGUs through permanent shut-down, installation of ACI, the application of pollution control technology for NO_x, PM, and SO_2 emissions, or the conversion of an EGU to a fuel other than coal (such as natural gas or distillate fuel oil with sulfur content no greater than 15 ppm), that also reduce mercury emissions as a co-benefit and to establish permanent emissions standards for those specified EGUs. Unless otherwise provided for in the CPS, owners and operators of those specified EGUs are not excused from compliance with other applicable requirements of Subparts B, C, D, and E.

(Source: Amended at 39 Ill. Reg. 16225, effective December 7, 2015)

Section 225.292 Applicability of the Combined Pollutant Standard

a) As an alternative to compliance with the emissions standards of Section 225.230(a), the owner or operator of specified EGUs in the CPS located at the Fisk, Crawford, Joliet, Powerton, Waukegan, and Will County power plants may elect for all of those EGUs as a group to demonstrate compliance ~~pursuant to~~under the CPS, which establishes control requirements and emissions standards for NO_x, PM, SO_2, and mercury. For this purpose, ownership of a specified EGU is determined based on direct ownership, by holding a majority interest in a company that owns the EGU or EGUs, or by the common ownership of the company that owns the EGU, whether through a parent-subsidiary relationship, as a sister corporation, or as an affiliated corporation with the same parent corporation, provided that the owner or operator has the right or authority to submit a CAAPP application on behalf of the EGU.

b) A specified EGU is an EGU listed in Appendix A, irrespective of any subsequent changes in ownership of the EGU or power plant, the operator, unit designation, or name of unit, or the type of fuel combusted (including natural gas or distillate fuel oil with sulfur content no greater than 15 ppm).

c) The owner or operator of each of the specified EGUs electing to demonstrate compliance with Section 225.230(a) ~~pursuant to~~under the CPS must submit an application for a CAAPP permit modification to the Agency, as provided for in Section 225.220, that includes the information ~~specified~~ in Section 225.293 that clearly states the owner's or operator's election to demonstrate compliance with Section 225.230(a) ~~pursuant to~~under the CPS.

d) If an owner or operator of one or more specified EGUs elects to demonstrate compliance with Section 225.230(a) ~~pursuant to~~under the CPS, then all specified EGUs owned or operated in Illinois by the owner or operator as of December 31, 2006, as defined in subsection (a)~~ of this Section~~, are thereafter subject to the standards and control requirements of the CPS. Such EGUs are referred to as a Combined Pollutant Standard (CPS) group.

e) If an EGU is subject to the requirements of this Section, then the requirements apply to all owners and operators of the EGU.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.293 Combined Pollutant Standard: Notice of Intent

The owner or operator of one or more specified EGUs that intends to comply with Section 225.230(a) by means of the CPS must notify the Agency of its intention on or before December 31, 2007. The following information must accompany the notification:

a) The identification of each EGU that will be complying with Section 225.230(a) ~~pursuant to~~under the CPS, with evidence that the owner or operator has identified all specified EGUs that it owned or operated in Illinois as of December 31, 2006, and which commenced commercial operation on or before December 31, 2004;

b) If an EGU identified in subsection (a) ~~of this Section~~ is also owned or operated by a person different than the owner or operator submitting the notice of intent, a demonstration that the submitter has the right to commit the EGU or authorization from the responsible official for the EGU submitting the application;

c) A summary of the current control devices installed and operating on each EGU and identification of the additional control devices that will likely be needed for each EGU to comply with emission control requirements of the CPS; and

d) Additionally, the owner or operator of a specified EGU that, on or after January 1, 2015, changes the type of primary fuel combusted by the unit or the control device or devices installed and operating on the unit must notify the Agency of such change by January 1, 2017, or within 30 days after the completion of such change, whichever is later.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.294 Combined Pollutant Standard: Control Technology Requirements and Emissions Standards for Mercury

a) Control Technology Requirements for Mercury.

1) For each coal-fired EGU in a CPS group other than an EGU ~~that is~~ addressed by subsection (b)~~ of this Section~~, the owner or operator of the EGU must install, if not already installed, and properly operate and maintain, by the dates ~~set forth~~ in subsection (a)(2)~~ of this Section~~, ACI equipment complying with subsections (g), (h), (i), (j), and (k)~~ of this Section~~, as applicable.

2) By the following dates, for the EGUs ~~listed~~ in subsections (a)(2)(A) and (B), which include hot and cold side ESPs, the owner or operator must install, if not already installed, and begin operating ACI equipment or the Agency must be given written notice that the EGU will be shut down on or before the following dates:

A) Fisk 19, Crawford 7, Crawford 8, Waukegan 7, and Waukegan 8 on or before July 1, 2008; and

B) Powerton 5, Powerton 6, Will County 3, Will County 4, Joliet 6, Joliet 7, and Joliet 8 on or before July 1, 2009.

b) Notwithstanding subsection (a) ~~of this Section~~:

1) The following EGUs are not required to install ACI equipment because they will be permanently shut down, as addressed by Section 225.297, by the date specified:

A) EGUs that are required to permanently shut down:

i) On or before December 31, 2007, Waukegan 6; and

ii) On or before December 31, 2010, Will County 1 and Will County 2.

B) Any other specified EGU that is permanently shut down by December 31, 2010; and

2) On and after the date an EGU permanently ceases combusting coal, it is not required to install, operate, or maintain ACI equipment.

c) Beginning on January 1, 2015, and continuing thereafter, and measured on a rolling 12-month basis (the initial period is January 1, 2015, through December 31, 2015, and~~,~~ then~~,~~ for every 12-month period thereafter), each specified EGU that has not permanently ceased combusting coal, except Will County 3, shall achieve one of the following emissions standards:

1) An emissions standard of 0.0080 lbs mercury/GWh gross electrical output; or

2) A minimum 90 percent reduction of input mercury.

d) On and after April 16, 2015, Will County 3 must not combust coal.

e) Compliance with Emission Standards

1) At any time ~~prior to~~before the dates required for compliance in subsections (c) and (d)~~ of this Section~~, the owner or operator of a specified EGU, upon notice to the Agency, may elect to comply with the emissions standards of subsection (c) ~~of this Section~~ measured on either:

A) a rolling 12-month basis; or

B) a quarterly calendar basis ~~pursuant to~~under the emissions testing requirements in Section 225.239(a)(4), (c), (d), (e), (f), (g), (h), (i), and (j) ~~of this Subpart~~ until June 30, 2012.

2) Once an EGU is subject to the mercury emissions standards of subsection (c)~~ of this Section~~, it shall not be subject to ~~the requirements of~~ subsections (g), (h), (i), (j)~~,~~ and (k)~~ of this Section~~;

3) On and after the date an EGU permanently ceases combusting coal, it shall not be subject to ~~the requirements of~~ subsections (g), (h), (i), (j)~~,~~ and (k)~~ of this Section~~.

f) Compliance with the mercury emissions standards or reduction requirement of this Section must be calculated in ~~accordance~~ compliance with Section 225.230(a) or (b)~~,~~ or Section 225.232 until December 31, 2013.

g) For each EGU for which injection of halogenated activated carbon is required by subsection (a)(1)~~ of this Section~~, the owner or operator of the EGU must inject halogenated activated carbon in an optimum manner.

1) Except as provided in subsection (h)~~ of this Section~~, optimum manner is defined as all of the following:

A) The use of an injection system for effective absorption of mercury, considering the configuration of the EGU and its ductwork;

B) The injection of halogenated activated carbon manufactured by Alstom, Norit, or Sorbent Technologies, Calgon Carbon's FLUEPAC CF Plus, or Calgon Carbon's FLUEPAC MC Plus, or the injection of any other halogenated activated carbon or sorbent that the owner or operator of the EGU has demonstrated to have similar or better effectiveness for control of mercury emissions; and

C) The injection of sorbent at the following minimum rates, as applicable:

i) For an EGU firing subbituminous coal, 5.0 lbs per million actual cubic feet or, for any cyclone-fired EGU that will

install a scrubber and baghouse by December 31, 2012, and which already meets an emission rate of 0.020 lb mercury/GWh gross electrical output or at least 75 percent reduction of input mercury, 2.5 lbs per million actual cubic feet;

ii) For an EGU firing bituminous coal, 10.0 lbs per million actual cubic feet or, for any cyclone-fired EGU that will install a scrubber and baghouse by December 31, 2012, and which already meets an emission rate of 0.020 lb mercury/GWh gross electrical output or at least 75 percent reduction of input mercury, 5.0 lbs per million actual cubic feet;

iii) For an EGU firing a blend of subbituminous and bituminous coal, a rate that is the weighted average of the rates ~~specified~~ in subsections (g)(1)(C)(i) and (ii) based on the blend of coal being fired; or

iv) A rate or rates set lower by the Agency, in writing, than the rate ~~specified~~ in any of ~~subsection~~ subsections (g)(1)(C)(i), (ii), or (iii) ~~of this Section~~ on a unit-specific basis, provided that the owner or operator of the EGU has demonstrated that such rate or rates are needed so that carbon injection will not increase particulate matter emissions or opacity so as to threaten noncompliance with applicable requirements for particulate matter or opacity.

2) For purposes of subsection (g)(1)(C) ~~of this Section~~, the flue gas flow rate shall be the gas flow rate in the stack for all units except for those equipped with activated carbon injection prior to a hot-side electrostatic precipitator; for units equipped with activated carbon injection prior to a hot-side electrostatic precipitator, the flue gas flow rate shall be the gas flow rate at the inlet to the hot-side electrostatic precipitator, which shall be determined as the stack flow rate adjusted through the use of Charles' Law for the differences in gas temperatures in the stack and at the inlet to the electrostatic precipitator ($V_{esp} = V_{stack} \times T_{esp}/T_{stack}$, where V = gas flow rate in acf and T = gas temperature in Kelvin or Rankine).

h) The owner or operator of an EGU that seeks to operate an EGU with an activated carbon injection rate or rates that are set on a unit-specific basis ~~pursuant to~~under subsection (g)(1)(C)(iv) ~~of this Section~~ must submit an application to the Agency proposing such rate or rates, and must meet the requirements of subsections (h)(1) and (h)(2) ~~of this Section~~, subject to ~~the limitations of~~ subsections (h)(3) and (h)(4) ~~of this Section~~:

1) The application must be submitted as an application for a new or revised federally enforceable operation permit for the EGU, and it must include a summary of relevant mercury emissions data for the EGU, the unit-specific injection rate or rates that are proposed, and detailed information to support the proposed injection rate or rates;

2) This application must be submitted no later than the date that activated carbon must first be injected. For example, the owner or operator of an EGU that must inject activated carbon ~~pursuant to~~under subsection (a)(1) ~~of this Section~~ must apply for unit-specific injection rate or rates by July 1, 2008. Thereafter, the owner or operator may supplement its application;

3) Any decision of the Agency denying a permit or granting a permit with conditions that set a lower injection rate or rates may be appealed to the Board ~~pursuant to~~under Section 39 of the Act; and

4) The owner or operator of an EGU may operate at the injection rate or rates proposed in its application until a final decision is made on the application including a final decision on any appeal to the Board.

i) During any evaluation of the effectiveness of a listed sorbent, alternative sorbent, or other technique to control mercury emissions, the owner or operator of an EGU need not comply with the requirements of subsection (g) ~~of this Section~~ for any system needed to carry out the evaluation, ~~as further~~ provided as follows:

1) The owner or operator of the EGU must conduct the evaluation in ~~accordance~~ compliance with a formal evaluation program submitted to the Agency at least 30 days ~~prior to~~before commencement of the evaluation;

2) The duration and scope of the evaluation may not exceed the duration and scope reasonably needed to complete the desired evaluation of the alternative control techniques, as initially addressed by the owner or operator in a support document submitted with the evaluation program;

3) The owner or operator of the EGU must submit a report to the Agency no later than 30 days after the conclusion of the evaluation that describes the evaluation conducted and which provides the results of the evaluation; and

4) If the evaluation of alternative control techniques shows less effective control of mercury emissions from the EGU than was achieved with the principal control techniques, the owner or operator of the EGU must resume use of the principal control techniques. If the evaluation of the alternative control technique shows comparable effectiveness to the principal control technique, the owner or operator of the EGU may either continue to use the alternative control technique in a manner that is at least as effective as the principal control technique or it may resume use of the

principal control technique. If the evaluation of the alternative control technique shows more effective control of mercury emissions than the control technique, the owner or operator of the EGU must continue to use the alternative control technique in a manner that is more effective than the principal control technique, so long as it continues to be subject to this Section.

j) In addition to complying with the applicable recordkeeping and monitoring requirements in Sections 225.240 through 225.290, the owner or operator of an EGU that elects to comply with this Subpart B by means of Sections 225.291 through 225.299 must also comply with the following additional requirements:

1) For the first 36 months that injection of sorbent is required, it must maintain records of the usage of sorbent, the flue gas flow rate from the EGU (and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack), and the sorbent feed rate, in pounds per million actual cubic feet of flue gas, on a weekly average;

2) After the first 36 months that injection of sorbent is required, it must monitor activated sorbent feed rate to the EGU, gas flow rate in the stack, and, if the unit is equipped with activated carbon injection prior to a hot-side electrostatic precipitator, flue gas temperature at the inlet of the hot-side electrostatic precipitator and in the stack. It must automatically record this data and the sorbent carbon feed rate, in pounds per million actual cubic feet of flue gas, on an hourly average; and

3) If a blend of bituminous and subbituminous coal is fired in the EGU, it must keep records of the amount of each type of coal burned and the required injection rate for injection of activated carbon on a weekly basis.

k) In addition to complying with the applicable reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU that elects to comply with Section 225.230(a) by means of the CPS must also submit quarterly reports for the recordkeeping and monitoring conducted ~~pursuant to~~under subsection (j) ~~of this Section~~.

l) Until June 30, 2012, as an alternative to the CEMS (or excepted monitoring system) monitoring, recordkeeping, and reporting requirements in Sections 225.240 through 225.290, the owner or operator of an EGU may elect to comply with the emissions testing, monitoring, recordkeeping, and reporting requirements in Section 225.239(c), (d), (e), (f)(1) and (2), (h)(2), (i)(3) and (4), and (j)(1).

m) Notwithstanding any other provision in this Subpart, the requirements in Sections 225.240 through 225.290 ~~of this Subpart~~, and any other mercury-related

monitoring, recordkeeping, notice, analysis, certification, and reporting requirements set forth in this Subpart, including in this CPS, will not apply to a specified EGU on and after the date the EGU permanently ceases combusting coal.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.295 Combined Pollutant Standard: Emissions Standards for NO_x and SO_2

a) Emissions Standards for NO_x and Reporting Requirements.

1) Beginning with calendar year 2012 and continuing in each calendar year thereafter, the CPS group, which includes all specified EGUs, regardless of the type of fuel combusted, that have not been permanently shut down by December 31 before the applicable calendar year, must comply with a CPS group average annual NO_x emissions rate of no more than 0.11 lbs/mmBtu.

2) Beginning with ozone season control period 2012 and continuing in each ozone season control period (May 1 through September 30) thereafter, the CPS group, which includes all specified EGUs, regardless of the type of fuel combusted, that have not been permanently shut down by December 31 before the applicable ozone season, must comply with a CPS group average ozone season NO_x emissions rate of no more than 0.11 lbs/mmBtu.

3) The owner or operator of the specified EGUs in the CPS group must file, not later than one year after startup of any selective SNCR on such EGU, a report with the Agency describing the NO_x emissions reductions that the SNCR has been able to achieve.

4) The specified EGUs are not subject to the requirements ~~set forth~~ in 35 Ill. Adm. Code 217, Subpart M, including without limitation the NO_x emission standards ~~set forth~~ in 35 Ill. Adm. Code 217.344.

b) Emissions Standards for SO_2. Beginning in calendar year 2013 and continuing in each calendar year thereafter, the CPS group must comply with the applicable CPS group average annual SO_2 emissions rate listed as follows. For purposes of subsections (b) and (d) only, the CPS group includes only those specified EGUs that combust coal.

year	lbs/mmBtu
2013	0.44
2014	0.41
2015	0.28

2016	0.195
2017	0.15
2018	0.13
2019	0.11

c) Compliance with the NO_x and SO_2 emissions standards must be demonstrated in ~~accordance~~ compliance with Sections 225.310, 225.410, and 225.510. The owner or operator of the specified EGUs must complete the demonstration of compliance ~~pursuant to~~under Section 225.298(c) before March 1 of the following year for annual standards and before November 30 of the particular year for ozone season control periods (May 1 through September 30) standards, by which date a compliance report must be submitted to the Agency.

d) The CPS group average annual SO_2 emission rate, annual NO_x emission rate, and ozone season NO_x emission rates ~~shall~~ must be determined as follows:

$$ER_{avg} = \sum_{i=1}^{n} (SO_{2i} \text{ or } NO_{xi}) / \sum_{i=1}^{n} (HI_i)$$

Where:

ER_{avg}	=	average annual or ozone season emission rate in lbs/mmBtu of all EGUs in the CPS group.
HI_i	=	heat input for the annual or ozone control period of each EGU, in mmBtu.
SO_{2i}	=	actual annual SO_2 lbs of each EGU in the CPS group, ~~as set forth in~~ under subsection (b).
NO_{xi}	=	actual annual or ozone season NO_x lbs of each EGU in the CPS group.
n	=	number of EGUs that are in the CPS group.
i	=	each EGU in the CPS group.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.296 Combined Pollutant Standard: Control Technology Requirements for NO_x, SO_2, and PM Emissions

a) Control Technology Requirements for NO_x and SO_2.

1) On or before December 31, 2013, the owner or operator must either permanently shut down or install and have operational FGD equipment on Waukegan 7;

2) On or before December 31, 2014, the owner or operator must either permanently shut down or install and have operational FGD equipment on Waukegan 8;

3) On or before December 31, 2015, the owner or operator must either permanently shut down or install and have operational FGD equipment on Fisk 19;

4) If Crawford 7 will be operated after December 31, 2018, and not permanently shut down by this date, the owner or operator must:

A) On or before December 31, 2015, install and have operational SNCR or equipment capable of delivering essentially equivalent NO_x reductions on Crawford 7; and

B) On or before December 31, 2018, install and have operational FGD equipment on Crawford 7;

5) If Crawford 8 will be operated after December 31, 2017 and not permanently shut down by this date, the owner or operator must:

A) On or before December 31, 2015, install and have operational SNCR or equipment capable of delivering essentially equivalent NO_x emissions reductions on Crawford 8; and

B) On or before December 31, 2017, install and have operational FGD equipment on Crawford 8.

b) Other Control Technology Requirements for SO_2. On and after April 16, 2015, Will County 3 must not combust coal. On and after December 31, 2016, Joliet 6, 7, and 8 must not combust coal. Owners or operators of the other specified EGUs must permanently shut down, permanently cease combusting coal at, or install FGD equipment on each specified EGU (except Will County 4), on or before December 31, 2018, unless an earlier date is specified in subsection (a) ~~of this Section~~.

c) Control Technology Requirements for PM. The owner or operator of the ~~specified~~ EGU listed in this subsection that is equipped with a hot-side ESP must replace the hot-side ESP with a cold-side ESP, install an appropriately designed fabric filter, or permanently shut down the EGU by the date specified. Hot-side ESP means an ESP on a coal-fired boiler that is installed before the boiler's air-preheater where the operating temperature is typically at least ~~550ºF~~550 ºF, as distinguished from a cold-side ESP that is installed after the air pre-heater where the operating temperature is typically no more than ~~350ºF~~350 ºF.

Waukegan 7 on or before December 31, 2013.

d) Beginning on December 31, 2008, and annually thereafter up to and including December 31, 2015, the owner or operator of the Fisk power plant must submit in

writing to the Agency a report on any technology or equipment designed to affect air quality that has been considered or explored for the Fisk power plant in the preceding 12 months. This report will not obligate the owner or operator to install any equipment described in the report.

e) Notwithstanding 35 Ill. Adm. Code 201.146(hhh), until an EGU has complied with the applicable requirements of subsections 225.296(a), (b), and (c), the owner or operator of the EGU must obtain a construction permit for any new or modified air pollution control equipment that it proposes to construct for control of emissions of mercury, NO_x, PM, or SO_2.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.297 Combined Pollutant Standard: Permanent Shut-Downs

a) The owner or operator of the following EGUs must permanently shut down the EGU by the dates specified:

1) Waukegan 6 on or before December 31, 2007; and

2) Will County 1 and Will County 2 on or before December 31, 2010.

b) No later than 8 months before the date that a specified EGU will be permanently shut down, the owner or operator must submit a report to the Agency that includes a description of the actions that have already been taken to allow the shutdown of the EGU and a description of the future actions that must be accomplished to complete the shutdown of the EGU, with the anticipated schedule for those actions and the anticipated date of permanent shutdown of the unit.

c) No later than six months before a specified EGU will be permanently shut down, the owner or operator ~~shall~~ must apply for revisions to the operating permits for the EGU to include provisions that terminate the authorization to operate the unit on that date.

d) If after applying for or obtaining a construction permit to install required control equipment, the owner or operator decides to permanently shut-down a Specified EGU rather than install the required control technology, the owner or operator must immediately notify the Agency in writing and thereafter submit the information required by subsections (b) and (c) ~~of this Section~~.

e) Failure to permanently shut down a specified EGU by the required date ~~shall~~ must be considered separate violations of the applicable emissions standards and control technology requirements of the CPS for NO_x, PM, SO_2, and mercury.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.298 Combined Pollutant Standard: Requirements for NO_x and SO_2 Allowances

a) The following requirements apply to the owner and operator with respect to SO_2 and NO_x allowances, which mean, for the purposes of this Section 225.298, allowances necessary for compliance with Section 225.310, 225.410, or 225.510, 40 CFR 72, or subparts AA and AAAA of 40 CFR 96, or any future federal NO_x or SO_2 emissions trading programs that modify or replace these programs:

1) The owner or operator of specified EGUs in a CPS group may sell, trade, or transfer any and all SO_2 and NO_x emissions allowances of any vintage (the year an allowance is issued) owned, allocated to, or earned by the specified EGUs (the "CPS allowances"), without restriction, to any person or entity located anywhere, except that the owner or operator may not directly sell, trade, or transfer CPS allowances to a unit located in Ohio, Indiana, Illinois, Wisconsin, Michigan, Kentucky, Missouri, Iowa, Minnesota, or Texas.

2) In no event ~~shall~~ must this subsection (a) require or be interpreted to require any restriction whatsoever on the sale, trade, or exchange of the CPS allowances by persons or entities who have acquired the CPS allowances from the owner or operator of specified EGUs in a CPS group.

b) The owner or operator of EGUs in a specified CPS group is prohibited from purchasing or using SO_2 and NO_x allowances for the purposes of meeting the SO_2 and NO_x emissions standards ~~set forth~~ in Section 225.295.

c) By March 1, 2010, and continuing ~~in~~ each year thereafter, the owner or operator of the EGUs in a CPS group must submit a report to the Agency that demonstrates compliance with the requirements of this Section for the previous calendar year and ozone season control period (May 1 through September 30), and includes identification of any NO_x or SO_2 allowances that have been used for compliance with any NO_x or SO_2 trading programs, and any NO_x or SO_2 allowances that were sold, gifted, used, exchanged, or traded. A final report must be submitted to the Agency by August 31 of each year, providing either verification that the actions described in the initial report have taken place, or, if such actions have not taken place, an explanation of the changes that have occurred and the reasons for such changes.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.299 Combined Pollutant Standard: Clean Air Act Requirements

The SO_2 emissions rates ~~set forth~~ in the CPS ~~shall~~ must be deemed to be best available retrofit technology ("BART") under the Visibility Protection provisions of the CAA (42 USC 7491), reasonably available control technology ("RACT"), and reasonably available control measures

("RACM") for achieving fine particulate matter ("$PM_{2.5}$") requirements under NAAQS in effect on August 31, 2007, as required by the CAA (42 USC 7502). The Agency may use the SO_2 and NO_x emissions reductions required under the CPS in developing attainment demonstrations and demonstrating reasonable further progress for $PM_{2.5}$ and 8 hour ozone standards, as required under the CAA. Furthermore, in developing rules, regulations, or State Implementation Plans designed to comply with $PM_{2.5}$ and 8 hour ozone NAAQS, the Agency, taking into account all emission reduction efforts and other appropriate factors, will use best efforts to seek SO_2 and NO_x emissions rates from other EGUs that are equal to or less than the rates applicable to the CPS group and will seek SO_2 and NO_x reductions from other sources before seeking additional emissions reductions from any EGU in the CPS group.

Section 25.APPENDIX B Continuous Emission Monitoring Systems for Mercury

Section 1.1 Applicability

~~The provisions of this~~This Appendix ~~apply~~ applies to sources subject to 35 Ill. Adm. Code 225 mercury (Hg) mass emission reduction program.

Section 1.2 General Operating Requirements

a) Primary Equipment Performance Requirements. The owner or operator must ensure that each continuous mercury emission monitoring system and each auxiliary monitoring system required by this Appendix meets the equipment, installation, and performance specifications in Exhibit A ~~to this Appendix~~ and is maintained according to the quality assurance and quality control procedures in Exhibit B ~~to this Appendix~~.

b) Heat Input Rate Measurement Requirement. The owner or operator must determine and record the heat input rate~~,~~ in units of mmBtu/hr~~,~~ to each affected unit for every hour or part of an hour any fuel is combusted following the procedures in Exhibit C ~~to this Appendix~~.

c) Primary Equipment Hourly Operating Requirements. The owner or operator must ensure that all continuous mercury emission monitoring systems and all auxiliary monitoring systems required by this Appendix are in operation and monitoring unit emissions at all times that the affected unit combusts any fuel except during periods of calibration, quality assurance, or preventive maintenance, performed ~~pursuant to~~under Section 1.5 ~~of this Appendix~~ and Exhibit B ~~to this Appendix~~,

periods of repair, periods of backups of data from the data acquisition and handling system, or recertification performed ~~pursuant to~~under Section 1.4 ~~of this Appendix~~.

1) The owner or operator must ensure that each continuous emission monitoring system is capable of completing a minimum of one cycle of operation (sampling, analyzing, and data recording) for each successive 15-minute interval. The owner or operator must reduce all volumetric flow, CO_2 concentration, O_2 concentration, and mercury concentration data collected by the monitors to hourly averages. Hourly averages must be computed using at least one data point in each 15-minute quadrant of an hour~~, where~~when the unit combusted fuel during that quadrant of an hour. Notwithstanding this requirement, an hourly average may be computed from at least two data points separated by a minimum of 15 minutes (where the unit operates for more than one quadrant of an hour) if data are unavailable as a result of the performance of calibration, quality assurance, or preventive maintenance activities ~~pursuant to~~under Section 1.5 ~~of this Appendix~~ and Exhibit B ~~to this Appendix~~, or backups of data from the data acquisition and handling system, or recertification, ~~pursuant to~~under Section 1.4 ~~of this Appendix~~. The owner or operator must use all valid measurements or data points collected during an hour to calculate the hourly averages. All data points collected during an hour must be, to the extent practicable, evenly spaced over the hour.

2) Failure of a CO_2 or O_2 emissions concentration monitor, mercury concentration monitor, flow monitor, or a moisture monitor to acquire the minimum number of data points for calculation of an hourly average in subsection (c)(1) ~~of this Section~~ must result in the failure to obtain a valid hour of data and the loss of such component data for the entire hour. For a moisture monitoring system consisting of one or more oxygen analyzers capable of measuring O_2 on a wet-basis and a dry-basis, an hourly average percent moisture value is valid only if the minimum number of data points is acquired for both the wet-and dry-basis measurements.

d) Optional Backup Monitor Requirements. If the owner or operator chooses to use two or more continuous mercury emission monitoring systems, each of which is capable of monitoring the same stack or duct at a specific affected unit~~,~~ or group of units using a common stack, then the owner or operator must designate one monitoring system as the primary monitoring system~~,~~ and must record this information in the monitoring plan, as provided for in Section 1.10 ~~of this Appendix~~. The owner or operator must designate the other monitoring systems as backup monitoring systems in the monitoring plan. The backup monitoring systems must be designated as redundant backup monitoring systems, non-redundant backup monitoring systems, or reference method backup systems~~, as described in~~under Section 1.4(d) ~~of this Appendix~~. When the certified primary monitoring system is operating and not out-of-control ~~as defined in~~under Section

1.7 ~~of this Appendix~~, only data from the certified primary monitoring system must be reported as valid, quality-assured data. ~~Thus, data~~Data from the backup monitoring system may be reported as valid, quality-assured data only when the backup is operating and not out-of-control ~~as defined in~~under Section 1.7 ~~of this Appendix~~ (or in the applicable reference method in appendix A of 40 CFR 60, incorporated by reference in Section 225.140) and when the certified primary monitoring system is not operating (or is operating but out-of-control). A particular monitor may be designated both as a certified primary monitor for one unit and as a certified redundant backup monitor for another unit.

e) Minimum Measurement Capability Requirement. The owner or operator must ensure that each continuous emission monitoring system is capable of accurately measuring, recording, and reporting data, and must not incur an exceedance of the full scale range, except as provided in Section 2.1.2.3 of Exhibit A ~~to this Appendix~~.

f) Minimum Recording and Recordkeeping Requirements. The owner or operator must record and report the hourly, daily, quarterly, and annual information collected under ~~the requirements as specified in~~ subpart G of 40 CFR 75, incorporated by reference in Section 225.140, and Section 1.11 through 1.13 ~~of this Appendix~~.

Section 1.3 Special Provisions for Measuring Mercury Mass Emissions Using the Excepted Sorbent Trap Monitoring Methodology

For an affected coal-fired unit under 35 Ill Adm. Code 225, if the owner or operator elects to use sorbent trap monitoring systems (as defined in Section 225.130) to quantify mass emissions, the guidelines in subsections (a) through (l) ~~of this Section~~ must be followed for this excepted monitoring methodology:

a) For each sorbent trap monitoring system (whether primary or redundant backup), the use of paired sorbent traps~~, as described in~~under Exhibit D ~~to this Appendix,~~ is required.

b) Each sorbent trap must have a main section, a backup section, and a third section to allow spiking with a calibration gas of known mercury concentration~~, as described in~~under Exhibit D ~~to this Appendix~~.

c) A certified flow monitoring system is required.

d) Correction for stack gas moisture content is required, and in some cases, a certified O_2 or CO_2 monitoring system is required (see Section 1.15(a)(4)).

e) Each sorbent trap monitoring system must be installed and operated in accordance with Exhibit D ~~to this Appendix~~. The automated data acquisition and handling

system must ensure that the sampling rate is proportional to the stack gas volumetric flow rate.

f) At the beginning and end of each sample collection period, and at least once in each unit operating hour during the collection period, the gas flow meter reading must be recorded.

g) After each sample collection period, the mass of mercury adsorbed in each sorbent trap (in all three sections) must be determined according to the applicable procedures in Exhibit D ~~to this Appendix~~.

h) The hourly mercury mass emissions for each collection period are determined using the results of the analyses in conjunction with contemporaneous hourly data recorded by a certified stack flow monitor, corrected for the stack gas moisture content. For each pair of sorbent traps analyzed, the average of the ~~2~~ two mercury concentrations must be used for reporting purposes under Section 1.18(f) ~~of this Appendix~~. Notwithstanding this requirement, if, due to circumstances beyond the control of the owner or operator, one of the paired traps is accidentally lost, damaged, or broken and cannot be analyzed, the results of the analysis of the other trap may be used for reporting purposes, provided that the other trap has met all of the applicable quality-assurance requirements of this Part.

i) All unit operating hours for which valid mercury concentration data are obtained with the primary sorbent trap monitoring system (as verified using the quality assurance procedures in Exhibit D ~~to this Appendix~~) must be reported in the electronic quarterly report under Section 1.18(f) ~~of this Appendix~~. For hours in which data from the primary monitoring system are invalid, the owner or operator may, in ~~accordance~~ compliance with Section 1.4(d) ~~of this Appendix~~, report valid mercury concentration data from: a certified redundant backup CEMS or sorbent trap monitoring system; a certified non-redundant backup CEMS or sorbent trap monitoring system; or an applicable reference method under Section 1.6 ~~of this Appendix~~.

j) Initial certification requirements and additional quality-assurance requirements for the sorbent trap monitoring systems are found in Section 1.4(c)(7), in Section 6.5.6 of Exhibit A ~~to this Appendix~~, in Sections 1.3 and 2.3 of Exhibit B ~~to this Appendix~~, and in Exhibit D ~~to this Appendix~~.

k) During each RATA of a sorbent trap monitoring system, the type of sorbent material used by the traps must be the same as for daily operation of the monitoring system. A new pair of traps must be used for each RATA run. However, the size of the traps used for the RATA may be smaller than the traps used for daily operation of the system.

l) Whenever the type of sorbent material used by the traps is changed, the owner or operator must conduct a diagnostic RATA of the modified sorbent trap

monitoring system within 720 unit or stack operating hours after the date and hour when the new sorbent material is first used. If the diagnostic RATA is passed, data from the modified system may be reported as quality-assured, back to the date and hour when the new sorbent material was first used. If the RATA is failed, all data from the modified system must be invalidated, back to the date and hour when the new sorbent material was first used, and data from the system must remain invalid until a subsequent RATA is passed. If the required RATA is not completed within 720 unit or stack operating hours, but is passed on the first attempt, data from the modified system must be invalidated beginning with the first operating hour after the 720 unit or stack operating hour window expires, and data from the system must remain invalid until the date and hour of completion of the successful RATA.

Section 1.4 Initial Certification and Recertification Procedures

a) Initial Certification Approval Process. The owner or operator must ensure that each continuous mercury emission monitoring system or auxiliary monitoring system required by this Appendix meets the initial certification requirements of this Section. In addition, whenever the owner or operator installs a continuous mercury emission monitoring system in order to meet the requirements of Section 1.3 ~~of this Appendix~~ and 40 CFR sections 75.11 through 75.14 and 75.16 through 75.18, incorporated by reference in Section 225.140, where no continuous emission monitoring system was previously installed, initial certification is required.

1) Notification of initial certification test dates. The owner or operator must submit a written notice of the dates of initial certification testing at the unit as specified in 40 CFR 75.61(a)(1), incorporated by reference in Section 225.140.

2) Certification application. The owner or operator must apply for certification of each continuous mercury emission monitoring system and, if not previously certified, for each auxiliary monitoring system. The owner or operator must submit the certification application in ~~accordance~~ compliance with 40 CFR 75.60, incorporated by reference in Section 225.140, and each complete certification application must include the information specified in 40 CFR 75.63, incorporated by reference in Section 225.140.

3) Provisional approval of certification (or recertification) applications. Upon the successful completion of the required certification (or recertification) procedures of this Section, each continuous mercury emission monitoring system and each auxiliary monitoring system must be deemed provisionally certified (or recertified) for use for a period not to exceed 120 days following receipt by the Agency of the complete certification (or recertification) application under subsection (a)(4) ~~of this Section~~. Data

measured and recorded by a provisionally certified (or recertified) continuous emission monitoring system, operated in ~~accordance~~ compliance with the requirements of Exhibit B ~~to this Appendix~~, will be considered valid quality-assured data (retroactive to the date and time of provisional certification or recertification), provided that the Agency does not invalidate the provisional certification (or recertification) by issuing a notice of disapproval within 120 days of receipt by the Agency of the complete certification (or recertification) application. Note that when the conditional data validation procedures of subsection (b)(3) ~~of this Section~~ are used for the initial certification (or recertification) of a continuous emissions monitoring system, the date and time of provisional certification (or recertification) of the CEMS may be earlier than the date and time of completion of the required certification (or recertification) tests.

4) Certification (or recertification) application formal approval process. The Agency will issue a notice of approval or disapproval of the certification (or recertification) application to the owner or operator within 120 days after receipt of the complete certification (or recertification) application. ~~In the event~~ If the Agency does not issue such a notice within 120 days after receipt, each continuous emission monitoring system which meets the performance requirements of this Part and is included in the certification (or recertification) application will be deemed certified (or recertified) for use under 35 Ill Adm. Code 225.

A) Approval notice. If the certification (or recertification) application is complete and shows that each continuous emission monitoring system meets the performance requirements of this part, then the Agency will issue a notice of approval of the certification (or recertification) application within 120 days of receipt.

B) Incomplete application notice. A certification (or recertification) application will be considered complete when all of the applicable information required to be submitted in 40 CFR 75.63, incorporated by reference in Section 225.140, has been received by the Agency. If the certification (or recertification) application is not complete, then the Agency will issue a notice of incompleteness that provides a reasonable timeframe for the owner or operator to submit the additional information required to complete the certification (or recertification) application. If the owner or operator has not complied with the notice of incompleteness by a specified due date, then the Agency may issue a notice of disapproval specified under paragraph (a)(4)(C) ~~of this Section~~. The 120-day review period will not begin prior to receipt of a complete application.

C) Disapproval notice. If the certification (or recertification) application shows that any continuous emission monitoring system does not meet the performance requirements of this Part, or if the certification (or recertification) application is incomplete and the requirement for disapproval under subsection (a)(4)(B) ~~of this Section~~ has been met, the Agency must issue a written notice of disapproval of the certification (or recertification) application within 120 days after receipt. By issuing the notice of disapproval, the provisional certification (or recertification) is invalidated by the Agency, and the data measured and recorded by each uncertified continuous emission or opacity monitoring system must not be considered valid quality-assured data as follows: from the hour of the probationary calibration error test that began the initial certification (or recertification) test period (if the conditional data validation procedures of subsection (b)(3) ~~of this Section~~ were used to retrospectively validate data); or from the date and time of completion of the invalid certification or recertification tests (if the conditional data validation procedures of subsection (b)(3) ~~of this Section~~ were not used). The owner or operator must follow the procedures for loss of initial certification in subsection (a)(5) ~~of this Section~~ for each continuous emission monitoring system that is disapproved for initial certification. For each disapproved recertification, the owner or operator must follow the procedures of subsection (b)(5) ~~of this Section~~.

5) Procedures for loss of certification. When the Agency issues a notice of disapproval of a certification application or a notice of disapproval of certification status (as specified in subsection (a)(4) ~~of this Section~~), then:

A) Until such time, date, and hour as the continuous mercury emission monitoring system can be adjusted, repaired, or replaced and certification tests successfully completed (or, if the conditional data validation procedures in subsections (b)(3)(B) through (I) ~~of this Section~~ are used, until a probationary calibration error test is passed following corrective actions in accordance with subsection (b)(3)(B) ~~of this Section~~), the owner or operator must perform emissions testing pursuant to Section 225.239~~.~~;

B) The owner or operator must submit a notification of certification pretest dates ~~as specified in~~under Section 225.250(a)(3)(A) and a new certification application according to the procedures in Section 225.250(a)(3)(B); and

C) The owner or operator must repeat all certification tests or other requirements that were failed by the continuous mercury emission monitoring system, as indicated in the Agency's notice of

disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval.

b) Recertification Approval Process. Whenever the owner or operator makes a replacement, modification, or change in a certified continuous mercury emission monitoring system or auxiliary monitoring system that may significantly affect the ability of the system to accurately measure or record the gas volumetric flow rate, mercury concentration, percent moisture, or to meet the requirements of Section 1.5 ~~of this Appendix~~ or Exhibit B ~~to this Appendix~~, the owner or operator must recertify the monitoring system, according to the procedures in this subsection. Examples of changes that require recertification include: replacement of the analyzer; change in location or orientation of the sampling probe or site; and complete replacement of an existing monitoring system. The owner or operator must also recertify the continuous emission monitoring systems for a unit that has recommenced commercial operation following a period of long-term cold storage as defined in Section 225.130. Any change to a flow monitor or gas monitoring system for which a RATA is not necessary will not be considered a recertification event. In addition, changing the polynomial coefficients or K-factors of a flow monitor will require a 3-load RATA, but is not considered to be a recertification event; however, records of the polynomial coefficients or K-factors currently in use must be maintained on-site in a format suitable for inspection. Changing the coefficient or K-factors of a moisture monitoring system will require a RATA, but is not considered to be a recertification event; however, records of the coefficient or K-factors currently in use by the moisture monitoring system must be maintained on-site in a format suitable for inspection. In such cases, any other tests that are necessary to ensure continued proper operation of the monitoring system (e.g., 3-load flow RATAs following changes to flow monitor polynomial coefficients, linearity checks, calibration error tests, DAHS verifications, etc.) must be performed as diagnostic tests, rather than as recertification tests. The data validation procedures in subsection (b)(3) ~~of this Section~~ must be applied to RATAs associated with changes to flow or moisture monitor coefficients, and to linearity checks, 7-day calibration error tests, and cycle time tests, when these are required as diagnostic tests. When the data validation procedures of subsection (b)(3) ~~of this Section~~ are applied in this manner, replace the word "recertification" with the word "diagnostic."

1) Tests required. For all recertification testing, the owner or operator must complete all initial certification tests in subsection (c) ~~of this Section~~ that are applicable to the monitoring system, except as otherwise approved by the Agency. For diagnostic testing after changing the flow rate monitor polynomial coefficients, the owner or operator must complete a 3-level RATA. For diagnostic testing after changing the K factor or mathematical algorithm of a moisture monitoring system, the owner or operator must complete a RATA.

2) Notification of recertification test dates. The owner or operator ~~or~~ must submit notice of testing dates for recertification under this subsection as specified in 40 CFR 75.61(a)(1)(ii), incorporated by reference in Section 225.140, unless all of the tests in subsection (c) ~~of this Section~~ are required for recertification, in which case the owner or operator must provide notice in accordance with the notice provisions for initial certification testing in 40 CFR 75.61(a)(1)(i), incorporated by reference in Section 225.140.

3) Recertification test period requirements and data validation. The data validation provisions in subsections (b)(3)(A) through (b)(3)(I) ~~of this Section~~ will apply to all mercury CEMS recertifications and diagnostic testing. The provisions in subsections (b)(3)(B) through (b)(3)(I) ~~of this Section~~ may also be applied to initial certifications (see Sections 6.2(a), 6.3.1(a), 6.3.2(a), 6.4(a) and 6.5(f) of Exhibit A ~~to this Appendix~~) and may be used to supplement the linearity check and RATA data validation procedures in Sections 2.2.3(b) and 2.3.2(b) of Exhibit B ~~to this Appendix~~.

A) The owner or operator must report emission data using a reference method or another monitoring system that has been certified or approved for use under this Part, in the period extending from the hour of the replacement, modification, or change made to a monitoring system that triggers the need to perform recertification testing, until either: the hour of successful completion of all of the required recertification tests; or the hour in which a probationary calibration error test (according to subsection (b)(3)(B) ~~of this Section~~) is performed and passed, following all necessary repairs, adjustments, or reprogramming of the monitoring system. The first hour of quality-assured data for the recertified monitoring system must either be the hour after all recertification tests have been completed or, if conditional data validation is used, the first quality-assured hour must be determined in ~~accordance~~ compliance with subsections (b)(3)(B) through (b)(3)(I) ~~of this Section~~. Notwithstanding these requirements, if the replacement, modification, or change requiring recertification of the CEMS is such that the historical data stream is no longer representative (e.g., where the mercury concentration and stack flow rate change significantly after installation of a wet scrubber), the owner or operator must estimate the mercury emissions over that time period and notify the Agency within 15 days after the replacement, modification, or change requiring recertification of the CEMS.

B) Once the modification or change to the CEMS has been completed and all of the associated repairs, component replacements, adjustments, linearization and reprogramming of the CEMS have been completed, a probationary calibration error test is required to

establish the beginning point of the recertification test period. In this instance, the first successful calibration error test of the monitoring system following completion of all necessary repairs, component replacements, adjustments, linearization and reprogramming must be the probationary calibration error test. The probationary calibration error test must be passed before any of the required recertification tests are commenced.

C) Beginning with the hour of commencement of a recertification test period, emission data recorded by the CEMS are considered to be conditionally valid, contingent upon the results of the subsequent recertification tests.

D) Each required recertification test must be completed no later than the following number of unit operating hours (or unit operating days) after the probationary calibration error test that initiates the test period:

i) For a linearity check, a system integrity check, and/or cycle time test, 168 consecutive unit operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140, or, for CEMS installed on common stacks or bypass stacks, 168 consecutive stack operating hours, as defined in 40 CFR 72.2;

ii) For a RATA (whether normal-load or multiple-load), 720 consecutive unit operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140, or, for CEMS installed on common stacks or bypass stacks, 720 consecutive stack operating hours, as defined in 40 CFR 72.2; and

iii) For a 7-day calibration error test, 21 consecutive unit operating days, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140.

E) All recertification tests must be performed hands-off. No adjustments to the calibration of the CEMS, other than the routine calibration adjustments following daily calibration error tests as described in Section 2.1.3 of Exhibit B ~~to this Appendix~~, are permitted during the recertification test period. Routine daily calibration error tests must be performed throughout the recertification test period, in accordance with Section 2.1.1 of Exhibit B ~~to this Appendix~~. The additional calibration error test requirements in Section 2.1.3 of Exhibit B ~~to this Appendix~~, must also apply during the recertification test period.

F) If all of the required recertification tests and required daily calibration error tests are successfully completed in succession with no failures, and if each recertification test is completed within the time period specified in subsection (b)(3)(D)(i), (ii) or (iii) ~~of this Section~~, then all of the conditionally valid emission data recorded by the CEMS will be considered quality assured, from the hour of commencement of the recertification test period until the hour of completion of the required tests.

G) If a required recertification test is failed or aborted due to a problem with the CEMS, or if a daily calibration error test is failed during a recertification test period, data validation must be done as follows:

i) If any required recertification test is failed, it must be repeated. If any recertification test other than a 7-day calibration error test is failed or aborted due to a problem with the mercury CEMS, the original recertification test period is ended, and a new recertification test period must be commenced with a probationary calibration error test. The tests that are required in the new recertification test period will include any tests that were required for the initial recertification event that were not successfully completed and any recertification or diagnostic tests that are required as a result of changes made to the monitoring system to correct the problems that caused the failure of the recertification test. For a 2- or 3-load flow RATA, if the relative accuracy test is passed at one or more load levels, but is failed at a subsequent load level, provided that the problem that caused the RATA failure is corrected without re-linearizing the instrument, the length of the new recertification test period must be equal to the number of unit operating hours remaining in the original recertification test period, as of the hour of failure of the RATA. However, if re-linearization of the flow monitor is required after a flow RATA is failed at a particular load level, then a subsequent 3-load RATA is required, and the new recertification test period must be 720 consecutive unit (or stack) operating hours. The new recertification test sequence must not be commenced until all necessary maintenance activities, adjustments, linearization and reprogramming of the CEMS have been completed~~;~~.

ii) If a linearity check, RATA system integrity check, or cycle time test is failed or aborted due to a problem with the

mercury CEMS, all conditionally valid emission data recorded by the CEMS are invalidated, from the hour of commencement of the recertification test period to the hour in which the test is failed or aborted, except for the case in which a multiple-load flow RATA is passed at one or more load levels, failed at a subsequent load level, and the problem that caused the RATA failure is corrected without re-linearizing the instrument. In that case, data invalidation will be prospective, from the hour of failure of the RATA until the commencement of the new recertification test period. Data from the CEMS remain invalid until the hour in which a new recertification test period is commenced, following corrective action, and a probationary calibration error test is passed, at which time the conditionally valid status of emission data from the CEMS begins again~~;~~.

iii) If a 7-day calibration error test is failed within the recertification test period, previously-recorded conditionally valid emission data from the mercury CEMS are not invalidated. The conditionally valid data status is unaffected, unless the calibration error on the day of the failed 7-day calibration error test exceeds twice the performance specification in Section 3 of Exhibit A ~~to this Appendix~~, as described in subsection (b)(3)(G)(iv) ~~of this Section~~.

iv) If a daily calibration error test is failed during a recertification test period (i.e., the results of the test exceed the applicable performance specification in Section 2.1.4 of Exhibit B ~~to this Appendix~~), the CEMS is out-of-control as of the hour in which the calibration error test is failed. Emission data from the CEMS will be invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful calibration error test following corrective action, at which time the conditionally valid status of data from the monitoring system resumes. Failure to perform a required daily calibration error test during a recertification test period will also cause data from the CEMS to be invalidated prospectively, from the hour in which the calibration error test was due until the hour of completion of a subsequent successful calibration error test. Whenever a calibration error test is failed or missed during a recertification test period, no further recertification tests must be performed until the required subsequent calibration error test has been passed, re-establishing the conditionally

valid status of data from the monitoring system. If a calibration error test failure occurs while a linearity check or RATA is still in progress, the linearity check or RATA must be re-started.

v) Trial gas injections and trial RATA runs are permissible during the recertification test period, prior to commencing a linearity check or RATA, for the purpose of optimizing the performance of the CEMS. The results of such gas injections and trial runs must not affect the status of previously-recorded conditionally valid data or result in termination of the recertification test period, provided that they meet the following specifications and conditions: for diluent gas injections, the stable, ending monitor response is within ±5 percent of the tag value of the reference gas or 0.5% CO_2 or O_2. For Hg vapor injections, the stable, ending monitor response is within ± 10 percent of the value of the reference gas or 0.8 µg/scm; for RATA trial runs, the average reference method reading and the average CEMS reading for the run differ by no more than ± 10% of the average reference method value (for flow, diluent gas, and moisture monitors); or ± 20% of the average reference method value or 1.0µg/scm (for mercury monitors), or differ by no more than 1.0% CO_2 or O_2 or 1.5% H_2O from the average reference method value, as applicable. No adjustments to the calibration of the CEMS shall be made following the trial injections or runs, other than the adjustments permitted under Section 2.1.3 of Exhibit B ~~to this Appendix~~, if the CEMS is not repaired, re-linearized or reprogrammed (e.g., changing flow monitor polynomial coefficients, linearity constants, or K-factors) after the trial injections or runs.

vi) If the results of any trial gas injections or RATA runs are outside the limits in subsection (b)(3)(G)(v) ~~of this Section~~ or if the CEMS is repaired, re-linearized, or reprogrammed after the trial injections or runs the trial injections or runs will be counted as a failed linearity check or RATA attempt. If this occurs, follow the procedures pertaining to failed and aborted recertification tests in subsections (b)(3)(G)(i) and (b)(3)(G)(ii) ~~of this Section~~.

H) If any required recertification test is not completed within its allotted time period, data validation must be done as follows. For a late linearity test, RATA, system integrity check, or cycle time test that is passed on the first attempt, data from the monitoring system

will be invalidated from the hour of expiration of the recertification test period until the hour of completion of the late test. For a late 7-day calibration error test, whether or not it is passed on the first attempt, data from the monitoring system will also be invalidated from the hour of expiration of the recertification test period until the hour of completion of the late test. For a late linearity test, RATA system integrity check, or cycle time test that is failed on the first attempt or aborted on the first attempt due to a problem with the monitor, all conditionally valid data from the monitoring system will be considered invalid back to the hour of the first probationary calibration error test that initiated the recertification test period. Data from the monitoring system will remain invalid until the hour of successful completion of the late recertification test and any additional recertification or diagnostic tests that are required as a result of changes made to the monitoring system to correct problems that caused failure of the late recertification test.

I) If any required recertification test of a monitoring system has not been completed by the end of a calendar quarter and if data contained in the quarterly report are conditionally valid pending the results of tests to be completed in a subsequent quarter, the owner or operator must indicate this by means of notification within the quarterly report for that quarter. The owner or operator must resubmit the report for that quarter if the required recertification test is subsequently failed. If any required recertification test is not completed by the end of a particular calendar quarter but is completed no later than 30 days after the end of that quarter (i.e., prior to the deadline for submitting the quarterly report under 40 CFR 75.64, incorporated by reference in Section 225.140), the test data and results may be submitted with the earlier quarterly report even though the test dates are from the next calendar quarter. In such instances, if the recertification tests are passed in accordance with the provisions of subsection (b)(3) ~~of this Section~~, conditionally valid data may be reported as quality-assured. The Agency may invalidate any conditionally valid data that remains unresolved at the end of a particular calendar year.

4) Recertification application. The owner or operator must apply for recertification of each continuous emission monitoring system. The owner or operator must submit the recertification application in ~~accordance~~ compliance with 40 CFR 75.60, incorporated by reference in Section 225.140, and each complete recertification application must include the information specified in 40 CFR 75.63, incorporated by reference in Section 225.140.

5) Approval or disapproval of request for recertification. The procedures for provisional certification in subsection (a)(3) ~~of this Section~~ apply to recertification applications. The Agency will issue a notice of approval, disapproval, or incompleteness according to the procedures in subsection (a)(4) ~~of this Section~~. Data from the monitoring system remain invalid until all required recertification tests have been passed or until a subsequent probationary calibration error test is passed, beginning a new recertification test period. The owner or operator must repeat all recertification tests or other requirements, as indicated in the Agency's notice of disapproval, no later than 30 unit operating days after the date of issuance of the notice of disapproval. The owner or operator must submit a notification of the recertification retest dates, as specified in 40 CFR 75.61(a)(1)(ii), incorporated by reference in Section 225.140, and must submit a new recertification application according to the procedures in subsection (b)(4) ~~of this Section~~.

c) Initial Certification and Recertification Procedures. Prior to the applicable deadline in ~~35 Ill Adm. Code~~Section 225.240(b), the owner or operator must conduct initial certification tests and in ~~accordance~~ compliance with 40 CFR 75.63, incorporated by reference in Section 225.140, the owner or operator must submit an application to demonstrate that the continuous emission monitoring system and components of the system meet the specifications in Exhibit A ~~to this Appendix~~. The owner or operator must compare reference method values with output from the automated data acquisition and handling system that is part of the continuous mercury emission monitoring system being tested. Except as otherwise specified in subsections (b)(1), (d), and (e) ~~of this Section~~, and in Sections 6.3.1 and 6.3.2 of Exhibit A ~~to this Appendix~~, the owner or operator must perform the following tests for initial certification or recertification of continuous emission monitoring systems according to the requirements of Exhibit B ~~to this Appendix~~:

1) For each mercury concentration monitoring system:

A) A 7-day calibration error test;

B) A linearity check~~,~~ ; for mercury monitors, perform this check with elemental mercury standards;

C) A relative accuracy test audit must be done on a µg/scm basis;

D) A cycle time test;

E) For mercury monitors a 3-level system integrity check, using a NIST-traceable source of oxidized mercury, as described in Section 6.2 of Exhibit A ~~to this Appendix~~. This test is not required for a mercury monitor that does not have a converter.

2) For each flow monitor:

A) A 7-day calibration error test;

B) Relative accuracy test audits, as follows:

i) A single-load RATA at the normal load, as defined in Section 6.5.2.1(d) of Exhibit A ~~to this Appendix~~, for a flow monitor installed on a peaking unit or bypass stack, or for a flow monitor exempted from multiple-load RATA testing under Section 6.5.2(e) of Exhibit A ~~to this Appendix~~;

ii) For all other flow monitors, a RATA at each of the three load levels (or operating levels) corresponding to the three flue gas velocities described in Section 6.5.2(a) of Exhibit A ~~to this Appendix~~.

3) For each diluent gas monitor used only to monitor heat input rate:

A) A 7-day calibration error test;

B) A linearity check;

C) A relative accuracy test audit, where, for an O_2 monitor used to determine CO_2 concentration, the CO_2 reference method must be used for the RATA; and

D) A cycle-time test.

4) For each continuous moisture monitoring system consisting of wet- and dry-basis O_2 analyzers:

A) A 7-day calibration error test of each O_2 analyzer;

B) A cycle time test of each O_2 analyzer;

C) A linearity test of each O_2 analyzer; and

D) A RATA directly comparing the percent moisture measured by the monitoring system to a reference method.

5) For each continuous moisture sensor: A RATA directly comparing the percent moisture measured by the monitor sensor to a reference method.

6) For a continuous moisture monitoring system consisting of a temperature sensor and a data acquisition and handling system (DAHS) software component programmed with a moisture lookup table: A demonstration that the correct moisture value for each hour is being taken from the moisture lookup tables and applied to the emission calculations. At a minimum, the demonstration must be made at three different temperatures covering the normal range of stack temperatures from low to high.

7) For each sorbent trap monitoring system, perform a RATA, on a µg/dscm basis.

8) For the automated data acquisition and handling system, tests designed to verify the proper computation of hourly averages for pollutant concentrations, flow rate, pollutant emission rates, and pollutant mass emissions.

9) The owner or operator must provide adequate facilities for initial certification or recertification testing that include:

A) Sampling ports adequate for test methods applicable to such facility, such that volumetric flow rate, pollutant concentration, and pollutant emission rates can be accurately determined by applicable test methods and procedures; and

B) Basic facilities (e.g., electricity) for sampling and testing equipment.

d) Initial Certification and Recertification and Quality Assurance Procedures for Optional Backup Continuous Emission Monitoring Systems.

1) Redundant backups. The owner or operator of an optional redundant backup CEMS must comply with all the requirements for initial certification and recertification according to the procedures ~~specified~~ in subsections (a), (b) and (c) ~~of this Section~~. The owner or operator must operate the redundant backup CEMS during all periods of unit operation, except for periods of calibration, quality assurance, maintenance, or repair. The owner or operator must perform upon the redundant backup CEMS all quality assurance and quality control procedures ~~specified~~ in Exhibit B ~~to this Appendix~~, except that the daily assessments in Section 2.1 of Exhibit B ~~to this Appendix~~ are optional for days on which the redundant backup CEMS is not used to report emission data under this Part. For any day on which a redundant backup CEMS is used to report emission data, the system must meet all of the applicable daily assessment criteria in Exhibit B ~~to this Appendix~~.

2) Non-redundant backups. The owner or operator of an optional non-redundant backup CEMS or like-kind replacement analyzer must comply with all of the following requirements for initial certification, quality assurance, recertification, and data reporting:

A) Except ~~as provided in~~under subsection (d)(2)(E) ~~of this Section~~, for a regular non-redundant backup CEMS (i.e., a non-redundant backup CEMS that has its own separate probe, sample interface, and analyzer), or a non-redundant backup flow monitor, all of the tests in subsection (c) ~~of this Section~~ are required for initial certification of the system, except for the 7-day calibration error test.

B) For a like-kind replacement non-redundant backup analyzer (i.e., a non-redundant backup analyzer that uses the same probe and sample interface as a primary monitoring system), no initial certification of the analyzer is required.

C) Each non-redundant backup CEMS or like-kind replacement analyzer must comply with the daily and quarterly quality assurance and quality control requirements in Exhibit B ~~to this Appendix~~ for each day and quarter that the non-redundant backup CEMS or like-kind replacement analyzer is used to report data, and must meet the additional linearity and calibration error test requirements specified in this subsection. The owner or operator must ensure that each non-redundant backup CEMS or like-kind replacement analyzer passes a linearity check (for mercury concentration and diluent gas monitors) or a calibration error test (for flow monitors) prior to each use for recording and reporting emissions. When a non-redundant backup CEMS or like-kind replacement analyzer is brought into service, prior to conducting the linearity test, a probationary calibration error test (as described in subsection (b)(3)(B) ~~of this Section~~), which will begin a period of conditionally valid data, may be performed in order to allow the validation of data retrospectively, as follows. Conditionally valid data from the CEMS or like-kind replacement analyzer are validated back to the hour of completion of the probationary calibration error test if the following conditions are met: if no adjustments are made to the CEMS or like-kind replacement analyzer other than the allowable calibration adjustments specified in Section 2.1.3 of Exhibit B ~~to this Appendix~~ between the probationary calibration error test and the successful completion of the linearity test; and if the linearity test is passed within 168 unit (or stack) operating hours of the probationary calibration error test. However, if the linearity test is performed within 168 unit or stack operating hours but is either failed or aborted due to a problem

with the CEMS or like-kind replacement analyzer, then all of the conditionally valid data are invalidated back to the hour of the probationary calibration error test, and data from the non-redundant backup CEMS or from the primary monitoring system of which the like-kind replacement analyzer is a part remain invalid until the hour of completion of a successful linearity test. Notwithstanding this requirement, the conditionally valid data status may be re-established after a failed or aborted linearity check, if corrective action is taken and a calibration error test is subsequently passed. However, in no case will the use of conditional data validation extend for more than 168 unit or stack operating hours beyond the date and time of the original probationary calibration error test when the analyzer was brought into service.

D For each parameter monitored (i.e., CO_2, O_2, Hg, or flow rate) at each unit or stack, a regular non-redundant backup CEMS may not be used to report data at that affected unit or common stack for more than 720 hours in any one calendar year (in ~~accordance~~ compliance with 40 CFR 75.74(c), incorporated by reference in Section 225.140), unless the CEMS passes a RATA at that unit or stack. For each parameter monitored at each unit or stack, the use of a like-kind replacement non-redundant backup analyzer (or analyzers) is restricted to 720 cumulative hours per calendar year, unless the owner or operator redesignates the like-kind replacement analyzers as components of regular non-redundant backup CEMS and each redesignated CEMS passes a RATA at that unit or stack.

E) For each regular non-redundant backup CEMS, no more than eight successive calendar quarters must elapse following the quarter in which the last RATA of the CEMS was done at a particular unit or stack, without performing a subsequent RATA. Otherwise, the CEMS may not be used to report data from that unit or stack until the hour of completion of a passing RATA at that location.

F) Each regular non-redundant backup CEMS must be represented in the monitoring plan required under Section 1.10 ~~of this Appendix~~ as a separate monitoring system, with unique system and component identification numbers. When like-kind replacement non-redundant backup analyzers are used, the owner or operator must represent each like-kind replacement analyzer used during a particular calendar quarter in the monitoring plan required under Section 1.10 ~~of this Appendix~~ as a component of a primary monitoring system. The owner or operator must also assign a unique component identification number to each like-kind

replacement analyzer, beginning with the letters LK (e.g., LK1, LK2, etc.) and must specify the manufacturer, model, and serial number of the like-kind replacement analyzer. This information may be added, deleted, or updated as necessary, from quarter to quarter. The owner or operator must also report data from the like-kind replacement analyzer using the system identification number of the primary monitoring system and the assigned component identification number of the like-kind replacement analyzer.

G) When reporting data from a certified regular non-redundant backup CEMS, use a method of determination code "02"(MODC). When reporting data from a like-kind replacement non-redundant backup analyzer, use a MODC of "17" (see Table 4a under Section 1.11 ~~of this Appendix~~).

H) For non-redundant backup mercury CEMS and sorbent trap monitoring systems, and for like-kind replacement mercury analyzers, the following provisions apply in addition to, or, in some cases, in lieu of, the general requirements in subsections (d)(2)(A) through (H) ~~of this Section~~:

i) When a certified sorbent trap monitoring system is brought into service as a regular non-redundant backup monitoring system, the system must be operated according to the procedures in Section 1.3 ~~of this Appendix~~ and Exhibit D ~~to this Appendix~~.

ii) When a regular non-redundant backup mercury CEMS or a like-kind replacement mercury analyzer is brought into service, a linearity check with elemental mercury standards, as described in subsection (c)(1)(B) ~~of this Section~~ and Section 6.2 of Exhibit A ~~to this Appendix~~, and a single-point system integrity check, as described in Section 2.6 of Exhibit B ~~to this Appendix~~, must be performed. Alternatively, a 3-level system integrity check, as described in subsection (c)(1)(E) ~~of this Section~~ and subsection (g) of Section 6.2 in Exhibit A ~~to this Appendix~~, may be performed in lieu of these two tests.

iii) The weekly single-point system integrity checks described in Section 2.6 of Exhibit B ~~to this Appendix~~ are required as long as a non-redundant backup mercury CEMS or like-kind replacement mercury analyzer remains in service, unless the daily calibrations of the mercury analyzer are done using a NIST-traceable source or other approved source of oxidized mercury.

3) Reference method backups. A monitoring system that is operated as a reference method backup system ~~pursuant to~~under the reference method requirements of Methods 2, 3A, 30A and 30B in appendix A of 40 CFR 60, incorporated by reference in Section 225.140, need not perform and pass the certification tests required by subsection (c) ~~of this Section~~ prior to its use pursuant to this subsection.

e) Certification/Recertification Procedures for Either Peaking Unit or By-pass Stack/Duct Continuous Emission Monitoring Systems. The owner or operator of either a peaking unit or a by-pass stack/duct continuous emission monitoring system must comply with all the requirements for certification or recertification according to the procedures ~~specified~~ in subsections (a), (b), and (c) ~~of this Section~~, except as follows: the owner or operator need only perform one Nine-run relative accuracy test audit for certification or recertification of a flow monitor installed on the by-pass stack/duct or on the stack/duct used only by affected peaking units. The relative accuracy test audit must be performed during normal operation of the peaking units or the by-pass stack/duct.

f) Certification/Recertification Procedures for Alternative Monitoring Systems. The owner or operator of each alternative monitoring system approved by the Agency as equivalent to or better than a continuous emission monitoring system according to the criteria in subpart E of 40 CFR 75, incorporated by reference in Section 225.140, must apply for certification to the Agency prior to use of the system under Subpart B ~~of this Part~~, and must apply for recertification to the Agency following a replacement, modification, or change according to the procedures in subsection (c) ~~of this Section~~. The owner or operator of an alternative monitoring system must comply with the notification and application requirements for certification or recertification according to the procedures ~~specified~~ in subsections (a) and (b) ~~of this Section~~.

Section 1.5 Quality Assurance and Quality Control Requirements

a) Continuous Emission Monitoring Systems. The owner or operator of an affected unit must operate, calibrate, and maintain each continuous mercury emission monitoring system used to report mercury emission data as follows:

1) The owner or operator must operate, calibrate, and maintain each primary and redundant backup continuous emission monitoring system according to the quality assurance and quality control procedures in Exhibit B ~~to this Appendix~~.

2) The owner or operator must ensure that each non-redundant backup CEMS meets the quality assurance requirements of Section 1.4(d) ~~of this Appendix~~ for each day and quarter that the system is used to report data.

3) The owner or operator must perform quality assurance upon a reference method backup monitoring system according to ~~the requirements of~~ Method 2 or 3A in appendix A of 40 CFR 60, incorporated by reference in Section 225.140 (supplemented, as necessary, by guidance from the Administrator or the Agency), or one of the mercury reference methods in Section 1.6 ~~of this Appendix~~, as applicable, instead of the procedures specified in Exhibit B ~~of this Appendix~~.

b) Calibration Gases. The owner or operator must ensure that all calibration gases used to quality assure the operation of the instrumentation required by this Appendix must meet the definition in 40 CFR 72.2, incorporated by reference in Section 225.140.

Section 1.6 Reference Test Methods

a) The owner or operator must use the following methods~~, which are found~~ in appendices A-1 through A-8 to 40 CFR 60, incorporated by reference in Section 225.140, or have been published by ASTM, to conduct the following tests: monitoring system tests for certification or recertification of continuous mercury emission monitoring systems; the emission tests required under Section 1.15(c) and (d) ~~of this Appendix~~; and required quality assurance and quality control tests:

1) Methods 1 or 1A in appendix A-1 to 40 CFR 60 are the reference methods for selection of sampling site and sample traverses.

2) Method 2 or its allowable alternatives, ~~as provided in~~under appendix A-1 to 40 CFR 60, incorporated by reference in Section 225.140, except for Methods 2B and 2E, are the reference methods for determination of volumetric flow.

3) Methods 3, 3A or 3B in appendix A-2 to 40 CFR 60 are the reference methods for the determination of the dry molecular weight O_2 and CO_2 concentrations in the emissions.

4) Method 4 in appendix A-3 to 40 CFR 60 (either the standard procedure described in Section 8.1 of the method or the moisture approximation procedure described in Section 8.2 of the method) must be used to correct pollutant concentrations from a dry basis to a wet basis (or from a wet basis to a dry basis) and must be used when relative accuracy test audits of continuous moisture monitoring systems are conducted. For the purpose of determining the stack gas molecular weight, however, the alternative wet bulb-dry bulb technique for approximating the stack gas moisture content described in Section 2.2 of Method 4 may be used in lieu of the procedures in Sections 8.1 and 8.2 of the method.

5) ASTM D6784-02, Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method) (incorporated by reference under Section 225.140) is the reference method for determining mercury concentration.

A) Alternatively, Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140, may be used, with these caveats: The procedures for preparation of mercury standards and sample analysis in Sections 13.4.1.1 through 13.4.1.3 ASTM D6784-02 (incorporated by reference under Section 225.140) must be followed instead of the procedures in Sections 7.5.33 and 11.1.3 of Method 29 in appendix A-8 to 40 CFR 60, and the QA/QC procedures in Section 13.4.2 of ASTM D6784-02 (incorporated by reference under Section 225.140) must be performed instead of the procedures in Section 9.2.3 of Method 29 in appendix A-8 to 40 CFR 60. The tester may also opt to use the sample recovery and preparation procedures in ASTM D6784-02 (incorporated by reference under Section 225.140) instead of the Method 29 in appendix A-8 to 40 CFR 60 procedures, as follows: Sections 8.2.8 and 8.2.9.1 of Method 29 in appendix A-8 to 40 CFR 60 may be replaced with Sections 13.2.9.1 through 13.2.9.3 of ASTM D6784-02 (incorporated by reference under Section 225.140); Sections 8.2.9.2 and 8.2.9.3 of Method 29 in appendix A-8 to 40 CFR 60 may be replaced with Sections 13.2.10.1 through 13.2.10.4 of ASTM D6784-02 (incorporated by reference under Section 225.140); Section 8.3.4 of Method 29 in appendix A-8 to 40 CFR 60 may be replaced with Section 13.3.4 or 13.3.6 of ASTM D6784-02 (as appropriate) (incorporated by reference under Section 225.140); and Section 8.3.5 of Method 29 in appendix A-8 to 40 CFR 60 may be replaced with Section 13.3.5 or 13.3.6 of ASTM D6784-02 (as appropriate) (incorporated by reference under Section 225.140).

B) Whenever ASTM D6784-02 (incorporated by reference under Section 225.140) or Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140 is used, paired sampling trains are required. To validate a RATA run or an emission test run, the relative deviation (RD), calculated according to Section 11.6 of Exhibit D ~~to this Appendix~~, must not exceed 10 percent when the average concentration is greater than 1.0 $\mu g/m^3$. If the average concentration is less than or equal to 1.0 $\mu g/m^3$, the RD must not exceed 20 percent. The RD results are also acceptable if the absolute difference between the mercury concentrations measured by the paired trains does not exceed 0.03 $\mu g/m^3$. If the

RD criterion is met, the run is valid. For each valid run, average the mercury concentrations measured by the two trains (vapor phase only).

C) Two additional reference methods in appendix A-8 to 40 CFR 60 ~~that~~ may be used to measure mercury concentration ~~are~~: Method 30A, Determination of Total Vapor Phase Mercury Emissions from Stationary Sources (Instrumental Analyzer Procedure) and Method 30B, "Determination of Total Vapor Phase Mercury Emissions from Coal-Fired Combustion Sources Using Carbon Sorbent Traps".

D) When Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140, or ASTM D6784- 02 (incorporated by reference under Section 225.140) is used for the mercury emission testing required under Section 1.15(c) and (d) ~~of this Appendix~~, locate the reference method test points according to Section 8.1 of Method 30A, and if mercury stratification testing is part of the test protocol, follow the procedures in Sections 8.1.3 through 8.1.3.5 of Method 30A.

b) The owner or operator may use any of the following methods~~, which are~~ found in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, or have been published by ASTM, as a reference method backup monitoring system to provide quality-assured monitor data:

1) Method 3A in appendix A-2 to 40 CFR 60 for determining O_2 or CO_2 concentration;

2) Method 2 in appendix A-1 to 40 CFR 60, or its allowable alternatives, as provided in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, except for Methods 2B and 2E, for determining volumetric flow. The sample points for reference methods must be located according to the provisions of Section 6.5.4 of Exhibit A ~~to this Appendix~~;

3) ASTM D6784-02, Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method) (incorporated by reference under Section 225.140) for determining mercury concentration;

4) Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140, for determining mercury concentration;

5) Method 30A in appendix A-8 to 40 CFR 60 for determining mercury concentration; and

6) Method 30B in appendix A-8 to 40 CFR 60 for determining mercury concentration.

c) Instrumental EPA Reference Method 3A in appendix A-2 of 40 CFR 60, incorporated by reference in Section 225.140, must be conducted using calibration gases as defined in Section 5 of Exhibit A ~~to this Appendix~~. Otherwise, performance tests must be conducted and data reduced in accordance with the test methods and procedures of this Part unless the Agency:

1) Specifies or approves, in specific cases, the use of a reference method with minor changes in methodology;

2) Approves the use of an equivalent method; or

3) Approves shorter sampling times and smaller sample volumes when necessitated by process variables or other factors.

Section 1.7 Out-of-Control Periods

a) If an out-of-control period occurs to a monitor or continuous emission monitoring system, the owner or operator must take corrective action and repeat the tests applicable to the "out-of-control parameter" as described in Exhibit B ~~to this Appendix~~.

1) For daily calibration error tests, an out-of-control period occurs when the calibration error of a pollutant concentration monitor exceeds the applicable specification in Section 2.1.4 of Exhibit B ~~to this Appendix~~.

2) For quarterly linearity checks, an out-of-control period occurs when the error in linearity at any of three gas concentrations (low, mid-range and high) exceeds the applicable specification in Exhibit A ~~to this Appendix~~.

3) For relative accuracy test audits, an out-of-control period occurs when the relative accuracy exceeds the applicable specification in Exhibit A ~~to this Appendix~~.

4) For weekly system integrity checks, an out-of-control period occurs when the error exceeds the applicable specification in Exhibit A ~~to this Appendix~~.

b) When a monitor or continuous emission monitoring system is out-of-control, any data recorded by the monitor or monitoring system are not quality-assured and must not be used in calculating monitor data availabilities pursuant to Section 1.8 ~~to this Appendix~~.

c) When a monitor or continuous emission monitoring system is out-of-control, the owner or operator must take one of the following actions until the monitor or monitoring system has successfully met the relevant criteria in Exhibits A and B ~~to this Appendix~~ as demonstrated by subsequent tests:

1) Use a certified backup monitoring system or a reference method for measuring and recording emissions from the affected units; or

2) Adjust the gas discharge paths from the affected units with emissions normally observed by the out-of-control monitor or monitoring system so that all exhaust gases are monitored by a certified monitor or monitoring system meeting the requirements of Exhibits A and B ~~to this Appendix~~.

Section 1.8 Determination of Monitor Data Availability

a) Following initial certification of the required CO_2, or O_2, flow monitoring systems, Hg concentration, or moisture monitoring system(s) at a particular unit or stack location (i.e., the date and time at which quality-assured data begins to be recorded by CEMSs at that location), the owner or operator must begin calculating the percent monitor data availability as described in subsection (a)(1) ~~of this Section~~, by means of the automated data acquisition and handling system, and the percent monitor data availability for each monitored parameter.

1) Following initial certification, the owner or operator must use Equation 8 to calculate, hourly, percent monitor data availability for each calendar quarter or 12-month rolling period, as applicable according to the schedule provided in Section 225.260(b).

Total unit or stack operating hours for which quality-assured data was recorded for the appropriate time period

Percent monitor = X 100 (Eq. 8) data availability

Total unit or stack operating hours for the appropriate time period

2) When calculating percent monitor data availability using Equation 8, the owner or operator must include all unit operating hours, and all monitor operating hours for which quality-assured data were recorded by a certified primary monitor; a certified redundant or non-redundant backup monitor or a reference method for that unit.

Section 1.9 Determination of Sorbent Trap Monitoring Systems Data Availability

a) If a primary sorbent trap monitoring system has not been certified by the applicable compliance date ~~specified~~ under Subpart B ~~of this Part~~, and if quality-assured mercury concentration data from a certified backup mercury monitoring

system, reference method or approved alternative monitoring system are unavailable, the owner or operator must perform quarterly emissions testing in ~~accordance~~ compliance with Section 225.239 until such time the primary sorbent trap monitoring system has been certified.

b) For a certified sorbent trap system, a missing data period will occur in the following circumstances, unless quality-assured mercury concentration data from a certified backup mercury CEMS, sorbent trap system, reference method, or approved alternative monitoring system are available:

1) A gas sample is not extracted from the stack during unit operation (e.g., during a monitoring system malfunction or when the system undergoes maintenance); or

2) The results of the mercury analysis for the paired sorbent traps are missing or invalid (as determined using the quality assurance procedures in Exhibit D ~~to this Appendix~~). The missing data period begins with the hour in which the paired sorbent traps for which the mercury analysis is missing or invalid were put into service. The missing data period ends at the first hour in which valid mercury concentration data are obtained with another pair of sorbent traps (i.e., the hour at which this pair of traps was placed in service), or with a certified backup mercury CEMS, reference method, or approved alternative monitoring system.

c) Following initial certification of the sorbent trap monitoring system, begin reporting the percent monitor data availability in accordance with Section 1.8 ~~of this Appendix~~.

Section 1.10 Monitoring Plan

a) The owner or operator of an affected unit must prepare and maintain a mercury emissions monitoring plan.

b) Whenever the owner or operator makes a replacement, modification, or change in the certified CEMS, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to a serial number for a component of a monitoring system), then the owner or operator must update the monitoring plan, by the applicable deadline ~~specified~~ in 40 CFR 75.62, incorporated by reference in Section 225.140, or elsewhere in this Appendix.

c) Contents of the Mercury Monitoring Plan. The requirements of subsection (d) ~~of this Section~~ must be met on and after July 1, 2009. Each monitoring plan must contain the information in subsection (d)(1) ~~of this Section~~ in electronic format and the entire monitoring plan in subsection (d)(2) ~~of this Section~~ in hardcopy format. Electronic storage of all monitoring plan information, including the

hardcopy portions, is permissible provided that a paper copy of the entire monitoring plan can be furnished upon request for audit purposes.

1) The following information must be retained on site in electronic storage and furnished to the Agency in hardcopy~~,~~ upon request for audit purposes.

A) The facility ORISPL number developed by the Department of Energy and used in the National Allowance Data Base (or equivalent facility ID number assigned by USEPA, if the facility does not have an ORISPL number). Also provide the following information for each unit and (as applicable) for each common stack and/or pipe, and each multiple stack and/or pipe involved in the monitoring plan:

i) A representation of the exhaust configuration for the units in the monitoring plan. Provide the ID number of each unit and assign a unique ID number to each common stack, common pipe, multiple stack, and/or multiple pipe associated with the units represented in the monitoring plan. For common and multiple stacks and/or pipes, provide the activation date and deactivation date (if applicable) of each stack and/or pipe;

ii) Identification of the monitoring system locations (e.g., at the unit-level, on the common stack, at each multiple stack, etc.). Provide an indicator (flag) if the monitoring location is at a bypass stack or in the ductwork (breeching);

iii) The stack exit height (ft) above ground level and ground level elevation above sea level, and the inside cross-sectional area (ft^2) at the flue exit and at the flow monitoring location (for units with flow monitors, only). Also use appropriate codes to indicate the materials of construction and the shapes of the stack or duct cross-sections at the flue exit and (if applicable) at the flow monitor location;

iv) The types of fuels fired by each unit. Indicate the start and (if applicable) end date of combustion for each type of fuel, and whether the fuel is the primary, secondary, emergency, or startup fuel;

v) The types of emission controls that are used to reduce mercury emissions from each unit. Also provide the installation date, optimization date, and retirement date (if applicable) of the emission controls, and indicate whether

the controls are an original installation; and

vi) Maximum hourly heat input capacity of each unit.

B) For each monitored parameter (i.e., mercury concentration, diluent concentration, moisture or flow) at each monitoring location, specify the monitoring methodology for the parameter. If the unmonitored bypass stack approach is used for a particular parameter, indicate this by means of an appropriate code. Provide the activation date/hour~~,~~ and deactivation date/hour (if applicable) for each monitoring methodology.

C) For each required continuous emission monitoring system and each sorbent trap monitoring system (as defined in Section 225.130), identify and describe the major monitoring components in the monitoring system (e.g., gas analyzer, flow monitor, moisture sensor, DAHS software, etc.). Other important components in the system (e.g., sample probe, PLC, data logger, etc.) may also be represented in the monitoring plan, if necessary. Provide the following specific information about each component and monitoring system:

i) For each required monitoring system, assign a unique, 3-character alphanumeric identification code to the system; indicate the parameter monitored by the system; designate the system as a primary, redundant backup, non-redundant backup, data backup, or reference method backup system, ~~as provided in~~under Section 1.2(d) ~~of this Appendix~~; and indicate the system activation date/hour and deactivation date/hour (as applicable).

ii) For each component of each monitoring system represented in the monitoring plan, assign a unique, 3-character alphanumeric identification code to the component; indicate the manufacturer, model, and serial number; designate the component type; for gas analyzers, indicate the moisture basis of measurement; indicate the method of sample acquisition or operation, (e.g., extractive pollutant concentration monitor or thermal flow monitor); and indicate the component activation date/hour and deactivation date/hour (as applicable).

D) Explicit formulas, using the component and system identification codes for the primary monitoring system, and containing all constants and factors required to derive the required emission rates, heat input rates, etc. from the hourly data recorded by the

monitoring systems. Formulas using the system and component ID codes for backup monitoring systems are required only if different formulas for the same parameter are used for the primary and backup monitoring systems (e.g., if the primary system measures pollutant concentration on a different moisture basis from the backup system). Provide the equation number or other appropriate code for each emissions formula (e.g., use code F-1 if Equation F-1 in Exhibit C ~~to this Appendix~~ is used to calculate SO_2 mass emissions). Also identify each emissions formula with a unique three character alphanumeric code. The formula effective start date/hour and inactivation date/hour (as applicable) must be included for each formula.

