Adopted Rule. Final Opinion and Order.

OPINION AND ORDER OF THE BOARD (by C.K. Zalewski and B.K. Carter):

The Board today adopts extensive amendments to the Illinois hazardous waste, Municipal Solid Waste Landfill (MSWLF), and underground injection control (UIC) rules. Many of the amendments are driven by USEPA amendments that occurred during the second half of 2016 and the second half of 2017. Others are non-substantive revisions and corrections that the Board finds are necessary. The Board consolidated four dockets to aid moving all amendments forward as rapidly and efficiently as possible.

The United States Environmental Protection Agency (USEPA) adopted the Generator Improvements Rule (GIR) and the Hazardous Waste Export-Import Revisions in 2016. These amendments revised every part of the federal hazardous waste rules adopted by USEPA to implement the Resource Conservation and Recovery Act (RCRA) Subtitle C, in 40 C.F.R. 148, 260 through 268, 270 through 273, and 279. The GIR also revised RCRA Subtitle D MSWLF regulations in 40 C.F.R. 258.¹ The Board reserved dockets R17-14 and R17-15 for the needed RCRA Subtitle D and RCRA Subtitle C amendments, respectively.

In 2017, USEPA set a date to implement the export provisions of the GIR and eliminated the possibility of claiming confidentiality for information on exports of used cathode ray tubes (CRTs). The Board reserved docket R18-12 for these RCRA Subtitle C revisions.

Section 22.4(a) of the Environmental Protection Act (Act) (415 ILCS 5/22.4(a) (2016)) requires the Board to adopt hazardous waste rules that are identical-in-substance to USEPA's

¹ USEPA also revised 40 C.F.R. 257, which is not part of the MSWLF rules within the Board's identical-in-substance rulemaking mandate.

RCRA Subtitle C rules. Section 22.40(a) of the Act (415 ILCS 5/22.40(a) (2016)) requires the Board to adopt MSWLF rules that are identical-in-substance to those adopted by USEPA. Both require the Board to use the identical-in-substance rulemaking procedure of Section 7.2(b) of the Act (415 ILCS 5/7.2(b) (2014)). Adopting USEPA's revised RCRA Subtitle C and Subtitle D rules will require amendments to 35 Ill. Adm. Code 702, 703, 705, 720 through 728, 733, 738, 739, 810, and 811. The Board includes non-substantive revisions and corrections that the Board finds are needed in the text of these Parts.

Section 13(c) of the Act (415 ILCS 5/13(c) (2016)) requires the Board to adopt UIC rules that are identical-in-substance to UIC rules adopted by USEPA. The Illinois UIC rules are in 35 Ill. Adm. Code 702, 704, 705, 730, and 738. USEPA did not amend its UIC rules in any way that requires Board action during 2016 or 2017.² Rather, the Board reviewed the Illinois UIC rules and finds that non-substantive revisions and corrections are needed in 35 Ill. Adm. Code 704, 705, and 730. *See* 415 ILCS 5/7.2(b) (2016). The Board reserved docket R18-31 for this purpose and consolidated it with dockets R17-14, R17-15, and R18-12.

PROCEDURAL HISTORY

The statutory due date for the R17-14 and R17-15 amendments was November 28, 2017.³ On October 19, 2017, the Board extended that deadline until June 1, 2018. A notice of public information appeared in the *Illinois Register* on November 3, 2017, at 41 Ill. Reg. 13463.

The statutory due date for the R18-12 amendments was arguably August 28, 2018.⁴ On May 24, 2018, when adopting a proposal for public comment for the consolidated R17-14, R17-15, and R18-12 rulemaking, the Board extended the due date until December 3, 2018.⁵ A Notice of Public Information appeared in the *Illinois Register* on June 15, 2018 (42 Ill. Reg. 10706).

Due to the extreme volume of the proposed amendments, the proposal appeared in four separate issues of the *Illinois Register*,⁶ as follows:

² As is explained in the discussion of the GIR below, USEPA should have amended a single provision in the UIC rules, at 40 C.F.R. § 148.1(c)(3), when adopting the GIR.

³ One year after the date of the earliest USEPA action included in the rulemaking. *See* 415 ILCS 5/7.2(b) (2016).

⁴ USEPA did not amend its rules on August 28, 2017. Rather, USEPA set an implementation date, which allows the Board to substitute the date for a defined phrase in the federal text. USEPA did amend its rules on December 26, 2017. *See* discussion below of the federal actions.

⁵ There was no need to extend the due date for the R18-31 UIC corrections because their due date is May 10, 2019.

⁶ The Office of the Secretary of State, Administrative Code Unit, tries to limit the length of each issue of the *Illinois Register* to about 1,000 pages. These amendments are nearly twice that length.

35 Ill. Adm. Code 702: 42 Ill. Reg. 9633 (June 15, 2018)
 35 Ill. Adm. Code 703: 42 Ill. Reg. 9672 (June 15, 2018)
 35 Ill. Adm. Code 704: 42 Ill. Reg. 9774 (June 15, 2018)
 35 Ill. Adm. Code 705: 42 Ill. Reg. 9856 (June 15, 2018)
 35 Ill. Adm. Code 720: 42 Ill. Reg. 9892 (June 15, 2018)
 35 Ill. Adm. Code 721: 42 Ill. Reg. 9892 (June 15, 2018)
 35 Ill. Adm. Code 722: 42 Ill. Reg. 10808 (June 22, 2018)
 35 Ill. Adm. Code 723: 42 Ill. Reg. 10999 (June 22, 2018)
 35 Ill. Adm. Code 724: 42 Ill. Reg. 11594 (June 29, 2018)
 35 Ill. Adm. Code 725: 42 Ill. Reg. 12003 (June 29, 2018)
 35 Ill. Adm. Code 726: 42 Ill. Reg. 11016 (June 22, 2018)
 35 Ill. Adm. Code 727: 42 Ill. Reg. 11136 (June 22, 2018)
 35 Ill. Adm. Code 728: 42 Ill. Reg. 11225 (June 22, 2018)
 35 Ill. Adm. Code 730: 42 Ill. Reg. 12549 (July 6, 2018)
 35 Ill. Adm. Code 733: 42 Ill. Reg. 12649 (July 6, 2018)
 35 Ill. Adm. Code 738: 42 Ill. Reg. 12694 (July 6, 2018)
 35 Ill. Adm. Code 739: 42 Ill. Reg. 12722 (July 6, 2018)
 35 Ill. Adm. Code 810: 42 Ill. Reg. 12782 (July 6, 2018)
 35 Ill. Adm. Code 811: 42 Ill. Reg. 12807 (July 6, 2018)
 35 Ill. Adm. Code 812: 42 Ill. Reg. 12934 (July 6, 2018)

A June 7, 2018 hearing officer order clarified that the public comment period for all Parts would end 45 days after publication of the last Notice of Proposed Amendments, which was July 6, 2018. Thus, the public comment period in this matter ended on August 20, 2018.

SUMMARY OF ADOPTED AMENDMENTS

The following discussions summarize the Board's actions today. USEPA took four actions that require identical-in-substance rulemaking. The Board further finds corrections necessary in several existing rules. More extended discussions of these topics follow the summaries.

Federal Regulations Implemented

USEPA took two actions that affected the federal hazardous waste rules during the second half of 2016 and two actions in the second half of 2017. These actions require corresponding amendments to the Illinois hazardous waste rules. One of the actions requires amendment of Illinois' MSWLF rules.

Hazardous Waste Export-Import Revisions—November 28, 2016 (81 Fed. Reg. 85696)

USEPA revised requirements for importing and exporting hazardous waste at 40 C.F.R. 260 through 267, 271, and 273. USEPA intended to provide greater protection of human health and the environment and greater consistency with current requirements for shipments between members of the Organization for Economic Cooperation and Development (OECD). USEPA also intended to implement electronic submission of import- and export-related documents into an Automated Export System.

The Board incorporates the federal revisions into the Illinois hazardous waste rules with minimal deviation from the federal text. Discussion below considers issues that the Board confronts in doing so.

Generator Improvements Rule (GIR)—November 28, 2016 (81 Fed. Reg. 85732)

USEPA adopted the GIR, which extensively revised requirements for hazardous waste generators. USEPA revised all parts of the hazardous waste rules: 40 C.F.R. 260 through 268, 270, 271, 273, and 279. The GIR also included revisions to RCRA Subtitle D rules in 40 C.F.R. 257 and 258. The federal MSWLF rules are codified in 40 C.F.R. 258. USEPA intended that reorganizing the hazardous waste generator requirements would make them simpler. USEPA also intended to address gaps in the rules to make them more effective and protective of human health and the environment. USEPA also corrected inadvertent errors and removed obsolete provisions.

The Board incorporates the GIR revisions into the Illinois hazardous waste rules with minimal deviation from the federal text. The Board includes the USEPA MSWLF amendments. Discussion below considers issues that the Board confronts in doing so.

Automated Export System (AES) Filing Compliance Date—August 29, 2017 (82 Fed. Reg. 41015)

USEPA established the Automated Export System (AES) filing compliance date for hazardous waste exports. As of December 31, 2017, exporters of manifested hazardous waste, universal waste, spent lead-acid batteries for recycling or disposal, and cathode ray tubes (CRTs) for recycling must use the AES for export shipments. After the AES filing compliance date, the use of paper reporting was no longer permissible for these exports.

The Board incorporates the date into the hazardous waste import-export rules. The Board revises the federal amendments to accommodate the date set by USEPA. This includes replacing the defined term “AES filing compliance date” with the date “December 31, 2017,” as appropriate, and removing obsolete provisions for paper reporting. The Board discusses the hazardous waste import and export revisions, including the AES filing compliance date, below.

Barring Claims of Confidential Business Information (CBI) for Hazardous Waste Import, Export, and Transit Documents—December 26, 2017 (82 Fed. Reg. 60894)

USEPA further revised the rules for imports and exports of hazardous waste. No person can assert a confidential business information (CBI) claim for documents relating to import, export, and transit of hazardous waste or to export of excluded CRTs.

The Board incorporated the revisions barring CBI claims into the Illinois rules. Discussion of the CBI-related changes appears below separate from the other hazardous waste import and export revisions.

Miscellaneous Corrections

The Board determines that several corrections to the text of various rules are needed. The corrections include stylistic changes of the type routinely requested by JCAR, removal of past effective dates and obsolete text, and correction of provisions to more closely follow federal text—one of which USEPA requested. A few correct USEPA omissions that occurred in adopting the GIR. These Board revisions do not derive directly from USEPA amendments that occurred during 2016 and 2017.

The Board adopts these corrections in Parts open for USEPA amendments (35 Ill. Adm. Code 702, 703, 720 through 728, 733, 739, 810, and 811). The Board also adopts corrections in five other Parts (35 Ill. Adm. Code 704, 705, 730, 738, and 812). The opinion first discusses the USEPA amendments that drive this consolidated proceeding, then discusses the amendments adopted by the Board.

PUBLIC COMMENTS

Public Comments Received

During the public comment period, the Board received the following:

- PC 1 E-mail exchanges dated June 14, 2018 through June 21, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 2 E-mail exchanges dated June 27, 2018 and June 28, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 3 E-mail exchanges dated July 5, 2018 and July 11, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 4 E-mail exchanges dated July 6, 2018 and July 11, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 5 E-mail exchanges dated July 23, 2018 and August 2, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 6 E-mail exchanges dated August 8, 2018 and August 9, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.
- PC 7 E-mail exchanges dated July 31, 2018 and August 10, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.

- PC 8 Comments of the Illinois Environmental Protection Agency (Agency) dated August 17, 2018.
- PC 9 Comments of the Illinois Environmental Regulatory Group (IERG) dated August 20, 2018, by Katherine D. Hodge, Heplerbroom, LLC.
- PC 10 E-mail exchanges dated August 1, 2018 and September 26, 2018 between Board and JCAR staff addressing JCAR inquiries about the text of the proposed amendments.

Segments of the discussion below consider the more significant comments. Revisions to the rules text since the May 24, 2018 proposal are listed in Table 5 in the Identical-in-Substance Regulatory Addendum (Final) (IIS-RA(F)), available on-line in the Board's digital Clerk's Office On-Line (COOL) system. Table 6 in the IIS-RA(F) lists the several specific suggested revisions that the Board has not made.

Requests for Post-Adoption Comments

The Board will delay filing the adopted amendments for 30 days to allow USEPA review. After the 30 days, the Board will file the final amendments with the Office of the Secretary of State, when they will become effective. The Board presently plans to promptly file the adopted amendments after the end of the 30 days.

The Board urges careful review of the adopted amendments and two rules. Due to significant revisions in two provisions, the Board will take advantage of the 30-day delay and invites additional public comment limited to those two provisions:

1. 35 Ill. Adm. Code 722.333, relating to additional episodic events; and
2. The definition of "municipal solid waste landfill unit" in 35 Ill. Adm. Code 810.103.

Discussions below indicate the comments requested.

The Board must receive any additional comments no later than October 26, 2018. This 20-day deadline does not apply to comments submitted by USEPA.

DISCUSSION

Federal Actions in This Rulemaking

The following discussion considers in three segments the four USEPA actions requiring amendments to the Illinois regulations. The Board considers the AES filing compliance date together with the hazardous waste import and export changes. The Board separately considers the GIR and the change that bars claims of CBI for hazardous waste imports and exports.

Hazardous Waste Import-Export Revisions (November 28, 2016 and August 29, 2017)

USEPA extensively revised the requirements for hazardous waste import, export, and transit. Significantly, USEPA applies OECD procedures for import and export shipments. These require advanced notice, local jurisdictional consents, and verifications for export, transit, and import of hazardous waste. USEPA further revised the rules so that all approvals and reporting ultimately occur electronically. As electronic reporting goes on-line, USEPA will eventually not allow use of paper documents for approvals or reporting.

The Board incorporates the USEPA Hazardous Waste Import-Export Revisions into the Illinois hazardous waste regulations with minimal deviation from the federal text. Persons interested in the details of the Hazardous Waste Import-Export Revisions should refer to the *Federal Register* notices of November 28, 2016 and August 29, 2017. The Board here limits consideration of USEPA amendments to issues involved in incorporating them into the Illinois regulations.

References to the WIETS and AES. USEPA consistently refers to “Waste Import Export Tracking System (WIETS), or its successor system” or “Automated Export System or its successor system.” *E.g.*, 40 C.F.R. §§ 260.10 (definitions of “AES filing compliance date” and “electronic import-export reporting compliance date”), 261.39(a)(5)(v)(B)(I); 262.83(a)(6)(i)(A), (a)(6)(ii), (g), and (i)(2); 262.84(b)(1) and (d)(2)(xv), 264.12(a)(2), (a)(4)(i), and (a)(4)(ii); 265.12(a)(2), (a)(4)(i), and (a)(4)(ii); and 267.71(d) (2017) (corresponding with 35 Ill. Adm. Code 720.110 (definitions of “AES filing compliance date” and “electronic import-export reporting compliance date”), 721.139(a)(5)(B); 722.183(a)(6), (g), and (i)(2); 722.184(b)(1) and (d)(2)(O); 724.112(a)(2), (a)(4)(A), and (a)(4)(B); 725.112(a)(2), (a)(4)(A), and (a)(4)(B); and 727.171(d). The Board removed the parenthetical “or its successor system” and the offsetting comma. If the rule requires use of a specific system for submitting documents, the Board must specifically identify that system. If USEPA later changes to a new system, the Board will need to revise the Illinois rule to accommodate the change. If the Board included “or its successor system,” USEPA may revise the rule in the future without Board action.⁷

⁷ The Administrative Procedure Act requires precision and clarity in rules, “to inform fully those persons affected.” 5 ILCS 100/5-20 (2016). The requirements for incorporation by reference evince this need for precision and clarity by requiring that the rule identify a specific version of a document and expressly bar later editions or amendments. 5 ILCS 100/5-75 (2016); *see, e.g.*, RCRA Update, USEPA Regulations (April 1, 1990 through June 30, 1990), R90-11 (Apr. 11, 1991), slip op. at 43 (incorporation by reference to future guidance documents); RCRA Update, USEPA Regulations (July 1, 1990 through December 31, 1990), R91-1 (Aug. 8, 1991), slip op. at 47 (incorporation by reference not specifically identifying standards and versions, ambiguous as to future editions). Very early in the evolution of identical-in-substance rulemaking, the Board called incorporation by reference to a future version an impermissible “forward incorporation by reference.” See Pretreatment Regulations, R86-44 (Dec. 3, 1987), slip op. at 7-8, 29, 40.

Compliance Dates. Implementation of the Hazardous Waste Import-Export Revisions occurs in stages, each with its own compliance date. The original rule established the first compliance date. USEPA subsequently established the second. The third is pending.

The General Compliance Date: December 31, 2016. The Hazardous Waste Import-Export Revisions generally became effective December 31, 2016. *See* 81 Fed. Reg. 85697 (Nov. 28, 2016). Initially, the Revisions allowed use of paper submissions. *E.g.*, 40 C.F.R. §§ 262.82(e), 262.83(g) and (h)(2), 262.84(b)(1), and 264.71(a)(3)(ii) (2017). This is the first stage of implementation. This first implementation date is now past, and deleting the date from import-related provisions may be possible, but the Board does not delete the date.

An Acknowledgements of Consent (AOC) for hazardous waste exports or imports can cover up to one year of shipments. 40 C.F.R. § 262.83(b) and 262.84(b)(1) (2017). However, an AOC can cover up to three years of pre-consented exports. *See* 40 C.F.R. § 262.83(b)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.183(b)(2)). It is not clear that all exports and imports of hazardous waste under AOCs issued prior to December 31, 2016 have concluded so that the Board can delete the date.

The export provision in 40 C.F.R. §§ 262.83(a) requires compliance with the new rules for all AOCs received after December 31, 2016. Shipments under AOCs issued before that date are subject to the terms of the AOC and the rules that existed on the date the AOC issued. The Board retained this date in corresponding 35 Ill. Adm. Code 722.183(a).

The import provision in 40 C.F.R. § 262.84(a)(1), for shipments under an AOC issued prior to December 31, 2016, subjects those imports to the requirements that existed on the date of the AOC's receipt. The rules in 263.20(a)(2), (c), (e)(2), and (f)(2), imposing new informational requirements, apply to shipments under an AOC issued on or after December 31, 2016. The Board retains "December 31, 2016" in corresponding 35 Ill. Adm. Code 722.183(a), 722.184(a)(1), and 723.120(a)(2), (c), (e)(2), and (f)(2). The Board can delete these dates after it becomes clear that they are obsolete.

The federal rules implement mandatory electronic reporting on two later dates: the "AES filing compliance date" and the "import-export reporting compliance date." *See* 40 C.F.R. § 260.10 (2017). Each is defined in the rules in Fed. Reg. § 260.10 (2017). Each is a separate stage of implementation of the Hazardous Waste Import-Export Revisions.

The AES Filing Compliance Date: December 31, 2017. The AES is a digital export reporting system operated by U.S. Customs and Border Protection. 81 Fed. Reg. 85696, 85699-706 (Nov. 28, 2016). A hazardous waste exporter must submit documentation into the AES and obtain consents before any export occurs. After the AES filing compliance date, the exporter must make the submission digitally. 40 C.F.R. § 262.83(a)(6) (2017).

USEPA established the AES filing compliance date as December 31, 2017. *See* 82 Fed. Reg. 41015 (Aug. 29, 2017). This allows the Board to omit the definition of "AES filing compliance date." The Board further removes the term "AES filing compliance date" as a past date where possible. *See* 40 C.F.R. §§ 261.39(a)(5)(v)(B) and (a)(5)(xi) and 262.83(a)(6)(ii) (2017) (corresponding with 35 Ill. Adm. Code 721.139(a)(5)(E)(ii) and (a)(5)(K); 722.183(a)(6);

and 723.120(g)(4)(B)). Because paper filling into the AES is no longer allowed, the Board removes 40 C.F.R. § 262.83(a)(6)(i) relative to filing paper documentation.

There are two exceptions to complete removal of the term “AES filing compliance date.” The rule requiring export reports, 40 C.F.R. § 262.83(g), requires digital reporting “one year after the AES filing compliance date.” The conditional exclusion in 40 C.F.R. § 261.39(a)(5)(xi) for used, broken CRTs and processed CRT glass undergoing recycling similarly requires digital reporting “one year after the AES filing compliance date.” The Board substituted “December 31, 2018” in corresponding 35 Ill. Adm. Code 722.183(g) and 721.139(a)(5)(K).

The Board changed “the AES filing compliance date” to “December 31, 2017” in corresponding 35 Ill. Adm. Code 723.120(g)(4)(B) because it remains possible that paperwork for a shipment initiated prior to that is not yet complete.

The Electronic Import-Export Reporting Compliance Date: Undetermined. The WIETS is still under development for electronic submissions and reports, and USEPA will phase in modules as they are ready. *See* 82 Fed. Reg. 41015 (Aug. 29, 2017); 81 Fed. Reg. 85696, 85699-706 (Nov. 28, 2016). USEPA stated as follows about the Hazardous Waste Import-Export Revisions:

Paper submittals will be required from the effective date of this action until the electronic submittals are required for each of the following: Export annual reports, export exception reports, import notices, and receiving facility notifications of the need to arrange alternate management or return of an individual import shipment. No submittals to EPA will be required for each of the following, until the electronic import-export reporting compliance date (on or after which electronic submittal of these documents to EPA using EPA’s WIETS, or its successor system, will be required): Export confirmations of receipt, export confirmations of recovery or disposal, import confirmations of receipt, and import confirmations of recovery or disposal. 81 Fed. Reg. 85696, 85700 (Nov. 28, 2016).

USEPA has not yet established the import-export reporting compliance date. Efforts on the part of Board staff to gain insight were fruitless. *See* Email exchange dated March 8, 2018. The federal rule defines the term “import-export reporting compliance date” in 40 C.F.R. § 260.10 (2017) (corresponding with 35 Ill. Adm. Code 720.110). The term appears in several segments of the export provisions of the Waste Import-Export Revisions. *See* 40 C.F.R. § 262.83(d)(2)(O), (f)(4), (f)(5), (f)(6)(ii), and (h)(2) (2017). It also appears in import-related provisions, *see* 40 C.F.R. § 262.84(b)(1), (d)(2)(O), (g)(1), and (g)(2) (2017), and treatment, storage, and disposal facility standards. *See* 40 C.F.R. § 264.12(a)(2), (a)(4)(i), and (a)(4)(ii); 264.71(d); 265.12(a)(2), (a)(4)(i), and (a)(4)(ii); 265.71(d); and 267.71(d) (2017). The Board can delete the definition of “electronic import-export compliance date” and all appearances of this term after USEPA establishes the date and the term become obsolete. The Board retains them for now.

Citations to Federal Rules, OECD Documents, and Industry Standards. The provisions that itemize the information required for hazardous waste imports and exports identify

federal regulations, international standards, and international organizations or conventions as sources of the information. The identifications, however, are often fragmentary, do not clearly identify the source, or allow use of sources as they will exist in the future. The Board here describes dealing with the more significant examples.

ISO 3166-1 2003: Country Codes. USEPA requires use of “the ISO standard 3166 name 2-digit code” to identify foreign countries of transit, import, and export. *See* 40 C.F.R. §§ 262.83(b)(1)(vi) and (b)(1)(vii) and 262.84(b)(1)(vi) and (b)(1)(vii). There are problems with the federal language. First, the International Organization for Standardization refers to the standard as “International Standard ISO 3166-1:2013.”⁸ Second, only the first volume holds the required codes. Third, USEPA does not identify a version. The Board can incorporate by reference only an existing, identifiable version of a document.⁹ The most recent edition is the third, published in 2013, which the Board incorporates by reference. Finally, there are no “2-digit codes” listed for countries. ISO 3166 lists three codes: “alpha-2 code,” “alpha-3 code,” and a three-digit “numeric.” The Board changes “country name 2-digit code” to “country name alpha-2 code” in corresponding 35 Ill. Adm. Code 722.183(b)(1)(G) and (b)(1)(G) and 722.184(b)(1)(F) and (b)(1)(G), on the assumption that this is what USEPA intended.

The Board observes that the International Organization for Standardization maintains a website for free on-line lookup of country name alpha-2 codes. A Board note added to the incorporation by reference gives the address for the website.

Code for the OECD/Basel Competent Authority. USEPA also requires submitting “the OECD/Basel competent authority code” for the countries of import, export, and transit. *See* 40 C.F.R. §§ 262.83(b)(1)(vi) and (b)(1)(vii) and 262.84(b)(1)(vi) and (b)(1)(vii). The Board found no printed or dated reference for these codes. The Board had nothing to incorporate by reference for these codes. Further, the Board found that not all competent authorities have a code.

The competent authority code begins with the International Standard ISO 3166-1:2013 alpha-2 code followed by a three-digit number. Parties to the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (Basel Convention) are required to establish or designate competent authorities to facilitate implementation of the Convention. Basel Convention, art. 5 (as amended through May 27, 2014) (www.basel.int/Portals/4/Basel%20Convention/docs/text/BaselConventionText-e.pdf). Annex IC ¶ 3 to Regulation (EC) No. 1013/2006 of the European Parliament and of the Council of 14 June 2006, as completed by Commission Regulation (EC) No. 669/2008 of 15 July 2008, allows use of optional code specified by control authority of country of dispatch. Annex IC ¶ 26 requires use of optional codes for control authorities of countries of dispatch, transit, and destination, where applicable (eur-lex.europa.eu/legal-content/EN/TXT/?qid=1454069470717&uri=CELEX:02006R1013-20160101).

⁸ The actual volume title is “Codes for the representation of names of countries and their subdivisions—Part 1: Country code,” Third edition (2013)

⁹ See *supra* note 6.

The United Nations Environment Programme, Basel Convention maintains an on-line list of competent authorities by country (www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx). The European Commission maintains a list of competent authorities for European Union members (ec.europa.eu/environment/waste/shipments/pdf/list_competent_authorities.pdf). Many entries in the lists of competent authorities, but not all, include an alphanumeric code for the listed competent authority.

The Board faces a dilemma. The Board is unable to incorporate any document by reference for obtaining codes for competent authorities because whatever is on-line is susceptible to revision at any time. The Board is further unable to delete the provision requiring use of the codes because the Illinois rules would become less stringent than their federal counterparts. The best the Board can do to resolve the situation is add Board notes to the definition of “competent authority” in 35 Ill. Adm. Code 722.181 (corresponding with 40 C.F.R. § 262.81 (2017)) and the notification provisions in 35 Ill. Adm. Code 722.183(b)(1) and 722.184(b)(1) (corresponding with 40 C.F.R. § 262.83(b)(1) and 262.84(b)(1) (2017)) that require use of the codes. The Board notes explain on-line access to the codes, giving the Internet addresses that the Board found.

The Board observes that WIETS and USEPA, which receive the notifications requiring competent authority codes, are federal data systems. Illinois has no control over them. The Board hopes that the WIETS itself, as an automated system, will offer the competent authority codes to importer and exporter users.

USEPA Hazardous Waste Numbers. The federal rules require use of “applicable RCRA waste code(s)” in notifications, shipping documents, and reports. *See* 40 C.F.R. §§ 262.83(b)(1)(xi), (d)(2)(vi), and (g)(4)(ii); 262.84(b)(1)(xi), (d)(2)(vi), and (g)(4)(ii); 264.12(a)(1); and 265.12(a)(1) (2017). The Board changes this to “USEPA hazardous waste number” in corresponding 35 Ill. Adm. Code 722.183(b)(1)(xi), (d)(2)(vi), (g)(4)(ii); 722.184(b)(1)(xi), (d)(2)(vi), (g)(4)(ii); 724.112(a)(1); and 725.112(a)(1).

The federal rules define the term “EPA hazardous waste number” in 40 C.F.R. § 260. In corresponding 35 Ill. Adm. Code 720.110, the Illinois rules define this as “‘EPA hazardous waste number’ or ‘USEPA hazardous waste number’.” USEPA used “hazardous waste number(s)” (or the singular or plural alternatives) in the simultaneously adopted GIF. *See, e.g.*, 40 C.F.R. §§ 262.17(c), 262.32(c), 263.12(b)(2), and 268.50(a)(2)(i)(B) (2017). USEPA extensively used “hazardous waste number(s)” (or the singular or plural alternatives) throughout the pre-existing text of its rules, including the now-repealed import-export and transboundary movements rules. *See, e.g.*, 40 C.F.R. §§ 261.20(b), 261.31(c), 262.53(a)(2)(i), 262.56(a)(4), 262.87(a)(4), 268.7(a)(2) (2016). USEPA also uses “waste code” or “RCRA waste code” in several rules. *See, e.g.*, 40 C.F.R. §§ 261.4(a)(18)(i) and (b)(9), 261.31(a) (table entry for F032), 264.12(a)(1), 265.12(a)(1), 268.3(c), 268.40 table (2017). USEPA even parenthetically uses both together in two provisions, demonstrating equivalence. *See, e.g.*, 40 C.F.R. §§ 262.11(g) and 268.9(a) (2017). Nevertheless, the Board believes use of the defined term, “USEPA hazardous waste number,” is more precise and less susceptible to ambiguity.¹⁰

¹⁰ The Board changes all variations of “waste code” to the defined term “USEPA hazardous waste number” throughout the text of the rules as part of the general corrections to the rules. *See* 35 Ill.

OECD Waste Codes. The federal notifications, shipping documents, and reports rules require “the OECD waste code” (or some variation referring to an unspecified incorporation by reference). See 40 C.F.R. §§ 262.83(b)(1)(xi), (d)(2)(vi), and (g)(4)(iii); 262.84(b)(1)(xi) and (d)(2)(vi); 264.12(a)(1); and 265.12(a)(1) (2017). The Board clarifies this language to “waste code from the lists in the OECD Guidance Manual” (or some variation) citing to the incorporation by reference in corresponding 35 Ill. Adm. Code 723.183(b)(1)(K), (d)(2)(F), (g)(4)(B); 723.184(b)(1)(K) and (d)(2)(F); 724.112(a)(1); and 725.112(a)(1).

United Nations/USDOT Identification Number. The federal notifications and shipping documents rules require “the United Nations/U.S. Department of Transportation (DOT) ID number for each waste.” See 40 C.F.R. §§ 262.83(b)(1)(xi) and (d)(2)(vi) and 262.84(b)(1)(xi) and (d)(2)(vi) (2017). In two provisions relating to identity of wastes, USEPA uses “United Nations classification.” See 40 C.F.R. §§ 264.12(a)(1) and 265.12(a)(1) (2017). The Board clarifies these passages to “United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101.” This revision further allows incorporation by reference to the source of the intended numbers.

Clarifications of Language. The Board found passages of the Hazardous Waste Import-Export Revisions difficult to understand and others ambiguous. The Board here describes the more significant examples.

A Signed Declaration and Certification. The federal notifications and shipping documents provisions require a “Certification/Declaration” signed by the importer or exporter, as appropriate.¹¹ See 40 C.F.R. §§ 262.83(b)(1)(xiii) and (d)(2)(xii) and 262.84(b)(1)(xiii) and (d)(2)(xii) (2017). To clarify, the Board requires a signed “declaration and certification” in corresponding 35 Ill. Adm. Code 722.183(b)(1)(M) and (d)(2)(L) and 724.184.

Acknowledgements of Consent. The Board changes “Acknowledgement of Consent” to “USEPA Acknowledgement of Consent” and defines the acronym “AOC” in 35 Ill. Adm. Code 721.139(a)(5)(E)(i) (corresponding with 40 C.F.R. § 261.39(a)(5)(v)(A)). This makes the hazardous waste CRT export provisions consistent with the rest of the Hazardous Waste Import-Export Revisions in 35 Ill. Adm. Code 722.181 (definition of “USEPA Acknowledgement of Consent”), 722.183, and 722.184 (corresponding with 40 C.F.R. §§ 262.81 (definition of EPA Acknowledgement of Consent”), 262.83, and 262.84 (2017)). An added Board note to 35 Ill.

Adm. Code 703.Appendix A (¶¶ , F.1.c. and G.1.e.); 721.104(a)(18), (b)(9), and (b)(10); 721.108(b); 721.138(a) (F032 and F039); 722.306(a)(2)(B); 722.310(b)(2); 722.311(e)(2); 722.312(e)(2); 726.330(a); 728.103(c); 728.107(b)(3)(B)(iii); 728.109(a) and (b); 728.142(d); 728.Appendices D, F, H, and K; 728.Table C (IMERC and RMERC); 728.Table D (heading); 728.Tables H and I; 728.Tabel T (column 1 heading, F032, and note 4); and 728.Table U (note 1).

¹¹ The OECD Guidance Manual calls this the exporter’s declarations. See “Guidance Manual for the Implementation of Council Decision C(2001)107/FINAL, as amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations,” Organization for Economic Co-Operation and Development (2009), at 32, 48, 63, and 64.

Adm. Code 721.139(a)(5) refers to the definition in 35 Ill. Adm. Code 722.181. For stylistic consistency with the hazardous waste import and export rules in Subpart H of 35 Ill. Adm. Code 722, the Board replaces “Acknowledgement of Consent” with “AOC” in 35 Ill. Adm. Code 721.139(a)(5)(F) through (a)(5)(I) (corresponding with 40 C.F.R. § 261.39(a)(5)(vi) through (a)(5)(ix)).

The Board raised the following issues to elicit public comment. The Board did not propose revised language in any rules based on the issues. Having received no comments in this regard, the Board adopts the affected rules as proposed.

The federal rules require that USEPA issues an AOC to the exporter before export occurs. 40 C.F.R. § 262.83(a)(3). The rules define “EPA Acknowledgement of Consent (AOC)” as a letter from USEPA to the exporter documenting the specific terms of consent of the country of import and the consents any countries of transit. 40 C.F.R. § 262.81 (2017). Thus, it could appear that use of AOCs is restricted to exports of hazardous waste, but this is not so.

The provisions for hazardous waste imports also provide for use of AOCs. The import rules require notification to USEPA that parallel those for hazardous waste exports. *Compare* 40 C.F.R. § 262.84(b) (2017) *with* 40 C.F.R. § 262.83(b) (2017). The import requirements similarly provide for USEPA issuing an AOC before shipment of waste. *Compare* 40 C.F.R. § 262.84(b)(5) (2017) *with* 40 C.F.R. § 262.83(b)(6) (2017). The importer must similarly comply with the requirements for movement documents. *Compare* 40 C.F.R. § 262.84(a)(4) and (d)(1) (2017) *with* 40 C.F.R. § 262.83(a)(4) and (d)(1) (2017). One of the requirements for movement documents is that the AOC numbers must appear for each waste listed. 40 C.F.R. §§ 262.83(d)(2)(i) and 262.84(d)(2)(i)(2017).

The general hazardous waste import and notification provisions state that USEPA issues consent to the country of export. 40 C.F.R. § 262.84(a)(1), (a)(2), and (b) (2017). USEPA sends the AOC to the importer under other import notification provisions. 40 C.F.R. § 262.84(b)(3) and (b)(5) (2017). One provision says that USEPA “provides a copy of that consent to the importer.” 40 C.F.R. § 262.84(e) (2017) (return shipments to the exporter).

One interpretation of these provisions that is consistent with the definition of AOC is that USEPA sends the original of the AOC to the foreign exporter and a copy to the domestic importer. This would make sense because movement of the hazardous waste necessarily begins at the exporting end. This is consistent with the Basel Convention, which prohibits the export of hazardous waste absent the consent of the country of import. Basel Convention, art. 4. ¶¶ 1(c) and (e) and 6 (as amended through May 27, 2014); *see* Basel Convention, art. 4. ¶¶ 1(c) and (e), 6, and 9(a) (as amended through May 27, 2014) (curbing export of hazardous waste); *but see* Basel Convention, art. 4. ¶¶ 1(g) and 5 (as amended through May 27, 2014) (in terms of curbing imports of hazardous waste). Further, notifications under the Basel Convention flow from the country of export to the country of import, and consents from the country of import to the country of export. Basel Convention, art. 6 (as amended through May 27, 2014).

The Board does not substitute “AOC” for “consent” in any of the various hazardous waste import provisions where “AOC” may clarify the text. In 40 C.F.R. § 262.84(a)(1), the phrase “under a consent from EPA” could become clearer as “under an AOC” because the AOC

is the form the consent takes. The same is true for the phrase “terms of the contracts or the consent(s)” and “a copy of that consent” in 40 C.F.R. § 262.84(e); “the terms of a consent” in 40 C.F.R. §§ 263.20(a)(2), (c), (e)(2) and (f)(2); “consent from EPA” in 40 C.F.R. §§ 264.12(a)(1) and 265.12(a)(1); and “consent documentation” in 40 C.F.R. §§ 264.71(a)(3)(i), 265.71(a)(3)(i) and 267.71(a)(6)(i). The Board also does not add “or import” or remove “to the exporter” from the definition of AOC in 40 C.F.R. § 262.81.

Clarification of Language Relating to Transboundary Movements to and from Canada.

Special considerations exist when the export of hazardous waste is to Canada. These special considerations cause potentially confusing language in definitions and convoluted language in a notification provision. The Board tries to clarify the language.

There are additional disposal operations codes and recovery facility codes for hazardous wastes in Canada.¹² See 40 C.F.R. 262.81 (2017) (definitions of “disposal operations” and “recovery operations”). The Board finds potential ambiguity in definitions of “disposal operations” and “recovery operations” and revises the definitions to enhance clarity.

The federal definition of “disposal operations” in 40 C.F.R. § 262.81 (2017) includes the following definition of two operations codes:

D15 (or DC17 for transboundary movements with Canada only) Interim Storage, prior to any of operations D1 through D12.

The Board splits this into two separate definitions of codes in corresponding 35 Ill. Adm. Code 722.181:

D15 Interim storage, prior to any of operations D1 through D12 (for transboundary movements other than with Canada).

DC17 Interim storage, prior to any of operations D1 through D12 (for transboundary movements with Canada only).

The federal definition of “recovery operations” in 40 C.F.R. § 262.81 (2017) includes the following definition of four operations codes:

R11 Uses of residual materials obtained from any of the operations numbered R1 through R10 or RC14 (for transboundary shipments with Canada only).

R12 Exchange of wastes for submission to any of the operations numbered R1 through R11 or RC14 (for transboundary shipments with Canada only).

¹² These are DC15, for interim storage prior to several operations; DC16, for testing a new technology to dispose of hazardous waste; RC14, for recovery or regeneration of a substance or use or reuse of a recyclable material other than by other specified recovery operations; RC15, testing a new technology to recycle a hazardous recyclable material; and RC16, interim storage before specified recovery operations

R13 Accumulation of material intended for any operation numbered R1 through R12 or RC14 (for transboundary shipments with Canada only).

RC14 Recovery or regeneration of a substance or use or re-use of a recyclable material, other than by any of operations R1 to R10 (for transboundary shipments with Canada only).

The Board believes that USEPA intended the “or RC 14 (for transboundary shipments with Canada only)” to direct attention to the RC 14 definition, and not to extend the lists “R1 through R10,” “R1 through R11,” and “R1 through R12” to include RC14. The absence of a comma before “or RC14” to offset the parenthetical in each instance allows this alternative interpretation. For this reason, the Board replaces “or RC14 (for transboundary shipments with Canada only)” with “(for transboundary shipments other than with Canada)” in each of the R11 through R13 definitions.

The separate definition of RC14 allows the Board to remove all references to “or RC14” and change “for transboundary shipments to Canada only” to “for transboundary shipments other than to Canada” in each of the definitions of RC11 through RC13 in corresponding 35 Ill. Adm. Code 722.181:

- R11 Uses of residual materials obtained from any of the operations numbered R1 through R10 or RC14 (for transboundary shipments with Canada only).
- R12 Exchange of wastes for submission to any of the operations numbered R1 through R11 (for transboundary shipments other than with Canada).
- R13 Accumulation of material intended for any operation numbered R1 through R12 (for transboundary shipments other than with Canada).
- RC14 Recovery or regeneration of a substance or use or re-use of a recyclable material, other than by any of operations R1 to R10 (for transboundary shipments with Canada only).

The addition of special considerations for shipments to Canada also results in an extended run-on sentence containing parenthetical statements in the following language in 40 C.F.R. § 262.83(b)(3):

Notifications listing interim recycling operations or interim disposal operations. If the foreign receiving facility listed in paragraph (b)(1)(ii) of this section will engage in any of the interim recovery operations R12 or R13 or interim disposal operations D13 through D15, or in the case of transboundary movements with Canada, any of the interim recovery operations R12, R13, or RC16, or interim disposal operations D13 to D14, or DC17, the notification submitted according to paragraph (b)(1) of this section must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11 and D1 through D12, or in the case of transboundary

movements with Canada, which of the applicable recovery or disposal operations R1 through R11, RC14 to RC15, D1 through D12, and DC15 to DC16 will be employed at the final foreign recovery or disposal facility.

The Board split this single sentence into two: one general statement and a second statement specific to shipments to Canada in corresponding 35 Ill. Adm. Code 722.183(b)(3):

Notifications Listing Interim Recycling Operations or Interim Disposal Operations. If the foreign receiving facility listed in subsection (b)(1)(B) will engage in any of the interim recovery operations R12 or R13 or interim disposal operations D13 through D15, the notification submitted according to subsection (b)(1) must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11 and D1 through D12 the final foreign recovery or disposal facility will employ. For transboundary movements to Canada, in addition to the foregoing foreign receiving facilities listed in subsection (b)(1)(B), if the foreign receiving facility will engage in interim recovery operations RC16 or interim disposal operations DC17, the notification submitted according to subsection (b)(1) must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11, RC14 to RC15, D1 through D12, and DC15 to DC16 the final foreign recovery or disposal facility will employ.

Sources of Manifest Forms (USEPA Forms 8700-22 and 8700-22A). The USEPA rules require use of manifest forms printed by approved sources. *Compare* 40 C.F.R. § 262.21(g)(1), 262.83(c)(4) (new provision specific to hazardous waste exports), and 262.84(c)(2) (new provision specific to hazardous waste imports) (2017) *with* 40 C.F.R. 262.21(g)(1), 262.54(e) (now-repealed rule specific to hazardous waste exports), and 262.60(c) (now-repealed rule specific to hazardous waste imports) (2016). The Hazardous Waste Import-Export Revisions cause the Board to re-examine the provisions requiring use of manifest forms printed by approved sources.

There is no document listing approved sources that the Board can incorporate by reference. USEPA could change its on-line list of approved suppliers at any time. Removing the provision requiring use of forms from an approved source would make the Illinois rules less stringent than their federal counterparts. Therefore, to aid the regulated community and add certainty to the Illinois rules, the Board adds a Board note explaining the on-line availability of the list of approved sources. The Board does this in the revised texts of 35 Ill. Adm. Code 722.183(c)(4) and 722.184(c)(2).¹³

“Green Waste” and “Amber Waste.” The terms “amber waste,” “amber list waste,” “green waste,” and “green list waste” are not defined in the federal rules. The federal text discusses assignment of wastes to a list subject to green control procedures or a list subject to

¹³ The Board also added the Board note to 35 Ill. Adm. Code 722.121(g)(1).

amber control procedures—the OECD Green and Amber lists. Then the text begins discussion of green waste under the topical heading “green list wastes” and discussion of amber waste under the topical heading “amber list wastes.” The federal rules use the terms and “green list wastes” and “amber list wastes” only in the topical subheadings of 40 C.F.R. § 262.82(a)(1) and (a)(2) (2017) and the note to 40 C.F.R. § 262.82(a)(2). The rules use the terms “green waste” seven times and “amber waste” (or the plural) six times throughout the text of 40 C.F.R. §§ 262.82(a)(1)(i), (a)(1)(ii), (a)(2)(i), (a)(2)(ii), (a)(3), (a)(3)(i) note, (a)(3)(ii), (a)(3)(ii) note (2017).

The Board added definitions of “amber-list waste” and “green-list waste” with prior amendments to the rules. *See RCRA Subtitle C Update, USEPA Amendments (January 1, 2004 through June 30, 2004 and October 25, 2004)*, R05-2 (Mar. 3, 2005), slip op. at 23. The Board subsequently changed this to “amber waste” and “green waste” to more accurately reflect the OECD Guidance Manual. *See RCRA Subtitle C Update, USEPA Amendments (January 1, 2010 through June 30, 2010, R11-2, and RCRA Subtitle C Update, USEPA Amendments (July 1, 2010 through December 31, 2010)*, R11-16 (Aug. 18, 2011) (consol.), slip op. at 16-17.

The Board retains those definitions. The Board further revises the language of the Hazardous Waste Import-Export Revisions, changing “amber list wastes” to “amber wastes” and “green list wastes” to “green wastes” in 35 Ill. Adm. Code 722.182(a) where they appear in corresponding 40 C.F.R. § 262.82(a).

Extended Records Retention. The Hazardous Waste Import-Export Revisions extend records retention “automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Administrator.” *See* 40 C.F.R. §§ 262.83(i)(3) and 262.84(h)(4) (2017) (corresponding with 35 Ill. Adm. Code 722.183(i)(3) and 722.184(h)(4)). The Board does not clarify “automatically during the course of unresolved enforcement action regarding the regulated activity.” The Board believes that “enforcement action” means a formal administrative or judicial proceeding. The request “by the Administrator” would apply under less formal circumstances. In either instance, the generator receives notice that it must retain the records for an extended time.

The Board requires that USEPA or the Agency must submit any request for extended records retention in writing. The Board adds a Board note explaining that any Agency request for extended retention is subject to Board review under section 40 of the Act (415 ILCS 5/40 (2016)).¹⁴

Miscellaneous Other Revisions to the Text. The Board made other miscellaneous revisions to the federal text that need no discussion. The IIS-RA(F) fully lists the differences between the USEPA amendments and the Board’s language in this rulemaking. Table 2 in the

¹⁴ A provision in the GIR also requires extended records retention under the same circumstances. *See* 40 C.F.R. §§ 262.11(f) (2017) (corresponding with 35 Ill. Adm. Code 722.111(f)). A few existing rules include similar requirements. *See* 35 Ill. Adm. Code 722.140(d), 727.170(e)(2), and 728.107(a)(8) and (a)(10). The Board makes the same observations regarding those rules, and adds the same Board note to them.

IIS-RA(P) lists federal amendments on which no Board action was necessary. Table 3 lists deviations from the literal text of the federal amendments. Each entry outlines how the Board differed from the USEPA amendments, and many offer brief explanation.

The Generator Improvements Rule (November 28, 2016)

USEPA adopted the GIR, extensively revising the requirements for hazardous waste generators and the status of hazardous waste generated by various categories of generators. Significantly, USEPA reorganized the generator requirements to make them more user-friendly and clarify how the RCRA hazardous waste generator regulatory mechanisms work. USEPA further sought to fill regulatory gaps and afford flexibility in managing hazardous wastes in more cost-effective and protective ways. USEPA also made technical corrections and conforming changes in its rules.

The Board incorporates the USEPA GIR into the Illinois hazardous waste regulations with minimal deviation from the federal text. Persons interested in the details of the GIR should refer to the *Federal Register* notice of November 28, 2016. The Board here limits consideration of the USEPA amendments to the issues involved in incorporating them into the Illinois regulations.

References to the Generator Categories. USEPA retained the generator categories “large quantity generator” and “small quantity generator.” It added a definition of “large quantity generator” and revised the definition of “small quantity generator” in 40 C.F.R. § 260.10 (2017). USEPA removed what was once special provisions for “conditionally exempt small quantity generator” (CESQG) waste in 40 C.F.R. § 261.5 and defined a “very small quantity generator” in 40 C.F.R. § 260.10 (2017). USEPA changed all references to “conditionally exempt small quantity generator” to “very small quantity generator” throughout the substantive rules. *See, e.g.*, 40 C.F.R. §§ 261.1(a)(1), 262.10(l)(2), 262.201(b), and 273.8(a)(2), and 279.10(b)(3) (2017) (corresponding with 35 Ill. Adm. Code 721.101(a)(1), 722.110(i)(2), 722.301(b), 733.108(a)(2), and 739.110(b)(3)). Some of these were RCRA Subtitle D MSWLF provisions. *See* 40 C.F.R. §§ 258.2, 258.20(b) (2017) (corresponding with 35 Ill. Adm. Code 810.103 and 811.323(a)).

USEPA Amendments Incomplete. USEPA did not change each occurrence of “conditionally exempt small quantity generator” to “very small quantity generator.” The Board found references to CESQG remaining in 40 C.F.R. §§ 148.1(c)(3), 262.204(b), and 266.100(c)(3) (2017). The Board found references to 40 C.F.R. § 261.5 remaining in 40 C.F.R. §§ 148.1(c)(3), 261.4(e), 261.11(c), 261.30(d), 262.212(e)(3), 266.100(c)(3), and 266.109(c) note (2017). The Board corrected oversights in the USEPA amendments and made the necessary changes in the corresponding Illinois rules in 35 Ill. Adm. Code 721.104(e), 721.111(c), 721.130(d), 722.312(e)(3), 726.200(c)(3), and 726.208(c) Board note, and 738.101(c)(3).

Acronyms “LOG,” “SOG,” and “VSOG” to Refer to the Generator Categories. The Board revised references to generator categories. The Board defined acronyms for each category, “LQG” for “large quantity generator,” “SQG” for “small quantity generator,” and “VSQG” for “very small quantity generator,” in the definitions of the categories in 35 Ill. Adm. Code 720.110. Then the Board substituted the acronyms for the category names throughout the

text.¹⁵ *See, e.g.*, 35 Ill. Adm. Code 721.101(a)(1), 722.110(a)(1)(A) through (a)(1)(C), 722.113 through 722.118, 722.330, 724.171(c), 725.171(c), 728.101(e)(1), 733.108(a)(2), 739.110(b)(3), 810.103, and 811.323(a) (2017) (corresponding with 40 C.F.R. §§ 261.1(a)(1), 262.10(a)(1)(i) through (a)(1)(iii), 262.13 through 262.18, 262.230, 264.71(c), 265.71(c), 268.1(e)(1), 273.8(a)(2), 279.10(b)(3), 258.2, and 258.20(b), respectively).

No Definition of Construction and Demolition Landfill. The Board cannot incorporate the federal definition of “construction and demolition landfill” (C&D landfill) into the Illinois rules. The definition would conflict with the similar Illinois statutory definition of “general construction or demolition debris” and cause confusion. *Compare* 40 C.F.R. § 258.2 (2017) *with* 415 ILCS 5/3.160 (2016). Further, adding the definition is unnecessary. The Agency agrees that confusion would result. PC 8 at 3.

USEPA added the definition of C&D landfill to the MSWLF rules¹⁶ in the GIR. The federal non-municipal non-hazardous waste landfill rules allow disposal of VSQG waste into a C&D landfill that complies with subpart B of 40 C.F.R. 257. 40 C.F.R. §§ 257.5(a) and 257.21(h) (2017).

The definition is not needed in the MSWLF rules in 40 C.F.R. 258. The federal rules use the term C&D landfill only in 40 C.F.R. 257. The GIR provision that requires the VSQG to ship its hazardous waste to a compliant facility only cites to 40 C.F.R. §§ 257.5 through 257.30, which is subpart B of 40 C.F.R. 257. 40 C.F.R. § 262.14(a)(5)(v) (2017). Thus, incorporation by reference to subpart B of 40 C.F.R. 257 incorporates the federal requirement without adding the definition of “C&D landfill.”

Discussion of changes to the Illinois definition of “municipal solid waste landfill unit” further considers use of the phrase “general construction or demolition debris.”

Clarifying Revisions. The Board clarified several provisions. These include the definition of “acute hazardous waste”; the threshold volumes of materials in the definitions of “LQG,” “SQG,” and “VSQG”; use of English and metric units in parallel in various provisions; and revising references to NFPA 30.

Acute Hazardous Waste. USEPA added a definition of “acute hazardous waste” in 40 C.F.R. § 260.10. The definition embraces six hazardous wastes bearing USEPA hazardous waste

¹⁵ To conform text throughout the rules, the Board changes “small quantity generator” to “SQG” and “large quantity generator” to “LQG” in existing text as part of the Board-derived general corrections to the rules. *See* 35 Ill. Adm. Code 722.110(l)(1); 722.300 (definition of “trained professional”); 722.301(a), 722.302(a), 722.304(a), 722.307(c), 722.309(a), 722.310(d)(1) and (d)(2); 722.311(c); and 722.316(a); and 728.107(a)(10). The Board changes “a generator” to “an SQG or LQG” in 35 Ill. Adm. Code 722.120(a)(1), (b), (c), (d), and (e)(3). *See* Table 4 in the IIS-RA(P).

¹⁶ USEPA added the definition to the non-municipal non-hazardous waste landfill rules at 40 C.F.R. § 257.2, but those rules are outside the scope of the Board’s MSWLF mandate. *See* 415 ILCS 5/22.40(a) (2016).

numbers that begin with “F” (“F” wastes) and 124 “P” wastes (USEPA hazardous waste numbers beginning with “P”). The Board adds a brief Board note explaining that acute hazardous waste includes the six “F” waste and all “P” wastes. The Agency agrees that listing the individual hazardous waste numbers clarifies the rule. PC 8 at 2-3.

Generator Category Threshold Amounts. The applicability of the new generator standards and associated revised hazardous waste management standards depend on the generator’s category: LQG, SQG, or VSQG. The definitions of these terms are each phrased in terms of generating “amounts in a month.” Each definition names three threshold amounts: a mass of non-acute hazardous waste, a mass of acute hazardous waste, and a mass of residue or contaminated soil, water, or debris from cleanup of a spill of acute hazardous waste. *See* 40 C.F.R. § 260.10 (definitions of LQG, SQG, and VSQG) (2017). The Board changes “amounts in a calendar month” to “amounts of material in a calendar month” in each definition. Using “amounts of waste” might cause confusion because the word “waste” is not used in the paragraphs stating threshold masses of cleanup debris. The Agency agrees that the change clarifies the rule. PC 8 at p.3.

Using English and Metric Units in Parallel. The Board abbreviates units—*e.g.*, “kilograms” as “kg,” “pounds” as “lbs,” “liters” as “l,” etc. The Board parenthetically adds metric units to several new provisions that state only English units and English units to those that state only metric units.¹⁷ *E.g.*, 35 Ill. Adm. Code 722.113(g), 722.115(a), 722.117(e), 722.182(h), 723.112(a) and (b) (corresponding with 40 C.F.R. 262.13(g), 262.15(a), 262.17(e), 262.82(h), and 263.12(a) and (b) (2017)). Some of the new rules follow the usual pattern of using both English and metric units, with one stated parenthetically. *E.g.*, 40 C.F.R. §§ 260.10 (definitions of LQG, SQG, and VSQG), 262.14(a)(3) and (a)(4), 262.15(a), 262.16(b)(1) and (b)(3)(ii)(C), 262.17(a)(1)(vi)(A), and 262.208(d)(2) (corresponding with 35 Ill. Adm. Code 720.110 (definitions of LQG, SQG, and VSQG), 722.114(a)(3) and (a)(4), 722.115(a), 722.116(b)(1) and (b)(3)(B)(iii), 722.117(a)(1)(F)(i), and 722.308(d)(2)). When adding the corresponding units, the Board consistently uses the units used by USEPA as the primary units, adding the corresponding metric or English units in parentheses.

NFPA 30. The federal rule imposes the buffer zone requirements for tanks in the 1977 or 1981 version of the National Fire Protection Association’s (NFPA) “Flammable and Combustible Liquids Code.” *See* 40 C.F.R. §§ 262.16(b)(3)(vii)(B) (2017). The Board already incorporated the 1984, 1987, and 2003 versions by reference in 35 Ill. Adm. Code 720.111(a) for the purposes of 35 Ill. Adm. Code 721.298, 724.298, 725.298, 726.211, and 727.290. The Illinois rules define the short-form name “NFPA 30” for this document. The Board uses this name in references to this document in corresponding 35 Ill. Adm. Code 722.116(b)(3)(G)(ii).

The federal rule cites to “Tables 2-1 through 2-6” for the required buffer zones. The Board removes the citation to table numbers. The numbers are both unnecessary and

¹⁷ The Board does this also for many existing provisions not affected by the current USEPA amendments. 35 Ill. Adm. Code 722.142(a) and (b), 723.112(b), 723.120(h), 724.296(d)(2)(A), 724.416(b), 724.443(b), 725.416(b), 739.100 (definitions of “used oil aggregation point” and “used oil collection center”), and 739.124(a)(2) and (b)(2).

undesirable. The format of NFPA 30 changed since the 1977 and 1981 editions. The Board further drops specific references to the 1977 and 1981 editions, although the Board incorporates both by reference. The same buffer zones are set forth in each of the 1977, 1981, 1984, 1987, 2003, 2008, 2012, and 2015 editions of NFPA 30, although the table designations changed. Each table is clearly labeled in a way that indicates its applicability and use. No other tables in NFPA relate to tank spacing and buffer zones. The Agency agrees that these changes do not change the scope of the rule. PC 8 at 3.

The Generator Accumulation Rules. USEPA removed the former generator accumulation rule of 40 C.F.R. § 262.34 (corresponding with 35 Ill. Adm. Code 722.134). USEPA placed accumulation requirements in new independent requirements for each of the three generator categories. *See* 40 C.F.R. §§ 262.14(a) and (c) and 262.15 through 262.17 (2017) (corresponding with 35 Ill. Adm. Code 722.114(a) and (c) and 722.115 through 722.117). Two issues confront the Board with the new generator accumulation rules.

Incomplete Updating of References to the Rules. USEPA revised cross-references to former 40 C.F.R. § 262.34 with appropriate references to provisions in the category-specific requirements. *See* 40 C.F.R. § 262.10(l)(1), 262.200 (definition of “trained professional”), 262.201(a), 262.202(a), 262.204(a), 262.211(c), 262.216(a), 264.1(g)(3), 264.1030(b)(2), 264.1050(b)(3), 264.1101(c)(4), 265.1(c)(7), 265.71(c), 265.1030(b)(2) and (b)(3), 266.255(a), 267.71(c), 268.7(a)(5), 268.50(a)(1), and 270.1(c)(2)(i) (2017). The Board made the required changes in corresponding 35 Ill. Adm. Code 703.123(a), 722.301(a), 722.302(a), 722.304(a), 722.311(c), 722.316(a), 724.101(g)(3), 724.930(b)(2), 724.950(b)(3), 724.1101(c)(4), 725.101(c)(7), 725.171(c), 725.930(b)(2) and (b)(3), 726.355(a), 727.171(c), 728.107(a)(5), and 728.150(a)(1).

USEPA did not revise references to 40 C.F.R. § 262.34 in several provisions: 40 C.F.R. §§ 260.10 (definition of “final closure”), 261.4(e)(1), 262.10(l) note 1, 264.1030(b)(3), 264.1050(b)(2), 273.13(c)(2)(iii) and (c)(2)(iv), and 273.33(c)(2)(iii) and (c)(2)(iv).¹⁸ The Board revises these provisions with references to the following generator-category-specific provisions:¹⁹

¹⁸ References to 40 C.F.R. § 262.34 remain in §§ 40 C.F.R. 261, appendix IX (Beckaert Corp., Saturn Corp., and American Chrome and Chemical) and 262.10(k), none of which affect a facility in Illinois. A reference remains in § 40 C.F.R. 262.20(a)(2), which is an obsolete provision that the Board deleted from corresponding 35 Ill. Adm. Code 722.120(a)(2).

¹⁹ The Board also changes the reference to 35 Ill. Adm. Code 722.134 in 35 Ill. Adm. Code 733.133(d)(3)(C) and 733.151(b)(3) as part of the Board-driven changes to rules. The Board added the references at the request of the Agency in Amendments of 35 Ill. Adm. Code 703, 720, 721, 724, 725, 728, and 733 (Standards for Universal Waste Management), R98-12 (Apr. 2, 1998). They are not derived from a federal provision.

Location of Reference to 35 Ill. Adm. Code 722.134	Updated Cross-Reference
720.110 (definition of “final closure”)	722.116
721.104(e)(1)	722.114 and 722.116
722.110(k) Board note	Removed the entire explanation, which supports only 40 C.F.R. § 262.19(k) in the federal rules.
724.930(b)(3)	722.117
724.950(b)(2)	722.117
733.113(c)(2)(C)	722.115
733.113(c)(2)(D)	722.115
733.133(c)(2)(C)	722.115
733.133(c)(2)(D)	722.115

The Agency stated that the Board appropriately corrected the references. PC 8 at 2.

Extending Accumulation Time. USEPA incorporated elements of the old generator accumulation rule of 40 C.F.R. § 262.34 into the GIR. An LQG may accumulate hazardous waste on site for up to 90 days under various conditions.²⁰ See 40 C.F.R. § 262.17(a) (2017) (corresponding with 35 Ill. Adm. Code 722.117(a)); see also 40 C.F.R. § 262.17(a)(3)(ii) and (a)(4)(ii)(A) (2017) (corresponding with 35 Ill. Adm. Code 722.117(a)(3)(B) and (a)(4)(B)(i)). An SQG may accumulate hazardous waste on site for up to 180 days under various conditions.²¹ See 40 C.F.R. § 262.16(b) (2017) (corresponding with 35 Ill. Adm. Code 722.116(b)). An LQG or an SQG can request an extension of the accumulation time up to 30 days if the accumulation time must be extended “due to unforeseen, temporary, and uncontrollable circumstances.” See 40 C.F.R. §§ 262.16(b) and (e) and 262.17(d) (2017) (corresponding with 35 Ill. Adm. Code 722.116(b) and (e) and 722.117(b)).

²⁰ This is up to 180 days for F006 waste or 270 days for F006 waste that must be transported more than 200 miles for off-site treatment, storage, or disposal. 40 C.F.R. § 262.16(c) and (d) (2017) (corresponding with 35 Ill. Adm. Code 722.116(c) and (d)).

²¹ This is extended to 270 days if the SQG’s waste must be transported 200 miles or more for off-site treatment, storage, or disposal or limited to 90 days if the SQG accumulates the waste on a drip pad or in a containment building. See 40 C.F.R. § 262.16(b)(4)(ii), (b)(5)(ii)(A), and (c) (2017) (corresponding with 35 Ill. Adm. Code 722.116(b)(4)(B), (b)(5)(B)(i), and (c)).

The old Illinois generator accumulation rule provided that the Agency granted extensions of the accumulation time by provisional variance. *See* 35 Ill. Adm. Code 722.134 (b), (f), (i)(1), and (i)(2) (2016). The provisional variance is the quickest, easiest, and most efficient mechanism for granting an extension of the accumulation time in Illinois. Further, the basis for decision, that “compliance on a short term basis . . . would impose an arbitrary or unreasonable hardship” (415 ILCS 5/35(b) (2016)) is consistent with the federal basis of “unforeseen, temporary, and uncontrollable circumstances” in 40 C.F.R. §§ 262.16(b) and (e) and 262.17(d).

The Board keeps the provisional variance as the mechanism for granting extensions of the generator accumulation times. Unlike the old accumulation rule, which cited to statutory provisions and Agency procedural rules for provisional variances (*see* 35 Ill. Adm. Code 722.134 (b), (f), (i)(1), and (i)(2) (2016)), the Board refers to provisional variances as the mechanism for granting extensions and cites statutory provisions for provisional variances only in Board notes. *See* 35 Ill. Adm. Code 722.116(d) and 722.117(b) and (e).

Alternative Standards for Episodic Events. The GIR includes new provisions for episodic events. The provisions help stabilize a generator’s category. The GIR defines “episodic event,” “planned episodic event,” and “unplanned episodic event.” Basically, an episodic event is a planned or unplanned increase in hazardous waste generation on a calendar month basis. A planned episodic event can include regular maintenance, equipment cleanouts, short-term projects, and removal of excess chemical inventory. An unplanned episodic event could include production upsets, product recalls, accidental spills, and severe weather events. *See* 40 C.F.R. § 262.231 (2017) (corresponding 35 Ill. Adm. Code 722.331).

The rules allow SQGs and VSQGs one episodic event per year to retain their generator category—*i.e.*, not fall into a higher generator category due to the increased generation. *See* 40 C.F.R. § 262.232(a), (a)(1), (b), and (b)(1) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a), (a)(1), (b), and (b)(1)). The GIR requires advanced notification of a planned episodic event and notification within 72 hours after an unplanned episodic event. *See* 40 C.F.R. § 262.232(a)(2) and (b)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a)(2) and (b)(2)).

Additional Episodic Events. The GIR allows a generator to apply for a second episodic event in a calendar year. If the generator already had an unplanned episodic event, it may apply for an additional planned episodic event. If the generator already had a planned episodic event, it may apply for an additional unplanned episodic event. *See* 40 C.F.R. § 262.233(a)(1) and (a)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.333(a)(1) and (a)(2)). The Board adds a Board note to the provision for additional episodic events—principally to conform with the Illinois regulatory structure.

Illinois provides limited regulatory relief.²² The Board proposed avoiding the relief mechanisms to grant additional episodic events. The Board felt that all the mechanisms either

²² The petitioner could seek a variance, a site-specific rule, or an adjusted standard from the Board or a provisional variance from the Agency. *See* 415 ILCS 5/22.4(b), 27, 28, 28.1, 35, 36(b) and (c), and 37 (2016).

require too much expenditure of resources, time, and effort, or their bases for determination conflict with what USEPA intends. The Board proposed considering an Agency decision to grant or deny an additional episodic event effectively as a permit determination. As explained below, the Board reconsiders and opts to use the provisional variance as the mechanism for Agency approvals.

The federal rule states the conditions for an additional episodic event and informational requirements for seeking one but does not explicitly state a threshold or basis for decision for granting or denying a request. *See generally* 40 C.F.R. § 262.233 (2017) (corresponding with 35 Ill. Adm. Code 722.333). USEPA said that requiring a petition ensures that the episodic events are legitimate, and not a means to avoid regulations applicable to higher generator categories. *See* 81 Fed. Reg. 85732, 86786 (Nov. 28, 2016). USEPA characterizes the determination as “evaluat[ing] . . . [the request] and other site-specific information to determine whether a generator should be allowed to complete an episodic event under the alternative standards.” *Id.* at 86786.

USEPA purposefully did not include a basis for decision in the rule. USEPA stated as follows:

EPA is not promulgating criteria for evaluating petitions for a second unplanned episodic event, but recommends that the implementing agency base its decision on factors including the validity of the proposed episodic event, the generator’s enforcement history[,] and evidence of the generator’s ability to responsibly manage the waste. *Id.* at 86787.

Any relief granted by the Board—*i.e.*, a variance, an adjusted standard, or site-specific rule—would unduly burden the approval process. The procedures would be costly in time, effort, and use of State resources. They include a mandatory public notice and at least the possibility of a public hearing. *See* 415 ILCS 5/27, 28, 28.1(d)(1) and (d)(2) and 37(a) (2016).

The Agency should make the decision to allow additional episodic events. The Board originally dismissed the possible use of a provisional variance. The Board believed that the basis for a provisional variance would add elements to the threshold for approval, inconsistent with USEPA’s intent. The Board compared an Agency determination to a permit decision.

The Agency agrees that it is the appropriate entity to approve or disapprove a request for an additional episodic event. PC 8 at 3-4. However, the Agency says that allowing an additional episodic event is not akin to a permit determination. The Agency points out that hazardous waste generators are not subject to any permit requirements. PC 8 at 4. The Board agrees.

The Board does not agree that the statutory threshold for permit issuance—*i.e.*, “that the facility, equipment, vehicle, vessel, or aircraft will cause a violation of this Act or of regulations hereunder” (PC 8 at 4 quoting 415 ILCS 5/39(a) (2016))—is inconsistent with the determination intended by USEPA. The violation to be avoided is noncompliance with higher generator category requirements when appropriate. *See* 81 Fed. Reg. at 85786.

Nevertheless, the Board agrees that likening an Agency determination to a permit decision is undesirable. Raising the possibility of Board review would unduly and unnecessarily

burden the prompt administrative review contemplated by USEPA. USEPA said, “in some cases a timely response to these requests is critical . . .” 80 Fed. Reg. 57918, 57976 (Sept. 25, 2015). Likening an Agency determination to a permit decision and implying the possibility of Board permit review could also increase uncertainty in the regulatory system and remove an incentive for prompt compliance.

The provisional variance is the sole remaining statutory mechanism for administrative approval of an additional episodic event. Like extending the limit on hazardous waste accumulation time, discussed above, approving an additional episodic event allows variance from the one-per-calendar-year limit on episodic events in 35 Ill. Adm. Code 722.332(a)(1) and (b)(1) (corresponding with 40 C.F.R. § 262.232(a)(1) and (b)(1)). But there are significant differences between extending accumulation time and allowing an additional episodic event.

After a planned or unplanned episodic event in the calendar year, the threshold for allowing an additional episodic event of the other type is simply “an additional episodic event is needed.” *See* 40 C.F.R. § 262.233(b)(1) (2017) (corresponding with 35 Ill. Adm. Code 722.333(b)(1)). This differs from the express threshold for extending generator accumulation time: the existence of “unforeseen, temporary, and uncontrollable circumstances” that necessitate waste remaining on-site for a longer time. *See* 40 C.F.R. §§ 262.16(d) and 262.17(b) (2017) (corresponding with 35 Ill. Adm. Code 722.16(d) and 722.17(b)).

A provisional variance requires “that compliance on a short term basis . . . would impose an arbitrary or unreasonable hardship.” 415 ILCS 5/35(b) (2016). This resembles the “unforeseen, temporary, and uncontrollable circumstances” standard for extending accumulation time. At first glance, the “is needed” standard for an additional episodic event seems different.

USEPA established the rule allowing episodic events to “ease compliance for episodic generators” by not unnecessarily requiring transient compliance with higher generator category standards. 85 Fed. Reg. at 85783. USEPA limited episodic events to an annual basis to avoid their use as a tool to avoid compliance. USEPA allowed the possibility of an additional episodic event “to cover the possibility that a generator could face an unplanned episodic event in the same year it is conducting a planned event.” *Id.*

The Board believes that the “is needed” standard for an additional episodic event is consistent with the standard for a provisional variance. The Board believes that USEPA intended to avoid the arbitrary and unreasonable hardship of compliance with higher generator category standards when a planned episodic event is needed before or after an unplanned episodic event in the same year. Using a provisional variance will not adversely affect the stringency of Illinois rule or make it inconsistent with its federal counterpart.

USEPA imposed a 60-day limit on initial episodic events. *See* 40 C.F.R. § 262.232(a)(6) and (b)(5) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a)(6) and (b)(5)). Although USEPA required that a generator submit information explaining how it will complete management of its waste within 60 days (40 C.F.R. § 262.233(b)(4), corresponding with 35 Ill. Adm. Code 722.333(b)(4)), the federal rule does not include an express limit. *See* 40 C.F.R. § 262.233(a) (2017). The Board added an express limit on additional episodic events in corresponding 35 Ill. Adm. Code 722.333(a).

The 45-day maximum duration of a provisional variance is not inconsistent with the 60-day limit for an additional episodic event. The Act allows an extension (415 ILCS 5/36(c) (2016)), which the Agency would need to limit to the balance of the 60 days to comply with the federal requirement.

The Agency recommended that the Board make three changes in the provision for additional episodic events in 35 Ill. Adm. Code 722.332:

1. Add criteria for Agency approval of requests for additional episodic events;
2. Require generators to clearly identify requests for additional episodic events using USEPA Form 8700-12; and
3. Provide for approval by rule where the specified criteria are fulfilled. PC 8 at 4.

JCAR also requested that the Board add criteria for Agency determinations. PC 5. The Board attempts to follow the first two Agency requests but cannot follow the third.

Although USEPA purposefully omitted criteria for allowing an additional episodic event, the Board has added them in 35 Ill. Adm. Code 722.333(e). The Board drew from the provisions for episodic events and USEPA's *Federal Register* discussion.

The first two criteria require that the initial episodic event and additional episodic event fulfill the definitions of "planned episodic event" and "unplanned episodic event" in 35 Ill. Adm. Code 722.331 (corresponding with 40 C.F.R. § 262.221 (2017)).

The third criterion requires that the additional episodic event must fulfill either of the requirements stated in subsection (a) of the rule: (1) it is an unplanned episodic event, and the generator already had a planned episodic event in the calendar year; or (2) it is a planned episodic event, and the generator already had an unplanned episodic event in the calendar year.

Derived from USEPA's *Federal Register* discussion, the fourth criterion limits approval of an additional episodic event to where "the generator is legitimately having episodic events" and "the provision is being used for true cases of episodic generation and not as a way for generators to regularly avoid managing hazardous waste at higher generator categories." 81 Fed. Reg. at 85786.

The fifth criterion requires that the additional episodic event comply with selected requirements for initial episodic events. These include the accumulation, hazardous waste manifest, maximum 60-day duration, and recordkeeping requirements, which differ between VSQGs and SQGs. *Compare* 35 Ill. Adm. Code 722.332(a)(4) through (a)(7) (correspond with 40 C.F.R. § 262.232(a)(4) through (a)(7)) *with* 722.332(b)(4) through (b)(6) (correspond with 40 C.F.R. § 262.232(b)(4) through (b)(6)). The Board omitted as unnecessary the limit of one episodic event per year. *See* 35 Ill. Adm. Code 722.332(a)(1) and (b)(1). The Board omitted the notification requirements as duplicative of the notification requirements in 35 Ill. Adm. Code 722.333(b) and (c). *See* 35 Ill. Adm. Code 722.332(a)(2) and (b)(2). The Board further omitted the requirement that the generator have a USEPA identification number because the generator

would presumably already have one from the initial episodic event. *See* 35 Ill. Adm. Code 722.332(a)(3) and (b)(3).

The final criterion requires that “the generator will manage the hazardous waste in a way that no violation of the Act or Board regulations will occur.” It is drawn from the permit provision of the Act, based on *Federal Register* discussion that the rule seeks to ensure compliant management of hazardous waste.

USEPA said that the deciding agency must base its decision on “the generator’s enforcement history and evidence of the generator’s ability to responsibly manage the wastes.” 81 Fed. Reg. at 85787. USEPA said that the purpose of the recordkeeping requirements for episodic events would provide “the minimum information necessary to determine that any hazardous waste generated during an episodic event is managed properly.” 81 Fed. Reg. at 85786. USEPA further said that the limitations on additional episodic events “ensure that the episodic provision is not used in a way that creates an incentive for irresponsible management of hazardous waste. *Id.*

The Board does not intend by the final criterion to liken the Agency determination to a permit determination. The Board is borrowing familiar language to incorporate USEPA’s intent into the decision process. The effect will be to require the Agency to deny a request when the generator has not provided adequate assurance in these regards.

Issues remain relating to the timing of requests for an additional episodic event and the effect of approval. There is no element of administrative approval for initial planned or unplanned episodic events. *See* 40 C.F.R. § 262.232(a)(2) and (b)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.232(a)(2) and (b)(2)). Administrative approval is required for additional episodic events. *See* 40 C.F.R. § 262.233(a)(1) (2017) (corresponding with 35 Ill. Adm. Code 722.333 (a)(1)).

For an additional planned episodic event, USEPA said:

In the case of a planned second episodic event, a generator may not manage the hazardous waste from the event under the episodic generation conditions in subpart L until it has approval from the implementing agency for that second event. There is no mandatory time frame for submitting a petition for a second planned event, but the generator should allow enough time for the implementing agency to review the petition so that they can begin the event on time. 81 Fed. Reg. at 85786.

Although the discussion quoted above indicates that USEPA intended prior approval is required for an additional planned episodic event, the federal rule does not expressly require it. *See* 40 C.F.R. § 262.233(a)(1) (2017) (corresponding with 35 Ill. Adm. Code 722.333 (a)(1)). The Board adds an express requirement for prior approval based on the USEPA discussion.

The rule for an initial planned episodic event requires 30 days’ prior notice. 40 C.F.R. § 262.232(a)(2) and (b)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a)(2) and (b)(2)). There is no timeframe for submitting a request for an additional planned episodic event. 40 C.F.R. § 262.233(a)(2) (2017) (corresponding with 35 Ill. Adm. Code 722.333(a)(2)). The

Board observes, however, that section 37(b) of the Act requires the Agency to take final action on a request for a provisional variance within 30 days of receipt. 415 ILCS 5/37(b) (2016).

For an additional unplanned episodic event, the generator must submit a request for approval within seven days after the event. 40 C.F.R. § 262.233(a)(1) (2017) (corresponding with 35 Ill. Adm. Code 722.333(a)(1)). For an unplanned additional episodic event, USEPA said that “the generator may manage hazardous waste for the additional unplanned episodic event under the episodic event standards until written approval by EPA has been received.” 81 Fed. Reg. at 85786.

However, the federal rule does not include language that would allow continued management of the hazardous waste pending approval. Nothing would excuse noncompliance with higher generator category standards should the generator not receive administrative approval. The Board cannot add a provision without making the Illinois rule less stringent than its federal counterpart.

The notification required for an initial episodic event uses USEPA Form 8700-12. The Board has revised the notice requirements for additional episodic events to require use of this form. The generator must clearly identify the submittal as a request for an additional episodic event. *See* 35 Ill. Adm. Code 722.333(b).

The Board cannot provide for approval by rule, as requested by the Agency. The context of an identical-in-substance rulemaking is inappropriate for such a fundamental change in a federal requirement. Further, approval by rule would likely make the Illinois rule less stringent than and inconsistent with its federal counterpart and USEPA’s stated intent.

USEPA chose to allow the initial episodic event by rule. *See* 40 C.F.R. § 262.232(a) and (b) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a) and (b)). If the generator exceeds its generator category threshold once in a year, no administrative determination is necessary. *See* 40 C.F.R. § 262.232(a) and (b) (2017) (corresponding with 35 Ill. Adm. Code 722.332(a) and (b)). On the other hand, USEPA subjected an additional episodic event to administrative scrutiny to ensure that the mechanism is used only to legitimately avoid the arbitrary or unreasonable hardship of compliance with higher generator category standards when an unplanned episodic event occurs in the same year as a planned episodic event. 81 Fed. Reg. at 85786.

The Board agrees with the Agency that noncompliance with the provision for additional episodic events could subject the generator to enforcement action for violation of higher generator category standards. *See* PC 4 at 4. The Board cannot add anything to the rule that would relieve the Agency of an obligation to review requests for additional episodic requests and avoid the possibility that a generator could begin an additional unplanned episodic event and fail to gain Agency approval—potentially becoming subject to enforcement liability.

The Board makes an important correction to the proposed version of the rule based on an IERG suggestion. IERG is correct that adding “planned” to 35 Ill. Adm. Code 722.332(a)(1) and (b)(1) unnecessarily limits the Illinois rule to less than what USEPA allows in corresponding 40

C.F.R. § 262.232(a)(1) and (a)(2). *See* PC 9 at 5-6. Adding “planned” was a drafting error. The Board corrects the error for final adoption.

The Board removes the proposed language from the Board note to 35 Ill. Adm. Code 722.333 to the effect that the Board considers an Agency determination to grant or deny an additional episodic event “in the nature of a permit determination” that is subject to Board review. The Board retains the explanation that any Agency determination is not a “RCRA permit” for the purposes of 35 Ill. Adm. Code 702, 703, and 705. The Board added a statement that failure to obtain Agency approval may subject a generator to enforcement action.

Supplemental Requests for Comments on Additional Episodic Events. The Board requests comments on the changes to provision for additional episodic events since the proposal for public comment. The Board requests comments on the following specific aspects of the rules:

1. Is a provisional variance the appropriate mechanism for the Agency to approve a request for an additional episodic event?
2. Is the Board correct that approval by rule would make 35 Ill. Adm. Code 722.333 less stringent than or inconsistent with corresponding 40 C.F.R. § 262.233?
3. Is there any alternative mechanism permissible under the Act by which the Agency could approve or deny requests for additional episodic events?
4. Is it true that USEPA intends that a generator not begin a planned additional episodic event until after receiving administrative approval?
5. Is it necessary and appropriate for the Board to add criteria for Agency approval of a request for an additional episodic event?
6. Does adding the criteria for Agency approval make 35 Ill. Adm. Code 722.333 more or less stringent than or inconsistent with corresponding 40 C.F.R. § 262.233?
7. Are the six criteria added by the Board the appropriate criteria for Agency consideration?
8. Is there any criterion or criteria that the Board should add for Agency consideration?

Preparedness, Prevention, and Emergency Procedures for LQGs. The GIR includes preparedness, prevention and emergency procedures requirements applicable to LQGs. 40 C.F.R. 262, subpart M (2017) (corresponding with 35 Ill. Adm. Code 722.Subpart M). A few issues warranting discussion confronted the Board in those rules.

Access to Communications. The federal rules require that “all personnel involved in the operation must have immediate access (*e.g.*, direct or unimpeded access) to an internal alarm or emergency communication device.” *See* 40 C.F.R. §§ 262.16(b)(8)(iv)(B) and 262.254(a)

(2017). USEPA intends that the personnel have access “either directly or through visual or voice contact with other employees.” 81 Fed. Reg. 85732, 85791 (Nov. 28, 2016). The *Federal Register* language adds clarity to the provision. The need for limiting language is illustrated by USEPA’s explanation that cell phone access is not sufficient.²³ See 81 Fed. Reg. at 85791. Further, the term “*e.g.*,” (meaning “for example”) does not limit to “direct or unimpeded access,” as stated in 40 C.F.R. §§ 262.16(b)(8)(iv)(B) and 262.254(a).

The Board substitutes the *Federal Register* language and uses “*i.e.*,” (meaning “that is”) since it is limiting. The Board requires that “all personnel involved in the operation must have immediate access (*i.e.*, either directly or through direct, unimpeded visual or voice contact with another employee) to an internal alarm or emergency communication device” in corresponding 35 Ill. Adm. Code 722.116(b)(8)(D)(ii) and 722.354(a). The Board also substituted “*i.e.*,” in 35 Ill. Adm. Code 722.354(b) where “*e.g.*,” appears in corresponding 40 C.F.R. § 262.254(b) (2017).

The Agency commented that this change does not add clarity, and that it may be less clear to some. The Agency does not elaborate. PC 8 at 5. The Board disagrees as to changing the signal abbreviation “*e.g.*” to “*i.e.*,” but agrees that proposed revisions to two of the parentheticals detract from clarity.

USEPA intended the revision as a “parenthetical example” to add clarity to the meaning of “immediate access.” 80 Fed. Reg. 57918, 57962 (Sept. 25, 2015). “*E.g.*” is the appropriate abbreviated signal for an example. However, the Board believes that USEPA mischaracterized the parenthetical as an example. As an example, the parenthetical creates the possibility that some form of access other than direct or unimpeded access is immediate access. Using “*i.e.*” makes the parenthetical define immediate access.

The proposed amendments changed “direct or unimpeded access” to repeat the parenthetical, “either directly or through direct, unimpeded visual or voice contact with another employee,” which appears later in 35 Ill. Adm. Code 722.116(b)(8)(D)(i) and 722.354(a). This does not clarify the meaning of “immediate access.” The Board corrects these two parentheticals by removing this change.

Arrangements with Local Authorities. The GIR requires SQGs and LQGs to arrange with local authorities for emergency response. The rule names “local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals (local emergency responders), taking into account the types and quantities of hazardous wastes handled at the facility.” The rule then allows arrangements with the Local Emergency Planning Committee (LEPC) “if it is determined to be the appropriate organization with which to make arrangements.” 40 C.F.R. §§ 262.16(b)(8)(vi)(A) and 262.256(a) (2017).

²³ When there is only one employee at the site, however, USEPA allows telephone or two-way radios. See 40 C.F.R. § 262.254(b).

The Board finds the federal language vague. Nothing in the rule indicates who makes the determination or the basis for the determination that the LEPC is the appropriate authority. The *Federal Register* discussion, however, illuminates USEPA's intent and suggests how the Board can cure the defect.

USEPA originally intended to direct a generator to first make arrangements with its LEPC. The generator was to go to local emergency responders if the LEPC did not respond, the LEPC determined that it was not the appropriate authority, or there was no LEPC. 81 Fed. Reg. at 86792-93. Public comments, however, convinced USEPA that the generator should first approach local emergency responders. Local emergency responders are usually first at the scene, and LEPCs arrive later, if at all. *Id.* at 86793. The final rule allows the generator to arrange with the LEPC if that is the appropriate authority.

The objectives of the emergency planning with local authorities are dual. First, local authorities need information to rapidly assess the emergency confronting them and respond. Second, local authorities need information to determine any longer-term responses after the emergency is under control. 81 Fed. Reg. at 86793.

The Board believes that individual situations indicate whether the local emergency responders or LEPC is the appropriate entity with which to make arrangements. Emphasis on the determination is misplaced. The Board changes "if it is determined to be the appropriate organization" to "if it is the appropriate organization" in 35 Ill. Adm. Code 722.116(b)(8)(F)(i) and 722.356(a).

The concept of LEPCs grew out of the Emergency Planning and Community Right-to-Know Act (42 U.S.C. §§ 11001 *et seq.*). The Illinois Emergency Planning and Community Right-to-Know Act required the State Emergency Response Committee (SERC) to organize LEPCs in accordance with the federal EPCRA. 430 ILCS 100/8 (2016). The Illinois Emergency Management Agency (IEMA) works with LEPCs to develop emergency operations plans. 20 ILCS 3305/5 (2016). The SERC is part of IEMA. The Board has no role in emergency planning in Illinois and has no experience with how or whether any LEPCs become involved with emergency planning with hazardous waste facility owners or operators.

A generator can contact its LEPC to determine whether the LEPC is the appropriate local authority for emergency planning. SERC/IEMA maintains an on-line listing of LEPC release reporting contacts in Illinois. A Board note at 35 Ill. Adm. Code 722.116(b)(8)(F)(i) and 722.356(a) gives SERC's Internet address.

The Agency asserts that the Internet address for the list would change in the future and make the Board note obsolete. However, the Agency does not recommend that the Board remove the Board notes. PC 8 at 5. The Board will need to periodically check the Internet address and update it as necessary.

"24/7" Emergency Telephone Numbers. The federal rule for contingency plans requires an LQG to send a quick reference guide of its contingency plan to emergency responders. *See* 40 C.F.R. § 262.262(b) (2017). USEPA requires that the guide include "7/24-hour emergency telephone number(s)" for an emergency coordinator. *See* 40 C.F.R. § 262.262(b)(8) (2017).

This is a non-standard usage. The Board changes this to “24/7 emergency telephone numbers.” The term “24/7” is clearer and defined in the dictionary. *See* Dictionary.com. Dictionary.com Unabridged. Random House, Inc. <http://www.dictionary.com/browse/24--7> (accessed: March 20, 2018). The Agency agrees with this change. PC 8 at 5.

Extended Records Retention. The GIR provides for extension of records retention “automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by the Administrator.” *See* 40 C.F.R. §§ 262.11(f) (2017) (corresponding with 35 Ill. Adm. Code 722.111(f)). *See* the discussion of this issue and requests for comments in the discussion of the Hazardous Waste Import-Export Revisions above. The Board does not repeat them here.

Biennial Reporting Requirements. There is a difference in reporting frequency between the USEPA and Illinois rules that prompts changes in the text. USEPA requires biennial reporting of waste activities by LQGs and treatment, storage, or disposal (T/S/D) facilities.²⁴ 40 C.F.R. §§ 262.41, 264.75 and 265.75 (2017). The corresponding Illinois rules require annual reporting. 35 Ill. Adm. Code 722.141, 724.175, and 725.175.

USEPA changed the frequency of reporting waste activities from annual to biennial in 1983. *See* 48 Fed Reg. 3977 (Jan. 28, 1983). The Board opted to retain annual reporting in place of biennial reporting in RCRA and UIC Update, R84-9 (June 13, 1985), slip op. at 4-5. The Board proposed changing from annual to biennial reporting to correspond with the federal requirement but deferred doing so in UIC Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-16, RCRA Subtitle D Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-17, and RCRA Subtitle C Update, USEPA Amendments (July 1, 2005 through December 31, 2005 and March 23, 2006), R06-18 (cons.), slip op. at 35-36 (Nov. 16, 2006). The Agency persuaded the Board to retain annual reporting, for the sake of consistency with statutory reporting requirements (*see* 415 ILCS 5/20.1 (2016)) and required annual updates to financial assurance (*see* 35 Ill. Adm. Code 727.240(c)), in RCRA Subtitle C Update, USEPA Amendments (March 5, 2005, September 8, 2005, and January 1, 2006 through June 30, 2006), R07-5 and RCRA Subtitle C Update, USEPA Amendments (July 1, 2006 through December 31, 2006), R07-14 (cons.), slip op. at 10-12 (June 5, 2008).

The Board omits or revises USEPA amendments particular to biennial reporting in 35 Ill. Adm. Code 722.101(c)(2)(D), 722.141(a) and (b), 724.175, and 725.175 (corresponding with 40 C.F.R. §§ 261.1(c)(2)(iv), 262.41(a) and (b), 264.75, and 265.75). The federal rules require an LQG to renotify USEPA of its hazardous waste activity biennially, which the LQG may do as

²⁴ USEPA requires annual reporting of hazardous waste exports. 40 C.F.R. § 262.83(g) (2017). Export reports must biennially include additional information. 40 C.F.R. § 262.83(g)(5) (2017). T/S/D facilities must report groundwater monitoring results and corrective action reports annually. 40 C.F.R. §§ 265.94(a)(2)(ii) and (b)(2), 265.113(e)(5) and 265.75 (2017) (corresponding with 35 Ill. Adm. Code 722.141, 724.175, and 725.175)

part of its biennial waste activities report.²⁵ 40 C.F.R. § 262.18(d)(2) (2017). The Board requires renotification on a biennial basis, but changes the reference to a biennial report to refer to the annual report in corresponding 35 Ill. Adm. Code 722.118(d)(2).

Miscellaneous Other Revisions to the Text. The Board made miscellaneous other revisions to the federal text that need no discussion. The Board assembled the IIS-RA(P), which fully lists the differences between the text of the USEPA amendments and the Board's language in this rulemaking. Table 2 in the IIS-RA(P) lists federal amendments on which no Board action was necessary. Table 3 lists deviations from the literal text of the federal amendments. Each entry outlines how the Board differed from the USEPA amendments, and many offer brief explanation.

Disallowing Claims of Confidentiality for Imports, Exports, and Transit of Hazardous Waste and Export of Excluded CRTs (December 26, 2017)

USEPA revised the rules for hazardous waste imports and exports to disallow claims of confidential business information for documents for the import, export, and transit of hazardous waste and export of excluded CRTs. Persons interested in the details of the USEPA revisions should refer to the *Federal Register* notice of December 26, 2017.

The Board incorporates the USEPA confidentiality revisions into the Illinois hazardous waste regulations with minimal deviation from the federal text. All revisions are limited to stylistic changes and those needed to comport with Illinois codification requirements. The Board encountered no issue that warrants discussion here.

The Board assembled the IIS-RA(P), which fully lists the differences between the text of the USEPA amendments and the Board's language in this rulemaking. Table 3 lists deviations from the literal text of the federal amendments. Each entry outlines how the Board differed from the USEPA amendments, and many offer brief explanation.

USEPA-Suggested Correction

In a prior proceeding, USEPA suggested a correction to 35 Ill. Adm. Code 702.123. *See* PC 4 and PC 7 in RCRA Subtitle C Update, USEPA Amendments (January 1, 2015 through June 30, 2015 and July 2, 2015), R16-7 (June 16, 2016). The corresponding federal rule, 40 C.F.R. § 270.13(e), requires the name, address, and phone number of the facility's owner in the Part A permit application.

In the proposal for public comment, the Board observed that the Illinois rule lacks that requirement and added it. Further review indicates that the Illinois rules already include the facility owner information requirement. The Board explains below.

USEPA adopted consolidated permit rules when adopting the initial RCRA rules. 48 Fed. Reg. 14146 (Apr. 1, 1983). Subpart A of 40 C.F.R. 122 contained the general rules

²⁵ An SQG must renotify every four years and may use its biennial report to do so. *See* 40 C.F.R. § 262.18(d)(1) (2017).

applicable to all Clean Water Act, UIC, and RCRA programs. Subpart A supported permit application form 1, which required general information. The facility operator information was required by 40 C.F.R. § 122.4(d)(4) (1980). Subpart B of 40 C.F.R. 122 concerned only Part A RCRA permit applications. Subpart B required facility owner information. 40 C.F.R. § 122.24(b) (1980). Subpart C of 40 C.F.R. 122 concerned only UIC permit applications and had no requirement relating to owner or operator information.

The Board adopted the consolidated permit rules in one of the first waves of RCRA rulemaking. The Board codified the general provisions of 40 C.F.R. 122 in 35 Ill. Adm. Code 702, the RCRA-specific provisions in 35 Ill. Adm. Code 703, and the UIC-specific provisions in 35 Ill. Adm. Code 704. (The procedural provisions of 40 C.F.R. 124 became 35 Ill. Adm. Code 705.) The general information requirement of 40 C.F.R. § 122.4(d)(4) (1980) appeared in 35 Ill. Adm. Code 702.123(d). The RCRA-specific provision of 40 C.F.R. § 122.24(b) (1980) appeared in 35 Ill. Adm. Code 703.181(b).

USEPA separated the permit rules in 1983. 48 Fed. Reg. 14146 (Apr. 1, 1983). USEPA narrowed applicability of 40 C.F.R. 122 (1983) to NPDES permits, separating the UIC and RCRA permit requirements respectively into new 40 C.F.R. 144 and 270 (1983). The general requirement for facility operator information in 40 C.F.R. § 122.4(d)(4) (1980) became 40 C.F.R. §§ 144.31(e)(4) and 270.13(d) (1983). The RCRA-specific requirement for facility owner information in 40 C.F.R. § 122.24(b) (1980) became 40 C.F.R. § 270.13(e) (1983).

The Board did not separate the permit rules. Elements of the three Parts 702, 703, and 704, originally drafted to correspond with subparts A, B, and C of 40 C.F.R. 122 (1980), now correlate with 40 C.F.R. 144 and 270 (1983) as follows:

- 40 C.F.R. §§ 144.31(e)(4) and 270.13(d) correspond with 35 Ill. Adm. Code 702.123(d), requiring operator information for RCRA and UIC permit applications
- 40 C.F.R. § 270.13(e) corresponds with 35 Ill. Adm. Code 703.181(b), requiring owner information only for RCRA permit applications

In R84-9 (June 13, 1985), the Board added a requirement for owner information at 35 Ill. Adm. Code 702.123(e). The corresponding Board Note was also amended, attributing 35 Ill. Adm. Code 702.123 to 40 C.F.R. §§ 144.31(e), 270.10(d), and 270.13. The opinion did not explain the revisions.

In R11-14 (Jan. 5, 2012), the Board replaced the owner information requirement at 35 Ill. Adm. Code 702.123(e) with an explanatory statement. On page 41 of its opinion, the Board explained that the UIC rule at 40 C.F.R. § 144.31(e) does not require owner information. Only the RCRA-specific rule at 40 C.F.R. § 270.13(e) requires owner information. The Board observed that the RCRA-specific rule is included in corresponding 35 Ill. Adm. Code 703.181(b).

The inaccurate attribution in the Board note in 35 Ill. Adm. Code 702.123 led USEPA to conclude that the Illinois rules omitted the owner information requirements of 40 C.F.R. § 270.13(e). The Board note now excludes subsection (e) from the reference to 40 C.F.R.

§ 270.13 in that note.

Board-Generated Revisions

In an identical-in-substance proceeding, the Board must adopt the verbatim text of federal regulations except for (1) changes needed for compliance with the Illinois Administrative Code; (2) technical changes that do not change the scope or meaning of the regulations; and (3) typographical and grammatical errors. In addition, the Board must not adopt USEPA rules that are not applicable to Illinois or “things which are outside the Board’s normal functions.” *See* 415 ILCS 5/7.2(a), (a)(1), (a)(2), and (a)(7) (2014). Thus, the Board will make only minor, non-substantive deviations from the federal text described below.

Inclusion of Rules Not Affected by Current Federal Amendments

The federal amendments of November 28, 2016 prompt the Board to open 35 Ill. Adm. Code 702, 703, 720 through 728, 733, and 739 in the hazardous waste rules; 35 Ill. Adm. Code 738 in the UIC rules;²⁶ and 35 Ill. Adm. Code 810 and 811 in the MSWLF rules. The Board includes corrections to many sections in these Parts.

The Board also corrects UIC rules in 35 Ill. Adm. Code 704 and 730, joint UIC and RCRA Subtitle C rules in 35 Ill. Adm. Code 705, and a MSWLF rule in 35 Ill. Adm. Code 812 for the sake of completing needed corrections. These Parts are infrequently opened to incorporate federal amendments. Completing corrections now will simplify Board staff preparation and JCAR staff review of future rulemaking proposals.

Updates to Incorporations by Reference and Textual References to Federal Rules

As a routine matter, the Board updates the versions of federal regulations and statutory provisions incorporated by reference in 35 Ill. Adm. Code 720.111 and 810.104. The most current available version of the *Code of Federal Regulations* is 2017 for all of Titles 29, 33, 40, and 49. For Title 10, 2018 is the latest version.²⁷ The most current available version of the *United States Code* is the 2016 edition for all but Title 50, for which the 2015 edition is the most current.

The Board periodically checks for the most recent versions of other governmental documents incorporated by reference. The Board found no revisions to required OECD or U.S. Government Services Administration (USGSA) documents incorporated by reference but did find later versions for required U.S. Department of Defense (USDOD) documents.

Updates to DOD Documents. The Board updates the incorporations by reference for three required USDOD documents. USDOD revised its “DOD Ammunition and Explosives Safety Standards” (DOD 6055.09) on December 15, 2017, December 18, 2017, December 29,

²⁶ See the discussion of incomplete USEPA amendments above on page 20.

²⁷ The same is true for Title 15 for which the present federally driven amendments add an incorporation by reference.

2017, and January 24, 2018. USDOD revised “The Motor Vehicle Inspection Report” (DD Form 626) and “The Signature and Tally Record” (DD Form 1907) in October 2011. The December 2015 “DOD Multimodal Dangerous Goods Declaration” (DD Form 2890) now serves the function of the former “Dangerous Goods Shipping Paper/Declaration and Emergency Response Information for Hazardous Materials Transported by Government Vehicles” (DD Form 836). The Board also updates the Internet address for obtaining copies of the documents.

When adopting the Military Munitions Rule, USEPA expressed concerns over future USDOD revisions to the forms but accepted future USDOD revisions that are published by a notice in the *Federal Register*. See 62 Fed. Reg. 6621, 6634-35 (Feb. 12, 1997). The Board could not find any such notices. USDOD forms are marked with the statement, “previous edition is obsolete.” USDOD personnel should use the latest version of each form. The Board will regularly check for updates to keep the incorporations by reference up-to-date.

Stylistic Revisions Generally Requested by JCAR Staff

The Board uses this opportunity to make several stylistic changes that JCAR staff usually requests. The Board moves commas and periods outside the ending quotation mark where the punctuation is not part of the quoted material. The Board removes “of this Section” from cross references to subsections and “of this Part” from cross references to Subparts, Tables, and Appendices. The Board also removes many bracketed citations to *Illinois Compiled Statutes* where the statutory citation is previously given in the text or included in a definition of the Act.

Removal of Past Effective Dates and Obsolete Text, Clarifications, and Corrections

The Board reviewed the entire texts of the Parts included in this rulemaking for clarity and errors and to find past effective dates and obsolete text for removal. Table 4 in the IIS-RA(P) describes what the Board has removed, added, or altered in the rules. Table 5 lists all the past dates in the Board’s rules in the Parts included in this proceeding. To determine what to remove and retain, the Board considered the effect of removing past dates or obsolete text. The Board retained dates and text when there was a possibility that removal would change the scope of the rule or effect the stringency of the Illinois rules *vis-a-vis* their federal counterparts. Persons interested in the full scope of the present changes should review Tables 4 and 5 in the IIS-RA(P).

Examples of dates retained and the rationale for keeping them are the following:

November 19, 1980 in the definitions of “new HWM facility” in 35 Ill. Adm. Code 702.110 and 720.110. The date determines the class of a HWM facility as a new facility or an existing facility for the applicability of rules.

March 3, 1984 in the definitions of “new injection well” in 35 Ill. Adm. Code 702.110 and 730.103. The date determines the class of an injection well as a new well or an existing well for the applicability of rules.

July 26, 1982 in the requirements for surface impoundments, landfills, land treatment units and landfills to obtain a post-closure care permit in 35 Ill. Adm. Code 703.121(b) and comply with corrective action requirements in 35 Ill. Adm. Code 724.190(a).

Removal of the dates could make the Illinois rules more stringent as to facilities that stopped receiving wastes before the date.

November 8, 1984 in 35 Ill. Adm. Code 704.141(b)(3) and (c)(3)(G) (the RCRA permit requirements), which deems a person issued an NPDES or UIC permit after the date to have a RCRA Subtitle C permit.

November 8, 1984 in 35 Ill. Adm. Code 728.114(b) and (c) (the land disposal restrictions), which allows an existing surface impoundment storing a waste deemed hazardous waste by USEPA after the date to continue to store the waste up to 48 months. Storage of wastes deemed hazardous waste before that date was not limited. Removing the past effective date could make the Illinois RCRA Subtitle C rule more stringent than its federal counterpart as to wastes stored before the date. Note: The date was the effective date of the Hazardous and Solid Waste Amendments of 1984 (HSWA), Pub. L. 98-616, 98 Stat. 3221 (Nov. 8, 1984).

October 12, 2005 in 35 Ill. Adm. Code 703.280(j)(2) (RCRA permit modification requirements) requiring a facility owner or operator to obtain a permit modification to install air emission control equipment. While it is possible that 40 C.F.R. § 270.42(j)(2) is obsolete, it is likely that removing subsection (j)(2) would affect the scope of the Illinois hazardous waste rules.

Persons interested in the past dates retained by the Board should consult Table 5 in the IIS-RA(P) for this proceeding. The following paragraphs consider only the more salient of the changes.

Hazardous Waste Rules. The Board removed obsolete RCRA Subtitle C dates and provisions. The Board also added text where necessary to clarify or correct the rules. The following paragraphs consider the changes topically.

Part A Permit Application Deadline. The rules require the owner or operator of an existing hazardous waste management facility²⁸ to submit a Part A permit application before the earliest of one of three dates: (1) six months after the rules first subject the facility to the standards of 35 Ill. Adm. Code 725 or 726; (2) thirty days after the owner or operator first becomes subject to these standards; or (3) March 24, 1987 for an SQG that treats, stores, or disposes of hazardous waste on-site. 35 Ill. Adm. Code 703.150(a).

The Board deletes subsection (a)(3) setting the March 24, 1987 date for an SQG treating, storing, or disposing of hazardous waste on-site. The Board believes, however, that the Board should delete more or all of 35 Ill. Adm. Code 703.150—possibly other provisions of 35 Ill. Adm. Code 703 that pertain exclusively to existing facilities.

The Board did not propose more extensive deletions due to uncertainty whether any provisions pertaining to existing facilities have any continuing applicability to any facilities in

²⁸ Defined as a facility in operation or for which construction began on or before November 19, 1980. 35 Ill. Adm. Code 702.110 (derived from 40 C.F.R. § 270.10(e) (2017)).

Illinois. The Board instead requested comment whether deletion as obsolete is possible. The Agency responded that a VSQG could move into either the SQG or LQG category and become subject to 35 Ill. Adm. Code 703.150(a)(2). PC 8 at 5-6.

Part B Permit Application Deadline. The rules interim status authorization²⁹ expires when the owner or operator of a facility fails to timely submit a Part B permit application. 35 Ill. Adm. Code 703.157. For a land disposal facility that had interim status before November 8, 1984, that deadline was November 8, 1985. 35 Ill. Adm. Code 703.157(c). For an incinerator facility that had interim status before November 8, 1984, that deadline was November 8, 1986, unless the facility owner or operator had submitted a Part B permit application before that date. 35 Ill. Adm. Code 703.157(f). For all other facilities that had interim status before November 8, 1984, that deadline was November 8, 1992, unless the facility owner or operator had submitted a Part B permit application before November 8, 1988. 35 Ill. Adm. Code 703.157(g).

The Board deletes these provisions as obsolete because we see no chance that a timely filed Part B permit application under these provisions could remain pending. The Board keeps subsections (d) and (e), since they have operative effect as to facilities that later become subject to the hazardous waste permit requirements.

Certification of Compliance by an Interim Status BIF. The rules for existing boilers and industrial furnaces that burn hazardous waste (BIFs) required an interim status facility to test its emissions, document compliance, then certify compliance to the Agency by August 21, 1992. 35 Ill. Adm. Code 726.203(c). If the BIF failed to timely complete the certification, it was to immediately cease burning hazardous waste, limit burning only to compliance testing, or seek a case-by-case extension of time. 35 Ill. Adm. Code 726.203(c)(7).

The Board removes the obsolete language “except under extensions of time provided by subsection (c)(7)” and “on or before August 21, 1992” from 35 Ill. Adm. Code 726.203(c). The Board removed the language relative to limiting burning to compliance testing and seeking a case-by-case extension of time from 35 Ill. Adm. Code 726.201(c)(7)(B) and (C)(7)(C), retaining only the language from 35 Ill. Adm. Code 726.201(c)(7)(A) requiring cessation of burning if the owner or operator did not submit a complete certification of compliance by August 21, 1992 as 35 Ill. Adm. Code 726(c)(7).

In the opinion accompanying the proposal for public comment, the Board speculated deleting 35 Ill. Adm. Code 726.203 in its entirety could be possible but hesitated to do so without the benefit of public comment. The Board observed that the Section applies only to “existing facilities” during interim status. To obtain the status of an existing facility, the owner or operator was to submit a certification of pre-compliance to USEPA by the August 21, 1991 effective date of the rules. 40 C.F.R. § 266.103(b); *see* 56 Fed. Reg. 7134, 7181 (Feb. 21, 1991). Owners or

²⁹ A facility in existence on the effective date of statutory or regulatory amendments that require the facility to have a permit and for which the owner or operator has submitted notification of hazardous waste activity to USEPA and Part A of the permit application. 35 Ill. Adm. Code 703.153 (derived from 40 C.F.R. § 270.70 (2017)).

operators or operators of BIFs not operating under interim status must comply with 35 Ill. Adm. Code 703.208, 703.232, and 726.202. 35 Ill. Adm. Code 726.202(a).

The Board observed that the rules are unclear as to the status of a BIF that newly becomes subject to the requirements due to a change of law or regulation. The owner or operator is subject to the compliance testing inherent to permit application on an Agency determination to require compliance. 35 Ill. Adm. Code 703.208 and 703.232. The Board opined that it appears that 35 Ill. Adm. Code 726.203 is obsolete and unnecessary.

If the Board should remove 35 Ill. Adm. Code 726.203, the Board should also remove 35 Ill. Adm. Code 726.219. The Board moved 40 C.F.R. § 266.103(c)(7)(ii), providing the procedure for extensions of time for the purposes of 35 Ill. Adm. Code 726.201(c) time limits. The primary time limit is that in 35 Ill. Adm. Code 726.203(c) and (c)(7) for completing certification of compliance by August 21, 1992. The Board believes that this the time limit intended. It is possible, however, that USEPA intended the other time limits in 35 Ill. Adm. Code 726.203(c):

Subsection (c)(2) requires an owner or operator to notify the Agency at least 30 days prior to compliance testing;

Subsection (c)(4) requires certification within 90 days of completing compliance testing;

Subsection (c)(8)(A) prohibits an owner or operator from operating more than 720 hours under conditions exceeding those in the certification of compliance without submitting a revised certification; and

Subsection (c)(8)(B) requires an owner or operator to notify the Agency at least 30 days prior to operating under conditions exceeding those in the certification of compliance.

The Board added the text of 35 Ill. Adm. Code 726.219 to the proposal for the purposes of public comment. The Board suggested that repeal of 35 Ill. Adm. Code 726.203 and 726.219 as obsolete may be possible on final adoption unless public comments persuaded the Board otherwise. The Agency commented, however, that compliance testing required by 35 Ill. Adm. Code 266.203 apply to a BIF that newly becomes subject to the rules absent an agency determination under 35 Ill. Adm. Code 703.208 or 708.232. PC 8 at 6. Thus, 35 Ill. Adm. Code 726.203 and 726.219 are not obsolete and their removal is not possible.

Submission of Exposure Information. The Board revises the requirement that exposure information must accompany any Part B permit application for a surface impoundment or landfill facility. The Board removes as obsolete the provision applicable to facilities that filed Part B applications prior to August 8, 1985. The Board retains the requirement as generally applicable to Part B permit applications on an ongoing basis.

Implementation Provisions for T/S/D Facility Air Emissions Requirements. The rules applicable to T/S/D facilities include three Subparts of rules in each of two Parts.³⁰ Separate rules apply to interim status facilities (35 Ill. Adm. Code 725) than those that generally apply to permitted facilities (35 Ill. Adm. Code 724). Within each part is a Subpart that regulates air emissions from process vents (Subparts AA of 35 Ill. Adm. Code 724 and 725), emissions from equipment leaks (Subparts BB of 35 Ill. Adm. Code 724 and 725), and emissions from tanks, surface impoundments, and containers (Subparts CC of 35 Ill. Adm. Code 724 and 725). The permitted facility standards in Subparts AA, BB, and CC of 35 Ill. Adm. Code 724 include transitional provisions that bridge the interim facility standards with the general facility standards. The Board removes past compliance dates and obsolete language from these provisions.

The Board removes from 35 Ill. Adm. Code 724.930(c) the language that required including the standards for process vents in any existing permit reissued, renewed, or modified after December 6, 1996. The Board removes the past date from 35 Ill. Adm. Code 724.933(a)(2) that requires units beginning operation after December 21, 1990 to immediately comply with the standards.

The Board removes from 35 Ill. Adm. Code 724.950(c) the language that required including the standards for equipment leaks in any existing permit reissued, renewed, or modified after December 6, 1996.

The Board retains the implementation provision in 35 Ill. Adm. Code 724.960(b)(1) and 725.960(b)(1) that requires a compliance schedule that provides for compliance within 30 months for a unit that cannot timely comply with the standards when effective. The effective date intended by USEPA was when a unit became subject to the standards because of regulatory or statutory change. *See* 62 Fed. Reg. 64636, 64639, 64640, 64642 (Dec. 8, 1997). This provision could apply to an existing unit in the future. Removing the possibility for delayed compliance would make the Illinois rules more stringent than their federal counterparts.

The Board removes from 35 Ill. Adm. Code 724.980(c) and 725.980(c) the language that required including the standards for tanks, surface impoundments, and containers in any existing permit reissued, renewed, or modified after December 6, 1996. The Board removes the past date from 35 Ill. Adm. Code 724.933(a)(2) that requires units beginning operation after December 21, 1990 to immediately comply with the process vents standards.

The Board removes the requirements of 35 Ill. Adm. Code 725.982(a) and (d). The rules required interim status facilities existing on December 6, 1996 to comply with the Subpart CC on that date or prepare an implementation schedule that provides for compliance by December 6, 1997. 35 Ill. Adm. Code 725.982(a). The Board could extend the compliance date past

³⁰ The rules applicable to reclamation facilities also include the three Subpart, but they do not have the transitional provisions of the T/S/D facility standards. *See* 35 Ill. Adm. Code 721.930, 721.950, and 721.980.

December 6, 1997 by an adjusted standard upon making specified determinations.³¹ 35 Ill. Adm. Code 725.982(d). Both provisions are obsolete.

Delayed Implementation for T/S/D Facility Secondary Containment Requirements.

The rules applicable to T/S/D facilities require secondary containment for containment buildings. 35 Ill. Adm. Code 724.1101(b) and 725.1101(b). The rules provide for USEPA granting a delay up to two-year in implementation if the owner or operator provides written notice including specified information. 35 Ill. Adm. Code 724.1101(b)(4) and 725.1101(b)(4) (corresponding with 40 C.F.R. §§ 264.1101(b)(4) and 265.1101(b)(4) (2015)). The Board removes the obsolete provisions for a delay. The owner or operator was to submit the request for delay by November 16, 1992. 35 Ill. Adm. Code 724.1101(b)(4)(A) and 725.1101(b)(4)(A).

Payments for T/S/D Facility Closure Financial Assurance. The T/S/D facility financial assurance provisions require an owner or operator to annually pay into its financial assurance mechanism(s) the amount equal to the closure cost and post-closure care cost divided by the years in the pay-in period. For an interim status facility, the Pay-in period is equal to the shorter of the 20 years that began May 19, 1981 or the operating life of the facility. 35 Ill. Adm. Code 725.243(a)(3) and 725.245(a)(3).

The Board removes “over the 20 years beginning May 19, 1981” and “whichever period is shorter” from 35 Ill. Adm. Code 725.243(a)(3) and 725.245(a)(3). The Board further removes the sentence requiring that the owner or operator make the first payment before May 19, 1981. These transitional dates are long past. 35 Ill. Adm. Code 725.243(a)(3)(A) and 725.245(a)(3)(A). The remaining language equates the pay-in period with the operating life of an interim status facility.

Alternative Post-Closure Care Requirements for Interim Status T/S/D Facilities. The Agency may allow remediation measures initiated for an interim status T/S/D facility prior to August 6, 1999 to substitute for corrective action required under a post-closure care permit. This was despite that public participation requirements were not fulfilled, so long as the Agency fulfilled the requirements “at the earliest reasonable opportunity after August 6, 1999. 35 Ill. Adm. Code 725.221(b)(3).

The Board removes the obsolete condition relative to subsequent fulfillment of the public participation requirements. The date is long past. The Board does not remove the condition that the owner or operator must have initiated the remediation before August 6, 1999. The Board cannot totally remove the provision. The post-closure care begins after closure is completed, and the post-closure care period has a 30-year duration. 35 Ill. Adm. Code 725.217(a)(1). It is possible that the post-closure care period has not yet be completed for some facility in Illinois that initiated remediation before August 6, 1999.

Removal of Obsolete Land Application Rates for Cadmium. The rules phased in the land application rates for cadmium on land growing food-chain crops. The rules allowed 0.5 kilograms per hectare (kg/ha) for land growing tobacco, leafy vegetables, and root crops for

³¹ A quick search of Board records disclosed no petition under this provision.

human consumption. The rules lowered the maximum allowable application rate from 2.0 kg/ha to 0.5 kg/ha in two stages on July 1, 1984 and January 1, 1987 for other food-chain crops. 35 Ill. Adm. Code 724.376(c)(1)(B) and 725.376(c)(1)(B) (derived from 40 C.F.R. §§ 264.276(c)(1)(ii) and 265.276(c)(1)(ii) (2017)). The Board replaces the now-obsolete staged table for other food-chain crops with the maximum application rate now allowed.

The Board observes that the entire provision could be further altered to state a limit of 0.5 kg/ha for all food-chain crops. The Board has not adopted this change in the absence of clear indication that “tobacco, leafy vegetables, and root crops grown for human consumption” would be included in “all food-chain crops.”

The interim status provisions for application of hazardous waste to land growing food crops required the owner or operator to notify of the activity by July 16, 1982. The Board deletes this provision, adding a Board note that explains that growing food chain crops at a facility that has never before been used for this purpose is a significant change in process under 35 Ill. Adm. Code 703.155. The owner or operator of such a land treatment facility that proposes to grow food chain crops after May 17, 1982 must have submitted a new or revised Part A permit application.

Electronic Filing Requirements. The Board revises the rules adopted in UIC Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-16, RCRA Subtitle D Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-17, and RCRA Subtitle C Update, USEPA Amendments (July 1, 2005 through December 31, 2005 and March 23, 2006), R06-18 (cons.) (Nov. 16, 2006) to incorporate the federal Cross-Media Electronic Reporting Rule (CROMERR) adopted in 2005. 70 Fed. Reg. 59848 (October 13, 2005). The Board removes the implementing provisions in 35 Ill. Adm. Code 720.104(a)(2)(B)(i) and (a)(2)(B)(ii) that applied until October 13, 2007. The Board divides the text of 35 Ill. Adm. Code 720.104(a)(2)(B)(iii) into two separate subsections (a)(2)(B)(i) and (a)(2)(B)(ii), one pertaining to filing with the Board and the other with filing with the Agency. The provision pertaining to filing with the Board specifically refers to the Clerk’s Office On-Line (COOL) system.

Imprecise Citations to “Section 1004 of the Resource Conservation and Recovery Act” in T/S/D Facility Air Emissions Rules. The Board revises the air emissions standards to uniformly refer to the incorporation by reference of section 1004 of RCRA for definitions of terms. Section 1004 is the definitions provision for RCRA. References to the definitions in section 1004 of RCRA appear in the air emissions control provisions in 35 Ill. Adm. Code 721.951, 721.981, 724.981, and 725.981.

References to RCRA definitions in parallel 35 Ill. Adm. Code 721.931, 724.931, 724.951, 725.931, and 725.951 do not refer specifically to the incorporation by reference of section 1004. Rather, these provisions generally reference “the Resource Conservation and Recovery Act.” The Board adds more specific reference to section 1004 of RCRA for uniformity among and enhance specificity and clarity in these provisions.

The Board observes that corresponding 40 C.F.R. §§ 262.1031, 262.1051, and 262.1081 refer to RCRA generally. Corresponding 40 C.F.R. §§ 264.1031, 264.1051, 264.1081, 265.1031, 265.1051, and 265.1081 refer to RCRA as “the Act.”

Corrected Citations to Section 3010 of RCRA. The Board corrects and standardizes citations to section 3010 of RCRA in several provisions. The Board changes “Resource Conservation and Recovery Act” to the defined acronym³² “RCRA” in 35 Ill. Adm. Code 721.101, 721.104, 721.106, 721.108, 721.120, 725.101, 726.170, and 726.180. The Board corrects “(42 USC 6910)” and “(42 USC 6901 et seq.)” to “(42 USC 6930)” in 35 Ill. Adm. Code 721.101, 721.120, 721.130, 725.101, and 726.170. The Board adds “(42 USC 6930)” to citations in 35 Ill. Adm. Code 721.104, 721.106, 721.108, 724.673, 726.170, and 726.180.

Definition and Standardized Use of “USEPA Identification Number.” The Board replaces the “EPA identification number” with a definition of “USEPA identification number” in 35 Ill. Adm. Code 720.110 and standardizes all references to the USEPA-assigned facility identification number throughout the rules. The definition of “USEPA identification number” differs from the federally derived definition of “EPA identification number.” The Illinois definition omits references to 35 Ill. Adm. Code 722 through 725 and instead refers to compliance with section 3010 of RCRA (42 U.S.C. § 6930 (2016)) as the means for obtaining the number. The Illinois definition also adds a reference to reclamation facilities that is absent from the federal definition. *See* 40 C.F.R. 260.10 (definition) and 260.42(a) (notification requirement). The Board rules throughout refer to this as the USEPA identification number, not “EPA identification number.” *E.g.*, 35 Ill. Adm. Code 720.142(a)(1), 721.104(a)(20)(B)(i), 721.139(a)(5)(A)(i), 722.118, 723.111, 724.111, and 725.111.

Standardized Use of “USEPA Hazardous Waste Number.” The Board replaces the definition of “EPA hazardous waste number” with a definition of “USEPA hazardous waste number,” keeping “EPA hazardous waste number” as the alternative defined term. The Board standardizes all references to hazardous wastes by the USEPA-assigned number throughout the rules.³³ The rules define “USEPA hazardous waste number” in 35 Ill. Adm. Code 720.110, keeping “EPA hazardous waste number” as the alternative defined form. The Illinois rules refer to the wastes by “USEPA hazardous waste number” when defining their characteristics or listing them. 35 Ill. Adm. Code 721.121(b), 721.122(b), 721.123(b), 722.124(b), 721.131(a), 721.132(a), and 721.133(e) and (f) (corresponding with 40 C.F.R. §§ 261.21(b), 261.22(b), 261.23(b), 262.24(b), 261.31(a), 261.32(a), and 261.33(e) and (f) (2017)). The Board believes this precision in language is especially important with the use of OECD “waste code” in import- and export-related provisions. *See* 35 Ill. Adm. Code 722.183(b)(1)(K), (d)(2)(F), and (g)(4)(C); 722.184(b)(1)(K) and (d)(2)(F); 724.112(a)(1); and 725.112(a)(1).

Definitions of Terms Not Used in Rules. The Board removes definitions of “final authorization” and “interim authorization” from the combined RCRA and UIC permit rules in 35 Ill. Adm. Code 702.110. Interim authorization occurred on May 17, 1982. *See* 47 Fed. Reg.

³² Defined in 35 Ill. Adm. Code 720.110.

³³ *See supra* note 9 and accompanying text.

21043 (May 17, 1982). Final authorization occurred January 31, 1986. *See* 51 Fed. Reg. 3776 (Jan.30, 1986). Neither term is used anywhere in the texts of 35 Ill. Adm. Code 702, 703, or 705.

The Board removes the definition of “inactive portion” from 35 Ill. Adm. Code 720.110 in the RCRA rules. The term is defined as the portion of a facility that was not operated after November 19, 1980. The term is used cross-referentially only in the definitions of “active portion” and “closed portion” in the hazardous waste rules, not in any substantive portion of 35 Ill. Adm. Code 720 through 728. *See also* 40 C.F.R. 260 through 268 (2017). The Board removes those references to “inactive portion” from the definitions of “active portion” and “closed portion.”

Corrected Chemical Names. The Board corrects the format (spacing and missing parenthesis mark) in the IUPAC chemical name “5,12-naphthacenedione, 8-acetyl-10-((3-amino-2,3,6-trideoxy- α -L-lyxo-hexo-pyranosyl)oxy)-7,8,9,10-tetrahydro-6,8,11-tri-hydroxy-1-methoxy-, (8S-cis)-” in the entry for daunomycin in Appendix H to 35 Ill. Adm. Code 721. The Board observes that the spacing error also appears in the entry in corresponding appendix VIII to 40 C.F.R. 261.

The Board corrected the alternative chemical name “2,7:3,6-Dimethan-onaphth-(2,3-b)-oxirene, 3,4,5,6,9,9-hexa-chloro-1a,2,2a,3,6,6a,7,7a-octa-hydro-, (1 α ,2 β ,2 α ,3 β ,6 β ,6 α ,7 β ,7 α)-” to the IUPAC name “(1aR,2R,2aS,3S,6R,6aR,7,7S,7aS)-rel-3,4,5,6,9,9-Hexa-chloro-1a,2,2a,3,6,6a,7,7a-octa-hydro-2,7:3,6-dimethan-onaphth-(2,3-b)-oxirene” in the entry for dieldrin in Appendix I to 35 Ill. Adm. Code 724. The former name now revised by the Board is appears in corresponding appendix IX to 40 C.F.R. 264.

The Board removed the space and hard hyphen to correct “dibenz(a,h)-anthracene” to “dibenz(a, h)anthracene” in Appendix G to 35 Ill. Adm. Code 726. The Board also remove the space to correct “4,4'-Methylenebis(2-chloroaniline)” to “4,4'-Methylenebis (2-chloroaniline)” in Appendix G. Both errors appear in corresponding appendix VII to 40 C.F.R. 266 (2017).

In the 35 Ill. Adm. Code 725. Appendix F listing of chemicals having a Henry’s Law Constant less than 0.1 Y/X, the Board attempts to provide IUPAC names and CAS numbers for positive identification of the chemicals. The Board makes the following revisions in the listing:

The Board corrects “bromochloromethyl acetate” to “methyl bromochloroacetate,” moving the entry into alphabetic order and adding the CAS number “20428-74-4.”

The Board changes “3-chloro-2,5-diketopyrrolidine” to “N-chlorosuccinimide (1-chloro-pyrrolidine-2,5-dione),” moving the entry into alphabetic order and adding the CAS number “128-09-6.”

The Board changes “chloro-1,2-ethane diol” to “2-chloroethane-1,1-diol,” adding the CAS number “15873-56-0.”

The Board changes “4-cyanomethyl benzoate” to “methyl-4-(cyanomethyl)benzoate,” moving the entry into alphabetic order and adding the CAS number “76469-88-0.”

The Board changes “methyliminoacetic acid” to “2-(Methylamino)acetic acid (sarcosine, N-methylglycine),” moving the entry into alphabetic order and adding the CAS number “107-97-1.”

The Board corrects “Proporur (Baygon)” to “Propoxur (Baygon) (2-(1-methylethoxy)phenol N-methylcarbamate),” adding the CAS number “114-26-1.”

The Board changes “triethylene glycol dimethyl ether” to “triethylene glycol dimethyl ether (2,5,8,11-tetraoxadodecane, 1-methoxy-2-(2-(2-methoxyethoxy)ethoxy)ethane),” adding the CAS number “112-49-2.”

In this Appendix F, however, the Board could not identify two compounds:

The Board could not identify “methylene diphenylamine (MDA).” The Board found 3-methyldiphenylamine (CAS No. 1205-64-7) and N-methyldiphenylamine (CAS No. 552-82-9). “MDA” is the abbreviation for 4,4'-methylenedianiline. The parenthetical use of “MDA,” however, causes the Board to believe that USEPA intended 4,4'-methylenedianiline. The Board adds the parenthetical abbreviation to the entry for that chemical in the list and removes the entry for “methylene diphenylamine (MDA).”

The Board could not identify “1-methyl-2-methoxyaziridine.” The Board found 1-methylaziridine (CAS No. 1072-44-2) and 2-methylaziridine (1,2-propyleneimine, CAS No. 75-55-8), but no methoxy-substituted aziridine. The Board cannot speculate what compound USEPA intended by “1-methyl-2-methoxyaziridine,” so the Board deletes the entry.

Updated Listing of Board-Granted Hazardous Waste Exclusions. The Board adds entries for the hazardous waste delistings granted by the Board in Petition or Keystone Steel & Wire Company for an Adjusted Standard from 35 Ill. Adm. Code 721.132, AS 93-7 (Dec. 4, 2008) and RCRA Delisting Adjusted Standard Petition for Peoria Disposal Co., AS 08-10 (Jan. 8, 2001) in Table D in Appendix I to 35 Ill. Adm. Code 721. This completes the listing of Board-granted hazardous waste delistings that complements the listing of USEPA-granted delistings in Table B.

The Board is unaware whether the hazardous waste delistings for Amoco Oil Company in Wood River, Illinois and Conversions Systems, Inc. in Sterling, Illinois are still viable. At the very least, the Board is aware that BP acquired the Amoco Oil Company, so that a name change may be warranted. It is possible that the Northwestern Steel plant in Sterling is now closed. The Board would wish to remove the text, if obsolete.

UIC Rules. The Board revises UIC provisions. The following paragraphs consider the revisions topically.

Provisions and Dates Relative to UIC Authorization by Rule. The federal rules required the owners or operators of existing Class I or Class III injection wells to submit a permit application before March 3, 1989. 40 C.F.R. § 144.21(c)(8)(i) (2017) (corresponding with 35 Ill. Adm. Code 704.142(h)). Thus, the Board removes 35 Ill. Adm. Code 704.141, 704.142(h), and

704.147(a)(4) and the references to Class I and Class III injection wells from 35 Ill. Adm. Code 704.147(a) as obsolete.

Authorization by rule was allowed for Class IV injection wells until six months after USEPA approved the Illinois UIC program. *See* 40 C.F.R. § 144.23(a) (2017). USEPA approved the Illinois program over 30 years ago. *See* 49 Fed. Reg. 3991 (Feb. 1, 1984) (approval effective March 3, 1984). The Board does not remove 35 Ill. Adm. Code 704.145 (corresponding with 40 C.F.R. § 144.23) because subsection (c) addresses the possibility that a Class IV injection well may continue to operate in Illinois.³⁴ The Agency commented that it is unaware that any Class IV injection wells are currently operating in Illinois. However, the Agency did not comment whether removing 35 Ill. Adm. Code 704.145 is possible. PC 8 at 6. Absent certainty, the Board cannot remove this provision. Should a Class IV injection well exist in Illinois, the provision includes a prohibition against operating a Class IV well and requirements for closure and notifying the Agency.

Authorization by rule of a Class V injection well ends when the owner or operator either gets a permit for the well or closes the well. *See* 40 C.F.R. § 144.24 (2017) (corresponding with 35 Ill. Adm. Code 704.146). The broad “catch-all” definition of Class V injection well could allow wells to operate without a permit. *See* 40 C.F.R. 144.6(e) (2017) (corresponding with 35 Ill. Adm. Code 704.106(e)); *see also* 40 C.F.R. § 144.3 (2017) (definitions of “well” and “well injection”) (corresponding with 35 Ill. Adm. Code 702.110).

Provisions and Dates Relative to UIC Inventory Requirements. The Board changes the inventory requirements in 35 Ill. Adm. Code 704.148(d) and (e) to remove all requirements except those that apply to a Class V injection well that began operation after May 2, 1994. Only subsection (e)(3), which requires inventory information before beginning operation of a Class V well, and subsection (e)(4), which allows recommencing operation of a Class V well after submitting inventory information, have continuing effect. The Board keeps the substance of those provisions as subsections (d) and (e), respectively.

Subsection (d) currently requires the owner or operator of an injection well to submit inventory information by March 3, 1985. The owner or operator of a Class V injection well in which injection began after March 3, 1985 was to submit inventory information prior to May 2, 1995. 35 Ill. Adm. Code 704.148(e)(1). The owner or operator of a Class V injection well in which injection began after May 2, 1994 was to submit inventory information prior to beginning operation. 35 Ill. Adm. Code 704.148(e)(3).

Provisions and Dates Relative to UIC Permit Requirements. The Board changes the permit application deadlines in 35 Ill. Adm. Code 704.161(b) to remove all requirements except those that apply to a new injection well. Only subsection (b)(2), which requires an application for permit before construction of a new well, has continuing effect. The Board keeps the substance of that provision as subsection (b).

³⁴ A well injecting treated contaminated groundwater into the formation from which it was drawn as approved by USEPA as part of a cleanup action.

The permit rules required the owner or operator of an existing injection well to apply for a permit before one of three dates: (1) within 180 days after the Agency required an application; (2) before August 1, 1984 for injecting manifested hazardous waste; and (3) before March 3, 1986 for those not already required to file by the other two dates. 35 Ill. Adm. Code 704.161(b)(1). The owner or operator of a new injection well is to apply for a permit before well construction begins. 35 Ill. Adm. Code 704.161(b)(2).

Requirements for Existing Motor Vehicle Waste Disposal Wells in Groundwater Protection Areas. The Board removes portions of 35 Ill. Adm. Code 704.287(a) and all of 35 Ill. Adm. Code 704.287(b) and (c) and 704.288(b)(1)(E) and (b)(1)(F). The Board sees no continuing operative effect for these rules relating to existing motor vehicle waste disposal wells.

USEPA required the State to complete all local assessments for groundwater protection before January 1, 2004. If the State failed to do so, additional requirements applied to motor vehicle waste disposal wells. 35 Ill. Adm. Code 704.287(a) (derived from 40 C.F.R. § 144.87(a) (2017)). If the State timely completed the assessments, the owner or operator was to shut down the well or apply for a permit within one year of the assessment. 35 Ill. Adm. Code 704.287(b) (derived from 40 C.F.R. § 144.87(b) (2017)).

The latest possible compliance deadline for the owner or operator of an existing motor vehicle disposal well was January 1, 2007. 35 Ill. Adm. Code 704.287(c) (derived from 40 C.F.R. § 144.87(c) (2017)). Although the rules provide for a one-year extension of the deadline for well assessments, the rules required well closure or receiving a permit no later than January 1, 2006. 35 Ill. Adm. Code 704.287(a)(1)(A) (derived from 40 C.F.R. § 144.87(a)(1)(i) (2017)). Further, any extension of time granted a facility owner or operator had a maximum duration of one year. 35 Ill. Adm. Code 704.287(a)(2) (derived from 40 C.F.R. § 144.87(a)(2) (2017)). There are similar deadlines in the additional requirements for motor vehicle waste disposal wells. 35 Ill. Adm. Code 704.288(b)(1)(E) and (b)(1)(F) (derived from 40 C.F.R. § 144.88(b)(1)(v) and (b)(1)(vi) (2017)).

The special requirements for motor vehicle waste disposal wells required closure of or permit for an existing well located in a sensitive groundwater area before January 1, 2007, with a possible extension up to one year to make connection to a sewer or install treatment. 35 Ill. Adm. Code 704.288(b)(1) (derived from 40 C.F.R. § 144.88(b)(1) (2017)). Else, the rules required the owner or operator to obtain a permit and comply with the maximum contaminant levels for the National Primary Drinking Water Regulations in 35 Ill. Adm. Code 611 (derived from 40 C.F.R. 141). 35 Ill. Adm. Code 704.288(b)(1)(C) and (b)(1)(D) (derived from 40 C.F.R. § 144.88(b)(1)(iii) and (b)(1)(iv) (2017)).

The Agency commented that it has no record of any Class V motor vehicle waste disposal wells operating in Illinois. PC 8 at 6. The past deadlines for closure and absence of any continued operation allow the Board to remove 35 Ill. Adm. Code 704.145.

Requirements for Class V Injection Wells. The Board removes 35 Ill. Adm. Code 704.287(f). The Board sees no continuing operative effect for this rule. If the State chose not to designate sensitive groundwater areas, the prohibitions against large-capacity cesspools applied to all Class V wells throughout the State on January 1, 2007 (or January 1, 2008 with a USEPA

extension). 35 Ill. Adm. Code 704.287(f) (derived from 40 C.F.R. § 144.87(f) (2017)). This provision is obsolete.

Requirements for Large-Capacity Cesspools. The Board removes 704.288(a). It provides that the owner or operator of a large-capacity cesspool existing on April 5, 2000 was to close its well by that date. The rule prohibits large-capacity cesspools after April 5, 2000. 35 Ill. Adm. Code 704.288(a) (derived from 40 C.F.R. § 144.88(a) (2017)).

Definition of a Term Not Used in Rules. The Board removes definition of “date of approval of the Illinois UIC program” from the UIC permit rules in 35 Ill. Adm. Code 702.110. That date was March 3, 1984. *See* 49 Fed. Reg. 3991 (Feb. 1, 1984). The term is not used in any portion of 35 Ill. Adm. Code 702, 704, or 705.

Correcting the Applicability of UIC Land Disposal Restrictions. The Board corrects unusual errors in the UIC land disposal restrictions. The Board incorporated USEPA amendments to four provisions into the Illinois rules in a prior UIC update. The USEPA amendments never became part of 40 C.F.R. 148. The differences are the following:

The applicability statement for the UIC land disposal restrictions in 35 Ill. Adm. Code 738.101(b) differs from that in corresponding 40 C.F.R. § 138.1(b);

The prohibition against dilution as a substitute for treatment in 35 Ill. Adm. Code 738.103 differs from corresponding 40 C.F.R. § 138.3; and

The Illinois rule in 35 Ill. Adm. Code 738.104 allows extensions of time for Class I non-hazardous waste injection wells, where corresponding 40 C.F.R. § 138.4 does not.

The Illinois rule in 35 Ill. Adm. Code 738.120(a) includes a clause relating to “hazardous waste that exhibits a characteristic of hazardous waste and which contains underlying hazardous constituents at the point of generation, but which no longer exhibits a characteristic of hazardous waste when injected into a Class I injection well” that does not appear in corresponding 40 C.F.R. § 148.20(a).

USEPA revised 40 C.F.R. §§ 148.101, 148.103, 148.104, and 148.20 effective April 8, 1998. *See* 61 Fed. Reg. 15565, 15596 (Apr. 8, 1996). The Board incorporated the revisions into the Illinois rules in RCRA Update, USEPA Regulations (July 1, 1995 through December 31, 1995), R96-10, UIC Update, USEPA Regulations (January 1, 1996 through June 30, 1996), R97-3, RCRA Update, USEPA Regulations (July 1, 1996 through June 30, 1996), R97-5 (Nov. 6, 1997) (consol.), slip or. at 642-44. Some of the federal amendments, however, were never incorporated into the *Code of Federal Regulations*.³⁵ *See* 40 C.F.R. § 148.1(b) (1998).

³⁵ The effective date note appended to 40 C.F.R. § 148.1 in the 1996 and 1997 editions of the *Code of Federal Regulations* observe that the April 8, 1996 amendments revised 40 C.F.R. § 148.1(a), but fail to mention amendments to subsections (b) and (d). There is no effective date note appended to any of 40 C.F.R. §§ 148.3, 148.4, and 148.20. Further, there are source notes

Correcting the UIC Land Disposal Restriction for F039 Wastewaters. The Board corrects an error UIC land disposal restriction for F039 wastewaters. The Illinois rule in 35 Ill. Adm. Code 738.116(c)(1) applies to F039 nonwastewaters. Corresponding 40 C.F.R. § 148.16(c)(1) applies to F039 wastewaters. The error originated in UIC Update, USEPA Regulations (January 1, 1990 through August 31, 1990), R90-14 (May 23, 1991). The Board observed the error in Petition of Cabot Corp. for an Adjusted Standard from 35 Ill. Adm. Code 738.Subpart B, AS 12-1 (May 3, 2012), slip op. at 5, n. 4, but did not correct it until now. The last amendments to 35 Ill. Adm. Code 738 occurred in 2006, prior to discovery of the error. *See* UIC Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-16, RCRA Subtitle D Update, USEPA Amendments (July 1, 2005 through December 31, 2005), R06-17, and RCRA Subtitle C Update, USEPA Amendments (July 1, 2005 through December 31, 2005 and March 23, 2006), R06-18 (cons.), slip op. at 35-36 (Nov. 16, 2006).

Updated Citation to Statutory a Definition. The General Assembly revised and renumbered the definitions in the Act in 2002. *See* P.A. 92-574, § 5, effective June 26, 2001. The Board updates the section number for a definition relating to UIC rules. The definition of “regulated recharge area” is updated to section 3.390 of the Act in 35 Ill. Adm. Code 704.286 (definition of “other sensitive groundwater areas”). Discussion below relates to similarly updating a MSWLF provision.

MSWLF Rules. The Board revised MSWLF provisions. The following paragraphs consider the revisions topically.

Statutory Definitions of MSWLF and C&D Landfill. Discussion above describes how the Board could not add the new USEPA definition of “C&D landfill” to the Illinois MSWLF rules. The Board believes that adding a definition would conflict with the statutory definition in Section 3.160 of the Act. The Agency agrees that confusion would result. PC 8 at 3. The Board does not believe adding the definition is necessary for the purposes of the MSWLF rules.³⁶

The Board, however, revises the definition of “MSWLF” in 35 Ill. Adm. Code 810.103 and adds Board note explanation. The USEPA amendments in the GIR prompt these revisions. Based on the statutory definition at Section 3.285 of the Act, the Illinois definition of “MSWLF” differs from the federal definition. The Illinois definition refers to “small quantity generator waste.”³⁷ A MSWLF may not receive waste from an SQG. Rather, a MSWLF may only receive waste from a VSQG. The GIR defines the entity generating the waste, not the waste itself. *See* 35 Ill. Adm. Code 720.110 (definition of “VSQG”), 722.113(g), and 722.114; *but see* 35 Ill. Adm. Code 722.113(f)(1) (referring to “VSQG waste”). The Agency agreed that removing

for those sections. The source notes appended to 40 C.F.R. § 148.1 reference the April 8, 1996 amendments. *See* 40 C.F.R. §§ 148.1, 148.3, 148.4, and 148.20 (1996 and 1997).

³⁶ *See supra* note 15 and accompanying text.

³⁷ The Board need not now consider that the definition should have referred to “conditionally exempt small quantity generator waste.” *See* 40 C.F.R. § 258.2 (2016) (former USEPA definition of “municipal solid waste landfill”).

“small quantity generator” is desirable. The Agency asked the Board to use USEPA’s terminology. PC 8 at 6.

JCAR asked whether the Board plans to revise the Illinois definition to use the federal language. PC 7. That inquiry and the Agency comments prompt the Board to revise the definition to use the federal language. The Board changes “small quantity generator waste” to “waste from a very small quantity generator.” Since the MSWLF rules do not themselves define a VSQG, the Board adds a reference to 35 Ill. Adm. Code 720.110 for the definition. The Board adds the USEPA exclusion of C&D landfills, referencing the definition of that term in 40 C.F.R. § 258.2 to avoid adding it to the Illinois rules. The Board further references 40 C.F.R. § 257.2 for definitions of “land application unit,” “surface impoundment,” and “waste pile.”

The Board removes the proposed explanation to the Board note, further explaining that allowing waste from an SQG would make the Illinois hazardous waste and MSWLF rules less stringent than the federal standards. The Board removes explanation about the exclusion of C&D landfills in the federal definition and its omission from the Illinois definition. The Board adds explanation that a C&D landfill is distinct from a CCDD fill operation regulated under 35 Ill. Adm. Code 1100.

Supplemental Requests for Comments on the Definition of MSWLF. The Board requests comments on the changes to the definition of “municipal solid waste landfill” since the proposal for public comment. The Board requests comments on the following specific aspects of the rules:

1. Did the Board appropriately adapt the federal definition of 40 C.F.R. § 258.2 into 35 Ill. Adm. Code 810.103?
2. Did the Board avoid confusion over “construction and demolition landfill” and “industrial solid waste” by relying on the federal definition in 40 C.F.R. § 258.2?
3. Did the Board appropriately rely on 40 C.F.R. § 257.2 for definitions of “land application unit,” “surface impoundment,” and “waste pile”?
4. Does the explanation added to the appended Board note help avoid confusion over “construction and demolition landfill”?

“Regulated Hazardous Waste” for Load Checking Program. The MSWLF rules require the owner or operator to implement a load-checking program to detect and discourage attempts to dispose of regulated hazardous waste in a MSWLF. The definition of “regulated hazardous waste” in 35 Ill. Adm. Code 811.323(a), adopted by the Board in Development, Operating, and Reporting Requirements for Non-Hazardous Waste Landfills, R88-7 (Aug. 17, 1990) differs from the language in corresponding 40 C.F.R. § 258.20(b). The Board revises the definition to parallel that of USEPA. USEPA’s amendment to 40 C.F.R. § 258.20(b), changing “conditionally exempt small quantity generator” to “very small quantity generator” prompted review of the language and the present amendment.

Corrected Chemical Name. The Board corrects the spelling of the chemical name “polychlorinated biphenyls” to “polychlorinated” in 35 Ill. Adm. Code 811.104(a)(9).

Corrections to MSWLF Rules Correlations Table. The Board corrects cross-references to Illinois rules in the correspondence table in 811.Appendix B:

The Board changes “Section 811.302(e)” to “Section 811.302(e) and (f)” as corresponding with 40 C.F.R. § 258.10 (airport safety);

The Board changes “Section 811.302 and 811.402” to “Sections 811.302(a)(1) and 811.402(a)(1)” as corresponding with 40 C.F.R. § 258.11 (flood plains);

The Board changes “Sections 811.102(d), 811.102(e), and 811.103” to “Sections 811.102(d) and (e) and 811.103” and “Sections 811.102(d), 811.102(e), and 811.103” to “Sections 811.102(d) and (e) and 811.103” as corresponding with 40 C.F.R. § 258.12 (wetlands);

The Board changes “Section 811.318(e), 811.320(d), 811.320(e)” to “Sections 811.318(e), 811.320(d) and (e)” as corresponding with 40 C.F.R. § 258.53 (groundwater monitoring program);

The Board changes “Sections 811.319(d) and 811.325” to “Sections 811.319(d) and 811.326” as corresponding with 40 C.F.R. § 258.58 (implementation of corrective action program); and

The Board changes “Sections 811.110, 811.315 and 811.322” to “Sections 811.110, 811.315, and 811.322” as corresponding with 40 C.F.R. § 258.60 (closure criteria);

The Agency commented that the revisions more accurately convey the correspondence between the State and federal MSWLF rules. PC 8 at 6.

Corrected Citation to a Statutory Definition. The General Assembly revised and renumbered the definitions in the Act in 2002. See P.A. 92-574, § 5, effective June 26, 2001. The Board updates the section number for a MSWLF rule. The definition of “new regional pollution control facility” is updated to section 3.330 of the Act in 35 Ill. Adm. Code 812.105. Discussion above relates to similarly updating a citation in a UIC definition.

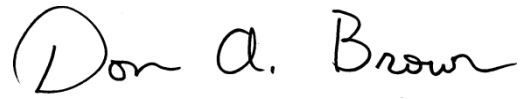

The Identical-in-Substance Rulemaking Addendum (Final) (IIS-RA(F)) fully lists the various Board-driven changes in this rulemaking that are not based on current USEPA amendments. The Board included the IIS-RA(P) in the docket for this rulemaking, available on the Board’s website. Table 3 in the IIS-RA(P) for this proceeding lists the Board-driven changes that the Board makes today.

ORDER

The Board directs the Clerk to provide notice in the *Illinois Register* of the appended adopted amendments to the hazardous waste, UIC, and MSWLF rules at 35 Ill. Adm. Code 702 through 705, 720 through 728, 730, 733, 738, 738, and 810 through 812.

