# POLLUTION CONTROL BOARD NOTICE OF PROPOSED AMENDMENTS

1) Heading of the Part: Identification and Listing of Hazardous Waste

2) Code Citation: 35 Ill, Adm. Code 721

from the address below.

| 3) | Section Numbers:        | Proposed Action: |
|----|-------------------------|------------------|
| ŕ  | 721.132                 | Amendment        |
|    | 721.APPENDIX A          | Amendment        |
|    | 721.APPENDIX I, TABLE A | Amendment        |
|    | 721.APPENDIX I, TABLE B | Amendment        |
|    | 721.APPENDIX I, TABLE C | Amendment        |
|    | 721.APPENDIX I, TABLE D | Amendment        |

Specifically, the amendments to Part 721 implement segments of the federal amendments of April 13, 2012. The Board has included a limited number of corrections and clarifying amendments that are not directly derived from the instant federal amendments.

Tables appear in the Board's opinion and order of November 1, 2012 in docket R13-5 that list numerous corrections and amendments that are not based on current federal amendments. The tables contain deviations from the literal text of the federal amendments underlying these amendments, as well as corrections and clarifications that the Board made in the base text involved. Persons interested in the details of those corrections and amendments should refer to the November 1, 2012 opinion and order in docket R13-5.

Section 22.4 of the Environmental Protection Act [415 ILCS 5/22.4] provides that Section 5-35 of the Administrative Procedure Act [5 ILCS 100/5-35] does not apply to this rulemaking. Because this rulemaking is not subject to Section 5-35 of the IAPA, it is not subject to First Notice or to Second Notice review by the Joint Committee on Administrative Rules (JCAR).

P13-5

#### 12

# POLLUTION CONTROL BOARD NOTICE OF PROPOSED AMENDMENTS

- 6) Published studies or reports, and sources of underlying data, used to compose this rulemaking: None
- 7) Will this rulemaking replace any emergency rulemaking currently in effect? No
- 8) Does this rulemaking contain an automatic repeal date? No
- 9) <u>Does this rulemaking contain incorporations by reference</u>? No. 35 Ill. Adm. Code 720.111 is the centralized location of all incorporations by reference for the purposes of all of 35 Ill. Adm. Code 702 through 705, 720 through 728, 730, 733, 738, and 739. The amendments update and revise a number of incorporations by reference in 35 Ill. Adm. Code 720.111 that are used for the purposes of Part 721.
- 10) <u>Statement of Statewide Policy Objectives</u>: These proposed amendments do not create or enlarge a State mandate, as defined in Section 3(b) of the State Mandates Act. [30 ILCS 805/3(b)].
- 11) Are there any other proposed rulemakings pending on this Part? No
- 12) Time, Place and Manner in which interested persons may comment on this proposed rulemaking: The Board will accept written public comment on this proposal for a period of 45 days after the date of this publication. Comments should reference docket R13-5 and be addressed to:

John T. Therriault, Assistant Clerk Illinois Pollution Control Board State of Illinois Center, Suite 11-500 100 W. Randolph St. Chicago, IL 60601

phone: 312/814-3620

Please direct inquiries to the following person and reference docket R13-5:

#### 13) <u>Initia Regulatory Flexibility Analysis:</u>

- A) Types of small businesses, small municipalities, and not-for-profit corporations affected: This rulemaking may affect those small businesses, small municipalities, and not-for-profit corporations that generate, transport, treat, store, or dispose of hazardous waste. These proposed amendments do not create or enlarge a State mandate, as defined in Section 3(b) of the State Mandates Act. [30 ILCS 805/3(b)]
- B) Reporting, bookkeeping or other procedures required for compliance: The existing rules and proposed amendments require extensive reporting, bookkeeping and other procedures, including the preparation of manifests and annual reports, waste analyses and maintenance of operating records. These proposed amendments do not create or enlarge a state mandate, as defined in Section 3(b) of the State Mandates Act. [30 ILCS 805/3(b)]
- C) Types of professional skills necessary for compliance: Compliance with the existing rules and proposed amendments may require the services of an attorney, certified public accountant, chemist, and registered professional engineer. These proposed amendments do not create or enlarge a state mandate, as defined in Section 3(b) of the State Mandates Act. [30 ILCS 805/3(b)]
- 14) Regulatory Agenda on which this rulemaking was summarized: June 2012

The full text of the Proposed Amendments begins on the next page:

Reg. 986, effective December 30, 2008; amended in R09-16/R10-4 at 34 Ill. Reg. 18611. effective November 12, 2010; amended in R11-2/R11-16 at 35 III. Reg. 17734, effective October 14, 2011; amended in R13-5 at 37 Ill. Reg. \_\_\_\_\_\_, effective

#### SUBPART D: LISTS OF HAZARDOUS WASTE

### Section 721.132 Hazardous Waste from Specific Sources

a) The following solid wastes are listed hazardous wastes from specific sources unless they are excluded under 35 Ill. Adm. Code 720.120 and 720.122 and listed in Appendix I of this Part.

USEPA Hazardous Waste No.

Industry and Hazardous Waste

Hazard Code

Wood Preservation Process Wastes:

K001

Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote or pentachlorophenol.

Inorganic Pigments Production Wastes:

# ILLINOIS REGISTER POLLUTION CONTROL

# BOARDJCAR350721-1216507r01

| K002          | production of chrome yellow and orange                                                    | (1)        |
|---------------|-------------------------------------------------------------------------------------------|------------|
| K003          | pigments.  Wastewater treatment sludge from the                                           | (T)        |
|               | production of molybdate orange pigments.                                                  |            |
| K004          | Wastewater treatment sludge from the                                                      | (T)        |
|               | production of zinc yellow pigments.                                                       |            |
| K005          | Wastewater treatment sludge from the                                                      | (T)        |
|               | production of chrome green pigments.                                                      |            |
| K006          | Wastewater treatment sludge from the                                                      | (T)        |
|               | production of chrome oxide green pigments                                                 |            |
| ¥600 <b>5</b> | (anhydrous and hydrated).                                                                 | (T)        |
| K007          | Wastewater treatment sludge from the                                                      | (T)        |
| 12000         | production of iron blue pigments.                                                         | <b>(T)</b> |
| K008          | Oven residue from the production of chrome                                                | (T)        |
|               | oxide green pigments.                                                                     |            |
|               | Organic Chemicals Production Wastes:                                                      |            |
| K009          | Distillation bottoms from the production of                                               | (T)        |
|               | acetaldehyde from ethylene.                                                               | , ,        |
| K010          | Distillation side cuts from the production of                                             | (T)        |
|               | acetaldehyde from ethylene.                                                               |            |
| K011          | Bottom stream from the wastewater stripper in                                             | (R, T)     |
|               | the production of acrylonitrile.                                                          |            |
| K013          | Bottom stream from the acetonitrile column in                                             | (T)        |
|               | the production of acrylonitrile.                                                          |            |
| K014          | Bottoms from the acetonitrile purification                                                | (T)        |
| ****          | column in the production of acrylonitrile.                                                | <b>(</b>   |
| K015          | Still bottoms from the distillation of benzyl                                             | (T)        |
| 7/01/         | chloride.                                                                                 | (T)        |
| K016          | Heavy ends or distillation residues from the                                              | (T)        |
| V017          | production of carbon tetrachloride.                                                       | <b>(T)</b> |
| K017          | Heavy ends (still bottoms) from the purification                                          | (T)        |
| K018          | column in the production of epichlorohydrin.  Heavy ends from the fractionation column in | (T)        |
| KUIS          | ethyl chloride production.                                                                | (T)        |
| K019          | Heavy ends from the distillation of ethylene                                              | (T)        |
| 10.9          | dichloride in ethylene dichloride production.                                             | (1)        |
| K020          | Heavy ends from the distillation of vinyl                                                 | (T)        |
|               | and any and an area and and and area and any a                                            | (~/        |

