Dear Board,

I write to support the proposed limitation of phosphorus in discharge water to 1mg/l.

I realize this is just a start - but it is a start and will begin to benefit water quality. My focus has been on discharges less than a million gallons where I see NPDES wastewater systems discharging to subdivision ponds that get choked with algae while the pond 150 feet away with no NPDES discharge stays clear.

This phosphorous limitation would not apply to those small NPDES discharges, yet but it will help the bigger ones,

Please adopt the standard.

Thanks

Bruce W. Anderson DDS