IT IS SO ORDERED.

I, Don A. Brown, Clerk of the Illinois Pollution Control Board, certify that the Board adopted the above opinion and order on October 4, 2018, by a vote of 5-0.

A handwritten signature in black ink that reads "Don A. Brown". The signature is written in a cursive style with a large, circular initial "D".

Don A. Brown, Clerk
Illinois Pollution Control Board

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE G: WASTE DISPOSAL
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER b: PERMITS

PART 702
RCRA AND UIC PERMIT PROGRAMS

SUBPART A: GENERAL PROVISIONS

Section	
702.101	Purpose, Scope, and Applicability
702.102	Electronic Reporting
702.103	Trade Secret or Non-Disclosable Information Submitted to the Agency or Board
702.104	References
702.105	Rulemaking
702.106	Adoption of Agency Criteria
702.107	Permit Appeals and Review of Agency Determinations
702.108	Variances and Adjusted Standards
702.109	Enforcement Actions
702.110	Definitions

SUBPART B: PERMIT APPLICATIONS

Section	
702.120	Permit Application
702.121	Who Applies
702.122	Completeness
702.123	Information Requirements
702.124	Recordkeeping
702.125	Continuation of Expiring Permits
702.126	Signatories to Permit Applications and Reports

SUBPART C: PERMIT CONDITIONS

Section	
702.140	Conditions Applicable to all Permits
702.141	Duty to Comply
702.142	Duty to Reapply
702.143	Need to Halt or Reduce Activity Not a Defense
702.144	Duty to Mitigate
702.145	Proper Operation and Maintenance
702.146	Permit Actions
702.147	Property Rights
702.148	Duty to Provide Information
702.149	Inspection and Entry
702.150	Monitoring and Records
702.151	Signature Requirements
702.152	Reporting Requirements
702.160	Establishing Permit Conditions

702.161	Duration of Permits

Reg. 1588, effective January 20, 2012; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 702.101 Purpose, Scope, and Applicability

- a) Coverage-
 - 1) The permit regulations of 35 Ill. Adm. Code 702 through 705 include provisions for the following two permit programs:
 - A) The RCRA (Resource Conservation and Recovery Act) permit program pursuant to Title V and Title X of the Environmental Protection Act ~~{415 ILCS 5/Title V and Title X}~~.
 - B) The UIC (Underground Injection Control) permit program pursuant to Title III and Title X of the Environmental Protection Act ~~{415 ILCS 5/Title III and Title X}~~.
 - 2) The regulations of 35 Ill. Adm. Code 702 through 705 cover basic permitting requirements (35 Ill. Adm. Code 702 through 704) and procedures for processing of permit applications (35 Ill. Adm. Code 705) for the RCRA and UIC permit programs.
 - 3) The regulations of 35 Ill. Adm. Code 702 through 705 are derived from 40 CFR 124, 144, and 270.
- b) Structure-
 - 1) The regulations of 35 Ill. Adm. Code 702 through 705 comprise the following four Parts:
 - A) This Part contains definitions applicable to 35 Ill. Adm. Code 702 through 705. It also contains basic permitting requirements for the RCRA and UIC programs.
 - B) The regulations of 35 Ill. Adm. Code 703 contain requirements specific to RCRA permits. In case of inconsistency between 35 Ill. Adm. Code 702 and 703, 35 Ill. Adm. Code 703 will control.
 - C) The regulations of 35 Ill. Adm. Code 704 contain requirements specific to UIC permits. In case of inconsistency between 35 Ill. Adm. Code 702 and 704, 35 Ill. Adm. Code 704 will control.
 - D) The regulations of 35 Ill. Adm. Code 705 establish procedures for issuance of RCRA and UIC permits by the Agency.

- 2) The structure and coverage of 35 Ill. Adm. Code 702 through 704 are indicated in the following table:

	RCRA <u>and</u> AND UIC Subpart of 35 Ill. Adm. Code 702	RCRA Subpart of 35 Ill. Adm. Code 703	UIC Subpart of 35 Ill. Adm. Code 704
General	A	A	A
Prohibitions	—	B	B
Authorization by Rule	—	C	C
Permit Application	B	D	D
Special Forms of Permits	—	E	—
Permit Conditions	C	F	E
Issued Permits	D	—	H
Permit Modification	—	G	—
Remedial Action Plans	—	H	—
Integration with MACT Standards	—	I	—
RCRA Standardized Permits	—	J	—
Requirements Applicable to Hazardous Waste Injection Wells	—	—	F
Financial Responsibility for Class I Hazardous Waste Injection Wells	—	—	G
Requirements Applicable to Class V Injection Wells	—	—	I
Requirements Applicable to Class V Injection Wells	—	—	I
Requirements Applicable to Class VI Injection Wells	—	—	J

- c) Relation to Other Requirements ~~other requirements~~.

- 1) Permit application forms. An applicant for a RCRA or UIC permit or a person seeking interim status under RCRA must submit its application on an Agency permit application form when such is available.

- 2) Technical regulations. Each of the two permit programs that are covered in these permit regulations has separate additional regulations that contain technical requirements for that program. These separate regulations are used by the Agency to determine the requirements that must be placed in any permit that it issues. These separate regulations are located as follows:

RCRA	35 Ill. Adm. Code <u>724 and 726</u> 720 through 728, 733, and 739
UIC	35 Ill. Adm. Code 730 and 738

BOARD NOTE: Derived in significant part from 40 CFR 144.1 and 270.1 (2017) ~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.103 Trade Secret or Non-Disclosable Information Submitted to the Agency or Board

- a) In accordance with Section 7 of the Environmental Protection Act ~~[415 ILCS 5/7]~~, and as federally required by 40 CFR 2, a person submitting certain information to the Agency or Board pursuant to this Part and 35 Ill. Adm. Code 703 through 705 may claim that information as trade secret or non-disclosable information. Any such claim of trade secret or non-disclosable information must be asserted at the time of submission in the manner prescribed by 35 Ill. Adm. Code 130. If no claim is made at the time of submission, the Agency or Board may make the information available to the public without further notice. If a claim is asserted, the information will be treated in accordance with 35 Ill. Adm. Code 130 and Board and Agency procedures.
- b) Claims of trade secret or non-disclosable information for the following information will be denied:
- 1) The name and address of any permit applicant or permittee;
 - 2) The identity of substances being placed or to be placed in landfills or hazardous waste treatment, storage, or disposal facilities; and
 - 3) For UIC permits, information that deals with the existence, absence, or level of contaminants in drinking water.

BOARD NOTE: Derived from 40 CFR 144.5 and 270.12 (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.105 Rulemaking

- a) Identical-in-Substance Regulations-
- 1) Generally applicable federal rules. Twice each year, the Board reserves identical-in-substance rulemaking dockets pursuant to Sections 7.2, 13(c), and 22.4(a) of the Act ~~[415 ILCS 5/7.2, 13(e), and 22.4(a)]~~. The Board's intent is generally to include all federal RCRA or UIC amendments that occurred in the appropriate of the prior concluded update periods of January 1 through June 30 or July 1 through December 31. The Board reviews the federal actions that occurred in the period of interest and includes those that require Board action in the reserved docket. The Board itself initiates any necessary amendments to the RCRA or UIC program, so no person needs to file a rulemaking proposal for the included amendments. The Board routinely excludes from these identical-in-substance proposals those federal amendments that pertain to facilities or activities that exist or occur outside Illinois.
 - 2) The Board does not generally include site-specific federal amendments in an identical-in-substance rulemaking proposal without a request from a member of the regulated community. The owner or operator of a facility subject to a site-specific federal rule that wishes the Board to incorporate that rule into the Illinois regulations should submit a request to the Clerk of the Board for inclusion of that site-specific rule in a future identical-in-substance rulemaking proposal. Any person wishing such inclusion may petition the Board to adopt appropriate amendments to the Illinois RCRA or UIC program pursuant to Sections 7.2 and 13(c) or 22.4(a) of the Act. The petition must take the form of a proposal for rulemaking pursuant to 35 Ill. Adm. Code 101 and 102. The proposal must include a listing of all amendments of interest to the petitioner together with copies of the Federal Register notices on which the amendments are to be based.
- b) Other Regulations. With respect to the Illinois RCRA or UIC program or permit issuance, any person may petition the Board to adopt amendments or additional regulations that are not identical in substance to federal regulations. Such proposal must conform to 35 Ill. Adm. Code 101 and 102 and Sections 13(d), 22.4(b) and (c), and Title VII of the Act ~~[415 ILCS 5/13(d), 22.4(b), and (c) and Title VII]~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.106 Adoption of Agency Criteria

- a) The Agency may, in its sole discretion, adopt criteria that will give guidance to the public as to what it will approve in RCRA and UIC permit applications and as

to what conditions it will impose in permit issuance. The statutory authority for the Agency adopting such criteria is the Agency's authority to issue permits pursuant to Sections 4 and 39 of the Act [~~415 ILCS 5/4 and 39~~], and the requirement of the Administrative Procedure Act [5 ILCS 100] that agencies codify as rules those policies or interpretations of general applicability that affect persons outside the Agency.

- b) With respect to review of permit applications and establishment of permit conditions, the Agency must adopt as criteria any policies and interpretations of general applicability that affect persons outside the Agency.
- c) Any criteria that the Agency adopts must include each of the following:
 - 1) Clear references to related provisions of the Act and Board regulations;
 - 2) A statement that the criteria are not Board regulations;
 - 3) A statement that the criteria apply only to review of permit applications and establishment of conditions; and
 - 4) Procedures to be followed if an applicant wishes to deviate from Agency criteria.
- d) For purposes of permit issuance, proof of compliance with Agency-adopted criteria is prima facie proof of compliance with related provisions of the appropriate Act and Board regulations. However, persons other than the Agency may challenge Agency-adopted criteria as applied in the context of permit issuance.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.107 Permit Appeals and Review of Agency Determinations

Unless the contrary intention is indicated, all actions taken by the Agency pursuant to 35 Ill. Adm. Code 702 through 704, 721 through 728, 730, 733, 738, or 739 are to be done as part of an original permit application or a proceeding for modification of an issued permit. Such actions are subject to the procedural requirements of 35 Ill. Adm. Code 705.

- a) Any final Agency action on an original permit application, a proceeding for modification of an issued permit, or any action for review of a final Agency determination required by these regulations may be appealed to the Board pursuant to Title X of the Environmental Protection Act [~~415 ILCS 5/Title X~~] and 35 Ill. Adm. Code 105 and 705.212.
- b) Other actions that are not required by these regulations, whether undertaken by the Agency gratuitously or pursuant to a statutory authorization, such as one taken

to enforce a bond, insurance policy, or similar instrument of a contractual nature or one intended to guide a regulated person in seeking compliance with the regulations, may not be permit modifications reviewable by the Board. The affected person may seek review of an Agency determination that is not a permit determination in any court of competent jurisdiction.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.108 Variances and Adjusted Standards

- a) The Agency has no authority to issue any permit that is inconsistent with Board regulations. If an applicant seeks a permit that would authorize actions that are inconsistent with Board regulations, including delayed compliance dates, the applicant should file for either of the following two forms of relief:
 - 1) A petition for a variance pursuant to Title IX of the Environmental Protection Act (Act) ~~[415 ILCS 5/Title IX]~~ and Subtitle B of 35 Ill. Adm. Code 104; or
 - 2) A petition for an adjusted standard pursuant to Section 28.2 of the Act ~~[415 ILCS 5/28.2]~~ and Subtitle D of 35 Ill. Adm. Code 104.
- b) The Agency must file a recommendation within prescribed times following the filing of a petition for a variance or adjusted standard. The recommendation must include a draft of the language the Agency proposes to include in the permit if its recommendation is accepted.
- c) If the Board grants a variance or adjusted standard, it will order the Agency to issue or modify the permit pursuant to the variance.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.109 Enforcement Actions

Any person may file a civil complaint with the Board alleging violation of the RCRA or UIC regulations, a permit requirement, or permit conditions, pursuant to Title VIII of the Act ~~[415 ILCS 5/Title VIII]~~ and 35 Ill. Adm. Code 103.

- a) A formal complaint filed with the Board will initiate a civil enforcement action in which the complainant bears the burden of proving that the respondent committed the alleged violations.
- b) The Board will forward any informal complaint to the Agency, and the Agency must investigate the alleged violations set forth in the complaint.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.110 Definitions

The following definitions apply to 35 Ill. Adm. Code 702, 703, 704, and 705. Terms not defined in this Section have the meaning given by the appropriate act and regulations, as such are defined in this Section. When a definition applies primarily to one or more programs, those programs appear in parentheses after the defined terms.

“Act” or “Environmental Protection Act” means the Environmental Protection Act [415 ILCS 5].

“Administrator” means the Administrator of the United States Environmental Protection Agency or an authorized representative.

“Agency” means the Illinois Environmental Protection Agency.

“Application” means the Agency forms for applying for a permit. For RCRA, application also includes the information required by the Agency pursuant to 35 Ill. Adm. Code 703.182 through 703.212 (contents of Part B of the RCRA application).

“Appropriate act and regulations” means the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) (RCRA), the federal Safe Drinking Water Act (42 USC 300f et seq.) (SDWA), or the Environmental Protection Act, whichever is applicable, and the applicable regulations promulgated under those statutes.

“Approved program or approved state” means a state or interstate program that has been approved or authorized by USEPA pursuant to 40 CFR 271 (RCRA) or section 1422 of the SDWA (42 USC 300h-1) (UIC).

“Aquifer” (RCRA and UIC) means a geologic formation, group of formations, or part of a formation that is capable of yielding a significant amount of water to a well or spring.

“Area of review” (UIC) means the area surrounding an injection well described according to the criteria set forth in 35 Ill. Adm. Code 730.106, or in the case of an area permit, the project area plus a circumscribing area the width of which is either 402 meters (one-quarter of a mile) or a number calculated according to the criteria set forth in 35 Ill. Adm. Code 730.106.

“Board” (RCRA and UIC) means the Illinois Pollution Control Board.

“Cesspool” (UIC) means a drywell that receives untreated sanitary waste containing human excreta and which sometimes has an open bottom or perforated sides.

“Closure” (RCRA) means the act of securing a Hazardous waste management facility pursuant to 35 Ill. Adm. Code 724.

“Component” (RCRA) means any constituent part of a unit or any group of constituent parts of a unit that are assembled to perform a specific function (e.g., a pump seal, pump, kiln liner, or kiln thermocouple).

“Contaminant” (UIC) means any physical, chemical, biological, or radiological substance or matter in water.

“Corrective action management unit” or “CAMU” (RCRA) means an area within a facility that is designated by the Agency pursuant to Subpart S of 35 Ill. Adm. Code 724 for the purpose of implementing corrective action requirements pursuant to 35 Ill. Adm. Code 724.201 and RCRA section 3008(h) (42 USC 6928(h)). A CAMU must only be used for the management of remediation wastes pursuant to implementing such corrective action requirements at the facility. BOARD NOTE: USEPA must also designate a CAMU until it grants this authority to the Agency. See the note following 35 Ill. Adm. Code 724.652.

“CWA” (RCRA and UIC) means the Clean Water Act (33 USC 1251 et seq.), as amended.

~~“Date of approval by USEPA of the Illinois UIC program” (UIC) means March 3, 1984.~~

“Director” (RCRA and UIC) means the Director of the Illinois Environmental Protection Agency or the Director’s designee.

“Disposal” (RCRA) means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any hazardous waste into or on any land or water so that such hazardous waste or any constituent of the waste may enter the environment or be emitted into the air or discharged into any waters, including groundwater.

“Disposal facility” (RCRA) means a facility or part of a facility at which hazardous waste is intentionally placed into or on the land or water, and at which hazardous waste will remain after closure. The term disposal facility does not include a corrective action management unit into which remediation wastes are placed.

“Draft permit” (RCRA and UIC) means a document prepared pursuant to 35 Ill. Adm. Code 705.141 indicating the Agency’s tentative decision to issue, deny, modify, terminate, or reissue a permit. A notice of intent to deny a permit, as discussed in 35 Ill. Adm. Code 705.141, is a type of draft permit. A denial of a request for modification, as discussed in 35 Ill. Adm. Code 705.128, is not a draft permit. A proposed permit is not a draft permit.

“Drywell” (UIC) means a well, other than an improved sinkhole or subsurface fluid distribution system, that is completed above the water table so that its bottom and sides are typically dry, except when receiving fluids.

“Drilling mud” (UIC) means a heavy suspension used in drilling an injection well, introduced down the drill pipe and through the drill bit.

“Elementary neutralization unit” (RCRA) means a device of which the following is true:

It is used for neutralizing wastes that are hazardous wastes only because they exhibit the corrosivity characteristics defined in 35 Ill. Adm. Code 721.122, or are listed in Subpart D of 35 Ill. Adm. Code 721 only for this reason; and

It meets the definition of tank, tank system, container, transport vehicle, or vessel in 35 Ill. Adm. Code 720.110.

“Emergency permit” (RCRA and UIC) means a RCRA or UIC permit issued in accordance with 35 Ill. Adm. Code 703.221 or 704.163, respectively.

“Environmental Protection Agency” or “EPA” or “USEPA” (RCRA and UIC) means the United States Environmental Protection Agency.

“Exempted aquifer” (UIC) means an aquifer or its portion that meets the criteria in the definition of “underground source of drinking water” but which has been exempted according to the procedures in 35 Ill. Adm. Code 702.105, 704.104, and 704.123(b).

“Existing hazardous waste management (HWM) facility” or “existing facility” (RCRA) means a facility that was in operation or for which construction commenced on or before November 19, 1980. A facility has commenced construction if the following occurs:

The owner or operator has obtained the federal, State, and local approvals or permits necessary to begin physical construction; and

Either of the following has transpired:

A continuous on-site, physical construction program has begun; or

The owner or operator has entered into contractual obligations for physical construction of the facility that cannot be canceled or modified without substantial loss and which are to be completed within a reasonable time.

“Existing injection well” (UIC) means an injection well that is not a new injection well.

“Facility mailing list” (RCRA) means the mailing list for a facility maintained by the Agency in accordance with 35 Ill. Adm. Code 705.163(a).

“Facility or activity” (RCRA and UIC) means any HWM facility, UIC injection well, or any other facility or activity (including land or appurtenances thereto) that is subject to regulations under the Illinois RCRA or UIC program.

“Federal, State, and local approvals or permits necessary to begin physical construction” (RCRA) means permits and approvals required under federal, State, or local hazardous waste control statutes, regulations, or ordinances.

~~“Final authorization” (RCRA) means January 31, 1986, the date of approval by USEPA of the Illinois Hazardous Waste Management Program that has met the requirements of section 3006(b) of RCRA (42 USC 6926(b)) and the applicable requirements of subpart A of 40 CFR 271.~~

“Fluid” (UIC) means any material or substance that flows or moves, whether in a semisolid, liquid, sludge, gas, or any other form or state.

“Formation” (UIC) means a body of rock characterized by a degree of lithologic homogeneity that is prevailing, but not necessarily, tabular and is mappable on the earth’s surface or traceable in the subsurface.

“Formation fluid” (UIC) means fluid present in a formation under natural conditions, as opposed to introduced fluids, such as drilling mud.

“Functionally equivalent component” (RCRA) means a component that performs the same function or measurement and which meets or exceeds the performance specifications of another component.

“Generator” (RCRA) means any person, by site location, whose act or process produces hazardous waste.

“Geologic sequestration” means the long-term containment of a gaseous, liquid, or supercritical carbon dioxide stream in a subsurface geologic formation. This term does not apply to carbon dioxide capture or transport.

“Groundwater” (RCRA and UIC) means a water below the land surface in a zone of saturation.

“Hazardous waste” (RCRA and UIC) means a hazardous waste as defined in 35 Ill. Adm. Code 721.103.

“Hazardous waste management facility” or “HWM facility” (RCRA) means all contiguous land and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (for example, one or more landfills, surface impoundments, or combinations of them).

“HWM facility” (RCRA) means hazardous waste management facility.

“Improved sinkhole” (UIC) means a naturally occurring karst depression or other natural crevice that is found in volcanic terrain and other geologic settings that have been modified by man for the purpose of directing and emplacing fluids into the subsurface.

“Injection well” (RCRA and UIC) means a well into which fluids are being injected.

“Injection zone” (UIC) means a geologic formation, group of formations, or part of a formation receiving fluids through a well.

“In operation” (RCRA) means a facility that is treating, storing, or disposing of hazardous waste.

~~“Interim authorization” (RCRA) means May 17, 1982, the date of approval by USEPA of the Illinois hazardous waste management program that has met the requirements of section 3006(g)(2) of RCRA (42 USC 6926(g)(2)) and applicable requirements of 40 CFR 271.~~

“Interstate agency” means an agency of two or more states established by or under an agreement or compact approved by the Congress, or any other agency of two or more states having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator under the appropriate act and regulations.

“Major facility” means any RCRA or UIC facility or activity classified as such by the Regional Administrator or the Agency.

“Manifest” (RCRA and UIC) means the shipping document originated and signed by the generator that contains the information required by Subpart B of 35 Ill. Adm. Code 722.

“National Pollutant Discharge Elimination System” means the program for issuing, modifying, revoking and reissuing, terminating, monitoring, and enforcing permits and imposing and enforcing pretreatment requirements pursuant to Section 12(f) of the Environmental Protection Act and Subpart A of 35 Ill. Adm. Code 309 and 35 Ill. Adm. Code 310. The term includes an approved program.

“New HWM facility” (RCRA) means a hazardous waste management facility that began operation or for which construction commenced after November 19, 1980.

“New injection well” (UIC) means a well that began injection after March 3, 1984, the date of USEPA approval of the UIC program for the State of Illinois.
BOARD NOTE: See 40 CFR 147.700 (2017)-(2011) and 49 Fed. Reg. 3991 (Feb. 1, 1984).

“Off-site” (RCRA) means any site that is not on-site.

“On-site” (RCRA) means on the same or geographically contiguous property that may be divided by public or private rights-of-way, provided the entrance and exit between the properties is at a cross-roads intersection, and access is by crossing as opposed to going along, the rights-of-way. Non-contiguous properties owned by the same person, but connected by a right-of-way that the person controls and to which the public does not have access, is also considered on-site property.

“Owner or operator” means the owner or operator of any facility or activity subject to regulation under the RCRA or UIC program.

“Permit” means an authorization, license, or equivalent control document issued to implement this Part and 35 Ill. Adm. Code 703, 704, and 705. “Permit” includes RCRA permit by rule (35 Ill. Adm. Code 703.141), RCRA standardized permit (35 Ill. Adm. Code 703.238), UIC area permit (35 Ill. Adm. Code 704.162), and RCRA or UIC “Emergency Permit” (35 Ill. Adm. Code 703.221 and 704.163). “Permit” does not include RCRA interim status (35 Ill. Adm. Code 703.153 through 703.157), UIC authorization by rule (Subpart C of 35 Ill. Adm. Code 704), or any permit that has not yet been the subject of final Agency action, such as a draft permit or a proposed permit.

“Person” means any individual, partnership, co-partnership, firm, company, corporation, association, joint stock company, trust, estate, political subdivision, state agency, or any other legal entity, or their legal representative, agency, or assigns.

“Physical construction” (RCRA) means excavation, movement of earth, erection of forms or structures, or similar activity to prepare an HWM facility to accept hazardous waste.

“Plugging” (UIC) means the act or process of stopping the flow of water, oil, or gas into or out of a formation through a borehole or well penetrating that formation.

“Point of injection” means the last accessible sampling point prior to waste fluids being released into the subsurface environment through a Class V injection well. For example, the point of injection of a Class V septic system might be the

distribution box—the last accessible sampling point before the waste fluids drain into the underlying soils. For a dry well, it is likely to be the well bore itself.

“POTW” means publicly owned treatment works.

“Project” (UIC) means a group of wells in a single operation.

“Publicly owned treatment works” or “POTW” is as defined in 35 Ill. Adm. Code 310.

“Radioactive waste” (UIC) means any waste that contains radioactive material in concentrations that exceed those listed in table II, column 2 in appendix B to 10 CFR 20, incorporated by reference in 35 Ill. Adm. Code 720.111.

“RCRA” (RCRA) means the Resource Conservation and Recovery Act of 1976 (42 USC 6901 et seq.). For the purposes of regulation pursuant to 35 Ill. Adm. Code 700 through 705, 720 through 728, 733, 738, and 739, “RCRA” refers only to RCRA Subtitle C. This does not include the RCRA Subtitle D (municipal solid waste landfill) regulations, found in 35 Ill. Adm. Code 810 through 815, and the RCRA Subtitle I (underground storage tank) regulations found in 35 Ill. Adm. Code 731 and 732.

“RCRA permit” (RCRA) means a permit required pursuant to Section 21(f) of the Act [~~415 ILCS 5/21(f)~~].

“RCRA standardized permit” (RCRA) means a RCRA permit issued pursuant to Subpart J of 35 Ill. Adm. Code 703 and Subpart G of 35 Ill. Adm. Code 705 that authorizes management of hazardous waste. The RCRA standardized permit may have two parts: a uniform portion issued for all RCRA standardized permits and a supplemental portion issued at the discretion of the Agency.

“Regional Administrator” (RCRA and UIC) means the Regional Administrator of the USEPA Region in which the facility is located or the Regional Administrator’s designee.

BOARD NOTE: Illinois is in USEPA Region 5.

“Remedial action plan” or “RAP” (RCRA) means a special form of RCRA permit that a facility owner or operator may obtain pursuant to Subpart H of 35 Ill. Adm. Code 703, instead of a RCRA permit issued pursuant to this Part and 35 Ill. Adm. Code 703, to authorize the treatment, storage, or disposal of hazardous remediation waste (as defined in 35 Ill. Adm. Code 720.110) at a remediation waste management site.

“Sanitary waste” (UIC) means liquid or solid wastes originating solely from humans and human activities, such as wastes collected from toilets, showers, wash basins, sinks used for cleaning domestic areas, sinks used for food

preparation, clothes washing operations, and sinks or washing machines where food and beverage serving dishes, glasses, and utensils are cleaned. Sources of these wastes may include single or multiple residences, hotels and motels, restaurants, bunkhouses, schools, ranger stations, crew quarters, guard stations, campgrounds, picnic grounds, day-use recreation areas, other commercial facilities, and industrial facilities, provided the waste is not mixed with industrial waste.

“Schedule of compliance” (RCRA and UIC) means a schedule of remedial measures included in a permit, including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the appropriate act and regulations.

“SDWA” (UIC) means the Safe Drinking Water Act (42 USC 300f et seq.).

“Septic system” (UIC) means a well, as defined in this Section, that is used to emplace sanitary waste below the surface and which is typically comprised of a septic tank and subsurface fluid distribution system or disposal system.

“Site” (RCRA and UIC) means the land or water area where any facility or activity is physically located or conducted, including adjacent land used in connection with the facility or activity.

“SIC code” (RCRA and UIC) means “Standard Industrial Classification code:”. This is the code assigned to a site by the United States Department of Transportation, Federal Highway Administration, based on the particular activities that occur on the site, as set forth in its publication, “Standard Industrial Classification Manual;”, incorporated by reference in 35 Ill. Adm. Code 720.111.

“State” (RCRA and UIC) means the State of Illinois.

“State Director” (RCRA and UIC) means the Director of the Illinois Environmental Protection Agency.

“State/USEPA agreement” (RCRA and UIC) means an agreement between the Regional Administrator and the State that coordinates USEPA and State activities, responsibilities, and programs, including those under the RCRA and SDWA.

“Storage” (RCRA) means the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.

“Stratum” (plural “strata”) (UIC) means a single sedimentary bed or layer, regardless of thickness, that consists of generally the same kind of rock material.

“Subsurface fluid distribution system” (UIC) means an assemblage of perforated pipes, drain tiles, or other similar mechanisms intended to distribute fluids below the surface of the ground.

“Total dissolved solids” (UIC) means the total dissolved (filterable) solids as determined by use of the method specified in 40 CFR 136.3 (Identification of Test Procedures; the method for filterable residue), incorporated by reference in 35 Ill. Adm. Code 720.111.

“Transfer facility” (RCRA) means any transportation related facility, including loading docks, parking areas, storage areas, and other similar areas where shipments of hazardous wastes are held during the normal course of transportation.

“Transferee” (UIC) means the owner or operator receiving ownership or operational control of the well.

“Transferor” (UIC) means the owner or operator transferring ownership or operational control of the well.

“Transporter” (RCRA) means a person engaged in the off-site transportation of “hazardous waste” by air, rail, highway, or water.

“Treatment” (RCRA) means any method, technique, process, including neutralization, designed to change the physical, chemical, or biological character or composition of any “hazardous waste” so as to neutralize such wastes, or so as to recover energy or material resources from the waste, or so as to render such wastes non-hazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

“UIC” (UIC) means the Underground Injection Control program.

“Underground injection” (UIC) means a well injection.

“Underground source of drinking water” or “USDW” (RCRA and UIC) means an aquifer or its portion that is not an exempted aquifer and of which either of the following is true:

It supplies any public water system; or

It contains a sufficient quantity of groundwater to supply a public water system; and

It currently supplies drinking water for human consumption; or

It contains less than 10,000 mg/ℓ total dissolved solids.

“USDW” (RCRA and UIC) means an underground source of drinking water.

“Wastewater treatment unit” (RCRA) means a device of which the following is true:

It is part of a wastewater treatment facility that is subject to regulation pursuant to Subpart A of 35 Ill. Adm. Code 309 or 35 Ill. Adm. Code 310; and

It receives and treats or stores an influent wastewater that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or generates and accumulates a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or treats or stores a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103; and

It meets the definition of tank or tank system in 35 Ill. Adm. Code 720.110.

“Well” (UIC) means a bored, drilled, or driven shaft, or a dug hole, whose depth is greater than the largest surface dimension; a dug hole whose depth is greater than the largest surface dimension; or an improved sinkhole; or, a subsurface fluid distribution system.

“Well injection” (UIC) means the subsurface emplacement of fluids through a well.

BOARD NOTE: Derived from 40 CFR 124.2, 144.3, and 270.2 (2017)-(2011).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: PERMIT APPLICATIONS

Section 702.120 Permit Application

- a) Applying for a UIC Permit-~~permit~~. Any person that is required to have a permit (including new applicants and permittees with expiring permits) must complete, sign, and submit an application to the Agency as described in this Section and in 35 Ill. Adm. Code 704.161 (UIC). Any person that is currently authorized with UIC authorization by rule (Subpart C of 35 Ill. Adm. Code 704) must apply for a permit when required to do so by the Agency. The procedure for application, issuance, and administration of an emergency permit is found exclusively in 35 Ill. Adm. Code 704.163 (UIC).
- b) Applying for a RCRA Permit-~~permit~~. The following information outlines how to obtain a permit and where to find requirements for specific permits:

- 1) If the facility is covered by RCRA permits by rule (35 Ill. Adm. Code 703.141), the owner or operator needs not apply for a permit.
- 2) If the facility owner or operator currently has interim status pursuant to RCRA (Subpart C of 35 Ill. Adm. Code 703), it must apply for a permit when required by the Agency.
- 3) If the facility owner or operator is required to have a permit (including new applicants and permittees with expiring permits), it must complete, sign, and submit an application to the Agency, as described in this Section; in Sections 702.121 through 702.124; and in 35 Ill. Adm. Code 703.125, 703.126, 703.150 through 703.157, 703.186, and 703.188.
- 4) If the facility owner or operator is seeking an emergency permit, the procedures for application, issuance, and administration are found exclusively in 35 Ill. Adm. Code 703.220.
- 5) If the facility owner or operator is seeking a research, development, and demonstration permit, the procedures for application, issuance, and administration are found exclusively in 35 Ill. Adm. Code 703.231.
- 6) If the facility owner or operator is seeking a RCRA standardized permit, the procedures for application and issuance are found in Subpart G of 35 Ill. Adm. Code 705 and Subpart J of 35 Ill. Adm. Code 703.

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 144.31(a) ~~(2017)-(2010)~~, and subsection (b) ~~of this Section~~ is derived from 40 CFR 270.10(a) ~~(2017)-(2010)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.123 Information Requirements

An applicant for a RCRA or UIC Class I, III, or V permit must provide the following information to the Agency, using the application form provided by the Agency (additional information required of applicants is set forth in Subpart D of 35 Ill. Adm. Code 703 (RCRA) and 35 Ill. Adm. Code 704.161 (UIC)). An applicant for a Class VI injection well permit must follow the criteria provided in 35 Ill. Adm. Code 730.182.

- a) The activities conducted by the applicant that require it to obtain a permit under RCRA or UIC.
- b) The name, mailing address, and location of the facility for which the application is submitted.
- c) Up to four SIC codes that best reflect the principal products or services provided by the facility.

- d) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.
- e) This subsection (e) corresponds with 40 CFR 144.31(e)(5) and 270.13(f), relating to facilities on Indian lands. The Board has replaced the corresponding federal text with this statement to maintain structural parity with the corresponding federal rules.
- f) A listing of all permits or construction approvals received or applied for under any of the following programs:
 - 1) The hazardous waste management program under RCRA, this Part, and 35 Ill. Adm. Code 703;
 - 2) The UIC program under SDWA, this Part, and 35 Ill. Adm. Code 704;
 - 3) The National Pollutant Discharge Elimination System (NPDES) program under the federal CWA (33 USC 1251 et seq.) and 35 Ill. Adm. Code 309;
 - 4) The Prevention of Significant Deterioration (PSD) program under the federal Clean Air Act (42 USC 7401 et seq.);
 - 5) The nonattainment program under the federal Clean Air Act;
 - 6) The National Emission Standards for Hazardous Pollutants (NESHAPs) preconstruction approval under the federal Clean Air Act;
 - 7) Any ocean dumping permits under the federal Marine Protection Research and Sanctuaries Act (33 UCS 1401 et seq.);
 - 8) Any dredge or fill permits under Section 404 of CWA (33 USC 1344); and
 - 9) Any other relevant environmental permits, including any State-issued permits.
- g) A topographic map (or other map if a topographic map is unavailable) extending 1609 meters (one mile) beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or which are otherwise known to the applicant within 402 meters (one-quarter mile) of the facility property boundary.
- h) A brief description of the nature of the business.

BOARD NOTE: Derived from 40 CFR 144.31(e)(1) through (e)(4) and (e)(6) through (e)(8); 270.10(d); and 270.13(a) through (d), (f), and (k) through (m) ~~(2017)-(2014)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.125 Continuation of Expiring Permits

- a) The conditions of an expired permit continue in force until the effective date of a new permit (see 35 Ill. Adm. Code 705.201) if both of the following conditions are fulfilled:
 - 1) The permittee has submitted a timely application pursuant to 35 Ill. Adm. Code 703.181 (RCRA) or 704.161 (UIC) that is a complete (pursuant to Section 702.122) application for a new permit; and
 - 2) The Agency, through no fault of the permittee, does not issue a new permit with an effective date pursuant to 35 Ill. Adm. Code 705.201 on or before the expiration date of the previous permit (for example, when issuance is impracticable due to time or resource constraints).
- b) Effect. Permits continued pursuant to this Section remain fully effective and enforceable.
- c) Enforcement. When the permittee is not in compliance with the conditions of the expiring or expired permit, the Agency may choose to do any or all of the following:
 - 1) Initiate enforcement action based upon the permit that has been continued;
 - 2) Issue a notice of intent to deny the new permit pursuant to 35 Ill. Adm. Code 705.141. If the permit is denied, the owner or operator would then be required to cease the activities authorized by the continued permit or be subject to enforcement action for operating without a permit;
 - 3) Issue a new permit pursuant to 35 Ill. Adm. Code 705 with appropriate conditions; or
 - 4) Take other actions authorized by the Environmental Protection Act ~~[415 ILCS 5]~~, or regulations adopted thereunder.
- d) This subsection (d) corresponds with 40 CFR 144.37(d) and 270.51(d), which pertain to continuation of USEPA-issued permits until disposition of a permit application filed with an authorized state. A corresponding provision is unnecessary in the Illinois regulations. This statement maintains structural consistency with the corresponding federal rules.

- e) RCRA Standardized Permits ~~standardized permits.~~
- 1) The conditions of an owner's or operator's expired RCRA standardized permit continue until the effective date of its new permit (see 35 Ill. Adm. Code 705.201) if all of the following conditions are fulfilled:
 - A) If the Agency is the permit-issuing authority;
 - B) If the owner or operator has submitted a timely and complete Notice of Intent pursuant to 35 Ill. Adm. Code 705.301(a)(2) requesting coverage under a RCRA standardized permit; and
 - C) If the Agency, through no fault of the owner or operator, does not issue the permit before the previous permit expires (for example, where it is impractical to make the permit effective by that date because of time or resource constraints).
 - 2) In some instances, the Agency may notify the owner or operator that it is not eligible for a RCRA standardized permit (see 35 Ill. Adm. Code 705.302(c)). In such an instance, the conditions of the owner's or operator's expired permit will continue if the owner or operator submits the information specified in subsection (a)(1) ~~of this Section~~ (that is, a complete application for a new permit) within 60 days after it receives an Agency notification that the owner or operator is not eligible for a RCRA standardized permit.

BOARD NOTE: Derived from 40 CFR 144.37 and 270.51 (2017) ~~(2005)~~, as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.126 Signatories to Permit Applications and Reports

- a) Applications. A permit application must be signed as follows:
 - 1) For a corporation: a permit application must be signed by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means either of the following persons:
 - A) A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person that performs similar policy or decision-making functions for the corporation; or
 - B) The manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having

gross annual sales or expenditures exceeding \$25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

BOARD NOTE: The Board does not require specific assignments or delegations of authority to responsible corporate officers identified in subsection (a)(1)(A) ~~of this Section~~. The Agency will presume that these responsible corporate officers have the requisite authority to sign permit applications, unless the corporation has notified the Agency to the contrary. Corporate procedures governing authority to sign permit applications may provide for assignment or delegation to applicable corporate positions pursuant to subsection (a)(1)(B) ~~of this Section~~, rather than to specific individuals.

- 2) For a partnership or sole proprietorship: a permit application must be signed by a general partner or the proprietor, respectively; or
 - 3) For a municipality, State, federal, or other public agency: a permit application must be signed by either a principal executive officer or ranking elected official. For purposes of this Section, a principal executive officer of a federal agency includes either of the following persons:
 - A) The chief executive officer of the agency, or
 - B) A senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of USEPA).
- b) Reports. All reports required by permits or other information requested by the Agency must be signed by a person described in subsection (a) ~~of this Section~~, or by a duly authorized representative of that person. A person is a duly authorized representative only if each of the following conditions are fulfilled:
- 1) The authorization is made in writing by a person described in subsection (a) ~~of this Section~~;
 - 2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or a well field, superintendent, or position of equivalent responsibility. (A duly authorized representative may thus be either a named individual or any individual occupying a named position); and
 - 3) The written authorization is submitted to the Agency.

c) Changes to ~~Authorization authorization~~. If an authorization pursuant to subsection (b) ~~of this Section~~ is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization satisfying the requirements of subsection (b) must be submitted to the Agency prior to or together with any reports, information, or applications to be signed by an authorized representative.

d) Certification.

1) Any person signing a document pursuant to subsection (a) or (b) ~~of this Section~~ must make the following certification:

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons that manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

2) Alternative ~~Owner Certification owner certification~~. For remedial action plans (RAPs) pursuant to Subpart H ~~of this Part~~, if the operator certifies according to subsection (d)(1) ~~of this Section~~, then the owner may choose to make the following certification instead of the certification in subsection (d)(1) ~~of this Section~~:

Based on my knowledge of the conditions of the property described in the RAP and my inquiry of the person or persons that manage the system referenced in the operator's certification, or those persons directly responsible for gathering the information, the information submitted is, upon information and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

BOARD NOTE: Derived from 40 CFR 144.32 and 270.11 ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: PERMIT CONDITIONS

Section 702.152 Reporting Requirements

- a) Planned Changes~~changes~~. The permittee must give notice to the Agency as soon as possible of any planned physical alterations or additions to the permitted facility.
- b) Anticipated noncompliance. The permittee must give advance notice to the Agency of any planned changes in the permitted facility or activity that may result in noncompliance with permit requirements. For RCRA, see also 35 Ill. Adm. Code 703.247.
- c) Transfers. This permit is not transferable to any person, except after notice to the Agency. The Agency may require modification of the permit to change the name of the permittee and incorporate such other requirements as may be necessary under the appropriate Act. (See Sections 702.182 and 702.183, in some cases modification is mandatory.)
- d) Monitoring Reports~~reports~~. Monitoring results must be reported at the intervals specified in the permit.
- e) Compliance Schedules~~schedules~~. Reports of compliance or non-compliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of the permit must be submitted no later than specified in Section 702.162.
- f) Twenty-four hour reporting as required in 35 Ill. Adm. Code 703.245 or 704.181(d).
- g) Other Noncompliance~~noncompliance~~. The permittee must report all instances of noncompliance not reported pursuant to subsections (d), (e), and (f) ~~of this Section~~ at the time monitoring reports are submitted. The reports must contain the information referenced in subsection (f) ~~of this Section~~.
- h) Other Information~~information~~. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Agency, it must promptly submit such facts or information.

BOARD NOTE: Derived from 40 CFR 144.51(l) and 270.30(l) ~~(2017)~~ ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.162 Schedules of Compliance

The permit may, when appropriate, specify a schedule of compliance leading to compliance with the appropriate act and regulations.

- a) Time for ~~Compliance-compliance~~. Any schedules of compliance pursuant to this Section must require compliance as soon as possible. For UIC, in addition, schedules of compliance must require compliance not later than three years after the effective date of the permit.
- b) Interim ~~Dates-dates~~. If a permit establishes a schedule of compliance that exceeds one year from the date of permit issuance, the schedule must set forth interim requirements and the dates for their achievement.
 - 1) The time between interim dates must not exceed one year.
 - 2) If the time necessary for completion of any interim requirement (such as the construction of a control facility) is more than one year and is not readily divisible into stages for completion, the permit must specify interim dates for the submission of reports of progress toward compliance of the interim requirements and indicate a projected completion date.
- c) Reporting. A RCRA permit must be written to require that no later than 14 days following such interim date and the final date of compliance, the permittee must notify the Agency in writing of its compliance or noncompliance with the interim or final requirements. A UIC permit must be written to require that, if subsection (a) ~~of this Section~~ is applicable, progress reports be submitted no later than 30 days following each interim date and the final date of compliance.
- d) The Agency may not permit a schedule of compliance involving violation of regulations adopted by the Board unless the permittee has been granted a variance. To avoid delay, an applicant seeking a schedule of compliance should file a variance petition pursuant to Subpart B of 35 Ill. Adm. Code 104 at the same time the permit application is filed.

BOARD NOTE: Derived from 40 CFR 144.53(a) and 270.33(a) ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.163 Alternative Schedules of Compliance

A RCRA or UIC permit applicant or permittee may cease conducting regulated activities (by receiving a terminal volume of hazardous waste and, for treatment or storage HWM facilities, by closing pursuant to applicable requirements; for disposal HWM facilities, by closing and conducting post-closure care pursuant to applicable requirements; or, for UIC wells, by plugging and abandonment), rather than continuing to operate and meet permit requirements as follows:

- a) If the permittee decides to cease conducting regulated activities at a given time within the term of a permit that has already been issued, either of the following must occur:
- 1) The permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or
 - 2) The permittee must cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit.
- b) If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit must contain a schedule leading to termination that will ensure timely compliance with applicable requirements.
- c) If the permittee is undecided whether to cease conducting regulated activities, the Agency may issue or modify a permit to contain two alternative schedules, as follows:
- 1) Both schedules must contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date that ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities;
 - 2) One schedule must lead to timely compliance with applicable requirements;
 - 3) The second schedule must lead to cessation of regulated activities by a date that will ensure timely compliance with applicable requirements.
 - 4) Each permit containing two alternative schedules must include a requirement that, after the permittee has made a final decision pursuant to subsection (c)(1) ~~of this Section~~, it must follow the schedule leading to compliance, if the decision is to continue conducting regulated activities, or follow the schedule leading to termination, if the decision is to cease conducting regulated activities.
- d) The applicant's or permittee's decision to cease conducting regulated activities must be evidenced by a firm public commitment satisfactory to the Agency, such as a written resolution of the board of directors of a corporation.

BOARD NOTE: Derived from 40 CFR 144.53(b) and 270.33(b) (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: ISSUED PERMITS

Section 702.181 Effect of a Permit

- a) The existence of a RCRA or UIC permit does not constitute a defense to a violation of the Environmental Protection Act or this Subtitle G, except for prohibitions against development, modification, or operation without a permit. A permit may be modified or reissued during its term for cause, as set forth in Subpart G of 35 Ill. Adm. Code 703 (RCRA) or Subpart H of 35 Ill. Adm. Code 704 (UIC) and Section 702.186, or a permit may be modified upon the request of the permittee, as provided by 35 Ill. Adm. Code 703.280 through 703.283.

BOARD NOTE: 40 CFR 270.4(a) differs from this subsection (a) in two significant aspects: (1) 40 CFR 270.4(a)(1) states that compliance with the permit is compliance with federal law; and (2) 40 CFR 270.4(a)(1)(i) through (a)(1)(iv) enumerate exceptions when compliance with the permit can violate federal law. The exceptions under which compliance with a permit can violate federal law are the following intervening events: (1) new or amended statutory requirements; (2) new or amended 40 CFR 268 land disposal restrictions; (3) the adoption of the 40 CFR 264 leak detection requirements; and (4) the adoption of the air emissions limitations of subparts AA, BB, and CC of 40 CFR 265. By not codifying the federal exceptions, since they are not necessary in the Illinois program to accomplish the intended purpose, the Board does not intend to imply that compliance with a RCRA permit obviates immediate compliance with any of the events included in the federal exceptions.

- b) The issuance of a permit does not convey property rights of any sort, nor does issuance convey any exclusive privilege.
- c) The issuance of a permit does not authorize injury to persons or property or invasion of other private rights, nor does issuance authorize any infringement of State or local law or regulations, except as noted in subsection (a) of this Section.

BOARD NOTE: Derived from 40 CFR 144.35 and 40 CFR 270.4 (2017) ~~(2010)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 702.186 Revocation

The Board will revoke a permit during its term in accordance with Title VIII of the Environmental Protection Act ~~[415 ILCS 5/Title VIII]~~ for the following causes:

- a) The permittee's violation of the Environmental Protection Act ~~[415 ILCS 5]~~ or regulations adopted thereunder;
- b) Noncompliance by the permittee with any condition of the permit;

- c) The permittee’s failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee’s misrepresentation of any relevant facts at any time; or
- d) A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification, reissuance, or revocation.

BOARD NOTE: Derived from 40 CFR 270.43 and 144.40 (2017)-(2005).

SUBPART B: PROHIBITIONS

Section 703.120 Prohibitions in General

- a) Violation of the provisions of this Subpart may result in an enforcement action and sanctions pursuant to Titles VIII and XII of the Environmental Protection Act [415 ILCS 5];
- b) This Subpart B serves the following functions:
 - 1) It prohibits the conduct of hazardous waste management operations without a RCRA permit (Sections 703.121 and 703.122);
 - 2) It specifies exclusions from the permit requirement (Section 703.123);
 - 3) It sets times for the filing of applications and reapplications (Sections 703.125 and 703.126);
 - 4) It prohibits violation of the conditions of RCRA permits (Section 703.122);
- c) ~~Subpart C of this Part~~ grants permits by rule, and sets the conditions for interim status, which allows operation of certain facilities prior to permit issuance. ~~Subpart C of this Part~~ contains prohibitions applicable during the interim status period;
- d) The following definitions apply to this Subpart B:
 - 1) 35 Ill. Adm. Code 702.110; and
 - 2) 35 Ill. Adm. Code 721, the definitions of “solid waste” and “hazardous waste-”.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.123 Specific Exclusions and Exemptions from Permit Program

The following persons are among those that are not required to obtain a RCRA permit:

- a) A generator that accumulates hazardous waste on site in compliance with all of ~~on-site for less than the~~ conditions for exemption ~~time periods~~ provided in 35 Ill. Adm. Code ~~722.134~~ 722.114 through 722.117;
- b) A farmer that disposes of hazardous waste pesticides from the farmer's own use, as provided in 35 Ill. Adm. Code 722.170;
- c) A person that owns or operates a facility solely for the treatment, storage, or disposal of hazardous waste excluded from regulations pursuant to this Part by 35 Ill. Adm. Code 721.104 or 722.114 ~~721.105~~ (VSQG ~~small generator~~ exemption);
- d) An owner or operator of a totally enclosed treatment facility, as defined in 35 Ill. Adm. Code 720.110;
- e) An owner or operator of an elementary neutralization unit or wastewater treatment unit, as defined in 35 Ill. Adm. Code 720.110;
- f) A transporter that stores manifested shipments of hazardous waste in containers that meet the requirements of 35 Ill. Adm. Code 722.130 at a transfer facility for a period of ten days or less;
- g) A person that adds absorbent material to waste in a container (as defined in 35 Ill. Adm. Code 720.110) or a person that adds waste to absorbent material in a container, provided that these actions occur at the time waste is first placed in the container; and 35 Ill. Adm. Code 724.117(b), 724.271, and 724.272 are complied with; and
- h) A universal waste handler or universal waste transporter (as defined in 35 Ill. Adm. Code 720.110) that manages the wastes listed in subsections (h)(1) through (h)(5) ~~of this Section~~. Such a handler or transporter is subject to regulation pursuant to 35 Ill. Adm. Code 733.
 - 1) Batteries, as described in 35 Ill. Adm. Code 733.102;
 - 2) Pesticides, as described in 35 Ill. Adm. Code 733.103;
 - 3) Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104; and
 - 4) Lamps, as described in 35 Ill. Adm. Code 733.105.

BOARD NOTE: Derived from 40 CFR 270.1(c)(2) ~~(2017)-(2005)~~, as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: AUTHORIZATION BY RULE AND INTERIM STATUS

Section 703.150 Application by Existing HWM Facilities and Interim Status Qualifications

- a) The owner or operator of an existing HWM facility or of an HWM facility in existence on the effective date of statutory or regulatory amendments that render the facility subject to the requirement to have a RCRA permit must submit Part A of the permit application to the Agency no later than the following times, whichever comes first:
 - 1) Six months after the date of publication of regulations that first require the owner or operator to comply with standards in 35 Ill. Adm. Code 725 or 726; or
 - 2) Thirty days after the date the owner or operator first becomes subject to the standards in 35 Ill. Adm. Code 725 or 726; ~~or~~
 - 3) ~~For generators that generate greater than 100 kilograms but less than 1000 kilograms of hazardous waste in a calendar month and treat, store or dispose of these wastes on-site, by March 24, 1987.~~
- b) In granting a variance under subsection (c), ~~of this Section~~ the Board will consider whether there has been substantial confusion as to whether the owner or operator of such facilities were required to file a Part A application and whether such confusion was attributable to ambiguities in 35 Ill. Adm. Code 720, 721, or 725.
- c) The time for filing Part A of the permit application may be extended only by a Board Order entered pursuant to a variance petition.
- d) The owner or operator of an existing HWM facility may be required to submit Part B of the permit application. The Agency will notify the owner or operator that a Part B application is required, and set a date for receipt of the application, not less than six months after the date the notice is sent. The owner or operator may voluntarily submit a Part B application for all or part of the HWM facility at any time. Notwithstanding the above, any owner or operator of an existing HWM facility must submit a Part B permit application in accordance with the dates specified in Section 703.157. Any owner or operator of a land disposal facility in existence on the effective date of statutory or regulatory amendments that render the facility subject to the requirement to have a RCRA permit must submit a Part B application in accordance with the dates specified in Section 703.157.

- e) Interim status may be terminated as provided in Section 703.157.

BOARD NOTE: Derived from 40 CFR 270.10(e) (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.151 Application by New HWM Facilities

- a) Except as provided in subsection (c) ~~of this Section~~, no person may begin physical construction of a new HWM facility without having submitted Part A and Part B of the permit application and having received a finally effective RCRA permit;
- b) An application for a permit for a new HWM facility (including both Part A and Part B) may be filed at any time after promulgation of standards in 35 Ill. Adm. Code 724 applicable to any TSD unit in the facility. Except as provided in subsection (c) ~~of this Section~~, all applications must be submitted to the Agency at least 180 days before physical construction is expected to commence;
- c) Notwithstanding subsection (a) ~~of this Section~~, a person may construct a facility for the incineration of polychlorinated biphenyls pursuant to an approval issued by the Administrator of USEPA under Section (6)(e) of the federal Toxic Substances Control Act (42 USC 9601 et seq.) and any person owning or operating such a facility may, at any time after construction ~~or~~ or operation of such facility has begun, file an application for a RCRA permit to incinerate hazardous waste authorizing such facility to incinerate waste identified or listed under 35 Ill. Adm. Code 721.
- d) Such persons may continue physical construction of the HWM facility after the effective date of the standards applicable to it if the person submits Part B of the permit application on or before the effective date of such standards (or on some later date specified by the Agency). Such person must not operate the HWM facility without having received a finally effective RCRA permit.

BOARD NOTE: Derived from 40 CFR 270.10(f) (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.157 Grounds for Termination of Interim Status

Interim status terminates when either of the following occurs:

- a) Final administrative disposition is made of a permit application, except an application for a remedial action plan (RAP) under Subpart H ~~of this Part~~; or
- b) The owner or operator fails to furnish a requested Part B application on time, or to furnish the full information required by the Part B application, in which case the

Agency must notify the owner and operator of the termination of interim status following the procedures for a notice of intent to deny a permit pursuant to 35 Ill. Adm. Code 705.

- c) Corresponding 40 CFR 270.10(e)(1)(iii) required a RCRA Part B permit application before a date long past. This statement maintains structural consistency with the federal rules.~~For an owner or operator of a land disposal facility that has been granted interim status prior to November 8, 1984, on November 8, 1985, unless the following conditions are fulfilled:~~
- ~~1) — The owner or operator submits a Part B application for a permit for such facility prior to that date; and~~
 - ~~2) — The owner or operator certifies that such facility is in compliance with all applicable groundwater monitoring and financial responsibility requirements.~~
- d) For an owner or operator of a land disposal facility that is in existence on the effective date of statutory or regulatory amendments under the federal Resource Conservation and Recovery Act (42 USC 6901 et seq.) that render the facility subject to the requirement to have a RCRA permit and which is granted interim status, twelve months after the date on which the facility first becomes subject to such permit requirement, unless the owner or operator of such facility does as follows:
- 1) It submits a Part B application for a RCRA permit for such facility before the date 12 months after the date on which the facility first becomes subject to such permit requirement; and
 - 2) It certifies that such facility is in compliance with all applicable groundwater monitoring and financial responsibility requirements.
- e) For an owner or operator of any land disposal unit that is granted authority to operate under Section 703.155(a)(1), (a)(2), or (a)(3), on the day 12 months after the effective date of such requirement, unless the owner or operator certifies that such unit is in compliance with all applicable groundwater monitoring and financial responsibility requirements (Subparts F and H of 35 Ill. Adm. Code 725).
- ~~f) — For an owner or operator of each incinerator facility that achieved interim status prior to November 8, 1984, on November 8, 1989, unless the owner or operator of the facility submits a Part B application for a RCRA permit for an incinerator facility by November 8, 1986.~~
- ~~g) — For an owner or operator of any facility (other than a land disposal or an incinerator facility) that achieved interim status prior to November 8, 1984, on~~

~~November 8, 1992, unless the owner or operator of the facility submits a Part B application for a RCRA permit for the facility by November 8, 1988.~~

BOARD NOTE: Derived from 40 CFR 270.10(e)(5)-(2002) and 270.73 (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.161 Enforceable Document for Post-Closure Care

- a) An owner or operator may obtain an enforceable document containing alternative requirements for post-closure care that imposes the requirements of 35 Ill. Adm. Code 725.221. “Enforceable document containing alternative requirements” or “other enforceable document;”₁ as used in this Part and in 35 Ill. Adm. Code 724 and 725, means an order of the Board, an Agency-approved plan, or an order of a court of competent jurisdiction that meets the requirements of subsection (b) ~~of this Section~~. An “enforceable document containing alternative requirements” or “other enforceable document;”₁ may also mean an order of USEPA (such as pursuant to section 3008(h) of RCRA, 42 USC 6928(h), or under section 106 of the federal Comprehensive Environmental Response, Compensation and Liability Act, 42 USC 9606).

BOARD NOTE: Derived from 40 CFR 270.1(c)(7) (2017)-(2002).

- b) Any alternative requirements issued under this Section or established to satisfy the requirements of 35 Ill. Adm. Code 724.190(f), 724.210(c), 724.240(d), 725.190(f), 725.210(c), or 725.240(d) must be embodied in a document that is enforceable and subject to appropriate compliance orders and civil penalties under Titles VIII and XII of the Act ~~[415 ILCS 5]~~.

BOARD NOTE: Derived from 40 CFR 271.16(e) (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: APPLICATIONS

Section 703.186 Exposure Information

Any Part B permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill must be accompanied by information, reasonably ascertainable by the owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address the following:

- a) ~~Any Part B permit application submitted by an owner or operator of a facility that stores, treats, or disposes of hazardous waste in a surface impoundment or a landfill must be accompanied by information, reasonably ascertainable by the~~

~~owner or operator, on the potential for the public to be exposed to hazardous wastes or hazardous constituents through releases related to the unit. At a minimum, such information must address the following:~~

- ~~a1)~~ Reasonably foreseeable potential releases from both normal operations and accidents at the unit, including releases associated with transportation to or from the unit;
- ~~b2)~~ The potential pathways of human exposure to hazardous wastes or constituents resulting from the releases described under subsection (a)~~(1)~~ of this Section; and
- ~~c3)~~ The potential magnitude and nature of the human exposure resulting from such releases.
- ~~b)~~ ~~By August 8, 1985, an owner or operator of a landfill or a surface impoundment that had already submitted a Part B application must have submitted the exposure information required in subsection (a) of this Section.~~

BOARD NOTE: Derived from 40 CFR 270.10(j) ~~(2017)~~ (2002).

Section 703.189 Additional Information Required to Assure Compliance with MACT Standards

If the Agency determines, based on one or more of the factors listed in subsection (a) ~~of this Section~~ that compliance with the standards of subpart EEE of 40 CFR 63, incorporated by reference in 35 Ill. Adm. Code 720.111, alone may not adequately protect human health and the environment, the Agency must require the additional information or assessments necessary to determine whether additional controls are necessary to ensure adequate protection of human health and the environment. This includes information necessary to evaluate the potential risk to human health or the environment resulting from both direct and indirect exposure pathways. The Agency may also require a permittee or applicant to provide information necessary to determine whether such an assessment should be required.

- a) The Agency ~~shall~~ must base the evaluation of whether compliance with the standards of subpart EEE of 40 CFR 63, incorporated by reference in 35 Ill. Adm. Code 720.111, alone adequately protects human health and the environment on factors relevant to the potential risk from a hazardous waste combustion unit, including, as appropriate, any of the following factors:
 - 1) Particular site-specific considerations such as proximity to receptors (such as schools, hospitals, nursing homes, day care centers, parks, community activity centers, or other potentially sensitive receptors), unique dispersion patterns, etc.;

- 2) The identities and quantities of emissions of persistent, bioaccumulative or toxic pollutants considering enforceable controls in place to limit those pollutants;
 - 3) The identities and quantities of non-dioxin products of incomplete combustion most likely to be emitted and to pose significant risk based on known toxicities (confirmation of which should be made through emissions testing);
 - 4) The identities and quantities of other off-site sources of pollutants in proximity of the facility that significantly influence interpretation of a facility-specific risk assessment;
 - 5) The presence of significant ecological considerations, such as the proximity of a particularly sensitive ecological area;
 - 6) The volume and types of wastes, for example wastes containing highly toxic constituents;
 - 7) Other on-site sources of hazardous air pollutants that significantly influence interpretation of the risk posed by the operation of the source in question;
 - 8) Adequacy of any previously conducted risk assessment, given any subsequent changes in conditions likely to affect risk; and
 - 9) Such other factors as may be appropriate.
- b) This subsection (b) corresponds with 40 CFR 270.10(l)(b), which USEPA has marked “Reserved.”. This statement maintains structural consistency with the corresponding federal rules.

BOARD NOTE: Derived from 40 CFR 270.10(l) (2017), as added at 70 Fed. Reg. 59402 (Oct. 12, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.205 Incinerators that Burn Hazardous Waste

For a facility that incinerates hazardous waste, except as 35 Ill. Adm. Code 724.440 and subsection (e) of this Section provide otherwise, the applicant must fulfill the requirements of subsection (a), (b), or (c) of this Section in completing the Part B application.

- a) When seeking exemption pursuant to 35 Ill. Adm. Code 724.440(b) or (c) (ignitable, corrosive, or reactive wastes only), the applicant must fulfill the following requirements:

- 1) Documentation that the waste is listed as a hazardous waste in Subpart D of 35 Ill. Adm. Code 721 solely because it is ignitable (Hazard Code I), corrosive (Hazard Code C), or both;
 - 2) Documentation that the waste is listed as a hazardous waste in Subpart D of 35 Ill. Adm. Code 721 solely because it is reactive (Hazard Code R) for characteristics other than those listed in 35 Ill. Adm. Code 721.123(a)(4) and (a)(5) and will not be burned when other hazardous wastes are present in the combustion zone;
 - 3) Documentation that the waste is a hazardous waste solely because it possesses the characteristic of ignitability or corrosivity, or both, as determined by the tests for characteristics of hazardous wastes pursuant to Subpart C of 35 Ill. Adm. Code 721; or
 - 4) Documentation that the waste is a hazardous waste solely because it possesses the reactivity characteristics listed in 35 Ill. Adm. Code 721.123(a)(1) through (a)(3) or (a)(6) through (a)(8), and that it will not be burned when other hazardous wastes are present in the combustion zone.
- b) Submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with Section 703.222 through 703.224.
- c) In lieu of a trial burn, the applicant may submit the following information:
- 1) An analysis of each waste or mixture of wastes to be burned including the following:
 - A) Heat value of the waste in the form and composition in which it will be burned;
 - B) Viscosity (if applicable) or description of physical form of the waste;
 - C) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721 that are present in the waste to be burned, except that the applicant need not analyze for constituents listed in Appendix H to 35 Ill. Adm. Code 721 that would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical methods;
 - D) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the appropriate analytical methods; and

- E) A quantification of those hazardous constituents in the waste that may be designated as POHCs based on data submitted from other trial or operational burns that demonstrate compliance with the performance standard in 35 Ill. Adm. Code 724.443;

BOARD NOTE: The federal regulations do not themselves define the phrase “appropriate analytical methods;”² but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D) of this Section:

[T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . .:

1. Appropriate methods are reliable and accepted as such in the scientific community.
2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

- 2) A detailed engineering description of the incinerator, including the following:
 - A) Manufacturer’s name and model number of incinerator;
 - B) Type of incinerator;
 - C) Linear dimension of incinerator unit including cross sectional area of combustion chamber;
 - D) Description of auxiliary fuel system (type/feed);
 - E) Capacity of prime mover;
 - F) Description of automatic waste feed cutoff systems;
 - G) Stack gas monitoring and pollution control monitoring system;
 - H) Nozzle and burner design;
 - I) Construction materials; and

- J) Location and description of temperature, pressure and flow indicating devices and control devices;
- 3) A description and analysis of the waste to be burned compared with the waste for which data from operational or trial burns are provided to support the contention that a trial burn is not needed. The data should include those items listed in subsection (c)(1) ~~of this Section~~. This analysis should specify the POHCs that the applicant has identified in the waste for which a permit is sought, and any differences from the POHCs in the waste for which burn data are provided;
 - 4) The design and operating conditions of the incinerator unit to be used, compared with that for which comparative burn data are available;
 - 5) A description of the results submitted from any previously conducted trial burns, including the following:
 - A) Sampling and analysis techniques used to calculate performance standards in 35 Ill. Adm. Code 724.443;
 - B) Methods and results of monitoring temperatures, waste feed rates, carbon monoxide, and an appropriate indicator of combustion gas velocity (including a statement concerning the precision and accuracy of this measurement); and
 - C) The certification and results required by subsection (b) ~~of this Section~~;
 - 6) The expected incinerator operation information to demonstrate compliance with 35 Ill. Adm. Code 724.443 and 724.445, including the following:
 - A) Expected carbon monoxide (CO) level in the stack exhaust gas;
 - B) Waste feed rate;
 - C) Combustion zone temperature;
 - D) Indication of combustion gas velocity;
 - E) Expected stack gas volume, flow rate, and temperature;
 - F) Computed residence time for waste in the combustion zone;
 - G) Expected hydrochloric acid removal efficiency;
 - H) Expected fugitive emissions and their control procedures; and

- I) Proposed waste feed cut-off limits based on the identified significant operating parameters;
- 7) The Agency may, pursuant to 35 Ill. Adm. Code 705.122, request such additional information as may be necessary for the Agency to determine whether the incinerator meets the requirements of Subpart O of 35 Ill. Adm. Code 724 and what conditions are required by that Subpart and Section 39(d) of the Environmental Protection Act ~~[415 ILCS 5/39(d)]~~; and
 - 8) Waste analysis data, including that submitted in subsection (c)(1) ~~of this Section~~, sufficient to allow the Agency to specify as permit Principal Organic Hazardous Constituents (permit POHCs) those constituents for which destruction and removal efficiencies will be required.
- d) The Agency must approve a permit application without a trial burn if it finds the following:
 - 1) The wastes are sufficiently similar; and
 - 2) The incinerator units are sufficiently similar, and the data from other trial burns are adequate to specify (pursuant to 35 Ill. Adm. Code 724.445) operating conditions that will ensure that the performance standards in 35 Ill. Adm. Code 724.443 will be met by the incinerator.
- e) When the owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements ~~after October 12, 2005~~, or when the owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply, except those provisions that the Agency determines are necessary to ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Agency may apply the provisions of this Section, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

BOARD NOTE: Operating conditions used to determine effective treatment of hazardous waste remain effective after the owner or operator demonstrates compliance with the standards of subpart EEE of 40 CFR 63.

BOARD NOTE: Derived from 40 CFR 270.19 ~~(2017)~~ ~~(2005)~~, as amended at 70 Fed. Reg. 59402 ~~(Oct. 12, 2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.208 Boilers and Industrial Furnaces Burning Hazardous Waste

When the owner or operator of a cement or lightweight aggregate kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements ~~after October 12, 2005~~, or when the owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply. This Section applies, however, if the Agency determines certain provisions are necessary to ensure compliance with 35 Ill. Adm. Code 726.202(e)(1) and (e)(2)(C) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the facility is an area source and the owner or operator elects to comply with the Sections 726.205, 726.206, and 726.207 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and non-mercury metals; or if the Agency determines that certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

a) ~~Trial Burns~~ Trial Burns.

- 1) General. Except as provided below, an owner or operator that is subject to the standards to control organic emissions provided by 35 Ill. Adm. Code 726.204, standards to control particulate matter provided by 35 Ill. Adm. Code 726.205, standards to control metals emissions provided by 35 Ill. Adm. Code 726.206, or standards to control hydrogen chloride (HCl) or chlorine gas emissions provided by 35 Ill. Adm. Code 726.207 must conduct a trial burn to demonstrate conformance with those standards and must submit a trial burn plan or the results of a trial burn, including all required determinations, in accordance with Section 703.232.

- A) Pursuant to subsections (a)(2) through (a)(5) ~~of this Section~~ and 35 Ill. Adm. Code 726.204 through 726.207, the Agency may waive a trial burn to demonstrate conformance with a particular emission standard; and
 - B) The owner or operator may submit data in lieu of a trial burn, as prescribed in subsection (a)(6) ~~of this Section~~.
- 2) Waiver of Trial Burn ~~trial burn~~ of DRE (Destruction Removal Efficiency) ~~(destruction removal efficiency)~~.
- A) Boilers Operated ~~operated~~ under Special Operating Requirements ~~special operating requirements~~. When seeking to be permitted pursuant to 35 Ill. Adm. Code 726.204(a)(4) and 726.210, which automatically waive the DRE trial burn, the owner or operator of a boiler must submit documentation that the boiler operates under the special operating requirements provided by 35 Ill. Adm. Code 726.210.
 - B) Boilers and Industrial Furnaces Burning Low Risk Waste ~~industrial furnaces burning low risk waste~~. When seeking to be permitted under the provisions for low risk waste provided by 35 Ill. Adm. Code 726.204(a)(5) and 726.209(a), which waive the DRE trial burn, the owner or operator must submit the following:
 - i) Documentation that the device is operated in conformance with 35 Ill. Adm. Code 726.209(a)(1).
 - ii) Results of analyses of each waste to be burned, documenting the concentrations of nonmetal compounds listed in Appendix H to 35 Ill. Adm. Code 721, except for those constituents that would reasonably not be expected to be in the waste. The constituents excluded from analysis must be identified and the basis for their exclusion explained. The analysis must rely on appropriate analytical methods.

BOARD NOTE: The federal regulations do not themselves define the phrase “appropriate analytical methods,”¹ but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D) ~~of this Section~~:

[T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :

1. Appropriate methods are reliable and accepted as such in the scientific community.
2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

- iii) Documentation of hazardous waste firing rates and calculations of reasonable, worst-case emission rates of each constituent identified in subsection (a)(2)(B)(ii) ~~of this Section~~ using procedures provided by 35 Ill. Adm. Code 726.209(a)(2)(B).
- iv) Results of emissions dispersion modeling for emissions identified in subsection (a)(2)(B)(iii) ~~of this Section~~ using modeling procedures prescribed by 35 Ill. Adm. Code 726.206(h). The Agency must review the emission modeling conducted by the applicant to determine conformance with these procedures. The Agency must either approve the modeling or determine that alternate or supplementary modeling is appropriate.
- v) Documentation that the maximum annual average ground level concentration of each constituent identified in subsection (a)(2)(B)(ii) ~~of this Section~~ quantified in conformance with subsection (a)(2)(B)(iv) ~~of this Section~~ does not exceed the allowable ambient level established in Appendix D or E to 35 Ill. Adm. Code 726. The acceptable ambient concentration for emitted constituents for which a specific reference air concentration has not been established in Appendix D to 35 Ill. Adm. Code 726 or risk-specific doses has not been established in Appendix E to 35 Ill. Adm. Code 726 is 0.1 micrograms per cubic meter, as noted in the footnote to Appendix D to 35 Ill. Adm. Code 726.

- 3) Waiver of Trial Burn for Metals~~metals~~. When seeking to be permitted under the Tier I (or adjusted Tier I) metals feed rate screening limits provided by 35 Ill. Adm. Code 726.206(b) and (e) that control metals emissions without requiring a trial burn, the owner or operator must submit the following:
- A) Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feed stocks;
 - B) Documentation of the concentration of each metal controlled by 35 Ill. Adm. Code 726.206(b) or (c) in the hazardous waste, other fuels and industrial furnace feedstocks, and calculations of the total feed rate of each metal;
 - C) Documentation of how the applicant will ensure that the Tier I feed rate screening limits provided by 35 Ill. Adm. Code 726.206(b) or (e) will not be exceeded during the averaging period provided by that subsection;
 - D) Documentation to support the determination of the TESH (terrain-adjusted effective stack height), good engineering practice stack height, terrain type, and land use, as provided by 35 Ill. Adm. Code 726.206(b)(3) through (b)(5);
 - E) Documentation of compliance with the provisions of 35 Ill. Adm. Code 726.206(b)(6), if applicable, for facilities with multiple stacks;
 - F) Documentation that the facility does not fail the criteria provided by 35 Ill. Adm. Code 726.206(b)(7) for eligibility to comply with the screening limits; and
 - G) Proposed sampling and metals analysis plan for the hazardous waste, other fuels, and industrial furnace feed stocks.
- 4) Waiver of Trial Burn~~trial burn~~ for PM (Particulate Matter)~~(particulate matter)~~. When seeking to be permitted under the low risk waste provisions of 35 Ill. Adm. Code 726.209(b), which waives the particulate standard (and trial burn to demonstrate conformance with the particulate standard), applicants must submit documentation supporting conformance with subsections (a)(2)(B) and (a)(3)~~of this Section~~.
- 5) Waiver of Trial Burn~~trial burn~~ for HCl and Chlorine Gas~~chlorine gas~~. When seeking to be permitted under the Tier I (or adjusted Tier I) feed rate screening limits for total chlorine and chloride provided by 35 Ill. Adm. Code 726.207(b)(1) and (e) that control emissions of HCl and

chlorine gas without requiring a trial burn, the owner or operator must submit the following:

- A) Documentation of the feed rate of hazardous waste, other fuels, and industrial furnace feed stocks;
 - B) Documentation of the levels of total chlorine and chloride in the hazardous waste, other fuels and industrial furnace feedstocks, and calculations of the total feed rate of total chlorine and chloride;
 - C) Documentation of how the applicant will ensure that the Tier I (or adjusted Tier I) feed rate screening limits provided by 35 Ill. Adm. Code 726.207(b)(1) or (e) will not be exceeded during the averaging period provided by that subsection;
 - D) Documentation to support the determination of the TESH, good engineering practice stack height, terrain type and land use as provided by 35 Ill. Adm. Code 726.207(b)(3);
 - E) Documentation of compliance with the provisions of 35 Ill. Adm. Code 726.207(b)(4), if applicable, for facilities with multiple stacks;
 - F) Documentation that the facility does not fail the criteria provided by 35 Ill. Adm. Code 726.207(b)(3) for eligibility to comply with the screening limits; and
 - G) Proposed sampling and analysis plan for total chlorine and chloride for the hazardous waste, other fuels, and industrial furnace feedstocks.
- 6) Data in Lieu lieu of Trial Burn~~trial burn~~. The owner or operator may seek an exemption from the trial burn requirements to demonstrate conformance with Section 703.232 and 35 Ill. Adm. Code 726.204 through 726.207 by providing the information required by Section 703.232 from previous compliance testing of the device in conformance with 35 Ill. Adm. Code 726.203 or from compliance testing or trial or operational burns of similar boilers or industrial furnaces burning similar hazardous wastes under similar conditions. If data from a similar device is used to support a trial burn waiver, the design and operating information required by Section 703.232 must be provided for both the similar device and the device to which the data is to be applied, and a comparison of the design and operating information must be provided. The Agency must approve a permit application without a trial burn if the Agency finds that the hazardous wastes are sufficiently similar, the devices are sufficiently similar, the operating conditions are sufficiently similar, and the data from

other compliance tests, trial burns, or operational burns are adequate to specify (pursuant to 35 Ill. Adm. Code 726.102) operating conditions that will ensure conformance with 35 Ill. Adm. Code 726.102(c). In addition, the following information must be submitted:

- A) For a waiver from any trial burn, the following:
 - i) A description and analysis of the hazardous waste to be burned compared with the hazardous waste for which data from compliance testing or operational or trial burns are provided to support the contention that a trial burn is not needed;
 - ii) The design and operating conditions of the boiler or industrial furnace to be used, compared with that for which comparative burn data are available; and
 - iii) Such supplemental information as the Agency finds necessary to achieve the purposes of this subsection (a).

- B) For a waiver of the DRE trial burn, the basis for selection of POHCs (principal organic hazardous constituents) used in the other trial or operational burns that demonstrate compliance with the DRE performance standard in 35 Ill. Adm. Code 726.204(a). This analysis should specify the constituents in Appendix H to 35 Ill. Adm. Code 721 that the applicant has identified in the hazardous waste for which a permit is sought and any differences from the POHCs in the hazardous waste for which burn data are provided.

- b) Alternative HC Limit ~~limit~~ for Industrial Furnaces ~~industrial furnaces~~ with Organic Matter ~~organic matter~~ in Raw Materials ~~raw materials~~. An owner or operator of industrial furnaces requesting an alternative HC limit pursuant to 35 Ill. Adm. Code 726.204(f) must submit the following information at a minimum:
 - 1) Documentation that the furnace is designed and operated to minimize HC emissions from fuels and raw materials;
 - 2) Documentation of the proposed baseline flue gas HC (and CO) concentration, including data on HC (and CO) levels during tests when the facility produced normal products under normal operating conditions from normal raw materials while burning normal fuels and when not burning hazardous waste;
 - 3) Test burn protocol to confirm the baseline HC (and CO) level including information on the type and flow rate of all feedstreams, point of introduction of all feedstreams, total organic carbon content (or other

appropriate measure of organic content) of all nonfuel feedstreams, and operating conditions that affect combustion of fuels and destruction of hydrocarbon emissions from nonfuel sources;

- 4) Trial burn plan to do the following:
 - A) To demonstrate when burning hazardous waste that flue gas HC (and CO) concentrations do not exceed the baseline HC (and CO) level; and
 - B) To identify, in conformance with Section 703.232(d), the types and concentrations of organic compounds listed in Appendix H to 35 Ill. Adm. Code 721 that are emitted when burning hazardous waste;
 - 5) Implementation plan to monitor over time changes in the operation of the facility that could reduce the baseline HC level and procedures to periodically confirm the baseline HC level; and
 - 6) Such other information as the Agency finds necessary to achieve the purposes of this subsection (b).
- c) ~~Alternative Metals Implementation Approach—metals implementation approach.~~ When seeking to be permitted under an alternative metals implementation approach pursuant to 35 Ill. Adm. Code 726.206(f), the owner or operator must submit documentation specifying how the approach ensures compliance with the metals emissions standards of 35 Ill. Adm. Code 726.106(c) or (d) and how the approach can be effectively implemented and monitored. Further, the owner or operator must provide such other information that the Agency finds necessary to achieve the purposes of this subsection (c).
- d) ~~Automatic Waste Feed Cutoff System—waste feed cutoff system.~~ An owner or operator must submit information describing the automatic waste feed cutoff system, including any pre-alarm systems that may be used.
- e) ~~Direct Transfer—transfer.~~ An owner or operator that uses direct transfer operations to feed hazardous waste from transport vehicles (containers, as defined in 35 Ill. Adm. Code 726.211) directly to the boiler or industrial furnace must submit information supporting conformance with the standards for direct transfer provided by 35 Ill. Adm. Code 726.211.
- f) Residues. An owner or operator that claims that its residues are excluded from regulation pursuant to 35 Ill. Adm. Code 726.212 must submit information adequate to demonstrate conformance with those provisions.

BOARD NOTE: Derived from 40 CFR 270.22 (2017) ~~(2005)~~, as amended at 70 Fed. Reg. 59402 (Oct. 12, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.210 Process Vents

Except as otherwise provided in 35 Ill. Adm. Code 724.101, the owner or operator of a facility that has process vents to which Subpart AA of 35 Ill. Adm. Code 724 applies must provide the following additional information:

- a) For facilities that cannot install a closed-vent system and control device to comply with Subpart AA of 35 Ill. Adm. Code 724 on the effective date on which the facility becomes subject to that Subpart or Subpart AA of 35 Ill. Adm. Code 725, an implementation schedule, as specified in 35 Ill. Adm. Code 724.933(a)(2).
- b) Documentation of compliance with the process vent standards in 35 Ill. Adm. Code 724.932, including the following:
 - 1) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for the affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous waste management units on a facility plot plan);
 - 2) Information and data supporting estimates of vent emissions and emission reduction achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, estimates of vent emissions and emission reductions must be made using operating parameter values (e.g., temperatures, flow rates, or concentrations) that represent the conditions that exist when the waste management unit is operating at the highest load or capacity level reasonably expected to occur; and
 - 3) Information and data used to determine whether or not a process vent is subject to 35 Ill. Adm. Code 724.932.
- c) Where an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with 35 Ill. Adm. Code 724.932, and chooses to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in 35 Ill. Adm. Code 724.935(b)(3).

- d) Documentation of compliance with 35 Ill. Adm. Code 724.933, including the following:
- 1) A list of all information references and sources used in preparing the documentation.
 - 2) Records, including the dates of each compliance test required by 35 Ill. Adm. Code 724.933(k).
 - 3) A design analysis, specifications, drawings, schematics, piping, and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions," USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a), or other engineering texts approved by the Agency that present basic control device information. The design analysis must address the vent stream characteristics and control device parameters as specified in 35 Ill. Adm. Code 724.935(b)(4)(C).
 - 4) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur.
 - 5) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater, unless the total organic emission limits of 35 Ill. Adm. Code 724.932(a) for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent.

BOARD NOTE: Derived from 40 CFR 270.24 (2017)-(2005), as amended at 70 Fed. Reg. 59402 (Oct. 12, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.211 Equipment

Except as otherwise provided in 35 Ill. Adm. Code 724.101, the owner or operator of a facility that has equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies must provide the following additional information:

- a) For each piece of equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the following:

- 1) Equipment identification number and hazardous waste management unit identification;
 - 2) Approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);
 - 3) Type of equipment (e.g., a pump or pipeline valve);
 - 4) Percent by weight total organics in the hazardous wastestream at the equipment;
 - 5) Hazardous waste state at the equipment (e.g., gas/vapor or liquid); and
 - 6) Method of compliance with the standard (e.g., “monthly leak detection and repair” or “equipped with dual mechanical seals”).
- b) For facilities that cannot install a closed-vent system and control device to comply with Subpart BB of 35 Ill. Adm. Code 724 on the effective date that facility becomes subject to this Subpart or Subpart BB of 35 Ill. Adm. Code 724, an implementation schedule as specified in 35 Ill. Adm. Code 724.933(a)(2).
- c) Where an owner or operator applies for permission to use a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system and chooses to use test data to determine the organic removal efficiency or the total organic compound concentration achieved by the control device, a performance test plan as specified in 35 Ill. Adm. Code 724.935(b)(3).
- d) Documentation that demonstrates compliance with the equipment standards in 35 Ill. Adm. Code 724.952 or 724.959. This documentation must contain the records required pursuant to 35 Ill. Adm. Code 724.964. The Agency must request further documentation if necessary to demonstrate compliance. Documentation to demonstrate compliance with 35 Ill. Adm. Code 724.960 must include the following information:
- 1) A list of all information references and sources used in preparing the documentation;
 - 2) Records, including the dates of each compliance test required by 35 Ill. Adm. Code 724.933(j);
 - 3) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of “APTI Course 415: Control of Gaseous Emissions;”, USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a), or other engineering texts approved by the Agency that

present basic control device information. The design analysis must address the vent stream characteristics and control device parameters, as specified in 35 Ill. Adm. Code 724.935(b)(4)(C);

- 4) A statement signed and dated by the owner or operator certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is or would be operating at the highest load or capacity level reasonably expected to occur; and
- 5) A statement signed and dated by the owner or operator certifying that the control device is designed to operate at an efficiency of 95 weight percent or greater.

BOARD NOTE: Derived from 40 CFR 270.25 (2017)-(2005), as amended at 70 Fed. Reg. 59402 (Oct. 12, 2005).

SUBPART E: SPECIAL FORMS OF PERMITS

Section 703.221 Alternative Compliance with the Federal NESHAPS

When an owner or operator of a hazardous waste incineration unit becomes subject to RCRA permit requirements ~~after October 12, 2005~~, or when an owner or operator of an existing hazardous waste incineration unit demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPS) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), Sections 703.221 through 703.225 do not apply, except those provisions that the Agency determines are necessary to ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events. Nevertheless, the Agency may apply the provisions of Sections 703.221 through 703.225, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

BOARD NOTE: Derived from 40 CFR 270.62 preamble (2017)-(2005), as amended at 70 Fed. Reg. 59402 (Oct. 12, 2005).

Section 703.223 Incinerator Conditions During Trial Burn

For the purposes of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 724.443 and of determining adequate operating conditions under 35 Ill. Adm. Code 724.445, the Agency must establish conditions in the permit to a new hazardous waste incinerator to be effective during the trial burn.

- a) Applicants must propose a trial burn plan, prepared under subsection (b) ~~of this Section~~ with Part B of the permit application;
- b) The trial burn plan must include the following information:
 - 1) An analysis of each waste or mixture of wastes to be burned that includes the following:
 - A) Heat value of the waste in the form and composition in which it will be burned;
 - B) Viscosity (if applicable), or description of physical form of the waste;
 - C) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721, that are present in the waste to be burned, except that the applicant need not analyze for constituents listed in Appendix H to 35 Ill. Adm. Code 721 that would reasonably not be expected to be found in the waste. The constituents excluded from analysis must be identified, and the basis for their exclusion stated. The waste analysis must rely on appropriate analytical methods; and
 - D) An approximate quantification of the hazardous constituents identified in the waste, within the precision produced by the appropriate analytical methods;

BOARD NOTE: The federal regulations do not themselves define the phrase “appropriate analytical methods;”¹ but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D) ~~of this Section~~:

[T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :

1. Appropriate methods are reliable and accepted as such in the scientific community.

2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

- 2) A detailed engineering description of the incinerator for which the permit is sought including the following:
 - A) Manufacturer's name and model number of incinerator (if available);
 - B) Type of incinerator;
 - C) Linear dimensions of the incinerator unit including the cross sectional area of combustion chamber;
 - D) Description of the auxiliary fuel system (type/feed);
 - E) Capacity of prime mover;
 - F) Description of automatic waste feed cut-off systems;
 - G) Stack gas monitoring and pollution control equipment;
 - H) Nozzle and burner design;
 - I) Construction materials;
 - J) Location and description of temperature-, pressure-, and flow-indicating and control devices;
- 3) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis;
- 4) A detailed test schedule for each waste for which the trial burn is planned including dates, duration, quantity of waste to be burned, and other factors relevant to the Agency's decision under subsection (e) ~~of this Section~~;
- 5) A detailed test protocol, including, for each waste identified, the ranges of temperature, waste feed rate, combustion gas velocity, use of auxiliary fuel, and any other relevant parameters that will be varied to affect the destruction and removal efficiency of the incinerator;

- 6) A description of, and planned operating conditions for, any emission control equipment that will be used;
 - 7) Procedures for rapidly stopping waste feed, shutting down the incinerator, and controlling emissions in the event of an equipment malfunction;
 - 8) Such other information as the Agency reasonably finds necessary to determine whether to approve the trial burn plan in light of the purposes of this subsection (b) and the criteria in subsection (e) ~~of this Section~~. Such information must be requested by the Agency pursuant to 35 Ill. Adm. Code 705.123;
- c) The Agency, in reviewing the trial burn plan, must evaluate the sufficiency of the information provided and must require the applicant, pursuant to 35 Ill. Adm. Code 705.123, to supplement this information, if necessary, to achieve the purposes of this Section;
- d) Based on the waste analysis data in the trial burn plan, the Agency must specify as trial Principal Organic Hazardous Constituents (POHCs), those constituents for which destruction and removal efficiencies must be calculated during the trial burn. These trial POHCs must be specified by the Agency based on its estimate of the difficulty of incineration of the constituents identified in the waste analysis, their concentration or mass in the waste feed, and, for wastes listed in Subpart D of 35 Ill. Adm. Code 721, the hazardous waste organic constituent of constituents identified in Appendix G or H to 35 Ill. Adm. Code 721 as the basis for listing;
- e) The Agency must approve a trial burn plan if it finds the following:
- 1) That the trial burn is likely to determine whether the incinerator performance standard required by 35 Ill. Adm. Code 724.443 can be met;
 - 2) That the trial burn itself will not present an imminent hazard to human health or the environment;
 - 3) That the trial burn will help the Agency to determine operating requirements to be specified under 35 Ill. Adm. Code 724.445; and
 - 4) That the information sought in subsections (e)(1) and (e)(3) ~~of this Section~~ cannot reasonably be developed through other means;
- f) The Agency must send a notice to all persons on the facility mailing list, as set forth in 35 Ill. Adm. Code 705.161(a), and to the appropriate units of State and local government, as set forth in 35 Ill. Adm. Code 705.163(a)(5), announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the Agency has issued such notice.

- 1) This notice must be mailed within a reasonable time period before the scheduled trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the Agency.
- 2) This notice must contain the following:
 - A) The name and telephone number of the applicant's contact person;
 - B) The name and telephone number of the Agency regional office appropriate for the facility;
 - C) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and
 - D) An expected time period for commencement and completion of the trial burn;
- g) During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations:
 - 1) A quantitative analysis of the trial POHCs, in the waste feed to the incinerator;
 - 2) A quantitative analysis of the exhaust gas for the concentration and mass emissions of the trial POHCs, molecular oxygen, and hydrogen chloride (HCl);
 - 3) A quantitative analysis of the scrubber water (if any), ash residues, and other residues, for the purpose of estimating the fate of the trial POHCs;
 - 4) A computation of destruction and removal efficiency (DRE), in accordance with the DRE formula specified in 35 Ill. Adm. Code 724.443(a);
 - 5) If the HCl (hydrogen chloride) emission rate exceeds 1.8 kilograms (4 pounds) of HCl per hour (~~4 pounds per hour~~), a computation of HCl removal efficiency, in accordance with 35 Ill. Adm. Code 724.443(b);
 - 6) A computation of particulate emissions, in accordance with 35 Ill. Adm. Code 724.443(c);
 - 7) An identification of sources of fugitive emissions and their means of control;

- 8) A measurement of average, maximum and minimum temperatures, and combustion gas velocity;
 - 9) A continuous measurement of carbon monoxide (CO) in the exhaust gas;
 - 10) Such other information as the Agency specifies as necessary to ensure that the trial burn will determine compliance with the performance standards in 35 Ill. Adm. Code 724.443 and to establish the operating conditions required by 35 Ill. Adm. Code 724.445 as necessary to meet that performance standard;
- h) The applicant must submit to the Agency a certification that the trial burn has been carried out in accordance with the approved trial burn plan, and must submit the results of all the determinations required in subsection (g) ~~of this Section~~. This submission must be made within 90 days after completion of the trial burn, or later, if approved by the Agency;
 - i) All data collected during any trial burn must be submitted to the Agency following the completion of the trial burn;
 - j) All submissions required by this Section must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report under 35 Ill. Adm. Code 702.126;
 - k) Based on the results of the trial burn, the Agency must set the operating requirements in the final permit according to 35 Ill. Adm. Code 724.445. The permit modification must proceed as a minor modification according to Section 703.280.

BOARD NOTE: Derived from 40 CFR 270.62(b) ~~(2017)~~-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.232 Permits for Boilers and Industrial Furnaces Burning Hazardous Waste

When the owner or operator of a cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace becomes subject to RCRA permit requirements ~~after October 12, 2005~~ or when an owner or operator of an existing cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace demonstrates compliance with the air emission standards and limitations of the federal National Emission Standards for Hazardous Air Pollutants (NESHAPs) in subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b) (i.e., by conducting a comprehensive performance test and submitting a Notification of Compliance pursuant to 40 CFR 63.1207(j) and 63.1210(d) documenting compliance with all applicable requirements of subpart EEE of 40 CFR 63), this Section does not apply. This Section does apply, however, if

the Agency determines certain provisions are necessary to ensure compliance with 35 Ill. Adm. Code 726.202(e)(1) and (e)(2)(C) if the owner or operator elects to comply with Section 703.320(a)(1)(A) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events; or if the facility is an area source and the owner or operator elects to comply with the Sections 726.205, 726.206, and 726.207 standards and associated requirements for particulate matter, hydrogen chloride and chlorine gas, and non-mercury metals; or if the Agency determines certain provisions apply, on a case-by-case basis, for purposes of information collection in accordance with Sections 703.188, 703.189, and 703.241(a)(2) and (a)(3).

- a) General. The owner or operator of a new boiler or industrial furnace (one not operating under the interim status standards of 35 Ill. Adm. Code 726.203) is subject to subsections (b) through (f) ~~of this Section~~. A boiler or industrial furnace operating under the interim status standards of 35 Ill. Adm. Code 726.203 is subject to subsection (g) ~~of this Section~~.
- b) Permit Operating Periods ~~operating periods~~ for a New Boiler ~~new boiler~~ or Industrial Furnace ~~industrial furnace~~. A permit for a new boiler or industrial furnace must specify appropriate conditions for the following operating periods:
 - 1) Pretrial burn period. For the period beginning with initial introduction of hazardous waste and ending with initiation of the trial burn, and only for the minimum time required to bring the boiler or industrial furnace to a point of operation readiness to conduct a trial burn, not to exceed 720 hours operating time when burning hazardous waste, the Agency must establish permit conditions in the pretrial burn period, including but not limited to allowable hazardous waste feed rates and operating conditions. The Agency must extend the duration of this operational period once, for up to 720 additional hours, at the request of the applicant when good cause is shown. The permit must be modified to reflect the extension according to Sections 703.280 through 703.283.
 - A) Applicants must submit a statement, with Part B of the permit application, that suggests the conditions necessary to operate in compliance with the standards of 35 Ill. Adm. Code 726.204 through 726.207 during this period. This statement should include, at a minimum, restrictions on the applicable operating requirements identified in 35 Ill. Adm. Code ~~726.202(e)~~ ~~726.202 (e)~~.
 - B) The Agency must review this statement and any other relevant information submitted with Part B of the permit application and specify requirements for this period sufficient to meet the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.

- 2) ~~Trial Burn Period~~~~burn period~~. For the duration of the trial burn, the Agency must establish conditions in the permit for the purposes of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 and determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.202(e). Applicants must propose a trial burn plan, prepared pursuant to subsection (c) ~~of this Section~~, to be submitted with Part B of the permit application.
 - 3) Post-Trial Burn Period~~Post-trial burn period~~.
 - A) For the period immediately following completion of the trial burn, and only for the minimum period sufficient to allow sample analysis, data computation and submission of the trial burn results by the applicant, and review of the trial burn results and modification of the facility permit by the Agency to reflect the trial burn results, the Agency must establish the operating requirements most likely to ensure compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.
 - B) Applicants must submit a statement, with Part B of the application, that identifies the conditions necessary to operate during this period in compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207. This statement should include, at a minimum, restrictions on the operating requirements provided by 35 Ill. Adm. Code 726.202 (e).
 - C) The Agency must review this statement and any other relevant information submitted with Part B of the permit application and specify requirements of this period sufficient to meet the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 based on the Agency's engineering judgment.
 - 4) Final permit period. For the final period of operation the Agency must develop operating requirements in conformance with 35 Ill. Adm. Code 726.202(e) that reflect conditions in the trial burn plan and are likely to ensure compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207. Based on the trial burn results, the Agency must make any necessary modifications to the operating requirements to ensure compliance with the performance standards. The permit modification must proceed according to Sections 703.280 through 703.283.
- c) Requirements for Trial Burn Plans~~trial burn plans~~. The trial burn plan must include the following information. The Agency, in reviewing the trial burn plan,

must evaluate the sufficiency of the information provided and may require the applicant to supplement this information, if necessary, to achieve the purposes of this subsection (c).

- 1) An analysis of each feed stream, including hazardous waste, other fuels, and industrial furnace feed stocks, as fired, that includes the following:
 - A) Heating value, levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, silver, thallium, total chlorine and chloride, and ash; and
 - B) Viscosity or description of the physical form of the feed stream.
- 2) An analysis of each hazardous waste, as fired, including the following:
 - A) An identification of any hazardous organic constituents listed in Appendix H to 35 Ill. Adm. Code 721 that are present in the feed stream, except that the applicant need not analyze for constituents listed in Appendix H that would reasonably not be expected to be found in the hazardous waste. The constituents excluded from analysis must be identified and the basis for this exclusion explained. The analysis must be conducted in accordance with appropriate analytical methods;
 - B) An approximate quantification of the hazardous constituents identified in the hazardous waste, within the precision produced by the appropriate analytical methods; and
 - C) A description of blending procedures, if applicable, prior to firing the hazardous waste, including a detailed analysis of the hazardous waste prior to blending, an analysis of the material with which the hazardous waste is blended, and blending ratios.

BOARD NOTE: The federal regulations do not themselves define the phrase “appropriate analytical methods;”¹ but USEPA did include a definition in its preamble discussion accompanying the rule. The Board directs attention to the following segment (at 70 Fed. Reg. 34538, 34541 (June 14, 2005)) for the purposes of subsections (b)(1)(C) and (b)(1)(D) of this Section:

[T]wo primary considerations in selecting an appropriate method, which together serve as our general definition of an appropriate method [are the following] . . . :

1. Appropriate methods are reliable and accepted as such in the scientific community.

2. Appropriate methods generate effective data.

USEPA went on to further elaborate these two concepts and to specify other documents that might provide guidance.

- 3) A detailed engineering description of the boiler or industrial furnace, including the following:
 - A) Manufacturer's name and model number of the boiler or industrial furnace;
 - B) Type of boiler or industrial furnace;
 - C) Maximum design capacity in appropriate units;
 - D) Description of the feed system for the hazardous waste and, as appropriate, other fuels and industrial furnace feedstocks;
 - E) Capacity of hazardous waste feed system;
 - F) Description of automatic hazardous waste feed cutoff systems;
 - G) Description of any pollution control system; and
 - H) Description of stack gas monitoring and any pollution control monitoring systems.
- 4) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and sample analysis.
- 5) A detailed test schedule for each hazardous waste for which the trial burn is planned, including dates, duration, quantity of hazardous waste to be burned, and other factors relevant to the Agency's decision pursuant to subsection (b)(2) of this Section.
- 6) A detailed test protocol, including, for each hazardous waste identified, the ranges of hazardous waste feed rate, and, as appropriate, the feed rates of other fuels and industrial furnace feedstocks, and any other relevant parameters that may affect the ability of the boiler or industrial furnace to meet the performance standards in 35 Ill. Adm. Code 726.204 through 726.207.
- 7) A description of and planned operating conditions for any emission control equipment that will be used.

- 8) Procedures for rapidly stopping the hazardous waste feed and controlling emissions in the event of an equipment malfunction.
 - 9) Such other information as the Agency finds necessary to determine whether to approve the trial burn plan in light of the purposes of this subsection (c) and the criteria in subsection (b)(2) ~~of this Section~~.
- d) Trial Burn Procedures ~~burn procedures~~.
- 1) A trial burn must be conducted to demonstrate conformance with the standards of 35 Ill. Adm. Code 726.104 through 726.107.
 - 2) The Agency must approve a trial burn plan if the Agency finds as follows:
 - A) That the trial burn is likely to determine whether the boiler or industrial furnace can meet the performance standards of 35 Ill. Adm. Code 726.104 through 726.107;
 - B) That the trial burn itself will not present an imminent hazard to human health and the environment;
 - C) That the trial burn will help the Agency to determine operating requirements to be specified pursuant to 35 Ill. Adm. Code 726.102(e); and
 - D) That the information sought in the trial burn cannot reasonably be developed through other means.
 - 3) The Agency must send a notice to all persons on the facility mailing list, as set forth in 35 Ill. Adm. Code 705.161(a), and to the appropriate units of State and local government, as set forth in 35 Ill. Adm. Code 705.163(a)(5), announcing the scheduled commencement and completion dates for the trial burn. The applicant may not commence the trial burn until after the Agency has issued such notice.
 - A) This notice must be mailed within a reasonable time period before the trial burn. An additional notice is not required if the trial burn is delayed due to circumstances beyond the control of the facility or the Agency.
 - B) This notice must contain the following:
 - i) The name and telephone number of applicant's contact person;

- ii) The name and telephone number of the Agency regional office appropriate for the facility;
 - iii) The location where the approved trial burn plan and any supporting documents can be reviewed and copied; and
 - iv) An expected time period for commencement and completion of the trial burn.
- 4) The applicant must submit to the Agency a certification that the trial burn has been carried out in accordance with the approved trial burn plan, and submit the results of all the determinations required in subsection (c) ~~of this Section~~. The Agency must, in the trial burn plan, require that the submission be made within 90 days after completion of the trial burn, or later if the Agency determines that a later date is acceptable.
- 5) All data collected during any trial burn must be submitted to the Agency following completion of the trial burn.
- 6) All submissions required by this subsection (d) must be certified on behalf of the applicant by the signature of a person authorized to sign a permit application or a report pursuant to 35 Ill. Adm. Code 702.126.
- e) ~~Special Procedures~~ procedures for DRE Trial Burns ~~trial burns~~. When a DRE trial burn is required pursuant to 35 Ill. Adm. Code 726.104, the Agency must specify (based on the hazardous waste analysis data and other information in the trial burn plan) as trial Principal Organic Hazardous Constituents (POHCs) those compounds for which destruction and removal efficiencies must be calculated during the trial burn. These trial POHCs will be specified by the Agency based on information including the Agency's estimate of the difficulty of destroying the constituents identified in the hazardous waste analysis, their concentrations or mass in the hazardous waste feed, and, for hazardous waste containing or derived from wastes listed in Subpart D of 35 Ill. Adm. Code 721, the hazardous waste organic constituents identified in Appendix G to 35 Ill. Adm. Code 721 as the basis for listing.
- f) ~~Determinations Based based on Trial Burn~~ trial burn. During each approved trial burn (or as soon after the burn as is practicable), the applicant must make the following determinations:
- 1) A quantitative analysis of the levels of antimony, arsenic, barium, beryllium, cadmium, chromium, lead, mercury, thallium, silver, and chlorine/chloride in the feed streams (hazardous waste, other fuels, and industrial furnace feedstocks);

- 2) When a DRE trial burn is required pursuant to 35 Ill. Adm. Code 726.204(a), the following determinations:
 - A) A quantitative analysis of the trial POHCs in the hazardous waste feed;
 - B) A quantitative analysis of the stack gas for the concentration and mass emissions of the trial POHCs; and
 - C) A computation of destruction and removal efficiency (DRE), in accordance with the DRE formula specified in 35 Ill. Adm. Code 726.204(a);
- 3) When a trial burn for chlorinated dioxins and furans is required pursuant to 35 Ill. Adm. Code 726.204(e), a quantitative analysis of the stack gas for the concentration and mass emission rate of the 2,3,7,8-chlorinated tetra- through octa-congeners of chlorinated dibenzo-p-dioxins and furans, and a computation showing conformance with the emission standard;
- 4) When a trial burn for PM, metals, or HCl and chlorine gas is required pursuant to 35 Ill. Adm. Code 726.205, 726.206(c) or (d), or 726.207(b)(2) or (c), a quantitative analysis of the stack gas for the concentrations and mass emissions of PM, metals, or HCl and chlorine gas, and computations showing conformance with the applicable emission performance standards;
- 5) When a trial burn for DRE, metals, and HCl and chlorine gas is required pursuant to 35 Ill. Adm. Code 726.204(a), 726.206(c) or (d), or 726.207(b)(2) or (c), a quantitative analysis of the scrubber water (if any), ash residues, other residues, and products for the purpose of estimating the fate of the trial POHCs, metals, and chlorine and chloride;
- 6) An identification of sources of fugitive emissions and their means of control;
- 7) A continuous measurement of carbon monoxide (CO), oxygen, and, where required, hydrocarbons (HC) in the stack gas; and
- 8) Such other information as the Agency specifies as necessary to ensure that the trial burn will determine compliance with the performance standards 35 Ill. Adm. Code 726.204 through 726.207 and to establish the operating conditions required by 35 Ill. Adm. Code 726.204 through 726.207 and of determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.203, and to establish the operating conditions required by 35 Ill. Adm. Code 726.202(e) as necessary to meet those performance standards.

- g) ~~Interim Status Boilers status boilers and Industrial Furnaces industrial furnaces.~~ For the purpose of determining feasibility of compliance with the performance standards of 35 Ill. Adm. Code 726.204 through 726.207 and of determining adequate operating conditions pursuant to 35 Ill. Adm. Code 726.203, an applicant that owns or operates an existing boiler or industrial furnace that is operated under the interim status standards of 35 Ill. Adm. Code 726.203 must either prepare and submit a trial burn plan and perform a trial burn in accordance with this Section or submit other information as specified in Section 703.208(a)(6). The Agency must announce its intention to approve of the trial burn plan in accordance with the timing and distribution requirements of subsection (d)(3) ~~of this Section~~. The contents of the notice must include all of the following information: the name and telephone number of a contact person at the facility; the name and telephone number of the Agency regional office appropriate for the facility; the location where the trial burn plan and any supporting documents can be reviewed and copied; and a schedule of the activities that are required prior to permit issuance, including the anticipated time schedule for Agency approval of the plan, and the time periods during which the trial burn would be conducted. Applicants that submit a trial burn plan and receive approval before submission of the Part B permit application must complete the trial burn and submit the results specified in subsection (f) ~~of this Section~~ with the Part B permit application. If completion of this process conflicts with the date set for submission of the Part B application, the applicant must contact the Agency to establish a later date for submission of the Part B application or the trial burn results. If the applicant submits a trial burn plan with Part B of the permit application, the trial burn must be conducted and the results submitted within a time period prior to permit issuance to be specified by the Agency.

BOARD NOTE: Derived from 40 CFR 270.66 (2017)~~(2005)~~, as amended at 70 Fed. Reg. 59402 (Oct. 12, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART G: CHANGES TO PERMITS

Section 703.270 Modification or Reissuance

When the Agency receives any information (for example, inspects the facility, receives information submitted by the permittee, as required in the permit (see 35 Ill. Adm. Code 702.140 through 702.152 and Section 703.241 et seq.), receives a request for reissuance pursuant to 35 Ill. Adm. Code 705.128, or conducts a review of the permit file) it may determine whether or not one or more of the causes, listed in Sections 703.271 or 703.272, for modification, reissuance, or both, exist. If cause exists, the Agency must modify or reissue the permit accordingly, subject to the limitations of Section 703.273, and may request an updated application if necessary. When a permit is modified, only the conditions subject to modification are reopened. If a permit is

reissued, the entire permit is reopened and subject to revision and the permit is reissued for a new term. (See 35 Ill. Adm. Code 705.128(c)(2).) If cause does not exist pursuant to Section 703.271 or 703.272, the Agency must not modify or reissue the permit, except on the request of the permittee. If a permit modification is requested by the permittee, the Agency must approve or deny the request according to the procedures of Section 703.280 through 703.283 or Section 703.353 and Subpart G of 35 Ill. Adm. Code 705. Otherwise, a draft permit must be prepared and other procedures in 35 Ill. Adm. Code 705 must be followed.

BOARD NOTE: Derived from the preamble to 40 CFR 270.41 (2017)-(2005), as amended at 70 Fed. Reg. 53420 (Sep. 8, 2005). The Board has chosen to use “reissue” where the corresponding federal provisions use “revoke and reissue.”. Revocation This was because permit revocation is a remedy in the context of an enforcement action that is reserved to the Board. See 415 ILCS 5/33(b) (2004); 35 Ill. Adm. Code 702.186 (2004). The Board intends that a reissued permit completely supercede the earlier version of that permit.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.280 Permit Modification at the Request of the Permittee

- a) Class 1 Modifications-~~modifications~~. See Section 703.281.
- b) Class 2 Modifications-~~modifications~~. See Section 703.282.
- c) Class 3 Modifications-~~modifications~~. See Section 703.283.
- d) Other Modifications-~~modifications~~.
 - 1) In the case of modifications not explicitly listed in Appendix A of this ~~Part~~, the permittee may submit a Class 3 modification request to the Agency, or the permittee may request a determination by the Agency that the modification be reviewed and approved as a Class 1 or Class 2 modification. If the permittee requests that the modification be classified as a Class 1 or 2 modification, the permittee must provide the Agency with the necessary information to support the requested classification.
 - 2) The Agency must make the determination described in subsection (d)(1) of this ~~Section~~ as promptly as practicable. In determining the appropriate class for a specific modification, the Agency must consider the similarity of the modification to other modifications codified in Appendix A of this ~~Part~~ and the following criteria:
 - A) Class 1 modifications apply to minor changes that keep the permit current with routine changes to the facility or its operation. These changes do not substantially alter the permit conditions or reduce the capacity of the facility to adequately protect human health or

the environment. In the case of Class 1 modifications, the Agency may require prior approval.

- B) Class 2 modifications apply to changes that are necessary to enable a permittee to respond, in a timely manner, to any of the following:
 - i) Common variations in the types and quantities of the wastes managed under the facility permit;
 - ii) Technological advances; and
 - iii) Changes necessary to comply with new regulations, where these changes can be implemented without substantially changing design specifications or management practices in the permit.
 - C) Class 3 modifications substantially alter the facility or its operation.
- e) Temporary Authorizations~~authorizations~~.
- 1) Upon request of the permittee, the Agency must, without prior public notice and comment, grant the permittee a temporary authorization in accordance with this subsection (e). Temporary authorizations have a term of not more than 180 days.
 - 2) Procedures:
 - A) The permittee may request a temporary authorization for the following:
 - i) Any Class 2 modification meeting the criteria in subsection (e)(3)(B)~~of this Section~~; and
 - ii) Any Class 3 modification that meets the criteria in subsection (e)(3)(B)(i)~~of this Section~~ or that meets the criteria in subsections (e)(3)(B)(iii) through (e)(3)(B)(v)~~of this Section~~ and provides improved management or treatment of a hazardous waste already listed in the facility permit.
 - B) The temporary authorization request must include the following:
 - i) A description of the activities to be conducted under the temporary authorization;

- ii) An explanation of why the temporary authorization is necessary; and
 - iii) Sufficient information to ensure compliance with 35 Ill. Adm. Code 724 standards.
 - C) The permittee must send a notice about the temporary authorization request to all persons on the facility mailing list maintained by the Agency and to appropriate units of State and local governments, as specified in 35 Ill. Adm. Code 705.163(a)(5). This notification must be made within seven days after submission of the authorization request.
- 3) The Agency must approve or deny the temporary authorization as quickly as practical. To issue a temporary authorization, the Agency must find as follows:
- A) That the authorized activities are in compliance with the standards of 35 Ill. Adm. Code 724.
 - B) That the temporary authorization is necessary to achieve one of the following objectives before action is likely to be taken on a modification request:
 - i) To facilitate timely implementation of closure or corrective action activities;
 - ii) To allow treatment or storage in tanks, containers, or containment buildings, in accordance with 35 Ill. Adm. Code 728;
 - iii) To prevent disruption of ongoing waste management activities;
 - iv) To enable the permittee to respond to sudden changes in the types or quantities of the wastes managed under the facility permit; or
 - v) To facilitate other changes to adequately protect human health and the environment.
- 4) A temporary authorization must be reissued for one additional term of up to 180 days, provided that the permittee has requested a Class 2 or 3 permit modification for the activity covered in the temporary authorization, and either of the following is true:

- A) The reissued temporary authorization constitutes the Agency's decision on a Class 2 permit modification in accordance with Section 703.282(f)(1)(D) or (f)(2)(D); or
 - B) The Agency determines that the reissued temporary authorization involving a Class 3 permit modification request is warranted to allow the authorized activities to continue while the modification procedures of 35 Ill. Adm. Code 703.283 are conducted.
- f) Public Notice notice and Appeals appeals of Permit Modification Decisions permit modification decisions.
- 1) The Agency must notify persons on the facility mailing list and appropriate units of State and local government within 10 days after any decision to grant or deny a Class 2 or 3 permit modification request. The Agency must also notify such persons within 10 days after an automatic authorization for a Class 2 modification goes into effect pursuant to Section 703.282(f)(3) or (f)(5).
 - 2) The Agency's decision to grant or deny a Class 2 or 3 permit modification request may be appealed under the permit appeal procedures of 35 Ill. Adm. Code 705.212.
 - 3) An automatic authorization that goes into effect pursuant to Section 703.282(f)(3) or (f)(5) may be appealed under the permit appeal procedures of 35 Ill. Adm. Code 705.212; however, the permittee may continue to conduct the activities pursuant to the automatic authorization until the Board enters a final order on the appeal notwithstanding the provisions of 35 Ill. Adm. Code 705.204.
- g) Newly Regulated Wastes regulated wastes and Units units.
- 1) The permittee is authorized to continue to manage wastes listed or identified as hazardous pursuant to 35 Ill. Adm. Code 721, or to continue to manage hazardous waste in units newly regulated as hazardous waste management units, if each of the following is true:
 - A) The unit was in existence as a hazardous waste facility with respect to the newly listed or characterized waste or newly regulated waste management unit on the effective date of the final rule listing or identifying the waste, or regulating the unit;
 - B) The permittee submits a Class 1 modification request on or before the date on which the waste becomes subject to the new requirements;

- C) The permittee is in compliance with the applicable standards of 35 Ill. Adm. Code 725 and 726;
 - D) The permittee also submits a complete Class 2 ~~class 2~~ or 3 modification request within 180 days after the effective date of the rule listing or identifying the waste, or subjecting the unit to management standards pursuant to 35 Ill. Adm. Code 724, 725, or 726; and
 - E) In the case of land disposal units, the permittee certifies that such unit is in compliance with all applicable requirements of 35 Ill. Adm. Code 725 for groundwater monitoring and financial responsibility requirements on the date 12 months after the effective date of the rule identifying or listing the waste as hazardous, or regulating the unit as a hazardous waste management unit. If the owner or operator fails to certify compliance with all these requirements, the owner or operator loses authority to operate pursuant to this Section.
- 2) New wastes or units added to a facility's permit pursuant to this subsection (g) do not constitute expansions for the purpose of the 25 percent capacity expansion limit for Class 2 modifications.
- h) Military Hazardous Waste Munitions Treatment ~~hazardous waste munitions treatment~~ and Disposal ~~disposal~~. The permittee is authorized to continue to accept waste military munitions notwithstanding any permit conditions barring the permittee from accepting off-site wastes, if each of the following is true:
- 1) The facility was in existence as a hazardous waste facility and the facility was already permitted to handle the waste military munitions on the date when the waste military munitions became subject to hazardous waste regulatory requirements;
 - 2) On or before the date when the waste military munitions become subject to hazardous waste regulatory requirements, the permittee submits a Class 1 modification request to remove or amend the permit provision restricting the receipt of off-site waste munitions; and
 - 3) The permittee submits a complete Class 2 modification request within 180 days after the date when the waste military munitions became subject to hazardous waste regulatory requirements.
- i) Permit Modification List ~~modification list~~. The Agency must maintain a list of all approved permit modifications and must publish a notice once a year in a State-wide newspaper that an updated list is available for review.

- j) ~~Combustion Facility Changes facility changes to Meet meet federal~~ 40 CFR 63 MACT ~~Standards-standards~~. The following procedures apply to hazardous waste combustion facility permit modifications requested pursuant to Appendix A, paragraph L(9) ~~of this Part~~.
- 1) A facility owner or operator must have complied with the federal notification of intent to comply (NIC) requirements of 40 CFR 63.1210 that was in effect prior to October 11, 2000, (see subpart EEE of 40 CFR 63 (2000), incorporated by reference in 35 Ill. Adm. Code 720.111(b)) in order to request a permit modification pursuant to this Section for the purpose of technology changes needed to meet the standards of 40 CFR 63.1203, 63.1204, and 63.1205, incorporated by reference in 35 Ill. Adm. Code 720.111(b).
 - 2) If the Agency does not act to either approve or deny the request within 90 days of receiving it, the request must be deemed approved. The Agency may, at its discretion, extend this 90-day deadline one time for up to 30 days by notifying the facility owner or operator in writing before the 90 days has expired. A facility owner or operator must comply with the NIC requirements of 40 CFR 63.1210(b) and 63.1212(a) before a permit modification can be requested under this Section for the purpose of technology changes needed to meet the 40 CFR 63.1215, 63.1216, 63.1217, 63.1218, 63.1219, 63.1220, and 63.1221 standards as added on October 12, 2005, incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- k) Waiver of RCRA Permit Conditions ~~permit conditions in Support support of Transition transition to the federal~~ 40 CFR 63 MACT Standards-standards.
- 1) The facility owner or operator may request to have specific RCRA operating and emissions limits waived by submitting a Class 1 permit modification request under Appendix A ~~of this Part~~, paragraph L.10. The owner or operator must provide the information described in subsections (k)(1)(A) through (k)(1)(C) ~~of this Section~~, with Agency review subject to the conditions of subsection (k)(1)(D) ~~of this Section~~:
 - A) It must identify the specific RCRA permit operating and emissions limits that the owner or operator is requesting to waive;
 - B) It must provide an explanation of why the changes are necessary in order to minimize or eliminate conflicts between the RCRA permit and MACT compliance; and
 - C) It must discuss how the revised provisions will be sufficiently protective.

- D) The Agency must approve or deny the request within 30 days after receipt of the request. The Agency may, at its discretion, extend this 30-day deadline one time for up to 30 days by notifying the facility owner or operator in writing.
- 2) To request this modification in conjunction with MACT performance testing, where permit limits may only be waived during actual test events and pretesting, as defined under 40 CFR 63.1207(h)(2)(i) and (h)(2)(ii), incorporated by reference in 35 Ill. Adm. Code 720.111(b), for an aggregate time not to exceed 720 hours of operation (renewable at the discretion of the Agency) the owner or operator must fulfill the conditions of subsection (k)(2)(A) ~~of this Section~~, subject to the conditions of subsection (k)(2)(B) ~~of this Section~~:
 - A) It must submit its modification request to the Agency at the same time it submits its test plans to the Agency.
 - B) The Agency may elect to approve or deny the request contingent upon approval of the test plans.
 - 1) This subsection (l) corresponds with 40 CFR 270.42(l), which ~~became obsolete when USEPA removed and marked reserved at 81 Fed. Reg. 85732 (November 28, 2016) terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program related rules are no longer effective at 75 Fed. Reg. 12989, 92, note 1 (Mar. 18, 2010).~~ This statement maintains structural consistency with the corresponding federal requirements.

BOARD NOTE: Derived from 40 CFR 270.42(d) through (k) ~~(2017)~~ (2012).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.282 Class 2 Modifications

- a) For Class 2 modifications, listed in Appendix A, the permittee must submit a modification request to the Agency that does the following:
 - 1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;
 - 2) Identifies that the modification is a Class 2 modification;
 - 3) Explains why the modification is needed; and
 - 4) Provides the applicable information required by Section 703.181 through 703.185, 703.201 through 703.207, 703.221 through 703.225, and 703.230.

- b) The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the Agency and to the appropriate units of State and local government as specified in 35 Ill. Adm. Code 705.163(a)(5) and must, to the extent practicable, publish this notice in a newspaper of general circulation published in the County in which the facility is located. If no such newspaper exists, the permittee must publish the notice in a newspaper of general circulation in the vicinity of the facility. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the Agency evidence of the mailing and publication. The notice must include:
- 1) Announcement of a 60-day comment period, in accordance with subsection (e) ~~of this Section~~, and the name and address of an Agency contact to whom comments must be sent;
 - 2) Announcement of the date, time and place for a public meeting held in accordance with subsection (d) ~~of this Section~~;
 - 3) Name and telephone number of the permittee's contact person;
 - 4) Name and telephone number of an Agency contact person;
 - 5) Locations where copies of the modification request and any supporting documents can be viewed and copied; and
 - 6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the Agency contact person.";
- c) The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.
- d) The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in subsection (b) ~~of this Section~~ and no later than 15 days before the close of the 60-day comment period. The meeting must be held in the County in which the permitted facility is located, unless it is impracticable to do so, in which case the hearing must be held in the vicinity of the facility.
- e) The public must be provided 60 days to comment on the modification request. The comment period begins on the date that the permittee publishes the notice in the local newspaper. Comments must be submitted to the Agency contact identified in the public notice.
- f) Agency Decision ~~decision~~.

- 1) No later than 90 days after receipt of the notification request, the Agency must:
 - A) Approve the modification request, with or without changes, and modify the permit accordingly;
 - B) Deny the request;
 - C) Determine that the modification request must follow the procedures in Section 703.283 for Class 3 modifications for either of the following reasons:
 - i) There is significant public concern about the proposed modification; or
 - ii) The complex nature of the change requires the more extensive procedures of Class 3;
 - D) Approve the request, with or without changes, as a temporary authorization having a term of up to 180 days; or
 - E) Notify the permittee that the Agency will decide on the request within the next 30 days.
- 2) If the Agency notifies the permittee of a 30-day extension for a decision, the Agency must, no later than 120 days after receipt of the modification request, do the following:
 - A) Approve the modification request, with or without changes, and modify the permit accordingly;
 - B) Deny the request;
 - C) Determine that the modification request must follow the procedures in Section 703.283 for Class 3 modifications for the following reasons:
 - i) There is significant public concern about the proposed modification; or
 - ii) The complex nature of the change requires the more extensive procedures of Class 3; or
 - D) Approve the request, with or without changes, as a temporary authorization having a term of up to 180 days.

- 3) If the Agency fails to make one of the decisions specified in subsection (f)(2) ~~of this Section~~ by the 120th day after receipt of the modification request, the permittee is automatically authorized to conduct the activities described in the modification request for up to 180 days, without formal Agency action. The authorized activities must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of 35 Ill. Adm. Code 725. If the Agency approves, with or without changes, or denies the modification request during the term of the temporary or automatic authorization provided for in subsections (f)(1), (f)(2), or (f)(3) ~~of this Section~~, such action cancels the temporary or automatic authorization.
- 4) Notification by Permittee ~~permittee~~.
 - A) In the case of an automatic authorization under subsection (f)(3) ~~of this Section~~, or a temporary authorization under subsection (f)(1)(D) or (f)(2)(D) ~~of this Section~~, if the Agency has not made a final approval or denial of the modification request by the date 50 days prior to the end of the temporary or automatic authorization, the permittee must, within seven days after that time, send a notification to persons on the facility mailing list, and make a reasonable effort to notify other persons who submitted written comments on the modification request, that informs them as follows:
 - i) That the permittee has been authorized temporarily to conduct the activities described in the permit modification request; and
 - ii) That, unless the Agency acts to give final approval or denial of the request by the end of the authorization period, the permittee will receive authorization to conduct such activities for the life of the permit.
 - B) If the owner or operator fails to notify the public by the date specified in subsection (f)(4)(A) ~~of this Section~~, the effective date of the permanent authorization will be deferred until 50 days after the owner or operator notifies the public.
- 5) Except as provided in subsection (f)(7) ~~of this Section~~, if the Agency does not finally approve or deny a modification request before the end of the automatic or temporary authorization period or reclassify the modification as a Class 3 modification, the permittee is authorized to conduct the activities described in the permit modification request for the life of the permit unless modified later under Section 703.270 or Section 703.280.

The activities authorized under this subsection must be conducted as described in the permit modification request and must be in compliance with all appropriate standards of 35 Ill. Adm. Code 725.

- 6) In making a decision to approve or deny a modification request, including a decision to issue a temporary authorization or to reclassify a modification as a Class 3, the Agency must consider all written comments submitted to the Agency during the public comment period and must respond in writing to all significant comments in the Agency's decision.
- 7) With the written consent of the permittee, the Agency may extend indefinitely or for a specified period the time periods for final approval or denial of a modification request or for reclassifying a modification as a Class 3.
- g) The Agency must deny or change the terms of a Class 2 permit modification request under subsections (f)(1) through (f)(3) ~~of this Section~~ for the following reasons:
 - 1) The modification request is incomplete;
 - 2) The requested modification does not comply with the appropriate requirements of 35 Ill. Adm. Code 724 or other applicable requirements; or
 - 3) The conditions of the modification fail to protect human health and the environment.
- h) The permittee may perform any construction associated with a Class 2 permit modification request beginning 60 days after the submission of the request unless the Agency establishes a later date for commencing construction and informs the permittee in writing before day 60.

BOARD NOTE: Derived from 40 CFR 270.42(b) (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.283 Class 3 Modifications

- a) For Class 3 modifications, listed in Appendix A, the permittee must submit a modification request to the Agency that does the following:
 - 1) Describes the exact change to be made to the permit conditions and supporting documents referenced by the permit;
 - 2) Identifies that the modification is a Class 3 modification;

- 3) Explains why the modification is needed; and
 - 4) Provides the applicable information required by Section 703.181 through 703.187, 703.201 through 703.209, 703.221 through 703.225, 703.230, and 703.232.
- b) The permittee must send a notice of the modification request to all persons on the facility mailing list maintained by the Agency and to the appropriate units of State and local government, as specified in 35 Ill. Adm. Code 705.163(a)(5), and must publish this notice in a newspaper of general circulation in the county in which the facility is located. This notice must be mailed and published within seven days before or after the date of submission of the modification request, and the permittee must provide to the Agency evidence of the mailing and publication. The notice must include the following:
- 1) Announcement of a 60-day comment period, in accordance with subsection (e) ~~of this Section~~, and the name and address of an Agency contact to whom comments must be sent;
 - 2) Announcement of the date, time, and place for a public meeting held in accordance with subsection (d) ~~of this Section~~;
 - 3) Name and telephone number of the permittee's contact person;
 - 4) Name and telephone number of an Agency contact person;
 - 5) Locations where copies of the modification request and any supporting documents can be viewed and copied; and
 - 6) The following statement: "The permittee's compliance history during the life of the permit being modified is available from the Agency contact person:"
- c) The permittee must place a copy of the permit modification request and supporting documents in a location accessible to the public in the vicinity of the permitted facility.
- d) The permittee must hold a public meeting no earlier than 15 days after the publication of the notice required in subsection (b) ~~of this Section~~ and no later than 15 days before the close of the 60-day comment period. The meeting must be held to the extent practicable in the vicinity of the permitted facility.
- e) The public must be provided 60 days to comment on the modification request. The comment period will begin on the date the permittee publishes the notice in the local newspaper. Comments must be submitted to the Agency contact identified in the public notice.

- f) After the conclusion of the 60-day comment period, the Agency must grant or deny the permit modification request, according to the permit modification procedures of 35 Ill. Adm. Code 705. In addition, the Agency must consider and respond to all significant written comments received during the 60-day comment period.

BOARD NOTE: Derived from 40 CFR 270.42(c) (2017)~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART I: INTEGRATION WITH MAXIMUM ACHIEVABLE CONTROL TECHNOLOGY (MACT) STANDARDS

Section 703.320 Options for Incinerators and Cement and Lightweight Aggregate Kilns to Minimize Emissions from Startup, Shutdown, and Malfunction Events

- a) Facilities with Existing Permits~~existing permits~~.
- 1) Revisions to permit conditions after documenting compliance with MACT. The owner or operator of a RCRA-permitted incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace, when requesting removal of permit conditions that are no longer applicable according to 35 Ill. Adm. Code 724.440(b) and 726.200(b), may request that the Agency address permit conditions that minimize emissions from startup, shutdown, and malfunction events under any of the following options:
 - A) Retain Relevant Permit Conditions~~relevant permit conditions~~. Under this option, the Agency must do the following:
 - i) Retain permit conditions that address releases during startup, shutdown, and malfunction events, including releases from emergency safety vents, as these events are defined in the facility's startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) (When and How Must You Comply with the Standards and Operating Requirements?), incorporated by reference in 35 Ill. Adm. Code 720.111(b); and
 - ii) Limit applicability of those permit conditions only to when the facility is operating under its startup, shutdown, and malfunction plan.
 - B) Revise Relevant Permit Conditions~~relevant permit conditions~~. Under this option, the following must occur:

- i) The Agency must identify a subset of relevant existing permit requirements, or develop alternative permit requirements, that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history;
- ii) The Agency must retain or add these permit requirements to the permit to apply only when the facility is operating under its startup, shutdown, and malfunction plan; and
- iii) The owner or operator must comply with subsection (a)(3) ~~of this Section.~~

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(1)(ii) in this subsection (a)(1)(B) in order to comport with Illinois Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(1)(ii)(A), (a)(1)(ii)(A)(1), and (a)(1)(ii)(A)(2) appear as subsections (a)(1)(B), (a)(1)(B)(i), and (a)(1)(B)(ii). The substance of 40 CFR 270.235(a)(1)(ii)(B) has been codified as subsection (a)(3) ~~of this Section.~~ The Board added subsection (a)(1)(B)(iii) ~~of this Section~~ to direct attention to subsection (a)(3).

- C) Remove Permit Conditions ~~permit conditions~~. Under this option the following are required:
 - i) The owner or operator must document that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B); and
 - ii) The Agency must remove permit conditions that are no longer applicable according to 35 Ill. Adm. Code 724.440(b) and 726.200(b).
- 2) Addressing Permit Conditions ~~permit conditions~~ upon Permit Reissuance ~~permit reissuance~~. The owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that has conducted a comprehensive performance test and submitted to the Agency a Notification of Compliance documenting compliance with the standards of subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants

from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), may request in the application to reissue the permit for the combustion unit that the Agency control emissions from startup, shutdown, and malfunction events under any of the following options:

- A) RCRA ~~Option~~ Option A. Under this option, the Agency must do the following:
- i) Include, in the permit, conditions that ensure compliance with 35 Ill. Adm. Code 724.445(a) and (c) or 726.202(e)(1) and (e)(2)(C) to minimize emissions of toxic compounds from startup, shutdown, and malfunction events, including releases from emergency safety vents; and
 - ii) Specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan; or

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(2)(i) in this subsection (a)(2)(A) in order to comport with Illinois Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(2)(i)(A), (a)(2)(i)(A)(1), and (a)(2)(i)(A)(2) appear as subsections (a)(2)(A), (a)(2)(A)(i), and (a)(2)(A)(ii).

- B) RCRA ~~Option~~ Option B. Under this option, the following must occur:
- i) The Agency must include, in the permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information including the source's startup, shutdown, and malfunction plan, design, and operating history;
 - ii) The Agency must specify that these permit requirements apply only when the facility is operating under its startup, shutdown, and malfunction plan; and
 - iii) The owner or operator must comply with subsection (a)(3) of this Section; and

BOARD NOTE: The Board found it necessary to deviate from the structure of corresponding 40 CFR 270.235(a)(2)(ii) in this subsection (a)(2)(B) in order to comport with Illinois

Administrative Code codification requirements. The substance of 40 CFR 270.235(a)(2)(ii)(A), (a)(2)(ii)(A)(1), and (a)(2)(ii)(A)(2) appear as subsections (a)(2)(B), (a)(2)(B)(i), and (a)(2)(B)(ii). The substance of 40 CFR 270.235(a)(2)(ii)(B) has been codified as subsection (a)(3) ~~of this Section~~. The Board added subsection (a)(2)(B)(iii) ~~of this Section~~ to direct attention to subsection (a)(3).

- C) ~~CAA Option option~~. Under this option the following are required:
- i) The owner or operator must document that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B); and
 - ii) The Agency must omit from the permit conditions that are not applicable pursuant to 35 Ill. Adm. Code 724.440(b) and 726.200(b).

3) Changes That May Significantly Increase Emissions ~~that may significantly increase emissions.~~

- A) The owner or operator must notify the Agency in writing of changes to the startup, shutdown, and malfunction plan or changes to the design of the source that may significantly increase emissions of toxic compounds from startup, shutdown, or malfunction events, including releases from emergency safety vents. The owner or operator must notify the Agency of such changes within five days of making such changes. The owner or operator must identify in the notification recommended revisions to permit conditions necessary as a result of the changes to ensure that emissions of toxic compounds are minimized during these events.
- B) The Agency may revise permit conditions as a result of these changes to ensure that emissions of toxic compounds are minimized during startup, shutdown, or malfunction events, including releases from emergency safety vents in either of the following ways:
 - i) Upon permit renewal; or
 - ii) If warranted, by modifying the permit pursuant to Section 703.270 or 703.280 through 703.283.

BOARD NOTE: The substance of 40 CFR 270.235(a)(1)(ii)(B) and (a)(2)(ii)(B) has been codified as this subsection (a)(3).

- b) Interim Status Facilities~~-status facilities-~~
- 1) Interim status operations. In compliance with 35 Ill. Adm. Code 725.440 and 726.200(b), the owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of 35 Ill. Adm. Code 725 or 726 may control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options after conducting a comprehensive performance test and submitting to the Agency a Notification of Compliance documenting compliance with the standards of subpart EEE of 40 CFR 63:
 - A) RCRA Option~~-option~~. Under this option, the owner or operator must continue to comply with the interim status emission standards and operating requirements of 35 Ill. Adm. Code 725 or 726 relevant to control of emissions from startup, shutdown, and malfunction events. Those standards and requirements apply only during startup, shutdown, and malfunction events; or
 - B) CAA Option~~-option~~. Under this option, the owner or operator is exempt from the interim status standards of 35 Ill. Adm. Code 725 or 726 relevant to control of emissions of toxic compounds during startup, shutdown, and malfunction events upon submission of written notification and documentation to the Agency that the startup, shutdown, and malfunction plan required pursuant to 40 CFR 63.1206(c)(2) has been approved pursuant to 40 CFR 63.1206(c)(2)(ii)(B).
 - 2) Operations Under a Subsequent~~subsequent~~ RCRA Permit permit. When an owner or operator of an incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace that is operating under the interim status standards of 35 Ill. Adm. Code 725 or 726 submits a RCRA permit application, the owner or operator may request that the Agency control emissions from startup, shutdown, and malfunction events under any of the options provided by subsection (a)(2)(A), (a)(2)(B), or (a)(2)(C) of this Section.
- c) New Units~~-units~~. A hazardous waste incinerator, cement kiln, lightweight aggregate kiln, solid fuel boiler, liquid fuel boiler, or hydrochloric acid production furnace unit that becomes subject to RCRA permit requirements ~~after October 12, 2005~~ must control emissions of toxic compounds during startup, shutdown, and malfunction events under either of the following options:

- 1) It may comply with the requirements specified in 40 CFR 63.1206(c)(2), incorporated by reference in 35 Ill. Adm. Code 720.111(b); or
- 2) It may request to include in the RCRA permit, conditions that ensure emissions of toxic compounds are minimized from startup, shutdown, and malfunction events, including releases from emergency safety vents, based on review of information, including the source's startup, shutdown, and malfunction plan and design. The Agency must specify that these permit conditions apply only when the facility is operating under its startup, shutdown, and malfunction plan.

BOARD NOTE: Derived from 40 CFR 270.235 ~~(2017)~~~~(2005)~~, as amended at 70 Fed. Reg. 59402 ~~(Oct. 12, 2005)~~. Operating conditions used to determine effective treatment of hazardous waste remain effective after the owner or operator demonstrates compliance with the standards of subpart EEE of 40 CFR 63.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART J: RCRA STANDARDIZED PERMITS FOR STORAGE AND TREATMENT UNITS

Section 703.350 General Information About RCRA Standardized Permits

- a) ~~RCRA Standardized Permit~~~~standardized permit~~. A RCRA standardized permit (RCRA) is a special type of permit that authorizes the owner or operator of a facility to manage hazardous waste. A RCRA standardized permit is issued pursuant to Subpart G of 35 Ill. Adm. Code 705 and this Subpart J.

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 270.250 ~~(2017)~~~~(2007)~~.

- b) Eligibility for a RCRA ~~Standardized Permit~~~~standardized permit~~.
 - 1) The facility owner or operator may be eligible for a RCRA standardized permit if the following conditions are fulfilled:
 - A) The facility generates hazardous waste and then stores or non-thermally treats the hazardous waste on-site in containers, tanks, or containment buildings; or
 - B) The facility receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and the facility stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings.

- C) The Agency must inform the facility owner or operator of its eligibility for a RCRA standardized permit when the Agency makes a decision on its permit application.
- 2) This subsection (b)(2) corresponds with 40 CFR 270.255(b), which USEPA has marked “Reserved.”. This statement maintains structural consistency with the corresponding federal rules.

BOARD NOTE: Subsection (b) ~~of this Section~~ is derived from 40 CFR 270.255 (2017) ~~(2007)~~.

- c) Permit Requirements Applicable to a RCRA Standardized Permit ~~standardized permit~~. The following provisions of this Part and 35 Ill. Adm. Code 702 apply to a RCRA standardized permit:
 - 1) General Information: All provisions derived from subpart A of 40 CFR 270 apply: Sections 703.110, 703.121 through 703.124, 703.158 through 703.160, and 703.161(a) and 35 Ill. Adm. Code 702.104, 702.110, 702.181, and 720.111.
 - 2) Permit Application: All provisions derived from 40 CFR 270.10, 270.11, 270.12, 270.13, and 270.29 in subpart B of 40 CFR 270 apply: Sections 703.125, 703.126, 703.150 ~~through~~ ~~though~~ 703.152, 703.157, 703.181, 703.186, 703.188, and 703.240 and 35 Ill. Adm. Code 702.103, 702.120 through 702.124, and 702.126.
 - 3) Permit Conditions: All provisions derived from subpart C of 40 CFR 270 apply: Sections 703.241 through 703.248 and 35 Ill. Adm. Code 702.140 through 702.152, 702.160, and 702.162 through 702.164.
 - 4) Changes to Permit: All provisions derived from 40 CFR 270.40, 270.41, and 270.43 in subpart D of 40 CFR 270 apply: Sections 703.260 and 703.270 ~~through~~ ~~though~~ 703.273 and 35 Ill. Adm. Code 702.186.
 - 5) Expiration and Continuation of Permits: All provisions derived from subpart E of 40 CFR 270 apply: 35 Ill. Adm. Code 702.125 and 702.161.
 - 6) Special Forms of Permits: The provision derived from 40 CFR 270.67 in subpart F of 40 CFR 270 apply: Section 703.238.
 - 7) Interim Status: All provisions derived from subpart G of 40 CFR 270 apply: Sections 703.153 through 703.157.
 - 8) Remedial Action Plans: No provisions derived from subpart H of 40 CFR 270 apply: no provisions of Subpart H of 35 Ill. Adm. Code 703 apply.

- 9) RCRA Standardized Permits: All provisions derived from subpart J of 40 CFR 270 apply: this Subpart J.

BOARD NOTE: Subsection (c) ~~of this Section~~ is derived from 40 CFR 270.260 (2017)-(2007).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.352 Information That Must Be Kept at the Facility

- a) ~~General Types~~ types of Information to Be Maintained ~~be maintained~~ at the Facility ~~facility~~. The facility owner or operator must keep the following information at its facility:
- 1) A general description of the facility;
 - 2) Results of chemical and physical analyses of the hazardous waste and hazardous debris handled at the facility. At a minimum, these results of analyses must contain all the information that the owner or operator must know to treat or store the wastes properly pursuant to 35 Ill. Adm. Code 727;
 - 3) A copy of the waste analysis plan required by 35 Ill. Adm. Code 727.110(d)(2);
 - 4) A description of the security procedures and equipment required by 35 Ill. Adm. Code 727.110(e);
 - 5) A copy of the general inspection schedule required by 35 Ill. Adm. Code 727.110(f)(2). The owner or operator must include in the inspection schedule applicable requirements of 35 Ill. Adm. Code 724.933, 724.952, 724.953, 724.958, 724.988, 727.270(e), and 727.290(d) and (f);
 - 6) A justification of any modification of the preparedness and prevention requirements of 35 Ill. Adm. Code 727.130(a) through (f);
 - 7) A copy of the contingency plan required by 35 Ill. Adm. Code 727.150;
 - 8) A description of procedures, structures, or equipment used at the facility to accomplish each of the following:
 - A) Prevent hazards in unloading operations (for example, use ramps, special forklifts);

- B) Prevent runoff from hazardous waste handling areas to other areas of the facility or environment, or to prevent flooding (for example, with berms, dikes, trenches, etc.);
 - C) Prevent contamination of water supplies;
 - D) Mitigate effects of equipment failure and power outages;
 - E) Prevent undue exposure of personnel to hazardous waste (for example, requiring protective clothing); and
 - F) Prevent releases to atmosphere;
- 9) A description of precautions to prevent accidental ignition or reaction of ignitable, reactive, or incompatible wastes as required by 35 Ill. Adm. Code 727.110(h);
 - 10) The traffic pattern, estimated volume (number, types of vehicles) and control (for example, show turns across traffic lanes, and stacking lanes; describe access road surfacing and load bearing capacity; show traffic control signals, etc.);
 - 11) This subsection (a)(11) corresponds with 40 CFR 270.290(k), which USEPA has marked "Reserved." This statement maintains structural consistency with the corresponding federal rules;
 - 12) An outline of both the introductory and continuing training programs that the owner or operator will use to prepare employees to operate or maintain its facility safely as required by 35 Ill. Adm. Code 727.110(g). A brief description of how training will be designed to meet actual job tasks pursuant to 35 Ill. Adm. Code 727.110(g)(1)(B) requirements;
 - 13) A copy of the closure plan required by 35 Ill. Adm. Code 727.210(c). Include, where applicable, as part of the plans, specific requirements in 35 Ill. Adm. Code 727.270(g), 727.290(l), and 727.900(i);
 - 14) This subsection (a)(14) corresponds with 40 CFR 270.290(n), which USEPA has marked "Reserved." This statement maintains structural consistency with the corresponding federal rules;
 - 15) The most recent closure cost estimate for the facility prepared pursuant to 35 Ill. Adm. Code 727.240(c) and a copy of the documentation required to demonstrate financial assurance pursuant to 35 Ill. Adm. Code 727.240(d). For a new facility, the owner or operator may gather the required documentation 60 days before the initial receipt of hazardous wastes;

- 16) This subsection (a)(16) corresponds with 40 CFR 270.290(p), which USEPA has marked “Reserved.”. This statement maintains structural consistency with the corresponding federal rules;
- 17) Where applicable, a copy of the insurance policy or other documentation that complies with the liability requirements of 35 Ill. Adm. Code 727.240(h). For a new facility, documentation showing the amount of insurance meeting the specification of 35 Ill. Adm. Code 727.240(h)(1) that the owner or operator plans to have in effect before initial receipt of hazardous waste for treatment or storage;
- 18) Where appropriate, proof of coverage by a State financial mechanism, as required by 35 Ill. Adm. Code 727.240(j) or 727.240(k);
- 19) A topographic map showing a distance of 1,000 feet around the facility at a scale of 2.5 centimeters (1 inch) equal to not more than 61.0 meters (200 feet). The map must show elevation contours. The contour interval must show the pattern of surface water flow in the vicinity of and from each operational unit of the facility. For example, contours with an interval of 1.5 meters (5 feet), if relief is greater than 6.1 meters (20 feet), or an interval of 0.6 meters (2 feet), if relief is less than 6.1 meters (20 feet). If the facility is in a mountainous area, the owner or operator should use large contour intervals to adequately show topographic profiles of the facility. The map must clearly show each of the following:
 - A) The map scale and date;
 - B) Any 100-year flood plain area;
 - C) All surface waters including intermittent streams;
 - D) The surrounding land uses (residential, commercial, agricultural, recreational, etc.);
 - E) A wind rose (*i.e.*, prevailing windspeed and direction);
 - F) The orientation of the map (north arrow);
 - G) Legal boundaries of the facility site;
 - H) Facility access control (fences, gates);
 - I) All injection and withdrawal wells both on-site and off-site;
 - J) All buildings; treatment, storage, or disposal operations; and other structures (recreation areas, runoff control systems, access and

internal roads, storm, sanitary, and process sewerage systems, loading and unloading areas, fire control facilities, etc.);

- K) Barriers for drainage or flood control; and
- L) The location of operational units within the facility where hazardous waste is (or will be) treated or stored (including equipment cleanup areas).

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 270.290 (2017) ~~(2007)~~.

- b) Container Information ~~information~~ to Be Maintained ~~be maintained~~ at the Facility ~~facility~~. If the facility owner or operator stores or treats hazardous waste in containers, it must keep the following information at its facility:
 - 1) A description of the containment system to demonstrate compliance with the container storage area provisions of 35 Ill. Adm. Code 727.270(d). This description must show the following information:
 - A) The basic design parameters, dimensions, and materials of construction;
 - B) How the design promotes drainage or how containers are kept from contact with standing liquids in the containment system;
 - C) The capacity of the containment system relative to the number and volume of containers to be stored;
 - D) The provisions for preventing or managing run-on; and
 - E) How accumulated liquids can be analyzed and removed to prevent overflow;
 - 2) For storage areas that store containers holding wastes that do not contain free liquids, a demonstration of compliance with 35 Ill. Adm. Code 727.270(d)(3), including the following:
 - A) Test procedures and results or other documentation or information to show that the wastes do not contain free liquids; and
 - B) A description of how the storage area is designed or operated to drain and remove liquids or how containers are kept from contact with standing liquids;

- 3) Sketches, drawings, or data demonstrating compliance with 35 Ill. Adm. Code 727.270(e) (location of buffer zone (15m or 50ft) and containers holding ignitable or reactive wastes) and 35 Ill. Adm. Code 727.270(f)(3) (location of incompatible wastes in relation to each other), where applicable;
- 4) Where incompatible wastes are stored or otherwise managed in containers, a description of the procedures used to ensure compliance with 35 Ill. Adm. Code 727.270(f)(1) and (f)(2), and 35 Ill. Adm. Code 727.110(h)(2) and (h)(3); and
- 5) Information on air emission control equipment as required by Section 703.352(e).

BOARD NOTE: Subsection (b) ~~of this Section~~ is derived from 40 CFR 270.300 (2017) ~~(2007)~~.

