Illinois Pollution Control Board

Dear Pollution Control Board,

I am writing in support of the Illinois Pollution Control Board's proposed rule on factory farms.

Pollution from factory farms, like animal waste and chemicals, threatens the rivers and streams we love and depend on. That's why I fully support the IPCB's proposal to:

- Ban manure spreading practices that threaten our rivers, streams, or drinking water
- Ensure the public's right to know about every factory farm operation across the state, so we know where the pollution is coming from.

Much tougher action will be needed to truly curb factory farm pollution. But these are good first steps, and I hope that you will fully support them.

Thank you for standing up for Illinois's rivers and streams.

Sincerely,

Michael Yannell
4895 N Ravenswood Ave

Chicago, IL 60601

Dear Mr. Therriault,

I'm writing in support of the rules outlined in R2012-023 and encourage the Illinois Pollution Control Board to maintain the stringent regulation of Concentrated Animal Feeding Operations.

Specific aspects of R2012-023 that must be preserved include the following:

--CAFOs lacking NPDES permits must provide the EPA with information establishing the 1) identity of their operator, 2) location, 3) number and type of livestock, 4) types of animal holding areas and 5) types and capacity of waste storage structures.

--Reducing the frequency of and tightening requirements surrounding winter application of livestock waste.

--Improving land application requirements to reduce the probability of waterway and groundwater contamination from livestock waste.

--Improving production area requirements to protect U.S. waters and institutionalize routine inspections for leaks, discharges and other problems.

--Tightening regulation of temporary manure stacks to prevent leaching into groundwater and runoff into waterways.

TO IMPROVE THESE RULES, the Pollution Control Board could insist on facility siting setbacks to increase distance from surface waters.

CAFOs dot the Illinois landscape and compromise the health of our environment and neighbors. I urge you to defend the advances achieved by these strong rules and to continue to strive for better environmental protections in the future.

Sincerely,

S.A. Kips

I'm writing in support of the rules outlined in R2012-023 and encourage the Illinois Pollution Control Board to maintain the stringent regulation of Concentrated Animal Feeding Operations.

Specific aspects of R2012-023 that must be preserved include the following:

--CAFOs lacking NPDES permits must provide the EPA with information establishing the 1) identity of their operator, 2) location, 3) number and type of livestock, 4) types of animal holding areas and 5) types and capacity of waste storage structures.

--Reducing the frequency of and tightening requirements surrounding winter application of livestock waste.

--Improving land application requirements to reduce the probability of waterway and groundwater contamination from livestock waste.

--Improving production area requirements to protect U.S. waters and institutionalize routine inspections for leaks, discharges and other problems.

--Tightening regulation of temporary manure stacks to prevent leaching into groundwater and runoff into waterways.

TO IMPROVE THESE RULES, the Pollution Control Board could insist on facility siting setbacks to increase distance from surface waters.

CAFOs dot the Illinois landscape and compromise the health of our environment and neighbors. I urge you to defend the advances achieved by these strong rules and to continue to strive for better environmental protections in the future.

Sincerely,

Catherine Quigg

Illinois Pollution Control Board

Dear Pollution Control Board,

I am writing in support of the Illinois Pollution Control Board's proposed rule on factory farms.

Pollution from factory farms, like animal waste and chemicals, threatens the rivers and streams we love and depend on. That's why I fully support the IPCB's proposal to:

- Ban manure spreading practices that threaten our rivers, streams, or drinking water
- Ensure the public's right to know about every factory farm operation across the state, so we know where the pollution is coming from.

Much tougher action will be needed to truly curb factory farm pollution. But these are good first steps, and I hope that you will fully support them.

Thank you for standing up for Illinois's rivers and streams.

Sincerely,

Bill Theisen