E) For each parameter monitored with CEMS, provide the following information:

i) Measurement scale;

ii) Maximum potential value (and method of calculation);

iii) Maximum expected value (if applicable) and method of calculation;

iv) Span values and full-scale measurement ranges;

v) Daily calibration units of measure; and

vi) Effective date/hour, and (if applicable) inactivation date/hour of each span value.

F) If the monitoring system or excepted methodology provides for the use of a constant, assumed, or default value for a parameter under specific circumstances, then include the following information for each such value for each parameter:

i) Identification of the parameter;

ii) Default, maximum, minimum, or constant value, and units of measure for the value;

iii) Purpose of the value;

iv) Indicator of use, i.e., during controlled hours, uncontrolled hours or all operating hours;

v) Type of fuel;

vi) Source of the value;

vii) Value effective date and hour; and

viii) Date and hour value is no longer effective (if applicable).

G) Unless otherwise specified in Section 6.5.2.1 of Exhibit A ~~to this Appendix~~, for each unit or common stack on which hardware CEMS are installed:

i) Maximum hourly gross load (in MW, rounded to the nearest MW, or steam load in 1000 lb/hr (i.e., klb/hr), rounded to the nearest klb/hr, or thermal output in mmBtu/hr, rounded to the nearest mmBtu/hr), for units that produce electrical or thermal output;

ii) The upper and lower boundaries of the range of operation (as defined in Section 6.5.2.1 of Exhibit A ~~to this Appendix~~), expressed in megawatts, thousands of lb/hr of steam, mmBtu/hr of thermal output or ft/sec (as applicable);

iii) Except for peaking units, identify the most frequently and second most frequently used load levels (i.e., low, mid, or high) in accordance with Section 6.5.2.1 of Exhibit A ~~to this Appendix~~, expressed in megawatts, thousands of lb/hr of steam, mmBtu/hr of thermal output or ft/sec (as applicable);

iv) An indicator of whether the second most frequently used load level is designated as normal in Section 6.5.2.1 of Exhibit A ~~to this Appendix~~;

v) The date of the data analysis used to determine the normal load levels and the two most frequently-used load levels (as applicable); and

vi) Activation and deactivation dates and hours, when the maximum hourly gross load, boundaries of the range of operation, normal load levels, or two most frequently-used load levels change and are updated.

H) For each unit for which CEMS are not installed, the maximum hourly gross load (in MW, rounded to the nearest MW, or steam load in klb/hr, rounded to the nearest klb/hr or steam load in

mmBtu/hr, rounded to the nearest mmBtu/hr).

I) For each unit with a flow monitor installed on a rectangular stack or duct, if a wall effects adjustment factor (WAF) is determined and applied to the hourly flow rate data:

i) Stack or duct width at the test location, ft;

ii) Stack or duct depth at the test location, ft;

iii) Wall effects adjustment factor (WAF), to the nearest 0.0001;

iv) Method of determining the WAF;

v) WAF effective date and hour;

vi) WAF no longer effective date and hour (if applicable);

vii) WAF determination date;

viii) Number of WAF test runs;

ix) Number of Method 1 traverse points in the WAF test;

x) Number of test ports in the WAF test; and

xi) Number of Method 1 traverse points in the reference flow RATA.

2) Hardcopy

A) Information, including (as applicable): Identification of the test strategy; protocol for the relative accuracy test audit; other relevant test information; calibration gas levels (percent of span) for the calibration error test and linearity check and span; and apportionment strategies under Sections 1.2 and 1.3 ~~of this Appendix~~.

B) Description of site locations for each monitoring component in the continuous emission monitoring systems, including schematic diagrams and engineering drawings specified in 40 CFR 75.53 (g)(2)(iv) and (g)(2)(v), incorporated by reference in Section 225.140 and any other documentation that demonstrates each monitor location meets the appropriate siting criteria.

C) A data flow diagram denoting the complete information handling path from output signals of CEMS components to final reports.

D) For units monitored by a continuous emission monitoring system, a schematic diagram identifying entire gas handling system from boiler to stack for all affected units, using identification numbers for units, monitoring systems and components, and stacks corresponding to the identification numbers provided in subsections (c)(1)(A) and C) ~~of this Section~~. The schematic diagram must depict stack height and the height of any monitor locations. Comprehensive and/or separate schematic diagrams must be used to describe groups of units using a common stack.

E) For units monitored by a continuous emission monitoring system, stack and duct engineering diagrams showing the dimensions and location of fans, turning vanes, air preheaters, monitor components, probes, reference method sampling ports, and other equipment that affects the monitoring system location, performance, or quality control checks.

Section 1.11 General Recordkeeping Provisions

The owner or operator must meet all of the applicable recordkeeping requirements of Section 225.290 and of this Section.

a) Recordkeeping Requirements for Affected Sources. The owner or operator of any affected source subject to the requirements of this Appendix must maintain for each affected unit a file of all measurements, data, reports, and other information required by Subpart B ~~of this Part~~ at the source in a form suitable for inspection for at least 5 years from the date of each record. The file must contain the following information:

1) The data and information required in subsections (b) through (h) ~~of this Section~~, beginning with the earlier of the date of provisional certification or July 1, 2009;

2) The supporting data and information used to calculate values required in subsections (b) through (g) ~~of this Section~~, excluding the subhourly data points used to compute hourly averages under Section 1.2(c) ~~of this Appendix~~, beginning with the earlier of the date of provisional certification or July 1, 2009;

3) The data and information required in Section 1.12 ~~of this Appendix~~ for specific situations, beginning with the earlier of the date of provisional certification or July 1, 2009;

4) The certification test data and information required in Section 1.13 ~~of this Appendix~~ for tests required under Section 1.4 ~~of this Appendix~~, beginning with the date of the first certification test performed, the quality assurance and quality control data and information required in Section 1.13 ~~of this Appendix~~ for tests, and the quality assurance/quality control plan required under Section 1.5 ~~of this Appendix~~ and Exhibit B ~~to this Appendix~~, beginning with the date of provisional certification;

5) The current monitoring plan ~~as specified in~~under Section 1.10 ~~of this Appendix~~, beginning with the initial submission to the Agency required by 40 CFR 75.62, incorporated by reference in Section 225.140; and

6) The quality control plan as described in Section 1 of Exhibit B ~~to this Appendix~~, beginning with the date of provisional certification.

b) Operating Parameter Record Provisions. The owner or operator must record for each hour the following information on unit operating time, heat input rate, and load, separately for each affected unit and also for each group of units utilizing a common stack and a common monitoring system:

1) Date and hour;

2) Unit operating time (rounded up to the nearest fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator));

3) Hourly gross unit load (rounded to nearest MWge), or steam load in 1000 lbs/hr at stated temperatures and pressures, rounded to the nearest 1000 lbs/hr;

4) Operating load range corresponding to hourly gross load of 1 to 10, except for units using a common stack, which may use up to 20 load ranges for stack gas flow rate, as specified in the monitoring plan;

5) Hourly heat input rate (mmBtu/hr, rounded to the nearest tenth);

6) Identification code for formula used for heat input, as provided in Section 1.10 ~~of this Appendix~~;

c) Diluent Record Provisions. The owner or operator of a unit using a flow monitor and an O_2 diluent monitor to determine heat input, in ~~accordance~~ compliance with Equation F-17 or F-18 of Exhibit C ~~to this Appendix~~, or a unit that accounts for heat input using a flow monitor and a CO_2 diluent monitor (which is used only for heat input determination and is not used as a CO_2 pollutant concentration monitor) must keep the following records for the O_2 or CO_2 diluent monitor:

1) Component-system identification code as provided in Section 1.10 ~~of this Appendix~~;

2) Date and hour;

3) Hourly average diluent gas (O_2 or CO_2) concentration (in percent, rounded to the nearest tenth);

4) Percent monitor data availability for the diluent monitor (recorded to the nearest tenth of a percent) calculated pursuant to Section 1.8 ~~of this Appendix~~; and

5) Method of determination code for diluent gas (O_2 or CO_2) concentration data using Codes 1-55 in Table 4a ~~of this Section~~.

d) Missing Data Records. The owner or operator must record the causes of any missing data periods and the actions taken by the owner or operator to correct such causes.

e) Mercury Emission Record Provisions (CEMS). The owner or operator must record for each hour the information required by this subsection for each affected unit using mercury CEMS in combination with flow rate, and (in certain cases) moisture, and diluent gas monitors, to determine mercury concentration and (if applicable) unit heat input under Subpart B ~~of this Part~~.

1) For mercury concentration during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

A) Component-system identification code as provided in Section 1.10 ~~of this Appendix~~;

B) Date and hour;

C) Hourly mercury concentration (µg/scm, rounded to the nearest tenth);

D) Method of determination for hourly mercury concentration using Codes 1-55 in Table 4a ~~of this Section~~; and

E) The percent monitor data availability (to the nearest tenth of a percent) calculated ~~pursuant to~~under Section 1.8 ~~of this Appendix~~.

2) For flue gas moisture content during unit operation (if required), as measured and reported from each certified primary monitor certified back-up monitor or other approved method of emissions determination (except

where a default moisture value is approved under 40 CFR 75.66, incorporated by reference in Section 225.140):

A) Component-system identification code, as provided in Section 1.10 ~~of this Appendix~~;

B) Date and hour;

C) Hourly average moisture content of flue gas (percent, rounded to the nearest tenth). If the continuous moisture monitoring system consists of wet-and dry-basis oxygen analyzers, also record both the wet- and dry-basis oxygen hourly averages (in percent O_2, rounded to the nearest tenth);

D) Percent monitor data availability (recorded to the nearest tenth of a percent) for the moisture monitoring system calculated pursuant to Section 1.8 ~~of this Appendix~~; and

E) Method of determination for hourly average moisture percentage using Codes 1-55 in Table 4a ~~of this Section~~.

3) For diluent gas (O_2 or CO_2) concentration during unit operation (if required), as measured and reported from each certified primary monitor, certified back-up monitor or other approved method of emissions determination:

A) Component-system identification code as provided in Section 1.10 ~~of this Appendix~~;

B) Date and hour;

C) Hourly average diluent gas (O_2 or CO_2) concentration (in percent, rounded to the nearest tenth);

D) Method of determination code for diluent gas (O_2 or CO_2) concentration data using Codes 1-55 in Table 4a ~~of this Section~~; and

E) The percent monitor data availability (to the nearest tenth of a percent) for the O_2 or CO_2 monitoring system (if a separate O_2 or CO_2 monitoring system is used for heat input determination) calculated ~~pursuant to~~under Section 1.8 ~~of this Appendix~~.

4) For stack gas volumetric flow rate during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor or other approved method of emissions determination, record the information

required under 40 CFR 75.57(c)(2)(i) through (vi), incorporated by reference in Section 225.140.

5) For mercury mass emissions during unit operation, as measured and reported from the certified primary monitoring systems, certified redundant or non-redundant back-up monitoring systems, or other approved methods of emissions determination:

A) Date and hour;

B) Hourly mercury mass emissions (ounces, rounded to three decimal places);

C) Identification code for emissions formula used to derive hourly mercury mass emissions from mercury concentration, flow rate and moisture data, as provided in Section 1.10 ~~of this Appendix~~.

f) Mercury Emission Record Provisions (Sorbent Trap Systems). The owner or operator must record for each hour the information required by this subsection(f)~~,~~ for each affected unit using sorbent trap monitoring systems in combination with flow rate, moisture, and (in certain cases) diluent gas monitors, to determine mercury mass emissions and (if required) unit heat input under this Part.

1) For mercury concentration during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor, or other approved method of emissions determination:

A) Component-system identification code as provided in Section 1.10 ~~of this Appendix~~;

B) Date and hour;

C) Hourly mercury concentration (µg/dscm, rounded to the nearest tenth). For a particular pair of sorbent traps, this will be the flow-proportional average concentration for the data collection period;

D) Method of determination for hourly average mercury concentration using Codes 1- 55 in Table 4a ~~of this Section~~; and

E) Percent monitor data availability (recorded to the nearest tenth of a percent) calculated pursuant to Section 1.8 ~~of this Appendix~~.

2) For flue gas moisture content during unit operation, as measured and reported from each certified primary monitor certified back-up monitor, or other approved method of emissions determination (except where a default moisture value is approved under 40 CFR 75.66, incorporated by reference

in Section 225.140), record the information required under subsections (e)(2)(A) through (E) ~~of this Section~~.

3) For diluent gas (O_2 or CO_2) concentration during unit operation (if required for heat input determination), record the information required under subsections (e)(3)(A) through (E) ~~of this Section~~.

4) For stack gas volumetric flow rate during unit operation, as measured and reported from each certified primary monitor, certified back-up monitor or other approved method of emissions determination, record the information required under 40 CFR 75.57(c)(2)(i) through (vi), incorporated by reference in Section 225.140.

5) For mercury mass emissions during unit operation, as measured and reported from the certified primary monitoring systems, certified redundant or non-redundant back-up monitoring systems, or other approved methods of emissions determination, record the information required under subsection (e)(5) ~~of this Section~~.

6) Record the average flow rate of stack gas through each sorbent trap (in appropriate units, e.g., liters/min, cc/min, dscm/min).

7) Record the gas flow meter reading (in dscm, rounded to the nearest hundredth) at the beginning and end of the collection period and at least once in each unit operating hour during the collection period.

8) Calculate and record the ratio of the bias-adjusted stack gas flow rate to the sample flow rate, as described in Section 11.2 of Exhibit D ~~to this Appendix~~.

Table 4a – Codes for Method of Emissions and Flow Determination Code

Hourly emissions/flow measurement or stimation method

1	Certified primary emission/flow monitoring system.
2	Certified backup emission/flow monitoring system.
3	Approved alternative monitoring system.
4	Reference method.
17	Like-kind replacement non-redundant backup analyzer
32	Hourly HG concentration determined from analysis of a single trap invalidated or damaged (see Exhibit D, Section 8).
33	Hourly Hg concentration determined from the trap resulting in the higher HG concentration when the relative deviation criterion for the paired trap is not

met (see Exhibit D, Section 8).

40 Fuel specific default value (or prorated default value) used for the hour.

54 Other quality assured methodologies approved through petition. These hours are included in missing data lookback and are treated as unavailable hours for percent monitor availability calculations.

Section 1.12 General Recordkeeping Provisions for Specific Situations

The owner or operator must meet all of the applicable recordkeeping requirements of this Section. In ~~accordance~~ compliance with 40 CFR 75.34, incorporated by reference in Section 225.140, the owner or operator of an affected unit with add-on emission controls must record the applicable information in this Section for each hour of missing mercury concentration data. Except as otherwise provided in 40 CFR 75.34(d), incorporated by reference in Section 225.140, for units with add-on mercury emission controls, the owner or operator must record:

a) Parametric data that demonstrate, for each hour of missing mercury emission data, the proper operation of the add-on emission controls, as described in the quality assurance/quality control program for the unit. The parametric data must be maintained on site and must be submitted, upon request, to the Agency. Alternatively, for units equipped with flue gas desulfurization (FGD) systems, the owner or operator may use quality-assured data from a certified SO_2 monitor to demonstrate proper operation of the emission controls during periods of missing mercury data;

b) A flag indicating, for each hour of missing mercury emission data, either that the add-on emission controls are operating properly, as evidenced by all parameters being within the ranges specified in the quality assurance/quality control program, or that the add-on emission controls are not operating properly.

Section 1.13 Certification, Quality Assurance, and Quality Control Record Provisions

The owner or operator must meet all of the applicable recordkeeping requirements of this Section.

a) Continuous Emission Monitoring Systems. The owner or operator must record the applicable information in this Section for each certified monitor or certified monitoring system (including certified backup monitors) measuring and recording emissions or flow from an affected unit. Further, the owner or operator must verify (e.g., by means of a certificate or data from the cylinder gas vendor or CEMS vendor) that only "calibration gas" (as defined in 40 CFR 72.2, incorporated by reference in Section 225.140 and in Exhibit A ~~to this Appendix~~) is used for all required calibration error tests, linearity checks, and system integrity checks.

1) For each flow monitor, mercury monitor, or diluent gas monitor (including wet- and dry-basis O_2 monitors used to determine percent moisture), the owner or operator must record the following for all daily and 7-day calibration error tests, all weekly system integrity checks, and all off-line calibration demonstrations, including any follow-up tests after corrective action:

   A) Component-system identification code (on and after January 1, 2009, only the component identification code is required);

   B) Instrument span and span scale;

   C) Date and hour;

   D) Reference value (i.e., calibration gas concentration or reference signal value, in ppm or other appropriate units);

   E) Observed value (monitor response during calibration, in ppm or other appropriate units);

   F) Percent calibration or measurement error (rounded to the nearest tenth of a percent) (flag if using alternative performance specification for low emitters or differential pressure flow monitors);

   G) Reference signal or calibration gas level;

   H) For 7-day calibration error tests, a test number and reason for test;

   I) Description of any adjustments, corrective actions, or maintenance prior to a passed test or following a failed test; and

   J) Indication of whether the unit is off-line or on-line.

2) For each flow monitor, the owner or operator must record the following for all daily interference checks, including any follow-up tests after corrective action.

   A) Component-system identification code (after January 1, 2009, only the component identification code is required);

   B) Date and hour;

   C) Code indicating whether monitor passes or fails the interference check; and

D) Description of any adjustments, corrective actions, or maintenance prior to a passed test or following a failed test.

3) For each mercury concentration monitor, or diluent gas monitor (including wet- and dry-basis O_2monitors used to determine percent moisture), the owner or operator must record the following for the initial and all subsequent linearity checks and 3-level system integrity checks (mercury monitors with converters, only), including any follow-up tests after corrective action:

A) Component-system identification code (on and after July 1, 2009, only the component identification code is required);

B) Instrument span and span scale (only span scale is required on and after July 1, 2009);

C) Calibration gas level;

D) Date and time (hour and minute) of each gas injection at each calibration gas level;

E) Reference value (i.e., reference gas concentration for each gas injection at each calibration gas level, in ppm or other appropriate units);

F) Observed value (monitor response to each reference gas injection at each calibration gas level, in ppm or other appropriate units);

G) Mean of reference values and mean of measured values at each calibration gas level;

H) Linearity error or measurement error at each of the reference gas concentrations (rounded to nearest tenth of a percent) (flag if using alternative performance specification);

I) Test number and reason for test (flag if aborted test); and

J) Description of any adjustments, corrective action, or maintenance prior to a passed test or following a failed test.

4) For each differential pressure type flow monitor, the owner or operator must record items in subsections (a)(4)(A) through (E) ~~of this Section,~~ for all quarterly leak checks, including any follow-up tests after corrective action. For each flow monitor, the owner or operator must record items in subsections (a)(4)(F) and (G) ~~of this Section~~ for all flow-to-load ratio and gross heat rate tests:

A) Component-system identification code (on and after July 1, 2009, only the system identification code is required).

B) Date and hour.

C) Reason for test.

D) Code indicating whether monitor passes or fails the quarterly leak check.

E) Description of any adjustments, corrective actions, or maintenance prior to a passed test or following a failed test.

F) Test data from the flow-to-load ratio or gross heat rate (GHR) evaluation, including:

i) Monitoring system identification code;

ii) Calendar year and quarter;

iii) Indication of whether the test is a flow-to-load ratio or gross heat rate evaluation;

iv) Indication of whether bias adjusted flow rates were used;

v) Average absolute percent difference between reference ratio (or GHR) and hourly ratios (or GHR values);

vi) Test result;

vii) Number of hours used in final quarterly average;

viii) Number of hours exempted for use of a different fuel type;

ix) Number of hours exempted for load ramping up or down;

x) Number of hours exempted for scrubber bypass;

xi) Number of hours exempted for hours preceding a normal-load flow RATA;

xii) Number of hours exempted for hours preceding a successful diagnostic test, following a documented monitor repair or major component replacement;

xiii) Number of hours excluded for flue gases discharging simultaneously thorough a main stack and a bypass stack; and

xiv) Test number.

G) Reference data for the flow-to-load ratio or gross heat rate evaluation, including (as applicable):

i) Reference flow RATA end date and time;

ii) Test number of the reference RATA;

iii) Reference RATA load and load level;

iv) Average reference method flow rate during reference flow RATA;

v) Reference flow/load ratio;

vi) Average reference method diluent gas concentration during flow RATA and diluent gas units of measure;

vii) Fuel specific F_d-or F_c-factor during flow RATA and F-factor units of measure;

viii) Reference gross heat rate value;

ix) Monitoring system identification code;

x) Average hourly heat input rate during RATA;

xi) Average gross unit load;

xii) Operating load level; and

xiii) An indicator (flag) if separate reference ratios are calculated for each multiple stack.

5) For each flow monitor, each diluent gas (O_2 or CO_2) monitor used to determine heat input, each moisture monitoring system, mercury concentration monitoring system, each sorbent trap monitoring system, and each approved alternative monitoring system the owner or operator must record the following information for the initial and all subsequent relative accuracy test audits:

A) Reference methods used.

B) Individual test run data from the relative accuracy test audit for the flow monitor, CO_2 emissions concentration monitor-diluent continuous emission monitoring system, diluent gas (O_2 or CO_2) monitor used to determine heat input, moisture monitoring system, mercury concentration monitoring system, sorbent trap monitoring system, or approved alternative monitoring system, including:

i) Date, hour, and minute of beginning of test run;

ii) Date, hour, and minute of end of test run;

iii) Monitoring system identification code;

iv) Test number and reason for test;

v) Operating level (low, mid, high, or normal, as appropriate) and number of operating levels comprising test;

vi) Normal load level indicator for flow RATAs (except for peaking units);

vii) Units of measure;

viii) Run number;

ix) Run value from CEMS being tested, in the appropriate units of measure;

x) Run value from reference method, in the appropriate units of measure;

xi) Flag value (0, 1, or 9, as appropriate) indicating whether run has been used in calculating relative accuracy and bias values or whether the test was aborted prior to completion;

xii) Average gross unit load, expressed as a total gross unit load, rounded to the nearest MWe, or as steam load, rounded to the nearest 1000 lb/hr; and

xiii) Flag to indicate whether an alternative performance specification has been used.

C) Calculations and tabulated results, as follows:

i) Arithmetic mean of the monitoring system measurement values, of the reference method values, and of their differences, as specified in Equation A–7 in Exhibit A ~~to this Appendix~~;

ii) Standard deviation, as specified in Equation A–8 in Exhibit A ~~to this Appendix~~;

iii) Confidence coefficient, as specified in Equation A–9 in Exhibit A ~~to this Appendix~~;

iv) Statistical t value used in calculations;

v) Relative accuracy test results, as specified in Equation A–10 in Exhibit A ~~to this Appendix~~. For multi-load flow monitor tests the relative accuracy test results must be recorded at each load level tested. Each load level must be expressed as a total gross unit load, rounded to the nearest MWe, or as steam load, rounded to the nearest 1000 lb/hr;

D) Description of any adjustment, corrective action, or maintenance prior to a passed test or following a failed or aborted test.

E) For flow monitors, the equation used to characterize the flow monitor and the numerical values of the polynomial coefficients or K factors of that equation.

F) For moisture monitoring systems, the coefficient or K factor or other mathematical algorithm used to adjust the monitoring system with respect to the reference method.

6) For each mercury concentration monitor, and each CO_2 or O_2 monitor used to determine heat input, the owner or operator must record the following information for the cycle time test:

A) Component-system identification code (on and after July 1, 2009, only the component identification code is required);

B) Date;

C) Start and end times;

D) Upscale and downscale cycle times for each component;

E) Stable start monitor value;

F) Stable end monitor value;

G) Reference value of calibration gases;

H) Calibration gas level;

I) Total cycle time;

J) Reason for test; and

K) Test number.

7) In addition to the information in subsection (a)(5) ~~of this Section~~, the owner or operator must record, for each relative accuracy test audit, supporting information sufficient to substantiate compliance with all applicable Sections and Appendices in this Part. Unless otherwise specified in this part or in an applicable test method, the information in subsections (a)(7)(A) through (H) ~~of this Section~~ may be recorded either in hard copy format, electronic format, or a combination of the two, and the owner or operator must maintain this information in a format suitable for inspection and audit purposes. This RATA supporting information must include~~, but must not be limited to,~~ the following data elements:

A) For each RATA using Reference Method 2 (or its allowable alternatives) in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, to determine volumetric flow rate:

i) Information indicating whether or not the location meets requirements of Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140; and

ii) Information indicating whether or not the equipment passed the required leak checks.

B) For each run of each RATA using Reference Method 2 (or its allowable alternatives in appendix A to 40 CFR 60, incorporated by reference in Section 225.140) to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

i) Operating level (low, mid, high, or normal, as appropriate);

ii) Number of reference method traverse points;

iii) Average stack gas temperature ~~(°F)~~(° F);

iv) Barometric pressure at test port (inches of mercury);

v) Stack static pressure (inches of H_2O);

vi) Absolute stack gas pressure (inches of mercury);

vii) Percent CO_2 and O_2 in the stack gas, dry-basis;

viii) CO_2 and O_2 reference method used;

ix) Moisture content of stack gas (percent H_2O);

x) Molecular weight of stack gas, dry-basis (lb/lb-mole);

xi) Molecular weight of stack gas, wet-basis (lb/lb-mole);

xii) Stack diameter (or equivalent diameter) at the test port (ft);

xiii) Average square root of velocity head of stack gas (inches of H_2O) for the run;

xiv) Stack or duct cross-sectional area at test port (ft^2);

xv) Average velocity (ft/sec);

xvi) Average stack flow rate, adjusted, if applicable, for wall effects (scfh, wet-basis);

xvii) Flow rate reference method used;

xviii) Average velocity, adjusted for wall effects;

xix) Calculated (site-specific) wall effects adjustment factor determined during the run, and, if different, the wall effects adjustment factor used in the calculations; and

xx) Default wall effects adjustment factor used.

C) For each traverse point of each run of each RATA using Reference Method 2 (or its allowable alternatives in appendix A to 40 CFR 60, incorporated by reference in Section 225.140) to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

i) Reference method probe type;

ii) Pressure measurement device type;

iii) Traverse point ID;

iv) Probe or pitot tube calibration coefficient;

v) Date of latest probe or pitot tube calibration;

vi) Average velocity differential pressure at traverse point (inches of H_2O) or the average of the square roots of the velocity differential pressures at the traverse point ((inches of $H_2O)^{1/2}$);

vii) T_S, stack temperature at the traverse point ~~(°F)~~(° F);

viii) Composite (wall effects) traverse point identifier;

ix) Number of points included in composite traverse point;

x) Yaw angle of flow at traverse point (degrees);

xi) Pitch angle of flow at traverse point (degrees);

xii) Calculated velocity at traverse point both accounting and not accounting for wall effects (ft/sec); and

xiii) Probe identification number.

D) For each RATA using Reference Method 3A in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, to determine, CO_2, or O_2concentration:

i) Pollutant or diluent gas being measured;

ii) Span of reference method analyzer;

iii) Type of reference method system (e.g., extractive or dilution type);

iv) Reference method dilution factor (dilution type systems only);

v) Reference gas concentrations (zero, mid, and high gas levels) used for the 3-point pre-test analyzer calibration error test (or, for dilution type reference method systems,

for the 3-point pre-test system calibration error test) and for any subsequent recalibrations;

vi) Analyzer responses to the zero-, mid-, and high-level calibration gases during the 3-point pre-test analyzer (or system) calibration error test and during any subsequent recalibrations;

vii) Analyzer calibration error at each gas level (zero, mid, and high) for the 3-point pre-test analyzer (or system) calibration error test and for any subsequent recalibrations (percent of span value);

viii) Upscale gas concentration (mid or high gas level) used for each pre-run or post-run system bias check or (for dilution type reference method systems) for each pre-run or post-run system calibration error check;

ix) Analyzer response to the calibration gas for each pre-run or post-run system bias (or system calibration error) check;

x) The arithmetic average of the analyzer responses to the zero-level gas, for each pair of pre- and post-run system bias (or system calibration error) checks;

xi) The arithmetic average of the analyzer responses to the upscale calibration gas for each pair of pre- and post-run system bias (or system calibration error) checks;

xii) The results of each pre-run and each post-run system bias (or system calibration error) check using the zero-level gas (percentage of span value);

xiii) The results of each pre-run and each post-run system bias (or system calibration error) check using the upscale calibration gas (percentage of span value);

xiv) Calibration drift and zero drift of analyzer during each RATA run (percentage of span value);

xv) Moisture basis of the reference method analysis;

xvi) Moisture content of stack gas, in percent, during each test run (if needed to convert to moisture basis of CEMS being tested);

xvii) Unadjusted (raw) average pollutant or diluent gas concentration for each run;

xviii) Average pollutant or diluent gas concentration for each run, corrected for calibration bias (or calibration error) and, if applicable, corrected for moisture;

xix) The F-factor used to convert reference method data to units of lb/mmBtu (if applicable);

xx) Dates of the latest analyzer interference tests;

xxi) Results of the latest analyzer interference tests; and

xxii) For each calibration gas cylinder used during each RATA, record the cylinder gas vendor, cylinder number, expiration date, pollutants in the cylinder, and certified gas concentrations.

E) For each test run of each moisture determination using Method 4 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, (or its allowable alternatives), whether the determination is made to support a gas RATA to support a flow RATA or to quality assure the data from a continuous moisture monitoring system, record the following data elements (as applicable to the moisture measurement method used):

i) Test number;

ii) Run number;

iii) The beginning date, hour, and minute of the run;

iv) The ending date, hour, and minute of the run;

v) Unit operating level (low, mid, high, or normal, as appropriate);

vi) Moisture measurement method;

vii) Volume of H_2O collected in the impingers (ml);

viii) Mass of H_2O collected in the silica gel (g);

ix) Dry gas meter calibration factor;

x) Average dry gas meter temperature (°F);

xi) Barometric pressure (inches of mercury);

xii) Differential pressure across the orifice meter (inches of H_2O);

xiii) Initial and final dry gas meter readings (ft^3);

xiv) Total sample gas volume, corrected to standard conditions (dscf); and

xv) Percentage of moisture in the stack gas (percent H_2O).

F) The raw data and calculated results for any stratification tests performed in ~~accordance~~ compliance with Sections 6.5.5.1 through 6.5.5.3 of Exhibit A ~~to this Appendix~~.

G) For each RATA run using the Ontario Hydro Method to determine mercury concentration:

i) Percent CO_2 and O_2 in the stack gas, dry-basis;

ii) Moisture content of the stack gas (percent H_2O);

iii) Average stack temperature ~~(°F)~~(° F);

iv) Dry gas volume metered (dscm);

v) Percent isokinetic;

vi) Particle-bound mercury collected by the filter, blank, and probe rinse (µg);

vii) Oxidized mercury collected by the KCl impingers (µg);

viii) Elemental mercury collected in the HNO_3/H_2O_2 impinger and in the $KMnO_4/H_2SO_4$ impingers (µg);

ix) Total mercury, including particle-bound mercury (µg); and

x) Total mercury, excluding particle-bound mercury (µg).

H) All appropriate data elements for Methods 30A and 30B.

I) For a unit with a flow monitor installed on a rectangular stack or duct, if a site-specific default or measured wall effects adjustment factor (WAF) is used to correct the stack gas volumetric flow rate data to account for velocity decay near the stack or duct wall, the owner or operator must keep records of the following for each flow RATA performed with EPA Method 2 in appendices A–1 and A–2 to 40 CFR 60, incorporated by reference in Section 225.140, subsequent to the WAF determination:

i) Monitoring system ID;

ii) Test number;

iii) Operating level;

iv) RATA end date and time;

v) Number of Method 1 traverse points; and

vi) Wall effects adjustment factor (WAF), to the nearest 0.0001.

J) For each RATA run using Method 29 in appendix A–8 to 40 CFR 60, incorporated by reference in Section 225.140, to determine mercury concentration:

i) Percent $CO_2$and O_2 in the stack gas, dry-basis;

ii) Moisture content of the stack gas (percent H_2O);

iii) Average stack gas temperature ~~(°F)~~(º F);

iv) Dry gas volume metered (dscm);

v) Percent isokinetic;

vi) Particulate mercury collected in the front half of the sampling train, corrected for the front-half blank value (µgm); and

vii) Total vapor phase mercury collected in the back half of the sampling train, corrected for the back-half blank value (µg).

8) For each certified continuous emission monitoring system, excepted monitoring system, or alternative monitoring system, the date and

description of each event that requires certification, recertification, or certain diagnostic testing of the system and the date and type of each test performed. If the conditional data validation procedures of Section 1.4(b)(3) ~~of this Appendix~~ are to be used to validate and report data prior to the completion of the required certification, recertification, or diagnostic testing, the date and hour of the probationary calibration error test must be reported to mark the beginning of conditional data validation.

9) Hardcopy relative accuracy test reports, certification reports, recertification reports, or semiannual or annual reports for gas or flow rate CEMS, mercury CEMS, or sorbent trap monitoring systems are required or requested under 40 CFR 75.60(b)(6) or 75.63, incorporated by reference in Section 225.140, the reports must include, at a minimum, the following elements (as applicable to the types of tests performed:

A) Summarized test results.

B) DAHS printouts of the CEMS data generated during the calibration error, linearity, cycle time, and relative accuracy tests.

C) For pollutant concentration monitor or diluent monitor relative accuracy tests at normal operating load:

i) The raw reference method data from each run, i.e., the data under subsections (a)(7)(D)(xvii) ~~of this Section~~ (usually in the form of a computerized printout, showing a series of one-minute readings and the run average);

ii) The raw data and results for all required pre-test, post-test, pre-run, and post-run quality assurance checks (i.e., calibration gas injections) of the reference method analyzers, i.e., the data under subsections (a)(7)(D)(v) through (xiv) ~~of this Section~~;

iii) The raw data and results for any moisture measurements made during the relative accuracy testing, i.e., the data under subsections (a)(7)(E)(i) through(xv) ~~of this Section~~; and

iv) Tabulated, final, corrected reference method run data (i.e., the actual values used in the relative accuracy calculations), along with the equations used to convert the raw data to the final values and example calculations to demonstrate how the test data were reduced.

D) For relative accuracy tests for flow monitors:

i) The raw flow rate reference method data, from Reference Method 2 (or its allowable alternatives) under appendix A to 40 CFR 60, incorporated by reference in Section 225.140, including auxiliary moisture data (often in the form of handwritten data sheets), i.e., the data under subsections (a)(7)(B)(i) through)(xx), subsections (a)(7)(C)(i) through ((xiii), and, if applicable, subsections (a)(7)(E)(i) through (xv) ~~of this Section~~; and

ii) The tabulated, final volumetric flow rate values used in the relative accuracy calculations (determined from the flow rate reference method data and other necessary measurements, such as moisture, stack temperature and pressure), along with the equations used to convert the raw data to the final values and example calculations to demonstrate how the test data were reduced.

E) Calibration gas certificates for the gases used in the linearity, calibration error, and cycle time tests and for the calibration gases used to quality assure the gas monitor reference method data during the relative accuracy test audit.

F) Laboratory calibrations of the source sampling equipment. For sorbent trap monitoring systems, the laboratory analyses of all sorbent traps and information documenting the results of all leak checks and other applicable quality control procedures.

G) A copy of the test protocol used for the CEMS certifications or recertifications, including narrative that explains any testing abnormalities, problematic sampling, and analytical conditions that required a change to the test protocol, and/or solutions to technical problems encountered during the testing program.

H) Diagrams illustrating test locations and sample point locations (to verify that locations are consistent with information in the monitoring plan). Include a discussion of any special traversing or measurement scheme. The discussion must also confirm that sample points satisfy applicable acceptance criteria.

I) Names of key personnel involved in the test program, including test team members, plant contacts, agency representatives, and test observers on site.

10) Whenever reference methods are used as backup monitoring systems ~~pursuant to~~under Section 1.4(d)(3)~~ of this Appendix~~, the owner or operator must record the following information:

A) For each test run using Reference Method 2 (or its allowable alternatives in appendix A to 40 CFR 60, incorporated by reference in Section 225.140) to determine volumetric flow rate, record the following data elements (as applicable to the measurement method used):

i) Unit or stack identification number;

ii) Reference method system and component identification numbers;

iii) Run date and hour;

iv) The data in subsection (a)(7)(B)~~ of this Section~~, except for subsections (a)(7)(B)(i), (vi), (viii), (xii) and (xvii) through (xx); and

v) The data in subsection (a)(7)(C), except on a run basis.

B) For each reference method test run using Reference Method 3A in appendix A to 40 CFR 60, incorporated by reference in Section 225.140 to determine CO_2, or O_2 concentration:

i) Unit or stack identification number;

ii) The reference method system and component identification numbers;

iii) Run number;

iv) Run start date and hour;

v) Run end date and hour;

vi) The data in subsections (a)(7)(D)(ii) through (ix) and (xii) through (xv); and (vii) Stack gas density adjustment factor (if applicable).

C) For each hour of each reference method test run using Method 3A in appendix A to 40 CFR 60, incorporated by reference in Section 225.140 to determine CO_2, or O_2 concentration:

i) Unit or stack identification number;

ii) The reference method system and component identification numbers;

iii) Run number;

iv) Run date and hour;

v) Pollutant or diluent gas being measured;

vi) Unadjusted (raw) average pollutant or diluent gas concentration for the hour; and

vii) Average pollutant or diluent gas concentration for the hour, adjusted as appropriate for moisture, calibration bias (or calibration error), and stack gas density.

11) For each other quality-assurance test or other quality assurance activity, the owner or operator must record the following (as applicable):

A) Component/system identification code;

B) Parameter;

C) Test or activity completion date and hour;

D) Test or activity description;

E) Test result;

F) Reason for test; and

G) Test code.

12) For each request for a quality assurance test extension or exemption, for any loss of exempt status, and for each single-load flow RATA claim pursuant to Section 2.3.1.3(c)(3) of Exhibit B ~~to this Appendix~~, the owner or operator must record the following (as applicable):

A) For a RATA deadline extension or exemption request:

i) Monitoring system identification code;

ii) Date of last RATA;

iii) RATA expiration date without extension;

iv) RATA expiration date with extension;

v) Type of RATA extension of exemption claimed or lost;

vi) Year to date hours of non-redundant back-up CEMS usage at the unit/stack; and

vii) Quarter and year.

B) For a linearity test or flow-to-load ratio test quarterly exemption:

i) Component-system identification code;

ii) Type of test;

iii) Basis for exemption;

iv) Quarter and year; and

v) Span scale.

C) For a single-load flow RATA claim:

i) Monitoring system identification code;

ii) Ending date of last annual flow RATA;

iii) The relative frequency (percentage) of unit or stack operation at each load (low, mid and high) since the previous annual flow RATA, to the nearest 0.1 percent;

iv) End date of the historical load data collection period; and

v) Indication of the load level (low, mid, or high) claimed for the single-load flow RATA.

13) For the sorbent traps used in sorbent trap monitoring systems to quantify mercury concentration under Sections 1.14 through 1.18 ~~of this Appendix~~ (including sorbent traps used for relative accuracy testing), the owner or operator must keep records of the following:

A) The ID number of the monitoring system in which each sorbent trap was used to collect mercury;

B) The unique identification number of each sorbent trap;

C) The beginning and ending dates and hours of the data collection period for each sorbent trap;

D) The average mercury concentration (in µgm/dscm) for the data collection period;

E) Information documenting the results of the required leak checks;

F) The analysis of the mercury collected by each sorbent trap; and

G) Information documenting the results of the other applicable quality control procedures in Section 1.3 ~~of this Appendix~~ and in Exhibits B and D ~~to this Appendix~~.

b) Except as otherwise provided in Section 1.12(a) ~~of this Appendix~~, for units with add-on mercury emission controls, the owner or operator must keep the following records on-site in the quality assurance/quality control plan required by Section 1 of Exhibit B ~~to this Appendix~~:

1) A list of operating parameters for the add-on emission controls, including parameters in Section 1.12 ~~of this Appendix~~, appropriate to the particular installation of add-on emission controls; and

2) The range of each operating parameter in the list that indicates the add-on emission controls are properly operating.

c) Excepted Monitoring for Mercury Low Mass Emission units under Section 1.15(b) ~~of this Appendix~~. For qualifying coal-fired units using the alternative low mass emission methodology under Section 1.15(b), the owner or operator must record the data elements ~~described~~ in Section 1.13(a)(7)(G), Section 1.13(a)(7)(H) or Section 1.13(a)(7)(J) ~~of this Appendix~~, as applicable, for each run of each mercury emission test and re-test required under Section 1.15(c)(1) or Section 1.15(d)(4)(C) ~~of this Appendix~~.

d) DAHS Verification. For each DAHS (formula) verification that is required for initial certification, recertification, or for certain diagnostic testing of a monitoring system, record the date and hour that the DAHS verification is successfully completed. (This requirement only applies to units that report monitoring plan data in accordance with Section 1.10(d) ~~of this Appendix~~.)

Section 1.14 General Provisions

a) Applicability. The owner or operator of a unit must comply with the requirements of this Appendix to the extent that compliance is required by this Part. For

purposes of this Appendix, the term "affected unit" means any coal-fired unit (as defined in 40 CFR 72.2 and incorporated by reference in Section 225.140) that is subject to this Part. The term "non-affected unit" means any unit that is not subject to this Part.~~, the~~ The term "permitting authority" means the Agency.

b) Compliance Dates. The owner or operator of an affected unit must meet the compliance deadlines established by Subpart B ~~of this Part~~.

c) Prohibitions.

1) No owner or operator of an affected unit or a non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~ will use any alternative monitoring system, alternative reference method, or any other alternative for the required continuous emission monitoring system without having obtained prior written approval in ~~accordance~~ compliance with subsection (f) ~~of this Section~~.

2) No owner or operator of an affected unit or a non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~ will operate the unit so as to discharge, or allow to be discharged, emissions of mercury to the atmosphere without accounting for such emissions in accordance with the applicable provisions of this Appendix.

3) No owner or operator of an affected unit or a non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~ will disrupt the continuous emission monitoring system, any portion of the system, or any other approved emission monitoring method, and thereby avoid monitoring and recording mercury mass emissions discharged into the atmosphere, except for periods of recertification or periods when calibration, quality assurance testing, or maintenance is performed in ~~accordance~~ compliance with the provisions of this Appendix applicable to monitoring systems under Section 1.15 ~~of this Appendix~~.

4) No owner or operator of an affected unit or a non-affected unit under Section 1.16(b)(2)(B) will retire or permanently discontinue use of the continuous emission monitoring system, any component of the system, or any other approved emission monitoring system under this Appendix, except under any one of the following circumstances:

A) During the period that the unit is covered by a retired unit exemption that is in effect under this Part; or

B) The owner or operator is monitoring mercury mass emissions from the affected unit with another certified monitoring system approved, in accordance with the provisions of Section 225.250 ~~of this Part~~; or

C) The owner or operator submits notification of the date of certification testing of a replacement monitoring system in ~~accordance~~ compliance with ~~Part~~ Section 225.240(d).

d) Quality Assurance and Quality Control Requirements. For units that use continuous emission monitoring systems to account for mercury mass emissions, the owner or operator must meet the applicable quality assurance and quality control requirements in Section 1.5 and Exhibit B ~~to this Appendix~~ for the flow monitoring systems, mercury concentration monitoring systems, moisture monitoring systems, and diluent monitors required under Section 1.15 ~~of this Appendix~~. Units using sorbent trap monitoring systems must meet the applicable quality assurance requirements in Section 1.3 ~~of this Appendix~~, Exhibit D ~~to this Appendix~~, and Sections 1.3 and 2.3 of Exhibit B ~~to this Appendix~~.

e) Reporting Data Prior to Initial Certification. If, by the applicable compliance date under this Part, the owner or operator of an affected unit has not successfully completed all required certification tests for any monitoring systems, he or she must determine, record, and report data prior to initial certification in accordance with Section 225.239 ~~of this Part~~.

f) Petitions.

1) The owner or operator of an affected unit that is also subject to the Acid Rain Program may submit a petition to the Agency requesting an alternative to any requirement of Sections 1.14 through 1.18 ~~of this Appendix~~. Such a petition must meet the requirements of 40 CFR 75.66, incorporated by reference in Section 225.140, and any additional requirements established by Subpart B ~~of this Part~~. Use of an alternative to any requirement of Sections 1.14 through 1.18 ~~of this Appendix~~ is in ~~accordance~~ compliance with Sections 1.14 through 1.18 ~~of this Appendix~~ and with Subpart B ~~of this Part~~ only to the extent that the petition is approved in writing by the Agency.

2) Notwithstanding subsection (f)(1) ~~of this Section~~, petitions requesting an alternative to a requirement concerning any additional CEMS required solely to meet the common stack provisions of Section 1.16 ~~of this Appendix~~ must be submitted to the Agency and will be governed by ~~paragraph~~ subsection (f)(3) ~~of this Section~~. Such a petition must meet the requirements of 40 CFR 75.66, incorporated by reference in Section 225.140, and any additional requirements established by Subpart B ~~of this Part~~.

3) The owner or operator of an affected unit that is not subject to the Acid Rain Program may submit a petition to the Agency requesting an alternative to any requirement of Sections 1.14 through 1.18 ~~of this~~

~~Appendix~~. Such a petition must meet the requirements of 40 CFR 75.66, incorporated by reference in Section 225.140, and any additional requirements established by Subpart B ~~of this Part~~. Use of an alternative to any requirement of Sections 1.14 through 1.18 ~~of this Appendix~~ is in ~~accordance~~ compliance with Sections 1.14 through 1.18 ~~of this Appendix~~ only to the extent that it is approved in writing by the Agency.

Section 1.15 Monitoring of Mercury Mass Emissions and Heat Input at the Unit Level

The owner or operator of the affected coal-fired unit must:

a) Meet the general operating requirements in Section 1.2 ~~of this Appendix~~ for the following continuous emission monitors (except as provided in ~~accordance~~ compliance with subpart E of 40 CFR 75, incorporated by reference in Section 225.140):

1) A mercury concentration monitoring system (consisting of a mercury pollutant concentration monitor and an automated DAHS, which provides a permanent, continuous record of mercury emissions in units of micrograms per standard cubic meter (µg/scm)) or a sorbent trap monitoring system to measure the mass concentration of total vapor phase mercury in the flue gas, including the elemental and oxidized forms of mercury, in micrograms per standard cubic meter (µg/scm);

2) A flow monitoring system;

3) A continuous moisture monitoring system (if correction of mercury concentration for moisture is required), as described in 40 CFR 75.11(b), incorporated by reference in Section 225.140. Alternatively, the owner or operator may use the appropriate fuel-specific default moisture value ~~provided~~ in 40 CFR 75.11, incorporated by reference in Section 225.140, or a site-specific moisture value approved by petition under 40 CFR 75.66, incorporated by reference in Section 225.140; and

4) If heat input is required to be reported under this Part, the owner or operator must meet the general operating requirements for a flow monitoring system and an O_2 or CO_2 monitoring system to measure heat input rate.

b) For an affected unit that emits 464 ounces (29 lb) of mercury per year or less, use the following excepted monitoring methodology. To implement this methodology for a qualifying unit, the owner or operator must meet the general operating requirements in Section 1.2 ~~of this Appendix~~ for the continuous emission monitors described in subsections (a)(2) and (a)(4) ~~of this Section~~, and perform mercury emission testing for initial certification and on-going quality-assurance, ~~as described in~~under subsections (c) through (e) ~~of this Section~~.

c) To determine whether an affected unit is eligible to use the monitoring provisions in subsection (b) ~~of this Section~~:

1) The owner or operator must perform mercury emission testing within 18 months before the compliance date in Section 1.14(b) ~~of this Appendix~~ to determine the mercury concentration (i.e., total vapor phase mercury) in the effluent.

A) The testing must be performed using one of the mercury reference methods listed in Section 1.6(a)(5) ~~of this Appendix~~, and must consist of a minimum of 3 runs at the normal unit operating load, while combusting coal. The coal combusted during the testing must be representative of the coal that will be combusted at the start of the mercury mass emissions reduction program (preferably from the same sources of supply).

B) The minimum time per run must be 1 hour if Method 30A is used. If either Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference, ASTM D6784-02 (the Ontario Hydro method) (incorporated by reference under Section 225.140) or Method 30B is used, paired samples are required for each test run and the runs must be long enough to ensure that sufficient mercury is collected to analyze. When Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference, or the Ontario Hydro method is used, the test results must be based on the vapor phase mercury collected in the back-half of the sampling trains (i.e., the non-filterable impinger catches). For each Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference, Method 30B or Ontario Hydro method test run, the paired trains must meet the relative deviation (RD) requirement specified in Section 1.6(a)(5) ~~of this Appendix~~ or Method 30B, as applicable. If the RD specification is met, the results of the two samples must be averaged arithmetically.

C) If the unit is equipped with flue gas desulfurization or add-on mercury emission controls, the controls must be operating normally during the testing and, for the purpose of establishing proper operation of the controls, the owner or operator must record parametric data or SO_2 concentration data in accordance with Section 1.12(a) ~~of this Appendix~~.

D) If two or more of units of the same type qualify as a group of identical units in accordance with 40 CFR 75.19(c)(1)(iv)(B), incorporated by reference in Section 225.140, the owner or operator may test a subset of these units in lieu of testing each unit individually. If this option is selected, the number of units

required to be tested must be determined from Table LM-4 in 40 CFR 75.19, incorporated by reference in Section 225.140. For the purposes of the required retests under subsection (d)(4) ~~of this Section~~, it is strongly recommended that (to the extent practicable) the same subset of the units not be tested in two successive retests, and that every effort be made to ensure that each unit in the group of identical units is tested in a timely manner.

2) Equation 1.

A) Based on the results of the emission testing, Equation 1 ~~of this Section~~ must be used to provide a conservative estimate of the annual mercury mass emissions from the unit:

$$E = N \times K \times C_{Hg} \times Q_{\max} \qquad \text{(Eq 1)}$$

Where:

E = Estimated annual mercury mass emissions from the affected unit, (ounces/year).

K = Units conversion constant, 9.978 x 10^{-10} oz-scm/µg-scf.

N = Either 8,760 (the number of hours in a year) or the maximum number of operating hours per year (if less than 8,760) allowed by the unit's Federally-enforceable operating permit.

C_{Hg} = The highest mercury concentration (µg/scm) from any of the test runs or 0.50 µg/scm, whichever is greater.

$Q_{\max}$ = Maximum potential flow rate, determined according to Section 2.1.2.1 of Exhibit A ~~to this Appendix~~, (scfh).

B) Equation 1 ~~of this Section~~ assumes that the unit operates at its maximum potential flow rate, either year-round or for the maximum number of hours allowed by the operating permit (if unit operation is restricted to less than 8,760 hours per year). If the permit restricts the annual unit heat input but not the number of annual unit operating hours, the owner or operator may divide the allowable annual heat input (mmBtu) by the design rated heat input capacity of the unit (mmBtu/hr) to determine the value of "N" in Equation 1. Also, note that if the highest mercury concentration measured in any test run is less than 0.50 µg/scm, a default value of 0.50 μg/scm must be used in the calculations.

3) If the estimated annual mercury mass emissions from subsection (c)(2) ~~of this Section~~ are 464 ounces per year or less, then the unit is eligible to use

the monitoring provisions in paragraph (b) ~~of this Section~~, and continuous monitoring of the mercury concentration is not required (except as otherwise provided in subsections (e) and (f) ~~of this Section~~).

d) If the owner or operator of an eligible unit under subsection (c)(3) ~~of this Section~~ elects not to continuously monitor mercury concentration, then the following requirements must be met:

1) The results of the mercury emission testing performed under subsection (c) ~~of this Section~~ must be submitted as a certification application to the permitting authority, no later than 45 days after the testing is completed. The calculations demonstrating that the unit emits 464 ounces (or less) per year of mercury must also be provided, and the default mercury concentration that will be used for reporting under Section 1.18 ~~of this Appendix~~ must be specified in the hard copy portions of the monitoring plan for the unit. The methodology is considered to be provisionally certified as of the date and hour of completion of the mercury emission testing.

2) Following initial certification, the same default mercury concentration value that was used to estimate the unit's annual mercury mass emissions under subsection (c) ~~of this Section~~ must be reported for each unit operating hour, except as otherwise provided in subsection (d)(4)(D) or (d)(6) ~~of this Section~~. The default mercury concentration value must be updated as appropriate, according to subsection (d)(5) ~~of this Section~~.

3) The hourly mercury mass emissions must be calculated according to Section 4.1.3 in Exhibit C ~~to this Appendix~~.

4) The mercury emission testing described in subsection (c) ~~of this Section~~ must be repeated periodically, for the purposes of quality-assurance, as follows:

A) If the results of the certification testing under subsection (c) ~~of this Section~~ show that the unit emits:

i) 144 ounces (9 lb) of mercury per year or less, the first retest is required by the end of the fourth QA operating quarter (as defined in 40 CFR 72.2, incorporated by reference) following the calendar quarter of the certification testing; or

ii) more than 144 ounces of mercury per year, but less than or equal to 464 ounces per year, the first retest is required by the end of the second QA operating quarter (as defined in 40 CFR 72.2, incorporated by reference) following the calendar quarter of the certification testing;

~~C~~B) Thereafter, retesting will be required either semiannually or annually (i.e., by the end of the second or fourth QA operating quarter following the quarter of the previous test), depending on the results of the previous test. To determine whether the next retest is due within two or four QA operating quarters, substitute the highest mercury concentration from the current test or 0.50 μg/scm (whichever is greater) into the equation in subsection (c)(2) ~~of this Section~~. If the estimated annual mercury mass emissions exceeds 144 ounces, the next test is due within two QA operating quarters. If the estimated annual mercury mass emissions is 144 ounces or less, the next test is due within four QA operating quarters;~~.~~

~~D~~C) An additional retest is required when there is a change in the coal rank of the primary fuel (e.g., when the primary fuel is switched from bituminous coal to lignite). Use ASTM D388-99 (incorporated by reference under Section 225.140) to determine the coal rank. The four principal coal ranks are anthracitic, bituminous, subbituminous, and lignitic. The ranks of anthracite coal refuse (culm) and bituminous coal refuse (gob) must be anthracitic and bituminous, respectively. The retest must be performed within 720 unit operating hours of the change.

5) The default mercury concentration used for reporting under Section 1.18 ~~of this Appendix~~ must be updated after each required retest. This includes retests that are required prior to the compliance date in Section 1.14(b) ~~of this Appendix~~. The updated value must either be the highest mercury concentration measured in any of the test runs or 0.50 μg/scm, whichever is greater. The updated value must be applied beginning with the first unit operating hour in which mercury emissions data are required to be reported after completion of the retest, except as provided in subsection (d)(4)(D) ~~of this Section~~, where the need to retest is triggered by a change in the coal rank of the primary fuel. In that case, apply the updated default mercury concentration beginning with the first unit operating hour in which mercury emissions are required to be reported after the date and hour of the fuel switch.

6) If the unit is equipped with a flue gas desulfurization system or add-on mercury controls, the owner or operator must record the information required under Section 1.12 ~~of this Appendix~~ for each unit operating hour, to document proper operation of the emission controls.

e) For units with common stack and multiple stack exhaust configurations, the use of the monitoring methodology described in subsections (b) through (d) ~~of this Section~~ is restricted as follows:

1) The methodology may not be used for reporting mercury mass emissions at a common stack unless all of the units using the common stack are affected units and the units' combined potential to emit does not exceed 464 ounces of mercury per year times the number of units sharing the stack, in ~~accordance~~ compliance with subsections (c) and (d) ~~of this Section~~. If the test results demonstrate that the units sharing the common stack qualify as low mass emitters, the default mercury concentration used for reporting mercury mass emissions at the common stack must either be the highest value obtained in any test run or 0.50 μg/scm, whichever is greater.

A) The initial emission testing required under subsection (c) ~~of this Section~~ may be performed at the common stack if the following conditions are met. Otherwise, testing of the individual units (or a subset of the units, if identical, as described in subsection (c)(1)(D) ~~of this Section~~) is required:

i) The testing must be done at a combined load corresponding to the designated normal load level (low, mid, or high) for the units sharing the common stack, in ~~accordance~~ compliance with Section 6.5.2.1 of Exhibit A ~~to this Appendix~~;

ii) All of the units that share the stack must be operating in a normal, stable manner and at typical load levels during the emission testing. The coal combusted in each unit during the testing must be representative of the coal that will be combusted in that unit at the start of the mercury mass emission reduction program (preferably from the same sources of supply);

iii) If flue gas desulfurization and/or add-on mercury emission controls are used to reduce the level of the emissions exiting from the common stack, these emission controls must be operating normally during the emission testing and, for the purpose of establishing proper operation of the controls, the owner or operator must record parametric data or SO_2 concentration data in accordance with Section 1.12(a) ~~of this Appendix~~;

iv) When calculating E, the estimated maximum potential annual mercury mass emissions from the stack, substitute the maximum potential flow rate through the common stack (as defined in the monitoring plan) and the highest concentration from any test run (or 0.50 μg/scm, if greater)

into Equation 1;

v) The calculated value of E must be divided by the number of units sharing the stack. If the result, when rounded to the nearest ounce, does not exceed 464 ounces, the units qualify to use the low mass emission methodology; and

vi) If the units qualify to use the methodology, the default mercury concentration used for reporting at the common stack must be the highest value obtained in any test run or 0.50 μg/scm, whichever is greater.

B) The retests required under subsection (d)(4) ~~of this Section~~ may also be done at the common stack. If this testing option is chosen, the testing must be done at a combined load corresponding to the designated normal load level (low, mid, or high) for the units sharing the common stack, in ~~accordance~~ compliance with Section 6.5.2.1 of Exhibit A ~~to this Appendix~~. Provided that the required load level is attained and that all of the units sharing the stack are fed from the same on-site coal supply during normal operation, it is not necessary for all of the units sharing the stack to be in operation during a retest. However, if two or more of the units that share the stack are fed from different on-site coal supplies (e.g., one unit burns low-sulfur coal for compliance and the other combusts higher-sulfur coal), then either:

i) Perform the retest with all units in normal operation; or

ii) If this is not possible, due to circumstances beyond the control of the owner or operator (e.g., a forced unit outage), perform the retest with the available units operating and assess the test results as follows. Use the mercury concentration obtained in the retest for reporting purposes under this Part if the concentration is greater than or equal to the value obtained in the most recent test. If the retested value is lower than the mercury concentration from the previous test, continue using the higher value from the previous test for reporting purposes and use that same higher mercury concentration value in Equation 1 to determine the due date for the next retest, as described in subsection (e)(1)(C) ~~of this Section~~.

C) If testing is done at the common stack, the due date for the next scheduled retest must be determined by substituting the maximum potential flow rate for the common stack (as defined in the monitoring plan) and the highest mercury concentration from any

test run (or 0.50 μg/scm, if greater) into Equation 1 and:

i) If the value of E obtained from Equation 1, rounded to the nearest ounce, is greater than 144 times the number of units sharing the common stack, but less than or equal to 464 times the number of units sharing the stack, the next retest is due in two QA operating quarters; or

ii) If the value of E obtained from Equation 1, rounded to the nearest ounce, is less than or equal to 144 times the number of units sharing the common stack, the next retest is due in four QA operating quarters.

2) For units with multiple stack or duct configurations, mercury emission testing must be performed separately on each stack or duct, and the sum of the estimated annual mercury mass emissions from the stacks or ducts must not exceed 464 ounces of mercury per year. For reporting purposes, the default mercury concentration used for each stack or duct must either be the highest value obtained in any test run for that stack or 0.50 μg/scm, whichever is greater.

3) For units with a main stack and bypass stack configuration, mercury emission testing must be performed only on the main stack. For reporting purposes, the default mercury concentration used for the main stack must either be the highest value obtained in any test run for that stack or 0.50 μg/scm, whichever is greater. Whenever the main stack is bypassed, the maximum potential mercury concentration, as defined in Section 2.1.3 of Exhibit A ~~to this Appendix~~, must be reported.

f) At the end of each calendar year, if the cumulative annual mercury mass emissions from an affected unit have exceeded 464 ounces, then the owner must install, certify, operate, and maintain a mercury concentration monitoring system or a sorbent trap monitoring system no later than 180 days after the end of the calendar year in which the annual mercury mass emissions exceeded 464 ounces. For common stack and multiple stack configurations, installation and certification of a mercury concentration or sorbent trap monitoring system on each stack (except for bypass stacks) is likewise required within 180 days after the end of the calendar year, if:

1) The annual mercury mass emissions at the common stack have exceeded 464 ounces times the number of affected units using the common stack; or

2) The sum of the annual mercury mass emissions from all of the multiple stacks or ducts has exceeded 464 ounces; or

3) The sum of the annual mercury mass emissions from the main and bypass

stacks has exceeded 464 ounces.

g) For an affected unit that is using a mercury concentration CEMS or a sorbent trap system under Section 1.15(a) ~~of this Appendix~~ to continuously monitor the mercury mass emissions, the owner or operator may switch to the methodology in Section 1.15(b) ~~of this Appendix~~, provided that the applicable conditions in subsections (c) through (f) ~~of this Section~~ are met.

Section 1.16 Monitoring of Mercury Mass Emissions and Heat Input at Common and Multiple Stacks

a) Unit Utilizing Common Stack with Other Affected Units. When an affected unit utilizes a common stack with one or more affected units, but no non-affected units, the owner or operator must either:

1) Install, certify, operate, and maintain the monitoring systems described in Section 1.15(a) ~~of this Appendix~~ at the common stack, record the combined mercury mass emissions for the units exhausting to the common stack. Alternatively, if, in ~~accordance~~ compliance with Section 1.15(e) ~~of this Appendix~~, each of the units using the common stack is demonstrated to emit less than 464 ounces of mercury per year, the owner or operator may install, certify, operate, and maintain the monitoring systems and perform the mercury emission testing described under Section 1.15(b) ~~of this Appendix~~. If reporting of the unit heat input rate is required, determine the hourly unit heat input rates either by:

A) Apportioning the common stack heat input rate to the individual units according to the procedures in 40 CFR 75.16(e)(3), incorporated by reference in Section 225.140; or

B) Installing, certifying, operating, and maintaining a flow monitoring system and diluent monitor in the duct to the common stack from each unit; or

2) Install, certify, operate, and maintain the monitoring systems and (if applicable) perform the mercury emission testing described in Section 1.15(a) or Section 1.15(b) ~~of this Appendix~~ in the duct to the common stack from each unit.

b) Unit utilizing Common Stack with Nonaffected Unit. When one or more affected units utilizes a common stack with one or more nonaffected units, the owner or operator must either:

1) Install, certify, operate, and maintain:

A) the monitoring systems and (if applicable) perform the mercury

emission testing described in Section 1.15(a) or Section 1.15(b) ~~of this Appendix~~ in the duct to the common stack from each affected unit; or

B) the monitoring systems described in Section 1.15(a) ~~of this Appendix~~ in the common stack and:

i) Install, certify, operate, and maintain the monitoring systems and (if applicable) perform the mercury emission testing described in Section 1.15(a) or (b) ~~of this Appendix~~ in the duct to the common stack from each non-affected unit. The owner or operator must submit a petition to the Agency to allow a method of calculating and reporting the mercury mass emissions from the affected units as the difference between mercury mass emissions measured in the common stack and mercury mass emissions measured in the ducts of the non-affected units, not to be reported as an hourly value less than zero. The Agency may approve such a method whenever the owner or operator demonstrates, to the satisfaction of the Agency, that the method ensures that the mercury mass emissions from the affected units are not underestimated; or

ii) Count the combined emissions measured at the common stack as the mercury mass emissions for the affected units, for recordkeeping and compliance purposes, in ~~accordance~~ compliance with subsection (a) ~~of this Section~~; or

iii) Submit a petition to the Agency to allow use of a method for apportioning mercury mass emissions measured in the common stack to each of the units using the common stack and for reporting the mercury mass emissions. The Agency may approve such a method whenever the owner or operator demonstrates, to the satisfaction of the Agency, that the method ensures that the mercury mass emissions from the affected units are not underestimated.

2) If the monitoring option in subsection (b)(1)(B) ~~of this Section~~ is selected, and if heat input is required to be reported under this Part, the owner or operator must either:

A) Apportion the common stack heat input rate to the individual units according to the procedures in 40 CFR 75.16(e)(3), incorporated by reference in Section 225.140; or

B) Install a flow monitoring system and a diluent gas (O_2 or CO_2)

monitoring system in the duct leading from each affected unit to the common stack, and measure the heat input rate in each duct, according to Section 2.2 of Exhibit C ~~to this Appendix~~.

c) Unit With a Main Stack and a Bypass Stack. Whenever any portion of the flue gases from an affected unit can be routed through a bypass stack to avoid the mercury monitoring systems installed on the main stack, the owner and operator must either:

1) Install, certify, operate, and maintain the monitoring systems described in Section 1.15(a) ~~of this Appendix~~ on both the main stack and the bypass stack and calculate mercury mass emissions for the unit as the sum of the mercury mass emissions measured at the two stacks;

2) Install, certify, operate, and maintain the monitoring systems described in Section 1.15(a) ~~of this Appendix~~ at the main stack and measure mercury mass emissions at the bypass stack using the appropriate reference methods in Section 1.6(b) ~~of this Appendix~~. Calculate mercury mass emissions for the unit as the sum of the emissions recorded by the installed monitoring systems on the main stack and the emissions measured by the reference method monitoring systems;

3) Install, certify, operate, and maintain the monitoring systems and (if applicable) perform the mercury emission testing described in Section 1.15(a) or (b) ~~of this Appendix~~ only on the main stack. If this option is chosen, it is not necessary to designate the exhaust configuration as a multiple stack configuration in the monitoring plan required under Section 1.10 ~~of this Appendix~~, since only the main stack is monitored; or

4) If the monitoring option in subsection (c)(1) or (c)(2) ~~of this Section~~ is selected, and if heat input is required to be reported under this Part, the owner or operator must:

A) Use the installed flow and diluent monitors to determine the hourly heat input rate at each stack (mmBtu/hr), according to Section 2.2 of Exhibit C ~~to this Appendix~~; and

B) Calculate the hourly heat input at each stack (in mmBtu) by multiplying the measured stack heat input rate by the corresponding stack operating time; and

C) Determine the hourly unit heat input by summing the hourly stack heat input values.

d) Unit With Multiple Stack or Duct Configuration. When the flue gases from an affected unit discharge to the atmosphere through more than one stack, or when

the flue gases from an affected unit utilize two or more ducts feeding into a single stack and the owner or operator chooses to monitor in the ducts rather than in the stack, the owner or operator must:

1) Install, certify, operate, and maintain the monitoring systems and (if applicable) perform the mercury emission testing described in Section 1.15(a) or (b) ~~of this Appendix~~ in each of the multiple stacks and determine mercury mass emissions from the affected unit as the sum of the mercury mass emissions recorded for each stack. If another unit also exhausts flue gases into one of the monitored stacks, the owner or operator must comply with the applicable requirements of subsections (a) and (b) ~~of this Section~~, in order to properly determine the mercury mass emissions from the units using that stack;

2) Install, certify, operate, and maintain the monitoring systems and (if applicable) perform the mercury emission testing described in Section 1.15(a) or Section 1.15(b) ~~of this Appendix~~ in each of the ducts that feed into the stack, and determine mercury mass emissions from the affected unit using the sum of the mercury mass emissions measured at each duct, except that where another unit also exhausts flue gases to one or more of the stacks, the owner or operator must also comply with the applicable requirements of paragraphs (a) and (b) ~~of this Section~~ to determine and record mercury mass emissions from the units using that stack; or

3) If the monitoring option in subsection (d)(1) or (d)(2) ~~of this Part~~ is selected, and if heat input is required to be reported under this Part, the owner or operator must:

A) Use the installed flow and diluent monitors to determine the hourly heat input rate at each stack or duct (mmBtu/hr), according to Section 2.2 of Exhibit C ~~to this Appendix~~; and

B) Calculate the hourly heat input at each stack or duct (in mmBtu) by multiplying the measured stack (or duct) heat input rate by the corresponding stack (or duct) operating time; and

C) Determine the hourly unit heat input by summing the hourly stack (or duct) heat input values.

Section 1.17 Calculation of Mercury Mass Emissions and Heat Input Rate

The owner or operator must calculate mercury mass emissions and heat input rate in ~~accordance~~

compliance with the procedures in Sections 4.1 through 4.3 of Exhibit F ~~to this Appendix~~.

Section 1.18 Recordkeeping and Reporting

a) General Recordkeeping Provisions. The owner or operator of any affected unit must maintain for each affected unit and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~ a file of all measurements, data, reports, and other information required by this part at the source in a form suitable for inspection for at least 5 years from the date of each record. Except for the certification data required in Section 1.11(a)(4) ~~of this Appendix~~ and the initial submission of the monitoring plan required in Section 1.11(a)(5) ~~of this Appendix~~, the data must be collected beginning with the earlier of the date of provisional certification or the compliance deadline in Section 1.14(b) ~~of this Appendix~~. The certification data required in Section 1.11(a)(4) ~~of this Appendix~~ must be collected beginning with the date of the first certification test performed. The file must contain the following information:

1) The information required in Sections 1.11(a)(2), (a)(4), (a)(5), (a)(6), (b), (c) (if applicable), (d), and (e) or (f) ~~of this Appendix~~ (as applicable);

2) The information required in Section 1.12 ~~of this Appendix~~, for units with flue gas desulfurization systems or add-on mercury emission controls;

3) For affected units using mercury CEMS or sorbent trap monitoring systems, for each hour when the unit is operating, record the mercury mass emissions, calculated in ~~accordance~~ compliance with Section 4 of Exhibit C ~~to this Appendix~~;

4) Heat input and mercury methodologies for the hour; and

5) Formulas from the monitoring plan for total mercury mass emissions and heat input rate (if applicable)

b) Certification, Quality Assurance, and Quality Control Record Provisions. The owner or operator of any affected unit must record the applicable information in Section 1.13 ~~of this Appendix~~ for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~.

c) Monitoring Plan Recordkeeping Provisions.

1) General Provisions. The owner or operator of an affected unit must prepare and maintain a monitoring plan for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~. The monitoring plan must contain sufficient information on the continuous monitoring systems and the use

of data derived from these systems to demonstrate that all the unit's mercury emissions are monitored and reported.

2) Updates. Whenever the owner or operator makes a replacement, modification, or change in a certified continuous monitoring system or alternative monitoring system under 40 CFR 75, subpart E, incorporated by reference in Section 225.140, including a change in the automated data acquisition and handling system or in the flue gas handling system, that affects information reported in the monitoring plan (e.g., a change to a serial number for a component of a monitoring system), then the owner or operator must update the monitoring plan.

3) Contents of the Monitoring Plan. Each monitoring plan must contain the information in Section 1.10(c)(1) ~~of this Appendix~~ in electronic format and the information in Section 1.10(c)(1) in hardcopy format.

d) General Reporting Provisions.

1) The owner or operator of an affected unit must comply with all reporting requirements in this Section and with any additional requirements ~~set forth~~ in 35 Ill. Adm. Code Part 225.

2) The owner or operator of an affected unit must submit the following for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~:

A) Monitoring plans in accordance with subsection (e) ~~of this Section~~; and

B) Quarterly reports in accordance with subsection (f) ~~of this Section~~.

3) Other Petitions and Communications. The owner or operator of an affected unit must submit petitions, correspondence, application forms, and petition-related test results in ~~accordance~~ compliance with the ~~provisions in~~ Section 1.14(f) ~~of this Appendix~~.

4) Quality Assurance RATA Reports. If requested by the Agency, the owner or operator of an affected unit must submit the quality assurance RATA report for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~ by the later of 45 days after completing a quality assurance RATA according to Section 2.3 of Exhibit B ~~to this Appendix~~ or 15 days after receiving the request. The owner or operator must report the hardcopy information required by Section 1.13(a)(9) ~~of this Appendix~~ to the Agency.

5) Notifications. The owner or operator of an affected unit must submit written notice to the Agency according to the provisions in 40 CFR 75.61, incorporated by reference in Section 225.140, for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~.

e) Monitoring Plan Reporting.

The owner or operator of an affected unit must submit all of the hardcopy information required under Section 1.10 ~~of this Appendix~~, for each affected unit or group of units monitored at a common stack and each non-affected unit under Section 1.16(b)(2)(B) ~~of this Appendix~~, to the Agency prior to initial certification. Thereafter, the owner or operator must submit hardcopy information only if that portion of the monitoring plan is revised. The owner or operator must submit the required hardcopy information as follows: no later than 21 days prior to the commencement of initial certification testing; with any certification or recertification application, if a hardcopy monitoring plan change is associated with the recertification event; and within 30 days of any other event with which a hardcopy monitoring plan change is associated, ~~pursuant to~~under Section 1.10(b) ~~of this Appendix~~.

f) Quarterly Reports. EGUs using CEMS or excepted monitoring systems must submit quarterly reports ~~pursuant to the requirements in~~under Section 225.290(b).

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.APPENDIX B Continuous Emission Monitoring System for Mercury

Section 225 EXHIBIT A --Specifications and Test Procedures

1. Installation and Measurement Location

1.1 Gas and Mercury Monitors

Following the procedures in Section 8.1.1 of Performance Specification 2 in appendix B to 40 CFR 60, incorporated by reference in Section 225.140, install the pollutant concentration monitor or monitoring system at a location where the pollutant concentration and emission rate measurements are directly representative of the total emissions from the affected unit. Select a representative measurement point or path for the monitor probes (or for the path from the transmitter to the receiver) such that the CO_2 or O_2, concentration monitoring system, mercury concentration monitoring system, or sorbent trap monitoring system will pass the relative accuracy test (see Section 6 of this Exhibit).

It is recommended that monitor measurements be made at locations where the exhaust gas temperature is above the dew-point temperature. If the cause of failure to meet the relative accuracy tests is determined to be the measurement location, relocate the monitor probes.

1.1.1 Point Monitors

Locate the measurement point (1) within the centroidal area of the stack or duct cross-section, or (2) no less than 1.0 meter from the stack or duct wall.

1.2 Flow Monitors

Install the flow monitor in a location that provides representative volumetric flow over all operating conditions. Such a location is one that provides an average velocity of the flue gas flow over the stack or duct cross section and is representative of the pollutant concentration monitor location. Where the moisture content of the flue gas affects volumetric flow measurements, use the procedures in both Reference Methods 1 and 4 of appendix A to 40 CFR 60, incorporated by reference in Section 225.140, to establish a proper location for the flow monitor. The Illinois EPA recommends (but does not require) performing a flow profile study following the procedures in 40 CFR 60, appendix A, Method 1, Sections 11.5 or 11.4, incorporated by reference in Section 225.140, for each of the three operating or load levels indicated in Section 6.5.2.1 ~~of this Exhibit~~ to determine the acceptability of the potential flow monitor location and to determine the number and location of flow sampling points required to obtain a representative flow value. The procedure in 40 CFR 60, appendix A, Test Method 1, Section 11.5, incorporated by reference in Section 225.140, may be used even if the flow measurement location is greater than or equal to 2 equivalent stack or duct diameters downstream or greater than or equal to 1/2 duct diameter upstream from a flow disturbance. If a flow profile study shows that cyclonic (or swirling) or stratified flow conditions exist at the potential flow monitor location that are likely to prevent the monitor from meeting the performance specifications of this part, then the Agency recommends either (1) selecting another location where there is no cyclonic (or swirling) or stratified flow condition, or (2) eliminating the cyclonic (or swirling) or stratified flow condition by straightening the flow, e.g., by installing straightening vanes. The Agency also recommends selecting flow monitor locations to minimize the effects of condensation, coating, erosion, or other conditions that could adversely affect flow monitor performance.

1.2.1 Acceptability of Monitor Location

The installation of a flow monitor is acceptable if either (1) the location satisfies the minimum siting criteria of Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140 (i.e., the location is greater than or equal to eight stack or duct diameters downstream and two diameters upstream from a flow disturbance; or, if necessary, two stack or duct diameters downstream and one-half stack or duct diameter upstream from a flow disturbance), or (2) the results of a flow profile study, if performed, are acceptable (i.e., there are no cyclonic (or swirling) or stratified flow conditions), and the flow monitor also satisfies the performance specifications of this part. If the flow monitor is installed in a location that does not satisfy these physical criteria, but nevertheless the monitor achieves the performance specifications of this part, then the location is acceptable, notwithstanding the requirements of this Section.

1.2.2 Alternative Monitoring Location

Whenever the owner or operator successfully demonstrates that modifications to the exhaust duct or stack (such as installation of straightening vanes, modifications of ductwork, and the like) are necessary for the flow monitor to meet the performance specifications, the Agency may approve an interim alternative flow monitoring methodology and an extension to the required certification date for the flow monitor.

Where no location exists that satisfies the physical siting criteria in Section 1.2.1, where the results of flow profile studies performed at two or more alternative flow monitor locations are unacceptable, or where installation of a flow monitor in either the stack or the ducts is demonstrated to be technically infeasible, the owner or operator may petition the Agency for an alternative method for monitoring flow.

2. Equipment Specifications

2.1 Instrument Span and Range

In implementing Sections 2.1.1 through 2.1.2 ~~of this Exhibit~~, set the measurement range for each parameter (CO_2, O_2, or flow rate) high enough to prevent full-scale exceedances from occurring, yet low enough to ensure good measurement accuracy and to maintain a high signal-to-noise ratio. To meet these objectives, select the range such that the majority of the readings obtained during typical unit operation are kept, to the extent practicable, between 20.0 and 80.0 percent of the full-scale range of the instrument. These guidelines do not apply to mercury monitoring systems.

2.1.1 CO_2 and O_2 Monitors

For an O_2 monitor (including O_2 monitors used to measure CO_2 emissions or percentage moisture), select a span value between 15.0 and 25.0 percent O_2. For a CO_2 monitor installed on a boiler, select a span value between 14.0 and 20.0 percent CO_2. For a CO_2 monitor installed on a combustion turbine, an alternative span value between 6.0 and 14.0 percent CO_2 may be used. An alternative CO_2 span value below 6.0 percent may be used if an appropriate technical justification is included in the hardcopy monitoring plan. An alternative O_2 span value below 15.0 percent O_2 may be used if an appropriate technical justification is included in the monitoring plan (e.g., O_2 concentrations above a certain level create an unsafe operating condition). Select the full-scale range of the instrument to be consistent with Section 2.1 ~~of this Exhibit~~ and to be greater than or equal to the span value. Select the calibration gas concentrations for the daily calibration error tests and linearity checks in ~~accordance~~ compliance with Section 5.1 ~~of this Exhibit~~, as percentages of the span value. For O_2 monitors with span values ≥21.0 percent O_2, purified instrument air containing 20.9 percent O_2 may be used as the high-level calibration material. If a dual-range or autoranging diluent analyzer is installed, the analyzer may be represented in the monitoring plan as a single component.

2.1.2 Flow Monitors

Select the full-scale range of the flow monitor so that it is consistent with Section 2.1 ~~of this Exhibit~~ and can accurately measure all potential volumetric flow rates at the flow monitor

installation site.

2.1.2.1 Maximum Potential Velocity and Flow Rate

For this purpose, determine the span value of the flow monitor using the following procedure. Calculate the maximum potential velocity (MPV) using Equation A-3a or A-3b or determine the MPV (wet basis) from velocity traverse testing using Reference Method 2 (or its allowable alternatives) in appendix A to 40 CFR 60, incorporated by reference in Section 225.140. If using test values, use the highest average velocity (determined from the Method 2 traverses) measured at or near the maximum unit operating load. Express the MPV in units of wet standard feet per minute (fpm). For the purpose of providing substitute data during periods of missing flow rate data in ~~accordance~~ compliance with 40 CFR 75.31 and 75.33 and as required elsewhere in this part, calculate the maximum potential stack gas flow rate (MPF) in units of standard cubic feet per hour (scfh), as the product of the MPV (in units of wet, standard fpm) times 60, times the cross-sectional area of the stack or duct (in ft^2) at the flow monitor location.

$$MPV = \left(\frac{F_d H_f}{A}\right)\left(\frac{20.9}{20.9 - \%O_{2d}}\right)\left(\frac{100}{100 - \%H_2O}\right) \quad \text{(Eq A-3a)}$$

or

$$MPV = \left(\frac{F_c H_f}{A}\right)\left(\frac{100}{\%CO_{2d}}\right)\left(\frac{100}{100 - \%H_2O}\right) \quad \text{(Eq A-3b)}$$

Where:

MPV = maximum potential velocity (fpm, standard wet basis).

F_d = dry-basis F factor (dscf/mmBtu) from Table 1, Section 3.3.5 of Appendix F , 40 CFR Part 75.

F_c = carbon-based F factor (scf CO_2/mmBtu) from Table 1, Section 3.3.5 of Appendix F , 40 CFR Part 75.

H_f = maximum heat input (mmBtu/minute) for all units, combined, exhausting to the stack or duct where the flow monitor is located.

A = inside cross sectional area (ft^2) of the flue at the flow monitor location.

$\%O_{2d}$ = maximum oxygen concentration, percent dry basis, under normal operating conditions.

$\%CO_{2d}$ = minimum carbon dioxide concentration, percent dry basis, under normal operating conditions.

$\%H_2O$ = maximum percent flue gas moisture content under normal operating

conditions.