- c) Tank ~~Information~~ ~~information~~ to Be Maintained ~~be maintained~~ at the Facility ~~facility~~. If the facility owner or operator uses tanks to store or treat hazardous waste, it must keep the following information at its facility:
 - 1) A written assessment that is reviewed and certified by an independent, qualified, registered professional engineer on the structural integrity and suitability for handling hazardous waste of each tank system, as required pursuant to 35 Ill. Adm. Code 727.290(b) and (c);
 - 2) The dimensions and capacity of each tank;
 - 3) A description of feed systems, safety cutoff, bypass systems, and pressure controls (*e.g.*, vents);
 - 4) A diagram of piping, instrumentation, and process flow for each tank system;
 - 5) A description of materials and equipment used to provide external corrosion protection, as required pursuant to 35 Ill. Adm. Code 727.290(b);
 - 6) For new tank systems, a detailed description of how the tank systems will be installed in compliance with 35 Ill. Adm. Code 727.290(c) and (e);
 - 7) Detailed plans and description of how the secondary containment system for each tank system is or will be designed, constructed, and operated to meet the requirements of 35 Ill. Adm. Code 727.290(f) and (g);

- 8) This subsection (c)(8) corresponds with 40 CFR 270.305(h), which USEPA has marked “Reserved.”. This statement maintains structural consistency with the corresponding federal rules;
- 9) A description of controls and practices to prevent spills and overflows, as required pursuant to 35 Ill. Adm. Code 727.290(i);
- 10) For tank systems in which ignitable, reactive, or incompatible wastes are to be stored or treated, a description of how operating procedures and tank system and facility design will achieve compliance with 35 Ill. Adm. Code 727.290(m) and (n); and
- 11) Information on air emission control equipment, as required by Section 703.352(e).

BOARD NOTE: Subsection (c) of this Section is derived from 40 CFR 270.305 (2017)-(2007).

- d) Equipment ~~Information~~ information to Be Maintained ~~be maintained~~ at the Facility ~~facility~~. If the facility has equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the facility owner or operator must keep the following information at its facility:
 - 1) For each piece of equipment to which Subpart BB of 35 Ill. Adm. Code 724 applies, the following:
 - A) The equipment identification number and hazardous waste management unit identification;
 - B) The approximate locations within the facility (e.g., identify the hazardous waste management unit on a facility plot plan);
 - C) The type of equipment (e.g., a pump or a pipeline valve);
 - D) The percent by weight of total organics in the hazardous waste stream at the equipment;
 - E) The phase of the hazardous waste at the equipment (e.g., gas or vapor or liquid); and
 - F) The method of compliance with the standard (e.g., monthly leak detection and repair, or equipped with dual mechanical seals);
 - 2) For a facility that cannot install a closed-vent system and control device to comply with Subpart BB of 35 Ill. Adm. Code 724 on the effective date

that the facility becomes subject to the Subpart BB provisions, an implementation schedule as specified in 35 Ill. Adm. Code 724.933(a)(2);

- 3) Documentation that demonstrates compliance with the equipment standards in 35 Ill. Adm. Code 724.952 and 724.959. This documentation must contain the records required pursuant to 35 Ill. Adm. Code 724.964; and
- 4) Documentation to demonstrate compliance with 35 Ill. Adm. Code 724.960, which must include the following information:
 - A) A list of all information references and sources used in preparing the documentation;
 - B) Records, including the dates, of each compliance test required by 35 Ill. Adm. Code 724.933(j);
 - C) A design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of “APTI Course 415: Control of Gaseous Emissions;”, USEPA publication number EPA-450/2-81-005, incorporated by reference in 35 Ill. Adm. Code 720.111(a) or other engineering texts acceptable to the Agency that present basic control device design information. The design analysis must address the vent stream characteristics and control device operation parameters, as specified in 35 Ill. Adm. Code 724.935(b)(4)(iii);
 - D) A statement signed and dated by the facility owner or operator that certifies that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous waste management unit is operating at the highest load or capacity level reasonable expected to occur; and
 - E) A statement signed and dated by the facility owner or operator that certifies that the control device is designed to operate at an efficiency of 95 weight percent or greater.

BOARD NOTE: Subsection (d) of this Section is derived from 40 CFR 270.310 (2017)-(2007).

- e) Air Emissions Control Information ~~emissions control information~~ Be Maintained ~~be maintained~~ at the Facility ~~facility~~. If the facility owner or operator has air emission control equipment subject to Subpart CC of 35 Ill. Adm. Code 724, it must keep the following information at its facility:

- 1) Documentation for each floating roof cover installed on a tank subject to 35 Ill. Adm. Code 724.984(d)(1) or (d)(2) that includes information that the owner or operator prepared or the cover manufacturer or vendor provided describing the cover design, and the owner's or operator's certification that the cover meets applicable design specifications listed in 35 Ill. Adm. Code 724.984(e)(1) or (f)(1);
- 2) Identification of each container area subject to Subpart CC of 35 Ill. Adm. Code 724 and the owner's or operator's certification that the requirements of this Subpart J are met;
- 3) Documentation for each enclosure used to control air pollutant emissions from tanks or containers pursuant to requirements of 35 Ill. Adm. Code 724.984(d)(5) or 724.986(e)(1)(B). The owner or operator must include records for the most recent set of calculations and measurements that it performed to verify that the enclosure meets the criteria of a permanent total enclosure as specified in appendix B to 40 CFR 52.741 (Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure), incorporated by reference in 35 Ill. Adm. Code 720.111(b);
- 4) This subsection (e)(4) corresponds with 40 CFR 270.315(d), which USEPA has marked "Reserved." This statement maintains structural consistency with the corresponding federal rules;
- 5) Documentation for each closed-vent system and control device installed pursuant to 35 Ill. Adm. Code 724.987 that includes design and performance information, as specified in Section 703.210(c) and (d); and
- 6) An emission monitoring plan for both Method 21 in appendix A to 40 CFR 60 (Determination of Volatile Organic Compound Leaks), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and control device monitoring methods. This plan must include the following information: monitoring points, monitoring methods for control devices, monitoring frequency, procedures for documenting exceedances, and procedures for mitigating noncompliances.

BOARD NOTE: Subsection (e) of this Section is derived from 40 CFR 270.315 (2017)-(2007).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 703.APPENDIX A Classification of Permit Modifications

Class Modifications

A. General Permit Provisions

- | | | |
|----|-----|---|
| 1 | 1. | Administrative and informational changes. |
| 1 | 2. | Correction of typographical errors. |
| 1 | 3. | Equipment replacement or upgrading with functionally equivalent components (e.g., pipes, valves, pumps, conveyors, controls). |
| | 4. | Changes in the frequency of or procedures for monitoring, reporting, sampling, or maintenance activities by the permittee: |
| 1 | a. | To provide for more frequent monitoring, reporting, or maintenance. |
| 2 | b. | Other changes. |
| | 5. | Schedule of compliance: |
| 1* | a. | Changes in interim compliance dates, with prior approval of the Agency. |
| 3 | b. | Extension of final compliance date. |
| 1* | 6. | Changes in expiration date of permit to allow earlier permit termination, with prior approval of the Agency. |
| 1* | 7. | Changes in ownership or operational control of a facility, provided the procedures of Section 703.260(b) are followed. |
| 1* | 8. | Changes to remove permit conditions that are no longer applicable (i.e., because the standards upon which they are based are no longer applicable to the facility). |
| 1* | 9. | Changes to remove permit conditions applicable to a unit excluded pursuant to the provisions of 35 Ill. Adm. Code 721.104. |
| 1* | 10. | Changes in the expiration date of a permit issued to a facility at which all units are excluded pursuant to the provisions of 35 Ill. Adm. Code 721.104. |

B. General Facility Standards

1. Changes to waste sampling or analysis methods:
 - 1 a. To conform with Agency guidance or Board regulations.
 - 1* b. To incorporate changes associated with F039 (multi-source leachate) sampling or analysis methods.
 - 1* c. To incorporate changes associated with underlying hazardous constituents in ignitable or corrosive wastes.
 - 2 d. Other changes.
2. Changes to analytical quality assurance or quality control plan:
 - 1 a. To conform with agency guidance or regulations.
 - 2 b. Other changes.
- 1 3. Changes in procedures for maintaining the operating record.
- 2 4. Changes in frequency or content of inspection schedules.
5. Changes in the training plan:
 - 2 a. That affect the type or decrease the amount of training given to employees.
 - 1 b. Other changes.
6. Contingency plan:
 - 2 a. Changes in emergency procedures (i.e., spill or release response procedures).
 - 1 b. Replacement with functionally equivalent equipment, upgrade, or relocate emergency equipment listed.
 - 2 c. Removal of equipment from emergency equipment list.
 - 1 d. Changes in name, address, or phone number of coordinators or other persons or agencies identified in the plan.

Note: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change must be reviewed under the same procedures as the permit modification.

7. CQA plan:

- 1 a. Changes that the CQA officer certifies in the operating record will provide equivalent or better certainty that the unit components meet the design specifications.
- 2 b. Other changes.

Note: When a permit modification (such as introduction of a new unit) requires a change in facility plans or other general facility standards, that change must be reviewed under the same procedures as a permit modification.

C. Groundwater Protection

1. Changes to wells:

- 2 a. Changes in the number, location, depth, or design of upgradient or downgradient wells of permitted groundwater monitoring system.
- 1 b. Replacement of an existing well that has been damaged or rendered inoperable, without change to location, design, or depth of the well.

1* 2. Changes in groundwater sampling or analysis procedures or monitoring schedule, with prior approval of the Agency.

1* 3. Changes in statistical procedure for determining whether a statistically significant change in groundwater quality between upgradient and downgradient wells has occurred, with prior approval of the Agency.

2 4. Changes in point of compliance.

5. Changes in indicator parameters, hazardous constituents, or concentration limits (including ACLs (Alternate Concentration Limits)):

3 a. As specified in the groundwater protection standard.

2 b. As specified in the detection monitoring program.

2 6. Changes to a detection monitoring program as required by 35 Ill. Adm. Code 724.198(h), unless otherwise specified in this Appendix.

7. Compliance monitoring program:

- 3 a. Addition of compliance monitoring program as required by 35 Ill. Adm. Code 724.198(g)(4) and 724.199.
- 2 b. Changes to a compliance monitoring program as required by 35 Ill. Adm. Code 724.199(j), unless otherwise specified in this Appendix.
- 8. Corrective action program:
 - 3 a. Addition of a corrective action program as required by 35 Ill. Adm. Code 724.199(i)(2) and 724.200.
 - 2 b. Changes to a corrective action program as required by 35 Ill. Adm. Code 724.200(h), unless otherwise specified in this Appendix.
- D. Closure
 - 1. Changes to the closure plan:
 - 1* a. Changes in estimate of maximum extent of operations or maximum inventory of waste on-site at any time during the active life of the facility, with prior approval of the Agency.
 - 1* b. Changes in the closure schedule for any unit, changes in the final closure schedule for the facility or extension of the closure period, with prior approval of the Agency.
 - 1* c. Changes in the expected year of final closure, where other permit conditions are not changed, with prior approval of the Agency.
 - 1* d. Changes in procedures for decontamination of facility equipment or structures, with prior approval of the Agency.
 - 2 e. Changes in approved closure plan resulting from unexpected events occurring during partial or final closure, unless otherwise specified in this Appendix.
 - 2 f. Extension of the closure period to allow a landfill, surface impoundment, or land treatment unit to receive non-hazardous wastes after final receipt of hazardous wastes under 35 Ill. Adm. Code 724.213(d) or (e).
 - 3 2. Creation of a new landfill unit as part of closure.

3. Addition of the following new units to be used temporarily for closure activities:
 - 3 a. Surface impoundments.
 - 3 b. Incinerators.
 - 3 c. Waste piles that do not comply with 35 Ill. Adm. Code 724.350(c).
 - 2 d. Waste piles that comply with 35 Ill. Adm. Code 724.350(c).
 - 2 e. Tanks or containers (other than specified in paragraph D(3)(f) below).
 - 1* f. Tanks used for neutralization, dewatering, phase separation, or component separation, with prior approval of the Agency.
 - 2 g. Staging piles.

E. Post-Closure

- 1 1. Changes in name, address, or phone number of contact in post-closure plan.
- 2 2. Extension of post-closure care period.
- 3 3. Reduction in the post-closure care period.
- 1 4. Changes to the expected year of final closure, where other permit conditions are not changed.
- 2 5. Changes in post-closure plan necessitated by events occurring during the active life of the facility, including partial and final closure.

F. Containers

1. Modification or addition of container units:
 - 3 a. Resulting in greater than 25 percent increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a).
 - 2 b. Resulting in up to 25 percent increase in the facility's container storage capacity, except as provided in F(1)(c) and F(4)(a).

- 1 c. Modification or addition of container units or treatment processes necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards, with prior approval of the Agency. This modification may also involve the addition of new USEPA hazardous waste numbers codes or narrative description of wastes. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
- 2. Modification of container units without an increased capacity or alteration of the system:
 - 2 a. Modification of a container unit without increasing the capacity of the unit.
 - 1 b. Addition of a roof to a container unit without alteration of the containment system.
- 3. Storage of different wastes in containers, except as provided in F(4):
 - 3 a. That require additional or different management practices from those authorized in the permit.
 - 2 b. That do not require additional or different management practices from those authorized in the permit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
- 4. Storage or treatment of different wastes in containers:
 - 2* a. That require addition of units or change in treatment process or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
 - 1* b. That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

G. Tanks

1. Modification of a tank unit, secondary containment system, or treatment process that increases tank capacity, adds a new tank, or alters treatment, specified as follows:
 - 3 a. Modification or addition of tank units resulting in greater than 25 percent increase in the facility's tank capacity, except as provided in paragraphs G(1)(c), G(1)(d), and G(1)(e).
 - 2 b. Modification or addition of tank units resulting in up to 25 percent increase in the facility's tank capacity, except as provided in paragraphs G(1)(d) and G(1)(e).
 - 2 c. Addition of a new tank that will operate for more than 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.
 - 1* d. After prior approval of the Agency, addition of a new tank that will operate for up to 90 days using any of the following physical or chemical treatment technologies: neutralization, dewatering, phase separation, or component separation.
 - 1* e. Modification or addition of tank units or treatment processes that are necessary to treat wastes that are restricted from land disposal to meet some or all of the applicable treatment standards, with prior approval of the Agency. This modification may also involve the addition of new USEPA hazardous waste numbers~~-codes~~. It is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
- 2 2. Modification of a tank unit or secondary containment system without increasing the capacity of the unit.
- 1 3. Replacement of a tank with a tank that meets the same design standards and has a capacity within ± 10 percent of the replaced tank provided:
 - a. The capacity difference is no more than 1500 gallons (5680 ℓ),
 - b. The facility's permitted tank capacity is not increased, and
 - c. The replacement tank meets the same conditions in the permit.
- 2 4. Modification of a tank management practice.

5. Management of different wastes in tanks:

- 3 a. That require additional or different management practices, tank design, different fire protection specifications or significantly different tank treatment process from that authorized in the permit, except as provided in paragraph G(5)(c).
- 2 b. That do not require additional or different management practices or tank design, different fire protection specification, or significantly different tank treatment process than authorized in the permit, except as provided in paragraph G(5)(d).

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

- 1* c. That require addition of units or change in treatment processes or management standards, provided that the wastes are restricted from land disposal and are to be treated to meet some or all of the applicable treatment standards. The modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

- 1 d. That do not require the addition of units or a change in the treatment process or management standards, and provided that the units have previously received wastes of the same type (e.g., incinerator scrubber water). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

H. Surface Impoundments

- 3 1. Modification or addition of surface impoundment units that result in increasing the facility's surface impoundment storage or treatment capacity.
- 3 2. Replacement of a surface impoundment unit.
- 2 3. Modification of a surface impoundment unit without increasing the facility's surface impoundment storage or treatment capacity and without modifying the unit's liner, leak detection system, or leachate collection system.

- 2 4. Modification of a surface impoundment management practice.
5. Treatment, storage, or disposal of different wastes in surface
impoundments:
- 3 a. That require additional or different management practices or
different design of the liner or leak detection system than
authorized in the permit.
- 2 b. That do not require additional or different management practices
or different design of the liner or leak detection system than
authorized in the permit.
- Note: See Section 703.280(g) for modification procedures to be
used for the management of newly listed or identified wastes.
- 1 c. That are wastes restricted from land disposal that meet the
applicable treatment standards. This modification is not
applicable to dioxin-containing wastes (F020, F021, F022,
F023, F026, F027, and F028).
- 1 d. That are residues from wastewater treatment or incineration,
provided the disposal occurs in a unit that meets the minimum
technological requirements stated in 40 CFR 268.5(h)(2)
(Procedures for Case-by-Case Extensions to an Effective Date),
incorporated by reference in 35 Ill. Adm. Code 720.111(b), and
provided further that the surface impoundment has previously
received wastes of the same type (for example, incinerator
scrubber water). This modification is not applicable to dioxin-
containing wastes (F020, F021, F022, F023, F026, F027, and
F028).
- 1* 6. Modifications of unconstructed units to comply with 35 Ill. Adm. Code
724.321(c), 724.322, 724.323, and 724.326(d).
7. Changes in response action plan:
- 3 a. Increase in action leakage rate.
- 3 b. Change in a specific response reducing its frequency or
effectiveness.
- 2 c. Other changes.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

I. Enclosed Waste Piles. For all waste piles, except those complying with 35 Ill. Adm. Code 724.350(c), modifications are treated the same as for a landfill. The following modifications are applicable only to waste piles complying with 35 Ill. Adm. Code 724.350(c).

1. Modification or addition of waste pile units:

3 a. Resulting in greater than 25 percent increase in the facility's waste pile storage or treatment capacity.

2 b. Resulting in up to 25 percent increase in the facility's waste pile storage or treatment capacity.

2 2. Modification of waste pile unit without increasing the capacity of the unit.

1 3. Replacement of a waste pile unit with another waste pile unit of the same design and capacity and meeting all waste pile conditions in the permit.

2 4. Modification of a waste pile management practice.

5. Storage or treatment of different wastes in waste piles:

3 a. That require additional or different management practices or different design of the unit.

2 b. That do not require additional or different management practices or different design of the unit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

2 6. Conversion of an enclosed waste pile to a containment building unit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

J. Landfills and Unenclosed Waste Piles

3 1. Modification or addition of landfill units that result in increasing the facility's disposal capacity.

- 3 2. Replacement of a landfill.
- 3 3. Addition or modification of a liner, leachate collection system, leachate detection system, runoff control, or final cover system.
- 2 4. Modification of a landfill unit without changing a liner, leachate collection system, leachate detection system, runoff control, or final cover system.
- 2 5. Modification of a landfill management practice.
6. Landfill different wastes:
- 3 a. That require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system.
- 2 b. That do not require additional or different management practices, different design of the liner, leachate collection system, or leachate detection system.
- Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.
- 1 c. That are wastes restricted from land disposal that meet the applicable treatment standards. This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
- 1 d. That are residues from wastewater treatment or incineration, provided the disposal occurs in a landfill unit that meets the minimum technological requirements stated in 40 CFR 268.5(h)(2) (Procedures for Case-by-Case Extensions to an Effective Date), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and provided further that the landfill has previously received wastes of the same type (for example, incinerator ash). This modification is not applicable to dioxin-containing wastes (F020, F021, F022, F023, F026, F027, and F028).
- 1* 7. Modification of unconstructed units to comply with 35 Ill. Adm. Code 724.351(c), 724.352, 724.353, 724.354(c), 724.401(c), 724.402, 724.403(c), and 724.404.
8. Changes in response action plan:

- 3 a. Increase in action leakage rate.
- 3 b. Change in a specific response reducing its frequency or effectiveness.
- 2 c. Other changes.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

K. Land Treatment

- 3 1. Lateral expansion of or other modification of a land treatment unit to increase area extent.
- 2 2. Modification of runoff control system.
- 3 3. Modify runoff control system.
- 2 4. Other modification of land treatment unit component specifications or standards required in permit.
- 5 5. Management of different wastes in land treatment units:
 - 3 a. That require a change in permit operating conditions or unit design specifications.
 - 2 b. That do not require a change in permit operating conditions or unit design specifications.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

- 6 6. Modification of a land treatment unit management practice to:
 - 3 a. Increase rate or change method of waste application.
 - 1 b. Decrease rate of waste application.
- 2 7. Modification of a land treatment unit management practice to change measures of pH or moisture content or to enhance microbial or chemical reactions.

- 3 8. Modification of a land treatment unit management practice to grow food chain crops, to add to or replace existing permitted crops with different food chain crops or to modify operating plans for distribution of animal feeds resulting from such crops.
- 3 9. Modification of operating practice due to detection of releases from the land treatment unit pursuant to 35 Ill. Adm. Code 724.378(g)(2).
- 3 10. Changes in the unsaturated zone monitoring system that result in a change to the location, depth, or number of sampling points or which replace unsaturated zone monitoring devices or components of devices with devices or components that have specifications different from permit requirements.
- 2 11. Changes in the unsaturated zone monitoring system that do not result in a change to the location, depth, or number of sampling points or which replace unsaturated zone monitoring devices or components of devices with devices or components having specifications different from permit requirements.
- 2 12. Changes in background values for hazardous constituents in soil and soil-pore liquid.
- 2 13. Changes in sampling, analysis, or statistical procedure.
- 2 14. Changes in land treatment demonstration program prior to or during the demonstration.
- 1* 15. Changes in any condition specified in the permit for a land treatment unit to reflect results of the land treatment demonstration, provided performance standards are met, and the Agency's prior approval has been received.
- 1* 16. Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, provided the conditions for the second demonstration are substantially the same as the conditions for the first demonstration and have received the prior approval of the Agency.
- 3 17. Changes to allow a second land treatment demonstration to be conducted when the results of the first demonstration have not shown the conditions under which the wastes can be treated completely, where the conditions for the second demonstration are not substantially the same as the conditions for the first demonstration.

2 18. Changes in vegetative cover requirements for closure.

L. Incinerators, Boilers and Industrial Furnaces

3 1. Changes to increase by more than 25 percent any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.

2 2. Changes to increase by up to 25 percent any of the following limits authorized in the permit: A thermal feed rate limit, a feedstream feed rate limit, a chlorine/chloride feed rate limit, a metal feed rate limit, or an ash feed rate limit. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.

3 3. Modification of an incinerator, boiler, or industrial furnace unit by changing the internal size or geometry of the primary or secondary combustion units; by adding a primary or secondary combustion unit; by substantially changing the design of any component used to remove HCl/Cl₂, metals, or particulate from the combustion gases; or by changing other features of the incinerator, boiler, or industrial furnace that could affect its capability to meet the regulatory performance standards. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards, unless this demonstration can be made through other means.

2 4. Modification of an incinerator, boiler, or industrial furnace unit in a manner that will not likely affect the capability of the unit to meet the regulatory performance standards but which will change the operating conditions or monitoring requirements specified in the permit. The Agency may require a new trial burn to demonstrate compliance with the regulatory performance standards.

5. Operating requirements:

- 3 a. Modification of the limits specified in the permit for minimum or maximum combustion gas temperature, minimum combustion gas residence time, oxygen concentration in the secondary combustion chamber, flue gas carbon monoxide or hydrocarbon concentration, maximum temperature at the inlet to the PM emission control system, or operating parameters for the air pollution control system. The Agency must require a new trial burn to substantiate compliance with the regulatory performance standards unless this demonstration can be made through other means.
- 3 b. Modification of any stack gas emission limits specified in the permit, or modification of any conditions in the permit concerning emergency shutdown or automatic waste feed cutoff procedures or controls.
- 2 c. Modification of any other operating condition or any inspection or recordkeeping requirement specified in the permit.

6. Burning different wastes:

- 3 a. If the waste contains a POHC that is more difficult to burn than authorized by the permit or if burning of the waste requires compliance with different regulatory performance standards than specified in the permit, the Agency must require a new trial burn to substantiate compliance with the regulatory performance standards, unless this demonstration can be made through other means.
- 2 b. If the waste does not contain a POHC that is more difficult to burn than authorized by the permit and if burning of the waste does not require compliance with different regulatory performance standards than specified in the permit.

Note: See Section 703.280(g) for modification procedures to be used for the management of newly listed or identified wastes.

7. Shakedown and trial burn:

- 2 a. Modification of the trial burn plan or any of the permit conditions applicable during the shakedown period for determining operational readiness after construction, the trial burn period or the period immediately following the trial burn.

- 1* b. Authorization of up to an additional 720 hours of waste burning during the shakedown period for determining operational readiness after construction, with the prior approval of the Agency.
- 1* c. Changes in the operating requirements set in the permit for conducting a trial burn, provided the change is minor and has received the prior approval of the Agency.
- 1* d. Changes in the ranges of the operating requirements set in the permit to reflect the results of the trial burn, provided the change is minor and has received the prior approval of the Agency.
- 1 8. Substitution of an alternative type of non-hazardous waste fuel that is not specified in the permit.
- 1* 9. Technology changes needed to meet standards under federal subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), provided the procedures of Section 703.280(j) are followed.
- 1* 10. Changes to RCRA Permit provisions needed to support transition to federal subpart EEE of 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), incorporated by reference in 35 Ill. Adm. Code 720.111(b), provided the procedures of Section 703.280(k) are followed.

M. Containment Buildings

- 1. Modification or addition of containment building units:
 - 3 a. Resulting in greater than 25 percent increase in the facility's containment building storage or treatment capacity.
 - 2 b. Resulting in up to 25 percent increase in the facility's containment building storage or treatment capacity.
- 2 2. Modification of a containment building unit or secondary containment system without increasing the capacity of the unit.
- 3 3. Replacement of a containment building with a containment building that meets the same design standards provided:
 - 1 a. The unit capacity is not increased.

- 1 b. The replacement containment building meets the same
 conditions in the permit.

- 2 4. Modification of a containment building management practice.

- 5. Storage or treatment of different wastes in containment buildings:

- 3 a. That require additional or different management practices.

- 2 b. That do not require additional or different management
 practices.

N. Corrective Action

- 3 1. Approval of a corrective action management unit pursuant to 35 Ill.
 Adm. Code 724.652.

- 2 2. Approval of a temporary unit or time extension pursuant to 35 Ill. Adm.
 Code 724.653.

- 2 3. Approval of a staging pile or staging pile operating term extension
 pursuant to 35 Ill. Adm. Code 724.654.

~~O. Burden Reduction~~

- 1. ~~This paragraph O.1. corresponds with paragraph O.1. in appendix I to 40 CFR 270.42, which became obsolete when USEPA terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program-related rules are no longer effective at 75 Fed. Reg. 12989, 92, note 1 (Mar. 18, 2010). This statement maintains structural consistency with the corresponding federal requirements.~~

- 1 2. ~~Development of one contingency plan based on Integrated Contingency Plan Guidance pursuant to 35 Ill. Adm. Code 724.152(b).~~

- 1 3. ~~A change to recordkeeping and reporting requirements pursuant to any of the following: 35 Ill. Adm. Code 724.156(i), 724.443(a)(2), 724.961(b)(1) and (d), 724.962(a)(2), 724.296(f), 724.200(g), or 724.213(e)(5).~~

- 1 4. ~~A change to inspection frequency for a tank system pursuant to 35 Ill. Adm. Code 724.295(b).~~

- 4 ~~5. A change to a detection and compliance monitoring program pursuant to 35 Ill. Adm. Code 724.198(d), (g)(2), (g)(3), or 724.199(f) or (g).~~

Note: * indicates modifications requiring prior Agency approval.

BOARD NOTE: Derived from appendix I to 40 CFR 270.42 ~~(2017)~~-(2012).

TITLE 35: ENVIRONMENTAL PROTECTION
 SUBTITLE G: WASTE DISPOSAL
 CHAPTER I: POLLUTION CONTROL BOARD
 SUBCHAPTER b: PERMITS

PART 704
 UIC PERMIT PROGRAM

SUBPART A: GENERAL PROVISIONS

Section	
704.101	Content
704.102	Scope of the Permit or Rule Requirement
704.103	Identification of Aquifers
704.104	Exempted Aquifers
704.105	Specific Inclusions and Exclusions
704.106	Classification of Injection Wells
704.107	Definitions
704.108	Electronic Reporting

SUBPART B: PROHIBITIONS

Section	
704.121	Prohibition Against Unauthorized Injection
704.122	Prohibition Against Movement of Fluid into USDW
704.123	Identification of USDWs and Exempted Aquifers
704.124	Prohibition Against Class IV Injection Wells
704.125	Prohibition Against Non-Experimental Class V Injection Wells for Geologic Sequestration
704.128	Requirements for Class VI Injection Wells
704.129	Transitioning from a Class II Injection Well to a Class VI Injection Well

SUBPART C: AUTHORIZATION OF UNDERGROUND INJECTION BY
 RULE

Section	
704.141	Existing Class I and III Injection Wells
704.142	Prohibitions Against Injection into Wells Authorized by Rule
704.143	Expiration of Authorization
704.144	Requirements

704.145	Existing Class IV Injection Wells
704.146	Class V Injection Wells
704.147	Requiring a Permit
704.148	Inventory Requirements
704.149	Requiring Other other Information
704.150	Requirements for Class I and III Injection Wells Authorized by Rule
704.151	RCRA Interim Status for Class I Injection Wells

SUBPART D: APPLICATION FOR PERMIT

Section	
704.161	Application for Permit; Authorization by Permit
704.162	Area Permits
704.163	Emergency Permits
704.164	Signatories to Permit Applications

SUBPART E: PERMIT CONDITIONS

Section	
704.181	Additional Conditions
704.182	Establishing UIC Permit Conditions
704.183	Construction Requirements
704.184	Corrective Action
704.185	Operation Requirements
704.186	Hazardous Waste Requirements
704.187	Monitoring and Reporting
704.188	Plugging and Abandonment
704.189	Financial Responsibility
704.190	Mechanical Integrity
704.191	Additional Conditions
704.192	Waiver of Requirements by Agency
704.193	Corrective Action
704.194	Maintenance and Submission of Records

SUBPART F: REQUIREMENTS FOR WELLS INJECTING HAZARDOUS WASTE

Section	
704.201	Applicability
704.202	Authorization
704.203	Requirements

SUBPART G: FINANCIAL RESPONSIBILITY FOR CLASS I HAZARDOUS WASTE INJECTION WELLS

Section	
704.210	Applicability
704.211	Definitions
704.212	Cost Estimate for Plugging and Abandonment

704.213	Financial Assurance for Plugging and Abandonment
704.214	Trust Fund
704.215	Surety Bond Guaranteeing Payment
704.216	Surety Bond Guaranteeing Performance
704.217	Letter of Credit
704.218	Plugging and Abandonment Insurance
704.219	Financial Test and Corporate Guarantee
704.220	Multiple Financial Mechanisms
704.221	Financial Mechanism for Multiple Facilities
704.222	Release of the Owner or Operator
704.230	Incapacity
704.240	Wording of the Instruments

SUBPART H: ISSUED PERMITS

Section	
704.260	Transfer
704.261	Modification
704.262	Causes for Modification
704.263	Well Siting
704.264	Minor Modifications

SUBPART I: REQUIREMENTS FOR CLASS V INJECTION WELLS

Section	
704.279	General
704.280	Definition of a Class V Injection Well

SUBPART A: GENERAL PROVISIONS

Section 704.101 Content

The regulations in this Subpart A set forth the specific requirements for the UIC (Underground Injection Control) permit program. These rules are intended to implement the UIC permit requirement of Section 12(g) of the ~~Environmental Protection Act (Act) [415 ILCS 5/12(g)]~~. These rules are intended to be identical in substance to United States Environmental Protection Agency (USEPA) rules found in 40 CFR 144. The regulations in this Subpart A are supplemental to the requirements in 35 Ill. Adm. Code 702, which contains requirements for both the RCRA and UIC permit programs. Operating requirements for injection wells are included in 35 Ill. Adm. Code 730.

BOARD NOTE: Derived from 40 CFR 144.1 ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.102 Scope of the Permit or Rule Requirement

Although six classes of wells are set forth in Section 704.106, the UIC (Underground Injection Control) permit program described in 35 Ill. Adm. Code 702, 704, 705, and 730 regulates underground injection for only five classes of wells (see definition of “well injection,” 35 Ill. Adm. Code 702.110). Class II wells (Section 704.106(b)) are not subject to the requirements found in 35 Ill. Adm. Code 702, 704, 705, and 730. The UIC permit program for Class II wells is regulated by the Illinois Department of Natural Resources, Office of Mines and Minerals, Oil and Gas Division, pursuant to the Illinois Oil and Gas Act [225 ILCS 725] (see 62 Ill. Adm. Code 240). The owner or operator of a Class I, Class III, Class IV, or Class V injection well must be authorized either by permit or by rule. In carrying out the mandate of the SDWA, this Part provides that no injection may be authorized by permit or by rule if it results in movement of fluid containing any contaminant into underground sources of drinking water (USDWs) (Section 704.122), if the presence of that contaminant may cause a violation of any primary drinking water regulation under 35 Ill. Adm. Code 611, or if the presence of that contaminant may adversely affect the health of persons (Section 704.122). Section 704.124 prohibits the construction, operation, or maintenance of a Class IV injection well. A Class V injection well is regulated under Subpart I ~~of this Part~~. If remedial action appears necessary for a Class V injection well, an individual permit may be required (Subpart C ~~of this Part~~) or the Agency must require remedial action or closure by order (see Section 704.122(c)).

BOARD NOTE: Derived from 40 CFR 144.1(g) preamble ~~(2017)-(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.106 Classification of Injection Wells

Injection wells are classified as follows:

- a) Class I Injection Wells ~~injection wells~~. Any of the following is a Class I injection well:
 - 1) A well used by a generator of hazardous waste or the owner or operator of a hazardous waste management facility to inject hazardous waste beneath the lowermost formation containing a USDW within 402 meters (one-quarter mile) of the well bore.
 - 2) Any other industrial and municipal disposal well that injects fluids beneath the lowermost formation containing a USDW within 402 meters (one-quarter mile) of the well bore.
 - 3) A radioactive waste disposal well that injects fluids below the lowermost formation containing a USDW within 402 meters (one-quarter mile) of the well bore.
- b) Class II Injection Wells ~~injection wells~~. Any well that injects any of the following fluids is a Class II injection well:
 - 1) Fluids that are brought to the surface in connection with natural gas storage operations, or conventional oil or natural gas production, and which may be commingled with waste waters from gas plants that are an integral part of production operations, unless those waters are classified as a hazardous waste at the time of injection;
 - 2) Fluids injected for enhanced recovery of oil or natural gas; and
 - 3) Fluids injected for storage of hydrocarbons that are liquid at standard temperature and pressure.
- c) Class III Injection Wells ~~injection wells~~. Any well that injects fluids for the extraction of minerals, including the following:
 - 1) The mining of sulfur by the Frasch process;
 - 2) The in-situ production of uranium or other metals. This category includes only in-situ production from ore bodies that have not been conventionally mined. Solution mining of conventional mines, such as stopes leaching, is included as a Class V injection well; and

- 3) Solution mining of salts or potash.
- d) Class IV Injection Wells~~injection wells~~. Any of the following is a Class IV injection well:
- 1) A well used by a generator of hazardous waste or of radioactive waste, by the owner or operator of a hazardous waste management facility or by the owner or operator of a radioactive waste disposal site to dispose of hazardous wastes or radioactive wastes into a formation that contains a USDW within 402 meters (one-quarter mile) of the well.
 - 2) A well used by a generator of hazardous waste or of radioactive waste, by the owner or operator of a hazardous waste management facility, or by the owner or operator of a radioactive waste disposal site to dispose of hazardous waste or radioactive waste above a formation that contains a USDW within 402 meters (one-quarter mile) of the well.
 - 3) A well used by a generator of hazardous waste or the owner or operator of a hazardous waste management facility to dispose of hazardous waste that cannot be classified under any of subsections (a)(1), (d)(1), or (d)(2)~~of this Section~~ (e.g., a well that is used to dispose of hazardous waste into or above a formation that contains an aquifer that has been exempted pursuant to 35 Ill. Adm. Code 730.104).
- e) Class V Injection Wells~~injection wells~~. Any injection well that is not classified as a Class I, II, III, IV, or VI injection well. Section 704.281 describes specific types of Class V injection wells.
- f) Class VI Injection Wells~~injection wells~~:
- 1) An injection well that is not experimental in nature which is used for geologic sequestration of carbon dioxide beneath the lowermost formation containing a USDW;
 - 2) An injection well that is used for geologic sequestration of carbon dioxide which has been granted a permit that includes alternative injection well depth requirements pursuant to Section 730.195; or
 - 3) An injection well that is used for geologic sequestration of carbon dioxide which has received an expansion to the areal extent of an existing Class II enhanced oil recovery or enhanced gas recovery aquifer exemption pursuant to Section 704.123(d) and 35 Ill. Adm. Code 730.104.

BOARD NOTE: Derived from 40 CFR 144.6 (2017)~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: PROHIBITIONS

Section 704.122 Prohibition Against Movement of Fluid into USDW

- a) No owner or operator may construct, operate, maintain, convert, plug, abandon, or conduct any other injection activity in a manner that allows the movement of fluid containing any contaminant into a USDW, if the presence of that contaminant could cause a violation of any national primary drinking water regulation under 35 Ill. Adm. Code 611 (derived from 40 CFR 141) or could otherwise adversely affect the health of persons. The applicant for a permit has the burden of showing that the requirement of this subsection (a) is met.
- b) For a Class I, III, or VI injection well, if any water quality monitoring of a USDW indicates the movement of any contaminant into the USDW, except as authorized under 35 Ill. Adm. Code 730, the Agency must prescribe such additional requirements for construction, corrective action, operation, monitoring or reporting (including closure of the injection well) as are necessary to prevent such movement. In the case of a well authorized by permit, these additional requirements must be imposed by modifying the permit in accordance with 35 Ill. Adm. Code 702.183 through 702.185, or appropriate enforcement action may be taken if the permit has been violated, and the permit may be subject to revocation under 35 Ill. Adm. Code 702.186 if cause exists. In the case of wells authorized by rule, see Section 704.141 through 704.146.
- c) For a Class V injection well, if at any time the Agency learns that a Class V injection well could cause a violation of any national primary drinking water regulation under 35 Ill. Adm. Code 611 (derived from 40 CFR 141), it must undertake one of the following actions:
 - 1) It must require the injector to obtain an individual permit;
 - 2) It must issue a permit that requires the injector to take such actions (including, where necessary, closure of the injection well) as may be necessary to prevent the violation; or
 - 3) It may initiate enforcement action.
- d) Whenever the Agency learns that a Class V injection well may be otherwise adversely affecting the health of persons, it may prescribe such actions as may be necessary to prevent the adverse effect, including any action authorized under subsection (c) ~~of this Section~~.
- e) Notwithstanding any other provision of this Section, the Agency may take emergency action upon receipt of information that a contaminant that is present in or is likely to enter a public water system or a USDW may present an imminent

and substantial endangerment to the health of persons. The Agency may declare an emergency and affix a seal pursuant to Section 34 of the Act ~~[415 ILCS 5/34]~~.

BOARD NOTE: Derived from 40 CFR 144.12 ~~(2017)~~-(2011).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.123 Identification of USDWs and Exempted Aquifers

- a) The Agency may identify (by narrative description, illustrations, maps, or other means) and must protect as a USDW, any aquifer or part of an aquifer that meets the definition of a USDW set forth in 35 Ill. Adm. Code 702.110, except as one of the exceptions of subsections (a)(1) and (a)(2) ~~of this Section~~ applies. Other than Agency-approved aquifer exemption expansions that meet the criteria set forth in 35 Ill. Adm. Code 730.104, a new aquifer exemption must not be issued for a Class VI injection well. Even if an aquifer has not been specifically identified by the Agency, it is a USDW if it meets the definition in 35 Ill. Adm. Code 702.110. Identification of USDWs must be made according to criteria adopted by the Agency pursuant to 35 Ill. Adm. Code 702.106.
 - 1) The Agency may not identify an aquifer or part of an aquifer as a USDW to the extent that there is an applicable aquifer exemption under subsection (b) ~~of this Section~~.
 - 2) The Agency may not identify an aquifer or part of an aquifer as a USDW to the extent that the aquifer or part of an aquifer is an expansion to the areal extent of an existing Class II enhanced oil recovery or is subject to an enhanced gas recovery aquifer exemption for the exclusive purpose of Class VI injection for geologic sequestration under subsection (d) ~~of this Section~~.
- b) Identification of an Exempted Aquifer ~~exempted aquifer~~.
 - 1) The Agency may identify (by narrative description, illustrations, maps, or other means) and describe in geographic or geometric terms (such as vertical and lateral limits and gradient) that are clear and definite, any aquifer or part of an aquifer that the Agency desires the Board to designate as an exempted aquifer using the criteria in 35 Ill. Adm. Code 730.104, as described in this subsection (b).
 - 2) No designation of an exempted aquifer may be final until approved by USEPA as part of the State program.
 - 3) Subsequent to program approval, the Board may identify additional exempted aquifers.

- 4) Identification of exempted aquifers must be by rulemaking pursuant to 35 Ill. Adm. Code 102 and 702.105 and Sections 27 and 28 of the Act ~~[415 ILCS 5/27 and 28]~~, considering the criteria set forth in 35 Ill. Adm. Code 730.104.
- c) For a Class III injection well, an applicant for a permit that necessitates an aquifer exemption under 35 Ill. Adm. Code 730.104(b)(1) must furnish the data necessary to demonstrate that the aquifer is expected to be mineral or hydrocarbon producing. Information contained in the mining plan for the proposed project, such as a map and general description of the mining zone, general information on the mineralogy and geochemistry of the mining zone, analysis of the amenability of the mining zone to the proposed mining method, and a timetable of planned development of the mining zone must be considered by the Board in addition to the information required by Section 704.161(c). Approval of the exempted aquifer must be by rulemaking pursuant to 35 Ill. Adm. Code 102 and 702.105 and Sections 27 and 28 of the Act ~~[415 ILCS 5/27 and 28]~~. Rules will not become final until approved by USEPA as a program revision.
- d) Expansion to the Areal Extent of Existing Class II Aquifer Exemptions for Class VI Wells. The owner or operator of a Class II enhanced oil recovery or enhanced gas recovery well may request that the Agency approve an expansion to the areal extent of an aquifer exemption already in place for a Class II enhanced oil recovery or enhanced gas recovery well for the exclusive purpose of Class VI injection for geologic sequestration. A request for areal expansion must be treated as a revision to the applicable federal UIC program under 40 CFR 147 or as a substantial program revision to an approved state UIC program under 40 CFR 145.32 and will not be final until approved by USEPA.
- 1) The request for an expansion of the areal extent of an existing aquifer exemption for the exclusive purpose of Class VI injection for geologic sequestration must define (by narrative description, illustrations, maps, or other means) and describe in geographic or geometric terms (such as vertical and lateral limits and gradient) that are clear and definite, all aquifers or parts of aquifers that are requested to be designated as exempted using the criteria in 35 Ill. Adm. Code 730.104.
- 2) In making a determination to expand the areal extent of an aquifer exemption of a Class II enhanced oil recovery or enhanced gas recovery well for the purpose of Class VI injection, the Agency must determine that the request meets the criteria for exemptions in 35 Ill. Adm. Code 730.104. In evaluating a request, the Agency must consider:
- A) Any current and potential future use of the USDWs to be exempted as drinking water resources;

- B) The predicted extent of the injected carbon dioxide plume, and any mobilized fluids that may result in degradation of water quality, over the lifetime of the geologic sequestration project, as informed by computational modeling performed pursuant to 35 Ill. Adm. Code 730.184(c)(1), in order to ensure that the proposed injection operation will not at any time endanger USDWs including non-exempted portions of the injection formation;
- C) Whether the areal extent of the expanded aquifer exemption is of sufficient size to account for any possible revisions to the computational model during reevaluation of the area of review, pursuant to 35 Ill. Adm. Code 730.184(e); and
- D) Any information submitted to support a request by the owner or operator for a permit that includes alternative injection well depth requirements pursuant to 35 Ill. Adm. Code 730.195, if appropriate.

BOARD NOTE: Derived from 40 CFR 144.7 (2017)~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.124 Prohibition Against Class IV Injection Wells

- a) The following are prohibited, except as provided in subsection (c) ~~of this Section~~:
 - 1) The construction of any Class IV injection well.
 - 2) The operation or maintenance of any Class IV injection well.
 - 3) Any increase in the amount of hazardous waste or change in the type of hazardous waste injected into a Class IV injection well.
- b) A Class IV injection well must comply with the requirements of Section 704.203 and the Class IV injection well closure requirements of Section 704.145.
- c) A well used to inject contaminated groundwater that has been treated and is being reinjected into the same formation from which it was originally drawn is not prohibited by this Section if such injection is approved by the Agency pursuant to provisions in the Act for preventive or corrective action, by the USEPA pursuant to provisions for cleanup of releases under the Comprehensive Environmental Response Compensation, and Liability Act of 1980 (CERCLA) (42 USC 9601 et seq.), by USEPA pursuant to requirements and provisions under the Resource Conservation and Recovery Act (RCRA) (42 USC 6901 et seq.), or by the Agency pursuant to Section 39 of the Act ~~[415 ILCS 5/39]~~.

- d) Clarification. This Section does not prohibit any of the following injection wells:
- 1) A well used to inject hazardous waste into an aquifer or a portion of an aquifer that has been exempted pursuant to 35 Ill. Adm. Code 730.104 if the exempted aquifer into which waste is injected underlies the lowermost formation containing a USDW. Such a well is a Class I injection well, as specified in Section 704.106(a)(1), and the owner or operator must comply with the requirements applicable to a Class I injection well.
 - 2) A well used to inject hazardous waste where no USDW exists within one quarter mile of the well bore in any underground formation, provided that the Agency determines that such injection is into a formation sufficiently isolated to ensure that injected fluids do not migrate from the injection zone. Such a well is a Class I injection well, as specified in Section 704.106(a)(1), and the owner or operator must comply with the requirements applicable to a Class I injection well.

BOARD NOTE: Derived from 40 CFR 144.13 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.129 Transitioning from a Class II Injection Well to a Class VI Injection Well

- a) The owner or operator of a Class II injection well that is injecting carbon dioxide into an oil and gas reservoir for the primary purpose of long-term storage must apply for and obtain a Class VI injection well geologic sequestration permit when there is an increased risk to a USDW compared to usual Class II injection well operations. In determining if there is an increased risk to a USDW, the owner or operator must consider the factors specified for Agency consideration in subsection (b) ~~of this Section~~.
- b) The Agency must determine when there is an increased risk to a USDW from injecting carbon dioxide into an oil and gas reservoir for the primary purpose of long-term storage compared to usual Class II injection well operations and that a Class VI injection well permit is required. In order to make this determination, the Agency must consider the following factors:
 - 1) Any increase in reservoir pressure within the injection zones;
 - 2) Any increase in carbon dioxide injection rates;
 - 3) Any decrease in reservoir production rates;
 - 4) The distance between the injection zones and USDWs;
 - 5) The suitability of the Class II injection well area of review delineation;

- 6) The quality of abandoned well plugs within the area of review;
- 7) The owner's or operator's plan for recovery of carbon dioxide after the cessation of injection;
- 8) The source and properties of injected carbon dioxide; and
- 9) Any additional site-specific factors that the Agency determines are necessary to determine whether the injection poses greater risk than usual Class II operations.

BOARD NOTE: Derived from 40 CFR 144.19 (2017)-(2011).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: AUTHORIZATION OF UNDERGROUND INJECTION BY RULE

Section 704.141 Existing Class I and III Injection Wells

Authorization by rule is no longer possible for Class I or Class III injection wells. The owners or operators of Class I and Class III injection wells were required by 40 CFR 144.21(c)(8)(i) to submit a permit application before March 3, 1989 (five years after the effective date of USEPA authorization of the Illinois program).

- ~~a) Injection into an existing Class I or Class III injection well is authorized by rule if the owner or operator fulfills either of the conditions of subsection (a)(1) or (a)(2) of this Section, subject to subject (a)(3) of this Section:

 - ~~1) It injected into the existing well within one year after March 3, 1984, or~~
 - ~~2) It inventories the well pursuant to Section 704.148.~~
 - ~~3) The owner or operator of a well that is authorized by rule pursuant to this Section must rework, operate, maintain, convert, plug, abandon, or inject into the well in compliance with applicable regulations.~~~~
- ~~b) Class III injection wells in existing fields or projects. Notwithstanding the prohibition in Section 704.121, this Section authorizes Class III injection wells or projects in existing fields or projects to continue normal operations until permitted, including construction, operation, and plugging and abandonment of wells as part of the operation provided the owner or operator maintains compliance with all applicable requirements.~~

BOARD NOTE: Derived from 40 CFR 144.21(a) and (d) (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.142 Prohibitions Against Injection into Wells Authorized by Rule

An owner or operator of a well authorized by rule pursuant to this Subpart C is prohibited from injecting into the well on the occurrence of any of the following:

- a) Upon the effective date of an applicable permit denial;
- b) Upon a failure to submit a permit application in a timely manner pursuant to Section 704.147 or 704.161;
- c) Upon a failure to submit inventory information in a timely manner pursuant to Section 704.148;
- d) Upon a failure to comply with a request for information in a timely manner pursuant to Section 704.149;
- e) Upon a failure to provide alternative financial assurance pursuant to Section 704.150(d)(6);
- f) 48 hours after receipt of a determination by the Agency pursuant to Section 704.150(f)(3) that the well lacks mechanical integrity, unless the Agency orders immediate cessation pursuant to Section 34 of the Act or as ordered by a court pursuant to Section 43 of the Act ~~[415 ILCS 5/43]; or~~
- g) Upon receipt of notification from the Agency that the transferee has not demonstrated financial assurance pursuant to Section 704.150(d);
- ~~h) For Class I and Class III injection wells: after March 3, 1989, unless a timely and complete permit application for a permit was pending the Agency's decision; or~~
- ~~i) This subsection (i) corresponds with 40 CFR 144.21(c)(9), a provision related to Class II injection wells, which are regulated by the Illinois Department of Natural Resources, Office of Mines and Minerals, and not by the Board. This statement maintains structural consistency with USEPA rules.~~

BOARD NOTE: Derived from 40 CFR 144.21(c) (2017) ~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.145 Existing Class IV Injection Wells

- a) Injection into a Class IV injection well, as defined in Section 704.106(d)(1), is not authorized. The owner or operator of any such well must comply with Sections 704.124 and 704.203.

- b) Closure.
- 1) Prior to abandoning any Class IV injection well, the owner or operator must plug or otherwise close the well in a manner acceptable to the Agency.
 - 2) ~~The By September 27, 1986, the~~ owner and operator of any Class IV injection well must submit ~~was to have submitted~~ to the Agency a plan for plugging or otherwise closing and abandoning the well.
 - 3) The owner or operator of a Class IV injection well must notify the Agency of intent to abandon the well at least 30 days prior to abandonment.
- c) Notwithstanding subsections (a) and (b) ~~of this Section~~, an injection well that is used to inject contaminated groundwater that has been treated and which is being injected into the same formation from which it was drawn is authorized by rule for the life of the well if such subsurface emplacement of fluids is approved by USEPA pursuant to provisions for cleanup of releases under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) (42 USC 9601 et seq.), by USEPA pursuant to requirements and provisions under the Resource Conservation and Recovery Act (RCRA) (42 USC 6901 et seq.), or by the ~~the~~ Agency pursuant to Section 39 of the Act ~~[415 ILCS 5/39]~~.

BOARD NOTE: Derived from 40 CFR 144.23 (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.147 Requiring a Permit

- a) The Agency may require the owner or operator of any ~~Class I, Class III, or Class V~~ injection well that is authorized by rule under this Subpart C to apply for and obtain an individual or area UIC permit. Cases where individual or area UIC permits may be required include the following:

- 1) The injection well is not in compliance with any requirement of this Subpart C;

BOARD NOTE: Any underground injection that violates any rule under this Subpart C is subject to appropriate enforcement action.

- 2) The injection well is not or no longer is within the category of wells and types of well operations authorized in the rule;
- 3) The protection of USDWs requires that the injection operation be regulated by requirements, such as for corrective action, monitoring and reporting, or operation, that are not contained in this Subpart C ~~;~~ ~~or~~

- 4) ~~When the injection well is a Class I or Class III injection well, in accordance with a schedule established by the Agency pursuant to Section 704.161(b).~~
- b) The Agency may require the owner or operator of any well that is authorized by rule under this Subpart C to apply for an individual or area UIC permit under this subsection (b) only if the owner or operator has been notified in writing that a permit application is required. The owner or operator of a well that is authorized by rule is prohibited from injecting into the well on the occurrence of either of the circumstances of subsection (b)(1) or (b)(2) ~~of this Section~~, subject to subsection (b)(3) ~~of this Section~~.
- 1) Upon the effective date of a permit denial; or
 - 2) Upon the failure of the owner or operator to submit an application in a timely manner as specified in the notice.
 - 3) The notice must include all of the following:
 - A) A brief statement of the reasons for this decision;
 - B) An application form;
 - C) A statement setting a time for the owner or operator to file the application; and
 - D) A statement of the consequences of denial or issuance of the permit, or failure to submit an application, as described in this subsection (b).
- c) An owner or operator of a well that is authorized by rule may request to be excluded from the coverage of the rule by applying for an individual or area UIC permit. The owner or operator must submit to the Agency an application under Section 704.161 with reasons supporting the request. The Agency may grant any such request.

BOARD NOTE: Derived from 40 CFR 144.25 (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.148 Inventory Requirements

The owner or operator of an injection well that is authorized by rule under this Subpart C must submit inventory information to the Agency. Such an owner or operator is prohibited from injecting into the well upon failure to submit inventory information for the well to the Agency within the time frame specified in subsection (d) ~~of this Section~~.

- a) Contents. As part of the inventory, the owner or operator must submit at least the following information:
- 1) The facility name and location;
 - 2) The name and address of legal contact;
 - 3) The ownership of facility;
 - 4) The nature and type of injection wells; and
 - 5) The operating status of injection wells.

BOARD NOTE: This information is requested on national form “Inventory of Injection Wells;”, USEPA Form 7520-16, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

- b) ~~Additional Contents-contents.~~ The owner or operator of a well listed in subsection (b)(1) ~~of this Section~~ must provide the information listed in subsection (b)(2) ~~of this Section~~.

- 1) This Section applies to the following wells:
 - A) Corresponding 40 CFR 144.26(b)(1)(i) pertains to Class II injection wells, which are regulated by the Department of Natural Resources pursuant to the Illinois Oil and Gas Act ~~[225 ILCS 725]~~ (see 62 Ill. Adm. Code 240). This statement maintains structural consistency with the corresponding federal provisions;
 - B) Class IV injection wells;
 - C) The following types of Class V injection wells:
 - i) A sand or other backfill well, 35 Ill. Adm. Code 730.105(e)(8);
 - ii) A radioactive waste disposal well that is not a Class I injection well, 35 Ill. Adm. Code 730.105(e)(11);
 - iii) A geothermal energy recovery well, 35 Ill. Adm. Code 730.105(e)(12);
 - iv) A brine return flow well, 35 Ill. Adm. Code 730.105(e)(14);
 - v) A well used in an experimental technology, 35 Ill. Adm. Code 730.105(e)(15);

- vi) A municipal or industrial disposal well other than a Class I injection well; and
 - vii) Any other Class V injection well, at the discretion of the Agency.
- 2) The owner or operator of a well listed in subsection (b)(1) ~~of this Section~~ must provide a listing of all wells owned or operated setting forth the following information for each well. (A single description of wells at a single facility with substantially the same characteristics is acceptable.)
- A) Corresponding 40 CFR 144.26(b)(2)(i) pertains to Class II wells, which are regulated by the Department of Natural Resources pursuant to the Illinois Oil and Gas Act ~~{225 ILCS 725}~~ (see 62 Ill. Adm. Code 240). This statement maintains structural consistency with the corresponding federal provisions;
 - B) The location of each well or project given by Township, Range, Section, and Quarter-Section;
 - C) The date of completion of each well;
 - D) Identification and depth of the formations into which each well is injecting;
 - E) The total depth of each well;
 - F) The casing and cementing record, tubing size, and depth of packer;
 - G) The nature of the injected fluids;
 - H) The average and maximum injection pressure at the wellhead;
 - I) The average and maximum injection rate; and
 - J) The date of the last mechanical integrity tests, if any.
- c) This subsection (c) corresponds with 40 CFR 144.26(c), a provision relating to USEPA notification to facilities upon authorization of the state's program. This statement maintains structural consistency with USEPA rules.
- d) ~~Deadlines. The owner or operator of a new Class V injection well must submit inventory information prior to starting injection. The owner or operator of an injection well must submit inventory information no later than March 3, 1985. The Agency need not require inventory information from any facility with RCRA interim status under 35 Ill. Adm. Code 703.~~

e) The owner or operator of a Class V injection well prohibited from injecting for failure to submit inventory information for the well may resume injection 90 days after submittal of the inventory information to the Agency, unless the owner or operator receives notice from the Agency that injection may not resume or that it may resume sooner.~~Deadlines for a Class V injection well.~~

- 1) ~~The owner or operator of a Class V injection well in which injection took place before March 3, 1985, and who failed to submit inventory information for the well within the time specified in subsection (d) of this Section may resume injection 90 days after submittal of the inventory information to the Agency, unless the owner or operator receives notice from the Agency that injection may not resume or that it may resume sooner.~~
- 2) ~~The owner or operator of a Class V injection well in which injection started later than March 3, 1985, must submit inventory information prior to May 2, 1995.~~
- 3) ~~The owner or operator of a Class V injection well in which injection started after May 2, 1994 must submit inventory information prior to starting injection.~~
- 4) ~~The owner or operator of a Class V injection well prohibited from injecting for failure to submit inventory information for the well within the time specified in subsection (e)(2) or (e)(3) of this Section may resume injection 90 days after submittal of the inventory information to the Agency, unless the owner or operator receives notice from the Agency that injection may not resume, or that it may resume sooner.~~

BOARD NOTE: A well that was in existence as of March 3, 1984, was required to submit inventory information by March 3, 1985. Since all wells other than a Class V injection wells are well is now either prohibited or required to file a permit application, the inventory requirement will apply only to a new Class V injection wells well.

BOARD NOTE: Derived from 40 CFR 144.26 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.149 Requiring Other ~~other~~ Information

- a) In addition to the inventory requirements of Section 704.148, the Agency may require the owner or operator of any well authorized by rule under this Subpart C to submit information as deemed necessary by the Agency to determine whether a well may be endangering a USDW in violation of Section 704.122.

- b) Such information requirements may include, but are not limited to the following:
 - 1) Performance of groundwater monitoring and the periodic submission of reports of such monitoring;
 - 2) An analysis of injected fluids, including periodic submission of such analyses; and
 - 3) A description of the geologic strata through and into which injection is taking place.
- c) Any request for information under this Section must be made in writing, and include a brief statement of the reasons for requiring the information. An owner or operator must submit the information within the time periods provided in the notice.
- d) An owner or operator of an injection well authorized by rule under this Subpart C is prohibited from injecting into the well upon failure of the owner or operator to comply with a request for information within the time period specified by the Agency pursuant to subsection (c) ~~of this Section~~. An owner or operator of a well prohibited from injection under this Section may not resume injection, except under a permit issued pursuant to any of Sections 704.147, 704.161, 704.162, or 704.163.

BOARD NOTE: Derived from 40 CFR 144.27 (2017)~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.150 Requirements for Class I and III Injection Wells Authorized by Rule

The following requirements apply to the owner or operator of a Class I or Class III well authorized by rule under this Subpart C, as provided by Section 704.144.

- a) The owner or operator must comply with all applicable requirements of this Subpart C and with Sections 704.121, 704.122, 704.124, 704.201, 704.202, and 704.203. Any noncompliance with these requirements constitutes a violation of the Act and SDWA and is grounds for enforcement action, except that the owner or operator need not comply with these requirements to the extent and for the duration such noncompliance is authorized by an emergency permit under Section 704.163.
- b) Twenty-Four Hour Reporting~~Twenty four hour reporting~~. The owner or operator must report any noncompliance that may endanger health or the environment, including either of the events described in subsection (b)(1) or (b)(2) ~~of this Section~~, subject to the conditions of subsection (b)(3) ~~of this Section~~:

- 1) Any monitoring or other information that indicates that any contaminant may cause an endangerment to a USDW; or
 - 2) Any noncompliance or malfunction of the injection system that may cause fluid migration into or between USDWs.
 - 3) Any information must be provided orally within 24 hours from the time the owner or operator becomes aware of the circumstances. A written submission must also be provided within five days of the time the owner or operator becomes aware of the circumstances. The written submission must contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent recurrence of the noncompliance.
- c) Plugging and Abandonment Plan~~abandonment plan.~~
- 1) The owner or operator must prepare, maintain, and comply with a plan for plugging and abandonment of the wells or project that meets the requirements of 35 Ill. Adm. Code 730.110. For purposes of this subsection (c), temporary intermittent cessation of injection operations is not abandonment.
 - 2) Submission of Plan~~plan.~~
 - A) The owner or operator must submit the plan on any forms prescribed by the Agency.
 - B) The owner or operator must submit any proposed significant revision to the method of plugging reflected in the plan no later than the notice of plugging required by subsection (i)~~of this Section~~ (i.e., 45 days prior to plugging, unless shorter notice is approved).
 - C) The plan must include the following information:
 - i) The nature and quantity and material to be used in plugging;
 - ii) The location and extent (by depth) of the plugs;
 - iii) Any proposed test or measurement to be made;
 - iv) The amount, size, and location (by depth) of casing to be left in the well;

- v) The method and location where casing is to be parted; and
 - vi) The estimated cost of plugging the well.
- D) After a cessation of operations of two years, the owner or operator must plug and abandon the well in accordance with the plan, unless the owner or operator performs both of the following actions:
- i) It provides written notice to the Agency; and
 - ii) It describes actions or procedures, satisfactory to the Agency that the owner or operator will take to ensure that the well will not endanger a USDW during the period of temporary abandonment. These actions and procedures must include compliance with the technical requirements applicable to active injection wells, unless the operator obtains regulatory relief in the form of a variance or adjusted standard from the technical requirements pursuant to 35 Ill. Adm. Code 104 and Title IX of the Act ~~[415 ILCS 5/Title IX]~~.
- E) The owner or operator of any well that has been temporarily abandoned (ceased operations for more than two years and which has met the requirements of subsections (c)(2)(D)(i) and (c)(2)(D)(ii) ~~of this Section~~) must notify the Agency in writing prior to resuming operation of the well.
- d) Financial Responsibility ~~responsibility~~.
- 1) The owner or operator or transferor of a Class I or Class III injection well is required to demonstrate and maintain financial responsibility and resources to close, plug, and abandon the underground injection operation in a manner acceptable to the Agency until one of the following has occurred:
 - A) The well has been plugged and abandoned in accordance with an approved plugging and abandonment plan pursuant to subsection (c) ~~of this Section~~ and 35 Ill. Adm. Code 730.110 and submission of a plugging and abandonment report has been made pursuant to subsection (k) ~~of this Section~~;
 - B) The well has been converted in compliance with subsection (j) ~~of this Section~~; or
 - C) The transferor has received notice from the Agency that the transferee has demonstrated financial responsibility for the well.

The owner or operator must show evidence of such financial responsibility to the Agency by the submission of a surety bond or other adequate assurance, such as a financial statement.

- 2) The owner or operator must submit evidence of financial responsibility to the Agency ~~was to have submitted such evidence no later than March 3, 1985.~~ Where the ownership or operational control of the well is to transfer ~~was transferred later than March 3, 1985,~~ the transferee must submit such evidence no later than the date specified in the notice required pursuant to subsection (1)(2) ~~of this Section.~~
 - 3) The Agency may require the owner or operator to submit a revised demonstration of financial responsibility if the Agency has reason to believe that the original demonstration is no longer adequate to cover the cost of closing, plugging, and abandoning the well.
 - 4) The owner or operator of a well injecting hazardous waste must comply with the financial responsibility requirements of Subpart G ~~of this Part.~~
 - 5) An owner or operator must notify the Agency by certified mail of the commencement of any voluntary or involuntary proceeding under Title 11 (Bankruptcy) of the United States Code that names the owner or operator as debtor, within 10 business days after the commencement of the proceeding. Any party acting as guarantor for the owner or operator for the purpose of financial responsibility must so notify the Agency if the guarantor is named as debtor in any such proceeding.
 - 6) In the event of commencement of a proceeding specified in subsection (d)(5) ~~of this Section,~~ an owner or operator that has furnished a financial statement for the purpose of demonstrating financial responsibility pursuant to this Section will be deemed to be in violation of this subsection (d) until an alternative financial assurance demonstration acceptable to the Agency is provided either by the owner or operator or by its trustee in bankruptcy, receiver, or other authorized party. All parties must be prohibited from injecting into the well until such alternative financial assurance is provided.
- e) This subsection (e) corresponds with 40 CFR 144.28(e), which pertains exclusively to enhanced recovery and hydrocarbon storage wells (Class II wells). Those wells are regulated by the Illinois Department of Natural Resources, Office of Mines and Minerals, rather than by the Board and the Agency. This statement maintains structural consistency with USEPA rules.
- f) Operating Requirements ~~requirements.~~

- 1) No person must cause or allow injection between the outermost casing protecting USDWs and the well bore.
- 2) Maintenance of Mechanical Integrity ~~mechanical integrity~~.
 - A) The owner or operator of a Class I or Class III injection well authorized by rule under this Subpart C must establish and maintain mechanical integrity, as defined in 35 Ill. Adm. Code 730.106, until either of the following has occurred:
 - i) The well is properly plugged and abandoned in accordance with an approved plugging and abandonment plan pursuant to subsection (c) ~~of this Section~~ and 35 Ill. Adm. Code 730.110 and a plugging and abandonment report is submitted pursuant to subsection (k); or
 - ii) The well is converted in compliance with subsection (j) ~~of this Section~~.
 - B) The Agency may require by permit condition that the owner or operator comply with a schedule describing when mechanical integrity demonstrations must be made.
- 3) Cessation upon Lack of Mechanical Integrity.
 - A) When the Agency determines that a Class I (non-hazardous) or Class III injection well lacks mechanical integrity pursuant to 35 Ill. Adm. Code 730.108, the Agency must give written notice of its determination to the owner or operator.
 - B) Unless the Agency requires immediate cessation, the owner or operator must cease injection into the well within 48 hours of receipt of the Agency's determination.
 - C) The Agency may allow plugging of the well in accordance with 35 Ill. Adm. Code 730.110, or require the owner or operator to perform such additional construction, operation, monitoring, reporting, and corrective action as is necessary to prevent the movement of fluid into or between USDWs caused by the lack of mechanical integrity.
 - D) The owner or operator may resume injection upon receipt of written notification from the Agency that the owner or operator has demonstrated mechanical integrity pursuant to 35 Ill. Adm. Code 730.108.

- 4) The Agency may allow the owner or operator of a well that lacks mechanical integrity pursuant to 35 Ill. Adm. Code 730.108(a)(1) to continue or resume injection if the owner or operator has made a satisfactory demonstration that there is no movement of fluid into or between USDWs.
- 5) For a Class I injection well, unless an alternative to a packer has been approved under 35 Ill. Adm. Code 730.112(c), the owner or operator must fill the annulus between the tubing and the long string of casings with a fluid approved by the Agency and maintain a pressure, also approved by the Agency, on the annulus. The owner or operator of a Class I well completed with tubing and packer must fill the annulus between tubing and casing with a non-corrosive fluid and maintain a positive pressure on the annulus. For any other Class I injection well, the owner or operator must insure that the alternative completion method will reliably provide a comparable level of protection of USDWs.
- 6) Injection Pressure ~~pressure~~ for Class I and III Injection Wells ~~injection wells~~.
 - A) Except during stimulation, the owner or operator must not exceed an injection pressure at the wellhead that must be calculated so as to assure that the pressure during injection does not initiate new fractures or propagate existing fractures in the injection zone; and
 - B) The owner or operator must not inject at a pressure that will initiate fractures in the confining zone or cause the movement of injection or formation fluids into a USDW.
- g) **Monitoring Requirements.** The owner or operator must perform the monitoring as described in this subsection (g). Monitoring of the nature of the injected fluids must comply with applicable analytical methods cited in tables IA (List of Approved Biological Methods), IB (List of Approved Inorganic Test Procedures), IC (List of Approved Test Procedures for Non-Pesticide Organic Compounds), ID (List of Approved Test Procedures for Pesticides), IE (List of Approved Radiologic Test Procedures), and IF (List of Approved Methods for Pharmaceutical Pollutants) of 40 CFR 136.3 (Identification of Test Procedures) or in appendix III of 40 CFR 261 (Chemical Analysis Test Methods), each incorporated by reference in 35 Ill. Adm. Code 720.111(b), or with other methods that have been approved by the Agency.
 - 1) The owner or operator of a Class I injection well must undertake the following actions:

- A) It must analyze the nature of the injected fluids with sufficient frequency to yield data representative of their characteristics;
 - B) It must install and use continuous recording devices to monitor injection pressure, flow rate and volume, and the pressure on the annulus between the tubing and the long string of casing; and
 - C) It must install and use monitoring wells within the area of review, if required by the Agency, to monitor any migration of fluids into and pressure in the USDWs. The type, number, and location of the wells; the parameters to be measured; and the frequency of monitoring must be approved by the Agency.
- 2) This subsection (g)(2) corresponds with 40 CFR 144.28(g)(2), a provision related to Class II injection wells, which are regulated by the Illinois Department of Natural Resources, Office of Mines and Minerals, and not by the Board. This statement maintains structural consistency with USEPA rules.
- 3) The owner or operator of a Class III injection well must undertake the following actions:
- A) It must provide to the Agency a qualitative analysis and ranges in concentrations of all constituents of injected fluids at least once within the first year of authorization and thereafter whenever the injection fluid is modified to the extent that the initial data are incorrect or incomplete.
 - i) The owner or operator may request confidentiality pursuant to Sections 7 and 7.1 of the Act and 35 Ill. Adm. Code 130.
 - ii) If the information is proprietary the owner or operator may in lieu of the ranges in concentrations choose to submit maximum concentrations that must not be exceeded.
 - iii) In such a case the owner or operator must retain records of the undisclosed concentration and provide them upon request to the Agency as part of any enforcement investigation;
 - B) It must monitor injection pressure and either flow rate or volume semi-monthly, or meter and record daily injected and produced fluid volumes as appropriate;
 - C) It must monitor the fluid level in the injection zone semi-monthly, where appropriate; and

- D) All Class III injection wells may be monitored on a field or project basis rather than an individual well basis by manifold monitoring. Manifold monitoring may be used in cases of facilities consisting of more than one injection well, operating with a common manifold. Separate monitoring systems for each well are not required provided the owner or operator demonstrates to the Agency that manifold monitoring is comparable to individual well monitoring.
- h) Reporting Requirements~~requirements~~. The owner or operator must submit reports to the Agency as follows:
- 1) For a Class I injection well, quarterly reports on all of the following:
 - A) The physical, chemical, and other relevant characteristics of the injection fluids;
 - B) Monthly average, maximum and minimum values for injection pressure, flow rate and volume, and annular pressure;
 - C) The results from groundwater monitoring wells prescribed in subsection (f)(1)(C)~~of this Section~~;
 - D) The results of any test of the injection well conducted by the owner or operator during the reported quarter if required by the Agency; and
 - E) Any well work over performed during the reported quarter.
 - 2) This subsection (h)(2) corresponds with 40 CFR 144.28(h)(2), a provision related to Class II injection wells, which are regulated by the Illinois Department of Natural Resources, Office of Mines and Minerals, and not by the Board. This statement maintains structural consistency with USEPA rules.
 - 3) For a Class III injection well, all of the following:
 - A) Quarterly reporting on all monitoring, as required in subsections (f)(2)(A), (f)(2)(B), and (f)(2)(C)~~of this Section~~;
 - B) Quarterly reporting of the results of any periodic tests required by the Agency that are performed during the reported quarter; and
 - C) Monitoring may be reported on a project or field basis rather than an individual well basis where manifold monitoring is used.

- i) Retention of Records~~records~~. The owner or operator must retain records of all monitoring information, including the following:
- 1) Calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, and copies of all reports required by this section, for a period of at least three years from the date of the sample, measurement or report. This period may be extended by request of the Agency at any time; and
 - 2) The nature and composition of all injected fluids until three years after the completion of any plugging and abandonment procedures specified under Section 704.188. The owner or operator must retain the records after the three year retention period unless it delivers the records to the Agency or obtains written approval from the Agency to discard the records.
- j) Notice of Abandonment~~abandonment~~. The owner or operator must notify the Agency at least 45 days before conversion or abandonment of the well.
- k) Plugging and Abandonment Report~~abandonment report~~. Within 60 days after plugging a well or at the time of the next quarterly report (whichever is less) the owner or operator must submit a report to the Agency. If the quarterly report is due less than 15 days before completion of plugging, then the report must be submitted within 60 days. The report must be certified as accurate by the person who performed the plugging operation. Such report must consist of either:
- 1) A statement that the well was plugged in accordance with the plan previously submitted to the Agency; or
 - 2) Where actual plugging differed from the plan previously submitted, an updated version of the plan, on any form supplied by the Agency, specifying the different procedures used.
- l) Change of Ownership~~ownership~~.
- 1) The owner or operator must notify the Agency of a transfer of ownership or operational control of the well at least 30 days in advance of the proposed transfer.
 - 2) The notice must include a written agreement between the transferor and the transferee containing a specific date when the financial responsibility demonstration of subsection (d)~~of this Section~~ will be met by the transferee.
 - 3) The transferee is authorized to inject unless it receives notification from the Agency that the transferee has not demonstrated financial responsibility pursuant to subsection (d)~~of this Section~~.

- m) Requirements for a Class I Hazardous Waste Injection Well ~~hazardous waste injection well~~. The owner or operator of any Class I injection well injecting hazardous waste must comply with Section 704.203. In addition the owner or operator must properly dispose of, or decontaminate by removing all hazardous waste residues, all injection well equipment.

BOARD NOTE: Derived from 40 CFR 144.28 (2017) ~~(2012)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: APPLICATION FOR PERMIT

Section 704.161 Application for Permit; Authorization by Permit

- a) Permit Application ~~application~~. Unless an underground injection well is authorized by rule under Subpart C ~~of this Part~~, all injection activities, including construction of an injection well, are prohibited until the owner or operator is authorized by permit. An owner or operator of a well currently authorized by rule must apply for a permit under this Section unless the well authorization was for the life of the well or project. Authorization by rule for a well or project for which a permit application has been submitted terminates for the well or project upon the effective date of the permit. Procedures for application, issuance, and administration of emergency permits are found exclusively in Section 704.163. A RCRA permit applying the standards of Subpart C of 35 Ill. Adm. Code 724 will constitute a UIC permit for hazardous waste injection wells for which the technical standards in 35 Ill. Adm. Code 730 are not generally appropriate.

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 144.31(a) (2017) ~~(2005)~~.

- b) Time to Apply ~~apply~~. Any person ~~that who performs or~~ proposes an underground injection for which a permit ~~was or~~ will be required must submit an application to the Agency. For new injection wells, except new wells covered by an existing area permit under Section 704.162(c), the application must be filed a reasonable time before construction is expected to begin, as follows:
- 1) ~~For existing wells, the application was to have been filed before the applicable of the following deadlines:~~
 - A) ~~Within 180 days after the Agency notifies such person that an application is required;~~
 - B) ~~If the waste being injected into the well is a hazardous waste accompanied by a manifest or delivery document, before August 1, 1984; or~~

~~C) Except as otherwise provided in subsections (b)(1)(A) and (b)(1)(B) of this Section, before March 3, 1986.~~

~~2) For new injection wells, except new wells in projects authorized under Section 704.141(b) or covered by an existing area permit under Section 704.162(c), the application must be filed a reasonable time before construction is expected to begin.~~

BOARD NOTE: Subsection (b) of this Section is derived from 40 CFR 144.31(c) ~~(2017)-(2005)~~.

- c) Contents of UIC ~~Application~~ application. The applicant must demonstrate that the underground injection will not endanger drinking water sources. The form and content of the UIC permit application may be prescribed by the Agency, including the materials required by 35 Ill. Adm. Code 702.123.
- d) ~~Information Requirements~~ requirements for a Class I Hazardous Waste Injection Well ~~hazardous waste injection well~~.
 - 1) The following information is required for each active Class I hazardous waste injection well at a facility seeking a UIC permit:
 - A) The dates the well was operated; and
 - B) Specification of all wastes that have been injected into the well, if available.
 - 2) The owner or operator of any facility containing one or more active hazardous waste injection wells must submit all available information pertaining to any release of hazardous waste or constituents from any active hazardous waste injection well at the facility.
 - 3) The owner or operator of any facility containing one or more active Class I hazardous waste injection wells must conduct such preliminary site investigations as are necessary to determine whether a release is occurring, has occurred, or is likely to have occurred.

BOARD NOTE: Subsection (d) of this Section is derived from 40 CFR 144.31(g) ~~(2017)-(2005)~~.

- e) In addition to the materials required by 35 Ill. Adm. Code 702.123, the applicant must provide the following:
 - 1) It must identify and submit on a list with the permit application the names and addresses for all owners of record of land within one-quarter mile (401 meters) of the facility boundary. This requirement may be waived by

the Agency where the site is located in a populous area such that the requirement would be impracticable; and

- 2) It must submit a plugging and abandonment plan that meets the requirements of 35 Ill. Adm. Code 730.110.

BOARD NOTE: Subsection (e) ~~of this Section~~ is derived from 40 CFR 144.31(e)(9) and (e)(10) ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.162 Area Permits

- a) The Agency may issue a permit on an area basis, rather than for each injection well individually, provided that the permit is for injection wells for which each of the following is true:
 - 1) The injection wells are described and identified by location in permit applications, if they are existing injection wells, except that the Agency may accept a single description of multiple injection wells with substantially the same characteristics;
 - 2) The injection wells are within the same well field, facility site, reservoir, project, or similar unit in the same state;
 - 3) The injection wells are operated by a single owner or operator;
 - 4) The injection wells are used to inject other than hazardous waste; and
 - 5) The injection wells are other than Class VI injection wells.
- b) Area permits must specify both of the following:
 - 1) The area within which underground injections are authorized; and
 - 2) The requirements for construction, monitoring, reporting, operation, and abandonment for all wells authorized by the permit.
- c) The area permit may authorize the permittee to construct and operate, convert, or plug and abandon new injection wells within the permit area provided the following conditions are fulfilled:
 - 1) The permittee notifies the Agency at such time as the permit requires;
 - 2) The additional well satisfies the criteria in subsection (a) ~~of this Section~~ and meets the requirements specified in the permit under subsection (b) ~~of this Section~~; and

- 3) The cumulative effects of drilling and operation of additional injection wells are considered by the Agency during evaluation of the area permit application and are acceptable to the Agency.
- d) If the Agency determines that any well constructed pursuant to subsection (c) ~~of this Section~~ does not satisfy the requirements of subsections (c)(1) and (c)(2) ~~of this Section~~, the Agency may modify the permit under 35 Ill. Adm. Code 702.183 through 702.185, seek revocation under 35 Ill. Adm. Code 702.186, or take enforcement action. If the Agency determines that cumulative effects are unacceptable, the permit may be modified under 35 Ill. Adm. Code 702.183 through 702.185.

BOARD NOTE: Derived from 40 CFR 144.33 ~~(2017)-(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.163 Emergency Permits

- a) Coverage. Notwithstanding any other provision of this Part or 35 Ill. Adm. Code 702 or 705, the Agency may temporarily permit a specific underground injection if an imminent and substantial threat to the health of persons will result unless a temporary emergency permit is granted.
- b) Requirements for Issuance ~~issuance~~.
 - 1) Any temporary permit under subsection (a) ~~of this Section~~ must be for no longer term than required to prevent the threat.
 - 2) Notice of any temporary permit under this subsection (b) must be published in accordance with 35 Ill. Adm. Code 705.163 within 10 days after the issuance of the permit.
 - 3) The temporary permit under this section may be either oral or written. If oral, it must be followed within five calendar days by a written temporary emergency permit.
 - 4) The Agency must condition the temporary permit in any manner it determines is necessary to ensure that the injection will not result in the movement of fluids into a USDW.

BOARD NOTE: Derived from 40 CFR 144.34 ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART E: PERMIT CONDITIONS

Section 704.181 Additional Conditions

The following conditions apply to all UIC permits, in addition to those set forth in 35 Ill. Adm. Code 702.140 through 702.152, and these conditions must be incorporated into all permits either expressly or by reference. If incorporated by reference, a specific citation to these regulations must be given in the permit.

- a) In addition to 35 Ill. Adm. Code 702.141 (duty to comply): the permittee needs not comply with the provisions of this permit to the extent and for the duration such noncompliance is authorized in a temporary emergency permit under Section 704.163.

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 144.51(a) (2017) ~~(2011)~~.

- b) In addition to 35 Ill. Adm. Code 702.150(b) (monitoring and records): the permittee must retain records concerning the nature and composition of all injected fluids until three years after the completion of any plugging and abandonment procedures specified under Section 704.188 or under Subpart G of 35 Ill. Adm. Code 730, as appropriate. The owner or operator must continue to retain the records after the three-year retention period, unless the owner or operator delivers the records to the Agency or obtains written approval from the Agency to discard the records.

BOARD NOTE: Subsection (b) ~~of this Section~~ is derived from 40 CFR 144.51(j)(2)(ii) (2017) ~~(2011)~~.

- c) In addition to 35 Ill. Adm. Code 702.152(a) (notice of planned changes), the following limitation applies: except for all new wells authorized by an area permit under Section 704.162(c), a new injection well may not commence injection until construction is complete, and both of the following must occur:
- 1) The permittee must have submitted notice of completion of construction to the Agency; and
 - 2) Inspection review must have occurred, as follows:
 - A) The Agency has inspected or otherwise reviewed the new injection well and finds it is in compliance with the conditions of the permit; or
 - B) The permittee has not received notice from the Agency of its intent to inspect or otherwise review the new injection well within 13 days of the date of the notice in subsection (c)(1) ~~of this Section~~, in

which case prior inspection or review is waived, and the permittee may commence injection. The Agency must include in its notice a reasonable time period in which it will inspect the well.

BOARD NOTE: Subsection (c) ~~of this Section~~ is derived from 40 CFR 144.51(m) (2017) ~~(2011)~~.

- d) Reporting Noncompliance ~~noncompliance~~.
- 1) Twenty-four hour reporting. The permittee must report any noncompliance that may endanger health or the environment, including the following:
 - A) Any monitoring or other information that indicates that any contaminant may cause an endangerment to a USDW; and
 - B) Any noncompliance with a permit condition or malfunction of the injection system that may cause fluid migration into or between USDWs.
 - 2) Any information must be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission must also be provided within five days after the time the permittee becomes aware of the circumstances. The written submission must contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates, times, and, if the noncompliance has not been corrected, the anticipated time is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance of the noncompliance.

BOARD NOTE: Subsection (d) ~~of this Section~~ is derived from 40 CFR 144.51(l)(6) (2017) ~~(2011)~~.

- e) The permittee must notify the Agency at such times as the permit requires before conversion or abandonment of the well or, in the case of area permits, before closure of the project.

BOARD NOTE: Subsection (e) ~~of this Section~~ is derived from 40 CFR 144.51(n) (2017) ~~(2011)~~.

- f) A Class I or Class III injection well permit must include, and a Class V permit may include, conditions that meet the applicable requirements of 35 Ill. Adm. Code 730.110 to ensure that plugging and abandonment of the well will not allow the movement of fluids into or between USDWs. Where the plan meets the requirements of 35 Ill. Adm. Code 730.110, the Agency must incorporate the plan into the permit as a permit condition. Where the Agency's review of an

application indicates that the permittee's plan is inadequate, the Agency may require the applicant to revise the plan, prescribe conditions meeting the requirements of this subsection (f), or deny the permit. A Class VI injection well permit must include conditions that meet the requirements set forth in 35 Ill. Adm. Code 730.192. Where the plan meets the requirements of 35 Ill. Adm. Code 730.192, the Agency must incorporate the plan into the permit as a permit condition. For purposes of this subsection (f), temporary or intermittent cessation of injection operations is not abandonment.

BOARD NOTE: Subsection (f) ~~of this Section~~ is derived from 40 CFR 144.51(o) ~~(2017)-(2011)~~.

- g) ~~Plugging and Abandonment Report~~ ~~abandonment report~~. Within 60 days after plugging a well or at the time of the next quarterly report (whichever is less) the owner or operator must submit a report to the Agency. If the quarterly report is due less than 15 days before completion of plugging, then the report must be submitted within 60 days. The report must be certified as accurate by the person who performed the plugging operation. Such report must consist of either of the following:
- 1) A statement that the well was plugged in accordance with the plan previously submitted to the Agency;
 - 2) Where actual plugging differed from the plan previously submitted, an updated version of the plan on the form supplied by the Agency specifying the differences.

BOARD NOTE: Subsection (g) ~~of this Section~~ is derived from 40 CFR 144.51(p) ~~(2017)-(2011)~~.

- h) Duty to ~~Establish~~ ~~establish~~ and Maintain Mechanical Integrity ~~maintain~~ ~~mechanical integrity~~.
- 1) The owner or operator of a Class I Class III, or Class VI injection well permitted under this Part and 35 Ill. Adm. Code 702 must establish mechanical integrity prior to commencing injection or on a schedule determined by the Agency. Thereafter the owner or operator of a Class I, Class II, or Class III injection well must maintain mechanical integrity as required by 35 Ill. Adm. Code 730.108, and the owner or operator of a Class VI injection well must maintain mechanical integrity as required by Section 730.189. The Agency may require by permit condition that the owner or operator comply with a schedule describing when mechanical integrity demonstrations must be made.
 - 2) When the Agency determines that a Class I or Class III injection well lacks mechanical integrity pursuant to 35 Ill. Adm. Code 730.108 or

730.189 (for a Class VI injection well), the Agency must give written notice of its determination to the owner or operator. Unless the Agency requires immediate cessation, the owner or operator must cease injection into the well within 48 hours of receipt of the Agency determination. The Agency may allow plugging of the well pursuant to 35 Ill. Adm. Code 730.110 or require the permittee to perform such additional construction, operation, monitoring, reporting, and corrective action as is necessary to prevent the movement of fluid into or between USDWs caused by the lack of mechanical integrity. The owner or operator may resume injection upon written notification from the Agency that the owner or operator has demonstrated mechanical integrity pursuant to 35 Ill. Adm. Code 730.108.

- 3) The Agency may allow the owner or operator of a well that lacks mechanical integrity pursuant to 35 Ill. Adm. Code 730.108(a)(1) to continue or resume injection, if the owner or operator has made a satisfactory showing that there is no movement of fluid into or between USDWs.

BOARD NOTE: Subsection (h) ~~of this Section~~ is derived from 40 CFR 144.51(q) ~~(2017)-(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.186 Hazardous Waste Requirements

UIC permits must require by condition requirements for wells managing hazardous waste, as set forth in Subpart F ~~of this Part~~.

BOARD NOTE: Derived from 40 CFR 144.52(a)(4) ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.189 Financial Responsibility

- a) The permittee, including the transferor of a permit, is required to demonstrate and maintain financial responsibility and resources to close, plug, and abandon the underground injection operation in a manner prescribed by the Agency until one of the following occurs:
 - 1) The well has been plugged and abandoned in accordance with an approved plugging and abandonment plan pursuant to Section 704.181(f) and 35 Ill. Adm. Code 730.110 and 730.192, and the permittee has submitted a plugging and abandonment report pursuant to Section 704.181(g);
 - 2) The well has been converted in compliance with Section 704.181(e); or

- 3) The transferor of a permit has received notice from the Agency that the owner or operator receiving transfer of the permit (the new permittee) has demonstrated financial responsibility for the well.
- b) The permittee must show evidence of financial responsibility to the Agency by the submission of a surety bond or other adequate assurance, such as financial statements or other materials acceptable to the Agency. The Agency may on a periodic basis require the holder of a life-time permit to submit an estimate of the resources needed to plug and abandon the well revised to reflect inflation of such costs, and a revised demonstration of financial responsibility if necessary. For a Class VI injection well, the permittee must show evidence of financial responsibility to the Agency by the submission of an instrument that fulfills the requirements of 35 Ill. Adm. Code 730.185(a), such as a financial statement or other materials necessary for an Agency evaluation of the adequacy of the submitted financial assurance.
- c) The owner or operator of a Class I hazardous waste injection well must comply with the financial responsibility requirements set forth in Subpart G ~~of this Part~~. The owner or operator of a Class VI injection well must comply with the financial responsibility requirements set forth in 35 Ill. Adm. Code 730.185.

BOARD NOTE: Derived from 40 CFR 144.52(a)(7) (2017) ~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.192 Waiver of Requirements by Agency

- a) When injection does not occur into, through, or above a USDW, the Agency may authorize a well or project with less stringent requirements for area of review, construction, mechanical integrity, operation, monitoring, and reporting than required in 35 Ill. Adm. Code 730 or Sections 704.182 through 704.191 to the extent that the reduction in requirements will not result in an increased risk of movement of fluids into a USDW.
- b) When injection occurs through or above a USDW, but the radius of endangering influence when computed under 35 Ill. Adm. Code 730.106(a) is smaller or equal to the radius of the well, the Agency may authorize a well or project with less stringent requirements for operation, monitoring, and reporting than required in 35 Ill. Adm. Code 730 or Sections 704.182 through 704.191 to the extent that the reduction in requirements will not result in an increased risk of movement of fluids into a USDW.
- c) When reducing requirements under subsection (a) or (b) ~~of this Section~~, the Agency must prepare a fact sheet under 35 Ill. Adm. Code 705.143 explaining the reasons for the action.

BOARD NOTE: Derived from 40 CFR 144.16 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.193 Corrective Action

- a) Coverage. An applicant for a Class I or Class III injection well permit must identify the location of all known wells within the injection well's area of review that penetrate the injection zone. For such wells that are improperly sealed, completed, or abandoned, the applicant must also submit a plan consisting of such steps or modifications as are necessary to prevent movement of fluid into USDWs ("corrective action"). Where the plan is adequate, the Agency must incorporate it into the permit as a condition. Where the Agency's review of an application indicates that the permittee's plan is inadequate (based on the factors in 35 Ill. Adm. Code 730.107), the Agency must require the applicant to revise the plan, prescribe a plan for corrective action as a condition of the permit under subsection (b) ~~of this Section~~, or deny the application.
- b) Requirements-
 - 1) Existing Injection Wells ~~injection wells~~. Any permit issued for an existing injection well requiring corrective action must include a compliance schedule requiring any corrective action accepted or prescribed under subsection (a) ~~of this Section~~ to be completed as soon as possible.
 - 2) New Injection Wells ~~injection wells~~. No permit for a new injection well may authorize injection until all required corrective action has been taken.
 - 3) Injection pressure limitation. The Agency may require as a permit condition that injection pressure in the injection zone does not exceed hydrostatic pressure at the site of any improperly completed or abandoned well within the area of review. This pressure limitation must satisfy the corrective action requirement. Alternatively, such injection pressure limitation can be part of a compliance schedule and last until all other required corrective action has been taken.
 - 4) Class III Injection Wells Only ~~injection wells only~~. When setting corrective action requirements the Agency must consider the overall effect of the project on the hydraulic gradient in potentially affected USDWs and the corresponding changes in potentiometric surfaces and flow directions rather than the discrete effect of each well. If a decision is made that corrective action is not necessary based on the determinations above, the monitoring program required in 35 Ill. Adm. Code 730.133(b) must be designed to verify the validity of such determinations.

BOARD NOTE: Derived from 40 CFR 144.55 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART F: REQUIREMENTS FOR WELLS INJECTING HAZARDOUS WASTE

Section 704.202 Authorization

The owner or operator of any well that is used to inject hazardous wastes accompanied by a manifest or delivery document ~~is~~ was required to apply for authorization to inject, ~~as specified in Section 704.161(b)(1)(B), before August 2, 1984.~~

BOARD NOTE: Derived from 40 CFR 144.14(b) ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART G: FINANCIAL RESPONSIBILITY FOR CLASS I HAZARDOUS WASTE INJECTION WELLS

Section 704.212 Cost Estimate for Plugging and Abandonment

- a) The owner or operator must prepare a written estimate, in current dollars, of the cost of plugging the injection well in accordance with the plugging and abandonment plan, as specified in Sections 704.150 and 704.181(f). The cost estimate must equal the cost of plugging and abandonment at the point in the facility's operating life when the extent and manner of its operation would making plugging and abandonment the most expensive, as indicated by its plan.
- b) The owner or operator must adjust the cost estimate for inflation within 30 days after each anniversary of the date on which the first cost estimate was prepared. The adjustment must be made as specified in subsections (b)(1) and (b)(2) ~~of this Section~~, using an inflation factor derived from the annual update to "Oil and Gas Lease Equipment and Operating Costs 1987 to [Date]" published by the U.S. Department of Treasury. The inflation factor is the result of dividing the latest published annual Index by the Index for the previous years.
 - 1) The first adjustment is made by multiplying the cost estimate by the inflation factor. The result is the adjusted cost estimate.
 - 2) Subsequent adjustments are made by multiplying the latest adjusted cost estimate by the latest inflation factor.

BOARD NOTE: Corresponding 40 CFR 144.62(b) cites "Oil and Gas Field Equipment Cost Index" without attribution of its source. The Board has located a publication entitled "Oil and Gas Lease Equipment and Operating Costs 1987 to [Date]". It is assembled by the U.S. Department of Energy, Energy Information Administration. It is available only on the Internet at www.eia.doe.gov. The

Board replaced the federally cited reference with this document. The full link for the document (in March 2006) is as follows:

http://www.eia.doe.gov/pub/oil_gas/natural_gas/data_publications/cost_indices_equipment_production/current/coststudy.html.

- c) The owner or operator must review the cost estimate whenever a change in the plan increases the cost of plugging and abandonment. The revised cost estimate must be adjusted for inflation as specified in subsection (b) ~~of this Section~~.
- d) The owner or operator must keep the following at the facility during the operating life of the facility: the latest cost estimate prepared in accordance with subsections (a) and (c) ~~of this Section~~ and, when this estimate has been adjusted in accordance with subsection (b) ~~of this Section~~, the latest adjusted cost estimate.

BOARD NOTE: Derived from 40 CFR 144.62 (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.214 Trust Fund

- a) An owner or operator may satisfy the financial assurance requirement by establishing a trust fund that conforms to the requirements of this Section and submitting an original, signed duplicate of the trust agreement to the Agency. An owner or operator of a Class I injection well injecting hazardous waste must submit the original, signed duplicate of the trust agreement to the Agency with the permit application or for approval to operate under rule. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency.
- b) The wording of the trust agreement must be as specified in Section 704.240, and the trust agreement must be accompanied by a formal certification of acknowledgment. Schedule A of the trust agreement must be updated within 60 days after a change in the amount of the current cost estimate covered by the agreement.
- c) Payments into the trust fund must be made annually by the owner or operator over the term of the initial permit or over the remaining operating life of the injection well as estimated in the plan, whichever period is shorter; this period is hereafter referred to as the "pay-in period." The payments into the trust fund must be made as follows:
 - 1) For a new well, the first payment must be made before the initial injection of hazardous waste. The owner or operator must submit a receipt to the Agency from the trustee for this payment before the initial injection of hazardous waste. The first payment must be at least equal to the current cost estimate, except as provided in Section 704.240, divided by the

number of years in the pay-in period. Subsequent payments must be made no later than 30 days after each anniversary date of the first payment. The amount of each subsequent payment must be determined by this formula:

$$\text{Next Payment} = \frac{\text{PE} - \text{CV}}{\text{YR}}$$

Where:

PE is the current cost estimate

CV is the current value of the trust fund

Y is the number of years remaining in the pay-in period-

- 2) If an owner or operator establishes a trust fund as specified in this Section, and the value of that trust fund is less than the current cost estimate when a permit is issued for the injection well, the amount of current cost estimate still to be paid into the trust fund must be paid in over the pay-in period as defined in subsection (c) ~~of this Section~~. Payments must continue to be made no later than 30 days after each anniversary date of the first payment made pursuant to this Part. The amount of each payment must be determined by this formula:

$$\text{Next Payment} = \frac{\text{PE} - \text{CV}}{\text{YR}}$$

Where:

PE is the current cost estimate

CV is the current value of the trust fund

Y is the number of years remaining in the pay-in period-

- d) The owner or operator may accelerate payments into the trust fund or the owner or operator may deposit the full amount of the current cost estimate at the time the fund is established. However, the owner or operator must maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subsection (c) ~~of this Section~~.
- e) If the owner or operator establishes a trust fund after having used one or more alternate financial assurance mechanisms, the owner or operator's first payment must be in at least the amount that the fund would contain if the trust fund were established initially and annual payments made according to specifications of this Section.

- f) After the pay-in period is completed, whenever the current cost estimate changes the owner or operator must compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner or operator, within 60 days after the change in the cost estimate, must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current cost estimate, or obtain other financial assurance to cover the difference.
- g) If the value of the trust fund is greater than the total amount of the current cost estimate, the owner or operator may submit a written request to the Agency for release of the amount in excess of the current cost estimate.
- h) If an owner or operator substitutes other financial assurance for all or part of the trust fund, the owner or operator may submit a written request to the Agency for release of the amount in excess of the current cost estimate covered by the trust fund.
- i) Within 60 days after receiving a request from the owner or operator for release of funds as specified in subsection (g) or (h) ~~of this Section~~, the Agency must instruct the trustee to release to the owner or operator such funds as the Agency specifies in writing.
- j) After beginning final plugging and abandonment, an owner and operator or any other person authorized to perform plugging and abandonment may request reimbursement for plugging and abandonment expenditures by submitting itemized bills to the Agency. Within 60 days after receiving bills for plugging and abandonment activities, the Agency must determine whether the plugging and abandonment expenditures are in accordance with the plan or otherwise justified, and if so, it must instruct the trustee to make reimbursement in such amounts as the Agency specifies in writing. If the Agency has reason to believe that the cost of plugging and abandonment will be significantly greater than the value of the trust fund, it may withhold reimbursement of such amounts as it deems prudent until it determines, in accordance with Section 704.222 that the owner or operator is no longer required to maintain financial assurance.
- k) The Agency must agree to termination of the trust when either of the following occurs:
 - 1) The owner or operator substitutes alternate financial assurance; or
 - 2) The Agency releases the owner or operator in accordance with Section 704.222.

BOARD NOTE: Derived from 40 CFR 144.63(a) (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.215 Surety Bond Guaranteeing Payment

- a) An owner or operator may satisfy the financial assurance requirement by obtaining a surety bond that conforms to the requirements of this Section and submitting the bond to the Agency with the application for a permit or for approval to operate under rule. The bond must be effective before the initial injection of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on Federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, “Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies;”, on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: <http://www.fms.treas.gov/c570/>.

- b) The wording of the surety bond must be as specified in Section 704.240.
- c) The owner or operator who uses a surety bond to satisfy the financial assurance requirement must also establish a standby trust fund. All payments made under the terms of the bond must be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in Section 704.214, except that the following limitations apply:
- 1) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and
 - 2) Until the standby trust fund is funded pursuant to this Section, the following are not required:
 - A) Payments into the trust fund as specified in Section 704.214;
 - B) Updating of Schedule A of the trust agreement to show current cost estimates;
 - C) Annual valuations as required by the trust agreement; and
 - D) Notices of non-payment as required by the trust agreement.
- d) The bond must guarantee that the owner or operator will fulfill the following requirements:
- 1) It will fund the standby trust fund in an amount equal to the penal sum of the bond before the beginning of plugging and abandonment of the injection well;

- 2) It will fund the standby trust fund in an amount equal to the penal sum within 15 days after an order to begin plugging and abandonment is issued by the Board or a U.S. district court or other court of competent jurisdiction; or
 - 3) It will provide alternate financial assurance, and obtain the Agency's written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.
- e) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.
 - f) The penal sum of the bond must be in amount at least equal to the current cost estimate, except as provided in Section 704.220.
 - g) Whenever the current cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance to cover the increase. Whenever the current cost estimate decreases, the penal sum may be reduced to the amount of the current cost estimate following written approval by the Agency.
 - h) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during 120 days beginning on the date of the receipt of the notice of cancellation by both owner or operator and the Agency as evidenced by the returned receipts.
 - i) The owner or operator may cancel the bond if the Agency has given prior written consent based on receipt of evidence of alternate financial assurance.

BOARD NOTE: Derived from 40 CFR 144.63(b) ~~(2017)~~-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.216 Surety Bond Guaranteeing Performance

- a) An owner or operator may satisfy the financial assurance requirement by obtaining a surety bond that conforms to the requirements of this Section and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency with the permit application or for approval to operate under rule. The bond must be effective before injection of hazardous waste is started. The surety company issuing the bond must, at a minimum, be

among those listed as acceptable sureties on Federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, “Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies;”, on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: <http://www.fms.treas.gov/c570/>.

- b) The wording of the surety bond must be as specified in Section 704.240.
- c) The owner or operator who uses a surety bond to satisfy the financial assurance requirement must also establish a standby trust fund. All payments made under the terms of the bond must be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in Section 704.214, except that the following limitations apply:
 - 1) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and
 - 2) Until the standby trust fund is funded pursuant to this Section, the following are not required:
 - A) Payments into the trust fund as specified in Section 704.214;
 - B) Updating of Schedule A of the trust agreement to show current cost estimates;
 - C) Annual valuations as required by the trust agreement; and
 - D) Notices of non-payment as required by the trust agreement.
- d) The bond must guarantee that the owner or operator will fulfill the following requirements:
 - 1) It will perform plugging and abandonment in accordance with the plan and other requirements of the permit for the injection well whenever required to do so; or
 - 2) It will provide alternate financial assurance, and obtain the Agency’s written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.

- e) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. Following a determination that the owner or operator has failed to perform plugging and abandonment in accordance with the plan and other permit requirements when required to do so, under terms of the bond the surety must perform plugging and abandonment as guaranteed by the bond or must deposit the amount of the penal sum into the standby trust fund.
- f) The penal sum of the bond must be in an amount at least equal to the current cost estimate.
- g) Whenever the current cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance. Whenever the current cost estimate decreases, the penal sum may be reduced to the amount of the current cost estimate following written approval by the Agency.
- h) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during 120 days beginning on the date of the receipt of the notice of cancellation by both owner or operator and the Agency as evidenced by the returned receipts.
- i) The owner or operator may cancel the bond if the Agency has given prior written consent. The Agency must provide such written content when either of the following occurs:
 - 1) An owner or operator substitute alternate financial assurance; or
 - 2) The Agency releases the owner or operator in accordance with Section 704.222.
- j) The surety will not be liable for deficiencies in the performance of plugging and abandonment by the owner or operator after the Agency releases the owner or operator in accordance with Section 704.222.

BOARD NOTE: Derived from 40 CFR 144.63(c) (2017) ~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.218 Plugging and Abandonment Insurance

- a) An owner or operator may satisfy the financial assurance requirement by obtaining insurance that conforms to this Section and submitting a certificate of

such insurance to the Agency. An owner or operator of a new injection well must submit the certificate of insurance to the Agency with the permit application or for approval operate under rule. The insurance must be effective before injection starts. At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more States.

- b) The wording of the certificate of insurance must be as specified in Section 704.240.
- c) The policy must be issued for a face amount at least equal to the current cost estimate, except as provided in Section 704.220. The term “face amount” means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer’s future liability will be lowered by the amount of the payments.
- d) The policy must guarantee that funds will be available whenever final plugging and abandonment occurs. The policy must also guarantee that once plugging and abandonment begins, the insurer will be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Agency to such party or parties as the Agency specifies.
- e) After beginning plugging and abandonment, an owner or operator or any other person authorized to perform plugging and abandonment may request reimbursement for plugging and abandonment expenditures by submitting itemized bills to the Agency. Within 60 days after receiving bills for plugging and abandonment activities, the Agency must determine whether the plugging and abandonment expenditures are in accordance with the plan or otherwise justified, and if so, it must instruct the insurer to make reimbursement in such amounts as the Agency specifies in writing. If the Agency has reason to believe that the cost of plugging and abandonment will be significantly greater than the face amount of the policy, it may withhold reimbursement of such amounts as it deems prudent until it determines, in accordance with Section 704.222, that the owner or operator is no longer required to maintain financial assurance for plugging and abandonment of the injection well.
- f) The owner or operator must maintain the policy in full force and effect until the Agency consents to termination of the policy by the owner or operator, as specified in subsection (j) ~~of this Section~~. Failure to pay the premium, without substitution of alternate financial assurance, will constitute a significant violation of these regulations, warranting such remedy as the Agency deems necessary. Such violation will be deemed to begin upon receipt by the Agency of a notice of future cancellation, termination or failure to renew due to non-payment of the premium, rather than upon the date of expiration.

- g) Each policy must contain provisions allowing assignment to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.
- h) The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If there is a failure to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the Agency. Cancellation, termination, or failure to renew may not occur, however, during 120 days beginning with the date of receipt of the notice by both the Agency and the owner or operator, as evidenced by the return of receipts. Cancellation, termination, or failure to renew may not occur and the policy will remain in full force and effect in the event that on or before the date of expiration any of the following occurs:
 - 1) The Agency deems the injection well abandoned;
 - 2) The permit is terminated or revoked or a new permit is denied;
 - 3) Plugging and abandonment is ordered by the Board, a U.S. district court, or any other court of competent jurisdiction;
 - 4) The owner or operator is named as debtor in a voluntary or involuntary proceeding under 11 USC (Bankruptcy); or
 - 5) The premium due is paid.
- i) Whenever the current cost estimate increases to an amount greater than the face amount of the policy, the owner or operator, within 60 days after the increase, must either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance to cover the increase. Whenever the current cost estimate decreases, the face amount may be reduced to the amount of the current cost estimate following written approval by the Agency.
- j) The Agency must give written consent to the owner or operator that the owner or operator may terminate the insurance policy when either of the following occurs:
 - 1) An owner or operator substitutes alternate financial assurance; or
 - 2) The Agency releases the owner or operator in accordance with Section 704.222.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.219 Financial Test and Corporate Guarantee

- a) An owner or operator may satisfy the financial assurance requirement by demonstrating that the owner or operator passes a financial test as specified in this Section. To pass this test the owner or operator must meet the criteria of either subsection (a)(1) or (a)(2) ~~of this Section~~:
- 1) The owner or operator must have each of the following:
 - A) Two of the following three ratios: A ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;
 - B) Net working capital and tangible net worth each at least six times the sum of the current cost estimate;
 - C) A tangible net worth of at least \$10 million; and
 - D) Assets in the United States amounting to at least 90 percent of the owner or operator's total assets or at least six times the sum of the current cost estimate.
 - 2) The owner or operator must have each of the following:
 - A) A current rating for the owner or operator's most recent bond issuance of AAA, AA, A, or BBB, as issued by Standard and Poor's, or Aaa, Aa, A, or Baa, as issued by Moody's;
 - B) A tangible net worth at least six times the sum of the current cost estimate;
 - C) A tangible net worth of at least \$10 million; and
 - D) Assets located in the United States amounting to at least 90 percent of the owner or operator's total assets or at least six times the sum of the current cost estimates.
- b) The phrase "current cost estimate" as used in subsection (a) ~~of this Section~~ refers to the cost estimate required to be shown in paragraphs 1 through 4 of the letter from the owner's or operator's chief financial officer, as specified in Section 704.240.

- c) To demonstrate that the owner or operator meets this test, the owner or operator must submit the following items to the Agency:
- 1) A letter signed by the owner's or operator's chief financial officer and worded as specified in Section 704.240;
 - 2) A copy of the independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and
 - 3) A special report from the owner's or operator's independent certified public accountant to the owner or operator stating that the following are true:
 - A) The accountant has compared the data that the letter from the chief financial officer specifies as having been derived from the independently audited, year-end financial statements for the latest fiscal year with the amounts in such financial statements; and
 - B) In connection with that procedure, no matters came to the accountant's attention that caused the accountant to believe that the specified data should be adjusted.
- d) An owner or operator of a new injection well must submit the items specified in subsection (c) ~~of this Section~~ to the Agency within 90 days after the close of each succeeding fiscal year. This information must consist of all three items specified in subsection (c) ~~of this Section~~.
- e) After the initial submission of items specified in subsection (c) ~~of this Section~~, the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must consist of all three items specified in subsection (c) ~~of this Section~~.
- f) If the owner or operator no longer meets the requirements of subsection (a) ~~of this Section~~, the owner or operator must send notice to the Agency intent to establish alternate financial assurance. The notice must be sent by certified mail within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator must provide the alternate financial assurance within 120 days after the end of such fiscal year.
- g) The Agency may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subsection (a) ~~of this Section~~, require reports of financial condition at any time from the owner or operator in addition to those specified in subsection (c) ~~of this Section~~. If the Agency finds, on the basis of such reports or other information, that the owner or operator no longer meets the

requirements of subsection (a), the owner or operator must provide alternate financial assurance within 30 days after notification of such a finding.

- h) The Agency may disallow use of this test on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's financial statements (see subsection (c)(2) ~~of this Section~~). An adverse opinion or disclaimer of opinion will be cause for disallowance. The Agency must evaluate other qualifications on an individual basis. The owner or operator must provide alternate financial assurance within 30 days after notification of the disallowance.
- i) The owner or operator is no longer required to submit the items specified in subsection (c) ~~of this Section~~ when either of the following occurs:
 - 1) An owner or operator substitutes alternate financial assurance; or
 - 2) The Agency releases the owner or operator in accordance with Section 704.222.
- j) An owner or operator may meet the requirements of this Section by obtaining a written guarantee, hereafter referred to as "corporate guarantee." The guarantor must be the parent corporation of the owner or operator. The guarantor must meet the requirements for owners or operators in subsections (a) through (h) ~~of this Section~~ and must comply with the terms of the corporate guarantee. The wording of the corporate guarantee must be as specified in Section 704.240. The corporate guarantee must accompany the items sent to the Agency, as specified in subsection (c) ~~of this Section~~. The terms of the corporate guarantee must provide that the following limitations apply:
 - 1) If the owner or operator fails to perform plugging and abandonment of the injection well covered by the corporate guarantee in accordance with the plan and other permit requirements whenever required to do so, the guarantor must do so or establish a trust fund, as specified in Section 704.214 in the name of the owner or operator.
 - 2) The corporate guarantee must remain in force unless the guarantor sends notice of cancellation by certified mail to the owner or operator and the Agency, as evidenced by the return receipts. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.
 - 3) If the owner or operator fails to provide alternate financial assurance and obtain the written approval of such alternate assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the corporate guarantee from the guarantor,

the guarantor must provide such alternative financial assurance in the name of the owner or operator.

BOARD NOTE: Derived from 40 CFR 144.63(f) (2017)~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART H: ISSUED PERMITS

Section 704.260 Transfer

- a) Transfer by Modification~~modification~~. Except as provided in subsection (b)~~of this Section~~, a permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or reissued (under Sections 704.261 through 704.264) to identify the new permittee and incorporate such other requirements as may be necessary under the appropriate Act. The new owner or operator to whom the permit is transferred must comply with all the terms and conditions specified in such permit.
- b) Automatic transfers. As an alternative to transfers under subsection (a)~~of this Section~~, any UIC permit for a well not injecting hazardous or injecting carbon dioxide for geologic sequestration waste may be automatically transferred to a new permittee if each of the following conditions are fulfilled:
- 1) The current permittee notifies the Agency at least 30 days in advance of the proposed transfer date in subsection (b)(2)~~of this Section~~;
 - 2) The notice includes a written agreement between the existing and new permittees containing a specific date for transfer of permit responsibility, coverage and liability between them and the notice demonstrates that the financial responsibility requirements of Section 704.189 will be met by the new permittee and that the new permittee agrees to comply with all the terms and conditions specified in the permit to be transferred under this subsection (b)~~of this Section~~; and
 - 3) The Agency does not notify the existing permittee and the proposed new permittee of its intent to modify or reissue the permit. A modification under this subsection (b) may also be a minor modification under Section 704.264. If this notice is not received, the transfer is effective on the date specified in the agreement mentioned in subsection (b)(2)~~of this Section~~.

BOARD NOTE: Derived from 40 CFR 144.38 (2017)~~(2011)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.263 Well Siting

Suitability of the well location must not be considered at the time of permit modification unless new information or standards indicate that a threat to human health or the environment exists that was unknown at the time of permit issuance or unless required under the Act ~~[415 ILCS 5]~~. However, certain modifications may require site location suitability approval pursuant to Section 39.2 of the Act ~~[415 ILCS 5/39.2]~~.

BOARD NOTE: Derived from 40 CFR 144.39(c) ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART I: REQUIREMENTS FOR CLASS V INJECTION WELLS

Section 704.279 General

This Subpart I sets forth the requirements applicable to the owner or operator of a Class V injection well. Additional requirements listed elsewhere in this Part may also apply. Where they may apply, those other requirements are referenced rather than repeated in this Subpart I. The requirements described in this Subpart I and elsewhere in this Part are intended to protect USDWs and are part of the UIC program established under Section 13(c) of the Act ~~[415 ILCS 5/13(c)]~~.

BOARD NOTE: Derived from 40 CFR 144.79 ~~(2017)-(2005)~~. USEPA wrote corresponding subpart G of 40 CFR 144 in a question-and-answer format to make it easier to understand the regulatory requirements. The Board has abandoned that format in favor of a more traditional approach of using clear statements of the requirements and their applicability.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.282 Protection of Underground Sources of Drinking Water

This Subpart I requires that an owner or operator of a Class V injection well must not allow movement of fluid into USDWs that might cause endangerment of the USDW, that the owner or operator must comply with the UIC requirements in this Part and 35 Ill. Adm. Code 702 and 730, that the owner or operator must comply with any other measures required by the State or USEPA to protect USDWs, and that the owner or operator must properly close its well when the owner or operator is through using it. The owner or operator also must submit basic information about its well, as described in Section 704.283.

- a) Prohibition of Fluid Movement ~~fluid movement.~~
 - 1) As described in Section 704.122(a), an owner's or operator's injection activity cannot allow the movement of fluid containing any contaminant into USDWs if the presence of that contaminant may cause a violation of the primary drinking water standards under 35 Ill. Adm. Code 611, may

cause a violation of other health-based standards, or may otherwise adversely affect the health of persons. This prohibition applies to the owner's or operator's well construction, operation, maintenance, conversion, plugging, closure, or any other injection activity.

- 2) If the Agency learns that an owner's or operator's injection activity may endanger a USDW, the Agency may require the owner or operator to close its well, require the owner or operator to get a permit, or require other actions listed in Section 704.122(c), (d), or (e).
- b) Closure ~~Requirements~~ requirements. An owner or operator must close the well in a manner that complies with the above prohibition of fluid movement. Also, the owner or operator must dispose of or otherwise manage any soil, gravel, sludge, liquids, or other materials removed from or adjacent to its well in accordance with all applicable federal, State, and local regulations and requirements.
 - c) Other ~~Requirements~~ requirements in this Part and 35 Ill. Adm. Code 702 and 730. Beyond this Subpart I, the owner and operator are subject to other UIC program requirements in this Part and 35 Ill. Adm. Code 702 and 730. While most of the relevant requirements are repeated or referenced in this Subpart I for convenience, the owner or operator needs to read all of this Part and 35 Ill. Adm. Code 702 and 730 to fully understand the entire UIC program.
 - d) Other State ~~Requirements~~ requirements. This Part and 35 Ill. Adm. Code 702 and 730 define minimum federally-derived UIC requirements. The Agency has the flexibility to establish additional or more stringent requirements based on the authorities in this Part, 35 Ill. Adm. Code 702 and 730, and the Act ~~[415 ILCS 5]~~, if such additional requirements are determined to be necessary to protect USDWs. The owner and operator must comply with any such additional requirements. The owner or operator should contact the Agency to learn more.

BOARD NOTE: Derived from 40 CFR 144.82 ~~(2017)-(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.283 Notification of a Class V Injection Well

The owner or operator of a Class V injection well needs to provide basic "inventory information" about its well to the Agency, if the owner or operator has not done so already. The owner or operator also needs to provide any additional information that the Agency requests in accordance with the provisions of the UIC regulations.

- a) Inventory ~~Requirements~~ requirements. Unless the owner or operator knows it has already satisfied the inventory requirements in Section 704.128 that were in effect prior to the issuance of this Subpart I, the owner or operator must give the Agency certain information about itself and its injection operation.

BOARD NOTE: In the corresponding note to 40 CFR 144.83(a), USEPA states that this information is requested on national form "Inventory of Injection Wells," USEPA Form 7520-16, incorporated by reference in 35 Ill. Adm. Code 720.111(a). Although USEPA Form 7520-16 is acceptable to USEPA, the Agency may develop alternative forms for use in this State.

- 1) The owner or operator of a new or existing Class V injection well must contact the Agency to determine what information it must submit and by when it must submit that information.
- 2) The following is the information that the owner or operator must submit:
 - A) No matter what type of Class V injection well is owned or operated, the owner or operator must submit at least the following information for each Class V injection well:
 - i) The facility name and location;
 - ii) The name and address of a legal contact person for the facility;
 - iii) The ownership of the facility;
 - iv) The nature and type of the injection well or wells; and
 - v) The operating status of the injection well or wells.
 - B) Illinois is designated a "Primacy State" by USEPA. Corresponding 40 CFR 144.83(a)(2)(ii) relates exclusively to "Direct Implementation" states, so the Board has omitted it. This statement maintains structural consistency with the federal regulations.
 - C) The owner or operator must provide a list of all wells it owns or operates, along with the following information for each well. (A single description of wells at a single facility with substantially the same characteristics is acceptable.)
 - i) The location of each well or project given by Township, Range, Section, and Quarter-Section, according to the U.S. Land Survey System;
 - ii) The date of completion of each well;
 - iii) The identification and depth of the underground formations into which each well is injecting;

- iv) The total depth of each well;
 - v) A construction narrative and schematic (both plan view and cross-sectional drawings);
 - vi) The nature of the injected fluids;
 - vii) The average and maximum injection pressure at the wellhead;
 - viii) The average and maximum injection rate; and
 - ix) The date of the last inspection.
- 3) The owner and operator is responsible for knowing about, understanding, and complying with these inventory requirements.
- b) Illinois is designated a “Primacy State” by USEPA. Corresponding 40 CFR 144.83(b) relates exclusively to “Direct Implementation” states, so the Board has omitted it. This statement maintains structural consistency with the federal regulations.

BOARD NOTE: Derived from 40 CFR 144.83 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.284 Permit Requirements

No permit is required for a Class V injection well, unless the owner or operator falls within an exception described in subsection (b) ~~of this Section~~.

- a) General ~~Authorization~~ authorization by Rule rule. With certain exceptions listed in subsection (b) ~~of this Section~~, an owner’s or operator’s Class V injection activity is “authorized by rule,” meaning that the owner and operator has to comply with all the requirements of this Subpart I and the rest of this Part and 35 Ill. Adm. Code 702 and 730, but the owner or operator does not need to get an individual permit. Well authorization expires once the owner or operator has properly closed its well, as described in Section 704.282(b).
- b) Circumstances in Which Permits ~~which permits~~ or Other Actions Are Required ~~other actions are required~~. If an owner or operator fits into one of the categories listed below, its Class V injection well is no longer authorized by rule. This means that the owner or operator has to either get a permit or close its injection well. The owner or operator can find out whether its well falls into one of these categories by contacting the Agency. Subparts D and H ~~of this Part~~ tell an owner or operator how to apply for a permit and describe other aspects of the permitting

process. Subpart C of 35 Ill. Adm. Code 702 and Subpart E of this Part outline some of the requirements that apply to the owner or operator if it gets a permit. An owner or operator must either obtain a permit or close its injection well if any of the following is true:

- 1) The owner or operator fails to comply with the prohibition against fluid movement in Section 704.122(a) and described in Section 704.282(a) (in which case, the owner or operator must get a permit, close its well, or comply with other conditions determined by the Agency);
- 2) The Class V injection well is a large-capacity cesspool (in which case, the owner or operator must close its well as specified in the additional requirements set forth in Section 704.288) or the Class V injection well is a motor vehicle waste disposal well in a groundwater protection area or a sensitive groundwater area (in which case, the owner or operator must either close its well or get a permit, as specified in the additional requirements set forth in Section 704.288). New motor vehicle waste disposal wells and new cesspools are prohibited;

BOARD NOTE: A new motor vehicle waste disposal well or a new cesspool is one for which construction had not commenced prior to April 5, 2000. See 40 CFR 144.84(a)(2).

- 3) The owner or operator is specifically required by the Agency to get a permit (in which case, the authorization by rule expires on the effective date of the permit issued, or the owner or operator is prohibited from injecting into its well upon the occurrence of either of the following:
 - A) The failure of the owner and operator to submit a permit application in a timely manner, as specified in a notice from the Agency; or
 - B) The effective date of a permit denial; or
- 4) The owner or operator has failed to submit inventory information to the Agency, as described in Section 704.283(a) (in which case, the owner and operator is prohibited from injecting into the well until it complies with the inventory requirements).
- 5) Illinois is designated a “Primacy State” by USEPA. Corresponding 40 CFR 144.84(b)(5) relates exclusively to “Direct Implementation” states, so the Board has omitted it. This statement maintains structural consistency with the federal regulations.

BOARD NOTE: Derived from 40 CFR 144.84 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.285 Applicability of the Additional Requirements

- a) ~~Large-Capacity Cesspools~~~~Large-capacity cesspools~~. The additional requirements set forth in Section 704.288 apply to a new and existing large-capacity cesspool. If the owner or operator is using a septic system for these type of wastes, the owner or operator is not subject to the additional requirements in Section 704.288.
- b) ~~Motor Vehicle Waste Disposal Wells Existing~~~~vehicle waste disposal wells existing~~ on April 5, 2000. If the owner or operator has a Class V motor vehicle waste disposal well, the additional requirements in Section 704.288 apply to that owner or operator if the well is located in a ground water protection area or other sensitive ground water area that is identified by the Agency, the Board, or USEPA Region 5.

BOARD NOTE: An existing motor vehicle waste disposal well is one for which construction had commenced prior to April 5, 2000. See 40 CFR 144.83(a)(1)(i) and (a)(1)(ii), as added at 64 Fed. Reg. 68568 (December 7, 1999). Corresponding 40 CFR 144.85(b) provides that the additional requirements apply Statewide if the State or the USEPA Region fails to identify sensitive groundwater areas. The Board has not included this Statewide applicability provision by virtue of 14.1 through 14.6 and Sections 17.1 through 17.4 of the Act [~~415 ILCS 5/14.1-14.6 and 17.1-17.4~~], Section 8 of the Illinois Groundwater Protection Act [415 ILCS 55/8], and 35 Ill. Adm. Code 615 through 620.

- c) New Motor Vehicle Waste Disposal Wells. The additional requirements in Section 704.288 apply to a new motor vehicle waste disposal well.

BOARD NOTE: A new motor vehicle waste disposal well is one for which construction had not commenced prior to April 5, 2000. See 40 CFR 144.85(c) (2005).

BOARD NOTE: Derived from 40 CFR 144.85 ~~(2017)~~~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.286 Definitions

“State drinking water source assessment and protection program” is a new approach to protecting drinking water sources, specified in section 1453 of the 1996 Amendments to the Safe Drinking Water Act (42 USC 300j-13).

BOARD NOTE: Under the federal requirements, states must prepare and submit for USEPA approval a program that sets out how each state must conduct local assessments, including the following: delineating the boundaries of areas providing source waters for public water systems; identifying significant potential

sources of contaminants in such areas; and determining the susceptibility of public water systems in the delineated areas to the inventoried sources of contamination. The Illinois Groundwater Protection Act ~~[415 ILCS 55]~~ and the regulations at 35 Ill. Adm. Code 620 adopted pursuant to that law and Sections 14.1 through 14.6 and 17.1 through 17.4 of the Environmental Protection Act ~~[415 ILCS 14.1-14.6 and 17.1-17.4]~~ and the regulations at 35 Ill. Adm. Code 615 through 617 adopted under those provisions are major segments of the required Illinois program.

“Complete local source water assessment for groundwater protection areas.”. When USEPA has approved a state’s drinking water source assessment and protection program, the state must begin to conduct local assessments for each public water system in that state. For the purposes of this Subpart I, local assessments for community water systems and non-transient non-community systems are complete when the four following requirements are met:

The State must delineate the boundaries of the assessment area for community and non-transient non-community water systems, as such are defined in 35 Ill. Adm. Code 611.101;

The State must identify significant potential sources of contamination in these delineated areas;

The State must determine the susceptibility of community and non-transient non-community water systems in the delineated area to such contaminants; and

The Agency must make the completed assessments available to the public.

BOARD NOTE: The Agency administers the “Illinois Source Water Assessment and Protection Program,” which is intended to comply with the federal source water assessment requirements of SDWA Section 1453 (42 USC 300j-13).

“Groundwater protection area” is a geographic area near or surrounding a community or non-transient non-community water system, as defined in 35 Ill. Adm. Code 611.101, that uses groundwater as a source of drinking water. For the purposes of this Subpart I, the Board considers a “setback zone,” as defined in Section ~~3.450 3.61~~ of the Act ~~[415 ILCS 5/3.61]~~ and regulated pursuant to Sections 14.1 through 14.6 of the Act ~~[415 ILCS 5/14.1-14.6]~~, to be a “groundwater protection area,” as intended by corresponding 40 CFR 144.86(c). (See 35 Ill. Adm. Code 615 and 616.) These areas receive priority for the protection of drinking water supplies and federal law requires the State to delineate and assess these areas under section 1453 of the federal Safe Drinking Water Act, 42 USC 300j-13. The additional requirements in Section 704.288 apply to an owner or operator if its Class V motor vehicle waste disposal well is

in a groundwater protection area for either a community water system or a non-transient non-community water system.

BOARD NOTE: USEPA stated in corresponding 40 CFR 144.86(c) that in many states these areas will be the same as wellhead protection areas delineated as described in section 1428 of the federal SDWA (42 USC 300h-7).

“Community water system,” as defined in 35 Ill. Adm. Code 611.101, is a public water system that serves at least 15 service connections used by year-round residents or which regularly serves at least 25 year-round residents.

“Non-transient, non-community water system,” as defined in 35 Ill. Adm. Code 611.101, is a water system that is not a community water system and which regularly serves at least 25 of the same people over six months a year. These may include systems that provide water to schools, day care centers, government or military installations, manufacturers, hospitals or nursing homes, office buildings, and other facilities.

“Delineation.” Once the State’s drinking water source assessment and protection program is approved by USEPA, the State must begin delineating its local assessment areas. “Delineation” is the first step in the assessment process in which the boundaries of groundwater protection areas are identified.

“Other sensitive groundwater areas.” The State may also identify other areas in the State in addition to groundwater protection areas that are critical to protecting USDWs from contamination. For the purposes of this Subpart I, the Board considers a “regulated recharge area,” as defined in Section ~~3.390 3.67~~ of the Act ~~[415 ILCS 5/3.67]~~ and regulated pursuant to Sections 17.1 through 17.4 of the Act ~~[415 ILCS 5/17.1-17.4]~~, to be an “other sensitive groundwater area,” as intended by corresponding 40 CFR 144.86(g). (See 35 Ill. Adm. Code 615 through 617.) These other sensitive groundwater areas may include areas such as areas overlying sole-source aquifers; highly productive aquifers supplying private wells; continuous and highly productive aquifers at points distant from public water supply wells; areas where water supply aquifers are recharged; karst aquifers that discharge to surface reservoirs serving as public water supplies; vulnerable or sensitive hydrogeologic settings, such as glacial outwash deposits, eolian sands, and fractured volcanic rock; and areas of special concern selected based on a combination of factors, such as hydrogeologic sensitivity, depth to groundwater, significance as a drinking water source, and prevailing land-use practices.

BOARD NOTE: Derived from 40 CFR 144.86 (2017)~~(2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.287 Location in a Groundwater Protection Area or Another Sensitive Area

- a) ~~The owner or operator of A person is subject to Section 704.288 if the person owns or operates an existing motor vehicle waste disposal well and that person is located in a groundwater protection area or another sensitive groundwater area is subject to Section 704.288. If the State fails to identify these areas within the federally specified time frames, the additional requirements of Section 704.288 must apply to all existing motor vehicle waste disposal wells within this State.~~

BOARD NOTE: Corresponding 40 CFR 144.87(a) provides that the “new requirements” apply statewide if the State or the USEPA Region fails to identify sensitive groundwater areas. The Board has interpreted “new requirements” as synonymous with “additional requirements” elsewhere in this Subpart I. Sections 14.1 through 14.6 and 17.1 through 17.4 of the Act ~~[415 ILCS 5/14.1-14.6 and 17.1-17.4]~~ and 35 Ill. Adm. Code 615 through 617 designate protected groundwater resources and allow the designation of other sensitive areas for protection. Further, the Illinois Groundwater Protection Act ~~[415 ILCS 55]~~, and the regulations adopted as 35 Ill. Adm. Code 620 under that statute, protect the quality of all groundwater resources in Illinois.

- b) ~~This subsection (b) corresponds with 40 CFR 144.87(b), which set forth now-past compliance deadlines for identifying groundwater protection areas. This statement maintains structural consistency with the federal rules. Groundwater protection areas. Many segments of corresponding 40 CFR 144.87(b) set forth requirements applicable to the State only. Other requirements apply to the regulated community contingent on the regulatory status of the Illinois groundwater protection program. The Board has codified the requirements applicable to the State in this subsection (b) for the purpose of informing the regulated public and clarifying the requirements on the regulated community.~~

~~1) For the purpose of this Subpart I, USEPA requires States to complete all local source water assessments for groundwater protection areas by January 1, 2004. Once a local assessment for a groundwater protection area is complete every existing motor vehicle waste disposal well owner in that groundwater protection area has one year to close the well or receive a permit. If the State fails to complete all local assessments for groundwater protection areas by January 1, 2004, the following may occur:~~

- ~~A) The new requirements in this Subpart I apply to all existing motor vehicle waste disposal wells in the State, and the owner or operator of a motor vehicle waste disposal well located outside of the areas of the completed area assessments for groundwater protection areas must have closed its well or obtained a permit by January 1, 2005.~~

~~B) — USEPA may have granted a state an extension for up to one year from the January 1, 2004 deadline if the state was making reasonable progress toward completing the source water assessments for groundwater protection areas. States must have applied for the extension by June 1, 2003. If a state failed to complete the assessments for the remaining groundwater protection areas by the extended date, the rule requirements apply to all motor vehicle waste disposal wells in the state, and the owner or operator of a motor vehicle waste disposal well located outside of groundwater protection areas with completed assessments must have closed its well or received a permit by January 1, 2006.~~

~~2) — The Agency must extend the compliance deadline for specific motor vehicle waste disposal wells for up to one year if it determines that the most efficient compliance option for the well is connection to a sanitary sewer or installation of new treatment technology and the extension is necessary to implement the compliance option.~~

~~BOARD NOTE: Any Agency determination of the most efficient compliance option is subject to Board review pursuant to Section 40 of the Act [415 ILCS 5/40].~~

c) ~~This subsection (c) corresponds with 40 CFR 144.87(c), which set forth now-past compliance deadlines for identifying other sensitive groundwater areas. This statement maintains structural consistency with the federal rules. Other sensitive groundwater areas. The owner or operator of an existing motor vehicle waste disposal well within another sensitive groundwater area has until January 1, 2007 to receive a permit or close the well. If the State failed to identify these additional sensitive groundwater areas by January 1, 2004, the additional requirements of Section 704.288 apply to all motor vehicle waste disposal wells in the State effective January 1, 2007, unless they are subject to a different compliance date pursuant to subsection (b) of this Section. If USEPA has granted the State an extension of the time to delineate sensitive groundwater areas, the owner or operator of an existing motor vehicle waste disposal well within a sensitive groundwater area has until January 1, 2008 to close the well or receive a permit, unless the owner or operator is subject to a different compliance date pursuant to subsection (b) of this Section. If the State has been granted an extension and fails to delineate sensitive areas by the extended date, an owner or operator has until January 1, 2008 to close the well or receive a permit, unless it is subject to a different compliance date pursuant to subsection (b) of this Section.~~

~~BOARD NOTE: Corresponding 40 CFR 144.87(c) provides that the State had until January 1, 2004 to identify sensitive groundwater areas. It also provides that USEPA may extend that deadline for up to an additional year if the State is making reasonable progress towards identifying such areas and the State had~~

applied for the extension by June 1, 2003. The Board has not included these provisions relating to deadlines for State action because they impose requirements on the State, rather than on regulated entities. Further, the corresponding federal rule provides that the “new requirements” apply statewide if the State or the USEPA Region fails to identify sensitive groundwater areas and that “the rule requirements” apply in the event of an extension granted by USEPA and the State fails to delineate sensitive areas. The Board has interpreted “new requirements” and “rule requirements” as synonymous with “additional requirements” as used elsewhere in this Subpart I. Sections 17.1 through 17.4 of the Act [415 ILCS 5/17.1-17.4], Section 8 of the Illinois Groundwater Protection Act [415 ILCS 55/8], and 35 Ill. Adm. Code 615 through 620 protect groundwater resources and allow the designation of sensitive areas.

- d) Finding Out If ~~out if~~ a well is ~~is~~ in a Groundwater Protection Area ~~groundwater protection area~~ or Sensitive Groundwater Area ~~sensitive groundwater area~~. The Agency must make that listing available for public inspection and copying upon request. Any interested person may contact the Illinois Environmental Protection Agency, Bureau of Water, Division of Public Water Supplies at 1021 North Grand Ave. East, P.O. Box 19276, Springfield, Illinois 62794-9276 (217-785-8653) to obtain information on the listing or to determine if any Class V injection well is situated in a groundwater protection area or another sensitive groundwater area.
- e) Changes in the Status ~~status~~ of the State Drinking Water Source Assessment ~~drinking water source assessment~~ and Protection Program ~~protection program~~. If the State assesses a groundwater protection area for groundwater supplying a new community water system or a new non-transient non-community water system after January 1, 2004, or if the State re-delineates the boundaries of a previously delineated groundwater protection area to include an additional area, the additional regulations of Section 704.288 would apply to any motor vehicle waste disposal well in such an area. The additional regulations apply to the affected Class V injection well one year after the State completes the local assessment for the groundwater protection area for the new drinking water system or the new re-delineated area. The Agency must extend this deadline for up to one year if it determines that the most efficient compliance option for the well is connection to a sanitary sewer or installation of new treatment technology and the extension is necessary to implement the compliance option.

BOARD NOTE: Any Agency determination of the most efficient compliance option is subject to Board review pursuant to Section 40 of the Act [415 ILCS 5/40].

- f) This subsection (f) corresponds with 40 CFR 144.87(f), which set forth now-past compliance deadlines in the event of a failure to identify other sensitive groundwater areas. This statement maintains structural consistency with the

~~federal rules. If the State elects not to delineate the additional sensitive groundwater areas, the additional regulations of Section 704.288 apply to all Class V injection wells in the State, regardless of the location, on January 1, 2007, or January 1, 2008 if an extension has been granted as provided in subsection (c) of this Section, except for wells in groundwater protection areas that are subject to different compliance deadlines explained in subsection (b) of this Section.~~

- g) ~~Application of Requirements Outside requirements outside of groundwater Protection Areas protection areas and Sensitive Groundwater Areas sensitive groundwater areas.~~ The Agency must apply the additional requirements in Section 704.288 to an owner or operator, even if the owner’s or operator’s well is not located in the areas listed in subsection (a) ~~of this Section~~, if the Agency determines that the application of those additional requirements is necessary to protect human health and the environment.

BOARD NOTE: Any Agency determination to apply the additional requirements of Section 704.288 is subject to Board review pursuant to Section 40 of the Act [415 ILCS 5/40]. The Board has omitted certain segments of corresponding 40 CFR 144.87 that encouraged State actions, since those segments did not impose requirements on the regulated community.

BOARD NOTE: Derived from 40 CFR 144.87 (2017)-(2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.288 Additional Requirements

Additional requirements are as follows:

- a) Additional Requirements for Large-Capacity Cesspools Statewide. See Section 704.285 to determine the applicability of these additional requirements. Large-capacity cesspools are prohibited.

1) ~~If the cesspool is existing (operational or under construction by April 5, 2000), the following requirements apply:~~

A) ~~The owner or operator must have closed the well by April 5, 2005.~~

B) ~~The owner or operator must have notified the Agency of its intent to close the well at least 30 days prior to closure.~~

BOARD NOTE: ~~In the corresponding note to 40 CFR 144.83(a), USEPA states that this information is requested on the federal form entitled “Preclosure Notification for Closure of Injection Wells.” Although the form “Preclosure Notification for Closure of~~

~~Injection Wells” is acceptable to USEPA, the Agency may develop alternative forms for use in this State.~~

- ~~2) If the cesspool is new or converted (construction not started before April 5, 2000) it is prohibited.~~

~~BOARD NOTE: Corresponding 40 CFR 144.88(b)(2) sets forth a federal effective date of April 5, 2000 for the prohibition.~~

- b) Additional Requirements for Motor Vehicle Waste Disposal Wells. See Section 704.285 to determine the applicability of these additional requirements.
- 1) If the motor vehicle waste disposal well is existing (operational or under construction by April 5, 2000) the following applies:
- A) If the well is in a groundwater protection area, the owner or operator must close the well or obtain a permit within one year after the completion of the local source water assessment; the Agency must extend the closure deadline, but not the permit application deadline, for up to one year if it determines that the most efficient compliance option is connection to a sanitary sewer or installation of new treatment technology and the extension is necessary to implement the compliance option;
 - B) If the well is in an other sensitive groundwater area, the owner or operator must immediately close the well or obtain a permit. ~~The by January 1, 2007;~~ the Agency may extend the closure deadline, but not the permit application deadline, for up to one year if it determines that the most efficient compliance option is connection to a sanitary sewer or installation of new treatment technology and the extension is necessary to implement the compliance option;
 - C) If the owner or operator plans to seek a waiver from the ban and apply for a permit by the date the owner or operator submits its permit application, the owner or operator must meet the maximum contaminant levels (MCLs) for drinking water, set forth in 35 Ill. Adm. Code 611, at the point of injection while the permit application is under review, if the owner or operator chooses to keep operating the well;
 - D) If the owner or operator receives a permit, the owner or operator must comply with all permit conditions by the dates specified in its permit, if the owner or operator chooses to keep operating the well, including requirements to meet MCLs and other health-based standards at the point of injection, follow best management practices, and monitor the injectate and sludge quality;

- E) This subsection (b)(1)(E) corresponds with 40 CFR 144.88(b)(1)(v), which provides a contingency for compliance before dates now past. This statement maintains structural consistency with the federal rules.~~If the State has not completed all of its local assessments by January 1, 2004 (or by the extended date if the State has obtained an extension, as described in Section 704.287), and the well is outside an area with a completed assessment, the owner or operator must have closed the well or obtained a permit by January 1, 2005, unless the State obtained an extension, as described in Section 704.287(b), in which case the deadline was January 1, 2006; the Agency must have extended the closure deadline, but not the permit application deadline, for up to one year if it determined that the most efficient compliance option was connection to a sanitary sewer or installation of new treatment technology and the extension was necessary to implement the compliance option;~~
- F) This subsection (b)(1)(F) corresponds with 40 CFR 144.88(b)(1)(vi), which provides a contingency for compliance before dates now past. This statement maintains structural consistency with the federal rules.~~If the State had not delineated other sensitive groundwater areas by January 1, 2004, and the well is outside of an area with a completed assessment, the owner or operator must close the well or obtain a permit regardless of its location by January 1, 2007, unless the State obtains an extension as described in Section 704.287(c), in which case the deadline is January 2008; or~~
- G) If the owner or operator plans to close its well, the owner or operator must notify the Agency of its intent to close the well (this includes closing the well prior to conversion) by at least 30 days prior to closure.

BOARD NOTE: In the corresponding note to 40 CFR 144.83(a), USEPA states that this information is requested on the federal form entitled "Preclosure Notification for Closure of Injection Wells:". Although the form "Preclosure Notification for Closure of Injection Wells" is acceptable to USEPA, the Agency may develop alternative forms for use in this State.

BOARD NOTE: Any Agency determination of the most efficient compliance option under subsection (b)(1)(A), (b)(1)(B), or (b)(1)(E) ~~of this Section~~ is subject to Board review pursuant to Section 40 of the Act [415 ILCS 5/40].

- 2) If the motor vehicle waste disposal well is new or converted (construction not started before April 5, 2000) it is prohibited.

~~BOARD NOTE: Corresponding 40 CFR 144.88(b)(2) sets forth a federal effective date of April 5, 2000 for the prohibition.~~

BOARD NOTE: Derived from 40 CFR 144.88 (2017)-(2000).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 704.289 Closure of a Class V Injection Well

The following describes the requirements for closing or converting a Class V injection well:

- a) Closure:
 - 1) Prior to closing a Class V large-capacity cesspool or motor vehicle waste disposal well, the owner or operator must plug or otherwise close the well in a manner that complies with the prohibition of fluid movement set forth in Section 704.122 and summarized in Section 704.282(a). The owner or operator must also dispose of or otherwise manage any soil, gravel, sludge, liquids, or other materials removed from or adjacent to the well in accordance with all applicable federal, State, and local regulations and requirements, as described in Section 704.282(b).
 - 2) Closure does not mean that the owner or operator needs to cease operations at its facility, only that the owner or operator needs to close its well. A number of alternatives are available for disposing of waste fluids. Examples of alternatives that may be available to motor vehicle stations include the following: recycling and reusing wastewater as much as possible; collecting and recycling petroleum-based fluids, coolants, and battery acids drained from vehicles; washing parts in a self-contained, recirculating solvent sink, with spent solvents being recovered and replaced by the supplier; using absorbents to clean up minor leaks and spills, and placing the used materials in approved waste containers and disposing of them properly; using a wet vacuum or mop to pick up accumulated rain or snow melt, and if allowed, connecting floor drains to a municipal sewer system or holding tank, and if allowed, disposing of the holding tank contents through a publicly owned treatment works (POTW). The owner or operator should check with the POTW that it might use to see if the POTW would accept the owner's or operator's wastes. Alternatives that may be available to owners and operators of a large-capacity cesspool include the following: conversion to a septic system; connection to a sewer; or installation of an on-site treatment unit.

- b) Conversions. In limited cases, the Agency may authorize the conversion (reclassification) of a motor vehicle waste disposal well to another type of Class V well. Motor vehicle wells may only be converted if the two conditions of subsections (b)(1) and (b)(2) ~~of this Section~~ are fulfilled, subject to the conditions of subsection (b)(3) ~~of this Section~~:
- 1) All motor vehicle fluids are segregated by physical barriers and are not allowed to enter the well; and
 - 2) Injection of motor vehicle waste is unlikely based on a facility's compliance history and records showing proper waste disposal.
 - 3) The use of a semi-permanent plug as the means to segregate waste is not sufficient to convert a motor vehicle waste disposal well to another type of Class V injection well.

BOARD NOTE: Derived from 40 CFR 144.89 (2017) ~~(2005)~~.

AUTHORITY: Implementing Sections 7.2, 13, and 22.4 and authorized by Section 27 of the Environmental Protection Act [415 ILCS 5/7.2, 13, 22.4 and 27].

