R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jim Hatcher

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Georgia Steward

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Michael Smith

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Melinda Elliott

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Joe Emmenegger

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Marianne Flanagan

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

John Beavers

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Steve Adler

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Carol Lachapelle

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Steven Weil

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Springfield, IL 62794-9276

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Letitia Noel

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Kathleen Sullivan

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

James Bennett

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Don Wilson

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Roberta Shick

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Bruce Gordon

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

James Macdonald

These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jennifer Humecke

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jennifer Worrell

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Bob Gendron

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

D Serrie Stern

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Sharon Warsaski

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Marcia Langlois

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

James Bonali

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

M G

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

tim rule

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Sally Weigel

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Meghan Capulong

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Diane Lang

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Linda Winn

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Donna Estes

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

william Pohl

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Ted Funn

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Scott Sebastian

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Delbert Birkner

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Gs Harden

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Paul Berland

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Valli Jo Grammer

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Sheila Mayol

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Laura M. Dini

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Daniel Juroff

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jan Hervert

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Michael Carlile

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Christy Mazrimas-Ott