|      | chloride in vinyl chloride monomer production.                                                                                              |        |
|------|---------------------------------------------------------------------------------------------------------------------------------------------|--------|
| K021 | Aqueous spent antimony catalyst waste from fluoromethanes production.                                                                       | (T)    |
| K022 | Distillation bottom tars from the production of                                                                                             | (T)    |
| K023 | phenol/acetone from cumene.  Distillation light ends from the production of                                                                 | (T)    |
| K024 | phthalic anhydride from naphthalene. Distillation bottoms from the production of                                                            | (T)    |
| K093 | phthalic anhydride from naphthalene.  Distillation light ends from the production of                                                        | (T)    |
| K094 | phthalic anhydride from ortho-xylene.  Distillation bottoms from the production of                                                          | (T)    |
| K025 | phthalic anhydride from ortho-xylene.  Distillation bottoms from the production of                                                          | (T)    |
| K026 | nitrobenzene by the nitration of benzene.  Stripping still tails from the production of                                                     | (T)    |
| K027 | methyl ethyl pyridines.  Centrifuge and distillation residues from toluene                                                                  | (R, T) |
| K028 | diisocyanate production.  Spent catalyst from the hydrochlorinator reactor                                                                  | (T)    |
| K029 | in the production of 1,1,1-trichloroethane.  Waste from the product stream stripper in the                                                  | (T)    |
| K095 | production of 1,1,1-trichloroethane.  Distillation bottoms from the production of                                                           | (T)    |
| K096 | 1,1,1-trichloroethane.  Heavy ends from the heavy ends column from                                                                          | (T)    |
| K030 | the production of 1,1,1-trichloroethane.  Column bottoms or heavy ends from the combined production of trichloroethylene and                | (T)    |
| K083 | perchloroethylene. Distillation bottoms from aniline production.                                                                            | (T)    |
| K103 | Process residues from aniline extraction from the production of aniline.                                                                    | (T)    |
| K104 | Combined wastewater streams generated from nitrobenzene/aniline production.                                                                 | (T)    |
| K085 | Distillation or fractionation column bottoms                                                                                                | (T)    |
| K105 | from the production of chlorobenzenes.  Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes. | (T)    |

| K107 | Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.                                              | (C, T) |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| K108 | Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. | (I, T) |
| K109 | Spent filter cartridges from the product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.                               | (T)    |
| K110 | Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.                             | (T)    |
| K111 | Product wastewaters from the production of dinitrotoluene via nitration of toluene.                                                                                      | (C, T) |
| K112 | Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.                                                | (T)    |
| K113 | Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.                             | (T)    |
| K114 | Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.                                                | (T)    |
| K115 | Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.                                              | (T)    |
| K116 | Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.                                        | (T)    |
| K117 | Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.                                                         | (T)    |
| K118 | Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.                                        | (T)    |

| K136 | Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.                                                                                                                                                                                                                                                                                                                                                                                                            | (T)    |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| K156 | Organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)                                                                                                                                                                                                                                                        | (T)    |
| K157 | Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)                                                                                                                                                                                                                                                                      | (T)    |
| K158 | Baghouse dusts and filter/separation solids from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)                                                                                                                                                                                                                                                                                                                       | (T)    |
| K159 | Organics from the treatment of thiocarbamate wastes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | (T)    |
| K161 | Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust, and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)                                                                                                                                                                                                                                                                                                     | (R, T) |
| K174 | Wastewater treatment sludges from the production of ethylene dichloride or vinyl chloride monomer (including sludges that result from commingled ethylene dichloride or vinyl chloride monomer wastewater and other wastewater), unless the sludges meet the following conditions: (1) the sludges are disposed of in a RCRA Subtitle C (42 USC 6921-6939e) or non-hazardous landfill licensed or permitted by a state or the federal government; (2) the sludges are not otherwise placed on the land prior to final disposal; and (3) | (T)    |

(T)

#### NOTICE OF PROPOSED AMENDMENTS

the generator maintains documentation demonstrating that the waste was either disposed of in an on-site landfill or consigned to a transporter or disposal facility that provided a written commitment to dispose of the waste in an off-site landfill. Upon a showing by the government that a respondent in any enforcement action brought to enforce the requirements of Subtitle C of this Part managed wastewater treatment sludges from the production of vinyl chloride monomer or ethylene dichloride, the respondent must demonstrate that it meets the conditions of the exclusion that are set forth above. In doing so, the respondent must provide appropriate documentation that the terms of the exclusion were met (e.g., contracts between the generator and the landfill owner or operator, invoices documenting delivery of waste to landfill, etc.).

Wastewater treatment sludges from the production of vinyl chloride monomer using mercuric chloride catalyst in an acetylene-based process.

#### Inorganic Chemicals Production Wastes:

| K071 | Brine purification muds from the mercury cell    | (T) |
|------|--------------------------------------------------|-----|
|      | process in chlorine production, where separately |     |
|      | prepurified brine is not used.                   |     |
| K073 | Chlorinated hydrocarbon waste from the           | (T) |
|      | purification step of the diaphragm cell process  |     |
|      | using graphite anodes in chlorine production.    |     |
| K106 | Wastewater treatment sludge from the mercury     | (T) |
|      | cell process in chlorine production.             |     |
| K176 | Baghouse filters from the production of          | (E) |
|      | antimony oxide, including filters from the       | • • |
|      | production of intermediates (e.g., antimony      |     |
|      | metal or crude antimony oxide).                  |     |
| K177 | Slag from the production of antimony oxide that  | (T) |
|      | is speculatively accumulated or disposed of,     | ` ' |

# BOARDJCAR350721-1216507r01

#### NOTICE OF PROPOSED AMENDMENTS

| K178 | including slag from the production of intermediates (e.g., antimony metal or crude antimony oxide).  Residues from manufacturing and manufacturing-site storage of ferric chloride from acids formed during the production of titanium dioxide using the chloride-ilmenite process.                                                                                                                                                                                                                                    | (T)            |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| K181 | Nonwastewaters from the production of dyes or pigments (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass loadings of any of the constituents identified in subsection (c) of this Section that are equal to or greater than the corresponding subsection (c) levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are managed in one of the following ways: |                |
| K181 | Nonwastewaters from the production of dyes or pigments (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass-loadings of any of the constituents identified in subsection (c) of this Section that are equal                                                                                                                                                                                                        | <del>(T)</del> |

to or greater than the corresponding subsection (c) levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are managed

in one of the following ways:

1) They are disposed of in a municipal solid waste landfill unit that is subject to the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402;

- They are disposed of in a hazardous waste landfill unit that is subject to either 35 III.
   Adm. Code 724.401 or 725.401;
- 3) They are disposed of in other municipal solid waste landfill units that meet the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402, 35 Ill. Adm. Code 724.401, or 35 Ill. Adm. Code 725.401; or
- 4) They are treated in a combustion unit that is permitted under 415 ILCS 5/39(d), or an onsite combustion unit that is permitted under 415 ILCS 5/39.5.

For the purposes of this listing, dyes or pigments production is defined in subsection (b)(1) of this Section. Subsection (d) of this Section describes the process for demonstrating that a facility?'s nonwastewaters are not K181 waste. This listing does not apply to wastes that are otherwise identified as hazardous under Sections 721.121 through 721.124 and 721.131 through 721.133 at the point of generation. Also, the listing does not apply to wastes generated before any annual mass loading limit is met, as set forth in subsection (c) of this Section.