SOURCE: Adopted in R81-32 at 6 Ill. Reg. 12479, effective May 17, 1982; amended in R82-19, at 7 Ill. Reg. 14352, effective May 17, 1982; amended in R84-9, at 9 Ill. Reg. 11894, effective July 24, 1985; amended in R89-2 at 14 Ill. Reg. 3082, effective February 20, 1990; amended in R94-5 at 18 Ill. Reg. 18265, effective December 20, 1994; amended in R95-6 at 19 Ill. Reg. 9906, effective June 27, 1995; amended in R03-7 at 27 Ill. Reg. 3675, effective February 14, 2003; amended in R06-16/R06-17/R06-18 at 31 Ill. Reg. 706, effective December 20, 2006; amended in R11-14 at 36 Ill. Reg. 1653, effective January 20, 2012; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 705.101 Scope and Applicability

- a) This Part sets forth procedures that the Illinois Environmental Protection Agency (Agency) must follow in issuing RCRA (Resource Conservation and Recovery Act) and UIC (Underground Injection Control) permits. This Part also specifies rules on effective dates of permits and stays of contested permit conditions.
- b) This Part provides for a public comment period and a hearing in some cases. The permit applicant and any other participants must raise issues during this proceeding to preserve issues for effective Board review, as required by Section 705.183.
- c) Board review of permit issuance or denial is pursuant to 35 Ill. Adm. Code 105. Board review is restricted to the record that was before the Agency when the permit was issued, as required by Sections 40(a) and 40(b) of the Environmental Protection Act [~~415 ILCS 5/40(a) and (b)~~].
- d) The provisions of 35 Ill. Adm. Code 702, 703, and 704 contain rules on UIC and RCRA permit applications, permit conditions, and related matters.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: PERMIT APPLICATIONS

Section 705.122 Completeness

- a) The Agency must review every application for a RCRA or UIC permit for completeness.
- b) Time limitations on Agency review for application completeness:

- 1) Each application for a permit submitted by a new HWM (hazardous waste management) facility or new UIC injection well must be reviewed for completeness within 30 days of its receipt.
- 2) Each application for a permit by an existing HWM facility (both Parts A and B of the application) or existing injection well must be reviewed for completeness within 60 days of receipt.
- c) Upon completing its review for completeness, the Agency must notify the applicant in writing whether the application is complete. If the application is incomplete, the Agency must list the information necessary to make the application complete.
- d) When the application is for an existing HWM (Hazardous Waste Management) facility or an existing UIC injection well, the Agency must also specify in the notice of deficiency a date for submitting the necessary information.
- e) The Agency shall, within the time limitations specified in subsection (b) ~~of this Section~~, notify the applicant whether additional information submitted in response to a notice of deficiency is deemed sufficient or insufficient to complete the application.
- f) After the application is deemed complete, the Agency may request additional information from an applicant only when necessary to clarify, modify, or supplement previously submitted material. Requests for such additional information will not render an application incomplete.

BOARD NOTE: Derived from 40 CFR 124.3(c) (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.126 Decision Schedule

For each permit application from a major new HWM facility or major new UIC injection well, the Agency must, no later than the effective date of the application, prepare and mail to the applicant a projected decision schedule. The schedule must specify target dates by which the Agency intends to do the following:

- a) Prepare a draft permit pursuant to Subpart C ~~of this Part~~;
- b) Give public notice pursuant to Subpart D ~~of this Part~~;
- c) Complete the public comment period, including any public hearing pursuant to Subpart E ~~of this Part~~; and
- d) Issue a final permit pursuant to Subpart F ~~of this Part~~.

BOARD NOTE: Derived from 40 CFR 124.3(g) (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.128 Modification or Reissuance of Permits

- a) The Agency may modify or reissue a permit either at the request of any interested person (including the permittee) or on its own initiative. However, the Agency may only modify or reissue a permit for the reasons specified in 35 Ill. Adm. Code 704.261 through 704.263 (UIC) or 35 Ill. Adm. Code 703.270 through 703.273 (RCRA). A request for permit modification or reissuance must be made in writing, must be addressed to the Agency (Division of Land Pollution Control), and must contain facts or reasons supporting the request.
- b) If the Agency determines that a request for modification or reissuance is not justified, it must send the requester a brief written response giving a reason for the determination. A denial of a request for modification or reissuance is not subject to public notice, comment, or public hearing requirements. The requester may appeal a denial of a request to modify or reissue a permit to the Board pursuant to 35 Ill. Adm. Code 105.
- c) Agency Modification or Reissuance Procedures-
 - 1) If the Agency tentatively decides to initiate steps to modify or reissue a permit pursuant to this Section and 35 Ill. Adm. Code 704.261 through 704.263 or 35 Ill. Adm. Code 703.270 through 703.273 (other than 35 Ill. Adm. Code 703.272(c)), after giving public notice pursuant to Section 705.161(a)(1), as though an application had been received, it must prepare a draft permit pursuant to Section 705.141 incorporating the proposed changes. The Agency may request additional information and may require the submission of an updated permit application. For reissued permits, other than those reissued under 35 Ill. Adm. Code 703.272(c), the Agency must require the submission of a new application. For permits reissued under 35 Ill. Adm. Code 703.272(c), the Agency and the permittee must comply with the appropriate requirements in Subpart G of 35 Ill. Adm. Code 705.
 - 2) In a permit modification proceeding pursuant to this Section, only those conditions to be modified must be reopened when a new draft permit is prepared. When a permit is to be reissued pursuant to this Section, the entire permit is reopened just as if it had expired. During any reissuance proceeding, including any appeal to the Board, the permittee must comply with all conditions of its existing permit until a new final permit is reissued.
 - 3) “Minor modifications;”₂ as defined in 35 Ill. Adm. Code 704.264, and “Class 1 and 2 modifications;”₂ as defined in 35 Ill. Adm. Code 703.281 and 703.282, are not subject to this Section.

- d) To the extent that the Agency has authority to reissue a permit, it must prepare a draft permit or notice of intent to deny in accordance with Section 705.141 if it decides to do so.
- e) The Agency or any person may seek the revocation of a permit in accordance with Title VIII of the Environmental Protection Act ~~[415 ILCS 5/Title VIII]~~ and the procedure of 35 Ill. Adm. Code 103. Revocation may only be sought for those reasons specified in 35 Ill. Adm. Code 702.186(a) through (d).

BOARD NOTE: Derived from 40 CFR 124.5 (2017) ~~(2005)~~, as amended at 70 Fed. Reg. 53420 ~~(Sep. 8, 2005)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: APPLICATION REVIEW

Section 705.141 Draft Permits

- a) Once an application for permit is complete, the Agency must tentatively decide whether to prepare a draft permit or to deny the application.
- b) If the Agency tentatively decides to deny the permit application, it must issue a notice of intent to deny. A notice of intent to deny must be subject to all of the procedural requirements applicable to draft permits under subsection (d) ~~of this Section~~. If the Agency's final decision made pursuant to Section 705.201 is that the tentative decision to deny the permit application was incorrect, it must withdraw the notice of intent to deny and proceed to prepare a draft permit under subsection (c) ~~of this Section~~.
- c) If the Agency decides to prepare a draft permit, it must prepare a draft permit that contains the following information:
 - 1) All conditions under 35 Ill. Adm. Code 702.140 through 702.152 and 35 Ill. Adm. Code 702.160;
 - 2) All compliance schedules under 35 Ill. Adm. Code 702.162 and 702.163;
 - 3) All monitoring requirements under 35 Ill. Adm. Code 702.164; and
 - 4) The following program-specific permit conditions:
 - A) For RCRA permits, standards for treatment, storage, or disposal and other permit conditions under Subpart F of 35 Ill. Adm. Code 703;
 - B) For UIC permits, permit conditions under Subpart E of 35 Ill. Adm. Code 704.

- d) A draft permit or a notice of intent to deny prepared under this Section must be accompanied by a statement of basis, under Section 705.142, or a fact sheet, under Section 705.143, must be based on the administrative record pursuant to Section 705.144, must be publicly noticed pursuant to Subpart D ~~of this Part~~, and must be made available for public comment pursuant to Section 705.181. The Agency must give notice of opportunity for a public hearing pursuant to Section 705.182, issue a final decision pursuant to Section 705.201, and respond to comments pursuant to Section 705.210. An appeal may be taken under Section 705.212.

BOARD NOTE: Derived from 40 CFR 124.6 (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.143 Fact Sheet

- a) A fact sheet must be prepared for every draft permit for a major HWM or a major UIC facility or activity, and for every draft permit or notice of intent to deny that the Agency finds is the subject of widespread public interest or raises major issues. The fact sheet must briefly set forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit. The Agency must send this fact sheet to the applicant and, on request, to any other person.
- b) The fact sheet must include the following, when applicable:
- 1) A brief description of the type of facility or activity that is the subject of the draft permit;
 - 2) The type and quantity of wastes, fluids or pollutants that are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged;
 - 3) A brief summary of the basis for refusing to grant a permit or for imposing each draft permit condition including references to applicable statutory or regulatory provisions and appropriate supporting references to the administrative record as defined by Section 705.144;
 - 4) Reasons why any requested schedules of compliance or other alternatives to required standards do or do not appear justified;
 - 5) A description of the procedures for reaching a final decision on the draft permit including the following:
 - A) The beginning and ending dates of the comment period pursuant to Subpart D ~~of this Part~~, and the address where comments will be received;

- B) Procedures for requesting a hearing, and the nature of that hearing; and
 - C) Any other procedures by which the public may participate in the final decision.
- 6) The name and telephone number of a person to contact for additional information.

BOARD NOTE: Derived from 40 CFR 124.8 (2017)-(2002).

Section 705.144 Administrative Record for Draft Permits or Notices of Intent to Deny

- a) The provisions of a draft permit or notice of intent to deny the application must be based on the administrative record, as defined in this Section.
- b) The administrative record must consist of the following:
 - 1) The application and any supporting data furnished by the applicant;
 - 2) The draft permit or notice of intent to deny the application;
 - 3) The statement of basis, as provided in Section 705.142, or fact sheet, as provided in Section 705.143;
 - 4) All documents cited in the statement of basis or fact sheet;
 - 5) Other documents contained in the supporting file for the draft permit or notice of intent to deny; and
 - 6) An index of all documents or items included in the record, by location in the record.
- c) Published material that is generally available, and which is included in the administrative record under subsection (b) ~~of this Section~~, need not be physically included with the rest of the record, as long as it is specifically referred to in the statement of basis or the fact sheet.
- d) This Section applies to all draft permits or notices of intent to deny ~~for which public notice was first given under Subpart D of this Part after March 3, 1984, for UIC permits, or January 31, 1986, for RCRA permits.~~

BOARD NOTE: Derived from 40 CFR 124.9 (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: PUBLIC NOTICE

Section 705.164 Contents of Public Notice

- a) All public notices issued under this Part must contain the following minimum information:
- 1) The name and address of the Agency;
 - 2) The name and address of the permittee or permit applicant and, if different, the name and address of the facility or activity regulated by the permit;
 - 3) A brief description of the business conducted at the facility or the activity described in the permit application or the draft permit;
 - 4) The name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit; a copy of the statement of basis or fact sheet; and a copy of the permit application;
 - 5) A brief description of the comment procedures required by Sections 705.181 and 705.182; the time and place of any hearing that will be held, including a statement of the procedures to request a hearing (unless a hearing has already been scheduled); and the other procedures by which the public may participate in the final permit decision;
 - 6) The location of the administrative record required by Section 705.144, the time at which the record will be open for public inspection, and a statement that all data submitted by the applicant is available as part of the administrative record; and
 - 7) Any additional information that the Agency considers necessary or appropriate.
- b) Public Notices ~~notices for Hearings~~ ~~hearings~~. In addition to the general public notice described in subsection (a) ~~of this Section~~, the public notice of a hearing under Section 705.182 must contain the following information:
- 1) Reference to the date of previous public notices relating to the permit;
 - 2) The date, time, and place of the hearing; and
 - 3) A brief description of the nature and purpose of the hearing, including the applicable rules and procedures.

BOARD NOTE: Derived from 40 CFR 124.10(d) (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART E: PUBLIC COMMENT

Section 705.181 Public Comments and Requests for Public Hearings

During the public comment period provided under Subpart D ~~of this Part~~, any interested person may submit written comments on the draft permit to the Agency, and any interested person may request a public hearing. A request for a public hearing must be in writing and must state the nature of the issues proposed to be raised in the hearing. The Agency must consider all comments in making the final decision and must answer, as provided in Section 705.210.

BOARD NOTE: Derived from 40 CFR 124.11 (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.182 Public Hearings

- a) When the Agency Holds Public Hearings ~~holds public hearings~~.
- 1) The Agency must hold a public hearing whenever it finds a significant degree of public interest in a draft permit on the basis of requests.
 - 2) The Agency may also hold a public hearing at its discretion, whenever such a hearing might clarify one or more issues involved in the permit decision.
 - 3) For RCRA permits only the following additional requirements apply:
 - A) The Agency must hold a public hearing whenever it receives written notice of opposition to a draft permit and a request for a hearing within 45 days of public notice under Section 705.162(a);
 - B) Whenever possible, the Agency must schedule the hearing at a location convenient to the population center nearest to the proposed facility.
 - 4) Public notice of the hearing must be given as specified in Section 705.162.
- b) Whenever a public hearing will be held, the Agency must designate a hearing officer who must be responsible for its scheduling and orderly conduct. Conduct of the hearing must be in accordance with Agency rules and procedures, and the hearing must be held in the county in which the HWM or UIC facility or proposed HWM or UIC facility is located.
- c) Any person may submit oral or written statements and data concerning the draft permit. Reasonable limits may be set by the hearing officer on the time allowed at

hearing for oral statements, and the submission of statements in writing may be required. Written statements must be accepted until the close of the public comment period. The public comment period under Subpart D of this Part must automatically be extended to a date not later than 30 days after the close of any public hearing under this Section. The hearing officer may also extend the comment period by entering an appropriate order into the record.

- d) A tape recording or written transcript of the hearing must be made available to the public for inspection during regular business hours at the Agency's office in Springfield. Copies of such recording or transcription must be made available on request, upon payment of reasonable costs of duplication pursuant to applicable Agency rules and procedures.

BOARD NOTE: Derived from 40 CFR 124.12 (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.183 Obligation to Raise Issues and Provide Information

All persons, including applicants, who believe any condition of a draft permit is inappropriate, or that the Agency's tentative decision to deny an application or prepare a draft permit is inappropriate, must raise all reasonably ascertainable issues and submit all reasonably available arguments and factual grounds supporting their position, including all supporting material, by the close of the public comment period (including any public hearing) under Subpart D of this Part. All supporting materials must be included in full and may not be incorporated by reference, unless they are already part of the administrative record in the same proceeding, or they consist of state or federal statutes and regulations, documents of general applicability, or other generally available reference materials. Commenters must make supporting material not already included in the administrative record available to the Agency, as directed by the Agency. The Agency must extend the public comment period by an appropriate time if a commenter demonstrates that the additional time is necessary to submit supporting materials under this Section.

BOARD NOTE: Derived from 40 CFR 124.13 (2017)-(2002).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.184 Reopening of Public Comment Period

- a) The Agency may reopen the public comment period under this Section if doing so could expedite the decisionmaking process.
 - 1) If the public comment period is reopened under this subsection (a), any person, including the applicant, who believes any condition of a draft permit is inappropriate or that the Agency's tentative decision to deny an application or prepare a draft permit is inappropriate, must submit all reasonably available factual grounds supporting their position, including

all supporting material, before a date, not less than 60 days after public notice given under subsection (a)(2) ~~of this Section~~, set by the Agency. Thereafter, any person may file a written response to the material filed by any other person, by a date, not less than 20 days after the date set for filing of the material (as set forth in the preceding sentence), set by the Agency.

- 2) Public notice of any comment period under this subsection (a) must identify the issues to which the requirements of this subsection (a) will apply.
 - 3) On its own motion or on the request of any person, the Agency may direct that the requirements of subsection (a)(1) ~~of this Section~~ will apply during the initial public comment period where the Agency determines that issuance of the permit will be contested and that applying the requirements of subsection (a)(1) ~~of this Section~~ will substantially expedite the decisionmaking process. The notice of the draft permit must state whenever this has been done.
 - 4) A comment period of longer than 60 days may be necessary in complicated proceedings to give commenters a reasonable opportunity to comply with the requirements of this Section. A commenter may request a longer comment period, and one must be granted under Subpart D ~~of this Part~~ to the extent that the Agency determines that a longer comment period is necessary.
- b) If any data, information, or arguments submitted during the public comment period appear to raise substantial new questions concerning a permit, the Agency may undertake one or more of the following actions:
- 1) It may prepare a new draft permit, appropriately modified, under Section 705.141;
 - 2) It may prepare a revised statement of basis, a fact sheet, or a revised fact sheet and reopen the comment period under subsection (b)(3) ~~of this Section~~;
 - 3) It may reopen or extend the comment period to give interested persons an opportunity to comment on the information or arguments submitted.
- c) Comments filed during the reopened comment period must be limited to the substantial new questions that caused its reopening. The public notice under Subpart D ~~of this Part~~ must define the scope of the reopening.
- d) After an extended comment period, the Agency may undertake final action under Section 705.201 that it deems appropriate based on the record.

- e) Public notice of any of the above actions must be issued under Subpart D ~~of this Part~~.

BOARD NOTE: Derived from 40 CFR 124.14 (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART F: PERMIT ISSUANCE

Section 705.201 Final Permit Decision

- a) After the close of the public comment period under Subpart D ~~of this Part~~ or Section 705.182, the Agency must issue a final permit decision.
- b) A final permit decision must consist of either of the following:
 - 1) A letter of denial that includes each of the following:
 - A) The Sections of the appropriate Act that may be violated if the permit were granted;
 - B) The provisions of Board regulations that may be violated if the permit were granted;
 - C) The specific type of information, if any, that the Agency deems the applicant did not provide with its application; and
 - D) A statement of specific reasons why the Act and the regulations might not be met if the permit were granted; or
 - 2) Issuance of a permit.
- c) On the date of the final permit decision, the Agency must notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. This notice must include reference to the procedures for appealing an Agency RCRA or UIC permit decision under Section 705.212.
- d) A final permit must become effective 35 days after the final permit decision made under subsection (a) ~~of this Section~~, unless:
 - 1) A later effective date is specified in the permit; or
 - 2) Review is requested under Section 705.212, in which case the effective date and conditions will be stayed as provided in Sections 705.202 through 705.205.

BOARD NOTE: This Section corresponds with and is partially derived from 40 CFR 124.15 ~~(2017)-(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.211 Administrative Record for Final Permits or Letters of Denial

- a) The Agency must base final permit decisions under Section 705.201 on the administrative record defined in this Section.
- b) The administrative record for any final permit or letter of denial must consist of the administrative record for the draft permit together with the following:
 - 1) All comments received during the public comment period provided under Subpart D ~~of this Part~~ (including any extension or reopening under Section 705.184);
 - 2) The tape or transcript of any hearing held under Section 705.182;
 - 3) Any written materials submitted at such a hearing;
 - 4) The response to comments required by Section 705.210 and any new material placed in the record under that Section;
 - 5) Other documents contained in the supporting file for the permit; and
 - 6) The final permit or letter of denial.
- c) The additional documents required under subsection (b) ~~of this Section~~ should be added to the record as soon as possible after their receipt or publication by the Agency. The record must be completed on the date that the final permit or letter of denial is issued.
- d) This Section applies to all final RCRA permits, UIC permits, and letters of denial, when the draft permit was subject to the administrative record requirements of Section 705.144.

BOARD NOTE: Derived from 40 CFR 124.18 ~~(2017)-(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.212 Appeal of Agency Permit Determinations

- a) Within 35 days after a RCRA or UIC final permit decision notification has been issued under Section 705.201, the following persons may petition the Board to review any condition of the permit decision:

- 1) The permit applicant, and
 - 2) Any person who filed comments on the draft permit or who participated in the public hearing on the draft permit.
- b) Any person who failed to file comments or failed to participate in the public hearing on the draft permit may petition for administrative review only to the extent of the changes from the draft to the final permit decision.
 - c) A petition for review must include a statement of the reasons supporting that review, including a demonstration that any issues being raised were raised during the public comment period (including any public hearing) to the extent required in this Part; in all other respects, the petition must comport with the requirements for permit appeals generally, as set forth in 35 Ill. Adm. Code 105.
 - d) Except as otherwise provided in this Part, the provisions of 35 Ill. Adm. Code 105 generally will govern appeals of RCRA and UIC permits under this Section. References in the procedural rules to the Agency permit application record will mean, for purposes of this Section, the administrative record for the final permit or letter of denial, as defined in Section 705.211.
 - e) An appeal under subsection (a) or (b) ~~of this Section~~ is a prerequisite to the seeking of judicial review of the final agency action under the administrative review provisions of Article III of the Code of Civil Procedure ~~[735 ILCS 5/Art. III]~~.

BOARD NOTE: This Section corresponds with 40 CFR 124.19(a) (2017) ~~(2002)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART G: PROCEDURE FOR RCRA STANDARDIZED PERMIT

Section 705.300 General Information About RCRA Standardized Permits

- a) RCRA Standardized Permit ~~standardized permit~~. A RCRA standardized permit is a special form of RCRA permit that may consist of two parts: a uniform portion that the Agency issues in all cases, and a supplemental portion that the Agency issues on a case-by-case basis at its discretion. The term “RCRA standardized permit” is defined in 35 Ill. Adm. Code 702.110.
 - 1) The Uniform Portion ~~uniform portion~~. The uniform portion of a RCRA standardized permit consists of terms and conditions, relevant to the units operated at a facility, that appear in 35 Ill. Adm. Code 727 (Standards for Owners and Operators of Hazardous Waste Facilities Operating under a RCRA Standardized Permit). If an owner or operator intends to operate under the RCRA standardized permit, it must comply with the nationally applicable terms and conditions of 35 Ill. Adm. Code 727.

- 2) The ~~Supplemental Portion~~ ~~supplemental portion~~. The supplemental portion of a RCRA standardized permit consists of site-specific terms and conditions, beyond those of the uniform portion, that the Agency may impose on a particular facility, as necessary to adequately protect human health and the environment. If the Agency issues a supplemental portion, the owner or operator must comply with the Agency-imposed site-specific terms and conditions.
- A) When required pursuant to 35 Ill. Adm. Code 727.190(l), provisions to implement corrective action must be included in the supplemental portion.
 - B) Unless otherwise specified, the supplemental permit terms and conditions apply to a facility in addition to the terms and conditions of the uniform portion of the RCRA standardized permit and not in place of any of those terms and conditions.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.200 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- b) Eligibility for a RCRA Standardized Permit ~~standardized permit~~.
- 1) A facility owner or operator may be eligible for a RCRA standardized permit if it engages in either of the following:
 - A) It generates hazardous waste and then stores or non-thermally treats the hazardous waste on-site in containers, tanks, or containment buildings; or
 - B) It receives hazardous waste generated off-site by a generator under the same ownership as the receiving facility, and then it stores or non-thermally treats the hazardous waste in containers, tanks, or containment buildings.
 - C) In either case, the Agency must inform the owner or operator of its eligibility when a decision is made on its permit.
 - 2) This subsection (b)(2) corresponds with 40 CFR 124.201(b), which USEPA has marked “reserved.” This statement maintains structural consistency with the corresponding federal rule.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.201 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.302 Issuance of a RCRA Standardized Permit

- a) Agency ~~Preparation preparation~~ of a Draft draft-RCRA Standardized Permit ~~standardized permit.~~
- 1) The Agency must review the Notice of Intent and supporting information submitted by the facility owner or operator.
 - 2) The Agency must determine whether the facility is or is not eligible to operate under the RCRA standardized permit.
 - A) If the facility is eligible for the RCRA standardized permit, the Agency must propose terms and conditions, if any, to include in a supplemental portion. If the Agency determines that these terms and conditions are necessary to adequately protect human health and the environment, and the terms and conditions cannot be imposed, the Agency must tentatively deny coverage under the RCRA standardized permit.
 - B) If the facility is not eligible for the RCRA standardized permit, the Agency must tentatively deny coverage under the RCRA standardized permit. Cause for ineligibility may include, but is not limited to, the following:
 - i) A failure of owner or operator to submit all the information required pursuant to 35 Ill. Adm. Code 703.351(b).
 - ii) Information submitted that is required pursuant to 35 Ill. Adm. Code 703.351(b) that is determined to be inadequate.
 - iii) The facility does not meet the eligibility requirements (its activities are outside the scope of the RCRA standardized permit).
 - iv) A demonstrated history of significant non-compliance with applicable requirements.
 - v) Permit conditions cannot ensure adequate protection of human health and the environment.
 - 3) The Agency must prepare its draft permit decision within 120 days after receiving the Notice of Intent and supporting documents from a facility owner or operator. The Agency's tentative determination pursuant to this Section to deny or grant coverage under the RCRA standardized permit, including any proposed site-specific conditions in a supplemental portion, constitutes a draft permit decision. The Agency is allowed a one time

extension of 30 days to prepare the draft permit decision. When the use of the 30-day extension is anticipated, the Agency must inform the permit applicant during the initial 120-day review period. Reasons for an extension may include, but are not limited to, needing to complete review of submissions with the Notice of Intent (*e.g.*, closure plans, waste analysis plans, etc. for facilities seeking to manage hazardous waste generated off-site).

- 4) Many requirements in this Part and 35 Ill. Adm. Code 702 apply to processing the RCRA standardized permit application and preparing the Agency's draft permit decision. For example, the Agency's draft permit decision must be accompanied by a statement of basis or fact sheet and must be based on the administrative record. In preparing the Agency's draft permit decision, the following provisions of this Part and 35 Ill. Adm. Code 702 apply (subject to the following modifications):
- A) Section 705.101 (Scope and Applicability): all subsections apply.
 - B) 35 Ill. Adm. Code 702.110 (Definitions): all definitions apply.
 - C) Sections 705.121 (Permit Application) and 705.124 (Site Visit): all subsections apply.
 - D) Section 705.127 (Consolidation of Permit Processing): applies.
 - E) Section 705.128 (Modification or Reissuance of Permits): does not apply.
 - F) Section 705.141 (Draft Permits): does not apply to the ~~RCRA~~ RCRA standardized permit; procedures in this Subpart G apply instead.
 - G) Section 705.142 (Statement of Basis): applies.
 - H) Section 705.143 (Fact Sheet): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D of this Part.
 - I) Section 705.144 (Administrative Record for Draft Permits or Notices of Intent to Deny): all subsections apply.
 - J) ~~Subpart D of this Part~~ (Public Notice): only Section 705.163(a)(4) and (a)(5)(A) applies to the RCRA standardized permit. Most of ~~Subpart D of this Part~~ does not apply to the RCRA standardized permit; Section 705.303(a) through (c) applies instead.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.204 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- b) Preparation of a Final final RCRA Standardized Permit ~~standardized permit~~. The Agency must consider all comments received during the public comment period (see Section 705.303(b)) in making its final permit decision. In addition, many requirements in this Part and 35 Ill. Adm. Code 702 apply to the public comment period, public hearings, and preparation of the Agency's final permit decision. In preparing a final permit decision, the following provisions of this Part and 35 Ill. Adm. Code 702 apply (subject to the following modifications):
- 1) Section 705.101 (Scope and Applicability): all subsections apply.
 - 2) 35 Ill. Adm. Code 702.110 (Definitions): all definitions apply.
 - 3) Section 705.181 (Public Comments and Requests for Public Hearings): Section 705.181 does not apply to the RCRA standardized permit; the procedures in Section 705.303(b) apply instead.
 - 4) Section 705.182 (Public Hearings): Section 705.182(b), (c), and (d) applies.
 - 5) Section 705.183 (Obligation to Raise Issues and Provide Information): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D ~~of this Part~~.
 - 6) Section 705.184 (Reopening of the Public Comment Period): all of subsections apply; however, in the context of the RCRA standardized permit, the reference in Section 705.184(b)(1) to preparation of a draft permit is Section 705.302(a) instead of Section 705.141; the reference in Section 705.184(b)(3) to reopening or extending the comment period relates to Section 705.303(b); the reference in Section 705.184(c) to the public notice is Section 705.303(a) instead of Subpart D ~~of this Part~~.
 - 7) Section 705.201 (Final Permit Decision): all subsections apply; however, in the context of the RCRA standardized permit, the reference to the public comment period is Section 705.303(b) instead of Subpart D ~~of this Part~~.
 - 8) Section 705.202 (Stay of Permit Conditions upon Appeal): all subsections apply.
 - 9) Section 705.210 (Agency Response to Comments): Section 705.210 does not apply to the RCRA standardized permit; procedures in Section 705.303(c) apply instead.

- 10) Section 705.211 (Administrative Record for Final Permit or Letters of Denial): all subsections apply, however, the reference to response to comments is Section 705.303(c) instead of Section 705.210.
- 11) Section 705.212 (~~Appeal of~~ Appeal of Agency Permit Determinations): - all subsections apply.
- 12) Section 705.103 (Computation of Time): all subsections apply.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.205 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- c) When a facility owner or operator must apply for an individual permit.
 - 1) Instances in which the Agency may determine that a facility is not eligible for the RCRA standardized permit include, but are not limited to, the following:
 - A) The facility does not meet the criteria in Section 705.300(b).
 - B) The facility has a demonstrated history of significant non-compliance with regulations or permit conditions.
 - C) The facility has a demonstrated history of submitting incomplete or deficient permit application information.
 - D) The facility has submitted incomplete or inadequate materials with the Notice of Intent (submitted pursuant to Section 705.301(a)(2)).
 - 2) If the Agency determines that a facility is not eligible for the RCRA standardized permit, the Agency must inform the facility owner or operator that it must apply for an individual permit.
 - 3) The Agency may require any facility that has a RCRA standardized permit to apply for and obtain an individual RCRA permit. Any interested person may petition the Agency to take action pursuant to this subsection (c)(3). Instances in which the Agency may require an individual RCRA permit include, but are not limited to, the following:
 - A) The facility is not in compliance with the terms and conditions of the standardized RCRA permit.
 - B) Circumstances have changed since the time the facility owner or operator applied for the RCRA standardized permit, so that the facility's hazardous waste management practices are no longer appropriately controlled under the RCRA standardized permit.

- 4) The Agency may require any facility authorized by a RCRA standardized permit to apply for an individual RCRA permit only if the Agency has notified the facility owner or operator in writing that an individual permit application is required. The Agency must include in this notice a brief statement of the reasons for its decision, a statement setting a deadline for the owner or operator to file the application, and a statement that, on the effective date of the individual RCRA permit, the facility's RCRA standardized permit automatically terminates. The Agency may grant additional time upon request from the facility owner or operator.
- 5) When the Agency issues an individual RCRA permit to an owner or operator otherwise subject to a standardized RCRA permit, the RCRA standardized permit for that facility will automatically cease to apply on the effective date of the individual permit.

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.206 ~~(2017)~~, as added at 70 Fed. Reg. 53420 (Sep. 8, 2005). An owner or operator authorized to operate under a RCRA standardized permit that is required by the Agency to submit an application for an individual permit pursuant to this subsection (c) may appeal that Agency determination before the Board pursuant to Section 40 of the Act ~~[415 ILCS 5/40]~~ and 35 Ill. Adm. Code 101 and 105.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.303 Public Participation in the RCRA Standardized Permit Process

- a) Requirements for Public Notices ~~public notices~~.
 - 1) The Agency must provide public notice of its draft permit decision and must provide an opportunity for the public to submit comments and request a hearing on that decision. The Agency must provide the public notice to the following persons:
 - A) The applicant;
 - B) Any other agency that the Agency knows has issued or is required to issue a RCRA permit for the same facility or activity (including USEPA when the draft permit is prepared by the State);
 - C) Federal and State agencies with jurisdiction over fish, shellfish, and wildlife resources and over coastal zone management plans, the Advisory Council on Historic Preservation, Illinois Historic Preservation Agency, including any affected states;
 - D) Everyone on the facility mailing list developed according to the requirements in Section 705.163(a)(4); and

- E) Any units of local government having jurisdiction over the area where the facility is proposed to be located and to each State agency having any authority under State law with respect to the construction or operation of the facility.
- 2) The Agency must issue the public notice according to the following methods:
 - A) Publication in a daily or weekly major local newspaper of general circulation and broadcast over local radio stations;
 - B) In a manner constituting legal notice to the public under State law; and
 - C) Any other method reasonably calculated to give actual notice of the draft permit decision to the persons potentially affected by it, including press releases or any other forum or medium to elicit public participation.
 - 3) The Agency must include the following information in the public notice:
 - A) The name and telephone number of the contact person at the facility.
 - B) The name and telephone number of the Agency's contact office, and a mailing address to which people may direct comments, information, opinions, or inquiries.
 - C) An address to which people may write to be put on the facility mailing list.
 - D) The location where people may view and make copies of the draft RCRA standardized permit and the Notice of Intent and supporting documents.
 - E) A brief description of the facility and proposed operations, including the address or a map (for example, a sketched or copied street map) of the facility location on the front page of the notice.
 - F) The date that the facility owner or operator submitted the Notice of Intent and supporting documents.
 - 4) At the same time that the Agency issues the public notice pursuant to this Section, it must place the draft RCRA standardized permit (including both the uniform portion and the supplemental portion, if any), the Notice of Intent and supporting documents, and the statement of basis or fact sheet

in a location accessible to the public in the vicinity of the facility or at the local Agency office.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.207 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- b) Opportunities for Public Comment ~~public comment~~ and Hearing ~~hearing~~ on a Draft Permit Decision ~~draft permit decision~~.
- 1) The public notice that the Agency issues pursuant to Section 705.303(a) must allow at least 45 days for interested persons to submit written comments on its draft permit decision. This time is referred to as the public comment period. The Agency must automatically extend the public comment period to the close of any public hearing pursuant to this subsection (b). The hearing officer may also extend the comment period by so stating at the hearing.
 - 2) During the public comment period, any interested person may submit written comments on the draft permit and may request a public hearing. Any request for a public hearing must be submitted to the Agency in writing. The request for a public hearing must state the nature of the issues that the requestor proposes to raise during the hearing.
 - 3) The Agency must hold a public hearing whenever it receives a written notice of opposition to a RCRA standardized permit and a request for a public hearing within the public comment period pursuant to subsection (b)(1) ~~of this Section~~. The Agency may also hold a public hearing at its discretion, whenever, for instance, such a hearing might clarify one or more issues involved in the permit decision.
 - 4) Whenever possible, the Agency must schedule a hearing pursuant to this subsection (b) at a location convenient to the nearest population center to the facility. The Agency must give public notice of the hearing at least 30 days before the date set for the hearing. (The Agency may give the public notice of the hearing at the same time it provides public notice of the draft permit, and the Agency may combine the two notices.)
 - 5) The Agency must give public notice of the hearing according to the methods in Section 705.303(a)(1) and (a)(2). The hearing must be conducted according to the procedures in Section 705.182(b), (c), and (d).
 - 6) In their written comments and during the public hearing, if held, interested persons may provide comments on the draft permit decision. These comments may include, but are not limited to, the facility's eligibility for the RCRA standardized permit, the tentative supplemental conditions

proposed by the Agency, and the need for additional supplemental conditions.

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.208 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- c) Requirements for Responding ~~responding to Comments~~ ~~comments~~.
- 1) At the time the Agency issues a final RCRA standardized permit, it must also respond to comments received during the public comment period on the draft permit. The Agency's response must do each of the following:
 - A) It must specify which additional conditions (i.e., those in the supplemental portion), if any, the Agency changed in the final permit, and the reasons for each change.
 - B) It must briefly describe and respond to all significant comments on the facility's ability to meet the general requirements (i.e., those terms and conditions in the uniform portion) and all significant comments on any additional conditions necessary to adequately protect human health and the environment that are raised during the public comment period or during the hearing.
 - C) It must make the comments and responses accessible to the public.
 - 2) The Agency may request additional information from the facility owner or operator or inspect the facility if it needs additional information to adequately respond to significant comments or to make decisions about conditions that it may need to add to the supplemental portion of the RCRA standardized permit.
 - 3) The Agency must include in the administrative record for its final permit decision any documents cited in the response to comments. If new points are raised or new material supplied during the public comment period, the Agency may document its response to those matters by adding new materials to the administrative record.

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.209 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- d) Appeal of a Final ~~final~~ RCRA Standardized Permit ~~standardized permit~~ by an Interested Party ~~interested party~~ in the Permit Process ~~permit process~~. An interested party may petition the Board for administrative review of the Agency's final permit decision, including the Agency's decision that the facility is eligible for the RCRA standardized permit, according to the procedures of Section 705.212. However, the terms and conditions of the uniform portion of the RCRA

standardized permit are not subject to administrative review pursuant to this subsection (d).

BOARD NOTE: Subsection (d) is derived from 40 CFR 124.210 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 705.304 Modifying a RCRA Standardized Permit

- a) ~~Permissible Types types of Changes changes-an Owner owner-or Operator May Make operator may make to its RCRA Standardized Permit standardized permit.~~ A facility owner or operator may make a routine change, a routine change with prior Agency approval, or a significant change. For the purposes of this subsection (a), the following definitions apply:

“Routine change” is any change to the RCRA standardized permit that qualifies as a Class 1 permit modification (without prior Agency approval) pursuant to Appendix A to 35 Ill. Adm. Code 703.

“Routine change with prior Agency approval” is a change to the RCRA standardized permit that would qualify as a Class ~~class~~-1 modification with prior agency approval, or a Class 2 permit modification pursuant to Appendix A to 35 Ill. Adm. Code 703.

“Significant change” is any change to the RCRA standardized permit that falls into one of the following categories:

It qualifies as a Class 3 permit modification pursuant to Appendix A to 35 Ill. Adm. Code 703;

It is not explicitly identified in Appendix A to 35 Ill. Adm. Code 703; or

It amends any terms or conditions in the supplemental portion of the RCRA standardized permit.

BOARD NOTE: Subsection (a) is derived from 40 CFR 124.211 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- b) Procedures to Make Routine Changes ~~make routine changes~~.
- 1) An owner or operator can make routine changes to the RCRA standardized permit without obtaining approval from the Agency. However, the owner or operator must first determine whether the routine change it will make amends the information it submitted to the Agency

pursuant to 35 Ill. Adm. Code 703.351(b) with its Notice of Intent to operate under the RCRA standardized permit.

- 2) If the routine changes that the owner or operator makes amend the information it submitted pursuant to 35 Ill. Adm. Code 703.351(b) with its Notice of Intent to operate under the RCRA standardized permit, then before the owner or operator makes the routine changes it must do both of the following:
 - A) It must submit to the Agency the revised information pursuant to 35 Ill. Adm. Code 703.351(b)(1); and
 - B) It must provide notice of the changes to the facility mailing list and to State and local governments in accordance with the procedures in Section 705.163(a)(4) and (a)(5).

BOARD NOTE: Subsection (b) is derived from 40 CFR 124.212 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- c) Procedures for Routine Changes ~~routine changes~~ with Prior ~~prior~~ Agency Approval ~~approval~~.
 - 1) Routine changes to the RCRA standardized permit may only be made with the prior written approval of the Agency.
 - 2) The owner or operator must also follow the procedures in subsections (b)(2)(A) and (b)(2)(B) ~~of this Section~~.

BOARD NOTE: Subsection (c) is derived from 40 CFR 124.213 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

- d) Procedures the Owner ~~owner or~~ Operator Must Follow ~~operator must follow to~~ Make Significant Changes ~~make significant changes~~.
 - 1) The owner or operator must first provide notice of and conduct a public meeting.
 - A) Public meeting. The owner or operator must hold a meeting with the public to solicit questions from the community and inform the community of its proposed modifications to its hazardous waste management activities. The owner or operator must post a sign-in sheet or otherwise provide a voluntary opportunity for people attending the meeting to provide their names and addresses.

- B) Public notice. At least 30 days before the owner or operator plans to hold the meeting, it must issue a public notice in accordance with 35 Ill. Adm. Code 703.191(d).
- 2) After holding the public meeting, the owner or operator must submit a modification request to the Agency that provides the following information:
 - A) It must describe the exact changes that the owner or operator wants and whether the changes are to information that the owner or operator provided pursuant to 35 Ill. Adm. Code 703.351(b) or to terms and conditions in the supplemental portion of its RCRA standardized permit;
 - B) It must explain why the modification is needed; and
 - C) It must include a summary of the public meeting held pursuant to subsection (d)(1) ~~of this Section~~, along with the list of attendees and their addresses and copies of any written comments or materials they submitted at the meeting.
 - 3) Once the Agency receives an owner's or operator's modification request, it must make a tentative determination within 120 days to approve or disapprove the request. The Agency is allowed a one time extension of 30 days to prepare the draft permit decision. When the use of the 30-day extension is anticipated, the Agency should inform the permit applicant during the initial 120-day review period.
 - 4) After the Agency makes its tentative determination, the procedures in Sections 705.302(b) and 705.303 for processing an initial request for coverage under the RCRA standardized permit apply to making the final determination on the modification request.

BOARD NOTE: Subsection (d) is derived from 40 CFR 124.214 (2017), as added at 70 Fed. Reg. 53420 (Sep. 8, 2005).

Reg. 11286, effective August 9, 2016; amended in R17-14/R17-15/R18-12/R18-31 at 42 Ill. Reg. _____, effective _____.

SUBPART A: GENERAL PROVISIONS

Section 720.101 Purpose, Scope, and Applicability

- a) This Part provides definitions of terms, general standards, and overview information applicable to 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.
- b) In this Part:
 - 1) Section 720.102 sets forth the rules that the Board and the Agency will use in making information it receives available to the public and sets forth the requirements that a generator, transporter, or owner or operator of a treatment, storage, or disposal facility must follow to assert claims of business confidentiality with respect to information that is submitted to the Board or the Agency for the purposes of compliance with 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.
 - 2) Section 720.103 establishes rules of grammatical construction for ~~for~~ the purposes of compliance with 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.
 - 3) Section 720.110 defines terms that are used in 35 Ill. Adm. Code 720 through 728, 733, 738, and 739.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.102 Availability of Information; Confidentiality of Information

- a) Availability and confidentiality of information is governed by Illinois law, including Sections 7 and 7.1 of the Environmental Protection Act ~~[415 ILCS 5/7 and 7.1]~~ and 35 Ill. Adm. Code 130.
- b) Except as provided under subsections ~~subsection (c) and (d) of this Section~~, any person who submits information to the Board or the Agency in accordance with this Part or 35 Ill. Adm. Code 721 through 728 may assert a claim of business confidentiality covering part or all of that information by following the procedures set forth in 35 Ill. Adm. Code 130. Information covered by such a claim will be disclosed by the Board or the Agency only to the extent, and by means of the procedures, set forth in 35 Ill. Adm. Code 130. ~~Information required under 35 Ill. Adm. Code 722.153(a) and 722.183 that is submitted in a notification of intent to export a hazardous waste will be provided to the U.S. Department of State and the appropriate authorities in the transit and receiving or importing countries regardless of any claims of confidentiality or trade secret.~~
- c) Public Disclosure ~~disclosure of Hazardous Waste Manifest Documents~~ ~~hazardous waste manifest documents.~~

- 1) No claim of business confidentiality may be asserted by any person with respect to information entered on a hazardous waste manifest (USEPA Form 8700-22), a Hazardous Waste Manifest Continuation Sheet (USEPA Form 8700-22A), or an e-Manifest format that may be prepared and used in accordance with 35 Ill. Adm. Code 722.120(a)(3).
- 2) USEPA has stated that it will make any e-Manifest that is prepared and used in accordance with 35 Ill. Adm. Code 722.120(a)(3), or any paper manifest that is submitted to the e-Manifest System under 35 Ill. Adm. Code 724.171(a)(6) or 725.171(a)(6) available to the public under this Section when the electronic or paper manifest is a complete and final document. E-Manifests and paper manifests submitted to the e-Manifest System are complete and final documents, and they become publicly available information, after 90 days have passed since the delivery to the designated facility of the hazardous waste shipment identified in the manifest.

d) Claims of Confidentiality

- 1) No person may assert any claim of business confidentiality with respect to information contained in cathode ray tube export documents prepared, used, and submitted under 35 Ill. Adm. Code 721.139(a)(5) and 721.141(a), and with respect to information contained in hazardous waste export, import, and transit documents prepared, used, and submitted under 35 Ill. Adm. Code 722.182, 722.183, 722.184, 723.120, 724.112, 724.171, 725.112, 725.171, and 727.171, whether submitted electronically into USEPA's Waste Import Export Tracking System or in paper format.
- 2) USEPA will make any cathode ray tube export documents prepared, used, and submitted under 35 Ill. Adm. Code 721.139(a)(5) and 721.141(a) and any hazardous waste export, import, and transit documents prepared, used, and submitted under 35 Ill. Adm. Code 722.182, 722.183, 722.184, 723.120, 724.112, 724.171, 725.112, 725.171, and 727.171 available to the public under this Section when USEPA considers these electronic or paper documents to be final documents. USEPA considers these submitted electronic and paper documents related to hazardous waste exports, imports, and transits and cathode ray tube exports to be final documents on March 1 of the calendar year after the related cathode ray tube exports or hazardous waste exports, imports, or transits occur.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.103 Use of Number and Gender

As used in 35 Ill. Adm. Code 702, 703, 720 through 728, and 733, 738, and 739:

- a) Words in the masculine gender also include the feminine and neuter genders;
- b) Words in the singular include the plural; and
- c) Words in the plural include the singular.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.104 Electronic Reporting

- a) Scope and Applicability-
 - 1) The USEPA, the Board, or the Agency may allow for the submission of any document as an electronic document in lieu of a paper document. This Section does not require submission of electronic documents in lieu of paper documents. This Section sets forth the requirements for the optional electronic submission of any document that must be submitted to the appropriate of the following:
 - A) To USEPA directly under Title 40 of the Code of Federal Regulations; or
 - B) To the Board or the Agency pursuant to any provision of 35 Ill. Adm. Code 702 through 705, 720 through 728, 730, 733, 738, or 739.
 - 2) Electronic document submission under this Section can occur only as follows:
 - A) For submissions of documents to USEPA, submissions may occur only after USEPA has published a notice in the Federal Register announcing that USEPA is prepared to receive, in an electronic format, documents required or permitted by the identified part or subpart of Title 40 of the Code of Federal Regulations; or
 - B) For submissions of documents to the State, submissions may occur only under the following circumstances:
 - i) To the Board, into the Board's Clerk's Office On-Line (COOL) system at www.ipcb.state.il.us. ~~As to any existing electronic document receiving system (i.e., one in use or substantially developed on or before October 13, 2005) for which an electronic reporting application has not been submitted on behalf of the Board or the Agency to USEPA pursuant to 40 CFR 3.1000, the Board or the Agency may use that system until October 13, 2007, or until such later~~

~~date as USEPA has approved in writing as the extended deadline for submitting the application;~~

- ii) To the Agency, into any electronic document receiving system for which USEPA has granted approval pursuant to 40 CFR 3.1000, so long as the system complies with 40 CFR 3.2000, incorporated by reference in Section 611.102(c), and USEPA has not withdrawn its approval of the system in writing. ~~As to any existing electronic document receiving system (i.e., one in use or substantially developed on or before October 13, 2005) for which an electronic reporting application has been submitted on behalf of the Board or the Agency to USEPA pursuant to 40 CFR 3.1000 on or before October 13, 2007, or on or before such later date as USEPA has approved in writing as the extended deadline for submitting the application, the Board or the Agency may use that system until USEPA disapproves its use in writing; or~~
 - iii) ~~— The Board or the Agency may use any electronic document receiving system for which USEPA has granted approval pursuant to 40 CFR 3.1000, so long as the system complies with 40 CFR 3.2000, incorporated by reference in Section 611.102(c), and USEPA has not withdrawn its approval of the system in writing.~~
- 3) This Section does not apply to any of the following documents, whether or not the document is a document submitted to satisfy the requirements cited in subsection (a)(1) ~~of this Section~~:
- A) Any document submitted via facsimile;
 - B) Any document submitted via magnetic or optical media, such as diskette, compact disc, digital video disc, or tape; or
 - C) Any data transfer between USEPA, any state, or any local government and either the Board or the Agency as part of administrative arrangements between the parties to the transfer to share data.
- 4) Upon USEPA conferring written approval for the submission of any types of documents as electronic documents in lieu of paper documents, as described in subsection (a)(2)(B)(iii) ~~of this Section~~, the Agency or the Board, as appropriate, must publish a Notice of Public Information in the Illinois Register that describes the documents approved for submission as

electronic documents, the electronic document receiving system approved to receive them, the acceptable formats and procedures for their submission, and, as applicable, the date on which the Board or the Agency will begin to receive those submissions. In the event of written cessation of USEPA approval for receiving any type of document as an electronic document in lieu of a paper document, the Board or the Agency must similarly cause publication of a Notice of Public Information in the Illinois Register.

BOARD NOTE: Subsection (a) ~~of this Section~~ is derived from 40 CFR 3.1, 3.2, 3.10, 3.20, and 3.1000 (2017) ~~(2012)~~.

- b) Definitions. For the purposes of this Section, terms will have the meaning attributed them in 40 CFR 3.3, incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- c) Procedures for Submission Of Electronic Documents ~~submission of electronic documents in Lieu lieu of Paper Documents paper documents~~ to USEPA. Except as provided in subsection (a)(3) of this Section, any person who is required under Title 40 of the Code of Federal Regulations to create and submit or otherwise provide a document to USEPA may satisfy this requirement with an electronic document, in lieu of a paper document, provided the following conditions are met:
- 1) The person satisfies the requirements of 40 CFR 3.10, incorporated by reference in Section 720.111(b); and
 - 2) USEPA has first published a notice in the Federal Register as described in subsection (a)(2)(A) ~~of this Section~~.

BOARD NOTE: Subsection (c) ~~of this Section~~ is derived from 40 CFR 3.2(a) and subpart B of 40 CFR 3 (2017) ~~(2012)~~.

- d) Procedures for Submission ~~submission of~~ Electronic Documents ~~electronic documents in Lieu lieu of Paper Documents paper documents~~ to the Board or the Agency.
- 1) The Board or the Agency may, but is not required to, establish procedural rules for the electronic submission of documents. The Board or the Agency must establish any such procedural rules under the Administrative Procedure Act [5 ILCS 100/Art. 5].
 - 2) The Board or the Agency may accept electronic documents under this Section only as provided in subsection (a)(2)(B) ~~of this Section~~.

BOARD NOTE: Subsection (d) ~~of this Section~~ is derived from 40 CFR 3.2(b) and subpart D of 40 CFR 3 (2017) ~~(2012)~~.

- e) Effects of ~~Submission~~ submission of an Electronic Document ~~electronic document~~ in Lieu lieu of Paper Documents ~~paper documents~~.
- 1) If a person who submits a document as an electronic document fails to comply with the requirements of this Section, that person is subject to the penalties prescribed for failure to comply with the requirement that the electronic document was intended to satisfy.
 - 2) Where a document submitted as an electronic document to satisfy a reporting requirement bears an electronic signature, the electronic signature legally binds, obligates, and makes the signer responsible to the same extent as the signer's handwritten signature would on a paper document submitted to satisfy the same reporting requirement.
 - 3) Proof that a particular signature device was used to create an electronic signature will suffice to establish that the individual uniquely entitled to use the device did so with the intent to sign the electronic document and give it effect.
 - 4) Nothing in this Section limits the use of electronic documents or information derived from electronic documents as evidence in enforcement or other proceedings.

BOARD NOTE: Subsection (e) ~~of this Section~~ is derived from 40 CFR 3.4 and 3.2000(c) ~~(2017)-(2012)~~.

- f) Public Document Subject document ~~subject~~ to State Laws laws. Any electronic document filed with the Board is a public document. The document, its submission, its retention by the Board, and its availability for public inspection and copying are subject to various State laws, including, but not limited to, the following:
- 1) The Administrative Procedure Act ~~[5 ILCS 100]~~;
 - 2) The Freedom of Information Act [5 ILCS 140];
 - 3) The State Records Act [5 ILCS 160];
 - 4) The Electronic Commerce Security Act [5 ILCS 175];
 - 5) The Environmental Protection Act ~~[415 ILCS 5]~~;
 - 6) Regulations relating to public access to Board records (2 Ill. Adm. Code 2175); and

- 7) Board procedural rules relating to protection of trade secrets and confidential information (35 Ill. Adm. Code 130).
- g) Nothing in this Section or in any provisions adopted pursuant to subsection (d)(1) ~~of this Section~~ will create any right or privilege to submit any document as an electronic document.

BOARD NOTE: Subsection (g) ~~of this Section~~ is derived from 40 CFR 3.2(c) ~~(2017)-(2012)~~.

BOARD NOTE: Derived from 40 CFR 3, 145.11(a)(33), 271.10(b), 271.11(b), and 271.12(h) ~~(2017)-(2012)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: DEFINITIONS AND REFERENCES

Section 720.110 Definitions

When used in 35 Ill. Adm. Code 720 through 728, 733, 738, and 739 only, the following terms have the meanings given below:

“Aboveground tank” means a device meeting the definition of tank that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected.

“Active life” of a facility means the period from the initial receipt of hazardous waste at the facility until the Agency receives certification of final closure.

“Active portion” means that portion of a facility where treatment, storage, or disposal operations are being or have been conducted after May 19, 1980, and which is not a closed portion. (See also “closed portion” and ~~“inactive portion.”~~)

“Acute hazardous waste” means hazardous waste that meets the listing criteria in 35 Ill. Adm. Code 721.111(a)(2) and therefore is either listed in 35 Ill. Adm. Code 721.131 with the assigned hazard code of (H) or is listed in 35 Ill. Adm. Code 721.133(e).

BOARD NOTE: These are USEPA hazardous waste numbers F020, F021, F022, F023, F026, and F027, and all USEPA hazardous waste numbers having the prefix “P”.

“Administrator” means the Administrator of the United States Environmental Protection Agency or the Administrator’s designee.

“Agency” means the Illinois Environmental Protection Agency.

“Ancillary equipment” means any device, including, but not limited to, such devices as piping, fittings, flanges, valves, and pumps, that is used to distribute, meter, or control the flow of hazardous waste from its point of generation to storage or treatment tanks, between hazardous waste storage and treatment tanks to a point of disposal onsite, or to a point of shipment for disposal off-site.

“Aquifer” means a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs.

“Authorized representative” means the person responsible for the overall operation of a facility or an operational unit (i.e., part of a facility), e.g., the plant manager, superintendent, or person of equivalent responsibility.

“Battery” means a device that consists of one or more electrically connected electrochemical cells that is designed to receive, store, and deliver electric energy. An electrochemical cell is a system consisting of an anode, cathode, and an electrolyte, plus such connections (electrical and mechanical) as may be needed to allow the cell to deliver or receive electrical energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed.

“Board” means the Illinois Pollution Control Board.

“Boiler” means an enclosed device using controlled flame combustion and having the following characteristics:

Boiler by physical characteristics:

The unit must have physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases; and the unit’s combustion chamber and primary energy recovery sections must be of integral design. To be of integral design, the combustion chamber and the primary energy recovery sections (such as waterwalls and superheaters) must be physically formed into one manufactured or assembled unit. A unit in which the combustion chamber and the primary energy recovery sections are joined only by ducts or connections carrying flue gas is not integrally designed; however, secondary energy recovery equipment (such as economizers or air preheaters) need not be physically formed into the same unit as the combustion chamber and the primary energy recovery section. The following units are not precluded from being boilers solely because they are not of integral design: process heaters (units that transfer energy directly to a process stream) and fluidized bed combustion units; and

While in operation, the unit must maintain a thermal energy recovery efficiency of at least 60 percent, calculated in terms of the recovered energy compared with the thermal value of the fuel; and

The unit must export and utilize at least 75 percent of the recovered energy, calculated on an annual basis. In this calculation, no credit may be given for recovered heat used internally in the same unit. (Examples of internal use are the preheating of fuel or combustion air, and the driving of induced or forced draft fans or feedwater pumps.); or

Boiler by designation. The unit is one that the Board has determined, on a case-by-case basis, to be a boiler, after considering the standards in Section 720.132.

“Carbon dioxide stream” means carbon dioxide that has been captured from an emission source (e.g., a power plant), plus incidental associated substances derived from the source materials and the capture process, and any substances added to the stream to enable or improve the injection process.

“Carbon regeneration unit” means any enclosed thermal treatment device used to regenerate spent activated carbon.

“Cathode ray tube” or “CRT” means a vacuum tube, composed primarily of glass, which is the visual or video display component of an electronic device. A “used, intact CRT” means a CRT whose vacuum has not been released. A “used, broken CRT” means glass removed from its housing or casing whose vacuum has been released.

“Central accumulation area” means any on-site area where hazardous waste is accumulating in units subject to either 35 Ill. Adm. Code 722.116 (for an SQG) or 35 Ill. Adm. Code 722.117 (for an LQG). A central accumulation area at an eligible academic entity that chooses to operate under Subpart K of 35 Ill. Adm. Code 722 is also subject to 35 Ill. Adm. Code 722.311 when accumulating unwanted material or hazardous waste.

“Certification” means a statement of professional opinion based upon knowledge and belief.

“Closed portion” means that portion of a facility that an owner or operator has closed in accordance with the approved facility closure plan and all applicable closure requirements. (See also “active portion” ~~and “inactive portion.”~~)

“Component” means either the tank or ancillary equipment of a tank system.

“Contained” means held in a unit (including a land-based unit, as defined in this Section) that meets either of the following containment situations:

Containment situation 1 (non-hazardous waste containment):

The unit is in good condition, with no leaks or other continuing or intermittent unpermitted releases of the hazardous secondary materials to the environment, and is designed, as appropriate for the hazardous secondary materials, to prevent unpermitted releases of hazardous secondary materials to the environment.

“Unpermitted releases” are releases that are not covered by a permit (such as a permit to discharge to water or air) and may include, but are not limited to, releases through surface transport by precipitation runoff, releases to soil and groundwater, windblown dust, fugitive air emissions, and catastrophic unit failures;

The unit is properly labeled or otherwise has a system (such as a log) to immediately identify the hazardous secondary materials in the unit; and

The unit holds hazardous secondary materials that are compatible with other hazardous secondary materials placed in the unit, is compatible with the materials used to construct the unit, and addresses any potential risks of fires or explosions.

Containment situation 2 (hazardous waste containment):

Hazardous secondary materials in units that meet the applicable requirements of 35 Ill. Adm. Code 724 or 725 are presumptively contained.

“Confined aquifer” means an aquifer bounded above and below by impermeable beds or by beds of distinctly lower permeability than that of the aquifer itself; an aquifer containing confined groundwater.

“Container” means any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled.

“Containment building” means a hazardous waste management unit that is used to store or treat hazardous waste pursuant to the provisions of Subpart DD of 35 Ill. Adm. Code 724 and Subpart DD of 35 Ill. Adm. Code 725.

“Contingency plan” means a document setting out an organized, planned and coordinated course of action to be followed in case of a fire, explosion, or release

of hazardous waste or hazardous waste constituents that could threaten human health or the environment.

“Corrosion expert” means a person who, by reason of knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control on buried or submerged metal piping systems and metal tanks.

“CRT collector” means a person who receives used, intact CRTs for recycling, repair, resale, or donation.

“CRT exporter” means any person in the United States that initiates a transaction to send used CRTs outside the United States or its territories for recycling or reuse, or any intermediary in the United States arranging for such export.

“CRT glass manufacturer” means an operation or part of an operation that uses a furnace to manufacture CRT glass.

“CRT processing” means conducting all of the following activities:

Receiving broken or intact CRTs;

Intentionally breaking intact CRTs or further breaking or separating broken CRTs; and

Sorting or otherwise managing glass removed from CRT monitors.

“Designated facility” means either of the following entities:

A hazardous waste treatment, storage, or disposal facility that has been designated on the manifest by the generator, pursuant to 35 Ill. Adm. Code 722.120, of which any of the following is true:

The facility has received a RCRA permit (or interim status) pursuant to 35 Ill. Adm. Code 702, 703, and 705;

The facility has received a RCRA permit from USEPA pursuant to 40 CFR 124 and 270;

The facility has received a RCRA permit from a state authorized by USEPA pursuant to 40 CFR 271; or

The facility is regulated pursuant to 35 Ill. Adm. Code 721.106(c)(2) or Subpart F of 35 Ill. Adm. Code 266; or

A generator site designated by the hazardous waste generator on the manifest to receive back its own waste as a return shipment from a designated hazardous waste treatment, storage, or disposal facility that has rejected the waste in accordance with 35 Ill. Adm. Code 724.172(f) or 725.172(f).

If a waste is destined to a facility in a state other than Illinois that has been authorized by USEPA pursuant to 40 CFR 271, but which has not yet obtained authorization to regulate that waste as hazardous, then the designated facility must be a facility allowed by the receiving state to accept such waste.

“Destination facility” means a facility that treats, disposes of, or recycles a particular category of universal waste, except those management activities described in 35 Ill. Adm. Code 733.113(a) and (c) and 733.133(a) and (c). A facility at which a particular category of universal waste is only accumulated is not a destination facility for the purposes of managing that category of universal waste.

“Dike” means an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials.

“Dioxins and furans” means tetra-, penta-, hexa-, hepta-, and octa-chlorinated dibenzo dioxins and furans.

“Director” means the Director of the Illinois Environmental Protection Agency.

“Discharge” or “hazardous waste discharge” means the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water.

“Disposal” means the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters.

“Disposal facility” means a facility or part of a facility at which hazardous waste is intentionally placed into or on any land or water and at which waste will remain after closure. The term disposal facility does not include a corrective action management unit (CAMU) into which remediation wastes are placed.

“Drip pad” means an engineered structure consisting of a curbed, free-draining base, constructed of non-earthen materials and designed to convey preservative kick-back

or drippage from treated wood, precipitation and surface water runoff to an associated collection system at wood preserving plants.

“Electronic import-export reporting compliance date” means the date that USEPA will announce in the Federal Register, on or after which exporters, importers, and receiving facilities will be required to submit certain export and import related documents to USEPA using USEPA’s Waste Import Export Tracking System, or its successor system.

BOARD NOTE: A compliance date in Illinois regulations is limited to a date certain on or after the Board has adopted the date by rulemaking. Adoption by rulemaking of the electronic import-export reporting compliance date can occur only after USEPA has made its announcement in the Federal Register. Until the Board has incorporated a date certain by rulemaking, the Board intends that no “electronic import-export reporting compliance date” will apply in the context of the Illinois rules. The federal electronic import-export reporting compliance date named by USEPA, however, may apply as provided by federal law.

“Electronic manifest” or “e-Manifest” means the electronic format of the hazardous waste manifest that is obtained from USEPA’s national e-Manifest System and transmitted electronically to the e-Manifest System, and which is the legal equivalent of USEPA Forms 8700-22 (Manifest) and 8700-22A (Continuation Sheet).

“Electronic Manifest System” or “e-Manifest System” means USEPA’s national information technology system through which the e-Manifest may be obtained, completed, transmitted, and distributed to users of the e-Manifest System and to regulatory agencies.

“Elementary neutralization unit” means a device of which the following is true:

It is used for neutralizing wastes that are hazardous only because they exhibit the corrosivity characteristic defined in 35 Ill. Adm. Code 721.122 or which are listed in Subpart D of 35 Ill. Adm. Code 721 only for this reason; and

It meets the definition of tank, tank system, container, transport vehicle, or vessel in this Section.

~~“EPA hazardous waste number” or “USEPA hazardous waste number” means the number assigned by USEPA to each hazardous waste listed in Subpart D of 35 Ill. Adm. Code 721 and to each characteristic identified in Subpart C of 35 Ill. Adm. Code 721.~~

~~“EPA identification number” or “USEPA identification number” means the number assigned by USEPA pursuant to 35 Ill. Adm. Code 722 through 725 to each generator; transporter; and treatment, storage, or disposal facility.~~

“EPA region” or “USEPA region” means the states and territories found in any one of the following 10 regions:

Region I: Maine, Vermont, New Hampshire, Massachusetts, Connecticut, and Rhode Island.

Region II: New York, New Jersey, Commonwealth of Puerto Rico, and the U.S. Virgin Islands.

Region III: Pennsylvania, Delaware, Maryland, West Virginia, Virginia, and the District of Columbia.

Region IV: Kentucky, Tennessee, North Carolina, Mississippi, Alabama, Georgia, South Carolina, and Florida.

Region V: Minnesota, Wisconsin, Illinois, Michigan, Indiana, and Ohio.

Region VI: New Mexico, Oklahoma, Arkansas, Louisiana, and Texas.

Region VII: Nebraska, Kansas, Missouri, and Iowa.

Region VIII: Montana, Wyoming, North Dakota, South Dakota, Utah, and Colorado.

Region IX: California, Nevada, Arizona, Hawaii, Guam, American Samoa, and Commonwealth of the Northern Mariana Islands.

Region X: Washington, Oregon, Idaho, and Alaska.

“Equivalent method” means any testing or analytical method approved by the Board pursuant to Section 720.120.

“Existing hazardous waste management (HWM) facility” or “existing facility” means a facility that was in operation or for which construction commenced on or before November 19, 1980. A facility had commenced construction if the owner or operator had obtained the federal, State, and local approvals or permits necessary to begin physical construction and either of the following had occurred:

A continuous on-site, physical construction program had begun; or

The owner or operator had entered into contractual obligations that could not be canceled or modified without substantial loss for physical construction of the facility to be completed within a reasonable time.

“Existing portion” means that land surface area of an existing waste management unit, included in the original Part A permit application, on which wastes have been placed prior to the issuance of a permit.

“Existing tank system” or “existing component” means a tank system or component that is used for the storage or treatment of hazardous waste and which was in operation, or for which installation was commenced, on or prior to July 14, 1986. Installation will be considered to have commenced if the owner or operator has obtained all federal, State, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either of the following is true:

A continuous on-site physical construction or installation program has begun; or

The owner or operator has entered into contractual obligations that cannot be canceled or modified without substantial loss for physical construction of the site or installation of the tank system to be completed within a reasonable time.

“Explosives or munitions emergency” means a situation involving the suspected or detected presence of unexploded ordnance (UXO), damaged or deteriorated explosives or munitions, an improvised explosive device (IED), other potentially explosive material or device, or other potentially harmful military chemical munitions or device, that creates an actual or potential imminent threat to human health, including safety, or the environment, including property, as determined by an explosives or munitions emergency response specialist. Such situations may require immediate and expeditious action by an explosives or munitions emergency response specialist to control, mitigate, or eliminate the threat.

“Explosives or munitions emergency response” means all immediate response activities by an explosives and munitions emergency response specialist to control, mitigate, or eliminate the actual or potential threat encountered during an explosives or munitions emergency. An explosives or munitions emergency response may include in-place render-safe procedures, treatment, or destruction of the explosives or munitions or transporting those items to another location to be rendered safe, treated, or destroyed. Any reasonable delay in the completion of an explosives or munitions emergency response caused by a necessary, unforeseen, or uncontrollable circumstance will not terminate the explosives or munitions emergency. Explosives and munitions emergency responses can occur on either public or private lands and are not limited to responses at RCRA facilities.

“Explosives or munitions emergency response specialist” means an individual trained in chemical or conventional munitions or explosives handling, transportation, render-safe procedures, or destruction techniques. Explosives or

munitions emergency response specialists include United States Department of Defense (USDOD) emergency explosive ordnance disposal (EOD), technical escort unit (TEU), and USDOD-certified civilian or contractor personnel and other federal, State, or local government or civilian personnel who are similarly trained in explosives or munitions emergency responses.

“Facility” means the following:

All contiguous land and structures, other appurtenances, and improvements on the land used for treating, storing, or disposing of hazardous waste or for managing hazardous secondary materials prior to reclamation. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations of them).

For the purpose of implementing corrective action pursuant to 35 Ill. Adm. Code 724.201 or 35 Ill. Adm. Code 727.201, all contiguous property under the control of the owner or operator seeking a permit under Subtitle C of RCRA. This definition also applies to facilities implementing corrective action pursuant to RCRA section 3008(h).

Notwithstanding the immediately-preceding paragraph of this definition, a remediation waste management site is not a facility that is subject to 35 Ill. Adm. Code 724.201, but a facility that is subject to corrective action requirements if the site is located within such a facility.

“Federal agency” means any department, agency, or other instrumentality of the federal government, any independent agency or establishment of the federal government, including any government corporation and the Government Printing Office.

“Federal, State, and local approvals or permits necessary to begin physical construction” means permits and approvals required under federal, State, or local hazardous waste control statutes, regulations, or ordinances.

“Final closure” means the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities pursuant to 35 Ill. Adm. Code 724 and 725 are no longer conducted at the facility unless subject to the provisions of 35 Ill. Adm. Code ~~722.116-722.134~~.

“Food-chain crops” means tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans.

“Freeboard” means the vertical distance between the top of a tank or surface impoundment dike and the surface of the waste contained therein.

“Free liquids” means liquids that readily separate from the solid portion of a waste under ambient temperature and pressure.

“Generator” means any person, by site, whose act or process produces hazardous waste identified or listed in 35 Ill. Adm. Code 721 or whose act first causes a hazardous waste to become subject to regulation.

“Groundwater” means water below the land surface in a zone of saturation.

“Hazardous secondary material” means a secondary material (e.g., spent material, by-product, or sludge) that, when discarded, would be identified as hazardous waste pursuant to 35 Ill. Adm. Code 721.

“Hazardous secondary material generator” means any person whose act or process produces hazardous secondary materials at the generating facility. For purposes of this definition, “generating facility” means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator. For the purposes of Sections 721.102(a)(2)(B) and 721.104(a)(23), a facility that collects hazardous secondary materials from other persons is not the hazardous secondary material generator.

“Hazardous waste” means a hazardous waste as defined in 35 Ill. Adm. Code 721.103.

“Hazardous waste constituent” means a constituent that caused the hazardous waste to be listed in Subpart D of 35 Ill. Adm. Code 721, or a constituent listed in 35 Ill. Adm. Code 721.124.

“Hazardous waste management unit” is a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples of hazardous waste management units include a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system, and a container storage area. A container alone does not constitute a unit; the unit includes containers, and the land or pad upon which they are placed.

~~“Inactive portion” means that portion of a facility that was not operated after November 19, 1980. (See also “active portion” and “closed portion.”)~~

“Incinerator” means any enclosed device of which the following is true:

The facility uses controlled flame combustion, and both of the following are true of the facility:

The facility does not meet the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor

The facility is not listed as an industrial furnace; or

The facility meets the definition of infrared incinerator or plasma arc incinerator.

“Incompatible waste” means a hazardous waste that is unsuitable for the following:

Placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container inner liners or tank walls); or

Commingling with another waste or material under uncontrolled conditions because the commingling might produce heat or pressure, fire, or explosion, violent reaction, toxic dusts, mists, fumes or gases, or flammable fumes or gases.

(See Appendix E to 35 Ill. Adm. Code 724 and Appendix E to 35 Ill. Adm. Code 725 for references that list examples.)

“Industrial furnace” means any of the following enclosed devices that are integral components of manufacturing processes and that use thermal treatment to accomplish recovery of materials or energy:

Cement kilns;

Lime kilns;

Aggregate kilns;

Phosphate kilns;

Coke ovens;

Blast furnaces;

Smelting, melting, and refining furnaces (including pyrometallurgical devices such as cupolas, reverberator furnaces, sintering machines, roasters, and foundry furnaces);

Titanium dioxide chloride process oxidation reactors;

Methane reforming furnaces;

Pulping liquor recovery furnaces;

Combustion devices used in the recovery of sulfur values from spent sulfuric acid;

Halogen acid furnaces (HAFs) for the production of acid from halogenated hazardous waste generated by chemical production facilities where the furnace is located on the site of a chemical production facility, the acid product has a halogen acid content of at least three percent, the acid product is used in a manufacturing process, and, except for hazardous waste burned as fuel, hazardous waste fed to the furnace has a minimum halogen content of 20 percent, as generated; and

Any other such device as the Agency determines to be an industrial furnace on the basis of one or more of the following factors:

The design and use of the device primarily to accomplish recovery of material products;

The use of the device to burn or reduce raw materials to make a material product;

The use of the device to burn or reduce secondary materials as effective substitutes for raw materials, in processes using raw materials as principal feedstocks;

The use of the device to burn or reduce secondary materials as ingredients in an industrial process to make a material product;

The use of the device in common industrial practice to produce a material product; and

Other relevant factors.

“Individual generation site” means the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste but is considered a single or individual generation site if the site or property is contiguous.

“Infrared incinerator” means any enclosed device that uses electric powered resistance heaters as a source of radiant heat followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.

“Inground tank” means a device meeting the definition of tank whereby a portion of the tank wall is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground.

“In operation” refers to a facility that is treating, storing, or disposing of hazardous waste.

“Injection well” means a well into which fluids are being injected. (See also “underground injection.”)

“Inner liner” means a continuous layer of material placed inside a tank or container that protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste.

“Installation inspector” means a person who, by reason of knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise the installation of tank systems.

“Intermediate facility” means any facility that stores hazardous secondary materials for more than 10 days and which is neither a hazardous secondary material generator nor a reclaimer of hazardous secondary material.

“International shipment” means the transportation of hazardous waste into or out of the jurisdiction of the United States.

“Lamp” or “universal waste lamp” means the bulb or tube portion of an electric lighting device. A lamp is specifically designed to produce radiant energy, most often in the ultraviolet, visible, or infrared regions of the electromagnetic spectrum. Examples of common universal waste lamps include, but are not limited to, fluorescent, high intensity discharge, neon, mercury vapor, high-pressure sodium, and metal halide lamps.

“Land-based unit” means an area where hazardous secondary materials are placed in or on the land before recycling. This definition does not include land-based production units.

“Land treatment facility” means a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure.

“Landfill” means a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a pile, a land treatment facility, a surface impoundment, an underground injection well, a salt dome formation, a salt bed formation, an underground mine, a cave, or a corrective action management unit (CAMU).

“Landfill cell” means a discrete volume of a hazardous waste landfill that uses a liner to provide isolation of wastes from adjacent cells or wastes. Examples of landfill cells are trenches and pits.

“Large quantity generator” or “LQG” means a generator that generates any of the following amounts of material in a calendar month:

Greater than or equal to 1,000 kg (2,200 lbs) of non-acute hazardous waste;

Greater than 1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); or

Greater than 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

“LDS” means leak detection system.

“Leachate” means any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste.

“Liner” means a continuous layer of natural or manmade materials beneath or on the sides of a surface impoundment, landfill, or landfill cell that restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate.

“Leak-detection system” means a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary containment structure. Such a system must employ operational controls (e.g., daily visual inspections for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure.

“Management” or “hazardous waste management” means the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste.

“Manifest” means the shipping document USEPA Form 8700-22 (including, if necessary, USEPA Form 8700-22A), or the e-Manifest, originated and signed in accordance with the applicable requirements of 35 Ill. Adm. Code 722 through 727.

“Manifest tracking number” means the alphanumeric identification number (i.e., a unique three letter suffix preceded by nine numerical digits) that is pre-printed in Item 4 of the manifest by a registered source.

“Mercury-containing equipment” means a device or part of a device (including thermostats, but excluding batteries and lamps) that contains elemental mercury integral to its function.

“Military munitions” means all ammunition products and components produced or used by or for the United States Department of Defense or the United States Armed Services for national defense and security, including military munitions under the control of the United States Department of Defense (USDOD), the United States Coast Guard, the United States Department of Energy (USDOE), and National Guard personnel. The term military munitions includes: confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, smokes, and incendiaries used by USDOD components, including bulk explosives and chemical warfare agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components of these items and devices. Military munitions do not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components of these items and devices. However, the term does include non-nuclear components of nuclear devices, managed under USDOE’s nuclear weapons program after all sanitization operations required under the Atomic Energy Act of 1954 (42 USC 2014 et seq.), as amended, have been completed.

“Mining overburden returned to the mine site” means any material overlying an economic mineral deposit that is removed to gain access to that deposit and is then used for reclamation of a surface mine.

“Miscellaneous unit” means a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container; tank; surface impoundment; pile; land treatment unit; landfill; incinerator; boiler; industrial furnace; underground injection well with appropriate technical standards pursuant to 35 Ill. Adm. Code 730; containment building; corrective action management unit (CAMU); unit eligible for a research, development, and demonstration permit pursuant to 35 Ill. Adm. Code 703.231; or staging pile.

“Movement” means hazardous waste that is transported to a facility in an individual vehicle.

“NAICS Code” means the code number assigned a facility using the “North American Industry Classification System;”, incorporated by reference in Section 720.111.

“New hazardous waste management facility”, “new HWM facility”, or “new facility” means a facility that began operation, or for which construction commenced

after November 19, 1980. (See also “Existing hazardous waste management facility.”.)

“New tank system” or “new tank component” means a tank system or component that will be used for the storage or treatment of hazardous waste and for which installation commenced after July 14, 1986; except, however, for purposes of 35 Ill. Adm. Code 724.293(g)(2) and 725.293(g)(2), a new tank system is one for which construction commenced after July 14, 1986. (See also “existing tank system.”.)

“No free liquids,” as used in 35 Ill. Adm. Code 721.104(a)(26) and (b)(18), means that solvent-contaminated wipes may not contain free liquids, as determined by Method 9095B (Paint Filter Liquids Test), included in “Test Methods for Evaluating Solid Waste, Physical/Chemical Methods,” incorporated by reference in Section 720.111, and that there is no free liquid in the container holding the wipes. No free liquids may also be determined using another standard or test method that the Agency has determined by permit condition is equivalent to Method 9095B.

“Non-acute hazardous waste” means hazardous waste that is not acute hazardous waste, as defined in this Section.

“Onground tank” means a device meeting the definition of tank that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surfaces so that the external tank bottom cannot be visually inspected.

“On-site” means the same or geographically contiguous property that may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a crossroads intersection and access is by crossing as opposed to going along the right-of-way. Non-contiguous properties owned by the same person but connected by a right-of-way that the owner controls and to which the public does not have access is also considered on-site property.

“Open burning” means the combustion of any material without the following characteristics:

Control of combustion air to maintain adequate temperature for efficient combustion;

Containment of the combustion reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion; and

Control of emission of the gaseous combustion products.

(See also “incineration” and “thermal treatment.”.)

“Operator” means the person responsible for the overall operation of a facility.

“Owner” means the person that owns a facility or part of a facility.

“Partial closure” means the closure of a hazardous waste management unit in accordance with the applicable closure requirements of 35 Ill. Adm. Code 724 or 725 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems), landfill cell, surface impoundment, waste pile, or other hazardous waste management unit, while other units of the same facility continue to operate.

“Person” means an individual, trust, firm, joint stock company, federal agency, corporation (including a government corporation), partnership, association, state, municipality, commission, political subdivision of a state, or any interstate body.

“Personnel” or “facility personnel” means all persons who work at or oversee the operations of a hazardous waste facility and whose actions or failure to act may result in noncompliance with 35 Ill. Adm. Code 724 or 725.

“Pesticide” means any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest or intended for use as a plant regulator, defoliant, or desiccant, other than any article that fulfills one of the following descriptions:

It is a new animal drug under section 201(v) of the Federal Food, Drug and Cosmetic Act (FFDCA; 21 USC 321(v)), incorporated by reference in Section 720.111(c);

It is an animal drug that has been determined by regulation of the federal Secretary of Health and Human Services pursuant to FFDCA section 512 (21 USC 360b), incorporated by reference in Section 720.111(c), to be an exempted new animal drug; or

It is an animal feed under FFDCA section 201(w) (21 USC 321(w)), incorporated by reference in Section 720.111(c), that bears or contains any substances described in either of the two preceding paragraphs of this definition.

BOARD NOTE: The second exception of corresponding 40 CFR 260.10 reads as follows: “Is an animal drug that has been determined by regulation of the Secretary of Health and Human Services not to be a new animal drug.” This is very similar to the language of section 2(u) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA; 7 USC 136(u)). The three exceptions, taken together, appear intended not to include as pesticide any material within the scope of federal Food and Drug Administration regulation. The Board codified this provision with the intent of retaining the

same meaning as its federal counterpart while adding the definiteness required under Illinois law.

“Pile” means any non-containerized accumulation of solid, non-flowing hazardous waste that is used for treatment or storage, and that is not a containment building.

“Plasma arc incinerator” means any enclosed device that uses a high intensity electrical discharge or arc as a source of heat followed by an afterburner using controlled flame combustion and which is not listed as an industrial furnace.

“Point source” means any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.

“Publicly owned treatment works” or “POTW” is as defined in 35 Ill. Adm. Code 310.110.

“Qualified groundwater scientist” means a scientist or engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering, and has sufficient training and experience in groundwater hydrology and related fields, as demonstrated by state registration, professional certifications, or completion of accredited university courses that enable the individual to make sound professional judgments regarding groundwater monitoring and contaminant rate and transport. BOARD NOTE: State registration includes, but is not limited to, registration as a professional engineer with the Department of Professional Regulation, pursuant to 225 ILCS 325 and 68 Ill. Adm. Code 1380. Professional certification includes, but is not limited to, certification under the certified groundwater professional program of the National Ground Water Association.

“RCRA” means the Solid Waste Disposal Act, as amended by the Resource Conservation and Recovery Act of 1976, as amended (42 USC 6901 et seq.).

“RCRA standardized permit” means a RCRA permit issued pursuant to Subpart J of 35 Ill. Adm. Code 703 and Subpart G of 35 Ill. Adm. Code 702 that authorizes management of hazardous waste. The RCRA standardized permit may have two parts: a uniform portion issued in all cases and a supplemental portion issued at the discretion of the Agency.

“Recognized trader” means a person domiciled in the United States, by site of business, who acts to arrange and facilitate transboundary movements of wastes destined for recovery or disposal operations, either by purchasing from and subsequently selling to United States and foreign facilities, or by acting under arrangements with a United States waste facility to arrange for the export or import of the wastes.

“Regional Administrator” means the Regional Administrator for the USEPA region in which the facility is located or the Regional Administrator’s designee.

“Remanufacturing” means processing a higher-value hazardous secondary material in order to manufacture a product that serves a similar functional purpose as the original commercial-grade material. For the purpose of this definition, a hazardous secondary material is considered higher-value if it was generated from the use of a commercial-grade material in a manufacturing process and can be remanufactured into a similar commercial-grade material.

“Remediation waste” means all solid and hazardous wastes, and all media (including groundwater, surface water, soils, and sediments) and debris that are managed for implementing cleanup.

“Remediation waste management site” means a facility where an owner or operator is or will be treating, storing, or disposing of hazardous remediation wastes. A remediation waste management site is not a facility that is subject to corrective action pursuant to 35 Ill. Adm. Code 724.201, but a remediation waste management site is subject to corrective action requirements if the site is located in such a facility.

“Replacement unit” means a landfill, surface impoundment, or waste pile unit from which all or substantially all of the waste is removed, and which is subsequently reused to treat, store, or dispose of hazardous waste. Replacement unit does not include a unit from which waste is removed during closure, if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in accordance with a closure or corrective action plan approved by USEPA or the Agency.

“Representative sample” means a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) that can be expected to exhibit the average properties of the universe or whole.

“Runoff” means any rainwater, leachate, or other liquid that drains over land from any part of a facility.

“Runon” means any rainwater, leachate, or other liquid that drains over land onto any part of a facility.

“Saturated zone” or “zone of saturation” means that part of the earth’s crust in which all voids are filled with water.

“SIC code” means “Standard Industrial Classification code;”, as assigned to a site by the United States Department of Transportation, Federal Highway Administration, based on the particular activities that occur on the site, as set forth

in its publication “Standard Industrial Classification Manual,” incorporated by reference in Section 720.111(a).

“Sludge” means any solid, semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility, exclusive of the treated effluent from a wastewater treatment plant.

“Sludge dryer” means any enclosed thermal treatment device that is used to dehydrate sludge and which has a total thermal input, excluding the heating value of the sludge itself, of 2,500 Btu/lb or less of sludge treated on a wet-weight basis.

“Small quantity generator” or “SQG” means a generator that generates the following amounts ~~less than 1,000 kg of material hazardous waste~~ in a calendar month:-

Greater than 100 kg (220 lbs) but less than 1,000 kilograms (2,200 lbs) of non-acute hazardous waste;

Less than or equal to 1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); and

Less than or equal to 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

“Solid waste” means a solid waste as defined in 35 Ill. Adm. Code 721.102.

“Solvent-contaminated wipe” means the following:

A wipe that, after use or after cleaning up a spill, fulfills one or more of the following conditions:

The wipe contains one or more of the F001 through F005 solvents listed in 35 Ill. Adm. Code 721.131 or the corresponding P- or U-listed solvents found in 35 Ill. Adm. Code 721.133;

The wipe exhibits a hazardous characteristic found in Subpart C of 35 Ill. Adm. Code 721 when that characteristic results from a solvent listed in 35 Ill. Adm. Code 721; or

The wipe exhibits only the hazardous waste characteristic of ignitability found in 35 Ill. Adm. Code 721.121 due to the presence of one or more solvents that are not listed in 35 Ill. Adm. Code 721.

Solvent-contaminated wipes that contain listed hazardous waste other than solvents, or exhibit the characteristic of toxicity, corrosivity, or reactivity due to contaminants other than solvents, are not eligible for the exclusions at 35 Ill. Adm. Code 721.104(a)(26) and (b)(18).

“Sorbent” means a material that is used to soak up free liquids by either adsorption or absorption, or both. “Sorb” means to either adsorb or absorb, or both.

“Staging pile” means an accumulation of solid, non-flowing “remediation waste” (as defined in this Section) that is not a containment building and that is used only during remedial operations for temporary storage at a facility. Staging piles must be designated by the Agency according to 35 Ill. Adm. Code 724.654.

“State” means any of the several states, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

“Storage” means the holding of hazardous waste for a temporary period, at the end of which the hazardous waste is treated, disposed of, or stored elsewhere.

“Sump” means any pit or reservoir that meets the definition of tank and those troughs or trenches connected to it that serve to collect hazardous waste for transport to hazardous waste storage, treatment, or disposal facilities; except that, as used in the landfill, surface impoundment, and waste pile rules, sump means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system.

“Surface impoundment” or “impoundment” means a facility or part of a facility that is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials) that is designed to hold an accumulation of liquid wastes or wastes containing free liquids and which is not an injection well. Examples of surface impoundments are holding, storage, settling and aeration pits, ponds, and lagoons.

“Tank” means a stationary device, designed to contain an accumulation of hazardous waste that is constructed primarily of non-earthen materials (e.g., wood, concrete, steel, plastic) that provide structural support.

“Tank system” means a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system.

“TEQ” means toxicity equivalence, the international method of relating the toxicity of various dioxin and furan congeners to the toxicity of 2,3,7,8-tetrachlorodibenzo-p-dioxin.

“Thermal treatment” means the treatment of hazardous waste in a device that uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste. Examples of thermal treatment processes are incineration, molten salt, pyrolysis, calcination, wet air oxidation, and microwave discharge. (See also “incinerator” and “open burning.”)

“Thermostat” means a temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element and mercury-containing ampules that have been removed from such a temperature control device in compliance with 35 Ill. Adm. Code 733.113(c)(2) or 733.133(c)(2).

“Totally enclosed treatment facility” means a facility for the treatment of hazardous waste that is directly connected to an industrial production process and which is constructed and operated in a manner that prevents the release of any hazardous waste or any constituent thereof into the environment during treatment. An example is a pipe in which waste acid is neutralized.

“Transfer facility” means any transportation-related facility, including loading docks, parking areas, storage areas, and other similar areas where shipments of hazardous waste or hazardous secondary materials are held during the normal course of transportation.

“Transport vehicle” means a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle.

“Transportation” means the movement of hazardous waste by air, rail, highway, or water.

“Transporter” means a person engaged in the off-site transportation of hazardous waste by air, rail, highway, or water.

“Treatability study” means the following:

A study in which a hazardous waste is subjected to a treatment process to determine the following:

Whether the waste is amenable to the treatment process;

What pretreatment (if any) is required;

The optimal process conditions needed to achieve the desired treatment;

The efficiency of a treatment process for a specific waste or wastes;
and

The characteristics and volumes of residuals from a particular treatment process;

Also included in this definition for the purpose of 35 Ill. Adm. Code 721.104(e) and (f) exemptions are liner compatibility, corrosion and other material compatibility studies, and toxicological and health effects studies. A treatability study is not a means to commercially treat or dispose of hazardous waste.

“Treatment” means any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize the waste, recover energy or material resources from the waste, or render the waste non-hazardous or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume.

“Treatment zone” means a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized.

“Underground injection” means the subsurface emplacement of fluids through a bored, drilled, or driven well or through a dug well, where the depth of the dug well is greater than the largest surface dimension. (See also “injection well-”.)

“Underground tank” means a device meeting the definition of tank whose entire surface area is totally below the surface of and covered by the ground.

“Unfit-for-use tank system” means a tank system that has been determined, through an integrity assessment or other inspection, to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment.

“United States” means the 50 states, the District of Columbia, the Commonwealth of Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.

“Universal waste” means any of the following hazardous wastes that are managed pursuant to the universal waste requirements of 35 Ill. Adm. Code 733:

Batteries, as described in 35 Ill. Adm. Code 733.102;

Pesticides, as described in 35 Ill. Adm. Code 733.103;

Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104;
and

Lamps, as described in 35 Ill. Adm. Code 733.105.

“Universal waste handler” means either of the following:

A generator (as defined in this Section) of universal waste; or

The owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates the universal waste, and sends that universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

“Universal waste handler” does not mean either of the following:

A person that treats (except under the provisions of Section 733.113(a) or (c) or 733.133(a) or (c)), disposes of, or recycles universal waste; or

A person engaged in the off-site transportation of universal waste by air, rail, highway, or water, including a universal waste transfer facility.

“Universal waste transporter” means a person engaged in the off-site transportation of universal waste by air, rail, highway, or water.

“Unsaturated zone” or “zone of aeration” means the zone between the land surface and the water table.

“Uppermost aquifer” means the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility’s property boundary.

“USDOT” or “Department of Transportation” means the United States Department of Transportation.

“Used oil” means any oil that has been refined from crude oil, or any synthetic oil, that has been used and as a result of such use is contaminated by physical or chemical impurities.

“USEPA” or “EPA” means the United States Environmental Protection Agency.

“USEPA hazardous waste number” or “EPA hazardous waste number” means the number assigned by USEPA to each hazardous waste listed in Subpart D of 35 Ill. Adm. Code 721 and to each characteristic identified in Subpart C of 35 Ill. Adm. Code 721.

“USEPA identification number” or “USEPA ID number” is the unique alphanumeric identifier that USEPA assigns a hazardous waste generator; transporter; treatment, storage, or disposal facility; or reclamation facility upon

notification in compliance with the requirements of section 3010 of RCRA (42 USC 6930).

“User of the Electronic Manifest System” or “user of the e-Manifest System” means a hazardous waste generator, a hazardous waste transporter, an owner or operator of a hazardous waste treatment, storage, recycling, or disposal facility, or any other person or entity—

that is required to use a manifest to comply with any federal or state requirement to track the shipment, transportation, and receipt of either—

hazardous waste or other waste material that is shipped from the site of generation to an off-site designated facility for treatment, storage, recycling, or disposal; or

rejected wastes or regulated container residues that are shipped from a designated facility to an alternative facility, or returned to the generator; and

which elects to use either—

the e-Manifest System to obtain, complete and transmit an e-Manifest format supplied by the USEPA e-Manifest System; or

the paper manifest form and submits to the e-Manifest System for data processing purposes a paper copy of the manifest (or data from such a paper copy), in accordance with 35 Ill. Adm. Code 724.171(a)(2)(E) or 725.171(a)(2)(E).

A paper copy submitted for data processing purposes is submitted for data exchange purposes only and is not the official copy of record for legal purposes.

“USPS” means the United States Postal Service.

“Very small quantity generator” or “VSQG” means a generator that generates less than or equal to the following amounts of material in a calendar month:

100 kg (220 lbs) of nonacute hazardous waste;

1 kg (2.2 lbs) of acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e); and

100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill Adm. Code 721.131 or 721.133(e).

“Vessel” includes every description of watercraft used or capable of being used as a means of transportation on the water.

“Wastewater treatment unit” means a device of which the following is true:

It is part of a wastewater treatment facility that has an NPDES permit pursuant to 35 Ill. Adm. Code 309 or a pretreatment permit or authorization to discharge pursuant to 35 Ill. Adm. Code 310;

It receives and treats or stores an influent wastewater that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or generates and accumulates a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103, or treats or stores a wastewater treatment sludge that is a hazardous waste as defined in 35 Ill. Adm. Code 721.103; and

It meets the definition of tank or tank system in this Section.

“Water (bulk shipment)” means the bulk transportation of hazardous waste that is loaded or carried on board a vessel without containers or labels.

“Well” means any shaft or pit dug or bored into the earth, generally of a cylindrical form, and often walled with bricks or tubing to prevent the earth from caving in.

“Well injection” (See “underground injection.”)

“Wipe” means a woven or non-woven shop towel, rag, pad, or swab made of wood pulp, fabric, cotton, polyester blends, or other material.

“Zone of engineering control” means an area under the control of the owner or operator that, upon detection of a hazardous waste release, can be readily cleaned up prior to the release of hazardous waste or hazardous constituents to groundwater or surface water.

ASTM D 2382-88, "Standard Test Method for Heat of Combustion of Hydrocarbon Fuels by Bomb Calorimeter (High Precision Method)," approved October 31, 1988, USEPA-approved for 35 Ill. Adm. Code 724.933 and 725.933.

ASTM D 2879-92, "Standard Test Method for Vapor Pressure-Temperature Relationship and Initial Decomposition Temperature of Liquids by Isoteniscope," approved 1992, USEPA-approved for 35 Ill. Adm. Code 725.984, referenced in 35 Ill. Adm. Code 721.963, 724.963, and 725.963.

ASTM D 3828-87, "Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester," approved December 14, 1988, USEPA-approved for 35 Ill. Adm. Code 721.121(a).

ASTM E 168-88, "Standard Practices for General Techniques of Infrared Quantitative Analysis," approved May 27, 1988, USEPA-approved for 35 Ill. Adm. Code 721.963 and 724.963.

ASTM E 169-87, "Standard Practices for General Techniques of Ultraviolet-Visible Quantitative Analysis," approved February 1, 1987, USEPA-approved for 35 Ill. Adm. Code 721.963 and 724.963.

ASTM E 260-85, "Standard Practice for Packed Column Gas Chromatography," approved June 28, 1985, USEPA-approved for 35 Ill. Adm. Code 724.963.

ASTM G 21-70 (1984a), "Standard Practice for Determining Resistance of Synthetic Polymer Materials to Fungi," referenced in 35 Ill. Adm. Code 724.414 and 725.414.

ASTM G 22-76 (1984b), “Standard Practice for Determining Resistance of Plastics to Bacteria;”, referenced in 35 Ill. Adm. Code 724.414 and 725.414.

“Procedures Manual for Ground Water Monitoring at Solid Waste Disposal Facilities;”² August 1977, EPA-530/SW-611, NTIS document number PB84-174820, referenced in 35 Ill. Adm. Code 725.192.

“Screening Procedures for Estimating the Air Quality Impact of Stationary Sources;”² October 1992, USEPA publication number EPA-454/R-92-019, NTIS document number 93-219095, referenced in 35 Ill. Adm. Code 726.204 and 726.206.

BOARD NOTE: Also available on the Internet for free download as a WordPerfect document from the USEPA website at the following Internet address: www.epa.gov/scram001/guidance/guide/scrng.wpd.

“Test Methods for Evaluating Solid Waste, Physical/Chemical Methods,” USEPA publication number EPA-530/SW-846 (Third Edition, November 1986; Revision 6, January 2005), as amended by Updates I (July 1992), II (November 1994), IIA (August 1993), IIB (January 1995), III (December 1996), IIIA (April 1998), and IIIB (November 2004) (document number 955-001-00000-1), generally referenced in Appendices A and I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 726.200, 726.206, 726.212, and 728.106 (in addition to the references cited below for specific methods):

Method 0010 (November 1986) (Modified Method 5 Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0011 (December 1996) (Sampling for Selected Aldehyde and Ketone Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and for Appendix I to 35 Ill. Adm. Code 726.

Method 0020 (November 1986) (Source Assessment Sampling System), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0023A (December 1996) (Sampling Method for Polychlorinated Dibenzop-Dioxins and Polychlorinated Dibenzofuran Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.204.

Method 0030 (November 1986) (Volatile Organic Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0031 (December 1996) (Sampling Method for Volatile Organic Compounds (SMVOC)), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0040 (December 1996) (Sampling of Principal Organic Hazardous Constituents from Combustion Sources Using Tedlar® Bags), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 0050 (December 1996) (Isokinetic HCl/Cl₂ Emission Sampling Train), USEPA-approved for Appendix

I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.207.

Method 0051 (December 1996) (Midget Impinger HCl/Cl₂ Emission Sampling Train), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.207.

Method 0060 (December 1996) (Determination of Metals in Stack Emissions), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, Appendix I to 35 Ill. Adm. Code 726, and 35 Ill. Adm. Code 726.206.

Method 0061 (December 1996) (Determination of Hexavalent Chromium Emissions from Stationary Sources), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721, 35 Ill. Adm. Code 726.206, and Appendix I to 35 Ill. Adm. Code 726.

Method 1010A (November 2004) (Test Methods for Flash Point by Pensky-Martens Closed Cup Tester), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1020B (November 2004) (Standard Test Methods for Flash Point by Setaflash (Small Scale) Closed-cup Apparatus), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1110A (November 2004) (Corrosivity Toward Steel), USEPA-approved for 35 Ill. Adm. Code 721.122 and Appendix I to 35 Ill. Adm. Code 721.

Method 1310B (November 2004) (Extraction Procedure (EP) Toxicity Test Method and Structural Integrity Test), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and referenced in Appendix I to 35 Ill. Adm. Code 728.

Method 1311 (November 1992) (Toxicity Characteristic Leaching Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721; for 35 Ill. Adm. Code 721.124, 728.107, and 728.140; and for Table T to 35 Ill. Adm. Code 728.

Method 1312 (November 1994) (Synthetic Precipitation Leaching Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1320 (November 1986) (Multiple Extraction Procedure), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 1330A (November 1992) (Extraction Procedure for Oily Wastes), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9010C (November 2004) (Total and Amenable Cyanide: Distillation), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 728.140, 728.144, and 728.148, referenced in Table H to 35 Ill. Adm. Code 728.

Method 9012B (November 2004) (Total and Amenable Cyanide (Automated Colorimetric, with Off-Line Distillation)), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 728.140, 728.144, and 728.148, referenced in Table H to 35 Ill. Adm. Code 728.

Method 9040C (November 2004) (pH Electrometric Measurement), USEPA-approved for 35 Ill. Adm. Code 721.122 and Appendix I to 35 Ill. Adm. Code 721.

Method 9045D (November 2004) (Soil and Waste pH), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9060A (November 2004) (Total Organic Carbon), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721 and 35 Ill. Adm. Code 721.934, 721.963, 724.934, 724.963, 725.934, and 725.963.

Method 9070A (November 2004) (n-Hexane Extractable Material (HEM) for Aqueous Samples), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9071B (April 1998) (n-Hexane Extractable Material (HEM) for Sludge, Sediment, and Solid Samples), USEPA-approved for Appendix I to 35 Ill. Adm. Code 721.

Method 9095B (November 2004) (Paint Filter Liquids Test), USEPA-approved for 35 Ill. Adm. Code 720.110; Appendix I to 35 Ill. Adm. Code 721; and 35 Ill. Adm. Code 724.290, 724.414, 725.290, 725.414, 725.981, 727.290, and 728.132.

BOARD NOTE: Also available on the Internet for free download in segments in PDF format from the USEPA website at: www.epa.gov/SW-846.

OECD. Organization ~~Organisation~~ for Economic Cooperation ~~Co-operation~~ and Development, Environment Directorate, 2 rue Andre Pascal, F-75775 Paris Cedex 16, France, +33 (0) 1 45 24 81 67 (www.oecd.org), also OECD Washington Center, 2001 L Street, NW, Suite 650, Washington, DC 20036-4922, 202-785-6323 or 800-456-6323 (www.oecdwash.org):

OECD Guidance Manual. “Guidance Manual for the Implementation of Council Decision C(2001)107/FINAL, as Amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations;”, 2009 (also called “Guidance Manual for the Control of Transboundary Movements of Recoverable Materials” in OECD documents), but only the following segments, which set forth the substantive requirements of OECD decision C(2001)107/FINAL (June 14, 2001), as amended by C(2001)107/ADD1 (February 28, 2002), C(2004)20 (March 9, 2004), C(2005)141 (December 2, 2005), and C(2008)156 (December 4, 2008):

~~“Annex A: OECD Decision C(2001)107/FINAL, as Amended by C(2004)20; C(2005)141 and C(2008)156” (also called “Revision of Council Decision C(92)39/FINAL on the Control of Transboundary Movements of Wastes Destined for Recovery Operations” within the text of Annex A, and “Decision of the Council Concerning the Control of Transboundary Movements of Wastes Destined for Recovery Operations” in the original OECD decision source document, C(2001)107/FINAL (June 14, 2001), as amended by C(2001)107/ADD1 (February 28, 2002), C(2004)20 (March 9, 2004), C(2005)141 (December 2, 2005), and C(2008)156 (December 4, 2008)).~~

“Annex B: OECD Consolidated List of Wastes Subject to the Green Control Procedure” (individually referred to as “Annex B to OECD Guidance Manual” in 35 Ill. Adm. Code 722), combining Appendix 3 to OECD decision C(2001)107/FINAL, as amended as described above, together with the text of Annex IX (“List B”) to the “Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal” (“Basel Convention”).

“Annex C: OECD Consolidated List of Wastes Subject to the Amber Control Procedure” (individually referred to as “Annex C to OECD Guidance Manual” in 35 Ill. Adm. Code 722), combining Appendix 4 to OECD decision C(2001)107/FINAL, as amended, together with the text of Annexes II (“Categories of Wastes Requiring Special Consideration”) and VIII (“List A”) to the Basel Convention.

BOARD NOTE: The OECD Guidance Manual is available online from OECD at www.oecd.org/dataoecd/57/1/42262259.pdf. The OECD and the Basel Convention consider the OECD Guidance Manual unofficial text of these documents. Despite this unofficial status, the Board has chosen to follow USEPA’s lead and incorporate the OECD Guidance Manual by reference, instead of separately incorporating the OECD decision C(2001)107/FINAL (with its subsequent amendments: OECD decisions C(2001)107/ADD1, C(2004)20, C(2005)141, and C(2008)156) and the Basel Convention by reference. Use of the OECD Guidance Manual eases reference to the documents, increases access to the documents, and facilitates future updates to this incorporation by reference. All references to “OECD C(2001)107/FINAL” in the text of 35 Ill. Adm. Code 722 refer to both the OECD decision and the Basel Convention that the OECD decision references. The OECD Guidance Manual includes as Annex A the full text of OECD document C(2001)107/FINAL, with amendments, and Annexes B and C set forth lists of wastes subject to Green control procedures and wastes subject to Amber control procedures, respectively, which consolidate the wastes from C(2001)107/FINAL together with those from the Basel Convention.

OECD Guideline for Testing of Chemicals, “Ready Biodegradability,” Method 301B (July 17, 1992), “CO₂ Evolution (Modified Sturm Test),” referenced in 35 Ill. Adm. Code 724.414.

40 CFR 3.2000 ~~(2017)-(2015)~~ (What Are the Requirements Authorized State, Tribe, and Local Programs' Reporting Systems Must Meet?), referenced in Section 720.104.

40 CFR 51.100(ii) ~~(2018)-(2015)~~ (Definitions), referenced in 35 Ill. Adm. Code 726.200.

Appendix W to 40 CFR 51 ~~(2018)-(2015)~~ (Guideline on Air Quality Models), referenced in 35 Ill. Adm. Code 726.204.

BOARD NOTE: Also available from NTIS (see above for contact information) as "Guideline on Air Quality Models," Revised 1986, USEPA publication number EPA-450/12-78-027R, NTIS document numbers PB86-245248 (Guideline) and PB88-150958 (Supplement).

Appendix B to 40 CFR 52.741 ~~(2017)-(2015)~~ (VOM Measurement Techniques for Capture Efficiency), referenced in 35 Ill. Adm. Code 703.213, 703.352, 721.984, 721.986, 721.989, 724.982, 724.984, 724.986, 724.989, 725.983, 725.985, 725.987, and 725.990.

40 CFR 60 ~~(2018)-(2015)~~ (Standards of Performance for New Stationary Sources), referenced generally in 35 Ill. Adm. Code 721.104, 721.950, 721.964, 721.980, 724.964, 724.980, 725.964, and 725.980.

Subpart VV of 40 CFR 60 ~~(2018)~~~~(2015)~~ (Standards of Performance for Equipment Leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry), referenced in 35 Ill. Adm. Code 721.989, 724.989, and 725.990.

Appendix A to 40 CFR 60 ~~(2018)~~~~(2015)~~ (Test Methods), referenced generally in 35 Ill. Adm. Code 726.205 (in addition to the references cited below for specific methods):

Method 1 (Sample and Velocity Traverses for Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)), referenced in 35 Ill. Adm. Code 721.934, 724.933, 724.934, 725.933, 725.934, and 726.205.

Method 2A (Direct Measurement of Gas Volume through Pipes and Small Ducts), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2B (Determination of Exhaust Gas Volume Flow Rate from Gasoline Vapor Incinerators), referenced in 35 Ill. Adm. Code 726.205.

Method 2C (Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2D (Measurement of Gas Volume Flow Rates in Small Pipes and Ducts), referenced in 35 Ill. Adm. Code 721.933, 724.933, 725.933, and 726.205.

Method 2E (Determination of Landfill Gas Production Flow Rate), referenced in 35 Ill. Adm. Code 726.205.

Method 2F (Determination of Stack Gas Velocity and Volumetric Flow Rate with Three-Dimensional Probes), referenced in 35 Ill. Adm. Code 726.205.

Method 2G (Determination of Stack Gas Velocity and Volumetric Flow Rate with Two-Dimensional Probes), referenced in 35 Ill. Adm. Code 726.205.

Method 2H (Determination of Stack Gas Velocity Taking into Account Velocity Decay Near the Stack Wall), referenced in 35 Ill. Adm. Code 726.205.

Method 3 (Gas Analysis for the Determination of Dry Molecular Weight), referenced in 35 Ill. Adm. Code 724.443 and 726.205.

Method 3A (Determination of Oxygen and Carbon Dioxide Concentrations in Emissions from Stationary Sources (Instrumental Analyzer Procedure)), referenced in 35 Ill. Adm. Code 726.205.

Method 3B (Gas Analysis for the Determination of Emission Rate Correction Factor or Excess Air), referenced in 35 Ill. Adm. Code 726.205.

Method 3C (Determination of Carbon Dioxide, Methane, Nitrogen, and Oxygen from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 4 (Determination of Moisture Content in Stack Gases), referenced in 35 Ill. Adm. Code 726.205.

Method 5 (Determination of Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5A (Determination of Particulate Matter Emissions from the Asphalt Processing and Asphalt Roofing Industry), referenced in 35 Ill. Adm. Code 726.205.

Method 5B (Determination of Nonsulfuric Acid Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5D (Determination of Particulate Matter Emissions from Positive Pressure Fabric Filters), referenced in 35 Ill. Adm. Code 726.205.

Method 5E (Determination of Particulate Matter Emissions from the Wool Fiberglass Insulation Manufacturing Industry), referenced in 35 Ill. Adm. Code 726.205.

Method 5F (Determination of Nonsulfate Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 5G (Determination of Particulate Matter Emissions from Wood Heaters (Dilution Tunnel Sampling Location)), referenced in 35 Ill. Adm. Code 726.205.

Method 5H (Determination of Particulate Emissions from Wood Heaters from a Stack Location), referenced in 35 Ill. Adm. Code 726.205.

Method 5I (Determination of Low Level Particulate Matter Emissions from Stationary Sources), referenced in 35 Ill. Adm. Code 726.205.

Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography), referenced in 35 Ill. Adm. Code 721.933, 721.934, 724.933, 724.934, 725.933, and 725.934.

Method 21 (Determination of Volatile Organic Compound Leaks), referenced in 35 Ill. Adm. Code 703.213, 721.934, 721.935, 721.963, 721.983, 724.934, 724.935, 724.963, 725.934, 725.935, 725.963, and 725.984.

Method 22 (Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares), referenced in 35 Ill. Adm. Code 721.933, 724.933, 724.1101, 725.933, 725.1101, and 727.900.

Method 25A (Determination of Total Gaseous Organic Concentration Using a Flame Ionization Analyzer), referenced in 35 Ill. Adm. Code 721.934, 724.934, and 725.985.

Method 25D (Determination of the Volatile Organic Concentration of Waste Samples), referenced in 35 Ill. Adm. Code 721.983, 724.982, 725.983, and 725.984.

Method 25E (Determination of Vapor Phase Organic Concentration in Waste Samples), referenced in 35 Ill. Adm. Code 721.983 and 725.984.

Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Using Pressure-Vacuum Test), referenced in 35 Ill. Adm. Code 721.986, 724.986, and 725.987.

40 CFR 61 ~~(2018)~~~~(2015)~~ (National Emission Standards for Hazardous Air Pollutants), referenced generally in 35 Ill. Adm. Code 721.104, 721.933, 721.950, 721.964, 721.980, 724.933, 724.964, 725.933, 725.964, and 725.980.

Subpart V of 40 CFR 61 ~~(2018)~~~~(2015)~~ (National Emission Standard for Equipment Leaks (Fugitive Emission Sources)), referenced in 35 Ill. Adm. Code 721.989, 724.989, and 725.990.

Subpart FF of 40 CFR 61 ~~(2018)~~-(2015) (National Emission Standard for Benzene Waste Operations), referenced in 35 Ill. Adm. Code 724.982 and 725.983.

40 CFR 63 ~~(2018)~~-(2015) (National Emission Standards for Hazardous Air Pollutants for Source Categories), referenced generally in 35 Ill. Adm. Code 721.293, 721.933, 721.950, 721.964, 721.980, 724.933, 724.964, 724.980, 725.933, 725.964, 725.980, and 726.200.

Subpart RR of 40 CFR 63 ~~(2018)~~-(2015) (National Emission Standards for Individual Drain Systems), referenced in 35 Ill. Adm. Code 721.984, 724.984, 724.985, 725.985, and 725.986.

Subpart EEE of 40 CFR 63 (2000) (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors), referenced in 35 Ill. Adm. Code 703.280.

Subpart EEE of 40 CFR 63 ~~(2018)~~-(2015) (National Emission Standards for Hazardous Air Pollutants from Hazardous Waste Combustors) (includes 40 CFR 63.1206 (When and How Must You Comply with the Standards and Operating Requirements?), 63.1215 (What are the Health-Based Compliance Alternatives for Total Chlorine?), 63.1216 (What are the Standards for Solid-Fuel Boilers that Burn Hazardous Waste?), 63.1217 (What are the Standards for Liquid-Fuel Boilers that Burn Hazardous Waste?), 63.1218 (What are the Standards for Hydrochloric Acid Production Furnaces that Burn Hazardous Waste?), 63.1219 (What are the Replacement Standards for Hazardous Waste Incinerators?), 63.1220 (What are the Replacement Standards for Hazardous Waste-Burning Cement Kilns?), and 63.1221 (What are the Replacement Standards for Hazardous Waste-Burning Lightweight Aggregate Kilns?)), referenced in Appendix A to 35 Ill. Adm. Code 703 and 35 Ill. Adm. Code 703.155, 703.205, 703.208, 703.221, 703.232, 703.320, 703.280, 724.440, 724.701, 724.950, 725.440, and 726.200.

Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 ~~(2018)~~-(2015) (Test Methods), referenced in 35 Ill. Adm. Code 721.983 and 725.984.

Appendix C to 40 CFR 63 ~~(2018)~~-(2015) (Determination of the Fraction Biodegraded (F_{bio}) in a Biological Treatment Unit), referenced in 35 Ill. Adm. Code 725.984.

Appendix D to 40 CFR 63 ~~(2018)~~-(2015) (Test Methods), referenced in 35 Ill. Adm. Code 721.983 and 725.984.

40 CFR 136.3 (Identification of Test Procedures) ~~(2018)-(2015)~~,
referenced in 35 Ill. Adm. Code 702.110, 704.150, 704.187, and 730.103.

40 CFR 144.70 ~~(2018)-(2015)~~ (Wording of the Instruments), referenced in
35 Ill. Adm. Code 704.240.

40 CFR 232.2 ~~(2017)-(2015)~~ (Definitions), referenced in 35 Ill. Adm.
Code 721.104.

40 CFR 257 ~~(2017)-(2015)~~ (Criteria for Classification of Solid Waste
Disposal Facilities and Practices), referenced in 35 Ill. Adm. Code
739.181.

~~Subpart B of 40 CFR 257 (2015) (Disposal Standards for the Receipt of
Conditionally Exempt Small Quantity Generator (CESQG) Wastes at
Non-Municipal Non-Hazardous Waste Disposal Units) (40 CFR 257.5
through 257.30), referenced in 35 Ill. Adm. Code 721.105.~~

40 CFR 258 ~~(2017)-(2015)~~ (Criteria for Municipal Solid Waste Landfills),
referenced in 35 Ill. Adm. Code 739.181.

40 CFR 260.21(b) ~~(2018)-(2015)~~ (Alternative Equivalent Testing
Methods), referenced in Section 720.121.

40 CFR 261.151 ~~(2018)-(2015)~~ (Wording of the Instruments), referenced
in 35 Ill. Adm. Code 721.251.

Appendix III to 40 CFR 261 ~~(2018)-(2015)~~ (Chemical Analysis Test
Methods), referenced in 35 Ill. Adm. Code 704.150 and 704.187.

~~40 CFR 262.53 (2015) (Notification of Intent to Export), referenced in 35
Ill. Adm. Code 722.153.~~

~~40 CFR 262.54 (2015) (Special Manifest Requirements), referenced in 35
Ill. Adm. Code 722.154.~~

~~40 CFR 262.55 (2015) (Exception Reports), referenced in 35 Ill. Adm.
Code 722.155.~~

~~40 CFR 262.56 (2015) (Annual Reports), referenced in 35 Ill. Adm. Code
722.156.~~

~~40 CFR 262.57 (2015) (Recordkeeping), referenced in 35 Ill. Adm. Code
722.157.~~

Appendix to 40 CFR 262 ~~(2018)~~-(2015) (Uniform Hazardous Waste Manifest and Instructions (EPA Forms 8700-22 and 8700-22A and Their Instructions)), referenced in Appendix A to 35 Ill. Adm. Code 722 and 35 Ill. Adm. Code 724.986 and 725.987.

40 CFR 264.151 ~~(2018)~~-(2015) (Wording of the Instruments), referenced in 35 Ill. Adm. Code 724.251 and 727.240.

Appendix I to 40 CFR 264 ~~(2018)~~-(2015) (Recordkeeping Instructions), referenced in Appendix A to 35 Ill. Adm. Code 724.

Appendix IV to 40 CFR 264 ~~(2018)~~-(2015) (Cochran's Approximation to the Behrens-Fisher Students' T-Test), referenced in Appendix D to 35 Ill. Adm. Code 724.

Appendix V to 40 CFR 264 ~~(2018)~~-(2015) (Examples of Potentially Incompatible Waste), referenced in Appendix E to 35 Ill. Adm. Code 724 and 35 Ill. Adm. Code 727.270.

Appendix VI to 40 CFR 264 ~~(2018)~~-(2015) (Political Jurisdictions in Which Compliance with § 264.18(a) Must Be Demonstrated), referenced in 35 Ill. Adm. Code 703.306, 724.118, and 727.110.

Appendix I to 40 CFR 265 ~~(2018)~~-(2015) (Recordkeeping Instructions), referenced in Appendix A to 35 Ill. Adm. Code 725.

Appendix III to 40 CFR 265 ~~(2018)~~-(2015) (EPA Interim Primary Drinking Water Standards), referenced in Appendix C to 35 Ill. Adm. Code 725.

Appendix IV to 40 CFR 265 ~~(2018)~~-(2015) (Tests for Significance), referenced in Appendix D to 35 Ill. Adm. Code 725.

Appendix V to 40 CFR 265 ~~(2018)~~-(2015) (Examples of Potentially Incompatible Waste), referenced in 35 Ill. Adm. Code 725.277, 725.301, 725.330, 725.357, 725.382, and 725.413 and Appendix E to 35 Ill. Adm. Code 725.

Appendix IX to 40 CFR 266 ~~(2017)~~-(2015) (Methods Manual for Compliance with the BIF Regulations), referenced generally in Appendix I to 35 Ill. Adm. Code 726.

Section 4.0 (Procedures for Estimating the Toxicity Equivalence of Chlorinated Dibenzo-p-Dioxin and Dibenzofuran Congeners), referenced in 35 Ill. Adm. Code 726.200 and 726.204.

Section 5.0 (Hazardous Waste Combustion Air Quality Screening Procedure), referenced in 35 Ill. Adm. Code 726.204 and 726.206.

Section 7.0 (Statistical Methodology for Bevill Residue Determinations), referenced in 35 Ill. Adm. Code 726.212.

BOARD NOTE: Also available from NTIS (see above for contact information) as “Methods Manual for Compliance with BIF Regulations: Burning Hazardous Waste in Boilers and Industrial Furnaces;”, December 1990, USEPA publication number EPA-530/SW-91-010, NTIS document number PB91-120006.

40 CFR 267.151 ~~(2017)~~~~(2015)~~ (Wording of the Instruments), referenced in 35 Ill. Adm. Code 727.240.

40 CFR 270.5 ~~(2017)~~~~(2015)~~ (Noncompliance and Program Reporting by the Director), referenced in 35 Ill. Adm. Code 703.305.

40 CFR 302 ~~(2018)~~~~(2015)~~ (Designation, Reportable Quantities, and Notification), referenced in 35 Ill. Adm. Code 721.293.

Section 1412 of the Department of Defense Authorization Act of 1986 (50 USC 1521(j)(1) ~~(2015)~~ ~~(2012)~~), referenced in 35 Ill. Adm. Code 726.301.

- d) This Section incorporates no later editions or amendments.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: RULEMAKING PETITIONS AND OTHER PROCEDURES

Section 720.120 Rulemaking

- a) Any person may petition the Board to adopt as State regulations rules that are identical in substance with newly-adopted federal amendments or regulations. The petition must take the form of a proposal for rulemaking pursuant to 35 Ill. Adm. Code 102. The proposal must include a listing of all amendments to 40 CFR 260 through 268, 273, or 279 that have been made since the last preceding amendment or proposal to amend 35 Ill. Adm. Code 720 through 728, 733, or 739, pursuant to Section 22.4(a) of the Environmental Protection Act ~~[415 ILCS 5/22.4(a)]~~.
- b) Any person may petition the Board to adopt amendments or additional regulations not identical in substance with federal regulations. Such proposal must conform to 35 Ill. Adm. Code 102 and Section 22.4(b) or 22.4(c) and Title VII of the Environmental Protection Act ~~[415 ILCS 5/22.4(b) or (c) and Title VII]~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.121 Alternative Equivalent Testing Methods

- a) The Agency has no authority to alter the universe of regulated wastes. Modification of testing methods that are stated in 35 Ill. Adm. Code 721 requires rulemaking pursuant to Section 720.120. However, deviation from these methods is allowed under 35 Ill. Adm. Code 721, as observed, for example, in the Board Note appended to 35 Ill. Adm. Code 721.120(c).
- b) The Agency may approve alternative equivalent testing methods for a particular person's use to determine whether specified waste streams are subject to these regulations. This must be done by permit condition or letter. Any petition to the Board or request to the Agency concerning alternative equivalent testing methods must include the information required by 40 CFR 260.21(b), incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- c) The testing methods specified in 35 Ill. Adm. Code 721 or alternative equivalent testing methods approved by the Agency need not be applied to identify or distinguish waste streams that are known, admitted, or assumed to be subject to

these regulations. In this case, any method may be used, subject to the Agency's authority to approve the testing procedures used.

- d) If USEPA amends the federal regulations to allow the use of a new testing method, USEPA has stated that it will incorporate the new method by reference in 40 CFR 260.11 and add it to "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," USEPA publication number EPA-530/SW-846, incorporated by reference in Section 720.111(b).
- e) Alternative equivalent testing methods will not be approved if the result of the approval would make the Illinois RCRA Subtitle C program less than substantially equivalent to the federal.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.122 Waste Delisting

- a) Any person seeking to exclude a waste from a particular generating facility from the lists in Subpart D of 35 Ill. Adm. Code 721 may file a petition, as specified in subsection (n) ~~of this Section~~. The Board will grant the petition if the following occur:
 - 1) The petitioner demonstrates that the waste produced by a particular generating facility does not meet any of the criteria under which the waste was listed as a hazardous or acute hazardous waste; and
 - 2) The Board determines that there is a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be a hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, "EPA RCRA Delisting Program—Guidance Manual for the Petitioner," incorporated by reference in Section 720.111(a). A waste that is so excluded, however, still may be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.
- b) Listed Wastes ~~wastes~~ and Mixtures ~~mixtures~~. A person may also petition the Board to exclude from 35 Ill. Adm. Code 721.103(a)(2)(B) or (c), a waste that is described in these Sections and is either a waste listed in Subpart D of 35 Ill. Adm. Code 721, or is derived from a waste listed in that Subpart. This exclusion may only be granted for a particular generating, storage, treatment, or disposal facility. The petitioner must make the same demonstration as required by subsection (a) ~~of this Section~~. Where the waste is a mixture of a solid waste and one or more listed hazardous wastes or is derived from one or more listed hazardous wastes, the demonstration must be made with respect to the waste mixture as a whole; analyses must be conducted for not only those constituents

for which the listed waste contained in the mixture was listed as hazardous, but also for factors (including additional constituents) that could cause the waste mixture to be a hazardous waste. A waste that is so excluded may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.

- c) Ignitable, Corrosive, Reactive ~~corrosive, reactive and Toxicity Characteristic Wastes~~ toxicity characteristic wastes. If the waste is listed in codes “I,” “C,” “R,” or “E” in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:
- 1) The petitioner must demonstrate that the waste does not exhibit the relevant characteristic for which the waste was listed, as defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections. The petitioner must also show that the waste does not exhibit any of the other characteristics, defined in those Sections, using any applicable methods prescribed in those Sections; and
 - 2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, “EPA RCRA Delisting Program—Guidance Manual for the Petitioner,” incorporated by reference in Section 720.111(a). A waste that is so excluded, however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.
- d) Toxic Waste ~~waste~~. If the waste is listed in code “T” in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:
- 1) The petitioner must demonstrate that the waste fulfills the following criteria:
 - A) It does not contain the constituent or constituents (as defined in Appendix G of 35 Ill. Adm. Code 721) that caused USEPA to list the waste; or
 - B) Although containing one or more of the hazardous constituents (as defined in Appendix G of 35 Ill. Adm. Code 721) that caused USEPA to list the waste, the waste does not meet the criterion of 35 Ill. Adm. Code 721.111(a)(3) when considering the factors used in 35 Ill. Adm. Code 721.111(a)(3)(A) through (a)(3)(K) under which the waste was listed as hazardous.

- 2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste.
 - 3) The petitioner must demonstrate that the waste does not exhibit any of the characteristics, defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections.
 - 4) A waste that is so excluded, however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.
- e) ~~Acute Hazardous Waste-hazardous waste~~. If the waste is listed with the code “H” in Subpart D of 35 Ill. Adm. Code 721, the following requirements apply:
- 1) The petitioner must demonstrate that the waste does not meet the criterion of 35 Ill. Adm. Code 721.111(a)(2); and
 - 2) Based on a complete petition, the Board will determine, if it has a reasonable basis to believe that factors (including additional constituents) other than those for which the waste was listed could cause the waste to be hazardous waste, that such factors do not warrant retaining the waste as a hazardous waste. A Board determination under the preceding sentence must be made by reliance on, and in a manner consistent with, “EPA RCRA Delisting Program—Guidance Manual for the Petitioner,”² incorporated by reference in Section 720.111(a).
 - 3) The petitioner must demonstrate that the waste does not exhibit any of the characteristics, defined in 35 Ill. Adm. Code 721.121, 721.122, 721.123, or 721.124, using any applicable methods prescribed in those Sections.
 - 4) A waste that is so excluded, however, may still be a hazardous waste by operation of Subpart C of 35 Ill. Adm. Code 721.
- f) This subsection (f) corresponds with 40 CFR 260.22(f), which USEPA has marked “reserved.”. This statement maintains structural consistency with the federal regulations.
- g) This subsection (g) corresponds with 40 CFR 260.22(g), which USEPA has marked “reserved.”. This statement maintains structural consistency with the federal regulations.
- h) Demonstration samples must consist of enough representative samples, but in no case less than four samples, taken over a period of time sufficient to represent the variability or the uniformity of the waste.

- i) Each petition must include, in addition to the information required by subsection (n) of this Section:
- 1) The name and address of the laboratory facility performing the sampling or tests of the waste;
 - 2) The names and qualifications of the persons sampling and testing the waste;
 - 3) The dates of sampling and testing;
 - 4) The location of the generating facility;
 - 5) A description of the manufacturing processes or other operations and feed materials producing the waste and an assessment of whether such processes, operations, or feed materials can or might produce a waste that is not covered by the demonstration;
 - 6) A description of the waste and an estimate of the average and maximum monthly and annual quantities of waste covered by the demonstration;
 - 7) Pertinent data on and discussion of the factors delineated in the respective criterion for listing a hazardous waste, where the demonstration is based on the factors in 35 Ill. Adm. Code 721.111(a)(3);
 - 8) A description of the methodologies and equipment used to obtain the representative samples;
 - 9) A description of the sample handling and preparation techniques, including techniques used for extraction, containerization, and preservation of the samples;
 - 10) A description of the tests performed (including results);
 - 11) The names and model numbers of the instruments used in performing the tests; and
 - 12) The following statement signed by the generator or the generator's authorized representative:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this demonstration and all attached documents, and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate and complete. I am aware that there are significant penalties for

submitting false information, including the possibility of fine and imprisonment.

- j) After receiving a petition, the Board may request any additional information that the Board needs to evaluate the petition.
- k) An exclusion will only apply to the waste generated at the individual facility covered by the demonstration and will not apply to waste from any other facility.
- l) The Board will exclude only part of the waste for which the demonstration is submitted if the Board determines that variability of the waste justifies a partial exclusion.

BOARD NOTE: See “EPA RCRA Delisting Program—Guidance Manual for the Petitioner,”² incorporated by reference in Section 720.111(a).

- m) Delisting of specific wastes from specific sources that have been adopted by USEPA may be proposed as State regulations that are identical in substance pursuant to Section 720.120(a).
- n) Delistings that have not been adopted by USEPA may be proposed to the Board pursuant to a petition for adjusted standard pursuant to Section 28.1 of the Act [~~415 ILCS 5/28.1~~] and Subpart D of 35 Ill. Adm. Code 104. The justification for the adjusted standard is as specified in subsections (a) through (g) ~~of this Section~~, as applicable to the waste in question. The petition must be clearly labeled as a RCRA delisting adjusted standard petition.

- 1) In accordance with 35 Ill. Adm. Code 101.304, the petitioner must serve copies of the petition, and any other documents filed with the Board, on USEPA at the following addresses:

USEPA
Office of Resource Conservation and Recovery
1200 Pennsylvania Avenue, NW
Washington, D.C. 20460

USEPA, Region 5
77 West Jackson Boulevard
Chicago, IL 60604

- 2) The Board will mail copies of all opinions and orders to USEPA at the above addresses.
- 3) In conjunction with the normal updating of the RCRA regulations, the Board will maintain, in Appendix I of 35 Ill. Adm. Code 721, a listing of all adjusted standards granted by the Board.

- o) The Agency may determine in a permit or a letter directed to a generator that, based on 35 Ill. Adm. Code 721, a waste from a particular source is not subject to these regulations. Such a finding is evidence against the Agency in any subsequent proceedings but will not be conclusive with reference to other persons or the Board.
- p) Any petition to delist directed to the Board or request for determination directed to the Agency must include a showing that the waste will be generated or managed in Illinois.
- q) The Board will not grant any petition that would render the Illinois RCRA program less stringent than if the decision were made by USEPA.
- r) Delistings apply only within Illinois. Generators must comply with 35 Ill. Adm. Code 722 for waste that is hazardous in any state to which it is to be transported.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.134 Non-Waste Determinations

- a) A person generating, managing, or reclaiming hazardous secondary material may petition the Board pursuant to this Section, Section 720.133 and Section 28.2 of the Act ~~[415 ILCS 5/28.2]~~ for an adjusted standard that is a formal determination that a hazardous secondary material is not discarded and therefore is not a solid waste. The Board's adjusted standard determination will be based on the criteria contained in either subsection (b) or (c), as applicable. If the Board denies the petition, the hazardous secondary material might still be eligible for a solid waste determination or verified facility determination pursuant to Section 720.131 or an exclusion. A determination made by the Board pursuant to this Section becomes effective upon occurrence of the first of the following two events:
 - 1) After USEPA has authorized Illinois to administer this segment of the hazardous waste regulations, the determination is effective upon issuance of the Board order that grants the non-waste determination; or
 - 2) Before USEPA has granted such authorization, the non-waste determination becomes effective upon fulfillment of all of the following conditions:
 - A) The Board has granted an adjusted standard which determines that the hazardous secondary material meets the criteria in either subsection (b) or (c), as applicable;
 - B) The Agency has requested that USEPA review the Board's non-waste determination; and

- C) USEPA has approved the Board's non-waste determination.
- b) The Board will grant a non-waste determination for hazardous secondary material that is reclaimed in a continuous industrial process if the Board determines that the applicant has demonstrated that the hazardous secondary material is a part of the production process and the material is not discarded. The determination will be based on whether the hazardous secondary material is legitimately recycled, as determined pursuant to Section 720.143, and on the following criteria:
- 1) The extent to which the management of the hazardous secondary material is part of the continuous primary production process and is not waste treatment;
 - 2) Whether the capacity of the production process would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);
 - 3) Whether the hazardous constituents in the hazardous secondary material are reclaimed, rather than released to the air, water, or land, at significantly higher levels, from either a statistical or from a health and environmental risk perspective, than would otherwise be released by the production process; and
 - 4) Other relevant factors which demonstrate that the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under 35 Ill. Adm. Code 721.102 or 721.104.
- c) The Board will grant a non-waste determination for a hazardous secondary material that is indistinguishable in all relevant aspects from a product or intermediate if the petitioner demonstrates that the hazardous secondary material is comparable to a product or intermediate and is not discarded. The Board's determination will be based on whether the hazardous secondary material is legitimately recycled, as determined pursuant to Section 720.143, and on the following criteria:
- 1) Whether market participants treat the hazardous secondary material as a product or intermediate, rather than as a waste (for example, based on the current positive value of the hazardous secondary material, stability of demand, or any contractual arrangements);
 - 2) Whether the chemical and physical identity of the hazardous secondary material is comparable to commercial products or intermediates;

- 3) Whether the capacity of the market would use the hazardous secondary material in a reasonable time frame and ensure that the hazardous secondary material will not be abandoned (for example, based on past practices, market factors, the nature of the hazardous secondary material, or any contractual arrangements);
- 4) Whether the hazardous constituents in the hazardous secondary material are reclaimed, rather than released to the air, water, or land, at significantly higher levels, from either a statistical or from a health and environmental risk perspective, than would otherwise be released by the production process; and
- 5) Other relevant factors which demonstrate that the hazardous secondary material is not discarded, including why the hazardous secondary material cannot meet, or should not have to meet, the conditions of an exclusion under 35 Ill. Adm. Code 721.102 or 721.104.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.142 Notification Requirement for Hazardous Secondary Materials

- a) A facility that manages hazardous secondary materials which are excluded from regulation under 35 Ill. Adm. Code 721.104(a)(23), (a)(24), or (a)(27) must send a notification to USEPA Region 5. The notification must occur prior to operating under the regulatory provision and before March 1 of every even-numbered calendar year thereafter using a copy of USEPA Form 8700-12 obtained from the Agency, Bureau of Land (217-782-6762). The notification must include the following information:
 - 1) The name, address, and USEPA identification number (if applicable) of the facility;
 - 2) The name and telephone number of a contact person for the facility;
 - 3) The NAICS code of the facility;

BOARD NOTE: Determined using the “North American Industry Classification System;”, incorporated by reference in Section 720.111.
 - 4) The regulation under which the facility will manage the hazardous secondary materials;
 - 5) When the facility began or expects to begin managing the hazardous secondary materials in accordance with the regulation;

- 6) A list of hazardous secondary materials that the facility will manage according to the regulation (reported as the USEPA hazardous waste numbers that would apply if the hazardous secondary materials were managed as hazardous wastes);
 - 7) For each hazardous secondary material, whether the hazardous secondary material, or any portion thereof, will be managed in a land-based unit;
 - 8) The quantity of each hazardous secondary material to be managed annually; and
 - 9) The certification (included in USEPA Form 8700-12) signed and dated by an authorized representative of the facility.
- b) If a facility that manages hazardous secondary material has submitted a notification, but then subsequently ceases managing hazardous secondary materials in accordance with a regulation listed in subsection (a), the facility owner or operator must notify the Agency within 30 days after the cessation using a copy of USEPA Form 8700-12 obtained from the Agency, Bureau of Land (217-782-6762). For purposes of this Section, a facility has stopped managing hazardous secondary materials if the facility no longer generates, manages, or reclaims hazardous secondary materials under the regulation listed in subsection (a), and the facility owner or operator does not expect to manage any amount of hazardous secondary materials for at least one year.

BOARD NOTE: USEPA Form 8700-12 is the required instructions and forms for notification of regulated waste activity.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 720.143 Legitimate Recycling of Hazardous Secondary Materials

- a) Recycling of hazardous secondary materials for the purpose of the exclusions or exemptions from the hazardous waste regulations must be legitimate. Hazardous secondary material that is not the subject of legitimate recycling is discarded material and is a solid waste. A determination that an activity is legitimate recycling must address all the requirements of this subsection (a).
 - 1) Legitimate recycling must involve a hazardous secondary material that provides a useful contribution to the recycling process or to a product or intermediate of the recycling process. The hazardous secondary material provides a useful contribution if it fulfills one of the following criteria:
 - A) The material contributes valuable ingredients to a product or intermediate;

- B) The material replaces a catalyst or carrier in the recycling process;
 - C) The material is the source of a valuable constituent recovered in the recycling process;
 - D) The material is recovered or regenerated by the recycling process;
or
 - E) The material is used as an effective substitute for a commercial product.
- 2) The recycling process must produce a valuable product or intermediate. The product or intermediate is valuable if either of the following is true:
- A) The product or intermediate is sold to a third party; or
 - B) The product or intermediate is used by the recycler or the generator as an effective substitute for a commercial product or as an ingredient or intermediate in an industrial process.
- 3) The generator and the recycler must manage the hazardous secondary material as a valuable commodity when it is under their control. Where there is an analogous raw material, the hazardous secondary material must be managed, at a minimum, in a manner consistent with the management of the raw material or in an equally protective manner. Where there is no analogous raw material, the hazardous secondary material must be contained. Hazardous secondary materials that are released to the environment and which are not recovered immediately are discarded material.
- 4) The product of the recycling process must be comparable to a legitimate product or intermediate as follows:
- A) Where there is an analogous product or intermediate, the product of the recycling process is comparable to a legitimate product or intermediate if both of the following conditions are true:
 - i) The product of the recycling process does not exhibit a hazardous characteristic (as defined in Subpart C of 35 Ill. Adm. Code 721) that analogous products do not exhibit; and
 - ii) The concentrations of any hazardous constituents found in Appendix H of 35 Ill. Adm. Code 721 that are in the product or intermediate are at levels that are comparable to or lower than those found in analogous products or at levels

that meet widely recognized commodity standards and specifications, where the commodity standards and specifications include levels that specifically address those hazardous constituents.

- B) Where there is no analogous product, the product of the recycling process is comparable to a legitimate product or intermediate if either of the following conditions is true:
- i) The product of the recycling process is a commodity that meets widely recognized commodity standards and specifications (e.g., commodity specification grades for common metals); or
 - ii) The hazardous secondary materials being recycled are returned to the original process or processes from which they were generated to be reused (e.g., closed loop recycling).
- C) If the product of the recycling process has levels of hazardous constituents that are not comparable to or unable to be compared to a legitimate product or intermediate as provided in subsection (a)(4)(A) or (a)(4)(B), the recycling still may be shown to be legitimate if the person performing the recycling fulfills the following requirements:
- i) The person performing the recycling must conduct the necessary assessment and prepare documentation which demonstrates that the recycling is, in fact, still legitimate;
 - ii) The assessment and documentation demonstrate that the recycling is legitimate based on lack of exposure from toxics in the product, lack of the bioavailability of the toxics in the product, or other relevant considerations which show that the recycled product does not contain levels of hazardous constituents that pose a significant human health or environmental risk;
 - iii) The documentation must include a certification statement that the recycling is legitimate, and the assessment and documentation must be maintained on-site for three years after the recycling operation has ceased; and
 - iv) The person performing the recycling must notify USEPA and the Agency of the recycling activity using USEPA Form 8700-12.

- b) This subsection (b) corresponds with 40 CFR 260.43(b), which USEPA has removed and marked “reserved.”. This statement maintains structural consistency with the corresponding federal rules.
- c) This subsection (c) corresponds with 40 CFR 260.43(c), which USEPA has removed and marked “reserved.”. This statement maintains structural consistency with the corresponding federal rules.

TITLE 35: ENVIRONMENTAL PROTECTION
 SUBTITLE G: WASTE DISPOSAL
 CHAPTER I: POLLUTION CONTROL BOARD
 SUBCHAPTER c: HAZARDOUS WASTE OPERATING REQUIREMENTS

PART 721
 IDENTIFICATION AND LISTING OF HAZARDOUS WASTE

SUBPART A: GENERAL PROVISIONS

Section	
721.101	Purpose and Scope
721.102	Definition of Solid Waste
721.103	Definition of Hazardous Waste
721.104	Exclusions
721.105	Special Requirements for Hazardous Waste Generated by Small Quantity Generators <u>(Repealed)</u>
721.106	Requirements for Recyclable Materials
721.107	Residues of Hazardous Waste in Empty Containers
721.108	PCB Wastes Regulated under TSCA
721.109	Requirements for Universal Waste

SUBPART B: CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF
 HAZARDOUS WASTE AND FOR LISTING HAZARDOUS WASTES

Section	
721.110	Criteria for Identifying the Characteristics of Hazardous Waste
721.111	Criteria for Listing Hazardous Waste

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section	
721.120	General
721.121	Characteristic of Ignitability
721.122	Characteristic of Corrosivity
721.123	Characteristic of Reactivity
721.124	Toxicity Characteristic

SUBPART D: LISTS OF HAZARDOUS WASTE

Section	
721.130	General
721.131	Hazardous Wastes from Nonspecific Sources
721.132	Hazardous Waste from Specific Sources
721.133	Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof
721.135	Wood Preserving Wastes

SUBPART E: EXCLUSIONS AND EXEMPTIONS

Section	
721.138	Exclusion of Comparable Fuel and Syngas Fuel (Repealed)
721.139	Conditional Exclusion for Used, Broken CRTs and Processed CRT Glass Undergoing Recycling
721.140	Conditional Exclusion for Used, Intact CRTs Exported for Recycling
721.141	Notification and Recordkeeping for Used, Intact CRTs Exported for Reuse

SUBPART H: FINANCIAL REQUIREMENTS FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section	
721.240	Applicability
721.241	Definitions of Terms as Used in This Subpart
721.242	Cost Estimate
721.243	Financial Assurance Condition
721.247	Liability Requirements
721.248	Incapacity of Owners or Operators, Guarantors, or Financial Institutions
721.249	Use of State-Required Mechanisms
721.250	State Assumption of Responsibility
721.251	Wording of the Instruments

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section	
721.270	Applicability
721.271	Condition of Containers
721.272	Compatibility of Hazardous Secondary Materials with Containers
721.273	Management of Containers
721.275	Secondary Containment
721.276	Special Requirements for Ignitable or Reactive Hazardous Secondary Material
721.277	Special Requirements for Incompatible Materials
721.279	Air Emission Standards

SUBPART J: TANK SYSTEMS

Section	
721.290	Applicability
721.291	Assessment of Existing Tank System's Integrity

721.293	Containment and Detection of Releases
721.294	General Operating Requirements
721.296	Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems

SUBPART A: GENERAL PROVISIONS

Section 721.101 Purpose and Scope

- a) This Part identifies those solid wastes that are subject to regulation as hazardous wastes under 35 Ill. Adm. Code 702, 703, and 722 through 728, and which are subject to the notification requirements of ~~section Section-3010 of the Resource Conservation and Recovery Act (RCRA) (42 USC 6930-6901 et seq.)~~. In this Part:
- 1) ~~Subpart A of this Part~~ defines the terms “solid waste” and “hazardous waste;”, identifies those wastes that are excluded from regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728, and establishes special management requirements for hazardous waste produced by VSQGs ~~conditionally exempt small quantity generators~~ and hazardous waste that is recycled.
 - 2) ~~Subpart B of this Part~~ sets forth the criteria used to identify characteristics of hazardous waste and to list particular hazardous wastes.
 - 3) ~~Subpart C of this Part~~ identifies characteristics of hazardous wastes.
 - 4) ~~Subpart D of this Part~~ lists particular hazardous wastes.
- b) Limitations on Definition ~~definition of Solid Waste~~ ~~solid waste~~.
- 1) The definition of solid waste contained in this Part applies only to wastes that also are hazardous for purposes of the regulations implementing Subtitle C of RCRA. For example, it does not apply to materials (such as non-hazardous scrap, paper, textiles or rubber) that are not otherwise hazardous wastes and that are recycled.
 - 2) This Part identifies only some of the materials that are solid wastes and hazardous wastes under Sections 1004(5), 1004(27) and 7003 of RCRA. A material that is not defined as a solid waste in this Part, or is not a hazardous waste identified or listed in this Part, is still a hazardous waste for purposes of those Sections if, in the case of Section 7003 of RCRA, the statutory elements are established.
- c) For the purposes of Sections 721.102 and 721.106 the following definitions apply:
- 1) A “spent material” is any material that has been used and as a result of contamination can no longer serve the purpose for which it was produced without processing.
 - 2) “Sludge” has the same meaning used in 35 Ill. Adm. Code 720.110.

- 3) A “by-product” is a material that is not one of the primary products of a production process and is not solely or separately produced by the production process. Examples are process residues such as slags or distillation column bottoms. The term does not include a co-product that is produced for the general public’s use and is ordinarily used in the form it is produced by the process.
- 4) A material is “reclaimed” if it is processed to recover a usable product, or if it is regenerated. Examples are recovery of lead values from spent batteries and regeneration of spent solvents. In addition, for purposes of Section 721.104(a)(23) and (a)(24) smelting, melting, and refining furnaces are considered to be solely engaged in metals reclamation if the metal recovery from the hazardous secondary materials meets the same requirements as those specified for metals recovery from hazardous waste found in 35 Ill. Adm. Code 726.200(d)(1) through (d)(3), and if the residuals meet the requirements specified in 35 Ill. Adm. Code 726.212.
- 5) A material is “used or reused” if either of the following is true:
 - A) It is employed as an ingredient (including use as an intermediate) in an industrial process to make a product (for example, distillation bottoms from one process used as feedstock in another process). However, a material will not satisfy this condition if distinct components of the material are recovered as separate end products (as when metals are recovered from metal-containing secondary materials); or
 - B) It is employed in a particular function or application as an effective substitute for a commercial product (for example, spent pickle liquor used as phosphorus precipitant and sludge conditioner in wastewater treatment).
- 6) “Scrap metal” is bits and pieces of metal parts (e.g., bars, turnings, rods, sheets, or wire) or metal pieces that may be combined together with bolts or soldering (e.g., radiators, scrap automobiles, or railroad box cars) that when worn or superfluous can be recycled.
- 7) A material is “recycled” if it is used, reused, or reclaimed.
- 8) A material is “accumulated speculatively” if it is accumulated before being recycled. A material is not accumulated speculatively, however, if the person accumulating it can show that the material is potentially recyclable and has a feasible means of being recycled; and that, during the calendar year (commencing on January 1), the amount of material that is recycled, or transferred to a different site for recycling, equals at least 75

percent by weight or volume of the amount of that material accumulated at the beginning of the period. Materials must be placed in a storage unit with a label indicating the first date that the material began to be accumulated. If placing a label on the storage unit is not practicable, the accumulation period must be documented through an inventory log or other appropriate method. In calculating the percentage of turnover, the 75 percent requirement is to be applied to each material of the same type (e.g., slags from a single smelting process) that is recycled in the same way (i.e., from which the same material is recovered or that is used in the same way). Materials accumulating in units that would be exempt from regulation under Section 721.104(c) are not to be included in making the calculation. Materials that are already defined as solid wastes also are not to be included in making the calculation. Materials are no longer in this category once they are removed from accumulation for recycling, however.

BOARD NOTE: Various segments of this Part and 35 Ill. Adm. Code 720 use the verbal phrase “accumulated speculatively” and the noun phrase “speculative accumulation.” Some of those segments rely on this subsection (c)(8) definition of “speculatively accumulated” for definition of the “speculative accumulation.” The Board infers that USEPA intends that the verb phrase define the noun phrase: material that is accumulated speculatively is the subject of speculative accumulation.