2.1.2.2 Span Values and Range

Determine the span and range of the flow monitor as follows. Convert the MPV, as determined in Section 2.1.2.1 ~~of this Exhibit~~, to the same measurement units of flow rate that are used for daily calibration error tests (e.g., scfh, kscfh, kacfm, or differential pressure (inches of water)). Next, determine the "calibration span value" by multiplying the MPV (converted to equivalent daily calibration error units) by a factor no less than 1.00 and no greater than 1.25, and rounding up the result to at least two significant figures. For calibration span values in inches of water, retain at least two decimal places. Select appropriate reference signals for the daily calibration error tests as percentages of the calibration span value, as specified in Section 2.2.2.1 ~~of this Exhibit~~. Finally, calculate the "flow rate span value" (in scfh) as the product of the MPF, as determined in Section 2.1.2.1 ~~of this Exhibit~~, times the same factor (between 1.00 and 1.25) that was used to calculate the calibration span value. Round off the flow rate span value to the nearest 1000 scfh. Select the full-scale range of the flow monitor so that it is greater than or equal to the span value and is consistent with Section 2.1 ~~of this Exhibit~~. Include in the monitoring plan for the unit: calculations of the MPV, MPF, calibration span value, flow rate span value, and full-scale range (expressed both in scfh and, if different, in the measurement units of calibration).

2.1.2.3 Adjustment of Span and Range

For each affected unit or common stack, the owner or operator must make a periodic evaluation of the MPV, span, and range values for each flow rate monitor (at a minimum, an annual evaluation is required) and must make any necessary span and range adjustments with corresponding monitoring plan updates, as described in subsections (a) through (c) ~~of this Section 2.1.2.3~~. Span and range adjustments may be required, for example, as a result of changes in the fuel supply, changes in the stack or ductwork configuration, changes in the manner of operation of the unit, or installation or removal of emission controls. In implementing the provisions in subsections (a) and (b) ~~of this Section 2.1.2.3~~, note that flow rate data recorded during short-term, non-representative operating conditions (e.g., a trial burn of a different type of fuel) must be excluded from consideration. The owner or operator must keep the results of the most recent span and range evaluation on-site, in a format suitable for inspection. Make each required span or range adjustment no later than 45 days after the end of the quarter in which the need to adjust the span or range is identified.

a) If the fuel supply, stack or ductwork configuration, operating parameters, or other conditions change such that the maximum potential flow rate changes significantly, adjust the span and range to assure the continued accuracy of the flow monitor. A "significant" change in the MPV means that the guidelines of Section 2.1 ~~of this Exhibit~~ can no longer be met, as determined by either a periodic evaluation by the owner or operator or from the results of an audit by the Agency. The owner or operator should evaluate whether any planned changes in operation of the unit may affect the flow of the unit or stack and should plan any necessary span and range changes needed to account for these changes, so that

they are made in as timely a manner as practicable to coordinate with the operational changes. Calculate the adjusted calibration span and flow rate span values using the procedures in Section 2.1.2.2 ~~of this Exhibit~~.

b) Whenever the full-scale range is exceeded during a quarter, provided that the exceedance is not caused by a monitor out-of-control period, report 200.0 percent of the current full-scale range as the hourly flow rate for each hour of the full-scale exceedance. If the range is exceeded, make appropriate adjustments to the flow rate span, and range to prevent future full-scale exceedances. Calculate the new calibration span value by converting the new flow rate span value from units of scfh to units of daily calibration. A calibration error test must be performed and passed to validate data on the new range.

c) Whenever changes are made to the MPV, full-scale range, or span value of the flow monitor, as described in subsections (a) and (b) ~~of this Section~~, record and report (as applicable) the new full-scale range setting, calculations of the flow rate span value, calibration span value, and MPV in an updated monitoring plan for the unit. The monitoring plan update must be made in the quarter in which the changes become effective. Record and report the adjusted calibration span and reference values as parts of the records for the calibration error test required by Exhibit B ~~to Appendix B~~. Whenever the calibration span value is adjusted, use reference values for the calibration error test that meet the requirements of Section 2.2.2.1 ~~of this Exhibit~~, based on the most recent adjusted calibration span value. Perform a calibration error test according to Section 2.1.1 of Exhibit B ~~to Appendix B~~ whenever making a change to the flow monitor span or range, unless the range change also triggers a recertification under Section 1.4 of Appendix B.

2.1.3 Mercury Monitors

Determine the appropriate span and range values for each mercury pollutant concentration monitor, so that all expected mercury concentrations can be determined accurately.

2.1.3.1 Maximum Potential Concentration

The maximum potential concentration depends upon the type of coal combusted in the unit. For the initial MPC determination, there are three options:

1) Use one of the following default values: 9 µg/scm for bituminous coal; 10 µg/scm for sub-bituminous coal; 16 µg/scm for lignite, and 1 µg/scm for waste coal, i.e., anthracite culm or bituminous gob. If different coals are blended, use the highest MPC for any fuel in the blend; or

2) You may base the MPC on the results of site-specific emission testing using one of the mercury reference methods in Section 1.6 ~~of this Appendix~~, if the unit does not have add-on mercury emission controls or a flue gas desulfurization system, or if you test upstream of these control

devices. A minimum of 3 test runs are required at the normal operating load. Use the highest total mercury concentration obtained in any of the tests as the MPC; or

3) You may base the MPC on 720 or more hours of historical CEMS data or data from a sorbent trap monitoring system, if the unit does not have add-on mercury emission controls or a flue gas desulfurization system (or if the CEMS or sorbent trap system is located upstream of these control devices) and if the mercury CEMS or sorbent trap system has been tested for relative accuracy against one of the mercury reference methods in Section 1.6 ~~of this Appendix~~ and has met a relative accuracy specification of 20.0% or less.

2.1.3.2 Maximum Expected Concentration

For units with FGD systems that significantly reduce mercury emissions (including fluidized bed units that use limestone injection) and for units equipped with add-on mercury emission controls (e.g., carbon injection), determine the maximum expected mercury concentration (MEC) during normal, stable operation of the unit and emission controls. To calculate the MEC, substitute the MPC value from Section 2.1.3.1 ~~of this Exhibit~~ into Equation A-2 in Section 2.1.1.2 of appendix A to 40 CFR 75, incorporated by reference in Section 225.140. For units with add-on mercury emission controls, base the percent removal efficiency on design engineering calculations. For units with FGD systems, use the best available estimate of the mercury removal efficiency of the FGD system.

2.1.3.3 Span and Range Values

a) For each mercury monitor, determine a high span value, by rounding the MPC value from Section 2.1.3.1 ~~of this Exhibit~~ upward to the next highest multiple of 10 µg/scm.

b) For an affected unit equipped with an FGD system or a unit with add-on mercury emission controls, if the MEC value from Section 2.1.3.2 ~~of this Exhibit~~ is less than 20 percent of the high span value from subsection (a) ~~of this Section~~, and if the high span value is 20 µg/scm or greater, define a second, low span value of 10 µg/scm.

c) If only a high span value is required, set the full-scale range of the mercury analyzer to be greater than or equal to the span value.

d) If two span values are required, you may either:

1) Use two separate (high and low) measurement scales, setting the range of each scale to be greater than or equal to the high or low span value, as appropriate; or

2) Quality-assure two segments of a single measurement scale.

2.1.3.4 Adjustment of Span and Range

For each affected unit or common stack, the owner or operator must make a periodic evaluation of the MPC, MEC, span, and range values for each mercury monitor (at a minimum, an annual evaluation is required) and must make any necessary span and range adjustments, with corresponding monitoring plan updates. Span and range adjustments may be required, for example, as a result of changes in the fuel supply, changes in the manner of operation of the unit, or installation or removal of emission controls. In implementing the provisions in subsections (a) and (b) ~~of this Section~~, data recorded during short-term, non-representative process operating conditions (e.g., a trial burn of a different type of fuel) must be excluded from consideration. The owner or operator must keep the results of the most recent span and range evaluation on-site, in a format suitable for inspection. Make each required span or range adjustment no later than 45 days after the end of the quarter in which the need to adjust the span or range is identified, except that up to 90 days after the end of that quarter may be taken to implement a span adjustment if the calibration gas concentrations currently being used for calibration error tests, system integrity checks, and linearity checks are unsuitable for use with the new span value and new calibration materials must be ordered or additional Hg generator calibration points must be certified.

a) The guidelines of Section 2.1 ~~of this Exhibit~~ do not apply to mercury monitoring systems.

b) Whenever a full-scale range exceedance occurs during a quarter and is not caused by a monitor out-of-control period, proceed as follows:

1) For monitors with a single measurement scale, report that the system was out of range and invalid data was obtained until the readings come back on-scale and, if appropriate, make adjustments to the MPC, span, and range to prevent future full-scale exceedances; or

2) For units with two separate measurement scales, if the low range is exceeded, no further action is required, provided that the high range is available and is not out-of-control or out-of-service for any reason. However, if the high range is not able to provide quality assured data at the time of the low range exceedance or at any time during the continuation of the exceedance, report that the system was out-of-control until the readings return to the low range or until the high range is able to provide quality assured data (unless the reason that the high-scale range is not able to provide quality assured data is because the high-scale range has been exceeded; if the high-scale range is exceeded follow the procedures in subsection (b)(1) ~~of this Section~~).

c) Whenever changes are made to the MPC, MEC, full-scale range, or span value of the mercury monitor, record and report (as applicable) the new full-scale range setting, the new MPC or MEC and calculations of the adjusted span value in an

updated monitoring plan. The monitoring plan update must be made in the quarter in which the changes become effective. In addition, record and report the adjusted span as part of the records for the daily calibration error test and linearity check specified by Exhibit B ~~to Appendix B~~. Whenever the span value is adjusted, use calibration gas concentrations that meet the requirements of Section 5.1 ~~of this Exhibit~~, based on the adjusted span value. When a span adjustment is so significant that the calibration gas concentrations currently being used for calibration error tests, system integrity checks and linearity checks are unsuitable for use with the new span value, then a diagnostic linearity or 3-level system integrity check using the new calibration gas concentrations must be performed and passed. Use the data validation procedures in Section 1.4(b)(3) of Appendix B, beginning with the hour in which the span is changed.

2.2 Design for Quality Control Testing

2.2.1 Pollutant Concentration and CO_2 or O_2 Monitors

a) Design and equip each pollutant concentration and CO_2 or O_2 monitor with a calibration gas injection port that allows a check of the entire measurement system when calibration gases are introduced. For extractive and dilution type monitors, all monitoring components exposed to the sample gas, (e.g., sample lines, filters, scrubbers, conditioners, and as much of the probe as practicable) are included in the measurement system. For in-situ type monitors, the calibration must check against the injected gas for the performance of all active electronic and optical components (e.g. transmitter, receiver, analyzer).

b) Design and equip each pollutant concentration or CO_2 or O_2 monitor to allow daily determinations of calibration error (positive or negative) at the zero- and mid-or high-level concentrations specified in Section 5.2 ~~of this Exhibit~~.

2.2.2 Flow Monitors

Design all flow monitors to meet the applicable performance specifications.

2.2.2.1 Calibration Error Test

Design and equip each flow monitor to allow for a daily calibration error test consisting of at least two reference values: Zero to 20 percent of span or an equivalent reference value (e.g., pressure pulse or electronic signal) and 50 to 70 percent of span. Flow monitor response, both before and after any adjustment, must be capable of being recorded by the data acquisition and handling system. Design each flow monitor to allow a daily calibration error test of the entire flow monitoring system, from and including the probe tip (or equivalent) through and including the data acquisition and handling system, or the flow monitoring system from and including the transducer through and including the data acquisition and handling system.

2.2.2.2 Interference Check

a) Design and equip each flow monitor with a means to ensure that the moisture expected to occur at the monitoring location does not interfere with the proper functioning of the flow monitoring system. Design and equip each flow monitor with a means to detect, on at least a daily basis, pluggage of each sample line and sensing port, and malfunction of each resistance temperature detector (RTD), transceiver or equivalent.

b) Design and equip each differential pressure flow monitor to provide an automatic, periodic back purging (simultaneously on both sides of the probe) or equivalent method of sufficient force and frequency to keep the probe and lines sufficiently free of obstructions on at least a daily basis to prevent velocity sensing interference, and a means for detecting leaks in the system on at least a quarterly basis (manual check is acceptable).

c) Design and equip each thermal flow monitor with a means to ensure on at least a daily basis that the probe remains sufficiently clean to prevent velocity sensing interference.

d) Design and equip each ultrasonic flow monitor with a means to ensure on at least a daily basis that the transceivers remain sufficiently clean (e.g., back purging system) to prevent velocity sensing interference.

2.2.3 Mercury Monitors

Design and equip each mercury monitor to permit the introduction of known concentrations of elemental mercury and HgCl2 separately, at a point immediately preceding the sample extraction filtration system, such that the entire measurement system can be checked. If the mercury monitor does not have a converter, the HgCl2 injection capability is not required.

3. Performance Specifications

3.1 Calibration Error

a) The calibration error performance specifications in this Section apply only to 7-day calibration error tests under Sections 6.3.1 and 6.3.2 ~~of this Exhibit~~ and to the offline calibration demonstration described in Section 2.1.1.2 of Exhibit B ~~to Appendix B~~. The calibration error limits for daily operation of the continuous monitoring systems required under this part are found in Section 2.1.4(a) of Exhibit B ~~to Appendix B~~.

b) The calibration error of a mercury concentration monitor must not deviate from the reference value of either the zero or upscale calibration gas by more than 5.0 percent of the span value, as calculated using Equation A-5 ~~of this Exhibit~~. Alternatively, if the span value is 10 µg/scm, the calibration error test results are also acceptable if the absolute value of the difference between the monitor

response value and the reference value, R-A in Equation A-5 ~~of this Exhibit~~, is ≤ 1.0 µg/scm.

$$CE = \frac{|R - A|}{S} \times 100 \qquad \text{(Eq A-5)}$$

Where:

CE = Calibration error as a percentage of the span of the instrument.

R = Reference value of zero or upscale (high-level or mid-level, as applicable) calibration gas introduced into the monitoring system.

A = Actual monitoring system response to the calibration gas.

S = Span of the instrument, as specified in Section 2 ~~of this Exhibit~~.

3.2 Linearity and System Integrity Checks

For CO_2 or O_2 monitors (including O_2 monitors used to measure CO_2 emissions or percent moisture):

a) The error in linearity for each calibration gas concentration (low-, mid-, and high-levels) must not exceed or deviate from the reference value by more than 5.0 percent as calculated using Equation A-4 ~~of this Exhibit~~; or

b) The absolute value of the difference between the average of the monitor response values and the average of the reference values, R-A in Equation A-4 ~~of this Exhibit~~, must be less than or equal to 0.5 percent CO_2 or O_2, whichever is less restrictive. For the linearity check and the 3-level system integrity check of a mercury monitor, which are required, respectively, under Section 1.4(c)(1)(B) and (c)(1)(E) of Appendix B, the measurement error must not exceed 10.0 percent of the reference value at any of the three gas levels. To calculate the measurement error at each level, take the absolute value of the difference between the reference value and mean CEM response, divide the result by the reference value, and then multiply by 100. Alternatively, the results at any gas level are acceptable if the absolute value of the difference between the average monitor response and the average reference value, i.e., $|R - A|$ in Equation A-4 ~~of this Exhibit~~, does not exceed 0.8 µg/m^3. The principal and alternative performance specifications in this Section also apply to the single-level system integrity check described in Section 2.6 of Exhibit B to Appendix B.

$$ME = \frac{|R - A|}{R} \times 100 \qquad \text{(Eq A-4)}$$

Where:

ME = Percentage measurement error, for a linearity check or system integrity check, based upon the reference value.

R = Reference value of low-, mid-, or high-level calibration gas introduced into the monitoring system.

A = Average of the monitoring system responses.

3.3 Relative Accuracy

3.3.1 Relative Accuracy for CO_2 and O_2 Monitors

The relative accuracy for CO_2 and O_2 monitors must not exceed 10.0 percent. The relative accuracy test results are also acceptable if the difference between the mean value of the CO_2 or O_2 monitor measurements and the corresponding reference method measurement mean value, calculated using equation A-7 ~~of this Exhibit~~, does not exceed ±1.0 percent CO_2 or O_2.

$$\underline{d = \sum_{i=1}^{n} d_i} \qquad \text{(Eq A-7)}$$

Where:

n = Number of data points.

d_i = The difference between a reference method value and the corresponding continuous emission monitoring system value (RM_i–CEM_i) at a given point in time i.

3.3.1 Relative Accuracy for Flow Monitors

a) The relative accuracy of flow monitors must not exceed 10.0 percent at any load (or operating) level at which a RATA is performed (i.e., the low, mid, or high level, as defined in Section 6.5.2.1 ~~of this Exhibit~~).

b) For affected units where the average of the flow reference method measurements of gas velocity at a particular load (or operating) level of the relative accuracy test audit is less than or equal to 10.0 fps, the difference between the mean value of the flow monitor velocity measurements and the reference method mean value in fps at that level must not exceed ±- 2.0 fps, wherever the 10.0 percent relative accuracy specification is not achieved.

3.3.3 Relative Accuracy for Moisture Monitoring Systems

The relative accuracy of a moisture monitoring system must not exceed 10.0 percent. The relative accuracy test results are also acceptable if the difference between the mean value of the reference method measurements (in percent H_2O) and the corresponding mean value of the moisture monitoring system measurements (in percent H_2O), calculated using Equation A-7 ~~of this Exhibit~~ does not exceed ±- 1.5 percent H_2O.

3.3.4 Relative Accuracy for Mercury Monitoring Systems

The relative accuracy of a mercury concentration monitoring system or a sorbent trap monitoring system must not exceed 20.0 percent. Alternatively, for affected units where the average of the reference method measurements of mercury concentration during the relative accuracy test audit is less than 5.0 μg/scm, the test results are acceptable if the difference between the mean value of the monitor measurements and the reference method mean value does not exceed 1.0 μg/scm, in cases where the relative accuracy specification of 20.0 percent is not achieved.

3.4 Cycle Time

The cycle time for mercury concentration monitors, oxygen monitors used to determine percent moisture, and any other monitoring component of a continuous emission monitoring system that is required to perform a cycle time test must not exceed 15 minutes.

4. Data Acquisition and Handling Systems

Automated data acquisition and handling systems must read and record the full range of pollutant concentrations and volumetric flow from zero through span and provide a continuous, permanent record of all measurements and required information as a computer data file capable of being reproduced in a readable hard copy format. These systems also must have the capability of interpreting and converting the individual output signals from a flow monitor, a CO_2 monitor, an O_2 monitor, a moisture monitoring system, a mercury concentration monitoring system, and a sorbent trap monitoring system, to produce a continuous readout of pollutant emission rates or pollutant mass emissions (as applicable) in the appropriate units (e.g., lb/hr, lb/MMBtu, ounces/hr, tons/hr). These systems also must have the capability of interpreting and converting the individual output signals from a flow monitor to produce a continuous readout of pollutant mass emission rates in the units of the standard. Where CO_2 emissions are measured with a continuous emission monitoring system, the data acquisition and handling system must also produce a readout of CO_2 mass emissions in tons.

Data acquisition and handling systems must also compute and record monitor calibration error; flow rate data, or mercury emission rate data.

5. Calibration Gas

5.1 Reference Gases

For the purposes of Appendix B, calibration gases include the following:

5.1.1 Standard Reference Materials (SRM)

These calibration gases may be obtained from the National Institute of Standards and Technology (NIST) at the following address: Quince Orchard and Cloppers Road, Gaithersburg, MD 20899-0001.

5.1.2 SRM-Equivalent Compressed Gas Primary Reference Material (PRM)

Contact the Gas Metrology Team, Analytical Chemistry Division, Chemical Science and Technology Laboratory of NIST, at the address in Section 5.1.1, for a list of vendors and cylinder gases.

5.1.3 NIST Traceable Reference Materials

Contact the Gas Metrology Team, Analytical Chemistry Division, Chemical Science and Technology Laboratory of NIST, at the address in Section 5.1.1, for a list of vendors and cylinder gases that meet the definition for a NIST Traceable Reference Material (NTRM) provided in 40 CFR 72.2, incorporated by reference in Section 225.140.

5.1.4 EPA Protocol Gases

a) An EPA Protocol Gas is a calibration gas mixture prepared and analyzed according to Section 2 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards" September 1997, EPA-600/R-97/121 or such revised procedure as approved by the Administrator (EPA Traceability Protocol).

b) An EPA Protocol Gas must have a specialty gas producer-certified uncertainty (95-percent confidence interval) that must not be greater than 2.0 percent of the certified concentration (tag value) of the gas mixture. The uncertainty must be calculated using the statistical procedures (or equivalent statistical techniques) that are listed in Section 2.1.8 of the EPA Traceability Protocol.

c) A copy of EPA-600/R-97/121 is available from the National Technical Information Service, 5285 Port Royal Road, Springfield, VA, 703-605-6585 or http://www.ntis.gov, and from http://www.epa.gov/ttn/emc/news.html or http://www.epa.gov/appcdwww/tsb/index.html.

5.1.5 Research Gas Mixtures

Research gas mixtures must be vendor-certified to be within 2.0 percent of the concentration specified on the cylinder label (tag value), using the uncertainty calculation procedure in Section 2.1.8 of the "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards" September 1997, EPA-600/R-97/121. Inquiries about the RGM program should be directed to: National Institute of Standards and Technology, Analytical Chemistry Division, Chemical Science and Technology Laboratory, B-324 Chemistry, Gaithersburg, MD 20899.

5.1.6 Zero Air Material

Zero air material is defined in 40 CFR 72.2, incorporated by reference in Section 225.140.

5.1.7 NIST/EPA-Approved Certified Reference Materials

Existing certified reference materials (CRMs) that are still within their certification period may be used as calibration gas.

5.1.8 Gas Manufacturer's Intermediate Standards

Gas manufacturer's intermediate standards is defined in 40 CFR 72.2, incorporated by reference in Section 225.140.

5.1.9 Mercury Standards

For 7-day calibration error tests of mercury concentration monitors and for daily calibration error tests of mercury monitors, either NIST-traceable elemental mercury standards (as defined in Section 225.130) or a NIST-traceable source of oxidized mercury (as defined in Section 225.130) may be used. For linearity checks, NIST-traceable elemental mercury standards must be used. For 3- level and single-point system integrity checks under Section 1.4(c)(1)(E) of Appendix B, Sections 6.2(g) and 6.3.1 ~~of this Exhibit~~, and Sections 2.1.1, 2.2.1 and 2.6 of Exhibit B of Appendix B, a NIST-traceable source of oxidized mercury must be used. Alternatively, other NIST-traceable standards may be used for the required checks, subject to the approval of the Agency. Notwithstanding these requirements, mercury calibration standards that are not NIST-traceable may be used for the tests described in this Section until December 31, 2009. However, on and after January 1, 2010, only NIST-traceable calibration standards must be used for these tests.

5.2 Concentrations

Four concentration levels are required as follows.

5.2.1 Zero-level Concentration

0.0 to 20.0 percent of span, including span for high-scale or both low- and high-scale for Hg, CO_2 and O_2 monitors, as appropriate.

5.2.2 Low-level Concentration

20.0 to 30.0 percent of span, including span for high-scale or both low- and high-scale for Hg, CO_2 and O_2 monitors, as appropriate.

5.2.3 Mid-level Concentration

50.0 to 60.0 percent of span, including span for high-scale or both low- and high-scale for Hg, CO_2 and O_2 monitors, as appropriate.

5.2.4 High-level Concentration

80.0 to 100.0 percent of span, including span for high-scale or both low-and high-scale for Hg, CO_2 and O_2 monitors, as appropriate.

6. Certification Tests and Procedures

6.1 General Requirements

6.1.1 Pretest Preparation

Install the components of the continuous emission monitoring system (i.e., pollutant concentration monitors, CO_2 or O_2 monitor, and flow monitor) as specified in Sections 1, 2, and 3 ~~of this Exhibit~~, and prepare each system component and the combined system for operation in accordance with the manufacturer's written instructions. Operate the units during each period when measurements are made. Units may be tested on non-consecutive days. To the extent practicable, test the DAHS software prior to testing the monitoring hardware.

6.1.2 Requirements for Air Emission Testing Bodies

a) On and after January 1, 2009, any Air Emission Testing Body (AETB) conducting relative accuracy test audits of CEMS and sorbent trap monitoring systems under Part 225, Subpart B, must conform to the requirements of ASTM D7036-04 ~~pursuant to~~under 40 CFR 75, appendix A, section 6.1.2 (incorporated by reference in Section 225.140). This Section is not applicable to daily operation, daily calibration error checks, daily flow interference checks, quarterly linearity checks, or routine maintenance of CEMS.

b) The AETB must provide to the affected sources certification that the AETB operates in conformance with, and that data submitted to the Agency has been collected in ~~accordance~~ compliance with~~, the requirements of~~ ASTM D7036-04 ~~pursuant to~~under 40 CFR 75, appendix A, section 6.1.2 (incorporated by reference in Section 225.140). This certification may be provided in the form of:

1) A certificate of accreditation of relevant scope issued by a recognized, national accreditation body; or

2) A letter of certification signed by a member of the senior management staff of the AETB.

c) The AETB must either provide a Qualified Individual on-site to conduct or must oversee all relative accuracy testing carried out by the AETB as required in ASTM D7036-04 ~~pursuant to~~under 40 CFR 75, appendix A, section 6.1.2 (incorporated by reference under Section 225.140). The Qualified Individual must provide the affected sources with copies of the qualification credentials relevant to the scope of the testing conducted.

6.2 Linearity Check (General Procedures)

Check the linearity of each CO_2, Hg, and O_2 monitor while the unit, or group of units for a common stack, is combusting fuel at conditions of typical stack temperature and pressure; it is not necessary for the unit to be generating electricity during this test. For units with two measurement ranges (high and low) for a particular parameter, perform a linearity check on both the low scale and the high scale. For on-going quality assurance of the CEMS, perform linearity checks, using the procedures in this Section, on the ranges and at the frequency specified in Section 2.2.1 of Exhibit B to Appendix B. Challenge each monitor with calibration gas, as defined in Section 5.1 ~~of this Exhibit~~, at the low-, mid-, and high-range concentrations specified in Section 5.2 ~~of this Exhibit~~. Introduce the calibration gas at the gas injection port, as specified in Section 2.2.1 ~~of this Exhibit~~. Operate each monitor at its normal operating temperature and conditions. For extractive and dilution type monitors, pass the calibration gas through all filters, scrubbers, conditioners, and other monitor components used during normal sampling and through as much of the sampling probe as is practical. For in-situ type monitors, perform calibration checking all active electronic and optical components, including the transmitter, receiver, and analyzer. Challenge the monitor three times with each reference gas (see example data sheet in Figure 1). Do not use the same gas twice in succession. To the extent practicable, the duration of each linearity test, from the hour of the first injection to the hour of the last injection, must not exceed 24 unit operating hours. Record the monitor response from the data acquisition and handling system. For each concentration, use the average of the responses to determine the error in linearity using Equation A-4 ~~in this Exhibit~~. Linearity checks are acceptable for monitor or monitoring system certification, recertification, or quality assurance if none of the test results exceed the applicable performance specifications in Section 3.2 ~~of this Exhibit~~. The status of emission data from a CEMS prior to and during a linearity test period must be determined as follows:

a) For the initial certification of a CEMS, data from the monitoring system are considered invalid until all certification tests, including the linearity test, have been successfully completed, unless the conditional data validation procedures in Section 1.4(b)(3) of Appendix B are used. When the procedures in Section 1.4(b)(3) of Appendix B are followed, the words "initial certification" apply instead of "recertification" and complete all of the initial certification tests by January 1, 2009, rather than within the time periods specified in Section 1.4(b)(3)(D) of Appendix B for the individual tests.

b) For the routine quality assurance linearity checks required by Section 2.2.1 of Exhibit B to Appendix B, use the data validation procedures in Section 2.2.3 of Exhibit B to Appendix B.

c) When a linearity test is required as a diagnostic test or for recertification, use the data validation procedures in Section 1.4 (b)(3) of Appendix B.

d) For linearity tests of non-redundant backup monitoring systems, use the data validation procedures in Section 1.4(d)(2)(C) of Appendix B.

e) For linearity tests performed during a grace period and after the expiration of a

grace period, use the data validation procedures in Sections 2.2.3 and 2.2.4, respectively, of Exhibit B to Appendix B.

f) For all other linearity checks, use the data validation procedures in Section 2.2.3 of Exhibit B to Appendix B.

g) For mercury monitors, follow the guidelines in Section 2.2.3 ~~of this Exhibit~~ in addition to the applicable procedures in Section 6.2 when performing the system integrity checks described in Section 1.4(c)(1)(E) and in Sections 2.1.1, 2.2.1, and 2.6 of Exhibit B to Appendix B.

h) For mercury concentration monitors, if moisture and/or chlorine is added to the calibration gas during the required linearity checks or system integrity checks, the dilution effect of the moisture and/or chlorine addition on the calibration gas concentration must be accounted for in an appropriate manner.

6.3 7-Day Calibration Error Test

6.3.1 Gas Monitor 7-day Calibration Error Test

Measure the calibration error of each mercury concentration monitor and each CO_2 or O_2 monitor while the unit is combusting fuel (but not necessarily generating electricity) once each day for 7 consecutive operating days according to the following procedures. For mercury monitors, you may perform this test using either elemental mercury standards or a NIST-traceable source of oxidized mercury. Also for mercury monitors, if moisture and/or chlorine is added to the calibration gas, the dilution effect of the added moisture and/or chlorine on the calibration gas concentration must be accounted for in an appropriate manner. (In the event that unit outages occur after the commencement of the test, the 7 consecutive unit operating days need not be 7 consecutive calendar days.) Units using dual span monitors must perform the calibration error test on both high- and low-scales of the pollutant concentration monitor. The calibration error test procedures in this Section and in Section 6.3.2 ~~of this Exhibit~~ must also be used to perform the daily assessments and additional calibration error tests required under Sections 2.1.1 and 2.1.3 of Exhibit B to Appendix B. Do not make manual or automatic adjustments to the monitor settings until after taking measurements at both zero and high concentration levels for that day during the 7-day test. If automatic adjustments are made following both injections, conduct the calibration error test such that the magnitude of the adjustments can be determined and recorded. Record and report test results for each day using the unadjusted concentration measured in the calibration error test prior to making any manual or automatic adjustments (i.e., resetting the calibration). The calibration error tests should be approximately 24 hours apart, (unless the 7- day test is performed over non-consecutive days). Perform calibration error tests at both the zero-level concentration and high-level concentration, as specified in Section 5.2 ~~of this Exhibit~~. Alternatively, a mid-level concentration gas (50.0 to 60.0 percent of the span value) may be used in lieu of the high-level gas, provided that the mid-level gas is more representative of the actual stack gas concentrations. Use only calibration gas, as specified in Section 5.1 ~~of this Exhibit~~. Introduce the calibration gas at the gas injection port, as specified in Section 2.2.1 ~~of this Exhibit~~. Operate each monitor in its normal sampling mode.

For extractive and dilution type monitors, pass the calibration gas through all filters, scrubbers, conditioners, and other monitor components used during normal sampling and through as much of the sampling probe as is practical. For in-situ type monitors, perform calibration, checking all active electronic and optical components, including the transmitter, receiver, and analyzer. Challenge the pollutant concentration monitors and CO_2 or O_2 monitors once with each calibration gas. Record the monitor response from the data acquisition and handling system. Using Equation A-5 ~~of this Exhibit~~, determine the calibration error at each concentration once each day (at approximately 24-hour intervals) for 7 consecutive days according to the procedures given in this Section. The results of a 7-day calibration error test are acceptable for monitor or monitoring system certification, recertification or diagnostic testing if none of these daily calibration error test results exceed the applicable performance specifications in Section 3.1 ~~of this Exhibit~~. The status of emission data from a gas monitor prior to and during a 7-day calibration error test period must be determined as follows:

a) For initial certification, data from the monitor are considered invalid until all certification tests, including the 7-day calibration error test, have been successfully completed, unless the conditional data validation procedures in Section 1.4(b)(3) of Appendix B are used. When the procedures in Section 1.4(b)(3) ~~of this Appendix~~ are followed, the words "initial certification" apply instead of "recertification" and complete all of the initial certification tests by July 1, 2009, rather than within the time periods specified in Section 1.4(b)(3)(D) ~~of this Appendix~~ for the individual tests.

b) When a 7-day calibration error test is required as a diagnostic test or for recertification, use the data validation procedures in Section 1.4(b)(3) of Appendix B.

6.3.2 Flow Monitor 7-day Calibration Error Test

Flow monitors installed on peaking units (as defined in 40 CFR 72.2, incorporated by reference in Section 225.140) are exempted from the 7-day calibration error test requirements of this part. In all other cases, perform the 7-day calibration error test of a flow monitor, when required for certification, recertification, or diagnostic testing, according to the following procedures. Introduce the reference signal corresponding to the values specified in Section 2.2.2.1 ~~of this Exhibit~~ to the probe tip (or equivalent), or to the transducer. During the 7-day certification test period, conduct the calibration error test while the unit is operating once each unit operating day (as close to 24-hour intervals as practicable). In the event that unit outages occur after the commencement of the test, the 7 consecutive operating days need not be 7 consecutive calendar days. Record the flow monitor responses by means of the data acquisition and handling system. Calculate the calibration error using Equation A-6 ~~of this Exhibit~~. Do not perform any corrective maintenance, repair, or replacement upon the flow monitor during the 7-day test period other than that required in the quality assurance/quality control plan required by Exhibit B to Appendix B. Do not make adjustments between the zero and high reference level measurements on any day during the 7-day test. If the flow monitor operates within the calibration error performance specification (i.e., less than or equal to 3.0 percent error each day and requiring no corrective maintenance, repair, or replacement during the 7-day test period), the flow monitor passes the

calibration error test. Record all maintenance activities and the magnitude of any adjustments. Record output readings from the data acquisition and handling system before and after all adjustments. Record and report all calibration error test results using the unadjusted flow rate measured in the calibration error test prior to resetting the calibration. Record all adjustments made during the 7-day period at the time the adjustment is made, and report them in the certification or recertification application. The status of emissions data from a flow monitor prior to and during a 7-day calibration error test period must be determined as follows:

a) For initial certification, data from the monitor are considered invalid until all certification tests, including the 7-day calibration error test, have been successfully completed, unless the conditional data validation procedures in Section 1.4(b)(3) of Appendix B are used. When the procedures in Section 1.4(b)(3) of Appendix B are followed, the words "initial certification" apply instead of "recertification" and complete all of the initial certification tests by July 1, 2009, rather than within the time periods specified in Section 1.4(b)(3)(D) of Appendix B for the individual tests.

b) When a 7-day calibration error test is required as a diagnostic test or for recertification, use the data validation procedures in Section 1.4(b)(3).

$$CE = \frac{|R - A|}{S} \times 100 \qquad \text{(Eq A-6)}$$

Where:

CE = Calibration error as a percentage of span.

R = Low or high level reference value specified in Section 2.2.2.1 ~~of this Exhibit~~.

A = Actual flow monitor response to the reference value.

S = Flow monitor calibration span value as determined under Section 2.1.2.2 ~~of this Exhibit~~.

6.3.3

For gas or flow monitors installed on peaking units, the exemption from performing the 7-day calibration error test applies as long as the unit continues to meet the definition of a peaking unit in 40 CFR 72.2, incorporated by reference in Section 225.140. However, if at the end of a particular calendar year or ozone season, it is determined that peaking unit status has been lost, the owner or operator must perform a diagnostic 7-day calibration error test of each monitor installed on the unit, by no later than December 31 of the following calendar year.

6.4 Cycle Time Test

Perform cycle time tests for each pollutant concentration monitor and continuous emission monitoring system while the unit is operating, according to the following procedures. Use a zero-level and a high-level calibration gas (as defined in Section 5.2 ~~of this Exhibit~~) alternately.

For mercury monitors, the calibration gas used for this test may either be the elemental or oxidized form of mercury. To determine the downscale cycle time, measure the concentration of the flue gas emissions until the response stabilizes. Record the stable emissions value. Inject a zero-level concentration calibration gas into the probe tip (or injection port leading to the calibration cell, for in-situ systems with no probe). Record the time of the zero gas injection, using the data acquisition and handling system (DAHS). Next, allow the monitor to measure the concentration of the zero gas until the response stabilizes. Record the stable ending calibration gas reading. Determine the downscale cycle time as the time it takes for 95.0 percent of the step change to be achieved between the stable stack emissions value and the stable ending zero gas reading. Then repeat the procedure, starting with stable stack emissions and injecting the high-level gas, to determine the upscale cycle time, which is the time it takes for 95.0 percent of the step change to be achieved between the stable stack emissions value and the stable ending high-level gas reading. Use the following criteria to assess when a stable reading of stack emissions or calibration gas concentration has been attained. A stable value is equivalent to a reading with a change of less than 2.0 percent of the span value for 2 minutes, or a reading with a change of less than 6.0 percent from the measured average concentration over 6 minutes. Alternatively, the reading is considered stable if it changes by no more than 0.5 ppm, 0.5 $\mu g/m^3$ (for mercury) for two minutes. (Owners or operators of systems that do not record data in 1-minute or 3-minute intervals may petition the Agency for alternative stabilization criteria.) For monitors or monitoring systems that perform a series of operations (such as purge, sample, and analyze), time the injections of the calibration gases so they will produce the longest possible cycle time. Refer to Figures 6a and 6b ~~in this Exhibit~~ for example calculations of upscale and downscale cycle times. Report the slower of the two cycle times (upscale or downscale) as the cycle time for the analyzer. On and after July 1, 2009, record the cycle time for each component analyzer separately. For time-shared systems, perform the cycle time tests at each of the probe locations that will be polled within the same 15-minute period during monitoring system operations. To determine the cycle time for time-shared systems, at each monitoring location, report the sum of the cycle time observed at that monitoring location plus the sum of the time required for all purge cycles (as determined by the continuous emission monitoring system manufacturer) at each of the probe locations of the time-shared systems. For monitors with dual ranges, report the test results for each range separately. Cycle time test results are acceptable for monitor or monitoring system certification, recertification or diagnostic testing if none of the cycle times exceed 15 minutes. The status of emissions data from a monitor prior to and during a cycle time test period must be determined as follows:

a) For initial certification, data from the monitor are considered invalid until all certification tests, including the cycle time test, have been successfully completed, unless the conditional data validation procedures in Section 1.4(b)(3) of Appendix B are used. When the procedures in Section 1.4(b)(3) of Appendix B are followed, the words "initial certification" apply instead of "recertification" and complete all of the initial certification tests by July 1, 2009, rather than within the time periods specified in Section 1.4(b)(3)(D) of Appendix B for the individual tests.

b) When a cycle time test is required as a diagnostic test or for recertification, use the data validation procedures in Section 1.4(b)(3) of Appendix B.

6.5 Relative Accuracy (General Procedures)

Perform the required relative accuracy test audits (RATAs) as follows for each flow monitor, each O_2 or CO_2 diluent monitor used to calculate heat input, each mercury concentration monitoring system, each sorbent trap monitoring system, and each moisture monitoring system.

a) Except as otherwise provided in this subsection, perform each RATA while the unit (or units, if more than one unit exhausts into the flue) is combusting the fuel that is a normal primary or backup fuel for that unit (for some units, more than one type of fuel may be considered normal, e.g., a unit that combusts gas or oil on a seasonal basis). For units that co-fire fuels as the predominant mode of operation, perform the RATAs while co-firing. For mercury monitoring systems, perform the RATAs while the unit is combusting coal. When relative accuracy test audits are performed on CEMS installed on bypass stacks/ducts, use the fuel normally combusted by the unit (or units, if more than one unit exhausts into the flue) when emissions exhaust through the bypass stack/ducts.

b) Perform each RATA at the load (or operating) levels specified in Section 6.5.1 or 6.5.2 ~~of this Exhibit~~ or in Section 2.3.1.3 of Exhibit B to Appendix B, as applicable.

c) For monitoring systems with dual ranges, perform the relative accuracy test on the range normally used for measuring emissions. For units with add-on mercury controls that operate continuously rather than seasonally, or for units that need a dual range to record high concentration "spikes" during startup conditions, the low range is considered normal. However, for some dual span units (e.g., for units that use fuel switching or for which the emission controls are operated seasonally), provided that both monitor ranges are connected to a common probe and sample interface, either of the two measurement ranges may be considered normal; in such cases, perform the RATA on the range that is in use at the time of the scheduled test. If the low and high measurement ranges are connected to separate sample probes and interfaces, RATA testing on both ranges is required.

d) Record monitor or monitoring system output from the data acquisition and handling system.

e) Complete each single-load relative accuracy test audit within a period of 168 consecutive unit operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140 (or, for CEMS installed on common stacks or bypass stacks, 168 consecutive stack operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140). Notwithstanding this requirement, up to 336 consecutive unit or stack operating hours may be taken to complete the RATA of a mercury monitoring system, when ASTM 6784-02 (incorporated by reference in Section 225.140) or Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140, is used as the reference method. For

2-level and 3-level flow monitor RATAs, complete all of the RATAs at all levels, to the extent practicable, within a period of 168 consecutive unit (or stack) operating hours; however, if this is not possible, up to 720 consecutive unit (or stack) operating hours may be taken to complete a multiple-load flow RATA.

f) The status of emission data from the CEMS prior to and during the RATA test period must be determined as follows:

1) For the initial certification of a CEMS, data from the monitoring system are considered invalid until all certification tests, including the RATA, have been successfully completed, unless the conditional data validation procedures in Section 1.4(b)(3) of Appendix B are used. When the procedures in Section 1.4(b)(3) of Appendix B are followed, the words "initial certification" apply instead of "recertification", and complete all of the initial certification tests by January 1, 2009, rather than within the time periods specified in Section 1.4(b)(3)(D) of Appendix B for the individual tests.

2) For the routine quality assurance RATAs required by Section 2.3.1 of Exhibit B to Appendix B, use the data validation procedures in Section 2.3.2 of Exhibit B to Appendix B.

3) For recertification RATAs, use the data validation procedures in Section 1.4(b)(3).

4) For quality assurance RATAs of non-redundant backup monitoring systems, use the data validation procedures in Section 1.4(d)(2)(D) and (E) of Appendix B.

5) For RATAs performed during and after the expiration of a grace period, use the data validation procedures in Sections 2.3.2 and 2.3.3, respectively, of Exhibit B to Appendix B.

6) For all other RATAs, use the data validation procedures in Section 2.3.2 of Exhibit B to Appendix B.

g) For each flow monitor, each CO_2 or O_2 diluent monitor used to determine heat input, each moisture monitoring system, each mercury concentration monitoring system, and each sorbent trap monitoring system, calculate the relative accuracy, in accordance with Section 7.3 ~~of this Exhibit~~, as applicable.

6.5.1 Gas and Mercury Monitoring System RATAs (Special Considerations)

a) Perform the required relative accuracy test audits for each CO_2 or O_2 diluent monitor used to determine heat input, each mercury concentration monitoring system, and each sorbent trap monitoring system at the normal load level or

normal operating level for the unit (or combined units, if common stack), as defined in Section 6.5.2.1 ~~of this Exhibit~~. If two load levels or operating levels have been designated as normal, the RATAs may be done at either load level.

b) For the initial certification of a gas or mercury monitoring system and for recertifications in which, in addition to a RATA, one or more other tests are required (i.e., a linearity test, cycle time test, or 7-day calibration error test), the Agency recommends that the RATA not be commenced until the other required tests of the CEMS have been passed.

6.5.2 Flow Monitor RATAs (Special Considerations)

a) Except as otherwise provided in subsection (b) ~~of this Section~~, perform relative accuracy test audits for the initial certification of each flow monitor at three different exhaust gas velocities (low, mid, and high), corresponding to three different load levels within the range of operation, as defined in Section 6.5.2.1 ~~of this Exhibit~~. For a common stack/duct, the three different exhaust gas velocities may be obtained from frequently used unit/load or operating level combinations for the units exhausting to the common stack. Select the three exhaust gas velocities such that the audit points at adjacent load or operating levels (i.e., low and mid or mid and high), in megawatts (or in thousands of lb/hr of steam production or in ft/sec, as applicable), are separated by no less than 25.0 percent of the range of operation, as defined in Section 6.5.2.1 ~~of this Exhibit~~.

b) For flow monitors on bypass stacks/ducts and peaking units, the flow monitor relative accuracy test audits for initial certification and recertification must be single-load tests, performed at the normal load, as defined in Section 6.5.2.1(d) ~~of this Exhibit~~.

c) Flow monitor recertification RATAs must be done at three load levels, unless otherwise specified in subsection (b) ~~of this Section~~ or unless otherwise specified or approved by the Agency.

d) The semiannual and annual quality assurance flow monitor RATAs required under Exhibit B ~~to this Appendix~~ must be done at the load levels, specified in Section 2.3.1.3 of Exhibit B to Appendix B.

6.5.2.1 Range of Operation and Normal Load Levels

a) The owner or operator must determine the upper and lower boundaries of the "range of operation" as follows for each unit (or combination of units, for common stack configurations): The lower boundary of the range of operation of a unit must be the minimum safe, stable loads for any of the units discharging through the stack. Alternatively, for a group of frequently-operated units that serve a common stack, the sum of the minimum safe, stable loads for the individual units may be used as the lower boundary of the range of operation.

The upper boundary of the range of operation of a unit must be the maximum sustainable load. The "maximum sustainable load" is the higher of either: the nameplate or rated capacity of the unit, less any physical or regulatory limitations or other deratings; or the highest sustainable load, based on at least four quarters of representative historical operating data. For common stacks, the maximum sustainable load is the sum of all of the maximum sustainable loads of the individual units discharging through the stack, unless this load is unattainable in practice, in which case use the highest sustainable combined load for the units that discharge through the stack, based on at least four quarters of representative historical operating data. The load values for the units must be expressed either in units of megawatts of thousands of lb/hr of steam load or mmBtu/hr of thermal output.

b) The load levels for relative accuracy test audits will, except for peaking units, be defined as follows: the "low" load level will be the first 30.0 percent of the range of operation; the "mid" load level will be the middle portion (>30.0 percent, but ≤60.0 percent) of the range of operation; and the "high" load level will be the upper end (>60.0 percent) of the range of operation. For example, if the upper and lower boundaries of the range of operation are 100 and 1100 megawatts, respectively, then the low, mid, and high load levels would be 100 to 400 megawatts, 400 to 700 megawatts, and 700 to 1100 megawatts, respectively.

c) The owner or operator must identify, for each affected unit or common stack, the "normal" load level or levels (low, mid, or high), based on the operating history of the units. To identify the normal load levels, the owner or operator must, at a minimum, determine the relative number of operating hours at each of the three load levels, low, mid, and high over the past four representative operating quarters. The owner or operator must determine, to the nearest 0.1 percent, the percentage of the time that each load level (low, mid, high) has been used during that time period. A summary of the data used for this determination and the calculated results must be kept on-site in a format suitable for inspection. For new units or newly-affected units, the data analysis in this subsection may be based on fewer than four quarters of data if fewer than four representative quarters of historical load data are available. Or, if no historical load data are available, the owner or operator may designate the normal load based on the expected or projected manner of operating the unit. However, in either case, once four quarters of representative data become available, the historical load analysis must be repeated.

d) Determination of Normal Load.

Based on the analysis of the historical load data described in subsection (c) ~~of this Section~~, the owner or operator must designate the most frequently used load level as the normal load level for the unit (or combination of units, for common stacks). The owner or operator may also designate the second most frequently used load level as an additional normal load level for the unit or stack. If the manner of

operation of the unit changes significantly, such that the designated normal loads or the two most frequently used load levels change, the owner or operator must repeat the historical load analysis and must redesignate the normal loads and the two most frequently used load levels, as appropriate. A minimum of two representative quarters of historical load data are required to document that a change in the manner of unit operation has occurred. Update the electronic monitoring plan whenever the normal load levels and the two most frequently-used load levels are redesignated.

e) The owner or operator must report the upper and lower boundaries of the range of operation for each unit (or combination of units, for common stacks), in units of megawatts or thousands of lb/hr or mmBtu/hr of steam production (as applicable), in the electronic monitoring plan required under Section 1.10 of Appendix B

6.5.2.2 Multi-Load Flow RATA Results

For each multi-load flow RATA, calculate the flow monitor relative accuracy at each load level. If a flow monitor relative accuracy test is failed or aborted due to a problem with the monitor on any load level of a 2-load (or 3-load) relative accuracy test audit, the RATA must be repeated at that load level. However, the entire 2-load (or 3-load) relative accuracy test audit does not have to be repeated unless the flow monitor polynomial coefficients or K-factors are changed, in which case a 3-load RATA is required.

6.5.3 Calculations

Using the data from the relative accuracy test audits, calculate relative accuracy in ~~accordance~~ compliance with the procedures and equations specified in Section 7 ~~of this Exhibit~~.

6.5.4 Reference Method Measurement Location

Select a location for reference method measurements that is (1) accessible; (2) in the same proximity as the monitor or monitoring system location; and (3) meets the requirements of Performance Specification 3 in appendix B of 40 CFR 60, incorporated by reference in Section 225.140, for CO_2 or O_2 monitors, or Method 1 (or 1A) in appendix A of 40 CFR 60, incorporated by reference in Section 225.140, for volumetric flow, except as otherwise indicated in this Section or as approved by the Agency.

6.5.5 Reference Method Traverse Point Selection

Select traverse points that ensure acquisition of representative samples of pollutant and diluent concentrations, moisture content, temperature, and flue gas flow rate over the flue cross Section. To achieve this, the reference method traverse points must meet the requirements of Section 8.1.3 of Performance Specification 2 ("PS No. 2") in appendix B to 40 CFR 60, incorporated by reference in Section 225.140 (for moisture monitoring system RATAs), Performance Specification 3 in appendix B to 40 CFR 60, incorporated by reference in Section 225.140 (for O_2 and CO_2 monitor RATAs), Method 1 (or 1A) (for volumetric flow rate monitor RATAs),

Method 3 (for molecular weight), and Method 4 (for moisture determination) in appendix A to 40 CFR 60, incorporated by reference in Section 225.140. The following alternative reference method traverse point locations are permitted for moisture and gas monitor RATAs:

a) For moisture determinations where the moisture data are used only to determine stack gas molecular weight, a single reference method point, located at least 1.0 meter from the stack wall, may be used. For moisture monitoring system RATAs and for gas monitor RATAs in which moisture data are used to correct pollutant or diluent concentrations from a dry basis to a wet basis (or vice-versa), single-point moisture sampling may only be used if the 12-point stratification test described in Section 6.5.5.1 ~~of this Exhibit~~ is performed prior to the RATA for at least one pollutant or diluent gas, and if the test is passed according to the acceptance criteria in Section 6.5.5.3(b) ~~of this Exhibit~~.

b) For gas monitoring system RATAs, the owner or operator may use any of the following options:

1) At any location (including locations where stratification is expected), use a minimum of six traverse points along a diameter, in the direction of any expected stratification. The points must be located in accordance with Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140.

2) At locations where Section 8.1.3 of PS No. 2 allows the use of a short reference method measurement line (with three points located at 0.4, 1.2, and 2.0 meters from the stack wall), the owner or operator may use an alternative 3-point measurement line, locating the three points at 4.4, 14.6, and 29.6 percent of the way across the stack, in accordance with Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140.

3) At locations where stratification is likely to occur (e.g., following a wet scrubber or when dissimilar gas streams are combined), the short measurement line from Section 8.1.3 of PS No. 2 (or the alternative line described in subsection (b)(2) ~~of this Section~~) may be used in lieu of the prescribed "long" measurement line in Section 8.1.3 of PS No. 2, provided that the 12-point stratification test described in Section 6.5.5.1 ~~of this Exhibit~~ is performed and passed one time at the location (according to the acceptance criteria of Section 6.5.5.3(a) ~~of this Exhibit~~) and provided that either the 12-point stratification test or the alternative (abbreviated) stratification test in Section 6.5.5.2 ~~of this Exhibit~~ is performed and passed prior to each subsequent RATA at the location (according to the acceptance criteria of Section 6.5.5.3(a) ~~of this Exhibit~~).

4) A single reference method measurement point, located no less than 1.0 meter from the stack wall and situated along one of the measurement lines

used for the stratification test, may be used at any sampling location if the 12-point stratification test described in Section 6.5.5.1 ~~of this Exhibit~~ is performed and passed prior to each RATA at the location (according to the acceptance criteria of Section 6.5.5.3(b) ~~of this Exhibit~~).

c) For mercury monitoring systems, use the same basic approach for traverse point selection that is used for the other gas monitoring system RATAs, except that the stratification test provisions in Sections 8.1.3 through 8.1.3.5 of Method 30A must apply, rather than the provisions of Sections 6.5.5.1 through 6.5.5.3 ~~of this Exhibit~~.

6.5.5.1 Stratification Test

a) With the units operating under steady-state conditions at the normal load level (or normal operating level), as defined in Section 6.5.2.1 ~~of this Exhibit~~, use a traversing gas sampling probe to measure diluent CO_2 or O_2 concentrations at a minimum of 12 points, located according to Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140.

b) Use Method 3A in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, to make the measurements. Data from the reference method analyzers must be quality assured by performing analyzer calibration error and system bias checks before the series of measurements and by conducting system bias and calibration drift checks after the measurements, in ~~accordance~~ compliance with the procedures of Method 3A.

c) Measure for a minimum of 2 minutes at each traverse point. To the extent practicable, complete the traverse within a 2-hour period.

d) If the load has remained constant ±-3.0 percent during the traverse and if the reference method analyzers have passed all of the required quality assurance checks, proceed with the data analysis.

e) Calculate the average CO_2 or O_2 concentrations at each of the individual traverse points. Then, calculate the arithmetic average CO_2 or O_2 concentrations for all traverse points.

6.5.5.2 Alternative (Abbreviated) Stratification Test

a) With the units operating under steady-state conditions at the normal load level (or normal operating level), as defined in Section 6.5.2.1 ~~of this Exhibit~~, use a traversing gas sampling probe to measure the diluent CO_2 or O_2 concentrations at three points. The points must be located according to the specifications for the long measurement line in Section 8.1.3 of PS No. 2 (i.e., locate the points 16.7 percent, 50.0 percent, and 83.3 percent of the way across the stack). Alternatively, the concentration measurements may be made at six traverse points

along a diameter. The six points must be located in ~~accordance~~ compliance with Method 1 in appendix A to 40 CFR 60, incorporated by reference in Section 225.140.

b) Method 3A in appendix A to 40 CFR 60, incorporated by reference in Section 225.140, to make the measurements. Data from the reference method analyzers must be quality assured by performing analyzer calibration error and system bias checks before the series of measurements and by conducting system bias and calibration drift checks after the measurements, in accordance with the procedures of Method 3A.

c) Measure for a minimum of 2 minutes at each traverse point. To the extent practicable, complete the traverse within a 1-hour period.

d) If the load has remained constant +-3.0 percent during the traverse and if the reference method analyzers have passed all of the required quality assurance checks, proceed with the data analysis.

f) Calculate the average CO_2 or O_2 concentrations at each of the individual traverse points. Then, calculate the arithmetic average CO_2 or O_2 concentrations for all traverse points.

Stratification Test Results and Acceptance Criteria

a) For each diluent gas RATA, the short reference method measurement line described in Section 8.1.3 of PS No. 2 may be used in lieu of the long measurement line prescribed in Section 8.1.3 of PS No. 2 if the results of a stratification test, conducted in ~~accordance~~ compliance with Section 6.5.5.1 or 6.5.5.2 ~~of this Exhibit~~ (as appropriate; see Section 6.5.5(b)(3) ~~of this Exhibit~~), show that the concentration at each individual traverse point differs by no more than ±10.0 percent from the arithmetic average concentration for all traverse points. The results are also acceptable if the concentration at each individual traverse point differs by no more than ±0.5 percent CO_2 or O_2 from the arithmetic average concentration for all traverse points.

b) For each diluent gas RATA, a single reference method measurement point, located at least 1.0 meter from the stack wall and situated along one of the measurement lines used for the stratification test, may be used for that diluent gas if the results of a stratification test, conducted in accordance with Section 6.5.5.1 ~~of this Exhibit~~, show that the concentration at each individual traverse point differs by no more than ±5.0 percent from the arithmetic average concentration for all traverse points. The results are also acceptable if the concentration at each individual traverse point differs by no more than ±0.3 percent CO_2 or O_2 from the arithmetic average concentration for all traverse points.

c) The owner or operator must keep the results of all stratification tests on-site, in a

format suitable for inspection, as part of the supplementary RATA records required under Section 1.13(a)(7) of Appendix B.

6.5.6 Sampling Strategy

a) Conduct the reference method tests so they will yield results representative of the pollutant concentration, emission rate, moisture, temperature, and flue gas flow rate from the unit and can be correlated with the mercury monitor, CO_2 orO_2, moisture, flow monitoring system, and mercury CEMS (or excepted monitoring system) measurements (as applicable). The minimum acceptable time for a gas monitoring system RATA run or for a moisture monitoring system RATA run is 21 minutes. For each run of a gas monitoring system RATA, all necessary pollutant concentration measurements, diluent concentration measurements, and moisture measurements (if applicable) must, to the extent practicable, be made within a 60-minute period. For flow monitor RATAs, the minimum time per run must be 5 minutes. Flow rate reference method measurements may be made either sequentially from port to port or simultaneously at two or more sample ports. The velocity measurement probe may be moved from traverse point to traverse point either manually or automatically. If, during a flow RATA, significant pulsations in the reference method readings are observed, be sure to allow enough measurement time at each traverse point to obtain an accurate average reading when a manual readout method is used (e.g., a "sight-weighted" average from a manometer). Also, allow sufficient measurement time to ensure that stable temperature readings are obtained at each traverse point, particularly at the first measurement point at each sample port, when a probe is moved sequentially from port-to-port. A minimum of one set of auxiliary measurements for stack gas molecular weight determination (i.e., diluent gas data and moisture data) is required for every clock hour of a flow RATA or for every three test runs (whichever is less restrictive). Alternatively, moisture measurements for molecular weight determination may be performed before and after a series of flow RATA runs at a particular load level (low, mid, or high), provided that the time interval between the two moisture measurements does not exceed three hours. If this option is selected, the results of the two moisture determinations must be averaged arithmetically and applied to all RATA runs in the series. Successive flow RATA runs may be performed without waiting in-between runs. If an O_2-diluent monitor is used as a CO_2 continuous emission monitoring system, perform a CO_2 system RATA (i.e., measure CO_2, rather than O_2, with the reference method). For moisture monitoring systems, an appropriate coefficient, K-factor or other suitable mathematical algorithm may be developed prior to the RATA, to adjust the monitoring system readings with respect to the reference method. If such a coefficient, K-factor or algorithm is developed, it must be applied to the CEMS readings during the RATA and (if the RATA is passed), to the subsequent CEMS data, by means of the automated data acquisition and handling system. The owner or operator must keep records of the current coefficient, K-factor or algorithm, as specified in Section 1.13(a)(5)(F) of Appendix B. Whenever the coefficient, K-factor or algorithm is changed, a

RATA of the moisture monitoring system is required. For the RATA of a mercury CEMS using the Ontario Hydro Method, or for the RATA of a sorbent trap system (irrespective of the reference method used), the time per run must be long enough to collect a sufficient mass of mercury to analyze. For the RATA of a sorbent trap monitoring system, the type of sorbent material used by the traps must be the same as for daily operation of the monitoring system; however, the size of the traps used for the RATA may be smaller than the traps used for daily operation of the system. Spike the third section of each sorbent trap with elemental mercury, as described in Section 7.1.2 of Exhibit D to Appendix B. Install a new pair of sorbent traps prior to each test run. For each run, the sorbent trap data must be validated according to the quality assurance criteria in Section 8 of Exhibit D to Appendix B.

b) To properly correlate the mercury, volumetric flow rate, moisture, CO_2-or O_2 monitoring system data with the reference method data, annotate the beginning and end of each reference method test run (including the exact time of day) on the individual chart recorders or other permanent recording devices.

6.5.7 Correlation of Reference Method and Continuous Emission Monitoring System

Confirm that the monitoring system and reference method test results are on consistent moisture, pressure, temperature, and diluent concentration basis (e.g., since the flow monitor measures flow rate on a wet basis, Method 2 test results must also be on a wet basis). Compare flow-monitor and reference method results on a scfh basis. Also, consider the response times of the pollutant concentration monitor, the continuous emission monitoring system, and the flow monitoring system to ensure comparison of simultaneous measurements.

For each relative accuracy test audit run, compare the measurements obtained from the continuous emission monitoring system (in $\mu g/m^3$, percent CO_2, percent O_2, or $\%H_2O$, as applicable) against the corresponding reference method values. Tabulate the paired data in a table such as the one shown in Figure 2.

6.5.8 Number of Reference Method Tests

Perform a minimum of nine sets of paired monitor (or monitoring system) and reference method test data for every required (i.e., certification, recertification, diagnostic, semiannual, or annual) relative accuracy test audit. For 2-load and 3-load relative accuracy test audits of flow monitors, perform a minimum of nine sets at each of the load levels.

6.5.9 Reference Methods

The following methods are from appendix A to 40 CFR 60, incorporated by reference in Section 225.140, or have been published by ASTM, and are the reference methods for performing relative accuracy test audits under this Part: Method 1 or 1A in appendix A-1 to 40 CFR 60 for siting; Method 2 or its allowable alternatives in appendices A-1 and A-2 to 40 CFR 60 (except for Methods 2B and 2E) for stack gas velocity and volumetric flow rate; Methods 3, 3A or 3B in

appendix A-2 to 40 CFR 60 for O_2 and CO_2; Method 4 in appendix A-3 to 40 CFR 60 for moisture; and for mercury, either ASTM D6784-02 (the Ontario Hydro Method, incorporated by reference under Section 225.140), or Method 29, Method 30A, or Method 30B in appendix A-8 to 40 CFR 60.

7. Calculations

7.1 Linearity and System Integrity Checks

Analyze the linearity check data for Hg, CO_2, and O_2 monitors and the system integrity check data for Hg CEMS as follows. Calculate the percentage measurement error based upon the reference value at the low-level, mid-level, and high-level concentrations specified in Section 6.2 ~~of this Exhibit~~. Perform this calculation once during the certification test. Use the following equation to calculate the measurement error for each reference value.

$$ME = \frac{|R - A|}{R} \times 100 \qquad \text{(Eq A-4)}$$

Where:

ME = Percentage measurement error, based upon the reference value.

R = Reference value of low-, mid-, or high-level calibration gas introduced into the monitoring system.

A = Average of the monitoring system responses.

7.2 Calibration Error

7.2.1 Pollutant Concentration and Diluent Monitors

For each reference value, calculate the percentage calibration error based upon instrument span for daily calibration error tests using the following equation:

$$CE = \frac{|R - A|}{S} \times 100 \qquad \text{(Eq A-5)}$$

Where:

CE = Calibration error as a percentage of the span of the instrument.

R = Reference value of zero or upscale (high-level or mid-level, as applicable) calibration gas introduced into the monitoring system.

A = Actual monitoring system response to the calibration gas.

S = Span of the instrument, as specified in Section 2 ~~of this Exhibit~~.

7.2.2 Flow Monitor Calibration Error

For each reference value, calculate the percentage calibration error based upon span using the following equation:

$$CE = \frac{|R - A|}{S} \times 100 \qquad \text{(Eq A-6)}$$

Where:

CE = Calibration error as a percentage of span.

R = Low or high level reference value specified in Section 2.2.2.1 ~~of this Exhibit~~.

A = Actual flow monitor response to the reference value.

S = Flow monitor calibration span value as determined under Section 2.1.2.2 ~~of this Exhibit~~.

7.3 Relative Accuracy for O_2 Monitors, Mercury Monitoring Systems, and Flow Monitors

Analyze the relative accuracy test audit data from the reference method tests for CO_2 or O_2 monitors used only for heat input rate determination, mercury monitoring systems used to determine mercury mass emissions under Sections 1.14 through 1.18 of Appendix B, and flow monitors using the following procedures. Summarize the results on a data sheet. An example is shown in Figure 2. Calculate the mean of the monitor or monitoring system measurement values. Calculate the mean of the reference method values. Using data from the automated data acquisition and handling system, calculate the arithmetic differences between the reference method and monitor measurement data sets. Then calculate the arithmetic mean of the difference, the standard deviation, the confidence coefficient, and the monitor or monitoring system relative accuracy using the following procedures and equations.

7.3.1 Arithmetic Mean

Calculate the arithmetic mean of the differences, d, of a data set as follows.

$$d = \sum_{i=1}^{n} d_i \qquad \text{(Eq A-7)}$$

Where:

N = Number of data points.

d_i = The difference between a reference method value and the corresponding continuous emission monitoring system value (RM_i–CEM_i) at a given point in time i.

7.3.2 Standard Deviation

Calculate the standard deviation, S_d, of a data set as follows:

$$S_d = \sqrt{\frac{\sum_{i=1}^{n} d_i^{\,2} - \left[\frac{\left(\sum_{i=1}^{n} d_i\right)^2}{n}\right]}{n-1}} \quad \text{(Eq A-8)}$$

Where:

n = Number of data points.

d_i = The difference between a reference method value and the corresponding continuous emission monitoring system value (RM_i–CEM_i) at a given point in time i.

7.3.3 Confidence Coefficient

Calculate the confidence coefficient (one-tailed), cc, of a data set as follows:

$$cc = t_{0.025}\frac{S_d}{\sqrt{n}} \quad \text{(Eq A-9)}$$

Where:

t0.025=t value (see Table 7-1).

Table 7-1 t-Values

n-1	t0.025	n-1	t0.025	n-1	t0.025
1	12.706	12	2.179	23	2.069
2	4.303	13	2.160	24	2.064
3	3.182	14	2.145	25	2.060
4	2.776	15	2.131	26	2.056
5	2.571	16	2.120	27	2.052
6	2.447	17	2.110	28	2.048
7	2.365	18	2.101	29	2.045
8	2.306	19	2.093	30	2.042
9	2.262	20	2.086	40	2.021
10	2.228	21	2.080	60	2.000
11	2.201	22	2.074	>60	1.960

7.3.4 Relative Accuracy

Calculate the relative accuracy of a data set using the following equation.

$$RA = \frac{\left|\overline{d}\right| + \left|cc\right|}{\overline{RM}} \times 100 \quad \text{(Eq A-10)}$$

Where:

$\overline{RM}$ = Arithmetic mean of the reference method values.

$\left|\overline{d}\right|$ = The absolute value of the mean difference between the reference method values and the corresponding continuous emission monitoring system values.

$\left|cc\right|$ = The absolute value of the confidence coefficient.

7.5 Reference Flow-to-Load Ratio or Gross Heat Rate

a) Except as provided in Section 7.6 ~~of this Exhibit~~, the owner or operator must determine R_{ref}, the reference value of the ratio of flow rate to unit load, each time that a passing flow RATA is performed at a load level designated as normal in Section 6.5.2.1 ~~of this Exhibit~~. The owner or operator must report the current value of R_{ref} in the electronic quarterly report required under 40 CFR 75.64, incorporated by reference in Section 225.140, and must also report the completion date of the associated RATA. If two load levels have been designated as normal under Section 6.5.2.1 ~~of this Exhibit~~, the owner or operator must determine a separate R_{ref} value for each of the normal load levels. The reference flow-to-load ratio must be calculated as follows:

$$R_{ref} = \frac{Q_{ref}}{L_{avg}} \times 10^{-5} \quad \text{(Eq A-13)}$$

Where:

R_{ref} = Reference value of the flow-to-load ratio, from the most recent normal-load flow RATA, scfh/megawatts, scfh/1000 lb/hr of steam, or scfh/ (mmBtu/hr of steam output).

Q_{ref} = Average stack gas volumetric flow rate measured by the reference method

during the normal-load RATA, scfh.

L_{avg} = Average unit load during the normal-load flow RATA, megawatts, 1000 lb/hr of steam, or mmBtu/hr of thermal output.

b) In Equation A-13, for a common stack, determine L_{avg} by summing, for each RATA run, the operating loads of all units discharging through the common stack, and then taking the arithmetic average of the summed loads. For a unit that discharges its emissions through multiple stacks, either determine a single value of Q_{ref} for the unit or a separate value of Q_{ref} for each stack. In the former case, calculate Q_{ref} by summing, for each RATA run, the volumetric flow rates through the individual stacks and then taking the arithmetic average of the summed RATA run flow rates. In the latter case, calculate the value of Q_{ref} for each stack by taking the arithmetic average, for all RATA runs, of the flow rates through the stack. For a unit with a multiple stack discharge configuration consisting of a main stack and a bypass stack (e.g., a unit with a wet SO_2 scrubber), determine Q_{ref} separately for each stack at the time of the normal load flow RATA. Round off the value of R_{ref} to two decimal places.

c) In addition to determining R_{ref} or as an alternative to determine R_{ref}, a reference value of the gross heat rate (GHR) may be determined. In order to use this option, quality assured diluent gas (CO_2 or O_2) must be available for each hour of the most recent normal-load flow RATA. The reference value of the GHR must be determined as follows:

$$(GHR)_{ref} = \frac{(HeatInput)_{avg}}{L_{avg}} \times 1000 \quad \text{(Eq A-13a)}$$

Where:

$(GHR)_{ref}$ = Reference value of the gross heat rate at the time of the most recent normal-load flow RATA, Btu/kwh, Btu/lb steam load, or Btu heat input/mmBtu steam output.

$(HeatInput)_{avg}$ = Average hourly heat input during the normal-load flow RATA, as determined using the applicable equation in Exhibit C ~~to this Appendix~~, mmBtu/hr. For multiple stack configurations, if the reference GHR value is determined separately for each stack, use the hourly heat input measured at each stack. If the reference GHR is determined at the unit level, sum the hourly heat inputs measured at the individual stacks.

L_{avg} = Average unit load during the normal-load flow RATA, megawatts, 1000 lb/hr of steam, or mmBtu/hr thermal output.

d) In the calculation of $(HeatInput)_{avg}$, use Q_{ref}, the average volumetric flow rate measured by the reference method during the RATA, and use the average diluent gas concentration measured during the flow RATA (i.e., the arithmetic average of the diluent gas concentrations for all clock hours in which a RATA run was performed).

7.6 Flow-to-Load Test Exemptions

For complex stack configurations (e.g., when the effluent from a unit is divided and discharges through multiple stacks in such a manner that the flow rate in the individual stacks cannot be correlated with unit load), the owner or operator may petition the USEPA under 40 CFR 75.66, incorporated by reference in Section 225.140, for an exemption from the requirements of Section 7.7 to appendix A to 40 CFR 75 and Section 2.2.5 of Exhibit B to Appendix B. The petition must include sufficient information and data to demonstrate that a flow-to-load or gross heat rate evaluation is infeasible for the complex stack configuration.

Arithmetic Mean Difference (Eq. A-7).
Confidence Coeffecient (Eq. A-9).
Relative Accuracy (Eq. A-10).

[FNa] Specify units: ppm, lb/dscf, mg/dscm.

Figure 5. Cycle Time

Date of test _____

Component/system ID#: _____

Analyzer type _____

Serial Number _____

High level gas concentration: _____ ppm/% (circle one)

Zero level gas concentration: _____ ppm/% (circle one)

Analyzer span setting: _____ ppm/% (circle one)

Upscale:

Stable starting monitor value: _____ ppm/% (circle one)
Stable ending monitor reading: _____ ppm/% (circle one)
Elapsed time: _____ Seconds
Downscale:
Stable starting monitor value: _____ ppm/% (circle one)
Stable ending monitor reading: _____ ppm/% (circle one)
Elapsed time: _____ seconds
Component cycle time = _____ seconds
System cycle time = _____ seconds

A. To determine the upscale cycle time (Figure 6a), measure the flue gas emissions until the response stabilizes. Record the stabilized value (see Section 6.4 ~~of this Exhibit~~ for the stability criteria).

B. Inject a high-level calibration gas into the port leading to the calibration cell or thimble (Point B). Allow the analyzer to stabilize. Record the stabilized value.

C. Determine the step change. The step change is equal to the difference between the final stable calibration gas value (Point D) and the stabilized stack emissions value (Point A).

D. Take 95% of the step change value and add the result to the stabilized stack emissions value (Point A). Determine the time at which 95% of the step change occurred (Point C).

E. Calculate the upscale cycle time by subtracting the time at which the calibration gas was injected (Point B) from the time at which 95% of the step change occurred (Point C). In this example, upscale cycle time = (11-5) = 6 minutes.

F. To determine the downscale cycle time (Figure 6b) repeat the procedures above, except that a zero gas is injected when the flue gas emissions have stabilized, and 95% of the step change in concentration is subtracted from the stabilized stack emissions value.

G. Compare the upscale and downscale cycle time values. The longer of these two times is the cycle time for the analyzer.

Section 225.APPENDIX B Continuous Emission Monitoring Systems for Mercury

Section 225.EXHIBIT B Quality Assurance and Quality Control Procedures

1. Quality Assurance/Quality Control Program

Develop and implement a quality assurance/quality control (QA/QC) program for the continuous

emission monitoring systems, and their components. At a minimum, include in each QA/QC program a written plan that describes in detail (or that refers to separate documents containing) complete, step-by-step procedures and operations for each of the following activities. Upon request from regulatory authorities, the source must make all procedures, maintenance records, and ancillary supporting documentation from the manufacturer (e.g., software coefficients and troubleshooting diagrams) available for review during an audit. Electronic storage of the information in the QA/QC plan is permissible, provided that the information can be made available in hardcopy upon request during an audit.

1.1 Requirements for All Monitoring Systems

1.1.1 Preventive Maintenance

Keep a written record of procedures needed to maintain the monitoring system in proper operating condition and a schedule for those procedures. This must, at a minimum, include procedures specified by the manufacturers of the equipment and, if applicable, additional or alternate procedures developed for the equipment.

1.1.2 Recordkeeping and Reporting

Keep a written record describing procedures that will be used to implement the recordkeeping and reporting requirements in subparts E and G of 40 CFR 75, incorporated by reference in Section 225.140, and Sections 1.10 through 1.13 of Appendix B, as applicable.

1.1.3 Maintenance Records

Keep a record of all testing, maintenance, or repair activities performed on any monitoring system or component in a location and format suitable for inspection. A maintenance log may be used for this purpose. The following records should be maintained: date, time, and description of any testing, adjustment, repair, replacement, or preventive maintenance action performed on any monitoring system and records of any corrective actions associated with a monitor's outage period. Additionally, any adjustment that recharacterizes a system's ability to record and report emissions data must be recorded (e.g., changing of flow monitor or moisture monitoring system polynomial coefficients, K factors or mathematical algorithms, changing of temperature and pressure coefficients and dilution ratio settings), and a written explanation of the procedures used to make the adjustments must be kept.

1.1.4

The requirements in Section 6.1.2 of Exhibit A to Appendix B must be met by any Air Emissions Testing Body (AETB) performing the semiannual/annual RATAs described in Section 2.3 ~~of this Exhibit~~ and the mercury emission tests described in Sections 1.15(c) and 1.15(d)(4) of Appendix B.

1.2 Specific Requirements for Continuous Emissions Monitoring Systems

1.2.1 Calibration Error Test and Linearity Check Procedures

Keep a written record of the procedures used for daily calibration error tests and linearity checks (e.g., how gases are to be injected, adjustments of flow rates and pressure, introduction of reference values, length of time for injection of calibration gases, steps for obtaining calibration error or error in linearity, determination of interferences, and when calibration adjustments should be made). Identify any calibration error test and linearity check procedures specific to the continuous emission monitoring system that vary from the procedures in Exhibit A to Appendix B.

1.2.2 Calibration and Linearity Adjustments

Explain how each component of the continuous emission monitoring system will be adjusted to provide correct responses to calibration gases, reference values, and/or indications of interference both initially and after repairs or corrective action. Identify equations, conversion factors, and other factors affecting calibration of each continuous emission monitoring system.

1.2.3 Relative Accuracy Test Audit Procedures

Keep a written record of procedures and details peculiar to the installed continuous emission monitoring systems that are to be used for relative accuracy test audits, such as sampling and analysis methods.

1.2.4 Parametric Monitoring for Units With Add-on Emission Controls

The owner or operator ~~shall~~ must keep a written (or electronic) record including a list of operating parameters for the add-on mercury emission controls, as applicable, and the range of each operating parameter that indicates the add-on emission controls are operating properly. The owner or operator ~~shall~~ must keep a written (or electronic) record of the parametric monitoring data during each mercury missing data period.

1.3 Requirements for Sorbent Trap Monitoring Systems

1.3.1 Sorbent Trap Identification and Tracking

Include procedures for inscribing or otherwise permanently marking a unique identification number on each sorbent trap for tracking purposes. Keep records of the ID of the monitoring system in which each sorbent trap is used, and the dates and hours of each mercury collection period.

1.3.2 Monitoring System Integrity and Data Quality

Explain the procedures used to perform the leak checks when sorbent traps are placed in service and removed from service. Also explain the other QA procedures used to ensure system integrity and data quality, including~~, but not limited to,~~ gas flow meter calibrations, verification of moisture removal, and ensuring air-tight pump operation. In addition, the QA plan must

include the data acceptance and quality control criteria in Section 8 of Exhibit D to Appendix B. All reference meters used to calibrate the gas flow meters (e.g., wet test meters) must be periodically recalibrated. Annual, or more frequent, recalibration is recommended. If a NIST-traceable calibration device is used as a reference flow meter, the QA plan must include a protocol for ongoing maintenance and periodic recalibration to maintain the accuracy and NIST-traceability of the calibrator.

1.3.3 Mercury Analysis

Explain the chain of custody employed in packing, transporting, and analyzing the sorbent traps (see Sections 7.2.8 and 7.2.9 in Exhibit D to Appendix B). Keep records of all mercury analyses. The analyses must be performed in ~~accordance~~ compliance with the procedures described in Section 10 of Exhibit D to Appendix B.

1.3.4 Laboratory Certification

The QA Plan must include documentation that the laboratory performing the analyses on the carbon sorbent traps is certified by the International Organization for Standardization (ISO) to have a proficiency that meets the requirements of ISO 17025. Alternatively, if the laboratory performs the spike recovery study described in Section 10.3 of Exhibit D to Appendix B and repeats that procedure annually, ISO certification is not required.

1.3.5 Data Collection Period

State, and provide the rationale for, the minimum acceptable data collection period (e.g., one day, one week, etc.) for the size of the sorbent trap selected for the monitoring. Include in the discussion such factors as the mercury concentration in the stack gas, the capacity of the sorbent trap, and the minimum mass of mercury required for the analysis.

1.3.6 Relative Accuracy Test Audit Procedures

Keep records of the procedures and details peculiar to the sorbent trap monitoring systems that are to be followed for relative accuracy test audits, such as sampling and analysis methods.

2. Frequency of Testing

A summary chart showing each quality assurance test and the frequency at which each test is required is ~~located~~ at the end of this Exhibit in Figure 1.

2.1 Daily Assessments

Perform the following daily assessments to quality-assure the hourly data recorded by the monitoring systems during each period of unit operation, or, for a bypass stack or duct, each period in which emissions pass through the bypass stack or duct. These requirements are effective as of the date when the monitor or continuous emission monitoring system completes certification testing.

2.1.1 Calibration Error Test

Except as provided in Section 2.1.1.2 ~~of this Exhibit~~, perform the daily calibration error test of each gas monitoring system (including moisture monitoring systems consisting of wet- and dry-basis O_2 analyzers) according to the procedures in Section 6.3.1 of Exhibit A to Appendix B, and perform the daily calibration error test of each flow monitoring system according to the procedure in Section 6.3.2 of Exhibit A to Appendix B. When two measurement ranges (low and high) are required for a particular parameter, perform sufficient calibration error tests on each range to validate the data recorded on that range, according to the criteria in Section 2.1.5 ~~of this Exhibit~~.

For units with add-on emission controls and dual-span or auto-ranging monitors, and other units that use the maximum expected concentration to determine calibration gas values, perform the daily calibration error tests on each scale that has been used since the previous calibration error test. For example, if the pollutant concentration has not exceeded the low-scale value (based on the maximum expected concentration) since the previous calibration error test, the calibration error test may be performed on the low-scale only. If, however, the concentration has exceeded the low-scale span value for one hour or longer since the previous calibration error test, perform the calibration error test on both the low- and high-scales.

2.1.1.1 On-line Daily Calibration Error Tests

Except as provided in Section 2.1.1.2 ~~of this Exhibit~~, all daily calibration error tests must be performed while the unit is in operation at normal, stable conditions (i.e., "on-line").

2.1.1.2 Off-line Daily Calibration Error Tests

Daily calibrations may be performed while the unit is not operating (i.e., "off-line") and may be used to validate data for a monitoring system that meets the following conditions:

1) An initial demonstration test of the monitoring system is successfully completed and the results are reported in the quarterly report required under 40 CFR 75.64, incorporated by reference in Section 225.140. The initial demonstration test, hereafter called the "off-line calibration demonstration", consists of an off-line calibration error test followed by an on-line calibration error test. Both the off-line and on-line portions of the off-line calibration demonstration must meet the calibration error performance specification in Section 3.1 of Exhibit A to Appendix B. Upon completion of the off-line portion of the demonstration, the zero and upscale monitor responses may be adjusted, but only toward the true values of the calibration gases or reference signals used to perform the test and only in ~~accordance~~ compliance with the routine calibration adjustment procedures specified in the quality control program required under Section 1 ~~of this Exhibit~~. Once these adjustments are made, no further adjustments may be made to the monitoring system until after completion of the on-line portion of the off-line calibration demonstration. Within 26 clock hours after the completion hour of the

off-line portion of the demonstration, the monitoring system must successfully complete the first attempted calibration error test, i.e., the on-line portion of the demonstration.

