ENVIRON	MENTAL	PRO	TECTION .	AGENCY,	į		
				Respondent.	,		

INTERIM ORDER OF THE BOARD (by D. Anderson):

This NPDES permit appeal involves application of the water quality standards or anti-dilution rule to ponds formed by damming a waterway adjacent to the plant property south of Clinton (35 Ill. Adm. Code 302 or 304.102). Petitioner's witness testified that the drainage area upstream of the plant was 5000 acres and that the average flow was 384,500 gallons per day (R. 22, 24). However, the topographical map shows a drainage area of less than 640 acres (Ex. 7). Furthermore, the average flow expected from 5000 acres would be about 5.6 MGD, based on 30 inches annual rainfall and 50% runoff. The Board asks the parties to supplement the record with additional information on the size of the watershed.

The Board asks the parties to provide current information on Petitioner's legal status and the ownership of the facility in question.

Petitioner is requested to provide the above information to the Board within 21 days from the date of this Order.

IT IS SO ORDERED.

Christan L. Moffett, Clerk
Illinois Pollution Control Board