- 9) “Excluded scrap metal” is processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal.
- 10) “Processed scrap metal” is scrap metal that has been manually or physically altered to either separate it into distinct materials to enhance economic value or to improve the handling of materials. Processed scrap metal includes, but is not limited to, scrap metal that has been baled, shredded, sheared, chopped, crushed, flattened, cut, melted, or separated by metal type (i.e., sorted), and fines, drosses and related materials that have been agglomerated. (Note: shredded circuit boards being sent for recycling are not considered processed scrap metal. They are covered under the exclusion from the definition of solid waste for shredded circuit boards being recycled (Section 721.104(a)(14))).
- 11) “Home scrap metal” is scrap metal as generated by steel mills, foundries, and refineries, such as turnings, cuttings, punchings, and borings.
- 12) “Prompt scrap metal” is scrap metal as generated by the metal working/fabrication industries, and it includes such scrap metal as turnings, cuttings, punchings, and borings. Prompt scrap metal is also known as industrial or new scrap metal.

- d) The Agency has inspection authority pursuant to Section 3007 of RCRA and Section 4 of the Environmental Protection Act ~~[415 ILCS 5/4]~~.
- e) Electronic reporting. The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Subsection (e) is derived from 40 CFR 3, 271.10(b), 271.11(b), and 271.12(h) (2017) ~~(2015)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.102 Definition of Solid Waste

- a) ~~Solid Waste-waste-~~
 - 1) A solid waste is any discarded material that is not excluded pursuant to Section 721.104(a) or that is not excluded pursuant to 35 Ill. Adm. Code 720.130 and 720.131 or 35 Ill. Adm. Code 720.130 and 720.134.
 - 2) ~~Discarded Material-material-~~
 - A) A discarded material is any material that is described as follows:
 - i) It is abandoned, as described in subsection (b);
 - ii) It is recycled, as described in subsection (c);
 - iii) It is considered inherently waste-like, as described in subsection (d); or
 - iv) It is a military munition identified as a solid waste in 35 Ill. Adm. Code 726.302.
 - B) This subsection (a)(2)(B) corresponds with 40 CFR 261.2(a)(2)(ii), which USEPA has removed and marked “reserved.”. This statement maintains structural consistency with the corresponding federal regulations.
- (b) A material is a solid waste if it is abandoned in one of the following ways:
 - 1) It is disposed of;
 - 2) It is burned or incinerated;
 - 3) It is accumulated, stored, or treated (but not recycled) before or in lieu of being abandoned by being disposed of, burned, or incinerated; or

- 4) Sham recycled, as explained in subsection (g).
- c) A material is a solid waste if it is recycled—or accumulated, stored, or treated before recycling—as specified in subsections (c)(1) through (c)(4), if one of the following occurs with regard to the material:
- 1) The material is used in a manner constituting disposal.
 - A) A material that is noted with a “yes” in column 1 of the table in Appendix Z of this Part is a solid waste when one of the following occurs:
 - i) The material is applied to or placed on the land in a manner that constitutes disposal; or
 - ii) The material is used to produce products that are applied to or placed on the land or are otherwise contained in products that are applied to or placed on the land (in which cases the product itself remains a solid waste).
 - B) However, a commercial chemical product that is listed in Section 721.133 is not a solid waste if it is applied to the land and that is its ordinary manner of use.
 - 2) The material is burned for energy recovery.
 - A) A material that is noted with a “yes” in column 2 of the table in Appendix Z of this Part is a solid waste when one of the following occurs:
 - i) It is burned to recover energy;
 - ii) It is used to produce a fuel or is otherwise contained in fuels (in which case the fuel itself remains a solid waste);
 - iii) It is contained in fuels (in which case the fuel itself remains a solid waste).
 - B) However, a commercial chemical product that is listed in Section 721.133 is not a solid waste if it is itself a fuel.
 - 3) Reclaimed. A material noted with a “No” in column 3 of the table in Appendix Z of this Part is not a solid waste when reclaimed (except as provided under Section 721.104(a)(17)). A material noted with a “Yes” in column 3 of Appendix Z of this Part is a solid waste when reclaimed,

unless it meets the requirements of Section 721.104(a)(17), (a)(23), (a)(24), or (a)(27).

- 4) Accumulated ~~Speculatively-speculatively~~. A material noted with “yes” in column 4 of the table in Appendix Z ~~of this Part~~ is a solid waste when accumulated speculatively.
- d) Inherently Waste-Like Materials ~~waste-like materials~~. The following materials are solid wastes when they are recycled in any manner:
- 1) ~~USEPA h~~Hazardous waste numbers F020, F021 (unless used as an ingredient to make a product at the site of generation), F022, F023, F026, and F028.
 - 2) A secondary material fed to a halogen acid furnace that exhibits a characteristic of a hazardous waste or which is listed as a hazardous waste, as defined in Subpart C or D ~~of this Part~~, except for brominated material that meets the following criteria:
 - A) The material must contain a bromine concentration of at least 45 percent;
 - B) The material must contain less than a total of one percent of toxic organic compounds listed in Appendix H ~~of this Part~~; and
 - C) The material is processed continually on-site in the halogen acid furnace via direct conveyance (hard piping).
 - 3) The following criteria are used to add wastes to the list:
 - A) ~~Disposal Method method or Toxicity-toxicity~~.
 - i) The material is ordinarily disposed of, burned, or incinerated; or
 - ii) The material contains toxic constituents listed in Appendix H ~~of this Part~~ and these constituents are not ordinarily found in raw materials or products for which the material substitutes (or are found in raw materials or products in smaller concentrations) and is not used or reused during the recycling process; and
 - B) The material may pose a substantial hazard to human health and the environment when recycled.

- e) Materials That Are Not Solid Waste When Recycled ~~that are not solid waste when recycled.~~
- 1) A material is not a solid waste when it can be shown to be recycled by fulfilling one of the following conditions:
 - A) It is used or reused as an ingredient in an industrial process to make a product, provided the material is not being reclaimed; or
 - B) It is used or reused as effective substitutes for commercial products; or
 - C) It is returned to the original process from which it is generated, without first being reclaimed or land disposed. The material must be returned as a substitute for feedstock materials. In cases where the original process to which the material is returned is a secondary process, the material must be managed in such a manner that there is no placement on the land. In cases where the material is generated and reclaimed within the primary mineral processing industry, the conditions of the exclusion found at Section 721.104(a)(17) apply rather than this provision.
 - 2) The following materials are solid wastes, even if the recycling involves use, reuse, or return to the original process (described in subsections (e)(1)(A) through (e)(1)(C)):
 - A) A material used in a manner constituting disposal or used to produce a product that is applied to the land; or
 - B) A material burned for energy recovery, used to produce a fuel, or contained in fuels; or
 - C) A material accumulated speculatively; or
 - D) A material listed in subsections (d)(1) and (d)(2).
- f) Documentation of Claims That ~~claims that a material material is Not not a Solid Waste solid waste~~ or is Conditionally Exempt ~~conditionally exempt~~ from Regulation ~~regulation~~. A respondent in an action to enforce regulations implementing Subtitle C of RCRA or Section 21 of the Environmental Protection Act that raises a claim that a certain material is not a solid waste or that the material is conditionally exempt from regulation must demonstrate that there is a known market or disposition for the material and that the material meets the terms of the exclusion or exemption. In doing so, the person must provide appropriate documentation (such as contracts showing that a second person uses the material as an ingredient in a production process) to demonstrate that the material is not a

waste or that the material is exempt from regulation. In addition, an owner or operator of a facility claiming that it actually is recycling a material must show that it has the necessary equipment to recycle that material.

- g) ~~Sham Recycling~~-~~reeycling~~. A hazardous secondary material found to be sham recycled is considered discarded and a solid waste. Sham recycling is recycling that is not legitimate recycling, as defined in 35 Ill. Adm. Code 720.143.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.103 Definition of Hazardous Waste

- a) A solid waste, as defined in Section 721.102, is a hazardous waste if the following is true of the waste:
- 1) It is not excluded from regulation as a hazardous waste pursuant to Section 721.104(b); and
 - 2) It meets any of the following criteria:
 - A) It exhibits any of the characteristics of hazardous waste identified in Subpart C ~~of this Part~~. However, any mixture of a waste from the extraction, beneficiation, and processing of ores and minerals excluded pursuant to Section 721.104(b)(7) and any other solid waste exhibiting a characteristic of hazardous waste pursuant to Subpart C ~~of this Part~~ is a hazardous waste only if it exhibits a characteristic that would not have been exhibited by the excluded waste alone if such mixture had not occurred, or if the mixture continues to exhibit any of the characteristics exhibited by the non-excluded wastes prior to mixture. Further, for the purposes of applying the toxicity characteristic to such mixtures, the mixture is also a hazardous waste if it exceeds the maximum concentration for any contaminant listed in Section 721.124 that would not have been exceeded by the excluded waste alone if the mixture had not occurred or if it continues to exceed the maximum concentration for any contaminant exceeded by the nonexempt waste prior to mixture.
 - B) It is listed in Subpart D ~~of this Part~~ and has not been excluded from the lists in Subpart D ~~of this Part~~ pursuant to 35 Ill. Adm. Code 720.120 and 720.122.
 - C) This subsection (a)(2)(B) corresponds with 40 CFR 261.3(a)(2)(iii), which USEPA removed and marked as “reserved” at 66 Fed. Reg. 27266 (May 16, 2001). This statement maintains structural consistency with the federal regulations.

- D) It is a mixture of solid waste and one or more hazardous wastes listed in Subpart D of this Part and has not been excluded from this subsection (a)(2) pursuant to 35 Ill. Adm. Code 720.120 and 720.122 or subsection (g) or (h); however, the following mixtures of solid wastes and hazardous wastes listed in Subpart D of this Part are not hazardous wastes (except by application of subsection (a)(2)(A) or (a)(2)(B)) if the generator demonstrates that the mixture consists of wastewater the discharge of which is subject to regulation under either 35 Ill. Adm. Code 309 or 310 (including wastewater at facilities that have eliminated the discharge of wastewater) and the following is true of the waste:
- i) It is one or more of the following solvents listed in Section 721.131: benzene, carbon tetrachloride, tetrachloroethylene, trichloroethylene or the scrubber waters derived from the combustion of these spent solvents, provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 1 part per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 1 part per million on an average weekly basis. Any facility that uses benzene as a solvent and claims this exemption must use an aerated biological wastewater treatment system and must use only lined surface impoundments or tanks prior to secondary clarification in the wastewater treatment system. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been

received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(i) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected;

- ii) It is one or more of the following spent solvents listed in Section 721.131: methylene chloride, 1,1,1-trichloroethane, chlorobenzene, o-dichlorobenzene, cresols, cresylic acid, nitrobenzene, toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, spent chlorofluorocarbon solvents, 2-ethoxyethanol, or the scrubber waters derived from the combustion of these spent solvents, provided that the maximum total weekly usage of these solvents (other than the amounts that can be demonstrated not to be discharged to wastewater) divided by the average weekly flow of wastewater into the headworks of the facility's wastewater treatment or pretreatment system does not exceed 25 parts per million, or the total measured concentration of these solvents entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 25 parts per million on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The

Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(ii) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected;

- iii) It is one of the following wastes listed in Section 721.132, provided that the wastes are discharged to the refinery oil recovery sewer before primary oil/water/solids separation: heat exchanger bundle cleaning sludge from the petroleum refining industry (USEPA hazardous waste number K050), crude oil storage tank sediment from petroleum refining operations (USEPA hazardous waste number K169), clarified slurry oil tank sediment or in-line filter/separation solids from petroleum refining operations (USEPA hazardous waste number K170), spent hydrotreating catalyst (USEPA hazardous waste number K171), and spent hydrorefining catalyst (USEPA hazardous waste number K172);
- iv) It is a discarded hazardous waste, commercial chemical product or chemical intermediate listed in Section 721.121, 721.132, or 721.133 arising from de minimis losses of these materials. For purposes of this subsection (a)(2)(D)(iv), “de minimis” losses are inadvertent releases to a wastewater treatment system, including those from normal material handling operations (e.g., spills from the unloading or transfer of materials from bins or other containers, leaks from pipes, valves, or other devices used to transfer materials); minor leaks of process equipment, storage tanks, or containers; leaks from well-maintained pump packings and seals; sample purgings; relief device discharges; discharges from safety showers and rinsing and cleaning of personal safety equipment; and rinsate from empty containers or from containers that are rendered empty by that rinsing. Any manufacturing facility that claims an exemption for de minimis quantities of a waste listed in Section 721.131 or 721.132, or any nonmanufacturing facility that claims an exemption for de

minimis quantities of wastes listed in Subpart D ~~of this Part~~, must either have eliminated the discharge of wastewaters or have included in its federal Clean Water Act (33 USC 1251 et seq.) permit application or wastewater pretreatment submission to the Agency or the wastewater pretreatment Control Authority pursuant to 35 Ill. Adm. Code 307 of the constituents for which each waste was listed (in Appendix G ~~of this Part~~); and the constituents in Table T to 35 Ill. Adm. Code 728 for which each waste has a treatment standard (*i.e.*, land disposal restriction constituents). A facility is eligible to claim the exemption once the Agency or Control Authority has been notified of possible de minimis releases via the Clean Water Act permit application or the wastewater pretreatment submission. A copy of the Clean Water Act permit application or the wastewater pretreatment submission must be placed in the facility's on-site files;

- v) It is wastewater resulting from laboratory operations containing toxic (T) wastes listed in Subpart D ~~of this Part~~, provided that the annualized average flow of laboratory wastewater does not exceed one percent of total wastewater flow into the headworks of the facility's wastewater treatment or pretreatment system or provided that the wastes' combined annualized average concentration does not exceed one part per million in the headworks of the facility's wastewater treatment or pretreatment facility. Toxic (T) wastes used in laboratories that are demonstrated not to be discharged to wastewater are not to be included in this calculation;
- vi) It is one or more of the following wastes listed in Section 721.132: wastewaters from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K157), provided that the maximum weekly usage of formaldehyde, methyl chloride, methylene chloride, and triethylamine (including all amounts that cannot be demonstrated to be reacted in the process, destroyed through treatment, or recovered, *i.e.*, what is discharged or volatilized) divided by the average weekly flow of process wastewater prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 parts per million by weight, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at a facility that

is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 parts per million on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(vi) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected; or

- vii) It is wastewater derived from the treatment of one or more of the following wastes listed in Section 721.132: organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K156), provided that the maximum concentration of formaldehyde, methyl chloride, methylene chloride, and triethylamine prior to any dilutions into the headworks of the facility's wastewater treatment system does not exceed a total of 5 milligrams per liter, or the total measured concentration of these chemicals entering the headworks of the facility's wastewater treatment system (at a facility that is subject to regulation under the federal Clean Air Act new source performance standards or national emission standards for hazardous air pollutants of 40 CFR 60, 61, or 63 or at a facility that is subject to an

enforceable limit in a federal operating permit that minimizes fugitive emissions) does not exceed 5 milligrams per liter on an average weekly basis. A facility that chooses to measure concentration levels must file a copy of its sampling and analysis plan with the Agency. A facility must file a copy of a revised sampling and analysis plan only if the initial plan is rendered inaccurate by changes in the facility's operations. The sampling and analysis plan must include the monitoring point location (headworks), the sampling frequency and methodology, and a list of constituents to be monitored. A facility is eligible for the direct monitoring option once it receives confirmation that the sampling and analysis plan has been received by the Agency. The Agency must reject the sampling and analysis plan if it determines that the sampling and analysis plan fails to include the information required by this subsection (a)(2)(D)(vii) or that the plan parameters would not enable the facility to calculate the weekly average concentration of these chemicals accurately. If the Agency rejects the sampling and analysis plan, or if the Agency determines that the facility is not following the sampling and analysis plan, the Agency must notify the facility to cease the use of the direct monitoring option until such time as the bases for rejection are corrected.

- E) Rebuttable presumption for used oil. Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in Subpart D ~~of this Part~~. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in Appendix H ~~of this Part~~).
- i) The rebuttable presumption does not apply to a metalworking oil or fluid containing chlorinated paraffins if it is processed through a tolling arrangement, as described in 35 Ill. Adm. Code 739.124(c), to reclaim metalworking oils or fluids. The presumption does apply to a metalworking oil or fluid if such an oil or fluid is recycled in any other manner, or disposed of.
 - ii) The rebuttable presumption does not apply to a used oil contaminated with chlorofluorocarbons (CFCs) removed

from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to a used oil contaminated with CFCs that have been mixed with used oil from a source other than a refrigeration unit.

- b) A solid waste that is not excluded from regulation pursuant to subsection (a)(1) becomes a hazardous waste when any of the following events occur:
- 1) In the case of a waste listed in Subpart ~~D-of this Part~~, when the waste first meets the listing description set forth in Subpart ~~D-of this Part~~.
 - 2) In the case of a mixture of solid waste and one or more listed hazardous wastes, when a hazardous waste listed in Subpart ~~D-of this Part~~ is first added to the solid waste.
 - 3) In the case of any other waste (including a waste mixture), when the waste exhibits any of the characteristics identified in Subpart ~~C-of this Part~~.
- c) Unless and until it meets the criteria of subsection (e), a hazardous waste will remain a hazardous waste.

BOARD NOTE: This subsection (c) corresponds with 40 CFR 261.3(c)(1) (2017). The Board has codified 40 CFR 261.3(c)(2) at subsection (e).

- d) Any solid waste described in subsection (e) is not a hazardous waste if it meets the following criteria:
- 1) In the case of any solid waste, it does not exhibit any of the characteristics of hazardous waste identified in Subpart ~~C-of this Part~~. (However, wastes that exhibit a characteristic at the point of generation may still be subject to 35 Ill. Adm. Code 728, even if they no longer exhibit a characteristic at the point of land disposal.)
 - 2) In the case of a waste that is a listed waste pursuant to Subpart ~~D-of this Part~~, a waste that contains a waste listed pursuant to Subpart ~~D-of this Part~~, or a waste that is derived from a waste listed in Subpart ~~D-of this Part~~, it also has been excluded from subsection (e) pursuant to 35 Ill. Adm. Code 720.120 and 720.122.
- e) Specific Inclusions ~~inclusions~~ and Exclusions ~~exclusions~~:
- 1) Except as otherwise provided in subsection (e)(2), (g), or (h), any solid waste generated from the treatment, storage, or disposal of a hazardous waste, including any sludge, spill residue, ash, emission control dust, or leachate (but not including precipitation run-off), is a hazardous waste. (However, materials that are reclaimed from solid wastes and that are used

beneficially are not solid wastes and hence are not hazardous wastes under this provision unless the reclaimed material is burned for energy recovery or used in a manner constituting disposal.)

- 2) The following solid wastes are not hazardous even though they are generated from the treatment, storage, or disposal of a hazardous waste, unless they exhibit one or more of the characteristics of hazardous waste:
- A) Waste pickle liquor sludge generated by lime stabilization of spent pickle liquor from the iron and steel industry (SIC Codes 331 and 332).
 - B) Wastes from burning any of the materials exempted from regulation by Section 721.106(a)(3)(C) and (a)(3)(D).
 - C) Nonwastewater residues, such as slag, resulting from high temperature metal recovery (HTMR) processing of K061, K062, or F006 waste in the units identified in this subsection (e)(2) that are disposed of in non-hazardous waste units, provided that these residues meet the generic exclusion levels identified in the tables in this subsection (e)(2)(C) for all constituents and the residues exhibit no characteristics of hazardous waste. The types of units identified are rotary kilns, flame reactors, electric furnaces, plasma arc furnaces, slag reactors, rotary hearth furnace/electric furnace combinations, or the following types of industrial furnaces (as defined in 35 Ill. Adm. Code 720.110): blast furnaces; smelting, melting, and refining furnaces (including pyrometallurgical devices such as cupolas, reverberator furnaces, sintering machines, roasters, and foundry furnaces); and other furnaces designated by the Agency pursuant to that definition.
 - i) Testing requirements must be incorporated in a facility's waste analysis plan or a generator's self-implementing waste analysis plan; at a minimum, composite samples of residues must be collected and analyzed quarterly and when the process or operation generating the waste changes.
 - ii) Persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements. The generic exclusion levels are the following:

Generic exclusion levels for K061 and K062
nonwastewater HTMR residues:

Constituent	Maximum for any single composite sample (mg/ℓ)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Vanadium	1.26
Zinc	70

Generic exclusion levels for F006 nonwastewater HTMR residues:

Constituent	Maximum for any single composite sample (mg/ℓ)
Antimony	0.10
Arsenic	0.50
Barium	7.6
Beryllium	0.010
Cadmium	0.050
Chromium (total)	0.33
Cyanide (total) (mg/kg)	1.8
Lead	0.15
Mercury	0.009
Nickel	1.0
Selenium	0.16
Silver	0.30
Thallium	0.020
Zinc	70

- iii) A one-time notification and certification must be placed in the facility's files and sent to the Agency (or, for out-of-State shipments, to the appropriate Regional Administrator of USEPA or the state agency authorized to implement federal 40 CFR 268 requirements) for K061, K062, or F006 HTMR residues that meet the generic exclusion levels for

all constituents, which do not exhibit any characteristics, and which are sent to RCRA Subtitle D (municipal solid waste landfill) units. The notification and certification that is placed in the generator's or treater's files must be updated if the process or operation generating the waste changes or if the RCRA Subtitle D unit receiving the waste changes. However, the generator or treater need only notify the Agency on an annual basis if such changes occur. Such notification and certification should be sent to the Agency by the end of the calendar year, but no later than December 31. The notification must include the following information: the name and address of the non-hazardous waste management unit receiving the waste shipment; the USEPA hazardous waste number and treatability group at the initial point of generation; and the treatment standards applicable to the waste at the initial point of generation. The certification must be signed by an authorized representative and must state as follows:

“I certify under penalty of law that the generic exclusion levels for all constituents have been met without impermissible dilution and that no characteristic of hazardous waste is exhibited. I am aware that there are significant penalties for submitting a false certification, including the possibility of fine and imprisonment.”

- D) Biological treatment sludge from the treatment of one of the following wastes listed in Section 721.132: organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K156) and wastewaters from the production of carbamates and carbamoyl oximes (USEPA hazardous waste number K157).
- E) Catalyst inert support media separated from one of the following wastes listed in Section 721.132: spent hydrotreating catalyst (USEPA hazardous waste number K171) and spent hydrorefining catalyst (USEPA hazardous waste number K172).

BOARD NOTE: This subsection (e) would normally correspond with 40 CFR 261.3(e), a subsection that has been deleted and marked “reserved” by USEPA. Rather, this subsection (e) corresponds with 40 CFR 261.3(c)(2), which the Board codified here to comport with codification requirements and to enhance clarity.

- f) Notwithstanding subsections (a) through (e) and provided the debris, as defined in 35 Ill. Adm. Code 728.102, does not exhibit a characteristic identified at Subpart C ~~of this Part~~, the following materials are not subject to regulation under 35 Ill. Adm. Code 702, 703, 720, 721 to 726, or 728:
- 1) Hazardous debris as defined in 35 Ill. Adm. Code 728.102 that has been treated using one of the required extraction or destruction technologies specified in Table F to 35 Ill. Adm. Code 728; persons claiming this exclusion in an enforcement action will have the burden of proving by clear and convincing evidence that the material meets all of the exclusion requirements; or
 - 2) Debris, as defined in 35 Ill. Adm. Code 728.102, that the Agency, considering the extent of contamination, has determined is no longer contaminated with hazardous waste.
- g) Exclusion of certain wastes listed in Subpart D ~~of this Part~~ solely because they exhibit a characteristic of ignitability, corrosivity, or reactivity.
- 1) A hazardous waste that is listed in Subpart D ~~of this Part~~ solely because it exhibits one or more characteristics of ignitability, as defined under Section 721.121; corrosivity, as defined under Section 721.122; or reactivity, as defined under Section 721.123 is not a hazardous waste if the waste no longer exhibits any characteristic of hazardous waste identified in Subpart C ~~of this Part~~.
 - 2) The exclusion described in subsection (g)(1) also pertains to the following:
 - A) Any mixture of a solid waste and a hazardous waste listed in Subpart D ~~of this Part~~ solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under subsection (a)(2)(D); and
 - B) Any solid waste generated from treating, storing, or disposing of a hazardous waste listed in Subpart D ~~of this Part~~ solely because it exhibits the characteristics of ignitability, corrosivity, or reactivity, as regulated under subsection (e)(1).
 - 3) Wastes excluded pursuant to this subsection (g) are subject to 35 Ill. Adm. Code 728 (as applicable), even if they no longer exhibit a characteristic at the point of land disposal.
 - 4) Any mixture of a solid waste excluded from regulation in Section 721.104(b)(7) and a hazardous waste listed in Subpart D ~~of this Part~~ solely because the listed hazardous waste exhibits one or more of the characteristics of ignitability, corrosivity, or reactivity, as regulated under

subsection (a)(2)(D), is not a hazardous waste if the mixture no longer exhibits any characteristic of hazardous waste identified in Subpart C ~~of this Part~~ for which USEPA listed the hazardous waste listed in Subpart D ~~of this Part~~.

- h) Eligible Radioactive Mixed Waste ~~radioactive mixed waste~~.
- 1) Hazardous waste containing radioactive waste is no longer a hazardous waste when it meets the eligibility criteria and conditions of Subpart N of 35 Ill. Adm. Code 726 (i.e., it is “eligible radioactive mixed waste”).
 - 2) The exemption described in subsection (h)(1) also pertains to the following:
 - A) Any mixture of a solid waste and an eligible radioactive mixed waste; and
 - B) Any solid waste generated from treating, storing, or disposing of an eligible radioactive mixed waste.
 - 3) Waste exempted pursuant to this subsection (h) must meet the eligibility criteria and specified conditions in 35 Ill. Adm. Code 726.325 and 726.330 (for storage and treatment) and in 35 Ill. Adm. Code 726.410 and 726.415 (for transportation and disposal). Waste that fails to satisfy these eligibility criteria and conditions is regulated as hazardous waste.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.104 Exclusions

- a) Materials That Are Not Solid Wastes ~~that are not solid wastes~~. The following materials are not solid wastes for the purpose of this Part:
- 1) Sewage.
 - A) Domestic sewage (untreated sanitary wastes that pass through a sewer system); and
 - B) Any mixture of domestic sewage and other waste that passes through a sewer system to publicly-owned treatment works for treatment.
 - 2) Industrial wastewater discharges that are point source discharges with National Pollutant Discharge Elimination System (NPDES) permits issued by the Agency pursuant to Section 12(f) of the Environmental Protection Act ~~[415 ILCS 5/12(f)]~~ and 35 Ill. Adm. Code 309.

BOARD NOTE: This exclusion applies only to the actual point source discharge. It does not exclude industrial wastewaters while they are being collected, stored, or treated before discharge, nor does it exclude sludges that are generated by industrial wastewater treatment.

- 3) Irrigation return flows.
- 4) Source, by-product, or special nuclear material, as defined by section 11 of the Atomic Energy Act of 1954, as amended (42 USC 2014), incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- 5) Materials subjected to in-situ mining techniques that are not removed from the ground as part of the extraction process.
- 6) Pulping liquors (i.e., black liquors) that are reclaimed in a pulping liquor recovery furnace and then reused in the pulping process, unless it is accumulated speculatively, as defined in Section 721.101(c).
- 7) Spent sulfuric acid used to produce virgin sulfuric acid, provided ~~unless~~ it is not accumulated speculatively, as defined in Section 721.101(c).
- 8) Secondary materials that are reclaimed and returned to the original process or processes in which they were generated, where they are reused in the production process, provided that the following is true:
 - A) Only tank storage is involved, and the entire process through completion of reclamation is closed by being entirely connected with pipes or other comparable enclosed means of conveyance;
 - B) Reclamation does not involve controlled flame combustion (such as occurs in boilers, industrial furnaces, or incinerators);
 - C) The secondary materials are never accumulated in such tanks for over 12 months without being reclaimed; and
 - D) The reclaimed material is not used to produce a fuel or used to produce products that are used in a manner constituting disposal.
- 9) Wood preserving wastes.
 - A) Spent wood preserving solutions that have been used and which are reclaimed and reused for their original intended purpose;
 - B) Wastewaters from the wood preserving process that have been reclaimed and which are reused to treat wood; and

- C) Prior to reuse, the wood preserving wastewaters and spent wood preserving solutions described in subsections (a)(9)(A) and (a)(9)(B), so long as they meet all of the following conditions:
- i) The wood preserving wastewaters and spent wood preserving solutions are reused on-site at water-borne plants in the production process for their original intended purpose;
 - ii) Prior to reuse, the wastewaters and spent wood preserving solutions are managed to prevent release to either land or groundwater or both;
 - iii) Any unit used to manage wastewaters or spent wood preserving solutions prior to reuse can be visually or otherwise determined to prevent such releases;
 - iv) Any drip pad used to manage the wastewaters or spent wood preserving solutions prior to reuse complies with the standards in Subpart W of 35 Ill. Adm. Code 725, regardless of whether the plant generates a total of less than 100 kg/month of hazardous waste; and
 - v) Prior to operating pursuant to this exclusion, the plant owner or operator prepares a one-time notification to the Agency stating that the plant intends to claim the exclusion, giving the date on which the plant intends to begin operating under the exclusion, and containing the following language: "I have read the applicable regulation establishing an exclusion for wood preserving wastewaters and spent wood preserving solutions and understand it requires me to comply at all times with the conditions set out in the regulation." The plant must maintain a copy of that document in its on-site records until closure of the facility. The exclusion applies only so long as the plant meets all of the conditions. If the plant goes out of compliance with any condition, it may apply to the Agency for reinstatement. The Agency must reinstate the exclusion in writing if it finds that the plant has returned to compliance with all conditions and that the violations are not likely to recur. If the Agency denies an application, it must transmit to the applicant specific, detailed statements in writing as to the reasons it denied the application. The applicant under this subsection (a)(9)(C)(v) may appeal the Agency's determination to deny the reinstatement, to grant

the reinstatement with conditions, or to terminate a reinstatement before the Board pursuant to Section 40 of the Act ~~[415 ILCS 5/40]~~.

- 10) USEPA ~~h~~Hazardous waste numbers K060, K087, K141, K142, K143, K144, K145, K147, and K148, and any wastes from the coke by-products processes that are hazardous only because they exhibit the toxicity characteristic specified in Section 721.124, when subsequent to generation these materials are recycled to coke ovens, to the tar recovery process as a feedstock to produce coal tar, or are mixed with coal tar prior to the tar's sale or refining. This exclusion is conditioned on there being no land disposal of the waste from the point it is generated to the point it is recycled to coke ovens, to tar recovery, to the tar refining processes, or prior to when it is mixed with coal.
- 11) Nonwastewater splash condenser dross residue from the treatment of USEPA hazardous waste number K061 in high temperature metals recovery units, provided it is shipped in drums (if shipped) and not land disposed before recovery.
- 12) Certain oil-bearing hazardous secondary materials and recovered oil, as follows:
 - A) Oil-bearing hazardous secondary materials (i.e., sludges, by-products, or spent materials) that are generated at a petroleum refinery (standard industrial classification (SIC) code 2911) and are inserted into the petroleum refining process (SIC code 2911: including, but not limited to, distillation, catalytic cracking, fractionation, or thermal cracking units (i.e., cokers)), unless the material is placed on the land, or speculatively accumulated before being so recycled. Materials inserted into thermal cracking units are excluded under this subsection (a)(12), provided that the coke product also does not exhibit a characteristic of hazardous waste. Oil-bearing hazardous secondary materials may be inserted into the same petroleum refinery where they are generated or sent directly to another petroleum refinery and still be excluded under this provision. Except as provided in subsection (a)(12)(B), oil-bearing hazardous secondary materials generated elsewhere in the petroleum industry (i.e., from sources other than petroleum refineries) are not excluded under this Section. Residuals generated from processing or recycling materials excluded under this subsection (a)(12)(A), where such materials as generated would have otherwise met a listing under Subpart D ~~of this Part~~, are designated as USEPA hazardous waste number F037 listed wastes when disposed of or intended for disposal.

- B) Recovered oil that is recycled in the same manner and with the same conditions as described in subsection (a)(12)(A). Recovered oil is oil that has been reclaimed from secondary materials (including wastewater) generated from normal petroleum industry practices, including refining, exploration and production, bulk storage, and transportation incident thereto (SIC codes 1311, 1321, 1381, 1382, 1389, 2911, 4612, 4613, 4922, 4923, 4789, 5171, and 5172). Recovered oil does not include oil-bearing hazardous wastes listed in Subpart D ~~of this Part~~; however, oil recovered from such wastes may be considered recovered oil. Recovered oil does not include used oil, as defined in 35 Ill. Adm. Code 739.100.
- 13) Excluded scrap metal (processed scrap metal, unprocessed home scrap metal, and unprocessed prompt scrap metal) being recycled.
 - 14) Shredded circuit boards being recycled, provided that they meet the following conditions:
 - A) The circuit boards are stored in containers sufficient to prevent a release to the environment prior to recovery; and
 - B) The circuit boards are free of mercury switches, mercury relays, nickel-cadmium batteries, and lithium batteries.
 - 15) Condensates derived from the overhead gases from kraft mill steam strippers that are used to comply with federal Clean Air Act regulation 40 CFR 63.446(e). The exemption applies only to combustion at the mill generating the condensates.
 - 16) This subsection (a)(16) corresponds with 40 CFR 261.4(a)(16), marked “reserved” by USEPA. This statement maintains structural consistency with the federal regulations.
 - 17) Spent materials (as defined in Section 721.101) (other than hazardous wastes listed in Subpart D ~~of this Part~~) generated within the primary mineral processing industry from which minerals, acids, cyanide, water, or other values are recovered by mineral processing or by beneficiation, provided that the following is true:
 - A) The spent material is legitimately recycled to recover minerals, acids, cyanide, water, or other values;
 - B) The spent material is not accumulated speculatively;
 - C) Except as provided in subsection (a)(17)(D), the spent material is stored in tanks, containers, or buildings that meet the following

minimum integrity standards: a building must be an engineered structure with a floor, walls, and a roof all of which are made of non-earthen materials providing structural support (except that smelter buildings may have partially earthen floors, provided that the spent material is stored on the non-earthen portion), and have a roof suitable for diverting rainwater away from the foundation; a tank must be free standing, not be a surface impoundment (as defined in 35 Ill. Adm. Code 720.110), and be manufactured of a material suitable for containment of its contents; a container must be free standing and be manufactured of a material suitable for containment of its contents. If a tank or container contains any particulate that may be subject to wind dispersal, the owner or operator must operate the unit in a manner that controls fugitive dust. A tank, container, or building must be designed, constructed, and operated to prevent significant releases to the environment of these materials.

- D) The Agency must allow by permit in writing that solid mineral processing spent materials only may be placed on pads, rather than in tanks, containers, or buildings if the facility owner or operator can demonstrate the following: the solid mineral processing secondary materials do not contain any free liquid; the pads are designed, constructed, and operated to prevent significant releases of the spent material into the environment; and the pads provide the same degree of containment afforded by the non-RCRA tanks, containers, and buildings eligible for exclusion.
- i) The Agency must also consider whether storage on pads poses the potential for significant releases via groundwater, surface water, and air exposure pathways. Factors to be considered for assessing the groundwater, surface water, and air exposure pathways must include the following: the volume and physical and chemical properties of the spent material, including its potential for migration off the pad; the potential for human or environmental exposure to hazardous constituents migrating from the pad via each exposure pathway; and the possibility and extent of harm to human and environmental receptors via each exposure pathway.
 - ii) Pads must meet the following minimum standards: they must be designed of non-earthen material that is compatible with the chemical nature of the mineral processing spent material; they must be capable of withstanding physical stresses associated with placement and removal; they must

have runoff and runoff controls; they must be operated in a manner that controls fugitive dust; and they must have integrity assurance through inspections and maintenance programs.

- iii) Before making a determination under this subsection (a)(17)(D), the Agency must provide notice and the opportunity for comment to all persons potentially interested in the determination. This can be accomplished by placing notice of this action in major local newspapers, or broadcasting notice over local radio stations.

BOARD NOTE: See Subpart D of 35 Ill. Adm. Code 703 for the RCRA Subtitle C permit public notice requirements.

- E) The owner or operator provides a notice to the Agency, providing the following information: the types of materials to be recycled, the type and location of the storage units and recycling processes, and the annual quantities expected to be placed in land-based units. This notification must be updated when there is a change in the type of materials recycled or the location of the recycling process.
 - F) For purposes of subsection (b)(7), mineral processing spent materials must be the result of mineral processing and may not include any listed hazardous wastes. Listed hazardous wastes and characteristic hazardous wastes generated by non-mineral processing industries are not eligible for the conditional exclusion from the definition of solid waste.
- 18) Petrochemical recovered oil from an associated organic chemical manufacturing facility, where the oil is to be inserted into the petroleum refining process (SIC code 2911) along with normal petroleum refinery process streams, provided that both of the following conditions are true of the oil:
- A) The oil is hazardous only because it exhibits the characteristic of ignitability (as defined in Section 721.121) or toxicity for benzene (Section 721.124, USEPA hazardous waste ~~number code~~ D018);
 - B) The oil generated by the organic chemical manufacturing facility is not placed on the land, or speculatively accumulated before being recycled into the petroleum refining process. An “associated organic chemical manufacturing facility” is a facility for which all of the following is true: its primary SIC code is 2869, but its

operations may also include SIC codes 2821, 2822, and 2865; it is physically co-located with a petroleum refinery; and the petroleum refinery to which the oil being recycled is returned also provides hydrocarbon feedstocks to the organic chemical manufacturing facility. "Petrochemical recovered oil" is oil that has been reclaimed from secondary materials (i.e., sludges, by-products, or spent materials, including wastewater) from normal organic chemical manufacturing operations, as well as oil recovered from organic chemical manufacturing processes.

- 19) Spent caustic solutions from petroleum refining liquid treating processes used as a feedstock to produce cresylic or naphthenic acid, unless the material is placed on the land or accumulated speculatively, as defined in Section 721.101(c).
- 20) Hazardous secondary materials used to make zinc fertilizers, provided that the following conditions are satisfied:
 - A) Hazardous secondary materials used to make zinc micronutrient fertilizers must not be accumulated speculatively, as defined in Section 721.101(c)(8).
 - B) A generator or intermediate handler of zinc-bearing hazardous secondary materials that are to be incorporated into zinc fertilizers must fulfill the following conditions:
 - i) It must submit a one-time notice to the Agency that contains the name, address, and USEPA identification number of the generator or intermediate handler facility, that provides a brief description of the secondary material that will be subject to the exclusion, and which identifies when the manufacturer intends to begin managing excluded zinc-bearing hazardous secondary materials under the conditions specified in this subsection (a)(20).
 - ii) It must store the excluded secondary material in tanks, containers, or buildings that are constructed and maintained in a way that prevents releases of the secondary materials into the environment. At a minimum, any building used for this purpose must be an engineered structure made of non-earthen materials that provide structural support, and it must have a floor, walls, and a roof that prevent wind dispersal and contact with rainwater. A tank used for this purpose must be structurally sound and, if outdoors, it must have a roof or cover that prevents contact with wind and

rain. A container used for this purpose must be kept closed, except when it is necessary to add or remove material, and it must be in sound condition. Containers that are stored outdoors must be managed within storage areas that fulfill the conditions of subsection (a)(20)(F).

- iii) With each off-site shipment of excluded hazardous secondary materials, it must provide written notice to the receiving facility that the material is subject to the conditions of this subsection (a)(20).
 - iv) It must maintain records at the generator's or intermediate handler's facility for no less than three years of all shipments of excluded hazardous secondary materials. For each shipment these records must, at a minimum, contain the information specified in subsection (a)(20)(G).
- C) A manufacturer of zinc fertilizers or zinc fertilizer ingredients made from excluded hazardous secondary materials must fulfill the following conditions:
- i) It must store excluded hazardous secondary materials in accordance with the storage requirements for generators and intermediate handlers, as specified in subsection (a)(20)(B)(ii).
 - ii) It must submit a one-time notification to the Agency that, at a minimum, specifies the name, address, and USEPA identification number of the manufacturing facility and which identifies when the manufacturer intends to begin managing excluded zinc-bearing hazardous secondary materials under the conditions specified in this subsection (a)(20).
 - iii) It must maintain for a minimum of three years records of all shipments of excluded hazardous secondary materials received by the manufacturer, which must at a minimum identify for each shipment the name and address of the generating facility, the name of transporter, and the date on which the materials were received, the quantity received, and a brief description of the industrial process that generated the material.
 - iv) It must submit an annual report to the Agency that identifies the total quantities of all excluded hazardous

secondary materials that were used to manufacture zinc fertilizers or zinc fertilizer ingredients in the previous year, the name and address of each generating facility, and the industrial processes from which the hazardous secondary materials were generated.

- D) Nothing in this Section preempts, overrides, or otherwise negates the provision in 35 Ill. Adm. Code 722.111 that requires any person who generates a solid waste to determine if that waste is a hazardous waste.
- E) Interim status and permitted storage units that have been used to store only zinc-bearing hazardous wastes prior to the submission of the one-time notice described in subsection (a)(20)(B)(i), and that afterward will be used only to store hazardous secondary materials excluded under this subsection (a)(20), are not subject to the closure requirements of 35 Ill. Adm. Code 724 and 725.
- F) A container used to store excluded secondary material must fulfill the following conditions:
 - i) It must have containment structures or systems sufficiently impervious to contain leaks, spills, and accumulated precipitation;
 - ii) It must provide for effective drainage and removal of leaks, spills, and accumulated precipitation; and
 - iii) It must prevent run-on into the containment system.

BOARD NOTE: Subsections (a)(20)(F)(i) through (a)(20)(F)(iii) are derived from 40 CFR 261.4(a)(20)(ii)(B)(1) through (a)(20)(ii)(B)(3). The Board added the preamble to these federal paragraphs as subsection (a)(20)(F) to comport with Illinois Administrative Code codification requirements.

- G) Required records of shipments of excluded hazardous secondary materials must, at a minimum, contain the following information:
 - i) The name of the transporter and date of the shipment;
 - ii) The name and address of the facility that received the excluded material, along with documentation confirming receipt of the shipment; and

- iii) The type and quantity of excluded secondary material in each shipment.

BOARD NOTE: Subsections (a)(20)(G)(i) through (a)(20)(G)(iii) are derived from 40 CFR 261.4(a)(20)(ii)(D)(1) through (a)(20)(ii)(D)(3). The Board added the preamble to these federal paragraphs as subsection (a)(20)(G) to comport with Illinois Administrative Code codification requirements.

- 21) Zinc fertilizers made from hazardous wastes or hazardous secondary materials that are excluded under subsection (a)(20), provided that the following conditions are fulfilled:

- A) The fertilizers meet the following contaminant limits:

- i) For metal contaminants:

Constituent	Maximum Allowable Total Concentration in Fertilizer, per Unit (1%) of Zinc (ppm)
Arsenic	0.3
Cadmium	1.4
Chromium	0.6
Lead	2.8
Mercury	0.3

- ii) For dioxin contaminants, the fertilizer must contain no more than eight parts per trillion of dioxin, measured as toxic equivalent (TEQ).

- B) The manufacturer performs sampling and analysis of the fertilizer product to determine compliance with the contaminant limits for metals no less frequently than once every six months, and for dioxins no less frequently than once every 12 months. Testing must also be performed whenever changes occur to manufacturing processes or ingredients that could significantly affect the amounts of contaminants in the fertilizer product. The manufacturer may use any reliable analytical method to demonstrate that no constituent of concern is present in the product at concentrations above the applicable limits. It is the responsibility of the manufacturer to ensure that the sampling and analysis are unbiased, precise, and representative of the products introduced into commerce.
- C) The manufacturer maintains for no less than three years records of all sampling and analyses performed for purposes of determining

compliance with subsection (a)(21)(B). Such records must at a minimum include the following:

- i) The dates and times product samples were taken, and the dates the samples were analyzed;
- ii) The names and qualifications of the persons taking the samples;
- iii) A description of the methods and equipment used to take the samples;
- iv) The name and address of the laboratory facility at which analyses of the samples were performed;
- v) A description of the analytical methods used, including any cleanup and sample preparation methods; and
- vi) All laboratory analytical results used to determine compliance with the contaminant limits specified in this subsection (a)(21).

22) Used CRTs.

- A) Used, intact CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste within the United States, unless they are disposed of or speculatively accumulated, as defined in Section 721.101(c)(8), by a CRT collector or glass processor.
- B) Used, intact CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste when exported for recycling, provided that they meet the requirements of Section 721.140.
- C) Used, broken CRTs, as defined in 35 Ill. Adm. Code 720.110, are not solid waste, provided that they meet the requirements of Section 721.139.
- D) Glass removed from CRTs is not a solid waste provided that it meets the requirements of Section 721.139(c).

23) Hazardous Secondary Materials Reclaimed ~~secondary materials reclaimed~~ under the Control ~~control~~ of the Generator ~~generator~~. Hazardous secondary material generated and legitimately reclaimed within the United States or its territories and under the control of the generator, provided that the material complies with subsections (a)(23)(A) and (a)(23)(B):

A) Excluded Hazardous Secondary Materials ~~hazardous secondary materials.~~

- i) The hazardous secondary material is generated and reclaimed at the generating facility. (For purposes of this subsection (a)(23)(A)(i), “generating facility” means all contiguous property owned, leased, or otherwise controlled by the hazardous secondary material generator.);
- ii) The hazardous secondary material is generated and reclaimed at different facilities, if the reclaiming facility is controlled by the generator or if both the generating facility and the reclaiming facility are controlled by a person as defined in 35 Ill. Adm. Code 720.110, and if the generator provides one of the following certifications:

“On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], which is controlled by [insert generator facility name] and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material.”

or

“On behalf of [insert generator facility name], I certify that this facility will send the indicated hazardous secondary material to [insert reclaimer facility name], that both facilities are under common control, and that [insert name of either facility] has acknowledged full responsibility for the safe management of the hazardous secondary material.”

For purposes of this subsection (a)(23)(A)(ii), “control” means the power to direct the policies of the facility, whether by the ownership of stock, voting rights, or otherwise, except that contractors who operate facilities on behalf of a different person, as defined in 35 Ill. Adm. Code 720.110, cannot be deemed to “control” such facilities. The generating and receiving facilities must both maintain at their facilities for no less than three years records of hazardous secondary materials sent or received under this

exclusion. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received under the exclusion. These requirements may be satisfied by routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations); or

- iii) The hazardous secondary material is generated pursuant to a written contract between a tolling contractor and a toll manufacturer and is reclaimed by the tolling contractor, if the tolling contractor certifies as follows:

“On behalf of [insert tolling contractor name], I certify that [insert tolling contractor name] has a written contract with [insert toll manufacturer name] to manufacture [insert name of product or intermediate] which is made from specified unused materials, and that [insert tolling contractor name] will reclaim the hazardous secondary materials generated during this manufacture. On behalf of [insert tolling contractor name], I also certify that [insert tolling contractor name] retains ownership of, and responsibility for, the hazardous secondary materials that are generated during the course of the manufacture, including any releases of hazardous secondary materials that occur during the manufacturing process.”

The tolling contractor must maintain at its facility for no less than three years records of hazardous secondary materials received pursuant to its written contract with the tolling manufacturer, and the tolling manufacturer must maintain at its facility for no less than three years records of hazardous secondary materials shipped pursuant to its written contract with the tolling contractor. In both cases, the records must contain the name of the transporter, the date of the shipment, and the type and quantity of the hazardous secondary material shipped or received pursuant to the written contract. These requirements may be satisfied by routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations). For purposes of this subsection (a)(23)(A)(ii), “tolling contractor” means a person who arranges for the production of a product or intermediate

made from specified unused materials through a written contract with a toll manufacturer. “Toll manufacturer” means a person who produces a product or intermediate made from specified unused materials pursuant to a written contract with a tolling contractor.

- B) Management of Hazardous Secondary Materials~~hazardous secondary materials.~~
- i) The hazardous secondary material is contained, as defined in 35 Ill. Adm. Code 720.110. A hazardous secondary material released to the environment is discarded material and a solid waste unless it is immediately recovered for the purpose of reclamation. Hazardous secondary material managed in a unit with leaks or other continuing or intermittent unpermitted releases is discarded material and a solid waste;
 - ii) The hazardous secondary material is not speculatively accumulated, as defined in Section 721.101(c)(8);
 - iii) Notice is provided, as required by 35 Ill. Adm. Code 720.142;
 - iv) The hazardous secondary material is not otherwise subject to material-specific management conditions under subsection (a) when reclaimed, and it is not a spent lead acid battery (see 35 Ill. Adm. Code 726.180 and 733.102);
 - v) Persons performing the recycling of hazardous secondary materials under this exclusion must maintain documentation of their legitimacy determination on-site. Documentation must be a written description of how the recycling meets all four factors in 35 Ill. Adm. Code 720.143(a). Documentation must be maintained for three years after the recycling operation has ceased; and
 - vi) The emergency preparedness and response requirements found in Subpart M ~~of this Part~~ are met.
- 24) Hazardous Secondary Materials Transferred~~secondary materials transferred for Off-Site Reclamation~~~~off-site reclamation~~. Hazardous secondary material that is generated and then transferred to a verified reclamation facility for the purpose of reclamation is not a solid waste if the management of the material fulfills the conditions of subsections (a)(24)(A) through (a)(24)(G):

- A) The hazardous secondary material must not be speculatively accumulated, as defined in Section 721.101(c)(8).
- B) No person or facility other than the hazardous secondary material generator, the transporter, an intermediate facility, or a reclaimer manages the material; the hazardous secondary material must not be stored for more than 10 days at a transfer facility, as defined in Section 721.110; and the hazardous secondary material must be packaged according to applicable USDOT regulations codified as 49 CFR 173, 178, and 179, incorporated by reference in 35 Ill. Adm. Code 720.111, while in transport.
- C) The hazardous secondary material must not otherwise be subject to material-specific management conditions pursuant to other provisions of this subsection (a) when reclaimed, and the hazardous secondary material must not be a spent lead-acid battery (see 35 Ill. Adm. Code 726.180 and 733.102).
- D) The reclamation of the hazardous secondary material must be legitimate, as determined pursuant to 35 Ill. Adm. Code 720.143.
- E) The hazardous secondary material generator must satisfy each of the following conditions:
 - i) The hazardous secondary material must be contained as defined in 35 Ill. Adm. Code 720.110. A hazardous secondary material released to the environment is discarded and a solid waste unless it is immediately recovered for the purpose of recycling. Hazardous secondary material managed in a unit that leaks or which otherwise continuously releases hazardous secondary material is discarded material and a solid waste.
 - ii) The hazardous secondary material generator must arrange for transport of hazardous secondary materials to a verified reclamation facility in the United States. A “verified reclamation facility” is a facility that has been granted a verified facility determination pursuant to 35 Ill. Adm. Code 720.131(d), or a reclamation facility where the management of the hazardous secondary material is regulated by any of 35 Ill. Adm. Code 724, 725, 726, or 727. If the hazardous secondary material will pass through an intermediate facility, the facility must be a “verified intermediate facility” that has been granted a verified facility determination pursuant to 35 Ill. Adm. Code

720.131(d) or management of the hazardous secondary materials at that facility must be regulated by any of 35 Ill. Adm. Code 724, 725, 726, or 727, and the hazardous secondary material generator must make contractual arrangements with the intermediate facility to ensure that the hazardous secondary material is sent to the reclamation facility identified by the hazardous secondary material generator.

- iii) The hazardous secondary material generator must maintain certain records at the generating facility for a minimum of three years that document every off-site shipment of hazardous secondary materials. The documentation for each shipment must, at a minimum, include the following information about the shipment: the name of the transporter and date of the shipment; the name and address of each reclaimer and intermediate facility to which the hazardous secondary material was sent; and the type and quantity of hazardous secondary material in the shipment.

BOARD NOTE: The Board combined and moved the shipping documentation and records retention requirements of corresponding 40 CFR 261.4(a)(24)(v)(C) and (a)(24)(v)(C)(1) through (a)(24)(v)(C)(3) to this single subsection (a)(24)(E)(iii). This combination allowed compliance with codification requirements relating to the maximum permissible indent level.

- iv) The hazardous secondary material generator must maintain at the generating facility, for a minimum of three years, for every off-site shipment of hazardous secondary materials, confirmations of receipt from each reclaimer and intermediate facility to which its hazardous secondary materials were sent. Each confirmation of receipt must include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received, and the date on which the facility received the hazardous secondary materials. The generator may satisfy this requirement using routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations of receipt).

- v) The hazardous secondary material generator must comply with the emergency preparedness and response conditions in Subpart M ~~of this Part~~.
- F) The reclaimer of hazardous secondary material or any intermediate facility, as defined in 35 Ill. Adm. Code 720.110, that manages material which is excluded from regulation pursuant to this subsection (a)(24) must satisfy all of the following conditions:

- i) The owner or operator of a reclamation or intermediate facility must maintain at its facility for a minimum of three years records of every shipment of hazardous secondary material that the facility received and, if applicable, for every shipment of hazardous secondary material that the facility received and subsequently sent off-site from the facility for further reclamation. For each shipment, these records must, at a minimum, contain the following information: the name of the transporter and date of the shipment; the name and address of the hazardous secondary material generator and, if applicable, the name and address of the reclaimer or intermediate facility from which the facility received the hazardous secondary materials; the type and quantity of hazardous secondary material in the shipment; and, for hazardous secondary materials that the facility subsequently transferred off-site for further reclamation after receiving it, the name and address of the (subsequent) reclaimer and any intermediate facility to which the facility sent the hazardous secondary material.

BOARD NOTE: The Board combined the provisions from 40 CFR 261.4(a)(24)(vi)(A) and (a)(24)(vi)(A)(1) through (a)(24)(vi)(A)(3) that enumerate the required information into this single subsection (a)(24)(F)(i). This combination allowed compliance with codification requirements relating to the maximum permissible indent level.

- ii) The intermediate facility must send the hazardous secondary material to the reclaimers designated by the generator of the hazardous secondary materials.
- iii) The reclaimer or intermediate facility that receives a shipment of hazardous secondary material must send a confirmation of receipt to the hazardous secondary material generator for each off-site shipment of hazardous secondary materials. A confirmation of receipt must

include the name and address of the reclaimer (or intermediate facility), the type and quantity of the hazardous secondary materials received, and the date on which the facility received the hazardous secondary materials. The reclaimer or intermediate facility may satisfy this requirement using routine business records (e.g., financial records, bills of lading, copies of USDOT shipping papers, or electronic confirmations of receipt).

- iv) The reclaimer or intermediate facility must manage the hazardous secondary material in a manner that is at least as protective of human health and the environment as that employed for analogous raw material, and the material must be contained. An “analogous raw material” is a raw material for which the hazardous secondary material substitutes and that serves the same function and has similar physical and chemical properties as the hazardous secondary material.
- v) A reclaimer of hazardous secondary materials must manage any residuals that are generated from its reclamation processes in a manner that is protective of human health and the environment. If any residuals of the reclamation process exhibit a characteristic of hazardous waste, as defined in Subpart C ~~of this Part~~, or if the residuals themselves are specifically listed as hazardous waste in Subpart D ~~of this Part~~, those residuals are hazardous waste. The reclaimer and any subsequent persons must manage that hazardous waste in accordance with the applicable requirements of 35 Ill. Adm. Code: Subtitle G or similar regulations authorized by USEPA as equivalent to 40 CFR 260 through 272.
- vi) The reclaimer and intermediate facility must have financial assurance that satisfies the requirements of Subpart H ~~of this Part~~.
- vii) The reclaimer and intermediate facility must have been granted a solid waste determination pursuant to 35 Ill. Adm. Code 720.131(d), or have a RCRA Part B permit or be subject to interim status standards that address the management of the hazardous secondary materials; and

- G) Any person claiming the exclusion for recycled hazardous secondary material pursuant to this subsection (a)(24) must provide notification as required by 35 Ill. Adm. Code 720.142.
- 25) This subsection (a)(25) corresponds with 40 CFR 261.4(a)(25), which USEPA removed and marked “reserved.” This statement maintains structural consistency with the corresponding federal regulations.
- 26) Solvent-contaminated wipes that are sent for cleaning and reuse are not solid wastes from the point of generation, provided that all of the following conditions are fulfilled:
- A) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled “Excluded Solvent-Contaminated Wipes.” The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;
 - B) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for cleaning;
 - C) At the point of being sent for cleaning on-site or at the point of being transported off-site for cleaning, the solvent-contaminated wipes must contain no free liquids, as defined in 35 Ill. Adm. Code 720.110;
 - D) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in this Part and 35 Ill. Adm. Code 720, 722 through 728, and 733;
 - E) Generators must maintain at their site the following documentation:
 - i) The name and address of the laundry or dry cleaner that is receiving the solvent-contaminated wipes;

- ii) The documentation that the 180-day accumulation time limit in 35 Ill. Adm. Code 721.104(a)(26)(B) is being met; and
 - iii) A description of the process the generator is using to ensure that the solvent-contaminated wipes contain no free liquids at the point of being laundered or dry cleaned on-site or at the point of being transported off-site for laundering or dry cleaning; and
- F) The solvent-contaminated wipes are sent to a laundry or dry cleaner whose discharge, if any, is regulated under sections 301 and 402 or section 307 of the federal Clean Water Act (33 USC 1311 and 1341 or 33 USC 1317) or equivalent Illinois or sister-state requirements approved by USEPA pursuant to 33 USC 1311 through 1346 and 1370.
- 27) Hazardous secondary material that is generated and then transferred to another person for the purpose of remanufacturing is not a solid waste, provided that the following conditions are fulfilled:

BOARD NOTE: The North American Industrial Classification System (NAICS) codes used in this subsection (a)(27) are defined in the NAICS Manual, available from the Office of Management and Budget and incorporated by reference in 35 Ill. Adm. Code 720.111.

- A) The hazardous secondary material consists of one or more of the following spent solvents: toluene, xylenes, ethylbenzene, 1,2,4-trimethylbenzene, chlorobenzene, n-hexane, cyclohexane, methyl tert-butyl ether, acetonitrile, chloroform, chloromethane, dichloromethane, methyl isobutyl ketone, N,N-dimethylformamide, tetrahydrofuran, n-butyl alcohol, ethanol, or methanol.
- B) The hazardous secondary material originated from using one or more of the solvents listed in subsection (a)(27)(A) in a commercial grade for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510).
- C) The hazardous secondary material generator sends the hazardous secondary material spent solvents listed in subsection (a)(27)(A) to a remanufacturer in the pharmaceutical manufacturing (NAICS

325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), or the paints and coatings manufacturing sectors (NAICS 325510).

- D) After remanufacturing one or more of the solvents listed in subsection (a)(27)(A), the use of the remanufactured solvent must be limited to reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) in the pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and the paints and coatings manufacturing sectors (NAICS 325510) or to using them as ingredients in a product. These allowed uses correspond to chemical functional uses enumerated in 40 CFR 711.15(b)(4)(i)(C) (Reporting Information to EPA), incorporated by reference in 35 Ill. Adm. Code 720.111, including Industrial Function Category Codes U015 (solvents consumed in a reaction to produce other chemicals) and U030 (solvents that become part of the mixture);

BOARD NOTE: The Board observes that the citation to Toxic Substances Control Act function categories and use of the word “including” to preface specific example Industrial Function Category Codes does not expand the range of permissible uses beyond the express limitations recited in the first segment of this subsection (a)(27)(D) and subsection (a)(27)(E).

- E) After remanufacturing one or more of the solvents listed in subsection (a)(27)(i), the use of the remanufactured solvent does not involve cleaning or degreasing oil, grease, or similar material from textiles, glassware, metal surfaces, or other articles. (These disallowed continuing uses correspond to chemical functional uses in Industrial Function Category Code U029 (solvents (for cleaning and degreasing)) in 40 CFR 711.15(b)(4)(i)(C), incorporated by reference in 35 Ill. Adm. Code 720.111.
- F) Both the hazardous secondary material generator and the remanufacturer must fulfill the following requirements:
- i) The generator and remanufacturer must notify USEPA Region 5 and the Agency, and update the notification every two years per 35 Ill. Adm. Code 720.142;
 - ii) The generator and remanufacturer must develop and maintain an up-to-date remanufacturing plan that identifies the information enumerated in subsection (a)(27)(G);

BOARD NOTE: The Board moved corresponding 40 CFR 261.4(a)(27)(vi)(B)(I) through (a)(27)(vi)(B)(I) to appear as subsections (a)(27)(G)(i) through (a)(27)(G)(v) to comport with codification requirements.

- iii) The generator and remanufacturer must maintain records of shipments and confirmations of receipts for a period of three years from the dates of the shipments;
 - iv) The generator and remanufacturer must, prior to remanufacturing, store the hazardous spent solvents in tanks or containers that meet technical standards found in Subparts I and J ~~of this Part~~, with the tanks and containers being labeled or otherwise having an immediately available record of the material being stored;
 - v) The generator and remanufacturer must, during remanufacturing, and during storage of the hazardous secondary materials prior to remanufacturing, the remanufacturer certifies that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls in compliance with the applicable Clean Air Act regulations of 40 CFR 60, 61 and 63, incorporated by reference in 35 Ill. Adm. Code 720.111; or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, are in compliance with the appropriate standards in Subparts AA (vents), BB (equipment) and CC (tank storage) ~~of this Part~~; and
 - vi) The generator and remanufacturer must meet the requirements prohibiting speculative accumulation in Section 721.101(c)(8).
- G) The following information items are required elements for a remanufacturing plan.
- i) The name, address and USEPA ID number of the generators and the remanufacturers;
 - ii) The types and estimated annual volumes of spent solvents to be remanufactured;
 - iii) The processes and industry sectors that generate the spent solvents;

- iv) The specific uses and industry sectors for the remanufactured solvents; and
- v) A certification from the remanufacturer stating as follows:

“On behalf of [insert remanufacturer facility name], I certify that this facility is a remanufacturer under pharmaceutical manufacturing (NAICS 325412), basic organic chemical manufacturing (NAICS 325199), plastics and resins manufacturing (NAICS 325211), and/or the paints and coatings manufacturing sectors (NAICS 325510), and will accept the spent solvent(s) for the sole purpose of remanufacturing into commercial-grade solvent(s) that will be used for reacting, extracting, purifying, or blending chemicals (or for rinsing out the process lines associated with these functions) or for use as product ingredient(s). I also certify that the remanufacturing equipment, vents, and tanks are equipped with and are operating air emission controls in compliance with the appropriate Clean Air Act regulations under 40 CFR ~~part~~ 60, ~~part~~ 61 or ~~part~~ 63, or, absent such Clean Air Act standards for the particular operation or piece of equipment covered by the remanufacturing exclusion, are in compliance with the appropriate standards in Subparts AA (vents), BB (equipment) and CC (tank storage).”

BOARD NOTE: Subsections (a)(27)(G)(i) through (a)(27)(G)(v) correspond with 40 CFR 261.4(a)(27)(vi)(B)(I) through (a)(27)(vi)(B)(I), moved to this subsection (a)(27)(G) to comport with codification requirements.

- b) Solid Wastes That Are Not Hazardous Wastes ~~wastes that are not hazardous wastes~~. The following solid wastes are not hazardous wastes:
 - 1) Household waste, including household waste that has been collected, transported, stored, treated, disposed of, recovered (e.g., refuse-derived fuel), or reused. “Household waste” means any waste material (including garbage, trash, and sanitary wastes in septic tanks) derived from households (including single and multiple residences, hotels, and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use recreation areas). A resource recovery facility managing municipal solid waste must not be deemed to be treating, storing, disposing of, or otherwise managing hazardous wastes for the purposes of regulation under this Part, if the following describe the facility:

- A) The facility receives and burns only the following waste:
 - i) Household waste (from single and multiple dwellings, hotels, motels, and other residential sources); or
 - ii) Solid waste from commercial or industrial sources that does not contain hazardous waste; and
- B) The facility does not accept hazardous waste and the owner or operator of such facility has established contractual requirements or other appropriate notification or inspection procedures to assure that hazardous wastes are not received at or burned in such facility.

BOARD NOTE: The U.S. Supreme Court determined, in *City of Chicago v. Environmental Defense Fund, Inc.*, 511 U.S. 328, 114 S. Ct. 1588, 128 L. Ed. 2d 302 (1994), that this exclusion and RCRA section 3001(i) (42 USC 6921(i)) do not exclude the ash from facilities covered by this subsection (b)(1) from regulation as a hazardous waste. At 59 Fed. Reg. 29372 (June 7, 1994), USEPA granted facilities managing ash from such facilities that is determined a hazardous waste under Subpart C of this Part until December 7, 1994 to file a Part A permit application pursuant to 35 Ill. Adm. Code 703.181. At 60 Fed. Reg. 6666 (Feb. 3, 1995), USEPA stated that it interpreted that the point at which ash becomes subject to RCRA Subtitle C regulation is when that material leaves the combustion building (including connected air pollution control equipment).

- 2) Solid wastes generated by any of the following that are returned to the soil as fertilizers:
 - A) The growing and harvesting of agricultural crops, or
 - B) The raising of animals, including animal manures.
- 3) Mining overburden returned to the mine site.
- 4) Coal and Fossil Fuel Combustion Waste ~~fossil fuel combustion waste~~.
 - A) Fly ash waste, bottom ash waste, slag waste, and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels, except as provided in 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.
 - B) The following wastes generated primarily from processes that support the combustion of coal or other fossil fuels that are co-disposed with the wastes in subsection (b)(4)(A), except as

provided by 35 Ill. Adm. Code 726.112 for facilities that burn or process hazardous waste:

- i) Coal Pile Run-Off~~pile run-off~~. For purposes of this subsection (b)(4), coal pile run-off means any precipitation that drains off coal piles.
- ii) Boiler Cleaning Solutions~~cleaning solutions~~. For purposes of this subsection (b)(4), boiler cleaning solutions means water solutions and chemical solutions used to clean the fire-side and waterside of the boiler.
- iii) Boiler Blowdown~~blowdown~~. For purposes of this subsection (b)(4), boiler blowdown means water purged from boilers used to generate steam.
- iv) Process Water Treatment~~water treatment~~ and Demineralizer Regeneration Wastes~~demineralizer regeneration wastes~~. For purposes of this subsection (b)(4), process water treatment and demineralizer regeneration wastes means sludges, rinses, and spent resins generated from processes to remove dissolved gases, suspended solids, and dissolved chemical salts from combustion system process water.
- v) Cooling Tower Blowdown~~tower blowdown~~. For purposes of this subsection (b)(4), cooling tower blowdown means water purged from a closed cycle cooling system. Closed cycle cooling systems include cooling towers, cooling ponds, or spray canals.
- vi) Air Heater~~heater~~ and Precipitator Washes~~precipitator washes~~. For purposes of this subsection (b)(4), air heater and precipitator washes means wastes from cleaning air preheaters and electrostatic precipitators.
- vii) Effluents from Floor~~floor~~ and Yard Drains~~yard drains~~ and Sumps~~sumps~~. For purposes of this subsection (b)(4), effluents from floor and yard drains and sumps means wastewaters, such as wash water, collected by or from floor drains, equipment drains, and sumps located inside the power plant building; and wastewaters, such as rain runoff, collected by yard drains and sumps located outside the power plant building.

- viii) ~~Wastewater Treatment Sludges~~ ~~treatment sludges~~. For purposes of this subsection (b)(4), wastewater treatment sludges refers to sludges generated from the treatment of wastewaters specified in subsections (b)(4)(B)(i) through (b)(4)(B)(vi).
- 5) Drilling fluids, produced waters, and other wastes associated with the exploration, development, or production of crude oil, natural gas, or geothermal energy.
- 6) Chromium ~~Wastes~~ ~~wastes~~.
 - A) Wastes that fail the test for the toxicity characteristic (Section 721.124 and Appendix B ~~to this Part~~) because chromium is present or which are listed in Subpart D ~~of this Part~~ due to the presence of chromium, that do not fail the test for the toxicity characteristic for any other constituent or which are not listed due to the presence of any other constituent, and that do not fail the test for any other characteristic, if the waste generator shows the following:
 - i) The chromium in the waste is exclusively (or nearly exclusively) trivalent chromium;
 - ii) The waste is generated from an industrial process that uses trivalent chromium exclusively (or nearly exclusively) and the process does not generate hexavalent chromium; and
 - iii) The waste is typically and frequently managed in non-oxidizing environments.
 - B) The following are specific wastes that meet the standard in subsection (b)(6)(A) (so long as they do not fail the test for the toxicity characteristic for any other constituent and do not exhibit any other characteristic):
 - i) Chrome (blue) trimmings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;
 - ii) Chrome (blue) shavings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;

- iii) Buffing dust generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue;
 - iv) Sewer screenings generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;
 - v) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, retan/wet finish, no beamhouse, through-the-blue, and shearling;
 - vi) Wastewater treatment sludges generated by the following subcategories of the leather tanning and finishing industry: hair pulp/chrome tan/retan/wet finish, hair save/chrome tan/retan/wet finish, and through-the-blue;
 - vii) Waste scrap leather from the leather tanning industry, the shoe manufacturing industry, and other leather product manufacturing industries; and
 - viii) Wastewater treatment sludges from the production of titanium dioxide pigment using chromium-bearing ores by the chloride process.
- 7) Solid waste from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock, and overburden from the mining of uranium ore), except as provided by 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.
- A) For purposes of this subsection (b)(7), beneficiation of ores and minerals is restricted to the following activities: crushing; grinding; washing; dissolution; crystallization; filtration; sorting; sizing; drying; sintering; pelletizing; briquetting; calcining to remove water or carbon dioxide; roasting; autoclaving or chlorination in preparation for leaching (except where the roasting (or autoclaving or chlorination) and leaching sequence produces a final or intermediate product that does not undergo further beneficiation or processing); gravity concentration; magnetic

separation; electrostatic separation; floatation; ion exchange; solvent extraction; electrowinning; precipitation; amalgamation; and heap, dump, vat tank, and in situ leaching.

- B) For the purposes of this subsection (b)(7), solid waste from the processing of ores and minerals includes only the following wastes as generated:
- i) Slag from primary copper processing;
 - ii) Slag from primary lead processing;
 - iii) Red and brown muds from bauxite refining;
 - iv) Phosphogypsum from phosphoric acid production;
 - v) Slag from elemental phosphorus production;
 - vi) Gasifier ash from coal gasification;
 - vii) Process wastewater from coal gasification;
 - viii) Calcium sulfate wastewater treatment plant sludge from primary copper processing;
 - ix) Slag tailings from primary copper processing;
 - x) Fluorogypsum from hydrofluoric acid production;
 - xi) Process wastewater from hydrofluoric acid production;
 - xii) Air pollution control dust or sludge from iron blast furnaces;
 - xiii) Iron blast furnace slag;
 - xiv) Treated residue from roasting and leaching of chrome ore;
 - xv) Process wastewater from primary magnesium processing by the anhydrous process;
 - xvi) Process wastewater from phosphoric acid production;
 - xvii) Basic oxygen furnace and open hearth furnace air pollution control dust or sludge from carbon steel production;

- xviii) Basic oxygen furnace and open hearth furnace slag from carbon steel production;
 - xix) Chloride processing waste solids from titanium tetrachloride production; and
 - xx) Slag from primary zinc production.
- C) A residue derived from co-processing mineral processing secondary materials with normal beneficiation raw materials or with normal mineral processing raw materials remains excluded under this subsection (b) if the following conditions are fulfilled:
- i) The owner or operator processes at least 50 percent by weight normal beneficiation raw materials or normal mineral processing raw materials; and
 - ii) The owner or operator legitimately reclaims the secondary mineral processing materials.
- 8) Cement kiln dust waste, except as provided by 35 Ill. Adm. Code 726.212 for facilities that burn or process hazardous waste.
- 9) Solid waste that consists of discarded arsenical-treated wood or wood products that fails the test for the toxicity characteristic for USEPA hazardous waste ~~numbers codes~~ D004 through D017 and which is not a hazardous waste for any other reason if the waste is generated by persons that utilize the arsenical-treated wood and wood products for these materials' intended end use.
- 10) Petroleum-contaminated media and debris that fail the test for the toxicity characteristic of Section 721.124 (USEPA hazardous waste ~~numbers codes~~ D018 through D043 only) and which are subject to corrective action regulations under 35 Ill. Adm. Code 731.
- 11) This subsection (b)(11) corresponds with 40 CFR 261.4(b)(11), which expired by its own terms on January 25, 1993. This statement maintains structural parity with USEPA regulations.
- 12) Used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air conditioning systems, mobile refrigeration, and commercial and industrial air conditioning and refrigeration systems, that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided the refrigerant is reclaimed for further use.

- 13) Non-terne plated used oil filters that are not mixed with wastes listed in Subpart D ~~of this Part~~, if these oil filters have been gravity hot-drained using one of the following methods:
- A) Puncturing the filter anti-drain back valve or the filter dome end and hot-draining;
 - B) Hot-draining and crushing;
 - C) Dismantling and hot-draining; or
 - D) Any other equivalent hot-draining method that will remove used oil.
- 14) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.
- 15) Leachate or gas condensate collected from landfills where certain solid wastes have been disposed of, under the following circumstances:
- A) The following conditions must be fulfilled:
 - i) The solid wastes disposed of would meet one or more of the listing descriptions for the following USEPA hazardous waste numbers that are generated after the effective date listed for the waste:

USEPA Hazardous Waste Numbers	Listing Effective Date
K169, K170, K171, and K172	February 8, 1999
K174 and K175	May 7, 2001
K176, K177, and K178	May 20, 2002
K181	August 23, 2005
 - ii) The solid wastes described in subsection (b)(15)(A)(i) were disposed of prior to the effective date of the listing (as set forth in that subsection);
 - iii) The leachate or gas condensate does not exhibit any characteristic of hazardous waste nor is derived from any other listed hazardous waste; and
 - iv) Discharge of the leachate or gas condensate, including leachate or gas condensate transferred from the landfill to a

POTW by truck, rail, or dedicated pipe, is subject to regulation under section 307(b) or 402 of the federal Clean Water Act (33 USC 1317(b) or 1342).

- B) Leachate or gas condensate derived from K169, K170, K171, K172, K176, K177, K178, or K181 waste will no longer be exempt if it is stored or managed in a surface impoundment prior to discharge. There is one exception: if the surface impoundment is used to temporarily store leachate or gas condensate in response to an emergency situation (e.g., shutdown of wastewater treatment system), provided the impoundment has a double liner, and provided the leachate or gas condensate is removed from the impoundment and continues to be managed in compliance with the conditions of this subsection (b)(15) after the emergency ends.
- 16) This subsection (b)(16) corresponds with 40 CFR 261.4(b)(16), which USEPA has marked “reserved.”. This statement maintains structural parity with USEPA regulations.
 - 17) This subsection (b)(17) corresponds with 40 CFR 261.4(b)(17), which pertains exclusively to waste generated by a specific facility outside Illinois. This statement maintains structural parity with USEPA regulations.
 - 18) Solvent-contaminated wipes, except for wipes that are hazardous waste due to the presence of trichloroethylene, that are sent for disposal are not hazardous wastes from the point of generation provided that all of the following conditions are fulfilled:
 - A) The solvent-contaminated wipes, when accumulated, stored, and transported, are contained in non-leaking, closed containers that are labeled “Excluded Solvent-Contaminated Wipes.”. The containers must be able to contain free liquids, should free liquids occur. During accumulation, a container is considered closed when there is complete contact between the fitted lid and the rim, except when it is necessary to add or remove solvent-contaminated wipes. When the container is full, when the solvent-contaminated wipes are no longer being accumulated, or when the container is being transported, the container must be sealed with all lids properly and securely affixed to the container and all openings tightly bound or closed sufficiently to prevent leaks and emissions;
 - B) The solvent-contaminated wipes may be accumulated by the generator for up to 180 days from the start date of accumulation for each container prior to being sent for disposal;

- C) At the point of being transported for disposal, the solvent-contaminated wipes must contain no free liquids, as defined in 35 Ill. Adm. Code 720.110;
- D) Free liquids removed from the solvent-contaminated wipes or from the container holding the wipes must be managed according to the applicable regulations found in this Part and 35 Ill. Adm. Code 720, 722 through 728, and 733;
- E) Generators must maintain at their site the following documentation:
 - i) The name and address of the landfill or combustor that is receiving the solvent-contaminated wipes;
 - ii) The documentation that the 180 day accumulation time limit in 35 Ill. Adm. Code 721.104(b)(18)(B) is being met; and
 - iii) A description of the process the generator is using to ensure that the solvent-contaminated wipes contain no free liquids at the point of being transported for disposal; and
- F) The solvent-contaminated wipes are sent for disposal at one of the following facilities:
 - i) A municipal solid waste landfill regulated under RCRA Subtitle D regulations: 35 Ill. Adm. Code 810 through 815, including the landfill design criteria of 35 Ill. Adm. Code 811.303 through 811.309, 811.315 through 811.317, and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402; 40 CFR 258, including the landfill design criteria of 40 CFR 258.40; or equivalent regulations of a sister state that USEPA has approved pursuant to 42 USC 6943 and 6947; or
 - ii) A hazardous waste landfill regulated under RCRA Subtitle C regulations: 35 Ill. Adm. Code 724 or 725; 40 CFR 264 or 265; or equivalent regulations of a sister state that USEPA has approved pursuant to 42 USC 6926; or
 - iii) A municipal waste combustor or other combustion facility regulated under section 129 of the Clean Air Act (42 USC 7429) or equivalent Illinois or sister-state regulations approved by USEPA pursuant to 42 USC 7429; or

- iv) A hazardous waste combustor, boiler, or industrial furnace regulated under RCRA Subtitle C regulations: 35 Ill. Adm. Code 724 or 725 or Subpart H of 35 Ill. Adm. Code 726; 40 CFR 264 or 265 or subpart H of 40 CFR 266; or equivalent regulations of a sister state that USEPA has approved pursuant to 42 USC 6926.
- c) Hazardous wastes that are exempted from certain regulations. A hazardous waste that is generated in a product or raw material storage tank, a product or raw material transport vehicle or vessel, a product or raw material pipeline, or in a manufacturing process unit, or an associated non-waste-treatment manufacturing unit, is not subject to regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728 or to the notification requirements of section 3010 of RCRA (42 USC 6930) until it exits the unit in which it was generated, unless the unit is a surface impoundment, or unless the hazardous waste remains in the unit more than 90 days after the unit ceases to be operated for manufacturing or for storage or transportation of product or raw materials.
- d) Samples:
- 1) Except as provided in ~~subsections~~ subsection (d)(2) and (d)(4), a sample of solid waste or a sample of water, soil, or air that is collected for the sole purpose of testing to determine its characteristics or composition is not subject to any requirements of this Part or 35 Ill. Adm. Code 702, 703, and 722 through 728. The sample qualifies when it fulfills one of the following conditions:
 - A) The sample is being transported to a laboratory for the purpose of testing;
 - B) The sample is being transported back to the sample collector after testing;
 - C) The sample is being stored by the sample collector before transport to a laboratory for testing;
 - D) The sample is being stored in a laboratory before testing;
 - E) The sample is being stored in a laboratory for testing but before it is returned to the sample collector; or
 - F) The sample is being stored temporarily in the laboratory after testing for a specific purpose (for example, until conclusion of a court case or enforcement action where further testing of the sample may be necessary).

- 2) In order to qualify for the exemption in subsection (d)(1)(A) or (d)(1)(B), a sample collector shipping samples to a laboratory and a laboratory returning samples to a sample collector must do the following:
 - A) Comply with USDOT, U.S. Postal Service (USPS), or any other applicable shipping requirements; or
 - B) Comply with the following requirements if the sample collector determines that USDOT, USPS, or other shipping requirements do not apply to the shipment of the sample:
 - i) Assure that the following information accompanies the sample: The sample collector's name, mailing address, and telephone number; the laboratory's name, mailing address, and telephone number; the quantity of the sample; the date of the shipment; and a description of the sample; and
 - ii) Package the sample so that it does not leak, spill, or vaporize from its packaging.
- 3) This exemption does not apply if the laboratory determines that the waste is hazardous but the laboratory is no longer meeting any of the conditions stated in subsection (d)(1).
- 4) In order to qualify for the exemption in subsections (d)(1)(A) and (d)(1)(B), the mass of a sample that will be exported to a foreign laboratory or that will be imported to a U.S. laboratory from a foreign source must additionally not exceed 25 kg.
- e) Treatability Study Samples ~~study samples.~~
 - 1) Except as is provided in ~~subsections (e)(2) and (e)(4)~~, a person that generates or collects samples for the purpose of conducting treatability studies, as defined in 35 Ill. Adm. Code 720.110, are not subject to any requirement of 35 Ill. Adm. Code 721 through 723 or to the notification requirements of section 3010 of RCRA (42 USC 6930) ~~the Resource Conservation and Recovery Act~~. Nor are such samples included in the quantity determinations of ~~Section 721.105 and 35 Ill. Adm. Code 722.114 and 722.116 722.134(d)~~ when:
 - A) The sample is being collected and prepared for transportation by the generator or sample collector;
 - B) The sample is being accumulated or stored by the generator or sample collector prior to transportation to a laboratory or testing facility; or

- C) The sample is being transported to the laboratory or testing facility for the purpose of conducting a treatability study.
- 2) The exemption in subsection (e)(1) is applicable to samples of hazardous waste being collected and shipped for the purpose of conducting treatability studies provided that the following conditions are fulfilled:
- A) The generator or sample collector uses (in “treatability studies”) no more than 10,000 kg of media contaminated with non-acute hazardous waste, 1,000 kg of non-acute hazardous waste other than contaminated media, 1 kg of acute hazardous waste, or 2,500 kg of media contaminated with acute hazardous waste for each process being evaluated for each generated waste stream;
 - B) The mass of each shipment does not exceed 10,000 kg; the 10,000 kg quantity may be all media contaminated with non-acute hazardous waste, or may include 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of hazardous waste, and 1 kg of acute hazardous waste;
 - C) The sample must be packaged so that it does not leak, spill, or vaporize from its packaging during shipment and the requirements of subsection (e)(2)(C)(i) or (e)(2)(C)(ii) are met.
 - i) The transportation of each sample shipment complies with USDOT, USPS, or any other applicable shipping requirements; or
 - ii) If the USDOT, USPS, or other shipping requirements do not apply to the shipment of the sample, the following information must accompany the sample: The name, mailing address, and telephone number of the originator of the sample; the name, address, and telephone number of the facility that will perform the treatability study; the quantity of the sample; the date of the shipment; and, a description of the sample, including its USEPA hazardous waste number;
 - D) The sample is shipped to a laboratory or testing facility that is exempt under subsection (f), or has an appropriate RCRA permit or interim status;
 - E) The generator or sample collector maintains the following records for a period ending three years after completion of the treatability study:

- i) Copies of the shipping documents;
 - ii) A copy of the contract with the facility conducting the treatability study; and
 - iii) Documentation showing the following: The amount of waste shipped under this exemption; the name, address, and USEPA identification number of the laboratory or testing facility that received the waste; the date the shipment was made; and whether or not unused samples and residues were returned to the generator; and
- F) The generator reports the information required in subsection (e)(2)(E)(iii) in its report under 35 Ill. Adm. Code 722.141.
- 3) The Agency may grant requests on a case-by-case basis for up to an additional two years for treatability studies involving bioremediation. The Agency may grant requests, on a case-by-case basis, for quantity limits in excess of those specified in subsections (e)(2)(A), (e)(2)(B), and (f)(4), for up to an additional 5,000 kg of media contaminated with non-acute hazardous waste, 500 kg of non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, and 1 kg of acute hazardous waste under the circumstances set forth in either subsection (e)(3)(A) or (e)(3)(B), subject to the limitations of subsection (e)(3)(C):
- A) In response to requests for authorization to ship, store, and conduct further treatability studies on additional quantities in advance of commencing treatability studies. Factors to be considered in reviewing such requests include the nature of the technology, the type of process (e.g., batch versus continuous), the size of the unit undergoing testing (particularly in relation to scale-up considerations), the time or quantity of material required to reach steady-state operating conditions, or test design considerations, such as mass balance calculations.
 - B) In response to requests for authorization to ship, store, and conduct treatability studies on additional quantities after initiation or completion of initial treatability studies when the following occurs: There has been an equipment or mechanical failure during the conduct of the treatability study, there is need to verify the results of a previously-conducted treatability study, there is a need to study and analyze alternative techniques within a previously-evaluated treatment process, or there is a need to do further evaluation of an ongoing treatability study to determine final specifications for treatment.

- C) The additional quantities allowed and timeframes allowed in subsections (e)(3)(A) and (e)(3)(B) are subject to all the provisions in subsections (e)(1) and (e)(2)(B) through (e)(2)(F). The generator or sample collector must apply to the Agency and provide in writing the following information:
- i) The reason why the generator or sample collector requires additional time or quantity of sample for the treatability study evaluation and the additional time or quantity needed;
 - ii) Documentation accounting for all samples of hazardous waste from the waste stream that have been sent for or undergone treatability studies, including the date each previous sample from the waste stream was shipped, the quantity of each previous shipment, the laboratory or testing facility to which it was shipped, what treatability study processes were conducted on each sample shipped, and the available results of each treatability study;
 - iii) A description of the technical modifications or change in specifications that will be evaluated and the expected results;
 - iv) If such further study is being required due to equipment or mechanical failure, the applicant must include information regarding the reason for the failure or breakdown and also include what procedures or equipment improvements have been made to protect against further breakdowns; and
 - v) Such other information as the Agency determines is necessary.
- 4) In order to qualify for the exemption in subsection (e)(1)(A), the mass of a sample that will be exported to a foreign laboratory or testing facility, or that will be imported to a U.S. laboratory or testing facility from a foreign source must additionally not exceed 25 kg.
- 54) Final Agency determinations pursuant to this subsection (e) may be appealed to the Board.
- f) Samples undergoing treatability studies at laboratories or testing facilities. Samples undergoing treatability studies and the laboratory or testing facility conducting such treatability studies (to the extent such facilities are not otherwise subject to RCRA requirements) are not subject to any requirement of this Part, or of 35 Ill. Adm. Code 702, 703, 722 through 726, and 728 or to the notification requirements of ~~section Section~~ 3010 of RCRA the Resource

~~Conservation and Recovery Act~~ (42 USC 6930), provided that the requirements of subsections (f)(1) through (f)(11) are met. A mobile treatment unit may qualify as a testing facility subject to subsections (f)(1) through (f)(11). Where a group of mobile treatment units are located at the same site, the limitations specified in subsections (f)(1) through (f)(11) apply to the entire group of mobile treatment units collectively as if the group were one mobile treatment unit.

- 1) No less than 45 days before conducting treatability studies, the facility notifies the Agency in writing that it intends to conduct treatability studies under this subsection (f).
- 2) The laboratory or testing facility conducting the treatability study has a USEPA identification number.
- 3) No more than a total of 10,000 kg of “as received” media contaminated with non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, or 250 kg of other “as received” hazardous waste is subject to initiation of treatment in all treatability studies in any single day. “As received” waste refers to the waste as received in the shipment from the generator or sample collector.
- 4) The quantity of “as received” hazardous waste stored at the facility for the purpose of evaluation in treatability studies does not exceed 10,000 kg, the total of which can include 10,000 kg of media contaminated with non-acute hazardous waste, 2,500 kg of media contaminated with acute hazardous waste, 1,000 kg of non-acute hazardous wastes other than contaminated media, and 1 kg of acute hazardous waste. This quantity limitation does not include treatment materials (including non-hazardous solid waste) added to “as received” hazardous waste.
- 5) No more than 90 days have elapsed since the treatability study for the sample was completed, or no more than one year (two years for treatability studies involving bioremediation) has elapsed since the generator or sample collector shipped the sample to the laboratory or testing facility, whichever date first occurs. Up to 500 kg of treated material from a particular waste stream from treatability studies may be archived for future evaluation up to five years from the date of initial receipt. Quantities of materials archived are counted against the total storage limit for the facility.
- 6) The treatability study does not involve the placement of hazardous waste on the land or open burning of hazardous waste.
- 7) The facility maintains records for three years following completion of each study that show compliance with the treatment rate limits and the

storage time and quantity limits. The following specific information must be included for each treatability study conducted:

- A) The name, address, and USEPA identification number of the generator or sample collector of each waste sample;
 - B) The date the shipment was received;
 - C) The quantity of waste accepted;
 - D) The quantity of “as received” waste in storage each day;
 - E) The date the treatment study was initiated and the amount of “as received” waste introduced to treatment each day;
 - F) The date the treatability study was concluded;
 - G) The date any unused sample or residues generated from the treatability study were returned to the generator or sample collector or, if sent to a designated facility, the name of the facility and the USEPA identification number.
- 8) The facility keeps, on-site, a copy of the treatability study contract and all shipping papers associated with the transport of treatability study samples to and from the facility for a period ending three years from the completion date of each treatability study.
- 9) The facility prepares and submits a report to the Agency, by March 15 of each year, that includes the following information for the previous calendar year:
- A) The name, address, and USEPA identification number of the facility conducting the treatability studies;
 - B) The types (by process) of treatability studies conducted;
 - C) The names and addresses of persons for whom studies have been conducted (including their USEPA identification numbers);
 - D) The total quantity of waste in storage each day;
 - E) The quantity and types of waste subjected to treatability studies;
 - F) When each treatability study was conducted; and
 - G) The final disposition of residues and unused sample from each treatability study.

- 10) The facility determines whether any unused sample or residues generated by the treatability study are hazardous waste under Section 721.103 and, if so, are subject to 35 Ill. Adm. Code 702, 703, and 721 through 728, unless the residues and unused samples are returned to the sample originator under the exemption of subsection (e).
- 11) The facility notifies the Agency by letter when the facility is no longer planning to conduct any treatability studies at the site.
- g) Dredged ~~Material That Is Not material that is not a Hazardous Waste hazardous waste~~. Dredged material that is subject to the requirements of a permit that has been issued under section 404 of the Federal Water Pollution Control Act (33 USC 1344) is not a hazardous waste. For the purposes of this subsection (g), the following definitions apply:
- “Dredged material” has the meaning ascribed it in 40 CFR 232.2 (Definitions), incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- “Permit” means any of the following:
- A permit issued by the U.S. Army Corps of Engineers (Army Corps) under section 404 of the Federal Water Pollution Control Act (33 USC 1344);
- A permit issued by the Army Corps under section 103 of the Marine Protection, Research, and Sanctuaries Act of 1972 (33 USC 1413);
- or
- In the case of Army Corps civil works projects, the administrative equivalent of the permits referred to in the preceding two paragraphs of this definition, as provided for in Army Corps regulations (for example, see 33 CFR 336.1, 336.2, and 337.6).
- h) Carbon Dioxide Stream Injected ~~dioxide stream injected for Geologic Sequestration-geologic sequestration~~. Carbon dioxide streams that are captured and transported for purposes of injection into an underground injection well subject to the requirements for Class VI carbon sequestration injection wells, including the requirements in 35 Ill. Adm. Code 704 and 730, are not a hazardous waste, provided the following conditions are met:
- 1) Transportation of the carbon dioxide stream must be in compliance with U.S. Department of Transportation requirements, including the pipeline safety laws (chapter 601 of subtitle VIII of 49 USC, incorporated by reference in 35 Ill. Adm. Code 720.111) and regulations (49 CFR 190 through 199, incorporated by reference in 35 Ill. Adm. Code 720.111) of the U.S. Department of Transportation, and pipeline safety regulations

adopted and administered by a state authority pursuant to a certification under 49 USC 60105, incorporated by reference in 35 Ill. Adm. Code 720.111, and 49 CFR 171 through 180, incorporated by reference in 35 Ill. Adm. Code 720.111, as applicable.

BOARD NOTE: The parenthetical language relating to pipeline transportation does not preclude transportation by air, water, highway, or rail that complies with U.S. Department of Transportation regulations at 49 CFR 171 through 180. For this reason, the Board has added citations of those regulations.

- 2) Injection of the carbon dioxide stream must be in compliance with the applicable requirements for Class VI carbon sequestration injection wells, including the applicable requirements in 35 Ill. Adm. Code 704 and 730;
- 3) No hazardous wastes may be mixed with, or otherwise co-injected with, the carbon dioxide stream; and
- 4) Required Certifications-
 - A) Any generator of a carbon dioxide stream, who claims that a carbon dioxide stream is excluded under this subsection (h), must have an authorized representative (as defined in 35 Ill. Adm. Code 720.110) sign a certification statement worded as follows:

“I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under 35 Ill. Adm. Code 721.104(h) has not been mixed with hazardous wastes, and I have transported the carbon dioxide stream in compliance with (or have contracted with a pipeline operator or transporter to transport the carbon dioxide stream in compliance with) U.S. Department of Transportation requirements, including the pipeline safety laws (49 USC 60101 et seq.) and regulations (49 CFR Parts 190 through 199) of the U.S. Department of Transportation, and the pipeline safety regulations adopted and administered by a state authority pursuant to a certification under 49 USC 60105, as applicable, for injection into a well subject to the requirements for the Class VI Underground Injection Control Program of the federal Safe Drinking Water Act (42 USC 300f et seq.).”
 - B) Any Class VI carbon sequestration injection well owner or operator, who claims that a carbon dioxide stream is excluded under this subsection (h), must have an authorized representative

(as defined in 35 Ill. Adm. Code 720.110) sign a certification statement worded as follows:

“I certify under penalty of law that the carbon dioxide stream that I am claiming to be excluded under 35 Ill. Adm. Code 721.104(h) has not been mixed with, or otherwise co-injected with, hazardous waste at the UIC Class VI permitted facility, and that injection of the carbon dioxide stream is in compliance with the applicable requirements for UIC Class VI wells, including the applicable requirements in 35 Ill. Adm. Code 704 and 730.”

- C) The signed certification statement must be kept on-site for no less than three years, and must be made available within 72 hours after a written request from the Agency or USEPA, or their designee. The signed certification statement must be renewed every year that the exclusion is claimed, by having an authorized representative (as defined in 35 Ill. Adm. Code 720.110) annually prepare and sign a new copy of the certification statement within one year after the date of the previous statement. The signed certification statement must also be readily accessible on the facility’s publicly-available website (if such website exists) as a public notification with the title of “Carbon Dioxide Stream Certification” at the time the exclusion is claimed.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.105 Special Requirements for Hazardous Waste Generated by Small Quantity Generators (Repealed)

- a) ~~A generator is a conditionally exempt small quantity generator (CESQG) in a calendar month if it generates no more than 100 kilograms of hazardous waste in that month.~~
- b) ~~Except for those wastes identified in subsections (e), (f), (g), and (j) of this Section, a CESQG’s hazardous wastes are not subject to regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728, and the notification requirements of section 3010 of Resource Conservation and Recovery Act (42 USC 6930), provided the generator complies with subsections (f), (g), and (j) of this Section.~~
- e) ~~When making the quantity determinations of this Part and 35 Ill. Adm. Code 722, the generator must include all hazardous waste that it generates, except the following hazardous waste:~~
- 1) ~~Hazardous waste that is exempt from regulation under Section 721.104(e) through (f), 721.106(a)(3), 721.107(a)(1), or 721.108;~~

- 2) ~~Hazardous waste that is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities, as defined in 35 Ill. Adm. Code 720.110;~~
 - 3) ~~Hazardous waste that is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under Section 721.106(e)(2);~~
 - 4) ~~Hazardous waste that is used oil managed pursuant to Section 721.106(a)(4) and 35 Ill. Adm. Code 739;~~
 - 5) ~~Hazardous waste that is spent lead-acid batteries managed pursuant to Subpart G of 35 Ill. Adm. Code 726;~~
 - 6) ~~Hazardous waste that is universal waste managed pursuant to Section 721.109 and 35 Ill. Adm. Code 733; and~~
 - 7) ~~Hazardous waste that is an unused commercial chemical product (that is listed in Subpart D of 35 Ill. Adm. Code 721 or which exhibits one or more characteristics in Subpart C of 35 Ill. Adm. Code 721) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic entity pursuant to Section 722.313. For purposes of this subsection (e)(7), the term "eligible academic entity" has the meaning given that term in 35 Ill. Adm. Code 722.300.~~
- d) ~~In determining the quantity of hazardous waste it generates, a generator need not include the following:~~
- 1) ~~Hazardous waste when it is removed from on-site storage;~~
 - 2) ~~Hazardous waste produced by on-site treatment (including reclamation) of its hazardous waste so long as the hazardous waste that is treated was counted once;~~
 - 3) ~~Spent materials that are generated, reclaimed, and subsequently reused on-site, so long as such spent materials have been counted once.~~
- e) ~~If a generator generates acute hazardous waste in a calendar month in quantities greater than those set forth in subsections (e)(1) and (e)(2) of this Section, all quantities of that acute hazardous waste are subject to full regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728, and the notification requirements of section 3010 of the Resource Conservation and Recovery Act (42 USC 6930).~~
- 1) ~~A total of one kilogram of one or more of the acute hazardous wastes listed in Section 721.131 or 721.133(e); or~~

- 2) ~~A total of 100 kilograms of any residue or contaminated soil, waste, or other debris resulting from the clean up of a spill, into or on any land or water, of any one or more of the acute hazardous wastes listed in Section 721.131 or 721.133(e).~~

BOARD NOTE: “Full regulation” means those regulations applicable to generators of 1,000 kg or greater of hazardous waste in a calendar month.

- f) ~~In order for acute hazardous wastes generated by a generator of acute hazardous wastes in quantities equal to or less than those set forth in subsection (e)(1) or (e)(2) of this Section to be excluded from full regulation under this Section, the generator must comply with the following requirements:~~
- 1) ~~35 Ill. Adm. Code 722.111.~~
 - 2) ~~The generator may accumulate acute hazardous waste on site. If the generator accumulates at any time acute hazardous wastes in quantities greater than set forth in subsection (e)(1) or (e)(2) of this Section, all of those accumulated wastes are subject to regulation under 35 Ill. Adm. Code 702, 703, and 722 through 728, and the applicable notification requirements of section 3010 of the Resource Conservation and Recovery Act. The time period of 35 Ill. Adm. Code 722.134(a), for accumulation of wastes on site, begins when the accumulated wastes exceed the applicable exclusion limit.~~
 - 3) ~~A CESQG may either treat or dispose of its acute hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage, or disposal facility, any of which, if located in the United States, meets any of the following conditions:~~
 - A) ~~The facility is permitted under 35 Ill. Adm. Code 702 and 703;~~
 - B) ~~The facility has interim status under 35 Ill. Adm. Code 702, 703, and 725;~~
 - C) ~~The facility is authorized to manage hazardous waste by a state with a hazardous waste management program approved by USEPA pursuant to 40 CFR 271;~~
 - D) ~~The facility is permitted, licensed, or registered by a state to manage municipal solid waste and, if managed in a municipal solid waste landfill facility, the landfill is subject to 35 Ill. Adm. Code 810 through 814 or federal 40 CFR 258;~~
 - E) ~~The facility is permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste and, if managed in a~~

non-municipal non-hazardous waste disposal unit, the unit is subject to federal 40 CFR 257.5 through 257.30, incorporated by reference in 35 Ill. Adm. Code 720.111;

BOARD NOTE: The Illinois non-hazardous waste landfill regulations, 35 Ill. Adm. Code 810 through 814, do not allow the disposal of hazardous waste in a landfill regulated under those rules. The Board intends that subsections (f)(3)(D) and (f)(3)(E) of this Section impose a federal requirement on the hazardous waste generator. The Board specifically does not intend that these subsections authorize any disposal of conditionally-exempt small quantity generator waste in a landfill not specifically permitted to accept the particular hazardous waste.

- F) ~~The facility is one that fulfills one of the following conditions:~~
- i) ~~It beneficially uses or reuses or legitimately recycles or reclaims its waste; or~~
 - ii) ~~It treats its waste prior to beneficial use or reuse or legitimate recycling or reclamation; or~~
- G) ~~For universal waste managed under 35 Ill. Adm. Code 733 or federal 40 CFR 273, the facility is a universal waste handler or destination facility subject to 35 Ill. Adm. Code 733 or federal 40 CFR 273.~~
- g) ~~In order for hazardous waste generated by a CESQG in quantities of 100 kilograms or less of hazardous waste during a calendar month to be excluded from full regulation under this Section, the generator must comply with the following requirements:~~
- 1) ~~The hazardous waste determination requirements of 35 Ill. Adm. Code 722.111;~~
 - 2) ~~The CESQG may accumulate hazardous waste on-site. If it accumulates at any time 1,000 kilograms or greater of the generator's hazardous waste, all of those accumulated wastes are subject to regulation pursuant to the special provisions of 35 Ill. Adm. Code 722 applicable to generators of greater than 100 kg and less than 1,000 kg of hazardous waste in a calendar month, as well as 35 Ill. Adm. Code 702, 703, and 723 through 728, and the applicable notification requirements of Section 3010 of the Resource Conservation and Recovery Act (42 USC 6930). The time period of 35 Ill. Adm. Code 722.134(d) for accumulation of wastes on-site begins for a small quantity generator when the accumulated wastes equal or exceed 1,000 kilograms;~~

- 3) ~~A CESQG may either treat or dispose of its hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage, or disposal facility, any of which, if located in the United States, meets any of the following conditions:~~
- A) ~~The facility is permitted under 35 Ill. Adm. Code 702 and 703;~~
 - B) ~~The facility has interim status under 35 Ill. Adm. Code 702, 703, and 725;~~
 - C) ~~The facility is authorized to manage hazardous waste by a state with a hazardous waste management program approved by USEPA pursuant to 40 CFR 271;~~
 - D) ~~The facility is permitted, licensed, or registered by a state to manage municipal solid waste and, if managed in a municipal solid waste landfill facility, the landfill is subject to 35 Ill. Adm. Code 810 through 814 or federal 40 CFR 258;~~
 - E) ~~The facility is permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste and, if managed in a non-municipal non-hazardous waste disposal unit, the unit is subject to federal CESQG waste landfill disposal standards in 40 CFR 257.5 through 257.30;~~

~~BOARD NOTE: The Illinois non-hazardous waste landfill regulations, 35 Ill. Adm. Code 810 through 814, do not allow the disposal of hazardous waste in a landfill regulated under those rules. The Board intends that subsections (g)(3)(D) and (g)(3)(E) of this Section impose a federal requirement on the hazardous waste generator. The Board specifically does not intend that these subsections authorize any disposal of conditionally-exempt small quantity generator waste in a landfill not specifically permitted to accept the particular hazardous waste.~~

- F) ~~The facility is one that fulfills the following conditions:~~
 - i) ~~It beneficially uses or re-uses, or legitimately recycles or reclaims the small quantity generator's waste; or~~
 - ii) ~~It treats its waste prior to beneficial use or re-use or legitimate recycling or reclamation; or~~
- G) ~~For universal waste managed under 35 Ill. Adm. Code 733 or federal 40 CFR 273, the facility is a universal waste handler or~~

destination facility subject to 35 Ill. Adm. Code 733 or federal 40 CFR 273.

- ~~h) Hazardous waste subject to the reduced requirements of this Section may be mixed with non-hazardous waste and remain subject to these reduced requirements even though the resultant mixture exceeds the quantity limitations identified in this Section, unless the mixture meets any of the characteristics of hazardous wastes identified in Subpart C of this Part.~~
- ~~i) If a small quantity generator mixes a solid waste with a hazardous waste that exceeds a quantity exclusion level of this Section, the mixture is subject to full regulation.~~
- ~~j) If a CESQG's hazardous wastes are mixed with used oil, the mixture is subject to the used oil standards in 35 Ill. Adm. Code 739. Any material produced from such a mixture by processing, blending, or other treatment is also so regulated.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 721.106 Requirements for Recyclable Materials

- a) Recyclable Materials ~~materials:~~
- 1) Hazardous wastes that are recycled are subject to the requirements for generators, transporters, and storage facilities of subsections (b) and (c) ~~of this Section~~, except for the materials listed in subsections (a)(2) and (a)(3) ~~of this Section~~. Hazardous wastes that are recycled will be known as "recyclable materials."
 - 2) The following recyclable materials are not subject to the requirements of this Section but are regulated under Subparts C through H of 35 Ill. Adm. Code 726 and all applicable provisions in 35 Ill. Adm. Code 702, 703, and 728.
 - A) Recyclable materials used in a manner constituting disposal (see Subpart C of 35 Ill. Adm. Code 726);
 - B) Hazardous wastes burned (as defined in 35 Ill. Adm. Code 726.200(a)) in boilers and industrial furnaces that are not regulated under Subpart O of 35 Ill. Adm. Code 724 or Subpart O ~~of this Part~~ (see Subpart H of 35 Ill. Adm. Code 726);
 - C) Recyclable materials from which precious metals are reclaimed (see Subpart F of 35 Ill. Adm. Code 726); and

- D) Spent lead-acid batteries that are being reclaimed (see Subpart G of 35 Ill. Adm. Code 726).
- 3) The following recyclable materials are not subject to regulation under 35 Ill. Adm. Code 722 through 728, or 702 and 703 and are not subject to the notification requirements of section 3010 of RCRA (42 USC 6930)~~the Resource Conservation and Recovery Act:~~
- A) Industrial ethyl alcohol that is reclaimed except that exports and imports of such recyclable materials must comply with the requirements of 40 CFR 262, subpart H., unless provided otherwise in an international agreement as specified in 35 Ill. Adm. Code 722.158, the following requirements continue to apply:
- i) ~~— A person initiating a shipment for reclamation in a foreign country and any intermediary arranging for the shipment must comply with the requirements applicable to a primary exporter in 35 Ill. Adm. Code 722.153; 722.156(a)(1) through (a)(4), (a)(6), and (b); and 722.157; must export such materials only upon consent of the receiving country and in conformance with the USEPA Acknowledgment of Consent, as defined in Subpart E of 35 Ill. Adm. Code 722; and must provide a copy of the USEPA Acknowledgment of Consent to the shipment to the transporter transporting the shipment for export; and~~
- ii) ~~— Transporters transporting a shipment for export must not accept a shipment if the transporter knows that the shipment does not conform to the USEPA Acknowledgement of Consent, must ensure that a copy of the USEPA Acknowledgement of Consent accompanies the shipment, and must ensure that it is delivered to the facility designated by the person initiating the shipment;~~
- B) Scrap metal that is not excluded under Section 721.104(a)(13);
- C) Fuels produced from the refining of oil-bearing hazardous wastes along with normal process streams at a petroleum refining facility if such wastes result from normal petroleum refining, production, and transportation practices (this exemption does not apply to fuels produced from oil recovered from oil-bearing hazardous waste where such recovered oil is already excluded under Section 721.104(a)(12));
- D) Petroleum Refining Wastes~~refining wastes.~~

- i) Hazardous waste fuel produced from oil-bearing hazardous wastes from petroleum refining, production, or transportation practices or produced from oil reclaimed from such hazardous wastes, where such hazardous wastes are reintroduced into a process that does not use distillation or does not produce products from crude oil, so long as the resulting fuel meets the used oil specification under 35 Ill. Adm. Code 739.111 and so long as no other hazardous wastes are used to produce the hazardous waste fuel;
 - ii) Hazardous waste fuel produced from oil-bearing hazardous waste from petroleum refining production, and transportation practices, where such hazardous wastes are reintroduced into a refining process after a point at which contaminants are removed, so long as the fuel meets the used oil fuel specification under 35 Ill. Adm. Code 739.111; and
 - iii) Oil reclaimed from oil-bearing hazardous wastes from petroleum refining, production, and transportation practices, which reclaimed oil is burned as a fuel without reintroduction to a refining process, so long as the reclaimed oil meets the used oil fuel specification under 35 Ill. Adm. Code 739.111.
 - 4) Used oil that is recycled and is also a hazardous waste solely because it exhibits a hazardous characteristic is not subject to the requirements of 35 Ill. Adm. Code 720 through 728, but it is regulated under 35 Ill. Adm. Code 739. Used oil that is recycled includes any used oil that is reused for any purpose following its original use (including the purpose for which the oil was originally used). Such term includes, but is not limited to, oil that is re-refined, reclaimed, burned for energy recovery, or reprocessed.
 - 5) Hazardous waste that is exported to or imported from ~~designated member countries of the Organization for Economic Cooperation and Development (OECD), as defined in Section 722.158(a)(1),~~ for the purpose of recovery is subject to the requirements of Subpart H of 35 Ill. Adm. Code 722 ~~if it is subject to either the hazardous waste manifesting requirements of 35 Ill. Adm. Code 722 or the universal waste management standards of 35 Ill. Adm. Code 733.~~
- b) Generators and transporters of recyclable materials are subject to the applicable requirements of 35 Ill. Adm. Code 722 and 723 and the notification requirements under section 3010 of RCRA (42 USC 6930) ~~the Resource Conservation and Recovery Act, except as provided in subsection (a) of this Section.~~

- c) Storage and Recycling-recycling.
- 1) Owners or operators of facilities that store recyclable materials before they are recycled are regulated under all applicable provisions of Subparts A through L, AA, BB, and CC of 35 Ill. Adm. Code 724 and 725 and 35 Ill. Adm. Code 702, 703, 705, 726, 727, and 728; and the notification requirement under section 3010 of RCRA (42 USC 6930)~~the Resource Conservation and Recovery Act~~, except as provided in subsection (a)~~of this Section~~. (The recycling process itself is exempt from regulation, except as provided in subsection (d)~~of this Section~~.)
 - 2) Owners or operators of facilities that recycle recyclable materials without storing them before they are recycled are subject to the following requirements, except as provided in subsection (a)~~of this Section~~, the following requirements continue to apply:
 - A) Notification requirements under section 3010 of RCRA (42 USC 6930)~~the Resource Conservation and Recovery Act~~,
 - B) 35 Ill. Adm. Code 725.171 and 725.172 (dealing with the use of the manifest and manifest discrepancies);~~and~~
 - C) Subsection (d); ~~and of this Section.~~
 - D) 35 Ill. Adm. Code 725.175 (annual reporting requirements).
 - d) Owners or operators of facilities required to have a RCRA permit pursuant to 35 Ill. Adm. Code 703 with hazardous waste management units that recycle hazardous wastes are subject to Subparts AA and BB of 35 Ill. Adm. Code 724 or 725 or 35 Ill. Adm. Code 267.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.108 PCB Wastes Regulated under TSCA

Polychlorinatedbiphenyl-(PCB-)containing dielectric fluid and electric equipment containing such fluid are exempt from regulation under 35 Ill. Adm. Code 702, 703, and 721 through 728, and from the notification requirements of Section 3010 of RCRA (42 USC 6930)~~the Resource Conservation and Recovery Act~~ if the following conditions are fulfilled with regard to the fluid:

- a) The fluid is authorized for use and regulated pursuant to federal 40 CFR 761; and
- b) The fluid is hazardous only because it fails the test for toxicity characteristic (hazardous waste numbers codes D018 through D043 only).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

**SUBPART B: CRITERIA FOR IDENTIFYING THE CHARACTERISTICS OF
HAZARDOUS WASTE AND FOR LISTING HAZARDOUS WASTES**

Section 721.110 Criteria for Identifying the Characteristics of Hazardous Waste

- a) USEPA stated in corresponding federal 40 CFR 261.10 that it identifies and defines a characteristic of hazardous waste in Subpart C ~~of this Part~~ only upon determining the following:
- 1) That a solid waste that exhibits the characteristic may do either of the following:
 - A) It could cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or
 - B) It could pose a substantial present or potential hazard to human health or the environment when it is improperly treated, stored, transported, disposed of or otherwise managed; and
 - 2) That the characteristic can be as follows:
 - A) It can be measured by an available standardized test method that is reasonable within the capability of generators of solid waste or private sector laboratories that are available to serve generators of solid waste; or
 - B) It can reasonably be detected by generators of solid waste through their knowledge of their waste.
- b) Delisting procedures are contained in 35 Ill. Adm. Code 720.122.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.111 Criteria for Listing Hazardous Waste

- a) USEPA stated in corresponding federal 40 CFR 261.11 that it lists a solid waste as a hazardous waste only upon determining that the solid waste meets one of the following criteria:
- 1) The solid waste exhibits any of the characteristics of hazardous waste identified in Subpart C ~~of this Part~~; or
 - 2) Acute hazardous waste. The solid waste has been found to be fatal to humans in low doses or, in the absence of data on human toxicity, it has been shown in studies to have an oral LD 50 toxicity (rat) of less than 50

mg/kg, an inhalation LC 50 toxicity (rat) of less than 2 mg/l, or a dermal LD 50 toxicity (rabbit) of less than 200 mg/kg or is otherwise capable of causing or significantly contributing to an increase in serious irreversible or incapacitating reversible, illness.

BOARD NOTE: Waste listed in accordance with these criteria are designated Acute Hazardous Waste.

- 3) Toxic ~~Waste-waste~~. The solid waste contains any of the toxic constituents listed in Appendix H ~~of this Part~~ and, after considering the following factors, USEPA concludes that the waste is capable of posing a substantial present or potential hazard to human health or the environment when improperly treated, stored, transported, or disposed of, or otherwise managed:

BOARD NOTE: Substances are listed in Appendix H ~~of this Part~~ only if they have been shown in scientific studies to have toxic, carcinogenic, mutagenic, or teratogenic effects on humans or other life forms.

- A) The nature of the toxicity presented by the constituent;
- B) The concentration of the constituent in the waste;
- C) The potential of the constituent or any toxic degradation product of the constituent to migrate from the waste into the environment under the types of improper management considered in subsection (a)(3)(G) ~~of this Section~~;
- D) The persistence of the constituent or any toxic degradation product of the constituent;
- E) The potential for the constituent or any toxic degradation product of the constituent to degrade into nonharmful constituents and the rate of degradation;
- F) The degree to which the constituent or any degradation product of the constituent bioaccumulates in ecosystems;
- G) The plausible types of improper management to which the waste could be subjected;
- H) The quantities of the waste generated at individual generation sites or on a regional or national basis;

- I) The nature and severity of the human health and environmental damage that has occurred as a result of the improper management of the wastes containing the constituent;
- J) Action taken by other governmental agencies or regulatory programs based on the health or environmental hazard posed by the waste or waste constituent; and
- K) Such other factors as may be appropriate.

BOARD NOTE: Wastes listed in accordance with these criteria are designated toxic wastes.

- b) USEPA stated in corresponding federal 40 CFR 261.11(b) that it may list classes or types of solid waste as hazardous waste if USEPA has reason to believe that individual wastes, within the class or type of waste, typically or frequently are hazardous under the definition of hazardous waste found in section Section 1004(5) of RCRA ~~the federal Resource Conservation and Recovery Act (42 USC 6904(5))~~.
- c) USEPA will use the criteria for listing specified in this Section to establish the exclusion limits referred to in 35 Ill. Adm. Code 722.113 ~~Section 721.105(e)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: CHARACTERISTICS OF HAZARDOUS WASTE

Section 721.120 General

- a) A solid waste, as defined in Section 721.102, which is not excluded from regulation as a hazardous waste under Section 721.104(b), is a hazardous waste if it exhibits any of the characteristics identified in this Subpart C.

BOARD NOTE: 35 Ill. Adm. Code 722.111 sets forth the generator's responsibility to determine whether the generator's waste exhibits one or more characteristics identified in this Subpart C.

- b) A hazardous waste that is identified by a characteristic in this Subpart C is assigned every USEPA hazardous waste number that is applicable as set forth in this Subpart C. This number must be used in complying with the notification requirements of Section 3010 of RCRA (42 USC 6930) ~~the Resource Conservation and Recovery Act (42 USC 6910)~~ and all applicable recordkeeping and reporting requirements under 35 Ill. Adm. Code 702, 703, and 722 through 728.

- c) For purposes of this Subpart C, a sample obtained using any of the applicable sampling methods specified in Appendix A ~~of this Part~~ is a representative sample within the meaning of 35 Ill. Adm. Code 720.

BOARD NOTE: Since the Appendix A sampling methods are not being formally adopted, a person who desires to employ an alternative sampling method is not required to demonstrate the equivalency of the person's method under the procedures set forth in 35 Ill. Adm. Code 720.121.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.121 Characteristic of Ignitability

- a) A solid waste exhibits the characteristic of ignitability if a representative sample of the waste has any of the following properties:
- 1) It is a liquid, other than an aqueous solution containing less than 24 percent alcohol by volume, and has a flash point less than 60 °C ~~60°C~~ (140 °F ~~140°F~~), as determined by a Pensky-Martens Closed Cup Tester, using the test method specified in ASTM D 93-85 (Standard Test Methods for Flash Point by Pensky-Martens Closed Tester), or a Setaflash Closed Cup Tester, using the test method specified in ASTM D 3828-87, (Standard Test Methods for Flash Point of Liquids by Setaflash Closed Tester), each incorporated by reference in 35 Ill. Adm. Code 720.111(a).
 - 2) It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture, or spontaneous chemical changes and, when ignited, burns so vigorously and persistently that it creates a hazard.
 - 3) It is a flammable gas, as defined in federal 49 CFR 173.115 (Class 2, Divisions 2.1, 2.2, and 2.3—Definitions), incorporated by reference in 35 Ill. Adm. Code 720.111(b), and as determined by the test methods described in that regulation or equivalent test methods approved by the Board (35 Ill. Adm. Code 720.120).

BOARD NOTE: Corresponding 40 CFR 261.21(a)(3) uses “ignitable compressed gas” based on the outmoded USDOT hazard class “flammable compressed gas,” and it replicates the text from former 49 ~~CFR C.F.R.~~ 173.300(b) (1980) for the definition. In 1990, USDOT replaced that former hazard class with “flammable gas”, as defined at 49 CFR 173.115. See 55 Fed. Reg. 52402, 53433 (December 21, 1990) (USDOT rulemaking replacing the old hazard class with the new one). The Board has chosen to avoid major problems inherent to USEPA's approach (the use of obsolete methods and USDOT regulatory mechanisms for the outmoded hazard class). The Board has instead updated the Illinois

provision to correspond with the current USDOT regulations and used the “flammable gas” hazard class, together with its associated current methods.

- 4) It is an oxidizer, as defined in ~~federal~~ 49 CFR 173.127 (Class 5, Division 5.1—Definition and Assignment of Packaging Groups), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

BOARD NOTE: Corresponding 40 CFR 261.21(a)(4) uses “oxidizer;”₂ and it replicates the text from former 49 ~~CFR C.F.R.~~ 173.151 (1980) for the definition. Further, corresponding 40 CFR 261.21(a)(4) adds the definition of “organic peroxide” from former 49 ~~CFR C.F.R.~~ 173.151a to the definition of “oxidizer;”₂. In 1990, USDOT replaced that former definition of the hazard class with a new definition at 49 CFR 173.127, which classifies an oxidizer as a Division 5.1 material. See 55 Fed. Reg. 52402, 53433 (Dec. 21, 1990) (USDOT rulemaking replacing the old hazard class with the new one). The Board has chosen to avoid major problems inherent to USEPA’s approach (the use of obsolete methods and USDOT regulatory mechanisms for the outmoded hazard class). The Board has instead updated the Illinois provision to correspond with the current USDOT regulations, used the “oxidizer” hazard class, together with its associated current methods, and omitted the addition of “organic peroxide” to the definition.

- b) A solid waste that exhibits the characteristic of ignitability has the USEPA hazardous waste number of D001.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.122 Characteristic of Corrosivity

- a) A solid waste exhibits the characteristic of corrosivity if a representative sample of the waste has either of the following properties:
- 1) It is aqueous and has a pH less than or equal to 2 or greater than or equal to 12.5, as determined by a pH meter using Method 9040C (pH Electrometric Measurement) in “Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods;”₂ USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
 - 2) It is a liquid and corrodes steel (SAE 1020) at a rate greater than 6.35 mm (0.250 inch) per year at a test temperature of 55° C (130° F), as determined by Method 1110A (Corrosivity Toward Steel) in “Test Methods for the Evaluation of Solid Waste, Physical/Chemical Methods;”₂ USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

BOARD NOTE: The corrosivity characteristic determination currently does not apply to non-liquid wastes, as discussed by USEPA at 45 Fed. Reg. 33109, May 19, 1980 and at 55 Fed. Reg. 22549, June 1, 1990.

- b) A solid waste that exhibits the characteristic of corrosivity has the USEPA hazardous waste number of D002.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.124 Toxicity Characteristic

- a) A solid waste (except manufactured gas plant waste) exhibits the characteristic of toxicity if, using Method 1311 (Toxicity Characteristic Leaching Procedure (TCLP)) in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," USEPA publication number EPA-530/SW-846, as incorporated by reference in 35 Ill. Adm. Code 720.111(a), the extract from a representative sample of the waste contains any of the contaminants listed in the table in subsection (b) ~~of this Section~~ at a concentration equal to or greater than the respective value given in that table. Where the waste contains less than 0.5 percent filterable solids, the waste itself, after filtering using the methodology outlined in Method 1311, is considered to be the extract for the purpose of this Section.

BOARD NOTE: The reference to the "EP toxicity test" in 35 Ill. Adm. Code 808.410(b)(4) is to be understood as referencing the test required by this Section.

- b) A solid waste that exhibits the characteristic of toxicity has the USEPA hazardous waste number specified in the following table that corresponds to the toxic contaminant causing it to be hazardous.

MAXIMUM CONCENTRATION OF CONTAMINANTS FOR THE TOXICITY CHARACTERISTIC

USEPA Hazardous Waste No.	Contaminant	CAS Number	Note	Regulatory Level (mg/ℓ)
D004	Arsenic	7440-38-2		5.0
D005	Barium	7440-39-3		100.0
D018	Benzene	71-43-2		0.5
D006	Cadmium	7440-43-9		1.0
D019	Carbon tetrachloride	56-23-5		0.5
D020	Chlordane	57-74-9		0.03
D021	Chlorobenzene	108-90-7		100.0
D022	Chloroform	67-66-3		6.0
D007	Chromium	7440-47-3		5.0

D023	o-Cresol	95-48-7	2	200.0
D024	m-Cresol	108-39-4	2	200.0
D025	p-Cresol	106-44-5	2	200.0
D026	Cresol		2	200.0
D016	2,4-D	94-75-7		10.0
D027	1,4-Dichlorobenzene	106-46-7		7.5
D028	1,2-Dichloroethane	107-06-2		0.5
D029	1,1-Dichloroethylene	75-35-4		0.7
D030	2,4-Dinitrotoluene	121-14-2	1	0.13
D012	Endrin	72-20-8		0.02
D031	Heptachlor (and its epoxide)	76-44-8		0.008
D032	Hexachlorobenzene	118-74-1	1	0.13
D033	Hexachlorobutadiene	87-68-3		0.5
D034	Hexachloroethane	67-72-1		3.0
D008	Lead	7439-92-1		5.0
D013	Lindane	58-89-9		0.4
D009	Mercury	7439-97-6		0.2
D014	Methoxychlor	72-43-5		10.0
D035	Methyl ethyl ketone	78-93-3		200.0
D036	Nitrobenzene	98-95-3		2.0
D037	Pentachlorophenol	87-86-5		100.0
D038	Pyridine	110-86-1	1	5.0
D010	Selenium	7782-49-2		1.0
D011	Silver	7440-22-4		5.0
D039	Tetrachloroethylene	127-18-4		0.7
D015	Toxaphene	8001-35-2		0.5
D040	Trichloroethylene	79-01-6		0.5
D041	2,4,5-Trichlorophenol	95-95-4		400.0
D042	2,4,6-Trichlorophenol	88-06-2		2.0
D017	2,4,5-TP (Silvex)	93-72-1		1.0
D043	Vinyl chloride	75-01-4		0.2

Notes to Table:

- 1 Quantitation limit is greater than the calculated regulatory level. The quantitation limit therefore becomes the regulatory level.
- 2 If o-, m-, p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used. The regulatory level of total cresol is 200.0 mg/l.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: LISTS OF HAZARDOUS WASTE

Section 721.130 General

- a) A solid waste is a hazardous waste if it is listed in this Subpart D, unless it has been excluded from this list pursuant to 35 Ill. Adm. Code 720.120 and 720.122.
- b) The basis for listing the classes or types of wastes listed in this Subpart D is indicated by employing one or more of the following hazard codes:
- 1) Hazard Codes.

A)	Ignitable waste	(I)
B)	Corrosive waste	(C)
C)	Reactive waste	(R)
D)	Toxicity Characteristic waste	(E)
E)	Acute hazardous waste	(H)
F)	Toxic waste	(T)
 - 2) Appendix G of this Part identifies the constituent that caused the Administrator to list the waste as a toxicity characteristic waste (E) or toxic waste (T) in Sections 721.131 and 721.132.
- c) Each hazardous waste listed in this Subpart D is assigned a USEPA hazardous waste number that precedes the name of the waste. This number must be used in complying with the federal notification requirements of section 3010 of RCRA (42 USC 6930) ~~(42 USC 6910)~~ and certain recordkeeping and reporting requirements under 35 Ill. Adm. Code 702, 703, and 722 through 725, 727, and 728.
- d) The following hazardous wastes listed in Section 721.131 or 721.132 are subject to the exclusion limits for acute hazardous wastes established in 35 Ill. Adm. Code 722.114 ~~Section 721.105~~: hazardous wastes numbers F020, F021, F022, F023, F026, and F027.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.131 Hazardous Wastes from Nonspecific Sources

- a) The following solid wastes are listed hazardous wastes from non-specific sources, unless they are excluded under 35 Ill. Adm. Code 720.120 and 720.122 and listed in Appendix I ~~of this Part~~.

USEPA Hazardous Waste No.	Industry and Hazardous Waste	Hazard Code
F001	The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures and blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, orthodichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures and blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F003	The following spent non-halogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures and blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures and blends containing, before use, one or more of the above non-halogenated solvents and a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I)

F004	The following spent non-halogenated solvents: cresols and cresylic acid and nitrobenzene; all spent solvent mixtures and blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(T)
F005	The following spent non-halogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures and blends, containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(I, T)
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc, and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(T)
F007	Spent cyanide plating bath solutions from electroplating operations.	(R, T)
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(R, T)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.	(R, T)
F010	Quenching bath residues from oil baths from metal heat-treating operations where cyanides are used in the process.	(R, T)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat-treating operations.	(R, T)

- F012 Quenching wastewater treatment sludges from metal heat-treating operations where cyanides are used in the process. (T)
- F019 Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process. (T)

Wastewater treatment sludge from the manufacturing of motor vehicles using a zinc phosphating process will not be subject to this listing at the point of generation if the waste is not placed outside on the land prior to shipment to a landfill for disposal and it is disposed of in a regulated landfill that fulfills either of the following conditions:

It is located in Illinois, and it is one of the following types of landfills:

It is a landfill that is a hazardous waste management unit, as defined in 35 Ill. Adm. Code 720.110;

It is a municipal solid waste landfill, as defined in 35 Ill. Adm. Code 810.103; or

It is a putrescible or chemical waste landfill that is subject to the requirements of Subpart C of 35 Ill. Adm. Code 811.

It is located outside Illinois, and it is one of the following types of landfills:

It is a RCRA Subtitle D municipal solid waste or industrial solid waste landfill unit that is equipped with a single clay liner and which is permitted, licensed or otherwise authorized by the state; or

It is a landfill unit that is subject to or which otherwise meets the landfill requirements in 40 CFR 258.40, 264.301 or 265.301.

For the purposes of this hazardous waste listing, “motor vehicle manufacturing” is defined in subsection

(b)(4)(A) of this Section, and subsection (b)(4)(B) of this Section describes the recordkeeping requirements for motor vehicle manufacturing facilities.

- | | | |
|------|---|-----|
| F020 | Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tri- or tetrachlorophenol or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.) | (H) |
| F021 | Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of pentachlorophenol or of intermediates used to produce its derivatives. | (H) |
| F022 | Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions. | (H) |
| F023 | Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5-trichlorophenol.) | (H) |

- F024 Process wastes, including but not limited to, distillation residues, heavy ends, tars, and reactor cleanout wastes, from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution. (This listing does not include wastewaters, wastewater treatment sludges, spent catalysts, and wastes listed in this Section or in Section 721.132.) (T)
- F025 Condensed light ends, spent filters and filter aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution. (T)
- F026 Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions. (H)
- F027 Discarded unused formulations containing tri-, tetra- or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.) (H)
- F028 Residues resulting from the incineration or thermal treatment of soil contaminated with hazardous waste numbers F020, F021, F022, F023, F026, and F027. (T)

- F032 Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 hazardous waste number ~~code~~ deleted in accordance with Section 721.135 and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol. (T)
- F034 Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol. (T)
- F035 Wastewaters, (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote or pentachlorophenol. (T)

- F037 Petroleum refinery primary oil/water/solids separation sludge—any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refineries. Such sludges include, but are not limited to, those generated in: oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and stormwater units receiving dry weather flow. Sludge generated in stormwater units that do not receive dry weather flow, sludge generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludge generated in aggressive biological treatment units as defined in subsection (b)(2) ~~of this Section~~ (including sludge generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), and K051 wastes are not included in this listing. This listing does include residuals generated from processing or recycling oil-bearing hazardous secondary materials excluded under Section 721.104(a)(12)(A) if those residuals are to be disposed of. (T)
- F038 Petroleum refinery secondary (emulsified) oil/water/solids separation sludge—any sludge or float generated from the physical or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in the following types of units: induced air floatation (IAF) units, tanks and impoundments, and all sludges generated in dissolved air flotation (DAF) units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from non-contact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges and floats generated in aggressive biological treatment units as defined in subsection (b)(2) ~~of this Section~~ (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units), F037, K048, and K051 wastes are not included in this listing. (T)

- F039 Multi-source leachate resulting from the disposal of more than one restricted waste classified as hazardous under this Subpart D. For purposes of this hazardous waste listing, “leachate” means liquids that have percolated through land-disposed wastes. (This multi-source leachate listing does not apply to leachate resulting from the disposal of more than one of the following USEPA hazardous wastes where the disposal of no other hazardous waste is involved: F020, F021, F022, F026, F027, and F028. Leachate from disposal of any combination of these hazardous wastes is considered single-source leachate, and that leachate retains the USEPA hazardous waste numbers of the wastes from which the leachate derived, and the leachate must meet the treatment standards for the underlying hazardous waste numbers ~~codes~~.) (T)

BOARD NOTE: Derived from the listing for F039 at 40 CFR 261.31(a) ~~(2017)-(2019)~~ and the discussion at 55 Fed. Reg. 22520, 22619-22623 (June 1, 1990).

BOARD NOTE: The primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). The letter H indicates Acute Hazardous Waste. “(I, T)” should be used to specify mixtures that are ignitable and contain toxic constituents.

b) Listing-Specific Definitions ~~Listing-specific definitions.~~

- 1) For the purpose of the F037 and F038 listings, “oil/water/solids” is defined as oil or water or solids.
- 2) For the purposes of the F037 and F038 listings, the following apply:
 - A) “Aggressive biological treatment units” are defined as units that employ one of the following four treatment methods: activated sludge, trickling filter, rotating biological contactor for the continuous accelerated biological oxidation of wastewaters, or high-rate aeration. “High-rate aeration” is a system of surface impoundments or tanks in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and the following is true:
 - i) The units employ a minimum of six horsepower per million gallons of treatment volume; and either

- ii) The hydraulic retention time of the unit is no longer than five days; or
 - iii) The hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the toxicity characteristic.
 - B) Generators and treatment, storage, or disposal (TSD) facilities have the burden of proving that their sludges are exempt from listing as F037 or F038 wastes under this definition. Generators and TSD facilities must maintain, in their operating or other on site records, documents and data sufficient to prove the following:
 - i) The unit is an aggressive biological treatment unit, as defined in this subsection; and
 - ii) The sludges sought to be exempted from F037 or F038 were actually generated in the aggressive biological treatment unit.
- 3) Time of Generation-generation. For the purposes of the designated waste, the “time of generation” is defined as follows:
- A) For the F037 listing, sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement.
 - B) For the F038 listing:
 - i) Sludges are considered to be generated at the moment of deposition in the unit, where deposition is defined as at least a temporary cessation of lateral particle movement; and
 - ii) Floats are considered to be generated at the moment they are formed in the top of the unit.
- 4) For the purposes of the F019 hazardous waste listing, the following apply to wastewater treatment sludges from the manufacturing of motor vehicles using a zinc phosphating process:
- A) “Motor vehicle manufacturing” is defined to include the manufacture of automobiles and light trucks or utility vehicles (including light duty vans, pick-up trucks, minivans, and sport utility vehicles). A facility owner or operator must be engaged in

manufacturing complete vehicles (body and chassis or unibody) or chassis only; and

- B) The generator must maintain documentation and information in its on-site records that is sufficient to prove that the wastewater treatment sludge to be exempted from the F019 listing meets the conditions of the listing. These records must include the following information: the volumes of waste generated and disposed of off site; documentation showing when the waste volumes were generated and sent off site; the name and address of the receiving facility; and documentation confirming receipt of the waste by the receiving facility. The generator must maintain these documents on site for no less than three years. The retention period for the documentation is automatically extended during the pendency of any enforcement action or as requested by USEPA or by the Agency in writing.

Section 721.132 Hazardous Waste from Specific Sources

- a) The following solid wastes are listed hazardous wastes from specific sources unless they are excluded under 35 Ill. Adm. Code 720.120 and 720.122 and listed in Appendix I of this Part.

USEPA Hazardous Waste No.	Industry and Hazardous Waste	Hazard Code
Wood Preservation Process Wastes:		
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote or pentachlorophenol.	(T)
Inorganic Pigments Production Wastes:		
K002	Wastewater treatment sludge from the production of chrome yellow and orange pigments.	(T)
K003	Wastewater treatment sludge from the production of molybdate orange pigments.	(T)
K004	Wastewater treatment sludge from the production of zinc yellow pigments.	(T)

K005	Wastewater treatment sludge from the production of chrome green pigments.	(T)
K006	Wastewater treatment sludge from the production of chrome oxide green pigments (anhydrous and hydrated).	(T)
K007	Wastewater treatment sludge from the production of iron blue pigments.	(T)
K008	Oven residue from the production of chrome oxide green pigments.	(T)

Organic Chemicals Production Wastes:

K009	Distillation bottoms from the production of acetaldehyde from ethylene.	(T)
K010	Distillation side cuts from the production of acetaldehyde from ethylene.	(T)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.	(R, T)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.	(R, T)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	(T)
K015	Still bottoms from the distillation of benzyl chloride.	(T)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.	(T)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	(T)
K018	Heavy ends from the fractionation column in ethyl chloride production.	(T)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	(T)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	(T)

K021	Aqueous spent antimony catalyst waste from fluoromethanes production.	(T)
K022	Distillation bottom tars from the production of phenol/acetone from cumene.	(T)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.	(T)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.	(T)
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene.	(T)
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene.	(T)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.	(T)
K026	Stripping still tails from the production of methyl ethyl pyridines.	(T)
K027	Centrifuge and distillation residues from toluene diisocyanate production.	(R, T)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.	(T)
K029	Waste from the product stream stripper in the production of 1,1,1-trichloroethane.	(T)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.	(T)
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(T)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.	(T)
K083	Distillation bottoms from aniline production.	(T)
K103	Process residues from aniline extraction from the production of aniline.	(T)

K104	Combined wastewater streams generated from nitrobenzene/aniline production.	(T)
K085	Distillation or fractionation column bottoms from the production of chlorobenzenes.	(T)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(T)
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(C, T)
K108	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(I, T)
K109	Spent filter cartridges from the product purification from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.	(C, T)
K112	Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K113	Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K114	Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)
K115	Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(T)

K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.	(T)
K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.	(T)
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(T)
K156	Organic waste (including heavy ends, still bottoms, light ends, spent solvents, filtrates, and decantates) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K157	Wastewaters (including scrubber waters, condenser waters, washwaters, and separation waters) from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K158	Baghouse dusts and filter/separation solids from the production of carbamates and carbamoyl oximes. (This listing does not apply to wastes generated from the manufacture of 3-iodo-2-propynyl n-butylcarbamate.)	(T)
K159	Organics from the treatment of thiocarbamate wastes.	(T)
K161	Purification solids (including filtration, evaporation, and centrifugation solids), bag house dust, and floor sweepings from the production of dithiocarbamate acids and their salts. (This listing does not include K125 or K126.)	(R, T)
K174	Wastewater treatment sludges from the production of ethylene dichloride or vinyl chloride monomer (including sludges that result from commingled ethylene dichloride or vinyl chloride monomer wastewater and other	(T)

wastewater), unless the sludges meet the following conditions:

- (1) ~~The~~ The sludges are disposed of in a RCRA Subtitle C (42 USC 6921-6939e) or non-hazardous landfill licensed or permitted by a state or the federal government;
- (2) ~~The~~ The sludges are not otherwise placed on the land prior to final disposal; and
- (3) ~~The~~ The generator maintains documentation demonstrating that the waste was either disposed of in an on-site landfill or consigned to a transporter or disposal facility that provided a written commitment to dispose of the waste in an off-site landfill. Upon a showing by the government that a respondent in any enforcement action brought to enforce the requirements of RCRA Subtitle C ~~of this Part~~ managed wastewater treatment sludges from the production of vinyl chloride monomer or ethylene dichloride, the respondent must demonstrate that it meets the conditions of the exclusion that are set forth above. In doing so, the respondent must provide appropriate documentation that the terms of the exclusion were met (e.g., contracts between the generator and the landfill owner or operator, invoices documenting delivery of waste to landfill, etc.).

K175 Wastewater treatment sludges from the production of vinyl chloride monomer using mercuric chloride catalyst in an acetylene-based process. (T)

Inorganic Chemicals Production Wastes:

K071 Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used. (T)

K073 Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production. (T)

K106 Wastewater treatment sludge from the mercury cell process in chlorine production. (T)

- | | | |
|------|--|-----|
| K176 | Baghouse filters from the production of antimony oxide, including filters from the production of intermediates (e.g., antimony metal or crude antimony oxide). | (E) |
| K177 | Slag from the production of antimony oxide that is speculatively accumulated or disposed of, including slag from the production of intermediates (e.g., antimony metal or crude antimony oxide). | (T) |
| K178 | Residues from manufacturing and manufacturing-site storage of ferric chloride from acids formed during the production of titanium dioxide using the chloride-ilmenite process. | (T) |
| K181 | Nonwastewaters from the production of dyes or pigments (including nonwastewaters commingled at the point of generation with nonwastewaters from other processes) that, at the point of generation, contain mass loadings of any of the constituents identified in subsection (c) that are equal to or greater than the corresponding subsection (c) levels, as determined on a calendar year basis. These wastes will not be hazardous if the nonwastewaters are managed in one of the following ways: | (T) |
- 1) They are disposed of in a municipal solid waste landfill unit that is subject to the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402;
 - 2) They are disposed of in a hazardous waste landfill unit that is subject to either 35 Ill. Adm. Code 724.401 or 725.401;
 - 3) They are disposed of in other municipal solid waste landfill units that meet the design criteria in 35 Ill. Adm. Code 811.303 through 811.309 and 811.315 through 811.317 and Subpart E of 35 Ill. Adm. Code 811 or 35 Ill. Adm. Code 814.302 and 814.402, 35 Ill. Adm. Code 724.401, or 35 Ill. Adm. Code 725.401; or
 - 4) They are treated in a combustion unit that is permitted under 415 ILCS 5/39(d), or an onsite

combustion unit that is permitted under 415 ILCS 5/39.5.

For the purposes of this listing, dyes or pigments production is defined in subsection (b)(1). Subsection (d) describes the process for demonstrating that a facility's nonwastewaters are not K181 waste. This listing does not apply to wastes that are otherwise identified as hazardous under Sections 721.121 through 721.124 and 721.131 through 721.133 at the point of generation. Also, the listing does not apply to wastes generated before any annual mass loading limit is met, as set forth in subsection (c).

Pesticides Production Wastes:

K031	By-product salts generated in the production of MSMA and cacodylic acid.	(T)
K032	Wastewater treatment sludge from the production of chlordane.	(T)
K033	Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.	(T)
K034	Filter solids from the filtration of hexachlorocyclopentadiene in the production of chlordane.	(T)
K097	Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.	(T)
K035	Wastewater treatment sludges generated in the production of creosote.	(T)
K036	Still bottoms from toluene reclamation distillation in the production of disulfoton.	(T)
K037	Wastewater treatment sludges from the production of disulfoton.	(T)
K038	Wastewater from the washing and stripping of phorate production.	(T)
K039	Filter cake from the filtration of diethylphosphorodithioic acid in the production of phorate.	(T)

K040	Wastewater treatment sludge from the production of phorate.	(T)
K041	Wastewater treatment sludge from the production of toxaphene.	(T)
K098	Untreated process wastewater from the production of toxaphene.	(T)
K042	Heavy ends or distillation residues from the distillation of tetrachlorobenzene in the production of 2,4,5-T.	(T)
K043	2,6-Dichlorophenol waste from the production of 2,4-D.	(T)
K099	Untreated wastewater from the production of 2,4-D.	(T)
K123	Process wastewater (including supernates, filtrates, and washwaters) from the production of ethylenebisdithiocarbamic acid and its salts.	(T)
K124	Reactor vent scrubber water from the production of ethylenebisdithiocarbamic acid and its salts.	(C, T)
K125	Filtration, evaporation, and centrifugation solids from the production of ethylenebisdithiocarbamic acid and its salts.	(T)
K126	Baghouse dust and floor sweepings in milling and packaging operations from the production or formulation of ethylenebisdithiocarbamic acid and its salts.	(T)
K131	Wastewater from the reactor and spent sulfuric acid from the acid dryer from the production of methyl bromide.	(C, T)
K132	Spent absorbent and wastewater separator solids from the production of methyl bromide.	(T)

Explosives Production Wastes:

K044	Wastewater treatment sludges from the manufacturing and processing of explosives.	(R)
K045	Spent carbon from the treatment of wastewater containing explosives.	(R)

K046 Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds. (T)

K047 Pink/red water from TNT operations. (R)

Petroleum Refining Wastes:

K048 Dissolved air flotation (DAF) float from the petroleum refining industry. (T)

K049 Slop oil emulsion solids from the petroleum refining industry. (T)

K050 Heat exchanger bundle cleaning sludge from the petroleum refining industry. (T)

K051 API separator sludge from the petroleum refining industry. (T)

K052 Tank bottoms (leaded) from the petroleum refining industry. (T)

K169 Crude oil storage tank sediment from petroleum refining operations. (T)

K170 Clarified slurry oil tank sediment or in-line filter/separation solids from petroleum refining operations. (T)

K171 Spent hydrotreating catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media). (I, T)

K172 Spent hydrorefining catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (this listing does not include inert support media). (I, T)

Iron and Steel Production Wastes:

K061 Emission control dust/sludge from the primary production of steel in electric furnaces. (T)

K062 Spent pickle liquor generated by steel finishing operations of facilities within the iron and steel industry (SIC Codes 331 and 332) (as defined in 35 Ill. Adm. Code 720.110). (C, T)

Primary Aluminum Production Wastes:

K088 Spent potliners from primary aluminum reduction. (T)

Secondary Lead Production Wastes:

K069 Emission control dust/sludge from secondary lead smelting. (T)

BOARD NOTE: This listing is administratively stayed for sludge generated from secondary acid scrubber systems. The stay will remain in effect until this note is removed.