2) For each monitoring system that has passed the off-line calibration demonstration, off-line calibration error tests may be used on a limited basis to validate data, in ~~accordance~~ compliance with subsection (2) in Section 2.1.5.1 ~~of this Exhibit~~.

2.1.2 Daily Flow Interference Check

Perform the daily flow monitor interference checks ~~specified~~ in Section 2.2.2.2 of Exhibit A to Appendix B while the unit is in operation at normal, stable conditions.

2.1.3 Additional Calibration Error Tests and Calibration Adjustments

a) In addition to the daily calibration error tests required under Section 2.1.1 ~~of this Exhibit~~, a calibration error test of a monitor must be performed in ~~accordance~~ compliance with Section 2.1.1 ~~of this Exhibit~~, as follows: whenever a daily calibration error test is failed; whenever a monitoring system is returned to service following repair or corrective maintenance that could affect the monitor's ability to accurately measure and record emissions data; or after making certain calibration adjustments, as described in this Section. Except in the case of the routine calibration adjustments described in this Section, data from the monitor are considered invalid until the required additional calibration error test has been successfully completed.

b) Routine calibration adjustments of a monitor are permitted after any successful calibration error test. These routine adjustments must be made so as to bring the monitor readings as close as practicable to the known values of the calibration gases or to the actual value of the flow monitor reference signals. An additional calibration error test is required following routine calibration adjustments where the monitor's calibration has been physically adjusted (e.g., by turning a potentiometer) to verify that the adjustments have been made properly. An additional calibration error test is not required, however, if the routine calibration adjustments are made by means of a mathematical algorithm programmed into the data acquisition and handling system. It is recommended that routine calibration adjustments be made, at a minimum, whenever the daily calibration error exceeds the limits of the applicable performance specification in Exhibit A to Appendix B for the pollutant concentration monitor, CO_2 or O_2 monitor, or flow monitor.

c) Additional (non-routine) calibration adjustments of a monitor are permitted prior to (but not during) linearity checks and RATAs and at other times, provided that an appropriate technical justification is included in the quality control program required under Section 1 ~~of this Exhibit~~. The allowable non-routine adjustments are as follows. The owner or operator may physically adjust the calibration of a monitor (e.g., by means of a potentiometer), provided that the post-adjustment

zero and upscale responses of the monitor are within the performance specifications of the instrument given in Section 3.1 of Exhibit A to Appendix B. An additional calibration error test is required following such adjustments to verify that the monitor is operating within the performance specifications at both the zero and upscale calibration levels.

2.1.4 Data Validation

a) An out-of-control period occurs when the calibration error of a CO_2 or O_2 monitor (including O_2 monitors used to measure CO_2 emissions or percent moisture) exceeds 1.0 percent CO_2 or O_2, or when the calibration error of a flow monitor or a moisture sensor exceeds 6.0 percent of the span value, which is twice the applicable specification of Exhibit A to Appendix B. Notwithstanding, a differential pressure-type flow monitor for which the calibration error exceeds 6.0 percent of the span value will not be considered out-of-control if $|R - A|$, the absolute value of the difference between the monitor response and the reference value in Equation A-5 of Exhibit A ~~to this Appendix~~, is < 0.02 inches of water. For a mercury monitor, an out-of-control period occurs when the calibration error exceeds 5.0% of the span value. Notwithstanding, the mercury monitor will not be considered out-of-control if $|R - A|$ in Equation A-5 does not exceed 1.0 µg/scm. The out-of-control period begins upon failure of the calibration error test and ends upon completion of a successful calibration error test. Note, that if a failed calibration, corrective action, and successful calibration error test occur within the same hour, emission data for that hour recorded by the monitor after the successful calibration error test may be used for reporting purposes, provided that two or more valid readings are obtained as required by Section 1.2 of Appendix B. Emission data must not be reported from an out-of-control monitor.

b) An out-of-control period also occurs whenever interference of a flow monitor is identified. The out-of-control period begins with the hour of completion of the failed interference check and ends with the hour of completion of an interference check that is passed.

2.1.5 Quality Assurance of Data With Respect to Daily Assessments

When a monitoring system passes a daily assessment (i.e., daily calibration error test or daily flow interference check), data from that monitoring system are prospectively validated for 26 clock hours (i.e., 24 hours plus a 2-hour grace period) beginning with the hour in which the test is passed, unless another assessment (i.e., a daily calibration error test, an interference check of a flow monitor, a quarterly linearity check, a quarterly leak check, or a relative accuracy test audit) is failed within the 26-hour period.

2.1.5.1 Data Invalidation with Respect to Daily Assessments

The following specific rules apply to the invalidation of data with respect to daily assessments:

1) Data from a monitoring system are invalid, beginning with the first hour following the expiration of a 26-hour data validation period or beginning with the first hour following the expiration of an 8-hour start-up grace period (as provided under Section 2.1.5.2 ~~of this Exhibit~~), if the required subsequent daily assessment has not been conducted.

2) For a monitor that has passed the off-line calibration demonstration, a combination of on-line and off-line calibration error tests may be used to validate data from the monitor, as follows. For a particular unit (or stack) operating hour, data from a monitor may be validated using a successful off-line calibration error test if: a) An on-line calibration error test has been passed within the previous 26 unit (or stack) operating hours; and b) the 26 clock hour data validation window for the off-line calibration error test has not expired. If either of these conditions is not met, then the data from the monitor are invalid with respect to the daily calibration error test requirement. Data from the monitor must remain invalid until the appropriate on-line or off-line calibration error test is successfully completed so that both conditions in subsections a) and b) are met.

3) For units with two measurement ranges (low and high) for a particular parameter, when separate analyzers are used for the low and high ranges, a failed or expired calibration on one of the ranges does not affect the quality-assured data status on the other range. For a dual-range analyzer (i.e., a single analyzer with two measurement scales), a failed calibration error test on either the low or high scale results in an out-of-control period for the monitor. Data from the monitor remain invalid until corrective actions are taken and "hands-off" calibration error tests have been passed on both ranges. However, if the most recent calibration error test on the high scale was passed but has expired, while the low scale is up-to-date on its calibration error test requirements (or vice-versa), the expired calibration error test does not affect the quality-assured status of the data recorded on the other scale.

2.1.5.2 Daily Assessment Start-Up Grace Period

For the purpose of quality assuring data with respect to a daily assessment (i.e. a daily calibration error test or a flow interference check), a start-up grace period may apply when a unit begins to operate after a period of non-operation. The start-up grace period for a daily calibration error test is independent of the start-up grace period for a daily flow interference check. To qualify for a start-up grace period for a daily assessment, there are two requirements:

1) The unit must have resumed operation after being in outage for 1 or more hours (i.e., the unit must be in a start-up condition) as evidenced by a change in unit operating time from zero in one clock hour to an operating time greater than zero in the next clock hour.

2) For the monitoring system to be used to validate data during the grace period, the previous daily assessment of the same kind must have been passed on-line within 26 clock hours prior to the last hour in which the unit operated before the outage. In addition, the monitoring system must be in-control with respect to quarterly and semi-annual or annual assessments.

If both of the above conditions are met, then a start-up grace period of up to 8 clock hours applies, beginning with the first hour of unit operation following the outage. During the start-up grace period, data generated by the monitoring system are considered quality-assured. For each monitoring system, a start-up grace period for a calibration error test or flow interference check ends when either: (1) a daily assessment of the same kind (i.e., calibration error test or flow interference check) is performed; or (2) 8 clock hours have elapsed (starting with the first hour of unit operation following the outage), whichever occurs first.

2.1.6 Data Recording

Record and tabulate all calibration error test data according to month, day, clock-hour, and magnitude in either ppm, percent volume, or scfh. Program monitors that automatically adjust data to the corrected calibration values (e.g., microprocessor control) to record either: (1) the unadjusted concentration or flow rate measured in the calibration error test prior to resetting the calibration, or (2) the magnitude of any adjustment. Record the following applicable flow monitor interference check data: (1) sample line/sensing port pluggage, and (2) malfunction of each RTD, transceiver, or equivalent.

2.2 Quarterly Assessments

For each primary and redundant backup monitor or monitoring system, perform the following quarterly assessments. This requirement applies as of the calendar quarter following the calendar quarter in which the monitor or continuous emission monitoring system is provisionally certified.

2.2.1 Linearity Check

Perform a linearity check, in ~~accordance~~ compliance with the procedures in Section 6.2 of Exhibit A to Appendix B, for each primary and redundant backup, mercury monitor and each primary and redundant backup CO_2 or O_2 monitor (including O_2 monitors used to measure CO_2 emissions or to continuously monitor moisture) at least once during each QA operating quarter, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140. For mercury monitors, perform the linearity checks using elemental mercury standards. Alternatively, you may perform 3-level system integrity checks at the same three calibration gas levels (i.e., low, mid, and high), using a NIST-traceable source of oxidized mercury. If you choose this option, the performance specification in Section 3.2(c) of Exhibit A to Appendix B must be met at each gas level. For units using both a low and high span value, a linearity check is required only on the ranges used to record and report emission data during the QA operating quarter. Conduct the linearity checks no less than 30 days apart, to the extent practicable. The data validation procedures in Section

2.2.3(e) ~~of this Exhibit~~ must be followed.

2.2.2 Leak Check

For differential pressure flow monitors, perform a leak check of all sample lines (a manual check is acceptable) at least once during each QA operating quarter. For this test, the unit does not have to be in operation. Conduct the leak checks no less than 30 days apart, to the extent practicable. If a leak check is failed, follow the applicable data validation procedures in Section 2.2.3(g) ~~of this Exhibit~~.

2.2.3 Data Validation

a) A linearity check must not be commenced if the monitoring system is operating out-of-control with respect to any of the daily or semiannual quality assurance assessments required by Sections 2.1 and 2.3 ~~of this Exhibit~~ or with respect to the additional calibration error test requirements in Section 2.1.3 ~~of this Exhibit~~.

b) Each required linearity check must be done according to subsection (b)(1), (b)(2), or (b)(3) ~~of this Section~~:

1) The linearity check may be done "cold," i.e., with no corrective maintenance, repair, calibration adjustments, re-linearization, or reprogramming of the monitor prior to the test.

2) The linearity check may be done after performing only the routine or non-routine calibration adjustments described in Section 2.1.3 ~~of this Exhibit~~ at the various calibration gas levels (zero, low, mid, or high), but no other corrective maintenance, repair, re-linearization, or reprogramming of the monitor. Trial gas injection runs may be performed after the calibration adjustments and additional adjustments within the allowable limits in Section 2.1.3 ~~of this Exhibit~~ may be made prior to the linearity check, as necessary, to optimize the performance of the monitor. The trial gas injections need not be reported, provided that they meet the specification for trial gas injections in Section 1.4(b)(3)(G)(v) of Appendix B. However, if, for any trial injection, the specification in Section 1.4(b)(3)(G)(v) is not met, the trial injection must be counted as an aborted linearity check.

3) The linearity check may be done after repair, corrective maintenance, or reprogramming of the monitor. In this case, the monitor must be considered out-of-control from the hour in which the repair, corrective maintenance, or reprogramming is commenced until the linearity check has been passed. Alternatively, the data validation procedures and associated timelines in Sections 1.4(b)(3)(B) through (I) of Appendix B may be followed upon completion of the necessary repair, corrective maintenance, or reprogramming. If the procedures in Section 1.4(b)(3) are

used, the words "quality assurance" apply instead of the word "recertification".

c) Once a linearity check has been commenced, the test must be done hands-off. That is, no adjustments of the monitor are permitted during the linearity test period, other than the routine calibration adjustments following daily calibration error tests, as described in Section 2.1.3 ~~of this Exhibit~~. If a routine daily calibration error test is performed and passed just prior to a linearity test (or during a linearity test period) and a mathematical correction factor is automatically applied by the DAHS, the correction factor must be applied to all subsequent data recorded by the monitor, including the linearity test data.

d) If a daily calibration error test is failed during a linearity test period, prior to completing the test, the linearity test must be repeated. Data from the monitor are invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful calibration error test. The linearity test must not be commenced until the monitor has successfully completed a calibration error test.

e) An out-of-control period occurs when a linearity test is failed (i.e., when the error in linearity at any of the three concentrations in the quarterly linearity check (or any of the six concentrations, when both ranges of a single analyzer with a dual range are tested) exceeds the applicable specification in Section 3.2 of Exhibit A to Appendix B) or when a linearity test is aborted due to a problem with the monitor or monitoring system. The out-of-control period begins with the hour of the failed or aborted linearity check and ends with the hour of completion of a satisfactory linearity check following corrective action and/or monitor repair, unless the option in subsection (b)(3) ~~of this Section~~ to use the data validation procedures and associated timelines in Section 1.4(b)(3)(B) through (I) ~~of this Appendix~~ has been selected, in which case the beginning and end of the out-of-control period must be determined in ~~accordance~~ compliance with Sections 1.4(b)(3)(G)(i) and (ii). For a dual-range analyzer, "hands-off" linearity checks must be passed on both measurement scales to end the out-of-control period.

f) No more than four successive calendar quarters must elapse after the quarter in which a linearity check of a monitor or monitoring system (or range of a monitor or monitoring system) was last performed without a subsequent linearity test having been conducted. If a linearity test has not been completed by the end of the fourth calendar quarter since the last linearity test, then the linearity test must be completed within a 168 unit operating hour or stack operating hour "grace period" (as provided in Section 2.2.4 ~~of this Exhibit~~) following the end of the fourth successive elapsed calendar quarter, or data from the CEMS (or range) will become invalid.

g) An out-of-control period also occurs when a flow monitor sample line leak is detected. The out-of-control period begins with the hour of the failed leak check

and ends with the hour of a satisfactory leak check following corrective action.

h) For each monitoring system, report the results of all completed and partial linearity tests that affect data validation (i.e., all completed, passed linearity checks; all completed, failed linearity checks; and all linearity checks aborted due to a problem with the monitor, including trial gas injections counted as failed test attempts under subsection (b)(2) ~~of this Section~~ or under Section 1.4(b)(3)(G)(vi) of Appendix B), in the quarterly report required under 40 CFR 75.64, incorporated by reference in Section 225.140. Note that linearity attempts that are aborted or invalidated due to problems with the reference calibration gases or due to operational problems with the affected units need not be reported. Such partial tests do not affect the validation status of emission data recorded by the monitor. A record of all linearity tests, trial gas injections, and test attempts (whether reported or not) must be kept on-site as part of the official test log for each monitoring system.

2.2.4 Linearity and Leak Check Grace Period

a) When a required linearity test or flow monitor leak check has not been completed by the end of the QA operating quarter in which it is due or if, due to infrequent operation of a unit or infrequent use of a required high range of a monitor or monitoring system, four successive calendar quarters have elapsed after the quarter in which a linearity check of a monitor or monitoring system (or range) was last performed without a subsequent linearity test having been done, the owner or operator has a grace period of 168 consecutive unit operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140 (or, for monitors installed on common stacks or bypass stacks, 168 consecutive stack operating hours, as defined in 40 CFR 72.2) in which to perform a linearity test or leak check of that monitor or monitoring system (or range). The grace period begins with the first unit or stack operating hour following the calendar quarter in which the linearity test was due. Data validation during a linearity or leak check grace period must be done in ~~accordance~~ compliance with the applicable provisions in Section 2.2.3 ~~of this Exhibit~~.

b) If, at the end of the 168 unit (or stack) operating hour grace period, the required linearity test or leak check has not been completed, data from the monitoring system (or range) will be invalid, beginning with the first unit operating hour following the expiration of the grace period. Data from the monitoring system (or range) remain invalid until the hour of completion of a subsequent successful hands-off linearity test or leak check of the monitor or monitoring system (or range). Note that when a linearity test or a leak check is conducted within a grace period for the purpose of satisfying the linearity test or leak check requirement from a previous QA operating quarter, the results of that linearity test or leak check may only be used to meet the linearity check or leak check requirement of the previous quarter, not the quarter in which the missed linearity test or leak check is completed.

2.2.5 Flow-to-Load Ratio or Gross Heat Rate Evaluation

a) Applicability and Methodology. Unless exempted from the flow-to-load ratio test under Section 7.6 of Exhibit A to Appendix B, the owner or operator must, for each flow rate monitoring system installed on each unit, common stack or multiple stack, evaluate the flow-to-load ratio quarterly, i.e., for each QA operating quarter (as defined in 40 CFR 72.2, incorporated by reference in Section 225.140). At the end of each QA operating quarter, the owner or operator must use Equation B-1 to calculate the flow-to-load ratio for every hour during the quarter in which: the unit (or combination of units, for a common stack) operated within ±10.0 percent of R_h, the average load during the most recent normal-load flow RATA; and a quality assured hourly average flow rate was obtained with a certified flow rate monitor. Alternatively, for the reasons stated in subsections (c)(1) through (c)(6) ~~of this Section~~, the owner or operator may exclude from the data analysis certain hours within ±10.0 percent of L_{avg} and may calculate R_h values for only the remaining hours.

$$R_h = \frac{Q_h}{L_h} \times 10^{-5} \qquad \text{(Eq. B-1)}$$

Where:

R_h = Hourly value of the flow-to-load ratio, scfh/megawatts, scfh/1000 lb/hr of steam, or scfh/(mmBtu/hr thermal output).

Q_h = Hourly stack gas volumetric flow rate, as measured by the flow rate monitor, scfh.

L_h = Hourly unit load, megawatts, 1000 lb/hr of steam, or mmBtu/hr thermal output; must be within + 10.0 percent of L_{avg} during the most recent normal-load flow RATA.

1) In Equation B-1, the owner or operator may use either bias-adjusted flow rates or unadjusted flow rates, provided that all of the ratios are calculated the same way. For a common stack, L_h will be the sum of the hourly operating loads of all units that discharge through the stack. For a unit that discharges its emissions through multiple stacks or that monitors its emissions in multiple breechings, Q_h will be either the combined hourly volumetric flow rate for all of the stacks or ducts (if the test is done on a unit basis) or the hourly flow rate through each stack individually (if the test is performed separately for each stack). For a unit with a multiple stack discharge configuration consisting of a main stack and a bypass stack, each of which has a certified flow monitor (e.g., a unit with a wet

SO_2 scrubber), calculate the hourly flow-to-load ratios separately for each stack. Round off each value of R_h to two decimal places.

2) Alternatively, the owner or operator may calculate the hourly gross heat rates (GHR) in lieu of the hourly flow-to-load ratios. The hourly GHR must be determined only for those hours in which quality assured flow rate data and diluent gas (CO_2 or O_2) concentration data are both available from a certified monitor or monitoring system or reference method. If this option is selected, calculate each hourly GHR value as follows:

$$(GHR)_h = \frac{(HeatInput)_h}{L_h} \times 1000 \qquad \text{(Eq B-1a)}$$

Where:

$(GHR)_h$ = Hourly value of the gross heat rate, Btu/kwh, Btu/lb steam load, or 1000 mmBtu heat input/mmBtu thermal output.

$(HeatInput)_h$ = Hourly heat input, as determined from the quality assured flow rate and diluent data, using the applicable equation in Exhibit C to appendix B, mmBtu/hr.

L_h = Hourly unit load, megawatts, 1000 lb/hr of steam, or mmBtu/hr thermal output; must be within + 10.0 percent of L_{avg} during the most recent normal-load flow RATA.

3) In Equation B-1a, the owner or operator may either use bias-adjusted flow rates or unadjusted flow rates in the calculation of $(HeatInput)_h$, provided that all of the heat input values are determined in the same manner.

4) The owner or operator must evaluate the calculated hourly flow-to-load ratios (or gross heat rates) as follows. A separate data analysis must be performed for each primary and each redundant backup flow rate monitor used to record and report data during the quarter. Each analysis must be based on a minimum of 168 acceptable recorded hourly average flow rates (i.e., at loads within ± 10 percent of L_{avg}). When two RATA load levels are designated as normal, the analysis must be performed at the higher load level, unless there are fewer than 168 acceptable data points available at that load level, in which case the analysis must be performed at the lower load level. If, for a particular flow monitor, fewer than 168 acceptable hourly flow-to-load ratios (or GHR values) are available at any of the load levels designated as normal, a flow-to-load (or GHR) evaluation is not required for that monitor for that calendar quarter.

5) For each flow monitor, use Equation B-2 in this Exhibit to calculate E_h, the absolute percentage difference between each hourly R_h value and R_{ref}, the reference value of the flow-to-load ratio, as determined in ~~accordance~~ compliance with Section 7.5 of Exhibit A to Appendix B. Note that R_{ref} must always be based upon the most recent normal-load RATA, even if that RATA was performed in the calendar quarter being evaluated.

$$E_h = \frac{\left|R_{ref} - R_h\right|}{R_{ref}} \times 100 \qquad \text{(Eq B-2)}$$

Where:

E_h = Absolute percentage difference between the hourly average flow-to-load ratio and the reference value of the flow-to-load ratio at normal load.

R_h = The hourly average flow-to-load ratio, for each flow rate recorded at a load level within ±10.0 percent of L_{avg}.

R_{ref} = The reference value of the flow-to-load ratio from the most recent normal-load flow RATA, determined in ~~accordance~~ compliance with Section 7.5 of Exhibit A ~~to this Appendix~~.

6) Equation B-2 must be used in a consistent manner. That is, use R_{ref} and R_h if the flow-to-load ratio is being evaluated, and use (GHR)ref and (GHR) h if the gross heat rate is being evaluated. Finally, calculate E_f, the arithmetic average of all of the hourly E_h values. The owner or operator must report the results of each quarterly flow-to-load (or gross heat rate) evaluation, as determined from Equation B-2, in the electronic quarterly report required under 40 CFR 75.64, incorporated by reference in Section 225.140.

b) Acceptable Results. The results of a quarterly flow-to-load (or gross heat rate) evaluation are acceptable, and no further action is required, if the calculated value of E_f is less than or equal to: (1) 15.0 percent, if L_{avg} for the most recent normal-load flow RATA is ≥60 megawatts (or ≥500 klb/hr of steam) and if unadjusted flow rates were used in the calculations; or (2) 10.0 percent, if L_{avg} for the most recent normal-load flow RATA is ≥60 megawatts (or ≥500 klb/hr of steam) and if bias-adjusted flow rates were used in the calculations; or (3) 20.0 percent, if L_{avg} for the most recent normal-load flow RATA is <60 megawatts (or <500 klb/hr of steam) and if unadjusted flow rates were used in the calculations; or (4) 15.0

percent, if L_{avg} for the most recent normal-load flow RATA is <60 megawatts (or <500 klb/hr of steam) and if bias-adjusted flow rates were used in the calculations. If E_f is above these limits, the owner or operator must either: implement Option 1 in Section 2.2.5.1 ~~of this Exhibit~~; or perform a RATA in ~~accordance~~ compliance with Option 2 in Section 2.2.5.2 of this Exhibit; or re-examine the hourly data used for the flow-to-load or GHR analysis and recalculate E_f, after excluding all non-representative hourly flow rates. If E_f is above these limits, the owner or operator must either: implement Option 1 in Section 2.2.5.1 of this Exhibit; perform a RATA in ~~accordance~~ compliance with Option 2 in Section 2.2.5.2 of this Exhibit; or (if applicable) re-examine the hourly data used for the flow-to-load or GHR analysis and recalculate E_f, after excluding all non-representative hourly flow rates, as provided in subsection (c) ~~of this Section~~.

c) Recalculation of E_f. If the owner or operator did not exclude any hours within ±10 percent of L_{avg} from the original data analysis and chooses to recalculate E_f, the flow rates for the following hours are considered non-representative and may be excluded from the data analysis:

1) Any hour in which the type of fuel combusted was different from the fuel burned during the most recent normal-load RATA. For purposes of this determination, the type of fuel is different if the fuel is in a different state of matter (i.e., solid, liquid, or gas) than is the fuel burned during the RATA or if the fuel is a different classification of coal (e.g., bituminous versus sub-bituminous). Also, for units that co-fire different types of fuels, if the reference RATA was done while co-firing, then hours in which a single fuel was combusted may be excluded from the data analysis as different fuel hours (and vice-versa for co-fired hours, if the reference RATA was done while combusting only one type of fuel);

2) For a unit that is equipped with an SO_2 scrubber and that always discharges its flue gases to the atmosphere through a single stack, any hour in which the SO_2 scrubber was bypassed;

3) Any hour in which "ramping" occurred, i.e., the hourly load differed by more than ±15.0 percent from the load during the preceding hour or the subsequent hour;

4) For a unit with a multiple stack discharge configuration consisting of a main stack and a bypass stack, any hour in which the flue gases were discharged through both stacks;

5) If a normal-load flow RATA was performed and passed during the quarter being analyzed, any hour prior to completion of that RATA; and

6) If a problem with the accuracy of the flow monitor was discovered during the quarter and was corrected (as evidenced by passing the abbreviated flow-to-load test in Section 2.2.5.3 ~~of this Exhibit~~), any hour prior to completion of the abbreviated flow-to-load test.

7) After identifying and excluding all non-representative hourly data in ~~accordance~~ compliance with subsections (c)(1) through (6) ~~of this Section~~, the owner or operator may analyze the remaining data a second time. At least 168 representative hourly ratios or GHR values must be available to perform the analysis; otherwise, the flow-to-load (or GHR) analysis is not required for that monitor for that calendar quarter.

8) If, after re-analyzing the data, E_f meets the applicable limit in subsection (b)(1), (b)(2), (b)(3), or (b)(4) ~~of this Section~~, no further action is required. If, however, E_f is still above the applicable limit, data from the monitor will be declared out-of-control, beginning with the first unit operating hour following the quarter in which E_f exceeded the applicable limit. Alternatively, if a probationary calibration error test is performed and passed according to Section 1.4(b)(3)(B) of Appendix B, data from the monitor may be declared conditionally valid following the quarter in which E_f exceeded the applicable limit. The owner or operator must then either implement Option 1 in Section 2.2.5.1 ~~of this Exhibit~~ or Option 2 in Section 2.2.5.2 ~~of this Exhibit~~.

2.2.5.1 Option 1

Within 14 unit operating days of the end of the calendar quarter for which the E_f value is above the applicable limit, investigate and troubleshoot the applicable flow monitors. Evaluate the results of each investigation as follows:

a) If the investigation fails to uncover a problem with the flow monitor, a RATA must be performed in ~~accordance~~ compliance with Option 2 in Section 2.2.5.2 ~~of this Exhibit~~.

b) If a problem with the flow monitor is identified through the investigation (including the need to re-linearize the monitor by changing the polynomial coefficients or K-factors), data from the monitor are considered invalid back to the first unit operating hour after the end of the calendar quarter for which E_f was above the applicable limit. If the option to use conditional data validation was selected under Section 2.2.5(c)(8) ~~of this Exhibit~~, all conditionally valid data will be invalidated, back to the first unit operating hour after the end of the calendar quarter for which E_f was above the applicable limit. Corrective actions must be taken. All corrective actions (e.g., non-routine maintenance, repairs,

major component replacements, re-linearization of the monitor, etc.) must be documented in the operation and maintenance records for the monitor. The owner or operator then must either complete the abbreviated flow-to-load test in Section 2.2.5.3 ~~of this Exhibit~~, or, if the corrective action taken has required relinearization of the flow monitor, must perform a 3-load RATA. The conditional data validation procedures in Section 1.4(b)(3)of Appendix B may be applied to the 3-load RATA.

2.2.5.2 Option 2

Perform a single-load RATA (at a load designated as normal under Section 6.5.2.1 of Exhibit A to Appendix B) of each flow monitor for which E_f is outside of the applicable limit. If the RATA is passed hands-off, in ~~accordance~~ compliance with Section 2.3.2(c) ~~of this Exhibit~~, no further action is required and the out-of-control period for the monitor ends at the date and hour of completion of a successful RATA, unless the option to use conditional data validation was selected under Section 2.2.5(c)(8) ~~of this Exhibit~~. In that case, all conditionally valid data from the monitor are considered to be quality-assured, back to the first unit operating hour following the end of the calendar quarter for which the E_f value was above the applicable limit. If the RATA is failed, all data from the monitor will be invalidated, back to the first unit operating hour following the end of the calendar quarter for which the E_f value was above the applicable limit. Data from the monitor remain invalid until the required RATA has been passed. Alternatively, following a failed RATA and corrective actions, the conditional data validation procedures of Section 1.4(b)(3) of Appendix B may be used until the RATA has been passed. If the corrective actions taken following the failed RATA included adjustment of the polynomial coefficients or K-factors of the flow monitor, a 3-level RATA is required, except as otherwise specified in Section 2.3.1.3 ~~of this Exhibit~~.

2.2.5.3 Abbreviated Flow-to-Load Test

a) The following abbreviated flow-to-load test may be performed after any documented repair, component replacement, or other corrective maintenance to a flow monitor (except for changes affecting the linearity of the flow monitor, such as adjusting the flow monitor coefficients or K-factors) to demonstrate that the repair, replacement, or other maintenance has not significantly affected the monitor's ability to accurately measure the stack gas volumetric flow rate. Data from the monitoring system are considered invalid from the hour of commencement of the repair, replacement, or maintenance until either the hour in which the abbreviated flow-to-load test is passed, or the hour in which a probationary calibration error test is passed following completion of the repair, replacement, or maintenance and any associated adjustments to the monitor. If the latter option is selected, the abbreviated flow-to-load test must be completed within 168 unit operating hours of the probationary calibration error test (or, for peaking units, within 30 unit operating days, if that is less restrictive). Data from the monitor are considered to be conditionally valid (as defined in 40 CFR 72.2, incorporated by reference in Section 225.140), beginning with the hour of the

probationary calibration error test.

b) Operate the units in such a way as to reproduce, as closely as practicable, the exact conditions at the time of the most recent normal-load flow RATA. To achieve this, it is recommended that the load be held constant to within ±10.0 percent of the average load during the RATA and that the diluent gas (CO_2 or O_2) concentration be maintained within ±-0.5 percent CO_2 or O_2 of the average diluent concentration during the RATA. For common stacks, to the extent practicable, use the same combination of units and load levels that were used during the RATA. When the process parameters have been set, record a minimum of six and a maximum of 12 consecutive hourly average flow rates, using the flow monitors for which E_f was outside the applicable limit. For peaking units, a minimum of three and a maximum of 12 consecutive hourly average flow rates are required. Also record the corresponding hourly load values and, if applicable, the hourly diluent gas concentrations. Calculate the flow-to-load ratio (or GHR) for each hour in the test hour period, using Equation B-1 or B-1a. Determine E_h for each hourly flow- to-load ratio (or GHR), using Equation B-2 ~~of this Exhibit~~ and then calculate E_f, the arithmetic average of the Eh values.

c) The results of the abbreviated flow-to-load test will be considered acceptable, and no further action is required if the value of E_h does not exceed the applicable limit specified in Section 2.2.5 ~~of this Exhibit~~. All conditionally valid data recorded by the flow monitor will be considered quality assured, beginning with the hour of the probationary calibration error test that preceded the abbreviated flow-to-load test (if applicable). However, if E_f is outside the applicable limit, all conditionally valid data recorded by the flow monitor (if applicable) will be considered invalid back to the hour of the probationary calibration error test that preceded the abbreviated flow-to-load test, and a single-load RATA is required in ~~accordance~~ compliance with Section 2.2.5.2 ~~of this Exhibit~~. If the flow monitor must be re-linearized, however, a 3-load RATA is required.

2.3 Semiannual and Annual Assessments

For each primary and redundant backup monitoring system, perform relative accuracy assessments either semiannually or annually, as specified in Section 2.3.1.1 or 2.3.1.2 ~~of this Exhibit~~ for the type of test and the performance achieved. This requirement applies as of the calendar quarter following the calendar quarter in which the monitoring system is provisionally certified. A summary chart showing the frequency with which a relative accuracy test audit must be performed, depending on the accuracy achieved, is ~~located~~ at the end of this Exhibit in Figure 2.

2.3.1 Relative Accuracy Test Audit (RATA)

2.3.1.1 Standard RATA Frequencies

a) Except for mercury monitoring systems, and as otherwise specified in Section 2.3.1.2 ~~of this Exhibit~~, perform relative accuracy test audits semiannually, i.e., once every two successive QA operating quarters (as defined in 40 CFR 72.2, incorporated by reference in Section 225.140) for each primary and redundant backup flow monitor, CO_2 or O_2 diluent monitor used to determine heat input and each moisture monitoring system. For each primary and redundant backup mercury concentration monitoring system and each sorbent trap monitoring system, RATAs must be performed annually, i.e., once every four successive QA operating quarters (as defined in 40 CFR 72.2). A calendar quarter that does not qualify as a QA operating quarter must be excluded in determining the deadline for the next RATA. No more than eight successive calendar quarters must elapse after the quarter in which a RATA was last performed without a subsequent RATA having been conducted. If a RATA has not been completed by the end of the eighth calendar quarter since the quarter of the last RATA, then the RATA must be completed within a 720 unit (or stack) operating hour grace period (as provided in Section 2.3.3 ~~of this Exhibit~~) following the end of the eighth successive elapsed calendar quarter, or data from the CEMS will become invalid.

b) The relative accuracy test audit frequency of a CEMS may be reduced, as specified in Section 2.3.1.2 ~~of this Exhibit~~, for primary or redundant backup monitoring systems which qualify for less frequent testing. Perform all required RATAs in accordance with the applicable procedures and provisions in Sections 6.5 through 6.5.2.2 of Exhibit A to Appendix B and Sections 2.3.1.3 and 2.3.1.4 ~~of this Exhibit~~.

2.3.1.2 Reduced RATA Frequencies

Relative accuracy test audits of primary and redundant backup CO_2 or O_2 diluent monitors used to determine heat input, moisture monitoring systems, and flow monitors may be performed annually (i.e., once every four successive QA operating quarters, rather than once every two successive QA operating quarters) if any of the following conditions are met for the specific monitoring system involved:

a) The relative accuracy during the audit of a CO_2 or O_2 diluent monitor used to determine heat input is ≤7.5 percent;

b) The relative accuracy during the audit of a flow monitor is ≤7.5 percent at each operating level tested;

c) For low flow (≤10.0 fps), as measured by the reference method during the RATA stacks/ducts, when the flow monitor fails to achieve a relative accuracy ≤7.5 percent during the audit, but the monitor mean value, calculated using Equation A-7 in Exhibit A to Appendix B and converted back to an equivalent velocity in standard feet per second (fps), is within ± 1.5 fps of the reference method mean value, converted to an equivalent velocity in fps;

d) For a CO_2 or O_2 monitor, when the mean difference between the reference method values from the RATA and the corresponding monitor values is within ± 0.7 percent CO_2 or O_2; and

e) When the relative accuracy of a continuous moisture monitoring system is ≤ 7.5 percent or when the mean difference between the reference method values from the RATA and the corresponding monitoring system values is within ±1.0 percent H_2O.

2.3.1.3 RATA Load Levels and Additional RATA Requirements

a) For CO_2 or O_2 diluent monitors used to determine heat input, mercury concentration monitoring systems, sorbent trap monitoring systems, and moisture monitoring systems, the required semiannual or annual RATA tests must be done at the load level designated as normal under Section 6.5.2.1(d) of Exhibit A to Appendix B. If two load levels are designated as normal, the required RATAs may be done at either load level.

b) For flow monitors installed and bypass stacks, all required semiannual or annual relative accuracy test audits must be single-load audits at the normal load, as defined in Section 6.5.2.1(d) of Exhibit A to Appendix B.

c) For all other flow monitors, the RATAs must be performed as follows:

1) An annual 2-load flow RATA must be done at the two most frequently used load levels, as determined under Section 6.5.2.1(d) of Exhibit A to Appendix B. Alternatively, a 3-load flow RATA at the low, mid, and high load levels, as defined under Section 6.5.2.1(b) of Exhibit A to Appendix B, may be performed in lieu of the 2-load annual RATA.

2) If the flow monitor is on a semiannual RATA frequency, 2-load flow RATAs and single-load flow RATAs at the normal load level may be performed alternately.

3) A single-load annual flow RATA may be performed in lieu of the 2-load RATA if the results of an historical load data analysis show that, in the time period extending from the ending date of the last annual flow RATA to a date that is no more than 21 days prior to the date of the current annual flow RATA, the unit (or combination of units, for a common stack) has operated at a single load level (low, mid, or high), for ≥85.0 percent of the time. Alternatively, a flow monitor may qualify for a single-load RATA if the 85.0 percent criterion is met in the time period extending from the beginning of the quarter in which the last annual flow RATA was performed through the end of the calendar quarter preceding the quarter of current annual flow RATA.

4) A 3-load RATA, at the low-, mid-, and high-load levels, as determined under Section 6.5.2.1 of Exhibit A to Appendix B, must be performed at least once every 20 consecutive calendar quarters, except for flow monitors that are exempted from 3-load RATA testing under Section 6.5.2(b) of Exhibit A to Appendix B.

5) A 3-load RATA is required whenever a flow monitor is re-characterized, i.e., when its polynomial coefficients or K-factors are changed, except for flow monitors that are exempted from 3-load RATA testing under Section 6.5.2(b) of Exhibit A to Appendix B. For monitors so exempted under Section 6.5.2(b), a single-load flow RATA is required.

6) For all multi-level flow audits, the audit points at adjacent load levels or at adjacent operating levels (e.g., mid and high) must be separated by no less than 25.0 percent of the "range of operation," as defined in Section 6.5.2.1 of Exhibit A to Appendix B.

d) A RATA of a moisture monitoring system must be performed whenever the coefficient, K-factor or mathematical algorithm determined under Section 6.5.6 of Exhibit A to Appendix B is changed.

2.3.1.4 Number of RATA Attempts

The owner or operator may perform as many RATA attempts as are necessary to achieve the desired relative accuracy test audit frequencies. However, the data validation procedures in Section 2.3.2 ~~of this Exhibit~~ must be followed.

2.3.2 Data Validation

a) A RATA must not commence if the monitoring system is operating out-of-control with respect to any of the daily and quarterly quality assurance assessments required by Sections 2.1 and 2.2 ~~of this Exhibit~~ or with respect to the additional calibration error test requirements in Section 2.1.3 ~~of this Exhibit~~.

b) Each required RATA must be done according to subsections (b)(1), (b)(2) or (b)(3) ~~of this Section~~:

1) The RATA may be done "cold," i.e., with no corrective maintenance, repair, calibration adjustments, re-linearization, or reprogramming of the monitoring system prior to the test.

2) The RATA may be done after performing only the routine or non-routine calibration adjustments described in Section 2.1.3 ~~of this Exhibit~~ at the zero and/or upscale calibration gas levels, but no other corrective maintenance, repair, re-linearization, or reprogramming of the monitoring system. Trial RATA runs may be performed after the calibration

adjustments and additional adjustments within the allowable limits in Section 2.1.3 ~~of this Exhibit~~ may be made prior to the RATA, as necessary, to optimize the performance of the CEMS. The trial RATA runs need not be reported, provided that they meet the specification for trial RATA runs in Section 1.4(b)(3)(G)(v) of Appendix B. However, if, for any trial run, the specification in Section 1.4(b)(3)(G)(v) of Appendix B is not met, the trial run must be counted as an aborted RATA attempt.

3) The RATA may be done after repair, corrective maintenance, re-linearization, or reprogramming of the monitoring system. In this case, the monitoring system will be considered out-of-control from the hour in which the repair, corrective maintenance, re-linearization, or reprogramming is commenced until the RATA has been passed. Alternatively, the data validation procedures and associated timelines in Sections 1.4(b)(3)(B) through (I) of Appendix B may be followed upon completion of the necessary repair, corrective maintenance, re-linearization, or reprogramming. If the procedures in Section 1.4(b)(3) of Appendix B are used, the words "quality assurance" apply instead of the word "recertification".

c) Once a RATA is commenced, the test must be done hands-off. No adjustment of the monitor's calibration is permitted during the RATA test period, other than the routine calibration adjustments following daily calibration error tests, as described in Section 2.1.3 ~~of this Exhibit~~. If a routine daily calibration error test is performed and passed just prior to a RATA (or during a RATA test period) and a mathematical correction factor is automatically applied by the DAHS, the correction factor must be applied to all subsequent data recorded by the monitor, including the RATA test data. For 2-level and 3- level flow monitor audits, no linearization or reprogramming of the monitor is permitted in between load levels.

d) For single-load RATAs, if a daily calibration error test is failed during a RATA test period, prior to completing the test, the RATA must be repeated. Data from the monitor are invalidated prospectively from the hour of the failed calibration error test until the hour of completion of a subsequent successful calibration error test. The subsequent RATA must not be commenced until the monitor has successfully passed a calibration error test in accordance with Section 2.1.3 ~~of this Exhibit~~. Notwithstanding these requirements, when ASTM D6784-02 (incorporated by reference under Section 225.140) or Method 29 in appendix A-8 to 40 CFR 60, incorporated by reference in Section 225.140, is used as the reference method for the RATA of a mercury CEMS, if a calibration error test of the CEMS is failed during a RATA test period, any test runs completed prior to the failed calibration error test need not be repeated; however, the RATA may not continue until a subsequent calibration error test of the mercury CEMS has been passed. For multiple-load flow RATAs, each load level is treated as a separate RATA (i.e., when a calibration error test is failed prior to completing the RATA at a particular load level, only the RATA at that load level must be repeated; the

results of any previously-passed RATAs at the other load levels are unaffected, unless re-characterization of the monitor is required to correct the problem that caused the calibration failure, in which case a subsequent 3-load RATA is required), except as otherwise provided in Section 2.3.1.3(c)(5) ~~of this Exhibit~~.

e) For a RATA performed using the option in subsection (b)(1) or (b)(2) ~~of this Section~~, if the RATA is failed (that is, if the relative accuracy exceeds the applicable specification in Section 3.3 of Exhibit A to Appendix B) or if the RATA is aborted prior to completion due to a problem with the CEMS, then the CEMS is out-of-control and all emission data from the CEMS are invalidated prospectively from the hour in which the RATA is failed or aborted. Data from the CEMS remain invalid until the hour of completion of a subsequent RATA that meets the applicable specification in Section 3.3 of Exhibit A to Appendix B . If the option in subsection (b)(3) ~~of this Section~~ to use the data validation procedures and associated timelines in Sections 1.4(b)(3)(B) through(b)(3)(I) of Appendix B has been selected, the beginning and end of the out-of-control period must be determined in ~~accordance~~ compliance with Section 1.4(b)(3)(G)(i) and (ii) of Appendix B. Note that when a RATA is aborted for a reason other than monitoring system malfunction (see subsection (g) ~~of this Section~~), this does not trigger an out-of-control period for the monitoring system.

f) For a 2-load or 3-load flow RATA, if, at any load level, a RATA is failed or aborted due to a problem with the flow monitor, the RATA at that load level, must be repeated. The flow monitor is considered out-of-control and data from the monitor are invalidated from the hour in which the test is failed or aborted and remain invalid until the passing of a RATA at the failed load level, unless the option in subsection (b)(3) ~~of this Section~~ to use the data validation procedures and associated timelines in Section 1.4(b)(3)(B) through (b)(3)(I) of Appendix B has been selected, in which case the beginning and end of the out-of-control period must be determined in ~~accordance~~ compliance with Section 1.4(b)(3)(G)(i) and (ii) of Appendix B. Flow RATAs that were previously passed at the other load levels, do not have to be repeated unless the flow monitor must be re-characterized following the failed or aborted test. If the flow monitor is recharacterized, a subsequent 3-load RATA is required, except as otherwise provided in Section 2.3.1.3(c)(5) ~~of this Exhibit~~.

g) For each monitoring system, report the results of all completed and partial RATAs that affect data validation (i.e., all completed, passed RATAs; all completed, failed RATAs; and all RATAs aborted due to a problem with the CEMS, including trial RATA runs counted as failed test attempts under subsection (b)(2) ~~of this Section~~ or under Section 1.4(b)(3)(G)(vi)) in the quarterly report required under 40 CFR 75.64, incorporated by reference in Section 225.140. Note that RATA attempts that are aborted or invalidated due to problems with the reference method or due to operational problems with the affected units need not be reported. Such runs do not affect the validation status of emission data recorded by the CEMS. However, a record of all RATAs, trial

RATA runs and RATA attempts (whether reported or not) must be kept on-site as part of the official test log for each monitoring system.

2.3.3 RATA Grace Period

a) The owner or operator has a grace period of 720 consecutive unit operating hours, as defined in 40 CFR 72.2, incorporated by reference in Section 225.140 (or, for CEMS installed on common stacks or bypass stacks, 720 consecutive stack operating hours, as defined in 40 CFR 72.2), in which to complete the required RATA for a particular CEMS whenever:

1) A required RATA has not been performed by the end of the QA operating quarter in which it is due; or

2) A required 3-load flow RATA has not been performed by the end of the calendar quarter in which it is due.

b) The grace period will begin with the first unit (or stack) operating hour following the calendar quarter in which the required RATA was due. Data validation during a RATA grace period must be done in ~~accordance~~ compliance with the applicable provisions in Section 2.3.2 ~~of this Exhibit~~.

c) If, at the end of the 720 unit (or stack) operating hour grace period, the RATA has not been completed, data from the monitoring system will be invalid, beginning with the first unit operating hour following the expiration of the grace period. Data from the CEMS remain invalid until the hour of completion of a subsequent hands-off RATA. The deadline for the next test will be either two QA operating quarters (if a semiannual RATA frequency is obtained) or four QA operating quarters (if an annual RATA frequency is obtained) after the quarter in which the RATA is completed, not to exceed eight calendar quarters.

d) When a RATA is done during a grace period in order to satisfy a RATA requirement from a previous quarter, the deadline for the next RATA must be determined as follows:

1) If the grace period RATA qualifies for a reduced, (i.e., annual), RATA frequency the deadline for the next RATA will be set at three QA operating quarters after the quarter in which the grace period test is completed.

2) If the grace period RATA qualifies for the standard, (i.e., semiannual), RATA frequency the deadline for the next RATA will be set at two QA operating quarters after the quarter in which the grace period test is completed.

3) Notwithstanding these requirements, no more than eight successive

calendar quarters must elapse after the quarter in which the grace period test is completed, without a subsequent RATA having been conducted.

2.4 Recertification, Quality Assurance, and RATA Frequency (Special Considerations)

a) When a significant change is made to a monitoring system such that recertification of the monitoring system is required in ~~accordance~~ compliance with Section 1.4(b)of Appendix B, a recertification test (or tests) must be performed to ensure that the CEMS continues to generate valid data. In all recertifications, a RATA will be one of the required tests; for some recertifications, other tests will also be required. A recertification test may be used to satisfy the quality assurance test requirement of this Exhibit. For example, if, for a particular change made to a CEMS, one of the required recertification tests is a linearity check and the linearity check is successful, then, unless another recertification event occurs in that same QA operating quarter, it would not be necessary to perform an additional linearity test of the CEMS in that quarter to meet the quality assurance requirement of Section 2.2.1 ~~of this Exhibit~~. For this reason, EPA recommends that owners or operators coordinate component replacements, system upgrades, and other events that may require recertification, to the extent practicable, with the periodic quality assurance testing required by this Exhibit. When a quality assurance test is done for the dual purpose of recertification and routine quality assurance, the applicable data validation procedures in Section 1.4(b)(3) must be followed.

b) Except for Hg monitoring systems (which always have an annual RATA frequency), whenever a passing RATA of a gas monitor is performed, or a passing 2-load RATA or a passing 3-load RATA of a flow monitor is performed (irrespective of whether the RATA is done to satisfy a recertification requirement or to meet the quality assurance requirements of this Exhibit, or both), the RATA frequency (semi-annual or annual) must be established based upon the date and time of completion of the RATA and the relative accuracy percentage obtained. For 2-load and 3-load flow RATAs, use the highest percentage relative accuracy at any of the loads to determine the RATA frequency. The results of a single-load flow RATA may be used to establish the RATA frequency when the single-load flow RATA is specifically required under Section 2.3.1.3(b) ~~of this Exhibit~~ or when the single-load RATA is allowed under Section 2.3.1.3(c) ~~of this Exhibit~~ for a unit that has operated at one load level for ≥85.0 percent of the time since the last annual flow RATA. No other single-load flow RATA may be used to establish an annual RATA frequency; however, a 2-load or 3-load flow RATA may be performed at any time, or in place of any required single-load RATA, in order to establish an annual RATA frequency.

2.5 Other Audits

Affected units may be subject to relative accuracy test audits at any time. If a monitor or continuous emission monitoring system fails the relative accuracy test during the audit, the

monitor or continuous emission monitoring system will be considered to be out-of-control beginning with the date and time of completion of the audit, and continuing until a successful audit test is completed following corrective action. Alternatively, the conditional data validation procedures and associated timelines in Sections 1.4(b)(3)(B) through (I) of Appendix B may be used following the corrective actions.

2.6 System Integrity Checks for Mercury Monitors

For each mercury concentration monitoring system (except for a mercury monitor that does not have a converter), perform a single-point system integrity check weekly, i.e., at least once every 168 unit or stack operating hours, using a NIST-traceable source of oxidized mercury. Perform this check using a mid- or high-level gas concentration, as defined in Section 5.2 of Exhibit A to Appendix B. The performance specifications in subsection (3) of Section 3.2 of Exhibit A to Appendix B must be met, otherwise the monitoring system is considered out-of-control, from the hour of the failed check until a subsequent system integrity check is passed. If a required system integrity check is not performed and passed within 168 unit or stack operating hours of last successful check, the monitoring system will also be considered out of control, beginning with the 169th unit or stack operating hour after the last successful check, and continuing until a subsequent system integrity check is passed. This weekly check is not required if the daily calibration assessments in Section 2.1.1 ~~of this Exhibit~~ are performed using a NIST-traceable source of oxidized mercury.

[Note: The following TABLE/FORM is too wide to be displayed on one screen. You must print it for a meaningful review of its contents. The table has been divided into multiple pieces with each piece containing information to help you assemble a printout of the table. The information for each piece includes: (1) a three line message preceding the tabular data showing by line # and character # the position of the upper left-hand corner of the piece and the position of the piece within the entire table; and (2) a numeric scale following the tabular data displaying the character positions.]

Figure 1 for Exhibit B of Appendix B − Quality Assurance Test Requirements

Test	Basic QA test frequency requirements [FN*]				
	Daily [FN*]	Weekly	Quarterly [FN*]	Semiannual [FN*]	Annual
Calibration Error Test (2 pt.)	/				
Interference Check (flow)	/				
Flow-to-Load Ratio			/		
Leak Check (DP flow monitors)			/		

Linearity Check or System Integrity Check [FN**] (3 pt.)		/	
Single-point System Integrity Check [FN**]	/		
RATA (SO_2, NO_x, CO_2, O_2, H_2O) [FN1]			/
RATA (All Hg monitoring systems)			/
RATA (flow) [FN1] [FN2]			/

[FN*] "Daily" means operating days, only. "Weekly" means once every 168 unit or stack operating hours. "Quarterly" means once every QA operating quarter. "Semiannual" means once every two QA operating quarters. "Annual" means once every four QA operating quarters.[FN**] The system integrity check applies only to Hg monitors with converters. The single-point weekly system integrity check is not required if daily calibrations are performed using a NIST-traceable source of oxidized Hg. The 3-point quarterly system integrity check is not required if a linearity check is performed.

[FN1] Conduct RATA annually (i.e., once every four QA operating quarters), if monitor meets accuracy requirements to qualify for less frequent testing. [FN2] For flow monitors installed on peaking units, bypass stacks conduct all RATAs at a single, normal load (or operating level). For other flow monitors, conduct annual RATAs at two load levels (or operating levels). Alternating single-load and 2-load (or single-level and 2-level) RATAs may be done if a monitor is on a semiannual frequency. A single-load (or single-level) RATA may be done in lieu of a 2-load (or 2-level) RATA if, since the last annual flow RATA, the unit has operated at one load level (or operating level) for ≥85.0 percent of the time. A 3-level RATA is required at least once every five calendar years and whenever a flow monitor is re-linearized, except for flow monitors exempted from 3-level RATA testing under Section 6.5.2(b) of Exhibit A to Appendix B.

Figure 2 for Exhibit B of Appendix B − Relative Accuracy Test Frequency Incentive System

RATA	Semiannual [FNW] (percent)	Annual [FNW]
SO_2 or NO_X [FNY]	7.5% < RA ≤ 10.0% or ± 15.0 ppm [FNX]	RA ≤ 7.5% or ± 12.0 ppm [FNX].
SO_2-diluent	7.5% < RA ≤ 10.0% or ± 0.030 lb/mmBtu [FNX]	RA ≤ 7.5% or ± 0.025 lb/mmBtu =G5X.

NO_X-diluent	7.5% < RA ≤ 10.0% or ± 0.020 lb/mmBtu [FNX]	RA ≤ 7.5% or ± 0. 015 lb/mmBtu [FNX].
Flow	7.5% < RA ≤ 10.0% or ± 2.0 fps [FNX]	RA ≤ 7.5% or ± 1.5 fps [FNX].
CO_2 or O_2	7.5% < RA ≤ 10.0% or ± 1.0 CO_2/O_2 [FNX]	RA ≤ 7.5% or ± 0.7% CO_2/O_2 [FNX].
Hg [FNX] <<mu>>g/scm	N/A	RA < 20.0% or ± 1.0 [FNX].
Moisture	7.5% < RA ≤ 10.0% or ± 1.5% H_2O [FNX]	RA ≤ 7.5% or ± 1.0% H_2O [FNX].

[FNW] The deadline for the next RATA is the end of the second (if semiannual) or fourth (if annual) successive QA operating quarter following the quarter in which the CEMS was last tested. Exclude calendar quarters with fewer than 168 unit operating hours (or, for common stacks and bypass stacks, exclude quarters with fewer than 168 stack operating hours) in determining the RATA deadline. For SO_2 monitors, QA operating quarters in which only very low sulfur fuel as defined in 40 CFR 72.2, incorporated by reference in Section 225.140, is combusted may also be excluded. However, the exclusion of calendar quarters is limited as follows: the deadline for the next RATA will be no more than 8 calendar quarters after the quarter in which a RATA was last performed. [FNX] The difference between monitor and reference method mean values applies to moisture monitors, CO_2, and O_2 monitors, low emitters of SO_2, NO_X, or Hg, or and low flow, only. The specifications for Hg monitors also apply to sorbent trap monitoring systems.[FNY] A NO_X concentration monitoring system used to determine NO_X mass emissions under 40 CFR 75.71, incorporated by reference in Section 225.140.

Section 225.APPENDIX B Continuous Emission Monitoring Systems for Mercury

Section 225.EXHIBIT C Conversion Procedures

1. Applicability

Use the procedures in this Exhibit to convert measured data from a monitor or continuous emission monitoring system into the appropriate units of the standard.

2. Procedures for Heat Input

Use the following procedures to compute heat input rate to an affected unit (in mmBtu/hr or mmBtu/day):

Calculate and record heat input rate to an affected unit on an hourly basis. The owner or operator may choose to use the provisions specified in 40 CFR 75.16(e), incorporated by reference in Section 225.140, in conjunction with the procedures provided in Sections 2.4 through 2.4.2 to apportion heat input among each unit using the common stack or common pipe header.

2.2

For an affected unit that has a flow monitor (or approved alternate monitoring system under subpart E of 40 CFR 75, incorporated by reference in Section 225.140, for measuring volumetric flow rate) and a diluent gas (O_2 or CO_2) monitor, use the recorded data from these monitors and one of the following equations to calculate hourly heat input rate (in mmBtu/hr).

2.2.1

When measurements of CO_2 concentration are on a wet basis, use the following equation:

$$HI = Q_w \frac{1}{F_c} \frac{\%CO_{2w}}{100} \qquad \text{(Eq. F - 15)}$$

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_w = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F_c = Carbon-based F-factor, listed in Section 3.3.5 of appendix F to 40 CFR 75 for each fuel, scf/mmBtu.

$\%CO_{2w}$ = Hourly concentration of CO_2 during unit operation, percent CO_2 wet basis.

2.2.2

When measurements of CO_2 concentration are on a dry basis, use the following equation:

$$HI = Qh\left[\frac{(100 - \%H_2 0)}{100F_c}\right]\left(\frac{\%CO_{2d}}{100}\right) \qquad \text{(Eq. F-16)}$$

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_h = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F_c = Carbon-based F-factor, listed in Section 3.3.5 of appendix F to 40 CFR 75 for each fuel, scf/mmBtu.

$\%CO_{2d}$ = Hourly concentration of CO_2 during unit operation, percent CO_2 wet basis.

$\%H_20$ = Moisture content of gas in the stack, percent.

2.2.3

When measurements of O_2 concentration are on a wet basis, use the following equation:

$$HI = Q_w \frac{1}{F} \frac{[(20.9/100)(100 - \%H_2O) - \%O_{2w}]}{20.9} \qquad \text{(Eq. F-17)}$$

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_w = Hourly average volumetric flow rate during unit operation, wet basis, scfh.

F = Carbon-based F-factor, listed in Section 3.3.5 of appendix F to 40 CFR 75 for each fuel, dscf/mmBtu.

$\%O_{2w}$ = Hourly concentration of O_2 during unit operation, percent O_2 wet basis.

$\%H_20$ = Hourly average stack moisture content, percent by volume.

2.2.4

When measurements of O_2 concentration are on a dry basis, use the following equation:

$$HI = Q_w \left[\frac{(100 - \%H_2O)}{100F}\right]\left[\frac{(20.9 - \%O_{2d})}{20.9}\right] \qquad \text{(Eq. F-18)}$$

Where:

HI = Hourly heat input rate during unit operation, mmBtu/hr.

Q_w = Hourly average volumetric flow during unit operation, wet basis, scfh.

F = Dry basis F-factor, listed in Section 3.3.5 of appendix F to 40 CFR 75 for each fuel, dscf/mmBtu.

$\%H_20$ = Moisture content of the stack gas, percent.

$\%O_{2d}$ = Hourly concentration of O_2 during unit operation, percent O_2 dry basis.

2.3

Heat Input Summation (for Heat Input Determined Using a Flow Monitor and Diluent Monitor)

2.3.1

Calculate total quarterly heat input for a unit or common stack using a flow monitor and diluent monitor to calculate heat input, using the following equation:

$$HI_q = \sum_{hour=1}^{n} HI_i t_i \qquad \text{(Eq. F-18a)}$$

Where:

HI_q = Total heat input for quarter "q", mmBtu.

HI_i = Heat input rate for hour "i" during unit operation, using Equation F-15, F-16, F-17, or F-18, mmBtu/hr.

t_i = Hourly operating time for the unit or common stack, hour or fraction of an hour (in equal increments that can range from 100^{th} to one quarter of an hour, at the option of the owner or operator).

n = Number of unit operating hours in the quarter.

2.3.2

Calculate total cumulative (year-to-date) heat input for a unit or common stack using a flow monitor and diluent monitor to calculate heat input, using the following equation:

$$HI_c = \sum_{q=1}^{the\_current\_quarter} HI_q \qquad \text{(Eq. F-18b)}$$

Where:

HI_c = Total heat input for the year-to-date, mmBtu.

HI_q = Total heat input for quarter "q", mmBtu.

2.4 Heat Input Rate Apportionment for Units Sharing a Common Stack or Pipe

2.4.1

Where applicable, the owner or operator of an affected unit that determines heat input rate at the unit level by apportioning the heat input monitored at a common stack or common pipe using megawatts must apportion the heat input rate using the following equation:

$$HI_i = HI_{CS}\left(\frac{t_{CS}}{t_i}\right)\left[\frac{MW_i t_i}{\sum_{i=1}^{n} MW_i t_i}\right] \qquad \text{(Eq. F-21a)}$$

Where:

HI_i = Heat input rate for a unit, mmBtu/hr.

HI_{CS} = Heat input rate at the common stack or pipe, mmBtu/hr.

MW_i = Gross electrical output, MWe.

t_i = Unit operating time, hour or fraction of an hour (in equal increments that can range from one hundredth to one quarter of an hour, at the option of the owner or operator).

t_{CS} = Common stack or common pipe operating time, hour or fraction of an hour (in equal increments that can range from 100th to one quarter of an hour, at the option of the owner or operator).

n = Total number of units using the common stack or pipe.

i = Designation of a particular unit.

2.4.2

Where applicable, the owner or operator of an affected unit that determines the heat input rate at the unit level by apportioning the heat input rate monitored at a common stack or common pipe using steam load must apportion the heat input rate using the following equation:

$$HI_i = HI_{CS}\left(\frac{t_{CS}}{t_i}\right)\left[\frac{SF_i t_i}{\sum_{i=1}^{n} SF_i t_i}\right] \qquad \text{(Eq. F-21b)}$$

Where:

HI_i = Heat input rate for a unit, mmBtu/hr.

HI_{CS} = Heat input rate at the common stack or pipe, mmBtu/hr.

SF = Gross steam load, lb/hr, or mmBtu/hr.

t_i = Unit operating time, hour or fraction of an hour (in equal increments that can range from 100th to one quarter of an hour, at the option of the owner or operator).

t_{CS} = Common stack or common pipe operating time, hour or fraction of an hour (in equal increments that can range from 100th to one quarter of an hour, at the option of the owner or operator).

n = Total number of units using the common stack or pipe.

i = Designation of a particular unit.

2.5 Heat Input Rate Summation for Units with Multiple Stacks or Pipes

The owner or operator of an affected unit that determines the heat input rate at the unit level by summing the heat input rates monitored at multiple stacks or multiple pipes must sum the heat input rates using the following equation:

$$HI_{Unit} = \frac{\sum_{s=1}^{n} HI_s t_s}{t_{Unit}} \qquad \text{(Eq. F-21c)}$$

Where:

HI_{Unit} = Heat input rate for a unit, mmBtu/hr.

HI_s = Heat input rate for the individual stack, duct, or pipe, mmBtu/hr.

t_{Unit} = Unit operating time, hour or fraction of the hour (in equal increments

that can range from 100th to one quarter of an hour, at the option of the owner or operator).

t_s = Operating time for the individual stack or pipe, hour or fraction of the hour (in equal increments that can range from 100th to one quarter of an hour, at the option of the owner or operator).

s = Designation for a particular stack, duct, or pipe.

3. Procedure for Converting Volumetric Flow to STP

Use the following equation to convert volumetric flow at actual temperature and pressure to standard temperature and pressure.

$$F_{STP} = F_{Actual}\left(T_{Std} / T_{Stack}\right)\left(P_{Stack} / P_{Std}\right) \qquad \text{(Eq. F-22)}$$

Where:

F_{STP} = Flue gas volumetric flow rate at standard temperature and pressure, scfh.

F_{Actual} = Flue gas volumetric flow rate at actual temperature and pressure, acfh.

T_{Std} = Standard temperature=528 degreesR.

T_{Stack} = Flue gas temperature at flow monitor location, degreesR, where degreesR = 460 + degreesF.

P_{Stack} = The absolute flue gas pressure=barometric pressure at the flow monitor location + flue gas static pressure, inches of mercury.

P_{Std} = Standard pressure=29.92 inches of mercury.

4. Procedures for Mercury Mass Emissions.

4.1

Use the procedures in this Section to calculate the hourly mercury mass emissions (in ounces) at each monitored location for the affected unit or group of units that discharge through a common stack.

4.1.1

To determine the hourly mercury mass emissions when using a mercury concentration monitoring system that measures on a wet basis and a flow monitor, use the following equation:

$$M_h = KC_hQ_ht_h \qquad \text{(Eq. F-28)}$$

Where:

M_h = Mercury mass emissions for the hour, rounded off to three decimal places, (ounces).

K = Units conversion constant, 9.978 x 10^{-10} oz-scm/µg-scf

C_h = Hourly mercury concentration, wet basis (µg/wscm).

Q_h = Hourly stack gas volumetric flow rate, (scfh)

t_h = Unit or stack operating time (hr), as defined in 40 CFR 72.2 as incorporated by reference in Section 225.140.

4.1.2

To determine the hourly mercury mass emissions when using a mercury concentration monitoring system that measures on a dry basis or a sorbent trap monitoring system and a flow monitor, use the following equation:

$$M_h = KC_hQ_ht_h\left(1 - B_{ws}\right) \qquad \text{(Eq. F-29)}$$

Where:

M_h = Mercury mass emissions for the hour, rounded off to three decimal places, (ounces).

K = Units conversion constant, 9.978 x 10^{-10} oz-scm/µg-scf

C_h = Hourly mercury concentration, dry basis (µg/dscm). For sorbent trap systems, a single value of C_h (i.e., a flow-proportional average concentration for the data collection period), is applied to each hour in the data collection period for a particular pair of traps.

Q_h = Hourly stack gas volumetric flow rate (scfh).

B_{ws} = Moisture fraction of the stack gas, expressed as a decimal (equal to %H_2O/ 100).

t_h = Unit or stack operating time (hr), as defined in 40 CFR 72.2, incorporated

by reference in Section 225.140.

4.1.3

For units that are demonstrated under Section 1.15(d) ~~of this Appendix~~ to emit less than 464 ounces of mercury per year, and for which the owner or operator elects not to continuously monitor the mercury concentration, calculate the hourly mercury mass emissions using Equation F-28 in Section 4.1.1 ~~of this Exhibit~~, except that "C_h " will be the applicable default mercury concentration from Section 1.15(c), (d), or (e) of Appendix B, expressed in μg/scm. Correction for the stack gas moisture content is not required when this methodology is used.

4.2

Use the following equation to calculate quarterly and year-to-date mercury mass emissions in ounces:

$$M_{time\_period} = \sum_{h=1}^{n} M_h \qquad \text{(Eq. F-30)}$$

Where:

M_{time_period} = Mercury mass emissions for the given time period i.e., quarter or year-to-date, rounded to the nearest 1000th -, (ounces).

M_h = Mercury mass emissions for the hour, rounded to three decimal places, (ounces).

n = The number of hours in the given time period (quarter or year-to-date).

4.3

If heat input rate monitoring is required, follow the applicable procedures for heat input apportionment and summation in Sections 2.3, 2.4 and 2.5 ~~of this Exhibit~~.

5. Moisture Determination from Wet and Dry O_2 Readings

If a correction for the stack gas moisture content is required in any of the emissions or heat input calculations described in this Exhibit, and if the hourly moisture content is determined from wet- and dry-basis O_2 readings, use Equation F-31 to calculate the percent moisture, unless a K-factor or other mathematical algorithm is developed as described in Section 6.5.6(a) of Exhibit A to Appendix B:

$$\%H_2O = \frac{(O_{2d} - O_{2w})}{O_{2d}} \times 100 \qquad \text{(Eq. F-31)}$$

Where:

$\%H_20$ = Hourly average stack gas moisture content, percent H_2O.

O_{2d} = Dry-basis hourly average oxygen concentration, percent O_2.

O_{2w} = Wet-basis hourly average oxygen concentration, percent O_2.

(Source: Amended in 48 Ill. Reg._____, Effective _____)

Section 225.APPENDIX B Continuous Emission Monitoring Systems for Mercury

Section 225.EXHIBIT D Quality Assurance and Operating Procedures for Sorbent Trap Monitoring Systems

1.0 Scope and Application

This Exhibit specifies sampling, ~~and~~ analytical, and quality-assurance criteria and procedures for the performance-based monitoring of vapor-phase mercury (Hg) emissions in combustion flue gas streams, using a sorbent trap monitoring system (as defined in Section 225.130). The principle employed is continuous sampling using in-stack sorbent media coupled with analysis of the integrated samples. The performance-based approach of this Exhibit allows for use of various suitable sampling and analytical technologies while maintaining a specified and documented level of data quality through performance criteria. Persons using this Exhibit should have a thorough working knowledge of Methods 1, 2, 3, 4 and 5 in appendices A-1 through A-3 to 40 CFR 60, incorporated by reference in Section 225.140, as well as the determinative technique selected for analysis.

1.1 Analytes

The analyte measured by these procedures and specifications is total vapor-phase mercury in the flue gas, which represents the sum of elemental mercury (Hg^0, CAS Number 7439-97-6) and oxidized forms of mercury, in mass concentration units of micrograms per dry standard cubic meter (µg/dscm).

1.2 Applicability

These performance criteria and procedures are applicable to monitoring of vapor-phase mercury emissions under relatively low-dust conditions (i.e., sampling in the stack after all pollution control devices), from coal-fired electric utility steam generators which are subject to Sections 1.14 through 1.18 of Appendix B. Individual sample collection times can range from 30 minutes to several days in duration, depending on the mercury concentration in the stack. The monitoring system must achieve the performance criteria specified in Section 8 ~~of this Exhibit~~ and the sorbent media capture ability must not be exceeded. The sampling rate must be maintained at a constant proportion to the total stack flow rate to ensure representativeness of the sample

collected. Failure to achieve certain performance criteria will result in invalid mercury emissions monitoring data.

2.0 Principle

Known volumes of flue gas are extracted from a stack or duct through paired, in-stack, pre-spiked sorbent media traps at an appropriate nominal flow rate. Collection of mercury on the sorbent media in the stack mitigates potential loss of mercury during transport through a probe/sample line. Paired train sampling is required to determine measurement precision and verify acceptability of the measured emissions data.

The sorbent traps are recovered from the sampling system, prepared for analysis, as needed, and analyzed by any suitable determinative technique that can meet the performance criteria. A section of each sorbent trap is spiked with Hg^0 prior to sampling.

3.0 Clean Handling and Contamination

To avoid mercury contamination of the samples, special attention should be paid to cleanliness during transport, field handling, sampling, recovery, and laboratory analysis, as well as during preparation of the sorbent cartridges. Collection and analysis of blank samples (field, trip, lab) is useful in verifying the absence of contaminant mercury.

4.0 Safety

4.1 Site hazards.

Site hazards must be thoroughly considered in advance of applying these procedures/specifications in the field; advance coordination with the site is critical to understand the conditions and applicable safety policies. At a minimum, portions of the sampling system will be hot, requiring appropriate gloves, long sleeves, and caution in handling this equipment.

4.2 Laboratory safety policies

Laboratory safety policies should be in place to minimize risk of chemical exposure and to properly handle waste disposal. Personnel must wear appropriate laboratory attire according to a Chemical Hygiene Plan established by the laboratory.

4.3 Toxicity or carcinogenicity.

The toxicity or carcinogenicity of any reagents used must be considered. Depending upon the sampling and analytical technologies selected, this measurement may involve hazardous materials, operations, and equipment and this Exhibit does not address all of the safety problems associated with implementing this approach. It is the responsibility of the user to establish appropriate safety and health practices and determine the applicable regulatory limitations prior to performance. Any chemical should be regarded as a potential health hazard and exposure to these compounds should be minimized. Chemists should refer to the Material Safety Data Sheet

(MSDS) for each chemical used.

4.4 Wastes

Any wastes generated by this procedure must be disposed of according to a hazardous materials management plan that details and tracks various waste streams and disposal procedures.

5.0 Equipment and Supplies

The following list is presented as an example of key equipment and supplies likely required to perform vapor-phase mercury monitoring using a sorbent trap monitoring system. It is recognized that additional equipment and supplies may be needed. Collection of paired samples is required. Also required are a certified stack gas volumetric flow monitor that meets the requirements of Section 1.2 to Appendix B and an acceptable means of correcting for the stack gas moisture content, i.e., either by using data from a certified continuous moisture monitoring system or by using an approved default moisture value (see 40 CFR 75.11(b), incorporated by reference in Section 225.140).

5.1 Sorbent Trap Monitoring System

A typical sorbent trap monitoring system is shown in Figure K-1. The monitoring system must include the following components:

5.1.1 Sorbent Traps

The sorbent media used to collect mercury must be configured in a trap with three distinct and identical segments or sections, connected in series, that are amenable to separate analyses. Section 1 is designated for primary capture of gaseous mercury. Section 2 is designated as a backup section for determination of vapor-phase mercury breakthrough. Section 3 is designated for QA/QC purposes where this section must be spiked with a known amount of gaseous Hg^0 prior to sampling and later analyzed to determine recovery efficiency. The sorbent media may be any collection material (e.g., carbon, chemically-treated filter, etc.) capable of quantitatively capturing and recovering for subsequent analysis, all gaseous forms of mercury for the intended application. Selection of the sorbent media must be based on the material's ability to achieve the performance criteria contained in Section 8 of this Exhibit as well as the sorbent's vapor-phase mercury capture efficiency for the emissions matrix and the expected sampling duration at the test site. The sorbent media must be obtained from a source that can demonstrate the quality assurance and control necessary to ensure consistent reliability. The paired sorbent traps are supported on a probe (or probes) and inserted directly into the flue gas stream.

5.1.2 Sampling Probe Assembly

Each probe assembly must have a leak-free Exhibit to the sorbent traps. Each sorbent trap must be mounted at the entrance of or within the probe such that the gas sampled enters the trap directly. Each probe/sorbent trap assembly must be heated to a temperature sufficient to prevent liquid condensation in the sorbent traps. Auxiliary heating is required only where the stack

temperature is too low to prevent condensation. Use a calibrated thermocouple to monitor the stack temperature. A single probe capable of operating the paired sorbent traps may be used. Alternatively, individual probe/sorbent trap assemblies may be used, provided that the individual sorbent traps are co-located to ensure representative mercury monitoring and are sufficiently separated to prevent aerodynamic interference.

5.1.3 Moisture Removal Device

A robust moisture removal device or system, suitable for continuous duty (such as a Peltier cooler), must be used to remove water vapor from the gas stream prior to entering the gas flow meter.

5.1.4 Vacuum Pump

Use a leak-tight, vacuum pump capable of operating within the candidate system's flow range.

5.1.5 Gas Flow Meter

A gas flow meter (such as a dry gas meter, thermal mass flow meter, or other suitable measurement device) must be used to determine the total sample volume on a dry basis, in units of standard cubic meters. The meter must be sufficiently accurate to measure the total sample volume to within 2 percent and must be calibrated at selected flow rates across the range of sample flow rates at which the sorbent trap monitoring system typically operates. The gas flow meter must be equipped with any necessary auxiliary measurement devices (e.g., temperature sensors, pressure measurement devices) needed to correct the sample volume to standard conditions.

5.1.6 Sample Flow Rate Meter and Controller

Use a flow rate indicator and controller for maintaining necessary sampling flow rates.

5.1.7 Temperature Sensor

Same as Section 6.1.1.7 of Method 5 in appendix A-3 to 40 CFR 60, incorporated by reference in Section 225.140.

5.1.8 Barometer

Same as Section 6.1.2 of Method 5 in appendix A-3 to 40 CFR 60, incorporated by reference in Section 225.140.

5.1.9 Data Logger (Optional)

Device for recording associated and necessary ancillary information (e.g., temperatures, pressures, flow, time, etc.).

5.2 Gaseous Hg^0 Sorbent Trap Spiking System

A known mass of gaseous Hg^0 must be spiked onto section 3 of each sorbent trap prior to sampling. Any approach capable of quantitatively delivering known masses of Hg^0 onto sorbent traps is acceptable. Several technologies or devices are available to meet this objective. Their practicality is a function of mercury mass spike levels. For low levels, NIST-certified or NIST-traceable gas generators or tanks may be suitable, but will likely require long preparation times. A more practical, alternative system, capable of delivering almost any mass required, makes use of NIST-certified or NIST-traceable mercury salt solutions (e.g., $Hg(NO_3)2$). With this system, an aliquot of known volume and concentration is added to a reaction vessel containing a reducing agent (e.g., stannous chloride); the mercury salt solution is reduced to Hg^0 and purged onto section 3 of the sorbent trap using an impinger sparging system.

5.3 Sample Analysis Equipment

Any analytical system capable of quantitatively recovering and quantifying total gaseous mercury from sorbent media is acceptable provided that the analysis can meet the performance criteria in Section 8 of this procedure. Candidate recovery techniques include leaching, digestion, and thermal desorption. Candidate analytical techniques include ultraviolet atomic fluorescence (UV AF); ultraviolet atomic absorption (UV AA), with and without gold trapping; and in situ X-ray fluorescence (XRF) analysis.

6.0 Reagents and Standards

Only NIST-certified or NIST-traceable calibration gas standards and reagents must be used for the tests and procedures required under this Exhibit.

7.0 Sample Collection and Transport

7.1 Pre-Test Procedures

7.1.1 Selection of Sampling Site

Sampling site information should be obtained in ~~accordance~~ compliance with Method 1 in appendix A-1 to 40 CFR 60, incorporated by reference in Section 225.140. Identify a monitoring location representative of source mercury emissions. Locations shown to be free of stratification through measurement traverses for gases such as SO_2 and NO_x may be one such approach. An estimation of the expected stack mercury concentration is required to establish a target sample flow rate, total gas sample volume, and the mass of Hg^0 to be spiked onto section 3 of each sorbent trap.

7.1.2 Pre-sampling Spiking of Sorbent Traps

Based on the estimated mercury concentration in the stack, the target sample rate and the target sampling duration, calculate the expected mass loading for section 1 of each sorbent trap (for an example calculation, see Section 11.1 ~~of this Exhibit~~). The pre-sampling spike to be added to section 3 of each sorbent trap must be within ±50 percent of the expected section 1 mass loading.

Spike section 3 of each sorbent trap at this level, as described in Section 5.2 ~~of this Exhibit~~. For each sorbent trap, keep an official record of the mass of Hg^0 added to section 3. This record must include, at a minimum, the ID number of the trap, the date and time of the spike, the name of the analyst performing the procedure, the mass of Hg^0 added to section 3 of the trap (µg), and the supporting calculations. This record must be maintained in a format suitable for inspection and audit and must be made available to the regulatory agencies upon request.

7.1.3 Pre-test Leak Check

Perform a leak check with the sorbent traps in place. Draw a vacuum in each sample train. Adjust the vacuum in the sample train to mercury. Using the gas flow meter, determine leak rate. The leakage rate must not exceed 4 percent of the target sampling rate. Once the leak check passes this criterion, carefully release the vacuum in the sample train, then seal the sorbent trap inlet until the probe is ready for insertion into the stack or duct.

7.1.4 Determination of Flue Gas Characteristics

Determine or measure the flue gas measurement environment characteristics (gas temperature, static pressure, gas velocity, stack moisture, etc.) in order to determine ancillary requirements such as probe heating requirements (if any), initial sample rate, proportional sampling conditions, moisture management, etc.

7.2 Sample Collection

7.2.1

Remove the plug from the end of each sorbent trap and store each plug in a clean sorbent trap storage container. Remove the stack or duct port cap and insert the probes. Secure the probes and ensure that no leakage occurs between the duct and environment.

7.2.2

Record initial data including the sorbent trap ID, start time, starting dry gas meter readings, initial temperatures, set-points, and any other appropriate information.

7.2.3 Flow Rate Control

Set the initial sample flow rate at the target value from Section 7.1.1 ~~of this Exhibit~~. Record the initial gas flow meter reading, stack temperature (if needed to convert to standard conditions), meter temperatures (if needed), etc. Then, for every operating hour during the sampling period, record the date and time, the sample flow rate, the gas flow meter reading, the stack temperature (if needed), the flow meter temperatures (if needed), temperatures of heated equipment such as the vacuum lines and the probes (if heated), and the sampling system vacuum readings. Also, record the stack gas flow rate, as measured by the certified flow monitor, and the ratio of the stack gas flow rate to the sample flow rate. Adjust the sampling flow rate to maintain proportional sampling, i.e., keep the ratio of the stack gas flow rate to sample flow rate constant,

to within ±25 percent of the reference ratio from the first hour of the data collection period (see Section 11 ~~of this Exhibit~~). The sample flow rate through a sorbent trap monitoring system during any hour (or portion of an hour) in which the unit is not operating must be zero.

7.2.4 Stack Gas Moisture Determination

Determine stack gas moisture using a continuous moisture monitoring system, as described in 40 CFR 75.11(b), incorporated by reference in Section 225.140. Alternatively, the owner or operator may use the appropriate fuel-specific moisture default value provided in 40 CFR 75.11, incorporated by reference in Section 225.140, or a site-specific moisture default value approved by the Agency.

7.2.5 Essential Operating Data

Obtain and record any essential operating data for the facility during the test period, e.g., the barometric pressure for correcting the sample volume measured by a dry gas meter to standard conditions. At the end of the data collection period, record the final gas flow meter reading and the final values of all other essential parameters.

7.2.6 Post Test Leak Check

When sampling is completed, turn off the sample pump, remove the probe/sorbent trap from the port, and carefully re-plug the end of each sorbent trap. Perform a leak check with the sorbent traps in place, at the maximum vacuum reached during the sampling period. Use the same general approach described in Section 7.1.3 ~~of this Exhibit~~. Record the leakage rate and vacuum. The leakage rate must not exceed 4 percent of the average sampling rate for the data collection period. Following the leak check, carefully release the vacuum in the sample train.

7.2.7 Sample Recovery

Recover each sampled sorbent trap by removing it from the probe, sealing both ends. Wipe any deposited material from the outside of the sorbent trap. Place the sorbent trap into an appropriate sample storage container and store/preserve in appropriate manner.