#### Pesticides Production Wastes:

| K031 | By-product salts generated in the production of | (T) |
|------|-------------------------------------------------|-----|
|      | MSMA and cacodylic acid.                        |     |
| K032 | Wastewater treatment sludge from the            | (T) |
|      | production of chlordane.                        |     |
| K033 | Wastewater and scrub water from the             | (T) |
|      | chlorination of cyclopentadiene in the          |     |

|      | production of chlordane.                                              |        |
|------|-----------------------------------------------------------------------|--------|
| K034 | Filter solids from the filtration of                                  | (T)    |
|      | hexachlorocyclopentadiene in the production of chlordane.             | . ,    |
| K097 | Vacuum stripper discharge from the chlordane                          | (T)    |
|      | chlorinator in the production of chlordane.                           |        |
| K035 | Wastewater treatment sludges generated in the production of creosote. | (T)    |
| K036 | Still bottoms from toluene reclamation                                | (T)    |
|      | distillation in the production of disulfoton.                         | ` /    |
| K037 | Wastewater treatment sludges from the                                 | (T)    |
|      | production of disulfoton.                                             | ` '    |
| K038 | Wastewater from the washing and stripping of                          | (T)    |
|      | phorate production.                                                   |        |
| K039 | Filter cake from the filtration of                                    | (T)    |
|      | diethylphosphorodithioic acid in the production                       |        |
|      | of phorate.                                                           |        |
| K040 | Wastewater treatment sludge from the                                  | (T)    |
|      | production of phorate.                                                |        |
| K041 | Wastewater treatment sludge from the                                  | (T)    |
|      | production of toxaphene.                                              |        |
| K098 | Untreated process wastewater from the                                 | (T)    |
|      | production of toxaphene.                                              |        |
| K042 | Heavy ends or distillation residues from the                          | (T)    |
|      | distillation of tetrachlorobenzene in the                             |        |
|      | production of 2,4,5-T.                                                |        |
| K043 | 2,6-Dichlorophenol waste from the production                          | (T)    |
|      | of 2,4-D.                                                             |        |
| K099 | Untreated wastewater from the production of                           | (T)    |
|      | 2,4-D.                                                                |        |
| K123 | Process wastewater (including supernates,                             | (T)    |
|      | filtrates, and washwaters) from the production of                     |        |
|      | ethylenebisdithiocarbamic acid and its salts.                         |        |
| K124 | Reactor vent scrubber water from the production                       | (C, T) |
|      | of ethylenebisdithiocarbamic acid and its salts.                      |        |
| K125 | Filtration, evaporation, and centrifugation solids                    | (T)    |
|      | from the production of                                                |        |
| **** | ethylenebisdithiocarbamic acid and its salts.                         |        |
| K126 | Baghouse dust and floor sweepings in milling                          | (T)    |
|      | and packaging operations from the production or                       |        |

#### POLITION CONTROL

# BOARDJCAR350721-1216507r01

### **NOTICE OF PROPOSED AMENDMENTS**

| K172 | Spent hydrorefining catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media).  Iron and Steel Production Wastes: | (I, T) |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| K061 | Emission control dust/sludge from the primary production of steel in electric furnaces.                                                                                                                                             | (T)    |
| K062 | Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC Codes 331 and 332) (as defined in 35 Ill. Adm. Code 720.110).                                                     | (C, T) |
|      | Primary Aluminum Production Wastes:                                                                                                                                                                                                 |        |
| K088 | Spent potliners from primary aluminum reduction.                                                                                                                                                                                    | (T)    |

# Secondary Lead Production Wastes:

| K069 | Emission control dust/sludge from secondary | (T) |
|------|---------------------------------------------|-----|
|      | lead smelting.                              |     |

BOARD NOTE: This listing is administratively stayed for sludge generated from secondary acid scrubber systems. The stay will remain in effect until this note is removed.

| K100 | Waste leaching solution from acid leaching of | (T) |
|------|-----------------------------------------------|-----|
|      | emission control dust/sludge from secondary   |     |
|      | lead smelting.                                |     |

# Veterinary Pharmaceuticals Production Wastes:

| K084 | Wastewater treatment sludges generated during      | (T) |
|------|----------------------------------------------------|-----|
|      | the production of veterinary pharmaceuticals       |     |
|      | from arsenic or organo-arsenic compounds.          |     |
| K101 | Distillation tar residues from the distillation of | (T) |
|      | aniline-based compounds in the production of       |     |
|      | veterinary pharmaceuticals from arsenic or         |     |

| K102         | organo-arsenic compounds. Residue from use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds.                                                                                                                  | (T)          |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
|              | Ink Formulation Wastes:                                                                                                                                                                                                                                                                      |              |
| K086         | Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, dryers, soaps and stabilizers containing chromium and lead.                                                               | (T)          |
|              | Coke Production Wastes:                                                                                                                                                                                                                                                                      |              |
| K060         | Ammonia still lime sludge from coking operations.                                                                                                                                                                                                                                            | (T)          |
| K087         | Decanter tank tar sludge from coking operations.                                                                                                                                                                                                                                             | $(\Upsilon)$ |
| <b>K14</b> 1 | Process residues from the recovery of coal tar, including, but not limited to, collecting sump residues from the production of coke from coal or the recovery of coke by-products produced from coal. This listing does not include K087 (decanter tank tar sludges from coking operations). | (T)          |
| K142         | Tar storage tank residues from the production of coke from coal or from the recovery of coke by-products produced from coal.                                                                                                                                                                 | (T)          |
| K143         | Process residues from the recovery of light oil, including, but not limited to, those generated in stills, decanters, and wash oil recovery units from the recovery of coke by-products produced from coal.                                                                                  | (T)          |
| K144         | Wastewater sump residues from light oil refining, including, but not limited to, intercepting or contamination sump sludges from the recovery of coke by-products produced from coal.                                                                                                        | (T)          |
| K145         | Residues from naphthalene collection and                                                                                                                                                                                                                                                     | (T)          |
|              |                                                                                                                                                                                                                                                                                              |              |

#### **ILLINOIS REGISTER**

#### BOARDJCAR350721-1216507r01

|      | recovery operations from the recovery of coke by-products produced from coal.                                                                                                                                                                                                                                   |     |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| K147 | Tar storage tank residues from coal tar refining.                                                                                                                                                                                                                                                               | (T) |
| K148 | Residues from coal tar distillation, including, but not limited to, still bottoms.                                                                                                                                                                                                                              | (T) |
| K149 | Distillation bottoms from the production of α-<br>(or methyl-) chlorinated toluenes,<br>ring-chlorinated toluenes, benzoyl chlorides, and<br>compounds with mixtures of these functional<br>groups. (This waste does not include still<br>bottoms from the distillation of benzyl chloride.)                    | (T) |
| K150 | Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of $\alpha$ - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. | (T) |
| K151 | Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of α- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.                 | (T) |

- b) Listing-specific definition: For the purposes of the K181 hazardous waste listing in subsection (a) of this Section, "dyes or pigments production" includes manufacture of the following product classes: dyes, pigments, and FDA-certified colors that are in the azo, triarylmethane, perylene, and anthraquinone classes. Azo products include azo, monoazo, diazo, triazo, polyazo, azoic, benzidine, and pyrazolone products. Triarylmethane products include both triarylmethane and triphenylmethane products. Wastes that are not generated at a dyes or pigments manufacturing site, such as wastes from the offsite use, formulation, and packaging of dyes or pigments, are not included in the K181 listing.
- c) K181 listing levels. Nonwastewaters containing constituents in amounts equal to or exceeding the following levels during any calendar year are subject to the K181 hazardous waste listing in subsection (a) of this Section, unless the conditions in the K181 hazardous waste listing are met:

| Constituent          | Chemical Abstracts No. | Mass Levels<br>(kg/yr) |
|----------------------|------------------------|------------------------|
| Aniline              | 62-53-3                | 9,300                  |
| o-Anisidine          | 90-04-0                | 110                    |
| 4-Chloroaniline      | 106-47-8               | 4,800                  |
| p-Cresidine          | 120-71-8               | 660                    |
| 2,4-Dimethylaniline  | 95-68-1                | 100                    |
| 1,2-Phenylenediamine | 95-54-5                | 710                    |
| 1,3-Phenylenediamine | 108-45-2               | 1,200                  |