K100 Waste leaching solution from acid leaching of emission control dust/sludge from secondary lead smelting. (T)

Veterinary Pharmaceuticals Production Wastes:

K084 Wastewater treatment sludges generated during the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds. (T)

K101 Distillation tar residues from the distillation of aniline-based compounds in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds. (T)

K102 Residue from use of activated carbon for decolorization in the production of veterinary pharmaceuticals from arsenic or organo-arsenic compounds. (T)

Ink Formulation Wastes:

K086 Solvent washes and sludges, caustic washes and sludges, or water washes and sludges from cleaning tubs and equipment used in the formulation of ink from pigments, driers, soaps and stabilizers containing chromium and lead. (T)

Coke Production Wastes:

K060	Ammonia still lime sludge from coking operations.	(T)
K087	Decanter tank tar sludge from coking operations.	(T)
K141	Process residues from the recovery of coal tar, including, but not limited to, collecting sump residues from the production of coke from coal or the recovery of coke by-products produced from coal. This listing does not include K087 (decanter tank tar sludges from coking operations).	(T)
K142	Tar storage tank residues from the production of coke from coal or from the recovery of coke by-products produced from coal.	(T)
K143	Process residues from the recovery of light oil, including, but not limited to, those generated in stills, decanters, and wash oil recovery units from the recovery of coke by-products produced from coal.	(T)
K144	Wastewater sump residues from light oil refining, including, but not limited to, intercepting or contamination sump sludges from the recovery of coke by-products produced from coal.	(T)
K145	Residues from naphthalene collection and recovery operations from the recovery of coke by-products produced from coal.	(T)
K147	Tar storage tank residues from coal tar refining.	(T)
K148	Residues from coal tar distillation, including, but not limited to, still bottoms.	(T)
K149	Distillation bottoms from the production of α - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (This waste does not include still bottoms from the distillation of benzyl chloride.)	(T)

- K150 Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of α - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (T)
- K151 Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of α - (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (T)

- b) Listing-Specific Definition.~~Listing-specific definition~~: For the purposes of the K181 hazardous waste listing in subsection (a), “dyes or pigments production” includes manufacture of the following product classes: dyes, pigments, and FDA-certified colors that are in the azo, triarylmethane, perylene, and anthraquinone classes. Azo products include azo, monoazo, diazo, triazo, polyazo, azoic, benzidine, and pyrazolone products. Triarylmethane products include both triarylmethane and triphenylmethane products. Wastes that are not generated at a dyes or pigments manufacturing site, such as wastes from the offsite use, formulation, and packaging of dyes or pigments, are not included in the K181 listing.
- c) K181 Listing Levels.~~listing levels~~. Nonwastewaters containing constituents in amounts equal to or exceeding the following levels during any calendar year are subject to the K181 hazardous waste listing in subsection (a), unless the conditions in the K181 hazardous waste listing are met:

Constituent	Chemical Abstracts No.	Mass Levels (kg/yr)
Aniline	62-53-3	9,300
o-Anisidine	90-04-0	110
4-Chloroaniline	106-47-8	4,800
p-Cresidine	120-71-8	660
2,4-Dimethylaniline	95-68-1	100
1,2-Phenylenediamine	95-54-5	710
1,3-Phenylenediamine	108-45-2	1,200

- d) Procedures for Demonstrating That Dyes demonstrating that dyes or Pigments Nonwastewaters Are Not K181 Waste pigments nonwastewaters are not K181 waste. The procedures described in subsections (d)(1) through (d)(3) and (d)(5) establish when nonwastewaters from the production of dyes or pigments would not be hazardous. (These procedures apply to wastes that are not disposed of in landfill units or treated in combustion units, as specified in subsection (a)). If the nonwastewaters are disposed of in landfill units or treated in combustion units as described in subsection (a), then the nonwastewaters are not hazardous. In order to demonstrate that it is meeting the landfill disposal or combustion conditions contained in the K181 waste listing description, the generator must maintain documentation as described in subsection (d)(4).
- 1) Determination Based based on No K181 Waste Constituents no K181 waste constituents. A generator that has knowledge (e.g., knowledge of constituents in wastes based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed) that its waste contains none of the K181 waste constituents (see subsection (c)) can use its knowledge to determine that its waste is not K181 waste. The generator must document the basis for all such determinations on an annual basis and keep each annual documentation for three years.
 - 2) Determination for Generated Quantities generated quantities of 1,000 Tonnes (1,000 Metric Tons) Per Year tonnes (1,000 metric tons) per year or Less less for Wastes That Contain K181 Waste Constituents wastes that contain K181 waste constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is 1,000 tonnes or less, the generator can use knowledge of the wastes (e.g., knowledge of constituents in wastes based on prior analytical data or information about raw materials used, production processes used, and reaction and degradation products formed) to conclude that annual mass loadings for the K181 constituents are below the listing levels of subsection (c). To make this determination, the generator must fulfill the following conditions:
 - A) Each year, the generator must document the basis for determining that the annual quantity of nonwastewaters expected to be generated will be less than 1,000 tonnes;
 - B) The generator must track the actual quantity of nonwastewaters generated from January 1 through December 31 of each calendar year. If, at any time within the year, the actual waste quantity exceeds 1,000 tonnes, the generator must comply with the requirements of subsection (d)(3) for the remainder of that calendar year;

- C) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year; and
 - D) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations were made:
 - i) The quantity of dyes or pigments nonwastewaters generated;
 - ii) The relevant process information used; and
 - iii) The calculations performed to determine annual total mass loadings for each K181 waste constituent in the nonwastewaters during the year.
- 3) Determination for generated quantities greater than 1,000 tonnes per year for wastes that contain K181 constituents. If the total annual quantity of dyes or pigments nonwastewaters generated is greater than 1,000 tonnes, the generator must perform each of the following steps in order to make a determination that its waste is not K181 waste:
- A) The generator must determine which K181 waste constituents (see subsection (c)) are reasonably expected to be present in the wastes based on knowledge of the wastes (e.g., based on prior sampling and analysis data or information about raw materials used, production processes used, and reaction and degradation products formed);
 - B) If 1,2-phenylenediamine is present in the wastes, the generator can use either knowledge of the wastes or sampling and analysis procedures to determine the level of this constituent in the wastes. For determinations based on use of knowledge of the wastes, the generator must comply with the procedures for using knowledge of the wastes described in subsection (d)(2) and keep the records described in subsection (d)(2)(D). For determinations based on sampling and analysis, the generator must comply with the sampling and analysis and recordkeeping requirements described in subsection (d)(3)(C);
 - C) The generator must develop a waste sampling and analysis plan (or modify an existing plan) to collect and analyze representative waste samples for the K181 waste constituents reasonably expected to be present in the wastes. At a minimum, the plan must include the following elements:

- i) A discussion of the number of samples needed to characterize the wastes fully;
 - ii) The planned sample collection method to obtain representative waste samples;
 - iii) A discussion of how the sampling plan accounts for potential temporal and spatial variability of the wastes; and
 - iv) A detailed description of the test methods to be used, including sample preparation, clean up (if necessary), and determinative methods;
- D) The generator must collect and analyze samples in accordance with the waste sampling and analysis plan, and the plan must fulfill the following requirements:
- i) The sampling and analysis must be unbiased, precise, and representative of the wastes; and
 - ii) The analytical measurements must be sufficiently sensitive, accurate, and precise to support any claim that the constituent mass loadings are below the listing levels of subsection (c);
- E) The generator must record the analytical results;
- F) The generator must record the waste quantity represented by the sampling and analysis results;
- G) The generator must calculate constituent-specific mass loadings (product of concentrations and waste quantity);
- H) The generator must keep a running total of the K181 waste constituent mass loadings over the course of the calendar year;
- I) The generator must determine whether the mass of any of the K181 waste constituents listed in subsection (c) generated between January 1 and December 31 of any calendar year is below the K181 waste listing levels;
- J) The generator must keep the following records on site for the three most recent calendar years in which the hazardous waste determinations are made:
- i) The sampling and analysis plan;

- ii) The sampling and analysis results (including quality assurance or quality control data);
 - iii) The quantity of dyes or pigments nonwastewaters generated; and
 - iv) The calculations performed to determine annual mass loadings; and
- K) The generator must conduct non-hazardous waste determinations annually to verify that the wastes remain non-hazardous.
- i) The annual testing requirements are suspended after three consecutive successful annual demonstrations that the wastes are non-hazardous. The generator can then use knowledge of the wastes to support subsequent annual determinations.
 - ii) The annual testing requirements are reinstated if the manufacturing or waste treatment processes generating the wastes are significantly altered, resulting in an increase of the potential for the wastes to exceed the listing levels.
 - iii) If the annual testing requirements are suspended, the generator must keep records of the process knowledge information used to support a non-hazardous determination. If testing is reinstated, the generator must retain a description of the process change.
- 4) Recordkeeping for the Landfill Disposal ~~landfill disposal~~ and Combustion Exemptions ~~combustion exemptions~~. For the purposes of meeting the landfill disposal and combustion condition set out in the K181 waste listing description in subsection (a), the generator must maintain on site for three years documentation demonstrating that each shipment of waste was received by a landfill unit that is subject to or which meets the landfill design standards set out in the listing description or that the waste was treated in combustion units, as specified in the listing description in subsection (a).
- 5) Waste Holding ~~holding~~ and Handling ~~handling~~. During the interim period, from the point of generation to completion of the hazardous waste determination, the generator must store the wastes appropriately. If the wastes are determined to be hazardous and the generator has not complied with the hazardous waste storage requirements of 35 Ill. Adm. Code 722.116 ~~722.134~~ during the interim period, the generator could be subject to an enforcement action for improper hazardous waste management.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.133 Discarded Commercial Chemical Products, Off-Specification Species, Container Residues, and Spill Residues Thereof

The following materials or items are hazardous wastes if and when they are discarded or intended to be discarded, as described in Section 721.102(a)(2)(A); when they are mixed with waste oil or used oil or other material and applied to the land for dust suppression or road treatment; when they are otherwise applied to the land in lieu of their original intended use or when they are contained in products that are applied to land in lieu of their original intended use; or when, in lieu of their original intended use, they are produced for use as (or as a component of) a fuel, distributed for use as a fuel, or burned as a fuel.

- a) Any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f).
- b) Any off-specification commercial chemical product or manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in subsection (e) or (f).
- c) Any residue remaining in a container or inner liner removed from a container that has held any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f), unless the container is empty, as defined in Section 721.107(b)(3).

BOARD NOTE: Unless the residue is being beneficially used or reused; legitimately recycled or reclaimed; or accumulated, stored, transported, or treated prior to such use, reuse, recycling, or reclamation, the Board considers the residue to be intended for discard, and thus a hazardous waste. An example of a legitimate reuse of the residue would be where the residue remains in the container and the container is used to hold the same commercial chemical product or manufacturing chemical intermediate it previously held. An example of the discard of the residue would be where the drum is sent to a drum reconditioner that reconditions the drum but discards the residue.

- d) Any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any commercial chemical product or manufacturing chemical intermediate having the generic name listed in subsection (e) or (f) or any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into or on any land or water of any off-specification chemical product or manufacturing chemical intermediate that, if it met specifications, would have the generic name listed in subsection (e) or (f).

BOARD NOTE: The phrase “commercial chemical product or manufacturing chemical intermediate having the generic name listed in” refers to a chemical substance that is manufactured or formulated for commercial or

manufacturing use that consists of the commercially pure grade of the chemical, any technical grades of the chemical that are produced or marketed, and all formulations in which the chemical is the sole active ingredient. It does not refer to a material, such as a manufacturing process waste, that contains any of the substances listed in subsection (e) or (f). Where a manufacturing process waste is deemed to be a hazardous waste because it contains a substance listed in subsection (e) or (f), such waste will be listed in either Sections 721.131 or 721.132 or will be identified as a hazardous waste by the characteristics set forth in Subpart C of this Part.

- e) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products or manufacturing chemical intermediates referred to in subsections (a) through (d) are identified as acute hazardous waste (H) and are subject to the small quantity exclusion defined in Section 721.105(e). These wastes and their corresponding USEPA hazardous waste numbers are the following:

BOARD NOTE: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), and R (Reactivity). The absence of a letter indicates that the compound is only listed for acute toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by USEPA hazardous waste number.

Alphabetical Listing

USEPA Hazardous Waste No.	Chemical Abstracts No. (CAS No.)	Substance	Hazard Code
P023	107-20-0	Acetaldehyde, chloro-	
P002	591-08-2	Acetamide, N-(aminothioxomethyl)	
P057	640-19-7	Acetamide, 2-fluoro-	
P058	62-74-8	Acetic acid, fluoro-, sodium salt	
P002	591-08-2	1-Acetyl-2-thiourea	
P003	107-02-8	Acrolein	
P070	116-06-3	Aldicarb	
P203	1646-88-4	Aldicarb sulfone	
P004	309-00-2	Aldrin	
P005	107-18-6	Allyl alcohol	
P006	20859-73-8	Aluminum phosphide	(R, T)
P007	2763-96-4	5-(Aminomethyl)-3-isoxazolol	
P008	504-24-5	4-Aminopyridine	
P009	131-74-8	Ammonium picrate	(R)
P119	7803-55-6	Ammonium vanadate	

P099	506-61-6	Argentate(1-), bis(cyano-C)-, potassium
P010	7778-39-4	Arsenic acid H_3AsO_4
P012	1327-53-3	Arsenic oxide As_2O_3
P011	1303-28-2	Arsenic oxide As_2O_5
P011	1303-28-2	Arsenic pentoxide
P012	1327-53-3	Arsenic trioxide
P038	692-42-2	Arsine, diethyl-
P036	696-28-6	Arsonous dichloride, phenyl-
P054	151-56-4	Aziridine
P067	75-55-8	Aziridine, 2-methyl
P013	542-62-1	Barium cyanide
P024	106-47-8	Benzenamine, 4-chloro-
P077	100-01-6	Benzenamine, 4-nitro-
P028	100-44-7	Benzene, (chloromethyl)-
P042	51-43-4	1,2-Benzenediol, 4-(1-hydroxy-2-(methylamino)ethyl)-, (R)-
P046	122-09-8	Benzeneethanamine, α,α -dimethyl-
P014	108-98-5	Benzenethiol
P127	1563-66-2	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate
P188	57-64-7	Benzoic acid, 2-hydroxy-, compound with (3aS-cis)-1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethylpyrrolo-(2,3-b)indol-5-yl methylcarbamate ester (1:1)
P001	81-81-2*	2H-1-Benzopyran-2-one, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, and salts, when present at concentrations greater than 0.3 percent
P028	100-44-7	Benzyl chloride
P015	7440-41-7	Beryllium powder
P017	598-31-2	Bromoacetone
P018	357-57-3	Brucine
P045	39196-18-6	2-Butanone, 3,3-dimethyl-1-(methylthio)-, O-((methylamino)carbonyl) oxime
P021	592-01-8	Calcium cyanide
P021	592-01-8	Calcium cyanide $Ca(CN)_2$
P189	55285-14-8	Carbamic acid, ((dibutylamino)-thio)-methyl-, 2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester

P191	644-64-4	Carbamic acid, dimethyl-, 1- ((dimethyl-amino)carbonyl)-5-methyl- 1H-pyrazol-3-yl ester
P192	119-38-0	Carbamic acid, dimethyl-, 3-methyl-1- (1-methylethyl)-1H-pyrazol-5-yl ester
P190	1129-41-5	Carbamic acid, methyl-, 3-methyl- phenyl ester
P127	1563-66-2	Carbofuran
P022	75-15-0	Carbon disulfide
P095	75-44-5	Carbonic dichloride
P189	55285-14-8	Carbosulfan
P023	107-20-0	Chloroacetaldehyde
P024	106-47-8	p-Chloroaniline
P026	5344-82-1	1-(o-Chlorophenyl)thiourea
P027	542-76-7	3-Chloropropionitrile
P029	544-92-3	Copper cyanide
P029	544-92-3	Copper cyanide CuCN
P202	64-00-6	m-Cumenyl methylcarbamate
P030		Cyanides (soluble cyanide salts), not otherwise specified
P031	460-19-5	Cyanogen
P033	506-77-4	Cyanogen chloride
P033	506-77-4	Cyanogen chloride CNCl
P034	131-89-5	2-Cyclohexyl-4,6-dinitrophenol
P016	542-88-1	Dichloromethyl ether
P036	696-28-6	Dichlorophenylarsine
P037	60-57-1	Dieldrin
P038	692-42-2	Diethylarsine
P041	311-45-5	Diethyl-p-nitrophenyl phosphate
P040	297-97-2	O,O-Diethyl O-pyrazinyl phosphorothioate
P043	55-91-4	Diisopropylfluorophosphate (DFP)
P191	644-64-4	Dimetilan
P004	309-00-2	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro- 1,4,4a,5,8,8a-hexahydro-, (1 α ,4 α ,4a β ,5 α ,8 α ,8a β)-
P060	465-73-6	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro- 1,4,4a,5,8,8a-hexahydro-, (1 α ,4 α ,4a β ,5 β ,8 β ,8a β)-

P037	60-57-1	2,7:3,6-Dimethanonaphth(2,3-b)-oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1 α ,2 β ,2 α ,3 β ,6 β ,6 α ,7 β ,7 α)-	
P051	72-20-8*	2,7:3,6-Dimethanonaphth(2,3-b)-oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1 α ,2 β ,2 α ,3 α ,6 α ,6 β ,7 β ,7 α)-, and metabolites	
P044	60-51-5	Dimethoate	
P046	122-09-8	α,α -Dimethylphenethylamine	
P047	534-52-1*	4,6-Dinitro-o-cresol and salts	
P048	51-28-5	2,4-Dinitrophenol	
P020	88-85-7	Dinoseb	
P085	152-16-9	Diphosphoramidate, octamethyl-	
P111	107-49-3	Diphosphoric acid, tetraethyl ester	
P039	298-04-4	Disulfoton	
P049	541-53-7	Dithiobiuret	
P185	26419-73-8	1,3-Dithiolane-2-carboxaldehyde, 2,4-dimethyl-, O-((methylamino)-carbonyl)oxime	
P050	115-29-7	Endosulfan	
P088	145-73-3	Endothall	
P051	72-20-8	Endrin	
P051	72-20-8	Endrin, and metabolites	
P042	51-43-4	Epinephrine	
P031	460-19-5	Ethanedinitrile	
P194	23135-22-0	Ethanimidothioic acid, 2-(dimethylamino)-N-(((methylamino)carbonyl)oxy)-2-oxo-, methyl ester	
P066	16752-77-5	Ethanimidothioic acid, N-(((methylamino)carbonyl)oxy)-, methyl ester	
P101	107-12-0	Ethyl cyanide	
P054	151-56-4	Ethyleneimine	
P097	52-85-7	Famphur	
P056	7782-41-4	Fluorine	
P057	640-19-7	Fluoroacetamide	
P058	62-74-8	Fluoroacetic acid, sodium salt	
P198	23422-53-9	Formetanate hydrochloride	
P197	17702-57-7	Formparanate	
P065	628-86-4	Fulminic acid, mercury (2+) salt	(R, T)
P059	76-44-8	Heptachlor	
P062	757-58-4	Hexaethyl tetraphosphate	
P116	79-19-6	Hydrazinecarbothioamide	

P068	60-34-4	Hydrazine, methyl-	
P063	74-90-8	Hydrocyanic acid	
P063	74-90-8	Hydrogen cyanide	
P096	7803-51-2	Hydrogen phosphide	
P060	465-73-6	Isodrin	
P192	119-38-0	Isolan	
P202	64-00-6	3-Isopropylphenyl-N-methylcarbamate	
P007	2763-96-4	3(2H)-Isoxazolone, 5-(aminomethyl)-	
P196	15339-36-3	Manganese, bis(dimethylcarbamodithioato-S,S')	
P196	15339-36-3	Manganese dimethyldithiocarbamate	
P092	62-38-4	Mercury, (acetato-O)phenyl-	
P065	628-86-4	Mercury fulminate	(R, T)
P082	62-75-9	Methanamine, N-methyl-N-nitroso-	
P064	624-83-9	Methane, isocyanato-	
P016	542-88-1	Methane, oxybis(chloro-	
P112	509-14-8	Methane, tetranitro-	(R)
P118	75-70-7	Methanethiol, trichloro-	
P198	23422-53-9	Methanimidamide, N,N-dimethyl-N'-(3-(((methylamino)-carbonyl)oxy)phenyl)-, monohydrochloride	
P197	17702-57-7	Methanimidamide, N,N-dimethyl-N'-(2-methyl-4-(((methylamino)-carbonyl)oxy)phenyl)-	
P199	2032-65-7	Methiocarb	
P050	115-29-7	6,9-Methano-2,4,3-benzodioxathiepen, 6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-, 3-oxide	
P059	76-44-8	4,7-Methano-1H-indene, 1,4,5,6,7,8,8-heptachloro-3a,4,7,7a-tetrahydro-	
P066	16752-77-5	Methomyl	
P068	60-34-4	Methyl hydrazine	
P064	624-83-9	Methyl isocyanate	
P069	75-86-5	2-Methylactonitrile	
P071	298-00-0	Methyl parathion	
P190	1129-41-5	Metolcarb	
P128	315-18-4	Mexacarbate	
P072	86-88-4	α -Naphthylthiourea	
P073	13463-39-3	Nickel carbonyl	
P073	13463-39-3	Nickel carbonyl Ni(CO) ₄ , (T-4)-	
P074	557-19-7	Nickel cyanide	
P074	557-19-7	Nickel cyanide Ni(CN) ₂	
P075	54-11-5*	Nicotine, and salts	
P076	10102-43-9	Nitric oxide	

P077	100-01-6	p-Nitroaniline	
P078	10102-44-0	Nitrogen dioxide	
P076	10102-43-9	Nitrogen oxide NO	
P078	10102-44-0	Nitrogen oxide NO ₂	
P081	55-63-0	Nitroglycerine	(R)
P082	62-75-9	N-Nitrosodimethylamine	
P084	4549-40-0	N-Nitrosomethylvinylamine	
P085	152-16-9	Octamethylpyrophosphoramidate	
P087	20816-12-0	Osmium oxide OsO ₄ , (T-4)-	
P087	20816-12-0	Osmium tetroxide	
P088	145-73-3	7-Oxabicyclo(2.2.1)heptane-2,3-dicarboxylic acid	
P194	23135-22-0	Oxamyl	
P089	56-38-2	Parathion	
P034	131-89-5	Phenol, 2-cyclohexyl-4,6-dinitro-	
P128	315-18-4	Phenol, 4-(dimethylamino)-3,5-dimethyl-, methylcarbamate (ester)	
P199	2032-65-7	Phenol, (3,5-dimethyl-4-(methylthio)-, methylcarbamate	
P048	51-28-5	Phenol, 2,4-dinitro-	
P047	534-52-1*	Phenol, 2-methyl-4,6-dinitro-, and salts	
P202	64-00-6	Phenol, 3-(1-methylethyl)-, methyl carbamate	
P201	2631-37-0	Phenol, 3-methyl-5-(1-methylethyl)-, methyl carbamate	
P020	88-85-7	Phenol, 2-(1-methylpropyl)-4,6-dinitro-	
P009	131-74-8	Phenol, 2,4,6-trinitro-, ammonium salt	(R)
P092	62-38-4	Phenylmercury acetate	
P093	103-85-5	Phenylthiourea	
P094	298-02-2	Phorate	
P095	75-44-5	Phosgene	
P096	7803-51-2	Phosphine	
P041	311-45-5	Phosphoric acid, diethyl 4-nitrophenyl ester	
P039	298-04-4	Phosphorodithioic acid, O,O-diethyl S-(2-(ethylthio)ethyl) ester	
P094	298-02-2	Phosphorodithioic acid, O,O-diethyl S-((ethylthio)methyl) ester	
P044	60-51-5	Phosphorodithioic acid, O,O-dimethyl S-(2-(methylamino)-2-oxoethyl)ester	
P043	55-91-4	Phosphorofluoridic acid, bis(1-methyl-ethyl)ester	

P089	56-38-2	Phosphorothioic acid, O,O-diethyl O-(4-nitrophenyl) ester	
P040	297-97-2	Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester	
P097	52-85-7	Phosphorothioic acid, O-(4-((dimethylamino)sulfonyl)phenyl) O,O-dimethyl ester	
P071	298-00-0	Phosphorothioic acid, O,O-dimethyl O-(4-nitrophenyl) ester	
P204	57-47-6	Physostigmine	
P188	57-64-7	Physostigmine salicylate	
P110	78-00-2	Plumbane, tetraethyl-	
P098	151-50-8	Potassium cyanide	
P098	151-50-8	Potassium cyanide KCN	
P099	506-61-6	Potassium silver cyanide	
P201	2631-37-0	Promecarb	
P203	1646-88-4	Propanal, 2-methyl-2-(methylsulfonyl)-, O-((methylamino)carbonyl) oxime	
P070	116-06-3	Propanal, 2-methyl-2-(methylthio)-, O-((methylamino)carbonyl)oxime	
P101	107-12-0	Propanenitrile	
P027	542-76-7	Propanenitrile, 3-chloro-	
P069	75-86-5	Propanenitrile, 2-hydroxy-2-methyl-	
P081	55-63-0	1,2,3-Propanetriol, trinitrate-	(R)
P017	598-31-2	2-Propanone, 1-bromo-	
P102	107-19-7	Propargyl alcohol	
P003	107-02-8	2-Propenal	
P005	107-18-6	2-Propen-1-ol	
P067	75-55-8	1,2-Propylenimine	
P102	107-19-7	2-Propyn-1-ol	
P008	504-24-5	4-Pyridinamine	
P075	54-11-5*	Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (S)- and salts	
P204	57-47-6	Pyrrolo(2,3-b)indol-5-ol, 1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethyl-, methylcarbamate (ester), (3aS-cis)-	
P114	12039-52-0	Selenious acid, dithallium (1+) salt	
P103	630-10-4	Selenourea	
P104	506-64-9	Silver cyanide	
P104	506-64-9	Silver cyanide AgCN	
P105	26628-22-8	Sodium azide	
P106	143-33-9	Sodium cyanide	
P106	143-33-9	Sodium cyanide NaCN	

P108	57-24-9*	Strychnidin-10-one, and salts	
P018	357-57-3	Strychnidin-10-one, 2,3-dimethoxy-	
P108	57-24-9*	Strychnine and salts	
P115	7446-18-6	Sulfuric acid, dithallium (1+) salt	
P109	3689-24-5	Tetraethyldithiopyrophosphate	
P110	78-00-2	Tetraethyl lead	
P111	107-49-3	Tetraethylpyrophosphate	
P112	509-14-8	Tetranitromethane	(R)
P062	757-58-4	Tetraphosphoric acid, hexaethyl ester	
P113	1314-32-5	Thallic oxide	
P113	1314-32-5	Thallium oxide Tl_2O_3	
P114	12039-52-0	Thallium (I) selenite	
P115	7446-18-6	Thallium (I) sulfate	
P109	3689-24-5	Thiodiphosphoric acid, tetraethyl ester	
P045	39196-18-4	Thiofanox	
P049	541-53-7	Thioimidodicarbonic diamide $((H_2N)C(S))_2NH$	
P014	108-98-5	Thiophenol	
P116	79-19-6	Thiosemicarbazide	
P026	5344-82-1	Thiourea, (2-chlorophenyl)-	
P072	86-88-4	Thiourea, 1-naphthalenyl-	
P093	103-85-5	Thiourea, phenyl-	
P123	8001-35-2	Toxaphene	
P185	26419-73-8	Tirpate	
P118	75-70-7	Trichloromethanethiol	
P119	7803-55-6	Vanadic acid, ammonium salt	
P120	1314-62-1	Vanadium oxide V_2O_5	
P120	1314-62-1	Vanadium pentoxide	
P084	4549-40-0	Vinylamine, N-methyl-N-nitroso-	
P001	81-81-2*	Warfarin, and salts, when present at concentrations greater than 0.3 percent	
P121	557-21-1	Zinc cyanide	
P121	557-21-1	Zinc cyanide $Zn(CN)_2$	
P205	137-30-4	Zinc, bis(dimethylcarbamo-dithioato- S,S')-	
P122	1314-84-7	Zinc phosphide Zn_3P_2 , when present at concentrations greater than 10 percent	(R, T)
P205	137-30-4	Ziram	

Numerical Listing

USEPA Hazardous Waste No.	Chemical Abstracts No. (CAS No.)	Substance	Hazard Code

P205	137-30-4	Ziram

BOARD NOTE: An asterisk (*) following the CAS number indicates that the CAS number is given for the parent compound only.

- f) The commercial chemical products, manufacturing chemical intermediates, or off-specification commercial chemical products referred to in subsections (a) through (d), are identified as toxic wastes (T) unless otherwise designated ~~and are subject to the small quantity exclusion defined in Section 721.105(a) and (g)~~. These wastes and their corresponding USEPA hazardous waste numbers are the following:

BOARD NOTE: For the convenience of the regulated community, the primary hazardous properties of these materials have been indicated by the letters T (Toxicity), R (Reactivity), I (Ignitability), and C (Corrosivity). The absence of a letter indicates that the compound is only listed for toxicity. Wastes are first listed in alphabetical order by substance and then listed again in numerical order by USEPA hazardous waste number.

SUBPART E: EXCLUSIONS AND EXEMPTIONS

Section 721.139 Conditional Exclusion for Used, Broken CRTs and Processed CRT Glass Undergoing Recycling

Used, broken CRTs are not solid waste if they meet the following conditions:

- a) Prior to CRT ~~Processing~~processing. These materials are not solid wastes if they are destined for recycling and they meet the following requirements:
 - 1) Storage. The broken CRTs must be managed in either of the following ways:
 - A) They are stored in a building with a roof, floor, and walls, or
 - B) They are placed in a container (i.e., a package or a vehicle) that is constructed, filled, and closed to minimize releases to the environment of CRT glass (including fine solid materials).
 - 2) Labeling. Each container in which the used, broken CRT is contained must be labeled or marked clearly with one of the following phrases: “Used cathode ray tubes—contains leaded glass” or “Leaded glass from televisions or computers.”. It must also be labeled with the following statement: “Do not mix with other glass materials.”
 - 3) Transportation. The used, broken CRTs must be transported in a container meeting the requirements of subsections (a)(1)(B) and (a)(2) ~~of this Section~~.
 - 4) Speculative ~~Accumulation~~accumulation and ~~Use Constituting Disposal~~use constituting disposal. The used, broken CRTs are subject to the limitations on speculative accumulation, as defined in subsection (c)(8) ~~of this Section~~. If they are used in a manner constituting disposal, they must comply with the applicable requirements of Subpart C of 35 Ill. Adm. Code ~~40 CFR~~ 726, instead of the requirements of this Section.
 - 5) Exports. In addition to the applicable conditions specified in subsections (a)(1) through (a)(4) ~~of this Section~~, an exporter of used, broken CRTs must comply with the following requirements:

- A) It must notify the Agency and USEPA of an intended export before the CRTs are scheduled to leave the United States. A complete notification should be submitted sixty (60) days before the initial shipment is intended to be shipped off-site. This notification may cover export activities extending over a 12-month or shorter period. The notification must be in writing, signed by the exporter, and include the following information:
- i) The name, mailing address, telephone number and USEPA identification number (if applicable) of the exporter of the CRTs.
 - ii) The estimated frequency or rate at which the CRTs are to be exported and the period of time over which they are to be exported.
 - iii) The estimated total quantity of CRTs specified in kilograms.
 - iv) All points of entry to and departure from each foreign country through which the CRTs will pass.
 - v) A description of the means by which each shipment of the CRTs will be transported (e.g., mode of transportation vehicle (air, highway, rail, water, etc.), types of container (drums, boxes, tanks, etc.)).
 - vi) The name and address of the recycler or recyclers and the estimated quantity of used CRTs to be sent to each facility, as well as the name of any alternate recycler.
 - vii) A description of the manner in which the CRTs will be recycled in the foreign country that will be receiving the CRTs.
 - viii) The name of any transit country through which the CRTs will be sent and a description of the approximate length of time the CRTs will remain in such country and the nature of their handling while there.
- B) Notifications must be submitted electronically using USEPA's Waste Import Export Tracking System (WIETS). ~~Whether delivered by mail or hand-delivered, the following words must be prominently displayed on the front of any envelope containing an export notification: "Attention: Notification of Intent to Export CRTs."~~

i) ~~An export notification submitted to USEPA by mail must be sent to the following mailing address:~~

~~Office of Enforcement and Compliance Assurance
Office of Federal Activities, International
Compliance Assurance Division (Mail Code
2254A)
Environmental Protection Agency
1200 Pennsylvania Ave., NW
Washington, DC 20460~~

ii) ~~An export notification hand-delivered to USEPA must be sent to:~~

~~Office of Enforcement and Compliance Assurance
Office of Federal Activities, International
Compliance Assurance Division (Mail Code
2254A)
Environmental Protection Agency
Ariel Rios Bldg., Room 6144
1200 Pennsylvania Ave., NW
Washington, DC~~

iii) ~~An export notification submitted to the Agency by mail or hand-delivered must be sent to the following mailing address:~~

~~Illinois Environmental Protection Agency
Bureau of Land Pollution Control
1021 North Grand Ave East
P.O. Box 19276
Springfield, IL 62794-9276~~

- C) Upon request by the Agency or USEPA, the exporter must furnish to the Agency and USEPA any additional information which a receiving country requests in order to respond to a notification.
- D) USEPA has stated that it will provide a complete notification to the receiving country and any transit countries. A notification is complete when the Agency and USEPA receives a notification that USEPA determines satisfies the requirements of subsection (a)(5)(A) of this Section. ~~Where a claim of confidentiality is asserted with respect to any notification information required by subsection (a)(5)(A) of this Section, USEPA has stated that it may~~

~~find the notification not complete until any such claim is resolved in accordance with 40 CFR 260.2.~~

- E) The export of CRTs is prohibited, unless all of the following occur:
- i) The receiving country consents to the intended export.
When the receiving country consents in writing to the receipt of the CRTs, USEPA has stated that it will forward a USEPA an Acknowledgment of Consent (AOC) to Export CRTs to the exporter. Where the receiving country objects to receipt of the CRTs or withdraws a prior consent, USEPA has stated that it will notify the exporter in writing. USEPA has stated that it will also notify the exporter of any responses from transit countries.
 - ii) The exporter or a U.S. authorized agent must fulfill the requirements of subsection (a)(6).

BOARD NOTE: The Board moved the text of corresponding 40 CFR 261.39(a)(5)(v)(B)(1) through (a)(5)(v)(B)(2)(vii) to appear as subsections (a)(6)(A) through (a)(6)(B)(vii) to comport with codification requirements.

- F) When the conditions specified on the original notification change, the exporter must provide the Agency and USEPA with a written renotification of the change using the allowable methods listed in subsection (a)(5)(ii) of this section, except for changes to the telephone number in subsection (a)(5)(A)(i) ~~of this Section~~ and decreases in the quantity indicated pursuant to subsection (a)(5)(A)(iii) ~~of this Section~~. The shipment cannot take place until consent of the receiving country to the changes has been obtained (except for changes to information about points of entry and departure and transit countries pursuant to subsections (a)(5)(A)(iv) and (a)(5)(A)(viii) ~~of this Section~~) and the exporter of CRTs receives from USEPA a copy of the AOC Acknowledgment of Consent to Export CRTs reflecting the receiving country's consent to the changes.
- G) A copy of the AOC to Acknowledgment of Consent to Export CRTs must accompany the shipment of CRTs. The shipment must conform to the terms of the Acknowledgment.
- H) If a shipment of CRTs cannot be delivered for any reason to the recycler or the alternate recycler, the exporter of CRTs must

renotify the Agency and USEPA of a change in the conditions of the original notification to allow shipment to a new recycler in accordance with subsection (a)(5)(F) ~~of this Section~~ and obtain another AOC Acknowledgment of Consent to Export CRTs.

- I) An exporter must keep copies of notifications and AOCs Acknowledgments of Consent to Export CRTs for a period of three years following receipt of the AOC Acknowledgment. An exporter may satisfy this recordkeeping requirement by retaining electronically submitted notifications or electronically generated Acknowledgements in the CRT exporter's account on USEPA's WIETS, or its successor system, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized state inspector. No CRT exporter may be held liable for the inability to produce a notification or Acknowledgement for inspection under this section if the CRT exporter can demonstrate that the inability to produce such copies are due exclusively to technical difficulty with USEPA's WIETS, or its successor system for which the CRT exporter bears no responsibility.
- J) A CRT exporter must file with USEPA, no later than March 1 of each year, an annual report summarizing the quantities (in kilograms), frequency of shipment, and ultimate destinations (i.e., the facility or facilities where the recycling occurs) of all used CRTs exported during the previous calendar year. This annual report must also include the following:
- i) The name, USEPA identification number (if applicable), and mailing and site address of the exporter;
 - ii) The calendar year covered by the report;
 - iii) A certification signed by the CRT exporter that states as follows:

“I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining this information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.”

- K) Annual reports must be submitted to the office listed using the allowable methods specified in subsection (a)(5)(B). Exporters must keep copies of each annual report for a period of at least three years after the due date of the report. An exporter may satisfy this recordkeeping requirement by retaining electronically submitted annual reports in the CRT exporter’s account on USEPA’s WIETS, or its successor system, provided that a copy is readily available for viewing and production if requested by any USEPA or authorized Agency inspector. No CRT exporter may be held liable for the inability to produce an annual report for inspection under this Section if the CRT exporter can demonstrate that the inability to produce the annual report is due exclusively to technical difficulty with USEPA’s WIETS, or its successor system for which the CRT exporter bears no responsibility. Annual reports must be submitted to the office specified in subsection (a)(5)(B) of this Section. A CRT exporter must keep copies of each annual report for a period of at least three years from the due date of the report.

BOARD NOTE: The hazardous waste import and export rules define “USEPA Acknowledgement of Consent” in 35 Ill. Adm. Code 722.181.

6) AES Reporting Requirements.

- A) Submit Electronic Export Information (EEI) for each shipment to the Automated Export System (AES) or its successor system, under the International Trade Data System (ITDS) platform, in accordance with 15 CFR 30.4(b), incorporated by reference in 35 Ill. Adm. Code 720.111.
- B) Include the following items in the EEI, along with the other information required under 15 CFR 30.6, incorporated by reference in 35 Ill. Adm. Code 720.111:
- i) The USEPA license code;
 - ii) The commodity classification code (per 15 CFR 30.6(a)(12));
 - iii) The USEPA consent number;
 - iv) The country of ultimate destination (per 15 CFR 30.6(a)(5));;
 - v) The date of export (per 15 CFR 30.6(a)(2));;

- vi) The quantity of waste in shipment and units for reported quantity, if required reporting units established by value for the reported commodity classification number are in units of weight or volume (per 15 CFR 30.6(a)(15));; or
- vii) The USEPA net quantity reported in units of kilograms, if required reporting units established by value for the reported commodity classification number are not in units of weight or volume.

BOARD NOTE: The Board moved the text of corresponding 40 CFR 261.39(a)(5)(v)(B)(1) through (a)(5)(v)(B)(2)(vii) to appear as subsections (a)(6)(A) through (a)(6)(B)(vii) to comport with codification requirements.

BOARD NOTE: Corresponding 40 CFR 261.39(a)(5) requires communications relating to export of CRTs between the exporter and USEPA. It is clear that USEPA intends to maintain its central role between the exporter and the export-receiving country and its granting authorization to export. Nevertheless, the Board has required the exporter submit to the Agency also whatever notifications it must submit to USEPA relating to the export. The intent is to facilitate the Agency's efforts towards assurance of compliance with the regulations as a whole, and not to require a separate authorization for export by the Agency.

- b) Requirements for used CRT processing. Used, broken CRTs undergoing CRT processing, as defined in 35 Ill. Adm. Code 720.110, are not solid waste if they meet the following requirements:
 - 1) Storage. Used, broken CRTs undergoing CRT processing are subject to the requirement of subsection (a)(4) ~~of this Section~~.
 - 2) CRT Processing ~~processing~~.
 - A) All activities specified in the second and third paragraphs of the definition of "CRT processing" in 35 Ill. Adm. Code 720.110 must be performed within a building with a roof, floor, and walls; and

BOARD NOTE: The activities specified in the second and third paragraphs of the definition of "CRT processing" are "intentionally breaking intact CRTs or further breaking or separating broken CRTs" and "sorting or otherwise managing glass removed from CRT monitors:".
 - B) No activities may be performed that use temperatures high enough to volatilize lead from CRTs.

- c) Glass from CRT processing that is sent to CRT glass making or lead smelting. Glass from CRT processing that is destined for recycling at a CRT glass manufacturer or a lead smelter after CRT processing is not a solid waste unless it is speculatively accumulated, as defined in Section 721.101(c)(8).
- d) Use constituting disposal. Glass from CRT processing that is used in a manner constituting disposal must comply with the requirements of Subpart C of 35 Ill. Adm. Code 726 instead of the requirements of this Section.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.141 Notification and Recordkeeping for Used, Intact CRTs Exported for Reuse

- a) A CRT exporter that exports used, intact CRTs for reuse must send a notification to the Agency and USEPA. This notification may cover export activities extending over a 12-month or lesser period.
 - 1) The notification must be in writing, signed by the exporter, and include the following information:
 - A) Name, mailing address, telephone number, and USEPA identification number (if applicable) of the exporter of the used, intact CRTs;
 - B) The estimated frequency or rate at which the used, intact CRTs are to be exported for reuse and the period of time over which they are to be exported;
 - C) The estimated total quantity of used, intact CRTs specified in kilograms;
 - D) All points of entry to and departure from each transit country through which the used, intact CRTs will pass, a description of the approximate length of time the used, intact CRTs will remain in that country, and the nature of their handling while there;
 - E) A description of the means by which each shipment of the used, intact CRTs will be transported (e.g., mode of transportation vehicle (air, highway, rail, water, etc.), types of container (drums, boxes, tanks, etc.));
 - F) The name and address of the ultimate destination facility or facilities where the used, intact CRTs will be reused, refurbished, distributed, or sold for reuse and the estimated quantity of used, intact CRTs to be sent to each facility, as well as the name of any alternate destination facility or facilities;

G) A description of the manner in which the used, intact CRTs will be reused (including reuse after refurbishment) in the foreign country that will be receiving the used, intact CRTs; and

H) A certification signed by the CRT exporter that states as follows:

“I certify under penalty of law that the CRTs described in this notice are intact and fully functioning or capable of being functional after refurbishment and that the used CRTs will be reused or refurbished and reused. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.”

2) Notifications submitted by mail should be sent to the following mailing address:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (Mail Code 2254A)
Environmental Protection Agency
1200 Pennsylvania Ave., NW
Washington, DC 20460

Hand-delivered notifications should be sent to the following address:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (Mail Code 2254A)
Environmental Protection Agency
William Jefferson Clinton Building, Room 6144
1200 Pennsylvania Ave., NW
Washington, DC 20004

In either case, the following must be prominently displayed on the front of the envelope:

“Attention: Notification of Intent to Export CRTs.”

A notification submitted to the Agency by mail or hand-delivered must be sent to the following mailing address:

Illinois Environmental Protection Agency
 Bureau of Land Pollution Control
 1021 North Grand Ave., East
 P.O. Box 19276
 Springfield, IL 62794-9276

- b) A CRT exporter that exports used, intact CRTs for reuse must keep copies of normal business records, such as contracts, demonstrating that each shipment of exported used, intact CRTs will be reused. This documentation must be retained for a period of at least three years from the date the CRTs were exported. If the documents are written in a language other than English, a CRT exporter of used, intact CRTs sent for reuse must provide both the original, non-English version of the normal business records, as well as a third-party translation of the normal business records into English, within 30 days after a request by USEPA.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART H: FINANCIAL REQUIREMENTS FOR MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

Section 721.242 Cost Estimate

- a) The owner or operator of a reclamation or intermediate facility must have a detailed written estimate, in current dollars, of the cost of disposing of any hazardous secondary material as listed or characteristic hazardous waste, and the potential cost of closing the facility as a treatment, storage, and disposal facility.
- 1) The estimate must equal the cost of conducting the activities described in this subsection (a) at the point when the extent and manner of the facility's operation would make these activities the most expensive.
 - 2) The cost estimate must be based on the costs to the owner or operator of hiring a third party to conduct these activities. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of "parent corporation" in 35 Ill. Adm. Code 725.241(d).) The owner or operator may use costs for on-site disposal in accordance with applicable requirements if the owner or operator can demonstrate that on-site disposal capacity will exist at all times over the life of the facility.
 - 3) The cost estimate may not incorporate any salvage value that may be realized with the sale of hazardous secondary materials, hazardous waste, non-hazardous wastes (if permitted by the Agency pursuant to 35 Ill. Adm. Code 725.213(d)), facility structures or equipment, land, or other assets associated with the facility.

- 4) The owner or operator may not incorporate a zero cost for hazardous secondary materials, hazardous waste, non-hazardous wastes (if permitted by the Agency pursuant to 35 Ill. Adm. Code 725.213(d)) that might have economic value.
- b) During the active life of the facility, the owner or operator must adjust the written cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instruments used to comply with the requirements of Section 721.243. An owner or operator that uses the financial test or corporate guarantee must update its cost estimate for inflation within 30 days after the close of the firm's fiscal year and before submission of updated information to the Agency and USEPA pursuant to Section 721.243(e)(3). The adjustment may be made by recalculating the cost estimate in current dollars, or by using an inflation factor derived from the most recent Implicit Price Deflator for Gross National Product (Deflator) published by the U.S. Department of Commerce, as specified in subsections (b)(1) and (b)(2) ~~of this Section~~. The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year.
- 1) The first adjustment is made by multiplying the cost estimate by the inflation factor. The result is the adjusted cost estimate.
 - 2) Subsequent adjustments are made by multiplying the latest adjusted cost estimate by the latest inflation factor.

BOARD NOTE: The table of Deflators is available as Table 1.1.9. in the National Income and Product Account Tables, published by U.S. Department of Commerce, Bureau of Economic Analysis, National Economic Accounts, available on-line at the following web address: www.bea.gov/national/nipaweb/TableView.asp?SelectedTable=13&FirstYear=2002&LastYear=2004&Freq=Qtr.

- c) During the active life of the facility, the owner or operator must revise the cost estimate no later than 30 days after a change in a facility's operating plan or design that would increase the costs of conducting the activities described in subsection (a) ~~of this Section~~ or no later than 60 days after an unexpected event which increases the cost of conducting the activities described in subsection (a) ~~of this Section~~. The revised cost estimate must be adjusted for inflation, as specified in subsection (b) ~~of this Section~~.
- d) The owner or operator must keep the following documents at the facility during the operating life of the facility: The latest cost estimate prepared in accordance with subsections (a) and (c) ~~of this Section~~ and, when this estimate has been adjusted in accordance with subsection (b) ~~of this Section~~, the latest adjusted cost estimate.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.243 Financial Assurance Condition

As required by Section 721.104(a)(24)(F)(vi), an owner or operator of a reclamation facility or an intermediate facility must have financial assurance as a condition of the exclusion. The owner or operator must choose from among the options specified in subsections (a) through (e) ~~of this Section.~~

- a) Trust Fund ~~fund.~~
- 1) An owner or operator may satisfy the requirements of this Section by establishing a trust fund that conforms to the requirements of this subsection (a) and submitting an originally signed duplicate of the trust agreement to the Agency. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.
 - 2) The wording of the trust agreement must be identical to the wording specified by the Agency pursuant to Section 721.251, and the trust agreement must be accompanied by a formal certification of acknowledgment as specified by the Agency pursuant to Section 721.251. Schedule A of the trust agreement must be updated within 60 days after any change in the amount of the current cost estimate covered by the agreement.
 - 3) The trust fund must be funded for the full amount of the current cost estimate before it may be relied upon to satisfy the requirements of this Section.
 - 4) Whenever the current cost estimate changes, the owner or operator must compare the new cost estimate with the trustee's most recent annual valuation of the trust fund. Within 60 days after the change in the cost estimate, if the value of the fund is less than the amount of the new cost estimate, the owner or operator must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current cost estimate, or the owner or operator must obtain other financial assurance that satisfies the requirements of this Section to cover the difference.
 - 5) If the value of the trust fund is greater than the total amount of the current cost estimate, the owner or operator may submit a written request to the Agency for release of the amount in excess of the current cost estimate.
 - 6) If an owner or operator substitutes other financial assurance that satisfies the requirements of this Section for all or part of the trust fund, it may submit a written request to the Agency for release of the amount in excess of the current cost estimate covered by the trust fund.

- 7) Within 60 days after receiving a request from the owner or operator for a release of funds, as specified in subsection (a)(5) or (a)(6) ~~of this Section~~, the Agency must instruct the trustee to release to the owner or operator such funds as the Agency specifies in writing. If the owner or operator begins final closure pursuant to Subpart G of 35 Ill. Adm. Code 724 or 725, it may request reimbursements for partial or final closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs of closing the facility over its remaining operating life. No later than 60 days after receiving bills for partial or final closure activities, if the Agency determines that the partial or final closure expenditures are in accordance with the approved closure plan, or otherwise justified, the Agency must instruct the trustee to make reimbursements in those amounts as the Agency specifies in writing. If the Agency has reason to believe that the maximum cost of closure over the remaining life of the facility will be significantly greater than the value of the trust fund, the Agency may withhold reimbursements of such amounts as the Agency deems prudent until the Agency determines, in accordance with 35 Ill. Adm. Code 725.243(i), that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the Agency does not instruct the trustee to make such reimbursements, the Agency must provide to the owner or operator a detailed written statement of reasons.
- 8) The Agency must agree to termination of the trust fund when either of the following has occurred:
- A) The Agency determines that the owner or operator has substituted alternative financial assurance that satisfies the requirements of this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i) ~~of this Section~~.
- b) Surety Bond Guaranteeing Payment ~~bond guaranteeing payment into a Trust Fund trust fund.~~
- 1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (b) and submitting the bond to the Agency. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, “Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies;”, on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: <http://www.fms.treas.gov/c570/>.

- 2) The wording of the surety bond must be identical to the wording specified by the Agency pursuant to Section 721.251.
- 3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in subsection (a) ~~of this Section~~, except that the following also apply:
 - A) The owner or operator must submit an originally signed duplicate of the trust agreement to the Agency with the surety bond; and
 - B) Until the standby trust fund is funded pursuant to the requirements of this Section, the following are not required:
 - i) Payments into the trust fund, as specified in subsection (a) ~~of this Section~~;
 - ii) Updating of Schedule A of the trust agreement to show current cost estimates;
 - iii) Annual valuations, as required by the trust agreement; and
 - iv) Notices of nonpayment, as required by the trust agreement.
- 4) The bond must guarantee that the owner or operator will undertake one of the following actions:
 - A) That the owner or operator will fund the standby trust fund in an amount equal to the penal sum of the bond before loss of the exclusion pursuant to Section 721.104(a)(24);
 - B) That the owner or operator will fund the standby trust fund in an amount equal to the penal sum within 15 days after an administrative order to begin closure issued by the Agency becomes final, or within 15 days after an order to begin closure is issued by the Board or a court of competent jurisdiction; or

- C) Within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety, that the owner or operator will provide alternate financial assurance that satisfies the requirements of this Section and obtain the Agency's written approval of the assurance provided.
- 5) Under the terms of the bond, the surety must become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.
 - 6) The penal sum of the bond must be in an amount at least equal to the current cost estimate, except as provided in subsection (f) ~~of this Section~~.
 - 7) Whenever the current cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance that satisfies the requirements of this Section to cover the increase. Whenever the current cost estimate decreases, the penal sum may be reduced to the amount of the current cost estimate following written approval by the Agency.
 - 8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.
 - 9) The owner or operator may cancel the bond if the Agency has given prior written consent based on the Agency's receipt of evidence of alternate financial assurance that satisfies the requirements of this Section.
- c) Letter of Credit ~~credit~~.
- 1) An owner or operator may satisfy the requirements of this Section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection (c) and submitting the letter to the Agency. The issuing institution must be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.
 - 2) The wording of the letter of credit must be identical to the wording specified by the Agency pursuant to Section 721.251.
 - 3) An owner or operator who uses a letter of credit to satisfy the requirements of this Section must also establish a standby trust fund.

Under the terms of the letter of credit, all amounts paid pursuant to a draft by the Agency will be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements of the trust fund specified in subsection (a) ~~of this Section~~, except that the following also apply:

- A) The owner or operator must submit an originally signed duplicate of the trust agreement to the Agency with the letter of credit; and
 - B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required:
 - i) Payments into the trust fund, as specified in subsection (a) ~~of this Section~~;
 - ii) Updating of Schedule A of the trust agreement to show current cost estimates;
 - iii) Annual valuations, as required by the trust agreement; and
 - iv) Notices of nonpayment, as required by the trust agreement.
- 4) The letter of credit must be accompanied by a letter from the owner or operator that refers to the letter of credit by number, issuing institution, and date, and which provides the following information: The USEPA identification number (if any issued), name, and address of the facility, and the amount of funds assured for the facility by the letter of credit.
 - 5) The letter of credit must be irrevocable, and the letter must be issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Agency by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120 days will begin on the date when both the owner or operator and the Agency have received the notice, as evidenced by the return receipts.
 - 6) The letter of credit must be issued in an amount at least equal to the current cost estimate, except as provided in subsection (f) ~~of this Section~~.
 - 7) Whenever the current cost estimate increases to an amount greater than the amount of the credit, within 60 days after the increase, the owner or operator must either cause the amount of the credit to be increased, so that it at least equals the current cost estimate, and submit evidence of such increase to the Agency, or it must obtain other financial assurance that

satisfies the requirements of this Section to cover the increase. Whenever the current cost estimate decreases, the amount of the credit may be reduced to the amount of the current cost estimate following written approval by the Agency.

- 8) Following a determination by the Agency that the hazardous secondary materials do not meet the conditions of the exclusion set forth in Section 721.104(a)(24), the Agency may draw on the letter of credit.
 - 9) If the owner or operator does not establish alternative financial assurance that satisfies the requirements of this Section and obtain written approval of such alternate assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice from the issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the Agency may draw on the letter of credit. The Agency may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last 30 days of any such extension, the Agency may draw on the letter of credit if the owner or operator has failed to provide alternative financial assurance that satisfies the requirements of this Section and obtain written approval of such assurance from the Agency.
 - 10) The Agency must return the letter of credit to the issuing institution for termination when either of the following occurs:
 - A) The owner or operator substitutes alternative financial assurance that satisfies the requirements of this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i) ~~of this Section.~~
- d) Insurance-
- 1) An owner or operator may satisfy the requirements of this Section by obtaining insurance that conforms to the requirements of this subsection (d) and submitting a certificate of such insurance to the Agency. At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one or more states.
 - 2) The wording of the certificate of insurance must be identical to the wording specified by the Agency pursuant to Section 721.251.
 - 3) The insurance policy must be issued for a face amount at least equal to the current cost estimate, except as provided in subsection (f) ~~of this Section.~~ The term “face amount” means the total amount the insurer is obligated to

pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer's future liability will be lowered by the amount of the payments.

- 4) The insurance policy must guarantee that funds will be available whenever needed to pay the cost of removal of all hazardous secondary materials from the unit, to pay the cost of decontamination of the unit, and to pay the costs of the performance of activities required under Subpart G of 35 Ill. Adm. Code 724 or 725, as applicable, for the facilities covered by the policy. The policy must also guarantee that once funds are needed, the insurer will be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Agency, to such party or parties as the Agency specifies.
- 5) After beginning partial or final closure pursuant to 35 Ill. Adm. Code 724 or 725, as applicable, an owner or operator or any other authorized person may request reimbursements for closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements only if the remaining value of the policy is sufficient to cover the maximum costs of closing the facility over its remaining operating life. If the Agency determines that the expenditures are in accordance with the approved plan or are otherwise justified, the Agency must, within 60 days after receiving bills for closure activities, instruct the insurer in writing to make reimbursements in such amounts as the Agency specifies. If the Agency has reason to believe that the maximum cost over the remaining life of the facility will be significantly greater than the face amount of the policy, the Agency may withhold reimbursement of such amounts as the Agency deems prudent until the Agency determines, in accordance with subsection (h) ~~of this Section~~, that the owner or operator is no longer required to maintain financial assurance for the particular facility. If the Agency does not instruct the insurer to make such reimbursements, the Agency must provide to the owner or operator a detailed written statement of reasons.

BOARD NOTE: The owner or operator may appeal any Agency determination made pursuant to this subsection (d)(5), as provided by Section 40 of the Act ~~[415 ILCS 5/40]~~.

- 6) The owner or operator must maintain the policy in full force and effect until the Agency consents to termination of the policy by the owner or operator, as specified in subsection (d)(10) ~~of this Section~~. Failure to pay the premium, without substitution of alternate financial assurance as specified in this Section, will constitute a significant violation of these regulations warranting such remedy as is deemed necessary pursuant to Sections 31, 39, and 40 of the Act ~~[415 ILCS 5/31, 39, and 40]~~. Such a

violation will be deemed to begin upon receipt by the Agency of a notice of future cancellation, termination, or failure to renew the policy due to nonpayment of the premium, rather than upon the date of policy expiration.

- 7) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditioned on consent of the insurer, so long as the policy provides that the insurer may not unreasonably refuse such consent.
- 8) The policy must provide that the insurer may not cancel, terminate, or fail to renew the policy, except for failure to pay the premium. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. If the owner or operator fails to pay the premium, the insurer may elect to cancel, terminate, or fail to renew the policy by sending notice by certified mail to the owner or operator and the Agency. Cancellation, termination, or failure to renew may not occur, however, during the 120 days that begin on the date that both the Agency and the owner or operator have received the notice, as evidenced by the return receipts. Cancellation, termination, or failure to renew the policy may not occur, and the policy will remain in full force and effect, in the event that on or before the expiration date, one of the following events occurs:
 - A) The Agency deems the facility abandoned;
 - B) Conditional exclusion or interim status is lost, terminated, or revoked;
 - C) Closure is ordered by the Board or a court of competent jurisdiction;
 - D) The owner or operator is named as debtor in a voluntary or involuntary proceeding under Title 11 of the U.S. Code (Bankruptcy); or
 - E) The premium due has been paid.
- 9) Whenever the owner or operator learns that the current cost estimate has increased to an amount greater than the face amount of the policy, the owner or operator must, within 60 days after learning of the increase, either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the Agency, or the owner or operator must obtain other financial assurance that satisfies the requirements of this Section to cover the increase. Whenever the current cost estimate decreases, the face amount may be

reduced to the amount of the current cost estimate after the owner or operator has obtained the written approval of the Agency.

- 10) The Agency must give written consent that allows the owner or operator to terminate the insurance policy when either of the following events occurs:
 - A) The Agency has determined that the owner or operator has substituted alternative financial assurance that satisfies the requirements of this Section; or
 - B) The Agency has released the owner or operator from the requirements of this Section pursuant to subsection (i) ~~of this Section.~~
- e) ~~Financial Test test and Corporate Guarantee corporate guarantee.~~
- 1) An owner or operator may satisfy the requirements of this Section by demonstrating that the owner or operator passes one of the financial tests specified in this subsection (e). To pass a financial test, the owner or operator must meet the criteria of either subsection (e)(1)(A) or (e)(1)(B) ~~of this Section:~~
 - A) Test 1. The owner or operator must have each of the following:
 - i) Two of the following three ratios: A ratio of total liabilities to net worth less than 2.0; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; and a ratio of current assets to current liabilities greater than 1.5;
 - ii) Net working capital and tangible net worth each at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;
 - iii) Tangible net worth of at least \$10 million; and
 - iv) Assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.
 - B) Test 2. The owner or operator must have each of the following:
 - i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB, as issued by Standard and Poor's, or Aaa, Aa, A, or Baa, as issued by Moody's;

- ii) Tangible net worth at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates;
- iii) Tangible net worth of at least \$10 million; and
- iv) Assets located in the United States amounting to either at least 90 percent of total assets or at least six times the sum of the current cost estimates and the current plugging and abandonment cost estimates.

2) Definitions:

“Current cost estimates;”² as used in subsection (e)(1) ~~of this Section~~, refers to the following four cost estimates required in the standard letter from the owner’s or operator’s chief financial officer:

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in subsections (e)(1) through (e)(9) ~~of this Section~~;

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the corporate guarantee specified in subsection (e)(10) ~~of this Section~~;

For facilities in a state outside of Illinois, the cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in Subpart H of 40 CFR 261 or through a financial test deemed by USEPA as equivalent to that set forth in Subpart H of 40 CFR 261; and

The cost estimate for each facility for which the owner or operator has not demonstrated financial assurance to the Agency, USEPA, or a sister state in which the facility is located by any mechanism that satisfies the requirements of the applicable of this Subpart H, Subpart H of 40 CFR 261, or regulations deemed by USEPA as equivalent to Subpart H of 40 CFR 261.

“Current plugging and abandonment cost estimates;”² as used in subsection (e)(1) ~~of this Section~~, refers to the following four cost estimates required in the standard form of a letter from the owner’s

or operator's chief financial officer (see 35 Ill. Adm. Code 704.240):

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in 35 Ill. Adm. Code 704.219(a) through (i);

The cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in 35 Ill. Adm. Code 704.219(j);

For facilities in a state outside of Illinois, the cost estimate for each facility for which the owner or operator has demonstrated financial assurance through the financial test specified in Subpart F of 40 CFR 144 or through a financial test deemed by USEPA as equivalent to that set forth in Subpart F of 40 CFR 144; and

The cost estimate for each facility for which the owner or operator has not demonstrated financial assurance to the Agency, USEPA, or a sister state in which the facility is located by any mechanism that satisfies the requirements of the applicable of Subpart G of 35 Ill. Adm. Code 704, Subpart F of 40 CFR 144, or regulations deemed by USEPA as equivalent to Subpart F of 40 CFR 144.

BOARD NOTE: Corresponding 40 CFR 261.143(e)(2) defines "current cost estimate" as "the cost estimates required to be shown in paragraphs 1–4 of the letter from the owner's or operator's chief financial officer (Section 261.151(e))" and "current plugging and abandonment cost estimates" as "the cost estimates required to be shown in paragraphs 1–4 of the letter from the owner's or operator's chief financial officer (Section 144.70(f) of this chapter)". The Board has substituted the descriptions of these estimates, using those set forth by USEPA in 40 CFR 261.151(e) and 144.70(f), as appropriate. Since the letter of the chief financial officer must include the cost estimates for any facilities that the owner or operator manages outside of Illinois, the Board has referred to the corresponding regulations of those sister states as "regulations deemed by USEPA as equivalent to Subpart F of 40 CFR 144 and Subpart H of 40 CFR 261:".

- 3) To demonstrate that it meets the financial test set forth in subsection (e)(1) ~~of this Section~~, the owner or operator must submit the following items to the Agency:

- A) A letter signed by the owner's or operator's chief financial officer and worded as specified by the Agency pursuant to Section 721.251 that is derived from the independently audited, year-end financial statements for the latest fiscal year, with the amounts of the pertinent environmental liabilities included in such financial statements;
 - B) A copy of an independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and
 - C) If the chief financial officer's letter prepared pursuant to subsection (e)(3)(A) ~~of this Section~~ includes financial data which shows that the owner or operator satisfies the test set forth in subsection (e)(1)(A) ~~of this Section~~ (Test 1), and either the data in the chief financial officer's letter are different from the data in the audited financial statements required by subsection (e)(3)(B) ~~of this Section~~, or the data are different from any other audited financial statement or data filed with the federal Securities and Exchange Commission, then the owner or operator must submit a special report from its independent certified public accountant. The special report must be based on an agreed-upon procedures engagement, in accordance with professional auditing standards. The report must describe the procedures used to compare the data in the chief financial officer's letter (prepared pursuant to subsection (e)(3)(A) ~~of this Section~~), the findings of the comparison, and the reasons for any differences.
- 4) This subsection (e)(3)(4) corresponds with 40 CFR 261.143(e)(3)(iv), a provision relating to extension of the deadline for filing the financial documents required by 40 CFR 261.143(e)(3) until as late as 90 days after the effective date of the federal rule. Thus, the latest date for filing the documents was March 29, 2009, which is now past. See 40 CFR 261.143(e)(3) and 73 Fed. Reg. 64668 (Oct. 30, 2008). This statement maintains structural consistency with the corresponding federal provision.
 - 5) After the initial submission of items specified in subsection (e)(3) ~~of this Section~~, the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must consist of all three items specified in subsection (e)(3) ~~of this Section~~.
 - 6) If the owner or operator no longer fulfills the requirements of subsection (e)(1) ~~of this Section~~, it must send notice to the Agency of intent to establish alternative financial assurance that satisfies the requirements of

this Section. The owner or operator must send the notice by certified mail within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the requirements. The owner or operator must provide the alternative financial assurance within 120 days after the end of such fiscal year.

- 7) The Agency may, based on a reasonable belief that the owner or operator may no longer meet the requirements of subsection (e)(1) ~~of this Section~~, require reports of financial condition at any time from the owner or operator in addition to those specified in subsection (e)(3) ~~of this Section~~. If the Agency finds, on the basis of such reports or other information, that the owner or operator no longer meets the requirements of subsection (e)(1) ~~of this Section~~, the owner or operator must provide alternative financial assurance that satisfies the requirements of this Section within 30 days after notification of such a finding.
- 8) The Agency must disallow use of the financial tests set forth in this subsection (e) on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's financial statements (see subsection (e)(3)(B) ~~of this Section~~) where the Agency determines that those qualifications significantly, adversely affect the owner's or operator's ability to provide its own financial assurance by this mechanism. An adverse opinion or a disclaimer of opinion will be cause for disallowance. The Agency must evaluate all other kinds of qualifications on an individual basis. The owner or operator must provide alternative financial assurance that satisfies the requirements of this Section within 30 days after a notification of Agency disallowance pursuant to this subsection (e)(8).
- 9) The owner or operator is no longer required to submit the items specified in subsection (e)(3) ~~of this Section~~ when either of the following events occur:
 - A) An owner or operator has substituted alternative financial assurance that satisfies the requirements of this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section pursuant to subsection (i) ~~of this Section~~.
- 10) Corporate guarantee for financial responsibility. An owner or operator may comply with the requirements of this Section by obtaining a written corporate guarantee. The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a sister firm whose parent corporation is also the parent corporation of the owner or operator, or a

firm with a “substantial business relationship” with the owner or operator. The guarantor must meet the requirements applicable to an owner or operator as set forth in subsections (e)(1) through (e)(8) ~~of this Section~~, and it must comply with the terms of the guarantee. The wording of the guarantee must be identical to the wording specified by the Agency pursuant to Section 721.251. A certified copy of the guarantee must accompany the items sent to the Agency that are required by subsection (e)(3) ~~of this Section~~. One of these items must be the letter from the guarantor’s chief financial officer. If the guarantor’s parent corporation is also the parent corporation of the owner or operator, the letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a “substantial business relationship” with the owner or operator, this letter must describe this “substantial business relationship” and the value received in consideration of the guarantee. The terms of the guarantee must provide as follows:

- A) Following a determination by the Agency that the hazardous secondary materials at the owner or operator’s facility covered by this guarantee do not meet the conditions of the exclusion under Section 721.104(a)(24), the guarantor must dispose of any hazardous secondary material as hazardous waste and close the facility in accordance with the applicable closure requirements set forth in 35 Ill. Adm. Code 724 or 725, or the guarantor must establish a trust fund in the name of the owner or operator and in the amount of the current cost estimate that satisfies the requirements of subsection (a) ~~of this Section~~.
 - B) The corporate guarantee must remain in force unless the guarantor has sent notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date on which both the owner or operator and the Agency have received the notice of cancellation, as evidenced by the return receipts.
 - C) If the owner or operator fails to provide alternative financial assurance that satisfies the requirements of this Section and obtain the written approval of such alternate assurance from the Agency within 90 days after the date on which both the owner or operator and the Agency have received the notice of cancellation of the corporate guarantee from the guarantor, the guarantor must provide such alternative financial assurance in the name of the owner or operator.
- f) Use of Multiple Financial Mechanisms ~~multiple financial mechanisms~~. An owner or operator may satisfy the requirements of this Section by establishing more than

one financial mechanism per facility. The mechanisms that an owner or operator may use for this purpose are limited to a trust fund that satisfies the requirements of subsection (a) ~~of this Section~~, a surety bond that satisfies the requirements of subsection (b) ~~of this Section~~, a letter of credit that satisfies the requirements of subsection (c) ~~of this Section~~, and insurance that satisfies the requirements of subsection (d) ~~of this Section~~. The mechanisms must individually satisfy the indicated requirements of this Section, except that it is the combination of all mechanisms used by the owner or operator, rather than any individual mechanism, that must provide financial assurance for an aggregated amount at least equal to the current cost estimate. If an owner or operator uses a trust fund in combination with a surety bond or a letter of credit, the owner or operator may use the trust fund as the standby trust fund for the other mechanisms. The owner or operator may establish a single standby trust fund for two or more mechanisms. The Agency may use any or all of the mechanisms to provide care for the facility.

- g) Use of a Single Financial Mechanism ~~single financial mechanism~~ for Multiple Facilities ~~multiple facilities~~. An owner or operator may use a single financial assurance mechanism that satisfies the requirements of this Section to fulfill the requirements of this Section for more than one facility. Evidence of financial assurance submitted to the Agency must include a list showing, for each facility, the USEPA identification number (if any), name, address, and the amount of funds assured by the mechanism. If the facilities covered by the mechanism are in more than one Region, USEPA requires the owner or operator to submit and maintain identical evidence of financial assurance with each USEPA Region in which a covered facility is located. The amount of funds available through the mechanism must be no less than the sum of funds that would be available if a separate mechanism had been established and maintained for each facility. In directing funds available through a mechanism for any of the facilities covered by that mechanism, the Agency may direct only that amount of funds designated for that facility, unless the owner or operator agrees to the use of additional funds available under the mechanism.
- h) Removal and Decontamination Plan ~~decontamination plan~~ for Release ~~release~~ from Financial Assurance Obligations ~~financial assurance obligations~~.
- 1) An owner or operator of a reclamation facility or an intermediate facility that wishes to be released from its financial assurance obligations under Section 721.104(a)(24)(F)(vi) must submit a plan for removing all hazardous secondary material residues from the facility. The owner or operator must submit the plan to the Agency at least 180 days prior to the date on which the owner or operator expects to cease to operate under the exclusion.
 - 2) The plan must, at a minimum, include the following information:

- A) For each hazardous secondary materials storage unit subject to financial assurance requirements pursuant to Section 721.104(a)(24)(F)(vi), the plan must include a description of how all excluded hazardous secondary materials will be recycled or sent for recycling, and how all residues, contaminated containment systems (liners, etc.), contaminated soils, subsoils, structures, and equipment will be removed or decontaminated as necessary to protect human health and the environment;
 - B) The plan must include a detailed description of the steps necessary to remove or decontaminate all hazardous secondary material residues and contaminated containment system components, equipment, structures, and soils, including, but not limited to, procedures for cleaning equipment and removing contaminated soils, methods for sampling and testing surrounding soils, and criteria for determining the extent of decontamination necessary to protect human health and the environment;
 - C) The plan must include a detailed description of any other activities necessary to protect human health and the environment during this timeframe, including, but not limited to, leachate collection, run-on and run-off control, etc.; and
 - D) The plan must include a schedule for conducting the activities described that, at a minimum, includes the total time required to remove all excluded hazardous secondary materials for recycling and decontaminate all units subject to financial assurance pursuant to Section 721.104(a)(24)(F)(vi) and the time required for intervening activities that will allow tracking of the progress of decontamination.
- 3) The Agency must provide the owner or operator and the public, through a newspaper notice, the opportunity to submit written comments on and request modifications to the plan. The Agency must accept any comments or requests to modify the plan that it receives no later than 30 days after the date of publication of the notice. The Agency must also, in response to a request or in its discretion, hold a public hearing whenever it determines that such a hearing might clarify one or more issues concerning the plan. The Agency must give public notice of the hearing at least 30 days before it occurs. (Public notice of the hearing may be given at the same time as notice of the opportunity for the public to submit written comments, and the Agency may combine the two notices.) The Agency must approve, modify, or disapprove the plan within 90 days after its receipt. If the Agency does not approve the plan, the Agency must provide the owner or operator with a detailed written statement of reasons for its refusal, and the

owner or operator must modify the plan or submit a new plan for approval within 30 days after the owner or operator receives such a written statement from the Agency. The Agency must approve or modify this owner- or operator-modified plan in writing within 60 days. If the Agency modifies the owner- or operator-modified plan, this modified plan becomes the approved plan. The Agency must assure that the approved plan is consistent with this subsection (h). A copy of the modified plan with a detailed statement of reasons for the modifications must be mailed to the owner or operator.

- 4) Within 60 days after completion of the activities described for each hazardous secondary materials management unit, the owner or operator must submit to the Agency, by registered mail, a certification that all hazardous secondary materials have been removed from the unit and that the unit has been decontaminated in accordance with the specifications in the approved plan. The certification must be signed by the owner or operator and by a qualified Professional Engineer. Upon request, the owner or operator must furnish the Agency with documentation that supports the Professional Engineer's certification, until the Agency releases the owner or operator from the financial assurance requirements of Section 721.104(a)(24)(F)(vi).
- i) Release of the Owner ~~owner~~ or ~~Operator operator~~ from the Requirements ~~requirements~~ of This ~~this~~ Section. Within 60 days after receiving certifications from the owner or operator and a qualified Professional Engineer that all hazardous secondary materials have been removed from the facility or from a unit at the facility and the facility or unit has been decontaminated in accordance with the approved plan in compliance with the requirements of subsection (h) ~~of this Section~~, the Agency must determine whether or not the owner or operator has accomplished the objectives of removing all hazardous secondary materials from the facility or from a unit at the facility and decontaminating the facility in accordance with the approved plan. If the Agency determines that the owner or operator has accomplished both objectives, the Agency must notify the owner or operator in writing, within the 60 days, that the owner and operator are no longer required pursuant to Section 721.104(a)(24)(F)(vi) to maintain financial assurance for that facility or unit at the facility. If the Agency determines that the owner or operator has not accomplished both objectives, it must provide the owner or operator with a detailed written statement of the basis for its determination.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.247 Liability Requirements

- a) Coverage for Sudden Accidental Occurrences ~~sudden accidental occurrences~~. The owner or operator of one or more hazardous secondary material reclamation

facilities or intermediate facilities that are subject to financial assurance requirements pursuant to Section 721.104(a)(24)(F)(vi) must demonstrate financial responsibility for bodily injury and property damage to third parties caused by sudden accidental occurrences arising from operations of its facilities. The owner or operator must maintain liability coverage in force for sudden accidental occurrences in the amount of at least \$1 million per occurrence with an annual aggregate of at least \$2 million, exclusive of legal defense costs. This liability coverage may be demonstrated as specified in any of subsections (a)(1), (a)(2), (a)(3), (a)(4), (a)(5), or (a)(6) ~~of this Section.~~

- 1) An owner or operator may demonstrate the required liability coverage by having liability insurance that satisfies the requirements of this subsection (a)(1).
 - A) Each insurance policy must be amended by attachment of the Hazardous Secondary Material Facility Liability Endorsement, or evidenced by a Certificate of Liability Insurance. The wording of the Hazardous Secondary Material Facility Liability Endorsement must be identical to the wording specified by the Agency pursuant to Section 721.251. The wording of the Certificate of Liability Insurance must be identical to the wording specified by the Agency pursuant to Section 721.251. The owner or operator must submit a signed duplicate original of the Hazardous Secondary Material Facility Liability Endorsement or the Certificate of Liability Insurance to the Agency. If requested by the Agency, the owner or operator must provide a signed duplicate original of the insurance policy.
 - B) At a minimum, each insurance policy must be issued by an insurer that is licensed to transact the business of insurance, or which is eligible to provide insurance as an excess or surplus lines insurer, in one or more states.
- 2) An owner or operator may satisfy the requirements of this Section by passing a financial test or using the guarantee for liability coverage that satisfies the requirements of subsections (f) and (g) ~~of this Section.~~
- 3) An owner or operator may satisfy the requirements of this Section by obtaining a letter of credit for liability coverage that satisfies the requirements of subsection (h) ~~of this Section.~~
- 4) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond for liability coverage that satisfies the requirements of subsection (i) ~~of this Section.~~

- 5) An owner or operator may satisfy the requirements of this Section by obtaining a trust fund for liability coverage that satisfies the requirements of subsection (j) ~~of this Section~~.
- 6) An owner or operator may demonstrate the required liability coverage through the use of a combination of insurance (subsection (a)(1) ~~of this Section~~), financial test (subsection (f) ~~of this Section~~), guarantee (subsection (g) ~~of this Section~~), letter of credit (subsection (h) ~~of this Section~~), surety bond (subsection (i) ~~of this Section~~), and trust fund (subsection (j) ~~of this Section~~), except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee where the financial statement of the owner or operator is consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated by the combination must total at least the minimum amounts required for the facility by this Section. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances pursuant to this subsection (a)(6), the owner or operator must specify at least one such assurance as “primary” coverage and all other assurance as “excess” coverage.
- 7) An owner or operator must notify the Agency in writing within 30 days whenever any of the following events has occurred:
 - A) A claim has resulted in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument authorized by any of subsections (a)(1) through (a)(6) ~~of this Section~~;
 - B) A Certification of Valid Claim for bodily injury or property damages caused by a sudden or non-sudden accidental occurrence arising from the operation of a hazardous secondary material reclamation facility or intermediate facility is entered between the owner or operator and a third-party claimant for liability coverage established pursuant to any of subsections (a)(1) through (a)(6) ~~of this Section~~; or
 - C) A final court order that establishes a judgment for bodily injury or property damage caused by a sudden or non-sudden accidental occurrence which arose from the operation of a hazardous secondary material reclamation facility or intermediate facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage pursuant to any of subsections (a)(1) through (a)(6) ~~of this Section~~.

BOARD NOTE: Corresponding 40 CFR 261.147(a) recites that it applies to “a hazardous secondary material reclamation facility or intermediate facility with land-based units . . . or a group of such facilities.” The Board has rendered this provision in the singular, intending that it include several facilities as a group where necessary. The Board does not intend to limit the applicability of this provision to multiple facilities. Note that the Agency can require compliance with this provision by a facility to which it would not otherwise apply pursuant to subsection (d)(2) ~~of this Section~~, subject to the owner’s or operator’s right to appeal an Agency determination to the Board.

- b) Coverage for Non-sudden Accidental Occurrences ~~non-sudden accidental occurrences~~. An owner or operator of a hazardous secondary material reclamation facility or intermediate facility with land-based units, as defined in Section 720.110, that is used to manage hazardous secondary materials excluded pursuant to Section 721.104(a)(24) must demonstrate financial responsibility for bodily injury and property damage to third parties caused by non-sudden accidental occurrences that arise from operations of the facility or group of facilities. The owner or operator must maintain liability coverage for non-sudden accidental occurrences in the amount of at least \$3 million per occurrence with an annual aggregate of at least \$6 million, exclusive of legal defense costs. An owner or operator that must satisfy the requirements of this Section may combine the required per occurrence coverage levels for sudden and non-sudden accidental occurrences into a single per-occurrence level, and the owner or operator may combine the required annual aggregate coverage levels for sudden and non-sudden accidental occurrences into a single annual aggregate level. An owner or operator that combines coverage levels for sudden and non-sudden accidental occurrences must maintain liability coverage in the amount of at least \$4 million per occurrence and \$8 million annual aggregate. The owner or operator may demonstrate this liability coverage by any of the means set forth in subsections (b)(1) through (b)(6) ~~of this Section~~:
- 1) An owner or operator may demonstrate the required liability coverage by having liability insurance that satisfies the requirements of this subsection (b)(1).
 - A) Each insurance policy must be amended by attachment of the Hazardous Secondary Material Facility Liability Endorsement or evidenced by a Certificate of Liability Insurance. The wording of the Hazardous Secondary Material Facility Liability Endorsement must be identical to the wording specified by the Agency pursuant to Section 721.251. The wording of the Certificate of Liability Insurance must be identical to the wording specified by the Agency pursuant to Section 721.251. The owner or operator must submit a signed duplicate original of the Hazardous Secondary Material Facility Liability Endorsement or the Certificate of Liability

Insurance to the Agency. If requested by the Agency, the owner or operator must provide a signed duplicate original of the insurance policy.

- B) At a minimum, each insurance policy must be issued by an insurer that is licensed to transact the business of insurance, or which is eligible to provide insurance as an excess or surplus lines insurer, in one or more states.
- 2) An owner or operator may satisfy the requirements of this Section by passing a financial test or by using the guarantee for liability coverage that satisfies the requirements of subsections (f) and (g) ~~of this Section~~.
 - 3) An owner or operator may satisfy the requirements of this Section by obtaining a letter of credit for liability coverage that satisfies the requirements of subsection (h) ~~of this Section~~.
 - 4) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond for liability coverage that satisfies the requirements of subsection (i) ~~of this Section~~.
 - 5) An owner or operator may satisfy the requirements of this Section by obtaining a trust fund for liability coverage that satisfies the requirements of subsection (j) ~~of this Section~~.
 - 6) An owner or operator may demonstrate the required liability coverage through the use of a combination of insurance (subsection (b)(1) ~~of this Section~~), financial test (subsection (f) ~~of this Section~~), guarantee (subsection (g) ~~of this Section~~), letter of credit (subsection (h) ~~of this Section~~), surety bond (subsection (i) ~~of this Section~~), or trust fund (subsection (j) ~~of this Section~~), except that the owner or operator may not combine a financial test covering part of the liability coverage requirement with a guarantee where the financial statement of the owner or operator is consolidated with the financial statement of the guarantor. The amounts of coverage demonstrated by the combination must total to at least the minimum amounts required for the facility by this Section. If the owner or operator demonstrates the required coverage through the use of a combination of financial assurances pursuant to this subsection (b)(6), the owner or operator must specify at least one such assurance as “primary” coverage and all other assurance as “excess” coverage.
 - 7) An owner or operator must notify the Agency in writing within 30 days whenever any of the following events has occurred:
 - A) A claim has resulted in a reduction in the amount of financial assurance for liability coverage provided by a financial instrument

authorized by any of subsections (b)(1) through (b)(6) ~~of this Section~~;

- B) A Certification of Valid Claim for bodily injury or property damages caused by a sudden or non-sudden accidental occurrence arising from the operation of a hazardous secondary material treatment or storage facility is entered between the owner or operator and a third-party claimant for liability coverage established pursuant to any of subsections (b)(1) through (b)(6) ~~of this Section~~; or
- C) A final court order that establishes a judgment for bodily injury or property damage caused by a sudden or non-sudden accidental occurrence which arose from the operation of a hazardous secondary material treatment and/or storage facility is issued against the owner or operator or an instrument that is providing financial assurance for liability coverage pursuant to any of subsections (b)(1) through (b)(6) ~~of this Section~~.

BOARD NOTE: Corresponding 40 CFR 261.147(b) recites that it applies to “a hazardous secondary material reclamation facility or intermediate facility with land-based units . . . or a group of such facilities.”. The Board has rendered this provision in the singular, intending that it include several facilities as a group where necessary. The Board does not intend to limit the applicability of this provision to multiple facilities. Note that the Agency can require compliance with this provision by a facility to which it would not otherwise apply pursuant to subsection (d)(2) ~~of this Section~~, subject to the owner’s or operator’s right to appeal an Agency determination to the Board.

- c) Petition for Adjusted Standard ~~adjusted standard~~. If an owner or operator can demonstrate that the level of financial responsibility required by subsection (a) or (b) ~~of this Section~~ is not consistent with the degree and duration of risk associated with treatment or storage at a facility, the owner or operator may petition the Board for an adjusted standard pursuant to Section 28.1 of the Act ~~[415 ILCS 5/28.1]~~. The petition for an adjusted standard must be filed with the Board and submitted in writing to the Agency, as required by 35 Ill. Adm. Code 101 and Subpart D of 35 Ill. Adm. Code 104. If granted, the adjusted standard will take the form of an adjusted level of required liability coverage, such level to be based on the Board’s assessment of the degree and duration of risk associated with the ownership or operation of the facility or group of facilities. The owner or operator that requests an adjusted standard must provide such technical and engineering information as is necessary for the Board to determine that an alternative level of financial responsibility to that required by subsection (a) or (b) ~~of this Section~~ should apply.

BOARD NOTE: Corresponding 40 CFR 261.147(c) allows application for a “variance” for “the levels of financial responsibility” required for “the facility or group of facilities.” The Board has rendered this provision in the singular, intending that it include a single petition pertaining to several facilities as a group. The Board does not intend to limit the applicability of this provision to multiple facilities in a single petition. The Board has chosen the adjusted standard procedure for variance from the level of financial responsibility required by subsection (a) or (b) ~~of this Section~~.

- d) Adjustments by the Agency-
- 1) If the Agency determines that the level of financial responsibility required by subsection (a) or (b) ~~of this Section~~ is not consistent with the degree and duration of risk associated with treatment or storage of hazardous secondary material at a facility, the Agency may adjust the level of financial responsibility required to satisfy the requirements of subsection (a) or (b) ~~of this Section~~ to the level that the Agency deems necessary to protect human health and the environment. The Agency must base this adjusted level on an assessment of the degree and duration of risk associated with the ownership or operation of the facility.
 - 2) In addition, if the Agency determines that there is a significant risk to human health and the environment from non-sudden accidental occurrences resulting from the operations of a facility that is not a surface impoundment, pile, or land treatment facility, the Agency may require the owner or operator of the facility to comply with subsection (b) ~~of this Section~~.
 - 3) An owner or operator must furnish to the Agency, within a reasonable time, any information that the Agency requests to aid its determination whether cause exists for such adjustments of level or type of coverage.

BOARD NOTE: The owner or operator may appeal any Agency determination made pursuant to this subsection (d) pursuant to Section 40 of the Act ~~[415 ILCS 5/40]~~.

- e) Release from the Financial Assurance Obligation ~~financial assurance obligation~~ for a Facility ~~facility~~ or a Unit ~~unit~~ at a Facility ~~facility~~.
- 1) After an owner or operator has removed all hazardous secondary material from a facility or a unit at a facility and decontaminated the facility or unit at the facility, the owner or operator may submit a written request that the Agency release it from the obligation of subsections ~~subsection~~ (a) and (b) ~~of this Section~~ as they apply to the facility or to the unit. The owner or operator and a qualified Professional Engineer must submit with the

request certifications stating that all hazardous secondary materials have been removed from the facility or from a unit at the facility, and that the facility or a unit has been decontaminated in accordance with the owner's or operator's Agency-approved Section 721.243(h) plan.

- 2) Within 60 days after receiving the complete request and certifications described in subsection (e)(1) ~~of this Section~~, the Agency must notify the owner or operator in writing of its determination on the request. The Agency must grant the request only if it determines that the owner or operator has removed all hazardous secondary materials from the facility or from the unit at the facility and that the owner or operator has decontaminated the facility or unit in accordance with its Agency-approved Section 721.243(h) plan.
- 3) After an affirmative finding by the Agency pursuant to subsection (e)(2) ~~of this Section~~, the owner or operator is no longer required to maintain liability coverage pursuant to Section 721.104(a)(24)(F)(vi) for that facility or unit at the facility that is indicated in the written notice issued by the Agency.

BOARD NOTE: The Board has broken the single sentence of corresponding 40 CFR 261.147(e) into five sentences in three subsections in this subsection (e) for enhanced clarity. The owner or operator may appeal any Agency determination made pursuant to this subsection (e) pursuant to Section 40 of the Act ~~[415 ILCS 5/40]~~.

- f) Financial Test ~~test for Liability Coverage liability coverage.~~
 - 1) An owner or operator may satisfy the requirements of this Section by demonstrating that it passes one of the financial tests specified in this subsection (f)(1). To pass a financial test, the owner or operator must meet the criteria of either subsection (f)(1)(A) or (f)(1)(B) ~~of this Section~~:
 - A) Test 1. The owner or operator must have each of the following:
 - i) Net working capital and tangible net worth each at least six times the amount of liability coverage that the owner or operator needs to demonstrate by this test;
 - ii) Tangible net worth of at least \$10 million; and
 - iii) Assets in the United States that amount to either at least 90 percent of the owner's or operator's total assets or at least six times the amount of liability coverage that it needs to demonstrate by this test.

- B) Test 2. The owner or operator must have each of the following:
- i) A current rating for its most recent bond issuance of AAA, AA, A, or BBB, as issued by Standard and Poor's, or Aaa, Aa, A, or Baa, as issued by Moody's;
 - ii) Tangible net worth of at least \$10 million;
 - iii) Tangible net worth at least six times the amount of liability coverage to be demonstrated by this test; and
 - iv) Assets in the United States amounting to either at least 90 percent of the owner's or operator's total assets or at least six times the amount of liability coverage that it needs to demonstrate by this test.

2) Definition-

“Amount of liability coverage,” as used in subsection (f)(1) ~~of this Section~~, refers to the annual aggregate amounts for which coverage is required pursuant to subsections (a) and (b) ~~of this Section~~ and the annual aggregate amounts for which coverage is required pursuant to 35 Ill. Adm. Code 724.247(a) and (b) or 725.247(a) and (b).

- 3) To demonstrate that it meets the financial test set forth in subsection (f)(1) ~~of this Section~~, the owner or operator must submit the following three items to the Agency:
- A) A letter signed by the owner's or operator's chief financial officer and worded as specified by the Agency pursuant to Section 721.251. If an owner or operator is using the financial test to demonstrate both financial assurance, as specified by Section 721.243(e), and liability coverage, as specified by this Section, the owner or operator must submit the letter specified by the Agency pursuant to Section 721.251 for financial assurance to cover both forms of financial responsibility; no separate letter is required for liability coverage;
 - B) A copy of an independent certified public accountant's report on examination of the owner's or operator's financial statements for the latest completed fiscal year; and
 - C) If the chief financial officer's letter prepared pursuant to subsection (f)(3)(A) ~~of this Section~~ includes financial data which shows that the owner or operator satisfies the test set forth in

subsection (f)(1)(A) ~~of this Section~~ (Test 1), and either the data in the chief financial officer's letter are different from the data in the audited financial statements required by subsection (f)(3)(B) ~~of this Section~~, or the data are different from any other audited financial statement or data filed with the federal Securities and Exchange Commission, then the owner or operator must submit a special report from its independent certified public accountant. The special report must be based on an agreed-upon procedures engagement, in accordance with professional auditing standards. The report must describe the procedures used to compare the data in the chief financial officer's letter (prepared pursuant to subsection (f)(3)(A) ~~of this Section~~), the findings of the comparison, and the reasons for any difference.

- 4) This subsection (f)(4) corresponds with 40 CFR 261.147(f)(3)(iv), a provision relating to extension of the deadline for filing the financial documents required by 40 CFR 261.147(f)(3) until as late as 90 days after the effective date of the federal rule. Thus, the latest date for filing the documents was March 29, 2009, which is now past. See 40 CFR 261.147(f)(3) and 73 Fed. Reg. 64668 (Oct. 30, 2008). This statement maintains structural consistency with the corresponding federal provision.
- 5) After the initial submission of items specified in subsection (f)(3) ~~of this Section~~, the owner or operator must send updated information to the Agency within 90 days after the close of each succeeding fiscal year. This information must consist of all three items specified in subsection (f)(3) ~~of this Section~~.
- 6) If the owner or operator no longer fulfills the requirements of subsection (f)(1) ~~of this Section~~, it must obtain insurance (subsection (a)(1) ~~of this Section~~), a letter of credit (subsection (h) ~~of this Section~~), a surety bond (subsection (i) ~~of this Section~~), a trust fund (subsection (j) ~~of this Section~~), or a guarantee (subsection (g) ~~of this Section~~) for the entire amount of required liability coverage required by this Section. Evidence of liability coverage must be submitted to the Agency within 90 days after the end of the fiscal year for which the year-end financial data show that the owner or operator no longer meets the test requirements.
- 7) The Agency must disallow use of the financial tests set forth in this subsection (f) on the basis of qualifications in the opinion expressed by the independent certified public accountant in the accountant's report on examination of the owner's or operator's financial statements (see subsection (f)(3)(B) ~~of this Section~~) where the Agency determines that those qualifications significantly, adversely affect the owner's or operator's ability to provide its own financial assurance by this

mechanism. An adverse opinion or a disclaimer of opinion will be cause for disallowance. The Agency must evaluate all other kinds of qualifications on an individual basis. The owner or operator must provide evidence of insurance for the entire amount of required liability coverage that satisfies the requirements of this Section within 30 days after a notification of Agency disallowance pursuant to this subsection (f)(7).

- g) Corporate Guarantee ~~guarantee for Liability Coverage liability coverage.~~
- 1) Subject to the limitations of subsection (g)(2) ~~of this Section~~, an owner or operator may meet the requirements of this Section by obtaining a written guarantee (“guarantee”). The guarantor must be the direct or higher-tier parent corporation of the owner or operator, a sister firm whose parent corporation is also the parent corporation of the owner or operator, or a firm with a “substantial business relationship” with the owner or operator. The guarantor must meet the requirements applicable to an owner or operator as set forth in subsections (f)(1) through (f)(6) ~~of this Section~~. The wording of the guarantee must be identical to the wording specified by the Agency pursuant to Section 721.251. A certified copy of the guarantee must accompany the items sent to the Agency that are required by subsection (f)(3) ~~of this Section~~. One of these items must be the letter from the guarantor’s chief financial officer. If the guarantor’s parent corporation is also the parent corporation of the owner or operator, this letter must describe the value received in consideration of the guarantee. If the guarantor is a firm with a “substantial business relationship” with the owner or operator, this letter must describe this “substantial business relationship” and the value received in consideration of the guarantee.
- A) The guarantor must pay full satisfaction, up to the limits of coverage, whenever either of the following events has occurred with regard to liability for bodily injury or property damage to third parties caused by sudden or non-sudden accidental occurrences (or both) that arose from the operation of facilities covered by the corporate guarantee:
- i) The owner or operator has failed to satisfy a judgment based on a determination of liability; or
- ii) The owner or operator has failed to pay an amount agreed to in settlement of claims arising from or alleged to arise from such injury or damage.
- B) This subsection (g)(1)(B) is derived from 40 CFR 261.147(g)(1)(ii), which USEPA has marked as “reserved.” This

statement maintains structural consistency with the corresponding federal regulations.

BOARD NOTE: Any determination by the Agency pursuant to this subsection (g)(1)(B) is subject to Section 40 of the Act [~~415 HCS 5/40~~]. This subsection (g)(1)(B) is derived from 40 CFR 264.141(h) and 265.141(h) (2017) ~~(2009)~~.

- 2) Limitations on Guarantee and Documentation Required ~~documentation required.~~
- A) Where both the guarantor and the owner or operator are incorporated in the United States, a guarantee may be used to satisfy the requirements of this Section only if the Attorneys General or Insurance Commissioners of each of the following states have submitted a written statement to the Agency that a guarantee executed as described in this Section is a legally valid and enforceable obligation in that state:
- i) The state in which the guarantor is incorporated (if other than the State of Illinois); and
 - ii) The State of Illinois (as the state in which the facility covered by the guarantee is located).
- B) Where either the guarantor or the owner or operator is incorporated outside the United States, a guarantee may be used to satisfy the requirements of this Section only if both of the following has occurred:
- i) The non-U.S. corporation has identified a registered agent for service of process in the State of Illinois (as the state in which the facility covered by the guarantee is located) and in the state in which it has its principal place of business (if other than the State of Illinois); and
 - ii) The Attorney General or Insurance Commissioner of the State of Illinois (as the state in which a facility covered by the guarantee is located) and the state in which the guarantor corporation has its principal place of business (if other than the State of Illinois) has submitted a written statement to the Agency that a guarantee executed as described in this Section is a legally valid and enforceable obligation in that state.

- C) The facility owner or operator and the guarantor must provide the Agency with all documents that are necessary and adequate to support an Agency determination that the required substantial business relationship exists adequate to support the guarantee.

BOARD NOTE: The Board added documentation to this subsection (g)(2)(C) to ensure that the owner and operator ensures all information necessary for an Agency determination is submitted to the Agency. The information required would include copies of any contracts and other documents that establish the nature, extent, and duration of the business relationship; any statements of competent legal opinion, signed by an attorney duly licensed to practice law in each of the jurisdictions referred to in the applicable of subsection (g)(2)(A) or (g)(2)(B) ~~of this Section~~, that would support a conclusion that the business relationship is adequate consideration to support the guarantee in the pertinent jurisdiction; a copy of the documents required by subsection (g)(2)(A)(ii) or (g)(2)(B)(ii) ~~of this Section~~; documents that identify the registered agent, as required by subsection (g)(2)(B)(i) ~~of this Section~~; and any other documents requested by the Agency that are reasonably necessary to make a determination that a substantial business relationship exists, as such is defined in subsection (g)(1)(A) ~~of this Section~~.

- h) Letter of Credit ~~credit~~ for Liability Coverage ~~liability coverage~~.
- 1) An owner or operator may fulfill the requirements of this Section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection (h) and submitting a copy of the letter of credit to the Agency.
 - 2) The financial institution issuing the letter of credit must be an entity that has the authority to issue letters of credit and whose letter of credit operations are regulated and examined by a federal or state agency.
 - 3) The wording of the letter of credit must be identical to the wording specified by the Agency pursuant to Section 721.251.
 - 4) An owner or operator that uses a letter of credit to fulfill the requirements of this Section may also establish a standby trust fund. Under the terms of such a letter of credit, all amounts paid pursuant to a draft by the trustee of the standby trust fund must be deposited by the issuing institution into the standby trust fund in accordance with instructions from the trustee. The trustee of the standby trust fund must be an entity that has the authority to

act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

- 5) The wording of the standby trust fund must be identical to the wording specified by the Agency pursuant to Section 721.251.

i) Surety ~~Bond~~ fund for Liability Coverage ~~liability coverage~~.

- 1) An owner or operator may fulfill the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (i) and submitting a copy of the bond to the Agency.
- 2) The surety company issuing the bond must be among those listed as acceptable sureties on federal bonds in the most recent Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies;"¹ on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet at the following website: <http://www.fms.treas.gov/c570/>.

- 3) The wording of the surety bond must be identical to the wording specified by the Agency pursuant to Section 721.251.
- 4) A surety bond may be used to fulfill the requirements of this Section only if the Attorneys General or Insurance Commissioners of the following states have submitted a written statement to the Agency that a surety bond executed as described in this Section is a legally valid and enforceable obligation in that state:
 - A) The state in which the surety is incorporated; and
 - B) The State of Illinois (as the state in which the facility covered by the surety bond is located).

j) Trust ~~Fund~~ fund for Liability Coverage ~~liability coverage~~.

- 1) An owner or operator may fulfill the requirements of this Section by establishing a trust fund that conforms to the requirements of this subsection (j) and submitting an originally signed duplicate of the trust agreement to the Agency.
- 2) The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency.

- 3) The trust fund for liability coverage must be funded for the full amount of the liability coverage to be provided by the trust fund before it may be relied upon to fulfill the requirements of this Section. If at any time after the trust fund is created the amount of funds in the trust fund is reduced below the full amount of the liability coverage that the owner or operator must provide, the owner or operator must either add sufficient funds to the trust fund to cause its value to equal the full amount of liability coverage to be provided, or the owner or operator must obtain other financial assurance that satisfies the requirements of this Section to cover the difference. Where the owner or operator must either add sufficient funds or obtain other financial assurance, it must do so before the anniversary date of the establishment of the trust fund. For purposes of this subsection, “the full amount of the liability coverage to be provided” means the amount of coverage for sudden or non-sudden occurrences that the owner or operator is required to provide pursuant to this Section, less the amount of financial assurance for liability coverage that the owner or operator has provided by other financial assurance mechanisms to demonstrate financial assurance.
- 4) The wording of the trust fund must be identical to the wording specified by the Agency pursuant to Section 721.251.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section 721.279 Air Emission Standards

The remanufacturer or other person that stores or treats the hazardous secondary material must manage all hazardous secondary material placed in a container in accordance with the applicable requirements of Subparts AA, BB, and CC of this Part.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART J: TANK SYSTEMS

Section 721.291 Assessment of Existing Tank System’s Integrity

- a) A tank system must meet the secondary containment requirements of Section 721.293, or the remanufacturer or other person that handles the hazardous secondary material must determine that the tank system is not leaking or is unfit for use. Except as provided in subsection (c), a written assessment reviewed and certified by a qualified Professional Engineer must be kept on file at the remanufacturer’s facility or other facility that stores or treats the hazardous secondary material that attests to the tank system’s integrity.

- b) The qualified Professional Engineer's assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the materials to be stored or treated, to ensure that the tank system will not collapse, rupture, or fail. At a minimum, this assessment must consider the following:
- 1) Design standards, if available, according to which the tank system and ancillary equipment were constructed;
 - 2) Hazardous characteristics of the materials that have been and will be handled;
 - 3) Existing corrosion protection measures;
 - 4) Documented age of the tank system, if available (otherwise, an estimate of the age); and
 - 5) Results of a leak test, internal inspection, or other tank system integrity examination such that:
 - A) For non-enterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of temperature variations, tank end deflection, vapor pockets, and high water table effects; and
 - B) For other than non-enterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above, or other integrity examination that is certified by a qualified Professional Engineer that addresses cracks, leaks, corrosion, and erosion.
- BOARD NOTE: The practices described in the American Petroleum Institute (API) Publication, Guide for Inspection of Refinery Equipment, Chapter XIII, "Atmospheric and Low-Pressure Storage Tanks," 4th edition, 1981, incorporated by reference in 35 Ill. Adm. Code 720.111, may be used, where applicable, as guidelines in conducting other than a leak test.
- c) If, as a result of the assessment conducted in accordance with subsection (a), a tank system is found to be leaking or unfit for use, the remanufacturer or other person that stores or treats the hazardous secondary material must comply with the requirements of Section 721.296.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.293 Containment and Detection of Releases

- a) The following must be true of a secondary containment system:
- 1) The system is designed, installed, and operated to prevent any migration of materials or accumulated liquid out of the system to the soil, ground water, or surface water at any time during the use of the tank system; and
 - 2) The system is capable of detecting and collecting releases and accumulated liquids until the collected material is removed.

BOARD NOTE: If the collected material is a hazardous waste under this Part, the material is subject to management as a hazardous waste in accordance with all applicable requirements of 35 Ill. Adm. Code 722 through 728. If the collected material is discharged through a point source to waters of the United States, it is subject to the NPDES permit requirement of Section 12(f) of the Environmental Protection Act and 35 Ill. Adm. Code 309. If discharged to a Publicly Owned Treatment Works (POTW), it is subject to the requirements of 35 Ill. Adm. Code 307 and 310. If the collected material is released to the environment, it may be subject to the reporting requirements of 35 Ill. Adm. Code 750.410 and federal 40 CFR 302.6.

- b) To meet the requirements of subsection (a), a secondary containment system must fulfill the following requirements:
- 1) The secondary containment system must be constructed of or lined with materials that are compatible with the materials to be placed in the tank system and must have sufficient strength and thickness to prevent failure owing to pressure gradients (including static head and external hydrological forces), physical contact with the material to which it is exposed, climatic conditions, and the stress of daily operation (including stresses from nearby vehicular traffic);
 - 2) The secondary containment system must be placed on a foundation or base capable of providing support to the secondary containment system, resistance to pressure gradients above and below the system, and capable of preventing failure due to settlement, compression, or uplift;
 - 3) The secondary containment system must be provided with a leak-detection system that is designed and operated so that the system will detect the failure of either the primary or secondary containment structure or the presence of any release of hazardous secondary material or accumulated liquid in the secondary containment system at the earliest practicable time; and

- 4) The secondary containment system must be sloped or otherwise designed or operated to drain and remove liquids resulting from leaks, spills, or precipitation. Spilled or leaked material and accumulated precipitation must be removed from the secondary containment system in as timely a manner as is possible, but in no case later than 24 hours after the leak, spill, or accumulation of precipitation occurs, to prevent harm to human health and the environment.
- c) Secondary containment for tanks must include one or more of the following devices:
 - 1) A liner (external to the tank);
 - 2) A vault; or
 - 3) A double-walled tank.
 - d) In addition to the requirements of subsections (a), (b), and (c), secondary containment systems must satisfy the following requirements:
 - 1) An external liner system must fulfill the following requirements:
 - A) The secondary containment system must be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;
 - B) The secondary containment system must be designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. The additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;
 - C) The secondary containment system must be free of cracks or gaps; and
 - D) The secondary containment system must be designed and installed to surround the tank completely and to cover all surrounding earth likely to come into contact with the material if the material is released from the tanks (i.e., capable of preventing lateral as well as vertical migration of the material).
 - 2) A vault system must fulfill the following requirements:
 - A) The vault system must be designed or operated to contain 100 percent of the capacity of the largest tank within its boundary;

- B) The vault system must be designed or operated to prevent run-on or infiltration of precipitation into the secondary containment system unless the collection system has sufficient excess capacity to contain run-on or infiltration. The additional capacity must be sufficient to contain precipitation from a 25-year, 24-hour rainfall event;
 - C) The vault system must be constructed with chemical-resistant water stops in place at all joints (if any);
 - D) The vault system must be provided with an impermeable interior coating or lining that is compatible with the stored material and that will prevent migration of material into the concrete;
 - E) The vault system must be provided with a means to protect against the formation of and ignition of vapors within the vault, if the material being stored or treated is ignitable or reactive; and
 - F) The vault system must be provided with an exterior moisture barrier or be otherwise designed or operated to prevent migration of moisture into the vault if the vault is subject to hydraulic pressure.
- 3) A double-walled tank must fulfill the following requirements:
- A) The double-walled tank must be designed as an integral structure (i.e., an inner tank completely enveloped within an outer shell) so that any release from the inner tank is contained by the outer shell;
 - B) The double-walled tank must be protected, if constructed of metal, from both corrosion of the primary tank interior and of the external surface of the outer shell; and
 - C) The double-walled tank must be provided with a built-in continuous leak detection system capable of detecting a release at the earliest practicable time, but in no case later than 24 hours after the release occurs.

BOARD NOTE: The provisions outlined in the Steel Tank Institute's (STI) "Standard for Dual Wall Underground Steel Storage Tanks," incorporated by reference in 35 Ill. Adm. Code 720.111, may be used as guidelines for aspects of the design of underground steel double-walled tanks.

- e) This subsection (e) corresponds with 40 CFR 261.194(e), which USEPA has marked “reserved.”. This statement maintains structural consistency with the corresponding federal regulations.
- f) Ancillary equipment must be provided with secondary containment (e.g., trench, jacketing, double-walled piping, etc.) that meets the requirements of subsections (a) and (b), except for the following equipment:
 - 1) Aboveground piping (exclusive of flanges, joints, valves, and other connections) that are visually inspected for leaks on a daily basis;
 - 2) Welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis;
 - 3) Seal-less or magnetic coupling pumps and seal-less valves that are visually inspected for leaks on a daily basis; and
 - 4) Pressurized aboveground piping systems with automatic shut-off devices (e.g., excess flow check valves, flow metering shutdown devices, loss of pressure actuated shut-off devices, etc.) that are visually inspected for leaks on a daily basis.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.298 Special Requirements for Ignitable or Reactive Materials

- a) Ignitable or reactive material must not be placed in a tank system, unless the material is stored or treated in such a way that it is protected from any material or conditions that may cause the material to ignite or react.
- b) The remanufacturer or other person that stores or treats hazardous secondary material that is ignitable or reactive must store or treat the hazardous secondary material in a tank system that is in compliance with the requirements for the maintenance of protective distances between the material management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association’s “Flammable and Combustible Liquids Code,” incorporated by reference in 35 Ill. Adm. Code 720.111.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.300 Air Emission Standards

The remanufacturer or other person that stores or treats the hazardous secondary material must manage all hazardous secondary material placed in a tank in accordance with the applicable requirements of Subparts AA, BB, and CC ~~of this Part~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART M: EMERGENCY PREPAREDNESS AND RESPONSE FOR
MANAGEMENT OF EXCLUDED HAZARDOUS SECONDARY MATERIALS

**Section 721.520 Contingency Planning and Emergency Procedures for Facilities
Generating or Accumulating More Than 6,000 kg of Hazardous Secondary Material**

A generator or an intermediate or reclamation facility operating under a verified recycler variance under 35 Ill. Adm. Code 720.131(d) that generates or accumulates more than 6,000 kg of hazardous secondary material must comply with the following requirements:

- a) Purpose and ~~Implementation~~ ~~implementation~~ of ~~Contingency Plan~~ ~~contingency plan~~.
 - 1) Each generator or an intermediate or reclamation facility operating under a verified facility determination under 35 Ill. Adm. Code 720.131(d) that accumulates more than 6,000 kg of hazardous secondary material must have a contingency plan for his facility. The contingency plan must be designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water.
 - 2) The provisions of the contingency plan must be carried out immediately whenever there is a fire, explosion, or release of hazardous secondary material or hazardous secondary material constituents that could threaten human health or the environment.
- b) Content of ~~Contingency Plan~~ ~~contingency plan~~.
 - 1) The contingency plan must describe the actions facility personnel must take to comply with subsections (a) and (f) in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous secondary material or hazardous secondary material constituents to air, soil, or surface water at the facility.
 - 2) If the generator or an intermediate or reclamation facility operating under a verified facility determination under 35 Ill. Adm. Code 720.131(d) accumulating more than 6,000 kg of hazardous secondary material has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan in accordance with 40 CFR 112, or some other emergency or contingency plan, the facility needs only amend that plan to incorporate hazardous secondary material management provisions that are sufficient to comply with the requirements of this Part. The hazardous secondary material generator or an intermediate or reclamation facility operating

under a verified recycler variance under 35 Ill. Adm. Code 720.131(d) may develop one contingency plan which meets all regulatory requirements. When modifications are made to non-RCRA provisions in an integrated contingency plan, the changes do not trigger the need for a RCRA permit modification.

BOARD NOTE: USEPA has recommended that the contingency plan be based on the National Response Team's Integrated Contingency Plan Guidance ("One Plan").

- 3) The contingency plan must describe arrangements agreed to by local police departments, fire departments, hospitals, contractors, and State and local emergency response teams to coordinate emergency services, pursuant to 35 Ill. Adm. Code 722.510(f).
 - 4) The contingency plan must list names, addresses, and phone numbers (office and home) of all persons qualified to act as emergency coordinator (see subsection (e)), and this list must be kept up-to-date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates.
 - 5) The contingency plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. This list must be kept up to date. In addition, the plan must include the location and a physical description of each emergency equipment item on the list, and a brief outline of its capabilities.
 - 6) The contingency plan must include an evacuation plan for facility personnel where there is a possibility that evacuation could be necessary. This evacuation plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous secondary material or fires).
- c) Copies of Contingency Plan~~-contingency plan~~. The facility owner or operator must do as follows with the contingency plan and all revisions to the plan:
- 1) Maintain a copy at the facility; and
 - 2) Submit a copy to every local police department, fire department, hospital, and State and local emergency response team that may be called upon to provide emergency services.

- d) Amendment of Contingency Plan~~-contingency plan~~. The facility owner or operator must review and immediately amend its contingency plan, if necessary, whenever any of the following occurs:
- 1) Applicable regulations are revised;
 - 2) The plan fails in an emergency;
 - 3) The facility changes—in its design, construction, operation, maintenance, or other circumstances—in a way that materially increases the potential for fires, explosions, or releases of hazardous secondary material or hazardous secondary material constituents, or the facility changes the response necessary in an emergency;
 - 4) The list of emergency coordinators changes; or
 - 5) The list of emergency equipment changes.
- e) Emergency Coordinator~~-coordinator~~. At all times, there must be at least one employee, either on the facility premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time), with the responsibility for coordinating all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of hazardous secondary materials handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan. The emergency coordinator's responsibilities are more fully spelled out in subsection (f). Applicable responsibilities for the emergency coordinator vary, depending on factors such as type and variety of hazardous secondary materials handled by the facility, and type and complexity of the facility.
- f) Emergency Procedures~~-procedures~~.
- 1) Whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) must immediately:
 - A) Activate internal facility alarms or communication systems, when applicable, to notify all facility personnel; and
 - B) Notify appropriate State or local agencies with designated response roles if their help is needed.
 - 2) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal

extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.

- 3) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions).
- 4) If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health, or the environment, outside the facility, the emergency coordinator must report his or her findings as follows:
 - A) If the emergency coordinator's assessment indicates that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and
 - B) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area, or the National Response Center (using their 24-hour toll free number 800-424-8802). The report must include the following information:
 - i) The name and telephone number of reporter;
 - ii) The name and address of facility;
 - iii) The time and type of incident (e.g., release, fire);
 - iv) The name and quantity of materials involved, to the extent known;
 - v) The extent of injuries, if any; and
 - vi) The possible hazards to human health, or the environment, outside the facility.
- 5) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous secondary material at the

facility. These measures must include, when applicable, stopping processes and operations, collecting and containing released material, and removing or isolating containers.

- 6) If the facility stops operations in response to a fire, explosion or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.
- 7) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered secondary material, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the hazardous secondary material generator can demonstrate, in accordance with Section 721.103(c) or (d), that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage the recovered material in accordance with all applicable requirements of 35 Ill. Adm. Code 722, 723, and 725.
- 8) The emergency coordinator must ensure that the following has occurred in the affected areas of the facility:
 - A) No secondary material that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and
 - B) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.
- 9) The hazardous secondary material generator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the emergency coordinator must submit a written report on the incident to the Regional Administrator. The report must include the following information:
 - A) The name, address, and telephone number of the hazardous secondary material generator;
 - B) The name, address, and telephone number of the facility;
 - C) The date, time, and type of incident (e.g., fire, explosion, etc.);
 - D) The name and quantity of materials involved;
 - E) The extent of injuries, if any;

- F) An assessment of actual or potential hazards to human health or the environment, when this is applicable; and
- G) The estimated quantity and disposition of recovered material that resulted from the incident.

g) Personnel Training. All employees must be thoroughly familiar with proper waste handling and emergency procedures relevant to their responsibilities during normal facility operations and emergencies.

SUBPART AA: AIR EMISSION STANDARDS FOR PROCESS VENTS

Section 721.931 Definitions

As used in this Subpart AA, all terms not defined in this Section will have the meaning given them in section 1004 of the Resource Conservation and Recovery Act, incorporated by reference in 35 Ill. Adm. Code 720.111, and 35 Ill. Adm. Code 720 through 726.

“Air stripping operation” is a desorption operation employed to transfer one or more volatile components from a liquid mixture into a gas (air) either with or without the application of heat to the liquid. Packed towers, spray towers, and bubble-cap, sieve, or valve-type plate towers are among the process configurations used for contacting the air and a liquid.

“Bottoms receiver” means a container or tank used to receive and collect the heavier bottoms fractions of the distillation feed stream that remain in the liquid phase.

“Closed-vent system” means a system that is not open to the atmosphere and that is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.

“Condenser” means a heat-transfer device that reduces a thermodynamic fluid from its vapor phase to its liquid phase.

“Connector” means flanged, screwed, welded, or other joined fittings used to connect two pipelines or a pipeline and a piece of equipment. For the purposes of reporting and recordkeeping, connector means flanged fittings that are not covered by insulation or other materials that prevent location of the fittings.

“Continuous recorder” means a data-recording device recording an instantaneous data value at least once every 15 minutes.

“Control device” means an enclosed combustion device, vapor recovery system, or flare. Any device the primary function of which is the recovery or capture of solvents or other organics for use, reuse, or sale (e.g., a primary condenser on a solvent recovery unit) is not a control device.

“Control device shutdown” means the cessation of operation of a control device for any purpose.

“Distillate receiver” means a container or tank used to receive and collect liquid material (condensed) from the overhead condenser of a distillation unit and from which the condensed liquid is pumped to larger storage tanks or other process units.

“Distillation operation” means an operation, either batch or continuous, separating one or more feed streams into two or more exit streams, each exit stream having component concentrations different from those in the feed streams. The separation is achieved by the redistribution of the components between the liquid and vapor phase as they approach equilibrium within the distillation unit.

“Double block and bleed system” means two block valves connected in series with a bleed valve or line that can vent the line between the two block valves.

“Equipment” means each valve, pump, compressor, pressure relief device, sampling connection system, open-ended valve or line, or flange or other connector, and any control devices or systems required by this Subpart AA.

“Flame zone” means the portion of the combustion chamber in a boiler occupied by the flame envelope.

“Flow indicator” means a device that indicates whether gas flow is present in a vent stream.

“First attempt at repair” means to take rapid action for the purpose of stopping or reducing leakage of organic material to the atmosphere using best practices.

“Fractionation operation” means a distillation operation or method used to separate a mixture of several volatile components of different boiling points in successive stages, each stage removing from the mixture some proportion of one of the components.

“Hazardous secondary material management unit shutdown” means a work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit. An unscheduled work practice or operational procedure that stops operation of a hazardous secondary material management unit or part of a hazardous secondary material management unit for less than 24 hours is not a hazardous

secondary material management unit shutdown. The use of spare equipment and technically feasible bypassing of equipment without stopping operation are not hazardous secondary material management unit shutdowns.

“Hot well” means a container for collecting condensate as in a steam condenser serving a vacuum-jet or steam-jet ejector.

“In gas/vapor service” means that the piece of equipment contains or contacts a hazardous secondary material stream that is in the gaseous state at operating conditions.

“In heavy liquid service” means that the piece of equipment is not in gas/vapor service or in light liquid service.

“In light liquid service” means that the piece of equipment contains or contacts a material stream where the vapor pressure of one or more of the organic components in the stream is greater than 0.3 kilopascals (kPa) at 20 °C, the total concentration of the pure organic components having a vapor pressure greater than 0.3 kPa at 20 °C is equal to or greater than 20 percent by weight, and the fluid is a liquid at operating conditions.

“In situ sampling systems” means non-extractive samplers or in-line samplers.

“In vacuum service” means that equipment is operating at an internal pressure that is at least 5 kPa below ambient pressure.

“Malfunction” means any sudden failure of a control device or a hazardous secondary material management unit or failure of a hazardous secondary material management unit to operate in a normal or usual manner, so that organic emissions are increased.

“Open-ended valve or line” means any valve, except pressure relief valves, having one side of the valve seat in contact with hazardous secondary material and one side open to the atmosphere, either directly or through open piping.

“Pressure release” means the emission of materials resulting from the system pressure being greater than the set pressure of the pressure relief device.

“Process heater” means a device that transfers heat liberated by burning fuel to fluids contained in tubes, including all fluids except water that are heated to produce steam.

“Process vent” means any open-ended pipe or stack that is vented to the atmosphere either directly, through a vacuum-producing system, or through a tank (e.g., distillate receiver, condenser, bottoms receiver, surge control tank, separator tank, or hot well) associated with hazardous secondary material distillation,

fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations.

“Repaired” means that equipment is adjusted, or otherwise altered, to eliminate a leak.

“Sampling connection system” means an assembly of equipment within a process or material management unit used during periods of representative operation to take samples of the process or material fluid. Equipment used to take non-routine grab samples is not considered a sampling connection system.

“Sensor” means a device that measures a physical quantity or the change in a physical quantity, such as temperature, pressure, flow rate, pH, or liquid level.

“Separator tank” means a device used for separation of two immiscible liquids.

“Solvent extraction operation” means an operation or method of separation in which a solid or solution is contacted with a liquid solvent (the two being mutually insoluble) to preferentially dissolve and transfer one or more components into the solvent.

“Startup” means the setting in operation of a hazardous secondary material management unit or control device for any purpose.

“Steam stripping operation” means a distillation operation in which vaporization of the volatile constituents of a liquid mixture takes place by the introduction of steam directly into the charge.

“Surge control tank” means a large-sized pipe or storage reservoir sufficient to contain the surging liquid discharge of the process tank to which it is connected.

“Thin-film evaporation operation” means a distillation operation that employs a heating surface consisting of a large diameter tube that may be either straight or tapered, horizontal or vertical. Liquid is spread on the tube wall by a rotating assembly of blades that maintain a close clearance from the wall or actually ride on the film of liquid on the wall.

“Vapor incinerator” means any enclosed combustion device that is used for destroying organic compounds and does not extract energy in the form of steam or process heat.

“Vented” means discharged through an opening, typically an open-ended pipe or stack, allowing the passage of a stream of liquids, gases, or fumes into the atmosphere. The passage of liquids, gases, or fumes is caused by mechanical means such as compressors or vacuum-producing systems or by process-related means such as evaporation produced by heating and not caused by tank loading

and unloading (working losses) or by natural means such as diurnal temperature changes.

Section 721.933 Standards: Closed-Vent Systems and Control Devices

- a) **Applicability-**
- 1) The remanufacturer or other person that stores or treats the hazardous secondary materials in hazardous secondary material management units using closed-vent systems and control devices used to comply with provisions of this Part must comply with the provisions of this Section.
 - 2) This subsection (a)(2) corresponds with 40 CFR 261.1033, which USEPA has marked "reserved." This statement maintains structural consistency with the federal regulations.
- b) A control device involving vapor recovery (e.g., a condenser or adsorber) must be designed and operated to recover the organic vapors vented to it with an efficiency of 95 weight percent or greater unless the total organic emission limits of Section 721.932(a)(1) for all affected process vents can be attained at an efficiency less than 95 weight percent.
- c) An enclosed combustion device (e.g., a vapor incinerator, boiler, or process heater) must be designed and operated to reduce the organic emissions vented to it by 95 weight percent or greater; to achieve a total organic compound concentration of 20 ppmv, expressed as the sum of the actual compounds, not carbon equivalents, on a dry basis corrected to three percent oxygen; or to provide a minimum residence time of 0.50 seconds at a minimum temperature of 760 °C. If a boiler or process heater is used as the control device, then the vent stream must be introduced into the flame zone of the boiler or process heater.
- d) **Flares-**
- 1) A flare must be designed for and operated with no visible emissions, as determined by the methods specified in subsection (e)(1), except for periods not to exceed a total of five minutes during any two consecutive hours.
 - 2) A flare must be operated with a flame present at all times, as determined by the methods specified in subsection (f)(2)(C).
 - 3) A flare must be used only if the net heating value of the gas being combusted is 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam-assisted or air-assisted; or if the net heating value of the gas being

combusted is 7.45 MJ/scm (200 Btu/scf) or greater if the flare is non-assisted. The net heating value of the gas being combusted must be determined by the methods specified in subsection (e)(2).

- 4) Exit Velocity-velocity.
- A) A steam-assisted or nonassisted flare must be designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), less than 18.3 m/s (60 ft/s), except as provided in subsections (d)(4)(B) and (C).
 - B) A steam-assisted or non-assisted flare designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), equal to or greater than 18.3 m/s (60 ft/s) but less than 122 m/s (400 ft/s) is allowed if the net heating value of the gas being combusted is greater than 37.3 MJ/scm (1,000 Btu/scf).
 - C) A steam-assisted or non-assisted flare designed for and operated with an exit velocity, as determined by the methods specified in subsection (e)(3), less than the velocity, V_{max} , as determined by the method specified in subsection (e)(4), and less than 122 m/s (400 ft/s) is allowed.
- 5) An air-assisted flare must be designed and operated with an exit velocity less than the velocity, V_{max} , as determined by the method specified in subsection (e)(5).
- 6) A flare used to comply with this Section must be steam-assisted, air-assisted, or unassisted.

e) Compliance Determination determination and Equations-equations.

- 1) Reference Method 22 (Visual Determination of Fugitive Emissions from Material Sources and Smoke Emissions from Flares) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, must be used to determine the compliance of a flare with the visible emission provisions of this Subpart AA. The observation period is two hours and must be used according to Method 22.
- 2) The net heating value of the gas being combusted in a flare must be calculated using the following equation:

$$H_T = K \left[\sum_{i=1}^n C_i H_i \right]$$

Where:

H_T = Net heating value of the sample, MJ/scm; where the net enthalpy per mole of offgas is based on combustion at 25 °C and 760 mm Hg, but the standard temperature for determining the volume corresponding to one mol is 20 °C;

K = Constant, 1.74×10^{-7} (1/ppm) (g mol/scm) (MJ/kcal) where standard temperature for (g mol/scm) is 20 °C;

C_i = Concentration of sample component i in ppm on a wet basis, as measured for organics by Reference Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, and measured for hydrogen and carbon monoxide by ASTM D 1946-90, incorporated by reference in Section 720.111; ~~and~~

H_i = Net heat of combustion of sample component i , kcal/g mol at 25 °C and 760 mm Hg. The heats of combustion may be determined using ASTM D 2382–83, incorporated by reference in Section 720.111, if published values are not available or cannot be calculated.

- 3) The actual exit velocity of a flare must be determined by dividing the volumetric flow rate (in units of standard temperature and pressure), as determined by Reference Methods 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)), 2A (Direct Measurement of Gas Volume through Pipes and Small Ducts), 2C (Determination of Gas Velocity and Volumetric Flow Rate in Small Stacks or Ducts (Standard Pitot Tube)), or 2D (Measurement of Gas Volume Flow Rates in Small Pipes and Ducts) in appendix A to 40 CFR 60 (Test Methods), each incorporated by reference in 35 Ill. Adm. Code 720.111, as appropriate, by the unobstructed (free) cross-sectional area of the flare tip.
- 4) The maximum allowed velocity in m/s, V_{max} , for a flare complying with subsection (d)(4)(C) must be determined by the following equation:

$$\log_{10}(V_{max}) = \frac{(H_T + 28.8)}{31.7}$$

Where:

H_T = The net heating value as determined in subsection (e)(2);

- 5) The maximum allowed velocity in m/s, V_{max} , for an air-assisted flare must be determined by the following equation:

$$V_{\max} = 8.706 + 0.7084 (H_T)$$

Where:

H_T = The net heating value as determined in subsection (e)(2):

- f) The remanufacturer or other person that stores or treats the hazardous secondary material must monitor and inspect each control device required to comply with this section to ensure proper operation and maintenance of the control device by implementing the following requirements:
- 1) Install, calibrate, maintain, and operate according to the manufacturer's specifications a flow indicator that provides a record of vent stream flow from each affected process vent to the control device at least once every hour. The flow indicator sensor must be installed in the vent stream at the nearest feasible point to the control device inlet but before the point at which the vent streams are combined.
 - 2) Install, calibrate, maintain, and operate according to the manufacturer's specifications a device to continuously monitor control device operation as specified below:
 - A) For a thermal vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or ± 0.5 $^{\circ}\text{C}$, whichever is greater. The temperature sensor must be installed at a location in the combustion chamber downstream of the combustion zone.
 - B) For a catalytic vapor incinerator, a temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature at two locations and have an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or ± 0.5 $^{\circ}\text{C}$, whichever is greater. One temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed inlet and a second temperature sensor must be installed in the vent stream at the nearest feasible point to the catalyst bed outlet.
 - C) For a flare, a heat sensing monitoring device equipped with a continuous recorder that indicates the continuous ignition of the pilot flame.
 - D) For a boiler or process heater having a design heat input capacity less than 44 MW, a temperature monitoring device equipped with a continuous recorder. The device must have an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or ± 0.5 $^{\circ}\text{C}$,

whichever is greater. The temperature sensor must be installed at a location in the furnace downstream of the combustion zone.

- E) For a boiler or process heater having a design heat input capacity greater than or equal to 44 MW, a monitoring device equipped with a continuous recorder to measure a parameters that indicates good combustion operating practices are being used.
 - F) For a condenser, either:
 - i) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the condenser; or
 - ii) A temperature monitoring device equipped with a continuous recorder. The device must be capable of monitoring temperature with an accuracy of ± 1 percent of the temperature being monitored in $^{\circ}\text{C}$ or ± 0.5 $^{\circ}\text{C}$, whichever is greater. The temperature sensor must be installed at a location in the exhaust vent stream from the condenser exit (i.e., product side).
 - G) For a carbon adsorption system that regenerates the carbon bed directly in the control device such as a fixed-bed carbon adsorber, either:
 - i) A monitoring device equipped with a continuous recorder to measure the concentration level of the organic compounds in the exhaust vent stream from the carbon bed; or
 - ii) A monitoring device equipped with a continuous recorder to measure a parameter that indicates the carbon bed is regenerated on a regular, predetermined time cycle.
- 3) Inspect the readings from each monitoring device required by subsections (f)(1) and (f)(2) at least once each operating day to check control device operation and, if necessary, immediately implement the corrective measures necessary to ensure the control device operates in compliance with the requirements of this Section.
- g) A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device must replace the existing carbon in the

control device with fresh carbon at a regular, predetermined time interval that is no longer than the carbon service life established as a requirement of Section 721.935(b)(4)(C)(vi).

- h) A remanufacturer or other person that stores or treats hazardous secondary material in a hazardous secondary material management unit using a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device must replace the existing carbon in the control device with fresh carbon on a regular basis by using one of the following procedures:
 - 1) Monitor the concentration level of the organic compounds in the exhaust vent stream from the carbon adsorption system on a regular schedule, and replace the existing carbon with fresh carbon immediately when carbon breakthrough is indicated. The monitoring frequency must be daily or at an interval no greater than 20 percent of the time required to consume the total carbon working capacity established as a requirement of Section 721.935(b)(4)(C)(vii), whichever is longer.
 - 2) Replace the existing carbon with fresh carbon at a regular, predetermined time interval that is less than the design carbon replacement interval established as a requirement of Section 721.935(b)(4)(C)(vii).
- i) An alternative operational or process parameter may be monitored if it can be demonstrated that another parameter will ensure that the control device is operated in conformance with these standards and the control device's design specifications.
- j) A remanufacturer or other person that stores or treats hazardous secondary material at an affected facility seeking to comply with the provisions of this part by using a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system is required to develop documentation including sufficient information to describe the control device operation and identify the process parameter or parameters that indicate proper operation and maintenance of the control device.
- k) A closed-vent system must meet either of the following design requirements:
 - 1) A closed-vent system must be designed to operate with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background as determined by the procedure in Section 721.934(b), and by visual inspections; or
 - 2) A closed-vent system must be designed to operate at a pressure below atmospheric pressure. The system must be equipped with at least one pressure gauge or other pressure measurement device that can be read

from a readily accessible location to verify that negative pressure is being maintained in the closed-vent system when the control device is operating.

- l) The remanufacturer or other person that stores or treats the hazardous secondary material must monitor and inspect each closed-vent system required to comply with this section to ensure proper operation and maintenance of the closed-vent system by implementing the following requirements:
 - 1) Each closed-vent system that is used to comply with subsection (k)(1) must be inspected and monitored in accordance with the following requirements:
 - A) An initial leak detection monitoring of the closed-vent system must be conducted by the remanufacturer or other person that stores or treats the hazardous secondary material on or before the date that the system becomes subject to this section. The remanufacturer or other person that stores or treats the hazardous secondary material must monitor the closed-vent system components and connections using the procedures specified in Section 721.934(b) to demonstrate that the closed-vent system operates with no detectable emissions, as indicated by an instrument reading of less than 500 ppmv above background.
 - B) After initial leak detection monitoring required in subsection (l)(1)(A), the remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the closed-vent system as follows:
 - i) Closed-vent system joints, seams, or other connections that are permanently or semi-permanently sealed (e.g., a welded joint between two sections of hard piping or a bolted and gasketed ducting flange) must be visually inspected at least once per year to check for defects that could result in air pollutant emissions. The remanufacturer or other person that stores or treats the hazardous secondary material must monitor a component or connection using the procedures specified in Section 721.934(b) to demonstrate that it operates with no detectable emissions following any time the component is repaired or replaced (e.g., a section of damaged hard piping is replaced with new hard piping) or the connection is unsealed (e.g., a flange is unbolted).
 - ii) Closed-vent system components or connections other than those specified in subsection (l)(1)(B)(i) must be monitored annually and at other times as requested by the Agency,

except as provided for in subsection (o), using the procedures specified in Section 721.934(b) to demonstrate that the components or connections operate with no detectable emissions. The Agency must make any request for monitoring in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

- C) In the event that a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect or leak in accordance with the requirements of subsection (l)(3).
 - D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection and monitoring in accordance with the requirements specified in Section 721.935.
- 2) Each closed-vent system that is used to comply with subsection (k)(2) must be inspected and monitored in accordance with the following requirements:
- A) The closed-vent system must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in ductwork or piping or loose connections.
 - B) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the closed-vent system on or before the date that the system becomes subject to this Section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year.
 - C) In the event that a defect or leak is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (l)(3).
 - D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection and monitoring in accordance with the requirements specified in Section 721.935.

- 3) The remanufacturer or other person that stores or treats the hazardous secondary material must repair all detected defects as follows:
 - A) Detectable emissions, as indicated by visual inspection, or by an instrument reading greater than 500 ppmv above background, must be controlled as soon as practicable, but not later than 15 calendar days after the emission is detected, except as provided for in subsection (1)(3)(C).
 - B) A first attempt at repair must be made no later than 5 calendar days after the emission is detected.
 - C) Delay of repair of a closed-vent system for which leaks have been detected is allowed if the repair is technically infeasible without a process unit shutdown, or if the remanufacturer or other person that stores or treats the hazardous secondary material determines that emissions resulting from immediate repair would be greater than the fugitive emissions likely to result from delay of repair. Repair of such equipment must be completed by the end of the next process unit shutdown.
 - D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the defect repair in accordance with the requirements specified in Section 721.935.
- m) Closed-vent systems and control devices used to comply with provisions of this Subpart AA must be operated at all times when emissions may be vented to them.
- n) The owner or operator using a carbon adsorption system to control air pollutant emissions must document that all carbon that is a hazardous waste and that is removed from the control device is managed in one of the following manners, regardless of the average volatile organic concentration of the carbon:
 - 1) Regenerated or reactivated in a thermal treatment unit that meets one of the following:
 - A) The owner or operator of the unit has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements the requirements of Subpart X ~~of this Part~~;
 - B) The unit is equipped with and operating air emission controls in accordance with the applicable requirements of Subparts AA and CC ~~of this Part~~ or Subparts AA and CC of 35 Ill. Adm. Code 725; or

- C) The unit is equipped with and operating air emission controls in accordance with a national emission standard for hazardous air pollutants under 40 CFR 61 (National Emission Standards for Hazardous Air Pollutants) or 40 CFR 63 (National Emission Standards for Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111(b).
- 2) Incinerated in a hazardous waste incinerator for which the owner or operator either:
 - A) Has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements the requirements of Subpart O ~~of this Part~~; or
 - B) Has designed and operates the incinerator in accordance with the interim status requirements of Subpart O of 35 Ill. Adm. Code 725.
 - 3) Burned in a boiler or industrial furnace for which the owner or operator either:
 - A) Has been issued a final permit under 35 Ill. Adm. Code 702, 703, and 705 that implements the requirements of Subpart H of 35 Ill. Adm. Code 726; or
 - B) Has designed and operates the boiler or industrial furnace in accordance with the interim status requirements of Subpart H of 35 Ill. Adm. Code 726.
- o) Any components of a closed-vent system that are designated, as described in Section 721.935(c)(9), as unsafe to monitor are exempt from the requirements of subsection (1)(1)(B)(ii) if both of the following conditions are fulfilled:
 - 1) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system determines that the components of the closed-vent system are unsafe to monitor because monitoring personnel would be exposed to an immediate danger as a consequence of complying with subsection (1)(1)(B)(ii); and
 - 2) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit using a closed-vent system adheres to a written plan that requires monitoring the closed-vent system components using the procedure specified in subsection (1)(1)(B)(ii) as frequently as practicable during safe-to-monitor times.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.934 Test Methods and Procedures

- a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart AA must comply with the test methods and procedural requirements provided in this Section.
- b) When a closed-vent system is tested for compliance with no detectable emissions, as required in Section 721.933(l) of this Subpart AA, the test must comply with the following requirements:
 - 1) Monitoring must comply with Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.
 - 2) The detection instrument must meet the performance criteria of Reference Method 21.
 - 3) The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.
 - 4) Calibration gases must be:
 - A) Zero air (less than 10 ppm of hydrocarbon in air).
 - B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.
 - 5) The background level must be determined as set forth in Reference Method 21.
 - 6) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.
 - 7) The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.
- c) Performance tests to determine compliance with Section 721.932(a) and with the total organic compound concentration limit of Section 721.933(c) must comply with the following:
 - 1) Performance tests to determine total organic compound concentrations and mass flow rates entering and exiting control devices must be conducted

and data reduced in accordance with the following reference methods and calculation procedures:

- A) Reference Method 2 (Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111 for velocity and volumetric flow rate.
- B) Reference Method 18 (Measurement of Gaseous Organic Compound Emissions by Gas Chromatography) or Reference Method 25A (Determination of Total Gaseous Organic Concentration Using a Flame Ionization Analyzer) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, for organic content. If Reference Method 25A is used, the organic HAP used as the calibration gas must be the single organic HAP representing the largest percent by volume of the emissions. The use of Reference Method 25A is acceptable if the response from the high-level calibration gas is at least 20 times the standard deviation of the response from the zero calibration gas when the instrument is zeroed on the most sensitive scale.
- C) Each performance test must consist of three separate runs; each run must be conducted for at least one hour under the conditions that exist when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. For the purpose of determining total organic compound concentrations and mass flow rates, the average of results of all runs must apply. The average must be computed on a time-weighted basis.
- D) Total organic mass flow rates must be determined by the following equation:
- i) For sources utilizing Reference Method 18.

$$E_h = Q_{2sd} \left\{ \sum_{i=1}^n C_i MW_i \right\} [0.0416] [10^{-6}]$$

Where:

- E_h = Total organic mass flow rate, kg/h;
 Q_{2sd} = Volumetric flow rate of gases entering or exiting control device, as determined by Reference Method 2, dscm/h;

- n = Number of organic compounds in the vent gas;
- C_i = Organic concentration in ppm, dry basis, of compound i in the vent gas, as determined by Reference Method 18;
- MW_i = Molecular weight of organic compound i in the vent gas, kg/kg-mol;
- 0.0416 = Conversion factor for molar volume, kg-mol/m³ (@293 K and 760 mm Hg); ~~and~~
- 10^{-6} = Conversion from ppm-

ii) For sources utilizing Reference Method 25A.

$$E_h = (Q)(C)(MW)(0.0416)(10^{-6})$$

Where:

- E_h = Total organic mass flow rate, kg/h;
- Q = Volumetric flow rate of gases entering or exiting control device, as determined by Reference Method 2, dscm/h;
- C = Organic concentration in ppm, dry basis, as determined by Reference Method 25A;
- MW = Molecular weight of propane, 44;
- 0.0416 = Conversion factor for molar volume, kg-mol/m³ (@293 K and 760 mm Hg); ~~and~~
- 10^{-6} = Conversion from ppm-

E) The annual total organic emission rate must be determined by the following equation:

$$E_A = (E_h)(H)$$

Where:

- E_A = Total organic mass emission rate, kg/y;
- E_h = Total organic mass flow rate for the process vent, kg/h; ~~and~~
- H = Total annual hours of operations for the affected unit, h/y-

F) Total organic emissions from all affected process vents at the facility must be determined by summing the hourly total organic mass emission rates (E_h , as determined in subsection (c)(1)(D)) and by summing the annual total organic mass emission rates (E_A , as

determined in subsection (c)(1)(E)) for all affected process vents at the facility.

- 2) The remanufacturer or other person that stores or treats the hazardous secondary material must record process information as necessary to determine the conditions of the performance tests. Operations during periods of startup, shutdown, and malfunction must not constitute representative conditions for the purpose of a performance test.
 - 3) The remanufacturer or other person that stores or treats the hazardous secondary material at an affected facility must provide, or cause to be provided, performance testing facilities, as follows:
 - A) Sampling ports adequate for the test methods specified in subsection (c)(1).
 - B) Safe sampling platforms.
 - C) Safe access to sampling platforms.
 - D) Utilities for sampling and testing equipment.
 - 4) For the purpose of making compliance determinations, the time-weighted average of the results of the three runs must apply. In the event that a sample is accidentally lost or conditions occur in which one of the three runs must be discontinued because of forced shutdown, failure of an irreplaceable portion of the sample train, extreme meteorological conditions, or other circumstances beyond the control of the remanufacturer or other person that stores or treats the hazardous secondary material, the Agency may approve compliance determination using the average of the results of the two other runs. The Agency must state any approval or disapproval of a compliance determination in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.
- d) To show that a process vent associated with a hazardous secondary material distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation is not subject to the requirements of this Subpart AA, the remanufacturer or other person that stores or treats the hazardous secondary material must make an initial determination that the time-weighted, annual average total organic concentration of the material managed by the hazardous secondary material management unit is less than 10 ppmw using one of the following two methods:
- 1) Direct measurement of the organic concentration of the material using the following procedures:

- A) The remanufacturer or other person that stores or treats the hazardous secondary material must take a minimum of four grab samples of material for each material stream managed in the affected unit under process conditions expected to cause the maximum material organic concentration.
 - B) For material generated onsite, the grab samples must be collected at a point before the material is exposed to the atmosphere such as in an enclosed pipe or other closed system that is used to transfer the material after generation to the first affected distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation. For material generated offsite, the grab samples must be collected at the inlet to the first material management unit that receives the material provided the material has been transferred to the facility in a closed system such as a tank truck and the material is not diluted or mixed with other material.
 - C) Each sample must be analyzed and the total organic concentration of the sample must be computed using Method 9060A of "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods," EPA Publication SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111, or analyzed for its individual organic constituents.
 - D) The arithmetic mean of the results of the analyses of the four samples must apply for each material stream managed in the unit in determining the time-weighted, annual average total organic concentration of the material. The time-weighted average is to be calculated using the annual quantity of each material stream processed and the mean organic concentration of each material stream managed in the unit.
- 2) Using knowledge of the material to determine that its total organic concentration is less than 10 ppmw. Documentation of the material determination is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to generate a material stream having a total organic content less than 10 ppmw, or prior speciation analysis results on the same material stream where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.

- e) The determination that distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations manage hazardous secondary materials with time-weighted, annual average total organic concentrations less than 10 ppmw must be made as follows:
- 1) By the effective date that the facility becomes subject to the provisions of this Subpart AA or by the date when the material is first managed in a hazardous secondary material management unit, whichever is later; and
 - 2) For continuously generated material, annually; or
 - 3) Whenever there is a change in the material being managed or a change in the process that generates or treats the material.
- f) When a remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on whether a distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operation manages a hazardous secondary material with organic concentrations of at least 10 ppmw based on knowledge of the material, the dispute may be resolved by using direct measurement, as specified at subsection (d)(1). The Agency must state any disagreement in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.935 Recordkeeping Requirements

- a) ~~Compliance Required-~~
- 1) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart AA must comply with the recordkeeping requirements of this Section.
 - 2) A remanufacturer or other person that stores or treats the hazardous secondary material of more than one hazardous secondary material management unit subject to the provisions of this Subpart AA may comply with the recordkeeping requirements for these hazardous secondary material management units in one recordkeeping system if the system identifies each record by each hazardous secondary material management unit.
- b) The remanufacturer or other person that stores or treats the hazardous secondary material must keep the following records on-site:
- 1) For facilities that comply with the provisions of Section 721.933(a)(2), an implementation schedule that includes dates by which the closed-vent

system and control device will be installed and in operation. The schedule must also include a rationale of why the installation cannot be completed at an earlier date. The implementation schedule must be kept on-site at the facility by the effective date that the facility becomes subject to the provisions of this Subpart AA.

- 2) Up-to-date documentation of compliance with the process vent standards in Section 721.932, including the following:
 - A) Information and data identifying all affected process vents, annual throughput and operating hours of each affected unit, estimated emission rates for each affected vent and for the overall facility (i.e., the total emissions for all affected vents at the facility), and the approximate location within the facility of each affected unit (e.g., identify the hazardous secondary material management units on a facility plot plan).
 - B) Information and data supporting determinations of vent emissions and emission reductions achieved by add-on control devices based on engineering calculations or source tests. For the purpose of determining compliance, determinations of vent emissions and emission reductions must be made using operating parameter values (e.g., temperatures, flow rates, or vent stream organic compounds and concentrations) that represent the conditions that result in maximum organic emissions, such as when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. If the remanufacturer or other person that stores or treats the hazardous secondary material takes any action (e.g., managing a material of different composition or increasing operating hours of affected hazardous secondary material management units) that would result in an increase in total organic emissions from affected process vents at the facility, then a new determination is required.
- 3) Where a remanufacturer or other person that stores or treats the hazardous secondary material chooses to use test data to determine the organic removal efficiency or total organic compound concentration achieved by the control device, a performance test plan must be developed and include the following:
 - A) A description of how it is determined that the planned test is going to be conducted when the hazardous secondary material management unit is operating at the highest load or capacity level reasonably expected to occur. This must include the estimated or design flow rate and organic content of each vent stream and

define the acceptable operating ranges of key process and control device parameters during the test program.

- B) A detailed engineering description of the closed-vent system and control device, including the following:
 - i) Manufacturer's name and model number of control device.
 - ii) Type of control device.
 - iii) Dimensions of the control device.
 - iv) Capacity.
 - v) Construction materials.
 - C) A detailed description of sampling and monitoring procedures, including sampling and monitoring locations in the system, the equipment to be used, sampling and monitoring frequency, and planned analytical procedures for sample analysis.
- 4) Documentation of compliance with Section 721.933 must include the following information:
- A) A list of all information references and sources used in preparing the documentation.
 - B) Records, including the dates, of each compliance test required by Section 721.933(k).
 - C) If engineering calculations are used, a design analysis, specifications, drawings, schematics, and piping and instrumentation diagrams based on the appropriate sections of "APTI Course 415: Control of Gaseous Emissions,"¹ incorporated by reference as specified in 35 Ill. Adm. Code 720.111, or other engineering texts acceptable to the Agency that present basic control device design information. Documentation provided by the control device manufacturer or vendor that describes the control device design in accordance with subsections (b)(4)(C)(i) through (b)(4)(C)(vii) may be used to comply with this requirement. The design analysis must address the vent stream characteristics and control device operation parameters, as specified below. The Agency must state whether or not the other engineering texts are acceptable or unacceptable in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

- i) For a thermal vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average temperature in the combustion zone and the combustion zone residence time.
- ii) For a catalytic vapor incinerator, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average temperatures across the catalyst bed inlet and outlet.
- iii) For a boiler or process heater, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also establish the design minimum and average flame zone temperatures, combustion zone residence time, and description of method and location where the vent stream is introduced into the combustion zone.
- iv) For a flare, the design analysis must consider the vent stream composition, constituent concentrations, and flow rate. The design analysis must also consider the requirements specified in Section 721.933(d).
- v) For a condenser, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design outlet organic compound concentration level, design average temperature of the condenser exhaust vent stream, and design average temperatures of the coolant fluid at the condenser inlet and outlet.
- vi) For a carbon adsorption system such as a fixed-bed adsorber that regenerates the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design exhaust vent stream organic compound concentration level, number and capacity of carbon beds, type and working capacity of activated carbon used for carbon beds, design total steam flow over the period of each complete carbon bed

regeneration cycle, duration of the carbon bed steaming and cooling/ drying cycles, design carbon bed temperature after regeneration, design carbon bed regeneration time, and design service life of carbon.