7.2.8 Sample Preservation, Storage, and Transport

While the performance criteria of this approach provide for verification of appropriate sample handling, it is still important that the user consider, determine, and plan for suitable sample preservation, storage, transport, and holding times for these measurements. Therefore, procedures in ASTM D6911-03 "Standard Guide for Packaging and Shipping Environmental Samples for Laboratory Analysis" (incorporated by reference under Section 225.140) must be followed for all samples.

7.2.9 Sample Custody

Proper procedures and documentation for sample chain of custody are critical to ensuring data

integrity. The chain of custody procedures in ASTM D4840-99 (reapproved 2004) "Standard Guide for Sample Chain-of-Custody Procedures" (incorporated by reference under Section 225.140) must be followed for all samples (including field samples and blanks).

8.0 Quality Assurance and Quality Control

Table K-1 summarizes the QA/QC performance criteria that are used to validate the mercury emissions data from sorbent trap monitoring systems, including the relative accuracy test audit (RATA) requirement (see Section 1.4(c)(7), Section 6.5.6 of Exhibit A to Appendix B, and Section 2.3 of Exhibit B to Appendix B). Except as provided in Section 1.3(h) of Appendix B and as otherwise indicated in Table K-1, failure to achieve these performance criteria will result in invalidation of mercury emissions data.

Table K-1.--Quality Assurance/Quality Control Criteria for Sorbent Trap Monitoring Systems

QA/QC test or specification	Acceptance criteria	Frequency	Consequences if not met
Pre-test leak check	≤ 4% of target sampling rate	Prior to sampling	Sampling must not commence until the leak check is passed.
Post-test leak check	≤ 4% of average sampling rate	After sampling	[FN**] See Note, below.
Ratio of stack gas flow rate to sample flow rate	No more than 5% of the hourly ratios or 5 hourly ratios (whichever is less restrictive) may deviate from the reference ratio by more than ± %	Every hour throughout data collection period	[FN**] See Note, below.
Sorbent trap section 2 break-through	≤ 5% of Section 1 Hg mass	Every sample	[FN**] See Note, below.

Paired sorbent trap agreement	≤ 10% Relative Deviation (RD) if the average concentration is > 1.0µg/m^3 ≤ 20% RD if the average concentration is ≤ 1.0µg/m^3. Results are also acceptable if absolute difference between concentrations from paired traps is ≤ 0.03µg/m^3	Every sample	Either invalidate the data from the paired traps or report the results from the trap with the higher Hg concentration.
Spike Recovery Study	Average recovery between 85% and 115% for each of the 3 spike concentration levels	Prior to analyzing field samples and prior to use of new sorbent media	Field samples must not be analyzed until the percent recovery criteria has been met.
Multipoint analyzer calibration	Each analyzer reading within ± 10% of true value and r^2 ≥ 0.99	On the day of analysis, before analyzing any samples	Recalibrate until successful.
Analysis of independent calibration standard	Within ± 10% of true value	Following daily calibration, prior to analyzing field samples	Recalibrate and repeat independent standard analysis until successful.
Spike recovery from Section 3 of sorbent trap	75-125% of spike amount	Every sample	[FN**] See Note, below.
RATA	RA ≤ 20.0% or Mean difference ≤ 1.0µg/dscm for low emitters	For initial certification and annually thereafter	Data from the system are invalidated until a RATA is passed.

Gas flow meter calibration	Calibration factor (Y) within ± 5% of average value from the most recent 3-point calibration	At three settings prior to initial use and at least quarterly at one setting thereafter. For mass flow meters, initial calibration with stack gas is required	Recalibrate the meter at three orifice settings to determine a new value of Y.
Temperature sensor calibration	Absolute temperature measured by sensor within ± 1.5% of a reference sensor	Prior to initial use and at least quarterly thereafter	Recalibrate. Sensor may not be used until specification is met.
Barometer calibration	Absolute pressure measured by instrument within ± 10 mm Hg of reading with a mercury barometer	Prior to initial use and at least quarterly thereafter	Recalibrate. Instrument may not be used until specification is met.

[FN**] Note: If both traps fail to meet the acceptance criteria, the data from the pair of traps are invalidated. However, if only one of the paired traps fails to meet this particular acceptance criterion and the other sample meets all of the applicable QA criteria, the results of the valid trap may be used for reporting under this Part. When the data from both traps are invalidated and quality-assured data from a certified backup monitoring system, reference method, or approved alternative monitoring system are unavailable, missing data substitution must be used.

9.0 Calibration and Standardization.

9.1

Only NIST-certified and NIST-traceable calibration standards (i.e., calibration gases, solutions, etc.) must be used for the spiking and analytical procedures in this Exhibit.

9.2 Gas Flow Meter Calibration

9.2.1

Preliminaries. The manufacturer or supplier of the gas flow meter should perform all necessary set-up, testing, programming, etc., and should provide the end user with any necessary instructions~~,~~ to ensure that the meter will give an accurate readout of dry gas volume in standard cubic meters for the particular field application.

9.2.2

Initial Calibration. Prior to its initial use, a calibration of the flow meter must be performed. The initial calibration may be done by the manufacturer, by the equipment supplier, or by the end user. If the flow meter is volumetric in nature (e.g., a dry gas meter), the manufacturer, equipment supplier, or end user may perform a direct volumetric calibration using any gas. For a mass flow meter, the manufacturer, equipment supplier, or end user may calibrate the meter using a bottled gas mixture containing 12 +- 0.5% CO_2, 7 +- 0.5% O_2, and balance N_2, or these same gases in proportions more representative of the expected stack gas composition. Mass flow meters may also be initially calibrated on-site, using actual stack gas.

9.2.2.1

Initial Calibration Procedures. Determine an average calibration factor (Y) for the gas flow meter~~,~~ by calibrating it at three sample flow rate settings covering the range of sample flow rates at which the sorbent trap monitoring system typically operates. You may either follow the procedures in Section 10.3.1 of Method 5 in appendix A-3 to 40 CFR 60, incorporated by reference in Section 225.140, or the procedures in Section 16 of Method 5 in appendix A-3 to 40 CFR 60. If a dry gas meter is being calibrated, use at least five revolutions of the meter at each flow rate.

9.2.2.2

Alternative Initial Calibration Procedures. Alternatively, you may perform the initial calibration of the gas flow meter using a reference gas flow meter (RGFM). The RGFM may either be: (1) A wet test meter calibrated according to Section 10.3.1 of Method 5 in appendix A-3 to 40 CFR 60, incorporated by reference in Section 225.140; (2) a gas flow metering device calibrated at multiple flow rates using the procedures in Section 16 of Method 5 in appendix A-3 to 40 CFR 60; or (3) a NIST-traceable calibration device capable of measuring volumetric flow to an accuracy of 1 percent. To calibrate the gas flow meter using the RGFM, proceed as follows: While the sorbent trap monitoring system is sampling the actual stack gas or a compressed gas mixture that simulates the stack gas composition (as applicable), connect the RGFM to the discharge of the system. Care should be taken to minimize the dead volume between the sample flow meter being tested and the RGFM. Concurrently measure dry gas volume with the RGFM and the flow meter being calibrated the for a minimum of 10 minutes at each of three flow rates covering the typical range of operation of the sorbent trap monitoring system. For each 10-minute (or longer) data collection period, record the total sample volume, in units of dry standard cubic meters (dscm), measured by the RGFM and the gas flow meter being tested.

9.2.2.3

Initial Calibration Factor. Calculate an individual calibration factor Yi at each tested flow rate from Section 9.2.2.1 or 9.2.2.2 ~~of this Exhibit~~ (as applicable), by taking the ratio of the reference sample volume to the sample volume recorded by the gas flow meter. Average the three Yi values, to determine Y, the calibration factor for the flow meter. Each of the three individual values of Yi must be within ±0.02 of Y. Except as otherwise provided in Sections 9.2.2.4 and 9.2.2.5 ~~of this Exhibit~~, use the average Y value from the three level calibration to adjust all subsequent gas volume measurements made with the gas flow meter.

9.2.2.4

Initial On-Site Calibration Check. For a mass flow meter that was initially calibrated using a compressed gas mixture, an on-site calibration check must be performed before using the flow meter to provide data for this Part. While sampling stack gas, check the calibration of the flow meter at one intermediate flow rate typical of normal operation of the monitoring system. Follow the basic procedures in Section 9.2.2.1 or 9.2.2.2 ~~of this Exhibit~~. If the on-site calibration check shows that the value of Yi, the calibration factor at the tested flow rate, differs by more than 5 percent from the value of Y obtained in the initial calibration of the meter, repeat the full 3-level calibration of the meter using stack gas to determine a new value of Y, and apply the new Y value to all subsequent gas volume measurements made with the gas flow meter.

9.2.2.5

Ongoing Quality Assurance. Recalibrate the gas flow meter quarterly at one intermediate flow rate setting representative of normal operation of the monitoring system. Follow the basic procedures in Section 9.2.2.1 or 9.2.2.2 ~~of this Exhibit~~. If a quarterly recalibration shows that the value of Yi, the calibration factor at the tested flow rate, differs from the current value of Y by more than 5 percent, repeat the full 3-level calibration of the meter to determine a new value of Y, and apply the new Y value to all subsequent gas volume measurements made with the gas flow meter.

9.3 Thermocouples and Other Temperature Sensors

Use the procedures and criteria in Section 10.3 of Method 2 in appendix A-1 to 40 CFR 60, incorporated by reference in Section 225.140, to calibrate in-stack temperature sensors and thermocouples. Dial thermometers must be calibrated against mercury-in-glass thermometers. Calibrations must be performed prior to initial use and at least quarterly thereafter. At each calibration point, the absolute temperature measured by the temperature sensor must agree to within +- 1.5 percent of the temperature measured with the reference sensor, otherwise the sensor may not continue to be used.

9.4 Barometer

Calibrate against a mercury barometer. Calibration must be performed prior to initial use and at least quarterly thereafter. At each calibration point, the absolute pressure measured by the barometer must agree to within ±10 mmHg of the pressure measured by the mercury barometer, otherwise the barometer may not continue to be used.

9.5 Other Sensors and Gauges

Calibrate all other sensors and gauges according to the procedures specified by the instrument manufacturers.

9.6 Analytical System Calibration

See Section 10.1 of this Exhibit.

10.0 Analytical Procedures

The analysis of the mercury samples may be conducted using any instrument or technology capable of quantifying total mercury from the sorbent media and meeting the performance criteria in Section 8 ~~of this Exhibit~~.

10.1 Analyzer System Calibration

Perform a multipoint calibration of the analyzer at three or more upscale points over the desired quantitative range (multiple calibration ranges must be calibrated, if necessary). The field samples analyzed must fall within a calibrated, quantitative range and meet the necessary performance criteria. For samples that are suitable for aliquotting, a series of dilutions may be needed to ensure that the samples fall within a calibrated range. However, for sorbent media samples that are consumed during analysis (e.g., thermal desorption techniques), extra care must be taken to ensure that the analytical system is appropriately calibrated prior to sample analysis. The calibration curve ranges should be determined based on the anticipated level of mercury mass on the sorbent media. Knowledge of estimated stack mercury concentrations and total sample volume may be required prior to analysis. The calibration curve for use with the various analytical techniques (e.g., UV AA, UV AF, and XRF) can be generated by directly introducing standard solutions into the analyzer or by spiking the standards onto the sorbent media and then introducing into the analyzer after preparing the sorbent/standard according to the particular analytical technique. For each calibration curve, the value of the square of the linear correlation coefficient, i.e., r^2, must be ≥ 0.99, and the analyzer response must be within ±10 percent of reference value at each upscale calibration point. Calibrations must be performed on the day of the analysis, before analyzing any of the samples. Following calibration, an independently prepared standard (not from same calibration stock solution) must be analyzed. The measured value of the independently prepared standard must be within ±10 percent of the expected value.

10.2 Sample Preparation

Carefully separate the three sections of each sorbent trap. Combine for analysis all materials associated with each section, i.e., any supporting substrate that the sample gas passes through prior to entering a media section (e.g., glass wool, polyurethane foam, etc.) must be analyzed with that segment.

10.3 Spike Recovery Study

Before analyzing any field samples, the laboratory must demonstrate the ability to recover and quantify mercury from the sorbent media by performing the following spike recovery study for sorbent media traps spiked with elemental mercury.

Using the procedures described in Sections 5.2 and 11.~~1 of this Exhibit~~, spike the third section of nine sorbent traps with gaseous Hg^0, i.e., three traps at each of three different mass loadings,

representing the range of masses anticipated in the field samples. This will yield a 3 x 3 sample matrix. Prepare and analyze the third section of each spiked trap, using the techniques that will be used to prepare and analyze the field samples. The average recovery for each spike concentration must be between 85 and 115 percent. If multiple types of sorbent media are to be analyzed, a separate spike recovery study is required for each sorbent material. If multiple ranges are calibrated, a separate spike recovery study is required for each range.

10.4 Field Sample Analysis

Analyze the sorbent trap samples following the same procedures that were used for conducting the spike recovery study. The three sections of each sorbent trap must be analyzed separately (i.e., section 1, then section 2, then section 3). Quantify the total mass of mercury for each section based on analytical system response and the calibration curve from Section 10.1 ~~of this Exhibit~~. Determine the spike recovery from sorbent trap section 3. The spike recovery must be no less than 75 percent and no greater than 125 percent. To report the final mercury mass for each trap, add together the mercury masses collected in trap sections 1 and 2.

11.0 Calculations and Data Analysis

11.1 Calculation of Pre-Sampling Spiking Level

Determine sorbent trap section 3 spiking level using estimates of the stack mercury concentration, the target sample flow rate, and the expected sample duration. First, calculate the expected mercury mass that will be collected in section 1 of the trap. The pre-sampling spike must be within ±50 percent of this mass. Example calculation: For an estimated stack mercury concentration of 5 µg/m^3, a target sample rate of 0.30 L/min, and a sample duration of 5 days:

(0.30 L/min) (1440 min/day) (5 days) (10^{-3} m^3/liter) (5µg/m^3) = 10.8 µg

A pre-sampling spike of 10.8 µg ± 50 percent is, therefore, appropriate.

11.2 Calculations for Flow-Proportional Sampling.

For the first hour of the data collection period, determine the reference ratio of the stack gas volumetric flow rate to the sample flow rate, as follows:

$$R_{ref} = \frac{KQ_{ref}}{F_{ref}} \qquad \text{(Eq. K-1)}$$

Where:

R_{ref} = Reference ratio of hourly stack gas flow rate to hourly sample flow rate.

Q_{ref} = Average stack gas volumetric flow rate for first hour of collection period.

F_{ref} = Average sample flow rate for first hour of the collection period, in appropriate units (e.g., liters/min, cc/min, dscm/min).

K = Power of ŧ10 multiplier, to keep the value of R_{ref} between 1 and 100. The appropriate K value will depend on the selected units of measure for the sample flow rate.

Then, for each subsequent hour of the data collection period, calculate ratio of the stack gas flow rate to the sample flow rate using the equation K-2:

$$R_h = \frac{KQ_h}{F_h} \qquad \text{(Eq. K-2)}$$

Where:

R_h = Ratio of hourly stack gas flow rate to hourly sample flow rate

Q_h = Average stack gas volumetric flow rate for the hour

F_h = Average sample flow rate for the hour, in appropriate units (e.g., liters/min, cc/min, dscm/min)

K = Power of ten multiplier, to keep the value of R_h between 1 and 100. The appropriate K value will depend on the selected units of measure for the sample flow rate and the range of expected stack gas flow rates.

Maintain the value of R_h within +- 25 percent of R_{ref} throughout the data collection period.

11.3 Calculation of Spike Recovery.

Calculate the percent recovery of each section 3 spike, as follows:

$$\%R = \frac{M_3}{M_s} \times 100 \qquad \text{(Eq. K-3)}$$

Where:

$\%R$ = Percentage recovery of the pre-sampling spike.

M_3 = Mass of mercury recovered from section 3 of the sorbent trap (µg).

M_s = Calculated mercury mass of the pre-sampling spike, from Section 7.1.2 ~~of this Exhibit~~.

11.4 Calculation of Breakthrough.

Calculate the percent breakthrough to the second section of the sorbent trap, as follows:

Where:

$$\%B = \frac{M_2}{M_1} \times 100 \qquad \text{(Eq. K-4)}$$

Where:

$\%B$ = Percent breakthrough.

M_2 = Mass of mercury recovered from section 2 of the sorbent trap, (µg).

M_1 = Mass of mercury recovered from section 1 of the sorbent trap, (µg).

11.5 Calculation of Mercury Concentration

Calculate the mercury concentration for each sorbent trap, using the following equation:

$$C = \frac{M^*}{V_t} \qquad \text{(Eq. K-5)}$$

Where:

C = Concentration of mercury for the collection period (µgm/dscm)

M^* = Total mass of mercury recovered from sections 1 and 2 of the sorbent trap (µg)

V_t = Total volume of dry gas metered during the collection period (dscm). For the purposes of this Exhibit, standard temperature and pressure are defined as 20 ° C and 760 mm Hg, respectively.

11.6 Calculation of Paired Trap Agreement

Calculate the relative deviation (RD) between the mercury concentrations measured with the paired sorbent traps:

$$RD = \frac{|C_a - C_b|}{C_a + C_b} \times 100 \qquad \text{(Eq. K-6)}$$

Where:

RD = Relative deviation between the mercury concentrations from traps "a" and "b" (percent).

C_a = Concentration of mercury for the collection period, for sorbent trap "a" (µgm/dscm).

C_b = Concentration of mercury for the collection period, for sorbent trap "b" (µgm/dscm).

11.7 Calculation of Mercury Mass Emissions

To calculate mercury mass emissions, follow the procedures in Section 4.1.2 of Exhibit C to Appendix B. Use the average of the two mercury concentrations from the paired traps in the calculations, except as provided in Section 1.3(h) of Exhibit B to this Appendix or in Table K-1.

12.0 Method Performance

These monitoring criteria and procedures have been applied to coal-fired utility boilers (including units with post-combustion emission controls), having vapor-phase mercury concentrations ranging from 0.03 µg/dscm to 100 µg/dscm.

Section 226.115 Definitions

The following definitions apply for the purposes of this Part. Unless otherwise defined in this Section or a different meaning for a term is clear from its context, all terms not defined in this Part ~~shall~~ have the ~~meaning given them~~definitions in the Act and in 35 Ill. Adm. Code 211.

"Agency" means the Illinois Environmental ~~protection~~ Protection Agency.

"Agglomerating furnace" means a furnace used to melt into a solid mass flue dust that is collected from a baghouse.

"Alloy" means a mixture or metallic solid solution composed of 2 or more elements.

"Alloying" means the process of combining or mixing metals or other substances in molten form for the purpose of producing a particular alloy.

"Alloying and refining kettle" means an open-top vessel that is heated from below and contains molten lead for the purpose of alloying and refining the lead. These kettles include~~, but are not limited to,~~ pot furnaces, receiving kettles, and holding kettles.

"Battery breaking area" means the source location at which lead-acid batteries are broken, crushed, disassembled, or separated into components.

"Casting" means the process of transferring molten lead-containing metal to a mold.

"Dross" means solid impurities removed from molten lead in lead kettles.

"Dryer" means a chamber that is heated and ~~that is~~ used to remove moisture from lead-bearing materials other than lead shot.

"Existing lead emission unit" means a lead emission unit in existence before January 1, 2015 at a nonferrous metal production facility.

"Housekeeping activities" means regular cleaning or maintenance activities conducted to reduce fugitive emissions from production areas.

"Induction furnace" means an electrical furnace used for heating metal by electromagnetic induction.

"Lead" means elemental lead or alloys in which the predominant component is lead (*i.e.,* lead being more prevalent than any other single component).

"Lead-bearing scrap" or "lead-containing material" or "lead-containing metal" or "lead-containing wastes" or "lead particulate" means scrap or material or metal or wastes or particulate with a lead content equal to or greater than 5 mg/l as measured by EPA Method 1311, incorporated by reference in Section 226.120.

"Lead emission unit" means any process that emits lead, including~~, but not limited to,~~ battery breaking areas; material handling areas; dryers and dryer areas; channel furnaces and channel furnace areas; coreless furnaces and coreless furnace areas; reverberatory furnaces and reverberatory furnace areas; rotary furnaces and rotary furnace areas; agglomerating furnaces and agglomerating furnace areas; kettles and casting areas; lead taps, slag taps, and molds during tapping; and areas where dust from fabric filters, sweepings, or used fabric filters are processed.

"Lead kettle" means a vessel that is heated from below and ~~is~~ used for the purpose of melting refined lead.

"Lead tap" means the pouring hole though which molten lead flows from a kettle or furnace.

"Leak detection system" means an instrument that is capable of monitoring relative particulate matter (dust) loadings in the exhaust of a particulate control in order to detect leaks in the particulate control. A leak detection system includes~~, but is not limited to,~~ an instrument that operates on triboelectric, light scattering, transmittance, or other effect to monitor relative particulate matter loadings.

"Materials handling area" means any area in which lead-containing materials (including~~, but not limited to,~~ broken battery components, flue dust, and dross) are handled in between process steps. These areas may include~~, but are not limited to,~~ areas in which lead-bearing scrap, lead-containing materials, lead-containing metal, or lead-containing wastes are prepared.

"Materials storage area" means any area in which lead-containing materials (including~~, but not limited to,~~ broken battery components, flue dust, and dross) are stored in between process steps. These areas may include~~, but are not limited to,~~ areas in which lead-bearing scrap, lead-containing materials, lead-containing metal, or lead-containing wastes are stored in open piles, bins, or tubs.

"Mold cooling" means the process of cooling a mold containing hot metal by direct contact of the mold, but not the hot metal itself, with cooling water or other liquids.

"Natural draft opening" means any permanent opening, including doors and windows, in a total enclosure that remains open during operation of the lead emissions unit in the enclosure or enclosures and is not connected to a duct in which a fan is installed.

"New lead emission unit" means a lead emission unit constructed on or after January 1, 2015, at a nonferrous metal production facility.

"Nonferrous metal" means a metal that is not an iron or steel alloy; these metals may include alloys of aluminum, copper, lead, and zinc.

"Nonferrous metal production facility" means any source that is alloying, refining, or casting nonferrous metal or manufacturing nonferrous metal products, and where the source includes lead in their alloys or products by design.

"Production area" means an indoor space at a nonferrous metal production facility where lead emission units are operated.

"Quenching" means the process of cooling hot metal other than lead shot by direct contact of the metal with cooling water or other liquids.

"Refined lead" means a material composed of lead alloys of a specified composition from an onsite or offsite lead refining operation.

"Refining" means the process of removing impurities or oxides from a metal or metal alloy.

"Reverberatory furnace" means a refractory-lined furnace that uses one or more flames to heat the walls and roof of the furnace and lead-bearing scrap to such a temperature that lead compounds are chemically reduced to elemental lead metal.

"Rotary furnace" or "rotary reverberatory furnace" means a furnace consisting of a refractory-lined chamber that rotates about a horizontal axis and that uses one or more flames to heat the walls of the furnace and lead-bearing scrap to such a temperature that lead compounds are chemically reduced to elemental lead metal.

"Section Manager" means Manager of Agency's Bureau of Air, Compliance Section.

"Slag tap" means the pouring hole through which slag is removed from a kettle or furnace.

"Tap" means the pouring hole through which molten metal flows from a kettle or furnace.

"Tapping" means opening the tap.

"Total enclosure" means a complete enclosure with walls and a roof designed to minimize exposure to the elements and to maximize containment of emissions from one or more lead emission units and that meets the following performance standards: the average facial velocity of air flowing into the enclosure through all natural draft openings during operation of lead emission units in each total enclosure in any one hour period must be at least 200 fpm (3,600 m/hr) or average negative pressure value of 0.007 inches of water (0.013 mm Hg) must be maintained inside the enclosure over any one hour period.

"Valid test run" means a completed test run conducted in ~~accordance~~ compliance with a testing protocol submitted to the Agency, as required under Section 226.175(f).

Section 226.125 Applicability

~~The provisions of this~~This Part ~~apply~~ applies to all nonferrous metal production facilities located in the following areas in Illinois designated nonattainment for the 2008 lead National Ambient Air Quality Standards by USEPA:

a) Part of Madison County, specifically the area bounded by Granite City Township and Venice Township, 75 FR 71033-01 (November 22, 2010), ~~as~~ incorporated by reference in Section 226.120; and

b) Part of Cook County, specifically, the area bounded by Damen Avenue on the west, Roosevelt Road on the north, the Dan Ryan Expressway on the east, and the Stevenson Expressway on the south, 76 FR 72097-01 (November 22, 2011), ~~as~~ incorporated by reference in Section 226.120.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.130 Compliance Date

a) For an existing lead emission unit that is subject to this Part, compliance with these requirements by an owner or operator of the unit is required by ~~no later than~~ January 1, 2015.

b) For a new lead emission unit that is subject to this Part, compliance with these requirements by an owner or operator of the unit is required by the date on which the unit initially begins operation.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.140 Lead Emission Standards

a) For all alloying and refining kettles located at a source subject to this Part (see Section 226.125), each lead emission unit must be:

1) Equipped with a capture system (including covers, hoods, ducts, and fans) that is vented to a control device for lead particulates. The emissions of lead into the atmosphere from each control device must not exceed 0.0010 gr/dscf; and

2) Operated in a total enclosure ~~pursuant to~~under Section 226.155. The entire gas stream collected by each total enclosure must only be ducted to a control device such that the emissions of lead into the atmosphere from each control device must not exceed 0.00010 gr/dscf.

b) For reverberatory furnaces or rotary furnaces located at a source subject to this Part (see Section 226.125), each lead emission unit must be:

1) Equipped with a capture system (including hoods, ducts, and fans) that is vented to a control device for lead particulates. The emissions of lead into the atmosphere from each control device must not exceed 0.00010 gr/dscf; and

2) Operated in a total enclosure ~~pursuant to~~under Section 226.155. The entire gas stream collected by each total enclosure must only be ducted to a control device such that the emissions of lead into the atmosphere from each control device must not exceed 0.00010 gr/dscf.

c) Notwithstanding the provisions for total enclosure in subsections (a) and (b), any emissions of lead exiting an uncontrolled stack during quenching or mold cooling operations must not exceed 0.00010 gr/dscf. Quenching operations ~~shall~~ must be limited to no more than 6 hours per associated unit in any 24 hour period.

d) For induction furnaces located at a source subject to this Part (see Section 226.125), each lead emission unit must be equipped with a capture system (including hoods, ducts, and fans) that is vented to a control device for lead particulates. The emissions of lead into the atmosphere from each control device must not exceed 0.000010 gr/dscf.

e) For all other furnaces, lead kettles, or any other operation subject to this Part (see Section 226.125), but not subject to subsection (a), (b), or (d), each lead emission unit must be equipped with a capture system (including ducts, fans, and hoods or covers) that is vented to a control device for lead particulates. The emissions of lead into the atmosphere from each control device must not exceed 0.00010 gr/dscf.

f) Any source subject to the requirements of this Part (see Section 226.125) must operate ~~pursuant to~~under a lifetime operating permit, a federally enforceable State operating permit, a Clean Air Act Permit Program permit, or conditions within a construction permit.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.150 Operational Monitoring for Control Device

a) The owner or operator of a lead emission unit subject to this Part must install, maintain, and operate parametric monitoring equipment that consists of a pressure differential system to measure the pressure drop across each control device required by Section 226.140. Data from this instrumentation must be recorded as follows:

1) Data must be automatically recorded every minute during operation of any lead emission unit subject to Section 226.140(a) or (b).

2) Data must be recorded at least once every 8 hours during operation of any lead emission unit subject to Section 226.140(d) or (e).

3) If the control device used to control lead emission units subject to Section 226.140(a) or (b) is the same as the control device used to control other lead emission units subject to Section 226.140(d) or (e), the requirements in subsection (a)(1) apply to the control device.

b) The owner or operator of a lead emission unit subject to this Part and using a baghouse or other filter system to control units subject to the total enclosure requirements of Section 226.155 must install, maintain, and operate parametric monitoring equipment that consists of a leak detection system. The leak detection system must be installed at the outlet of the baghouse or other filter system.

c) The owner or operator of a lead emission unit subject to this Part must develop and maintain a Control Device Monitoring Plan. The CDMP must be submitted for review and approval to the Section Manager by the compliance date ~~specified~~ in Section 226.130 and within 30 days after any changes are made to the plan. The CDMP must be amended by the owner or operator of a lead emission unit subject to this Part as necessary to ensure that it is kept current.

d) The CDMP must include procedures to investigate and determine the cause of changes in pressure that could indicate a leak or other problem and, if applicable, every alarm from the leak detection system. The procedures must also include a means to determine appropriate corrective actions and preventative measures to address the pressure changes and to avoid future alarms. The owner or operator of a lead emission unit subject to this Part must operate and maintain each

pressure differential system and each leak detection system according to the CDMP at all times.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.155 Total Enclosure

a) An owner or operator of a lead emission unit subject to this Part must install, maintain, and operate one or more total enclosures to minimize fugitive emissions from the operations listed in subsections (a)(1) through (6) at all times that the applicable lead emission unit in the total enclosure is operating or housekeeping activities are being performed. The total enclosure must meet the requirements ~~specified~~ in subsections (b) through (e).

1) Battery breaking areas.

2) Dryer and dryer areas, including transition pieces, charging hoppers, chutes, and skip hoists conveying any lead-containing material.

3) Reverberatory furnaces or rotary furnaces charging any lead-containing material and the associated reverberatory furnace areas or rotary furnace areas, including any associated lead taps, slag taps, and molds during processing.

4) Alloying and refining kettles and associated areas, including any associated lead taps, slag taps, and molds during processing.

5) Areas where dross, dust from fabric filters, sweepings, or used fabric filters are handled, except for areas where all such materials are in closed, leak-proof containers at all times.

6) Material handling areas for any lead-containing materials. The following areas are exempt from the total enclosure requirements unless the areas listed also contain operations listed in subsections (a)(1) through (5):

A) Those areas where refined lead is melted and cast;

B) Those areas where spent refractory brick is stored in closed containers ~~prior to~~before and after crushing;

C) Those areas where ladle repairs take place; or

D) Those areas where lead-bearing scrap is sorted and handled, if the area is enclosed and equipped with a capture system ducted to a control device subject to ~~the requirements of~~ Section 226.140(e)

during all sorting and handling activities and if the scrap is stored in closed containers at all other times.

b) An owner or operator of a lead emission unit subject to this Part must duct the gas stream collected by each total enclosure to a control device that meets the applicable requirements of Section 226.140.

c) The total enclosure must be maintained and operated with an inward flow of air through all natural draft openings while the lead emission unit applicable to the operation listed in subsection (a) in the total enclosure is operating. The average facial velocity of air flowing into the enclosure through all natural draft openings during operation of lead emission units in each total enclosure in any one hour period must be at least 200 fpm (3,600 m/hr) or an average negative pressure value of 0.007 inches of water (0.013 mm Hg) must be maintained inside the enclosure over any one hour period.

d) The total enclosure required by subsection (a) must be maintained at any opening, including~~, but not limited to,~~ vents, windows, passages, doorways, bay doors, and roll-ups while lead emission units in the total enclosure or enclosures are operating, except as needed for temporary access to conduct manufacturing operations (e.g., during load-in and load-out of materials or passage of personnel or equipment).

e) The total enclosure must be free of cracks, gaps, corrosion, or other deterioration that could cause or result in dust being emitted to the atmosphere through those openings, except that the total area of all natural draft openings must not exceed 5 percent of the surface area of the total enclosure's walls, floor, and ceiling.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.160 Operational Measurement for Total Enclosure

a) An owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must measure the total area of all natural draft openings and the total surface area of the total enclosure.

b) An owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must measure the facial velocity of air flowing through all natural draft openings using the following equation while any lead emission unit applicable to the operation listed in Section 226.155(a) is operating. Values for Q_o and Q_I must be obtained by means of testing ~~pursuant to~~under subsection (b)(1) or monitoring ~~pursuant to~~under subsection (b)(2):

$$FV = \frac{Q_0 - Q_I}{A_n}$$

Where:

Q_o = the sum of volumetric flow from all gas streams exiting the total enclosure through the control device.

Q_I = the sum of the volumetric flow from all gas streams into the total enclosure through a forced makeup air duct; zero if there is no forced makeup air into the total enclosure.

A_n = total area of all natural draft openings in the total enclosure.

1) An owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must conduct testing to determine the values for Q_o and Q_I at the same time as any emissions testing is conducted ~~pursuant to~~under Section 226.175; or

2) An owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must install, maintain, and operate a flow monitor at the outlet of each control device required by Section 226.140 to measure the volumetric flow from all gas streams exiting the total enclosure through the control device (or the final control device emitting to the atmosphere if the source has more than one control device in series). This volumetric flow data must be monitored and automatically recorded every minute.

c) As an alternative to compliance with ~~the requirements of~~ subsection (b), an owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must install, operate, and maintain instrumentation to monitor the pressure differential between the interior and exterior of the enclosure, measured in inches of water, to demonstrate compliance with the differential pressure requirements in Section 226.155(c). This instrumentation must be located and designed to operate in ~~accordance~~ compliance with all of the requirements of subsections (c)(1) through (6):

1) An owner or operator of a total enclosure that has a total ground surface area of 10,000 square feet or more must install and maintain a minimum of one building digital differential pressure monitoring system at each of the following 3 walls in each total enclosure:

A) The leeward wall.

B) The windward wall.

C) An exterior wall that connects the leeward and windward wall at a location defined by the intersection of a perpendicular line between a point on the connecting wall and a point on its furthest opposite exterior wall, and intersecting within plus or minus 10 meters of

the midpoint of a straight line between the 2 other monitors specified. The midpoint monitor must not be located on the same wall as either of the other 2 monitors.

2) An owner or operator of a total enclosure that has a total ground surface area of less than 10,000 square feet must install and maintain a minimum of one building digital differential pressure monitoring system at the leeward wall of each total enclosure.

3) Each digital differential pressure monitoring system must be certified by the manufacturer to be capable of measuring and displaying negative pressure in the range of 0.001 to 0.11 inches of water (0.002 to 0.2 mm Hg) with a minimum accuracy of plus or minus 0.001 inches of water (0.002 mm Hg).

4) Each digital differential pressure monitoring system must be equipped with a continuous recorder.

5) Each digital differential pressure monitoring system must be calibrated in ~~accordance~~ compliance with manufacturer's specifications at least once every 12 calendar months or more frequently if recommended by the manufacturer.

6) Each digital differential pressure monitoring system must be equipped with a backup, uninterruptible power supply to ensure continuous operation of the monitoring system during a power outage.

d) An owner or operator of a lead emission unit subject to the total enclosure requirement of Section 226.155 must develop and maintain a Continuous Parametric Monitoring Plan containing the information required in subsection (d)(1), (2), or (3). The CPMP must be submitted for review and approval to the Section Manager by the compliance date ~~specified~~ in Section 226.130 and within 30 days after any changes are made to the plan. The CPMP must be amended by the owner or operator of a lead emission unit subject to this Part as necessary to ensure that it is kept current. The owner or operator of a lead emission unit subject to this Part must conduct monitoring in ~~accordance~~ compliance with the CPMP at all times.

1) If electing to comply with the facial velocity requirement in Section 226.155(c) using the total enclosure measurement method in subsection (b)(1), the CPMP must contain the information required by subsections (d)(1)(A) through (D).

A) The CPMP must identify the operating parameters to be monitored on an ongoing basis to ensure that the facial velocity measured during the most recent compliance test is maintained, explain why

those parameters are appropriate for demonstrating ongoing compliance, and identify the specific monitoring procedures for each parameter.

B) The CPMP must specify limits or ranges of values of the operating parameters listed ~~pursuant to~~under subsection (d)(1)(A) that demonstrate compliance with the facial velocity requirements in Section 226.155(c). These limits or ranges must represent the conditions ~~indicative of~~indicating proper operation and maintenance of the facial velocity through all natural draft openings during operation of lead emission units in each total enclosure.

C) The CPMP must specify data to be recorded to demonstrate compliance with the facial velocity requirements in Section 226.155(c), as well as the recording frequency and methodology.

D) The CPMP must specify the information to be reported to the Agency to demonstrate compliance with the facial velocity requirements in Section 226.155(c). This information must include~~, but is not limited to,~~ all information to be submitted as part of the semiannual reports required by Section 226.185(n), as well as the reporting frequency.

2) If electing to comply with the facial velocity requirement in Section 226.155(c) using the total enclosure monitoring method in subsection (b)(2), the CPMP must contain the information required by subsections (d)(2)(A) through (C).

A) The CPMP must specify limits or ranges of values of the sum of volumetric flow from all gas streams exiting the total enclosure through the control device and the sum of the volumetric flow from all gas streams into the total enclosure through a forced makeup air duct. These limits or ranges must represent the conditions ~~indicative of~~indicating proper operation and maintenance of the facial velocity through all natural draft openings during operation of lead emission units in each total enclosure.

B) The CPMP must specify data to be recorded to demonstrate compliance with the facial velocity requirements in Section 226.155(c), as well as the recording frequency and methodology.

C) The CPMP must specify the information to be reported to the Agency to demonstrate compliance with the facial velocity requirements in Section 226.155(c). This information must include~~,~~

~~but is not limited to,~~ all information to be submitted as part of the semiannual reports required by Section 226.185(n), as well as the reporting frequency.

3) If electing to comply with the average differential pressure requirement in Section 226.155(c) using the total enclosure measurement method in subsection (c), the CPMP must contain the information required by subsections (d)(3)(A) through (C).

A) The CPMP must identify the locations and design of each differential pressure monitoring instrumentation demonstrating compliance with ~~the requirements of~~ subsection (c) to ensure that the average differential pressure is measured properly, explain why those locations are appropriate for demonstrating ongoing compliance, and provide a schedule for instrumentation calibration.

B) The CPMP must specify data to be recorded to demonstrate compliance with the average differential pressure requirements in Section 226.155(c), as well as the recording frequency and methodology.

C) The CPMP must specify the information to be reported to the Agency to demonstrate compliance with the average differential pressure requirements in Section 226.155(c). This information must include~~, but is not limited to,~~ all information to be submitted as part of the semiannual reports required by Section 226.185(n), as well as the reporting frequency.

e) The owner or operator of a lead emission unit subject to this Part electing to change the total enclosure measurement method for an existing lead emission unit subject to the total enclosure requirements of Section 226.155 must notify the Section Manager of the measurement method by which the owner or operator will comply with the requirements of this Section. The notification must include an updated CPMP complying with the appropriate requirements for the new measurement method and must occur at least 30 days ~~prior to~~before changing the method.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.165 Inspection

a) An owner or operator of a lead emission unit subject to this Part must inspect control devices for the control of lead particulate at least once per month. The inspections of control devices must include all structures that comprise the

infrastructure of the affected control device and other structures that are necessary for the affected control device to function in its intended capacity.

b) An owner or operator of a lead emission unit subject to this Part must inspect all total enclosures for proper operation and physical integrity at least once per month.

c) An owner or operator of a lead emission unit subject to this Part must maintain and repair any control device and total enclosure, including all structures that comprise the infrastructure of the affected control device and total enclosure, as necessary to ensure proper and compliant operation.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.170 Lead Fugitive Dust Operating Program

a) An owner or operator of a lead emission unit subject to this Part must operate at all times according to a lead fugitive dust operating program that describes in detail the measures that are implemented to minimize lead fugitive dust emissions from the areas, activities, or events listed in subsections (a)(1) through (7):

1) Source roadways;

2) Source buildings housing lead emission units;

3) Battery storage areas;

4) Equipment maintenance for equipment used ~~in connection~~ with the processing or handling of lead-containing materials;

5) Material storage and material handling areas for lead-containing materials, excluding areas where only finished products are stored or handled;

6) Spillage of lead-containing material; and

7) Sorting or handling of lead-bearing scrap subject to Section 226.155(a)(6)(D).

b) An owner or operator of a lead emission unit subject to this Part must develop and maintain a lead fugitive dust operating program. The lead fugitive dust operating program must be submitted for review and approval to the Section Manager by the compliance date ~~specified~~ in Section 226.130 and within 30 days after any changes are made to the program. The lead fugitive dust operating program must be amended by the owner or operator of a lead emission unit subject to this Part as necessary to ensure that it is kept current. The owner or operator of a lead

emission unit subject to this Part must operate according to the lead fugitive dust operating program at all times.

c) The measures specified in the lead fugitive dust operating program must, at a minimum, include the requirements specified in subsections (c)(1) through (8).

1) The lead fugitive dust operating program must meet all requirements of 35 Ill. Adm. Code 212.Subpart K.

2) Cleanings must be performed by wet wash or by a vacuum cleaner equipped with a filter rated by the manufacturer to achieve at least 99.97 percent capture efficiency for 0.3 micron particles in a manner that does not generate fugitive dust. When performing cleanings by wet wash, a wet sweeper must employ a water flush followed by sweeping. Cleanings must be performed at the following frequencies:

A) Cleanings must be performed at least once every 24 hour period that a lead emission unit in an associated production area is operating and immediately before termination of negative pressure in any total enclosure required by Section 226.155 for all production areas.

B) Cleanings of scrap sorting and handling areas subject to Section 226.155(a)(6)(D) must be performed directly after sorting or handling is completed and before shutdown of the required capture and control equipment.

C) Cleanings must be performed at least once every 7 calendar days for all areas where lead-containing wastes generated from housekeeping activities are stored, disposed of, recovered, or recycled.

D) Cleanings of all areas must be performed no later than one hour after detection of any accidental release of dust containing lead.

3) All areas within the property boundaries subject to vehicle traffic must be paved and must be cleaned at least once every 7 calendar days to remove dust or other accumulated material from paved areas within the property boundaries. The cleaning must be performed using a vacuum truck with a filter rated by the manufacturer to achieve at least 99.97 percent capture efficiency for 0.3 micron particles, or a wet sweeper, or a combination thereof. Limited access and limited use roadways such as unpaved roads to remote locations on the property are exempt from this requirement if they are used infrequently (no more than one round trip per day).

4) Broken batteries must only be stored in a total enclosure. Any battery storage areas that are not located in a total enclosure must be inspected at least once every 7 calendar days. Within 72 hours after identification, any broken batteries must be moved to a total enclosure and all residue from broken batteries must be collected and the area must be cleaned.

5) All maintenance activities that could generate dust containing lead must be performed in a manner that minimizes emissions of dust, including~~, but not limited to,~~ the use of a vacuum cleaner equipped with a filter rated by the manufacturer to achieve at least 99.97 percent capture efficiency for 0.3 micron particles or the use of wet suppression sufficient to prevent dust formation.

6) All collected dross and dust must be stored and transported within closed conveyor and storage systems or in closed, leak-proof containers. All other lead-containing material must be contained and covered for transport outside of a total enclosure in a manner that minimizes spillage or dust formation. The transport outside of a total enclosure of scrap metal, spent refractory brick, ladles, and finished product must be addressed in the lead fugitive dust operating program so as to minimize the spillage of lead-containing material or the formation of dust.

7) Replacement of control equipment filter bags must be conducted ~~in the manner specified in~~under this subsection (c)(7). All vacuuming referenced in this subsection (c)(7) must be performed by a vacuum cleaner equipped with a filter rated by the manufacturer to achieve at least 99.97 percent capture efficiency for 0.3 micron particles:

A) Used filter bags must be rolled-up and placed into sealed plastic bags or barrels ~~prior to~~before removal from the filter unit;

B) The filter unit floors, the dirty and clean plenum side, must be vacuumed of dust residues immediately following removal activity;

C) The ground surface in and around the filter unit must be vacuumed immediately following the complete installation of new filter bags to remove any and all dust residue; and

D) In those instances in which filter bag replacement requires more than one operational day, the requirements of subsection (c)(7)(C) must be completed just ~~prior to~~before the end of each operational day.

8) Measures, including~~, but not limited to,~~ those specified in subsections (c)(1) through (7), must be implemented to minimize the tracking of dust

containing lead out of the total enclosure by personnel or by equipment used in handling the material.

d) All grounds on any source subject to this Part must be paved or oiled, or have sufficient groundcover planted, to minimize the amount of wind-blown dust leaving the property.

e) The applicability of this Part to the owner or operator of a lead emission unit does not exempt the owner or operator from compliance with the applicable requirements in 35 Ill. Adm. Code 212.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.175 Emissions Testing

a) For an existing lead emission unit that is subject to this Part, testing of lead emissions at control devices required by Section 226.140 must be conducted by January 1, 2015.

b) Testing Completed ~~Prior to~~Before January 1, 2015

1) The owner or operator of an existing lead emission unit that is subject to this Part and that performed all testing necessary to demonstrate compliance with Section 226.140 ~~prior to~~before January 1, 2015, is not required to retest ~~pursuant to~~under subsection (a) if:

A) On or after January 1, 2011, the owner or operator of an existing lead emission unit that is subject to this Part performed all testing necessary to demonstrate compliance with Section 226.140;

B) The owner or operator submitted the results of the tests to the Agency, and the tests were not rejected by the Agency;

C) The same capture system and control device or devices tested under subsection (b)(1)(A) are still being used by the subject lead emission unit; and

D) The owner or operator complies with all recordkeeping and reporting requirements in Section 226.185(i).

2) Nothing in this subsection (b), however, ~~shall~~ must limit the ability of the Agency or the USEPA to require that the owner or operator perform testing ~~pursuant to~~under subsection (e).

c) For a new lead emission unit that is subject to this Part, testing of lead emissions at control devices required by Section 226.140 must be conducted within 60 days

after achieving maximum operating rate, but no later than 180 days after initial startup of the new lead emission unit in ~~accordance~~ compliance with this Section.

d) The owner or operator of a lead emission unit subject to this Part must have subsequent emissions tests conducted at least once every 5 years. The owner or operator of a lead emission unit that tested ~~prior to~~before January 1, 2015, in ~~accordance~~ compliance with subsection (b) must use the original test date as the beginning of this 5-year period.

e) When, as determined by the Agency or USEPA, it is necessary to conduct testing to demonstrate compliance with Section 226.140, the owner or operator of a lead emission unit subject to this Part must, at his or her own expense, have the test conducted in ~~accordance~~ compliance with the applicable test methods and procedures specified in this Section within 90 days after receipt of a notice to test from the Agency or USEPA, unless that notice specifies an alternative testing deadline.

f) The owner or operator of a lead emission unit subject to the emissions testing requirements of this Section must conduct all tests for lead required by subsections (a) through (e) in ~~accordance~~ compliance with subsections (g) through (m).

g) The owner or operator of a lead emission unit required to test ~~pursuant to~~under subsection (a), (c), (d), or (e) must submit a testing protocol as described in USEPA's Emission Measurement Center Guideline Document (GD-042), as incorporated by reference in Section 226.120, to the Agency, directed to the Section Manager, at least 45 days ~~prior to~~before a scheduled emissions test. Upon written request directed to the Section Manager, the Agency may, in its sole discretion, waive the 45-day requirement. A waiver is only effective if it is provided in writing by the Section Manager or his or her designee.

h) Notification of a scheduled emissions test must be submitted to the Agency in writing, directed to the Section Manager, at least 30 days ~~prior to~~before the expected date of the emissions test and, again, 5 days ~~prior to~~before the testing. Upon written request directed to the Section Manager, the Agency may, in its sole discretion, waive the 30-day requirement or the 5-day requirement. A waiver is only effective if it is provided in writing by the Section Manager or his or her designee.

i) If, after the 30-days' notice for an initially scheduled test is sent, there is a delay (e.g., due to operational problems) in conducting the test as scheduled, the owner or operator of the lead emission unit must notify the Agency's Bureau of Air, Compliance Section as soon as practicable of the delay in the original test date, either by providing at least 7 days' notice of the rescheduled date of the test or by arranging a new test date with the Agency by mutual agreement.

j) Not later than 60 days after the completion of the test, the owner or operator of a lead emission unit required to test ~~pursuant to~~under subsection (a), (c), (d), or (e) must submit the results of the test to the Agency, directed to the Section Manager.

k) The owner or operator of a lead emission unit subject to the emissions testing requirements of this Section must conduct tests for lead emissions using 40 CFR 60, subpart A, and appendix A, Methods 1 (1 or 1A), 2 (2, 2A, 2C, or 2D), 3 (3 or 3A), and 4, and Method 12 or 29, as incorporated by reference in Section 226.120, or other alternative USEPA methods approved by the Agency.

l) Each emissions test must be in ~~accordance~~ compliance with all of the following requirements:

1) Method 12 or 29 must be used to determine compliance with the lead emission standard in Section 226.140;

2) The minimum sample volume must be 0.85 dry standard cubic meters (30 dry standard cubic feet);

3) The minimum sampling time must be 60 minutes for each run. Consistent with the averaging and compliance requirements of this subsection (l), at least 3 runs must be performed and the arithmetic average of 3 valid runs must be used to determine compliance;

4) The following procedure must be used to average emissions of tests results for any compliance determination:

A) The average of the emissions test results must be determined by the arithmetic average of 3 valid test run results, as long as the test runs are conducted in ~~conformance~~ compliance with ~~the provisions of~~ an approved testing protocol as required by subsection (g).

B) Notwithstanding subsection (l)(4)(A), if the owner or operator of a lead emission unit elects to perform more than 3 test runs, then the average must be calculated based upon the results of all valid test runs.

C) Notwithstanding subsection (l)(4)(A), in the event that a sample is accidentally lost or conditions occur in which one of the test runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, malfunction, or other dissimilar or non-representative circumstances, upon the owner's or operator's documentation of the existence of any of the circumstances set forth in this subsection (l)(4)(C) and verification by the Section Manager or his or her designee that the conditions existed, compliance may be

determined by using the arithmetic average of the test results of all remaining valid test runs; however, a minimum of 2 valid test runs is required to determine compliance;

5) Each test for lead emissions must be conducted during conditions representative of maximum lead emissions; and

6) If an owner or operator of a lead emission unit does not meet the criteria for averaging of subsection (l)(4), then each individual valid test run must meet the applicable limitation in order to demonstrate compliance.

m) The owner or operator of any lead emission unit for which emissions are vented from an uncontrolled stack to the atmosphere must test those emissions in ~~accordance~~ compliance with the requirements of this Section or calculate the emissions by means of collecting area time-weighted average lead samples and analyzing those samples through the use of OSHA Method 1006, as incorporated by reference in Section 226.120. If an owner or operator of a lead emission unit subject to this Part elects to calculate lead emissions from an uncontrolled stack, the calculations must be completed at least once every 5 years.

(Source: Amended at 48 Ill. Reg_____, effective _____)

Section 226.185 Recordkeeping and Reporting

a) An owner or operator of a lead emission unit subject to this Part must keep and maintain all records used to demonstrate initial compliance and ongoing compliance with the requirements of this Part.

1) Except as otherwise provided under this Part, copies of the records must be submitted by the owner or operator of the source to the Agency within 30 days after receipt of a written request by the Agency.

2) The owner or operator must keep and maintain all records required by this Section at the source for at least 5 years ~~from~~ after the date the document is created and must make all records available to the Agency for inspection and copying upon request.

b) Notification of the initial startup of any new lead emission unit subject to this Part must be submitted to the Section Manager no later than 30 days after initial startup.

c) The owner or operator of a lead emission unit subject to this Part must maintain records that demonstrate compliance with the requirements of this Part, as applicable, that include the following:

1) Calendar date of the record;

2) Reports for all applicable emissions tests for lead conducted on the lead emission unit, including the date of the test and the results;

3) The date, time, and duration of any malfunction in the operation of any lead emission unit, any lead emission unit's control equipment, or any emissions monitoring equipment subject to this Part if the malfunction could cause an increase in emissions. The records must include a description of the malfunction, the probable cause of the malfunction, the date and nature of the corrective action taken, and any preventative action taken to avoid future malfunctions;

4) A log of all inspections, cleanings, maintenance, and repair activities performed on a lead emission unit's control equipment. The records must document the performance of the inspection, including the date of the inspection, and the observed condition and operation of the control equipment. The records must also include the date and nature of the cleaning and the maintenance and repair activities performed on the lead emission unit's control equipment;

5) Records, including the date and nature of all pavement cleanings, and any reason for not cleaning pavement (e.g., equipment breakdown);

6) The date, time, and quantity of any spillage of dust containing lead. The records must include the date, time, and nature of the cleaning activity in response to the spill;

7) A log of all battery storage inspection activities, including the date of the inspection, a description of any broken batteries discovered during the inspections, and the date and nature of any required cleaning activities to control dust;

8) A log of all maintenance activities that could generate dust containing lead. The log must include the date of the maintenance activity, a description of the maintenance activity, and those measures implemented to minimize emissions of dust; and

9) A log of the hours of operation for all quenching operations.

d) The owner or operator of a lead emission unit subject to this Part must maintain records to demonstrate compliance with Section 226.150(a) and (b).

e) The owner or operator of a lead emission unit subject to this Part must maintain the CDMP required by Section 226.150(c). Records must be maintained demonstrating compliance with the CDMP.

f) The owner or operator of a lead emission unit subject to this Part must maintain records of changes in pressure that could indicate a leak or other problem and, if applicable, every alarm from the leak detection system. A log must be maintained of all investigations into the cause of the pressure changes and, if applicable, every alarm from the leak detection system, and any maintenance and repair activities performed as a result of the investigation. The records must also include the date of each ~~aforementioned activity~~of these activities. Records must be maintained in order to demonstrate compliance with Section 226.150(d).

g) The owner or operator of a lead emission unit subject to this Part must maintain records demonstrating compliance with the lead fugitive dust operating program and with the activities required by Section 226.170.

h) The owner or operator of a lead emission unit subject to this Part must maintain records that include the following information for each period when the affected emission unit operated without the lead emission unit's control equipment for lead and had the potential for emissions:

1) The date, time, and duration of the outage;

2) The length of time that the affected lead emission unit subject to this Part operated uncontrolled before required control measures were in place or the affected lead emission unit was shut down (to resume operations only after required control measures were in place) and an explanation why the time the affected lead emission unit operated uncontrolled was not shorter, including a description of any mitigation measures that were implemented;

3) A discussion of the probable cause of the outage of the control equipment; and

4) A discussion of the date and nature of any preventative measures taken to avoid future outage.

i) The owner or operator of a lead emission unit subject to this Part must maintain records demonstrating compliance with Section 226.175.

j) The owner or operator of a lead emission unit subject to this Part must maintain a log of all inspections of control devices for the control of lead particulate. The records must document the date of the inspection, the observed condition and operation of the control devices, and the date and nature of any corrective action taken. Records must be maintained demonstrating compliance with Sections 226.165(a) and (c).

k) The owner or operator of a lead emission unit subject to this Part must maintain a log of all inspections of any total enclosures and source structures. The records must document the date of the inspection, the observed condition and operation of

the total enclosure, and the date and nature of any corrective action taken. Records must be maintained demonstrating compliance with Sections 226.155(e), 226.160(a), and 226.165(b) and (c).

l) The owner or operator of a lead emission unit subject to this Part must maintain records that include any data or information necessary to demonstrate compliance with the CPMP, including~~, but not limited to,~~ records demonstrating compliance with Sections 226.155(c) and 226.160.

m) The owner or operator of a lead emission unit subject to this Part must notify the Section Manager within 5 days after discovery of deviations from any of the requirements of this Part or any exceedance of an applicable emission limitation. At a minimum, and in addition to any permitting obligations, these notifications must include a description of the deviations, a discussion of the possible cause of the deviations, any corrective actions, and any preventative measures taken.

n) The owner or operator of a lead emission unit subject to this Part must submit semiannual reports to the Section Manager. The reports must include all monitoring reports summarizing monitoring as required by this Part, as well as summaries of all instances of deviations from the requirements of this Part. For the January through June monitoring period, the owner or operator ~~shall~~ must submit the monitoring report by July 31 of that year. For the July through December monitoring period, the owner or operator ~~shall~~ must submit the monitoring report by January 31 of the following year. All reports must be certified by a responsible official that the information submitted is complete, true, and accurate.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: EMISSION STANDARDS AND LIMITATIONS FOR STATIONARY SOURCES

PART 228
ASBESTOS (REPEALED)

SUBPART A: GENERAL PROVISIONS

SUBPART B: GENERAL REQUIREMENTS

SUBPART C: CONSTRUCTION, ALTERATION AND REPAIR OF STRUCTURE

SUBPART D: DEMOLITION

SUBPART E: MANUFACTURING

SUBPART F: LOCAL ENFORCEMENT

AUTHORITY: Implementing Section 10 and authorized by Section 27 of the Environmental Protection Act (Ill. Rev. Stat. 981, ch. 111 1/2, pars. 1010 and 1027).

SOURCE: Adopted as Chapter V: Hazardous Substances, Title I, Asbestos and Spray Insulation and Fireproofing, R71-16, 3 PCB 461, January 6, 1972, filed and effective January 24, 1972; Renumbered to Chapter 2: Air Pollution, Part VI: Asbestos and Spray Insulation and Fireproofing, R72-10, filed and effective June 27, 1975; codified at 7 Ill. Reg. 13612; repealed in R18-21 at 48 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 228.101 Authority

Pursuant to the authority in Sections 9, 10 and 13 of the Environmental Protection Act (Ill. Rev. Stat. 1981, ch. 111 1/2, pars. 1001 et seq.) (Act) which empower the Pollution Control Board (Board) to adopt regulations forbidding the "sale, offer, or use for reasons of air pollution control" of any article, and to set "standards specifying the maximum amounts or concentrations of various contaminants that may be discharged into the atmosphere"; and to set standards for the issuance of permits for the operation of any equipment or facility capable of causing or contributing to air pollution; and to promulgate "conditions regarding the...use of any...article determined by the Board to constitute an air pollution hazard;" and to adopt effluent standards limiting the amounts of contaminants that may be discharged into the water of Illinois, the Board adopts the following rules and regulations.

Section 228.102 Policy

a) It is the purpose of the General Assembly in adopting the Act to maintain and enhance the purity of the air and water of Illinois in order to protect health, welfare and the quality of life. Accordingly, it is hereby determined that the uncontrolled discharge of asbestos fiber into the environment tends to serverely endanger the public health and welfare and that the uncontrolled spraying of fiber-containing materials unreasonably interferes with the enjoyment of life and property.

b) It is the purpose of these regulations to control the amount of asbestos fiber released into the environment from the major sources of emission. Such control is necessary not only to protect those members of the public who are in proximity to heavy concentrations of asbestos fiber but also to safeguard the health of future generations endangered by the continuous discharge of asbestos fiber which can be toxic and which tends to be cumulative both in the atmosphere and in the human body.

c) Where health can be protected by the adoption of an emission standard or of procedural safeguards, such a course has been pursued. In those instances where restriction is unfeasible because of the unusual nature of the emission source (spray asbestos at construction sites) a product ban has been resorted to. This prohibition has been made with full consideration given to the available alternative materials.

d) It is also the purpose of these regulations to reduce the emission of non-asbestos particulate from spray-fireproofing and insulation. To protect against these emissions, the biological effects of which are unknown, procedural safeguards have been enacted.

Section 228.103 Definitions

The terms which appear in this Part have the definitions specified in this Part and 35 Ill. Adm. Code 201 and 211.

"Asbestos": Any fiber or any mixture containing fiber of hydrated silicate mineral, which, on the basis of its crystalline structure, falls into one of two categories:

pyroxenes - chrysotile fiber; or

amphiboles - crocidolite, amosite, tremolite, actinolite or

anthophilite fiber.

"Commercial activity": Any activity done for hire or having financial profit as a primary aim.

"Debris": Asbestos-containing waste produced by the demolition of a structure.

"Spraying": The pneumatic application of material used for fireproofing or insulation.

"Waste": Any asbestos-containing matter which has been or is intended to be discarded.

Section 228.104 Incorporations by Reference

The following materials are incorporated by reference:

a) ASME Power Test Code 27-1957, American Society of Mechanical Engineers, United Engineering Center, 345 East 47th Street, New York, NY 10017.

b) Edwards, G. H., and Lynch, J. R., "The Method Used by the U. S. Public Health Service for Enumeration of Asbestos Dust on Membrane Filters," Ann. Occupational Hyg. (Oxford), 11(1):1-6, January 1968.

SUBPART B: GENERAL REQUIREMENTS

Section 228.121 Prohibition

No commercial activity, not otherwise hereinafter prohibited, involving the potential discharge of visible amounts of asbestos fiber or asbestos-containing materials into the ambient air from the construction, alteration, repair or demolition of a structure or from the processing or manufacturing of asbestos-containing products, shall be conducted unless the person or entity in charge of such activity complies with the following:

a) Personnel shall be designated to exercise full-time supervisory authority over all aspects of the activity from which the release of asbestos fiber into the environment could result, in such a manner as to insure compliance with the pertinent asbestos control regulations.

b) Each employee engaged in such activity shall complete a course of instruction on the potential hazards of exposure to asbestos fiber, including the precautions that must be observed to prevent or restrict the dispersion of asbestos fiber into the environment.

c) Facilities shall be provided and procedures instituted and supervised that prevent the removal from the site of visible amounts of asbestos-containing material on the clothing of the employees.

d) Asbestos-containing wastes shall be immediately vacuumed or otherwise collected where vacuuming is impossible, and shall be placed in a container resistant to tearing or breaking under normal handling conditions, which shall be tightly sealed and clearly marked as containing asbestos waste. Such containers shall be placed directly upon a vehicle for disposal by burial at a sanitary landfill. Exception: This subsection (d) shall not apply to the demolition of a structure, except as provided in Section 228.141(d) and (e) or to the disposal of sludge waste except as provided in Section 228.156.

Section 228.123 Permit for Manufacture

The manufacturing or processing of asbestos-containing products is prohibited unless the person or entity in charge of such activity has obtained a permit from the Illinois Environmental Protection Agency (Agency). Before obtaining such permit the applicant shall demonstrate compliance with Section 228.121 and such additional standards as are hereinafter specifically required.

SUBPART C: CONSTRUCTION, ALTERATION AND REPAIR OF STRUCTURE

Section 228.131 Spray Asbestos Prohibited

The spraying of asbestos-containing material is prohibited.

Section 228.132 Non-asbestos Spray Insulation

Non-asbestos fibrous matter shall not be sprayed in an area open to the atmosphere unless the following procedures are taken:

a) The entire floor or area to be sprayed shall be enclosed with plastic or plastic-coated tarpaulins in a manner which shall preclude the escape of fiber-containing material from the enclosure. All interior open areas such as elevator shafts and stairwells shall be enclosed in a manner which shall prevent the escape of fiber-containing material from the working area.

b) The entire sprayed area, all ledges and surfaces including tarpaulins within the enclosure shall be thoroughly vacuumed upon completion of the spraying operation and immediately before the enclosure is dismantled.

Section 228.133 Enclosure for Asbestos Construction

a) The cutting, trimming, fitting or stripping of asbestos-containing material in the construction, alteration or repair of a structure which is done at the site of such structure in an area open to the atmosphere shall be conducted within a special enclosure designed to preclude the escape of asbestos fiber from the immediate area of such enclosure.

b) The mechanical exhaustion of dust from such enclosure to the ambient air is prohibited unless such exhaust system is equipped with a properly sized fabric filter for dust collection or an equivalent device as approved by the Agency.

Section 228.134 No Visible Emission

Compliance with Sections 228.132 and 228.133 notwithstanding, visible emissions of fiber-containing material in an area open to the atmosphere shall be considered a violation.

Section 228.135 Preclude Exposure to Circulating Air

Asbestos-containing material applied in the construction, alteration or repair of a structure shall be coated with a sealant, provided with a cover or installed in some other manner so as to preclude emission of the asbestos-containing material to the circulating air. Any plenum or other structure coated with or containing asbestos-containing insulation and used in the circulation of air in a building shall be thoroughly cleaned of all debris and waste insulation.

SUBPART D: DEMOLITION

Section 228.141 Necessary and Practicable Safeguards

Where the risk of public exposure to asbestos fiber from the dislodging of asbestos-containing materials is present, no demolition of a structure shall be initiated unless all safeguards necessary and practicable to reduce the emission of dust are taken. Such procedures shall include, but are not necessarily limited to:

a) Boilers and pipes and steel members insulated or fireproofed with asbestos-containing material shall be wetted and stripped before toppling of walls is begun. This procedure shall be followed, where practicable, as to all other asbestos-lined surfaces. Such asbestos waste shall be immediately bagged and disposed of in accordance with Section 228.121(d).

b) When demolition by toppling occurs such reasonable enclosure for dust emission control as is compatible with the character of the structure shall be employed.

c) Before the demolition or toppling of any section or wall of the structure, adequate wetting to suppress the dust shall be employed.

d) Asbestos-containing debris shall not be dropped or thrown from any floor but shall be transported by dust-tight chutes or buckets. Asbestos-containing debris in chutes or buckets shall be sufficiently wetted to preclude dust dispersion at the point of discharge.

e) All asbestos-containing debris shall be thoroughly wetted before loading into trucks, other vehicles or containers. During transport such waste shall be enclosed or covered so as to prevent dust dispersion. Asbestos-containing debris shall be disposed by burial at a sanitary landfill.

SUBPART E: MANUFACTURING

Section 228.151 Emission Standards; Sampling and Counting Procedures

A factory, plant or enterprise which engages in the processing or manufacturing of any asbestos-containing product shall discharge no visible emission of particulate matter from such manufacturing or processing into the ambient air and shall emit no concentrations of asbestos fiber into the ambient air in excess of 2 fibers per cubic centimeter of air.

a) Sampling of emissions shall be by the membrane filter method and according to the procedures recommended in the ASME Power Test Code 27-1957, or other procedures generally accepted by persons knowledgeable in the state of the art.

b) Counting shall be according to the procedure outlined in Edwards, G. H., and Lynch, J. R., "The Method Used by the U. S. Public Health Service for Enumeration of Asbestos Dust on Membrane Filters," Ann. Occupational Hyg. (Oxford), 11(1):1-6, Jan. 1968; with 20 fields per sample, counted at random using phase contrast microscopy at 430 x magnification and counting only fibers 5 microns or greater in length, with a length to breadth ratio of 3 to 1 or greater.

Section 228.152 Venting of all Emissions to Central Sources

Any factory, plant or enterprise which engages in the processing or manufacturing of any asbestos-containing product shall control all asbestos handling facilities so that exhaust air can be ducted through necessary air pollution control equipment and samples taken of the gases which are emitted into the ambient air.

Section 228.153 Inspection

Any factory, plant or enterprise for which a permit is sought or has been granted pursuant to Section 228.122 shall be subject to inspection by the Agency at any reasonable time, without prior notice.

Section 228.154 Monitoring and Reporting

At a frequency to be determined by the Agency, any factory, plant or enterprise which engages in the processing or manufacturing of any asbestos-containing product shall sample the exhaust from such factory, plant or enterprise and submit the emission data to the Agency.

Section 228.155 Process Wastewater Effluent Criteria

A factory, plant or enterprise the manufacturing processes of which add asbestos fiber to water shall not discharge such process wastewater to the sewers or waters of Illinois unless such process wastewater is given the best available treatment consistent with technological feasibility and economic reasonableness.

Section 228.156 Sludge Disposal

Waste sludge containing asbestos and collected from settling ponds shall be enclosed during transport and shall be disposed by burial at a sanitary landfill.

Section 228.157 Transportation of Asbestos-containing Products

No product which may emit asbestos-fiber during its transportation shall be transported unless such product is enclosed so as to preclude the emission of asbestos fiber into the ambient air.

Section 228.158 No Visible Emission

Notwithstanding compliance with Section 228.156 and 228.157 the visible emission of particulate matter in the course of such transportation shall be considered a violation.

SUBPART F: LOCAL ENFORCEMENT

Section 228.161 Obligation to Enforce

It shall be the obligation of local governments as well as the Agency to enforce by appropriate means the requirements of Sections 228.121 and 228.156 through 228.158.

228.APPENDIX C Past Compliance Dates

Rule 621

After June 30, 1972 commercial activities involving potential discharge of asbestos from the construction, alteration, repair or demolition of a structure or from the processing or manufacturing of asbestos-containing products were prohibited except in compliance with certain requirements.

Rule 631

The spraying of asbestos-containing materials was prohibited after March 31, 1972.

Rule 651

After June 30, 1972, factories, plants or enterprises engaged in processing or manufacturing of any asbestos-containing product were prohibited from discharging visible emissions of particulate matter or concentrations of asbestos fiber in excess of 2 per cubic centimeter.

Unless otherwise defined herein and unless a different meaning of a term is clear from its context, the ~~definitions of~~ terms used in this Part ~~shall~~ have the ~~meanings specified~~definitions for those terms in ~~415 ILCS 5/39.5~~Section 39.5 of the Act, 35 Ill. Adm. Code 201.102, or 35 Ill. Adm. Code 211.

"Bag leak detection system" means an instrument that is capable of monitoring PM loadings in the exhaust of a fabric filter in order to detect bag failures. A bag leak detection system includes~~, but is not limited to,~~ an instrument that operates on triboelectric, lightscattering, light-transmittance, or other effects to monitor relative PM loadings.

"Batch HMIWI" means an HMIWI that is designed in such a way that neither waste charging nor ash removal can occur during combustion.

"Biologicals" means preparations made from living organisms and their products, including vaccines, cultures, etc., intended for use in diagnosing, immunizing, or treating humans or animals or in research pertaining thereto.

"Body fluids" means liquid emanating or derived from humans and limited to: blood; dialysate; amniotic, cerebrospinal, synovial, pleural, peritoneal and pericardial fluids; semen and vaginal secretions.

"Bypass stack" means an alternative stack used for discharging combustion gases to the atmosphere primarily to avoid severe damage to an air pollution control device or other equipment.

"Charge" means the act of placing waste into an HMIWI for incineration.

"Chemotherapeutic waste" means waste material resulting from the production or use of antineoplastic agents used for the purpose of stopping or reversing the growth of malignant cells.

"Co-fired combustor" means a unit combusting hospital waste or medical/infectious waste with other fuels or wastes (e.g., coal, municipal solid waste) and subject to an enforceable requirement limiting the unit to combusting a fuel feed stream, of which 10 percent or less of the weight is comprised, in aggregate, of hospital waste and medical/infectious waste as measured on a calendar quarter basis. For purposes of this definition, pathological waste, chemotherapeutic waste, and low-level radioactive waste are considered "other" wastes when calculating the percentage of hospital waste and medical/infectious waste combusted.

"Commercial HMIWI" means an HMIWI that offers incineration services for hospital/medical/ infectious waste generated offsite by firms unrelated to the firm

that owns the HMIWI.

"Continuous emission monitoring system" or "CEMS" means a monitoring system for continuously measuring and recording the emissions of a pollutant from an affected facility.

"Continuous HMIWI" means an HMIWI that is designed to allow waste charging and ash removal during combustion.

"Dioxins/furans" means the total emissions of any tetra- through octa-chlorinated dibenzo-para-dioxins and dibenzofurans, as measured by EPA Reference Method 23, incorporated by reference in Section 229.104(d) ~~of this Subpart~~.

"Dry scrubber" means an add-on air pollution control system that injects dry alkaline sorbent (dry injection) or sprays an alkaline sorbent (spray dryer) to react with and neutralize acid gases in an HMIWI exhaust stream, forming a dry powder material.

"Fabric filter" means an add-on air pollution control system that removes PM and nonvaporous metals emissions by passing flue gas through filter bags.

"Facilities manager" means the individual in charge of purchasing, maintaining, and operating an HMIWI, or the owner's or operator's representative responsible for the management of an HMIWI. Alternative titles may include director of facilities or vice president of support services.

"High air phase" means the stage of the batch operating cycle when the primary chamber reaches and maintains maximum operating temperatures.

"Hospital" means any facility that has an organized medical staff, maintaining at least 6 inpatient beds and where the primary function of the facility is to provide diagnostic and therapeutic patient services and continuous nursing care primarily to human inpatients who are not related and who stay on average ~~in excess of~~more than 24 hours per admission. This definition does not include facilities maintained for the sole purpose of providing nursing or convalescent care to human patients who generally are not acutely ill but who require continuing medical supervision.

"Hospital/medical/infectious waste incinerator" or "HMIWI" means any device that combusts any amount of hospital waste or medical/infectious waste.

"Hospital waste" means discards generated at a hospital, except unused items returned to the manufacturer. The definition of hospital waste does not include human corpses, remains, or anatomical parts that are intended for interment or cremation.

"HMIWI operator" means any person who operates, controls, or supervises the day-to-day operation of an HMIWI.

"Infectious agent" means any organism that is capable of being communicated by invasion and multiplication in body tissues and is also capable of causing disease or adverse health impacts in humans.

"Intermittent HMIWI" means an HMIWI that is designed to allow waste charging, but not ash removal, during combustion.

"Large HMIWI" means:

An HMIWI whose maximum design waste burning capacity is more than 500 lbs per hour; or

A continuous or intermittent HMIWI whose maximum charge rate is more than 500 lbs per hour; or

A batch HMIWI whose maximum charge rate is more than 4,000 lbs per day.

"Low-level radioactive waste" means waste that contains radioactive nuclides emitting primarily beta or gamma radiation, or both, in concentrations or quantities that exceed applicable Federal or State standards for unrestricted release. Low-level radioactive waste is not high-level radioactive waste, spent nuclear fuel, or by-product material as defined by the Atomic Energy Act of 1954 (42 USC 2014(e)(2)).

"Malfunction" means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or ~~of~~ a process to operate in a normal or usual manner. Failures that are caused, in part, by poor maintenance or careless operation are not malfunctions.

"Maximum charge rate" means:

For continuous and intermittent HMIWI, 110 percent of the lowest 3-hour average charge rate measured during the most recent performance test demonstrating compliance with all applicable emission limits ~~specified~~ in Subpart E ~~of this Part~~.

For batch HMIWI, 110 percent of the lowest daily charge rate measured during the most recent performance test demonstrating compliance with all applicable emission limits ~~specified~~ in Subpart E ~~of this Part~~.

"Maximum design waste burning capacity" means:

For intermittent and continuous HMIWI:

$$C = \frac{P_v X 15{,}000}{8{,}500}$$

Where:

C	=	HMIWI capacity, lb/hr
P_v	=	primary chamber volume, ft^3
15,000	=	primary chamber heat release rate factor, $Btu/ft^3/hr$
8,500	=	standard waste heating value, Btu/lb;

For batch HMIWI:

$$\frac{P_v x 4.5}{8}$$

Where:

C	=	HMIWI capacity, lb/hr
P_v	=	primary chamber volume, ft^3
4.5	=	waste density factor, lb/ft^3
8	=	typical hours of operation of a batch HMIWI, hours.

"Maximum fabric filter inlet temperature" means 110 percent of the lowest 3-hour average temperature at the inlet to the fabric filter (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable dioxin/furan emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Maximum flue gas temperature" means 110 percent of the lowest 3-hour average temperature at the outlet from the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable Hg emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Medical/infectious waste" means any waste generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals. The definition of medical/infectious waste does not include hazardous waste identified or listed under ~~the regulations in~~ 40 CFR 261; household waste, as defined in 40 CFR 261.4(b)(1); and domestic sewage materials identified in 40 CFR 261.4(a)(1). For the purposes of this Part, medical/infectious waste includes:

> Cultures and stocks of infectious agents and associated biologicals, including: vaccines and cultures intended for use in diagnosing, immunizing, or treating humans or animals; cultures from medical and

pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; and discarded live and attenuated vaccines;

Human pathological waste, including tissues, organs, and body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers;

Human blood, any products derived from human blood, or anything that has been in contact with human blood in any form;

Intravenous bags and associated tubing;

Sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), pasteur pipettes, scalpel blades, blood vials, and needles with attached tubing;

Culture dishes, regardless of the presence of infectious agents, and culture dishes and devices used to transfer, inoculate, and mix cultures;

Any type of broken or unbroken glassware that has been in contact with infectious agents;

Animal waste, including contaminated animal carcasses, body parts, bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals, or testing of pharmaceuticals;

Isolation wastes, including biological waste and discarded materials contaminated with blood, excretions, exudates, or secretions from humans who are isolated to protect others from highly communicable diseases, or isolated animals known to be infected with highly communicable diseases; and

Unused sharps, including the following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.

"Medium HMIWI" means:

An HMIWI whose maximum design waste burning capacity is more than 200 lbs per hour but less than or equal to 500 lbs per hour; or

A continuous or intermittent HMIWI whose maximum charge rate, as set by permit, is more than 200 lbs per hour but less than or equal to 500 lbs per hour; or

A batch HMIWI whose maximum charge rate, as set by permit, is more than 1,600 lbs per day but less than or equal to 4,000 lbs per day.

"Minimum dioxin/furan sorbent flow rate" means 90 percent of the highest 3-hour average dioxin/furan sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the applicable dioxin/furan emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum Hg sorbent flow rate" means 90 percent of the highest 3-hour average Hg sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the applicable Hg emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum HCl sorbent flow rate" means 90 percent of the highest 3-hour average HCl sorbent flow rate (taken, at a minimum, once every hour) measured during the most recent performance test demonstrating compliance with the applicable HCl emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum horsepower" or "minimum amperage" means 90 percent of the highest 3-hour average horsepower or amperage to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable emission limits ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum pressure drop across the wet scrubber" means 90 percent of the highest 3-hour average pressure drop across the wet scrubber PM control device (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable PM emission limit ~~specified~~ in this Subpart E ~~of this Part~~.

"Minimum reagent flow rate" means 90 percent of the highest 3-hour average reagent flow rate at the inlet to the selective noncatalytic reduction technology (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable NO_x emissions limit ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum scrubber liquor flow rate" means 90 percent of the highest 3-hour average liquor flow rate at the inlet to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the applicable emission limits ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum scrubber liquor pH" means 90 percent of the highest 3-hour average liquor pH at the inlet to the wet scrubber (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating

compliance with the applicable HCl emission limit ~~specified~~ in Subpart E ~~of this Part~~.

"Minimum secondary chamber temperature" means 90 percent of the highest 3-hour average secondary chamber temperature (taken, at a minimum, once every minute) measured during the most recent performance test demonstrating compliance with the PM, CO, dioxin/furan, and applicable NO_x emissions limits ~~specified~~ in Subpart E ~~of this Part~~.

"Operating day" means a 24-hour period between 12:00 midnight and the following midnight during which any amount of hospital waste or medical/infectious waste is combusted at any time in an HMIWI.

"Operation" means any period during which waste is combusted in an HMIWI, excluding periods of startup or shutdown.

"Pathological waste" means waste material consisting of only human or animal remains, anatomical parts, tissue, and the bags or containers used to collect and transport the waste material and associated animal bedding, if applicable.

"Primary chamber" means the chamber in an HMIWI that receives waste material, in which the waste is ignited, and from which ash is removed.

"Rural HMIWI" means any HMIWI identified in Section 229.110(a) ~~of this Part,~~ that is located more than 50 miles from the boundary of the nearest Standard Metropolitan Statistical Area, as defined in OMB Bulletin No. 93-17, incorporated by reference at Section 229.104(b) ~~of this Part~~, meets the criteria ~~specified~~ in the definition of "small HMIWI", and burns less than 2,000 lbs per week of hospital waste and medical/infectious waste (except the 2,000 lbs per week limitation does not apply during performance testing).

"Secondary chamber" means that component of an HMIWI that receives combustion gases from the primary chamber and in which the combustion process is completed.

"Shutdown" means the period of time after all waste has been combusted in the primary chamber.

"Small HMIWI" means:

An HMIWI whose maximum design waste burning capacity is less than or equal to 200 lbs per hour; or

A continuous or intermittent HMIWI whose maximum charge rate, as set by permit, is less than or equal to 200 lbs per hour; or

A batch HMIWI whose maximum charge rate, as set by permit, is less than or equal to 1,600 lbs per day.

"Startup" means the period of time between the activation of an HMIWI and the first charge of waste to the unit. For batch HMIWI, startup means the period of time between activation of an HMIWI and ignition of the waste.

"Wet scrubber" means an add-on air pollution control device that uses either an alkaline or some other type of scrubbing liquor to collect pollutants and/or neutralize acid gases.