- d) Procedures for demonstrating that dyes or pigments nonwastewaters are not K181 waste. The procedures described in subsections (d)(1) through (d)(3) and (d)(5) of this Section establish when nonwastewaters from the production of dyes or pigments would not be hazardous. (These procedures apply to wastes that are not disposed of in landfill units or treated in combustion units, as specified in subsection (a) of this Section). If the nonwastewaters are disposed of in landfill units or treated in combustion units as described in subsection (a) of this Section, then the nonwastewaters are not hazardous. In order to demonstrate that it is meeting the landfill disposal or combustion conditions contained in the K181 waste listing description, the generator must maintain documentation as described in subsection (d)(4) of this Section.
  - Determination based on no K181 waste constituents. A generator that has knowledge (e.g., knowledge of constituents in wastes based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed) that its waste contains none of the K181 waste constituents (see subsection (c) of this Section) can use its knowledge to determine that its waste is not K181 waste. The generator must document the basis for all such determinations on an annual basis and keep each annual documentation for three years.
  - Determination for generated quantities of 1,000 tonnes (1,000 metric tons) per year or less for wastes that contain K181 waste constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is 1,000 tonnes or less, the generator can use knowledge of the wastes (e.g., knowledge of constituents in wastes based on prior analytical data or information about raw materials used, production processes used, and reaction and degradation products formed) to conclude that annual mass

loadings for the K181 constituents are below the listing levels of subsection (c) of this Section. To make this determination, the generator must fulfill the following conditions:

- A) Each year, the generator must document the basis for determining that the annual quantity of nonwastewaters expected to be generated will be less than 1,000 tonnes;
- B) The generator must track the actual quantity of nonwastewaters generated from January 1 through December 31 of each calendar year. If, at any time within the year, the actual waste quantity exceeds 1,000 tonnes, the generator must comply with the requirements of subsection (d)(3) of this Section for the remainder of that calendar year;
- C) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year; and
- D) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations were made:
  - i) The quantity of dyes or pigments nonwastewaters generated;
  - ii) The relevant process information used; and
  - iii) The calculations performed to determine annual total mass loadings for each K181 waste constituent in the nonwastewaters during the year.
- 3) Determination for generated quantities greater than 1,000 tonnes per year for wastes that contain K181 constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is greater than 1,000 tonnes, the generator must perform each of the following steps in order to make a determination that its waste is not K181 waste:
  - A) The generator must determine which K181 waste constituents (see subsection (c) of this Section) are reasonably expected to be present in the wastes based on knowledge of the wastes (e.g., based

on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed);

- B) If 1,2-phenylenediamine is present in the wastes, the generator can use either knowledge of the wastes or sampling and analysis procedures to determine the level of this constituent in the wastes. For determinations based on use of knowledge of the wastes, the generator must comply with the procedures for using knowledge of the wastes described in subsection (d)(2) of this Section and keep the records described in subsection (d)(2)(D) of this Section. For determinations based on sampling and analysis, the generator must comply with the sampling and analysis and recordkeeping requirements described in subsection (d)(3)(C) of this Section;
- C) The generator must develop a waste sampling and analysis plan (or modify an existing plan) to collect and analyze representative waste samples for the K181 waste constituents reasonably expected to be present in the wastes. At a minimum, the plan must include the following elements:
  - i) A discussion of the number of samples needed to characterize the wastes fully:
  - ii) The planned sample collection method to obtain representative waste samples;
  - iii) A discussion of how the sampling plan accounts for potential temporal and spatial variability of the wastes; and
  - iv) A detailed description of the test methods to be used, including sample preparation, clean up (if necessary), and determinative methods;
- D) The generator must collect and analyze samples in accordance with the waste sampling and analysis plan, and the plan must fulfill the following requirements:
  - i) The sampling and analysis must be unbiased, precise, and representative of the wastes; and

- ii) The analytical measurements must be sufficiently sensitive, accurate, and precise to support any claim that the constituent mass loadings are below the listing levels of subsection (c) of this Section;
- E) The generator must record the analytical results;
- F) The generator must record the waste quantity represented by the sampling and analysis results;
- G) The genrator must calculate constituent-specific mass loadings (product of concentrations and waste quantity);
- H) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year;
- I) The generator must determine whether the mass of any of the K181 waste constituents listed in subsection (c) of this Section generated between January 1 and December 31 of any calendar year is below the K181 waste listing levels;
- J) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations are made:
  - i) The sampling and analysis plan;
  - ii) The sampling and analysis results (including quality assurance or quality control data);
  - iii) The quantity of dyes or pigments nonwastewaters generated; and
  - iv) The calculations performed to determine annual mass loadings; and
- K) The generator must conduct non-hazardous waste determinations annually to verify that the wastes remain non-hazardous.

- i) The annual testing requirements are suspended after three consecutive successful annual demonstrations that the wastes are non-hazardous. The generator can then use knowledge of the wastes to support subsequent annual determinations.
- ii) The annual testing requirements are reinstated if the manufacturing or waste treatment processes generating the wastes are significantly altered, resulting in an increase of the potential for the wastes to exceed the listing levels.
- iii) If the annual testing requirements are suspended, the generator must keep records of the process knowledge information used to support a non-hazardous determination. If testing is reinstated, the generator must retain a description of the process change.
- 4) Recordkeeping for the landfill disposal and combustion exemptions. For the purposes of meeting the landfill disposal and combustion condition set out in the K181 waste listing description in subsection (a) of this Section, the generator must maintain on site for three years documentation demonstrating that each shipment of waste was received by a landfill unit that is subject to or which meets the landfill design standards set out in the listing description or that the waste was treated in combustion units, as specified in the listing description in subsection (a) of this Section.
- Waste holding and handling. During the interim period, from the point of generation to completion of the hazardous waste determination, the generator must store the wastes appropriately. If the wastes are determined to be hazardous and the generator has not complied with the hazardous waste storage requirements of 35 Ill. Adm. Code 722.134 during the interim period, the generator could be subject to an enforcement action for improper hazardous waste management.

## Section 721. Appendix A 721. APPENDIX A Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, are considered by USEPA to be representative of the waste.

| considered by USEPA to be representative of the waste.                                                                                                                                              |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Extremely viscous liquid: ASTM D 140 = 70 (Standard Practice for Sampling Bituminous Materials), incorporated by reference in 35 Ill. Adm. Code 720.111(a).                                         |

| Facility Address                                                                        | Waste Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Amoco Oil Company<br>Wood River,<br>Illinois                                            | 150 million gallons of DAF float from petroleum refining contained in four surge ponds after treatment with the Chemfix stabilization process. This waste contains USEPA hazardous waste number K048. This exclusion applies to the 150 million gallons of waste after chemical stabilization as long as the mixing ratios of the reagent with the waste are monitored continuously and do not vary outside of the limits presented in the demonstration samples and one grab sample is taken each hour from each treatment unit, composited, and TCLP tests performed on each sample. If the levels of lead or total chromium exceed 0.5 ppm in the EP extract, then the waste that was processed during the compositing period is considered hazardous; the treatment residue must be pumped into bermed cells to ensure that the waste is identifiable in the event that removal is necessary. |
|                                                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Conversion Systems, Inc.<br>Horsham, Pennsylvania<br>(Sterling, Illinois<br>operations) | Chemically stabilized electric arc furnace dust (CSEAFD) that is generated by Conversion Systems, Inc. (CSI) (using the Super Detox® treatment process, as modified by CSI to treat electric arc furnace dust (EAFD) (USEPA hazardous waste no. K061)), at the following site and which is disposed of in a RCRA Subtitle D municipal solid waste landfill (MSWLF): Northwestern Steel, Sterling, Illinois.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                                                                                         | CSI must implement a testing program for each site that meets the following conditions:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                                                                                         | Verification testing requirements: Sample collection and analyses, including quality control procedures, must be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

performed using appropriate methods. As applicable to the method-defined parameters of concern, analyses requiring the use of methods in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a), must be used without substitution. As applicable, the EPA-530/SW-846 methods might include Methods 0010, 0011, 0020, 0023A, 0030, 0031, 0040, 0050, 0051, 0060, 0061, 1010A, 1020B, 1110A, 1310B, 1311, 1312, 1320, 1330A, 9010C, 9012B, 9040C, 9045D, 9060A, 9070A (uses USEPA Method 1664, Rev. A), 9071B, and 9095B.