- vii) For a carbon adsorption system such as a carbon canister that does not regenerate the carbon bed directly onsite in the control device, the design analysis must consider the vent stream composition, constituent concentrations, flow rate, relative humidity, and temperature. The design analysis must also establish the design outlet organic concentration level, capacity of carbon bed, type and working capacity of activated carbon used for carbon bed, and design carbon replacement interval based on the total carbon working capacity of the control device and source operating schedule.
 - D) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the operating parameters used in the design analysis reasonably represent the conditions that exist when the hazardous secondary material management unit is or would be operating at the highest load or capacity level reasonably expected to occur.
 - E) A statement signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material certifying that the control device is designed to operate at an efficiency of 95 percent or greater unless the total organic concentration limit of Section 721.932(a) is achieved at an efficiency less than 95 weight percent or the total organic emission limits of Section 721.932(a) for affected process vents at the facility can be attained by a control device involving vapor recovery at an efficiency less than 95 weight percent. A statement provided by the control device manufacturer or vendor certifying that the control equipment meets the design specifications may be used to comply with this requirement.
 - F) If performance tests are used to demonstrate compliance, all test results.
- c) Design documentation and monitoring, operating, and inspection information for each closed-vent system and control device required to comply with the provisions of this part must be recorded and kept up-to-date at the facility. The information must include the following:

- 1) Description and date of each modification that is made to the closed-vent system or control device design.
- 2) Identification of operating parameter, description of monitoring device, and diagram of monitoring sensor location or locations used to comply with Section 721.933 (f)(1) and (f)(2).
- 3) Monitoring, operating, and inspection information required by Section 721.933(f) through (k).
- 4) Date, time, and duration of each period that occurs while the control device is operating when any monitored parameter exceeds the value established in the control device design analysis, as specified below:
 - A) For a thermal vapor incinerator designed to operate with a minimum residence time of 0.50 second at a minimum temperature of 760 °C, period when the combustion temperature is below 760 °C.
 - B) For a thermal vapor incinerator designed to operate with an organic emission reduction efficiency of 95 weight percent or greater, period when the combustion zone temperature is more than 28 °C below the design average combustion zone temperature established as a requirement of subsection (b)(4)(C)(i).
 - C) For a catalytic vapor incinerator, period when either of the following occurs:
 - i) Temperature of the vent stream at the catalyst bed inlet is more than 28 °C below the average temperature of the inlet vent stream established as a requirement of subsection (b)(4)(C)(ii); or
 - ii) Temperature difference across the catalyst bed is less than 80 percent of the design average temperature difference established as a requirement of subsection (b)(4)(C)(ii).
 - D) For a boiler or process heater, period when either of the following occurs:
 - i) Flame zone temperature is more than 28 °C below the design average flame zone temperature established as a requirement of subsection (b)(4)(C)(iii); or

- ii) Position changes where the vent stream is introduced to the combustion zone from the location established as a requirement of subsection (b)(4)(C)(iii).
- E) For a flare, period when the pilot flame is not ignited.
- F) For a condenser that complies with Section 721.933(f)(2)(F)(i), period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the condenser are more than 20 percent greater than the design outlet organic compound concentration level established as a requirement of subsection (b)(4)(C)(v).
- G) For a condenser that complies with Section 721.933(f)(2)(F)(ii), period when either of the following occurs:
 - i) Temperature of the exhaust vent stream from the condenser is more than 6 °C above the design average exhaust vent stream temperature established as a requirement of subsection (b)(4)(C)(v); or
 - ii) Temperature of the coolant fluid exiting the condenser is more than 6 °C above the design average coolant fluid temperature at the condenser outlet established as a requirement of subsection (b)(4)(C)(v).
- H) For a carbon adsorption system, such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device and which complies with Section 721.933(f)(2)(G)(i), any period when the organic compound concentration level or readings of organic compounds in the exhaust vent stream from the carbon bed are more than 20 percent greater than the design exhaust vent stream organic compound concentration level established as a requirement of subsection (b)(4)(C)(vi).
- I) For a carbon adsorption system, such as a fixed-bed carbon adsorber that regenerates the carbon bed directly onsite in the control device and which complies with Section 721.933(f)(2)(G)(ii), any period when the vent stream continues to flow through the control device beyond the predetermined carbon bed regeneration time established as a requirement of subsection (b)(4)(C)(vi).

- 5) Explanation for each period recorded under subsection (c)(4) of the cause for control device operating parameter exceeding the design value and the measures implemented to correct the control device operation.
- 6) For a carbon adsorption system operated subject to requirements specified in Section 721.933(g) or (h)(2), any date when existing carbon in the control device is replaced with fresh carbon.
- 7) For a carbon adsorption system operated subject to requirements specified in Section 721.933(h)(1), a log that records:
 - A) Date and time when control device is monitored for carbon breakthrough and the monitoring device reading.
 - B) Date when existing carbon in the control device is replaced with fresh carbon.
- 8) Date of each control device startup and shutdown.
- 9) A remanufacturer or other person that stores or treats the hazardous secondary material designating any components of a closed-vent system as unsafe to monitor pursuant to Section 721.933(o) must record in a log that is kept at the facility the identification of closed-vent system components that are designated as unsafe to monitor in accordance with the requirements of Section 721.933(o), an explanation for each closed-vent system component stating why the closed-vent system component is unsafe to monitor, and the plan for monitoring each closed-vent system component.
- 10) When each leak is detected as specified in Section 721.933(l), the following information must be recorded:
 - A) The instrument identification number, the closed-vent system component identification number, and the operator name, initials, or identification number.
 - B) The date the leak was detected and the date of first attempt to repair the leak.
 - C) The date of successful repair of the leak.
 - D) Maximum instrument reading measured by Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, after it is successfully repaired or determined to be nonrepairable.

- E) “Repair delayed” and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak.
- i) The remanufacturer or other person that stores or treats the hazardous secondary material may develop a written procedure that identifies the conditions that justify a delay of repair. In such cases, reasons for delay of repair may be documented by citing the relevant sections of the written procedure.
 - ii) If delay of repair was caused by depletion of stocked parts, there must be documentation that the spare parts were sufficiently stocked on-site before depletion and the reason for depletion.
- d) Records of the monitoring, operating, and inspection information required by subsections (c)(3) through (c)(10) must be maintained by the owner or operator for at least three years following the date of each occurrence, measurement, maintenance, corrective action, or record.
- e) For a control device other than a thermal vapor incinerator, catalytic vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system, the Agency must specify the appropriate recordkeeping requirements. The Agency must specify the appropriate recordkeeping requirements in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.
- f) Up-to-date information and data used to determine whether or not a process vent is subject to the requirements in Section 721.932, including supporting documentation as required by Section 721.934(d)(2) when application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced is used, must be recorded in a log that is kept at the facility.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART BB: AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

Section 721.950 Applicability

The regulations in this this Subpart BB apply to equipment that contains hazardous secondary materials excluded under the remanufacturing exclusion at Section 721.104(a)(27), unless the equipment operations are subject to the requirements of an applicable federal Clean Air Act regulation in 40 CFR 60 (Standards of Performance for New Stationary Sources), 61 (National Emission Standards for Hazardous Air Pollutants), or 63 (National Emission Standards for

Hazardous Air Pollutants for Source Categories), each incorporated by reference in 35 Ill. Adm. Code 720.111.

BOARD NOTE: Section 9.1(b) and (d) of the Act ~~415 ILCS 5/9.1(b) and (d)~~ make the federal new source performance standards and national emission standards for hazardous air pollutants directly applicable in Illinois and prohibit operation of an emission source without a permit issued by the Agency. The Agency issues permits that incorporate the federal new source performance standards and national emission standards for hazardous air pollutants pursuant to Section 39.5 of the Act ~~415 ILCS 5/39.5~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.960 Standards: Closed-Vent Systems and Control Devices

- a) The remanufacturer or other person that stores or treats the hazardous secondary material in a hazardous secondary material management unit ~~units~~ using closed-vent systems and control devices subject to this Subpart BB must comply with the provisions of Section 721.933.
- b) Implementation Schedule-
 - 1) The remanufacturer or other person that stores or treats the hazardous secondary material at an existing facility who cannot install a closed-vent system and control device to comply with the provisions of this Subpart BB on the effective date that the facility becomes subject to the provisions of this Subpart BB must prepare an implementation schedule that includes dates by which the closed-vent system and control device will be installed and in operation. The controls must be installed as soon as possible, but the implementation schedule may allow up to 30 months after the effective date that the facility becomes subject to this Subpart BB for installation and startup.
 - 2) Any unit beginning that begins operation that after July 13, 2015 and ~~which~~ is subject to the provisions of this Subpart BB when operation begins, must comply with the rules immediately (i.e., must have control devices installed and operating on startup of the affected unit); the 30-month implementation schedule does not apply.
 - 3) The remanufacturer or other person that stores or treats the hazardous secondary material at any facility in existence on the effective date of a statutory or regulatory amendment that renders the facility subject to this Subpart BB must comply with all requirements of this Subpart BB as soon as practicable but no later than 30 months after the amendment's effective date. When control equipment required by this Subpart BB cannot be installed and begin operation by the effective date of the statutory or regulatory amendment that renders the facility subject to this Subpart BB,

the facility owner or operator must prepare an implementation schedule that includes the following information: specific calendar dates for award of contracts or issuance of purchase orders for the control equipment, initiation of on-site installation of the control equipment, completion of the control equipment installation, and performance of any testing to demonstrate that the installed equipment meets the applicable standards of this Subpart BB. The remanufacturer or other person that stores or treats the hazardous secondary material must keep a copy of the implementation schedule at the facility.

BOARD NOTE: The federal effective date of this provision was July 15, 2015. The resulting compliance deadline for the Subpart BB standards was then January 18, 2018 for all facilities to which this Subpart BB applied on July 15, 2015. ~~All and for all new and modified facilities to which this Subpart BB applies are to immediately comply upon beginning operation after would have applied had they existed on or been modified before July 15, 2015 in a way that would have made them subject to the requirements of this Subpart BB.~~ Where this Subpart BB becomes applicable to a facility subject to after July 15, 2015 as a result of statutory or regulatory amendment, compliance with the Subpart BB standards is required 30 months after the effective date of the statutory or regulatory amendment that subjected that facility to this provision.

- 4) Remanufacturers or other persons that store or treat the hazardous secondary materials at facilities and units that become newly subject to the requirements of this Subpart BB ~~after January 13, 2015~~, due to an action other than those described in subsection (b)(3), must comply with all applicable requirements immediately (i.e., must have control devices installed and operating on the date the facility or unit becomes subject to this Subpart BB; the 30-month implementation schedule does not apply).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.963 Test Methods and Procedures

- a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to the provisions of this Subpart BB must comply with the test methods and procedures requirements provided in this Section.
- b) Leak detection monitoring, as required in Sections 721.952 through 721.962, must comply with the following requirements:
- 1) Monitoring must comply with Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

- 2) The detection instrument must meet the performance criteria of Reference Method 21.
 - 3) The instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.
 - 4) Calibration gases must be as follows:
 - A) Zero air (less than 10 ppm of hydrocarbon in air); and
 - B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppm methane or n-hexane.
 - 5) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.
- c) When equipment is tested for compliance with no detectable emissions, as required in Sections 721.952(e), 721.953(i), 721.954, and 721.957(f), the test must comply with the following requirements:
- 1) The requirements of subsections (b)(1) through (b)(4).
 - 2) The background level must be determined as set forth in Reference Method 21.
 - 3) The instrument probe must be traversed around all potential leak interfaces as close to the interface as possible as described in Reference Method 21.
 - 4) The arithmetic difference between the maximum concentration indicated by the instrument and the background level is compared with 500 ppm for determining compliance.
- d) A remanufacturer or other person that stores or treats the hazardous secondary material must determine, for each piece of equipment, whether the equipment contains or contacts a hazardous secondary material with organic concentration that equals or exceeds 10 percent by weight using the following:
- 1) Methods described in ASTM Methods D 2267–88, E 169–87, E 168–88, E 260–85, incorporated by reference in 35 Ill. Adm. Code 720.111;
 - 2) Method 9060A of “Test Methods for Evaluating Solid Waste;”, USEPA Publication SW–846, incorporated by reference in 35 Ill. Adm. Code 720.111, for computing total organic concentration of the sample, or analyzed for its individual organic constituents; or

- 3) Application of the knowledge of the nature of the hazardous secondary material stream or the process by which it was produced. Documentation of a material determination by knowledge is required. Examples of documentation that must be used to support a determination under this provision include production process information documenting that no organic compounds are used, information that the material is generated by a process that is identical to a process at the same or another facility that has previously been demonstrated by direct measurement to have a total organic content less than 10 percent, or prior speciation analysis results on the same material stream, where it can also be documented that no process changes have occurred since that analysis that could affect the material total organic concentration.
- e) If a remanufacturer or other person that stores or treats the hazardous secondary material determines that a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight, the determination can be revised only after following the procedures in subsection (d)(1) or (d)(2).
- f) When a remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on whether a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight, the procedures in subsection (d)(1) or (d)(2) can be used to resolve the dispute. The Agency must state any disagreement on whether a piece of equipment contains or contacts a hazardous secondary material with organic concentrations at least 10 percent by weight in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.
- g) Samples used in determining the percent organic content must be representative of the highest total organic content hazardous secondary material that is expected to be contained in or contact the equipment.
- h) To determine if pumps or valves are in light liquid service, the vapor pressures of constituents may be obtained from standard reference texts or may be determined by ASTM D 2879-92, incorporated by reference in 35 Ill. Adm. Code 720.111.
- i) Performance tests to determine if a control device achieves 95 weight percent organic emission reduction must comply with the procedures of Section 721.934(c)(1) through (c)(4).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART CC: AIR EMISSION STANDARDS FOR TANKS
AND CONTAINERS

Section 721.983 Material Determination Procedures

- a) Procedure to Determine Average Volatile Organic (VO) Concentration-
- 1) Determining average VO concentration at the point of material origination. A remanufacturer or other person that stores or treats the hazardous secondary material must determine the average VO concentration at the point of material origination for each hazardous secondary material placed in a hazardous secondary material management unit exempted under the provisions of Section 721.982(c)(1) from using air emission controls in accordance with standards specified in Sections 721.984 through 721.987, as applicable to the hazardous secondary material management unit.
 - A) An initial determination of the average VO concentration of the material stream must be made before the first time any portion of the material in the hazardous secondary material stream is placed in a hazardous secondary material management unit exempted under the provisions of Section 721.982(c)(1) from using air emission controls, and thereafter an initial determination of the average VO concentration of the material stream must be made for each averaging period that a hazardous secondary material is managed in the unit; and
 - B) Perform a new material determination whenever changes to the source generating the material stream are reasonably likely to cause the average VO concentration of the hazardous secondary material to increase to a level that is equal to or greater than the applicable VO concentration limits specified in Section 721.982.
 - 2) Determination of average VO concentration using direct measurement or knowledge. For a material determination that is required by subsection (a)(1), the average VO concentration of a hazardous secondary material at the point of material origination must be determined using either direct measurement, as specified in subsection (a)(3), or by knowledge of the hazardous secondary material, as specified in subsection (a)(4).
 - 3) Direct measurement to determine average VO concentration of a hazardous secondary material at the point of material origination, as follows:
 - A) Identification. The remanufacturer or other person that stores or treats the hazardous secondary material must identify and record in

a log that is kept at the facility the point of material origination for the hazardous secondary material.

- B) Sampling. Samples of the hazardous secondary material stream must be collected at the point of material origination in a manner such that volatilization of organics contained in the material and in the subsequent sample is minimized and an adequately representative sample is collected and maintained for analysis by the selected method.
- i) The averaging period to be used for determining the average VO concentration for the hazardous secondary material stream on a mass-weighted average basis must be designated and recorded. The averaging period can represent any time interval that the remanufacturer or other person that stores or treats the hazardous secondary material determines is appropriate for the hazardous secondary material stream but must not exceed one year.
 - ii) A sufficient number of samples, but no less than four samples, must be collected and analyzed for a hazardous secondary material determination. All of the samples for a given material determination must be collected within a one-hour period. The average of the four or more sample results constitutes a material determination for the material stream. One or more material determinations may be required to represent the complete range of material compositions and quantities that occur during the entire averaging period due to normal variations in the operating conditions for the source or process generating the hazardous secondary material stream. Examples of such normal variations are seasonal variations in material quantity or fluctuations in ambient temperature.
 - iii) All samples must be collected and handled in accordance with written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material stream are collected such that a minimum loss of organics occurs throughout the sample collection and handling process, and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling

procedures for a total volatile organic constituent concentration may be found in Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.

- iv) Sufficient information, as specified in the “site sampling plan” required under subsection (a)(3)(B)(iii), must be prepared and recorded to document the material quantity represented by the samples and, as applicable, the operating conditions for the source or process generating the hazardous secondary material represented by the samples.
- C) Analysis. Each collected sample must be prepared and analyzed in accordance with Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, for the total concentration of volatile organic constituents, or using one or more methods when the individual organic compound concentrations are identified and summed and the summed material concentration accounts for and reflects all organic compounds in the material with Henry’s law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at 25 °C. At the discretion of the remanufacturer or other person that stores or treats the hazardous secondary material, the test data obtained may be adjusted by any appropriate method to discount any contribution to the total volatile organic concentration that is a result of including a compound with a Henry’s law constant value of less than 0.1 Y/X at 25 °C. To adjust these data, the measured concentration of each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}). If the remanufacturer or other person that stores or treats the hazardous secondary material elects to adjust the test data, the adjustment must be made to all individual chemical constituents with a Henry’s law constant value greater than or equal to 0.1 Y/X at 25 °C contained in the material. To adjust these data, the measured concentration of each individual chemical constituent contained in the waste is multiplied by the constituent-specific adjustment factors (f_{m25D}) approved in writing by the Agency. Other test methods may be used if they meet the requirements in subsection (a)(3)(C)(i) or (a)(3)(C)(ii) and provided the requirement to reflect all organic compounds in the material with

Henry's law constant values greater than or equal to 0.1 Y/X (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at 25 °C, is met.

- i) Any USEPA standard method that has been validated in accordance with appendix D to 40 CFR 63 (Alternative Validation Procedure for EPA Waste and Wastewater Methods), incorporated by reference in 35 Ill. Adm. Code 720.111.
- ii) Any other analysis method that has been validated in accordance with the procedures specified in Section 5.1 or Section 5.3, and the corresponding calculations in Section 6.1 or Section 6.3, of Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111. The data are acceptable if they meet the criteria specified in Section 6.1.5 or Section 6.3.3 of Method 301. If correction is required under section 6.3.3 of Method 301, the data are acceptable if the correction factor is within the range 0.7 to 1.30. Other sections of Method 301 are not required.

D) Calculations-

- i) The average VO concentration (\bar{C}) on a mass-weighted basis must be calculated by using the results for all material determinations conducted in accordance with subsections (a)(3)(B) and (a)(3)(C) and the following equation:

$$\bar{C} = \frac{1}{Q_T} \times \sum_{i=1}^n Q_i \times C_i$$

Where:

- \bar{C} = Average VO concentration of the hazardous secondary material at the point of material origination on a mass-weighted basis, ppmw;
- i = Individual material determination "i" of the hazardous secondary material;
- n = Total number of material determinations of the hazardous secondary material conducted for the averaging period (not to exceed one year);

Q_i = Mass quantity of hazardous secondary material stream represented by C_i , kg/hr;

Q_T = Total mass quantity of hazardous secondary material during the averaging period, kg/hr; ~~and~~

C_i = Measured VO concentration of material determination "i" as determined in accordance with the requirements of subsection (a)(3)(C) (i.e., the average of the four or more samples specified in subsection (a)(3)(B)(ii)), ppmw;

- ii) For the purpose of determining C_i , for individual material samples analyzed in accordance with subsection (a)(3)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must account for VO concentrations determined to be below the limit of detection of the analytical method by using the VO concentration that is one-half the blank value determined in the method at section 4.4 of Reference Method 25D, if Reference Method 25D is used for the analysis; or that is one-half the sum of the limits of detection established for each organic constituent in the material that has a Henry's law constant values at least 0.1 mole-fraction-in-the-gas-phase/mole-fraction-in-the-liquid-phase (0.1 Y/X) (which can also be expressed as 1.8×10^{-6} atmospheres/gram-mole/m³) at 25 °C, if any other analytical method is used.
- 4) Use of knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material to determine average VO concentration of a hazardous secondary material at the point of material origination.
- A) Documentation must be prepared that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material of the hazardous secondary material stream's average VO concentration. Examples of information that may be used as the basis for knowledge include material balances for the source or process generating the hazardous secondary material stream; constituent-specific chemical test data for the hazardous secondary material stream from previous testing that are still applicable to the current material stream; previous test data for other locations managing the same type of material stream; or other knowledge based on information included in shipping papers or material certification notices.

- B) If test data are used as the basis for knowledge, then the remanufacturer or other person that stores or treats the hazardous secondary material must document the test method, sampling protocol, and the means by which sampling variability and analytical variability are accounted for in the determination of the average VO concentration. For example, a remanufacturer or other person that stores or treats the hazardous secondary material may use organic concentration test data for the hazardous secondary material stream that are validated in accordance with Method 301 (Field Validation of Pollutant Measurement Methods from Various Waste Media) in appendix A to 40 CFR 63 (Test Methods) as the basis for knowledge of the material.
- C) A remanufacturer or other person that stores or treats the hazardous secondary material using chemical constituent-specific concentration test data as the basis for knowledge of the hazardous secondary material may adjust the test data to the corresponding average VO concentration value which would have been obtained had the material samples been analyzed using Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b). To adjust these data, the measured concentration for each individual chemical constituent contained in the material is multiplied by the appropriate constituent-specific adjustment factor (f_{m25D}).
- D) In the event that the Agency and the remanufacturer or other person that stores or treats the hazardous secondary material disagree on a determination of the average VO concentration for a hazardous secondary material stream using knowledge, then the results from a determination of average VO concentration using direct measurement as specified in subsection (a)(3) must be used to establish compliance with the applicable requirements of this Subpart CC. The Agency may perform or request that the remanufacturer or other person that stores or treats the hazardous secondary material perform this determination using direct measurement. The remanufacturer or other person that stores or treats the hazardous secondary material may choose one or more appropriate methods to analyze each collected sample in accordance with the requirements of subsection (a)(3)(C). The Agency must state any disagreement on determination of the average VO concentration for a hazardous secondary material stream using knowledge in writing to the remanufacturer or other person that stores or treats the hazardous secondary material.

- b) This subsection (b) corresponds with 40 CFR 261.1083(b), marked “reserved” by USEPA. This statement maintains structural consistency with the federal regulations.
- c) Procedure to Determine ~~determine~~ the Maximum Organic Vapor Pressure ~~maximum organic vapor pressure~~ of a Hazardous Secondary Material ~~hazardous secondary material~~ in a Tank ~~tank~~.
- 1) A remanufacturer or other person that stores or treats the hazardous secondary material must determine the maximum organic vapor pressure for each hazardous secondary material placed in a tank using Tank Level 1 controls in accordance with standards specified in Section 721.984(c).
 - 2) A remanufacturer or other person that stores or treats the hazardous secondary material must use either direct measurement as specified in subsection (c)(3) or knowledge of the waste as specified by subsection (c)(4) to determine the maximum organic vapor pressure which is representative of the hazardous secondary material composition stored or treated in the tank.
 - 3) Direct Measurement ~~measurement~~ to Determine ~~determine~~ the Maximum Organic Vapor Pressure ~~maximum organic vapor pressure~~ of a Hazardous Secondary Material ~~hazardous secondary material~~.
 - A) **Sampling.** A sufficient number of samples must be collected to be representative of the hazardous secondary material contained in the tank. All samples must be collected and handled in accordance with written procedures prepared by the remanufacturer or other person that stores or treats the hazardous secondary material and documented in a site sampling plan. This plan must describe the procedure by which representative samples of the hazardous secondary material are collected such that a minimum loss of organics occurs throughout the sample collection and handling process and by which sample integrity is maintained. A copy of the written sampling plan must be maintained at the facility. An example of acceptable sample collection and handling procedures may be found in Reference Method 25D (Determination of the Volatile Organic Concentration of Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b).
 - B) **Analysis.** Any appropriate one of the following methods may be used to analyze the samples and compute the maximum organic vapor pressure of the hazardous secondary material:

- i) Reference Method 25E (Determination of Vapor Phase Organic Concentration in Waste Samples) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111(b);
 - ii) Methods described in American Petroleum Institute Publication 2517, Third Edition, February 1989, “Evaporative Loss from External Floating-Roof Tanks;”, incorporated by reference in 35 Ill. Adm. Code 720.111;
 - iii) Methods obtained from standard reference texts;
 - iv) ASTM Method 2879–92, incorporated by reference in 35 Ill. Adm. Code 720.111; and
 - v) Any other method approved in writing by the Agency.
- 4) Use of Knowledge ~~knowledge~~ to Determine ~~determine~~ the Maximum Organic Vapor Pressure ~~maximum organic vapor pressure~~ of a Hazardous Secondary Material ~~hazardous secondary material~~. Documentation must be prepared and recorded that presents the information used as the basis for the knowledge by the remanufacturer or other person that stores or treats the hazardous secondary material that the maximum organic vapor pressure of the hazardous secondary material is less than the maximum vapor pressure limit listed in Section 721.984(b)(1)(A) for the applicable tank design capacity category. An example of information that may be used is documentation that the hazardous secondary material is generated by a process for which at other locations it previously has been determined by direct measurement that the hazardous secondary material’s maximum organic vapor pressure is less than the maximum vapor pressure limit for the appropriate tank design capacity category.
- d) Procedure for Determining No Detectable Organic Emissions ~~determining no detectable organic emissions~~ for the Purpose ~~purpose~~ of Complying ~~complying~~ with this Subpart CC:
- 1) The test must be conducted in accordance with the procedures specified in Reference Method 21 (Determination of Volatile Organic Compound Leaks) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111. Each potential leak interface (i.e., a location where organic vapor leakage could occur) on the cover and associated closure devices must be checked. Potential leak interfaces that are associated with covers and closure devices include, but are not limited to, the interface of the cover and its foundation mounting, the periphery of

any opening on the cover and its associated closure device, and the sealing seat interface on a spring-loaded pressure relief valve.

- 2) The test must be performed when the unit contains a hazardous secondary material having an organic concentration representative of the range of concentrations for the hazardous secondary material expected to be managed in the unit. During the test, the cover and closure devices must be secured in the closed position.
- 3) The detection instrument must meet the performance criteria of Reference Method 21, except the instrument response factor criteria in section 3.1.2(a) of Reference Method 21, must be for the average composition of the organic constituents in the hazardous secondary material placed in the hazardous secondary management unit, not for each individual organic constituent.
- 4) The detection instrument must be calibrated before use on each day of its use by the procedures specified in Reference Method 21.
- 5) Calibration gases must be as follows:
 - A) Zero air (less than 10 ppmv hydrocarbon in air), and
 - B) A mixture of methane or n-hexane and air at a concentration of approximately, but less than, 10,000 ppmv methane or n-hexane.
- 6) The background level must be determined according to the procedures in Reference Method 21.
- 7) Each potential leak interface must be checked by traversing the instrument probe around the potential leak interface as close to the interface as possible, as described in Reference Method 21. If the configuration of the cover or closure device prevents a complete traverse of the interface, all accessible portions of the interface must be sampled. If the configuration of the closure device prevents any sampling at the interface and the device is equipped with an enclosed extension or horn (e.g., some pressure relief devices), the instrument probe inlet must be placed at approximately the center of the exhaust area to the atmosphere.
- 8) The arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of 500 ppmv except when monitoring a seal around a rotating shaft that passes through a cover opening, in which case the comparison must be as specified in subsection (d)(9). If the difference is less than 500 ppmv, then the potential leak interface is determined to operate with no detectable organic emissions.

- 9) For the seals around a rotating shaft that passes through a cover opening, the arithmetic difference between the maximum organic concentration indicated by the instrument and the background level must be compared with the value of 10,000 ppmw. If the difference is less than 10,000 ppmw, then the potential leak interface is determined to operate with no detectable organic emissions.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.984 Standards: Tanks

- a) The provisions of this Section apply to the control of air pollutant emissions from tanks for which Section 721.982(b) references the use of this Section for air emission control.
- b) The remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from each tank subject to this Section in accordance with the following requirements, as applicable:
- 1) For a tank that manages hazardous secondary material that meets all of the conditions specified in subsections (b)(1)(A) through (b)(1)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the tank in accordance with the Tank Level 1 controls specified in subsection (c) or the Tank Level 2 controls specified in subsection (d).
- A) The hazardous secondary material in the tank has a maximum organic vapor pressure that is less than the maximum organic vapor pressure limit for the tank's design capacity category, as follows:
- i) For a tank design capacity equal to or greater than 151 m³, the maximum organic vapor pressure limit for the tank is 5.2 kPa.
- ii) For a tank design capacity equal to or greater than 75 m³ but less than 151 m³, the maximum organic vapor pressure limit for the tank is 27.6 kPa.
- iii) For a tank design capacity less than 75 m³, the maximum organic vapor pressure limit for the tank is 76.6 kPa.
- B) The hazardous secondary material in the tank is not heated by the remanufacturer or other person that stores or treats the hazardous secondary material to a temperature that is greater than the temperature at which the maximum organic vapor pressure of the

hazardous secondary material is determined for the purpose of complying with subsection (b)(1)(A).

- 2) For a tank that manages hazardous secondary material that does not meet all of the conditions specified in subsections (b)(1)(A) through (b)(1)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the tank by using Tank Level 2 controls in accordance with the requirements of subsection (d). An example of tanks required to use Tank Level 2 controls is a tank for which the hazardous secondary material in the tank has a maximum organic vapor pressure that is equal to or greater than the maximum organic vapor pressure limit for the tank's design capacity category, as specified in subsection (b)(1)(A).
- c) A remanufacturer or other person that stores or treats the hazardous secondary material controlling air pollutant emissions from a tank using Tank Level 1 controls must meet the requirements specified in subsections (c)(1) through (c)(4) of this Section:
 - 1) The remanufacturer or other person that stores or treats that hazardous secondary material must determine the maximum organic vapor pressure for a hazardous secondary material to be managed in the tank using Tank Level 1 controls before the first time the hazardous secondary material is placed in the tank. The maximum organic vapor pressure must be determined using the procedures specified in Section 721.983(c). Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform a new determination whenever changes to the hazardous secondary material managed in the tank could potentially cause the maximum organic vapor pressure to increase to a level that is equal to or greater than the maximum organic vapor pressure limit for the tank design capacity category specified in subsection (b)(1)(A), as applicable to the tank.
 - 2) The tank must be equipped with a fixed roof designed to meet the following specifications:
 - A) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the hazardous secondary material in the tank. The fixed roof may be a separate cover installed on the tank (e.g., a removable cover mounted on an open-top tank) or may be an integral part of the tank structural design (e.g., a horizontal cylindrical tank equipped with a hatch).
 - B) The fixed roof must be installed in a manner such that there are no visible cracks, holes, gaps, or other open spaces between roof

section joints or between the interface of the roof edge and the tank wall.

- C) Each opening in the fixed roof, and any manifold system associated with the fixed roof, must fulfill either of the following requirements:
- i) It must be equipped with a closure device designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the opening and the closure device; or
 - ii) It must be connected by a closed-vent system that is vented to a control device. The control device must remove or destroy organics in the vent stream, and must be operating whenever hazardous secondary material is managed in the tank, except as provided in this subsection (c)(2)(C)(ii). During any period of routine inspection, maintenance, or other activities needed for normal operations, and for removal of accumulated sludge or other residues from the bottom of the tank. During any period when it is necessary to provide access to the tank for performing the foregoing activities, venting of the vapor headspace underneath the fixed roof to the control device is not required, opening of closure devices is allowed, and removal of the fixed roof is allowed. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable, and resume operation of the control device.

BOARD NOTE: This subsection (c)(2)(C)(ii) corresponds with 40 CFR 261.1083(c)(2)(iii)(B). The Board combined the texts of 40 CFR 261.1083(c)(2)(iii)(B)(1) and (c)(2)(iii)(B)(2) into this single subsection to comport with codification requirements.

- D) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices must include the organic vapor permeability; the

effects of any contact with the hazardous secondary material or its vapors managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.

- 3) Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position, except as follows:
 - A) Opening of closure devices or removal of the fixed roof is allowed at the following times:
 - i) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of such activities include those times when a worker needs to open a port to sample the liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.
 - ii) To remove accumulated sludge or other residues from the bottom of tank.
 - B) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the tank internal pressure in accordance with the tank design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the tank internal pressure is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on the tank manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the tank internal pressure exceeds the internal pressure operating

range for the tank as a result of loading operations or diurnal ambient temperature fluctuations.

- C) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.
- 4) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the air emission control equipment in accordance with the following requirements.
- A) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.
 - B) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the fixed roof and its closure devices on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except under the special conditions provided for in subsection (l).
 - C) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (k).
 - D) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in accordance with the requirements specified in Section 721.989(b).
- d) Remanufacturers or other persons that store or treat the hazardous secondary material controlling air pollutant emissions from a tank using Tank Level 2 controls must use one of the following tanks:
- 1) A fixed-roof tank equipped with an internal floating roof in accordance with the requirements specified in subsection (e);

- 2) A tank equipped with an external floating roof in accordance with the requirements specified in subsection (f);
 - 3) A tank vented through a closed-vent system to a control device in accordance with the requirements specified in subsection (g);
 - 4) A pressure tank designed and operated in accordance with the requirements specified in subsection (h); or
 - 5) A tank located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device in accordance with the requirements specified in subsection (i).
- e) The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank using a fixed roof with an internal floating roof must meet the requirements specified in subsections (e)(1) through (e)(3).
- 1) The tank must be equipped with a fixed roof and an internal floating roof in accordance with the following requirements:
 - A) The internal floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.
 - B) The internal floating roof must be equipped with a continuous seal between the wall of the tank and the floating roof edge that meets either of the following requirements:
 - i) A single continuous seal that is either a liquid-mounted seal or a metallic shoe seal, as defined in Section 721.981; or
 - ii) Two continuous seals mounted one above the other. The lower seal may be a vapor-mounted seal.
 - C) The internal floating roof must meet the following specifications:
 - i) Each opening in a noncontact internal floating roof except for automatic bleeder vents (vacuum breaker vents) and the rim space vents is to provide a projection below the liquid surface.
 - ii) Each opening in the internal floating roof must be equipped with a gasketed cover or a gasketed lid except for leg sleeves, automatic bleeder vents, rim space vents, column wells, ladder wells, sample wells, and stub drains.

- iii) Each penetration of the internal floating roof for the purpose of sampling must have a slit fabric cover that covers at least 90 percent of the opening.
 - iv) Each automatic bleeder vent and rim space vent must be gasketed.
 - v) Each penetration of the internal floating roof that allows for passage of a ladder must have a gasketed sliding cover.
 - vi) Each penetration of the internal floating roof that allows for passage of a column supporting the fixed roof must have a flexible fabric sleeve seal or a gasketed sliding cover.
- 2) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the tank in accordance with the following requirements:
- A) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.
 - B) Automatic bleeder vents are to be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.
 - C) Prior to filling the tank, each cover, access hatch, gauge float well or lid on any opening in the internal floating roof must be bolted or fastened closed (i.e., no visible gaps). Rim space vents are to be set to open only when the internal floating roof is not floating or when the pressure beneath the rim exceeds the manufacturer's recommended setting.
- 3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the internal floating roof in accordance with the procedures specified as follows:
- A) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, the internal floating roof is not floating on the surface of the liquid inside the tank; liquid has accumulated on top of the internal floating roof; any portion of the roof seals have detached from the roof rim; holes, tears, or other openings are visible in the seal fabric; the gaskets no longer close off the hazardous secondary

material surface from the atmosphere; or the slotted membrane has more than 10 percent open area.

- B) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the internal floating roof components as follows, except as provided in subsection (e)(3)(C):
- i) It must visually inspect the internal floating roof components through openings on the fixed-roof (e.g., manholes and roof hatches) at least once every 12 months after initial fill; and
 - ii) It must visually inspect the internal floating roof, primary seal, secondary seal (if one is in service), gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every 10 years.
- C) As an alternative to performing the inspections specified in subsection (e)(3)(B), for an internal floating roof equipped with two continuous seals mounted one above the other, the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the internal floating roof, primary and secondary seals, gaskets, slotted membranes, and sleeve seals (if any) each time the tank is emptied and degassed and at least every five years.
- D) Prior to each inspection required by subsection (e)(3)(B) or (e)(3)(C), the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency in advance of each inspection to provide the Agency with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency of the date and location of the inspection as follows:
- i) Prior to each visual inspection of an internal floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before refilling the tank, except when an inspection is not planned as provided for in subsection (e)(3)(D)(ii).

- ii) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection 30 calendar days before refilling the tank, the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the Agency at least seven calendar days before refilling the tank.
- E) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (k).
- F) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in accordance with the requirements specified in Section 721.989(b).
- 4) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any tank complying with the requirements of subsection (e).
- f) The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank using an external floating roof must meet the requirements specified in subsections (f)(1) through (f)(3).
 - 1) The remanufacturer or other person that stores or treats the hazardous secondary material must design the external floating roof in accordance with the following requirements:
 - A) The external floating roof must be designed to float on the liquid surface except when the floating roof must be supported by the leg supports.
 - B) The floating roof must be equipped with two continuous seals, one above the other, between the wall of the tank and the roof edge.

The lower seal is referred to as the primary seal, and the upper seal is referred to as the secondary seal.

- i) The primary seal must be a liquid-mounted seal or a metallic shoe seal, as defined in 35 Ill. Adm. Code 721.981. The total area of the gaps between the tank wall and the primary seal must not exceed 212 square centimeters (cm²) per meter of tank diameter, and the width of any portion of these gaps must not exceed 3.8 centimeters (cm). If a metallic shoe seal is used for the primary seal, the metallic shoe seal must be designed so that one end extends into the liquid in the tank and the other end extends a vertical distance of at least 61 cm above the liquid surface.
- ii) The secondary seal must be mounted above the primary seal and cover the annular space between the floating roof and the wall of the tank. The total area of the gaps between the tank wall and the secondary seal must not exceed 21.2 cm² per meter of tank diameter, and the width of any portion of these gaps must not exceed 1.3 cm.

C) The external floating roof must meet the following specifications:

- i) Except for automatic bleeder vents (vacuum breaker vents) and rim space vents, each opening in a noncontact external floating roof must provide a projection below the liquid surface.
- ii) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be equipped with a gasketed cover, seal, or lid.
- iii) Each access hatch and each gauge float well must be equipped with a cover designed to be bolted or fastened when the cover is secured in the closed position.
- iv) Each automatic bleeder vent and each rim space vent must be equipped with a gasket.
- v) Each roof drain that empties into the liquid managed in the tank must be equipped with a slotted membrane fabric cover that covers at least 90 percent of the area of the opening.

- vi) Each unslotted and slotted guide pole well must be equipped with a gasketed sliding cover or a flexible fabric sleeve seal.
 - vii) Each unslotted guide pole must be equipped with a gasketed cap on the end of the pole.
 - viii) Each slotted guide pole must be equipped with a gasketed float or other device which closes off the liquid surface from the atmosphere.
 - ix) Each gauge hatch and each sample well must be equipped with a gasketed cover.
- 2) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the tank in accordance with the following requirements:
- A) When the floating roof is resting on the leg supports, the process of filling, emptying, or refilling must be continuous and must be completed as soon as practical.
 - B) Except for automatic bleeder vents, rim space vents, roof drains, and leg sleeves, each opening in the roof must be secured and maintained in a closed position at all times except when the closure device must be open for access.
 - C) Covers on each access hatch and each gauge float well must be bolted or fastened when secured in the closed position.
 - D) Automatic bleeder vents must be set closed at all times when the roof is floating, except when the roof is being floated off or is being landed on the leg supports.
 - E) Rim space vents must be set to open only at those times that the roof is being floated off the roof leg supports or when the pressure beneath the rim seal exceeds the manufacturer's recommended setting.
 - F) The cap on the end of each unslotted guide pole must be secured in the closed position at all times except when measuring the level or collecting samples of the liquid in the tank.
 - G) The cover on each gauge hatch or sample well must be secured in the closed position at all times except when the hatch or well must be opened for access.

- H) Both the primary seal and the secondary seal must completely cover the annular space between the external floating roof and the wall of the tank in a continuous fashion except during inspections.
- 3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect the external floating roof in accordance with the following procedures:
- A) The remanufacturer or other person that stores or treats the hazardous secondary material must measure the external floating roof seal gaps in accordance with the following requirements:
 - i) The remanufacturer or other person that stores or treats the hazardous secondary material must perform measurements of gaps between the tank wall and the primary seal within 60 calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every five years.
 - ii) The remanufacturer or other person that stores or treats the hazardous secondary material must perform measurements of gaps between the tank wall and the secondary seal within 60 calendar days after initial operation of the tank following installation of the floating roof and, thereafter, at least once every year.
 - iii) If a tank ceases to hold hazardous secondary material for a period of one year or more, subsequent introduction of hazardous secondary material into the tank must be considered an initial operation for the purposes of subsections (f)(3)(A)(i) and (f)(3)(A)(ii).
 - iv) The remanufacturer or other person that stores or treats the hazardous secondary material must determine the total surface area of gaps in the primary seal and in the secondary seal individually using the procedure described in subsection (f)(3)(D):

BOARD NOTE: The Board moved corresponding 40 CFR 261.1084(f)(3)(i)(D)(1) through (f)(3)(i)(D)(4) to appear as subsections (f)(3)(D)(i) through (f)(3)(D)(iv) to comport with codification requirements.
 - v) In the event that the seal gap measurements do not conform to the specifications in subsection (f)(1)(B), the remanufacturer or other person that stores or treats the

hazardous secondary material must repair the defect in accordance with the requirements of subsection (k).

- vi) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in accordance with the requirements specified in Section 721.989(b).
- B) The remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the external floating roof in accordance with the following requirements:
- i) The floating roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, holes, tears, or other openings in the rim seal or seal fabric of the floating roof; a rim seal detached from the floating roof; all or a portion of the floating roof deck being submerged below the surface of the liquid in the tank; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.
 - ii) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the external floating roof and its closure devices on or before the date that the tank becomes subject to this ~~Section~~ section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except for the special conditions provided for in subsection (l).
 - iii) In the event that a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (k).
 - iv) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in accordance with the requirements specified in Section 721.989(b).

- C) Prior to each inspection required by subsection (f)(3)(A) or (f)(3)(B), the remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency in advance of each inspection to provide the Agency with the opportunity to have an observer present during the inspection. The remanufacturer or other person that stores or treats the hazardous secondary material must notify the Agency of the date and location of the inspection as follows:
- i) Prior to each inspection to measure external floating roof seal gaps, as required under subsection (f)(3)(A), written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before the date the measurements are scheduled to be performed.
 - ii) Prior to each visual inspection of an external floating roof in a tank that has been emptied and degassed, written notification must be prepared and sent by the remanufacturer or other person that stores or treats the hazardous secondary material so that it is received by the Agency at least 30 calendar days before refilling the tank, except when an inspection is not planned as provided for in subsection (f)(3)(C)(iii).
 - iii) When a visual inspection is not planned and the remanufacturer or other person that stores or treats the hazardous secondary material could not have known about the inspection 30 calendar days before refilling the tank, the owner or operator must notify the Agency as soon as possible, but no later than seven calendar days before refilling of the tank. This notification may be made by telephone and immediately followed by a written explanation for why the inspection is unplanned. Alternatively, written notification, including the explanation for the unplanned inspection, may be sent so that it is received by the Agency at least seven calendar days before refilling the tank.
- D) Procedure for determining the total surface area of gaps in the primary seal and in the secondary seal individually.

- i) The seal gap measurements must be performed at one or more floating roof levels when the roof is floating off the roof supports.
- ii) Seal gaps, if any, must be measured around the entire perimeter of the floating roof in each place where a 0.32-cm diameter uniform probe passes freely (without forcing or binding against the seal) between the seal and the wall of the tank and measure the circumferential distance of each such location.
- iii) For a seal gap measured under this subsection (f)(3), the gap surface area must be determined by using probes of various widths to measure accurately the actual distance from the tank wall to the seal and multiplying each such width by its respective circumferential distance.
- iv) The total gap area must be calculated by adding the gap surface areas determined for each identified gap location for the primary seal and the secondary seal individually, and then dividing the sum for each seal type by the nominal diameter of the tank. These total gap areas for the primary seal and secondary seal are then compared to the respective standards for the seal type as specified in subsection (f)(1)(B).

BOARD NOTE: The texts of corresponding 40 CFR 261.1084(f)(3)(i)(D)(1) through (f)(3)(i)(D)(4), which would normally appear in subsection (f)(3)(A)(iv), but codification requirements do not allow a fifth level of subsections. Thus, the Board has codified them to appear as subsections (f)(3)(D)(i) through (f)(3)(D)(iv) to comport with codification requirements.

- 4) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any tank complying with the requirements of this subsection (f).
- g) The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions from a tank by venting the tank to a control device must meet the requirements specified in subsections (g)(1) through (g)(3).
- 1) The tank must be covered by a fixed roof and vented directly through a closed-vent system to a control device in accordance with the following requirements:

- A) The fixed roof and its closure devices must be designed to form a continuous barrier over the entire surface area of the liquid in the tank.
 - B) Each opening in the fixed roof not vented to the control device must be equipped with a closure device. If the pressure in the vapor headspace underneath the fixed roof is less than atmospheric pressure when the control device is operating, the closure devices must be designed to operate such that when the closure device is secured in the closed position there are no visible cracks, holes, gaps, or other open spaces in the closure device or between the perimeter of the cover opening and the closure device. If the pressure in the vapor headspace underneath the fixed roof is equal to or greater than atmospheric pressure when the control device is operating, the closure device must be designed to operate with no detectable organic emissions.
 - C) The fixed roof and its closure devices must be made of suitable materials that will minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, and will maintain the integrity of the fixed roof and closure devices throughout their intended service life. Factors to be considered when selecting the materials for and designing the fixed roof and closure devices must include, organic vapor permeability, the effects of any contact with the liquid and its vapor managed in the tank; the effects of outdoor exposure to wind, moisture, and sunlight; and the operating practices used for the tank on which the fixed roof is installed.
 - D) The closed-vent system and control device must be designed and operated in accordance with the requirements of Section 721.987.
- 2) Whenever a hazardous secondary material is in the tank, the fixed roof must be installed with each closure device secured in the closed position and the vapor headspace underneath the fixed roof vented to the control device, except as follows:
- A) Venting to the control device is not required, and opening of closure devices or removal of the fixed roof is allowed at the following times:
 - i) To provide access to the tank for performing routine inspection, maintenance, or other activities needed for normal operations. Examples of activities needed for normal operations include those times when a worker needs

to open a port to sample liquid in the tank, or when a worker needs to open a hatch to maintain or repair equipment. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable, to the tank.

- ii) To remove accumulated sludge or other residues from the bottom of a tank.
- B) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.
- 3) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the air emission control equipment in accordance with the following procedures:
- A) The fixed roof and its closure devices must be visually inspected by the remanufacturer or other person that stores or treats the hazardous secondary material to check for defects that could result in air pollutant emissions. Defects include, but are not limited to, visible cracks, holes, or gaps in the roof sections or between the roof and the tank wall; broken, cracked, or otherwise damaged seals or gaskets on closure devices; and broken or missing hatches, access covers, caps, or other closure devices.
 - B) The closed-vent system and control device must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedures specified in Section 721.987.
 - C) The remanufacturer or other person that stores or treats the hazardous secondary material must perform an initial inspection of the air emission control equipment on or before the date that the tank becomes subject to this section. Thereafter, the remanufacturer or other person that stores or treats the hazardous secondary material must perform the inspections at least once every year except for the special conditions provided for in subsection (1).
 - D) In the event that a defect is detected, the remanufacture or other person that stores or treats the hazardous secondary material must

repair the defect in accordance with the requirements of subsection (k).

- E) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain a record of the inspection in accordance with the requirements specified in Section 721.989(b).
- h) The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions by using a pressure tank must meet the following requirements:
- 1) The tank must be designed not to vent to the atmosphere as a result of compression of the vapor headspace in the tank during filling of the tank to its design capacity.
 - 2) All tank openings must be equipped with closure devices designed to operate with no detectable organic emissions as determined using the procedure specified in Section 721.983(d).
 - 3) Whenever a hazardous secondary material is in the tank, the tank must be operated as a closed system that does not vent to the atmosphere, except under either or the following conditions described in subsection (h)(3)(A) or (h)(3)(B).
 - A) At those times when opening of a safety device, as defined in Section 721.981, is required to avoid an unsafe condition.
 - B) At those times when purging of inerts from the tank is required and the purge stream is routed to a closed-vent system and control device designed and operated in accordance with the requirements of Section 721.987.
- i) The remanufacturer or other person that stores or treats the hazardous secondary material who controls air pollutant emissions by using an enclosure vented through a closed-vent system to an enclosed combustion control device must meet the following requirements:
- 1) The tank must be located inside an enclosure. The enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure as specified in “Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure” in appendix B to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111. The enclosure may have permanent or temporary openings to allow worker access; passage of material into or out of the enclosure by conveyor, vehicles, or other mechanical means; entry of permanent mechanical or

electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or treats the hazardous secondary material must perform the verification procedure for the enclosure as specified in Section 5.0 of “Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure” initially when the enclosure is first installed and annually thereafter.

- 2) The enclosure must be vented through a closed-vent system to an enclosed combustion control device that is designed and operated in accordance with the standards for either a vapor incinerator, boiler, or process heater specified in Section 721.987.
 - 3) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any enclosure, closed-vent system, or control device used to comply with the requirements of subsections (i)(1) and (i)(2).
 - 4) The remanufacturer or other person that stores or treats the hazardous secondary material must inspect and monitor the closed-vent system and control device, as specified in Section 721.987.
- j) The remanufacturer or other person that stores or treats the hazardous secondary material must transfer hazardous secondary material to a tank subject to this section in accordance with the following requirements:
- 1) Transfer of hazardous secondary material, except as provided in subsection (j)(2), to the tank from another tank subject to this section must be conducted using continuous hard-piping or another closed system that does not allow exposure of the hazardous secondary material to the atmosphere. For the purpose of complying with this provision, an individual drain system is considered to be a closed system when it meets the requirements of subpart RR of 40 CFR 63 (National Emission Standards for Individual Drain Systems), incorporated by reference in 35 Ill. Adm. Code 720.111.
 - 2) The requirements of subsection (j)(1) do not apply when transferring a hazardous secondary material to the tank under any of the following conditions:
 - A) The hazardous secondary material meets the average VO concentration conditions specified in Section 721.982(c)(1) at the point of material origination.
 - B) The hazardous secondary material has been treated by an organic destruction or removal process to meet the requirements in Section 721.982(c)(2).

- C) The hazardous secondary material meets the requirements of Section 721.982(c)(4).
- k) The remanufacturer or other person that stores or treats the hazardous secondary material must repair each defect detected during an inspection performed in accordance with the requirements of subsection (c)(4), (e)(3), (f)(3), or (g)(3), as follows:
- 1) The remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than five calendar days after detection, and repair must be completed as soon as possible, but no later than 45 calendar days after detection, except as provided in subsection (k)(2).
 - 2) Repair of a defect may be delayed beyond 45 calendar days if the remanufacturer or other person that stores or treats the hazardous secondary material determines that repair of the defect requires emptying or temporary removal from service of the tank and no alternative tank capacity is available at the site to accept the hazardous secondary material normally managed in the tank. In this case, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect the next time the process or unit that is generating the hazardous secondary material managed in the tank stops operation. Repair of the defect must be completed before the process or unit resumes operation.
- l) Following the initial inspection and monitoring of the cover as required by the applicable provisions of this Subpart CC, subsequent inspection and monitoring may be performed at intervals longer than one year under the following special conditions:
- 1) If inspecting or monitoring the cover would expose a worker to dangerous, hazardous, or other unsafe conditions, then the remanufacturer or other person that stores or treats the hazardous secondary material may designate a cover as an “unsafe to inspect and monitor cover” and comply with all of the following requirements:
 - A) Prepare a written explanation for the cover stating the reasons why the cover is unsafe to visually inspect or to monitor, if required.
 - B) Develop and implement a written plan and schedule to inspect and monitor the cover, using the procedures specified in the applicable section of this Subpart CC, as frequently as practicable during those times when a worker can safely access the cover.
 - 2) If a tank is buried partially or entirely underground, a remanufacturer or other person that stores or treats the hazardous secondary material is

required to inspect and monitor, as required by the applicable provisions of this ~~Section-section~~, only those portions of the tank cover and those connections to the tank (e.g., fill ports, access hatches, gauge wells, etc.) that are located on or above the ground surface.

Section 721.986 Standards: Containers

- a) **Applicability.** The provisions of this Section apply to the control of air pollutant emissions from containers for which Section 721.982(b) references the use of this Section for air emission control.
- b) **General Requirements-**
 - 1) The remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from each container subject to this Section in accordance with the following requirements, as applicable to the container.
 - A) For a container having a design capacity greater than 0.1 m³ and less than or equal to 0.46 m³, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in subsection (c).
 - B) For a container having a design capacity greater than 0.46 m³ that is not in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 1 standards specified in subsection (c).
 - C) For a container having a design capacity greater than 0.46 m³ that is in light material service, the remanufacturer or other person that stores or treats the hazardous secondary material must control air pollutant emissions from the container in accordance with the Container Level 2 standards specified in subsection (d).
 - 2) This subsection (b)(2) corresponds with 40 CFR 261.1086(b)(2), marked “reserved” by USEPA. This statement maintains structural consistency with the federal regulations
- c) **Container Level 1 Standards-**
 - 1) A container using Container Level 1 controls is one of the following:

- A) A container that meets the applicable U.S. Department of Transportation (USDOT) regulations on packaging hazardous materials for transportation, as specified in subsection (f).
 - B) A container equipped with a cover and closure devices that form a continuous barrier over the container openings such that, when the cover and closure devices are secured in the closed position, there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container (e.g., a lid on a drum or a suitably secured tarp on a roll-off box) or may be an integral part of the container structural design (e.g., a “portable tank” or bulk cargo container equipped with a screw-type cap).
 - C) An open-top container in which an organic-vapor suppressing barrier is placed on or over the hazardous secondary material in the container such that no hazardous secondary material is exposed to the atmosphere. One example of such a barrier is application of a suitable organic-vapor suppressing foam.
- 2) A container used to meet the requirements of subsection (c)(1)(B) or (c)(1)(C) must be equipped with covers and closure devices, as applicable to the container, that are composed of suitable materials to minimize exposure of the hazardous secondary material to the atmosphere and to maintain the equipment integrity, for as long as the container is in service. Factors to be considered in selecting the materials of construction and designing the cover and closure devices must include, organic vapor permeability; the effects of contact with the hazardous secondary material or its vapor managed in the container; the effects of outdoor exposure of the closure device or cover material to wind, moisture, and sunlight; and the operating practices for which the container is intended to be used.
- 3) Whenever a hazardous secondary material is in a container using Container Level 1 controls, the remanufacturer or other person that stores or treats the hazardous secondary material must install all covers and closure devices for the container, as applicable to the container, and secure and maintain each closure device in the closed position except as follows:
- A) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container as follows:
 - i) If the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material must

promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

- ii) If discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within 15 minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the hazardous secondary material being added to the container, whichever condition occurs first.
- B) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container, as follows:
- i) For the purpose of meeting the requirements of this section, an empty hazardous secondary material container may be open to the atmosphere at any time (i.e., covers and closure devices on such a container are not required to be secured in the closed position).
 - ii) If discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary material container, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.
- C) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of routine activities other than transfer of hazardous secondary material include those times when a worker needs to open a port to measure

the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

- D) Opening of a spring-loaded pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device must be designed to operate with no detectable organic emissions when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other persons that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.
 - E) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.
- 4) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 1 controls must inspect the containers and their covers and closure devices, as follows:
- A) If a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., is not an empty hazardous secondary material container) the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its cover and

closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection must be conducted on or before the date that the container is accepted at the facility (i.e., the date the container becomes subject to the container standards of this Subpart CC).

- B) If a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material must initially visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. After the initial inspection, a visual inspection must occur at least once every 12 months. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (c)(4)(C).
 - C) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than 24 hours after detection and repair must be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous secondary material must be removed from the container and the container must not be used to manage hazardous secondary material until the defect is repaired.
- 5) The remanufacturer or other person that stores or treats the hazardous secondary material must maintain at the facility a copy of the procedure used to determine that containers with capacity of 0.46 m³ or greater which do not meet applicable USDOT regulations, as specified in subsection (f), are not managing hazardous secondary material in light material service.
- d) Container Level 2 Standards-
- 1) A container using Container Level 2 controls is one of the following:
 - A) A container that meets the applicable USDOT regulations on packaging hazardous materials for transportation, as specified in subsection (f).

- B) A container that operates with no detectable organic emissions, as defined in Section 721.981, and determined in accordance with the procedure specified in subsection (g).
 - C) A container that has been demonstrated within the preceding 12 months to be vapor-tight by using Reference Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Unis Pressure-Vacuum Test) in appendix A to 40 CFR 60 (Test Methods), incorporated by reference in 35 Ill. Adm. Code 720.111, in accordance with the procedure specified in subsection (h).
- 2) Transfer of hazardous secondary material in or out of a container using Container Level 2 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that USEPA has stated that it considers to meet the requirements of this subsection (d) include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and subsequently purging the transfer line before removing it from the container opening.
- 3) Whenever a hazardous secondary material is in a container using Container Level 2 controls, the remanufacturer or other person that stores or treats the hazardous secondary material must install all covers and closure devices for the container, and secure and maintain each closure device in the closed position, except as follows:
- A) Opening of a closure device or cover is allowed for the purpose of adding hazardous secondary material or other material to the container, as follows:
 - i) If the container is filled to the intended final level in one continuous operation, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install the covers, as applicable to the container, upon conclusion of the filling operation.

- ii) If discrete quantities or batches of material intermittently are added to the container over a period of time, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon either the container being filled to the intended final level; the completion of a batch loading after which no additional material will be added to the container within 15 minutes; the person performing the loading operation leaving the immediate vicinity of the container; or the shutdown of the process generating the material being added to the container, whichever condition occurs first.
- B) Opening of a closure device or cover is allowed for the purpose of removing hazardous secondary material from the container, as follows:
- i) For the purpose of meeting the requirements of this Section, an empty hazardous secondary material container may be open to the atmosphere at any time (i.e., covers and closure devices are not required to be secured in the closed position on an empty container).
 - ii) If discrete quantities or batches of material are removed from the container, but the container is not an empty hazardous secondary materials container, the remanufacturer or other person that stores or treats the hazardous secondary material must promptly secure the closure devices in the closed position and install covers, as applicable to the container, upon the completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container, whichever condition occurs first.
- C) Opening of a closure device or cover is allowed when access inside the container is needed to perform routine activities other than transfer of hazardous secondary material. Examples of routine activities other than transfer of hazardous secondary material include those times when a worker needs to open a port to measure the depth of or sample the material in the container, or when a worker needs to open a manhole hatch to access equipment inside the container. Following completion of the activity, the remanufacturer or other person that stores or treats the hazardous

secondary material must promptly secure the closure device in the closed position or reinstall the cover, as applicable to the container.

- D) Opening of a spring-loaded, pressure-vacuum relief valve, conservation vent, or similar type of pressure relief device which vents to the atmosphere is allowed during normal operations for the purpose of maintaining the internal pressure of the container in accordance with the container design specifications. The device must be designed to operate with no detectable organic emission when the device is secured in the closed position. The settings at which the device opens must be established such that the device remains in the closed position whenever the internal pressure of the container is within the internal pressure operating range determined by the remanufacturer or other person that stores or treats the hazardous secondary material based on container manufacturer recommendations, applicable regulations, fire protection and prevention codes, standard engineering codes and practices, or other requirements for the safe handling of flammable, ignitable, explosive, reactive, or hazardous materials. Examples of normal operating conditions that may require these devices to open are during those times when the internal pressure of the container exceeds the internal pressure operating range for the container as a result of loading operations or diurnal ambient temperature fluctuations.
 - E) Opening of a safety device, as defined in Section 721.981, is allowed at any time conditions require doing so to avoid an unsafe condition.
- 4) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 2 controls must inspect the containers and their covers and closure devices as follows:
- A) If a hazardous secondary material already is in the container at the time the remanufacturer or other person that stores or treats the hazardous secondary material first accepts possession of the container at the facility and the container is not emptied within 24 hours after the container is accepted at the facility (i.e., is not an empty hazardous secondary material container), the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its cover and closure devices to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. The container visual inspection must be conducted on or before the date

that the container is accepted at the facility (i.e., the date the container becomes subject to the container standards of this Subpart CC).

- B) If a container used for managing hazardous secondary material remains at the facility for a period of one year or more, the remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the container and its cover and closure devices initially and thereafter, at least once every 12 months, to check for visible cracks, holes, gaps, or other open spaces into the interior of the container when the cover and closure devices are secured in the closed position. If a defect is detected, the remanufacturer or other person that stores or treats the hazardous secondary material must repair the defect in accordance with the requirements of subsection (d)(4)(C).
 - C) When a defect is detected for the container, cover, or closure devices, the remanufacturer or other person that stores or treats the hazardous secondary material must make first efforts at repair of the defect no later than 24 hours after detection, and repair must be completed as soon as possible but no later than five calendar days after detection. If repair of a defect cannot be completed within five calendar days, then the hazardous secondary material must be removed from the container and the container must not be used to manage hazardous secondary material until the defect is repaired.
- e) Container Level 3 Standards-
- 1) A container using Container Level 3 controls is one of the following:
 - A) A container that is vented directly through a closed-vent system to a control device in accordance with the requirements of subsection (e)(2)(B).
 - B) A container that is vented inside an enclosure which is exhausted through a closed-vent system to a control device in accordance with the requirements of subsections (e)(2)(A) and (e)(2)(B).
 - 2) The remanufacturer or other person that stores or treats the hazardous secondary material must meet the following requirements, as applicable to the type of air emission control equipment selected by the remanufacturer or other person that stores or treats the hazardous secondary material:
 - A) The container enclosure must be designed and operated in accordance with the criteria for a permanent total enclosure, as specified in "Procedure T—Criteria for and Verification of a

Permanent or Temporary Total Enclosure” in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111. The enclosure may have permanent or temporary openings to allow worker access; passage of containers through the enclosure by conveyor or other mechanical means; entry of permanent mechanical or electrical equipment; or direct airflow into the enclosure. The remanufacturer or other person that stores or treats the hazardous secondary material must perform the verification procedure for the enclosure as specified in Section 5.0 of “Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure” initially when the enclosure is first installed and, thereafter, annually.

- B) The closed-vent system and control device must be designed and operated in accordance with the requirements of Section 721.987.
- 3) Safety devices, as defined in Section 721.981, may be installed and operated as necessary on any container, enclosure, closed-vent system, or control device used to comply with the requirements of subsection (e)(1).
- 4) Remanufacturers or other persons that store or treat the hazardous secondary material using Container Level 3 controls in accordance with the provisions of this Subpart CC must inspect and monitor the closed-vent systems and control devices as specified in Section 721.987.
- 5) Remanufacturers or other persons that store or treat the hazardous secondary material that use Container Level 3 controls in accordance with the provisions of this Subpart CC must prepare and maintain the records specified in Section 721.989(d).
- 6) Transfer of hazardous secondary material in or out of a container using Container Level 3 controls must be conducted in such a manner as to minimize exposure of the hazardous secondary material to the atmosphere, to the extent practical, considering the physical properties of the hazardous secondary material and good engineering and safety practices for handling flammable, ignitable, explosive, reactive, or other hazardous materials. Examples of container loading procedures that USEPA has stated that it considers to meet the requirements of this subsection (e) include using any one of the following: a submerged-fill pipe or other submerged-fill method to load liquids into the container; a vapor-balancing system or a vapor-recovery system to collect and control the vapors displaced from the container during filling operations; or a fitted opening in the top of a container through which the hazardous secondary material is filled and

subsequently purging the transfer line before removing it from the container opening.

- f) For the purpose of compliance with subsection (c)(1)(A) or (d)(1)(A), containers must be used that meet the applicable USDOT regulations on packaging hazardous materials for transportation, as follows:
- 1) The container meets the applicable requirements specified in 49 CFR 178 (Specifications for Packagings) or 179 (Specifications for Tank Cars), each incorporated by reference in 35 Ill. Adm. Code 720.111.
 - 2) Hazardous secondary material is managed in the container in accordance with the applicable requirements specified in subpart B of 49 CFR 107 (Hazardous Material Program Procedures) and 49 CFR 172 (Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, Training Requirements, and Security Plans), 173 (Shippers—General Requirements for Shipments and Packagings), and 180 (Continuing Qualification and Maintenance of Packagings), incorporated by reference in 35 Ill. Adm. Code 720.111.
 - 3) For the purpose of complying with this Subpart CC, no exceptions to the 49 CFR 178 (Specifications for Packagings) or 179 (Specifications for Tank Cars) regulations are allowed.
- g) To determine compliance with the no detectable organic emissions requirement of subsection (d)(1)(B), the procedure specified in Section 721.983(d) must be used.
- 1) Each potential leak interface (i.e., a location where organic vapor leakage could occur) on the container, its cover, and associated closure devices, as applicable to the container, must be checked. Potential leak interfaces that are associated with containers include, but are not limited to: the interface of the cover rim and the container wall; the periphery of any opening on the container or container cover and its associated closure device; and the sealing seat interface on a spring-loaded pressure-relief valve.
 - 2) The test must be performed when the container is filled with a material having a volatile organic concentration representative of the range of volatile organic concentrations for the hazardous secondary materials expected to be managed in this type of container. During the test, the container cover and closure devices must be secured in the closed position.
- h) Procedure for determining a container to be vapor-tight using Reference Method 27 (Determination of Vapor Tightness of Gasoline Delivery Tank Unis Pressure-Vacuum Test) in appendix A (Test Methods) to 40 CFR 60, incorporated by

reference in 35 Ill. Adm. Code 720.111, for the purpose of complying with subsection (d)(1)(C).

- 1) The test must be performed in accordance with Reference Method 27 of appendix A to 40 CFR 60.
- 2) A pressure measurement device must be used that has a precision of ± 2.5 mm water and that is capable of measuring above the pressure at which the container is to be tested for vapor tightness.
- 3) If the test results determined by Reference Method 27 indicate that the container sustains a pressure change less than or equal to 0.75 kPa within five minutes after it is pressurized to a minimum of 4.5 kPa, then the container is determined to be vapor-tight.

Section 721.987 Standards: Closed-Vent Systems and Control Devices

- a) This Section applies to each closed-vent system and control device installed and operated by the remanufacturer or other person who stores or treats the hazardous secondary material to control air emissions in accordance with standards of this Subpart CC.
- b) The closed-vent system must meet the following requirements:
 - 1) The closed-vent system must route the gases, vapors, and fumes emitted from the hazardous secondary material in the hazardous secondary material management unit to a control device that meets the requirements specified in subsection (c).
 - 2) The closed-vent system must be designed and operated in accordance with the requirements specified in Section 721.933(k).
 - 3) If the closed-vent system includes bypass devices that could be used to divert the gas or vapor stream to the atmosphere before entering the control device, each bypass device must be equipped with either a flow indicator as specified in subsection (b)(3)(A) or a seal or locking device as specified in subsection (b)(3)(B). For the purpose of complying with this subsection (b), low leg drains, high point bleeds, analyzer vents, open-ended valves or lines, spring loaded pressure relief valves, and other fittings used for safety purposes are not considered to be bypass devices.
 - A) If a flow indicator is used to comply with subsection (b)(3), the indicator must be installed at the inlet to the bypass line used to divert gases and vapors from the closed-vent system to the

atmosphere at a point upstream of the control device inlet. For this subsection (b), a flow indicator means a device which indicates the presence of either gas or vapor flow in the bypass line.

- B) If a seal or locking device is used to comply with subsection (b)(3), the device must be placed on the mechanism by which the bypass device position is controlled (e.g., valve handle, damper lever, etc.) when the bypass device is in the closed position such that the bypass device cannot be opened without breaking the seal or removing the lock. Examples of such devices include, but are not limited to, a car-seal or a lock-and-key configuration valve. The remanufacturer or other person that stores or treats the hazardous secondary material must visually inspect the seal or closure mechanism at least once every month to verify that the bypass mechanism is maintained in the closed position.
- 4) The closed-vent system must be inspected and monitored by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the procedure specified in Section 721.933(l).
- c) The control device must meet the following requirements:
- 1) The control device must be one of the following devices:
 - A) A control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least 95 percent by weight;
 - B) An enclosed combustion device designed and operated in accordance with the requirements of Section 721.933(c); or
 - C) A flare designed and operated in accordance with the requirements of Section 721.933(d).
 - 2) The remanufacturer or other person that stores or treats the hazardous secondary material who elects to use a closed-vent system and control device to comply with the requirements of this Section ~~section~~ must comply with the requirements specified in subsections (c)(2)(A) through (c)(2)(F).
 - A) Periods of planned routine maintenance of the control device, during which the control device does not meet the specifications of subsection (c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, must not exceed 240 hours per year.

- B) The specifications and requirements in subsections (c)(1)(A) through (c)(1)(C) for control devices do not apply during periods of planned routine maintenance.
 - C) The specifications and requirements in subsections (c)(1)(A) through (c)(1)(C) for control devices do not apply during a control device system malfunction.
 - D) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate compliance with the requirements of subsection (c)(2)(A) (i.e., planned routine maintenance of a control device, during which the control device does not meet the specifications of subsection (c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, must not exceed 240 hours per year) by recording the information specified in Section 721.989(e)(1)(E).
 - E) The remanufacturer or other person that stores or treats the hazardous secondary material must correct control device system malfunctions as soon as practicable after their occurrence in order to minimize excess emissions of air pollutants.
 - F) The remanufacturer or other person that stores or treats the hazardous secondary material must operate the closed-vent system such that gases, vapors, or fumes are not actively vented to the control device during periods of planned maintenance or control device system malfunction (i.e., periods when the control device is not operating or not operating normally) except in cases when it is necessary to vent the gases, vapors, or fumes to avoid an unsafe condition or to implement malfunction corrective actions or planned maintenance actions.
- 3) The remanufacturer or other person that stores or treats the hazardous secondary material using a carbon adsorption system to comply with subsection (c)(1) must operate and maintain the control device in accordance with the following requirements:
- A) Following the initial startup of the control device, all activated carbon in the control device must be replaced with fresh carbon on a regular basis in accordance with the requirements of Section 721.933(g) or (h).
 - B) All carbon that is hazardous waste and that is removed from the control device must be managed in accordance with the requirements of Section 721.933(n), regardless of the average volatile organic concentration of the carbon.

- 4) A remanufacturer or other person that stores or treats the hazardous secondary material using a control device other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system to comply with subsection (c)(1) must operate and maintain the control device in accordance with the requirements of Section 721.933(j).
- 5) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate that a control device achieves the performance requirements of subsection (c)(1) as follows:
 - A) A remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate the performance of each control device, using either a performance test, as specified in subsection (c)(5)(C), or a design analysis, as specified in subsection (c)(5)(D), except for the following:
 - i) A flare;
 - ii) A boiler or process heater with a design heat input capacity of 44 megawatts or greater; or
 - iii) A boiler or process heater into which the vent stream is introduced with the primary fuel.
 - B) A remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate the performance of each flare in accordance with the requirements specified in Section 721.933(e).
 - C) For a performance test conducted to meet the requirements of subsection (c)(5)(A), the remanufacturer or other person that stores or treats the hazardous secondary material must use the test methods and procedures specified in Section 721.934(c)(1) through (c)(4).
 - D) For a design analysis conducted to meet the requirements of subsection (c)(5)(A), the design analysis must meet the requirements specified in Section 721.935(b)(4)(C).
 - E) The remanufacturer or other person that stores or treats the hazardous secondary material must demonstrate that a carbon adsorption system achieves the performance requirements of subsection (c)(1) based on the total quantity of organics vented to the atmosphere from all carbon adsorption system equipment that is used for organic adsorption, organic desorption or carbon regeneration, organic recovery, and carbon disposal.

- 6) If the remanufacturer or other person that stores or treats the hazardous secondary material and the Agency do not agree on a demonstration of control device performance using a design analysis, then the disagreement must be resolved using the results of a performance test performed by the remanufacturer or other person that stores or treats the hazardous secondary material in accordance with the requirements of subsection (c)(5)(C). The Agency may choose to have an authorized representative observe the performance test. The Agency must state any disagreement on a demonstration of control device performance using a design analysis in writing to the remanufacturer or other person that treats or stores hazardous secondary material.
- 7) The closed-vent system and control device must be inspected and monitored by the remanufacture or other person that stores or treats the hazardous secondary material in accordance with the procedures specified in Section 721.933(f)(2) and (l). The readings from each monitoring device required by Section 721.933(f)(2) must be inspected at least once each operating day to check control device operation. Any necessary corrective measures must be immediately implemented to ensure the control device is operated in compliance with the requirements of this Section.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 721.989 Recordkeeping Requirements

- a) Each remanufacturer or other person that stores or treats the hazardous secondary material subject to requirements of this Subpart CC must record and maintain the information specified in subsections (b) through (j), as applicable to the facility. Except for air emission control equipment design documentation and information required by subsections (i) and (j), records required by this section must be maintained at the facility for a minimum of three years. Air emission control equipment design documentation must be maintained at the facility until the air emission control equipment is replaced or otherwise no longer in service. Information required by subsections (i) and (j) must be maintained at the facility for as long as the hazardous secondary material management unit is not using air emission controls specified in Sections 721.984 through 721.987 in accordance with the conditions specified in Section 721.980(b)(7) or (d), respectively.
- b) The remanufacturer or other person that stores or treats the hazardous secondary material using a tank with air emission controls in accordance with the requirements of Section 721.984 must prepare and maintain records for the tank that include the following information:

- 1) For each tank using air emission controls in accordance with the requirements of Section 721.984, the remanufacturer or other person that stores or treats the hazardous secondary material must record:
 - A) A tank identification number (or other unique identification description as selected by the remanufacturer or other person that stores or treats the hazardous secondary material).
 - B) A record for each inspection required by Section 721.984 that includes the following information:
 - i) The date inspection was conducted.
 - ii) For each defect detected during the inspection, the location of the defect, a description of the defect, the date of detection, and corrective action taken to repair the defect. In the event that repair of the defect is delayed in accordance with the requirements of Section 721.984, the remanufacturer or other person that stores or treats the hazardous secondary material must also record the reason for the delay and the date that completion of repair of the defect is expected.
- 2) In addition to the information required by subsection (b)(1), the remanufacturer or other person that stores or treats the hazardous secondary material must record the following information, as applicable to the tank:
 - A) The remanufacturer or other person that stores or treats the hazardous secondary material using a fixed roof to comply with the Tank Level 1 control requirements specified in Section 721.984(c) must prepare and maintain records for each determination for the maximum organic vapor pressure of the hazardous secondary material in the tank performed in accordance with the requirements of Section 721.984(c). The records must include the date and time the samples were collected, the analysis method used, and the analysis results.
 - B) The remanufacturer or other person that stores or treats the hazardous secondary material using an internal floating roof to comply with the Tank Level 2 control requirements specified in Section 721.1084(e) of this Subpart CC must prepare and maintain documentation describing the floating roof design.
 - C) Remanufacturer or other persons that store or treat the hazardous secondary material using an external floating roof to comply with

the Tank Level 2 control requirements specified in Section 721.984(f) must prepare and maintain the following records:

- i) Documentation describing the floating roof design and the dimensions of the tank.
- ii) Records for each seal gap inspection required by Section 721.984(f)(3) describing the results of the seal gap measurements. The records must include the date that the measurements were performed, the raw data obtained for the measurements, and the calculations of the total gap surface area. In the event that the seal gap measurements do not conform to the specifications in Section 721.984(f)(1), the records must include a description of the repairs that were made, the date the repairs were made, and the date the tank was emptied, if necessary.

D) Each remanufacturer or other person that stores or treats the hazardous secondary material using an enclosure to comply with the Tank Level 2 control requirements specified in Section 721.984(i) must prepare and maintain the following records:

- i) Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in “Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure” in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111.
- ii) Records required for the closed-vent system and control device in accordance with the requirements of subsection (e).

- c) This subsection (c) corresponds with 40 CFR 261.1089(c), marked “reserved” by USEPA. This statement maintains structural consistency with the federal regulations
- d) The remanufacturer or other person that stores or treats the hazardous secondary material using containers with Container Level 3 air emission controls in accordance with the requirements of Section 721.986 must prepare and maintain records that include the following information:

- 1) Records for the most recent set of calculations and measurements performed by the remanufacturer or other person that stores or treats the hazardous secondary material to verify that the enclosure meets the criteria of a permanent total enclosure as specified in “Procedure T—Criteria for and Verification of a Permanent or Temporary Total Enclosure” in appendix B (VOM Measurement Techniques for Capture Efficiency) to 40 CFR 52.741, incorporated by reference in 35 Ill. Adm. Code 720.111.
 - 2) Records required for the closed-vent system and control device in accordance with the requirements of subsection (e).
- e) The remanufacturer or other person that stores or treats the hazardous secondary material using a closed-vent system and control device in accordance with the requirements of Section 721.987 must prepare and maintain records that include the following information:
- 1) Documentation for the closed-vent system and control device that includes:
 - A) Certification that is signed and dated by the remanufacturer or other person that stores or treats the hazardous secondary material stating that the control device is designed to operate at the performance level documented by a design analysis, as specified in subsection (e)(1)(B), or by performance tests as specified in subsection (e)(1)(C) when the tank or container is or would be operating at capacity or the highest level reasonably expected to occur.
 - B) If a design analysis is used, then design documentation as specified in Section 721.935(b)(4). The documentation must include information prepared by the remanufacturer or other person that stores or treats the hazardous secondary material or provided by the control device manufacturer or vendor that describes the control device design in accordance with Section 721.935(b)(4)(C) and certification by the remanufacturer or other person that stores or treats the hazardous secondary material that the control equipment meets the applicable specifications.
 - C) If performance tests are used, then a performance test plan, as specified in Section 721.935(b)(3), and all test results.
 - D) Information as required by Section 721.935(c)(1) and (c)(2), as applicable.
 - E) A remanufacturer or other person that stores or treats the hazardous secondary material must record, on a semiannual basis, the

information specified in subsections (e)(1)(E)(i) and (e)(1)(E)(ii) for those planned routine maintenance operations that would require the control device not to meet the requirements of Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable.

- i) A description of the planned routine maintenance that is anticipated to be performed for the control device during the next six-month period. This description must include the type of maintenance necessary, planned frequency of maintenance, and lengths of maintenance periods.
 - ii) A description of the planned routine maintenance that was performed for the control device during the previous six-month period. This description must include the type of maintenance performed and the total number of hours during those six months that the control device did not meet the requirements of Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable, due to planned routine maintenance.
- F) A remanufacturer or other person that stores or treats the hazardous secondary material must record the information specified in subsections (e)(1)(F)(i) through (e)(1)(F)(iii) for those unexpected control device system malfunctions that would require the control device not to meet the requirements of Section 721.987(c)(1)(A), (c)(1)(B), or (c)(1)(C), as applicable.
- i) The occurrence and duration of each malfunction of the control device system.
 - ii) The duration of each period during a malfunction when gases, vapors, or fumes are vented from the hazardous secondary material management unit through the closed-vent ~~closed-vent~~ system to the control device while the control device is not properly functioning.
 - iii) Actions taken during periods of malfunction to restore a malfunctioning control device to its normal or usual manner of operation.
- G) Records of the management of carbon removed from a carbon adsorption system conducted in accordance with Section 721.987(c)(3)(B).
- f) The remanufacturer or other person that stores or treats the hazardous secondary material using a tank or container exempted under the hazardous secondary

material organic concentration conditions specified in Section 721.982(c)(1) or (c)(2)(A) through (c)(2)(F), must prepare and maintain at the facility records documenting the information used for each material determination (e.g., test results, measurements, calculations, and other documentation). If analysis results for material samples are used for the material determination, then the remanufacturer or other person that stores or treats the hazardous secondary material must record the date, time, and location that each material sample is collected in accordance with applicable requirements of Section 721.983.

BOARD NOTE: Corresponding 40 CFR 261.1089(f) includes a subsection (f)(2) that USEPA marked “reserved.” Because there is no 40 CFR 1089(f)(1), the Board included no text to correspond with subsection (f)(2).

- g) A remanufacturer or other person that stores or treats the hazardous secondary material designating a cover as “unsafe to inspect and monitor” pursuant to Section 721.984(l) or Section 721.985(g) must record and keep at facility the following information: the identification numbers for hazardous secondary material management units with covers that are designated as “unsafe to inspect and monitor;” the explanation for each cover stating why the cover is unsafe to inspect and monitor, and the plan and schedule for inspecting and monitoring each cover.
- h) The remanufacturer or other person that stores or treats the hazardous secondary material that is subject to this Subpart CC and to the control device standards in subpart VV (Standards of Performance for Equipment Leaks of VOC in the Synthetic Organic Chemicals Manufacturing Industry for which Construction, Reconstruction, or Modification Commenced After January 5, 1981, on or Before November 7, 2006) of 40 CFR 60 or subpart V of 40 CFR 61 (National Emission Standard for Equipment Leaks (Fugitive Emission Sources)), each incorporated by reference in 35 Ill. Adm. Code 720.111, may elect to demonstrate compliance with the applicable sections of this Subpart CC by documentation either pursuant to this Subpart CC, or pursuant to the provisions of subpart VV of 40 CFR 60 or subpart V of 40 CFR 61, to the extent that the documentation required by 40 CFR 60 or 61 duplicates the documentation required by this Section.

Section 721.APPENDIX A Representative Sampling Methods

The methods and equipment used for sampling waste materials will vary with the form and consistency of the waste materials to be sampled. Samples collected using the sampling protocols listed below, for sampling waste with properties similar to the indicated materials, are considered by USEPA to be representative of the waste.

Extremely viscous liquid: ASTM D 140–70 (Standard Practice for Sampling Bituminous Materials), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Crushed or powdered material: ASTM D 346–75 (Standard Practice for Collection and Preparation of Coke Samples for Laboratory Analysis), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Soil or rock-like material: ASTM D 420–69 (Guide to Site Characterization for Engineering, Design, and Construction Purposes), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Soil-like material: ASTM D 1452–65 (Standard Practice for Soil Investigation and Sampling by Auger Borings), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Fly ash-like material: ASTM ~~D 2234–76~~D2234–76 (Standard Practice for Collection of a Gross Sample of Coal), incorporated by reference in 35 Ill. Adm. Code 720.111(a).

Containerized liquid wastes: “Composite Liquid Waste Sampler (COLIWASA)”.

Liquid waste in pits, ponds, lagoons, and similar reservoirs: “Pond Sampler”.

Section 721.APPENDIX H Hazardous Constituents

Common Name	Chemical Abstracts Name	Chemical Abstracts Number (CAS No.)	USEPA Hazardous Waste Number
A2213	Ethanimidothioic acid, 2-(dimethylamino)-N-hydroxy-2-oxo-, methyl ester	30558-43-1	U394
Acetonitrile	Same	75-05-8	U003
Acetophenone	Ethanone, 1-phenyl-	98-86-2	U004
2-Acetylaminofluorene	Acetamide, N-9H-fluoren-2-yl-	53-96-3	U005
Acetyl chloride	Same	75-36-5	U006
1-Acetyl-2-thiourea	Acetamide, N-(aminothioxomethyl)-	591-08-2	P002
Acrolein	2-Propenal	107-02-8	P003
Acrylamide	2-Propenamamide	79-06-1	U007
Acrylonitrile	2-Propenenitrile	107-13-1	U009
Aflatoxins	Same	1402-68-2	
Aldicarb	Propanal, 2-methyl-2-(methylthio)-, O-((methylamino)carbonyl)oxime	116-06-3	P070

Aldicarb sulfone	Propanal, 2-methyl-2- (methyl-sulfonyl)-, O-((methylamino)-carbonyl)oxime	1646-88-4	P203
Aldrin	1,4,5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-, (1- α ,4- α ,4a- β ,5- α ,8- α ,8a- β)-	309-00-2	P004
Allyl alcohol	2-Propen-1-ol	107-18-6	P005
Allyl chloride	1-Propene, 3-chloro-	107-05-1	
Aluminum phosphide	Same	20859-73-8	P006
4-Aminobiphenyl	(1,1'-Biphenyl)-4-amine	92-67-1	
5-(Aminomethyl)-3-isoxazolol	3(2H)-Isoxazolone, 5-(amino-methyl)-	2763-96-4	P007
4-Aminopyridine	4-Pyridinamine	504-24-5	P008
Amitrole	1H-1,2,4-Triazol-3-amine	61-82-5	U011
Ammonium vanadate	Vanadic acid, ammonium salt	7803-55-6	P119
Aniline	Benzenamine	62-53-3	U012
o-Anisidine (2-methoxyaniline)	Benzenamine, 2-Methoxy-	90-04-0	
Antimony	Same	7440-36-0	
Antimony compounds, N.O.S. (not otherwise specified)			
Aramite	Sulfurous acid, 2-chloroethyl-, 2-(4-(1,1-dimethylethyl)phenoxy)-1-methylethyl ester	140-57-8	
Arsenic	Arsenic	7440-38-2	
Arsenic compounds, N.O.S.			
Arsenic acid	Arsenic acid H_3AsO_4	7778-39-4	P010
Arsenic pentoxide	Arsenic oxide As_2O_5	1303-28-2	P011
Arsenic trioxide	Arsenic oxide As_2O_3	1327-53-3	P012
Auramine	Benzenamine, 4,4'-carbonimidoyl-bis(N, N-dimethyl-	492-80-8	U014
Azaserine	L-Serine, diazoacetate (ester)	115-02-6	U015
Barban	Carbamic acid, (3-chlorophenyl)-, 4-chloro-2-butynyl ester	101-27-9	U280
Barium	Same	7440-39-3	
Barium compounds, N.O.S.			
Barium cyanide	Same	542-62-1	P013
Bendiocarb	1,3-Benzodioxol-4-ol-2,2-dimethyl-, methyl carbamate	22781-23-3	U278
Bendiocarb phenol	1,3-Benzodioxol-4-ol-2,2-dimethyl-,	22961-82-6	U364
Benomyl	Carbamic acid, (1- ((butylamino)-carbonyl)-1H-benzimidazol-2-yl)-, methyl ester	17804-35-2	U271

Benz(c)acridine	Same	225-51-4	U016
Benz(a)anthracene	Same	56-55-3	U018
Benzal chloride	Benzene, (dichloromethyl)-	98-87-3	U017
Benzene	Same	71-43-2	U019
Benzeneearsonic acid	Arsonic acid, phenyl-	98-05-5	
Benzidine	(1,1'-Biphenyl)-4,4'-diamine	92-87-5	U021
Benzo(b)fluoranthene	Benz(e)acephenanthrylene	205-99-2	
Benzo(j)fluoranthene	Same	205-82-3	
Benzo(k)fluoranthene	Same	207-08-9	
Benzo(a)pyrene	Same	50-32-8	U022
p-Benzoquinone	2,5-Cyclohexadiene-1,4-dione	106-51-4	U197
Benzotrichloride	Benzene, (trichloromethyl)-	98-07-7	U023
Benzyl chloride	Benzene, (chloromethyl)-	100-44-7	P028
Beryllium powder	Same	7440-41-7	P015
Beryllium compounds, N.O.S.			
Bis(pentamethylene)thiuram tetrasulfide	Piperidine, 1,1'-(tetrathio-dicarbonothioyl)-bis-	120-54-7	
Bromoacetone	2-Propanone, 1-bromo-	598-31-2	P017
Bromoform	Methane, tribromo-	75-25-2	U225
4-Bromophenyl phenyl ether	Benzene, 1-bromo-4-phenoxy-	101-55-3	U030
Brucine	Strychnidin-10-one, 2,3-dimethoxy-	357-57-3	P018
Butylate	Carbamothioic acid, bis(2-methyl-propyl)-, S-ethyl ester	2008-41-5	
Butyl benzyl phthalate	1,2-Benzenedicarboxylic acid, butyl phenylmethyl ester	85-68-7	
Cacodylic acid	Arsenic acid, dimethyl-	75-60-5	U136
Cadmium	Same	7440-43-9	
Cadmium compounds, N.O.S.			
Calcium chromate	Chromic acid H ₂ CrO ₄ , calcium salt	13765-19-0	U032
Calcium cyanide	Calcium cyanide Ca(CN) ₂	592-01-8	P021
Carbaryl	1-Naphthalenol, methylcarbamate	63-25-2	U279
Carbendazim	Carbamic acid, 1H-benzimidazol-2-yl, methyl ester	10605-21-7	U372
Carbofuran	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-, methylcarbamate	1563-66-2	P127
Carbofuran phenol	7-Benzofuranol, 2,3-dihydro-2,2-dimethyl-	1563-38-8	U367
Carbosulfan	Carbamic acid, ((dibutylamino)-thio)methyl-2,3-dihydro-2,2-dimethyl-7-benzofuranyl ester	55285-14-8	P189
Carbon disulfide	Same	75-15-0	P022
Carbon oxyfluoride	Carbonic difluoride	353-50-4	U033

Carbon tetrachloride	Methane, tetrachloro-	56-23-5	U211
Chloral	Acetaldehyde, trichloro-	75-87-6	U034
Chlorambucil	Benzenebutanoic acid, 4(bis-(2-chloroethyl)amino)-	305-03-3	U035
Chlordane	4,7-Methano-1H-indene, 1,2,4,5,6,7,8,8-octachloro-2,3,3a,4,7,7a-hexahydro-	57-74-9	U036
Chlordane, α and γ isomers			U036
Chlorinated benzenes, N.O.S.			
Chlorinated ethane, N.O.S.			
Chlorinated fluorocarbons, N.O.S.			
Chlorinated naphthalene, N.O.S.			
Chlorinated phenol, N.O.S.			
Chlornaphazine	Naphthalenamine, N,N'-bis(2-chloroethyl)-	494-03-1	U026
Chloroacetaldehyde	Acetaldehyde, chloro-	107-20-0	P023
Chloroalkyl ethers, N.O.S.			
p-Chloroaniline	Benzenamine, 4-chloro-	106-47-8	P024
Chlorobenzene	Benzene, chloro-	108-90-7	U037
Chlorobenzilate	Benzeneacetic acid, 4-chloro- α -(4-chlorophenyl)- α -hydroxy-, ethyl ester	510-15-6	U038
p-Chloro-m-cresol	Phenol, 4-chloro-3-methyl-	59-50-7	U039
2-Chloroethyl vinyl ether	Ethene, (2-chloroethoxy)-	110-75-8	U042
Chloroform	Methane, trichloro-	67-66-3	U044
Chloromethyl methyl ether	Methane, chloromethoxy-	107-30-2	U046
β -Chloronaphthalene	Naphthalene, 2-chloro-	91-58-7	U047
o-Chlorophenol	Phenol, 2-chloro-	95-57-8	U048
1-(o-Chlorophenyl)thiourea	Thiourea, (2-chlorophenyl)-	5344-82-1	P026
Chloroprene	1,3-Butadiene, 2-chloro-	126-99-8	
3-Chloropropionitrile	Propanenitrile, 3-chloro-	542-76-7	P027
Chromium	Same	7440-47-3	
Chromium compounds, N.O.S.			
Chrysene	Same	218-01-9	U050
Citrus red No. 2	2-Naphthalenol, 1-((2,5-dimethoxyphenyl)azo)-	6358-53-8	
Coal tar creosote	Same	8007-45-2	
Copper cyanide	Copper cyanide CuCN	544-92-3	P029
Copper dimethyldithiocarbamate	Copper, bis(dimethylcarbamo-dithioato-S,S')-,	137-29-1	
Creosote	Same		U051
p-Cresidine	2-Methoxy-5-methylbenzenamine	120-71-8	
Cresols (Cresylic acid)	Phenol, methyl-	1319-77-3	U052

Crotonaldehyde	2-Butenal	4170-30-3	U053
m-Cumenyl methylcarbamate	Phenol, 3-(methylethyl)-, methyl carbamate	64-00-6	P202
Cyanides (soluble salts and complexes), N.O.S.			P030
Cyanogen	Ethanedinitrile	460-19-5	P031
Cyanogen bromide	Cyanogen bromide (CN)Br	506-68-3	U246
Cyanogen chloride	Cyanogen chloride (CN)Cl	506-77-4	P033
Cycasin	β -D-glucopyranoside, (methyl-ONN-azoxy)methyl-	14901-08-7	
Cycloate	Carbamothioic acid, cyclohexylethyl-, S-ethyl ester	1134-23-2	
2-Cyclohexyl-4,6-dinitrophenol	Phenol, 2-cyclohexyl-4,6-dinitro-	131-89-5	P034
Cyclophosphamide	2H-1,3,2-Oxazaphosphorin-2-amine, N,N-bis(2-chloroethyl)-tetrahydro-2-oxide	50-18-0	U058
2,4-D	Acetic acid, (2,4-dichlorophenoxy)-	94-75-7	U240
2,4-D, salts and esters	Acetic acid, (2,4-dichlorophenoxy)-, salts and esters		U240
Daunomycin	<u>5,12-Naphthacenedione, 8-acetyl-10-((3-amino-2,3,6-trideoxy-α-L-lyxo-hexopyranosyl)oxy)-7,8,9,10-tetrahydro-6,8,11-trihydroxy-1-methoxy-, (8S-cis)-</u> 5,12-Naphthacenedione, 8-acetyl-10-((3-amino-2,3,6-trideoxy-α-L-lyxo-hexopyranosyl)oxy)-7,8,9,10-tetrahydro-6,8,11-trihydroxy-1-methoxy-, (8S-cis)-	20830-81-3	U059
Dazomet	2H-1,3,5-thiadiazine-2-thione, tetrahydro-3,5-dimethyl	533-74-4	
DDD	Benzene, 1,1'-(2,2-dichloroethylidene)bis(4-chloro-	72-54-8	U060
DDE	Benzene, 1,1'-(dichloroethenylidene)bis(4-chloro-	72-55-9	
DDT	Benzene, 1,1'-(2,2,2-trichloroethylidene)bis(4-chloro-	50-29-3	U061
Diallate	Carbamothioic acid, bis(1-methylethyl)-, S-(2,3-dichloro-2-propenyl) ester	2303-16-4	U062
Dibenz(a,h)acridine	Same	226-36-8	
Dibenz(a,j)acridine	Same	224-42-0	
Dibenz(a,h)anthracene	Same	53-70-3	U063

7H-Dibenzo(c,g)carbazole	Same	194-59-2	
Dibenzo(a,e)pyrene	Naphtho(1,2,3,4-def)chrysene	192-65-4	
Dibenzo(a,h)pyrene	Dibenzo(b,def)chrysene	189-64-0	
Dibenzo(a,i)pyrene	Benzo(rst)pentaphene	189-55-9	U064
1,2-Dibromo-3-chloropropane	Propane, 1,2-dibromo-3-chloro-	96-12-8	U066
Dibutyl phthalate	1,2-Benzenedicarboxylic acid, dibutyl ester	84-74-2	U069
o-Dichlorobenzene	Benzene, 1,2-dichloro-	95-50-1	U070
m-Dichlorobenzene	Benzene, 1,3-dichloro-	541-73-1	U071
p-Dichlorobenzene	Benzene, 1,4-dichloro-	106-46-7	U072
Dichlorobenzene, N.O.S.	Benzene, dichloro-	25321-22-6	
3,3'-Dichlorobenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'- dichloro-	91-94-1	U073
1,4-Dichloro-2-butene	2-Butene, 1,4-dichloro-	764-41-0	U074
Dichlorodifluoromethane	Methane, dichlorodifluoro-	75-71-8	U075
Dichloroethylene, N.O.S.	Dichloroethylene	25323-30-2	
1,1-Dichloroethylene	Ethene, 1,1-dichloro-	75-35-4	U078
1,2-Dichloroethylene	Ethene, 1,2-dichloro-, (E)-	156-60-5	U079
Dichloroethyl ether	Ethane, 1,1'-oxybis(2-chloro-	111-44-4	U025
Dichloroisopropyl ether	Propane, 2,2'-oxybis(2-chloro-	108-60-1	U027
Dichloromethoxyethane	Ethane, 1,1'-(methylenebis(oxy)- bis(2-chloro-	111-91-1	U024
Dichloromethyl ether	Methane, oxybis(chloro-	542-88-1	P016
2,4-Dichlorophenol	Phenol, 2,4-dichloro-	120-83-2	U081
2,6-Dichlorophenol	Phenol, 2,6-dichloro-	87-65-0	U082
Dichlorophenylarsine	Arsonous dichloride, phenyl-	696-28-6	P036
Dichloropropane, N.O.S.	Propane, dichloro-	26638-19-7	
Dichloropropanol, N.O.S.	Propanol, dichloro-	26545-73-3	
Dichloropropene, N.O.S.	1-Propene, dichloro-	26952-23-8	
1,3-Dichloropropene	1-Propene, 1,3-dichloro-	542-75-6	U084
Dieldrin	2,7:3,6-Dimethanonaphth(2, 3-b)- oxirene, 3,4,5,6,9,9-hexachloro- 1a,2,2a,3,6, 6a,7,7a-octahydro-, (1 α ,2 β ,2 α ,3 β ,6 β ,6 α ,7 β ,7 α)-	60-57-1	P037
1,2:3,4-Diepoxybutane	2,2'-Bioxirane	1464-53-5	U085
Diethylarsine	Arsine, diethyl-	692-42-2	P038
Diethylene glycol, dicarbamate	Ethanol, 2,2'-oxybis-, dicarbamate	5952-26-1	U395
1,4-Diethyleneoxide	1,4-Dioxane	123-91-1	U108
Diethylhexyl phthalate	1,2-Benzenedicarboxylic acid, bis(2-ethylhexyl) ester	117-81-7	U028
N,N'-Diethylhydrazine	Hydrazine, 1,2-diethyl-	1615-80-1	U086
O,O-Diethyl-S-methyl dithio- phosphate	Phosphorodithioic acid, O,O- diethyl S-methyl ester	3288-58-2	U087

Diethyl-p-nitrophenyl phosphate	Phosphoric acid, diethyl 4-nitrophenyl ester	311-45-5	P041
Diethyl phthalate	1,2-Benzenedicarboxylic acid, diethyl ester	84-66-2	U088
O,O-Diethyl O-pyrazinyl phosphorothioate	Phosphorothioic acid, O,O-diethyl O-pyrazinyl ester	297-97-2	P040
Diethylstilbestrol	Phenol, 4,4'-(1,2-diethyl-1,2-ethenediyl)bis-, (E)-	56-53-1	U089
Dihydrosafrole	1,3-Benzodioxole, 5-propyl-	94-58-6	U090
Diisopropylfluorophosphate (DFP)	Phosphorofluoridic acid, bis(1-methylethyl) ester	55-91-4	P043
Dimethoate	Phosphorodithioic acid, O,O-dimethyl S-(2-(methylamino)-2-oxoethyl) ester	60-51-5	P044
3,3'-Dimethoxybenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'-dimethoxy-	119-90-4	U091
p-Dimethylaminoazobenzene	Benzenamine, N,N-dimethyl-4-(phenylazo)-	60-11-7	U093
2,4-Dimethylaniline (2,4-xylidine)	Benzenamine, 2,4-dimethyl-	95-68-1	
7,12-Dimethylbenz(a)anthracene	Benz(a)anthracene, 7,12-dimethyl-	57-97-6	U094
3,3'-Dimethylbenzidine	(1,1'-Biphenyl)-4,4'-diamine, 3,3'-dimethyl-	119-93-7	U095
Dimethylcarbamoyl chloride	Carbamic chloride, dimethyl-	79-44-7	U097
1,1-Dimethylhydrazine	Hydrazine, 1,1-dimethyl-	57-14-7	U098
1,2-Dimethylhydrazine	Hydrazine, 1,2-dimethyl-	540-73-8	U099
α,α -Dimethylphenethylamine	Benzeneethanamine, α,α -dimethyl-	122-09-8	P046
2,4-Dimethylphenol	Phenol, 2,4-dimethyl-	105-67-9	U101
Dimethylphthalate	1,2-Benzenedicarboxylic acid, dimethyl ester	131-11-3	U102
Dimethyl sulfate	Sulfuric acid, dimethyl ester	77-78-1	U103
Dimetilan	Carbamic acid, dimethyl-, 1-((dimethylamino) carbonyl)-5-methyl-1H-pyrazol-3-yl ester	644-64-4	P191
Dinitrobenzene, N.O.S.	Benzene, dinitro-	25154-54-5	
4,6-Dinitro-o-cresol	Phenol, 2-methyl-4,6-dinitro-	534-52-1	P047
4,6-Dinitro-o-cresol salts			P047
2,4-Dinitrophenol	Phenol, 2,4-dinitro-	51-28-5	P048
2,4-Dinitrotoluene	Benzene, 1-methyl-2,4-dinitro-	121-14-2	U105
2,6-Dinitrotoluene	Benzene, 2-methyl-1,3-dinitro-	606-20-2	U106
Dinoseb	Phenol, 2-(1-methylpropyl)-4,6-dinitro-	88-85-7	P020
Di-n-octyl phthalate	1,2-Benzenedicarboxylic acid, dioctyl ester	117-84-0	U107

Diphenylamine	Benzenamine, N-phenyl-	122-39-4	
1,2-Diphenylhydrazine	Hydrazine, 1,2-diphenyl-	122-66-7	U109
Di-n-propylnitrosamine	1-Propanamine, N-nitroso-N-propyl-	621-64-7	U111
Disulfiram	Thioperoxydicarbonic diamide, tetraethyl	97-77-8	
Disulfoton	Phosphorodithioic acid, O,O-diethyl S-(2-(ethylthio)ethyl) ester	298-04-4	P039
Dithiobiuret	Thioimidodicarbonic diamide ((H ₂ N)C(S)) ₂ NH	541-53-7	P049
Endosulfan	6, 9-Methano-2,4,3-benzodioxathiepen,6,7,8,9,10,10-hexachloro-1,5,5a,6,9,9a-hexahydro-, 3-oxide,	115-29-7	P050
Endothal	7-Oxabicyclo(2.2.1)heptane-2,3-dicarboxylic acid	145-73-3	P088
Endrin	2,7:3,6-Dimethanonaphth(2,3-b)-oxirene, 3,4,5,6,9,9-hexachloro-1a,2,2a,3,6,6a,7,7a-octahydro-, (1a α ,2 β ,2a β ,3 α ,6 α ,6a β ,7 β ,7a α)-,	72-20-8	P051
Endrin metabolites			P051
Epichlorohydrin	Oxirane, (chloromethyl)-	106-89-8	U041
Epinephrine	1,2-Benzenediol, 4-(1-hydroxy-2-(methylamino)ethyl)-, (R)-	51-43-4	P042
EPTC	Carbamothioic acid, dipropyl-, S-ethyl ester	759-94-4	
Ethyl carbamate (urethane)	Carbamic acid, ethyl ester	51-79-6	U238
Ethyl cyanide	Propanenitrile	107-12-0	P101
Ethylenebisdithiocarbamic acid	Carbamodithioic acid, 1,2-ethane-diylbis-	111-54-6	U114
Ethylenebisdithiocarbamic acid, salts and esters			U114
Ethylene dibromide	Ethane, 1,2-dibromo-	106-93-4	U067
Ethylene dichloride	Ethane, 1,2-dichloro-	107-06-2	U077
Ethylene glycol monoethyl ether	Ethanol, 2-ethoxy-	110-80-5	U359
Ethyleneimine	Aziridine	151-56-4	P054
Ethylene oxide	Oxirane	75-21-8	U115
Ethylenethiourea	2-Imidazolidinethione	96-45-7	U116
Ethylidene dichloride	Ethane, 1,1-dichloro-	75-34-3	U076
Ethyl methacrylate	2-Propenoic acid, 2-methyl-, ethyl ester	97-63-2	U118
Ethyl methanesulfonate	Methanesulfonic acid, ethyl ester	62-50-0	U119
Ethyl Ziram	Zinc, bis(diethylcarbamodithioato-S,S')-	14324-55-1	U407

Famphur	Phosphorothioc acid, O-(4- ((dimethylamino)sulfonyl)phenyl) O,O-dimethyl ester	52-85-7	P097
Ferbam	Iron, tris(dimethylcarbamio- dithioato-S,S')-,	14484-64-1	
Fluoranthene	Same	206-44-0	U120
Fluorine	Same	7782-41-4	P056
Fluoroacetamide	Acetamide, 2-fluoro-	640-19-7	P057
Fluoroacetic acid, sodium salt	Acetic acid, fluoro-, sodium salt	62-74-8	P058
Formaldehyde	Same	50-00-0	U122
Formetanate hydrochloride	Methanimidamide, N,N-dimethyl- N'-(3-(((methylamino)carbonyl)- oxy)phenyl)-, monohydrochloride	23422-53-9	P198
Formic acid	Same	64-18-16	U123
Formparanate	Methanimidamide, N,N-dimethyl- N'-(2-methyl-4-(((methylamino)- carbonyl)oxy)phenyl)-	17702-57-7	P197
Glycidylaldehyde	Oxiranecarboxaldehyde	765-34-4	U126
Halomethanes, N.O.S.			
Heptachlor	4,7-Methano-1H- indene,1,4,5,6,7,8,8-heptachloro- 3a,4,7,7a-tetrahydro-	76-44-8	P059
Heptachlor epoxide	2,5-Methano-2H-indeno(1, 2b)oxirene, 2,3,4,5,6,7,7-hepta- chloro-1a,1b,5,5a,6,6a-hexa- hydro-, (1 α ,1b β ,2 α ,5 α ,5a β ,6 β , 6a α)-	1024-57-3	
Heptachlor epoxide (α , β , and γ isomers)			
Heptachlorodibenzofurans			
Heptachlorodibenzo-p-dioxins			
Hexachlorobenzene	Benzene, hexachloro-	118-74-1	U127
Hexachlorobutadiene	1,3-Butadiene, 1,1,2,3,4,4-hexa- chloro-	87-68-3	U128
Hexachlorocyclo-pentadiene	1,3-Cyclopentadiene, 1,2,3,4,5,5- hexachloro-	77-47-4	U130
Hexachlorodibenzo-p-dioxins			
Hexachlorodibenzofurans			
Hexachloroethane	Ethane, hexachloro-	67-72-1	U131
Hexachlorophene	Phenol, 2,2'-methylenebis(3,4,6- trichloro-	70-30-4	U132
Hexachloropropene	1-Propene, 1,1,2,3,3,3-hexachloro-	1888-71-7	U243
Hexaethyltetraphosphate	Tetraphosphoric acid, hexaethyl ester	757-58-4	P062

Hydrazine	Same	302-01-2	U133
Hydrogen cyanide	Hydrocyanic acid	74-90-8	P063
Hydrogen fluoride	Hydrofluoric acid	7664-39-3	U134
Hydrogen sulfide	Hydrogen sulfide H ₂ S	7783-06-4	U135
Indeno(1,2,3-cd)pyrene	Same	193-39-5	U137
3-Iodo-2-propynyl-n-butyl-carbamate	Carbamic acid, butyl-, 3-iodo-2-propynyl ester	55406-53-6	
Isobutyl alcohol	1-Propanol, 2-methyl-	78-83-1	U140
Isodrin	<u>1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro-</u> 1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a-hexahydro- (1 α ,4 α ,4a β ,5 β ,8 β ,8a β)-,	465-73-6	P060
Isolan	Carbamic acid, dimethyl-, 3-methyl-1-(1-methylethyl)-1H-pyrazol-5-yl ester	119-38-0	P192
Isosafrole	1,3-Benzodioxole, 5-(1-propenyl)-	120-58-1	U141
Kepone	1,3,4-Metheno-2H-cyclobuta(cd)-pentalen-2-one, 1,1a,3,3a,4,5,5a,5b,6-decachlorooctahydro-,	143-50-0	U142
Lasiocarpine	2-Butenoic acid, 2-methyl-, 7-((2,3-dihydroxy-2-(1-methoxyethyl)-3-methyl-1-oxobutoxy)methyl)-2,3,5,7a-tetrahydro-1H-pyrrolizin-1-yl ester, (1S-(1- α (Z),7(2S*,3R*),7a α))-	303-34-4	U143
Lead	Same	7439-92-1	
Lead and compounds, N.O.S.			
Lead acetate	Acetic acid, lead (2+) salt	301-04-2	U144
Lead phosphate	Phosphoric acid, lead (2+) salt (2:3)	7446-27-7	U145
Lead subacetate	Lead, bis(acetato-O)tetrahydroxy-tri-	1335-32-6	U146
Lindane	Cyclohexane, 1,2,3,4,5,6-hexachloro-, 1 α ,2 α ,3 β ,4 α ,5 α ,6 β)-	58-89-9	U129
Maleic anhydride	2,5-Furandione	108-31-6	U147
Maleic hydrazide	3,6-Pyridazinedione, 1,2-dihydro-	123-33-1	U148
Malononitrile	Propanedinitrile	109-77-3	U149
Manganese dimethyldithiocarbamate	Manganese, bis(dimethylcarbamo-dithioato-S,S')-,	15339-36-3	P196

Melphalan	L-Phenylalanine, 4-(bis(2-chloroethyl)amino)-	148-82-3	U150
Mercury	Same	7439-97-6	U151
Mercury compounds, N.O.S.			
Mercury fulminate	Fulminic acid, mercury (2+) salt	628-86-4	P065
Metam Sodium	Carbamodithioic acid, methyl-, monosodium salt	137-42-8	
Methacrylonitrile	2-Propenenitrile, 2-methyl-	126-98-7	U152
Methapyrilene	1,2-Ethanediamine, N,N-dimethyl-N'-2-pyridinyl-N'-(2-thienylmethyl)-	91-80-5	U155
Methiocarb	Phenol, (3,5-dimethyl-4-(methylthio)-, methylcarbamate	2032-65-7	P199
Metholmyl	Ethanimidothioic acid, N-(((methylamino)carbonyl)oxy)-, methyl ester	16752-77-5	P066
Methoxychlor	Benzene, 1,1'-(2,2,2-trichloroethylidene)bis(4-methoxy-	72-43-5	U247
Methyl bromide	Methane, bromo-	74-83-9	U029
Methyl chloride	Methane, chloro-	74-87-3	U045
Methylchlorocarbonate	Carbonochloridic acid, methyl ester	79-22-1	U156
Methyl chloroform	Ethane, 1,1,1-trichloro-	71-55-6	U226
3-Methylcholanthrene	Benz(j)aceanthrylene, 1,2-dihydro-3-methyl-	56-49-5	U157
4,4'-Methylenebis(2-chloroaniline)	Benzenamine, 4,4'-methylenebis(2-chloro-	101-14-4	U158
Methylene bromide	Methane, dibromo-	74-95-3	U068
Methylene chloride	Methane, dichloro-	75-09-2	U080
Methyl ethyl ketone (MEK)	2-Butanone	78-93-3	U159
Methyl ethyl ketone peroxide	2-Butanone, peroxide	1338-23-4	U160
Methyl hydrazine	Hydrazine, methyl-	60-34-4	P068
Methyl iodide	Methane, iodo-	74-88-4	U138
Methyl isocyanate	Methane, isocyanato-	624-83-9	P064
2-Methylactonitrile	Propanenitrile, 2-hydroxy-2-methyl-	75-86-5	P069
Methyl methacrylate	2-Propenoic acid, 2-methyl-, methyl ester	80-62-6	U162
Methyl methanesulfonate	Methanesulfonic acid, methyl ester	66-27-3	
Methyl parathion	Phosphorothioic acid, O,O-dimethyl O-(4-nitrophenyl) ester	298-00-0	P071
Methylthiouracil	4-(1H)-Pyrimidinone, 2,3-dihydro-6-methyl-2-thioxo-	56-04-2	U164

Metolcarb	Carbamic acid, methyl-, 3-methyl-phenyl ester	1129-41-5	P190
Mexacarbate	Phenol, 4-(dimethylamino)-3,5-dimethyl-, methylcarbamate (ester)	315-18-4	P128
Mitomycin C	Azirino(2', 3':3, 4)pyrrolo(1, 2-a)indole-4, 7-dione, 6-amino-8-(((aminocarbonyl)oxy)methyl)-1,1a,2,8,8a,8b-hexahydro-8a-methoxy-5-methyl-, (1a-S-(1 α , 8 β , 8 α , 8 β))-,	50-07-7	U010
Molinate	1H-Azepine-1-carbothioic acid, hexahydro-, S-ethyl ester	2212-67-1	
MNNG	Guanidine, N-methyl-N'-nitro-N-nitroso-	70-25-7	U163
Mustard gas	Ethane, 1,1'-thiobis(2-chloro-	505-60-2	U165
Naphthalene	Same	91-20-3	U165
1,4-Naphthoquinone	1,4-Naphthalenedione	130-15-4	U166
α -Naphthylamine	1-Naphthalenamine	134-32-7	U167
β -Naphthylamine	2-Naphthalenamine	91-59-8	U168
α -Naphthylthiourea	Thiourea, 1-naphthalenyl-	86-88-4	P072
Nickel	Same	7440-02-0	
Nickel compounds, N.O.S.			
Nickel carbonyl	Nickel carbonyl Ni(CO) ₄ , (T-4)-	13463-39-3	P073
Nickel cyanide	Nickel cyanide Ni(CN) ₂	557-19-7	P074
Nicotine	Pyridine, 3-(1-methyl-2-pyrrolidinyl)-, (S)-	54-11-5	P075
Nicotine salts			P075
Nitric oxide	Nitrogen oxide NO	10102-43-9	P076
p-Nitroaniline	Benzenamine, 4-nitro-	100-01-6	P077
Nitrobenzene	Benzene, nitro-	98-95-3	U169
Nitrogen dioxide	Nitrogen oxide NO ₂	10102-44-0	P078
Nitrogen mustard	Ethanamine, 2-chloro-N-(2-chloroethyl)-N-methyl-	51-75-2	
Nitrogen mustard, hydrochloride salt			
Nitrogen mustard N-oxide	Ethanamine, 2-chloro-N-(2-chloroethyl)-N-methyl-, N-oxide	126-85-2	
Nitrogen mustard, N-oxide, hydrochloride salt			
Nitroglycerin	1,2,3-Propanetriol, trinitrate	55-63-0	P081
p-Nitrophenol	Phenol, 4-nitro-	100-02-7	U170
2-Nitropropane	Propane, 2-nitro-	79-46-9	U171
Nitrosamines, N.O.S.		35576-91-1	

N-Nitrosodi-n-butylamine	1-Butanamine, N-butyl-N-nitroso-	924-16-3	U172
N-Nitrosodiethanolamine	Ethanol, 2,2'-(nitrosoimino)bis-	1116-54-7	U173
N-Nitrosodiethylamine	Ethanamine, N-ethyl-N-nitroso-	55-18-5	U174
N-Nitrosodimethylamine	Methanamine, N-methyl-N-nitroso-	62-75-9	P082
N-Nitroso-N-ethylurea	Urea, N-ethyl-N-nitroso-	759-73-9	U176
N-Nitrosomethylethylamine	Ethanamine, N-methyl-N-nitroso-	10595-95-6	
N-Nitroso-N-methylurea	Urea, N-methyl-N-nitroso-	684-93-5	U177
N-Nitroso-N-methylurethane	Carbamic acid, methylnitroso-, ethyl ester	615-53-2	U178
N-Nitrosomethylvinylamine	Vinylamine, N-methyl-N-nitroso-	4549-40-0	P084
N-Nitrosomorpholine	Morpholine, 4-nitroso-	59-89-2	
N-Nitrosonornicotine	Pyridine, 3-(1-nitroso-2-pyrrolidinyl)-, (S)-	16543-55-8	
N-Nitrosopiperidine	Piperidine, 1-nitroso-	100-75-4	U179
N-Nitrosopyrrolidine	Pyrrolidine, 1-nitroso-	930-55-2	U180
N-Nitrososarcosine	Glycine, N-methyl-N-nitroso-	13256-22-9	
5-Nitro-o-toluidine	Benzenamine, 2-methyl-5-nitro-	99-55-8	U181
Octachlorodibenzo-p-dioxin (OCDD)	1,2,3,4,6,7,8,9-Octachlorodibenzo-p-dioxin.	3268-87-9	
Octachlorodibenzofuran (OCDF)	1,2,3,4,6,7,8,9-Octachlorodibenzofuran.	39001-02-0	
Octamethylpyrophosphoramidate	Diphosphoramidate, octamethyl-	152-16-9	P085
Osmium tetroxide	Osmium oxide OsO ₄ , (T-4)	20816-12-0	P087
Oxamyl	Ethanimidothioc acid, 2-(dimethylamino)-N-(((methylamino)carbonyl)oxy)-2-oxo-, methyl ester	23135-22-0	P194
Paraldehyde	1,3,5-Trioxane, 2,4,6-trimethyl-	123-63-7	U182
Parathion	Phosphorothioic acid, O,O-diethyl O-(4-nitrophenyl) ester	56-38-2	P089
Pebulate	Carbamothioic acid, butylethyl-, S-propyl ester	1114-71-2	
Pentachlorobenzene	Benzene, pentachloro-	608-93-5	U183
Pentachlorodibenzo-p-dioxins			
Pentachlorodibenzofurans			
Pentachloroethane	Ethane, pentachloro-	76-01-7	U184
Pentachloronitrobenzene (PCNB)	Benzene, pentachloronitro-	82-68-8	U185
Pentachlorophenol	Phenol, pentachloro-	87-86-5	See F027
Phenacetin	Acetamide, N-(4-ethoxyphenyl)-	62-44-2	U187
Phenol	Same	108-95-2	U188
Phenylenediamine	Benzenediamine	25265-76-3	
1,2-Phenylenediamine	1,2-Benzenediamine	95-54-5	
1,3-Phenylenediamine	1,3-Benzenediamine	108-45-2	

Phenylmercury acetate	Mercury, (acetato-O)phenyl-	62-38-4	P092
Phenylthiourea	Thiourea, phenyl-	103-85-5	P093
Phosgene	Carbonic dichloride	75-44-5	P095
Phosphine	Same	7803-51-2	P096
Phorate	Phosphorodithioic acid, O,O-diethyl S-((ethylthio)methyl) ester	298-02-2	P094
Phthalic acid esters, N.O.S.			
Phthalic anhydride	1,3-Isobenzofurandione	85-44-9	U190
Physostigmine	Pyrrolo(2,3-b)indol-5-ol, 1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethyl-, methylcarbamate (ester), (3aS-cis)-	57-47-6	P204
Physostigmine salicylate	Benzoic acid, 2-hydroxy-, compound with (3aS-cis)-1,2,3,3a,8,8a-hexahydro-1,3a,8-trimethylpyrrolo(2,3-b)indol-5-yl methylcarbamate ester (1:1)	57-64-7	P188
2-Picoline	Pyridine, 2-methyl-	109-06-8	U191
Polychlorinated biphenyls, N.O.S.			
Potassium cyanide	Same	151-50-8	P098
Potassium dimethyldithiocarbamate	Carbamodithioc acid, dimethyl, potassium salt	128-03-0	
Potassium n-hydroxymethyl-n-methyl-dithiocarbamate	Carbamodithioc acid, (hydroxymethyl)methyl-, monopotassium salt	51026-28-9	
Potassium n-methyldithiocarbamate	Carbamodithioc acid, methyl-monopotassium salt	137-41-7	
Potassium silver cyanide	Argentate(1-), bis(cyano-C)-, potassium)	506-61-6	P099
Potassium pentachlorophenate	Pentachlorophenol, potassium salt	7778736	None
Promecarb	Phenol, 3-methyl-5-(1-methylethyl)-, methyl carbamate	2631-37-0	P201
Pronamide	Benzamide, 3,5-dichloro-N-(1,1-dimethyl-2-propynyl)-	23950-58-5	U192
1,3-Propane sultone	1,2-Oxathiolane, 2,2-dioxide	1120-71-4	U193
Propham	Carbamic acid, phenyl-, 1-methylethyl ester	122-42-9	U373
Propoxur	Phenol, 2-(1-methylethoxy)-, methylcarbamate	114-26-1	U411
n-Propylamine	1-Propanamine	107-10-8	U194
Propargyl alcohol	2-Propyn-1-ol	107-19-7	P102
Propylene dichloride	Propane, 1,2-dichloro-	78-87-5	U083
1,2-Propylenimine	Aziridine, 2-methyl-	75-55-8	P067

Propylthiouracil	4(1H)-Pyrimidinone, 2,3-dihydro-6-propyl-2-thioxo-	51-52-5	
Prosulfocarb	Carbamothioic acid, dipropyl-, S-(phenylmethyl) ester	52888-80-9	U387
Pyridine	Same	110-86-1	U196
Reserpine	Yohimban-16-carboxylic acid, 11,17-dimethoxy-18-((3,4,5-trimethoxybenzoyl)oxy)-, methyl ester, (3 β ,16 β ,17 α ,18 β ,20 α)-,	50-55-5	U200
Resorcinol	1,3-Benzenediol	108-46-3	U201
Safrole	1,3-Benzodioxole, 5-(2-propenyl)-	94-59-7	U203
Selenium	Same	7782-49-2	
Selenium compounds, N.O.S.			
Selenium dioxide	Selenious acid	7783-00-8	U204
Selenium sulfide	Selenium sulfide SeS ₂	7488-56-4	U205
Selenium, tetrakis(dimethyl-dithiocarbamate	Carbamodithioic acid, dimethyl-, tetraanhydrosulfide with ortho-thioselenious acid	144-34-3	
Selenourea	Same	630-10-4	P103
Silver	Same	7440-22-4	
Silver compounds, N.O.S.			
Silver cyanide	Silver cyanide AgCN	506-64-9	P104
Silvex (2,4,5-TP)	Propanoic acid, 2-(2,4,5-trichlorophenoxy)-	93-72-1	See F027
Sodium cyanide	Sodium cyanide NaCN	143-33-9	P106
Sodium dibutyldithiocarbamate	Carbamodithioic acid, dibutyl-, sodium salt	136-30-1	
Sodium diethyldithiocarbamate	Carbamodithioic acid, diethyl-, sodium salt	148-18-5	
Sodium dimethyldithiocarbamate	Carbamodithioic acid, dimethyl-, sodium salt	128-04-1	
Sodium pentachlorophenate	Pentachlorophenol, sodium salt	131522	None
Streptozotocin	D-Glucose, 2-deoxy-2-(((methyl-nitrosoamino)carbonyl)amino)-	18883-66-4	U206
Strychnine	Strychnidin-10-one	57-24-9	P108
Strychnine salts			P108
Sulfallate	Carbamodithioic acid, diethyl-, 2-chloro-2-propenyl ester	95-06-7	
TCDD	Dibenzo(b,e)(1,4)dioxin, 2,3,7,8-tetrachloro-	1746-01-6	
Tetrabutylthiuram disulfide	Thioperoxydicarbonic diamide, tetrabutyl	1634-02-2	
Tetramethylthiuram monosulfide	Bis(dimethylthiocarbamoyl) sulfide	97-74-5	

1,2,4,5-Tetrachlorobenzene	Benzene, 1,2,4,5-tetrachloro-	95-94-3	U207
Tetrachlorodibenzo-p-dioxins			
Tetrachlorodibenzofurans			
Tetrachloroethane, N.O.S.	Ethane, tetrachloro-, N.O.S.	25322-20-7	
1,1,1,2-Tetrachloroethane	Ethane, 1,1,1,2-tetrachloro-	630-20-6	U208
1,1,2,2-Tetrachloroethane	Ethane, 1,1,2,2-tetrachloro-	79-34-5	U209
Tetrachloroethylene	Ethene, tetrachloro-	127-18-4	U210
2,3,4,6-Tetrachlorophenol	Phenol, 2,3,4,6-tetrachloro-	58-90-2	See F027
2,3,4,6-Tetrachlorophenol, potassium salt	Same	53535276	None
2,3,4,6-Tetrachlorophenol, sodium salt	Same	25567559	None
Tetraethyldithiopyrophosphate	Thiodiphosphoric acid, tetraethyl ester	3689-24-5	P109
Tetraethyl lead	Plumbane, tetraethyl-	78-00-2	P110
Tetraethylpyrophosphate	Diphosphoric acid, tetraethyl ester	107-49-3	P111
Tetranitromethane	Methane, tetranitro-	509-14-8	P112
Thallium	Same	7440-28-0	
Thallium compounds			
Thallic oxide	Thallium oxide Tl_2O_3	1314-32-5	P113
Thallium (I) acetate	Acetic acid, thallium (1+) salt	563-68-8	U214

Section 721.APPENDIX I Wastes Excluded by Administrative Action

Section 721.TABLE B Wastes Excluded by USEPA pursuant to 40 CFR 260.20 and 260.22 from Specific Sources

Facility Address	Waste Description
Amoco Oil Company Wood River, Illinois	150 million gallons of DAF float from petroleum refining contained in four surge ponds after treatment with the Chemfix stabilization process. This waste contains USEPA hazardous waste number K048. This exclusion applies to the 150 million gallons of waste after chemical stabilization

as long as the mixing ratios of the reagent with the waste are monitored continuously and do not vary outside of the limits presented in the demonstration samples and one grab sample is taken each hour from each treatment unit, composited, and TCLP tests performed on each sample. If the levels of lead or total chromium exceed 0.5 ppm in the EP extract, then the waste that was processed during the compositing period is considered hazardous; the treatment residue must be pumped into bermed cells to ensure that the waste is identifiable in the event that removal is necessary.

Conversion Systems, Inc.
Horsham, Pennsylvania
(Sterling, Illinois operations)

Chemically stabilized electric arc furnace dust (CSEAFD) that is generated by Conversion Systems, Inc. (CSI) (using the Super Detox® treatment process, as modified by CSI to treat electric arc furnace dust (EAFD) (USEPA hazardous waste no. K061)), at the following site and which is disposed of in a RCRA Subtitle D municipal solid waste landfill (MSWLF): Northwestern Steel, Sterling, Illinois.

CSI must implement a testing program for each site that meets the following conditions:

1. Verification testing requirements: Sample collection and analyses, including quality control procedures, must be performed using appropriate methods. As applicable to the method-defined parameters of concern, analyses requiring the use of methods in “Test Methods for Evaluating Solid Waste, Physical/Chemical Methods,” USEPA publication number EPA-530/SW-846, incorporated by reference in 35 Ill. Adm. Code 720.111(a), must be used without substitution. As applicable, the EPA-530/SW-846 methods might include Methods 0010, 0011, 0020, 0023A, 0030, 0031, 0040, 0050, 0051, 0060, 0061, 1010A, 1020B, 1110A, 1310B, 1311, 1312, 1320, 1330A, 9010C, 9012B, 9040C, 9045D, 9060A, 9070A (uses USEPA Method 1664, Rev. A), 9071B, and 9095B.

A. Initial verification testing: During the first 20 days of full-scale operation of a newly-constructed Super Detox® treatment facility, CSI must analyze a minimum of four composite samples of CSEAFD representative of the full 20-day period. Composite samples must be composed of representative samples collected from every batch generated. The CSEAFD samples must be analyzed for the constituents listed in condition 3 below. CSI must report the operational and analytical test data, including quality control information, obtained during this initial period no later than 60 days after the generation of the first batch of CSEAFD.

B. Addition of new Super Detox® treatment facilities to the exclusion:

Option 1: If USEPA approves additional facilities, CSI may petition the Board for identical-in-substance amendment of this exclusion pursuant to Section 22.4 for the Act and 35 Ill. Adm. Code 102 and 720.120(a), or

Option 2: If USEPA has not approved such amendment, CSI may petition the Board for amendment pursuant to the general rulemaking procedures of Section 27 of the Act and 35 Ill. Adm. Code 102 and 720.120(b); or

Option 3: Alternatively to options 1 or 2 above, CSI may petition the Board for a hazardous waste delisting pursuant to Section 28.1 of the Act and Subpart D of 35 Ill. Adm. Code 104 and 35 Ill. Adm. Code 720.122.

If CSI pursues general rulemaking (option 2 above) or hazardous waste delisting (option 3 above), it must demonstrate that the CSEAFD generated by a specific Super Detox® treatment facility consistently meets the delisting levels specified in condition 3 below.

C. Subsequent verification testing: For the approved facility, CSI must collect and analyze at least one composite sample of CSEAFD each month. The composite samples must be composed of representative samples collected from all batches treated in each month. These monthly representative samples must be analyzed, prior to the disposal of the CSEAFD, for the constituents listed in condition 3 below. CSI may, at its discretion, analyze composite samples gathered more frequently to demonstrate that smaller batches of waste are non-hazardous.

2. Waste holding and handling: CSI must store as hazardous all CSEAFD generated until verification testing, as specified in condition 1A or 1C above, is completed and valid analyses demonstrate that condition 3 below is satisfied. If the levels of constituents measured in the samples of CSEAFD do not exceed the levels set forth

in condition 3, then the CSEAFD is non-hazardous and may be disposed of in a RCRA Subtitle D municipal solid waste landfill. If constituent levels in a sample exceed any of the delisting levels set forth in condition 3 below, the CSEAFD generated during the time period corresponding to this sample must be retreated until it meets these levels or managed and disposed of as hazardous waste, in accordance with 35 Ill. Adm. Code 702 through 705, 720 through 728, 733, 738, and 739. CSEAFD generated by a new CSI treatment facility must be managed as a hazardous waste prior to the addition of the name and location of the facility to this exclusion pursuant to condition 1C above. After addition of the new facility to the exclusion pursuant to condition 1B above, CSEAFD generated during the verification testing in condition 1A is also non-hazardous if the delisting levels in condition 3 are satisfied.

3. Delisting levels: All leachable concentrations for metals must not exceed the following levels (in parts per million (ppm)): antimony—0.06; arsenic—0.50; barium—7.6; beryllium—0.010; cadmium—0.050; chromium—0.33; lead—0.15; mercury—0.009; nickel—1; selenium—0.16; silver—0.30; thallium—0.020; vanadium—2; and zinc—70. Metal concentrations must be measured in the waste leachate by the method specified in Section 721.124.

4. Changes in operating conditions: After initiating subsequent testing, as described in condition 1C, if CSI significantly changes the stabilization process established pursuant to condition 1 (e.g., use of new stabilization reagents), CSI must seek amendment of this exclusion using one of the options set forth in condition 1B above. After written amendment of this exclusion, CSI may manage CSEAFD wastes generated from the new process as non-hazardous if the wastes meet the delisting levels set forth in condition 3 above.

5. Data submittals: At least one month prior to operation of a new Super Detox® treatment facility, CSI must notify the Agency in writing when the Super Detox® treatment facility is scheduled to be on-line. The data obtained through condition 1A must be submitted to the Agency within the time period specified. Records of operating conditions and analytical data from condition 1 must be compiled, summarized, and maintained on site for a

minimum of five years. These records and data must be furnished to the Agency upon request and made available for inspection. Failure to submit the required data within the specified time period or to maintain the required records on site for the specified time will be considered a violation of the Act and Board regulations. All data submitted must be accompanied by a signed copy of the following certification statement to attest to the truth and accuracy of the data submitted:

“Under civil and criminal penalty of law for the making or submission of false or fraudulent statements or representations, I certify that the information contained in or accompanying this document is true, accurate, and complete.

“As to (those) identified section(s) of this document for which I cannot personally verify its (their) truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate, and complete.

“In the event that any of this information is determined by the Board or a court of law to be false, inaccurate, or incomplete, and upon conveyance of this fact to the company, I recognize and agree that this exclusion of waste will be void as if it never had effect or to the extent directed by the Board or court and that the company will be liable for any actions taken in contravention of the company’s obligations under the federal RCRA and Comprehensive Environmental Response, Compensation and Liability Act (42 USC 9601 et seq.) and corresponding provisions of the Act premised upon the company’s reliance on the void exclusion.”

BOARD NOTE: The obligations of this exclusion are derived from but also distinct from the obligations under the corresponding federally-granted exclusion of table 2 of appendix IX to 40 CFR 261.

Section 721.APPENDIX I Wastes Excluded by Administrative Action**Section 721.TABLE D Wastes Excluded by the Board by Adjusted Standard**

The Board has entered the following orders on petitions for adjusted standards for delisting, pursuant to 35 Ill. Adm. Code 720.122.

- AS 91-1 Petition of Keystone Steel & Wire Co. for Hazardous Waste Delisting, ~~AS 91-1~~ (Feb. 6, 1992 and Apr. 23, 1992). (Chemically stabilized electric arc furnace dust (K061 waste).)
- AS 91-3 Petition of Peoria Disposal Company for an Adjusted Standard from 35 Ill. Adm. Code 721.Subpart D, ~~AS 91-3~~ (Feb. 4, 1993 and Mar. 11, 1993). (Chemically stabilized wastewater treatment sludges from electroplating, anodizing, chemical milling and etching, and circuit board manufacturing (F006 waste).)
- AS 93-7 Petition of Keystone Steel & Wire Company for an Adjusted Standard from 35 Ill. Adm. Code 721.132, ~~AS 93-7~~ (Feb. 17, 1994, Mar. 17, 1994, and Dec. 14, 1994). (Chemically stabilized waste pickling liquor (K062 waste).)
- AS 94-10 Petition of Envirote Corporation for an Adjusted Standard from 35 Ill. Adm. Code 721.Subpart D, AS 94-10 (Dec. 14, 1994 and Feb. 16, 1995). (Sludge from the treatment of multiple hazardous wastes (F006, F007, F008, F009, F011, F012, F019, K002, K003, K004, K005, K006, K007, K008, and K062 wastes).)
- AS 08-5 Petition of BFI Waste Systems of North America, Inc. for Waste Delisting (Dec. 4, 2008). (F039 waste)
- AS 08-10 RCRA Delisting Adjusted Standard Petition of Peoria Disposal Co. (Jan. 8, 2009). (Treated K061 waste)

Section 721.APPENDIX Y Table to Section 721.138: Maximum Contaminant Concentration and Minimum Detection Limit Values for Comparable Fuel Specification (Repealed)

The following table lists the maximum concentration limit and minimum analytical detection limit required for each contaminant for which USEPA has established a comparable fuel specification. This table supports the requirements of the excluded fuels rule of Section 721.138.

Chemical name	CAS No	Concentration limit (mg/kg at 10,000 Btu/lb)	Minimum required detection limit (mg/kg)
Total Nitrogen as N	NA	4,900	
Total Halogens as Cl	NA	540	
Total Organic Halogens as Cl	NA	(Note 1)	
Polychlorinated biphenyls, total (Aroclors, total)	1336-36-3	ND	1.4
Cyanide, total	57-12-5	ND	1.0
Metals:			
— Antimony, total	7440-36-0	12	
— Arsenic, total	7440-38-2	0.23	
— Barium, total	7440-39-3	23	
— Beryllium, total	7440-41-7	1.2	
— Cadmium, total	7440-43-9	1.2	
— Chromium, total	7440-47-3	2.3	
— Cobalt	7440-48-4	4.6	
— Lead, total	7439-92-1	31	
— Manganese	7439-96-5	1.2	
— Mercury, total	7439-97-6	0.25	
— Nickel, total	7440-02-0	58	
— Selenium, total	7782-49-2	0.23	
— Silver, total	7440-22-4	2.3	
— Thallium, total	7440-28-0	23	
Hydrocarbons:			
— Benzo(a)anthracene	56-55-3	2,400

Section 721.APPENDIX Z Table to Section 721.102: Recycled Materials That Are Solid Waste

The following table lists the instances when a recycled secondary material is solid waste, based on the type of secondary material and the mode of material management during recycling. This table supports the requirements of the recycling provision of the definition of solid waste rule, at Section 721.102(c).

Table

	1	2	3 Reclamation (except as provided in Section 721.104- (a)(17), (a)(23), (a)(24), or (a)(27))	4 Speculative accumulation
Applicable Subsection of Section 721.102:	Use constituting disposal (c)(1)	Burning for energy recovery or use to produce a fuel (c)(2)	(c)(3)	(c)(4)
Spent materials	Yes	Yes	Yes	Yes
Sludges (listed in Section 721.131 or 721.132)	Yes	Yes	Yes	Yes
Sludges exhibiting a characteristic of hazardous waste	Yes	Yes	No	Yes
By-products (listed in Section 721.131 or 721.132)	Yes	Yes	Yes	Yes
By-products exhibiting a characteristic of hazardous waste	Yes	Yes	No	Yes
Commercial chemical products listed in Section 721.133	Yes	Yes	No	No
Scrap metal that is not excluded pursuant to Section 721.104(a)(13)	Yes	Yes	Yes	Yes

Yes - Defined as a solid waste

No - Not defined as a solid waste

BOARD NOTE: Derived from Table 1 to 40 CFR 261.2 ~~(2017)-(2010)~~. The terms “spent materials;”, “sludges;”, “by-products;”, “scrap metal;”, and “processed scrap metal” are defined in Section 721.101.

<u>722.118</u>	<u>USEPA Identification Numbers and Re-Notification for a Small Quantity Generator or Large Quantity Generator</u>

SUBPART B: THE MANIFEST REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section	
722.120	General Requirements
722.121	Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests
722.122	Number of Copies
722.123	Use of the Manifest
722.124	Use of the Electronic Manifest
722.125	Electronic Manifest Signatures
722.127	Waste Minimization Certification

SUBPART C: PRE-TRANSPORT REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section	
722.130	Packaging
722.131	Labeling
722.132	Marking

- 722.133 Placarding
- 722.134 Accumulation Time (Repealed)
- 722.135 Liquids in Landfills Prohibition

SUBPART D: RECORDKEEPING AND REPORTING REQUIREMENTS
APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

- Section
- 722.140 Recordkeeping
- 722.141 Annual Reporting for Large Quantity Generators
- 722.142 Exception Reporting
- 722.143 Additional Reporting
- 722.144 Recordkeeping Special Requirements for Small Quantity Generators of between 100 and 1,000 kilograms per month

SUBPART E: EXPORTS OF HAZARDOUS WASTE (Repealed)

- Section
- 722.150 Applicability (Repealed)
- 722.151 Definitions (Repealed)
- 722.152 General Requirements (Repealed)
- 722.153 Notification of Intent to Export (Repealed)
- 722.154 Special Manifest Requirements (Repealed)
- 722.155 Exception Report (Repealed)
- 722.156 Annual Reports (Repealed)
- 722.157 Recordkeeping (Repealed)
- 722.158 International Agreements (Repealed)

SUBPART F: IMPORTS OF HAZARDOUS WASTE (Repealed)

- Section
- 722.160 Imports of Hazardous Waste (Repealed)

SUBPART G: FARMERS

- Section
- 722.170 Farmers

SUBPART H: TRANSBOUNDARY TRANS-BOUNDARY SHIPMENTS OF
HAZARDOUS WASTE FOR RECOVERY OR DISPOSAL WITHIN THE
OECD

- Section
- 722.180 Applicability
- 722.181 Definitions
- 722.182 General Conditions
- 722.183 Exports of Hazardous Waste Notification and Consent
- 722.184 Imports of Hazardous Waste Movement Document
- 722.185 Contracts (Repealed)
- 722.186 Provisions Relating to Recognized Traders (Repealed)

- 722.187 Reporting and Recordkeeping (Repealed)
 722.189 OECD Waste Lists (Repealed)

**SUBPART K: ALTERNATIVE REQUIREMENTS FOR HAZARDOUS
 WASTE DETERMINATION AND ACCUMULATION OF UNWANTED
 MATERIAL FOR LABORATORIES OWNED BY ELIGIBLE ACADEMIC
 ENTITIES**

- Section
 722.300 Definitions
 722.301 Applicability
 722.302 Opting into the Subpart K Requirements
 722.303 Notice of Election into the Subpart K Requirements
 722.304 Notice of Withdrawal from the Subpart K Requirements
 722.305 Summary of the Requirements of this Subpart K
 722.306 Container Standards in the Laboratory
 722.307 Personnel Training
 722.308 Removing Unwanted Material from the Laboratory
 722.309 Hazardous Waste Determination and Removal of Unwanted Material from the
 Laboratory
 722.310 Hazardous Waste Determination in the Laboratory
 722.311 Hazardous Waste Determination at an On-Site Central Accumulation Area
 722.312 Hazardous Waste Determination at an On-Site Treatment, Storage, or Disposal
 Facility
 722.313 Laboratory Clean-Outs
 722.314 Laboratory Management Plan
 722.315 Unwanted Material That Is Not Solid Waste or Hazardous Waste
 722.316 Non-Laboratory Hazardous Waste Generated at an Eligible Academic Entity

SUBPART L: ALTERNATIVE STANDARDS FOR EPISODIC GENERATION

- Section
 722.330 Applicability
 722.331 Definitions for this Subpart L
 722.332 Conditions for a Generator Managing Hazardous Waste from an Episodic Event
 722.333 Request to Manage One Additional Episodic Event Per Calendar Year

**SUBPART M: PREPAREDNESS, PREVENTION, AND EMERGENCY
 PROCEDURES FOR LARGE QUANTITY GENERATORS**

- Section
 722.350 Applicability
 722.351 Maintenance and Operation of Facility
 722.352 Required Equipment
 722.353 Testing and Maintenance of Equipment
 722.354 Access to Communications or Alarm System
 722.355 Required Aisle Space
 722.356 Arrangements with Local Authorities

<u>722.360</u>	<u>Purpose and Implementation of Contingency Plan</u>
<u>722.361</u>	<u>Content of Contingency Plan</u>
<u>722.362</u>	<u>Copies of Contingency Plan</u>

SUBPART A: GENERAL

Section 722.101 Definitions

As used in this Part, the following terms have the following meanings:

“Condition for exemption” means any requirement in Sections 722.114 through 722.117, 722.170, or Subpart K or Subpart L that states an event, action, or standard that must occur or be met in order to obtain an exemption from any applicable requirement in 35 Ill. Adm. Code 702, 703, and 724 through 728, or from any requirement for notification under section 3010 of RCRA (42 USC 6930).

“Independent requirement” means a requirement of this Part that states an event, action, or standard that must occur or be met; and that applies without relation to, or irrespective of, the purpose of obtaining a conditional exemption from storage facility permit, interim status, and operating requirements under Sections 722.114 through 722.117, 722.170, or Subpart K or Subpart L.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section ~~722.105-722.113~~ Electronic Reporting

The filing of any document pursuant to any provision of this Part as an electronic document is subject to 35 Ill. Adm. Code 720.104.

BOARD NOTE: Derived from 40 CFR 3, ~~as added, and 40 CFR 271.10(b), 271.11(b), and 271.12(h) (2017)-(2005), as amended at 70 Fed. Reg. 59848 (Oct. 13, 2005).~~

(Source: Renumbered from Section 722.113 and amended at 42 Ill. Reg. _____, effective _____)

Section 722.110 Purpose, Scope, and Applicability

- a) This Part establishes standards for generators of hazardous waste, as defined by 35 Ill. Adm. Code 720.110.
 - 1) A person who generates a hazardous waste, as defined by 35 Ill. Adm. Code 721, is subject to all the applicable independent requirements in the following provisions:
 - A) Independent Requirements of a VSQG.
 - i) Section 722.111(a) through (d) (hazardous waste determination and recordkeeping); and
 - ii) Section 722.113 (generator category determination).
 - B) Independent Requirements of a SQG

- i) Section 722.111 (hazardous waste determination and recordkeeping);
- ii) Section 722.113 (generator category determination);
- iii) Section 722.118 (USEPA identification numbers and re-notification for SQGs and LQGs);
- iv) Subpart B (manifest requirements applicable to SQGs and LQGs);
- v) Subpart C (pre-transport requirements applicable to SQGs and LQGs);
- vi) Section 722.140 (recordkeeping);
- vii) Section 722.144 (recordkeeping for SQGs); and
- viii) Subpart H (transboundary movements of hazardous waste for recovery or disposal).