SUBPART B: APPLICABILITY

Section 229.110 General Applicability

a) Except as provided for in subsections (b), (c), (d) and (e) ~~of this Section~~ and Section 229.112 ~~of this Subpart~~, this Part applies to all HMIWIs for which:

1) Construction commenced either on or before June 20, 1996, or modification was commenced either on or before March 16, 1998; or

2) Construction commenced either after June 20, 1996, but no later than December 1, 2008, or for which modification is commenced after March 16, 1998 but no later than April 6, 2010.

b) An HMIWI otherwise subject to the emission limits in this Part is only subject to the recordkeeping requirements ~~set forth~~ in Section 229.182(b), (f) and (g) ~~of this Part~~ during those periods when it combusts only pathological waste, low-level radioactive waste, or chemotherapeutic waste, provided the owner or operator of the HMIWI notifies the Agency of its intention to operate ~~pursuant to~~under this operating scenario in its CAAPP application submitted in ~~accordance~~ compliance with either Section 229.115(b)(1), Subpart D ~~of this Part~~, or Section 39.5 of the Act.

c) An HMIWI that combusts only pathological waste, low-level radioactive waste, or chemotherapeutic waste is subject to only the recordkeeping requirements ~~set forth~~ in Section 229.182(c), (f) and (g) ~~of this Part~~ provided that the owner or operator of an HMIWI provides, by December 15, 1999, both the Agency and the USEPA with a written certification of its status as an HMIWI burning only the wastes listed in this subsection.

d) A co-fired combustor is subject only to the recordkeeping requirements ~~set forth~~ in Section 229.182(d), (f) and (g) ~~of this Part~~, provided that the owner or operator of the combustor is subject to a permit condition limiting its fuel feed stream to co-fired combustor status, and provides, by December 15, 1999, both the Agency and USEPA with a written certification of its status as a co-fired combustor, including an estimate of the relative weight of hospital waste, medical/infectious waste, and other fuels and/or waste combusted at the facility.

e) Any hospital that does not operate an HMIWI but ~~that~~ sends any of its hospital waste or medical/infectious waste to an off-site HMIWI is subject only to the waste management plan provisions ~~set forth~~ at Section 229.178 ~~of this Part~~.

f) Before January 1, 2014, each owner or operator of an HMIWI as defined in subsection (a)(1) ~~of this Section~~, subject to the emissions limits under Section 229.125(a) or Section 229.126(a), ~~shall~~ must comply with all the applicable provisions of this Part.

g) On and after January 1, 2014, an HMIWI as defined in subsection (a)(1) ~~of this Section~~ is no longer subject to the emissions limits under Section 229.125(a) or Section 229.126(a) ~~of this Part~~, but is subject to the emissions limits under Section 229.125(c) or Section 229.126(c), and ~~shall~~ must comply with all the applicable provisions of this Part.

h) On and after January 1, 2014, each owner and operator of an HMIWI as defined in subsection (a)(2) ~~of this Section~~ is no longer subject to ~~the provisions under~~ New Source Performance Standards for Hospital/Medical/Infectious Waste Incinerators (40 CFR 60, subpart Ec), but is subject to the emissions limits under Section 229.125(c) or Section 229.126(c), and ~~shall~~ must comply with all the applicable provisions of this Part.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.112 Exemptions

Notwithstanding other provisions of this Part, the following emission units are exempt from ~~the requirements of~~ this Part:

a) Any combustor required to have a permit under Section 3005 of the Solid Waste Disposal Act, 42 USC 6925;

b) Any municipal waste combustor that meets the applicability provisions for municipal waste combustors under Subparts Cb, Ea or Eb of 40 CFR 60;

c) Any pyrolysis unit (i.e., a unit that uses endothermic gasification to treat hospital waste or medical/infectious waste ~~in order~~ to render ~~such~~ the waste harmless);

d) Any cement kiln firing hospital waste or medical/infectious waste; or

e) Any HMIWI that meets the applicability provisions for Standards of Performance for Hospital/Medical/Infectious Waste Incinerators under subpart Ec of 40 CFR 60.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART C: COMPLIANCE SCHEDULES

Section 229.115 Compliance Schedules for HMIWIs That Will Continue to Operate

a) Before January 1, 2014, each owner or operator of an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~, subject to the emissions limits under Section 229.125(a) or Section 229.126(a) ~~of this Part, shall~~must comply with all the applicable provisions of this Part according to the following schedules:

1) Except as provided in subsection (a)(2) ~~of this Section~~ and unless another date is specified in ~~the provisions of~~ this Part, all owners or operators of HMIWIs ~~shall~~ must be in compliance with all of the provisions of this Part by September 15, 2000.

2) Except as provided in subsection (a)(3) ~~of this Section~~, the owner or operator of an HMIWI may have up to September 15, 2002, to come into compliance with this Part. To avail themselves of this extended compliance timeframe, the owner or operator of an HMIWI ~~shall~~must:

A) Submit its CAAPP application to the Agency, on or before November 15, 1999, requesting an extended compliance schedule, ~~pursuant to~~under Section 39.5(5)(d) of the Act~~, [415 ILCS 5/39.5(5)(d)]~~. This compliance schedule ~~shall~~ must include documentation supporting the need for an extension, a final control plan for the HMIWI, and incremental steps to be taken toward compliance with this Part that, at a minimum, meet the increments of progress ~~specified~~ in subsection (a)(2)(B) ~~of this Section~~;

B) Meet the following increments of progress by the dates indicated:

i) Finalize all contracts for the purchase of either pollution control equipment, process modification, or control systems by February 29, 2000;

ii) Commence the implementation of either the process modifications or the necessary construction or installation of air pollution control devices for the HMIWI by November 30, 2000;

iii) Complete either the process modifications or the installation or construction of the new air pollution control equipment by August 31, 2001;

iv) Perform initial startup of the retrofitted HMIWI by January 15, 2002; and

v) Complete the initial performance test in ~~accordance~~ compliance with Section 229.142 ~~of this Part~~ within 180 days after initial startup.

3) Any owner or operator of an HMIWI that fails to demonstrate compliance with this Part by September 15, 2002, ~~shall~~ must cease operation of the HMIWI until compliance with ~~the provisions of~~ this Part is achieved.

4) Notwithstanding subsection (a)(2) ~~of this Section~~, all owners or operators of HMIWIs ~~shall~~ must be in full compliance with all of the HMIWI operator provisions of Subpart J ~~of this Part~~ by September 15, 2000.

b) On and after January 1, 2014, each owner or operator of an HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, and subject to the emissions limits under Section 229.125(c) ~~of this Part~~ as applicable, or Section 229.126(c) ~~of this Part~~, ~~shall~~ must comply with the applicable provisions of this Part according to the following schedules:

1) Except as provided in subsection (b)(2) ~~of this Section~~ and unless another date is specified in ~~the provisions of~~ this Part, all owners or operators of HMIWIs ~~shall~~ must comply with all of the provisions of this Part by January 1, 2014.

2) Except as provided in subsection (b)(4) ~~of this Section~~, the owner or operator of an HMIWI may have until October 6, 2014 to come into compliance with the emissions limits under Section 229.125(c) or 229.126(c) ~~of this Part~~. To avail itself of this extended compliance timeframe, the owner or operator of an HMIWI ~~shall~~must:

A) Submit its CAAPP application and construction permit to the Agency, on or before January 1, 2012, requesting an extended compliance schedule, ~~pursuant to~~under Section 39.5(5)(d) of the Act ~~[415 ILCS 5/39.5(5)(d)]~~. This compliance schedule ~~shall~~ must include documentation supporting the need for an extension, a final control plan for the HMIWI, and incremental steps to be taken toward compliance with this Part that, at a minimum, meet the increments of progress ~~specified~~ in subsection (b)(2)(B) ~~of this Section~~;

B) Meet the following increments of progress by the dates indicated:

i) Finalize all contracts for the purchase of pollution control equipment, process modification, or control systems by August 1, 2012;

ii) Commence the implementation of either the process modifications or the necessary construction or installation of air pollution control devices for the HMIWI by March 1, 2013;

iii) Complete either the process modifications or the installation or construction of the new air pollution control equipment by September 1, 2013;

iv) Achieve final compliance, which includes incorporating all process changes and/or completing retrofit construction as described in the final control plan, connecting the air pollution control equipment or process changes so that the unit is brought on line, and ensuring that all necessary process changes and air pollution control equipment are operating properly, no later than June 1, 2014;

v) Complete the initial performance test in ~~accordance~~ compliance with Section 229.142 ~~of this Part~~ no later than October 6, 2014;

vi) Submit the results of the initial performance test and revised waste management plan to the Agency no later than 60 days ~~following~~ after the initial performance test; and

vii) Submit notification to the Agency within 10 business days after completing (or failing to complete by the applicable date) each of the increments of progress ~~specified~~ in subsection (b)(2)(B) ~~of this Section~~. The notification must be signed by the owner's or operator's representative responsible for the management of the HMIWI.

3) If a petition for compliance extension is granted, the owner or operator of an HMIWI, as defined in Section 229.110(a)(1) or (a)(2), must continue to comply with the provisions of its current CAAPP permit during the interim.

4) Any owner or operator of an HMIWI that fails to demonstrate compliance with this Part by October 6, 2014, ~~shall~~ must cease operation of the HMIWI until compliance with ~~the provisions of~~ this Part is achieved.

5) Notwithstanding subsection (b)(2) ~~of this Section~~, all owners or operators of HMIWIs ~~shall~~ must be in full compliance with all of the HMIWI operator provisions of Subpart J ~~of this Part~~ before January 1, 2014.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.116 Compliance Schedules for HMIWIs That Will Shut Down

All owners or operators of HMIWIs that intend to permanently shut down their HMIWI as a means of complying with this Part ~~shall~~:

a) Provide the Agency with written notice of their intention to permanently shut down their HMIWI, as follows:

1) On or before November 15, 1999, for an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~, subject to the emissions limits under Section 229.125(a) or Section 229.126(a) ~~of this Part~~;

2) On or before January 1, 2013, except as provided for in Section 229.116(c), for an HMIWI as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, subject to the emissions limits under Section 229.125(c), as applicable, or Section 229.126(c) ~~of this Part~~.

b) Take the following affirmative steps to demonstrate that the HMIWI has been rendered permanently inoperable by September 15, 2000, for an HMIWI as defined in Section 229.110(a)(1), or by January 1, 2014, for an HMIWI as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~:

1) Weld the primary chamber door shut;

2) Dismantle the HMIWI; or

3) Other means that reasonably demonstrate that the HMIWI is no longer functional.

c) Except as provided in subsection (c)(5) ~~of this Section~~, owners or operators may have up to October 6, 2014 to shut down their HMIWIs to avoid being subject to compliance with the emissions limits under Section 229.125(c) or 229.126(c). To avail themselves of this extended compliance timeframe, the owner or operator of an HMIWI ~~shall~~must:

1) Submit its application to the Agency by July 1, 2013, requesting an extended compliance schedule~~, pursuant to~~ under Section 39.5(5)(d) of the Act ~~[415 ILCS 5/39.5(5)(d)]~~. This compliance schedule ~~shall~~ must include documentation of the analysis undertaken to support the need for an extension, including an explanation of why the timeframe up to October 6, 2014 is sufficient while the timeframe up to January 1, 2014 is not sufficient, and incremental steps to be taken toward compliance with applicable requirements of this Part.

2) If an onsite alternative waste treatment technology is needed to be installed before the HMIWI is shut down, an application for compliance extension ~~shall~~ must include the following elements of increments of progress and completion date for each step of progress:

A) Finalize contract with an alternative waste treatment technology vendor;

B) Initiate onsite construction or installation of alternative waste treatment technology;

C) Complete onsite construction or installation of alternative waste treatment technology; and

D) Take the steps described under subsection (b) ~~of this Section~~ to demonstrate that the HMIWI has been rendered permanently inoperable.

3) If an onsite alternative waste treatment technology is not needed to be installed before an HMIWI is shut down, an application for compliance extension ~~shall~~ must include a plan for shut down. The plan for shut down ~~shall~~ must include steps ~~described~~ under subsection (b) ~~of this Section~~ to demonstrate that the HMIWI has been rendered permanently inoperable.

4) If a petition for compliance extension is granted, the owner or operator of an HMIWI, as defined in Section 229.110(a)(1) or (a)(2), must continue to comply with ~~the provisions of~~ its current CAAPP permit during the interim.

5) Any owner or operator of an HMIWI that fails to demonstrate compliance with this Part by October 6, 2014, ~~shall~~ must cease operation of the HMIWI until compliance with ~~the provisions of~~ this Part is achieved.

6) Notwithstanding subsection (c)(1) ~~of this Section~~, all owners or operators of HMIWIs ~~shall~~ must be in full compliance with all of the HMIWI operator provisions of Subpart J ~~of this Part~~ by January 1, 2014.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART D: CAAPP PERMIT REQUIREMENTS

Section 229.120 CAAPP Permit Requirements

a) All HMIWIs subject to the emissions limits in this Part ~~shall~~ must operate ~~pursuant to~~under a CAAPP permit, as follows:

1) By September 15, 2000, for an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~; and

2) By January 1, 2014, for an HMIWI as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~.

b) For any HMIWI subject to the emission limits in this Part that is first required to obtain a CAAPP permit because it is subject to the emission limits in this Part, the owner or operator ~~shall~~ must submit a complete application for a CAAPP permit, as follows:

1) By September 15, 2000, except as provided for in Section 229.115(a)(2)(A) ~~of this Part~~, for an HMIWI as defined in Section 229.110 (a)(1) ~~of this Part~~; or

2) By January 1, 2014, except as provided for in Section 229.115(b)(2)(A) ~~of this Part~~, for an HMIWI as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~.

c) ~~Upon submittal of~~After submitting a timely and complete CAAPP application, the owner or operator of an HMIWI ~~shall~~ must not be in violation of the requirement~~, specified~~ in subsection (a) ~~of this Section~~, to have a CAAPP permit, to the extent provided in Section 39.5(5)(h) of the Act ~~[415 ILCS 5/39.5(5)(h)]~~.

d) For any HMIWI that currently has a CAAPP permit, the following conditions apply:

1) If the CAAPP permit has ~~3~~ three or more years remaining on the permit term, the owner or operator of an HMIWI ~~shall~~ must apply for revision to the CAAPP permit to incorporate the applicable requirements of this Part, as follows:

A) On or before November 15, 1999, for an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~; and

B) On or before January 1, 2013, for an HMIWI as defined in Section 229.110 (a)(1) or (a)(2) ~~of this Part~~; or

2) If the CAAPP permit has less than ~~3~~ three years remaining on the permit term, the CAAPP permit ~~shall~~ must be revised to incorporate the applicable requirements of this Part, upon renewal of the permit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART E: EMISSION LIMITS

Section 229.125 Emissions Limits for Small, Medium, and Large HMIWIs

The emission limits in this Section ~~shall~~ must apply at all times to HMIWIs identified in Section 229.110(a), except as provided in Section 229.110(b) ~~of this Part and Section~~ 229.126 ~~of this Subpart~~.

a) Before January 1, 2014, each owner or operator of a small, medium, or large HMIWI as defined in Section 229.110(a)(1) ~~of this Part shall~~must comply with the following emissions limits:

Pollutant	Units (7% oxygen, dry basis)	HMIWI EMISSIONS LIMITS		
		Small	Medium	Large
Particulate matter	Milligrams per dry standard cubic meter (mg/dscm) (grains per dry standard cubic foot (gr/dscf))	115 (0.05)	69 (0.03)	34 (0.015)
Carbon monoxide	Parts per million by volume (ppmv)	40	40	40
Dioxins/furans	Nanograms per dry standard cubic meter total dioxins/furans (ng/dscm) (grains per billion dry standard cubic feet ($gr/10^9$ dscf)) or ng/dscm TEQ ($gr/10^9$ dscf)	125 (55) or 2.3 (1.0)	125 (55) or 2.3 (1.0)	125 (55) or 2.3 (1.0)
Hydrogen chloride	(ppmv) or percent reduction	100 or 93%	100 or 93%	100 or 93%
Sulfur dioxide	(ppmv)	55	55	55
Nitrogen oxides	(ppmv)	250	250	250
Lead	mg/dscm (grains per thousand dry standard cubic feet ($gr/10^3$ dscf)) or percent reduction	1.2 (0.52) or 70%	1.2 (0.52) or 70%	1.2 (0.52) or 70%

Cadmium	mg/dscm (gr/10^3 dscf) or percent reduction	0.16 (0.07) or 65%	0.16 (0.07) or 65%	0.16 (0.07) or 65%
Mercury	mg/dscm (gr/10^3 dscf) or percent reduction	0.55 (0.24) or 85%	0.55 (0.24) or 85%	0.55 (0.24) or 85%

b) ~~No~~ An owner or operator of a small, medium, or large HMIWI subject to emissions limits ~~listed~~ under subsection (a) ~~of this Section shall~~must not cause or allow any emissions that cause greater than 10 percent opacity, as measured on a 6-minute block average, according to Method 9, 40 CFR 60, appendix A, incorporated by reference in Section 229.104(d) ~~of this Part~~, from any stack used by an HMIWI.

c) On and after January 1, 2014, except as provided for in Section 229.115(b)(3) or ~~Section~~ 229.116(c)(4), as applicable, each owner or operator of a small, medium, or large HMIWI, as defined in Section 229.110(a)(1) and (a)(2) ~~of this Part~~, ~~shall~~ must comply with the following emissions limits, as applicable:

Pollutant	**Units** (7% oxygen, dry basis)	**HMIWI EMISSIONS LIMITS**		
		Small	**Medium**	**Large**
Particulate matter	Milligrams per dry standard cubic meter (mg/dscm) (grains per dry standard cubic foot (gr/dscf))	66 (0.029)	46 (0.020)[a] 34 (0.015)[b]	25 (0.011)
Carbon monoxide	Parts per million by volume (ppmv)	20	5.5	11
Dioxins/furans	Nanograms per dry standard cubic meter total dioxins/furans (ng/dscm) (grains per billion dry standard cubic feet (gr/10^9 dscf)) or ng/dscm TEQ (gr/10^9 dscf)	16 (7.0) or 0.013 (0.0057)	0.85 (0.37) or 0.020 (0.0087)	9.3 (4.1) or 0.054 (0.024)
Hydrogen chloride	(ppmv)	44[a] 15[b]	7.7	6.6

Sulfur dioxide	(ppmv)	4.2	4.2	9.0
Nitrogen oxides	(ppmv)	190	190	140
Lead	mg/dscm (grains per thousand dry standard cubic feet (gr/10^3 dscf))	0.31 (0.14)	0.018 (0.0079)	0.036 (0.016)
Cadmium	mg/dscm (gr/10^3 dscf)	0.017 (0.0074)	0.013 (0.0057)	0.0092 (0.0040)
Mercury	mg/dscm (gr/10^3 dscf)	0.014 (0.0061)	0.025 (0.011)	0.018 (0.0079)

[a] Emissions limits for HMIWIs as defined in Section 229.110(a)(1) ~~of this Part~~.
[b] Emissions limits for HMIWIs as defined in Section 229.110(a)(2) ~~of this Part~~.

d) ~~No~~ An owner or operator of a small, medium, or large HMIWI subject to emission limits ~~listed~~ under subsection (c) ~~of this Section shall~~must not cause or allow any emissions that cause greater than 6 percent opacity, as measured on a 6-minute block average, according to Method 9, 40 CFR 60, appendix A, incorporated by reference at Section 229.104(d) ~~of this Part~~, from any stack used by an HMIWI.

e) On and after the date on which the initial performance test is completed or required to be completed under Section 229.142 ~~of this Part~~, whichever date comes first, ~~no~~ an owner or operator of an HMIWI, as defined in Section 229.110 (a)(1) or (a)(2) ~~of this Part~~ and subject to the emissions limits under subsection (c) ~~of this Section~~, ~~shall~~ must not cause to be discharged into the atmosphere visible emissions of combustion ash from an ash conveying system (including conveyor transfer points), enclosures of ash conveying systems, buildings, or other sources in excess of 5 percent of the observation period of 9 minutes per 3-hour period, according to Method 22, 40 CFR 60, appendix A, incorporated by reference in Section 229.104(d) ~~of this Part~~, except as provided by the following exclusions:

1) Visible emissions discharged inside buildings or enclosures of ash conveying systems; or

2) During maintenance and repair of ash conveying systems. Maintenance and/or repair ~~shall~~ must not exceed 10 operating days per calendar quarter unless the owner or operator of an HMIWI makes a request to the Agency in writing for a longer period of time to complete maintenance and/or repair, and the Agency approves the owner's or operator's request in writing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.126 Emissions Limits For Rural HMIWIs

Notwithstanding the emissions limits ~~set out~~ in Section 229.125 ~~of this Part~~, any rural HMIWI ~~shall~~ must comply with the emissions limits ~~set out~~ in subsection (a) or (c) ~~of this Section~~. The emissions limits under this Section ~~shall~~ must apply at all times, except as provided for in Section 229.110(b).

a) Before January 1, 2014, a rural HMIWI as defined in Section 229.110(a)(1) ~~shall~~ must comply with the following emissions limits:

Pollutant	**Units** (7% oxygen, dry basis)	**EMISSION LIMITS**
Particulate matter	mg/dscm (gr/dscf)	197 (0.086)
Carbon monoxide	ppmv	40
Dioxins/furans	ng/dscm total dioxins/furans ($gr/10^9$ dscf) or ng/dscm TEQ ($gr/10^9$ dscf)	800 (350) or 15 (6.6)
Hydrogen chloride	ppmv	3100
Sulfur dioxide	ppmv	55
Nitrogen oxides	ppmv	250
Lead	mg/dscm ($gr/10^3$ dscf)	10 (4.4)
Cadmium	mg/dscm ($gr/10^3$ dscf)	4 (1.7)
Mercury	mg/dscm ($gr/10^3$ dscf)	7.5 (3.3)

b) ~~No~~ An owner or operator of a rural HMIWI subject to emissions limits ~~listed~~ under subsection (a) ~~of this Section shall~~must not cause or allow any emissions that cause greater than 10 percent opacity, as measured on a 6-minute block average, according to Method 9, 40 CFR 60, appendix A, incorporated by reference at Section 229.104(d) ~~of this Part~~, from any stack used by an HMIWI.

c) On and after January 1, 2014, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), as applicable, a rural HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, ~~shall~~ must comply with the following emissions limits:

Pollutant	**Units** (7% oxygen, dry basis)	**EMISSION LIMITS**
Particulate matter	mg/dscm (gr/dscf)	87 (0.038)
Carbon monoxide	ppmv	20

Dioxins/furans	ng/dscm total dioxins/furans ($gr/10^9$ dscf) or ng/dscm TEQ ($gr/10^9$ dscf)	240 (100) or 5.1 (2.2)
Hydrogen chloride	ppmv	810
Sulfur dioxide	ppmv	55
Nitrogen oxides	ppmv	130
Lead	mg/dscm ($gr/10^3$ dscf)	0.50 (0.22)
Cadmium	mg/dscm ($gr/10^3$ dscf)	0.11 (0.048)
Mercury	mg/dscm ($gr/10^3$ dscf)	0.0051 (0.0022)

d) ~~No~~ An owner or operator of a rural HMIWI subject to emissions limits ~~listed~~ under subsection (c) ~~of this Section shall~~must not cause or allow any emissions that cause greater than 6 percent opacity, as measured on a 6 minute block average, according to Method 9, 40 CFR 60, appendix A, incorporated by reference at Section 229.104(d) ~~of this Part~~, from any stack used by an HMIWI.

e) On and after the date on which the initial performance test is completed or required to be completed under Section 229.142 ~~of this Part~~, whichever date comes first, ~~no~~ an owner or operator of a rural HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, subject to the emissions limits under subsection (c) ~~of this Section~~, ~~shall~~ must not cause to be discharged into the atmosphere visible emissions of combustion ash from ash conveying system (including conveyor transfer points), enclosures of ash conveying systems, buildings, or other sources in excess of 5 percent of the observation period of 9 minutes per 3-hour period, according to Method 22, 40 CFR 60, appendix A, incorporated by reference at Section 229.104(d) ~~of this Part~~, except as provided by the following exclusions:

1) Visible emissions discharged inside buildings or enclosures of ash conveying systems; or

2) During maintenance and repair of ash conveying systems. Maintenance and/or repair ~~shall~~ must not exceed 10 operating days per calendar quarter, unless the owner or operator of an HMIWI makes a request to the Agency in writing for a longer period of time to complete maintenance and/or repair, and the Agency approves the owner's or operator's request in writing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART F: EXCEPTIONS FROM EMISSION LIMITS

Section 229.130 Operation During Periods of Startup, Shutdown, or Malfunction

(Repealed)

(Source: Repealed at 35 Ill. Reg. 16615, effective September 29, 2011)

SUBPART G: METHODS AND PROCEDURES FOR PERFORMANCE TESTING

Section 229.140 Methods and Procedures for Performance Testing

This Section applies during all performance tests.

a) The owner or operator of an HMIWI ~~shall~~ must provide, or cause to be provided, the facilities for emission testing specified in 40 CFR 60.8(e), incorporated by reference at Section 229.104(c) ~~of this Part~~.

b) When conducting a performance test for an HMIWI, the owner or operator ~~shall~~must:

1) Test an HMIWI at the waste charging rate specified in its permit or, if no permit has been issued, in its permit application;

2) Burn representative waste streams that are typically combusted in that HMIWI;

3) Conduct testing during periods that are inclusive of maximum emissions of the HMIWI and not during periods of startup, malfunction, or shutdown; and

4) Weigh the amount of waste combusted for each run of the performance test before charging the waste to an HMIWI to within 1.0 percent accuracy.

c) The owner or operator of an HMIWI ~~shall~~ must submit a test plan to the Agency at least 45 days before conducting a performance test ~~pursuant to~~under this Part. Performance test plans ~~shall~~ must include the following:

1) The proposed date of the performance test;

2) A roster of testing personnel, which provides information concerning their testing experience;

3) A description of the specific conditions under which the test will be performed, including, at a minimum:

A) Why these conditions will be representative of the operation and include maximum emissions of the HMIWI; and

B) The means by which the operating parameter values will be determined;

4) A technical description of the HMIWI being tested;

5) The parameters and pollutants that will be monitored during the performance test; and

6) The quality assurance procedures that will be followed during the performance test.

d) The owner or operator of an HMIWI ~~shall~~ must give the Agency 5 days written notice ~~prior to~~before actually conducting any performance testing required by ~~the provisions of~~ this Part.

e) Testing conducted ~~pursuant to~~under this Part ~~shall~~ must be according to the procedures and test methods ~~specified~~ for measuring each pollutant in Appendix C ~~of this Part~~.

f) Notwithstanding subsection (e) ~~of this Section~~, alternate testing methods may be used if approved by the Agency in a permit and approved by USEPA.

f) Any use of a bypass stack during a performance test ~~shall~~ must invalidate the results of that run.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART H: COMPLIANCE REQUIREMENTS

Section 229.142 Initial Performance Testing and Establishment of Operating Parameters for All HMIWIs

a) Before January 1, 2014, each owner or operator of an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~, subject to the emissions limits under Section 229.125(a) or ~~Section~~ 229.126(a) ~~of this Part~~, ~~shall~~ must comply with the following requirements:

1) Except as provided in Section 229.115(a)(2)(B)(v) ~~of this Part~~, conduct an initial performance test on their HMIWI by September 15, 2000.

2) Except ~~as provided in~~under subsection (a)(3) ~~of this Section~~, in the initial performance test, test for all pollutants limited ~~pursuant to~~under Subpart E ~~of this Part~~.

3) During the initial performance test, rural HMIWIs are not required to test

for HCl, Pb or Cd.

4) If an HMIWI is equipped with a dry scrubber followed by a fabric filter, a wet scrubber, or a dry scrubber followed by a fabric filter and wet scrubber, or a selective noncatalytic reduction system, establish the appropriate maximum and minimum operating parameter values indicated in Appendix B ~~of this Part~~ for the relevant control system during the initial performance test, provided that the performance test demonstrates compliance with the emission limits ~~specified~~ in Section 229.125 ~~of this Part~~.

5) If air pollution control equipment other than a dry scrubber followed by a fabric filter, a wet scrubber, a dry scrubber followed by a fabric filter and a wet scrubber, or a selective noncatalytic reduction system is used to comply with the emission limits under Section 229.125 ~~of this Part~~, the initial performance test ~~may~~ must not be conducted until site-specific operating parameters that will be monitored to demonstrate compliance with this Part have been established by the Agency in a construction permit and approved by USEPA.

6) For rural HMIWI, establish the maximum charge rate and minimum secondary chamber temperature as site-specific parameters during the initial performance test, provided that the performance test demonstrates that the HMIWI is in compliance with the emission limits ~~specified~~ in Section 229.126 ~~of this Part~~.

b) On and after January 1, 2014, each owner or operator of an HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, and subject to the emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~, ~~shall~~ must comply with the following requirements:

1) Except as provided in Section 229.115(b)(2)(B)(v) ~~of this Part~~, conduct an initial performance test on its HMIWI by January 1, 2014.

2) Except as provided for in subsection (b)(6), in the initial performance test, test for all pollutants to demonstrate compliance with Section 229.125(c) or Section 229.126(c) emissions limits, as applicable, ~~pursuant to~~under Subpart E ~~of this Part~~.

3) If an HMIWI is equipped with a dry scrubber followed by a fabric filter, a wet scrubber, a dry scrubber followed by a fabric filter and wet scrubber, or a selective noncatalytic reduction system, establish the appropriate maximum and minimum operating parameter values ~~indicated~~ in Appendix B ~~of this Part~~ for the relevant control system during the initial performance test, provided that the performance test demonstrates

compliance with the emission limits ~~specified~~ in Section 229.125 or 229.126 ~~of this Part~~.

4) If an air pollution control device other than a dry scrubber followed by a fabric filter, a wet scrubber, a dry scrubber followed by a fabric filter and a wet scrubber, or a selective noncatalytic reduction system is used to comply with the emission limits under Section 229.125 or Section 229.126 ~~of this Part~~, the initial performance test may not be conducted until site-specific operating parameters that will be monitored to demonstrate compliance with this Part have been established by the Agency in a construction permit and approved by USEPA.

5) For a rural HMIWI that is not equipped with an air pollution control device, establish the maximum charge rate and minimum secondary chamber temperature as site-specific parameters during the initial performance test, provided that the performance test demonstrates that the HMIWI is in compliance with the emission limits ~~specified~~ in Section 229.126(c) ~~of this Part~~.

6) The owner or operator of an HMIWI may use results of previous performance tests for initial compliance demonstration with the applicable emissions limits, provided the following conditions are met:

A) The previous emissions tests were conducted using procedures and test methods ~~listed~~ in Section 229.140 ~~of this Part~~ or USEPA-accepted voluntary consensus standards;

B) The test results are certified as representative of current operations; and

C) The previous emissions tests were conducted no earlier than 1996.

7) The owner or operator of an HMIWI that cannot certify and/or whose previous performance test results do not demonstrate compliance with one or more of the revised emission limits must conduct another performance test for those pollutants.

8) The owner or operator of an HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~, and subject to the emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~, as applicable, ~~shall~~ must determine compliance with the visible emissions limit for fugitive emissions from ash handling in Sections 229.125(g) and 229.126(e) by conducting an initial performance test using Method 22, at 40 CFR 60, appendix A, incorporated by reference at Section 229.104(d) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.144 Subsequent Performance Testing for All HMIWIs

a) The owner or operator of an HMIWI may conduct a repeat performance test at any time to establish new site specific operating values for the HMIWI. ~~Such~~ These new site specific operating parameter values must not be relied upon until approved by the Agency approved it as a permit condition.

b) The Agency or the USEPA may request that the owner or operator of an HMIWI conduct a new performance test at any time.

Section 229.146 Annual Testing for Opacity

~~Following~~ After the date on which the initial performance test is completed, as required by Section 229.142 ~~of this Section~~, the owners or operators of all HMIWIs ~~shall~~ must conduct an annual opacity test, in ~~accordance~~ compliance with Section 229.140 ~~of this Part~~. The opacity test schedules are as follows:

a) By September 15 of each year for an HMIWI as defined in Section 229.110(a)(1) ~~of this Part~~ and subject to the emissions limits under Section 229.125(a) or Section 229.126(a) ~~of this Part~~; and

b) By January 1 of each year for an HMIWI, as defined in Section 229.110(a)(1) or (a)(2) ~~of this Part~~ and subject to the emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.148 Annual Performance Testing for All HMIWIs

~~Following~~ After the date on which the initial performance test is completed, as required by Section 229.142 ~~of this Part~~, each owner or operator of an HMIWI, as applicable, ~~shall~~ must conduct an annual performance test to determine compliance with the applicable PM, CO, and HCl emission limits ~~specified~~ in Section 229.125 or 229.126 ~~of this Part~~, using the applicable test procedures and methods ~~specified~~ in Section 229.140 ~~of this Part~~.

a) Annual performance test schedules are as follows:

1) Before January 1, 2014, each owner or operator of a small, medium, or large HMIWI as defined in Section 229.110(a)(1), subject to the emissions limits under Section 229.125(a) ~~of this Part~~, ~~shall~~ must complete an annual performance test by September 15 of each year; and

2) On and after January 1, 2014, an owner or operator of a small, rural, medium, or large HMIWI, as defined in Section 229.110(a)(1) or (a)(2),

subject to the emissions limits under Section 229.125(c) as applicable, or in Section 229.126(c) ~~of this Part~~, ~~shall~~ must complete an annual performance test by January 1 of each year.

b) If all 3 annual performance tests over a 3-year period indicate compliance with the applicable emission limits for PM, CO, or HCl ~~specified~~ in Section 229.125 ~~of this Part~~, the owner or operator of an HMIWI may forego a performance test for that pollutant during the next 2 years. If the next performance test conducted every third year indicates compliance with the emission limits for PM, CO, or HCl ~~specified~~ in Section 229.125 ~~of this Part~~, the owner or operator of an HMIWI may forego a performance test for that pollutant for an additional 2 years from the date of the previous performance test.

c) If any performance test indicates noncompliance with the respective emission limit, the owner or operator of an HMIWI ~~shall~~ must conduct a performance test for that pollutant annually until all annual performance tests over a 3-year period indicate compliance with the respective emission limits.

d) The owner or operator of an HMIWI may use any of the following types of continuous emission monitoring systems (CEMS), as provided in Section 229.152 ~~of this Part~~, to substitute for annual performance tests and parameter monitoring to demonstrate compliance with applicable emissions limits:

1) PM CEMS: replace annual PM testing and opacity testing and monitoring of pressure drop across the wet scrubber, if applicable;

2) CO CEMS: replace annual CO testing and monitoring of minimum secondary chamber temperature;

3) HCl CEMS: replace annual HCl testing and monitoring of minimum HCl sorbent flow rate and minimum scrubber liquor pH.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.150 Compliance with Operating Parameter Values

a) ~~Following~~ After the date on which the initial performance test is completed, or is required to be completed under Section 229.142 ~~of this Subpart~~, whichever date comes first, an HMIWI, using a dry scrubber followed by a fabric filter, a wet scrubber, or a dry scrubber followed by a fabric filter and a wet scrubber to comply with the emission limits of this Part ~~shall~~ must not operate above any of the applicable maximum or below any of the applicable minimum operating parameters values ~~specified~~ in Appendix B ~~of this Part~~. All operating parameters ~~shall~~ must be measured as a 3-hour rolling average (calculated each hour as a 3-hour rolling average of the previous 3 operating hours) at all times. For batch HMIWIs, the charge rate ~~shall~~ must be measured on a per batch basis.

b) Except as provided in Section 229.164 ~~of this Subpart~~, for an HMIWI equipped with a selective noncatalytic reduction system, operation of the HMIWI above the maximum charge rate, below the minimum secondary chamber temperature, and below the minimum reagent flow rate simultaneously ~~shall~~ must constitute a violation of the NO_x emissions limit.

c) For HMIWIs using air pollution control equipment other than a dry scrubber followed by a fabric filter, a wet scrubber, or dry scrubber followed by a fabric filter and a wet scrubber to comply with the emission limits under Section 229.125 or Section 229.126 ~~of this Part~~, following the date on which the initial performance test is completed, as provided in Section 229.142 ~~of this Part~~, an HMIWI ~~shall~~ must not operate above any applicable maximum or below any applicable minimum operating parameter values ~~established~~ in its CAAPP permit.

d) Operating parameter limits do not apply during performance tests.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.152 Compliance Requirements for HMIWIs using CEMS

The owner or operator of an HMIWI may use a CEMS to demonstrate compliance with any of the emission limits under Section 229.125 or Section 229.126 ~~of this Part~~, if provided for in its permit.

a) Any HMIWI that is allowed to use a CEMS to demonstrate compliance with the emission limits of this Part ~~shall~~must:

1) Determine compliance with the applicable emission limits using a 12-hour rolling average, calculated each hour as the average of the previous 12 operating hours; and

2) Operate all CEMS in ~~accordance~~ compliance with the applicable procedures under appendices B and F of 40 CFR 60, incorporated by reference at Section 229.104(e) ~~of this Part~~.

b) In the case of CEMS for which USEPA has not published performance specifications, the option to use the CEMS takes effect on the date of publication of the performance specifications in the Federal Register or after site-specific operating parameters used to demonstrate compliance with this Part have been established by the Agency in a construction permit and approved by USEPA.

Section 229.154 Violations by HMIWIs Equipped with a Dry Scrubber Followed by a Fabric Filter

Except as provided in Section 229.164 ~~of this Subpart~~, for an HMIWI equipped with a dry scrubber followed by a fabric filter:

a) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum secondary chamber temperature (each measured on a 3-hour rolling average) ~~shall~~ must be a violation of the CO emissions limit;

b) Simultaneous operation of an HMIWI above the maximum fabric filter inlet temperature, above the maximum charge rate, and below the minimum dioxin/furan sorbent flow rate (each measured on a 3-hour rolling average) ~~shall~~ must be a violation of the dioxin/furan emissions limit;

c) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum HCl sorbent flow rate (each measured on a 3-hour rolling average) ~~shall~~ must be a violation of the HCl emissions limit;

d) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum Hg sorbent flow rate (each measured on a 3-hour rolling average) ~~shall~~ must be a violation of the Hg emissions limit;

e) Use of the bypass stack at any time during operation of an HMIWI is a violation of the PM, dioxin/furan, HCl, Pb, Cd, and Hg emissions limits;

f) If a CO CEMS is used to determine compliance with a CO emissions limit, operation of the HMIWI above the CO emissions limit as measured by the CO CEMS ~~shall~~ must be a violation of the emissions limit;

g) If a bag leak detection system is used, failure to initiate corrective action within one hour after the bag leak detection system alarm, or failure to operate and maintain the fabric filter so that the alarm is not engaged for more than 5 percent of the total operating time in a 6-month block reporting period, ~~shall~~ must be a violation of the PM emissions limit;

h) If a bag leak detection system is used to demonstrate compliance with the opacity limit, failure to initiate corrective action within one hour after the bag leak detection system alarm ~~shall~~ must be a violation of the opacity emissions limit;

i) If a CEMS is used to determine compliance with a PM, HCl, Pb, Cd, and/or Hg emissions limit, operation of the HMIWI above the applicable emissions limit as measured by the CEMS ~~shall~~ must be a violation of the emissions limit;

j) If a continuous automated sampling system is used, operation of the HMIWI above the dioxin/furan emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the dioxin/furan emissions limit; or

k) If a continuous automated sampling system is used, operation of the HMIWI above the Hg emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the Hg emissions limit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.156 Violations by HMIWIs Equipped with a Wet Scrubber

Except as provided in Section 229.164 ~~of this Subpart~~, for an HMIWI equipped with a wet scrubber:

a) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum pressure drop across the wet scrubber or below the minimum horsepower or amperage to the system (each measured on a 3-hour rolling average) is a violation of the PM emissions limit;

b) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum secondary chamber temperature (each measured on a 3-hour rolling average) is a violation of the CO emissions limit;

c) Simultaneous operation of an HMIWI above the maximum charge rate, below the minimum secondary chamber temperature and below the minimum scrubber liquor flow rate (each measured on a 3-hour rolling average) is a violation of the dioxin/furan emissions limit;

d) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum scrubber liquor pH (each measured on a 3-hour rolling average) is a violation of the HCl emissions limit;

e) Simultaneous operation of an HMIWI above the maximum flue gas temperature and above the maximum charge rate (each measured on a 3-hour rolling average) is a violation of the Hg emissions limit;

f) Use of the bypass stack at any time during operation of an HMIWI is a violation of the PM, dioxin/furan, HCl, Pb, Cd, and Hg emissions limits;

g) If a CO CEMS is used to determine compliance with a CO emissions limit, operation of the HMIWI above the CO emissions limit as measured by the CO CEMS ~~shall~~ must be a violation of the emissions limit;

h) If a CEMS is used to determine compliance with a PM, HCl, Pb, Cd, and/or Hg emissions limit, operation of the HMIWI above the applicable emissions limit as measured by the CEMS ~~shall~~ must be a violation of the emissions limit;

i) If a continuous automated sampling system is used, operation of the HMIWI above the dioxin/furan emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the dioxin/furan emissions limit; or

j) If a continuous automated sampling system is used, operation of the HMIWI above the Hg emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the Hg emissions limit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.158 Violations by HMIWIs Equipped with a Dry Scrubber Followed by a Fabric Filter and a Wet Scrubber

Except as provided in Section 229.164 ~~of this Subpart~~, for an HMIWI equipped with a dry scrubber followed by a fabric filter and a wet scrubber:

a) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum secondary chamber temperature (each measured on a 3-hour rolling average) is a violation of the CO emissions limit;

b) Simultaneous operation of an HMIWI above the maximum fabric filter inlet temperature, above the maximum charge rate and below the minimum dioxin/furan sorbent flow rate (each measured on a 3-hour rolling average) is a violation of the dioxin/furan emissions limit;

c) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum scrubber liquor pH (each measured on a 3-hour rolling average) is a violation of the HCl emissions limit;

d) Simultaneous operation of an HMIWI above the maximum charge rate and below the minimum Hg sorbent flow rate (each measured on a 3-hour rolling average) is a violation of the Hg emissions limit; or

e) Use of the bypass stack at any time during operation of an HMIWI is a violation of the PM, dioxin/furan, HCl, Pb, Cd, and Hg emissions limits;

f) If CO CEMS is used to determine compliance with a CO emissions limit, operation of the HMIWI above the CO emissions limit as measured by the CO CEMS ~~shall~~ must be a violation of the emissions limit;

g) If a bag leak detection system is used, failure to initiate corrective action within one hour after the bag leak detection system alarm, or failure to operate and maintain the fabric filter so that the alarm is not engaged for more than 5 percent of the total operating time in a 6-month block reporting period, ~~shall~~ must be a violation of the PM emissions limit;

h) If a bag leak detection system is used to demonstrate compliance with the opacity limit, failure to initiate corrective action within one hour after the bag leak detection system alarm ~~shall~~ must be a violation of the opacity emissions limit;

i) If CEMS is used to determine compliance with a PM, HCl, Pb, Cd, and/or Hg emissions limit, operation of the HMIWI above the applicable emissions limit as measured by the CEMS ~~shall~~ must be a violation of the emissions limit;

j) If a continuous automated sampling system is used, operation of the HMIWI above the dioxin/furan emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the dioxin/furan emissions limit; or

k) If a continuous automated sampling system is used, operation of the HMIWI above the Hg emissions limit as measured by the continuous automated sampling system ~~shall~~ must be a violation of the Hg emissions limit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.160 Compliance Requirements for Rural HMIWIs

a) ~~Prior to~~Before January 1, 2014, the requirements ~~set forth~~ in subsections (c) through (e) ~~of this Section shall~~must apply to all rural HMIWIs subject to the emissions limits under Section 229.126~~ of this Part~~.

b) On and after January 1, 2014, the requirements ~~set forth~~ in subsections (c) through (e) ~~of this Section shall~~must apply to all rural HMIWIs that are not equipped with an air pollution control device and that are subject to the emissions limits under Section 229.126~~ of this Part~~.

c) ~~Following~~ After the date on which the initial performance test is completed or is required to be completed under Section 229.142~~ of this Subpart~~, whichever date comes first, the owners or operators of rural HMIWI ~~shall~~ must not operate their HMIWI either above the maximum charge rate or below the minimum secondary chamber temperature measured as 3-hour rolling averages (calculated each hour as the average of the previous 3 operating hours) at all times.

d) Operating parameter limits do not apply during performance tests.

e) Except as provided in Section 229.164~~ of this Subpart~~, the simultaneous operation of a rural HMIWI above the maximum charge rate and below the minimum secondary chamber temperature (calculated as a 3-hour rolling average) ~~shall~~ must constitute a violation of the PM, CO, and dioxin/furan emission limits.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.162 Inspection Requirements for All HMIWIs

a) Before January 1, 2014, each owner or operator of a rural HMIWI subject to the emission limits under Section 229.126 ~~of this Part shall~~must inspect the HMIWI according to the following schedule:

1) An initial inspection ~~shall~~ must be conducted by September 15, 2000; and

2) An annual inspection shall be conducted by September 15 of each year thereafter.

b) Each equipment inspection ~~shall~~ must be conducted to ensure the proper operation of the HMIWI and, at a minimum, ~~shall~~ must consist of the following steps:

1) An inspection of all burners, pilot assemblies, and pilot sensing devices, cleaning the pilot flame sensor, as necessary;

2) An inspection of the primary and secondary chamber combustion air flow, adjusting, as necessary;

3) An inspection of the hinges and door latches, lubricating, as necessary;

4) An inspection of dampers, fans, and blowers;

5) An inspection of the HMIWI door and door gaskets;

6) An inspection of all HMIWI motors;

7) An inspection of the primary chamber refractory lining, cleaning, repairing or replacing the lining, as necessary;

8) An inspection of the incinerator shell for corrosion or hot spots;

9) An inspection of the secondary/tertiary chamber and stack, cleaning as necessary;

10) Where applicable, an inspection of the mechanical loader, including limit switches;

11) A visual inspection of the waste bed (grates), repairing or sealing, as necessary;

12) Where applicable, an inspection of air pollution control devices to ensure their proper operation;

13) Where applicable, an inspection of the waste heat boiler systems;

14) An inspection of all bypass stack components;

15) Calibration of thermocouples, sorbent feed systems, and monitoring equipment; and

16) A general inspection of all equipment to ensure that it is maintained in good operating condition.

c) The owner or operator of an HMIWI ~~shall~~ must document that, during the burn cycle immediately following the inspection required by this Section, the HMIWI is operating properly and make any necessary adjustments.

d) All maintenance, adjustments, or repairs identified during the equipment inspection required under this Section ~~shall~~ must be completed within 10 days after the inspection. The owner or operator of an HMIWI may have a longer period of time in which to complete any repairs identified as a result of the inspection required by this Section, provided that it makes this request to the Agency in writing, and the Agency approves the ~~owner or operator of an HMIWI's~~ request in writing.

e) The owner or operator of a small, rural, medium, or large HMIWI subject to the emission limits under Section 229.125(c) as applicable, or Section 229.126 ~~of this Part~~, ~~shall~~ must inspect the HMIWI ~~as outlined in~~under subsection (b) ~~of this Section~~, according to the following schedule:

1) An initial equipment inspection ~~shall~~ must be conducted by January 1, 2014; and

2) An annual equipment inspection ~~shall~~ must be conducted by January 1 of each year thereafter.

f) The owner or operator of an HMIWI subject to the emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~, ~~shall~~ must inspect the air pollution control devices, according to the following schedule:

1) An initial air pollution control device inspection ~~shall~~ must be conducted by January 1, 2014; and

2) An annual air pollution control device inspection ~~shall~~ must be conducted by January 1 of each year thereafter.

g) Each air pollution control device inspection, as applicable, ~~shall~~ must be conducted to ensure the proper operation of the device and, at a minimum, ~~shall~~ must consist of the following steps:

1) Where applicable, an inspection of the thermocouples, sorbent feed systems, and any other monitoring equipment, adjusting applicable calibrations, as necessary; and

2) A general inspection of the equipment to ensure that it is maintained in good operating condition.

h) All maintenance, adjustments, or repairs identified during an air pollution control device inspection required under this Section ~~shall~~ must be completed within 10 days after the inspection. The owner or operator of an HMIWI may have a longer period of time in which to complete any repairs identified as a result of the inspection required by this Section, provided that it makes this request to the Agency in writing and the Agency approves the request in writing.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.164 Optional Performance Testing to Address Actual or Potential Violations

The owner or operator of an HMIWI may conduct another performance test within 30 days after exceeding an applicable operating parameter value in order to demonstrate that an HMIWI is not in violation of the applicable emission limits. In addition to the applicable performance testing provisions under this Part, any performance test conducted ~~pursuant to~~under this Section ~~shall~~ must meet the following conditions:

a) All tests ~~shall~~ must use the same operating parameter values that indicated a violation under Section 229.154, 229.156, 229.158, or 229.160 ~~of this Subpart~~;

b) The owner or operator of an HMIWI ~~shall~~ must notify the Agency in writing at least 21 days before the date of any optional performance test;

c) The owner or operator of an HMIWI ~~shall~~ must notify the Agency in writing of its intent to proceed with the optional performance test 5 days ~~prior to~~before conducting the test; and

d) The owner or operator of an HMIWI ~~shall~~ must conduct the optional performance test using the same approved performance test plan that was used for the performance test in which the violated operating parameter values were established.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART I: MONITORING REQUIREMENTS

Section 229.166 Monitoring Requirements for All HMIWIs

a) Each owner or operator of an HMIWI subject to the emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~, ~~shall~~ must comply with requirements of this Section according to the following schedule:

1) Before January 1, 2014, for a small, medium, or large HMIWI;

2) On and after January 1, 2014, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), for a small, medium, or large HMIWI and a rural HMIWI that is equipped with an air pollution control device.

b) Once the initial performance test required by Section 229.142 ~~of this Part~~ has been performed, and the site-specific minimum and maximum operating parameter values have been established, the owner or operator of an HMIWI, as applicable, ~~shall~~ must continuously monitor those parameters.

c) The owner or operator of an HMIWI, as applicable, ~~shall~~ must comply with the following monitoring requirements:

1) Install, calibrate according to manufacturer's specifications, maintain, and operate devices or establish methods for monitoring the applicable maximum and minimum operating parameters ~~specified~~ in Appendix B ~~of this Part~~ (unless CEMS are used as a substitute for certain parameters as specified) so that these devices or methods measure and record values for these operating parameters at the frequencies ~~indicated~~ in Appendix B ~~of this Part~~ at all times;

2) Install, calibrate according to manufacturer's specifications, maintain, and operate a device or establish a method for identifying the use of the bypass stack, including date, time, and duration of use;

3) If control equipment other than a dry scrubber followed by a fabric filter, a wet scrubber, a dry scrubber followed by a fabric filter and a wet scrubber, or a selective noncatalytic reduction system is used to comply with the applicable emissions limits under Section 229.125(c) as applicable, or Section 229.126(c) ~~of this Part~~, install, calibrate according to manufacturer's specifications, maintain, and operate the equipment necessary to monitor the site-specific operating parameters developed and approved ~~pursuant to~~under Section 229.142(a)(5) or (b)(5) ~~of this Part~~; and

4) Record monitoring data at all times during HMIWI operation, except during the periods of monitoring equipment malfunction, calibration, or repair. At a minimum, valid monitoring data shall be recorded for 75 percent of the operating hours per day for 90 percent of the operating days per calendar quarter that an HMIWI is combusting hospital waste or

medical/infectious waste.

d) If an HMIWI is equipped with an air pollution control device that includes a fabric filter and a PM CEMS is not used to demonstrate compliance, the owner or operator of the HMIWI may use a bag leak detection system to determine compliance with the PM emissions limit. The owner or operator ~~shall~~ must meet the following requirements for each bag leak detection system installed:

1) Each triboelectric bag leak detection system may be installed, calibrated, operated, and maintained according to the "Fabric Filter Bag Leak Detection Guidance," as incorporated by reference in Section 229.104;

2) The bag leak detection system ~~shall~~ must be certified by the manufacturer as being capable of detecting PM emissions at concentrations of 10 milligrams per actual cubic meter (0.0044 grains per actual cubic foot) or less;

3) The bag leak detection system sensor ~~shall~~ must provide an output of relative PM loadings;

4) The bag leak detection system ~~shall~~ must be equipped with a device to continuously record the output signal from the sensor;

5) The bag leak detection system ~~shall~~ must be equipped with an audible alarm system that sounds automatically when an increase in relative PM emissions over a preset level is detected. The alarm ~~shall~~ must be located where it is easily heard by plant operating personnel;

6) For positive pressure fabric filter systems, a bag leak detector ~~shall~~ must be installed in each baghouse compartment or cell;

7) For negative pressure or induced air fabric filters, a bag leak detector ~~shall~~ must be installed downstream of the fabric filter;

8) If multiple bag leak detectors are required, the bag leak detection system's instrumentation and alarm may be shared among detectors;

9) The baseline output ~~shall~~ must be established by adjusting the range and the averaging period of the device and establishing the alarm set points and the alarm delay time according to section 5.0 of the "Fabric Filter Bag Leak Detection Guidance," as incorporated by reference in Section 229.104;

10) ~~Following~~ After initial adjustment of the system, the sensitivity or range, averaging period, alarm set points, or alarm delay time may not be adjusted. Increasing the sensitivity by more than 100 percent or

decreasing by more than 50 percent over a 365-day period is a violation, unless the adjustment follows a complete fabric filter inspection that demonstrates that the fabric filter is in good operating condition. Each adjustment ~~shall~~ must be recorded;

11) Records of the results of each inspection, calibration, and validation check ~~shall~~ must be maintained; and

12) The fabric filter must be operated and maintained so that the bag leak detection system alarm is not engaged for more than 5 percent of the total operating time in a 6-month block reporting period.~~; however, corrective~~ Corrective action must be initiated within 1 hour after the alarm.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.168 Monitoring Requirements for Rural HMIWIs

a) Each owner or operator of a rural HMIWI subject to the emissions limits under Section 229.126 ~~of this Part shall~~must comply with requirements of this Section according to the following schedule:

1) Before January 1, 2014, for a rural HMIWI; and

2) On and after January 1, 2014, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), for a rural HMIWI that is not equipped with an air pollution control device.

b) The owner or operator of each rural HMIWI ~~shall~~ must comply with the following monitoring requirements:

1) Install, calibrate according to manufacturer's specifications, maintain and operate a device measuring and recording the temperature of the secondary chamber on a continuous basis, the output of which ~~shall~~ must be recorded, at a minimum, once every minute of operation;

2) Install, calibrate according to manufacturer's specifications, maintain, and operate a device that automatically measures and records the date, time, and weight of each charge fed into an HMIWI; and

3) Record monitoring data at all times during HMIWI operation, except during periods of monitoring equipment malfunction, calibration, or repair. At a minimum, valid monitoring data ~~shall~~ must be recorded for 75 percent of the operating hours per day for 90 percent of the operating hours per calendar quarter that an HMIWI is combusting hospital waste or medical/infectious waste.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART J: REQUIREMENTS FOR HMIWI OPERATORS

Section 229.170 Operator Training and Qualification Requirements

a) ~~No~~ An HMIWI ~~shall~~ must not be operated unless a trained and qualified HMIWI operator, as specified in this Section, is available on-site to operate or supervise the operation of the HMIWI.

b) To become a trained and qualified operator, a person ~~shall~~ must complete a training program that, at a minimum, meets the criteria ~~specified~~ in subsection (c) ~~of this Section~~, pass the examination administered in ~~accordance~~ compliance with subsection (c)(2) ~~of this Section~~ and have either 6 months experience as an HMIWI operator or have completed 2 burn cycles under the observation of 2 trained and qualified HMIWI operators.

c) An operator training program ~~shall~~ must satisfy all of the following criteria:

1) Consist of at least 24 hours of training covering the following subjects:

A) Work safety procedures;

B) Pre-startup procedures;

C) Environmental concerns, including pathogen destruction and types of emissions;

D) Basic combustion principles, including combustion byproducts;

E) Instruction in the proper operation of the same type of incinerator that will be used by the operator, including proper startup, waste charging, and shutdown procedures;

F) Combustion controls and monitoring;

G) Operation of air pollution control equipment and factors affecting performance;

H) Methods for monitoring pollutants, both by CEMS and by monitoring of HMIWI and air pollution control device operating parameters, and monitoring instrument calibration procedures;

I) Inspection and maintenance of an HMIWI, air pollution control equipment, and CEMS;

J) Corrective measures to remedy malfunctions and conditions that may lead to malfunction;

K) Characteristics of and proper handling procedures for bottom and fly ash;

L) Recordkeeping procedures; and

M) Applicable ~~Federal~~federal, State, and local regulations.

2) Administer an examination designed by the course instructor; and

3) Provide reference materials covering all of the course topics ~~specified~~ in subsection (c)(1)~~ of this Section~~.

d) Operator qualification is valid from the date on which the examination ~~specified~~ in subsection (c)(2) ~~of this Section~~ is passed, or the completion of the experience requirements ~~set forth~~ in subsection (b)~~ of this Section~~, whichever is later.

e) In order for an operator ~~that has been~~ qualified in ~~accordance~~ compliance with subsection (b) ~~of this Section~~ to maintain the necessary qualification status, the operator shall:

1) Complete and pass an annual review course of at least 4 hours in length that, at a minimum, covers the following subjects:

A) An update of applicable regulations;

B) Proper incinerator operation, including startup and shutdown procedures;

C) Proper incinerator inspection and maintenance;

D) Responses to malfunctions and conditions that may lead to malfunction; and

E) A discussion of operating problems encountered by attendees.

2) If an operator fails to either take or to complete and pass the annual review course, the operator's qualification will lapse.

3) If the operator's qualification lapses for less than 3 years, qualification may be reinstated by taking and passing the annual review course~~, as provided~~ under subsection (e)(1)~~ of this Section~~.

4) If there is a 3 year or greater lapse in an operator's qualification, then the operator ~~shall~~ must take and pass an operator training course~~, as provided for~~ under subsection (c) ~~of this Section~~, in order to reinstate the qualification.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.172 Documentation To Be Maintained On-Site for Employees Operating HMIWIs

a) The owner or operator of an HMIWI ~~shall~~ must maintain the following information on-site for the use and reference of HMIWI operators:

1) A summary of the applicable requirements under this Part;

2) A description of basic combustion theory applicable to HMIWIs;

3) Procedures for receiving, handling, and charging waste;

4) Procedures for startup and shutdown of the HMIWI;

5) Procedures for maintaining proper combustion air supply levels;

6) Procedures for operating the HMIWI and associated air pollution control systems within the standards ~~established~~ under this Part;

7) Procedures for responding to periodic malfunction or conditions that may lead to malfunction;

8) Procedures for monitoring HMIWI emissions;

9) Recordkeeping and reporting procedures; and

10) Procedures for handling ash.

b) The owner or operator of an HMIWI ~~shall~~ must establish a program for the annual review of all of the information ~~listed~~ under subsection (a) ~~of this Section~~ by all employees that operate an HMIWI.

1) The initial review of the information ~~listed~~ in subsection (a) ~~of this Section shall~~ must be conducted by September 15, 2000, or ~~prior to~~before assuming responsibilities for operating an HMIWI, whichever is later;

2) Subsequent reviews of the information ~~contained~~ in subsection (a) ~~of this Section shall~~must be conducted annually.

c) The information ~~identified~~ in subsection (a) ~~of this Section shall~~must be kept in a location readily accessible to all HMIWI operators.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART K: WASTE MANAGEMENT PLAN REQUIREMENTS

Section 229.176 Waste Management Plan Requirements for Hospitals Using On-Site Incinerators

a) The owner or operator of a hospital subject to ~~the requirements in~~ this Part ~~shall~~ must submit to the Agency, in ~~accordance~~ compliance with Section 229.184(b) ~~of this Part~~, a waste management plan. Such plans ~~shall~~ must outline technically and economically feasible policies and practices for reducing the amount and toxicity of hospital and medical/infectious waste incinerated at the hospital. The waste management plan ~~shall~~ must include the following components:

1) The name and location of the facility;

2) A written policy statement setting forth management support for waste management and implementation of the plan;

3) A statement of goals for reducing the volume and toxicity of waste, expressed numerically where feasible;

4) Identification of the staff responsible for ~~development and implementation of~~developing and implementing the plan, as well as a description of their roles and responsibilities;

5) A description of communication and education programs to make employees aware of the waste management program and their responsibilities;

6) A summary of existing waste management policies and practices;

7) Identification of technically and economically feasible waste management policies and practices to be implemented and, where practical, a schedule for ~~the implementation of~~implementing the selected measures; and

8) Procedures for tracking implementation of the plan and progress toward achieving the goals.

b) ~~Prior to the development of~~Before developing the waste management plan, the hospital ~~shall~~ must assess:

1) Current waste management practices;

2) All of the available data that it has collected on the types, quantities, and sources of its waste;

3) Technical information on alternative waste management practices, such as the American Hospital Association publication ~~entitled~~ "An Ounce of Prevention: Waste Management Strategies for Health Care Facilities," incorporated by reference at Section 229.104(a) ~~of this Part~~; and

4) The feasibility of implementing additional waste management policies and practices, taking into account such considerations as:

A) The effectiveness of existing policies and practices;

B) The costs of additional measures;

C) The potential effects on patient care and worker safety;

D) The environmental benefits and savings;

E) The recycling options available in the area; and

F) The availability of products or equipment needed to implement alternative measures.

c) The following measures, at a minimum, ~~shall~~ must be considered when evaluating alternative waste management practices and developing waste management policies and procedures:

1) Segregating waste streams;

2) Phasing out the use of products containing toxic materials;

3) Reusing products and equipment;

4) Reducing the use of packaging and disposable items;

5) Collecting recyclable materials; and

6) Improving inventory control, training, and housekeeping practices.

d) Any waste management plan ~~that has been~~ developed by a hospital subject to the requirements of this Part ~~prior to~~before May 15, 1999, may be incorporated into the waste management plan required by this Section for that hospital, to the extent that such a plan is consistent with the requirements of this Section.

e) The owner or operator of each affected hospital ~~shall~~ must submit a waste management plan to the Agency at the same time site-specific operating parameters are reported, as specified in Section 229.184(b) ~~of this Part~~.

f) The waste management plan ~~shall~~ must be updated every 5 years to coincide with either the issuance or renewal of the facility's CAAPP permit.

g) The owner or operator of each affected hospital ~~shall~~ must submit a waste management progress report to the Agency annually, along with the annual emissions report required by 35 Ill. Adm. Code 201.302 and 254. The progress report ~~shall~~ must include the following elements:

1) A description of progress made during the previous calendar year toward meeting the goals established in the plan;

2) A summary of the waste management practices that were implemented; and

3) Any amendments to the plan along with a brief explanation of the need for the amendments.

h) Upon written request, the affected hospital ~~shall~~ must make the waste management plan and annual progress reports available for public review during normal business hours.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.178 Waste Management Plan Requirements for Hospitals Transporting Waste Off-Site to an HMIWI

a) By September 15, 2000, the owner or operator of any hospital that transfers hospital or medical/infectious waste off-site to an HMIWI ~~shall~~ must conduct an assessment of its current waste management program and consider additional technically and economically feasible measures for reducing the volume and toxicity of waste to be incinerated.

b) In identifying additional technically and economically feasible waste management practices, the owner or operator ~~shall~~ must consider:

1) Segregating waste streams;

2) Phasing out the use of products containing toxic materials;

3) Reusing products and equipment;

4) Reducing the use of packaging and disposable items;

5) Collecting recyclable materials; and

6) Improving inventory control, training, and housekeeping practices.

c) Within ~~1~~ one year after the assessment conducted ~~pursuant to~~under subsection (a) ~~of this Section~~, and annually thereafter, affected hospitals ~~shall~~ must submit a waste management progress report to the Agency. The progress report ~~shall~~ must summarize any waste management policies and practices that were implemented in the previous calendar year.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.180 Waste Management Requirements for Commercial HMIWIs

a) The owner or operator of any commercial HMIWI that accepts hospital waste or medical/infectious waste generated off-site ~~shall~~must:

1) Provide hospital, medical, or infectious waste customers with written information at least once a year concerning the availability of waste management practices for reducing the volume and toxicity of waste to be incinerated;

2) Conduct training and education programs in waste segregation for each of the company's waste generator customers;

3) Ensure that each waste generator customer prepares its own waste management plan that includes, at a minimum, the following elements:

A) Segregation of recyclable wastes such as paper products, glass, batteries, and metals;

B) Segregation of non-recyclable wastes such as polyvinyl chloride plastics, pharmaceutical waste, and mercury-containing waste; and

C) Purchasing recycled or recyclable products;

4) Submit a waste management plan to the Agency, in ~~accordance~~ compliance with Section 229.184(b) ~~of this Part~~, that outlines the efforts that will be undertaken to implement the ~~requirementsspecified~~ requirements specified in subsections (a)(1) through (a)(3) ~~of this Section~~.

b) Paper or electronic copies of the materials disseminated under this Section ~~shall~~ must be made available to the Agency upon written request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.181 Waste Management Plan Requirements for Other HMIWIs

The owner or operator of an HMIWI that is subject to emission limits in Subpart E ~~of this Part~~, but is not subject to the waste management plan provisions of Sections 229.176 or 229.180 ~~of this Subpart~~, ~~shall~~ must develop a waste management plan in ~~accordance~~ compliance with this Section.

(a) The owner or operator of an HMIWI subject to this Section ~~shall~~ must conduct an assessment of its current waste management program and submit a waste management plan to the Agency, in ~~accordance~~ compliance with Section 229.184(b) ~~of this Part~~, that:

1) Identifies, ~~pursuant to~~under subsection (b) ~~of this Section~~, the additional technically and economically feasible measures for reducing the volume and toxicity of the waste to be incinerated; and

2) Where practical, outlines a schedule for the implementation of the selected measures.

(b) In identifying additional technically and economically feasible waste management practices, the owner or operator ~~shall~~ must consider:

1) Segregating waste streams;

2) Phasing out the use of products containing toxic materials;

3) Reusing products and equipment;

4) Reducing the use of packaging and disposable items;

5) Collecting recyclable materials; and

6) Improving inventory control, training, and housekeeping practices.

(c) In assessing its current waste management practices, the facility ~~shall~~ must consider technical information on alternative waste management practices, such as the American Hospital Association publication ~~entitled~~ "An Ounce of Prevention: Waste Management Strategies for Health Care Facilities," incorporated by reference at Section 229.104(a) ~~of this Part~~.

(d) Any waste management plan that has been developed by a facility subject to this Section before May 15, 1999, may be incorporated into the waste management plan required for that facility, to the extent that such a plan is consistent with the requirements of this Section.

(e) The waste management plan ~~shall~~ must be updated every 5 years to coincide with either the issuance or renewal of the facility's CAAPP permit.

(Source: Amended at 48 Ill. Reg._____, effective _____)

SUBPART L: RECORDKEEPING AND REPORTING REQUIREMENTS

Section 229.182 Recordkeeping Requirements

a) The owner or operator of an HMIWI subject to the emissions limits under Subpart E ~~of this Part shall~~must maintain records of the following information:

1) The calendar date of each record;

2) The following data, where applicable:

A) Concentrations of all applicable pollutants ~~listed~~ in Section 229.125(a) or (c), or in Section 229.126(a) or (c) ~~of this Part~~ (as determined by the CEMS, if applicable), and any measurements of opacity as required under Section 229.125(b), (d), or (f) or Section 229.126(b) or (d);

B) HMIWI charge dates, times and weights, and hourly charge rates;

C) If a fabric filter is used, the fabric filter inlet temperatures during each minute of operation;

D) The amount and type of dioxin/furan sorbent used during each hour of operation;

E) The amount and type of Hg sorbent used during each hour of operation;

F) The amount and type of HCl sorbent used during each hour of operation;

G) If a selective noncatalytic reduction system is used to comply, the amount and type of NO_x reagent used during each hour of operation;

H) If a selective noncatalytic reduction system is used to comply, the minimum secondary chamber temperature recorded during each minute of operation;

I) The secondary chamber temperatures recorded during each minute of operation;

J) The liquor flow rate to the wet scrubber inlet during each minute of operation;

K) The horsepower or amperage to the wet scrubber during each minute of operation;

L) Any pressure drop across the wet scrubber system during each minute of operation;

M) The temperature at the outlet from the wet scrubber during each minute of operation;

N) The pH at the inlet to the wet scrubber during each minute of operation;

O) Identification of any use of the bypass stack, including dates, times, and the duration of such use;

P) For sources complying with Section 229.166(c) ~~of this Part~~, all operating parameter data collected; and

Q) If a bag leak detection system is used, maintain records of the system alarm, the time of the alarm, the time corrective action was initiated and completed, and a brief description of the cause of the alarm and the corrective action taken, as applicable;

3) Identification of any calendar days for which data on emissions rates or operating parameters ~~specified~~ under subsection (a)(2) ~~of this Section~~ have not been obtained, with an identification of the emissions rates or operating parameters not measured, reasons for not obtaining data, and a description of the corrective actions taken;

4) Identification of any malfunctions, including the calendar date, the time and duration, and a description of the malfunction and of the corrective action taken to remedy it;

5) Identification of calendar days for which data on emissions rates or operating parameters ~~specified~~ under subsection (a)(2) ~~of this Section~~ exceeded the applicable limits, with a description of the exceedences, reasons for such exceedences, and a description of the corrective actions taken;

6) The results of the initial, annual, and any other subsequent performance tests conducted to determine compliance with the applicable emissions limits and/or to establish or re-establish operating parameters, as

applicable, and a description, including sample calculations, of how the operating parameters were established or re-established, if applicable;

7) Records of calibration of any monitoring devices as required under Sections 229.166(c)(1), (2) and (3) and 229.168 (b)(1) and (2) ~~of this Part~~; and

8) Identification of the names of all HMIWI operators who have met the criteria for qualification under Section 229.170 ~~of this Part~~, including:

A) Documentation of training and the dates of the training; and

B) The date of the initial review and all subsequent annual reviews of the information ~~specified~~ in Section 229.172(a) ~~of this Part~~, as required by Section 229.172(b) ~~of this Part~~.

b) The owner or operator of an HMIWI claiming an exemption from the emissions limits in this Part ~~pursuant to~~under Section 229.110(b) ~~of this Part shall~~must keep contemporaneous records identifying each period of time when only pathological waste, low-level radioactive waste, or chemotherapeutic waste is burned, including the calendar date and duration of such periods.

c) The owner or operator of an HMIWI claiming an exemption ~~pursuant to~~under Section 229.110(c) ~~of this Part shall~~must keep records on a calendar quarter basis demonstrating that only pathological waste, low-level radioactive waste, or chemotherapeutic waste is burned.

d) The owner or operator of a co-fired combustor claiming an exemption from the emissions limits under Section 229.110(d) ~~of this Part shall~~must maintain records on a calendar quarter basis of the relative weight of hospital waste and/or medical/infectious waste, and of all other fuels or waste combusted.

e) The owner or operator of each HMIWI subject to the emissions limits under Section 229.125(c) or Section 229.126 ~~of this Part shall~~must maintain records of the annual equipment inspection required under Section 229.162 ~~of this Part~~.

f) The owner or operator of each HMIWI subject to the emissions limits under Section 229.125(c) or 229.126(c) ~~of this Part shall~~must maintain records of the annual air pollution control device inspection required under Section 229.162 ~~of this Part~~.

g) If a bag leak detection system is used, the owner or operator ~~shall~~ must maintain records of the system alarm, the time of the alarm, the time corrective action was initiated and completed, a brief description of the cause of the alarm, and the corrective action taken, as applicable.

h) The owner or operator of each HMIWI, when applicable, ~~shall~~ must maintain records of any required maintenance, adjustments, or repairs identified during an inspection required under Section 229.162 ~~of this Part~~ not completed within 10 days after the inspection or the timeframe approved in writing by the Agency.

i) All records required under this Section ~~shall~~ must be maintained onsite for ~~a period of 5~~five years, in either paper copy or electronic format, unless an alternative format has been approved by the Agency in a permit condition.

j) All records required to be maintained ~~pursuant to~~under this Section ~~shall~~ must be made available to the Agency upon request.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.184 Reporting Requirements

a) The facilities manager and the responsible official for the affected source ~~shall~~ must certify each report required under this Section.

b) The owner or operator of an HMIWI ~~shall~~ must submit to the Agency the results of any performance test conducted on the HMIWI within 60 days after conducting the performance test. The information submitted with the initial performance test required by Section 229.142 ~~of this Part shall~~must include:

1) Before January 1, 2014, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), as applicable, the test data and values for the site-specific operating parameters ~~established pursuant to~~under Section 229.142(a)(4), (5) or (6), as applicable, and a description, including sample calculations, of how the operating parameters were established during the initial performance test for an HMIWI subject to the emissions limits under Section 229.125(a) or 229.126(a) ~~of this Part~~;

2) On and after January 1, 2014, the test data and values for the site-specific operating parameters ~~established pursuant to~~under Section 229.142(b)(3), (4) or (5), as applicable, and a description, including sample calculations, of how the operating parameters were established during the initial performance test for an HMIWI subject to the emissions limits under Section 229.125(c) or Section 229.126(c) ~~of this Part~~;

3) If a bag leak detection system is used, analysis and supporting documentation demonstrating conformance with guidance and specifications for bag leak detection systems in Section 229.166(d)(1); and

4) A copy of the waste management plan required under Subpart K ~~of this Part~~.

c) All owners or operators of HMIWIs ~~shall~~ must submit the information ~~specified~~ under this subsection (c) to the Agency, as follows:

1) By September 15, 2001, and by September 15 of each year thereafter, for an HMIWI subject to the emissions limits under Section 229.125(a) or 229.126(a) ~~of this Part~~;

2) By January 1, 2014, and by January 1 of each year thereafter, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), as applicable, for an HMIWI subject to the emissions limits under Section 229.125(c) or (e) or Section 229.126(c) ~~of this Part~~; and

3) The annual report required under subsection (c)(1) or (2) ~~of this Section shall~~must include the following information:

A) Before January 1, 2014, the values for site-specific operating parameters established ~~pursuant to~~under Section 229.142(a)(4), (5) or (6) ~~of this Part~~, as applicable;

B) On and after January 1, 2014, except as provided for in Section 229.115(b)(3) or Section 229.116(c)(4), as applicable, the values for site-specific operating parameters established ~~pursuant to~~under Section 229.142(b)(3), (4) or (5) ~~of this Part~~, as applicable;

C) The highest maximum operating parameter and the lowest minimum operating parameter, as applicable, for each operating parameter, recorded for the calendar year being reported ~~pursuant to~~under Section 229.142(a)(4), (5) or (6), or Section 229.142(b)(3), (4) or (5) ~~of this Part~~, as applicable;

D) The highest maximum operating parameter and the lowest minimum operating parameter, as applicable, for each operating parameter recorded ~~pursuant to~~under Section 229.142(a)(4), (5) or (6) or Section 229.142(b)(3), (4) or (5) ~~of this Part~~, as applicable, for the calendar year preceding the year being reported, in order to provide the Agency with a summary of the performance of the affected facility over a 2-year period;

E) Any information recorded ~~pursuant to~~under Section 229.182(a)(3) through (5) ~~of this Subpart~~ for the calendar year being reported and for the calendar year preceding the year being reported;

F) If no exceedences or malfunctions were recorded under Section 229.182(a)(3) through (a)(5) ~~of this Subpart~~ for the calendar year being reported, a statement that no exceedences occurred during the reporting period; and

G) Any use of the bypass stack, the duration of use, the reason for malfunction, and the corrective actions taken.

d) Once an HMIWI is issued a CAAPP permit, the owner or operator of the HMIWI ~~shall~~ must submit the reports required under subsection (c) ~~of this Section~~ semiannually. The semiannual reports must be submitted within 60 days ~~following~~ after the end of the reporting period. The first semiannual reporting period ends on June 30 of each year and the second semiannual reporting period ends on December 31 of each year.

e) The owner or operator of each rural HMIWI subject to the emissions limits under Section 229.126(b) ~~of this Part, shall~~must submit an annual report containing all information ~~listed~~ in subsections (b) and (c) ~~of this Section~~ by no later than 60 days ~~following~~ after the year in which the data was collected. Subsequent reports ~~shall~~ must be sent no later than 12 calendar months ~~following~~ after the previous report. Once the unit is subject to permitting requirements under the CAAPP, the owner or operator ~~shall~~ must submit these reports semiannually in ~~accordance~~ compliance with the schedule ~~specified~~ in subsection (d) ~~of this Section~~.

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.APPENDIX A Toxic Equivalency (TEQ) Factors

The following TEQ factors ~~shall~~ must be used to determine compliance with the dioxin/furans standards under either Section 229.125(b) or ~~Section~~ 229.126(b) ~~of this Part~~.

Dioxin/Furan Congener	Toxic Equivalency Factor
2,3,7,8-tetrachlorinated dibenzo-p-dioxin	1.0
1,2,3,7,8-pentachlorinated dibenzo-p-dioxin	0.5
1,2,3,4,7,8-hexachlorinated dibenzo-p-dioxin	0.1
1,2,3,7,8,9-hexachlorinated dibenzo-p-dioxin	0.1
1,2,3,6,7,8-hexachlorinated dibenzo-p-dioxin	0.1
1,2,3,4,6,7,8-heptachlorinated dibenzo-p-dioxin	0.01
octachlorinated dibenzo-p-dioxin	0.001
2,3,7,8-tetrachlorinated dibenzofuran	0.1
2,3,4,7,8-pentachlorinated dibenzofuran	0.5
1,2,3,7,8-pentachlorinated dibenzofuran	0.05
1,2,3,4,7,8-hexachlorinated dibenzofuran	0.1
1,2,3,6,7,8-hexachlorinated dibenzofuran	0.1
1,2,3,7,8,9-hexachlorinated dibenzofuran	0.1
2,3,4,6,7,8-hexachlorinated dibenzofuran	0.1
1,2,3,4,6,7,8-heptachlorinated dibenzofuran	0.01
1,2,3,4,7,8,9-heptachlorinated dibenzofuran	0.01
octachlorinated dibenzofuran	0.001

(Source: Amended at 48 Ill. Reg._____, effective _____)

Section 229.APPENDIX B Operating Parameters to be Monitored and Minimum Measurement and Recording Frequencies

An "X" in any box in this matrix means that ~~measurement of~~measuring that parameter is required.

MINIMUM FREQUENCY			CONTROL SYSTEM			
Operating Parameters	**Data Measurement**	**Data Recording**	**Dry Scrubber Followed by Fabric Filter**	**Wet Scrubber**	**Dry Scrubber Followed by Fabric Filter and Wet Scrubber**	**Selective Noncatalytic Reduction System**
Maximum Charge Rate[1]	Continuous	Once per hour	X	X	X	X
Maximum Fabric Filter Inlet Temperature	Continuous	Once per minute	X		X	
Maximum Flue Gas Temperature	Continuous	Once per minute	X	X		
Minimum Secondary Chamber Temperature	Continuous	Once per minute	X	X	X	X
Minimum Dioxin/Furan Sorbent Flow Rate	Hourly	Once per hour	X		X	
Minimum HCl Sorbent Flow Rate	Hourly	Once per hour	X		X	
Minimum Reagent Flow Rate	Hourly	Once per hour				X
Minimum Hg Sorbent Flow Rate	Hourly	Once per hour	X		X	
Minimum Pressure	Continuous	Once per minute		X	X	

Drop Across the Wet Scrubber or Minimum Horsepower or Amperage to Wet Scrubber						
Minimum Scrubber Liquor Flow Rate	Continuous	Once per hour		X	X	
Minimum Scrubber Liquor pH	Continuous	Once per hour		X	X	

[1]For batch HMIWIs, record the charge per batch.