- A. Initial verification testing: During the first 20 days of full-scale operation of a newly-constructed Super Detox® treatment facility, CSI must analyze a minimum of four composite samples of CSEAFD representative of the full 20-day period. Composite samples must be composed of representative samples collected from every batch generated. The CSEAFD samples must be analyzed for the constituents listed in condition 3 below. CSI must report the operational and analytical test data, including quality control information, obtained during this initial period no later than 60 days after the generation of the first batch of CSEAFD.
- B. Addition of new Super Detox® treatment facilities to the exclusion:

Option 1: If USEPA approves additional facilities, CSI may petition the Board for identical-in substance amendment of this exclusion pursuant to Section 22.4 for the Act and 35 Ill. Adm. Code 102 and 720.120(a), or

Option 2: If USEPA has not approved such amendment, CSI may petition the Board for amendment pursuant to the general rulemaking procedures of Section 27 of the Act and 35 Ill. Adm. Code 102 and 720.120(b); or

Option 3: Alternatively to options 1 or 2 above, CSI may petition the Board for a hazardous waste delisting pursuant to Section 28.1 of the Act and Subpart D of 35 Ill. Adm. Code 104 and 35 Ill. Adm. Code 720.122.

If CSI pursues general rulemaking (option 2 above) or hazardous waste delisting (option 3 above), it must demonstrate that the CSEAFD generated by a specific Super Detox® treatment facility consistently meets the delisting levels specified in condition 3 below.

- C. Subsequent verification testing: For the approved facility, CSI must collect and analyze at least one composite sample of CSEAFD each month. The composite samples must be composed of representative samples collected from all batches treated in each month. These monthly representative samples must be analyzed, prior to the disposal of the CSEAFD, for the constituents listed in condition 3 below. CSI may, at its discretion, analyze composite samples gathered more frequently to demonstrate that smaller batches of waste are non-hazardous.
- 2. Waste holding and handling: CSI must store as hazardous all CSEAFD generated until verification testing, as specified in condition 1A or 1C above, as appropriate, is completed and valid analyses demonstrate that condition 3 below is satisfied. If the levels of constituents measured in the samples of CSEAFD do not exceed the levels set forth in condition 3, then the CSEAFD is non-hazardous and may be disposed of in a RCRA Subtitle D municipal solid waste landfill. If constituent levels in a sample exceed any of the delisting levels set forth in condition 3 below, the CSEAFD generated during the time period corresponding to this sample must be retreated until it meets these levels or managed and disposed of as hazardous waste, in accordance with 35 Ill. Adm. Code 702 through 705, 720 through 728, 733, 738, and 739. CSEAFD generated by a new CSI treatment facility must be managed as a hazardous waste

prior to the addition of the name and location of the facility to this exclusion pursuant to condition 1C above. After addition of the new facility to the exclusion pursuant to condition 1B above, CSEAFD generated during the verification testing in condition 1A is also non-hazardous if the delisting levels in condition 3 are satisfied.

- 4. Changes in operating conditions: After initiating subsequent testing, as described in condition 1C, if CSI significantly changes the stabilization process established pursuant to condition 1 (e.g., use of new stabilization reagents), CSI must seek amendment of this exclusion using one of the options set forth in condition 1B above. After written amendment of this exclusion, CSI may manage CSEAFD wastes generated from the new process as non-hazardous if the wastes meet the delisting levels set forth in condition 3 above.
- 5. Data submittals: At least one month prior to operation of a new Super Detox® treatment facility, CSI must notify the Agency in writing when the Super Detox® treatment facility is scheduled to be on-line. The data obtained through condition 1A must be submitted to the Agency within the time period specified. Records of operating conditions and analytical data from condition 1 must be compiled, summarized, and maintained on site for a minimum of five years. These records and data must be furnished to the Agency upon request and made available for inspection. Failure to submit the required data within the specified time period or to maintain the required records on site for the

specified time will be considered a violation of the Act and Board regulations. All data submitted must be accompanied by a signed copy of the following certification statement to attest to the truth and accuracy of the data submitted:

"Under civil and criminal penalty of law for the making or submission of false or fraudulent statements or representations, I certify that the information contained in or accompanying this document is true, accurate, and complete.

As to (those) identified section(s) of this document for which I cannot personally verify its (their) truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate, and complete.

the Board or a court of law to be false, inaccurate, or incomplete, and upon conveyance of this fact to the company, I recognize and agree that this exclusion of waste will be void as if it never had effect or to the extent directed by the Board or court and that the company will be liable for any actions taken in contravention of the company 's obligations under the federal RCRA and Comprehensive Environmental Response, Compensation and Liability Act (42 USC 9601 et seq.) and corresponding provisions of the Act premised upon the company's reliance on the void exclusion.<sup>221</sup>

BOARD NOTE: The obligations of this exclusion are derived from but also distinct from the obligations under the corresponding federally-granted exclusion of table 2 of appendix IX to 40 CFR 261.

# Section 721.Appendix I 721.APPENDIX I Wastes Excluded by Administrative Action

## Table D Section 721. TABLE D Wastes Excluded by the Board by Adjusted Standard

The Board has entered the following orders on petitions for adjusted standards for delisting, pursuant to 35 Ill. Adm. Code 720.122.

- AS91-1 Petition of Keystone Steel and Wire Co. for Hazardous Waste Delisting, February 6, 1992, and modified at 133 PCB-189, April 23, 1992. (Treated K061 waste)
- AS 91-1 Petition of Keystone Steel & Wire Co. for Hazardous Waste Delisting, AS 91-1 (Feb. 6, 1992 and Apr. 23, 1992). (Chemically stabilized electric arc furnace dust (K061 waste).)
- AS91-3 Petition of Peoria Disposal Co. for an Adjusted Standard from Subpart D of 35 Ill. Adm. Code 721, February 6 and March 11, 1993. (Treated F006 waste)
- AS 91.3 Petition of Peoria Disposal Company for an Adjusted Standard from 35 Ill.

  Adm. Code 721.Subpart D, AS 91-3 (Feb. 4, 1993 and Mar. 11, 1993).

  (Chemically stabilized wastewater treatment sludges from electroplating, anodizing, chemical milling and etching, and circuit board manufacturing (F006 waste).)
- AS93-7 Petition of Keystone Steel & Wire Co. for an Adjusted Standard from Subpart D of 35 Ill. Adm. Code 721, February 17, 1994, as modified March 17, 1994. (Treated K062 waste)
- AS 93-7 Petition of Keystone Steel & Wire Company for an Adjusted Standard from 35 Ill. Adm. Code 721.132, AS 93-7 (Feb. 17, 1994, Mar. 17, 1994, and Dec. 14, 1994). (Chemically stabilized waste pickling liquor (K062 waste).)
- AS94-10 Petition of Envirite Corporation for an Adjusted Standard from Subpart Dof 35 III. Adm. Code 721, December 14, 1994, as modified on February 16, 1995. (Treated F006, F007, F008, F009, F011, F012, F019, K002, K003, K004, K005, K006, K007, K008, and K062 wastes)

- AS 94-10 Petition of Envirite Corporation for an Adjusted Standard from 35 Ill. Adm.

  Code 721.Subpart D. AS 94-10 (Dec. 14, 1994 and Feb. 16, 1995). (Sludge from the treatment of multiple hazardous wastes (F006, F007, F008, F009, F011, F012, F019, K002, K003, K004, K005, K006, K007, K008, and K062-wastes).)

  AS 91-1. Petition of Kaystone Steel & Wire Co. for Hazardous Waste Delisting. A
- AS 91-1

  Petition of Keystone Steel & Wire Co. for Hazardous Waste Delisting, AS 91-1 (Feb. 6, 1992 and Apr. 23, 1992). (Chemically stabilized electric arc furnace dust (K061 waste).)
- AS 91-3

  Petition of Peoria Disposal Company for an Adjusted Standard from 35 Ill.

