STATE OF ILLINOIS Pollution Control Board

RECOMMENDATION

The Illinois Environmental Protection Agency ("Illinois EPA") hereby files its

Recommendation pursuant to Section 125.204 of the regulations of the Illinois Pollution

Control Board, 35 Ill. Adm. Code 125.204.

 On November 29, 2007, the Illinois EPA received a request from Matt Bible (log number TC-24-07, Exhibit A) for an Illinois EPA recommendation regarding the tax certification of water pollution control facilities pursuant to 35 Ill. Adm. Code 125.204.

2. The applicant's address is: Bible 4

3B 18 Bobwhite Road Louisville, Illinois 62868

3. The proposed water pollution control facilities in this request are located at Section 29, T4N, R6E of the 3rd P.M. in Clay County, at the above street address and consist of the following:

Livestock waste management facilities consisting of one concrete manure pit (640 ft. x 80 ft. x 1.67 ft. deep) with two pull plugs and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (660 ft. x 80 ft. x 10 ft. deep) with twelve concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (493 ft. x 80 ft. x 10 ft. deep) with six concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (277 ft. x 80 ft. x 10 ft. deep) with four concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (197.6 ft. x 80 ft. x 2 ft. deep) with one pull plug and the slotted concrete portion of the floor over the manure pit. Approximately 150 ft. of 8-inch diameter PVC manure transfer pipe.

These livestock waste management facilities are used to collect, transport and/or store livestock wastes prior to cropland application, and are further described in Exhibit A.

- Section 11-10 of the Property Tax Code, 35 ILCS 200/11-10 (2006), defines
 "pollution control facilities" as:
 - "any system, method, construction, device or appliance appurtenant thereto or any portion of any building or equipment, that is designed, constructed, installed or operated for the primary purpose of: (a) eliminating, preventing, or reducing air or water pollution ...or (b) treating, pretreating, modifying or disposing of any potential solid, liquid or gaseous pollutant which if released without treatment, pretreatment modification or disposal might be harmful, detrimental or offensive to human, plant or animal life, or to property."
- 5. Pollution control facilities are entitled to preferential tax treatment, 35 ILCS 200/11-5.
- 6. Based on the information in the application and the purpose of the facilities, it is the Illinois EPA's engineering judgment that the described facilities may be considered "pollution control facilities," pursuant to 35 Ill. Adm. Code 125.200(a), with the primary purpose of eliminating, preventing, or reducing water pollution, or as otherwise provided in 35 Ill. Adm. Code 125.200, and are eligible for tax certification from the Board.

WHEREFORE, the Illinois EPA recommends that the Board issue the

requested tax certification.

Recommendation of Tax Certification

Log # TC-24-07

Property Identification # 06-29-200-003

Environmental Protection

The Bureau of Water received a request on November 29, 2007 from Matt Bible for an Illinois EPA recommendation regarding the tax certification of water pollution control facilities pursuant to 35 II. Adm. Code 125.204. We offer the following recommendation.

The water pollution control facilities in this request include the following:

Bible 4 3B 18 Bobwhite Road Louisville, IL 62858

Section 29, T4N, R6E of the 3rd P.M. in Clay County

Livestock waste management facilities consisting of one concrete manure pit (640 ft. x 80 ft. x 1.67 ft. deep) with two pull plugs and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (660 ft. x 80 ft. x 10 ft. deep) with twelve concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (493 ft. x 80 ft. x 10 ft. deep) with six concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (277 ft. x 80 ft. x 10 ft. deep) with four concrete pump out pits (each 6 ft. x 5 ft. x 10.5 ft. deep) and the slotted concrete portion of the floor over the manure pit. One concrete manure pit (197.6 ft. x 80 ft. x 2 ft. deep) with one pull plug and the slotted concrete portion of the floor over the manure pit. Approximately 150 ft. of 8-inch diameter PVC manure transfer pipe.

These livestock waste management facilities are used to collect, transport and/or store livestock wastes prior to cropland application.

These facilities are further described in the enclosed applications and supporting documents.

Based on the information included in this submittal, it is our engineering judgment that the above proposed facilities may be considered "Pollution Control Facilities" under 35 IAC 125.200(a), with the primary purpose of eliminating, preventing, or reducing water pollution, or as otherwise provided in this section, and therefore eligible for tax certification from the Illinois Pollution Control Board. The Bureau of Water therefore recommends that the Board issue the requested tax certification for these facilities.

If you have any questions regarding the above, please contact Thaddeus Faught at 217/782-3362.

Bible 4

Section D.

The manure from the swine goes through the slats into the deep pits. The manure is stored in the pit until application is necessary. A pump with a hose is connected from the pump out port in/on the pit to the tractor and injected into the ground at agronomic rates in accordance to the Comprehensive Nutrient Management Plan.

There are 5 buildings at this site. The farrowing house is 80' x 640' with a 20" pull plug pig. This building drains into the gestation house. The gestation house is 660' x 80' with a 10' deep pit. The farrowing/nursery building is 80' x 197.6' with a 24" pull plug pit. This pit drains into the gestation/breeding building. The gilt developer is 277' x 80' with a 10' deep pit. The breeding/gestation building is 493' x 80' with a 10' deep pit.

All pits are made out of concrete that is reinforced with rebar.

Each of the buildings have manure pumpouts. (Please see included documents for their locations and number on each building.)

All buildings have 100% total slatted floors.

Sketched Diagram showing the flow of livestock waste from the animal through the pollution control facility.

STATE OF ILLINOIS
COUNTY OF SANGAMON)
PROOF OF SERVICE
I, the undersigned, on oath state that I have served the attached APPEARANCE AND THE
RECOMMENDATION , upon the person to whom it is directed, by placing a copy in an envelope
addressed to:
Clerk Illinois Pollution Control Board James R. Thompson Center 100 West Randolph Street, Suite. 11-500 Chicago, Illinois 60601 Matt Bible 2872 Sailor Springs Road Louisville, Illinois 62858
Steve Santarelli Illinois Department of Revenue 101 West Jefferson Post Office Box 19033 Springfield, Illinois 62794
and mailing it from Springfield, Illinois, on April 22, 2008, with sufficient postage
affixed for first class mail.
