Illinois Pollution Control Board

Dear Pollution Control Board,

I am writing in support of the Illinois Pollution Control Board's proposed rule on factory farms.

Pollution from factory farms, like animal waste and chemicals, threatens the rivers and streams we love and depend on. That's why I fully support the IPCB's proposal to:

- Ban manure spreading practices that threaten our rivers, streams, or drinking water
- Ensure the public's right to know about every factory farm operation across the state, so we know where the pollution is coming from.

Much tougher action will be needed to truly curb factory farm pollution. But these are good first steps, and I hope that you will fully support them.

Thank you for standing up for Illinois's rivers and streams.

Sincerely,

Jane Lewis
400 N Dodge St
Galena, IL 61036-1727

Illinois Pollution Control Board

Dear Pollution Control Board,

I am writing in support of the Illinois Pollution Control Board's proposed rule on factory farms.

Pollution from factory farms, like animal waste and chemicals, threatens the rivers and streams we love and depend on. That's why I fully support the IPCB's proposal to:

- Ban manure spreading practices that threaten our rivers, streams, or drinking water
- Ensure the public's right to know about every factory farm operation across the state, so we know where the pollution is coming from.

Much tougher action will be needed to truly curb factory farm pollution. But these are good first steps, and I hope that you will fully support them.

I am contacting you to ask that you please stand up to big agri business, and support the Pollution Control Board's proposed rule pertaining to factory farms.

Waste and pollution from these huge fedlot type cattle farms is a serious threat to our streams and rivers, With climate change advancing, causing higher temperatures and droughts, our sources for water are going to be even more important, so we must take prudent steps to safe guard them.

I strongly support the IPCB's proposal which will:

ban manure spreading practices which are a serious threat to our drinking water coming from our streams, rivers and lakes.

Preserve our right to know of the existence of every factory farm across the state, so that we will know where any pollution is originating.

These facilities pose a serious threat of contamination from manure and chemicals, so much stronger steps need to be taken. These, at least, are good first steps, so I hope that you will strongly support their implementation.

Thank you for standing strong to protect our waterways from feedlot contamination! It's extremely important---it's our health at stake, if we don't do this!!

Sincerely,

Kyra Shair

Chicago, IL 60601

Dear Mr. Therriault,

I'm writing in support of the rules outlined in R2012-023 and encourage the Illinois Pollution Control Board to maintain the stringent regulation of Concentrated Animal Feeding Operations.

Specific aspects of R2012-023 that must be preserved include the following:

--CAFOs lacking NPDES permits must provide the EPA with information establishing the 1) identity of their operator, 2) location, 3) number and type of livestock, 4) types of animal holding areas and 5) types and capacity of waste storage structures.

--Reducing the frequency of and tightening requirements surrounding winter application of livestock waste.

--Improving land application requirements to reduce the probability of waterway and groundwater contamination from livestock waste.

--Improving production area requirements to protect U.S. waters and institutionalize routine inspections for leaks, discharges and other problems.

--Tightening regulation of temporary manure stacks to prevent leaching into groundwater and runoff into waterways.

TO IMPROVE THESE RULES, the Pollution Control Board could insist on facility siting setbacks to increase distance from surface waters.

CAFOs dot the Illinois landscape and compromise the health of our environment and neighbors. I urge you to defend the advances achieved by these strong rules and to continue to strive for better environmental protections in the future.

Sincerely,

Kyra Shair

Specific aspects of R2012-023 that must be preserved include the following:

- CAFOs lacking NPDES permits must provide the EPA with information establishing the 1) identity of their operator, 2) location, 3) number and type of livestock, 4) types of animal holding areas and 5) types and capacity of waste storage structures.
- Reducing the frequency of and tightening requirements surrounding winter application of livestock waste.
- Improving land application requirements to reduce the probability of waterway and groundwater contamination from livestock waste.
- Improving production area requirements to protect U.S. waters and institutionalize routine inspections for leaks, discharges and other problems.
- Tightening regulation of temporary manure stacks to prevent leaching into groundwater and runoff into waterways.

TO IMPROVE THESE RULES, the Pollution Control Board could insist on facility siting setbacks to increase distance from surface waters.

CAFOs dot the Illinois landscape and compromise the health of our environment and neighbors. I urge you to defend the advances achieved by these strong rules and to continue to strive for better environmental protections in the future.

Sincerely,

david pittman

Dear Mr. Therriault,

I'm writing in support of the rules outlined in R2012-023 and encourage the Illinois Pollution Control Board to maintain the stringent regulation of Concentrated Animal Feeding Operations.

Specific aspects of R2012-023 that must be preserved include the following:

--CAFOs lacking NPDES permits must provide the EPA with information establishing the 1) identity of their operator, 2) location, 3) number and type of livestock, 4) types of animal holding areas and 5) types and capacity of waste storage structures.

--Reducing the frequency of and tightening requirements surrounding winter application of livestock waste.

--Improving land application requirements to reduce the probability of waterway and groundwater contamination from livestock waste.

--Improving production area requirements to protect U.S. waters and institutionalize routine inspections for leaks, discharges and other problems.

--Tightening regulation of temporary manure stacks to prevent leaching into groundwater and runoff into waterways.

TO IMPROVE THESE RULES, the Pollution Control Board could insist on facility siting setbacks to increase distance from surface waters.

CAFOs dot the Illinois landscape and compromise the health of our environment and neighbors. I urge you to defend the advances achieved by these strong rules and to continue to strive for better environmental protections in the future.

Sincerely,

John Koperczak

Illinois Pollution Control Board

Dear Pollution Control Board,

I am writing in support of the Illinois Pollution Control Board's proposed rule on factory farms.

Pollution from factory farms, like animal waste and chemicals, threatens the rivers and streams we love and depend on. That's why I fully support the IPCB's proposal to:

- Ban manure spreading practices that threaten our rivers, streams, or drinking water
- Ensure the public's right to know about every factory farm operation across the state, so we know where the pollution is coming from.

Much tougher action will be needed to truly curb factory farm pollution. But these are good first steps, and I hope that you will fully support them.

Thank you for standing up for Illinois's rivers and streams.

Sincerely,

Tony Menechella