  Adm. Code 721.Subpart D. AS 91-3 (Feb. 4, 1993 and Mar. 11, 1993).

  (Chemically stabilized wastewater treatment sludges from electroplating, anodizing, chemical milling and etching, and circuit board manufacturing (F006 waste).)
- AS 93-7

  Petition of Keystone Steel & Wire Company for an Adjusted Standard from 35 Ill. Am. Code 721.132, AS 93-7 (Feb. 17, 1994, Mar. 17, 1994, and Dec. 14, 1994). (Chemically stabilized waste pickling liquor (K062 waste).)
- AS 94-10

  Petition of Envirite Corporation for an Adjusted Standard from 35 Ill.

  Adm. Code 721.Subpart D. AS 94-10 (Dec. 14, 1994 and Feb. 16, 1995).

  (Sludge from the treatment of multiple hazardous wastes (F006, F007, F008, F009, F011, F012, F019, K002, K003, K004, K005, K006, K007, K008, and K062 wastes).)

Organic Chemicals Production Wastes:  Distillation bottoms from the production of acetaldehyde from ethylene. Distillation side cuts from the production of acetaldehyde from ethylene. Bottom stream from the wastewater stripper in the production of acrylonitrile. Bottom stream from the acetonitrile column in the production of acrylonitrile. Bottoms from the acetonitrile purification column in the production of acrylonitrile. Still bottoms from the distillation of benzyl chloride. Heavy ends or distillation residues from the production of carbon tetrachloride. Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin. Heavy ends from the fractionation column in ethyl chloride production. Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production. Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production. Aqueous spent antimony catalyst waste from fluoromethanes production. Distillation bottom tars from the production of phenol/acetone from cumene. Distillation light ends from the production of phthalic anhydride from naphthalene. Distillation bittoms from the production of phthalic anhydride from ortho-xylene. Distillation bottoms from the production of phthalic anhydride from ortho-xylene. Distillation bottoms from the production of phthalic anhydride from ortho-xylene. Distillation bottoms from the production of phthalic anhydride from ortho-xylene. |

| Stripping still tails from the production of methyl ethyl pyridines | (T)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                                                                     | methyl ethyl pyridines. Centrifuge and distillation residues from toluene diisocyanate production. Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane. Waste from the product stream stripper in the production of 1,1,1-trichloroethane. Distillation bottoms from the production of 1,1,1-trichloroethane. Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane. Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene. Distillation bottoms from aniline production. Process residues from aniline extraction from the production of aniline. Combined wastewater streams generated from nitrobenzene/aniline production. Distillation or fractionation column bottoms from the production of chlorobenzenes. Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes. Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. Spent filter cartridges from the product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides. |

| K161 | Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust, and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | (R, T) |
| K174 | Wastewater treatment sludges from the production of ethylene dichloride or vinyl chloride monomer (including sludges that result from commingled ethylene dichloride or vinyl chloride monomer wastewater and other wastewater), unless the sludges meet the following conditions: (1) the sludges are disposed of in a RCRA Subtitle C (42 USC 6921-6939e) or non-hazardous landfill licensed or permitted by a state or the federal government; (2) the sludges are not otherwise placed on the land prior to final disposal; and (3) the generator maintains documentation demonstrating that the waste was either disposed of in an on-site landfill or consigned to a transporter or disposal facility that provided a written commitment to dispose of the waste in an off-site landfill. Upon a showing by the government that a respondent in any enforcement action brought to enforce the requirements of Subtitle C of this Part managed wastewater treatment sludges from the production of vinyl chloride monomer or ethylene dichloride, the respondent must demonstrate that it meets the conditions of the exclusion that are set forth above. In doing so, the respondent must provide appropriate documentation that the terms of the exclusion were met (e.g., contracts between the generator and the landfill owner or operator, invoices documenting delivery of waste to landfill, etc.). | (T)    |
| K175 | Wastewater treatment sludges from the production of vinyl chloride monomer using mercuric chloride catalyst in an acetylene-based process.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | (T)    |

| K071 | Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.                                                                                                                                                                                                                                                                                                                                                                                          | (T) |
| K073 | Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.                                                                                                                                                                                                                                                                                                                                                                                   | (T) |
| K106 | Wastewater treatment sludge from the mercury cell process in chlorine production.                                                                                                                                                                                                                                                                                                                                                                                                                                      | (T) |
| K176 | Baghouse filters from the production of antimony oxide, including filters from the production of intermediates (e.g., antimony metal or crude antimony oxide).                                                                                                                                                                                                                                                                                                                                                         | (E) |
| K177 | Slag from the production of antimony oxide that is speculatively accumulated or disposed of, including slag from the production of intermediates (e.g., antimony metal or crude antimony oxide).                                                                                                                                                                                                                                                                                                                       | (T) |
| K178 | Residues from manufacturing and manufacturing-site storage of ferric chloride from acids formed during the production of titanium dioxide using the chloride-ilmenite process.                                                                                                                                                                                                                                                                                                                                         | (T) |
| K181 | Nonwastewaters from the production of dyes or pigments (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass loadings of any of the constituents identified in subsection (c) of this Section that are equal to or greater than the corresponding subsection (c) levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are managed in one of the following ways: | (T) |

- 1) They are disposed of in a municipal solid waste landfill unit that is subject to the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402;
- 2) They are disposed of in a hazardous waste landfill unit that is subject to either 35 Ill. Adm. Code 724.401 or 725.401;
- 3) They are disposed of in other municipal solid waste landfill units that meet the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402, 35 Ill. Adm. Code 724.401, or 35 Ill. Adm. Code 725.401; or
- 4) They are treated in a combustion unit that is permitted under 415 ILCS 5/39(d), or an onsite combustion unit that is permitted under 415 ILCS 5/39.5.

For the purposes of this listing, dyes or pigments production is defined in subsection (b)(1) of this Section. Subsection (d) of this Section describes the process for demonstrating that a facility's nonwastewaters are not K181 waste. This listing does not apply to wastes that are otherwise identified as hazardous under Sections 721.121 through 721.124 and 721.131 through 721.133 at the point of generation. Also, the listing does not apply to wastes generated before any annual mass loading limit is met, as set forth in subsection (c) of this Section.

#### Pesticides Production Wastes:

By-product salts generated in the production of MSMA and cacodylic acid. (T)

| K032 | Wastewater treatment sludge from the                                                                                                      | (T)    |
|------|-------------------------------------------------------------------------------------------------------------------------------------------|--------|
| K033 | production of chlordane.  Wastewater and scrub water from the chlorination of cyclopentadiene in the                                      | (T)    |
| K034 | production of chlordane. Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.                   | (T)    |
| K097 | Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.                                                  | (T)    |
| K035 | Wastewater treatment sludges generated in the production of creosote.                                                                     | (T)    |
| K036 | Still bottoms from toluene reclamation distillation in the production of disulfoton.                                                      | (T)    |
| K037 | Wastewater treatment sludges from the production of disulfoton.                                                                           | (T)    |
| K038 | Wastewater from the washing and stripping of phorate production.                                                                          | (T)    |
| K039 | Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.                                            | (T)    |
| K040 | Wastewater treatment sludge from the production of phorate.                                                                               | (T)    |
| K041 | Wastewater treatment sludge from the production of toxaphene.                                                                             | (T)    |
| K098 | Untreated process wastewater from the production of toxaphene.                                                                            | (T)    |
| K042 | Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.                             | (T)    |
| K043 | 2,6-Dichlorophenol waste from the production of 2,4-D.                                                                                    | (T)    |
| K099 | Untreated wastewater from the production of 2,4-D.                                                                                        | (T)    |
| K123 | Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts. | (T)    |
| K124 | Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.                                          | (C, T) |
| K125 | Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.                   | (T)    |

