)
 v.) # 71-195
)
)
 ENVIRONMENTAL PROTECTION AGENCY)

Supplemental Order (by Mr. Currie):

Our order of September 30, 1971, placed limits on the operation of units 1-3 at the Wood River plant, whose aim was to permit use of these extremely offensive units only when other power sources are unavailable. The company asks that we clarify or amend that order to make clear that it is permissible for the company, during intermittent low-load testing from November 29 to December 10, 1971 of the Cat-Ox control system being installed on an adjacent unit, to use units 1-3 if other sources are not available. The Agency has no objection to the motion. The tests are necessary in order to determine the effectiveness of the important and relatively new Cat-Ox system, which is significant not only for the success of this particular installation but for the nationwide future of sulfur dioxide and particulate control. The unavailability of unit 4 during such an abbreviated period is entirely in the spirit of what we contemplated in the original order, and the motion is hereby granted.

I, Christan Moffett, Acting Clerk of the Pollution Control Board, certify that the Board adopted the above Supplementary Order this 7 day of December, 1971.
