R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Mary Hanley

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Grace Hawk

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Marcia Brandt

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Savannah Hawkins

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

William Armstrong

Springfield, IL 62794-9276

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

John Szostek

These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Keri Jensen

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Alan Rider

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jonathan Mraunac

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Karen Rolison

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Melinda Stayduhar

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Michael Smith

The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Nicholas Williams

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Chris Pomeroy

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Lorri Francis

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

David Bozek

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

jeffrey sanders

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Joel Nelson

These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Ruth Mortensen

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Amalie Callahan

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Mary Yeck

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Kirk Andreas

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Rachel Whelan

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Leslie Wesolowski

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Linda Heinen

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Laura Long

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Gregory Zyvert

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Eduardo Rade

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Randy Shonkwiler

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Dan Fotopoulos

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Florence Castillo

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Marilyn Freese

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Joel Libman

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Jorge Arias

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Courtney Hughes

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Lawrence Blacik

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Christine Dionisio Bachi

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Patrick Maloney

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Annabel Lewis

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Bonnie Serone

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Laura Cynowa

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Leah Nelson

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Katie Copes

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Cindy Gelsthorpe

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Barbara Besserud

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Arthur Burzykowski

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

R2014-010PC, 35 Ill. Adm. Code 841, coal ash pond regulations

Dear Governor Rauner, Illinois EPA and Illinois Pollution Control Board Members,

Coal ash waste threatens our groundwater, rivers, lakes, health and property values around the state. For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

Penny Erickson

For years, coal power generating companies sluiced the ash left over from the burning of coal into huge waste ponds. These coal ash pits tainted with mercury, lead, arsenic and other heavy metals are often times in close proximity to neighborhoods, recreational areas, and sources of drinking water.

The State of Illinois has a moral and financial responsibility to adopt stronger rules to assure Illinoisans that coal ash will not remain a toxic legacy and a barrier to new economic development opportunities in their communities. The final federal rule and the latest proposed rule from Illinois EPA are woefully inadequate.

I ask you, Governor Rauner, to direct the Illinois EPA to implement comprehensive Illinois coal ash rules that adequately protect public health and future re-use opportunities for dozens of coal plant properties across Illinois and I ask that the IPCB support those rules. I ask this because:

+ Communities with coal ash pits deserve a state process that gives them an opportunity to have input into the plans to clean up and repurpose these toxic sites;

+ Removal of coal ash to high and dry, properly-lined landfill sites will reduce the potential for continued groundwater and surface water contamination from coal ash under a +cap and leave+ option; and

+ Corporations, not Illinois taxpayers, should be responsible for cleaning up these coal ash waste pits. Financial assurances must be required of companies with coal ash pit liabilities so that local communities do not get stuck with the bill for cleanup.

Thank you,

James Kohler