|     | K126 | Baghouse dust and floor sweepings in milling<br>and packaging operations from the production or<br>formulation of ethylenebisdithiocarbamic acid<br>and its salts.                               | (T)    |
|-----|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
|     | K131 | Wastewater from the reactor and spent sulfuric acid from the acid dryer from the production of methyl bromide.                                                                                   | (C, T) |
|     | K132 | Spent absorbent and wastewater separator solids from the production of methyl bromide.                                                                                                           | (T)    |
| 164 |      |                                                                                                                                                                                                  |        |
| 165 |      | Explosives Production Wastes:                                                                                                                                                                    |        |
| 166 |      |                                                                                                                                                                                                  |        |
|     | K044 | Wastewater treatment sludges from the manufacturing and processing of explosives.                                                                                                                | (R)    |
|     | K045 | Spent carbon from the treatment of wastewater containing explosives.                                                                                                                             | (R)    |
|     | K046 | Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds.                                                                                 | (T)    |
|     | K047 | Pink/red water from TNT operations.                                                                                                                                                              | (R)    |
| 167 |      |                                                                                                                                                                                                  |        |
| 168 |      | Petroleum Refining Wastes:                                                                                                                                                                       |        |
| 169 |      |                                                                                                                                                                                                  |        |
|     | K048 | Dissolved air flotation (DAF) float from the petroleum refining industry.                                                                                                                        | (T)    |
|     | K049 | Slop oil emulsion solids from the petroleum refining industry.                                                                                                                                   | (T)    |
|     | K050 | Heat exchanger bundle cleaning sludge from the petroleum refining industry.                                                                                                                      | (T)    |
|     | K051 | API separator sludge from the petroleum refining industry.                                                                                                                                       | (T)    |
|     | K052 | Tank bottoms (leaded) from the petroleum refining industry.                                                                                                                                      | (T)    |
|     | K169 | Crude oil storage tank sediment from petroleum                                                                                                                                                   | (T)    |

|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| K149 | Distillation bottoms from the production of $\alpha$ - (or methyl-) chlorinated toluenes, ring- chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (This waste does not include still bottoms from the distillation of benzyl chloride.)                          | (T) |
| K150 | Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of $\alpha$ - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. | (T) |
| K151 | Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of $\alpha$ - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups.         | (T) |

b) Listing-specific definition: For the purposes of the K181 hazardous waste listing in subsection (a) of this Section, "dyes or pigments production" includes manufacture of the following product classes: dyes, pigments, and FDA-certified colors that are in the azo, triarylmethane, perylene, and anthraquinone classes. Azo products include azo, monoazo, diazo, triazo, polyazo, azoic, benzidine, and pyrazolone products. Triarylmethane products include both triarylmethane and triphenylmethane products. Wastes that are not generated at a dyes or pigments manufacturing site, such as wastes from the offsite use, formulation, and packaging of dyes or pigments, are not included in the K181 listing.

c) K181 listing levels. Nonwastewaters containing constituents in amounts equal to or exceeding the following levels during any calendar year are subject to the K181 hazardous waste listing in subsection (a) of this Section, unless the conditions in the K181 hazardous waste listing are met:

| Constituent     | Chemical<br>Abstracts No. | Mass Levels<br>(kg/yr) |
|-----------------|---------------------------|------------------------|
| Aniline         | 62-53-3                   | 9,300                  |
| o-Anisidine     | 90-04-0                   | 110                    |
| 4-Chloroaniline | 106-47-8                  | 4,800                  |

| p-Cresidine          | 120-71-8 | 660   |
|----------------------|----------|-------|
| 2,4-Dimethylaniline  | 95-68-1  | 100   |
| 1,2-Phenylenediamine | 95-54-5  | 710   |
| 1,3-Phenylenediamine | 108-45-2 | 1,200 |

d) Procedures for demonstrating that dyes or pigments nonwastewaters are not K181 waste. The procedures described in subsections (d)(1) through (d)(3) and (d)(5) of this Section establish when nonwastewaters from the production of dyes or pigments would not be hazardous. (These procedures apply to wastes that are not disposed of in landfill units or treated in combustion units, as specified in subsection (a) of this Section). If the nonwastewaters are disposed of in landfill units or treated in combustion units as described in subsection (a) of this Section, then the nonwastewaters are not hazardous. In order to demonstrate that it is meeting the landfill disposal or combustion conditions contained in the K181 waste listing description, the generator must maintain documentation as described in subsection (d)(4) of this Section.

Determination based on no K181 waste constituents. A generator that has knowledge (e.g., knowledge of constituents in wastes based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed) that its waste contains none of the K181 waste constituents (see subsection (c) of this Section) can use its knowledge to determine that its waste is not K181 waste. The generator must document the basis for all such determinations on an annual basis and keep each annual documentation for three years.

Determination for generated quantities of 1,000 tonnes (1,000 metric tons) per year or less for wastes that contain K181 waste constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is 1,000 tonnes or less, the generator can use knowledge of the wastes (e.g., knowledge of constituents in wastes based on prior analytical data or information about raw materials used, production processes used, and reaction and degradation products formed) to conclude that annual mass loadings for the K181 constituents are below the listing levels of subsection (c) of this Section. To make this determination, the generator must fulfill the following conditions:

A) Each year, the generator must document the basis for determining that the annual quantity of nonwastewaters expected to be generated will be less than 1,000 tonnes;

| 247<br>248<br>249<br>250<br>251<br>252<br>253 |    | B)     | genera<br>year.<br>exceed<br>require | enerator must track the actual quantity of nonwastewaters ated from January 1 through December 31 of each calendar If, at any time within the year, the actual waste quantity is 1,000 tonnes, the generator must comply with the ements of subsection (d)(3) of this Section for the remainder calendar year; |

- H) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year;
- I) The generator must determine whether the mass of any of the K181 waste constituents listed in subsection (c) of this Section generated between January 1 and December 31 of any calendar year is below the K181 waste listing levels;
- J) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations are made:
  - i) The sampling and analysis plan;
  - ii) The sampling and analysis results (including quality assurance or quality control data);
  - iii) The quantity of dyes or pigments nonwastewaters generated; and
  - iv) The calculations performed to determine annual mass loadings; and
- K) The generator must conduct non-hazardous waste determinations annually to verify that the wastes remain non-hazardous.
  - The annual testing requirements are suspended after three consecutive successful annual demonstrations that the wastes are non-hazardous. The generator can then use knowledge of the wastes to support subsequent annual determinations.
  - ii) The annual testing requirements are reinstated if the manufacturing or waste treatment processes generating the wastes are significantly altered, resulting in an increase of the potential for the wastes to exceed the listing levels.
  - iii) If the annual testing requirements are suspended, the generator must keep records of the process knowledge information used to support a non-hazardous determination. If testing is reinstated, the generator must retain a description of the process change.

| 376 | 4)          | Recordkeeping for the landfill disposal and combustion exemptions. For         |
|-----|-------------|--------------------------------------------------------------------------------|
| 377 |             | the purposes of meeting the landfill disposal and combustion condition set     |
| 378 |             | out in the K181 waste listing description in subsection (a) of this Section,   |
| 379 |             | the generator must maintain on site for three years documentation              |
| 380 |             | demonstrating that each shipment of waste was received by a landfill unit      |
| 381 |             | that is subject to or which meets the landfill design standards set out in the |
| 382 |             | listing description or that the waste was treated in combustion units, as      |
| 383 |             | specified in the listing description in subsection (a) of this Section.        |
| 384 |             |                                                                                |
| 385 | 5)          | Waste holding and handling. During the interim period, from the point of       |
| 386 |             | generation to completion of the hazardous waste determination, the             |
| 387 |             | generator must store the wastes appropriately. If the wastes are               |
| 388 |             | determined to be hazardous and the generator has not complied with the         |
| 389 |             | hazardous waste storage requirements of 35 Ill. Adm. Code 722.134              |
| 390 |             | during the interim period, the generator could be subject to an enforcement    |
| 391 |             | action for improper hazardous waste management.                                |
| 392 |             |                                                                                |
| 393 | (Source: Am | ended at 37 Ill. Reg, effective)                                               |