(Source: Amended at 35 Ill. Reg. 16615, effective September 29, 2011)

Section 229.APPENDIX C Reference Test Methods and Procedures for Performance Tests

The following test methods and procedures ~~shall~~ must be used as specified in Section 229.140(e) ~~of this Part,~~ when conducting any performance test for the purpose of demonstrating compliance with the emissions limits ~~established~~ under this Part.

a) All performance tests ~~shall~~ must consist of a minimum of 3 test runs conducted under representative operating conditions. The minimum sample time of 1 hour per test run ~~shall~~ must be used unless otherwise indicated. In order to demonstrate compliance with the emissions limits ~~set forth~~ in Subpart E ~~of this Part~~, the arithmetic average of all 3 performance test runs ~~shall~~ must be used.

b) Method 1, at 40 CFR 60, incorporated by reference at Section 229.104(d) ~~of this Part~~, ~~shall~~ must be used to select the sampling location and number of traverse points.

c) Method 2, at 40 CFR 60, ~~shall~~ must be used to determine average gas density, as well as to measure gas velocity.

d) Method 3, 3A, or 3B, at 40 CFR 60, ~~shall~~ must be used for gas composition analysis, including measurement of oxygen concentration. Method 3, 3A, or 3B, at 40 CFR 60, ~~shall~~ must be used simultaneously with each of the other reference methods. As an alternative to Method 3B, ASME PTC-19-10-1981-Part 10 may be used.

e) The pollutant concentrations ~~shall~~ must be adjusted to 7 percent oxygen using the following equation:

$$C_{adj} = C_{meas} (20.9-7)/(20.9-\%O_2)$$

Where:

C_{adj}	=	pollutant concentration adjusted to 7 percent oxygen;
C_{meas}	=	pollutant concentration measured on a dry basis
(20.9-7)	=	20.9 percent oxygen - 7 percent oxygen (defined oxygen corrective basis);
20.9	=	oxygen concentration in air, percent; and
$\%O_2$	=	oxygen concentration measured on a dry basis, percent.

f) Method 5, 26A, or 29, at 40 CFR 60, ~~shall~~ must be used to measure PM emissions. As an alternative, a PM CEMS may be used in determining compliance with PM emissions using a 12-hour rolling average, calculated each hour as the average of the previous 12 operating hours.

g) Method 7 or 7E, at 40 CFR 60, ~~shall~~ must be used to measure NO_x emissions.

h) Method 6 or 6C, at 40 CFR 60, ~~shall~~ must be used to measure SO_2 emissions.

i) Method 9, at 40 CFR 60, ~~shall~~ must be used to measure stack opacity. As an alternative, the use of a bag leak detection system or a PM CEMS to demonstrate compliance with the PM standards is considered demonstrative of compliance with the opacity requirements.

j) Method 10 or 10B, at 40 CFR 60, ~~shall~~ must be used to measure CO emissions. As an alternative, a CO CEMS may be used to measure CO emissions.

k) Method 22, at 40 CFR 60, ~~shall~~ must be used to measure fugitive ash emissions.

l) Method 23, at 40 CFR 60, ~~shall~~ must be used to measure total dioxin/furan emissions. As an alternative, the facility may elect to sample total dioxins/furans by installing, calibrating, maintaining, and operating a continuous automated sampling system for monitoring dioxin/furan emissions. The minimum sample time for Method 23 sampling ~~shall~~ must be ~~4~~ four hours per test run. If the affected facility has selected the TEQ for dioxin/furans (~~set out~~ in Appendix A ~~of this Part~~), ~~as provided~~ under Section 229.125 or 229.126 ~~of this Part~~, whichever is applicable, the following procedures ~~shall~~ must be used to determine compliance:

1) Measure the concentration of each dioxin/furan tetra-through-octa-congener emitted using Method 23;

2) For each dioxin/furan congener measured in ~~accordance~~ compliance with subsection (i)(1) ~~of this Section~~, multiply the congener concentration by

its corresponding TEQ factor ~~specified~~ in Appendix A ~~of this Part~~; and

3) Sum the products calculated in ~~accordance~~ compliance with subsection (i)(2) ~~of this Section~~ to obtain the total concentration of dioxin/furans emitted in terms of TEQ.

m) Method 26 or 26A, at 40 CFR 60, ~~shall~~ must be used to measure HCl emissions. As an alternative, an HCl CEMS may be used to measure HCl emissions. Before January 1, 2014, if the affected facility has selected the percentage reduction standard for HCl ~~as provided~~ under Section 229.125(a) or 229.126(a) ~~of this Part~~, whichever is applicable, the percentage reduction in HCl emissions ($\%R_{HCl}$) is computed using the following formula:

$$(\%R_{HCl}) = ((E_i - E_o)/E_i) \times 100$$

Where:

$\%R_{HCl}$ = percentage reduction of HCI emissions achieved;

E_i = HCI emissions concentration measured at the control device inlet, corrected to 7 percent oxygen (dry basis); and

E_o = metal emissions concentration (Pb, Cd, or Hg) measured at the control device outlet, corrected to 7 percent oxygen (dry basis).

n) Method 29, at 40 CFR 60, ~~shall~~ must be used to measure Pb, Cd, and Hg emissions. As an alternative, ASTM D6784-02 may be used to measure Hg emissions; a multi-metals CEMS or Hg CEMS may be used to measure Pb, Cd, and Hg emissions; or the facility may elect to sample Hg by installing, calibrating, maintaining, and operating a continuous automated sampling system for monitoring Hg emissions. Before January 1, 2014, if the affected facility has selected the percentage reduction standards for metals ~~as provided~~ in Section 229.125(a) or 229.126(a) ~~of this Part~~, whichever ~~is~~ applicable, the percentage reduction in emissions ($\%R_{metal}$) is computed using the following formula:

$$(\%R_{metal}) = ((E_i - E_o)/E_i) \times 100$$

Where:

$\%R_{METAL}$ = percentage reduction of metal emissions (Pb, Cd, or Hg) achieved;

E_i = metal emissions concentration (Pb, Cd, or Hg) measured at the control device inlet, corrected to 7 percent oxygen (dry basis); and

E_O = metal emissions concentration (Pb, Cd, or Hg) measured at the control device outlet, corrected to 7 percent oxygen (dry basis).

SUBPART A: GENERAL PROVISIONS

Section 232.100 Introduction

This Part establishes a program to identify toxic air contaminants. This Part includes a list of toxic air contaminants (Section 232.Appendix A), the procedures to determine a toxic air contaminant and the procedures to amend the list.

Section 232.110 Incorporations by Reference

a) The following materials are incorporated by reference:

American Conference of Governmental Industrial Hygienists (ACGIH). Threshold Limit Values and Biological Exposure Indices for 1989-90 (1989). Document can be obtained from: 6500 Glenway Avenue, Building D-7, Cincinnati, Ohio 45211-4438.

Good Laboratory Practice Standards, 21 CFR 58 (1990).

Good Laboratory Practice Standards, 40 CFR 160 (1989).

Good Laboratory Practice Standards, 40 CFR 792 (1990).

Organization for Economic Co-operation and Development (OECD). OECD Guidelines For Testing of Chemicals, Appendix: Good Laboratory Practice [c(81)30(Final)] (November, 1989). Document can be obtained from: OECD Publications and Information Centre, 2001 L Street, N.W., Suite 700, Washington, D.C. 20036-4095.

United States Department of Health and Human Services, Public Health Service, National Toxicological Program (NTP). Fifth Annual Report on Carcinogens (1989). Document can be obtained from: National Technical Information Service, 5285 Port Royal Road, Springfield, Virginia 22161.

World Health Organization, International Agency for Research on Cancer (IARC). Monographs on the Evaluation of Carcinogenic Risks to Humans, Overall Evaluations of Carcinogenicity: An Updating of IARC Monographs Volumes 1 to 42, Supplement 7 (1987). Document can be obtained from: WHO Publications Centre USA, 49 Sheridan Avenue, Albany, New York 12210.

b) This Section incorporates no future editions or amendments.

Section 232.120 Definitions

The definitions of 35 Ill. Adm. Code 201 and 211 apply to this Part, as well as the definitions contained in this Section. Where a definition contained in this Section is more specific than those found in 35 Ill. Adm. Code 201 and 211, it must take precedence in application of this Part.

"ACGIH" means the American Conference of Governmental Industrial Hygienists.

"Adverse health effect" means a health injury or disease that may be produced by exposure to a contaminant. This includes any decrement in the function of an organ or organ system or any subclinical organ lesion that is likely to lead to a decrement in an organ or organ system function.

"Commercial fuel" means:

Any fuel offered for final sale for use in combustion processes;

Any gaseous or liquid fuel generated as a by-product at a source for which the source has been issued an operating permit to use such fuel internally in combustion processes, including internal combustion engines; or

Any waste derived fuel for which an operating permit has been issued and which represents no more than five percent (.05) by weight on a daily basis of total fuel used in combustion processes by a source.

"Critical gestation days" means the days during which the formation and differentiation of organs and organ systems occurs during embryonic development.

“Fugitive emissions” is defined according to 35 Ill. Adm. Code 203.124.
"IARC" means the World Health Organization's International Agency for Research on Cancer.

"IRIS" means the USEPA's Integrated Risk Information System.

"Illinois Toxic Air Contaminant" (ITAC) means any toxic air contaminant listed pursuant to 35 Ill. Adm. Code 232, excluding, specifically: coke oven gas; any hazardous air pollutant (HAP) now or hereafter listed under Section 112(b) of the Clean Air Act (CAA) (1990); and any pollutant or contaminant listed as a compound of concern under the Great Waters and Coastal Waters Program under Section 112(m) of the CAA.

"ITAC Source Report" means the report that the Agency provides to the source that lists data fields for the information required in the emissions report for Subpart D of this Part, and contains the information, if any, that previously has been reported to the Agency for those data fields.

"LC50" means the concentration in the air of a contaminant that kills, or is estimated to kill, 50% (.50) of a population of laboratory animals where the exposure is brief (8 hours or less) and where the route of exposure is inhalation.

"LD50" means the dose of a contaminant that kills, or is estimated to kill, 50% (.50) of a population of laboratory animals where the route of exposure is ingestion.

"Lowest observed adverse effect level" means the lowest experimentally determined dose at which a statistically or biologically significant indication of the toxic effect of concern is observed.

"Manufacture" means, for the purposes of Subpart D of this Part, to produce, prepare, or compound a listed ITAC, and includes coincidental production of an ITAC (e.g., as a by-product or impurity) as a result of the manufacture, processing or otherwise use or treatment of one or more chemical substances not an ITAC. An ITAC intentionally incorporated into a product is considered to be manufactured.

"NTP" means the United States Department of Health and Human Services, Public Health Services' National Toxicological Program.

"No observed effect" means the condition where no adverse health effect has been detected.

"Otherwise use" means, for the purposes of Subpart D of this Part, any activity involving a listed ITAC at a source that does not fall within the definition of "manufacture" or "process."

"Process" means, for the purposes of Subpart D of this Part, the preparation of an ITAC after its manufacture for distribution in commerce in the same physical state as, or in a different form or physical state from, that in which it was received by the source, or preparation that produces a change in physical state or chemical form.

"Toxic air contaminant" (TAC) means a contaminant identified pursuant to Section 232.200 or Section 232.501 of this Part and listed in Appendix A of this Part.

Section 232.130 Applicability

The requirements of this Part do not apply to the following:

a) RETAIL DRY CLEANING OPERATIONS;

b) RETAIL AND NONCOMMERCIAL STORAGE AND HANDLING OF MOTOR FUELS;

c) COMBUSTION PROCESSES USING ONLY COMMERCIAL FUEL, INCLUDING INTERNAL COMBUSTION ENGINES; AND

d) INCIDENTAL OR MINOR SOURCES INCLUDING LABORATORY-SCALE OPERATIONS, AND SUCH OTHER SOURCES OR CATEGORIES OF SOURCES WHICH ARE DETERMINED BY THE BOARD TO BE OF MINOR SIGNIFICANCE. (Section 9.5(e) of the Act)

SUBPART B: DETERMINATION OF A TOXIC AIR CONTAMINANT

Section 232.200 Characteristics for Determining a Toxic Air Contaminant

a) Contaminants found by the Board to be Toxic Air Contaminants pursuant to subsections (b) or (c), below, shall be listed in Section 232.Appendix A.

b) A TOXIC AIR CONTAMINANT IS A CONTAMINANT WHICH the Board finds MAY CAUSE OR SIGNIFICANTLY CONTRIBUTE TO AN INCREASE IN MORTALITY OR AN INCREASE IN SERIOUS IRREVERSIBLE OR INCAPACITATING REVERSIBLE ILLNESS, OR MAY POSE A SIGNIFICANT THREAT TO HUMAN HEALTH. (Section 9.5(c) of the Act)

c) The Board shall find that a contaminant is a Toxic Air Contaminant upon a determination that:

1) The contaminant has a Toxicity Score of 3 or greater using the procedures for determining the Toxicity Score described in Section 232.310; or

2) The contaminant is classified as a carcinogen according to Section 232.320; and

3) The contaminant meets the statutory definition set forth in subsection (b), above.

d) Any person can petition the Board to list or delist a toxic air contaminant pursuant to the requirements of Section 232.500. The Board will consider such a petition a proposal for rulemaking subject to the requirements of 35 Ill. Adm. Code 102.

SUBPART C: PROCEDURES FOR EVALUATING CHARACTERISTICS OF A TOXIC AIR CONTAMINANT

Section 232.300 Purpose

This Subpart identifies the procedures used to evaluate the characteristics of a toxic air contaminant. The Agency will use these procedures in proposing to list or delist toxic air contaminants in Section 232.Appendix A.

Section 232.310 Procedures for Determining the Toxicity Score

The Toxicity Score is the sum of the Acute Lethality Score and the Chronic Toxicity Score. The Acute Lethality Score is a number which indicates a contaminant's potential to cause death. The Chronic Toxicity Score is a number which indicates a contaminant's potential to cause adverse health effects after chronic exposure.

a) Procedure for Determining the Acute Lethality Score

1) The Acute Lethality Score is derived from toxicological studies using laboratory rats. One of two routes of exposure is used: inhalation or ingestion. Values derived from inhalation are used in preference to values derived from ingestion.

2) The Acute Lethality Score is derived from the following table:

Inhalation Concentration (LC50)	Acute Lethality Score
Less than: 500 mg/cu. m	3
500-4,999 mg/cu. m	2
5,000-50,000 mg/cu. m	1
Greater than: 50,000 mg/cu. m	0

or, if the above data are not available:

Ingestion Dose (LD50)	Acute Lethality Score
Less than: 50 mg/kg	3
50-499 mg/kg	2
500-5,000 mg/kg	1
Greater than: 5,000 mg/kg	0

b) Procedure for Determining the Chronic Toxicity Score
The Chronic Toxicity Score is the product of the Lowest Toxic Dose Score and the Severity of Effects Score.

1) Procedure for Determining the Lowest Toxic Dose Score

The Lowest Toxic Dose Score is a number based upon the lowest does of a contaminant that causes an observable adverse health effect.

The Lowest Toxic Dose Score is derived from the following table:

Dose	Lowest Toxic Dose Score
Less than: 5 mg/kg/day	1
5-50 mg/kg/day	2/3
Greater than: 50 mg/kg/day	1/3

2) Procedure for Determining the Severity of Effects Score
The Severity of Effects Score is a number based upon the category of organ(s) affected and the level of effect upon the organ(s).

A) Organ Categories

There are three categories of organs or organ systems which are identified as follows:

i) Category I includes: organs, the impairment or loss of which is fatal or usually cannot be compensated for by the body; gonads, the loss of which prevents the transmission of genetic material; and, adverse reproductive outcome including stillbirth, miscarriage, or reduced litter size (animal studies). The Category I organs are: Lungs, Heart, Brain, Spinal Cord, Kidneys, Liver, Bone Marrow, and Gonads.

ii) Category II includes: organs, the impairment or loss of which may be fatal, but which can be compensated for by drug or replacement therapy; adverse effect on an immune function which may be life threatening; changes in the composition or function of blood constituents which may be life threatening; and, certain fetotoxic effects including premature birth, reduced birth weight, and reduced morphometric parameters. The Category II organs are: Adrenals, Thyroids, Parathyroids, Pituitary, Pancreas, Esophagus, Stomach, Small Intestine, Large Intestine, Lymph Nodes, Thymus, Trachea.

iii) Category III includes: organs, the impairment or loss of which is not life threatening but may result in functional or emotional handicaps; adverse effect on an immune function which is not life threatening; changes in composition or function of blood which are not life threatening but may result in functional handicaps. Category III organs include,

but are not limited to: Oviducts, Epididymides, Uterus, Prostrate, Seminal Vesicles, Ductus Deferens, Penis, Vagina, Eyes, Bone, Nose, Peripheral Nerves, Muscles, Urinary Bladder, Blood Vessels, Ears, Gallbladder, Larynx, Mammary Glands, Salivary Glands, Skin, Spleen, Tongue, Teeth, Ureter, Urethra, Pharynx.

B) Levels of Effect

There are four levels of effect: Serious Irreversible (SI); Serious Reversible (SR); Non-serious Irreversible ("NI"); and Non-serious Reversible (NR).

i) A serious effect is an incapacitating condition or a condition which significantly contributes to an increase in mortality.

ii) A non-serious effect is a non-incapacitating condition or a condition which is unlikely to contribute to an increase in mortality.

iii) An irreversible effect is one that is permanent or would require medical treatment to correct.

iv) A reversible effect is a temporary effect.

C) Table of Severity of Effects Scores

The Severity of Effects Score for any level of effect observed in an organ belonging to a specified organ category is derived from the following table:

		Organ Category		
		I	II	III
Level of Effect	SI	6	5	4
	SR	5	4	3
	NI	4	3	2
	NR	3	2	1
No Observed Effect		0	0	0

D) When a study identifies an adverse health effect on multiple organs within the same category at the lowest observed adverse effect level, the Severity of Effects Score is increased by a value of 1. In no event can the Severity of Effects Score be greater than 6.

3) Additional procedures for calculating the Chronic Toxicity Score are described in Section 232.Appendix B.

Section 232.320 Carcinogen Classification

a) For purposes of this Part, the Agency will consider a contaminant to be a carcinogen if it is classified in the following manner:

1) A Category A1 or A2 Carcinogen by AGCIH; or

2) A Category 1 or 2A/2B Carcinogen by IARC; or

3) A "Human Carcinogen" or "Anticipated Human Carcinogen" by NTP; or

4) A Category A or B1/B2 Carcinogen by the United States Environmental Protection Agency (USEPA) in IRIS or a Final Rule issued in a Federal Register notice by the USEPA as of the effective date of this regulation.

b) The references ACGIH, IARC, and NTP are incorporated by reference in Section 232.110. The reference IRIS is the United States Environmental Protection Agency, Office of Health and Environmental Assesment, Integrated Risk Information System. The categories A, B1, and B2 carcinogens of IRIS as of December 31, 1989, are listed in Section 232.Appendix C.

SUBPART D: SOURCE IDENTIFICATION AND REPORTING REQUIREMENTS

Section 232.400 Purpose

This Subpart establishes identification and reporting requirements for new and existing sources that emit Illinois Toxic Air Contaminants.

Section 232.410 Applicability

a) This Subpart shall apply to any owner or operator of a source that manufactures, processes or imports 25,000 lbs. or more of any individual ITAC in any calendar year or otherwise uses 10,000 lbs. of any individual ITAC in any calendar year.

b) This Subpart shall not apply to the following:

1) Retail dry cleaning operations;

2) Retail and noncommercial storage and handling of motor fuels;

3) Combustion processes, including internal combustion engines, using only commercial fuel;

4) Equipment and operations which are exempt from permitting requirements pursuant to 35 Ill. Adm. Code 201.146;

5) Components of commercial and non-commercial agrichemical facility operations that are permitted under 8 Ill. Adm. Code 255 by the Department of Agriculture and endorsed by the Illinois Environmental Protection Agency pursuant to Section 39.4 of the Act; [415 ILCS 5/39.4.]

6) Farm storage or application of agricultural chemicals and distribution facilities not covered by 8 Ill. Adm. Code 255 that are used for storage or distribution of agrichemicals; and

7) The requirements of this Subpart shall not apply to the application of registered pesticides.

c) If an ITAC is present in a mixture of chemicals at a source at a concentration below 1% (0.01) by weight, or .1% (0.001) by weight in the case of an ITAC which is a carcinogen listed in Appendix C of this Part, an owner or operator subject to this Subpart is not required to consider the quantity of the ITAC in such mixture when determining whether an applicable threshold has been met under subsection (a) of this Section or in determining the amount of emissions to be reported under Section 232.430 of this Part.

Section 232.420 ITAC Source Report

a) On or before July 1, 1997, the Agency shall provide to the owner or operator of a source that is expected to be subject to this Subpart the ITAC Source Report. The ITAC Source Report shall contain all data fields for the information required under this Subpart.

b) The information on emissions provided by the owner or operator of a source in the emissions report submitted pursuant to Section 232.430 of this Part shall be based on the best information available to the owner or operator and that is reflective of the operations of the source and its ITAC emissions.

Section 232.421 Emissions Report Certification

All emission reports filed pursuant to this Subpart shall contain the following certification statement: "I hereby certify that I have reviewed the attached documents and that, to the best of my knowledge and belief, the submitted information is true and complete and that the amounts

and values in this report are accurate based on reasonable estimates using data available to the preparers of this report." The certification statement shall be signed by an individual responsible for the certification of the accuracy of the emissions report who will take legal responsibility for the information verified or reported therein. The certification statement shall be accompanied by the full name, title, actual signature, date of signature, and a telephone number of the individual signing the emissions report.

Section 232.423 Failure to Receive an ITAC Source Report

Failure to receive the ITAC Source Report from the Agency shall not relieve an owner or operator from the obligation to file a complete emissions report. Any owner or operator who does not receive the ITAC Source Report on or before July 1, 1997, may contact the Agency to request the ITAC Source Report.

Section 232.430 Emissions Report

a) On or before October 1, 1997, the owner or operator of a source subject to this Subpart shall file an emissions report for the calendar year 1996 which shall include the following information:

1) Source identification information and the source's actual annual emissions of each ITAC (identified by generic name and Chemical Abstract Service (CAS) number) expressed in tons per year (TPY), and the source's annual fugitive emissions of each ITAC, expressed in TPY, for each ITAC that exceeds the threshold for applicability as set forth in Section 232.410 of this Part. In determining the actual annual emissions of each ITAC, the source may exclude emissions of such ITAC from all emission units with de minimis emissions of ITACs; or

2) If the owner or operator of a source subject to this Subpart so elects, the owner or operator may choose to submit the relevant portions of the USEPA's Emergency Planning and Community Right to Know Act (EPCRA) Form R in lieu of the report required under subsection (a)(1) of this Section. If the owner or operator so elects, the reporting of emissions under Form R may be reported in pounds per year rather than in tons per year (TPY) as required in subsection (a)(1) of this Section.

b) The following emissions of ITACs shall be considered to be de minimis and shall not be subject to reporting requirements under this Subpart:

1) Emissions of ITACs from an emission unit which, in the aggregate, are less than one-half (0.5) TPY;

2) Emissions from a process unit resulting from a process vent stream with ITAC concentrations that are always less than one-tenth of one percent

(0.001) by weight on a daily basis, if such concentrations include any carcinogen listed in Appendix C of this Part;

3) Emissions from a process unit resulting from a process vent stream with ITAC concentrations that are always less than one percent (0.01) by weight on a daily basis, if such concentrations do not include any carcinogen listed in Appendix C of this Part; or

4) Fugitive emissions of ITACs from a process unit which, in the aggregate, are less than one-half (0.5) TPY.

c) If a source becomes subject to this Subpart on or after the effective date of this Subpart, the owner or operator of the source shall submit an emissions report to the Agency on or before July 1 of the year following the date the source becomes subject to this Subpart for the period from the date the source first becomes subject to this Subpart through the end of the calendar year before the year the first report from such source is due under this Subpart. Such emissions report shall contain all of the information listed in subsections (a)(1) or (a)(2) of this Section and any additional information requested by the Agency pursuant to Section 232.450 of this Part. Any such emissions report shall satisfy the requirements Subpart D of this Part.

d) An owner or operator of a source subject to this Subpart shall submit to the Agency a revised emissions report on or before July 1 of the year following the occurrence of any of the following:

1) If the source's actual annual emissions of any individual ITAC or any combination of ITACs required to be reported under this Subpart increases by more than one-half (0.50) TPY or one (1) TPY, respectively, from the sources' emissions of ITACs initially reported under this Subpart; or

2) If the source emits an ITAC that exceeds the threshold for applicability as set forth in Section 232.410 of this Part which was not previously reported in the source's initial report of its emissions of ITACs or in any subsequent revised report of its emissions of ITACs required to be submitted pursuant to this subsection (d).

e) Any revised emissions report required to be submitted under subsection (d) of this Section shall contain all of the information listed in subsection (a) of this Section and any additional information requested by the Agency pursuant to Section 232.450 of this Part. Any revised emissions report shall satisfy the requirements of Subpart D.

f) By July 1 of the calendar year following any modification or change to an emission unit requiring a revision to an existing permit or a new permit which may result in an increase in emissions of a previously reported ITAC by ten

percent (.10) or more, an owner or operator of a source subject to this Subpart shall submit to the Agency a revised emissions report which includes the information required under this Section 232.430.

Section 232.440 Use of Available Data

a) In order to provide the information requested by the Agency pursuant to Section 232.450 of this Part, the owner or operator of a source may:

1) Use reasonable engineering estimates of total emissions of individual ITACs pursuant to an emissions determination method, if, in each case, the owner or operator of a source specifies the emissions determination method used to estimate total emissions and certifies that such data represents the best available information and is true and accurate to the best of his/her knowledge; or

2) If available, use monitoring or measuring data collected pursuant to other provisions of law or regulation.

b) Nothing in this Subpart requires the monitoring or measurement of the quantities, concentrations, or frequency of emissions of any ITAC beyond any monitoring or measurement required under other provisions of law or regulation.

Section 232.450 Retention of Records/Additional Information

a) For purposes of modeling and conducting assessments of information submitted under this Subpart, the Agency may request supporting documentation or additional information for any emissions report submitted by a source, including:

1) An identification by generic name and Chemical Abstract Service (CAS) number the source's emissions of each ITAC by emission unit, with maximum hourly emission rates in lbs/hr and actual annual emissions in TPY and the source's fugitive emissions of each ITAC in TPY;

2) Operating data, exhaust point information and, if applicable, control device information for each emission unit; and

3) Copies of engineering estimate calculations, mass balance calculations, and any other information or documentation used by the owner or operator of a source in preparing an emissions report.

b) All records and calculations upon which the data submitted in the emissions report are based must be retained by the source for a minimum of three (3) years following the filing of a complete report. The owner or operator of a source shall provide the requested information in a format acceptable to the Agency within 60 days after the receipt of the request.

c) Nothing in this Section shall be interpreted to impose upon any source subject to this Subpart any additional monitoring which is not otherwise required by applicable rules or a permit condition.

Section 232.460 Reporting of Errors

If, after submitting any emissions report required by this Subpart, the owner or operator of a source discovers any error in the data reported, the owner or operator shall notify the Agency of the error in writing and shall provide the Agency with the correct data. The notification and correction shall be conveyed to the Agency within sixty (60) days after the owner's or operator's discovery of the error. The corrected data shall be certified in accordance with Section 232.421 of this Part.

SUBPART E: LISTING AND DELISTING

Section 232.500 Procedures for Listing and Delisting Toxic Air Contaminants

a) Any person may submit a regulatory proposal to the Board to list or delist a toxic air contaminant.

b) The proposal to list a contaminant as a toxic air contaminant, or to delist a toxic air contaminant, must include, at a minimum, the following:

1) The contaminant or toxic air contaminant name and Chemical Abstract Service Number where applicable;

2) The basis for listing or delisting pursuant to Section 232.200(b) or (c). This shall include but is not limited to, a showing of one of the following:

A) The toxicity score or carcinogen classification is correctly determined pursuant to the Subpart C procedures;

B) The Subpart C procedure for determining a toxicity score or carcinogen classification is not appropriate for the contaminant;

C) The Subpart C procedure for determining a toxicity score or carcinogen classification is incorrectly applied for the contaminant;

D) The studies used are inadequate for the purposes of the Subpart C procedure; or

E) Additional or new studies should be considered in a determination to list or delist a contaminant.

3) A copy of each study or report used to justify the proposal.

c) The Agency shall participate in each proposal to list or delist a toxic air contaminant and must provide the Board with a recommendation as to advisability of listing or delisting. Such recommendation must include a toxicity scoring pursuant to Section 232.300 and a carcinogen classification pursuant to Section 232.310.

d) The Agency will propose an update of the list of toxic air contaminants to the Board no less frequently than once every 2 years.

Section 232.501 Listing of Federal Hazardous Air Pollutants, Great Lakes Commission Toxic Compounds and Great Waters Program Toxic Compounds

Notwithstanding the provisions of Section 232.500 of this Subpart, all chemicals listed as "hazardous air pollutants" under Section 112(b) of the CAA (1990) (42 U.S.C. 7412(b)), and all chemicals targeted as toxic compounds or chemicals by the Great Lakes Commission or under the United States Environmental Protection Agency's "Great Waters" Program which are not currently listed as toxic air contaminants under this Part, are hereby listed as toxic air contaminants under Appendix A of this Part. The listing of hazardous air pollutants and other toxic compounds or chemicals as toxic air contaminants under this Section is without reference to the listing procedures of Section 232.500 of this Subpart.

Section 232.APPENDIX A List of Toxic Air Contaminants

Chemical Name	CAS Number
Acetaldehyde	75-07-0*
Acetamide	60-35-5*
Acetonitrile	75-05-8*
Acetophenone	98-86-2*
2-Acetylaminofluorene	53-96-3*
Acrolein	107-02-8*
Acrylamide	79-06-1*
Acrylic acid	79-10-7*
Acrylonitrile	107-13-1*
Aldrin	309-00-2**
Allyl chloride	107-05-1*
2-Aminoanthraquinone	117-79-3
4-Aminoazobenzene	60-09-3
o-Aminoazotoluene	93-56-3
4-Aminobiphenyl	92-67-1*
1-Amino-2-methylanthraquinone	82-28-0
Amitrole	61-82-5
Aniline	62-53-3*
o-Anisidine	90-04-0*
o-Anisidine hydrochloride	134-29-2

Antimony	7440-36-0
Arsenic	7440-38-2**
Asbestos	1332-21-4*
Azobenzene	103-33-3
Benzo(a)anthracene	56-55-3**
Benzene	71-43-2*
Benzidine	92-87-5*
Benzo(a)pyrene	50-32-8**
Benzo(b)fluoranthene [3,4-Benzofluoranthene]	205-99-2**
Benzo(j)fluoranthene	205-82-3
Benzo(k)fluoranthene [11,12-Benzofluoranthene]	207-08-9**
1,12-Benzoperylene	191-24-2
Benzotrichloride	98-07-7*
Benzyl chloride	100-44-7*
Benzyl violet	1694-09-3
Beryllium	7440-41-7
Beryllium oxide	1304-56-9*
Biphenyl	92-52-4*
Bis(chloromethyl)ether	542-88-1*
Boron trifluoride	7637-07-2
Bromoform	75-25-2*
4-Bromophenyl phenyl ether	101-55-3**
1,3-Butadiene	106-99-0*
Butyl benzyl phthalate	85-68-7
beta-Butyrolacetone	3068-88-0
C.I. Basic Red 9 monohydrochloride	569-61-9
Cadmium	7440-43-9**
Cadmium oxide	1306-19-0*
Calcium cyanamide	156-62-7*
Caprolactam	105-60-2
Captan	133-06-2*
Carbaryl	63-25-2*
Carbofuran	1563-66-2
Carbon black	1333-86-4
Carbon disulfide	75-15-0*
Carbon tetrachloride	56-23-5††
Carbonyl sulfide	463-58-1*
Carbosulfan	55285-14-8
Catechol	120-80-9*
Chloramben	133-90-4*
Chlordane	57-74-9††
Chlorinated dibenzodioxins	--
Chlorinated dibenzofurans	--
Chlorendic acid	115-28-6

Antimony compounds* Includes any unique chemical substance that contains antimony as part of that chemical's infrastructure	--
Arsenic compounds* Includes any unique chemical substance that contains arsenic as part of that chemical's infrastructure	--
Beryllium compounds*	--

Includes any unique chemical substance that contains beryllium as part of that chemical's infrastructure

Cadmium compounds* --
Includes any unique chemical substance that contains cadmium as part of that chemical's infrastructure

Chromium compounds* --
Includes any unique chemical substance that contains chromium as part of that chemical's infrastructure

Cobalt compounds* --
Includes any unique chemical substance that contains cobalt as part of that chemical's infrastructure

Cyanide compounds* --
x(pos) CN(neg) where X = H(pos) or any other group where a formal dissociation can be made. For example, KCN or $Ca(CN)_2$

Glycol ethers* --
Includes any unique chemical substance that contains glycol as part of that chemical's infrastructure. Includes mono- and di- ethers of ethylene glycol, diethylene glycol, and triethylene glycol $R(OCH_2CH_2)_n$-OR' where
n = 1,2, or 3
R = alkyl or aryl groups
R' = R, H, or groups which, when removed, yield glycol ethers with the structure: $R(OCH_2CH_2)_n$-OH. Polymers are excluded from the glycol category.

Fine mineral fibers* --
Includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) having the

average diameter of 1 micrometer or less.	
Lead compounds* Includes any unique chemical substance that contains lead as part of that chemical's infrastructure	--
Manganese compounds* Includes any unique chemical substance that contains manganese as part of that chemical's infrastructure	--††
Mercury compounds* Includes any unique chemical substance that contains mercury as part of that chemical's infrastructure	--
Nickel compounds* Includes any unique chemical substance that contains nickel as part of that chemical's infrastructure	--††
Polycyclic Organic Matter (POM)* Includes organic compounds having more than one benzene ring and a boiling point equal to or greater than 100 degrees Celsius (212 degrees Farenheit).	--††
Radionuclides (including radon)* A type of atom which spontaneously undergoes radioactive decay.	--
Selenium Compounds* Includes any unique chemical substance that contains selenium as part of that chemical's infrastructure.	--

* Indicates presence on HAP List.
** Indicates presence on Great Waters or Great Lakes List.
†† Indicates presence on HAP and Great Waters or Great Lakes Lists.

Section 232.Appendix B Additional Procedures for Calculating the Chronic Toxicity Score

a) Procedures to be used in selecting chronic toxicity studies.

1) Chronic toxicity studies in which all of the items in subsection (a)(1)(A) of this appendix are identified or measured with adequate specificity to use the equations in subsection (b) of this appendix are to be given first preference.

   A) Study items to be identified or measured:

      i) Test species;

      ii) Contaminant dose;

      iii) Duration of exposure must be at least 21 days, except for developmental studies in animals, in which case the duration of exposure must be during critical gestation days;

      iv) Route of exposure; and

      v) Effect of exposure.

   B) In the event that two or more studies are available in which the items in subsection (a)(1)(A) are deemed to have been identified or measured, but which give inconsistent results, the study must be selected by the following procedures:

      i) In the event that two or more studies are laboratory animal toxicity studies, the study that is conducted in accordance with or consistent with Good Laboratory Practice Standards must be used. Good Laboratory Practice Standards are incorporated by reference in Section 232.110.

      ii) In the event that the application of the procedure in subsection (i) fails to result in the selection of one study, then the study that results in the highest Chronic Toxicity Score must be used.

2) Studies that identify or measure all of the items in subsection (a)(1)(A) of this appendix, except for the contaminant dose, must be given second preference.

   A) For a second preference study, the Lowest Toxic Dose Score for a given species and a given route of exposure must be determined according to the following table:

Species	Route of Exposure	Lowest Toxic Dose Score

Human	Inhalation	1
Human	Non-inhalation	2/3
Non-human	Inhalation	2/3
Non-human	Non-inhalation	1/3

B) In the event that two or more second preference studies are available, the study that results in the highest Chronic Toxicity Score must be used.

3) A contaminant for which there is insufficient data in the study to identify the elements of either a first or second preference study must be determined to have no data and be assigned a Chronic Toxicity Score of 0.

b) The following general equation must be used to obtain the dose in units of milligram per kilogram per day for the oral, gavage and inhalation routes of exposure: Dose = (I)(C)(TCF)/UF

1) For the routes of exposure listed below, use the following: TCF= Time Correction Factor of 1, unless the exposure was intermittent, in which case the fraction of time during which exposure occurred is used (e.g., 5 days/week = 5/7 = 0.71).
UF= Uncertainty Factor of 10, used only when data are for exposure periods less than 90 days. In the case of fetotoxicity and teratogenicity studies, an Uncertainty Factor of 1 must be used;

2) Where the exposure is oral use the following:

A) Oral Exposure via Food: I= Food Intake in kilogram of food ingested per kilogram of body weight per day (kg/kg-d) (refer to Chart 1 for standard values); C= Contaminant Concentration in food in units of milligram per kilogram (mg/kg); or

B) Oral Exposure via Water: I= Water Intake in liter of water ingested per kilogram of body weight per day (L/kg-d) (refer to Chart 1 for standard values); C= Contaminant Concentration in water in units of milligram per liter (mg/L);

3) Where the exposure is via gavage use the following: The product (I X C) in the above equation must be replaced by Gavage Dose (GD) in units of milligram of contaminant ingested per kilogram of body weight per day (mg/kg-d); or

4) Where the exposure is via inhalation use the following:

I= Air intake in cubic meter of air inhaled per kilogram of body weight per day (cu.m3/kg-d) measured as the product of Ventilation Rate (VR) (refer

to Chart 1 for standard values) and Inhalation retention factor (RF) (assumed to be 0.5 for this procedure);

C= Contaminant Concentration in air in units of milligram per cubic meter (mg/cu.m).

Chart 1
Summary of Physiological Parameters

Species	Water Intake L/kg/day	Food Intake kg/kg/day	Ventilation cu.m/kg/day
Cat	0.100	0.050	0.46

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER i: OPEN BURNING

PART 237
OPEN BURNING

SUBPART A: GENERAL PROVISIONS

Section

SUBPART B: PERMITS

Section

AUTHORITY: Implementing Section 10 and authorized by Section 27 of the Environmental Protection Act ~~(Ill. Rev. Stat. 1981, ch. 111 1/2, pars. 1010 and 1027)~~[415 ILCS 5/10, 27].

SOURCE: Adopted as Rules 401 through 406, R70-11, 2 PCB 373, filed and effective September 7, 1971; Renumbered as Chapter 2: Air Pollution, Part V: Open Burning, R72-11, 6 PCB 199, filed and effective November 10, 1972; amended at 3 Ill. Reg. 51, p. 117, effective December 7, 1979; amended at 6 Ill. Reg. 14521, effective November 8, 1982; codified at 7 Ill. Reg. 13626; emergency amendment at 17 Ill. Reg. 14176, effective August 23, 1993, for a maximum of 150 days; amended in R18-21 at 48 Ill. Reg. _____, effective _____).

SUBPART A: GENERAL PROVISIONS

Section 237.101 Definitions

All terms ~~which appear~~ in this Part have the definitions ~~specified~~ in this ~~Part~~ Section and 35 Ill. Adm. Code 201 and 211.

"Agricultural Wastes"~~: Any~~ means any refuse, except garbage and dead animals, generated on a farm or ranch by crop and livestock production practices including such items as bags, cartons, dry bedding, structural materials, and crop residues but excluding landscape wastes.

"Clean Wood Building Debris"~~: The~~ means the wooden remains of a building. The term excludes rubber, asphalt, and non-wooden materials.

"Disaster"~~: A~~ means a major disaster declared by the President of the United States or the Governor of Illinois.

"Disaster Area"~~: Area~~ means area in which a major disaster has been declared by the President of the United States or the Governor of Illinois.

"Domicile Waste"~~: Any~~ means any refuse generated on single-family domiciliary property as a result of domiciliary activities. The term excludes landscape waste, garbage, and trade waste.

"Garbage"~~: Refuse~~ means refuse resulting from the handling, processing, preparation, cooking, and consumption of food or food products.

"Landscape Waste"~~: Any~~ means any vegetable or plant refuse, except garbage and agricultural waste. The term includes trees, tree trimmings, branches, stumps, brush, weeds, leaves, grass, shrubbery, and yard trimmings.

"Open Burning"~~: The~~ means the combustion of any matter in such a way that the products of the combustion are emitted to the open air without originating in or passing through equipment for which a permit could be issued under Section 9(b) of the Act ~~(Environmental Protection Act, (Ill. Rev. Stat. 1981, ch. 111 1/2, par. 1009(b))~~[415 ILCS 5/9(b)].

"Refuse"~~: Any~~ means any discarded matter; or any matter which is to be reduced in volume, or otherwise changed in chemical or physical properties, in order to facilitate its discard, removal, or disposal.

"Restricted Areas"~~: The~~ means the area within the boundaries of any "municipality" as defined in the Illinois Municipal Code ~~(Ill. Rev. Stat. 1981, ch. 24, par. 1-1-2)~~[65 ILCS 5/1-1-2], plus a zone extending one mile beyond the boundaries of any such municipality having a population of 1,000 or more according to the latest federal census.

"Trade Waste"~~: Any~~ means any refuse resulting from the prosecution of any trade, business, industry, commercial venture, utility, or service activity, and any government

or institutional activity, whether or not for profit. The term includes landscape waste but excludes agricultural waste.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.102 Prohibitions

a) ~~No~~ A person ~~shall~~ must not cause or allow open burning, except as provided in this Part.

b) ~~No~~ A person ~~shall~~ must not cause or allow the burning of any refuse in any chamber or apparatus, unless ~~such~~ that chamber or apparatus is designed for ~~the purpose of~~ disposing of the class of refuse being burned.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.103 Explosive Wastes

Open burning of wastes creating a hazard of explosion, fire, or other serious harm, unless authorized by other provisions in this Part, ~~shall~~ must be permitted only upon application for the grant of a variance ~~as provided by~~under the Environmental Protection Act ~~(Act) (Ill. Rev. Stat. 1981, ch. 111 1/2, pars. 1001 et seq.)~~ [415 ILCS 5/35 *et seq*.] and by the Pollution Control Board's ~~(Board)~~ Procedural Rules (35 Ill. Adm. Code~~: Subtitle A, Chapter I~~ 104.Subpart B).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.110 Local Enforcement

It shall be the obligation of local governments ~~as well as of~~and the Environmental Protection Agency ~~(Agency)~~, to enforce by appropriate means the prohibitions of this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.120 Exemptions

The following activities are not in violation of Section 9(c) of the Act ~~(Ill. Rev. Stat. 1981, ch. 111 1/2, par. 1009(c))~~[415 ILCS 5/9(c)] or ~~of~~ this Part unless they cause air pollution as defined in the Act. Nothing in this Section ~~shall~~ must exempt ~~such~~ these activities from applicable local restrictions.

a) The open burning of agricultural waste, but only:

1) On the premises on which ~~such~~ the waste is generated; and

2) In areas other than restricted areas; and

3) When atmospheric conditions will readily dissipate contaminants; and

4) If ~~such~~ the burning does not create a visibility hazard on roadways, railroad tracks, or air fields; and

5) More than 305 meters (1,000 feet) from residential or other populated areas; and

6) When it can be affirmatively demonstrated that no economically reasonable alternative method of disposal is available.

b) The open burning of domicile waste, but only:

1) On the premises on which ~~such~~ the waste is generated; and

2) In areas other than restricted areas; and

3) When atmospheric conditions will readily dissipate contaminants; and

4) If ~~such~~ the burning does not create a visibility hazard on roadways, railroad tracks, or air fields.

c) The open burning of landscape waste, but only:

1) On the premises on which ~~such~~ the waste is generated; and

2) When atmospheric conditions will readily dissipate contaminants; and

3) If ~~such~~ the burning does not create a visibility hazard on roadways, railroad tracks, or air fields; and

4) In those areas of the State which are not in the following prohibited areas:

A) Municipalities having a population in excess of 2,500 according to the latest federal census.

B) Municipalities of any size which adjoin a municipality having a population in excess of 2,500.

C) All municipalities wholly within 40 air miles (64.5 kilometers) of Meigs Field, Chicago, Illinois.

D) All municipalities wholly within 20 air miles (32.3 kilometers) of McKinley Bridge connecting St. Louis, Missouri and Venice, Illinois.

E) Rural areas 305 meters (1,000 feet) or less from a municipality in which open burning of landscape waste is prohibited.

d) The setting of fires to combat or limit existing fires, when reasonably necessary in the ~~judgement~~ judgment of the responsible government official.

e) The burning of fuels for legitimate campfire, recreational, and cooking purposes, or in domestic fireplaces, in areas where such-burning is consistent with other laws, provided that no garbage shall be burned in such cases.

f) The burning of waste gases, provided that in the case of refineries all such flares ~~shall~~ must be equipped with smokeless tips or comparable devices to reduce pollution.

g) Small open flames for heating tar, for welding, acetylene torches, highway safety flares, and the like.

(Source: Amended at 48 Ill. Reg. _____, effective_____)

Section 237.130 Freeport Air Curtain Destructor (Repealed)

~~This section applies to an air curtain destructor operated by the City of Freeport within Section 7, Township 26 North, Range 8 East of the Fourth Principal Meridian, Stephenson County.~~

~~a) Burning of landscape waste and clean wood waste in this air curtain destructor pursuant to permit conditions is lawful.~~

~~b) The Agency may grant a permit for this air curtain destructor pursuant to 35 Ill. Adm. Code 201 and Subpart B of this Part.~~

~~c) The existing permit and operating requirements of 35 Ill. Adm. Code 710 and 737 (Parts II and III of Chapter 7) shall not apply to this air curtain destructor; provided, however, that this subsection shall be inoperative in the event the Board, after the effective date of this section, pursuant to Section 22 of the Act (Ill. Rev. Stat. 1981, ch. 111 1/2, par. 1022), adopts regulations applicable to this air curtain destructor.~~

~~d) If the City of Freeport allows public access to the air curtain destructor site, the Agency shall, as a condition of any permit used for an air curtain destructor, limit access between the landfill and air curtain destructor areas, sufficient to assure compliance with the Act and Board regulations applicable to the landfill.~~

(Source: Repealed in R18-21 at 48 Ill. Reg. _____, effective _____)

SUBPART B: PERMITS

Section 237.201 Available Permits

The Agency may grant permits for open burning in the following instances:

a) For instruction in firefighting methods ~~of firefighting~~; ~~or~~ for testing ~~of~~ fire extinguishing equipment ~~for extinguishing fires~~, ~~of~~ flares, ~~and~~ signals, or ~~of~~ experimental incinerators~~,~~; or for research in control of fires;

b) For the destruction of vegetation on site under circumstances in which its removal would necessitate significant environmental damage;

c) For research or management in prairie or forest ecology;

d) For burning of landscape waste in any area of the State if ~~such~~ the burning is conducted with the aid of an air curtain destructor or comparable device to reduce emissions substantially~~;~~, and does not occur within 305 meters (1,000 feet) of any residential or other populated area;

e) For the destruction of oil sludges in petroleum production for safety reasons where alternative means including product recovery are impracticable~~; provided, that~~. However, when emergency conditions require, such burning may be done without a permit, and a report shall be filed with the Agency within ten days, ~~thereafter~~after the burning.~~, indicating~~ The report must indicate the place and time of ~~such~~ the burning, the quantities burned, the meteorological conditions, and the reasons why emergency burning was necessary;

f) In a disaster area, for the open burning of clean wooden building debris, landscape waste, and agricultural waste caused by a disaster.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.202 Permit Application

An application for a permit ~~shall~~ must be in ~~such~~ a form and ~~shall~~ contain ~~such~~ information ~~as shall be~~ required in procedures adopted by the Agency. ~~Such~~ The application ~~shall~~ must contain, as a minimum, data and information sufficient to inform the Agency with respect to: the exact quantities and types of material to be burned; the exact nature and exact quantities of air contaminant emissions which will result; the exact frequency, including date where appropriate, when such burning will take place, the exact location of the burning site including a map showing distances to residences, populated areas, roadways, air fields, etc.; the methods or actions which will be taken to reduce the emission of air contaminants; the reasons why alternatives to open burning are not available; and the reasons why such burning is necessary to the public interest.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.203 Permit Conditions

The Agency may impose ~~such~~ conditions in the permit ~~as may be~~ necessary to accomplish the purposes of the Act or this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.204 Standards of Issuance

~~No~~ The Agency must not grant a permit ~~shall be granted~~ unless the applicant proves to the satisfaction of the Agency that the open burning: is necessary to the public interest; will be conducted in such a time, place, and manner as to minimize the emission of air contaminants; will have no serious detrimental effect upon adjacent properties or the occupants thereof. ~~Provided that applications for~~Applications for open burning permits ~~to open burn pursuant to~~under Section 237.201(f) ~~shall~~ must contain, as a minimum, data and information sufficient to inform the Agency with respect to: the nature and estimated quantities of the materials to be burned, the manner in which the material to be burned resulted from the disaster, the location of the material to be burned, the date when such burning will take place, and the reasons why alternatives to open burning are not available.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.205 Duration and Renewal

~~No permit shall~~A permit must not be valid for longer than one year. Applications ~~for renewal of~~to renew a permit ~~shall~~ must be submitted to the Agency at least 90 days ~~prior to the expiration of~~before the prior permit expires, and ~~shall~~ must conform to Section 237.202. The standards for issuance of renewal permits ~~shall~~ must be ~~as set forth in~~those under Section 237.204.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.206 Revision

The Agency may revise any permit granted ~~pursuant to~~under this rule, or any conditions ~~contained~~ in any such permit.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 237.207 Revocation

Violation of any of the conditions of the permit ~~shall~~ must be grounds for revocation of the permit by the Agency~~, as well as for~~ and other sanctions ~~provided in~~under the Act.

SUBPART A: DEFINTIONS AND GENERAL PROVISIONS

Section 240.101 Preamble

As the state of knowledge and technology relating to the control of emissions from motor vehicles advances, and ~~in furtherance of~~to further the purposes of the Environmental Protection Act [415 ILCS 5] (Act), the Pollution Control Board (Board) must ~~shall~~ provide by rules and regulations for the control of emissions from motor vehicles. The ~~Such~~ rules and regulations must ~~shall~~ prescribe requirements for the installation and use of equipment designed to reduce or eliminate emissions and for the proper maintenance of the ~~such~~ equipment and ~~of~~ vehicles. Any rules and regulations promulgated under ~~pursuant to~~ this Section must ~~shall~~ be consistent with provisions of federal law, if any, relating to control of emissions from the vehicles concerned.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.102 Definitions

All terms ~~that appear~~ in this Part have the definitions ~~specified~~ in this Section, the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C], and 35 Ill. Adm. Code 201 and 211. When ~~conflicting~~ definitions ~~occur between~~in this Section and 35 Ill. Adm. Code 201 or 211 conflict, the definitions of this Section apply in this Part.

~~"~~"Agency"~~"~~ means the Illinois Environmental Protection Agency.

~~"~~"Diesel engine"~~"~~ means all types of internal-combustion engines in which air is compressed to a temperature sufficiently high to ignite fuel injected directly into the cylinder area.

~~"~~"Diesel locomotive"~~"~~ means a diesel engine vehicle designed to move cars on a railway.

~~"~~"Evaporative system integrity test"~~"~~ means a test of a vehicle's evaporative system. The test must~~shall~~ either consist of a leak check of a vehicle's fuel cap with a fuel cap pressure decay tester (fuel cap pressure decay test), a fuel cap leak flow tester (fuel cap leak flow test), or a visual functional check, as applicable.

~~"~~"Fuel cap"~~"~~ means a device used to seal a vehicle's fuel inlet.

“"Fuel cap leak flow test"" means a test which may be performed in ~~accordance~~ compliance with this Part on a vehicle's fuel cap using a fuel cap leak flow tester to determine whether the vehicle complies with the evaporative system emission standards of this Part.

“"Fuel cap leak flow tester"" means a device used to determine the leak flow integrity of a vehicle's fuel cap by comparing the measured leak flow of the fuel cap with an established fuel cap leak flow standard.

“"Fuel cap pressure decay test"" means the test performed in ~~accordance~~ compliance with this Part on a vehicle's fuel cap using a fuel cap pressure decay tester to determine whether the vehicle complies with the evaporative system emission standards of this Part.

“"Fuel cap pressure decay tester"" means a device used to determine the pressure decay integrity of a vehicle's fuel cap by monitoring the pressure behind the fuel cap for a ten second period and comparing the measured pressure decay of the fuel cap to an established fuel cap pressure decay standard.

“"Fuel cap visual functional test"" means the test performed in ~~accordance~~ compliance with this Part on a vehicle's fuel cap using visual analysis to determine whether the vehicle complies with the evaporative system emission standards of this Part.

“"Gross vehicle weight rating"" or “"GVWR"" means the value specified by the manufacturer as the maximum design loaded weight of a single vehicle.

“"Heavy duty vehicle"" means any motor vehicle rated at more than 8500 pounds GVWR or that has a vehicle curb weight of more than 6000 pounds or that has a basic vehicle frontal area in excess of 45 square feet.

“"High idle"" means a vehicle operating condition with engine disconnected from an external load (placed in either neutral or park) and operating at speed of 2500 ± 300 RPM.

“"Idle mode"" means that portion of a vehicle emission test procedure conducted with the engine disconnected from an external load and operating at minimum throttle.

“"Initial idle mode"" means the first of up to two idle mode sampling periods during a steady-state idle mode test, during which exhaust emission measurements are made with the vehicle in “"as-received"" condition.

“"Light duty truck 1"" means a motor vehicle rated at 6000 pounds maximum GVWR or less and which has a vehicle frontal area of 45 square feet or less, and which is designed primarily for purposes of transportation of property or is a derivation of such a vehicle, or is designed primarily for transportation of persons and has a capacity of more than 12

persons, or is available with special features enabling off-street or off-highway operation and use.

"Light duty truck 2" means a motor vehicle rated between 6001 and 8500 pounds maximum GVWR and which has a vehicle frontal area of 45 square feet or less, and which is designed primarily for purposes of transportation of property or is a derivation of such a vehicle, or is designed primarily for transportation of persons and has a capacity of more than 12 persons, or is available with special features enabling off-street or off-highway operation and use.

"Light duty vehicle" means a passenger car or passenger car derivative capable of seating 12 passengers or fewer.

"Measured values" means five-second running averages of exhaust emission concentrations sampled at a minimum rate of twice per second.

"Model year" means the year of manufacture of a motor vehicle based upon the annual production period ~~as~~ designated by the manufacturer and indicated on the title and registration of the vehicle. If the manufacturer does not designate a production period for the vehicle, then "model year" means the calendar year of manufacture.

"Motor vehicle", as used in this Part, must ~~shall~~ have the same meaning as in Section 1-146 of the Illinois Vehicle Code [625 ILCS 5/1-146].

"Opacity" means the percentage of light transmitted from a source that is prevented from reaching a light detector.

"Preconditioning mode" means a period of steady-state high-idle operation conducted to ensure that the engine and emissions control system components are operating at normal operating temperatures, thus minimizing false failures caused by improper or insufficient warm-up.

"Second-chance idle mode" means the second of two idle mode sampling periods during a steady-state idle mode test, preceded by a preconditioning mode and ~~utilized~~ used as a second chance to pass idle exhaust emission standards immediately ~~following~~ after an initial idle mode failure.

"Snap-acceleration test" means a test to measure exhaust smoke opacity from heavy-duty diesel powered vehicles in ~~accordance~~ compliance with the SAE J1667 procedure, incorporated by reference at Section 240.107 ~~of this Subpart~~.

"Steady-state idle test" means a vehicle emission test procedure consisting of an initial idle mode measurement of exhaust emissions followed, if necessary, by a loaded or high idle preconditioning mode and a second-chance idle mode.

"Vehicle curb weight" means the actual vehicle weight plus standard equipment and a full fuel tank.

"Visual inspection test" means a visual examination of a vehicle's malfunction indicator lamp (MIL) consisting of verifying the status of the MIL in the key-on/engine off position followed by verifying the status of the MIL in the key-on/engine on position to determine the status of the MIL and existence of an emission related malfunction with the vehicle.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.103 Prohibitions

Except as permitted or authorized by law, a ~~no~~ person must not ~~shall~~ fail to maintain in good working order or remove, dismantle, or otherwise cause to be inoperative any equipment or feature constituting an operational element of the air pollution control systems or mechanisms of a motor vehicle as required by rules or regulations of the Board and the United States Environmental Protection Agency to be maintained in or on the vehicle.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.104 Inspection

a) All motor vehicles subject to inspection ~~pursuant to~~under Section 13C-15 of the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C-15] must~~shall~~ comply with applicable vehicle emission standards ~~contained~~ in Sections 240.152, 240.172, 240.182, 40.192, and 240.202 ~~of this Part~~.

b) All diesel-powered vehicles subject to inspection under ~~pursuant to~~ Section 13-109.1 of the Illinois Vehicle Code [625 ILCS 5/13-109.1] must comply with applicable smoke opacity standards ~~set forth~~ in Section 240.141(a) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.105 Penalties

a) Any violations of Sections 240.103, 240.121, 240.122, or 240.123 must ~~of this Part shall~~ be subject to the penalties ~~as set forth~~ in Section 42 of the Act [415 ILCS 5/42].

b) Any violations of Sections 240.104(b), 240.152, 240.172, 240.182, 240.192, or 240.202 ~~of this Part~~, as applicable, must ~~shall~~ be subject to the penalties ~~as set forth~~ in Sections 13C-55 and 13C-60 of the Vehicle Emissions Inspection Law [625 ILCS 5/13C-55 and 13C-60].

c) Any violation of Section 240.141(a) ~~of this Part~~ will be subject to penalties ~~as set forth~~ in Section 13-109.1 of the Illinois Vehicle Code [625 ILCS 5/13-109.1].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.106 Determination of Violation

a) Any violations of Sections 240.103, 240.121, 240.122, or 240.123 must ~~of this Part shall~~ be determined by visual observation or by a test procedure employing an opacity measurement system ~~as qualified by~~under 35 Ill. Adm. Code 201, Subpart J.

b) Any violations of Sections 240.152, 240.172, 240.182, 240.192, or 240.202 ~~of this Part~~, as applicable, must ~~shall~~ be determined in ~~accordance~~ compliance with test procedures adopted by the Agency in 35 Ill. Adm. Code 276.

c) Any violation of Section 240.141(a) ~~of this Part~~ will be determined in ~~accordance~~ compliance with test procedures ~~set forth~~ in Section 240.141(b) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.107 Incorporations by Reference

The following material is incorporated by reference and includes no later editions or amendments:

Society of Automotive Engineers (SAE), 400 Commonwealth Drive, Warrendale, PA 15096-0001, www.sae.org: Report J1667 Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel Powered Vehicles (February 1996).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART B: EMISSIONS

Section 240.121 Smoke Emissions

a) There ~~shall~~ must be no visible emissions of smoke from a motor vehicle, zero opacity.

b) Motor vehicles traveling Illinois public highways from out of State must comply with subsection (a).

c) A ~~No~~ used motor vehicle ~~shall~~ must not be sold or transferred in Illinois unless that ~~said~~ vehicle meets subsection (a).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.122 Diesel Engine Emission Standards for Locomotives

a) ~~No~~ A person person ~~shall~~ must not cause or allow the emission of smoke from any diesel locomotive in the State of Illinois to exceed thirty percent (30%) opacity.

b) Subsection (a) ~~shall~~ must not apply to:

1) Smoke resulting from starting a cold locomotive~~:~~ for a period ~~of time~~ not to exceed 30 minutes.

2) Smoke emitted while accelerating under load from a throttle setting other than idle to a higher throttle setting~~:~~ for a period ~~of time~~ not to exceed 40 seconds.

3) Smoke emitted upon locomotive loading following idle~~:~~ for a period ~~of time~~ not to exceed 2 minutes.

4) Smoke emitted during locomotive testing, maintenance, adjustment, rebuilding, repairing, or breaking in~~:~~ for a period ~~of time~~ not to exceed 3 consecutive minutes and ~~an aggregate~~a total of 10 minutes in any 60 minute period.

5) Smoke emitted by a locomotive which, because of its age or design, makes replacement or retrofit parts necessary to achieve smoke reduction unavailable. These locomotives must~~shall~~ be retired at the earliest possible time.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.123 Liquid Petroleum Gas Fuel Systems

a) Motor vehicles that~~which~~ are solely fueled with liquid petroleum gas must~~shall~~ have excess air injection systems made inoperative, where the ~~such~~ systems are installed by the vehicle manufacturers.

b)

1) Motor vehicles that~~which~~ operate on liquid petroleum gas or gasoline fuels alternately~~,~~ in dual fuel systems~~,~~ must~~shall~~ have excess air injection systems inoperative when operating on liquid petroleum~~,~~ gas where excess air injection systems are installed by the vehicle manufacturers.

2) Motor vehicles that ~~which~~ operate on liquid petroleum gas or gasoline fuels alternately in a dual fuel system~~,~~ must~~shall~~ have excess air injection

systems operational when operating on gasoline~~,~~ where excess air injection systems are installed by the vehicle manufacturers.

3) Motor vehicles that~~which~~ operate on liquid petroleum gas or gasoline fuels alternately in a dual fuel system, must~~shall~~ have the intake manifold heat riser system to the carburetor operational at all times when the motor vehicles are operating.

SUBPART C: HEAVY-DUTY DIESEL SMOKE OPACITY STANDARDS AND TEST PROCEDURES

Section 240.140 Applicability

This Subpart applies to all on-road~~,~~ diesel-powered heavy duty vehicles operating in the State of Illinois.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.141 Smoke Opacity Standards and Test Procedures for Diesel-Powered Heavy Duty Vehicles

a) Diesel-powered heavy duty vehicles described in Section 240.140 ~~of this Subpart~~ are subject to the following smoke opacity standards:

1) Diesel-powered heavy duty vehicles that are model year 1991 or newer must not exceed forty percent peak smoke opacity when tested in ~~accordance~~ compliance with subsection (b) ~~of this Section~~.

2) Except ~~as set forth in~~under subsection (a)(3) ~~of this Section~~, diesel-powered heavy duty vehicles that are model year 1990 or older must not exceed fifty-five percent peak smoke opacity when tested in ~~accordance~~ compliance with subsection (b) ~~of this Section~~.

3) Until December 31, 2002, diesel-powered heavy duty vehicles that are model year 1973 or older must not exceed seventy percent peak smoke opacity when tested in ~~accordance~~ compliance with

subsection (b) ~~of this Section~~. Beginning on January 1, 2003, diesel-powered heavy duty vehicles that are model year 1973 or older must not exceed fifty-five percent peak smoke opacity when tested in ~~accordance~~ compliance with subsection (b) ~~of this Section~~.

b) Test procedures and equipment for measuring peak smoke opacity from diesel-powered heavy duty vehicles must be in ~~accordance~~ compliance with the Society of Automotive Engineer's (SAE) Recommended Practice J1667, "Snap-Acceleration Smoke Test Procedure for Heavy-Duty Diesel Powered Vehicles," (February 1996), incorporated by reference in Section 240.107 ~~of this Part~~.

BOARD NOTE: The Illinois Department of Transportation also addresses the use of diesel smoke test procedures in 92 Ill. Adm. Code 460.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART D: STEADY-STATE IDLE MODE TEST EMISSION STANDARDS

Section 240.151 Applicability

This Subpart is effective through January 31, 2012. ~~The standards of this~~This Subpart ~~apply~~ applies to those vehicles identified in subsection 13C-25(d) of the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C-25(d).].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.152 Steady-State Idle Mode Vehicle Exhaust Emission Standards

a) Exhaust emissions from light duty vehicles must~~shall~~ not exceed the following limitations:

Model Year	Carbon Monoxide (%)	Hydrocarbons as Hexane (ppm)
1996 and newer	1.2	220

b) Exhaust emissions from light duty trucks 1 and light duty trucks 2 must~~shall~~ not exceed the following limitations:

Model Year	Carbon Monoxide (%)	Hydrocarbons as Hexane (ppm)
1996 and newer	1.2	220

c) Exhaust emissions from heavy duty vehicles must~~shall~~ not exceed the following limitations:

Model Year	Carbon Monoxide (%)	Hydrocarbons as Hexane (ppm)
1996 and newer	3.0	300

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.153 Compliance Determination

Compliance must ~~shall~~ be determined based upon the measurement of exhaust emissions using the steady-state idle test while the vehicle to be tested is operating in the idle mode. The vehicle must~~shall~~ pass exhaust emissions inspection if at any time during the initial idle mode or second-chance idle mode of the steady-state idle test the measured values are at or below the applicable limits of Section 240.152 ~~of this Subpart~~. Vehicles failing the initial idle mode must~~shall~~ undergo a high idle preconditioning mode and receive a second-chance idle mode unless no measured values less than 1800 ppm HC are obtained within an elapsed time of 30 seconds.

SUBPART F: EVAPORATIVE TEST STANDARDS

Section 240.171 Applicability

This Subpart is effective through January 31, 2012. ~~The standards of this~~This Subpart ~~apply~~ applies to those vehicles identified in subsection 13C-25(d) of the Vehicle Emissions Inspection

Law of 2005 [625 ILCS 5/13C-25(d)].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.172 Evaporative System Integrity Test Standards

Vehicles subject to evaporative system integrity testing mustshall fail the evaporative system integrity test if one of the following occurs:

a) Fuel Cap Pressure Decay Standards - While tested using the fuel cap pressure decay tester, the pressure decays by 6 inches of water or more during a 10 second period after being pressurized to 28±1 inches of water column;

b) Fuel Cap Leak Flow Test Standards - While tested using the fuel cap leak flow tester, the fuel cap leak flow rate exceeds 60 cc/min at a pressure of 30±1 inches of water column. Determination will be made by comparing the fuel cap's measured leak flow rate with the flow rate obtained from a calibrated master orifice with a National Institute of Standards and Technology traceable flow rate which will result in a pass/fail flow rate threshold of 60 cc/min of air at 30±1 inches of water column;

c) Visual Functional Test Standards - While tested using the visual functional test, an inspection of the fuel cap reveals one or more of the following:

1) a missing fuel cap;

2) a missing or damaged o-ring, gasket, or seal;

3) missing or damaged threads, flanges, prongs, or other parts used to secure the fuel cap to the fuel tank filler neck; and/or

4) cracks, holes, or other visible forms of tampering or damage.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.173 Evaporative System Purge Test Standards (Repealed)

(Source: Repealed at 22 Ill. Reg. 13723, effective July 13, 1998)

SUBPART G: ON-ROAD REMOTE SENSING TEST EMISSION STANDARDS

Section 240.181 Applicability

The standards of thisThis Subpart apply applies to those vehicles tested under pursuant to subsection 13C-15(b)(11) of the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C-15(b)(11)].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.182 On-Road Remote Sensing Emission Standards

Exhaust emissions mustshall not exceed the following limitations:

Model Year	Hydrocarbons (ppm)	Carbon Monoxide (%)
1996 and newer	400	2.0

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.183 Compliance Determination

Compliance mustshall be determined based upon the measurement of exhaust emissions using the on-road remote sensing test procedures adopted by the Agency. If, during the course of on-road inspections, a vehicle is found to exceed the on-road remote sensing emission standards specified in Section 240.182 for the model year and type of vehicle, the Agency mustshall send a notice to the vehicle owner of the violation, which notice will include the time and location of the reading. The notice of a second on-road remote sensing exceedence mustshall, in addition to the information contained in the first notice, indicate that the vehicle has been reassigned and is subject to an out-of-cycle follow-up inspection at an official inspection station. TheIn no case shall the Agency must not send a notice of an on-road exceedence to the owner of a vehicle that was found to exceed the on-road remote sensing emission standards if the vehicle is registered outside the affected counties.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART H: ON-BOARD DIAGNOSTIC TEST STANDARDS

Section 240.191 Applicability

The standards of thisThis Subpart apply applies to those vehicles tested underpursuant to subsection 13C-25(c) of the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C-25(c)].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.192 On-Board Diagnostic Test Standards

Vehicles subject to on-board diagnostic testing mustshall fail the on-board diagnostic test if one of the following occurs:

a) the vehicle connector is missing, has been tampered with, or is otherwise inoperable; or

b) the malfunction indicator light is commanded to be illuminated and it is not visually illuminated according to visual inspection; or

c) the malfunction indicator light is commanded to be illuminated for any on-board diagnostic trouble codes; or

d) the malfunction indicator light (MIL) does not illuminate at all when the vehicle is in the key-on/engine-off condition.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.193 Compliance Determination

Compliance mustshall be determined based upon the inspection of the on-board diagnostic vehicle connector, malfunction indicator light, and electronic retrieval of data stored in the vehicle's on-board diagnostic system using the on-board diagnostic test procedures adopted by the Agency in 35 Ill. Adm. Code 276.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART I: VISUAL INSPECTION TEST STANDARDS

Section 240.201 Applicability

This Subpart is applicableapplies beginning February 1, 2012,. The standards of this Subpart apply to those vehicles tested pursuant tounder Section 13C-25(h) of the Vehicle Emissions Inspection Law of 2005 [625 ILCS 5/13C-25(h)].

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.202 Visual Inspection Test Standards

Vehicles subject to visual inspection testing mustshall fail the visual inspection test if the MIL does not illuminate in the key-on/engine off position or continuously illuminates in the key-on/engine on position.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 240.203 Compliance Determination

Compliance mustshall be determined based upon a visual examination of the MIL using the visual inspection test procedures adopted by the Agency in 35 Ill. Adm. Code 276.

CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER k: EMISSION STANDARDS AND LIMITATIONS FOR MOBILE SOURCES

PART 241
CLEAN FUEL FLEET PROGRAM

SUBPART A: GENERAL PROVISIONS

SUBPART B: GENERAL REQUIREMENTS

SUBPART C: CREDITS

SUBPART D: RECORDKEEPING AND REPORTING

AUTHORITY: Implementing Sections 9, 9.1, and 10 and authorized by Sections 27 and 28.5 of the Environmental Protection Act [415 ILCS 5/9, 9.1, 10, 27, and 28.5].

SOURCE: Adopted at R95-12 at 19 Ill. Reg. 13265, effective September 11, 1995; amended in R98-8, at 21 Ill. Reg. 15767, effective November 25, 1997; amended in R21-18 at 48 Ill. Reg._____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 241.101 Other Definitions

Unless otherwise defined ~~herein~~ in this Part and unless a different meaning of a term is clear from its context, the ~~definitions of~~ terms used in this Part ~~shall~~ have the ~~meanings specified by~~definitions in 35 Ill. ~~-~~Adm. ~~-~~Code 201.102 and 35 Ill. ~~-~~Adm. ~~-~~Code 211. The definitions in Section 241.102 ~~of this Part are applicable~~apply only to ~~the provisions of~~ this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.102 Definitions

"Adjusted loaded vehicle weight (ALVW)" means the numerical average of the vehicle curb weight and the GVWR, as designated by the manufacturer.

"Capable of being centrally fueled" means a motor vehicle that could be refueled 100 percent of the time at a location that is owned, operated, or controlled by the covered fleet owner or operator, or is under contract with the covered fleet owner or operator. Motor vehicles that are under normal conditions garaged at a personal residence are not considered to be capable of being centrally fueled and are exempt from the program unless they are, in fact, centrally fueled. The fact that one or more motor vehicles in a fleet are not capable of being centrally fueled does not exempt an entire fleet from the program. To determine whether a motor vehicle is capable of being centrally fueled 100 percent of the time, the owner or operator ~~shall~~must perform the following calculation for each motor vehicle in the fleet for which an exemption under Section 241.111(a)(10) is being claimed, and, annually thereafter, if additional new covered fleet vehicles are acquired and an exemption is claimed under Section 241.111(a)(10):

For each motor vehicle, sum the miles it is driven for a ~~three month~~three-month period beginning May 1, or the first day of the first full month in which the fleet may be covered.

Divide total miles for the given time period for each motor vehicle by its number of round trips. A round trip occurs each time a motor vehicle leaves its location or a contracted refueling station and returns to its location or a contracted refueling station.

If the average number of miles per round trip for the motor vehicle is less than 300 miles, then the motor vehicle is capable of being centrally fueled.

"~~"~~Centrally fueled"~~"~~ means a motor vehicle that is fueled 100 percent of the time at a location that is owned, operated, or controlled by the covered fleet owner or operator, or is under contract with the covered fleet owner or operator. Any motor vehicle that is under normal operations garaged at a personal residence at night but that is, in fact, centrally fueled 100 percent of the time ~~shall~~must be considered to be centrally fueled for the purpose of this definition. The fact that one or more motor vehicles in a fleet are not centrally fueled does not exempt an entire fleet from the program.

"Clean alternative fuel" means any fuel (including methanol~~;~~, ethanol~~;~~, or other alcohols ~~containing~~ comprising 85 percent or more by volume ~~of such alcohol~~ with gasoline or other fuels; reformulated gasoline; diesel; natural gas; liquefied petroleum gas; and hydrogen) or power source (including electricity) used in a clean fuel vehicle that complies with the standards and requirements applicable to ~~such~~ the motor vehicle under this Part when using such fuel or power source. In the case of any flexible fueled vehicle or dual fueled vehicle, the term "clean alternative fuel" means only a fuel with respect to which such motor vehicle was certified as a clean fuel vehicle meeting the emission standards applicable to such motor vehicle weight class ~~as set forth~~ in Appendix A and in 40 CFR Part 88, Subpart A, incorporated by reference at Section 241.104 ~~of this Subpart~~, when operating on clean alternative fuel.

"Clean fuel vehicle" means a motor vehicle in a class or category of motor vehicles (e.g., LDVs, LDTs, or HDVs) which ~~have~~ has been certified by USEPA to meet the clean fuel vehicle standards applicable under Subpart B ~~of this Part~~.

"Control" ~~shall have~~means the following ~~meanings~~:

When ~~it is~~ used to join all entities under common management, it means any one or a combination of the following:

Any person that has equity ownership of 51 percent or more in each of two or more firms;

Two or more firms have common officers, in whole or in substantial part, who are responsible for the day-to-day operation of the companies; or

One firm leases, operates, supervises, or in 51 percent or greater part owns equipment and/or facilities used by another person or firm, or has equity ownership of 51 percent or more of another firm.

When ~~it is~~ used to refer to the management of motor vehicles, it means a person has the authority to decide who can operate a particular motor vehicle~~,~~ and the purposes for which the motor vehicle can be operated.

When ~~it is~~ used to refer to the management of people, it means a person has the authority to direct the activities of another person or employee in a precise situation, such as at the workplace.

"“Covered area”" means the Chicago area counties of Cook, DuPage, Kane, Lake, McHenry, and Will and the Townships of Aux Sable and Goose Lake in Grundy County and the Township of Oswego in Kendall County.

"Covered fleet" means ten or more covered fleet vehicles which are owned or operated by a person. In determining the number of covered fleet vehicles owned or operated by a person for purposes of this Part, all motor vehicles owned or operated, leased, or otherwise controlled by ~~such~~ that person, and by any person who controls ~~such~~ that person, and by any person under common control with ~~such~~ that person, ~~shall~~must be treated as owned by ~~such~~ that person. Covered fleets include distributed and partially covered fleets.

"Covered fleet owner or operator" means a person who operates, owns, or controls a fleet of at least ten covered fleet vehicles that are located or primarily operated in the covered area (even if the covered fleet vehicles are garaged outside of the covered area).

"Covered fleet vehicle" means a motor vehicle which is:

In a vehicle class for which standards are applicable under this Part; and

In a covered fleet which is centrally fueled or capable of being centrally fueled. Covered fleet vehicle ~~shall~~must not include motor vehicles exempt under Section 241.111 ~~of this Part~~.

"Curb weight" means the empty weight of the motor vehicle, without load or passengers, as designated by the manufacturer.

"Date of vehicle acquisition" means the date on which legal or equitable title was transferred to the current owner or operator of the motor vehicle.

"Dealer" means any person whose primary business is in the sale or the distribution of motor vehicles to a purchaser or an ultimate purchaser.

"Dealer demonstration vehicle" means any motor vehicle that is operated by a dealer solely for the purpose of promoting motor vehicle sales, either on the sales lot or through other marketing or sales promotions, or for permitting potential purchasers to drive the motor vehicle for pre-purchase or pre-lease evaluation.

"Distributed fleet" means a fleet which is owned by a person or covered fleet owner or operator, but whose motor vehicles are operated in the covered area from different locations. A distributed fleet is considered to be a covered fleet if it consists of ten or more covered fleet vehicles which are located in or primarily operated in the covered area.

"Dual fueled vehicle" means any motor vehicle engineered and designed, or converted in ~~accordance~~ compliance with Sections 241.113(e) and 241.114 ~~of this Part~~, such that it may be operated on two different fuels, but not on a mixture of the fuels.

"Emergency vehicle" means any motor vehicle that is legally authorized by a governmental authority to exceed the speed limit to transport people and equipment to and from situations in which speed is required to save lives or property, such as a rescue vehicle, fire truck, or ambulance.

"Fleet" means 10 or more motor vehicles that are under the control of a person.

"Flexible fueled vehicle" means any motor vehicle engineered and designed, or converted in ~~accordance~~ compliance with Sections 241.113(e) and 241.114 ~~of this Part~~, such that it may be operated on any mixture of two or more different fuels.

"Gross Vehicle Weight Rating (GVWR)" means the total vehicle weight, including the maximum load, as designated by the original equipment manufacturer.

"Heavy-duty vehicle (HDV)" means a motor vehicle whose GVWR is more than 8,500 lbs but less than or equal to 26,000 lbs. Emission standards and credit values for HDVs are ~~set forth~~ in the tables ~~found~~ in Appendices A and B, respectively~~, of this Part~~.

"Inherently Low Emission Vehicle (ILEV)" means any LDV or LDT certified to the applicable ILEV evaporative emission standard ~~found~~ in 40 CFR Part 88, incorporated by reference at Section 241.104 ~~of this Subpart~~, or any HDV with an engine certified to the applicable ILEV standard. ~~No~~ A dual fueled or flexible fueled vehicle ~~shall~~must not be considered an ILEV unless it is certified to the applicable standard(s) (i.e., LEV, ULEV or ZEV) for ~~such~~ its weight class on all fuel types for which it is designed to operate.

"Law enforcement vehicle" means any motor vehicle which is primarily operated by a civilian or military police officer or sheriff~~,~~; ~~or by~~ personnel of the Federal Bureau of Investigation, ~~the~~ Drug Enforcement Administration, or other agencies of the federal government~~,~~; or ~~by~~ state highway patrols, municipal law enforcement agencies, or other similar law enforcement agencies, and which is used for the purpose of law enforcement activities including~~, but not limited to,~~ chase, apprehension, surveillance, or patrol of people engaged in or potentially engaged in unlawful activities.

"Light-duty truck (LDT)" means a motor vehicle whose GVWR is no more than 8,500 lbs. Emission standards and credit values for LDTs are ~~set forth~~ in the tables ~~found~~ in Appendices A and B, respectively~~, of this Part~~.

"Light-duty vehicle (LDV)" means a motor vehicle whose GVWR is no more than 6,000 lbs. Emission standards and credit values are ~~set forth~~ in the tables ~~found~~ in Appendices A and B, respectively~~, of this Part~~.

"Loaded vehicle weight (LVW)" means the curb weight of the vehicle, as specified by the manufacturer, plus 300 lbs.

"Location" means any building, structure, facility, or installation which is owned or operated by a person, ~~or~~ is under the control of a person, or is located on one or more contiguous properties and contains or could contain ~~a~~ one or more fueling ~~pump(s)~~pumps or system for the use of the vehicles owned or controlled by that person.

"Low Emission Vehicle (LEV)" means any LDV or LDT, or any HDV with an engine certified to the applicable federal low emission vehicle standard, ~~as set forth~~ in Appendix A ~~of this Part~~ and in 40 CFR Part 88, incorporated by reference in Section 241.104 ~~of this Subpart~~.

"Manufacturer" means any person engaged in the manufacturing or assembling of new motor vehicles, new motor vehicle engines, new nonroad vehicles, or new nonroad engines; or importing the ~~such~~ vehicles or engines for resale; or who acts for and is under the control of any ~~such~~ person in connection with the distribution of new motor vehicles, new motor vehicle engines, new nonroad vehicles or new nonroad engines, but ~~shall~~must not include any dealer with respect to new motor vehicles, new motor vehicle engines, new nonroad vehicles, or new nonroad engines received by the ~~such~~ dealer in commerce.

"Model year (MY)" means September 1 of any year through August 31 of the following year (e.g., September 1, 1997, through August 31, 1998, is MY 1998).

"Motor vehicle" means any self-propelled vehicle designed for transporting persons or property on a street or highway.

"Motor vehicle held for lease or rental to the general public" means a motor vehicle that is owned or controlled primarily for the purpose of short-term rental or extended-term leasing (with or without maintenance), without a driver, pursuant to a contract.

"New covered fleet vehicle" means a motor vehicle that has not been previously controlled by the current owner or operator, regardless of the model year, except as follows: motor vehicles that were manufactured before the start of the fleet program for the ~~such~~ motor vehicle's weight class, motor vehicles transferred due to the purchase of a company not previously controlled by the owner or operator or due to a consolidation of business operations, motor vehicles transferred as part of an employee transfer, or motor vehicles transferred for seasonal requirements (i.e., less than 120 days) are not considered new. This definition ~~of new covered fleet vehicle~~ is distinct from the definition of "new motor vehicle" as it applies to manufacturer certification, including the certification of motor vehicles to the clean fuel standards.

"New motor vehicle" means a motor vehicle the equitable or legal title to which has never been transferred to an ultimate purchaser.

"Owned or operated, leased, or otherwise controlled by such person" means either of the following:

Such person holds the beneficial title to such motor vehicle; or

Such person uses the motor vehicle for transportation purposes ~~pursuant to~~under a contract or similar arrangement, ~~and~~ the term of the ~~such~~ contract or similar arrangement is for a ~~period of~~ 120 days or more, and ~~such~~ the person has control over the motor vehicle.

"Partially-covered fleet" means a fleet of 10 or more motor vehicles that is located or primarily operated in the covered area and which contains both covered fleet vehicles and exempted fleet vehicles.

"Person" means an individual, corporation, partnership, association, state, municipality, political subdivision of a state, and any agency, department, or instrumentality of the United States and any officer, agent, or employee thereof.

"Primarily operated in the covered area" means at least 75 percent of the miles driven annually by a nonexempt motor vehicle are in the covered area. To determine whether a motor vehicle is primarily operated in the covered area, the owner or operator of a covered fleet ~~shall~~must, for each motor vehicle that it is claiming is not primarily operated in the covered area, perform the following calculation:

Sum the number of miles the motor vehicle is driven annually in the covered area;

Sum the number of miles the motor vehicle is driven annually outside of the covered area; and

If the annual number of miles driven in the covered area is at least 75% of all miles driven annually by the motor vehicle, then the motor vehicle is considered to be primarily operated in the covered area.

"Ultimate purchaser" means, with respect to a new motor vehicle, the first person who in good faith purchases a ~~such~~ new motor vehicle or new engine for purposes other than resale.

"Ultra Low Emission Vehicle (ULEV)" means any LDV or LDT, or any HDV with an engine certified to the applicable federal ultra low emission vehicle standard~~, as set forth~~ in Appendix A ~~of this Part~~ and in 40 CFR Part 88, Subpart A, incorporated by reference in Section 241.104 ~~of this Subpart~~.

"Under normal conditions garaged at a personal residence" means a motor vehicle that, when it is not in use, is normally parked at the personal residence of the individual who usually operates it, rather than at a central refueling, maintenance, and/or business location.

"Vehicle used for motor vehicle manufacturer product evaluations and tests" means a motor vehicle that is owned and operated by a motor vehicle manufacturer or motor vehicle component manufacturer, or owned or held by a university research department, independent testing laboratory, or other ~~such~~ evaluation facility, solely for the purpose of evaluating the performance of the ~~such~~ motor vehicle for engineering, research and development, or quality control reasons.