435 Section 721. APPENDIXAppendix I Wastes Excluded by 436

Administrative Action

437 438

Section 721.TABLE<del>Table</del> B Wastes Excluded by USEPA pursuant to 40 CFR 260.20 and 260.22 from Specific Sources

439 440

#### Facility Address

#### Waste Description

#### Amoco Oil Company Wood River, Illinois

150 million gallons of DAF float from petroleum refining contained in four surge ponds after treatment with the Chemfix stabilization process. This waste contains USEPA hazardous waste number K048. This exclusion applies to the 150 million gallons of waste after chemical stabilization as long as the mixing ratios of the reagent with the waste are monitored continuously and do not vary outside of the limits presented in the demonstration samples and one grab sample is taken each hour from each treatment unit, composited, and TCLP tests performed on each sample. If the levels of lead or total chromium exceed 0.5 ppm in the EP extract, then the waste that was processed during the compositing period is considered hazardous; the treatment residue must be pumped into bermed cells to ensure that the waste is identifiable in the event that removal is necessary.

Conversion Systems, Inc. Horsham, Pennsylvania (Sterling, Illinois operations)

Chemically stabilized electric arc furnace dust (CSEAFD) that is generated by Conversion Systems, Inc. (CSI) (using the Super Detox<sup>®</sup> treatment process, as modified by CSI to treat electric arc furnace dust (EAFD) (USEPA hazardous waste no. K061)), at the following site and which is disposed of in a RCRA Subtitle D municipal solid waste landfill (MSWLF): Northwestern Steel, Sterling, Illinois.

CSI must implement a testing program for each site that meets the following conditions:

1. Verification testing requirements: Sample collection and analyses, including quality control procedures, must be performed using appropriate methods. As applicable to the method-defined parameters of concern, analyses requiring the use of methods in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," USEPA publication number EPA-530/SW-846,incorporated by reference in 35 Ill. Adm. Code 720.111(a), must be used without

substitution. As applicable, the EPA-530/SW-846 methods might include Methods 0010, 0011, 0020, 0023A, 0030, 0031, 0040, 0050, 0051, 0060, 0061, 1010A, 1020B, 1110A, 1310B, 1311, 1312, 1320, 1330A, 9010C, 9012B, 9040C, 9045D, 9060A, 9070A (uses USEPA Method 1664, Rev. A), 9071B, and 9095B.

- A. Initial verification testing: During the first 20 days of full-scale operation of a newly-constructed Super Detox® treatment facility, CSI must analyze a minimum of four composite samples of CSEAFD representative of the full 20-day period. Composite samples must be composed of representative samples collected from every batch generated. The CSEAFD samples must be analyzed for the constituents listed in condition 3 below. CSI must report the operational and analytical test data, including quality control information, obtained during this initial period no later than 60 days after the generation of the first batch of CSEAFD.
- B. Addition of new Super Detox® treatment facilities to the exclusion:

Option 1: If USEPA approves additional facilities, CSI may petition the Board for identical-in substance amendment of this exclusion pursuant to Section 22.4 for the Act and 35 Ill. Adm. Code 102 and 720.120(a), or

Option 2: If USEPA has not approved such amendment, CSI may petition the Board for amendment pursuant to the general rulemaking procedures of Section 27 of the Act and 35 Ill. Adm. Code 102 and 720.120(b); or

Option 3: Alternatively to options 1 or 2 above, CSI may petition the Board for a hazardous waste delisting pursuant to Section 28.1 of the Act and Subpart D of 35 Ill. Adm. Code 104 and 35 Ill. Adm. Code 720.122.

If CSI pursues general rulemaking (option 2 above) or hazardous waste delisting (option 3 above), it must demonstrate that the CSEAFD generated by a specific

- Super Detox<sup>®</sup> treatment facility consistently meets the delisting levels specified in condition 3 below.
- C. Subsequent verification testing: For the approved facility, CSI must collect and analyze at least one composite sample of CSEAFD each month. The composite samples must be composed of representative samples collected from all batches treated in each month. These monthly representative samples must be analyzed, prior to the disposal of the CSEAFD, for the constituents listed in condition 3 below. CSI may, at its discretion, analyze composite samples gathered more frequently to demonstrate that smaller batches of waste are non-hazardous.
- 2. Waste holding and handling: CSI must store as hazardous all CSEAFD generated until verification testing, as specified in condition 1A or 1C above, as appropriate, is completed and valid analyses demonstrate that condition 3 below is satisfied. If the levels of constituents measured in the samples of CSEAFD do not exceed the levels set forth in condition 3, then the CSEAFD is non-hazardous and may be disposed of in a RCRA Subtitle D municipal solid waste landfill. If constituent levels in a sample exceed any of the delisting levels set forth in condition 3 below, the CSEAFD generated during the time period corresponding to this sample must be retreated until it meets these levels or managed and disposed of as hazardous waste, in accordance with 35 Ill. Adm. Code 702 through 705, 720 through 728, 733, 738, and 739. CSEAFD generated by a new CSI treatment facility must be managed as a hazardous waste prior to the addition of the name and location of the facility to this exclusion pursuant to condition 1C above. After addition of the new facility to the exclusion pursuant to condition 1B above, CSEAFD generated during the verification testing in condition 1A is also non-hazardous if the delisting levels in condition 3 are satisfied.
- 3. Delisting levels: All leachable concentrations for metals must not exceed the following levels (in parts per million (ppm)): antimony 0.06; arsenic 0.50; barium 7.6; beryllium 0.010; cadmium 0.050; chromium 0.33; lead 0.15; mercury 0.009; nickel 1; selenium 0.16;

silver – 0.30; thallium – 0.020; vanadium – 2; and zinc – 70. Metal concentrations must be measured in the waste leachate by the method specified in Section 721.124.

- 4. Changes in operating conditions: After initiating subsequent testing, as described in condition 1C, if CSI significantly changes the stabilization process established pursuant to condition 1 (e.g., use of new stabilization reagents), CSI must seek amendment of this exclusion using one of the options set forth in condition 1B above. After written amendment of this exclusion, CSI may manage CSEAFD wastes generated from the new process as non-hazardous if the wastes meet the delisting levels set forth in condition 3 above.
- 5. Data submittals: At least one month prior to operation of a new Super Detox® treatment facility, CSI must notify the Agency in writing when the Super Detox® treatment facility is scheduled to be on-line. The data obtained through condition 1A must be submitted to the Agency within the time period specified. Records of operating conditions and analytical data from condition 1 must be compiled, summarized, and maintained on site for a minimum of five years. These records and data must be furnished to the Agency upon request and made available for inspection. Failure to submit the required data within the specified time period or to maintain the required records on site for the specified time will be considered a violation of the Act and Board regulations. All data submitted must be accompanied by a signed copy of the following certification statement to attest to the truth and accuracy of the data submitted:

"Under civil and criminal penalty of law for the making or submission of false or fraudulent statements or representations, I certify that the information contained in or accompanying this document is true, accurate, and complete.

"As to (those) identified section(s) of this document for which I cannot personally verify its (their) truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under

my direct instructions, made the verification that this information is true, accurate, and complete.

"In the event that any of this information is determined by the Board or a court of law to be false, inaccurate, or incomplete, and upon conveyance of this fact to the company, I recognize and agree that this exclusion of waste will be void as if it never had effect or to the extent directed by the Board or court and that the company will be liable for any actions taken in contravention of the company's obligations under the federal RCRA and Comprehensive Environmental Response, Compensation and Liability Act (42 USC 9601 et seq.) and corresponding provisions of the Act premised upon the company's reliance on the void exclusion."

BOARD NOTE: The obligations of this exclusion are derived from but also distinct from the obligations under the corresponding federally-granted exclusion of table 2 of appendix IX to 40 CFR 261.