"Zero Emission Vehicle (ZEV)" means any LDV or LDT, or any HDV certified to the applicable federal zero emission vehicle standard~~, as set forth~~ in Appendix A ~~of this Part~~ and in 40 CFR Part 88, Subpart A, incorporated by reference in Section 241.104 ~~of this Subpart~~.

Section 241.103 Abbreviations

This Part uses the following abbreviations:

Agency	Illinois Environmental Protection Agency
ALVW	adjusted loaded vehicle weight
CAA	Clean Air Act as amended in 1990
CO	carbon monoxide
g/bhp-hr	grams per brakehorsepower-hour
g/mi	grams per mile
GVWR	gross vehicle weight rating
HCHO	formaldehyde
HDV	heavy-duty vehicle
ILEV	inherently low emission vehicle
kg	kilograms
lbs	pounds
LDT	light-duty truck
LDV	light-duty vehicle

LEV	low emission vehicle
LVW	loaded vehicle weight
MY	model year
NMOG	non-methane organic gas
NMHC	non-methane hydrocarbon
NOx	oxides of nitrogen
PM	particulate matter
THC	total hydrocarbon
ULEV	ultra low emission vehicle
VIN	vehicle identification number
ZEV	zero emission vehicle

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.104 Incorporations by Reference

The following materials are incorporated by reference and do not contain any subsequent additions or amendments:

a) Clean Fuel Vehicles, 40 CFR Part 88, Subpart A and 59 Fed. Reg. 50058 (September 30, 1994); and

b) Clean Fuel Fleet Program, 40 CFR Part 88, Subpart C (1993).

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART B: GENERAL REQUIREMENTS

Section 241.110 Applicability

a) ~~The requirements of this~~This Part ~~shall apply~~applies to owners or operators of covered fleets. Covered fleets include distributed and partially covered fleets.

b) Notwithstanding subsection (a)~~ of this Section~~, an owner or operator of a covered fleet who owns, operates, or controls motor vehicles which are located or

primarily operated in the covered area, but are regulated by the state of Indiana or Wisconsin as part of that state's Clean Fuel Fleet Program, as required by section 246 of the CAA, are only required to comply with ~~the requirements of~~ Section 241.115 ~~of this Subpart~~.

c) A fleet owner or operator who owns or leases fewer than ten covered fleet vehicles ~~shall~~must become a covered fleet owner or operator on the date that the owner or operator acquires legal or equitable title to a motor vehicle which causes the ~~such~~ fleet owner's or operator's fleet to equal or exceed ten covered fleet vehicles.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.111 Exemptions

a) The following motor vehicles are exempt from the requirements of Section 241.113 ~~of this Subpart~~ and are not considered to be covered fleet vehicles or included in the 10 motor vehicle count criterion of a covered fleet, whether or not the ~~such~~ motor vehicles are part of a covered fleet which is subject to the control requirements of this Subpart:

1) Motor vehicles held for lease or rental to the general public;

2) Motor vehicles held for sale by dealers (including demonstration vehicles);

3) Motor vehicles used for manufacturer product evaluations or tests;

4) Law enforcement vehicles and other emergency vehicles;

5) Motor vehicles not registered to operate on public roadways;

6) Motor vehicles in excess of 26,000 lbs GVWR;

7) Motor vehicles determined by the Secretary of Defense of the United States to be exempt from the program for national security reasons;

8) Antique vehicles as defined in Section 1-102.1 of the Illinois Vehicle Code [625 ILCS 5/1-102.1];

9) Motor driven cycles, motorcycles, and mopeds~~Motorcycles, motor driven cycles, and motorized pedal cycles~~ as defined in Sections 1-145.001, 1-147, ~~1-148,~~ and 1-148.2 of the Illinois Vehicle Code [625 ILCS 5/1-145.001, 1-147, ~~1-148,~~ and 1-148.2];

10) Motor vehicles that are not capable of being centrally fueled; and

11) Motor vehicles that are under normal conditions garaged at a personal residence, unless they are, in fact, centrally fueled.

b) Notwithstanding subsection (a) ~~of this Section~~, motor vehicles that are exempt from the requirements of Section 241.113 ~~of this Subpart~~, but are part of a covered fleet, are subject to the reporting and recordkeeping requirements in Sections 241.140 and 241.141 ~~of this Part~~.

c) Owners or operators of a fleet claiming that a motor vehicle is exempt under subsection (a)(10) ~~of this Section~~ must demonstrate that the motor vehicle is not capable of being centrally fueled and must comply with the recordkeeping requirements of Section 241.141(b) ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.112 Registration of Fleet Owners or Operators

3) An owner or operator of a covered fleet must apply for a fleet registration number on or before September 1, 1997, or within 60 days after becoming a covered fleet owner or operator, by providing the following information to the Agency:

3) The owner's or operator's, and if applicable, the company's, name and address;

2) Signature of the owner or operator;

3) The location of records and reports required by this Part, including the contact person's name, address, and telephone number;

4) The number of motor vehicles in the fleet; and

5) The VIN for each motor vehicle and, if applicable, whether the motor vehicle is exempt underpursuant to Section 241.111 ~~of this Part~~ and which exemption applies.

b) Fleet owners or operators ~~shall~~must include their fleet registration number on all reports or other correspondence submitted to the Agency for the Clean Fuel Fleet Program.

c) Fleet owners or operators participating in the credit program~~, as set forth in~~ under Subpart C ~~of this Part~~, must register with the Agency by providing the information required in subsection (a) ~~of this Section~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.113 Control Requirements

a) Any covered fleet owner or operator who acquires one or more new covered fleet vehicles in a model year must meet the emission standards in subsection (e) ~~of this Section~~ for the following percentages of new covered fleet vehicle acquisitions:

1) The portion of the acquisition of light-duty new covered fleet vehicles that must be light-duty clean fuel vehicles in any model year (MY) are as follows:

A) In MY 1999, at least 30 percent;

B) In MY 2000, at least 50 percent; and

C) In MY 2001 and every MY thereafter, at least 70 percent.

2) The portion of the acquisition of heavy-duty new covered fleet vehicles that must be heavy-duty clean fuel vehicles ~~shall~~must be 50 percent of the total number of heavy-duty new covered fleet vehicles acquired in each model year, commencing in MY 1999 and thereafter.

b) Any fraction of a new clean fuel vehicle acquisition requirement resulting from the percentage calculation in subsection (a)(1) or (a)(2) ~~of this Section~~ may be carried over and added to the new clean fuel vehicle acquisition requirement in the next model year for that type of clean fuel vehicle (i.e. LDV and LDT, or HDV) in which an acquisition of ~~such~~ a clean fuel vehicle is required ~~pursuant to~~ under subsection (a) ~~of this Section~~.

c) An owner's or operator's light-duty and heavy-duty clean fuel vehicle acquisition requirements in a given model year ~~shall~~must be the number of clean fuel vehicles calculated in subsections (a)(1) and (a)(2) ~~of this Section~~ plus any fraction of the same category and weight class (i.e., LDV/LDT or HDV) of motor vehicle acquisition requirements carried over from a preceding year.

d) Notwithstanding subsections (b) and (c) ~~of this Section~~, in any model year ~~no~~ an owner or operator ~~shall~~must not:

1) Fall short of the acquisition requirements for new LDV/LDT or HDV clean fuel vehicles by an amount equal to or greater than one motor vehicle unit;

2) Meet the acquisition requirements for clean fuel LDVs or LDTs through acquisition of clean fuel HDVs; or

3) Meet the acquisition requirements for clean fuel HDVs through the

acquisition of clean fuel LDVs or LDTs.

e) Motor vehicles acquired to meet the requirements of subsection (a) ~~of this Section~~ or Subpart C ~~of this Part~~ must be certified by USEPA to meet the federal emission certification standards of either LEV, ULEV, ZEV, or ILEV for a clean alternative fuel(s)~~, as set forth in~~ under Appendix A ~~of this Part~~ and in 40 CFR Part 88, incorporated by reference in Section 241.104 ~~of this Part~~.

f) The owner or operator must meet the acquisition requirements of subsection (a) ~~of this Section~~ by acquiring clean fuel vehicles or redeeming credits equal to or greater than the number of vehicle units calculated in ~~accordance~~ compliance with subsection (a) ~~of this Section~~ through one or more of the following:

1) Purchase or lease clean fuel vehicles certified by USEPA to meet any of the LEV, ULEV, ZEV, or ILEV standards ~~referenced~~ in subsection (e) ~~of this Section~~;

2) Conversion of existing or new motor vehicles to meet a LEV, ULEV, ZEV, or ILEV standard ~~specified~~ in subsection (e) ~~of this Section~~, consistent with the requirements of Section 241.114 ~~of this Subpart~~; or

3) Redeem credits generated or acquired consistent with the requirements of Subpart C ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.114 Conversions

a) If a motor vehicle which was not certified by the manufacturer as a clean fuel vehicle, but is subsequently converted in ~~accordance~~ compliance with 40 CFR Part 88, Subpart C, incorporated by reference at Section 241.104 ~~of this Part~~, and the ~~such~~ converted motor vehicle meets the requirements of this Section and Section 241.113(e) ~~of this Subpart~~, it is a clean fuel vehicle.

b) The owner or operator of the converted clean fuel vehicle must obtain sufficient documentation to verify that the motor vehicle meets the converted vehicle requirements in 40 CFR Part 88, Subpart C, incorporated by reference at Section 241.104 ~~of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.115 Operating Requirements

a) When a clean fuel vehicle acquired to meet the acquisition requirements of Section 241.113 ~~of this Subpart~~ or to generate credits under Subpart C ~~of this Part~~ is driven in the covered area, it must operate at all times on the clean alternative

fuel(s) to which it is certified by USEPA~~, as set forth in~~ under Section 241.113(e) ~~of this Subpart~~.

b) Notwithstanding subsection (a) ~~of this Section~~, owners or operators of flexible-fueled and dual-fueled vehicles ~~shall~~must operate the ~~such~~ motor vehicle on the clean alternative fuel(s) to which it is certified by USEPA~~, as set forth in~~ under Section 241.113(e) ~~of this Subpart~~, and, where applicable, to which the owner or operator earned credits ~~pursuant to~~ under Subpart C ~~of this Part~~, when the motor vehicle is driven in the covered area.

c) Any clean fuel vehicle driven in the covered area but regulated by another state ~~shall~~must operate at all times on the clean alternative fuel(s) to which it was certified by USEPA.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART C: CREDITS

Section 241.130 Clean Fuel Fleet Credit Program

a) Any owner or operator of ten or more fleet vehicles located or primarily operated in the covered area may participate in the clean fuel fleet credit program, provided that the owner or operator requests that the Agency establish a clean fuel fleet credit account and complies with the registration, operating, emission standards, and recordkeeping and reporting requirements of Sections 241.112, 241.113(e), 241.115, and 241.142 ~~of this Part~~, respectively, and the requirements of this Subpart and, if the vehicle for which credit is being claimed is converted, complies with the requirements of Section 241.114 ~~of this Part~~.

b) Any owner or operator of a fleet may earn credits by:

1) Acquiring more clean fuel vehicles or fractions of clean fuel vehicles than required in any MY ~~pursuant to~~ under Section 241.113 ~~of this Part~~;

2) Acquiring clean fuel vehicles that meet the ULEV or ZEV standard;

3) Acquiring clean fuel vehicles belonging ~~which belong~~ to a category of motor vehicles that are otherwise exempt under Section 241.111 ~~of this Part~~; and

4) Acquiring clean fuel vehicles before September 1, 1998, if the requirements of Section 241.112 ~~of this Part~~ have been met.

c) Credits will be generated, redeemed, or traded after the owner or operator submits the information ~~listed~~ in Sections 241.140(a) and (b) ~~of this Part~~ to the Agency for each clean fuel vehicle involved in the credit transaction, requests that a credit

transaction be posted and states the number of credits added to and subtracted from the credit accounts, and the Agency has received and reviewed the submittal. Credit transactions must be authorized by the owner or operator whose account is being reduced. The Agency will review~~,~~ and add to and subtract from credit accounts, according to the criteria of this Subpart and Appendix B ~~of this Part~~.

d) Credits ~~shall~~must be designated by the Agency at the time of issuance as either LDV/LDT credits or HDV credits. LDV/LDT credits may not be exchanged for HDV credits and HDV credits may not be exchanged for LDV/LDT credits.

e) Notwithstanding subsection (b) ~~of this Section~~, if a clean fuel vehicle has ever been used to demonstrate compliance under Subpart B ~~of this Part~~, or used to generate credits under this Subpart, ~~such~~ that clean fuel vehicle may never be used by any other person for the purpose of generating credits under this Subpart.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.131 Credit Provisions

a) The value of clean fuel vehicle credits ~~shall~~must be assigned in compliance~~accordance~~ with the values for the applicable class and weight category ~~as set forth~~ in Section 241.Appendix B:Tables A, B, C, D, E, and F.

b) The number of clean fuel vehicle credits that are needed to satisfy a new covered fleet vehicle acquisition obligation ~~shall~~must be determined in compliance ~~accordance~~ with the values for the applicable class(s) and weight category(s), ~~as set forth~~ in Appendix B, Tables C and F~~, contained in Appendix B of this Part~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART D: RECORDKEEPING AND REPORTING

Section 241.140 Reporting Requirements

By November 1, 1999, and by November 1 every year thereafter, the owner or operator of a covered fleet must submit the following information about its activities during the prior model year to the Agency:

a) For each motor vehicle newly acquired or being used to earn credits, which also includes motor vehicles converted to clean fuel vehicles:

1) The make, model, and year of manufacture;

2) The date of vehicle acquisition;

3) The vehicle identification number (VIN);

4) The GVWR, as specified by the manufacturer;

5) If the motor vehicle is being used to earn credits, the LVW for LDTs whose GVWR is less than or equal to 6,000 lbs and the ALVW for LDTs whose GVWR is greater than 6,000 lbs;

6) The license plate number and state registered in; and

7) A statement of whether the motor vehicle is exempt ~~pursuant to~~ under Section 241.111 ~~of this Part~~ and which exemption applies.

b) For each clean fuel vehicle newly acquired or being used to earn credits, which also includes motor vehicles converted to clean fuel vehicles:

1) The low emission standard(s) to which the motor vehicle is certified by USEPA, consistent with Section 241.113(e) ~~of this Part~~;

2) The clean alternative fuel(s) ~~to~~ with which the motor vehicle is certified to operate by the manufacturer in order to meet the federal low emission standard(s) in Section 241.113(e) ~~of this Part~~;

3) The 8-character alpha numeric bar-coded vehicle emission configuration number; and

4) For motor vehicles converted to clean fuel vehicles ~~pursuant to~~ under Section 241.114 ~~of this Part~~:

A) The date the motor vehicle was converted;

B) The name and address of the person(s) or firm performing the conversion; and

C) A statement that, to the best of the owner's or operator's knowledge, the motor vehicle was converted in ~~accordance~~ compliance with the applicable requirements of 40 CFR Part 88, incorporated by reference in Section 241.104 ~~of this Part~~.

c) In addition to the information required in subsections (a) and (b) ~~of this Section~~, the owner or operator must state:

1) The number, to the nearest tenth, of clean fuel vehicles the owner or operator was required to acquire ~~pursuant to~~ under Section 241.113 ~~of this Part~~;

2) How that obligation was met;

3) If any of the clean fuel vehicles in the fleet used for compliance or credits in the last two model years are no longer part of the fleet, the VIN and the date the clean fuel vehicle was transferred or taken out of service; and

4) If the fleet vehicles are centrally fueled at a location that is owned, operated, or controlled by the covered fleet owner or operator, the amount of bulk fuel purchased by type of fuel.

d) All reports to the Agency must include the owner's or operator's fleet registration number, the name of the operation, and the signature of the owner or operator.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.141 Recordkeeping Requirements

a) Owners or operators of covered fleets ~~shall~~must retain a copy of the title or lease for each motor vehicle in the fleet.

b) For each motor vehicle that the owner or operator is claiming is exempt ~~pursuant to~~ under Section 241.111(a)(10) ~~of this Part~~, the owner or operator must retain records showing the roundtrip calculation exempting the motor vehicle under the definition of "capable of being centrally fueled", ~~as~~ set forth in Section 241.102 ~~of this Part~~.

c) For each motor vehicle in a covered fleet located outside of the covered area that the owner or operator is claiming is not primarily operated in the covered area, the owner or operator must retain records demonstrating that the motor vehicle is not primarily operated in the covered area~~, as set forth in~~under the definition ~~for~~ of "primarily operated in the covered area" in Section 241.102 ~~of this Part~~.

d) For each converted motor vehicle, the covered fleet owner or operator must retain documentation that the motor vehicle meets the applicable certification requirements for converted motor vehicles in 40 CFR Part 88, Subpart C, incorporated by reference at Section 241.104 ~~of this Part~~.

e) For fleets that are centrally fueled at a location that is owned, operated, or controlled by the covered fleet owner or operator, the owner or operator must retain monthly records of the amount and type of bulk fuel purchased.

f) Fleet owners and operators of non-covered fleets who elect to participate in the credit program~~, as set forth in~~ under Subpart C ~~of this Part~~, must maintain the following records for each motor vehicle that they are using to generate credits:

1) A copy of the title or lease; and

2) For each converted motor vehicle, documentation that the motor vehicle meets the applicable certification requirements for converted motor vehicles in 40 CFR Part 88, Subpart C, incorporated by reference at Section 241.104 ~~of this Part~~.

g) The records required in this Section ~~shall~~must be retained by the owner or operator for at least three years and ~~shall~~must be made available immediately to the Agency upon request. Notwithstanding the above requirement, titles or leases to vehicles no longer under the control of the owner or operator need not be retained.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 241.142 Report on Credit Activities

a) From time to time, the Agency may send a credit reconciliation report to credit account holders showing the balance of credits and any transaction since the last report. The fleet owner or operator ~~shall~~must have 180 days to review and dispute the report. Failure by the fleet owner or operator to notify the Agency of a discrepancy entitles the Agency to presume that the credit reconciliation report is correct.

b) Fleet owners or operators may request from the Agency in writing credit reconciliation reports for their credit accounts. The ~~Such~~ request ~~shall~~must include the name and address of the owner or operator and the fleet registration number.

SUBPART A: GENERAL PROVISIONS

Section 243.101 Definitions

For the purposes of this Part, terms listed below ~~will~~ have the ~~meanings attributed to them~~definitions in this Section. As used in this Part, all terms not defined in this Section will have the ~~meaning given them by~~definition in the Act; the CAA, incorporated by reference in Section 243.108; or 35 Ill. Adm. Code 201.102.

~~"~~"Act~~"~~" means the Environmental Protection Act [415 ILCS 5].

~~"~~"Agency~~"~~" means the Illinois Environmental Protection Agency.

~~"~~"Ambient air~~"~~" means that portion of the atmosphere, external to buildings, to which the general public has access.

~~"~~"Clean Air Act~~"~~" or ~~"~~"CAA~~"~~" means the federal Clean Air Act (42 ~~USC~~U.S.C. 7401 et seq., as amended), incorporated by reference in Section 243.108.

~~"~~"Exceedance of a NAAQS~~"~~" means one occurrence of a measured or modeled concentration that exceeds the specified concentration level of that NAAQS for the averaging period specified by the standard.

~~"~~"Exceptional event~~"~~" means an event and its resulting emissions that fulfills all of the following criteria:

The event affects air quality in such a way that there exists a clear causal relationship between the specific event and the monitored exceedance or violation;

The event is not reasonably controllable or preventable;

The event is caused by human activity that is unlikely to recur at a particular location or a natural event; and

The event is determined by USEPA in accordance with 40 CFR 50.14 to be an exceptional event.

An "exceptional event" does not include any of the following:

Air pollution relating to source noncompliance;

Stagnation of air masses and meteorological inversions;

A meteorological event involving high temperatures or lack of precipitation (i.e., severe, extreme, or exceptional drought).

BOARD NOTE: Stagnation of air masses, meteorological inversions, and meteorological events involving high temperatures or lack of precipitation do not directly cause pollutant emissions and are not exceptional events. However, conditions involving high temperatures or lack of precipitation may promote occurrences of particular types of exceptional events, such as wildfires or high wind events, that do directly cause emissions.

"Federal equivalent method" or "FEM" means a method for measuring the concentration of an air pollutant in the ambient air that USEPA has designated as an equivalent method ~~pursuant to~~under 40 CFR 53 and that is included in the List of Designated Methods, including later updates, as incorporated by reference in Section 243.108~~; the~~. The term "federal equivalent method" does not include a method for which USEPA has cancelled or superseded an equivalent method designation in ~~accordance~~ compliance with 40 CFR 53.11 or 53.16, as reflected in the incorporation by reference in Section 243.108.
BOARD NOTE: Derived from 40 CFR 50.1(f) (definition of "equivalent method"), 50.11(d)(2) (parenthetical definition of "FEM"), and 53.1 (definition of "federal equivalent method"). The clause "including later updates" in this definition is intended to exclude methods canceled by USEPA ~~pursuant to~~under 40 CFR 53.11 or 53.16 for which the cancellation is included in the updates to List of Designated Methods incorporated by reference in Section 243.108. A federal designation of an FEM becomes effective upon publication of a notice in the Federal Register. A federal cancellation of an FEM becomes effective upon deletion from the listing of FEMs.

"Federal land manager" means the Secretary of the department with authority over the federal Class I area (or the Secretary's designee).
BOARD NOTE: See 40 CFR 50.1(r) and 51.301 (definitions of "federal land manager"). There are no federal Class I areas in or immediately abutting Illinois. See subpart D of 40 CFR 81.

"Federal reference method" or "FRM" means a method of sampling and analyzing the ambient air for an air pollutant that USEPA has specified as a reference method in an appendix to 40 CFR 50, incorporated by reference in Section 243.108, or a method that USEPA has designated as a reference method ~~pursuant to~~under 40 CFR 53 and that is included in List of Designated Methods, including later updates, incorporated by reference in Section 243.108~~; the~~. The

term "federal reference method" does not include a method for which USEPA has cancelled or superseded a reference method designation in ~~accordance~~ compliance with 40 CFR 53.11 or 53.16, as reflected in the incorporation by reference in Section 243.108.
BOARD NOTE: Derived from 40 CFR 50.1(f) (definition of "reference method") and 53.1 (definition of "federal reference method"). The clause "including later updates" in this definition is intended to include methods canceled by USEPA ~~pursuant to~~under 40 CFR 53.11 or 53.16 for which the cancellation is included in the updates to List of Designated Methods incorporated by reference in Section 243.108. A federal designation of an FRM becomes effective upon publication of a notice in the Federal Register. A federal cancellation of an FRM becomes effective upon deletion from the listing of FRMs or from an appendix to 40 CFR 50.

"High wind dust event" ~~is~~ means an event that includes the high-speed wind and the dust that the wind entrains and transports to a monitoring site.

"High wind threshold" ~~is~~ means the minimum wind speed capable of causing particulate matter emissions from natural undisturbed lands in the area affected by a high wind dust event.

"Micrograms per cubic meter" or "$\mu g/m^3$" means one millionth (10^{-6}) of a gram of a contaminant per cubic meter of ambient air, as measured and determined by the methods prescribed for that contaminant.
BOARD NOTE: The Board added this definition and that for "milligrams per liter".

"Milligrams per cubic meter" or "mg/m^3" means one thousandth (10^{-3}) of a gram of a contaminant per cubic meter of ambient air, as measured and determined by the methods prescribed for that contaminant.

"National Ambient Air Quality Standard" or "NAAQS" means a standard established by USEPA that applies for outdoor air throughout the United States.
BOARD NOTE: The Board added this definition, derived from the definition in "Terms of Environment: Glossary, Abbreviations, and Acronyms" (December 1997), EPA 175-B-97-001, at p. 30. USEPA has codified the NAAQS at 40 CFR 50.
~~BOARD NOTE: The Board added this definition based on the definition in "Terms of Environment: Glossary, Abbreviations, and Acronyms" (December 1997), document number EPA 175-B-97-001, USEPA, Office of Communications, Education, and Public Affairs, at p. 30.~~

"Natural event" means an event and its resulting emissions, which may recur at the same location, in which human activity plays little or no direct causal role. For purposes of this definition, anthropogenic sources that are reasonably

controlled are not human activity that plays a direct causal role in causing emissions.

"Parts per billion" or "ppb" means the ratio of the parts of a specified contaminant to a billion parts of air by weight ($1:10^{-9}$), as measured and determined by the methods prescribed for that contaminant.
BOARD NOTE: The Board added this definition and that for "parts per million", derived from the parentheticals in 40 CFR 50.4(a) and (b) and 50.17(a) and the definition of "parts per billion (ppb)/parts per million (ppm)" in "Terms of Environment: Glossary, Abbreviations, and Acronyms" (December 1997), EPA 175-B-97-001, at p. 34.

"Parts per million" or "ppm" means the ratio of the parts of a specified contaminant to a million parts of air by weight ($1:10^{-6}$), as measured and determined by the methods prescribed for that contaminant.
BOARD NOTE: The Board added this definition, derived from the parentheticals in 40 CFR 50.4(a) and (b) and 50.17(a) and the definition of "parts per billion (ppb)/parts per million (ppm)" in "Terms of Environment: Glossary, Abbreviations, and Acronyms" (December 1997), EPA 175-B-97-001, at p. 34.

"PM_{10}" means particulate matter that has an aerodynamic diameter less than or equal to a nominal 10 micrometers (µm).
BOARD NOTE: The Board added this definition, derived from the parenthetical definition in 40 CFR 50.6(c).

"$PM_{2.5}$" means particulate matter that has an aerodynamic diameter less than or equal to a nominal 2.5 micrometers (µm).
BOARD NOTE: The Board added this definition, derived from the parenthetical definition in 40 CFR 50.7(a).

"Prescribed fire" ~~is~~ means any fire intentionally ignited by management actions in accordance with applicable laws, policies, and regulations to meet specific land or resource management objectives.

"Traceable" means that a local standard has been compared and certified either directly or via not more than one intermediate standard, to a primary standard, such as a National Bureau of Standards Standard Reference Material (NBS SRM), or a USEPA/NBS-approved Certified Reference Material (CRM).

"USEPA" means the United States Environmental Protection Agency.
BOARD NOTE: Derived from 40 CFR 50.1(c). The Board has used "USEPA" in text where USEPA has used "Administrator", ~~,~~ if action by USEPA is clearly contemplated. Otherwise, the Board has retained the term "Agency" as defined in this Section.

"Wildfire" ~~is~~ means any fire started by an unplanned ignition caused by lightning; volcanoes; other acts of nature; unauthorized activity; or accidental, human-caused actions, or a prescribed fire that has developed into a wildfire. A wildfire that predominantly occurs on wildland is a natural event.

"Wildland" means an area in which human activity and development are essentially non-existent, except for roads, railroads, power lines, and similar transportation facilities. Structures, if any, are widely scattered.

BOARD NOTE: Derived from 40 CFR 50.1, except as otherwise more specifically indicated.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.102 Scope

a) This Part sets forth the NAAQS adopted by USEPA under section 109 of the CAA (42 ~~USC~~U.S.C. 7409) and incorporated into this Part under Sections 7.2 and 10(H) of the Act.

b) National primary ambient air quality standards (primary NAAQS) define levels of air quality that USEPA has judged are necessary, with an adequate margin of safety, to protect the public health. National secondary ambient air quality standards (secondary NAAQS) define levels of air quality that USEPA has judged necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant. These standards are subject to revision, and additional primary and secondary NAAQS may be promulgated as USEPA considers ~~deems~~ necessary to protect the public health and welfare.

c) The promulgation of primary and secondary NAAQS must not be considered in any manner to allow significant deterioration of existing air quality in any portion of this State.

BOARD NOTE: Derived from 40 CFR 50.2.

(Source: Amended at 47 Ill. Reg. _____, effective _____)

Section 243.103 Applicability

The standards in this Part apply throughout the State of Illinois, except as otherwise provided in this Part.

(Source: Amended at 37 Ill. Reg. 12882, effective July 29, 2013)

Section 243.104 Nondegradation (Repealed)

(Source: Repealed at 37 Ill. Reg. 12882, effective July 29, 2013)

Section 243.105 Air Quality Monitoring Data Influenced by Exceptional Events

a) The federal regulations at 40 CFR 50.14 provide that a state, federal land manager, or federal agency can seek USEPA determination that exceedances or violations of an NAAQS are directly due to an exceptional event, so that the State can exclude affected ambient air quality monitoring data from a compliance determination. An exceptional event is a natural event or the result of human activity that is unlikely to recur and that is not reasonably controllable or preventable that meets specified criteria. The federal rule provides that a fireworks display, a prescribed fire, a wildfire, a high wind dust event, a stratospheric intrusion, or an aggregate of events on the same day can be an exceptional event.

b) The Agency must use the applicable procedures of 40 CFR 50.14 to obtain a USEPA determination of an exceptional event and exclusion of affected ambient air quality monitoring data if the Agency determines that the data are influenced by an exceptional event and should be excluded from a compliance determination.

c) Ambient air quality monitoring data excluded by a USEPA determination ~~pursuant to~~under 40 CFR 50.14 is excluded from use for compliance determination under this Part.

BOARD NOTE: Derived from 40 CFR 50.14.

(Source: Amended at 47 Ill. Reg. _____, effective _____)

Section 243.106 Monitoring (Repealed)

(Source: Repealed at 37 Ill. Reg. 12882, effective July 29, 2013)

Section 243.107 Reference Conditions

All measurements of air quality that are expressed as mass per unit volume (e.g., micrograms per cubic meter, other than for particulate matter ($PM_{2.5}$) standards ~~contained~~ in Section 243.120(b), (c), and (d) and lead standards ~~contained~~ in Section 243.126(b), are corrected to a reference temperature of 25 °C, and to a reference pressure of 760 millimeters of mercury (1013.2 millibars). Measurements of $PM_{2.5}$, for purposes of comparison to the standards ~~contained~~ in Section 243.120(b), (c), and (d), and lead, for purposes of comparison to the standards ~~contained~~ in Section 243.126(b), must be reported based upon the actual ambient air volume measured at the actual temperature and pressure at the monitoring site during the measurement period.

BOARD NOTE: Derived from 40 CFR 50.3.

SUBPART B: STANDARDS AND MEASUREMENT METHODS

Section 243.120 PM_{10} and $PM_{2.5}$

a) 1987 Primary and Secondary 24-Hour NAAQS for PM_{10}

1) The level of the 1987 primary and secondary 24-hour NAAQS for PM_{10} is 150 µg/m^3, 24-hour average concentration. The 1987 primary and secondary NAAQS for PM_{10} is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 µg/m^3, as determined in ~~accordance~~ compliance with appendix K to 40 CFR 50, incorporated by reference in Section 243.108, is equal to or less than one.

2) This subsection (a)(2) corresponds with 40 CFR 50.6(b), a provision marked "reserved" by USEPA. This statement maintains structural consistency with the corresponding federal regulation.

3) For the purpose of determining attainment of the 1987 primary and secondary 24-hour NAAQS for PM_{10}, particulate matter must be measured in the ambient air as PM_{10} by a method that fulfills either of the following requirements:

A) An FRM based on appendix J to 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108; or

B) An FEM designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108.

BOARD NOTE: ~~This subsection (a) is derived~~Derived from 40 CFR 50.6.

b) 1997 Secondary Annual Average and Primary and Secondary 24-Hour NAAQS for $PM_{2.5}$

1) The 1997 secondary annual average NAAQS for $PM_{2.5}$ is 15.0 µg/m^3, annual arithmetic mean concentration, and the 1997 primary and secondary 24-hour NAAQS for $PM_{2.5}$ is 65 µg/m^3, 24-hour average concentration, measured in the ambient air as $PM_{2.5}$ by a method that fulfills either of the following requirements:

A) An FRM based on appendix L of 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108; or

B) An FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

2) The 1997 secondary annual average NAAQS for $PM_{2.5}$ is met when the annual arithmetic mean concentration, as determined in ~~accordance~~ compliance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 15.0 µg/m^3.

3) The 1997 primary and secondary 24-hour NAAQS for $PM_{2.5}$ is met when the 98th percentile 24-hour concentration, as determined in ~~accordance~~ compliance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 65 µg/m^3.

BOARD NOTE: ~~This subsection (b) is derived~~Derived from 40 CFR 50.7.

c) 2006 Secondary Annual Average and Primary and Secondary 24-Hour NAAQS for $PM_{2.5}$

1) The 2006 secondary annual average NAAQS for $PM_{2.5}$ is 15.0 µg/m^3, annual arithmetic mean concentration, and the 2006 primary and secondary 24-hour NAAQS for $PM_{2.5}$ is 35 µg/m^3, 24-hour average concentration, measured in the ambient air as $PM_{2.5}$ by a method that fulfills either of the following requirements:

A) An FRM based on appendix L of 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed

in the List of Designated Methods, incorporated by reference in Section 243.108; or

B) An FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

2) The 2006 secondary annual average NAAQS for $PM_{2.5}$ is met when the annual arithmetic mean concentration, as determined in ~~accordance~~ compliance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 15.0 µg/m^3.

3) The 2006 primary and secondary 24-hour NAAQS for $PM_{2.5}$ is met when the 98th percentile 24-hour concentration, as determined in ~~accordance~~ compliance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 35 µg/m^3.

BOARD NOTE: ~~This subsection (c) is derived~~Derived from 40 CFR 50.13.

d) 2012 Primary Annual Average and 24-Hour NAAQS for $PM_{2.5}$

1) The 2012 primary annual average NAAQS for $PM_{2.5}$ is 12.0 µg/m^3 annual arithmetic mean concentration, and the 2012 primary 24-hour NAAQS for $PM_{2.5}$ is 35 µg/m^3 24-hour average concentration, measured in the ambient air as $PM_{2.5}$ by a method that fulfills either of the following requirements:

A) An FRM based on appendix L of 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108; or

B) An FEM designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108.

2) The 2012 primary annual NAAQS for $PM_{2.5}$ is met when the annual arithmetic mean concentration, as determined in ~~accordance~~ compliance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 12.0 µg/m^3.

3) The 2012 primary 24-hour NAAQS for $PM_{2.5}$ is met when the 98th percentile 24-hour concentration, as determined in accordance with appendix N of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 35 µg/m^3.

BOARD NOTE: ~~This subsection (d) is derived~~Derived from 40 CFR 50.18.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.121 Particulates (Repealed)

(Source: Repealed at 16 Ill. Reg. 8185, effective May, 15, 1992)

Section 243.122 Sulfur Oxides (Sulfur Dioxide)

a) 1971 Secondary Three-Hour NAAQS for Sulfur Oxides (as SO_2)

1) The level of the 1971 secondary three-hour NAAQS for sulfur oxides is 0.5 ppm, not to be exceeded more than once per calendar year. The three-hour averages must be determined from successive non-overlapping three-hour blocks starting at midnight each calendar day and must be rounded to one decimal place (fractional parts equal to or greater than 0.05 ppm must be rounded up).

2) Sulfur oxides must be measured in the ambient air as SO_2 by the FRM ~~described~~ in appendix A-2 to 40 CFR 50, incorporated by reference in Section 243.108, or by an FEM designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108.

3) To demonstrate attainment, the second-highest three-hour average must be based upon hourly data that are at least 75 percent complete in each calendar quarter. A three-hour block average must be considered valid only if all three hourly averages for the three-hour period are available. If only one or two hourly averages are available, but the three-hour average would exceed the level of the standard when zeros are substituted for the missing values, subject to the rounding rule of subsection (b)(1), this must be considered a valid three-hour average. In all cases, the three-hour block average must be computed as the sum of the hourly averages divided by three.

BOARD NOTE: ~~This subsection (a) is derived~~Derived from 40 CFR 50.5.

b) 2010 Primary One-Hour NAAQS for Sulfur Oxides (as SO_2)

1) The level of the 2010 primary one-hour NAAQS for sulfur oxides is 75 ppb, measured in the ambient air as SO_2.

2) The 2010 one-hour primary NAAQS for sulfur oxides is met at an ambient air quality monitoring site when the three-year average of the annual (99th percentile) of the daily maximum one-hour average concentrations is less than or equal to 75 ppb, as determined in ~~accordance~~ compliance with appendix T of 40 CFR 50, incorporated by reference in Section 243.108.

3) The level of the 2010 one-hour primary NAAQS for sulfur oxides must be measured by an FRM based on appendix A-1 or A-2 of 40 CFR 50, incorporated by reference in Section 243.108, or by an FEM designated by USEPA and listed in List of Designated Methods, incorporated by reference in Section 243.108.

BOARD NOTE: ~~This subsection (b) is derived~~Derived from 40 CFR 50.17.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.123 Carbon Monoxide

a) The 1971 eight-hour and one-hour primary NAAQS for carbon monoxide are ~~as follows~~:

1) An eight-hour average concentration of 9 ppm (10 mg/m^3), not to be exceeded more than once per year; and

2) A one-hour average concentration of 35 ppm (40 mg/m^3), not to be exceeded more than once per year.

b) The levels of carbon monoxide in the ambient air must be measured by a method that fulfills either of the following requirements:

1) An FRM based on appendix C of 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108; or

2) An FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

c) An eight-hour average concentration must be considered valid if at least 75 percent of the hourly average for the eight-hour period is available. In the event that only six-hour (or seven-hour) averages are available, the eight-hour average must be computed on the basis of the hours available using six (or seven) as the divisor.

d) When summarizing data for comparison with the standards, averages must be stated to one decimal place. Comparison of the data with the levels of the standards in ppm must be made in terms of integers with fractional parts of 0.5 or greater rounded up.

BOARD NOTE: Derived from 40 CFR 50.8.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.124 Nitrogen Oxides (Nitrogen Dioxide as Indicator)

a) The level of the 1971 primary annual average NAAQS for nitrogen oxides is 53 ppb, annual average concentration, measured in the ambient air as nitrogen dioxide (NO_2).

b) The level of the 2010 primary one-hour NAAQS for nitrogen oxides is 100 ppb, one-hour average concentration, measured in the ambient air as NO_2.

c) The level of the 1971 secondary annual average NAAQS for nitrogen oxides is 0.053 ppm (100 $\mu g/m^3$), annual arithmetic mean concentration, measured in the ambient air as NO_2.

d) The levels of the standards in subsections (a) through (c) ~~of this Section~~ must be measured by:

1) An FRM based on appendix F to 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108; or

2) By an FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

e) The 1971 primary annual average NAAQS for nitrogen oxides in subsection (a) ~~of this Section~~ is met when the annual average concentration in a calendar year is less than or equal to 53 ppb, as determined in ~~accordance~~ compliance with appendix S of 40 CFR 50, incorporated by reference in Section 243.108, for the annual standard.

f) The 2010 one-hour primary NAAQS for nitrogen oxides in subsection (b) ~~of this Section~~ is met when the three-year average of the annual 98th percentile of the daily maximum one-hour average concentration is less than or equal to 100 ppb, as determined in ~~accordance~~ compliance with appendix S of 40 CFR 50, incorporated by reference in Section 243.108, for the 1-hour standard.

g) The 1971 secondary annual average NAAQS for nitrogen oxides in subsection (c) ~~of this Section~~ is attained when the annual arithmetic mean concentration in a calendar year is less than or equal to 0.053 ppm, rounded to three decimal places (fractional parts equal to or greater than 0.0005 ppm must be rounded up). To demonstrate attainment, an annual mean must be based upon hourly data that are at least 75 percent complete or upon data derived from manual methods that are at least 75 percent complete for the scheduled sampling days in each calendar quarter.

BOARD NOTE: Derived from 40 CFR 50.11.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.125 Ozone

a) 2008 Primary and Secondary Eight-Hour NAAQS for Ozone

1) The 2008 primary and secondary eight-hour NAAQS for ozone is 0.075 ppm, daily maximum eight-hour average, measured by an FRM based on appendix D to 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108, or an FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

2) The 2008 primary and secondary eight-hour NAAQS for ozone ambient air quality standards are met at an ambient air quality monitoring site when the three-year average of the annual fourth-highest daily maximum eight-hour average ozone concentration is less than or equal to 0.075 ppm, as determined in ~~accordance~~ compliance with appendix P to 40 CFR 50, incorporated by reference in Section 243.108.

BOARD NOTE: ~~This subsection (a) is derived~~Derived from 40 CFR 50.15.

b) 2015 Primary and Secondary Eight-Hour NAAQS for Ozone

1) The level of the eight-hour primary NAAQS for ozone is 0.070 ppm, daily maximum eight-hour average, measured by a reference method based on appendix D to 40 CFR 50, incorporated by reference in Section 243.108, or an equivalent method designated by USEPA and listed in the List of Designated Methods or a Federal Register notice incorporated by reference in Section 243.108.

2) The eight-hour primary NAAQS for ozone is met at an ambient air quality monitoring site when the three-year average of the annual fourth-highest daily maximum eight-hour average ozone concentration is less than or equal to 0.070 ppm, as determined in ~~accordance~~ compliance with appendix U to 40 CFR 50, incorporated by reference in Section 243.108.

3) The level of the secondary NAAQS for ozone is 0.070 ppm, daily maximum eight-hour average ozone concentration, measured by a reference method based on appendix D to 40 CFR 50, incorporated by reference in Section 243.108, and designated in ~~accordance~~ compliance with part 53 of this chapter or an equivalent method designated by USEPA and listed in the List of Designated Methods or a Federal Register notice incorporated by reference in Section 243.108.

4) The eight-hour secondary NAAQS for ozone is met at an ambient air quality monitoring site when the three-year average of the annual fourth-highest daily maximum eight-hour average ozone concentration is less than or equal to 0.070 ppm, as determined in ~~accordance~~ compliance with appendix U to 40 CFR 50, incorporated by reference in Section 243.108.

BOARD NOTE: ~~This subsection (b) is derived~~Derived from 40 CFR 50.19.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 243.126 Lead

a) 1978 Primary and Secondary Quarterly Average NAAQS for Lead

BOARD NOTE: Derived from 40 CFR 50.12. USEPA designated Granite City as nonattainment with the 2008 primary and secondary three-month average NAAQS for lead effective December 31, 2010, and an area of Chicago effective December 31, 2011. See 76 Fed. Reg. 72097, 79108 (Nov. 22, 2011); 75 Fed. Reg. 71033, 71042 (Nov. 22, 2010). This ~~Thus, this~~ subsection (a) was obsolete on December 31, 2012, and the Board removed it.

b) 2008 Primary and Secondary Three-Month Average NAAQS for Lead

1) The 2008 primary and secondary three-month average NAAQS for lead and its compounds is 0.15 µg/m^3, arithmetic mean concentration over a three-month period, measured in the ambient air as lead by either of the following:

A) An FRM based on appendix G of 40 CFR 50, incorporated by reference in Section 243.108, and designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108; or

B) An FEM designated by USEPA and listed in the List of Designated Methods, incorporated by reference in Section 243.108.

2) The 2008 primary and secondary three-month average NAAQS for lead are met when the maximum arithmetic three-month mean concentration for a three-year period, as determined in ~~accordance~~ compliance with appendix R of 40 CFR 50, incorporated by reference in Section 243.108, is less than or equal to 0.15 µg/m^3.

BOARD NOTE: Derived from 40 CFR 50.16.

AUTHORITY: Implementing Section 10 and authorized by Section 27 of the Environmental Protection Act ~~(Ill. Rev. Stat 1991, ch. 111½, pars. 1010 and 1027)~~ [415 ILCS 5/10, 27].

SOURCE: Adopted as Rules 102 through 114, in R70-7, 1 PCB 101, filed and effective December 8, 1970; renumbered as Chapter 2: Air Pollution, Part IV: Episodes, in R72-6, 5 PCB 183, filed and effective August 18, 1972; amended in R80-11, 45 PCB 577, at 6 Ill. ~~-~~Reg. ~~-~~5804, effective April 22, 1982; codified at 7 Ill. ~~-~~Reg. ~~-~~13632; amended in R91-35 at 16 Ill. ~~-~~Reg. 8191, effective May 15, 1992; amended in R18-21 at 48 Ill. Reg. _____, effective _____.

SUBPART A: DEFINITIONS AND GENERAL PROVISIONS

Section 244.101 Definitions

~~All terms which appear~~Terms in this Part have the definitions ~~specified by~~in this Part and 35 Ill. Adm. Code 201 and 211.

"Air Stagnation Advisory"~~: A~~ means a special bulletin issued by the National Weather Service entitled "Air Stagnation Advisory", which is used to warn air pollution control agencies that stagnant atmospheric conditions are expected which could cause increased concentrations of air contaminants near the ground.

"btu"~~: ~~" means British thermal unit

"Episode"~~: The~~ means the period of time at a location in which an air pollution advisory, yellow alert, red alert, or emergency has been declared.

"Fleet Vehicle"~~: Any~~ means any one of three or more vehicles operated for the transportation of persons or property in the furtherance of any commercial or industrial enterprise, for-hire or not-for-hire.

"Indirect Source"~~: Any~~ means any building, facility, plant, auditorium, or other structure or combination ~~thereof~~of them, or any street, road, or highway or airport, which causes or contributes to air pollution through the attraction of mobile air pollution emission sources.

"Level"~~: Average~~ means average concentration of an air contaminant during a specified time period.

"Low Sulfur Fuel"~~: Any~~ means any fuel containing 1.0% or less sulfur by weight.

"Parking Lots"~~: Parking lots shall include~~ must include all lots, areas, buildings~~,~~ or facilities or portions of lots, areas, buildings~~,~~ or facilities whose primary purpose is ~~for the~~ temporary motor vehicle parking ~~of motor vehicles~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.102 Responsibility of the Agency

The Director of the Illinois Environmental Protection Agency (Director) or ~~his~~ their designated representative has sole authority ~~for the declaration of~~to declare episode stages under these rules. The Illinois Environmental Protection Agency (Agency) has primary responsibility ~~for the~~to conduct ~~of~~ air pollution episode operations including ~~but not limited to~~ air contaminant monitoring, source surveillance~~,~~ and enforcement activities during air pollution episodes~~episodes~~ which affect any portion of the State of Illinois. The Agency must ~~shall~~ notify any local agency assigned a significant episode control role in the Illinois Air Pollution Implementation Plan ~~prior to the initiation, alteration or termination of~~before initiating, altering, or terminating any episode stage or control strategy in the jurisdictional area of any such local agency.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.103 Determination of Required Actions

To the maximum degree practicable, emission control actions taken under ~~pursuant to~~ these rules must ~~shall~~ be consistent with the extent of any air pollution alert or emergency.

a) When the existence of any episode stage is caused by one or more specific emission sources, the Agency must ~~shall~~ require emission control action steps applicable only to the ~~such~~ source or sources to be taken.

b) When the existence of any episode stage is caused by one or more specific air contaminants, action must ~~shall~~ be taken to reduce the concentration of the ~~such~~ contaminant or contaminants.

c) When motor vehicle emission control actions are required, the Agency must ~~shall~~ promptly declare the applicable episode stage and phase actions ~~so as~~ to allow reasonable notice and preparation for effective vehicle control actions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.104 Determination of Atmospheric Conditions

When determining expected atmospheric conditions, the Agency ~~shall~~must consider all available meteorological information, including ~~but not limited to~~ official National Weather Service observations, analyses, forecasts~~,~~ and advisories, as well as meteorological data and reports from other sources. Atmospheric conditions ~~shall~~must include ~~but not be limited to~~ stagnation areas,

weather fronts, pressure systems, inversions, precipitation, and wind patterns and variations in solar insolation, temperature, and atmospheric stability.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.105 Determination of Expected Contaminant Emissions

When determining expected contaminant emissions, the Agency ~~shall~~must consider all available emission information including ~~but not limited to~~ emission inventories for stationary sources, pertinent emissions summaries, motor vehicle traffic patterns, and known or estimated seasonal, daily, or hourly variations in emission rates or traffic patterns.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.106 Monitoring

a) Monitoring stations used to determine advisory, alert, or emergency levels ~~shall~~must be located according to Federal guidelines for establishment of air quality surveillance networks and ~~shall~~must use measurement methods or equivalent methods as officially authorized by the United States Environmental Protection Agency (USEPA).

b) Whenever any monitoring station registers air contaminant concentrations in excess of advisory or alert levels, proper operation of the sampling equipment at such stations ~~shall~~must be verified by the Agency or any agency cooperating with the Agency before the concentrations are used to declare any advisory, alert, or emergency stage.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.107 Determination of Areas Affected

a) An advisory ~~shall~~must be declared for the entire Illinois portion of any Air Quality Control Region if any part of ~~such~~ that region meets the advisory criteria. When atmospheric conditions and contaminant emissions in a region ~~are such as to~~ cause the advisory criteria to be met in another region, an advisory ~~shall~~must be declared for any Illinois portion of both regions.

b) An alert or emergency ~~shall~~must be declared for only those portions of an advisory area which meet the applicable criteria of Subpart D ~~of this Part~~ or cause ~~such~~ the criteria to be met elsewhere in Illinois or in another state. When ~~such~~ the criteria have been met, sectors of the advisory area requiring alert or emergency actions ~~shall~~must be defined depending upon expected atmospheric conditions, contaminant emissions, and dispersion analyses. Alerts or emergencies ~~shall~~must then be declared for one or more of these sectors.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.108 Failure to Comply with Episode Requirements

Failure to comply with an approved episode action plan, required actions ~~listed~~ in Appendix D, or the reasonable orders of the Director or ~~his~~ their designated representative during any alert or emergency ~~shall~~must expose any person to the penalty provisions of the Environmental Protection Act ~~(Ill. Rev. Stat. 1981, ch. 111 1/2, pars. 1001 et seq.)~~[415 ILCS 5/1 *et seq.*] (Act). In all cases, the reasonable orders of the Director or ~~his~~ their designated representative ~~shall~~must take precedence over episode action plans or required actions ~~listed~~ in Appendix D ~~provided, however, that such~~. However, those orders ~~shall~~must not exceed that which is authorized by this Part or by the Act.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.109 Sealing of Offenders

To the extent allowed by the Act, the Agency may seal any facility, vehicle, vessel, aircraft, or equipment operated in violation of this Part during any alert or emergency or otherwise contributing to an immediate danger to health.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART B: LOCAL AGENCY RESPONSIBILITIES

Section 244.121 Local Agency Responsibilities

Local air pollution control agencies ~~shall~~must cooperate with the Agency in monitoring, surveillance, and enforcement activities to the extent of their capabilities during any air pollution episode. This cooperation ~~shall~~must meet the following ~~specific~~ conditions:

a) Operation of Monitoring Equipment. At any time other than during an episode, local agencies with real-time monitoring equipment ~~shall~~must operate ~~all such~~that monitoring equipment at a minimum level necessary to determine whether any level of air contaminants specified in this Part has been reached.

b) Reporting Levels to Agency. ~~Such~~ These local agencies ~~shall~~must report to the Agency within ~~thirty (~~30~~)~~ minutes by either telephone or telemetry when any advisory, alert, or emergency level ~~specified~~ in this Part has been reached as indicated on their air monitoring equipment.

c) Operation of Telemetry Equipment. Local agencies with air contaminant sampling networks connected by telemetry with the headquarters of the Agency ~~shall~~must conduct their operations in ~~such~~ a manner ~~as to provide~~providing valid data to the Agency.

d) Agency Representatives at Local Agency Control Centers. In regions where local agencies are participating with the Agency in episode control activities, one or more Agency representatives may station themselves at the control center of the local agency during an air pollution episode. The Agency representatives ~~shall~~must have authority to cause data to be transmitted by telephone or other rapid form of communication to Agency headquarters and, after consultation with ~~said~~ the local agency, to require ~~the initiation, alteration or termination of~~initiating, altering, or terminating control strategy by persons required to take action under this Part as directed by the Director.

e) Local Agency Episode Operations Plan. Local agencies participating with the Agency in episode control activities ~~shall~~must file for approval with the Agency an episode operations plan which describes procedures for obtaining and processing episode action plans~~,~~; monitoring air contaminant levels during routine and episode operations~~,~~; alerting the public, governmental officials, emission sources, and other interested parties of episode stages~~,~~; and performing surveillance and enforcement activities during episodes.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART C: EPISODE ACTION PLANS

Section 244.141 Requirement for Plans

All persons responsible for the operation of a facility of a type ~~set forth in~~under Section 244.142 ~~shall~~must have on file with the Agency written episode action plans ~~(plans)~~, consistent with safe operating procedures, for reducing the levels of air contaminants during yellow alerts, red alerts, and emergencies. These plans ~~shall~~must be designed to reduce air contaminants in ~~accordance~~ compliance with ~~the provisions of~~ these rules and ~~shall~~must be on forms designed by the Agency. ~~Further~~ The Agency may develop guidelines interpreting these requirements, ~~which may be developed by the Agency and shall~~must be filed with the Secretary of State ~~pursuant to~~under the Administrative Procedure Act [5 ILCS 100/1-1 *et seq.*]~~(Ill. Rev. Stat. 1981, ch. 127, par. 1001 et seq.)~~.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.142 Facilities for which Action Plans are Required

a) Electric power generating stations burning fossil fuels.

b) Facilities having fuel combustion emission sources with a total rated heat input in excess of 2.9 MW (10 mmbtu/hr) burning coal or fuel oil, other than those sources exempted from permit requirements by 35 Ill. ~~Adm. Code~~ 201.146(c).

c) Facilities emitting more than 91 Mg/yr or 249 kg per operating day (100 tons per year or 550 pounds per operating day) of sulfur dioxide, carbon monoxide,

nitrogen oxides, particulate matter, organic material, or of any other air contaminant designated by the Agency as harmful to human health.

d) Governmental or commercial installations established primarily for the burning of refuse.

e) Parking lots located in major metropolitan areas having spaces for more than 200 vehicles; except for those lots predominantly serving residences, ; medical facilities, ; rail, bus, and air transportation terminals, ; grocery stores and pharmacies, ; lots provided by employers primarily for their employees; and comparable lots as designated by the Agency.

f) Fleet vehicle operations of 50 or more vehicles in a major metropolitan area, except those used for delivery of grocery, pharmaceutical, and medical products.

g) Local, State and Federal government agencies employing more than 100 employees in a major metropolitan area.

h) State, county, and municipal offices which have responsibility for road repair in a major metropolitan area.

i) Other governmental, industrial, or commercial establishments or activities classified by the Agency as significant direct or indirect sources of air contaminant emissions.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.143 Submission of Plans

a) Plans required by this rule shallmust be submitted to:

1) The Agency for facilities in Illinois located outside of Cook County.

2) The Cook County Department of Environmental Control for facilities located in Cook County and outside of the City of Chicago.

3) The Chicago Department of Environmental Control for facilities located within the City of Chicago.

b) At any time after the effective date of this Part, the Agency may request plans from all persons required to submit plans or a local agency specified above may request plans from persons required to submit plans to such that local agency. In such cases, plans shallmust be submitted to the requesting agency within 30 days after receipt ofreceiving written notification that such plans must be submitted.

c) If any person required to submit a plan or revise a plan fails to submit a plan or revise a plan satisfactory to the Agency, the Agency may file a formal complaint with the Pollution Control Board ~~(Board) pursuant to~~under applicable portions of the Act.

d) Facilities having operational changes invalidating plans ~~shall~~must within 30 days of such changes submit a new plan for Agency approval.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.144 Contents of Plans

a) Plans ~~shall~~must list all significant sources of air contaminants within the facility; ~~shall~~must describe the manner in which contaminant emissions will be reduced during yellow alert, red alert, and emergency; and ~~shall~~must specify the approximate magnitude of the reduction of emissions that will be achieved.

b) Plans for all electric power generating stations and for all facilities located in the Chicago, Peoria, or St. Louis (Illinois) major metropolitan areas having fuel combustion emission sources required to take action during yellow alert to reduce sulfur dioxide emissions ~~shall~~must specify either ~~the means whereby~~how a supply of low sulfur fuel adequate for at least four days operation will be assured, or an emissions reduction plan to lower sulfur dioxide emissions to those which would be discharged if a switch to such fuel were effected.

c) Plans for parking lots ~~shall~~must list the major facilities serviced by the lot, the total parking capacity, and the estimated average number of vehicles ~~utilizing~~ using the lot each day. Plans ~~shall~~must describe the manner in which an orderly curtailment of parking will be effected on the first day and closure on the second calendar day of the applicable alert, including a method by which unauthorized use of the lot will be prevented. If the lot services grocery stores, pharmacies, medical offices or clinics, or other essential facilities ~~as~~ designated by the Agency, procedures for allowing use of the lot ~~to~~ by employees and patrons of ~~such~~ those facilities ~~shall~~must be included in the plan.

d) Plans for fleet vehicle operations ~~shall~~must include the numbers and types of vehicles in the fleet and the estimated average number of vehicle miles operated in the major metropolitan area to which the plan applies. Plans ~~shall~~must describe the manner in which an orderly curtailment of operations will be effected on the first day and cessation on the second calendar day of the applicable alert. If fleet vehicle operations include delivery of food, medicine, or perishable goods or emergency or necessary maintenance services of any kind, plans ~~shall~~must include procedures for exempting ~~such~~ those services from curtailment and cessation.

e) Plans for government agencies ~~shall~~must include types of services rendered, number and location of employees engaged in such services, and the estimated number of employees driving to offices or driving in performance of the services. Plans ~~shall~~must include the methods by which orderly cessations of non-essential services will be effected to meet the requirements of Appendix D. Where government agencies are engaged in essential services, plans ~~shall~~must indicate the nature and magnitude of the services and procedures to exempt ~~such~~ those services from cessation during any alert or emergency.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.145 Processing Procedures

a) Local agencies designated to receive and evaluate episode action plans required by this Part ~~shall~~must file ~~such~~ those plans with the Agency within 30 days ~~following their receipt~~after receiving them.

b) If any plan does not conform with or effectively implement the requirements of this Part, the Agency ~~shall~~must disapprove the plan, state the reasons for disapproval, and require the plan to be revised.

c) During alerts or emergencies, plans required by this Part ~~shall~~must be made available at the facility in question to any person authorized to carry out the provisions of this Part.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

SUBPART D: EPISODE STAGES

Section 244.161 Advisory, Alert and Emergency Levels:

Pollutant	Averaging Time	Advisory	Yellow Alert	Red Alert	Emergency
Sulfur dioxide (ppm)	2-hour	0.30	--	--	--
	4-hour	--	0.30	0.35	0.40
(PM_{10} $\mu g/m^3$)	2-hour	420	--	--	--
	24-hour	--	350	420	500
Carbon Monoxide (ppm)	2-hour	30	--	--	
	8-hour	--	15.	30.	40.
Ozone (ppm)	1-hour	0.12	0.20	0.30	0.50
Nitrogen dioxide	2-hour	0.40	--	--	--

(ppm)	1-hour	--	0.60	1.20	1.60
	24-hour	--	0.15	0.30	0.40

(Source: Amended at 16 Ill. Reg. 8191, effective May 15, 1992)

Section 244.162 Criteria for Declaring an Advisory

The Director or ~~his/her~~their designated representative ~~shall~~must declare an air pollution advisory whenever:

a) An air stagnation advisory is received for any area within the State; or

b) Any advisory or yellow alert level is equaled or exceeded at any monitoring station; and

c) Atmospheric conditions, or expected contaminant emissions, are such that concentrations can reasonably be expected to remain at or above the advisory or yellow alert level for 24 or more hours; or

d) For ozone, atmospheric conditions~~,~~ or expected contaminant emissions, are such that concentrations can reasonably be expected to reoccur at any advisory~~,~~ or yellow alert~~,~~ level on the following calendar day.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.163 Criteria for Declaring a Yellow Alert

The Director or ~~his/her~~their designated representative ~~shall~~must declare a yellow alert whenever:

a) Any yellow alert level is equaled or exceeded at any monitoring station; and

b) An air pollution advisory has been in effect for 4 hours in the area for which the yellow alert is to be declared; and

c) Atmospheric conditions~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to remain at or above the yellow alert level for 12 or more hours; or

d) For ozone, atmospheric conditions~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to reoccur at a yellow alert level on the following calendar day.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.164 Criteria for Declaring a Red Alert

The Director or ~~his~~ their designated representative ~~shall~~must declare a red alert whenever:

a) Any red alert level is equaled or exceeded or any yellow alert level has been equaled or exceeded continuously for the ~~proceeding~~ preceding 24 hour period at any monitoring station; and

b) A yellow alert has been in effect for 4 hours in the area for which the red alert is to be declared; and

c) Atmospheric conditions~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to persist for 12 or more hours; or

d) For ozone, atmospheric conditions~~atmoshperic condtions~~~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to reoccur at a red alert level on the following calendar day.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.165 Criteria for Declaring an Emergency

The Director or ~~his~~ their designated representative ~~shall~~must declare an emergency whenever:

a) Any emergency level is equaled or exceeded or any red alert level has been equaled or exceeded continuously for the ~~proceeding~~ preceding 24 hour period at any monitoring station; and

b) A red alert has been in effect for 12 hours in the area for which the emergency is to be declared; and

c) Atmospheric conditions~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to persist or increase for 12 or more hours; or

d) For ozone, atmospheric conditions~~,~~ or expected contaminant emissions~~,~~ are such that concentrations can reasonably be expected to reoccur at an emergency level on the following calendar day.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.166 Criteria for Terminating Advisory, Alert and Emergency

The Director or ~~his/her~~their designated representative ~~shall~~must terminate any advisory, alert, or emergency stage when the applicable level ~~specified~~ in Section 244.161 no longer prevails and when in ~~his/her~~their judgment atmospheric conditions and expected contaminant emissions are such as to warrant discontinuance or lowering of that advisory, alert, or emergency stage.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.167 Episode Stage Notification

Whenever an advisory, ~~an~~ alert, or ~~an~~ emergency stage is declared or terminated, the Agency or local agency designated by the Agency ~~shall~~must notify:

a) Concerned personnel of the Agency and of federal, local, and other State agencies;

b) Facilities required to make preparations or take actions of major emission reducing consequence;

c) The public by radio, television, and other means of rapid communication.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.168 Contents of Episode Stage Notification

Notifications ~~shall~~must contain: time and date of issuance~~,~~; the names of agencies or persons responsible for issuance; and the beginning and expected ending time of any advisory, alert, or emergency stage. Notifications ~~shall~~must also contain details about the ~~pollutant(s)~~pollutant or pollutants for which notification is made, such as maximum pollutant levels reached and predicted, geographical areas affected, and specific pollution-reducing instructions to the public and to direct or indirect sources of air contaminants, as well as advice to persons who may be affected by the elevated pollution levels.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.169 Actions During Episode Stages

a) Advisory Actions. When an air pollution advisory is in effect, the Agency and other agencies designated by the Agency ~~shall~~must:

1) Coordinate their activities and place their operational staffs in a state of increased readiness except that, in the event of an ozone advisory, the Agency need not monitor on a 24 hour basis.

2) Promptly verify the operation of their air monitoring instrument networks and monitor data from ~~such~~ their instrument networks during all periods when there is reasonable likelihood of yellow alert levels occurring.

3) Evaluate atmospheric conditions and contaminant emissions data and monitor changes in such conditions and data during all periods when there is reasonable likelihood of yellow alert levels occurring.

b) Yellow Alert, Red Alert and Emergency Actions. When a yellow alert, red alert, or emergency is in effect, personnel of the Agency, local agencies designated by the Agency, direct and indirect emission sources, and ~~such~~ other persons ~~as are~~ required to take actions according to this Part ~~shall~~must take all actions required of them in Appendix D~~, of this Part insofar as such~~to the extent that these actions are applicable to the declared episode stage and contaminant for which the episode stage has been declared.

1) Actions by local agencies designated by the Agency ~~shall~~must be in ~~accordance~~ compliance with their episode operations plan if such plan has been approved by the Agency.

2) Actions by direct or indirect sources of emissions ~~shall~~must be in ~~accordance~~ compliance with their episode action plan if such plan has been approved by the Agency.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 244.APPENDIX C: Compliance Dates

Rule 404(a)

The current version of these rules became effective April 19, 1976. Episode action plans were required by October 19, 1976.

Section 244.APPENDIX D: Required Emission Reduction Actions [1] Sulfur Dioxide, PM-10, Nitrogen Dioxide, and Carbon Monoxide

YELLOW ALERT

1) The Agency ~~shall~~must notify the public by radio and/or television that a Yellow Alert is in effect; that the public is required to take action in accordance with these regulations; that the public is requested to avoid the unnecessary use of automobiles and of electricity; and that persons suffering from respiratory or heart conditions should take appropriate precautions.

2) Electric power generating stations ~~shall~~must effect the maximum feasible reduction of emissions by ~~utilizing~~ using fuels which have low ash content and less than 1.0% sulfur by weight (1.5% in the case of fuel oil), provided, however, that emission from ~~such~~ these stations ~~shall~~must not exceed the applicable emission standards and limitations of 35 Ill. ~~-~~Adm. ~~-~~Code 214; by limiting soot blowing and boiler lancing, where essential, to periods of maximum atmospheric turbulence; by diverting power generation to stations outside the area for which the Alert is in effect; or by any other means approved by the Agency. ~~Such~~ These actions will be in accordance with the Yellow Alert Plan if ~~such~~ the plan has been approved for that station.

3) Facilities having fuel combustion emission sources with a total rated capacity in excess of 10 million btu/hr and burning coal and/or fuel oil ~~shall~~must reduce emissions by utilizing fuels which have low ash content and less than 1.0% sulfur weight (1.5% in the case of fuel oil) provided, however, that emissions from ~~such~~ these facilities ~~shall~~must not exceed the applicable emission standards and limitations of 35 Ill. ~~-~~Adm. ~~-~~Code 214; by limiting soot blowing and boiler lancing, where essential, to periods of high atmospheric turbulence; or by any other means approved by the Agency. If fuels of low ash and sulfur content are not available, ~~such~~ these facilities with the exemption of residences, hospitals, and other essential facilities ~~as~~ designated by the Agency~~, shall~~ must curtail fuel burning to the maximum degree consistent with avoiding injury to persons or severe damage to property. ~~Such~~ These actions will be in accordance with the Yellow Alert Plan if ~~such~~ the plan has been approved for that facility.

4) Facilities engaged in manufacturing required to submit Yellow Alert plans ~~shall~~must curtail or defer production and allied operations to the extent necessary to avoid emissions in excess of those which would be discharged if the facility were operated in accord with the limitations prescribed by the regulations limiting emissions, ~~insofar as such~~to the extent that these reductions can be achieved without creating injury to persons or severe damage to property. ~~Such~~ These reductions ~~shall~~must be made notwithstanding any variance or program of delayed compliance with the regulations, and ~~shall~~must be in accord with the Yellow Alert plan if ~~such~~ the plan has been approved for that facility.

5) All open burning and all incineration except as provided below are prohibited. Certain burning of explosive or pathological wastes may be exempted from this restriction by the Agency in writing upon specific written application.

6) Incinerators meeting the emission standards and limitations of this Chapter may be operated only during the hours of maximum atmospheric turbulence as designated by the Agency.

1** During each stage only those actions which cause a reduction of emissions of contaminants for which such stage has been declared are required. cf 35 Ill. Adm. Code 244.102 through 244.109, and 244.168(b).

RED ALERT

1) All actions required during the Yellow Alert ~~shall~~must be continued.

2) The Agency ~~shall~~must notify the public by radio ~~and or~~and/or television that a Red Alert is in effect; that the public is required to take action in accordance with these regulations; that the public is requested to avoid the unnecessary use of automobiles and ~~of~~ electricity; and that persons suffering from respiratory or heart conditions should take appropriate precautions.

3) All incineration and all open burning are prohibited. Certain burning of explosive or pathological wastes may be exempted from these restrictions by the Agency in writing upon specific written application.

4) Facilities engaged in manufacturing and required to submit Red Alert Plans ~~shall~~must curtail any production, including the generation of process steam, which emits contaminants into the atmosphere, to the greatest extent possible without causing injury to persons or severe damage to equipment. The~~Such~~ action ~~shall~~must be in accordance with the Red Alert Plan if the ~~such~~ plan has been approved for that facility.

EMERGENCY

1) All actions required during the Yellow Alert and Red Alert ~~shall~~must be continued.

2) The unnecessary use of electricity, such as for decorative or amusement purposes, is prohibited.

3) The use of motor vehicles is prohibited except for essential uses such as police, fire, and health services~~,~~; delivery of food or essential fuel~~,~~; waste collection~~,~~; utility or pollution control emergency repairs~~,~~; and such comparable uses as may be designated by authorized Highway and Law Enforcement Officials in accordance with the Illinois Emergency Highway Traffic Regulations Plan.

4) All aircraft flights leaving the area of the Emergency are forbidden except for reasons of public health or safety as approved by the Agency in advance.

5) Buildings ~~shall~~must be heated to temperatures no greater than ~~65°F~~65 º Fexcept for hospitals and for other buildings approved by the Agency for reasons of health or severe damage to property.

6) All manufacturing activities ~~shall~~must be curtailed to the greatest extent possible without causing injury to persons or severe damage to equipment.

7) All facilities or activities listed below ~~shall~~must immediately cease operations:

Mining and quarrying, contract construction work, and wholesale trade establishments.

Schools, except elementary schools which ~~shall~~must close at the end of the normal school day and not re-open until the Emergency is terminated.

Government agencies except those needed to administer air pollution alert programs and other essential agencies determined by Agency to be vital for public safety and welfare.

Retail trade stores except those dealing primarily in the sale of food or pharmacies.

Real estate agencies, insurance offices, and similar business.

Laundries, cleaners and dryers, beauty and barber shops, and photographic studios.

Amusement and recreational service establishments such as motion picture theaters.

Automobile repair and automobile service garages.

Advertising offices, consumer credit reporting, adjustment and collecting agencies, printing and duplicating services, rental agencies, and commercial testing laboratories.

REQUIRED EMISSION REDUCTION ACTIONS-OZONE-

1. GENERAL
Yellow - Alert - All Advisory Actions continue.
Government officials, public, and submitters of Action Plans notified.

Red Alert - All Advisory and Yellow Alert actions continue.
Government officials, public, and submitters of Action Plans notified.

Emergency - All Advisory, Yellow Alert, and Red Alert actions continue.
Government officials, public, and submitters of Action Plans notified.

2. VEHICLES PARKING LOTS ROAD REPAIRS

Yellow Alert - Public requested to avoid the unnecessary use of automobiles.

Red Alert - Fleet vehicles, other than mass transit vehicles and vehicles used for the delivery of grocery and pharmaceutical products, essential fuel, ~~for~~ emergency medical services and ~~for such~~ comparable uses ~~as~~ designated by the Agency, immediately curtail operations to the greatest extent possible in or into the area affected by the Red Alert and cease operations on the second calendar day of the Alert.

Parking lots for more than 200 vehicles, except for lots predominately serving residences~~,~~ ; grocery stores~~,~~ ; medical facilities~~,~~ ; rail, bus, and air transportation terminals~~,~~ ; lots provided by employers primarily for employees~~,~~ ; and comparable lots ~~as~~ designated by the Agency ~~shall~~must immediately curtail operations and close on the second calendar day of the Alert.

Road repair and maintenance not necessary for immediate safety and which, if suspended, will expedite the flow of vehicular traffic is prohibited.

Emergency - Motor vehicle operation in or into the area affected by the Emergency is prohibited except for essential uses such as police, fire, and health services, and comparable uses designated by the Illinois Emergency Highway Traffic Regulation Plan. All aircraft flights leaving the area of the Emergency are forbidden except for reasons of public health or safety.

3. MANUFACTURING AND OTHER FACILITIES HAVING PROCESS EMISSION SOURCES

Yellow Alert - Facilities engaged in manufacturing review operations and Action Plans, inspect emission control devices, determine areas of delayable operations; and from such steps revise operations ~~so as~~ to cause greatest feasible reduction in emission short of adversely affecting normal production.

Red Alert - All facilities with process or fuel combustion emission sources emitting a total of more than 100 tons per year or 550 pounds per operating day of organic material or of nitrogen oxides, and all other facilities not in compliance with the organic material and nitrogen oxides emissions standards of Part 2 of this Chapter, curtail all such sources to the greatest extent possible short of causing injury to persons, severe damage to equipment, or an increase in emissions.

Emergency - All operations curtailed to the greatest extent possible short of causing injury to persons or severe damage to equipment.

4. ELECTRIC POWER GENERATORS AND USERS

Yellow Alert - Electric power generating stations burning fossil fuels requested to reduce emissions in and into the affected area to the greatest extent practicable by adjusting operations system wide or by any other means approved by the Agency.

Public request to avoid unnecessary use of electricity.

Red Alert - Electric power generating stations burning fossil fuels required to take all Yellow Alert Actions and in addition discontinue power generation for economy sales and service to ~~interruptable~~interruptible customers~~,~~ and maximize purchase of available power.

Unnecessary use of electricity, such as for decorative or advertising purposes, is prohibited.

Emergency - Electric power generating stations burning fossil fuel continue Yellow Alert and Red Alert actions and, in addition, effect the maximum feasible reduction of emissions by reducing voltage 2.5% system wide, purchase purchasing all available emergency power, and requesting large customers (500 kw) to reduce their electric demand, or by any other means approved by the Agency.

5. OFFICES, BUILDINGS, AND OTHER COMMERCIAL AND SERVICES OPERATIONS

Yellow Alert - Public requested to limit space heating to 65°F65 ºF, air conditioning to 80°F80 ºF.

Red Alert – Public, industrial, and commercial space heating limited to 65°F65 ºF and, air conditioning to 80°F80 ºF except for hospitals and for other buildings approved by the Agency.

Governmental agencies except those needed to administer essential programs close.

Schools close except elementary schools, which close at the end of the normal school day and do not reopen until the Alert is terminated.

The loading of more than 250 gallons of volatile organic material into any stationary tank, railroad tankcar, tank truck, or tank trailer is prohibited except where an integral part of an industrial operation allowed during Red Alert.

Emergency - All facilities or activities listed below immediately cease operation;: mining and quarrying,-; contract construction work,-; wholesale trade establishments,-; retail trade stores, except those dealing primarily in the sale of food or pharmaceuticals,-; real estate agencies, insurance offices and similar businesses,-; laundries, cleaners, and dryers,-; beauty and barber shops, and photographic studios. Amusement, amusement and recreational service establishments such as motion picture theaters,-; automobile repair and automobile service garages. Advertising; advertising offices,-; consumer credit reporting, adjustment and collection agencies,-; printing and duplicating services,-; rental agencies; and commercial testing laboratories.

6. REFUSE BURNERS

Yellow Alert - Governmental or commercial installations established primarily for the burning of refuse shallmust postpone delayable incinerations, all other incineration and all open burning prohibited.

Red Alert - All incineration prohibited.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER l: AIR QUALITY STANDARDS AND EPISODES

PART 245
ODORS

Section

AUTHORITY: Implementing Section 10 and authorized by Section 27 of the Environmental Protection Act ~~(Ill. Rev. Stat. 1981, ch. 111½, pars. 1010 and 1027)~~[415 ILCS 5/10, 27].

SOURCE: Adopted as Chapter 2: Air Pollution, Part VIII: Odors in R71-23, 4 PCB 191, filed and effective April 14, 1972; codified at 7 Ill. Reg. 13635; amended in R18-21 at 48 Ill. Reg. _____, effective _____.

Section 245.100 Definitions

"Animal and Marine Matter"~~: Any~~ means any product or derivative of animal life.

"Food Service Establishment"~~: Any~~ means any fixed or mobile restaurant; coffee shop; cafeteria; short order cafe~~,~~; luncheonette~~,~~; grill; tea room; sandwich shop; soda fountain; tavern; bar; cocktail lounge; nightclub; roadside stand; industrial feeding establishment; private, public, or non-profit organization or institution routinely serving food; catering kitchen; ~~commisary~~commissary; or similar place in which food is placed for sale or served on the premises or elsewhere; and any other eating or drinking establishment or operation where food is served or provided for the public, with or without charge.

"Odor Concentration"~~: The~~ means the number of cubic feet that one cubic foot of sample will occupy when diluted to the odor threshold. It is a measure of the number of odor units in one cubic foot of the sample. It is expressed in odor units per cubic foot.

"Odor Unit"~~: One~~ means one cubic foot of air at the odor threshold.

"Person"~~: Any~~ means any individual, partnership, co-partnership, firm, company, corporation, association, joint stock company, trust, estate, political subdivision, state agency, or any other legal entity, or their legal representative, agent, or assigns.

"Process"~~: Any~~ means any action, operation, or treatment and the equipment used in connection ~~therewith~~with it, and all methods or forms of manufacturing or processing that may emit smoke, particulate matter, or gaseous matter.

"Rendering"~~: Any~~ means any heating process, including cooking, drying, dehydrating, digesting, evaporating, and protein concentrating of animal or marine matter.

Section 245.101 Incorporation by Reference

The following is incorporated by reference: "Quantitative Odor Measurement" by John L. Mills, et al., ~~presented at the 56th Annual Meeting of APCA, Sheraton Cadillac Hotel, June 9-23, 1963, Detroit Michigan. (~~Journal of the Air Pollution Control Association, ~~Volume 13, No. 10~~13:10, October 1963, ~~Page~~ pages 467-475~~)~~.

(Source: Amended art 48 Ill. Reg. _____, effective _____)

Section 245.120 Inedible Rendering Process

a) ~~The provisions of this~~This Part ~~shall~~ must not apply to any device, machine, equipment, or other contrivance used exclusively for the processing of food for human consumption and to food service establishments.

b) A~~No~~ person must not ~~shall~~ operate or use any device, machine, equipment, or other contrivance for the inedible rendering of animal or marine matter unless all gases, vapors, and gas entrained effluents from these processes ~~shall be~~are controlled ~~in such manner as~~ to effectively abate any objectionable odor nuisance. When~~In the event that~~ the rendering processes of more than one company are contributing to the objectionable odor nuisance, abatement ~~shall~~ must be deemed effective when the odor concentration from each process is not more ~~that~~ than 120 odor units/cubic foot as determined by Mills adaptation of ASTM D-1391-57.

c) An objectionable odor nuisance exists when a trained state inspector, ~~upon the receipt of~~after receiving a complaint from one resident or property owner in the area affected, must ~~shall~~ determine that these odors cause a nuisance ~~as outlined in~~under Section 245.121.

(Source: Amended at 47 Ill. Reg. _____, effective _____)

Section 245.121 Objectionable Odor Nuisance Determination

An objectionable odor nuisance exists:

a) On or adjacent to residential, recreational, institutional, retail sales, hotel, or educational premises when odor is detectable in the ambient air after it is diluted with eight volumes of odor-free air as measured by the Scentometer;

b) On or adjacent to industrial premises when odor is detectable in the ambient air after it is diluted with twenty-four volumes of odor-free air as measured by the Scentometer;

c) On or adjacent to premises other than those ~~above~~ under subsection (a) or (b) when odor is detectable in the ambient air after it is diluted with sixteen volumes of odor-free air as measured by the Scentometer;

d) When concurrent determinations made by three trained inspectors ~~as outlined above~~under subsection (a), (b), or (c) in any given one hour period and at intervals of not less than fifteen minutes result in two positive determinations in each series of three determinations; and

e) Provided that any quantitative odor level measurements taken to arrive at a determination that an objectionable odor nuisance exists ~~shall~~ must be at or beyond the property line or at or near places where people live or work.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE B: AIR POLLUTION
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER m: MONITORING REQUIREMENTS

PART 249
ETHYLENE OXIDE AMBIENT AIR MONITORING

Section

AUTHORITY: Implementing Section 9.16, and authorized by Sections 27 and 28, of the Environmental Protection Act [415 ILCS 5/9.16, 27; and 28].

SOURCE: Adopted in R20-18 at 45 Ill. Reg.1696, effective January 25, 2021; amended in R18-21 at 48 Ill. Reg. _____, effective _____.

Section 249.100 Purpose

The purpose of this Part is to set forth the manner in which the Agency must conduct ambient air monitoring of ethylene oxide in ~~accordance~~ compliance with ~~the requirements in~~ Section 9.16 of the Environmental Protection Act [415 ILCS 5/9.16].

(Source: Amended at 48 Ill. Reg. ____, effective _____)

Section 249.105 Monitoring Locations

The Agency must monitor ethylene oxide levels in the ambient air in or around the following locations in Illinois under ~~the requirements of~~ Section 249.110:

a) Northbrook;

b) Schiller Park;

c) Nilwood;

d) Alton; and

e) Bondville.

(Source: Amended at 48 Ill. Reg. ____, effective _____)

Section 249.110 Ethylene Oxide Ambient Air Monitoring Requirements

a) The Agency must conduct ambient air monitoring for ethylene oxide in or around each location ~~specified~~ in Section 249.105 for ~~a period of~~ six consecutive calendar months. During that time ~~frame~~, the Agency must collect a sample every 12 days. Each sample must be collected over a period of approximately 24 hours.

b) The six-month monitoring period must commence no later than one year after January 25, 2021.

c) The Agency must comply with all applicable USEPA regulations and guidelines for ambient air monitoring.

(Source: Amended at 48 Ill. Reg. _____, effective _____)

Section 249.115 Monitoring Results

The Agency must make the ethylene oxide ambient air monitoring results publicly available on the Agency's website within 30 days ~~of receipt of~~after receiving each set of quality assured data.

(Source: Amended at 48 Ill. Reg. ____, effective _____)

Section 249.120 Sunset Provisions

~~The provisions of this~~This Part will no longer apply 24 months after January 25, 2021.

(Source: Amended at 48 Ill. Reg. ____, effective _____)