C) Independent Requirements of a LQG

- i) Section 722.111 (hazardous waste determination and recordkeeping);
- ii) Section 722.113 (generator category determination);
- iii) Section 722.118 (USEPA identification numbers and re-notification for SQGs and LQGs);
- iv) Subpart B (manifest requirements applicable to SQGs and LQGs);
- v) Subpart C (pre-transport requirements applicable to SQGs and LQGs);
- vi) Subpart D (recordkeeping and reporting applicable to SQGs and LQGs, except Section 722.144); and
- vii) Subpart H (transboundary movements of hazardous waste for recovery or disposal).

- 2) A generator that accumulates hazardous waste on site is a person that stores hazardous waste; this generator is subject to the applicable requirements of 35 Ill. Adm. Code 702, 703, and 724 through 727 and

section 3010 of RCRA (42 USC 6930), unless the generator is one of the following:

- A) A VSQG that meets the conditions for exemption in Section 722.114;
 - B) A SQG that meets the conditions for exemption in Sections 722.115 and 722.116; or
 - C) A LQG that meets the conditions for exemption in Sections 722.115 and 722.117.
- 3) A generator must not transport, offer its hazardous waste for transport, or otherwise cause its hazardous waste to be sent to a facility that is not a designated facility, as defined in 35 Ill. Adm. Code 720.110, or which is not otherwise authorized to receive the generator's hazardous waste.
- b) Determining Generator Category. A generator must use Section 722.113 ~~35 Ill. Adm. Code 721.105(e) and (d)~~ to determine which the applicability of provisions of this Part ~~that are applicable to the generator based on dependent on calculations of the quantity of hazardous waste generated per calendar month.~~
- c) This subsection (c) corresponds with 40 CFR 262.10(c), which USEPA removed and marked "reserved". This statement maintains structural consistency with the federal provision. ~~A generator that treats, stores, or disposes of a hazardous waste on-site must comply only with the following Sections of this Part with respect to that waste: Section 722.111, for determining whether or not the generator has a hazardous waste; Section 722.112, for obtaining an USEPA identification number; Section 722.140(e) and (d), for recordkeeping; Section 722.143, for additional reporting; and Section 722.170, for farmers, if applicable.~~
- d) Any person that exports or imports ~~hazardous a waste hazardous under U.S. national procedures to or from the countries listed in Section 722.158(a)(1) for recovery~~ must comply with Section 722.118 and Subpart H of this Part.
- ~~BOARD NOTE: USEPA used identical language in corresponding 40 CFR 262.10(d), 262.58(a), and 262.80(a) to define when a waste is considered hazardous under U.S. national procedures. The Board has chosen to create the term "waste hazardous under U.S. national procedures"; to add a definition in Section 722.181, the centralized listing of definitions for Subpart H of this Part; and to replace USEPA's defining language in this subsection (a) with a cross-reference to the definition in Section 722.181.~~
- e) Any person that imports hazardous waste into the United States must comply with the generator standards of this Part.

- f) A farmer that generates waste pesticides that are hazardous waste and which complies with Section 722.170 is not required to comply with other standards in this Part or 35 Ill. Adm. Code 702, 703, 724, 725, 727, or 728 with respect to such pesticides.
- g) ~~Generator Violation and Noncompliance~~~~A person that generates a hazardous waste, as defined by 35 Ill. Adm. Code 721, is subject to the compliance requirements and penalties prescribed in Title VIII and XII of the Environmental Protection Act if that person does not comply with this Part.~~
- 1) A generator's violation of an independent requirement is subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act.
 - 2) A generator's noncompliance with a condition for exemption in this Part is not subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act as a violation of a condition for exemption provided in this Part. Noncompliance by any generator with an applicable condition for exemption from storage permit and operations requirements means that the facility is a storage facility operating without an exemption from the permit, interim status, and operations requirements in 35 Ill. Adm. Code 702, 703, and 724 through 727, and the notification requirements of section 3010 of RCRA (42 USC 6930). Without an exemption, any violations of such storage requirements are subject to enforcement action under Title VIII of the Act, including Board orders, and the penalties provided by Title XII of the Act.
- h) An owner or operator that initiates a shipment of hazardous waste from a treatment, storage, or disposal facility must comply with the generator standards established in this Part.
- i) A person responding to an explosives or munitions emergency in accordance with 35 Ill. Adm. Code 724.101(g)(8)(A)(iv) or (g)(8)(D) or 35 Ill. Adm. Code 725.101(c)(11)(A)(iv) or (c)(11)(D) and 35 Ill. Adm. Code 703.121(a)(4) or (c) is not required to comply with the standards of this Part.
- j) This subsection (j) corresponds with 40 CFR 262.10(j), which USEPA removed and marked "reserved". This subsection corresponds with 40 CFR 262.10(j), a provision that relates only to facilities in the Commonwealth of Massachusetts. This statement maintains structural consistency with USEPA rules.
- k) This subsection (k) corresponds with 40 CFR 262.10(k), a provision that relates only to facilities in the Commonwealth of Massachusetts. This statement maintains structural consistency with USEPA rules.

- 1) The laboratories owned by an eligible academic entity that chooses to be subject to the requirements of Subpart K ~~of this Part~~ are not subject to the requirements set forth in subsections (1)(1) and (1)(2) ~~of this Section~~, except as specifically otherwise provided in Subpart K ~~of this Part~~. For purposes of this subsection (1), the terms “laboratory” and “eligible academic entity” must ~~shall~~ have the meanings given them in Section 722.300.
 - 1) The independent requirements of Section 722.111 or the regulations in Section 722.115; for an LQG a large quantity generator, or an SQG, except as provided in Subpart K Section 722.134(e), for a small quantity generator; and
 - 2) The conditions of Section 722.114 35 Ill. Adm. Code 721.105(b), for a VSQG, except as provided in Subpart K conditionally exempt small quantity generator.

BOARD NOTE: ~~The provisions of Section 722.134 are applicable to the on-site accumulation of hazardous waste by generators. Therefore, the provisions of Section 722.134 only apply to an owner or operator that is shipping hazardous waste which it generated at that facility. A generator that treats, stores, or disposes of hazardous waste on-site must comply with the applicable standards and permit requirements set forth in 35 Ill. Adm. Code 702, 703, 724 through 728, 733, and 739.~~

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.111 Hazardous Waste Determination

A person that generates a solid waste, as defined in 35 Ill. Adm. Code 721.102, must make an accurate determination as to whether determine if that waste is a hazardous waste in order to ensure that the waste is properly managed according to applicable RCRA regulations. A hazardous waste determination is made using the following steps method:

- a) The hazardous waste determination for each solid waste must be made at the point of waste generation, before any dilution, mixing, or other alteration of the waste occurs, and at any time in the course of its management that it has, or may have, changed its properties as a result of exposure to the environment or other factors that may change the properties of the waste such that the RCRA classification of the waste may change.
- ~~ba)~~ The person must ~~should first~~ determine whether if the solid waste is excluded from regulation under 35 Ill. Adm. Code 721.104.
- ~~cb)~~ If the waste is not excluded under 35 Ill. Adm. Code 721.104, the person must should then use knowledge of determine if the waste to determine whether the is listed as a hazardous waste meets any of the listing descriptions under in Subpart D of 35 Ill. Adm. Code 721. Acceptable knowledge that may be used in making an

accurate determination as to whether the waste is listed may include waste origin, composition, the process producing the waste, feedstock, and other reliable and relevant information. If a waste is listed, the person may file a delisting petition under 35 Ill. Adm. Code 720.120 and 720.122 to demonstrate to the Administrator that the waste from this particular site or operation is not a hazardous waste.

~~BOARD NOTE: Even if a waste is listed as a hazardous waste, the generator still has an opportunity under 35 Ill. Adm. Code 720.122 to demonstrate that the waste from the generator's particular facility or operation is not a hazardous waste.~~

- e) ~~For purposes of compliance with 35 Ill. Adm. Code 728, or if the waste is not listed as a hazardous waste in Subpart D of 35 Ill. Adm. Code 721, the generator must then determine whether the waste is identified in Subpart C of 35 Ill. Adm. Code 721 by either of the following methods:~~
- 1) ~~Testing the waste according to the methods set forth in Subpart C of 35 Ill. Adm. Code 721, or according to an equivalent method approved by the Board under 35 Ill. Adm. Code 720.121; or~~
 - 2) ~~Applying knowledge of the hazard characteristic of the waste in light of the materials or processes used.~~
- d) The person then must also determine whether the waste exhibits one or more hazardous characteristics, as identified in Subpart C of 35 Ill. Adm. Code 721, by following the procedures in subsection (d)(1) or (d)(2), or a combination of both.
- 1) The person must apply knowledge of the hazard characteristic of the waste in light of the materials or the processes used to generate the waste. Acceptable knowledge may include process knowledge (e.g., information about chemical feedstocks and other inputs to the production process); knowledge of products, by-products, and intermediates produced by the manufacturing process; chemical or physical characterization of wastes; information on the chemical and physical properties of the chemicals used or produced by the process or otherwise contained in the waste; testing that illustrates the properties of the waste; or other reliable and relevant information about the properties of the waste or its constituents. A test other than a test method set forth in Subpart C of 35 Ill. Adm. Code 721, or an equivalent test method approved by the Agency or the Board under 35 Ill. Adm. Code 720.121, may be used as part of a person's knowledge to determine whether a solid waste exhibits a characteristic of hazardous waste. However, such tests do not, by themselves, provide definitive results. Persons testing their waste must obtain a representative sample of the waste for the testing, as defined at 35 Ill. Adm. Code 720.110.

- 2) When available knowledge is inadequate to make an accurate determination, the person must test the waste according to the applicable methods set forth in Subpart C of 35 Ill. Adm. Code 721 or according to an equivalent method approved by the Administrator under 35 Ill. Adm. Code 720.121 and in accordance with the following:
- A) A persons testing its waste must obtain a representative sample of the waste for the testing, as defined at 35 Ill. Adm. Code 720.110.
- B) Where a test method is specified in Subpart C of 35 Ill. Adm. Code 721, the results of the regulatory test, when properly performed, are definitive for determining the regulatory status of the waste.
- e) If the generator determines that the waste is hazardous, the generator must refer to 35 Ill. Adm. Code 721, 724 through 728, and 733 for possible exclusions or restrictions pertaining to the management of the specific waste.
- f) Recordkeeping for SQGs and LOGs. A SQG or LQG must maintain records supporting its hazardous waste determinations, including records that identify whether a solid waste is a hazardous waste, as defined by 35 Ill. Adm. Code 721.103. Records must be maintained for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. These records must comprise the generator's knowledge of the waste and support the generator's determination, as described at subsections (c) and (d). The records must include, but are not limited to, the following types of information: the results of any tests, sampling, waste analyses, or other determinations made in accordance with this Section; records documenting the tests, sampling, and analytical methods used to demonstrate the validity and relevance of such tests; records consulted in order to determine the process by which the waste was generated, the composition of the waste, and the properties of the waste; and records which explain the knowledge basis for the generator's determination, as described at subsection (d)(1). The periods of record retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by the Agency.
- BOARD NOTE: Any Agency request for extended records retention under this subsection (f) is subject to Board review pursuant to Section 40 of the Act.
- g) Identifying USEPA Hazardous Waste Numbers for SQGs and LOGs. If the waste is determined to be hazardous, SQGs and LQGs must identify all applicable USEPA hazardous waste numbers in Subparts C and D of 35 Ill. Adm. Code 721. Prior to shipping the waste off site, the generator also must mark its containers with all applicable USEPA hazardous waste numbers (USEPA hazardous waste numbers) according to 35 Ill. Adm. Code 722.132.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.112 USEPA Identification Numbers (Repealed)

- a) ~~A generator must not treat, store, dispose of, transport, or offer for transportation hazardous waste without having received a USEPA identification number from USEPA.~~
- b) ~~A generator that has not received a USEPA identification number may obtain one by applying to USEPA Region 5 using USEPA Form 8700-12. The generator must obtain a copy of the form from the Agency, Bureau of Land (217-782-6762), and submit a completed copy of the form to the Bureau of Land, in addition to any notification directly to USEPA. Upon receiving the request USEPA will assign a USEPA identification number to the generator.~~
- e) ~~A generator must not offer its hazardous waste to transporters or to treatment, storage or disposal facilities that have not received a USEPA identification number.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.113 Generator Category Determination

A generator must determine its generator category. A generator's category is based on the amount of hazardous waste generated each calendar month and may change from calendar month to calendar month. This Section sets forth procedures to determine whether a generator is a VSQG, an SQG, or an LQG for a particular calendar month, as defined in 35 Ill. Adm. Code 720.110.

- a) Generators of Either Acute Hazardous Waste or Non-acute Hazardous Waste. A generator that either generates acute hazardous waste or non-acute hazardous waste in a calendar month must determine its generator category for that month by doing the following:
 - 1) Counting the total amount of hazardous waste generated in the calendar month;
 - 2) Subtracting from the total any amounts of waste exempt from counting, as described in subsections (c) and (d); and
 - 3) Determining the resulting generator category for the hazardous waste generated using the table in subsection (g).
- b) Generators of Both Acute and Nonacute Hazardous Waste. A generator that generates both acute hazardous waste and non-acute hazardous waste in the same calendar month must determine its generator category for that month by doing the following:

- 1) Counting separately the total amount of acute hazardous waste and the total amount of non-acute hazardous waste generated in the calendar month;
 - 2) Subtracting from each total any amounts of waste exempt from counting, as described in subsections (c) and (d);
 - 3) Determining separately the resulting generator categories for the quantities of acute and non-acute hazardous waste generated using the table in subsection (g); and
 - 4) Comparing the resulting generator categories from subsection (b)(3) and applying the more stringent generator category to the accumulation and management of both non-acute hazardous waste and acute hazardous waste generated for that calendar month.
- c) When making the monthly quantity-based determinations required by this Part, the generator must include all hazardous waste that it generates, except the following hazardous wastes:
- 1) Hazardous waste that is exempt from regulation under 35 Ill. Adm. Code 721.104(c) through (f), 721.106(a)(3), 721.107(a)(1), or 721.108;
 - 2) Hazardous waste that is managed immediately upon generation only in on-site elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities, as defined in 35 Ill. Adm. Code 720.110;
 - 3) Hazardous waste that is recycled, without prior storage or accumulation, only in an on-site process subject to regulation under 35 Ill. Adm. Code 721.106(c)(2);
 - 4) Hazardous waste that is used oil managed under the requirements of 35 Ill. Adm. Code 721.106(a)(4) and 739;
 - 5) Hazardous waste that is spent lead-acid batteries managed under the requirements of Subpart G of 35 Ill. Adm. Code 726;
 - 6) Hazardous waste that is universal waste managed under 35 Ill. Adm. Code 721.109 and 733;
 - 7) Hazardous waste that is a hazardous waste that is an unused commercial chemical product (listed in Subpart D of 35 Ill. Adm. Code 721 or exhibiting one or more characteristics in Subpart C of 35 Ill. Adm. Code 721) that is generated solely as a result of a laboratory clean-out conducted at an eligible academic entity pursuant to Section 722.313. For purposes

of this provision, the term eligible academic entity must have the meaning as defined in Section 722.300; or

- 8) Hazardous waste that is managed as part of an episodic event in compliance with the conditions of Subpart L.
- d) In determining the quantity of hazardous waste generated in a calendar month, a generator need not include any of the following:
- 1) Hazardous waste when it is removed from on-site accumulation, so long as the hazardous waste was previously counted once for the purposes of this Section;
 - 2) Hazardous waste generated by onsite treatment (including reclamation) of the generator's hazardous waste, so long as the hazardous waste that is treated was previously counted once for the purposes of this Section; and
 - 3) Hazardous waste spent materials that are generated, reclaimed, and subsequently reused on site, so long as such spent materials have been previously counted once for the purposes of this Section.
- e) Based on the generator category, as determined under this Section, the generator must meet the applicable independent requirements listed in Section 722.110. A generator's category also determines which of the provisions of Sections 722.114, 722.115, 722.116, or 722.117 must be met to obtain an exemption from the storage facility permit, interim status, and operating requirements when accumulating hazardous waste.
- f) Mixing Hazardous Waste with Solid Waste
- 1) VSQG Waste
 - A) Hazardous waste generated by a VSQG may be mixed with solid wastes. A VSQG may mix a portion or all of its hazardous waste with solid waste and remain subject to Section 722.114, even though the resultant mixture exceeds the quantity limits identified in the definition of VSQG at 35 Ill. Adm. Code 720.110, unless the mixture exhibits one or more of the characteristics of hazardous waste identified in Subpart C of 35 Ill. Adm. Code 721.
 - B) If the resulting mixture described in subsection (f)(1)(A) exhibits a characteristic of hazardous waste, this resultant mixture is a newly-generated hazardous waste. The VSQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the VSQG calendar month quantity limits identified in the

definition of generator categories found in 35 Ill. Adm. Code 720.110. If the total quantity exceeds the very small generator calendar quantity limits, to remain exempt from the permitting, interim status, and operating standards, the VSQG must meet the conditions for exemption applicable to either an SQG or an LQG. The VSQG must also comply with the applicable independent requirements for either an SQG or an LQG.

C) If a VSQG's waste is mixed with used oil, the mixture is subject to 35 Ill. Adm. Code 739. Any material produced from such a mixture by processing, blending, or other treatment is also regulated under 35 Ill. Adm. Code 739.

2) SQG and LQG Waste

A) Hazardous wastes generated by an SQG or LQG may be mixed with solid waste. These mixtures are subject to the following requirements: the mixture rule in 35 Ill. Adm. Code 721.103(a)(2)(iv), (b)(2) and (b)(3), and (g)(2)(A); the prohibition against dilution rule at 35 Ill. Adm. Code 728.103(a); the land disposal restriction requirements of 35 Ill. Adm. Code 728.140 if a characteristic hazardous waste is mixed with a solid waste so that it no longer exhibits the hazardous characteristic; and the hazardous waste determination requirement at Section 722.111.

B) If the resulting mixture described in subsection (f)(2)(A) is found to be a hazardous waste, this resultant mixture is a newly-generated hazardous waste. An SQG must count both the resultant mixture amount plus the other hazardous waste generated in the calendar month to determine whether the total quantity exceeds the SQG calendar monthly quantity limits identified in the definition of generator categories found in 35 Ill. Adm. Code 720.110. If the total quantity exceeds the small generator calendar quantity limits, to remain exempt from the permitting, interim status, and operating standards, the SQG must meet the conditions for exemption applicable to an LQG. The SQG must also comply with the applicable independent requirements for an LQG.

g) Generator Categories Based on Quantity of Waste Generated in a Calendar Month

<u>Quantity of acute hazardous waste generated in a calendar month</u>	<u>Quantity of non-acute hazardous waste generated in a calendar month</u>	<u>Quantity of residues from a cleanup of acute hazardous waste generated in a calendar month</u>	<u>Generator category</u>
<u>> 1 kg (> 2.2 lbs)</u>	<u>Any amount</u>	<u>Any amount</u>	<u>LQG</u>
<u>Any amount</u>	<u>≥ 1,000 kg (≥ 2,200 lbs)</u>	<u>Any amount</u>	<u>LQG</u>
<u>Any amount</u>	<u>Any amount</u>	<u>≥ 100 kg (> 220 lbs)</u>	<u>LQG</u>
<u>≤ 1 kg (≤ 2.2 lbs)</u>	<u>> 100 kg and < 1,000 kg (> 220 lbs and < 2,200 lbs)</u>	<u>≤ 100 kg (≤ 220 lbs)</u>	<u>VSQG</u>
<u>≤ 1 kg (≤ 2.2 lbs)</u>	<u>≤ 100 kg</u>	<u>≤ 100 kg (≤ 220 lbs)</u>	<u>VSQG</u>

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.114 Conditions for Exemption for a Very Small Quantity Generator

- a) Provided that a VSQG meets all the conditions for exemption listed in this Section, hazardous waste generated by the VSQG is not subject to the requirements of 35 Ill. Adm. Code 702, 703, 705, and 722 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930), and the VSQG may accumulate hazardous waste on site without complying with these requirements, except that the VSQG must comply with this Section and Sections 722.110 through 722.113. The conditions for exemption are as follows:
- 1) In a calendar month, the VSQG generates less than or equal to the amounts specified in the definition of “VSQG” in 35 Ill. Adm. Code 720.110;
 - 2) The VSQG complies with Section 722.111(a) through (d);
 - 3) If the VSQG accumulates at any time greater than one kg (2.2 lbs) of acute hazardous waste or 100 kg (220 lbs) of any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill, into or on any land or water, of any acute hazardous waste listed in 35 Ill. Adm. Code

721.131 or 721.133(e), all quantities of that acute hazardous waste are subject to the following additional conditions for exemption:

A) Such waste is held on site for no more than 90 days beginning on the date when the accumulated wastes exceed the amounts provided in subsection (a)(1); and

B) The conditions for exemption in Section 722.117(a) through (g).

4) If the VSQG accumulates at any time 1,000 kg (2,200 lbs) or greater of non-acute hazardous waste, all quantities of that hazardous waste are subject to the following additional conditions for exemption:

A) Such waste is held on site for no more than 180 days, or 270 days, if applicable, beginning on the date when the accumulated waste exceed the amounts provided in subsection (a)(1);

BOARD NOTE: Section 722.116(c) allows an SQG that must transport its waste or offer its waste for transportation over a distance of 200 miles for off-site treatment, storage, or disposal to accumulate the waste for up to 270 days.

B) The quantity of waste accumulated on site never exceeds 6,000 kg (13,200 lbs); and

C) The VSQG fulfills the conditions for exemption in Section 722.116(b)(2) through (f).

5) A VSQG that accumulates hazardous waste in amounts less than or equal to the limits in subsections (a)(3) and (a)(4) must either treat or dispose of its hazardous waste in an on-site facility or ensure delivery to an off-site treatment, storage, or disposal facility. The facility, if located in the U.S., must be one of the following:

A) A permitted facility under 35 Ill. Adm. Code 702 and 703;

B) An interim status facility under Subpart C of 35 Ill. Adm. Code 703 and 35 Ill. Adm. Code 725;

C) A facility authorized to manage hazardous waste by a state whose hazardous waste management program is approved by USEPA under 40 CFR 271;

D) A municipal solid waste landfill that is subject to the standards of 40 CFR 258 and which is permitted, licensed, or registered by a USEPA-authorized state to manage municipal solid waste;

- E) A solid waste management facility that is permitted, licensed, or registered by a state to manage non-municipal non-hazardous waste and, if the facility is a non-municipal non-hazardous waste disposal unit, the facility must comply with the requirements in subpart B of 40 CFR 257, incorporated by reference in 35 Ill. Adm. Code 720.111;
- F) A facility engaging in either of the following activities:
- i) Beneficial use or reuse, or legitimate recycling or reclamation of its waste; or
 - ii) Treating its waste prior to beneficial use or reuse, or legitimate recycling or reclamation;
- G) For universal waste managed under 35 Ill. Adm. Code 733, a universal waste handler or destination facility subject to the requirements of 35 Ill. Adm. Code 733;
- H) An LQG under the control of the same person as the VSQG, provided the following conditions are met:
- i) The VSQG and the LQG are under the control of the same person, as defined in 35 Ill. Adm. Code 720.110. “Control,” for the purposes of this Section, means the power to direct the policies of the generator, whether by the ownership of stock, voting rights, or otherwise, except that a contractor that operates a generator facility on behalf of a different person, as defined in 35 Ill. Adm. Code 720.110, cannot be deemed to “control” the VSQG and LQG.
 - ii) The VSQG marks its containers of hazardous waste with the words “Hazardous Waste” and an indication of the hazards of the contents. Examples of indication of the hazards include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitability, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labelling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200, incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111.

- b) The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited.
- c) A VSQG experiencing an episodic event may generate and accumulate hazardous waste in accordance with Subpart L in lieu of Sections 722.115, 722.116, and 722.117.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.115 Satellite Accumulation Area Regulations for a Small Quantity Generator or Large Quantity Generator

- a) A generator may accumulate as much as 55 gallons (208 ℓ) of non-acute hazardous waste or either one quart (0.94 ℓ) of liquid acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) or 1 kg (2.2 lbs) of solid acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in containers at or near any point of generation where wastes initially accumulate which is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with the requirements of 35 Ill. Adm. Code 702, 703, 705, and 724 through 727, provided that the generator complies with all of the conditions for exemption in this Section. A generator may comply with the conditions for exemption in this Section instead of complying with the conditions for exemption in Section 722.116(b) or 722.117(a), except as required in Section 722.115(a)(7) and (a)(8). The conditions for exemption for satellite accumulation are the following:
- 1) If a container holding hazardous waste is not in good condition, or if the container begins to leak, the generator must immediately transfer the hazardous waste from the leaking container to a container that is in good condition and not leaking, or immediately transfer and manage the waste in a central accumulation area operated in compliance with Section 722.116(b) or 722.117(a).
 - 2) The generator must use a container made of or lined with materials that will not react with and which are otherwise compatible with the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.
 - 3) Special Standards for Incompatible Wastes
 - A) The generator must not place incompatible wastes or incompatible wastes and materials (see appendix V of 40 C.F.R. 265, incorporated by reference in 35 Ill. Adm. Code 720.111, for examples) in the same container, unless the generator complies with Section 725.117(b).

- B) The generator must not place hazardous waste in an unwashed container that previously held an incompatible waste or material (see appendix V of 40 C.F.R. 265, incorporated by reference in 35 Ill. Adm. Code 720.111, for examples), unless the generator complies with Section 725.117(b).
 - C) The generator must separate a container holding hazardous waste or otherwise protect it by any practical means from any other incompatible waste or other materials accumulated nearby in other containers.
- 4) A container holding hazardous waste must be closed at all times during accumulation, except at the following times:
- A) When the generator is adding, removing, or consolidating waste; or
 - B) When the generator is engaged in necessary temporary venting of a container for either of the following reasons:
 - i) For the proper operation of equipment; or
 - ii) To prevent dangerous situations, such as build-up of extreme pressure.
- 5) A generator must mark or label its container with the following:
- A) The words “Hazardous Waste”; and
 - B) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic) listed in Subpart C or D of 35 Ill. Adm. Code 721; hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111.
- 6) A generator who accumulates either acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) or non-acute hazardous waste in excess of the amounts listed in subsection (a) at or near any point of generation must do the following:

- A) Comply within three consecutive calendar days with the applicable central accumulation area regulations in Section 722.116(b) or 262.722.117(a), or
 - B) Remove the excess from the satellite accumulation area within three consecutive calendar days to any of the following:
 - i) A central accumulation area operated in accordance with the applicable regulations in Section 722.116(b) or 722.117(a);
 - ii) An on-site interim status or permitted treatment, storage, or disposal facility, or
 - iii) An off-site designated facility; and
 - C) During the three-consecutive-calendar-day period the generator must continue to comply with subsections (a)(1) through (a)(5). The generator must mark or label the containers holding the excess accumulation of hazardous waste with the date the excess amount began accumulating.
- 7) All satellite accumulation areas operated by an SQG must meet the preparedness and prevention regulations of Section 722.116(b)(8) and emergency procedures at Section 722.116(b)(9).
- 8) All satellite accumulation areas operated by an LQG must meet the Preparedness, Prevention and Emergency Procedures in Subpart M.
- b) This subsection (b) corresponds with 40 CFR 262.115(b), which USEPA has marked “reserved”. This statement maintains structural consistency with the corresponding federal regulation.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.116 Conditions for Exemption for a Small Quantity Generator That Accumulates Hazardous Waste

An SQG may accumulate hazardous waste on site without a permit or interim status, and without complying with the requirements of 35 Ill. Adm. Code 702, 703, 705, and 724 through 727, or the notification requirements of section 3010 of RCRA (42 USC 6930), provided that all of the following conditions for exemption listed in this Section are met:

- a) Generation. The generator must generate in a calendar month no more than the amounts specified in the definition of “SQG” in 35 Ill. Adm. Code 720.110.

b) Accumulation. The generator must accumulate hazardous waste on site for no more than 180 days, unless in compliance with the conditions for exemption allowing longer accumulation in subsections (d) and (e). The following accumulation conditions also apply:

1) Accumulation Limit. The quantity of hazardous waste accumulated on site must never exceed 6,000 kg (13,200 lbs);

2) Accumulation of Hazardous Waste in Containers

A) Condition of Containers. If a container holding hazardous waste is not in good condition or the container begins to leak, the SQG must immediately transfer the hazardous waste from this container to a container that is in good condition or immediately manage the waste in some other way that complies with the conditions for exemption of this Section.

B) Compatibility of Waste with Container. The SQG must use a container made of or lined with materials that will not react with and which are otherwise compatible with the hazardous waste to be accumulated, so that the ability of the container to contain the waste is not impaired.

C) Management of Containers

i) A container holding hazardous waste must always be closed during accumulation, except when it is necessary to add or remove waste.

ii) A container holding hazardous waste must not be opened, handled, or accumulated in a manner that may rupture the container or cause it to leak.

D) Inspections. At least weekly, the SQG must inspect central accumulation areas. The SQG must look for leaking containers and for deterioration of containers caused by corrosion or other factors. See subsection (b)(2)(i) for remedial action required if deterioration or leaks are detected.

E) Special Conditions for Accumulation of Incompatible Wastes

i) The SQG must not place incompatible wastes or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) must not be placed in the same

container, unless the generator complies with 35 Ill. Adm. Code 725.117(b).

- ii) The SQG must not place hazardous waste in an unwashed container that previously held an incompatible waste or material (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111), unless the generator complies with 35 Ill. Adm. Code 725.117(b).
- iii) The SQG must separate or protect a container accumulating hazardous waste, by means of a dike, berm, wall, or other device, from any waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments.

3) Accumulation of Hazardous Waste in Tanks

A) This subsection (b)(3)(A) corresponds with 40 CFR 262.116(b)(3)(i), which USEPA has marked “reserved”. This statement maintains structural consistency with the corresponding federal regulation.

B) An SQG of hazardous waste must comply with the following general operating conditions:

- i) Treatment or accumulation of hazardous waste in tanks must comply with 35 Ill. Adm. Code 725.117(b).
- ii) The SQG must not place hazardous wastes or treatment reagents in a tank if the hazardous wastes or treatment reagents could cause the tank or its inner liner to rupture, leak, corrode, or otherwise fail before the end of its intended life.
- iii) The SQG must operate uncovered tanks must be operated to ensure at least 60 centimeters (2 feet) of freeboard, unless the tank is equipped with a containment structure (e.g., dike or trench), a drainage control system, or a diversion structure (e.g., standby tank) with a capacity that equals or exceeds the volume of the top 60 centimeters (2 feet) of the tank.
- iv) Where hazardous waste is continuously fed into a tank, the SQG must equip the tank with a means to stop this inflow

(e.g., waste feed cutoff system or by-pass system to a stand-by tank).

C) Except as noted in subsection (b)(3)(iv), an SQG that accumulates hazardous waste in tanks must inspect each of the following, where present:

- i) Discharge control equipment (e.g., waste feed cutoff systems, by-pass systems, and drainage systems) at least once each operating day, to ensure that it is in good working order;
- ii) Data gathered from monitoring equipment (e.g., pressure and temperature gauges) at least once each operating day, to ensure that the tank is being operated according to its design;
- iii) The level of waste in the tank at least once each operating day, to ensure compliance with subsection (b)(3)(ii)(C);
- iv) The construction materials of the tank at least weekly, to detect corrosion or leaking of fixtures or seams; and
- v) The construction materials of discharge confinement structures and the immediately surrounding area (e.g., dikes) at least weekly, to detect erosion or obvious signs of leakage (e.g., wet spots or dead vegetation). The SQG must remedy any deterioration or malfunction of equipment or structures which the inspection reveals on a schedule which ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, the SQG must immediately take remedial action.

D) A SQG accumulating hazardous waste in tanks or tank systems that have full secondary containment and that either use leak detection equipment to alert personnel to leaks, or implement established workplace practices to ensure leaks are promptly identified, must inspect at least weekly, where applicable, the areas identified in subsections (b)(3)(C)(i) through (b)(3)(C)(v). Use of the alternate inspection schedule must be documented in the generator's operating record. This documentation must include a description of the established workplace practices at the SQG.

E) This subsection (b)(3)(E) corresponds with 40 CFR 262.116(b)(3)(v), which USEPA has marked "reserved". This

statement maintains structural consistency with the corresponding federal regulation.

- F) An SQG accumulating hazardous waste in tanks must remove all hazardous waste from tanks, discharge control equipment, and discharge confinement structures upon closure of the facility. At closure, as throughout the operating period, unless the SQG can demonstrate, in accordance with 35 Ill. Adm. Code 721.103(c) or (d), that any solid waste removed from its tank is not a hazardous waste, then it must manage such waste in accordance with all applicable provisions of this Part and 35 Ill. Adm. Code 722, 723, 725 and 728.
- G) An SQG must comply with the following special conditions for accumulation of ignitable or reactive waste:
- i) Ignitable or reactive waste must not be placed in a tank, unless the waste is treated, rendered, or mixed before or immediately after placement in a tank so that the resulting waste, mixture, or dissolution of material no longer meets the definition of ignitable or reactive waste under 35 Ill. Adm. Code 721.121 or 721.123, and the SQG complies with 35 Ill. Adm. Code 725.117(b); the generator accumulates or treats the waste in such a way that the waste is protected from any material or conditions that may cause it to ignite or react; or the SQG uses the tank solely for emergencies.
 - ii) An SQG that treats or accumulates ignitable or reactive waste in covered tanks must comply with the buffer zone requirements for tanks contained in NFPA 30 (1977 or 1981), incorporated by reference in 35 Ill. Adm. Code 720.111.
 - iii) An SQG must not place incompatible wastes, or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) in the same tank or place hazardous waste in an unwashed tank that previously held an incompatible waste or material, unless the generator complies with 35 Ill. Adm. Code 725.117(b).
- 4) Accumulation of Hazardous Waste on Drip Pads. If the waste is placed on drip pads, the SQG must comply with the following:

- A) Subpart W of 35 Ill. Adm. Code 725 (except 35 Ill. Adm. Code 725.545(c));
- B) The SQG must remove all wastes from the drip pad at least once every 90 days. Any hazardous wastes that the generator removes from the drip pad are then subject to the 180-day accumulation limit in subsection (b) and Section 722.115 if hazardous wastes are being managed in satellite accumulation areas prior to being moved to the central accumulation area; and
- C) The SQG must maintain on site at the facility the following records readily available for inspection:
- i) A written description of procedures that are followed to ensure that all wastes are removed from the drip pad and associated collection system at least once every 90 days; and
 - ii) Documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system and the date and time of removal.
- 5) Accumulation of Hazardous Waste in Containment Buildings. If the SQG places waste in containment buildings, the SQG must comply with Subpart DD of 35 Ill. Adm. Code 725. The SQG must label its containment buildings with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on site. The SQG must also provide in a conspicuous place an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111. The SQG must also maintain both of the following:
- A) The professional engineer certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. This certification must be in the generator's files prior to operation of the unit; and

B) The following records, by use of inventory logs, monitoring equipment, or any other effective means:

- i) A written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the generator is consistent with maintaining the 90 day limit, and documentation that the SQG complies with the procedures; or
- ii) Documentation that the SQG empties the unit at least once every 90 days.
- iii) The SQG must maintain inventory logs or records with the above information on site and readily available for inspection.

6) Labeling and Marking of Containers and Tanks

A) Containers. An SQG must mark or label its containers with the following:

- i) The words “Hazardous Waste”;
- ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and
- iii) The date upon which each period of accumulation begins clearly visible for inspection on each container.

B) Tanks. An SQG accumulating hazardous waste in tanks must do the following:

- i) Mark or label its tanks with the words “Hazardous Waste”;

- ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;
 - iii) Use inventory logs, monitoring equipment, or other records to demonstrate that hazardous waste has been emptied within 180 days of first entering the tank if using a batch process or, in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 180 days of first entering; and
 - iv) Keep inventory logs or records with the above information on site and readily available for inspection.
- 7) Land Disposal Restrictions. An SQG must comply with all the applicable requirements under 35 Ill. Adm. Code 728.
- 8) Preparedness and Prevention
- A) Maintenance and Operation of Facility. An SQG must maintain and operate its facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment.
 - B) Required Equipment. An SQG must equip all areas where hazardous waste is either generated or accumulated with the items in subsections (b)(8)(B)(i) through (b)(8)(B)(iv) (unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below or the actual waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified below). An SQG may determine the most appropriate places to locate equipment necessary to prepare for and respond to emergencies.

- i) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
 - ii) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;
 - iii) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and
 - iv) Water at adequate volume and pressure to supply water hose streams, foam producing equipment, automatic sprinklers, or water spray systems.
- C) Testing and Maintenance of Equipment. The SQG must test and maintain all communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, as necessary to assure its proper operation in time of emergency.
- D) Access to Communications or Alarm System
- i) Whenever the SQG pours, mixes, spreads, or otherwise handles hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access (i.e., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under subsection (a)(8)(B).
 - ii) When there is just one employee on the premises while the facility is operating, the employee must have immediate access (i.e., direct or unimpeded access) to a device, such as a telephone (immediately available at the scene of operation) or a hand-held two-way radio, that is capable of summoning external emergency assistance, unless such a device is not required under subsection (a)(8)(B).
- E) Required Aisle Space. The SQG must maintain aisle space that allows the unobstructed movement of personnel, fire protection

equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

F) Arrangements with Local Authorities

- i) The SQG must attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals, taking into account the types and quantities of hazardous wastes handled at the facility. Arrangements may be made with the Local Emergency Planning Committee, if this is the appropriate organization with which to make arrangements. An SQG attempting to make arrangements with its local fire department must determine the potential need for the services of the local police department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals. As part of this coordination, the SQG must attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of hazardous waste handled at the facility and associated hazards, places where facility personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes, as well as the types of injuries or illnesses that could result from fires, explosions, or releases at the facility. Where more than one police or fire department might respond to an emergency, the SQG must attempt to make arrangements designating primary emergency authority to a specific fire or police department and with any others to provide support to the primary emergency authority.

BOARD NOTE: The State Emergency Response Commission (SERC) maintains an on-line listing of Local Emergency Planning Committees in Illinois by jurisdiction: www.illinois.gov/iema/Preparedness/SERC/Documents/LEPC_ReleaseReportingContactList.pdf.

- ii) An SQG must maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation must include documentation in the operating record that either confirms these arrangements actively exist or, in cases where no arrangements exist,

confirming that the SOG attempted to make these arrangements.

iii) A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction over the fire code within Illinois or the facility's locality, as far as needing to make arrangements with the local fire department as well as any other organization necessary to respond to an emergency, provided that the SOG documents the waiver in the operating record.

9) Emergency Procedures. The SOG must comply with the following conditions for those areas of the generator facility where hazardous waste is generated and accumulated:

A) At all times, at least one employee must be either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in subsection (b)(9)(D). This employee is the emergency coordinator.

B) The SOG must post the following information next to telephones or in areas directly involved in the generation and accumulation of hazardous waste:

i) The name and emergency telephone number of the emergency coordinator;

ii) The location of fire extinguishers and spill control material, and, if present, fire alarm; and

iii) The telephone number of the fire department, unless the facility has a direct alarm.

C) The SOG must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures that are relevant to their responsibilities during normal facility operations and emergencies;

D) The emergency coordinator or his or her designee must respond to any emergencies that arise. The required responses are the following:

i) In the event of a fire, the emergency coordinator must call the fire department or attempt to extinguish the fire using a fire extinguisher;

- ii) When a spill occurs, the SQG must contain the flow of hazardous waste to the extent possible and, as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil. The SQG can either itself conduct this containment and cleanup or have a contractor perform the work on its behalf;
 - iii) When a fire, explosion, or other release occurs that could threaten human health outside the facility, or when the SQG has knowledge that a spill has reached surface water, the SQG must immediately notify the National Response Center (using the 24-hour toll free number, 800-424-8802). The report must include the name, address, and USEPA identification number of the SQG; the date, time, and type of incident (e.g., spill or fire); the quantity and type of hazardous waste involved in the incident; the extent of any injuries; and the estimated quantity and disposition of any recovered materials.
- c) Transporting Waste More Than 200 Miles. An SQG that must transport its waste or offer its waste for transportation over a distance of 200 miles or more for off-site treatment, storage, or disposal may accumulate hazardous waste on site for 270 days or less without having a permit or interim status, provided that the SQG complies with the conditions of subsection (b).
- d) Accumulation Time Limit Extension. An SQG that accumulates hazardous waste for more than 180 days (or for more than 270 days if the SQG must transport its waste or offer its waste for transportation over a distance of 200 miles or more for off-site treatment, storage, or disposal) is subject to the requirements of 35 Ill. Adm. Code 702, 703, 724, 725, 727, and 728, unless the Agency has granted the SQG an extension to the 180-day (or 270-day if applicable) period. The Agency may grant an extension if hazardous wastes must remain on site for longer than 180 days (or 270 days if applicable) due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days on a case-by-case basis.
- BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period pursuant to sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.
- e) Rejected Load. An SQG may accumulate the returned waste on site in accordance with subsections (a) and (b) if the SQG sent the shipment of hazardous waste to a designated facility believing that the designated facility can accept and manage the waste and later received that shipment back as a rejected

load or residue in accordance with the manifest discrepancy provisions of 35 Ill. Adm. Code 724.172 or 725.172 may accumulate the returned waste on site in accordance with subsections (a) through (d). Upon receipt of the returned shipment, the SQG must do either of the following:

- 1) Sign Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or
 - 2) Sign Item 20 of the manifest, if the transporter returned the shipment using a new manifest.
- f) An SQG experiencing an episodic event may accumulate hazardous waste in accordance with Subpart L in lieu of Section 722.117.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.117 Conditions for Exemption for a Large Quantity Generator That Accumulates Hazardous Waste

An LQG may accumulate hazardous waste on site without a permit or interim status, and without complying with the requirements of 35 Ill. Adm. Code 702, 703 and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the LQG meets all of the following conditions for exemption:

- a) Accumulation. The LQG may accumulate hazardous waste on site for no more than 90 days, unless in compliance with the accumulation time limit extension or F006 accumulation conditions for exemption in subsections (b) through (e). The following accumulation conditions also apply:
 - 1) Accumulation of Hazardous Waste in Containers. If the hazardous waste is placed in containers, the LQG must comply with the following requirements:
 - A) Air Emission Standards. The LQG must comply with the applicable requirements of Subparts AA, BB, and CC of 35 Ill. Adm. Code 725;
 - B) Condition of Containers. If a container holding hazardous waste is not in good condition, or if the container begins to leak, the LQG must immediately transfer the hazardous waste from the leaking container to a container that is in good condition or otherwise immediately manage the waste in some other way that complies with the conditions for exemption of this Section;
 - C) Compatibility of Waste with Container. The LQG must use a container made of or lined with materials that will not react with

and are otherwise compatible with the hazardous waste to be stored, so that the ability of the container to contain the waste is not impaired;

D) Management of Containers

i) The LQG must always keep a container holding hazardous waste closed during accumulation, except when it is necessary to add or remove waste.

ii) The LQG must not open, handle, or store a container holding hazardous waste in a manner that may rupture the container or cause the container to leak.

E) Inspections. At least weekly, the LQG must inspect central accumulation areas. The LQG must look for leaking containers and for deterioration of containers caused by corrosion or other factors. See subsection (a)(1)(B) for remedial action required if the LQG detects deterioration or leaks.

F) Special Conditions for Accumulation of Ignitable and Reactive Wastes

i) The LQG must be locate containers holding ignitable or reactive waste at least 15 meters (50 feet) from the facility's property line, unless the LQG obtains a written approval from the authority having jurisdiction over the local fire code that allows hazardous waste accumulation to occur within this restricted area. The LQG must maintain a record of the written approval as long as the LQG accumulates ignitable or reactive hazardous waste in this area.

ii) The LQG must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. The LQG must separate and protect this waste from sources of ignition or reaction, including, but not limited to, the following: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical, or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), or radiant heat. While handling ignitable or reactive waste, the LQG must confine smoking and open flame to specially designated locations. The LQG must conspicuously place "No Smoking" signs wherever there is a hazard from ignitable or reactive waste.

G) Special Conditions for Accumulation of Incompatible Wastes

- i) The LQG must not place incompatible wastes or incompatible wastes and materials (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111) in the same container, unless the LQG complies with 35 Ill. Adm. Code 725.117(b).
- ii) The LQG must not place hazardous waste in an unwashed container that previously held an incompatible waste or material (for examples, see appendix V to 40 CFR 265, incorporated by reference in 35 Ill. Adm. Code 720.111), unless the LQG complies with 35 Ill. Adm. Code 725.117(b).
- iii) The LQG must separate a container holding hazardous waste or otherwise protect it by means of a dike, berm, wall, or other device from any other incompatible waste or other materials accumulated or stored nearby in other containers, piles, open tanks, or surface impoundments.

2) Accumulation of Hazardous Waste in Tanks. If the LQG places the waste in tanks, the LQG must comply with the applicable requirements of Subpart J, except 35 Ill. Adm. Code 725.297(c) (Closure and Post-Closure Care) and 35 Ill. Adm. Code 725.300 (Waste Analysis and Trial Tests) and the applicable requirements of Subparts AA, BB, and CC of 35 Ill. Adm. Code 725.

3) Accumulation of Hazardous Waste on Drip Pads. If the LQG places hazardous waste on drip pads, the LQG must comply with the following:

A) Subpart W of 35 Ill. Adm. Code 725;

B) The LQG must remove all wastes from the drip pad at least once every 90 days. Any hazardous wastes that the LQG removes from the drip pad are subject to the 90-day accumulation limit in subsection (a) and Section 722.115 if the LQG manages the hazardous wastes are being managed in satellite accumulation areas prior to moving them to a central accumulation area; and

C) The LQG must maintain on site at the facility the following records readily available for inspection:

- i) A written description of procedures that the LQG follows to ensure that it removes all wastes from the drip pad and

associated collection system at least once every 90 days;
and

ii) Documentation of each waste removal, including the quantity of waste that the LQG removed from the drip pad and the sump or collection system and the date and time of removal.

4) Accumulation of Hazardous Waste in Containment Buildings. If the LQG places the waste in containment buildings, the LQG must comply with Subpart DD of 35 Ill. Adm. Code 725. The LQG must label its containment building with the words "Hazardous Waste" in a conspicuous place easily visible to employees, visitors, emergency responders, waste handlers, or other persons on site. The LQG must also provide in a conspicuous place an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111. The LQG must also maintain both of the following:

A) The professional engineer certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. This certification must be in the LQG's files prior to operation of the unit; and

B) The following records, by use of inventory logs, monitoring equipment, or any other effective means:

i) A written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days, a written description of the waste generation and management practices for the facility showing that the 16(d) and generator is consistent with respecting the 90-day limit, and documentation that the LQG complies with the procedures

ii) Documentation that the unit is emptied the LQG empties the unit at least once every 90 days.

iii) The LQG must maintain inventory logs or records with the above information on site and readily available for inspection.

5) Labeling and Marking of Containers and Tanks

A) Containers. An LQG must mark or label its containers with the following:

i) The words “Hazardous Waste”;

ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and

iii) The date upon which each period of accumulation begins clearly visible for inspection on each container.

B) Tanks. An LQG accumulating hazardous waste in tanks must do the following:

i) Mark or label its tanks with the words “Hazardous Waste”;

ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment or other records to demonstrate that hazardous waste has been emptied

within 90 days of first entering the tank if using a batch process or, in the case of a tank with a continuous flow process, demonstrate that estimated volumes of hazardous waste entering the tank daily exit the tank within 90 days of first entering; and

iv) Keep inventory logs or records with the above information on site and readily available for inspection.

6) Emergency Procedures. The LQG must comply with the standards in Subpart M (Preparedness, Prevention and Emergency Procedures for Large Quantity Generators).

7) Personnel Training

A) Personnel Training Program

i) Facility personnel must successfully complete a program of classroom instruction, online training (e.g., computer-based or electronic) or on-the-job training that teaches them to perform their duties in a way that ensures compliance with this Part. The LQG must ensure that this program includes all the elements described in the document required under subsection (a)(7)(D).

ii) A person trained in hazardous waste management procedures must direct the program, and the program must include instruction that teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which the LQG employs them.

iii) At a minimum, the design of the training program must ensure that facility personnel can respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, where applicable, procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; key parameters for automatic waste feed cut-off systems; communications or alarm systems; response to fires or explosions; response to ground-water contamination incidents; and shutdown of operations.

iv) For facility employees that receive emergency response training pursuant to 29 CFR 1910.120(p)(8) (Emergency response program) and 1910.120(q) (Emergency response

to hazardous substance releases), incorporated by reference in 35 Ill. Adm. Code 720.111, the LQG is not required to provide separate emergency response training pursuant to this Section, provided that the overall facility training meets all the conditions of exemption in this Section.

- B) Facility personnel must successfully complete the program required in subsection (a)(7)(A) within six months after the date of their employment, assignment to the facility, or assignment to a new position at the facility, whichever is later. Employees must not work in unsupervised positions until he or she has completed the training standards of subsection (a)(7)(A).
- C) Facility personnel must take part in an annual review of the initial training required in subsection (a)(7)(A).
- D) The LQG must maintain the following documents and records at the facility:
- i) The job title for each position at the facility related to hazardous waste management and the name of the employee filling each job;
 - ii) A written job description for each position listed under subsection (a)(7)(D)(i). This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but the description must include the requisite skill, education, other qualifications, and duties of facility personnel assigned to each position;
 - iii) A written description of the type and amount of both introductory and continuing training that the LQG will give to each person filling a position listed under subsection (a)(7)(D)(i);
 - iv) Records documenting that the LQG has given and facility personnel has completed the training or job experience required by subsections (a)(7)(A), (B), and (C).
- E) The LQG must keep training records on current personnel until closure of the facility. The LQG must keep training records on former employees for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

8) Closure. An LQG accumulating hazardous wastes in containers, tanks, drip pads, and containment buildings, prior to closing the facility or a unit at the facility, must meet the following conditions:

A) Notification for Closure of a Waste Accumulation Unit. An LQG must perform one of the following when closing a waste accumulation unit:

i) Place a notice in the operating record within 30 days after closure identifying the location of the unit within the facility; or

ii) Meet the closure performance standards of subsection (a)(8)(C) for container, tank, and containment building waste accumulation units or subsection (a)(8)(D) for drip pads and notify USEPA and the Agency following the procedures in subsection (a)(8)(B)(ii) for the waste accumulation unit. If the waste accumulation unit is subsequently reopened, the LQG may remove the notice from the operating record.

B) Notification for Closure of the Facility

i) Notify USEPA and the Agency using USEPA Form 8700-12 no later than 30 days prior to closing the facility.

ii) Notify USEPA and the Agency using USEPA Form 8700-12 within 90 days after closing the facility that it has complied with the closure performance standards of subsection (a)(8)(C) or (a)(8)(D). If the facility cannot meet the closure performance standards of subsection (a)(8)(C) or (a)(8)(D), notify USEPA and the Agency using USEPA Form 8700-12 that it will close as a landfill under 35 Ill. Adm. Code 725.410 in the case of a container, tank or containment building units, or for a facility with drip pads, notify using USEPA Form 8700-12 that it will close under the standards of 35 Ill. Adm. Code 725.545(b).

iii) An LQG may request additional time to clean close, but it must notify USEPA and the Agency using USEPA Form 8700-12 within 75 days after the date provided in subsection (a)(8)(B)(i) to request an extension and provide an explanation as to why the additional time is required.

C) Closure Performance Standards for Container, Tank Systems, and Containment Building Waste Accumulation Units

- i) At closure, the LQG must close the waste accumulation unit or facility in a manner that minimizes the need for further maintenance by controlling, minimizing, or eliminating the post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated run-off, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere to the extent necessary to protect human health and the environment.
 - ii) The LQG must remove or decontaminate all contaminated equipment, structures, soil, and any remaining hazardous waste residues from waste accumulation units, including containment system components (pads, liners, etc.), contaminated soils and subsoils, bases, and structures and equipment contaminated with waste, unless 35 Ill. Adm. Code 721.103(d) applies.
 - iii) The LQG must manage any hazardous waste generated in the process of closing the LQG's facility or units accumulating hazardous waste in accordance with all applicable standards of 35 Ill. Adm. Code 722, 723, 725, and 728, including removing any hazardous waste contained in these units within 90 days of generating the waste and managing these wastes in a permitted or interim status hazardous waste treatment, storage, and disposal facility.
 - iv) If the LQG demonstrates that it cannot practicably remove or decontaminate any contaminated soils and wastes, as required in subsection (a)(8)(B)(ii), then the waste accumulation unit is a landfill, and the LQG must close the waste accumulation unit and perform postclosure care in accordance with the closure and post-closure care requirements that apply to landfills (35 Ill. Adm. Code 725.410). In addition, the LQG must meet all of the requirements for landfills specified in Subparts G and H of 35 Ill. Adm. Code 725 for the purposes of closure, post-closure, and financial responsibility, for a waste accumulation unit that is a landfill.
- D) Closure Performance Standards for Drip Pad Waste Accumulation Units. At closure, the LQG must comply with the closure requirements of subsections (a)(8)(B) and (a)(8)(C)(i), and (a)(8)(C)(iii) and 35 Ill. Adm. Code 725.545(a) and (b).

E) The closure requirements of this subsection (a)(8) do not apply to satellite accumulation areas.

9) Land Disposal Restrictions. The LQG must comply with all applicable requirements of 40 CFR 268.

b) Accumulation Time Limit Extension. An LQG that accumulates hazardous waste for more than 90 days is subject to the requirements of 35 Ill. Adm. Code 702, 703, and 724 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930), unless the Agency has granted the LQG an extension to the 90-day period. The Agency may grant an extension if hazardous wastes must remain on site for longer than 90 days due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days on a case-by-case basis.

BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period pursuant to sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.

c) Accumulation of F006 Waste. An LQG also generating wastewater treatment sludges from electroplating operations that meet the listing description for USEPA hazardous waste number F006 may accumulate F006 waste on site for more than 90 days but not more than 180 days without being subject to 35 Ill. Adm. Code 702, 703, and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the LQG complies with all of the following additional conditions for exemption:

1) The LQG has implemented pollution prevention practices that reduce the amount of any hazardous substances, pollutants, or contaminants entering F006 waste or otherwise being released to the environment prior to recycling of the waste;

2) The F006 waste is legitimately recycled through metals recovery;

3) The LQG accumulates no more than 20,000 kg of F006 waste on site at any one time; and

4) The LQG manages the F006 waste in accordance with the following requirements:

A) Requirements for Managing F006 Waste

i) If the LQG places the F006 waste in containers, the LQG must comply with the applicable conditions for exemption in subsection (a)(1).

- ii) If the LQG places the F006 waste in tanks, the LQG must comply with the applicable conditions for exemption in subsection (a)(2).
 - iii) If the LQG places the F006 waste in containment buildings, the LQG must comply with subpart DD of 35 Ill. Adm. Code 725. Prior to operation of the unit, the LQG must place in the operating record of the facility the certification of a professional engineer that the containment building complies with the design standards specified in 35 Ill. Adm. Code 725.1101. The LQG must also place in the operating record either documentation that the LQG empties the unit is at least once every 180 days or all three of the following items: a written description of procedures to ensure that the F006 waste remains in the unit for no more than 180 days, a written description of the facility waste generation and management practices showing that the practices are consistent with the 180-day limit, and documentation that the LQG is complying with the procedures.
- B) The LQG is exempt from all requirements of subparts G and H of 35 Ill. Adm. Code 725, except for those referenced in subsection (a)(8).
- C) The LQG must clearly mark the date upon which each period of accumulation begins, and the date must be clearly visible for inspection on each container.
- D) While accumulating waste on site, the LQG must clearly labeled or mark each container and tank is with the following:
- i) The words “Hazardous Waste”; and
 - ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172; a hazard statement or pictogram consistent with 29 CFR 1910.1200; or a chemical hazard label consistent with NFPA 704, each incorporated by reference in 35 Ill. Adm. Code 720.111.

E) The LQG must comply with the requirements in subsections (a)(6) and (a)(7).

d) F006 Waste Transported over 200 Miles. An LQG also generating wastewater treatment sludges from electroplating operations that meet the listing description for the USEPA hazardous waste number F006 may accumulate F006 waste on site for more than 90 days but not more than 270 days without being subject to 35 Ill. Adm. Code 702, 703, and 724 through 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), if the LQG must transport this waste or offer this waste for transportation over a distance of 200 miles or more for off-site metals recovery and the LQG complies with all of the conditions for exemption of subsections (c)(1) through (c)(4).

e) F006 Waste Accumulation Time Extension. An LQG accumulating F006 waste in accordance with subsections (c) and (d) that either accumulates F006 waste on site for more than 180 days (or for more than 270 days if the LQG must transport this waste or offer this waste for transportation over a distance of 200 miles or more) or accumulates more than 20,000 kg (44,000 lbs) of F006 waste on site is an operator of a storage facility and is subject to the requirements of 35 Ill. Adm. Code 702, 703, 724, 725, 727 and the notification requirements of section 3010 of RCRA (42 USC 6930), unless the Agency has granted the LQG an extension to the 180-day period (or 270-day period, if applicable) or an exception to the 20,000-kg (44,000-lb) accumulation limit. The Agency may grant an extension of the accumulation period or an exception to the accumulation limit if F006 waste must remain on site for longer than 180 days (or 270 days, if applicable) or if more than 20,000 kg (44,000 lbs) of F006 waste must remain on site due to unforeseen, temporary, and uncontrollable circumstances. The Agency may grant an extension of up to 30 days or an exception to the accumulation limit on a case-by-case basis.

BOARD NOTE: The Agency may grant a provisional variance that extends the permissible accumulation period or accumulation amount limit pursuant to sections 35(b) and 36(c) of the Act. This subsection provides the basis for granting and maximum duration of an extension.

f) Consolidation of Hazardous Waste Received from VSQGs. An LQG may accumulate on site hazardous waste received from a VSQG under control of the same person (as defined in 35 Ill. Adm. Code 720.110), without a storage facility permit or interim status and without complying with the requirements of 35 Ill. Adm. Code 702, 703, and 724 through 728 and the notification requirements of section 3010 of RCRA (42 USC 6930), provided that the LQG complies with the following conditions. "Control," for the purposes of this Section, means the power to direct the policies of the LQG and VSQG, whether by the ownership of stock, voting rights, or otherwise, except that a contractor that operates a LQG or

VSQG facility on behalf of a different person is not be deemed to “control” the LQG or VSQG.

- 1) The LQG must notify USEPA and the Agency at least 30 days prior to receiving the first shipment from a VSQG using USEPA Form 8700–12; and
 - A) The LQG must identify on the form the names and site addresses for the VSQG as well as the name and business telephone number for a contact person for the VSQG; and
 - B) The LQG must submit an updated USEPA Form 8700–12 within 30 days after a change in the name or site address for the VSQG.
 - 2) The LQG maintains records of shipments for three years from the date the LQG receives the hazardous waste from the VSQG. These records must identify the name, site address, and contact information for the VSQG and include a description of the hazardous waste received, including the quantity and the date the LQG received the waste.
 - 3) The LQG must comply with the independent requirements identified in Section 722.110(a)(1)(C) and the conditions for exemption in this Section for all hazardous waste received from a VSQG. For purposes of the labeling and marking regulations in subsection (a)(5), the LQG must label the container or unit with the date accumulation started (i.e., the date the LQG received the hazardous waste from the VSQG). If the LQG is consolidating incoming hazardous waste from a VSQG with either its own hazardous waste or with hazardous waste from other VSQGs, the LQG must label each container or unit with the earliest date when the VSQG first accumulated on site any hazardous waste in the container.
- g) Rejected Load. An LQG may accumulate the returned waste on site in accordance with subsections (a) and (b) if the LQG sent the shipment of hazardous waste to a designated facility believing that the designated facility can accept and manage the waste and later received that shipment back as a rejected load or residue in accordance with the manifest discrepancy provisions of 35 Ill. Adm. Code 724.172 or 725.172. Upon receipt of the returned shipment, the LQG must do either of the following:
- 1) Sign Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or
 - 2) Sign Item 20 of the manifest, if the transporter returned the shipment using a new manifest.

Section 722.118 USEPA Identification Numbers and Re-Notification for a Small Quantity Generator or Large Quantity Generator

- a) An SQG or LQG must not treat, store, dispose of, transport, or offer for transportation hazardous waste without having received a USEPA identification number.
- b) An SQG or LQG that has not received a USEPA identification number must obtain one by applying to USEPA using USEPA Form 8700-12. Upon receiving the request USEPA will assign a USEPA identification number to the generator.
- c) An SQG or LQG must not offer its hazardous waste to a transporter or treatment, storage, or disposal facility that has not received a USEPA identification number.
- d) Re-Notification
 - 1) An SQG must re-notify USEPA starting in 2021 and every four years thereafter using USEPA Form 8700-12. The SQG must submit this re-notification by September 1st of each year in which re-notification is required.
 - 2) An LQG must renotify USEPA by March 1 of each even-numbered year thereafter using USEPA Form 8700-12. An LQG may submit this renotification as part of its annual report required by Section 722.141.
- e) A recognized trader must not arrange for import or export of hazardous waste without having received a USEPA identification number from USEPA.

(Source: Added at 42 Ill. Reg. _____, effective _____)

SUBPART B: MANIFEST REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.120 General Requirements

- a) Manifest Form Required ~~form required.~~
 - 1) An SQG or LQG ~~A generator~~ that transports hazardous waste or offers a hazardous waste for transportation for off-site treatment, storage, or disposal or a treatment, storage, or disposal facility that offers for transport a rejected load of hazardous waste must prepare a manifest on USEPA Form 8700-22 (and, if necessary, on USEPA Form 8700-22A) according to the instructions included in the appendix to 40 CFR 262 (Uniform Hazardous Waste Manifest and Instructions (USEPA Forms 8700-22 and 8700-22A and Their Instructions)), incorporated by reference in 35 Ill. Adm. Code 720.111(b).

- 2) This subsection (a)(2) corresponds with 40 CFR 262.20(a)(2), an applicability statement that became obsolete for the purposes of the Illinois rules on September 6, 2006. This statement maintains structural parity with the corresponding federal regulations.
- 3) E-Manifest. In lieu of using the manifest form specified in subsection (a)(1) ~~of this Section~~, a person required to prepare a manifest under subsection (a)(1) ~~of this Section~~ may prepare and use an e-Manifest, provided that the person complies with the following requirements:
 - A) Section 722.124 for use of e-Manifests; and
 - B) 40 CFR 3.10, incorporated by reference in 35 Ill. Adm. Code 720.111, for the reporting of electronic documents to USEPA.
- b) An SQG or LQG ~~A generator~~ must designate on the manifest one receiving facility that is permitted to handle the waste described on the manifest.
- c) An SQG or LQG ~~A generator~~ may also designate on the manifest one alternate receiving facility that is permitted to handle his waste in the event an emergency prevents delivery of the waste to the primary designated facility.
- d) If the transporter is unable to deliver the hazardous waste to the designated receiving facility or the alternate facility, the SQG or LQG ~~generator~~ must either designate another receiving facility or instruct the transporter to return the waste.
- e) The requirements of this Subpart B do not apply to hazardous waste produced by generators of greater than 100 kg but less than 1,000 kg in a calendar month where the following conditions are fulfilled:
 - 1) The waste is reclaimed under a contractual agreement that specifies the type of waste and frequency of shipments;
 - 2) The vehicle used to transport the waste to the recycling facility and to deliver regenerated material back to the generator is owned and operated by the reclaimer of the waste; and
 - 3) The SQG or LQG ~~generator~~ maintains a copy of the reclamation agreement in his files for a period of at least three years after termination or expiration of the agreement.
- f) The requirements of this Subpart B and Section 722.132(b) do not apply to the transport of hazardous wastes on a public or private right-of-way within or along the border of contiguous property under the control of the same person, even if such contiguous property is divided by a public or private right-of-way. Notwithstanding 35 Ill. Adm. Code 723.110(a), the generator or transporter must

comply with the requirements for transporters set forth in 35 Ill. Adm. Code 723.130 and 723.131 in the event of a discharge of hazardous waste on a public or private right-of-way.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.121 Manifest Tracking Numbers, Manifest Printing, and Obtaining Manifests

- a) USEPA ~~Approval~~ approval of Manifest ~~manifest~~.
- 1) A registrant may not print the manifest or have the manifest printed for use or distribution, unless it has received approval from the USEPA Director of the Office of Resource Conservation and Recovery to do so pursuant to 40 CFR 262.21(c) and (e), as described in subsections (c) and (e) ~~of this Section~~.
 - 2) The approved registrant is responsible for ensuring that the organizations identified in its application are in compliance with the procedures of its approved application and the requirements of 40 CFR 262.21, as described in this Section. The registrant is responsible for assigning manifest tracking numbers to its manifests.
- b) A registrant must submit an initial application to the USEPA Director of the Office of Resource Conservation and Recovery that contains the following information:
- 1) The name and mailing address of registrant;
 - 2) The name, telephone number, and email address of contact person;
 - 3) A brief description of registrant's government or business activity;
 - 4) The USEPA identification number of the registrant, if applicable;
 - 5) A description of the scope of the operations that the registrant plans to undertake in printing, distributing, and using its manifests, including the following:
 - A) A description of the printing operation. The description should include an explanation of whether the registrant intends to print its manifests in-house (i.e., using its own printing establishments) or through a separate (i.e., unaffiliated) printing company. If the registrant intends to use a separate printing company to print the manifest on its behalf, the application must identify this printing company and discuss how the registrant will oversee the company. If this includes the use of intermediaries (e.g., prime and

subcontractor relationships), the role of each must be discussed. The application must provide the name and mailing address of each company. It also must provide the name and telephone number of the contact person at each company;

- B) A description of how the registrant will ensure that its organization and unaffiliated companies, if any, comply with the requirements of 40 CFR 262.21, as described in this Section. The application must discuss how the registrant will ensure that a unique manifest tracking number will be preprinted on each manifest. The application must describe the internal control procedures to be followed by the registrant and unaffiliated companies to ensure that numbers are tightly controlled and remain unique. In particular, the application must describe how the registrant will assign manifest tracking numbers to its manifests. If computer systems or other infrastructure will be used to maintain, track, or assign numbers, these should be indicated. The application must also indicate how the printer will pre-print a unique number on each form (e.g., crash or press numbering). The application also must explain the other quality procedures to be followed by each establishment and printing company to ensure that all required print specifications are consistently achieved and that printing violations are identified and corrected at the earliest practicable time; and
 - C) An indication of whether the registrant intends to use the manifests for its own business operations or to distribute the manifests to a separate company or to the general public (e.g., for purchase);
- 6) A brief description of the qualifications of the company that will print the manifest. The registrant may use readily available information to do so (e.g., corporate brochures, product samples, customer references, documentation of ISO certification), so long as such information pertains to the establishments or company being proposed to print the manifest;
 - 7) Proposed unique three-letter manifest tracking number suffix. If the registrant is approved to print the manifest, the registrant must use this suffix to pre-print a unique manifest tracking number on each manifest; and
 - 8) A signed certification by a duly authorized employee of the registrant that the organizations and companies in its application will comply with the procedures of its approved application and the requirements of 40 CFR 262.21, as described in this Section and that it will notify the Agency and the USEPA Director of the Office of Resource Conservation and Recovery

of any duplicated manifest tracking numbers on manifests that have been used or distributed to other parties as soon as this becomes known.

- c) USEPA will review the application submitted under subsection (b) ~~of this Section~~ and either approve it or request additional information or modification before approving it.
- d) Submission of Document Samples ~~document samples~~.
 - 1) Upon USEPA approval of the application pursuant to 40 CFR 262.21(c), as described in subsection (c) ~~of this Section~~, USEPA will provide the registrant an electronic file of the manifest, continuation sheet, and manifest instructions and ask the registrant to submit three fully assembled manifests and continuation sheet samples, except as noted in 40 CFR 262.21(d)(3), as described in subsection (d)(3) ~~of this Section~~. The registrant's samples must meet all of the specifications in 40 CFR 262.21(f), as described in subsection (f) ~~of this Section~~, and be printed by the company that will print the manifest as identified in the application approved by USEPA pursuant to 40 CFR 262.21(c), as described in subsection (c) ~~of this Section~~.
 - 2) The registrant must submit a description of the manifest samples as follows:
 - A) The paper type (i.e., manufacturer and grade of the manifest paper);
 - B) The paper weight of each copy;
 - C) The ink color of the manifest's instructions. If screening of the ink was used, the registrant must indicate the extent of the screening; and
 - D) The method of binding the copies.
 - 3) The registrant need not submit samples of the continuation sheet if it will print its continuation sheet using the same paper type, paper weight of each copy, ink color of the instructions, and binding method as its manifest form samples.
- e) USEPA will evaluate the forms and either approve the registrant to print them as proposed or request additional information or modification to them before approval. USEPA will notify the registrant of its decision by mail. The registrant cannot use or distribute its forms until USEPA approves them. An approved registrant must print the manifest and continuation sheet according to its application approved by USEPA pursuant to 40 CFR 262.21(c), as described in

subsection (e) ~~of this Section~~ and the manifest specifications in 40 CFR 262.21(f), as described in subsection (f) ~~of this Section~~. It also must print the forms according to the paper type, paper weight, ink color of the manifest instructions and binding method of its approved forms.

- f) Paper manifests and continuation sheets must be printed according to the following specifications:
- 1) The manifest and continuation sheet must be printed with the exact format and appearance as USEPA Forms 8700-22 and 8700-22A, respectively. However, information required to complete the manifest may be preprinted on the manifest form.
 - 2) A unique manifest tracking number assigned in accordance with a numbering system approved by USEPA must be pre-printed in Item 4 of the manifest. The tracking number must consist of a unique three-letter suffix following nine digits.
 - 3) The manifest and continuation sheet must be printed on 8½ × 11-inch white paper, excluding common stubs (e.g., top- or side-bound stubs). The paper must be durable enough to withstand normal use.
 - 4) The manifest and continuation sheet must be printed in black ink that can be legibly photocopied, scanned, or faxed, except that the marginal words indicating copy distribution must be printed with a distinct ink color or with another method (e.g., white text against black background in text box or black text against grey background in text box) that clearly distinguishes the copy distribution notations from the other text and data entries on the form.
 - 5) The manifest and continuation sheet must be printed as six-copy forms. Copy-to-copy registration must be exact within 1/32 inch. Handwritten and typed impressions on the form must be legible on all six copies. Copies must be bound together by one or more common stubs that reasonably ensure that they will not become detached inadvertently during normal use.
 - 6) Each copy of the manifest and continuation sheet must indicate how the copy must be distributed, as follows:
 - A) Page 1 (top copy): “Designated facility to destination State (if required):-”₂
 - B) Page 2: “Designated facility to generator State (if required):-”₂
 - C) Page 3: “Designated facility to generator:-”₂

- D) Page 4: “Designated facility’s copy.”
 - E) Page 5: “Transporter’s copy.”
 - F) Page 6 (bottom copy): “Generator’s initial copy.”
- 7) The instructions in the appendix to 40 CFR 262 (Uniform Hazardous Waste Manifest and Instructions (EPA Forms 8700-22 and 8700-22A and Their Instructions)), incorporated by reference in 35 Ill. Adm. Code 720.111(b), must appear legibly on the back of the copies of the manifest and continuation sheet as provided in 40 CFR 262.21(f), as described in this subsection (f). The instructions must not be visible through the front of the copies when photocopied or faxed.
- A) Manifest Form 8700-22-
 - i) The “Instructions for Generators” on Copy 6;
 - ii) The “Instructions for International Shipment Block” and “Instructions for Transporters” on Copy 5; and
 - iii) The “Instructions for Treatment, Storage, and Disposal Facilities” on Copy 4.
 - B) Manifest Form 8700-22A-
 - i) The “Instructions for Generators” on Copy 6;
 - ii) The “Instructions for Transporters” on Copy 5; and
 - iii) The “Instructions for Treatment, Storage, and Disposal Facilities” on Copy 4.
- g) Use of Approved Manifests ~~approved manifests~~.
- 1) A generator may use manifests printed by any source so long as the source of the printed form has received approval from USEPA to print the manifest pursuant to 40 CFR 262.21(c) and (e), as described in subsections (c) and (e) ~~of this Section~~. A registered source may be any of the following:
 - A) A state agency;
 - B) A commercial printer;
 - C) A hazardous waste generator, transporter, or treatment, storage, or disposal facility; or

- D) A hazardous waste broker or other preparer who prepares or arranges shipments of hazardous waste for transportation.

BOARD NOTE: USEPA maintains a listing of registered sources at <https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry>.

- 2) The waste generator must determine whether the generator state or the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes under these states' authorized programs. The generator must also determine whether the consignment state or generator state requires the generator to submit any copies of the manifest to these states. In cases where the generator must supply copies to either the generator's state or the consignment state, the generator is responsible for supplying legible photocopies of the manifest to these states.

h) Manifest Revisions ~~revisions~~.

- 1) If an approved registrant would like to update any of the information provided in its application approved by USEPA pursuant to 40 CFR 262.21(c), as described in subsection (c) ~~of this Section~~ (e.g., to update a company phone number or name of contact person), the registrant must revise the application and submit it to the USEPA Director of the Office of Resource Conservation and Recovery, along with an indication or explanation of the update, as soon as practicable after the change occurs. The USEPA will either approve or deny the revision. If USEPA denies the revision, it will explain the reasons for the denial, and it will contact the registrant and request further modification before approval.
- 2) If the registrant would like a new tracking number suffix, the registrant must submit a proposed suffix to the USEPA Director of the Office of Resource Conservation and Recovery, along with the reason for requesting it. USEPA will either approve the suffix or deny the suffix and provide an explanation why it is not acceptable.
- 3) If a registrant would like to change the paper type, paper weight, ink color of the manifest instructions, or binding method of its manifest or continuation sheet subsequent to approval by USEPA pursuant to 40 CFR 262.21(e), as described in this subsection (e) ~~of this Section~~, then the registrant must submit three samples of the revised form for USEPA review and approval. If the approved registrant would like to use a new printer, the registrant must submit three manifest samples printed by the new printer, along with a brief description of the printer's qualifications to print the manifest. USEPA will evaluate the manifests and either approve

the registrant to print the forms as proposed or request additional information or modification to them before approval. USEPA will notify the registrant of its decision by mail. The registrant cannot use or distribute its revised forms until USEPA approves them.

- i) If, subsequent to its approval by USEPA pursuant to 40 CFR 262.21(e), as described in subsection (e) ~~of this Section~~, a registrant typesets its manifest or continuation sheet instead of using the electronic file of the forms provided by USEPA, it must submit three samples of the manifest or continuation sheet to the registry for approval. USEPA will evaluate the manifests or continuation sheets and either approve the registrant to print them as proposed or request additional information or modification to them before approval. USEPA will notify the registrant of its decision by mail. The registrant cannot use or distribute its typeset forms until USEPA approves them.
- j) USEPA may exempt a registrant from the requirement to submit form samples pursuant to 40 CFR 262.21(d) or (h)(3), as described in subsection (d) or (h)(3) ~~of this Section~~, if USEPA is persuaded that a separate review of the registrant's forms would serve little purpose in informing an approval decision (e.g., a registrant certifies that it will print the manifest using the same paper type, paper weight, ink color of the instructions, and binding method of the form samples approved for some other registrant). A registrant may request an exemption from USEPA by indicating why an exemption is warranted.
- k) An approved registrant must notify USEPA by phone or email as soon as it becomes aware that it has duplicated tracking numbers on any manifests that have been used or distributed to other parties.
- l) If, subsequent to approval of a registrant by USEPA pursuant to 40 CFR 262.21(e), as described in subsection (e) ~~of this Section~~, USEPA becomes aware that the approved paper type, paper weight, ink color of the instructions, or binding method of the registrant's form is unsatisfactory, USEPA will contact the registrant and require modifications to the form.
- m) Effects of Non-Compliance ~~non-compliance~~.
 - 1) USEPA may suspend and, if necessary, revoke printing privileges if we find that the registrant has done either of the following:
 - A) The registrant has used or distributed forms that deviate from its approved form samples in regard to paper weight, paper type, ink color of the instructions, or binding method; or
 - B) The registrant exhibits a continuing pattern of behavior in using or distributing manifests that contain duplicate manifest tracking numbers.

- 2) USEPA will send a warning letter to the registrant that specifies the date by which it must come into compliance with the requirements. If the registrant does not come in compliance by the specified date, USEPA will send a second letter notifying the registrant that USEPA has suspended or revoked its printing privileges. An approved registrant must provide information on its printing activities to the Agency and USEPA if requested.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.123 Use of the Manifest

- a) The generator must ~~shall~~ do the following:
 - 1) Sign the manifest certification by hand;
 - 2) Obtain the handwritten signature of the initial transporter and date of acceptance on the manifest;
 - 3) Retain one copy, in accordance with Section 722.140(a); and
 - 4) Send one copy of the manifest to the Agency within two working days.
- b) The generator must give the transporter the remaining copies of the manifest.
- c) For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must send three copies of the manifest dated and signed in accordance with this Section to the owner or operator of the designated receiving facility, if that facility is in the United States, or to the last water (bulk shipment) transporter to handle the waste in the United States, if the waste is exported by water. Copies of the manifest are not required for each transporter.
- d) For rail shipments of hazardous waste within the United States that originate at the site of generation, the generator must send at least three copies of the manifest dated and signed in accordance with this Section to the following persons:
 - 1) The next non-rail transporter, if any;
 - 2) The designated receiving facility, if the waste is transported solely by rail;
or
 - 3) The last rail transporter to handle the waste in the United States, if the waste is exported by rail.

BOARD NOTE: See Section 723.120(e) and (f) for special provisions for rail or water (bulk shipment) transporters.

- e) For shipments of hazardous waste to a designated receiving facility in an authorized state that has not yet obtained authorization to regulate that particular waste as hazardous, the generator must assure that the designated receiving facility agrees to sign and return the manifest to the generator, and that any out-of-state transporter signs and forwards the manifest to the designated receiving facility.
- f) For rejected shipments of hazardous waste or container residues contained in non-empty containers that the designated facility has returned to the generator (following the procedures of 35 Ill. Adm. Code 724.172(f) or 725.172(f)), the generator must do each of the following:
 - 1) The generator must sign the hazardous waste manifest (USEPA Form 8700-22) as follows:
 - A) Item 20 of the new manifest if a new manifest is used for the returned shipment; or
 - B) Item 18c of the original manifest if the original manifest is used for the returned shipment;
 - 2) The generator must provide a copy of the manifest to the transporter;
 - 3) Within 30 days after delivery of the rejected shipment or container residues contained in non-empty containers, the generator must send a copy of the manifest to the designated facility that returned the shipment to the generator; and
 - 4) The generator must retain a copy of each manifest at the generator's site for at least three years from the date of delivery.

BOARD NOTE: The use of the term "non-empty containers" in this subsection (f) derives from the language of corresponding 40 CFR 262.23(f). "Non-empty containers," for the purposes of this subsection (f), are containers that are not deemed "empty" by the empty container rule of 35 Ill. Adm. Code 721.107. That rule allows a container that still contains waste residues to be considered "empty" under specified conditions. Thus, "container residues contained in non-empty containers" are subject to regulation as hazardous waste, and the requirements of this subsection (f) apply to those residues.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.124 Use of the Electronic Manifest

- a) Legal Equivalence ~~equivalence to Paper Manifests~~ ~~paper manifests~~. E-Manifests that are obtained, completed, and transmitted in accordance with Section 722.120(a)(3), and used in accordance with this Section in lieu of USEPA Forms

8700-22 and 8700-22A are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in 35 Ill. Adm. Code 720 through 728 to obtain, complete, sign, provide, use, or retain a manifest.

- 1) Any requirement in 35 Ill. Adm. Code 721 through 728 to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of Section 722.125.
- 2) Any requirement in 35 Ill. Adm. Code 721 through 728 to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when an e-Manifest is transmitted to the other person by submission to the e-Manifest System.
- 3) Any requirement in any provision of 35 Ill. Adm. Code 721 through 728 for a generator to keep or retain a copy of each manifest is satisfied by retention of a signed e-Manifest in the generator's account on the national e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized Agency inspector.
- 4) No generator may be held liable for the inability to produce an e-Manifest for inspection under this Section if the generator can demonstrate that the inability to produce the e-Manifest is due exclusively to a technical difficulty with the e-Manifest System for which the generator bears no responsibility.

BOARD NOTE: The Board has rendered the language "and requirement in these regulations" in corresponding 35 Ill. Adm. Code ~~40 CFR~~ 722.124(a) and (a)(1) through (a)(3) as "any requirement in any provision of 35 Ill. Adm. Code 720 through 728" in the appropriate segments of this subsection (a). The Board intends that use of the e-Manifest System have the same effect in Illinois as it would where the federal requirements directly apply.

- b) A generator may participate in the e-Manifest System either by accessing the e-Manifest System from its own electronic equipment, or by accessing the e-Manifest System from portable equipment brought to the generator's site by the transporter who accepts the hazardous waste shipment from the generator for off-site transportation.
- c) Restriction on Use ~~use~~ of e-Manifests. A generator may prepare an e-Manifest for the tracking of hazardous waste shipments involving any RCRA hazardous waste only if it is known at the time the manifest is originated that all waste handlers named on the manifest participate in the e-Manifest System.

- d) Requirement for One Printed Copy ~~one printed copy~~. To the extent the hazardous materials regulation on shipping papers for carriage by public highway requires shippers of hazardous materials to supply a paper document for compliance with 49 CFR 177.817, incorporated by reference in 35 Ill. Adm. Code 720.111, a generator originating an e-Manifest must also provide the initial transporter with one printed copy of the e-Manifest.
- e) Special Procedures When ~~procedures when~~ e-Manifest Is Unavailable ~~is unavailable~~. If a generator has prepared an e-Manifest for a hazardous waste shipment, but the e-Manifest System becomes unavailable for any reason prior to the time that the initial transporter has signed electronically to acknowledge the receipt of the hazardous waste from the generator, the generator must obtain and complete a paper manifest and if necessary, a continuation sheet (USEPA Forms 8700-22 and 8700-22A) in accordance with the manifest instructions referenced in Appendix A ~~to this Part~~, and use these paper forms from this point forward in accordance with the requirements of Section 722.123.
- f) Special Procedures ~~procedures~~ for Electronic Signature Methods Undergoing Tests ~~electronic signature methods undergoing tests~~. If a generator has prepared an e-Manifest for a hazardous waste shipment, and signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, the generator must also sign with an ink signature the generator or offeror certification on the printed copy of the manifest provided under subsection (d) ~~of this Section~~.
- g) Imposition of User Fee ~~user fee~~. A generator that is a user of the e-Manifest System may be assessed a user fee by USEPA for the origination of each e-Manifest. USEPA shall maintain and update from time-to-time the current schedule of e-Manifest user fees, which shall be determined based on current and projected e-Manifest System costs and level of use of the e-Manifest System.

BOARD NOTE: USEPA stated in corresponding 40 CFR 262.24(g) that it would publish the current schedule of e-Manifest user fees as an appendix to 40 CFR 262.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: PRE-TRANSPORT REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.132 Marking

- a) Before transporting or offering hazardous waste for transportation off-site, a generator must mark each package of hazardous waste in accordance with the applicable USDOT regulations on hazardous materials under 49 CFR 172

(Hazardous Materials Table, Special Provisions, Hazardous Materials Communications, Emergency Response Information, and Training Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b);

- b) **Marking Small Containers.** Before transporting hazardous waste or offering hazardous waste for transportation ~~off site~~ ~~off-site~~, a generator must mark each container of 119 gallons (450 ~~l~~ ~~liters~~) or less that is used in such transportation with the following words and information displayed in accordance with the requirements of 49 CFR 172.304 (Marking Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b):

- 1) HAZARDOUS WASTE—Federal Law Prohibits Improper Disposal. If found, contact the nearest police or public safety authority or the U.S. Environmental Protection Agency.
- 2) Generator's Name and Address _____.
- 3) Generator's USEPA Identification Number
_____.
- 4) Manifest Tracking Number _____.
- 5) USEPA hazardous waste numbers _____.

- c) A generator may use a nationally recognized electronic system, such as bar coding, to identify the USEPA hazardous waste numbers, as required by subsection (b)(5) or (d).

- d) The generator need not mark lab packs that will be incinerated in compliance with 35 Ill. Adm. Code 728.142(c) with USEPA hazardous waste numbers, except D004, D005, D006, D007, D008, D010, and D011, where applicable.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.134 Accumulation Time (Repealed)

- ~~a) Except as provided in subsection (d), (e), (f), (g), (h), or (i) of this Section, a generator is exempt from all the requirements in Subparts G and H of 35 Ill. Adm. Code 725, except for 35 Ill. Adm. Code 725.211 and 725.214, and may accumulate hazardous waste on-site for 90 days or less without a permit or without having interim status, provided that the following conditions are fulfilled:~~

- ~~1) The waste is placed in or on one of the following types of units, and the generator complies with the applicable requirements:~~

- A) ~~In containers, and the generator complies with Subparts I, AA, BB, and CC of 35 Ill. Adm. Code 725;~~
- B) ~~In tanks, and the generator complies with Subparts J, AA, BB, and CC of 35 Ill. Adm. Code 725, except 35 Ill. Adm. Code 725.297(e) and 725.300;~~
- C) ~~On drip pads, and the generator complies with Subpart W of 35 Ill. Adm. Code 725 and maintains the following records at the facility:

 - i) ~~A description of the procedures that will be followed to ensure that all wastes are removed from the drip pad and associated collection system at least once every 90 days; and~~
 - ii) ~~Documentation of each waste removal, including the quantity of waste removed from the drip pad and the sump or collection system and the date and time of removal; or~~~~
- D) ~~In containment buildings, and the generator complies with Subpart DD of 35 Ill. Adm. Code 725 (has placed its Professional Engineer (PE) certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101 in the facility's operating record prior to the date of initial operation of the unit). The owner or operator must maintain the following records at the facility:

 - i) ~~A written description of procedures to ensure that each waste volume remains in the unit for no more than 90 days; a written description of the waste generation and management practices for the facility showing that they are consistent with respect to the 90 day limit, and documentation that the procedures are complied with; or~~
 - ii) ~~Documentation that the unit is emptied at least once every 90 days;~~~~

BOARD NOTE: The Board placed the "in addition" hanging subsection that appears in the federal rules after 40 CFR 262.34(a)(1)(iv)(B) in the introduction to subsection (a) of this Section.

- 2) ~~The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;~~
- 3) ~~While being accumulated on-site, each container and tank is labeled or marked clearly with the words "Hazardous Waste"; and~~

- 4) ~~The generator complies with the requirements for owners or operators in Subparts C and D of 35 Ill. Adm. Code 725, with 35 Ill. Adm. Code 725.116, and with all applicable requirements in 35 Ill. Adm. Code 728.107(a)(5).~~
- b) ~~A generator of 1,000 kilograms or greater of hazardous waste in a calendar month, or greater than 1 kg of acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in a calendar month, that accumulates hazardous waste or acute hazardous waste for more than 90 days is an operator of a storage facility. Such a generator is subject to the requirements of 35 Ill. Adm. Code 724, 725, and 727 and the permit requirements of 35 Ill. Adm. Code 702, 703, and 705, unless the generator has been granted an extension of the 90 day period. If hazardous wastes must remain on site for longer than 90 days due to unforeseen, temporary, and uncontrollable circumstances, the generator may seek an extension of up to 30 days by means of a variance or provisional variance, pursuant to Sections 35(b), 36(e), and 37(b) of the Environmental Protection Act [415 ILCS 5/35(b), 36(e), and 37(b)] and 35 Ill. Adm. Code 180 (Agency procedural regulations).~~
- e) ~~Accumulation near the point of generation.~~
 - 1) ~~A generator may accumulate as much as 55 gallons (208 l) of hazardous waste or one quart of acutely hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in containers at or near any point of generation where wastes initially accumulate that is under the control of the operator of the process generating the waste without a permit or interim status and without complying with subsection (a) or (d) of this Section, provided the generator does the following:
 - A) ~~The generator complies with 35 Ill. Adm. Code 725.271, 725.272, and 725.273(a); and~~
 - B) ~~The generator marks the containers either with the words "Hazardous Waste" or with other words that identify the contents of the containers.~~~~
 - 2) ~~A generator that accumulates either hazardous waste or acutely hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in excess of the amounts listed in subsection (c)(1) of this Section at or near any point of generation must, with respect to that amount of excess waste, comply within three days with subsection (a) of this Section or other applicable provisions of this Chapter. During the three day period the generator must continue to comply with subsection (c)(1) of this Section. The generator must mark the container holding the excess accumulation of hazardous waste with the date the excess amount began accumulating.~~

- d) ~~A generator that generates greater than 100 kilograms but less than 1,000 kilograms of hazardous waste in a calendar month may accumulate hazardous waste on-site for 180 days or less without a permit or without having interim status provided that the following conditions are fulfilled:~~
- 1) ~~The quantity of waste accumulated on-site never exceeds 6,000 kilograms;~~
 - 2) ~~The generator complies with the requirements of Subpart I of 35 Ill. Adm. Code 725 (except 35 Ill. Adm. Code 725.276 and 725.278);~~
 - 3) ~~The generator complies with the requirements of 35 Ill. Adm. Code 725.301;~~
 - 4) ~~The generator complies with the requirements of subsections (a)(2) and (a)(3) of this Section, with Subpart C of 35 Ill. Adm. Code 725, and with all applicable requirements in 35 Ill. Adm. Code 268; and~~
 - 5) ~~The generator complies with the following requirements:~~
 - A) ~~At all times there must be at least one employee either on the premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures specified in subsection (d)(5)(D) of this Section. The employee is the emergency coordinator.~~
 - B) ~~The generator must post the following information next to the telephone:~~
 - i) ~~The name and telephone number of the emergency coordinator;~~
 - ii) ~~Location of fire extinguishers and spill control material and, if present, fire alarm; and~~
 - iii) ~~The telephone number of the fire department, unless the facility has a direct alarm.~~
 - C) ~~The generator must ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.~~
 - D) ~~The emergency coordinator or designee must respond to any emergencies that arise. The following are applicable responses:~~

- i) ~~In the event of a fire, call the fire department or attempt to extinguish it using a fire extinguisher;~~
- ii) ~~In the event of a spill, contain the flow of hazardous waste to the extent possible and, as soon as is practicable, clean up the hazardous waste and any contaminated materials or soil; and~~
- iii) ~~In the event of a fire, explosion, or other release that could threaten human health outside the facility, or when the generator has knowledge that a spill has reached surface water, the generator must immediately notify the National Response Center (using its 24-hour toll free number 800-424-8802).~~

E) ~~A report to the National Response Center pursuant to subsection (d)(5)(D)(iii) of this Section must include the following information:~~

- i) ~~The name, address, and USEPA identification number (Section 722.112 of this Part) of the generator;~~
- ii) ~~The date, time, and type of incident (e.g., spill or fire);~~
- iii) ~~The quantity and type of hazardous waste involved in the incident; the extent of injuries, if any; and~~
- iv) ~~The estimated quantity and disposition of recoverable materials, if any.~~

BOARD NOTE: The Board has codified 40 CFR 262.34(d)(5)(iv)(C)(1) through (d)(5)(iv)(C)(5) as subsections (d)(5)(E)(i) through (d)(5)(E)(iv) because Illinois Administrative Code codification requirements do not allow the use of a fifth level of subsection indents.

- e) ~~A generator that generates greater than 100 kilograms but less than 1,000 kilograms of hazardous waste in a calendar month and that must transport the waste or offer the waste for transportation over a distance of 200 miles or more for off-site treatment, storage, or disposal may accumulate hazardous waste on-site for 270 days or less without a permit or without having interim status, provided that the generator complies with the requirements of subsection (d) of this Section.~~
- f) ~~A generator that generates greater than 100 kilograms but less than 1,000 kilograms of hazardous waste in a calendar month and that accumulates~~

hazardous waste in quantities exceeding 6,000 kg or accumulates hazardous waste for more than 180 days (or for more than 270 days if the generator must transport the waste or offer the waste for transportation over a distance of 200 miles or more) is an operator of a storage facility and is subject to the requirements of 35 Ill. Adm. Code 724, 725, and 727 and the permit requirements of 35 Ill. Adm. Code 703, unless the generator has been granted an extension to the 180-day (or 270-day if applicable) period. If hazardous wastes must remain on-site for longer than 180 days (or 270 days if applicable) due to unforeseen, temporary, and uncontrollable circumstances, the generator may seek an extension of up to 30 days by means of variance or provisional variance pursuant to Sections 35(b), 36(e), and 37(b) of the Environmental Protection Act [415 ILCS 5/35(b), 36(e), and 37(b)].

- g) — A generator that generates 1,000 kilograms or greater of hazardous waste per calendar month which also generates wastewater treatment sludges from electroplating operations that meet the listing description for the RCRA hazardous waste code F006, may accumulate F006 waste on-site for more than 90 days, but not more than 180 days, without a permit or without having interim status provided that the generator fulfills the following conditions:
- 1) — The generator has implemented pollution prevention practices that reduce the amount of any hazardous substances, pollutants, or contaminants entering F006 or otherwise released to the environment prior to its recycling;
 - 2) — The F006 waste is legitimately recycled through metals recovery;
 - 3) — No more than 20,000 kilograms of F006 waste is accumulated on-site at any one time; and
 - 4) — The F006 waste is managed in accordance with the following conditions:
 - A) — The F006 waste is placed in one of the following containing devices:
 - i) — In containers and the generator complies with the applicable requirements of Subparts I, AA, BB, and CC of 35 Ill. Adm. Code 725;
 - ii) — In tanks and the generator complies with the applicable requirements of Subparts J, AA, BB, and CC of 35 Ill. Adm. Code 725, except 35 Ill. Adm. Code 725.297(e) and 725.300; or
 - iii) — In containment buildings, and the generator complies with Subpart DD of 35 Ill. Adm. Code 725 and has placed its

~~professional engineer certification that the building complies with the design standards specified in 35 Ill. Adm. Code 725.1101 in the facility's operating record prior to operation of the unit. The owner or operator must maintain the records listed in subsection (g)(4)(F) of this Section at the facility;~~

- ~~B) In addition, such a generator is exempt from all the requirements in Subparts G and H of 35 Ill. Adm. Code 725, except for 35 Ill. Adm. Code 725.211 and 725.214;~~
- ~~C) The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;~~
- ~~D) While being accumulated on site, each container and tank is labeled or marked clearly with the words, "Hazardous Waste"; and~~
- ~~E) The generator complies with the requirements for owners or operators in Subparts C and D of 35 Ill. Adm. Code 725, with 35 Ill. Adm. Code 725.116, and with 35 Ill. Adm. Code 728.107(a)(5).~~
- ~~F) Required records for a containment building:~~
- ~~i) A written description of procedures to ensure that the F006 waste remains in the unit for no more than 180 days, a written description of the waste generation and management practices for the facility showing that they are consistent with the 180 day limit, and documentation that the generator is complying with the procedures; or~~
 - ~~ii) Documentation that the unit is emptied at least once every 180 days.~~

~~BOARD NOTE: The Board has codified 40 CFR 262.34(g)(4)(i)(C)(1) and (g)(4)(i)(C)(2) as subsections (g)(4)(F)(i) and (g)(4)(F)(ii) because Illinois Administrative Code codification requirements do not allow the use of a fifth level of subsection indents.~~

- ~~h) A generator that generates 1,000 kilograms or greater of hazardous waste per calendar month, which also generates wastewater treatment sludges from electroplating operations that meet the listing description for the RCRA hazardous waste code F006, and which must transport this waste or offer this waste for transportation over a distance of 200 miles or more for off-site metals recovery may accumulate F006 waste on site for more than 90 days, but not more than 270~~

days, without a permit or without having interim status if the generator complies with the requirements of subsections (g)(1) through (g)(4) of this Section.

- i) ~~A generator accumulating F006 in accordance with subsections (g) and (h) of this Section that accumulates F006 waste on-site for more than 180 days (or for more than 270 days if the generator must transport this waste or offer this waste for transportation over a distance of 200 miles or more) or which accumulates more than 20,000 kilograms of F006 waste on-site is an operator of a storage facility, and such a generator is subject to the requirements of 35 Ill. Adm. Code 724, 725, and 727 and the permit requirements of 35 Ill. Adm. Code 702 and 703, unless the generator has been granted an extension to the 180-day (or 270-day if applicable) period or an exception to the 20,000 kilogram accumulation limit.~~
- 1) ~~On a case-by-case basis, the Agency must grant a provisional variance that allows an extension of the accumulation time up to an additional 30 days pursuant to Sections 35(b), 36(e), and 37(b) of the Act [415 ILCS 5/35(b), 36(e), and 37(b)] if it finds that the F006 waste must remain on-site for longer than 180 days (or 270 days if applicable) due to unforeseen, temporary, and uncontrollable circumstances.~~
 - 2) ~~On a case-by-case basis, the Agency must grant a provisional variance pursuant to Sections 35(b), 36(e), and 37(b) of the Act [415 ILCS 5/35(b), 36(e), and 37(b)] that allows an exception to the 20,000 kilogram accumulation limit if the Agency finds that more than 20,000 kilograms of F006 waste must remain on-site due to unforeseen, temporary, and uncontrollable circumstances.~~
 - 3) ~~A generator must follow the procedure of 35 Ill. Adm. Code 180 (Agency procedural rules) when seeking a provisional variance under subsection (i)(1) or (i)(2) of this Section.~~
- j) ~~This subsection (j) corresponds with 40 CFR 262.34(j), which became obsolete when USEPA terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program-related rules are no longer effective at 75 Fed. Reg. 12989, 92, note 1 (Mar. 18, 2010). This statement maintains structural consistency with the corresponding federal requirements.~~
- k) ~~This subsection (k) corresponds with 40 CFR 262.34(k), which became obsolete when USEPA terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program-related rules are no longer effective at 75 Fed. Reg. 12989, 12992, and note 1 (Mar. 18, 2010). This statement maintains structural consistency with the corresponding federal requirements.~~

- ~~1) This subsection (l) corresponds with 40 CFR 262.34(l), which became obsolete when USEPA terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program-related rules are no longer effective at 75 Fed. Reg. 12989, 12992, and note 1 (Mar. 18, 2010). This statement maintains structural consistency with the corresponding federal requirements.~~
- ~~m) A generator that sends a shipment of hazardous waste to a designated facility with the understanding that the designated facility can accept and manage the waste and which later receives that shipment back as a rejected load or residue in accordance with the manifest discrepancy provisions of 35 Ill. Adm. Code 724.172 or 725.172 may accumulate the returned waste on site in accordance with subsections (a) and (b) or (d), (e), and (f) of this Section, depending on the amount of hazardous waste on site in that calendar month. Upon receipt of the returned shipment, the generator must sign the appropriate of the following:~~
- ~~1) Item 18c of the manifest, if the transporter returned the shipment using the original manifest; or~~
 - ~~2) Item 20 of the manifest, if the transporter returned the shipment using a new manifest.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.135 Liquids in Landfills Prohibition

The placement of bulk or noncontainerized liquid hazardous waste or hazardous waste containing free liquids (whether or not sorbents have been added) in any landfill is prohibited. Prior to disposal in a hazardous waste landfill, liquids must meet the additional requirements as specified in 35 Ill. Adm. Code 724.414 and 725.414.

(Source: Added at 42 Ill. Reg. _____, effective _____)

SUBPART D: RECORDKEEPING AND REPORTING REQUIREMENTS APPLICABLE TO SMALL AND LARGE QUANTITY GENERATORS

Section 722.140 Recordkeeping

- a) A generator must keep a copy of each manifest signed in accordance with Section 722.123(a) for three years or until it receives a signed copy from the designated facility that received the waste. This signed copy must be retained as a record for at least three years from the date the waste was accepted by the initial transporter.
- b) A generator must keep a copy of each Annual Report and Exception Report for a period of at least three years from the due date of the report (March 1).

- c) ~~Section 722.111(f) requires documenting hazardous waste determinations. A generator must keep records of any test results, waste analyses, or other determinations made in accordance with Section 722.111 for at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal.~~
- d) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (d) is subject to Board review pursuant to Section 40 of the Act.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.141 Annual Reporting for Large Quantity Generators

- a) ~~A generator that is an LQG for at least one month of any calendar year (reporting year) shipping that ships any hazardous waste off site off-site to a treatment, storage or disposal facility within the United States must complete ~~prepare~~ and submit a single copy of an annual report to the Agency by March 1 of the following ~~for the preceding~~ calendar year. The annual report must be submitted on a form supplied by the Agency, and it must cover generator activities during the previous calendar year, and must include the following information:~~
- ~~1) — The USEPA identification number, name, and address of the generator;~~
 - ~~2) — The calendar year covered by the report;~~
 - ~~3) — The USEPA identification number, name, and address for each off site treatment, storage, or disposal facility in the United States to which waste was shipped during the year;~~
 - ~~4) — The name and USEPA identification number of each transporter used during the reporting year for shipments to a treatment, storage, or disposal facility within the United States;~~
 - ~~5) — A description, USEPA hazardous waste number (from Subpart C or D of 35 Ill. Adm. Code 721), USDOT hazard class and quantity of each hazardous waste shipped off site for shipments to a treatment, storage, or disposal facility within the United States. This information must be listed by USEPA identification number of each off site facility to which waste was shipped;~~
 - ~~6) — A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated;~~

- 7) ~~A description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984; and~~
- 8) ~~The certification signed by the generator or the generator's authorized representative.~~
- b) Any generator that is an LQG for at least one month of any calendar year (reporting year) treating, storing, or disposing ~~treats, stores, or disposes of~~ hazardous waste on site on-site must complete and submit to the Agency by March 1 of the following even-numbered year an annual report on a form provided by the Agency covering those wastes in accordance with the provisions of 35 Ill. Adm. Code 702, 703, and 724 through 727. This requirement also applies to an LQG that receives hazardous waste from a VSQG pursuant to Section 722.117(f). Reporting for exports of hazardous waste is not required on the annual report form. A separate annual report requirement is set forth at Section 722.156.
- c) Exports of hazardous waste to foreign countries are not required to be reported on the annual report form. Section 722.183(g) establishes a separate annual report requirement for hazardous waste exporters.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.142 Exception Reporting

- a) Generators of greater than 1,000 kg (2,200 lbs) ~~kilograms~~ of hazardous waste in a calendar month.
- 1) A generator of 1,000 kg (2,200 lbs) ~~kilograms~~ or greater of hazardous waste in a calendar month, or greater than 1 kg of acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in a calendar month, that does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 35 days after the date the waste was accepted by the initial transporter must contact the transporter or the owner or operator of the designated facility to determine the status of the hazardous waste.
- 2) A generator of 1,000 kg (2,200 lbs) ~~kilograms~~ or greater of hazardous waste in a calendar month, or greater than 1 kg of acute hazardous waste listed in 35 Ill. Adm. Code 721.131 or 721.133(e) in a calendar month, must submit an Exception Report to the Agency if the generator has not received a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 45 days after the date the waste was accepted by the initial transporter. The Exception Report must include the following documents:

- A) A legible copy of the manifest for which the generator does not have a confirmation of delivery; and
 - B) A cover letter signed by the generator or the generator's authorized representative explaining the efforts taken to locate the hazardous waste and the result of those efforts.
- b) A generator of greater than 100 kg (220 lbs) ~~kilograms~~ but less than 1,000 kg (2,200 lbs) ~~kilograms~~ of hazardous waste in a calendar month that does not receive a copy of the manifest with the handwritten signature of the owner or operator of the designated facility within 60 days after the date the waste was accepted by the initial transporter must submit a legible copy of the manifest to the Agency, with some indication that the generator has not received confirmation of delivery.

BOARD NOTE: The submission need be only a handwritten or typed note on the manifest itself, or on an attached sheet of paper, stating that the returned copy was not received.

- c) A generator must comply with the requirements of subsection (a) or (b) ~~of this Section~~, as applicable, when a designated facility has forwarded a rejected shipment of hazardous waste or container residues contained in non-empty containers to an alternate facility using a new manifest (following the procedures of 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or 725.172(e)(1) through (e)(6)). For purposes of generator compliance with subsection (a) or (b) ~~of this Section~~, when a designated facility forwards a shipment of rejected waste to an alternate facility, the following requirements apply:
- 1) The copy of the manifest received by the generator must have the handwritten signature of the owner or operator of the alternate facility in place of the signature of the owner or operator of the designated facility; and
 - 2) The 35-, 45-, or 60-day timeframes begin on the date that the initial transporter accepts the waste from the designated facility for shipment to the alternate facility.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.143 Additional Reporting

The Agency, as it deems necessary under Section 4 of the Illinois Environmental Protection Act [415 ILCS 5/4], may require generators to furnish additional reports concerning the quantities and disposition of wastes identified or listed in 35 Ill. Adm. Code Part 721.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.144 Recordkeeping Special Requirements for Small Quantity Generators of between 100 and 1,000 kilograms per month

Of the requirements in this Subpart D, ~~an SQG a generator of greater than 100 kilograms but less than 1,000 kilograms of hazardous waste in a calendar month is subject to only the following independent requirements:~~

- a) Section 722.140(a), (c), and (d), recordkeeping;
- b) Section 722.142(b), exception reporting; and
- c) Section 722.143, additional reporting.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.150 Applicability (Repealed)

~~This Subpart E establishes requirements applicable to exports of hazardous waste. Except to the extent Section 722.158 provides otherwise, a primary exporter of hazardous waste must comply with the special requirements of this Subpart E and a transporter transporting hazardous waste for export must comply with applicable requirements of 35 Ill. Adm. Code 723. Section 722.158 sets forth the requirements of international agreements between the United States and receiving countries that establish different notice, export, and enforcement procedures for the transportation, treatment, storage, and disposal of hazardous waste for shipments between the United States and those countries.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.151 Definitions (Repealed)

~~In addition to the definitions set forth at 35 Ill. Adm. Code 720.110, the following definitions apply to this Subpart E:~~

~~“Consignee” means the ultimate treatment, storage, or disposal facility in a receiving country to which the hazardous waste will be sent.~~

~~“Primary Exporter” means any person that is required to originate the manifest for a shipment of hazardous waste in accordance with Subpart B of this Part that specifies a treatment, storage, or disposal facility in a receiving country as the facility to which the hazardous waste will be sent and any intermediary arranging for the export.~~

~~“Receiving country” means a foreign country to which a hazardous waste is sent for the purpose of treatment, storage, or disposal (except short term storage incidental to transportation).~~

~~“Transit country” means any foreign country, other than a receiving country, through which a hazardous waste is transported.~~

~~“USEPA Acknowledgment of Consent” means the cable sent to USEPA from the United States Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country’s consent to the shipment.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.152 General Requirements (Repealed)

~~Exports of hazardous waste are prohibited except in compliance with the applicable requirements of this Subpart E and 35 Ill. Adm. Code 723. Exports of hazardous waste are prohibited unless the following conditions are fulfilled:~~

- ~~a) Notification in accordance with Section 722.153 has been provided;~~
- ~~b) The receiving country has consented to accept the hazardous waste;~~
- ~~c) A copy of the USEPA Acknowledgment of Consent to the shipment accompanies the hazardous waste shipment and, unless exported by rail, is attached to the manifest (or shipping paper for exports by water (bulk shipment)); and~~
- ~~d) The hazardous waste shipment conforms to the terms of the receiving country’s written consent as reflected in the USEPA Acknowledgment of Consent.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.153 Notification of Intent to Export (Repealed)

- ~~a) A primary exporter of hazardous waste must notify USEPA in accordance with federal 40 CFR 262.53 (Notification of Intent to Export), incorporated by reference in 35 Ill. Adm. Code 720.111(b).~~
- ~~b) The primary exporter must send the Agency a copy of each notice sent to USEPA pursuant to subsection (a) of this Section.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.154 Special Manifest Requirements (Repealed)

- ~~a) A primary exporter must comply with the manifest requirements as specified in federal 40 CFR 262.54 (Special Manifest Requirements), incorporated by reference in 35 Ill. Adm. Code 720.111(b).~~
- ~~b) The primary exporter must send a copy of the manifest to the Agency.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.155 Exception Report (Repealed)

- a) ~~In lieu of the requirements of Section 722.142, a primary exporter must file an exception report with USEPA as provided by federal 40 CFR 262.55 (Exception Reports), incorporated by reference in 35 Ill. Adm. Code 720.111(b).~~
- b) ~~The primary exporter must send a copy of the exception report to the Agency.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.156 Annual Reports (Repealed)

- a) ~~Primary exporters of hazardous waste must file with USEPA, no later than March 1 of each year, a report as specified in federal 40 CFR 262.56 (Annual Reports), incorporated by reference in 35 Ill. Adm. Code 720.111(b).~~
- b) ~~The primary exporter must send the Agency a copy of each report sent to USEPA.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.157 Recordkeeping (Repealed)

~~For all exports a primary exporter must comply with the recordkeeping requirements of federal 40 CFR 262.57 (Recordkeeping), incorporated by reference in 35 Ill. Adm. Code 720.111(b).~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.158 International Agreements (Repealed)

- a) ~~Any person that exports or imports waste hazardous under U.S. national procedures, as defined in Section 722.181, to or from any of the designated member countries of the Organisation for Economic Co-operation and Development (OECD), as listed in subsection (a)(1), for purposes of recovery is subject to the requirements of Subpart H of this Part. The requirements of Subparts E and F of this Part do not apply where Subpart H of this Part applies.~~
 - 1) ~~For the purposes of this Subpart E, the designated OECD countries are Australia, Austria, Belgium, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Luxembourg, the Netherlands, New Zealand, Norway, Poland, Portugal, the Republic of Korea, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.~~

- 2) ~~Only for the purposes of Subpart E of this Part, Canada and Mexico are considered OECD member countries.~~

~~BOARD NOTE: USEPA used identical language in 40 CFR 262.10(d), corresponding 262.58(a), and 262.80(a) to define when a waste is considered hazardous under U.S. national procedures. The Board has chosen to create the term “waste hazardous under U.S. national procedures”; add a definition in Section 722.181, the centralized listing of definitions for Subpart H of this Part; and replace USEPA’s defining language in this subsection (a) with a cross-reference to the definition in Section 722.181.~~

- b) ~~Any person that exports hazardous waste to or imports hazardous waste from any designated OECD member country for purposes other than recovery (e.g., incineration, disposal, etc.), Mexico (for any purpose), or Canada (for any purpose) remains subject to the requirements of Subparts E and F of this Part, and that person is not subject to the requirements of Subpart H of this Part.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

SUBPART F: IMPORTS OF HAZARDOUS WASTE (Repealed)

Section 722.160 Imports of Hazardous Waste (Repealed)

- a) ~~Any person that imports hazardous waste from a foreign country into the United States must comply with the requirements of this Part and the special requirements of this Subpart F.~~
- b) ~~When importing hazardous waste, a person must meet all the requirements of Section 722.120 for the manifest, except that the following information items are substituted:~~
- 1) ~~In place of the generator’s name, address, and USEPA identification number, the name and address of the foreign generator and the importer’s name, address, and USEPA identification number must be used.~~
 - 2) ~~In place of the generator’s signature on the certification statement, the United States importer or the importer’s agent must sign and date the certification and obtain the signature of the initial transporter.~~
- c) ~~A person that imports hazardous waste must obtain the manifest form as provided in Section 722.121.~~
- d) ~~In the International Shipments block of the manifest, the importer must check the import box and enter the point of entry (city and State) into the United States.~~

- e) ~~The importer must provide the transporter with an additional copy of the manifest to be submitted by the receiving facility to USEPA in accordance with 35 Ill. Adm. Code 724.171(a)(3) or 725.171(a)(3), as appropriate.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

~~SUBPART H: TRANSBOUNDARY TRANS-BOUNDARY SHIPMENTS OF
HAZARDOUS WASTE FOR RECOVERY OR DISPOSAL WITHIN THE
OECD~~

Section 722.180 Applicability

- a) The requirements of this Subpart H apply to transboundary movements ~~imports and exports of hazardous waste hazardous under U.S. national procedures, as defined in Section 722.181.~~

~~BOARD NOTE: USEPA used identical language in 40 CFR 262.10(d), 262.58(a), and corresponding 262.80(a) to define when a waste is considered hazardous under U.S. national procedures. The Board has chosen to create the term “waste hazardous under U.S. national procedures”; add a definition in Section 722.181, the centralized listing of definitions for Subpart H of this Part; and replace USEPA’s defining language in this subsection (a) with a cross-reference to the definition in Section 722.181.~~

- b) Any person (including importer, exporter, disposal facility operator, or recovery facility operator) that mixes two or more wastes (including hazardous and non-hazardous wastes) or which otherwise subjects two or more wastes (including hazardous and non-hazardous wastes) to physical or chemical transformation operations, and thereby creates a new hazardous waste, becomes a generator and assumes all subsequent generator duties under this Subchapter c and any exporter duties under this Subpart H, as applicable.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.181 Definitions

In addition to the definitions in 35 Ill. Adm. Code 720.110, the ~~The~~ following definitions apply to this Subpart H and to other provisions within this Part 722 as specifically indicated:

“Amber control procedures” means the controls listed in Section D of Annex A (“Amber Control Procedure”) to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

BOARD NOTE: The Board added this definition.

“Amber waste” means a waste listed in Appendix 4 (“List of Wastes Subject to the Amber Control Procedure”) to Annex A and in Annex C (“OECD

Consolidated List of Wastes Subject to the Amber Control Procedure”) to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).
BOARD NOTE: The Board added this definition.

“Competent authority” means the regulatory authority or authorities of countries concerned having jurisdiction over trans-boundary movements of wastes ~~destined for recovery operations.~~

BOARD NOTE: Under the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (Basel Convention), party countries are required to establish or designate competent authorities to facilitate implementation of the Convention. Basel Convention, art. 5 (as amended through May 27, 2014). The Basel Convention, United Nations Environment Programme maintains an on-line list of competent authorities by country: <http://www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx>.

“Countries concerned” means the ~~OECD member~~ countries of export or import and any ~~OECD member~~ countries of transit. Use of the singular “concerned country” is contemplated within this definition where the text refers only to a single country.

~~“Consent” means the specific or general consent or approval obtained pursuant to Section 722.183 from the competent authority of the country of export (for export from that country), the country of transit (for transit through that country), or the country of import (for import into that country), as required under the applicable of the Amber control procedures or red control procedures.~~

~~BOARD NOTE: The Board added this definition.~~

“Country of export” means any ~~designated OECD member~~ country listed in ~~Section 722.158(a)(1)~~ from which a trans-boundary movement of hazardous waste is planned to be initiated or is initiated.

“Country of import” means any ~~designated OECD member~~ country listed in ~~Section 722.158(a)(1)~~ to which a trans-boundary movement of hazardous waste is planned or takes place for the purpose of submitting the waste to recovery or disposal operations in that country.

“Country of transit” means any ~~designated OECD member~~ country listed in ~~Section 722.158(a)(1) or (a)(2)~~ other than the country of export or country of import across which a trans-boundary movement of waste is planned to be initiated or takes place.

“Disposal operations” means activities that do not lead to the possibility of resource recovery, recycling, reclamation, direct re-use, or alternate uses, which include the following:

- D1 Release or Deposit into or onto land, other than by any of operations D2 through D5 or D12.
- D2 Land treatment, such as biodegradation of liquids or sludges in soils.
- D3 Deep injection, such as injection into wells, salt domes, or naturally occurring repositories.
- D4 Surface impoundment, such as placing of liquids or sludges into pits, ponds, or lagoons.
- D5 Specially engineered landfill, such as placement into lined discrete cells which are capped and isolated from one another and the environment.
- D6 Release into a water body other than a sea or ocean, and other than by operation D4.
- D7 Release into a sea or ocean, including sea-bed insertion, other than by operation D4.
- D8 Biological treatment not specified elsewhere in operations D1 through D12 that results in final compounds or mixtures which are discarded by means of any of operations D1 through D12.
- D9 Physical or chemical treatment not specified elsewhere in operations D1 through D12, such as evaporation, drying, calcination, neutralization, or precipitation, that results in final compounds or mixtures which are discarded by means of any of operations D1 through D12.
- D10 Incineration on land.
- D11 Incineration at sea.
- D12 Permanent storage.
- D13 Blending or mixing, prior to any of operations D1 through D12.
- D14 Repackaging, prior to any of operations D1 through D13.
- D15 Interim storage, prior to any of operations D1 through D12 (for transboundary movements other than with Canada).

DC15 Release, including the venting of compressed or liquified gases, or treatment, other than by any of operations D1 to D12 (for transboundary movements with Canada only).

DC16 Testing of a new technology to dispose of a hazardous waste (for transboundary movements with Canada only).

DC17 Interim storage, prior to any of operations D1 through D12 (for transboundary movements with Canada only).

“Export” means the transportation of hazardous waste from a location under the jurisdiction of the United States to a location under the jurisdiction of another country, or a location not under the jurisdiction of any country, for the purposes of recovery or disposal operations at the destination.

“Exporter” (designated as “primary exporter” in the certification statement on the RCRA hazardous waste manifest (USEPA Form 8700-22)) means either the person domiciled in the United States that originates the movement document in accordance with Section 722.183(d) or the manifest in accordance with Subpart B specifying a foreign receiving facility as the destination of the hazardous waste or any recognized trader that proposes export of the hazardous wastes for recovery or disposal operations in the country of import.

“Foreign exporter” ~~“Exporter”~~ means the person under the jurisdiction of the country of export that has, or will have at the time the planned trans-boundary movement commences, possession or other forms of legal control of the hazardous waste and that proposes shipment trans-boundary movement of hazardous waste to the United States for the ultimate purpose of submitting it to recovery or disposal operations. ~~When the United States is the country of export, exporter is interpreted to mean a person domiciled in the United States.~~

“Foreign importer” means the person assigned possession or other form of legal control of the hazardous waste upon receipt of the exported hazardous waste in the country of import.

“Foreign receiving facility” means a facility that operates or is authorized to operate under the importing country’s applicable domestic law to receive the hazardous wastes and to perform recovery or disposal operations on them.

“Green control procedures” means the controls listed in Section C of Annex A (“Green Control Procedure”) to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

BOARD NOTE: The Board added this definition.

“Green waste” means a waste listed in Appendix 3 (“List of Wastes Subject to the Green Control Procedures”) to Annex A and in Annex B (“OECD Consolidated

List of Wastes Subject to the Green Control Procedure”) to OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111(a).

BOARD NOTE: The Board added this definition.

“Import” means the transportation of hazardous waste from a location under the jurisdiction of another country to a location under the jurisdiction of the United States for the purposes of recovery or disposal operations at the destination.

“Importer” means the person that is assigned possession or other form of legal control of the hazardous waste at the time the imported hazardous waste is received in the United States ~~country of import~~.

~~“OECD-listed waste” means, for the purposes of this Subpart H, Green waste or Amber waste, as defined in this Section.~~

BOARD NOTE: USEPA used the term “listed wastes” in 40 CFR 262.82(a)(1) and (a)(2) (2010) (corresponding with 35 Ill. Adm. Code 722.182(a)(1) and (a)(2)), referring to Green waste and Amber waste. The Board changed the term to “OECD-listed waste” and added this definition based on the discussions at 75 Fed. Reg. 1236, 1241, 1247 (Jan. 8, 2010), to distinguish this use in the context of waste export from the common use of the same term to describe waste defined as hazardous under Subpart D of 40 CFR 261 (2010) (corresponding with Subpart D of 35 Ill. Adm. Code 721).

“OECD” means the Organisation for Economic Co-operation ~~Cooperation~~ and Development.

“OECD area” means all land or marine areas under the national jurisdiction of any OECD member country ~~listed in Section 722.158~~. When the regulations refer to shipments to or from an OECD member country, this means OECD area.

“OECD Guidance Manual” means “Guidance Manual for the Implementation of Council Decision C(2001)107/FINAL, As as-Amended, on the Control of Transboundary Movements of Wastes Destined for Recovery Operations;”, 2009 (also called “Guidance Manual for the Control of Transboundary Movements of Recoverable Materials” in OECD documents), but only the segments incorporated by reference in 35 Ill. Adm. Code 722.111(a), which set forth the substantive requirements of OECD decision C(2001)107/FINAL, as amended by C(2004)20; C(2005)141 and C(2008)156.

BOARD NOTE: The Board added this definition. Although USEPA conventionally refers to the OECD requirements by the designation “C(2001)107/FINAL;”, USEPA incorporated the OECD Guidance Manual by reference for the substance of the OECD requirements. The substance of the OECD requirements requires reference to the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal (Basel

Convention) for full meaning, and the OECD Guidance Manual includes Annexes A through C, which present the full text of OECD decision C(2001)107/FINAL and the Basel Convention. For these reasons, the Board refers directly to the OECD Guidance Manual and incorporates Annexes A through C of the Guidance Manual by reference.

“OECD member country” means any of the countries that are members of the OECD and participate in the OECD Guidance Manual.

BOARD NOTE: Corresponding 40 CFR 262.81 states that USEPA provides a list of OECD Member countries on the Internet. (<https://www.epa.gov/hwgenerators/international-agreements-transboundary-shipments-hazardous-waste#oecd>).

~~“OECD waste designation” means, for the purposes of this Subpart H, the designation by OECD of waste as Green waste or Amber waste, as defined in this Section.~~

~~BOARD NOTE: USEPA used the term “designation of waste type(s) from the appropriate OECD list” in 40 CFR 262.83(d)(12) (2010) (corresponding with 35 Ill. Adm. Code 722.183(d)(12)). The Board changed USEPA’s term to “OECD waste designation” to replace USEPA’s language and added this definition of the created term, interpreting the plain language of 40 CFR 262.83(d)(12) and 262.89(d) (2010) (corresponding with 35 Ill. Adm. Code 722.183(a)(12) and 722.189(d)) to mean Green waste and Amber waste.~~

“Receiving facility” means a facility within the jurisdiction of the United States that operates or is authorized to operate to receive hazardous wastes and to perform recovery or disposal operations on them under RCRA and other applicable domestic laws.

“Recognized trader” means a person that, with appropriate authorization of countries concerned, acts in the role of principal to purchase and subsequently sell wastes; this person has legal control of such wastes from time of purchase to time of sale; such a person may act to arrange and facilitate trans-boundary movements of wastes destined for recovery operations.

“Recovery facility” means a facility that, under applicable domestic law, is operating or is authorized to operate in the country of import to receive wastes and to perform recovery operations on them.

“Recovery operations” means activities leading to resource recovery, recycling, reclamation, direct re-use, or alternative uses, which include the following types of operations:

- R1 Use as a fuel (other than in direct incineration) or other means to generate energy,

- R2 Solvent reclamation or regeneration,
- R3 Recycling or reclamation of organic substances that are not used as solvents,
- R4 Recycling or reclamation of metals and metal compounds,
- R5 Recycling or reclamation of other inorganic materials,
- R6 Regeneration of acids or bases,
- R7 Recovery of components used for pollution abatement,
- R8 Recovery of components from used catalysts,
- R9 Used oil re-refining or other reuses of previously used oil,
- R10 Land treatment resulting in benefit to agriculture or ecological improvement,
- R11 Uses of residual materials obtained from any of the operations numbered R1 through R10 (for transboundary shipments other than with Canada),
- R12 Exchange of wastes for submission to any of the operations numbered R1 through R11 (for transboundary shipments other than with Canada), and
- R13 Accumulation of material intended for any operation numbered R1 through R12 (for transboundary shipments other than with Canada) in this listing.
- RC14 Recovery or regeneration of a substance or use or re-use of a recyclable material, other than by any of operations R1 through R10 (for transboundary shipments with Canada only).
- RC15 Testing of a new technology to recycle a hazardous recyclable material (for transboundary shipments with Canada only).
- RC16 Interim storage prior to any of operations R1 through R11 or RC14 (for transboundary shipments with Canada only).

“Trans-boundary movement” means any movement of hazardous wastes from an area under the national jurisdiction of one ~~OECD member~~ country to an area under the national jurisdiction of another ~~OECD member~~ country.

“Waste hazardous under U.S. national procedures” means, for the purposes of Sections 722.110(d) and 722.159(a) and Subpart H of this Part, a waste that meets the definition of hazardous waste, as set forth in 35 Ill. Adm. Code 721.103, and which is subject to any of the following regulations:

~~The hazardous waste manifesting requirements of Subpart B of this Part;~~

~~The universal waste management standards of 35 Ill. Adm. Code 733, 40 CFR 273, or analogous requirements of a sister state; or~~

~~The export requirements in the spent lead acid battery management standards of Subpart G of 35 Ill. Adm. Code 726, subpart G of 40 CFR 266, or analogous requirements of a sister state.~~

~~BOARD NOTE: BOARD NOTE: USEPA used identical language in 40 CFR 262.10(d), 262.58(a), and 262.80(a) to define when a waste is considered hazardous under U.S. national procedures. The Board has chosen to create the term “waste hazardous under U.S. national procedures” for uniform use wherever this type of waste is intended; add a definition in this Section, the centralized listing of definitions for Subpart H of this Part; and replace USEPA’s defining language in 40 CFR 262.10(d), 262.58(a), and 262.80(a) with cross references to this definition.~~

“USEPA Acknowledgment of Consent” or “AOC” means the letter USEPA sends to the exporter documenting the specific terms of the country of import’s consent and any countries of transit’s consents.

BOARD NOTE: Corresponding 40 CFR 262.81 provides that the AOC meets the definition of “export license” in 15 CFR 30.1.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.182 General Conditions

- a) Scope. The level of control for exports and imports of waste ~~hazardous under U.S. national procedures, as defined in Section 722.181,~~ is indicated by designation of the waste as either Green waste or Amber waste, as such are defined in Section 722.181, and whether the waste is or is not hazardous waste.
 - 1) Green Wastes~~OECD-listed wastes subject to the Green control procedures.~~
 - A) Green waste that is not ~~waste-hazardous waste under U.S. national procedures, as defined in Section 722.181,~~ is subject to existing controls normally applied to commercial transactions and is not subject to the requirements of this Subpart H.

B) ~~Green waste that is waste-hazardous waste under U.S. national procedures, as defined in Section 722.181, is subject to the requirements of Amber control procedures set forth in this Subpart H.~~

2) Amber Wastes~~OECD-listed wastes subject to the Amber control procedures.~~

A) Amber waste that is ~~waste-hazardous waste under U.S. national procedures, as defined in Section 722.181,~~ is subject to the Amber control procedures set forth in this Subpart H, even if it is imported to or exported from a country that does not consider the waste to be hazardous or control the transboundary shipment as a hazardous waste import or export.

~~B) Amber waste that is waste-hazardous under U.S. national procedures, as defined in Section 722.181, is subject to the Amber control procedures within the United States, even if they are imported to or exported from a designated OECD member country listed in Section 722.158(a)(1) that does not consider the waste to be hazardous. In such an event, the responsibilities of the Amber control procedures shift as follows:~~

i) ~~For exports of Amber waste from the United States, exporter must comply with Section 722.183-USEPA has stated that the United States will issue an acknowledgement of receipt and assume other responsibilities of the competent authority of the country of import.~~

ii) ~~For imports of Amber waste into the United States, USEPA has stated that the U.S. recovery or disposal facility and the importer must comply with Section 722.184-assume the obligations associated with the Amber control procedures that normally apply to the exporter, and the United States will assume the obligations associated with the Amber control procedures that normally apply to the country of export.~~

BE) Amber waste that is not ~~waste-hazardous waste under U.S. national procedures, as defined in Section 722.181,~~ but which is considered hazardous by the other an OECD member country, is subject to the Amber control procedures in the ~~OECD member country that considers the waste hazardous, and are not subject to the requirements of this Subpart H.~~ All responsibilities of the U.S. importer or exporter shift to the foreign importer or foreign

~~exporter in the other importer or exporter of the OECD member country that considers the waste hazardous unless the parties make other arrangements through contracts.~~

BOARD NOTE: Some Amber wastes ~~that are subject to Amber control procedures~~ are not listed or otherwise identified as hazardous under RCRA, and therefore are not subject to the requirements Amber control procedures of this Subpart H. Regardless of the status of the waste under RCRA, however, other federal environmental statutes (e.g., the Toxic Substances Control Act (42 USC 2601 et seq.)) restrict certain waste imports or exports. These other federal restrictions continue to apply without regard to the applicability or inapplicability of this Subpart H.

3) Mixtures~~Procedures for mixtures of wastes.~~

- A) A Green waste that is mixed with one or more other Green wastes such that the resulting mixture is not ~~waste-hazardous waste is not~~ under U.S. national procedures, as defined in Section 722.181, is subject to the requirements of this Subpart H~~Green control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.~~

BOARD NOTE: USEPA has noted that the law of some ~~OECD member~~ countries may require that mixtures of different Green wastes be subject to the Amber control procedures.

- B) A Green waste that is mixed with one or more Amber wastes, in any amount, de minimis or otherwise, or a mixture of two or more Amber wastes, ~~such that the resulting waste mixture is waste hazardous~~ waste under U.S. national procedures, as defined in Section 722.181, is subject to the requirements of this Subpart H~~Amber control procedures, provided the composition of this mixture does not impair its environmentally sound recovery.~~

BOARD NOTE: USEPA has noted that the law of some ~~OECD member~~ countries may require that a mixture of a Green waste and more than a de minimis amount of an Amber waste or a mixture of two or more Amber wastes be subject to the Amber control procedures.

4) Waste that is not yet OECD-listed waste is eligible for trans-boundary movements, as follows:

- A) If such waste is ~~waste-hazardous waste under U.S. national procedures, as defined in Section 722.181~~, the waste is subject to the requirements of this Subpart H~~Amber control procedures.~~

- B) If such waste is not ~~waste hazardous waste under U.S. national procedures, as defined in Section 722.181~~, the waste is not subject to the requirements of this Subpart H-Green control procedures.
- b) General Conditions Applicable conditions applicable to Trans-Boundary Movements trans boundary movements of Hazardous Waste hazardous waste.
- 1) The hazardous waste must be destined for recovery or disposal operations at a facility that, under applicable domestic law, is operating or is authorized to operate in the importing country of import;
 - 2) The trans-boundary movement must comply be in compliance with applicable international transport agreements; and

BOARD NOTE: These international agreements include, but are not limited to, the Chicago Convention (1944), ADR (1957), ADN (1970), MARPOL Convention (1973/1978), SOLAS Convention (1974), IMDG Code (1985), COTIF (1985), and RID (1985).
 - 3) Any transit of hazardous waste through one or more countries a non-OECD member country must comply be conducted in compliance with all applicable international and national laws and regulations.
- e) ~~Provisions relating to re-export for recovery to a third country.~~
- 1) ~~Re-export of waste that is subject to the Amber control procedures from the United States, as the country of import, to a third country listed in Section 722.158(a)(1) may occur only after an exporter in the United States provides notification to and obtains consent from the competent authorities in the third country, the original country of export, and any transit countries. The notification must comply with the notice and consent procedures in Section 722.183 for all countries concerned and the original exporting country. The competent authorities of the original exporting country, as well as the competent authorities of all other concerned countries, have 30 days to object to the proposed movement.~~
 - A) ~~The 30 day period begins once the competent authorities of both the initial country of export and new country of import issue Acknowledgments of Receipt of the notification.~~
 - B) ~~The trans boundary movement may commence if no objection has been lodged after the 30 day period has passed or immediately after written consent is received from all relevant OECD countries of import and countries of transit.~~

- 2) ~~In the case of re-export of Amber waste to a country other than those listed in Section 722.158(a)(1), notification to and consent of the competent authorities of the original OECD member country of export and any OECD member countries of transit is required as specified in subsection (e)(1) of this Section in addition to compliance with all international agreements and arrangements to which the first importing OECD member country is a party and all applicable regulatory requirements for exports from the first country of import.~~
- d) ~~Duty to return or re-export wastes subject to the Amber control procedures. When a trans-boundary movement of wastes subject to the Amber control procedures cannot be completed in accordance with the terms of the contract or the consents and alternative arrangements cannot be made to recover the waste in an environmentally sound manner in the country of import, the waste must be returned to the country of export or re-exported to a third country. The provisions of subsection (e) of this Section apply to any shipments to be re-exported to a third country. The following provisions apply to shipments to be returned to the country of export, as appropriate:~~
- 1) ~~Return from the United States to the country of export. The U.S. importer must inform USEPA at the address specified in Section 722.183(b)(1)(A) of the need to return the shipment. USEPA stated that it will then inform the competent authorities of the countries of export and transit, citing the reasons for returning the waste. The U.S. importer must complete the return within 90 days from the time USEPA informs the country of export of the need to return the waste, unless informed in writing by USEPA of another timeframe agreed to by the concerned OECD member countries. If the return shipment will cross any transit country, the return shipment may only occur after USEPA provides notification to and obtains consent from the competent authority of the country of transit, and provides a copy of that consent to the U.S. importer.~~
- 2) ~~Return from the country of import to the United States. The U.S. exporter must provide for the return of the hazardous waste shipment within 90 days from the time the country of import informs USEPA of the need to return the waste or such other period of time as the concerned OECD member countries agree. The U.S. exporter must submit an exception report to USEPA in accordance with Section 722.187(b).~~
- ce) ~~Duty to return wastes subject to the Amber control procedures during transit through the United States from a country of transit. When a trans-boundary movement of hazardous waste wastes subject to the Amber control procedures does not comply with the requirements of the notification and movement documents or otherwise constitutes illegal shipment, and if alternative arrangements cannot be made to recover or dispose of these wastes in an~~

environmentally sound manner, the waste must be returned to the country of export. The U.S. transporter must inform EPA at the specified mailing address in subsection (e) of the need to return the shipment. USEPA will then inform the competent authority of the country of export, citing the reasons for returning the waste. The U.S. transporter must complete the return within 90 days from the time USEPA informs the country of export of the need to return the waste, unless informed in writing by USEPA of another timeframe agreed to by the concerned countries. ~~The following provisions apply, as appropriate:~~

1) ~~Return from the United States (as country of transit) to the country of export. The U.S. transporter must inform USEPA at the specified address in Section 722.183(b)(1)(A) of the need to return the shipment. USEPA will then inform the competent authority of the country of export, citing the reasons for returning the waste. The U.S. transporter must complete the return within 90 days from the time USEPA informs the country of export of the need to return the waste, unless informed in writing by USEPA of another timeframe agreed to by the concerned OECD member countries.~~

2) ~~Return from the country of transit to the United States (as country of export). The U.S. exporter must provide for the return of the hazardous waste shipment within 90 days from the time the competent authority of the country of transit informs USEPA of the need to return the waste or such other period of time as the concerned OECD member countries agree. The U.S. exporter must submit an exception report to USEPA in accordance with Section 722.187(b).~~

d) Laboratory Analysis Exemption. Export or import of a hazardous waste sample is exempt from the requirements of this Subpart H if the sample is destined for laboratory analysis to assess its physical or chemical characteristics or to determine its suitability for recovery or disposal operations, the sample does not exceed 25 kg (55 pounds) in quantity, the sample is appropriately packaged and labeled, and the sample complies with the conditions of 35 Ill. Adm. Code 721.104(d) or (e).

e) USEPA Address for Submittals by Postal Mail or Hand Delivery. Submittals required in this Subpart H to be made by postal mail or hand delivery should be sent to the following addresses:

1) For Postal Mail Delivery:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division (2254A)
Environmental Protection Agency

1200 Pennsylvania Avenue NW.
Washington, DC 20460.

2) For Hand-Delivery:

Office of Enforcement and Compliance Assurance
Office of Federal Activities
International Compliance Assurance Division
Environmental Protection Agency
William Jefferson Clinton South Bldg., Room 6144
12th St. and Pennsylvania Ave NW.
Washington, DC 20004.

- f) ~~Requirements for wastes destined for and received by facilities engaged in R12 and R13 recovery operations. The trans boundary movement of wastes destined for an R12 or R13 recovery operation must comply with all Amber control procedures for notification and consent, as set forth in Section 722.183, and for the movement document, as set forth in Section 722.184. Additional responsibilities of a facility engaged in an R12 or R13 recovery operation include the following:~~
- 1) ~~Indicating in the notification document the foreseen recovery facility or facilities where the subsequent R1 through R11 recovery operation will take place or may take place.~~
 - 2) ~~Within three days after the receipt of the wastes by a facility engaged in R12 or R13 recovery operation, the facility owner or operator must return a signed copy of the movement document to the exporter and to the competent authorities of the country of export and the country of import. The facility owner or operator must retain the original of the movement document for three years.~~
 - 3) ~~As soon as possible, but no later than 30 days after the completion of the R12 or R13 recovery operation and no later than one calendar year following the receipt of the waste, an R12 or R13 recovery operation facility owner or operator must send a certificate of recovery to the foreign exporter and to the competent authority of the country of export and to USEPA, by mail, email without digital signature followed by mail, or fax followed by mail, at the following address:~~

~~Office of Enforcement and Compliance Assurance
Office of Federal Activities, International Compliance Assurance
Division (2254A)
Environmental Protection Agency
1200 Pennsylvania Avenue, NW~~

Washington, DC 20460.

- 4) ~~When an a facility engaged in an R12 or R13 recovery operation delivers wastes for recovery to a facility engaged in an R1 through R11 recovery operation located in the country of import, the owner or operator of the R12 or R13 recovery operation facility must obtain, as soon as possible, but no later than one calendar year following delivery of the waste, a certification from the R1 through R11 recovery operation that recovery of the wastes at that facility has been completed. The owner or operator of the R12 or R13 recovery operation facility must promptly transmit the applicable certification to the competent authorities of the country of import and the country of export, identifying the trans boundary movements to which the certification pertains.~~
- 5) ~~When an R12 or R13 recovery operation facility delivers wastes for recovery to an R1 through R11 recovery operation facility located as follows, the indicated requirements apply:~~
- A) ~~In the initial country of export, Amber control procedures apply, including a new notification;~~
- B) ~~In a third country other than the initial country of export, Amber control procedures apply, with the additional requirement that the competent authority of the initial country of export must also be notified of the trans boundary movement.~~
- g) ~~Laboratory analysis exemption. The trans boundary movement of an Amber waste is exempt from the Amber control procedures if the Amber waste is in certain quantities and destined for laboratory analysis to assess its physical or chemical characteristics or determine its suitability for recovery operations. The quantity of such Amber waste must be determined by the minimum quantity reasonably needed to adequately perform the analysis in each particular case, but in no case may the amount of Amber waste exceed 25 kilograms (kg). Amber waste destined for laboratory analysis must still be appropriately packaged and labeled.~~

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.183 Exports of Hazardous WasteNotification and Consent

- a) General Export Requirements. Except as provided in subsections (a)(5) and (a)(6), an exporter that receives an AOC from USEPA before December 31, 2016 is subject to that approval and the requirements listed in the AOC as they existed at the time of that approval until the approval period expires. All other exports of hazardous waste are prohibited unless the following conditions are fulfilled:

- 1) The exporter complies with the contract requirements in subsection (f);
- 2) The exporter complies with the notification requirements in subsection (b);
- 3) The exporter receives an AOC from USEPA documenting consent from the countries of import and transit (and original country of export if exporting previously imported hazardous waste);
- 4) The exporter ensures compliance with the movement documents requirements in subsection (d);
- 5) The exporter ensures compliance with the manifest instructions for export shipments in subsection (c); and
- 6) The exporter or a U.S. authorized agent must submit electronic export information (EEI) for each shipment to the Automated Export System (AES) or its successor system, under the International Trade Data System (ITDS) platform, in accordance with 15 CFR 30.4(b), incorporated by reference in 35 Ill. Adm. Code 720.111, and includes the following items in the EEI, along with the other information required under 15 CFR 30.6, incorporated by reference in 35 Ill. Adm. Code 720.111:
 - A) The USEPA license code;
 - B) The commodity classification code for each hazardous waste per 15 CFR 30.6(a)(12), incorporated by reference in 35 Ill. Adm. Code 720.111;
 - C) The USEPA consent number for each hazardous waste;
 - D) The country of ultimate destination code per 15 CFR 30.6(a)(5), incorporated by reference in 35 Ill. Adm. Code 720.111;
 - E) The date of export per 15 CFR 30.6(a)(2), incorporated by reference in 35 Ill. Adm. Code 720.111;
 - F) The RCRA hazardous waste manifest tracking number, if required;
 - G) The quantity of each hazardous waste in shipment and units for reported quantity, if required reporting units established by value for the reported commodity classification number are in units of weight or volume per 15 CFR 30.6(a)(15), incorporated by reference in 35 Ill. Adm. Code 720.111; or

H) The USEPA net quantity for each hazardous waste reported in units of kilograms if solid or in units of liters if liquid, if required reporting units established by value for the reported commodity classification number are not in units of weight or volume.

b) Notifications

- 1) General Notifications. At least 60 days before the first shipment of hazardous waste is expected to leave the United States, the exporter must provide notification in English to USEPA of the proposed transboundary movement. Notifications must be submitted electronically using USEPA's Waste Import Export Tracking System (WIETS), or its successor system. The notification may cover up to one year of shipments of one or more hazardous wastes being sent to the same recovery or disposal facility, and the notification must include all of the following information:
- A) The exporter name and USEPA identification number, address, telephone, fax numbers, and email address;
- B) The foreign receiving facility name, address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;
- C) The foreign importer name (if not the owner or operator of the foreign receiving facility), address, telephone, fax numbers, and email address;
- D) The intended transporters or their agents; address, telephone, fax, and email address;
- E) "U.S." as the country of export name, "USA01" as the relevant competent authority code, and the intended U.S. ports of exit;
- F) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and the ports of entry and exit for each country of transit;
- G) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and port of entry for the country of import;
- H) A statement of whether the notification covers a single shipment or multiple shipments;

- D) The start and end dates requested for transboundary movements;
- J) The planned means of transport;
- K) A description of each hazardous waste, including whether each hazardous waste is regulated universal waste under 35 Ill. Adm. Code 733, spent lead-acid batteries being exported for recovery of lead under Subpart G of 35 Ill. Adm. Code 726, or industrial ethyl alcohol being exported for reclamation under 35 Ill. Adm. Code 721.106(a)(3)(A); the estimated total quantity of each waste in either metric tons or cubic meters; the applicable USEPA hazardous waste numbers for each hazardous waste; the applicable waste code from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each waste;
- L) Specification of the recovery or disposal operations, as defined in Section 722.181.
- M) A declaration and certification signed by the exporter that states as follows:

I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into and that any applicable insurance or other financial guarantee is or shall be in force covering the transboundary movement.

Name:

Signature:

Date:

BOARD NOTE: The United Nations Environment Programme, Basel Convention maintains an on-line list of competent authorities by country (www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx). The European Commission maintains a list of competent authorities for European Union members (ec.europa.eu/environment/waste/shipments/pdf/list_competent_authorities.pdf).

- 2) Exports to Pre-Consented Recovery Facilities in OECD Member Countries. If the recovery facility is located in an OECD member country and has been pre-consented by the competent authority of the OECD member country to recover the waste sent by exporters located in other

OECD member countries, the notification may cover up to three years of shipments. A notification proposing export to a preconsented facility in an OECD member country must include all information listed in subsections (b)(1)(A) through (b)(1)(M) and additionally state that the facility is preconsented. The exporter must submit the notification to USEPA using the allowable methods listed in subsection (b)(1) at least ten days before the first shipment is expected to leave the United States.

- 3) Notifications Listing Interim Recycling Operations or Interim Disposal Operations. If the foreign receiving facility listed in subsection (b)(1)(B) will engage in any of the interim recovery operations R12 or R13 or interim disposal operations D13 through D15, the notification submitted according to subsection (b)(1) must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11 and D1 through D12 the final foreign recovery or disposal facility will employ. For transboundary movements to Canada, in addition to the foregoing foreign receiving facilities listed in subsection (b)(1)(B), if the foreign receiving facility will engage in interim recovery operations RC16 or interim disposal operations DC17, the notification submitted according to subsection (b)(1) must also include the final foreign recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11, RC14 to RC15, D1 through D12, and DC15 to DC16 the final foreign recovery or disposal facility will employ. The recovery and disposal operations in this subsection are defined in Section 722.181.
- 4) Renotifications. When the exporter wishes to change any of the information specified on the original notification (including increasing the estimate of the total quantity of hazardous waste specified in the original notification or adding transporters), the exporter must submit a renotification of the changes to USEPA using the allowable methods in subsection (b)(1). Any shipment using the requested changes cannot take place until the countries of import and transit consent to the changes and the exporter receives an USEPA AOC letter documenting the countries' consents to the changes.
- 5) If the proposed country of import and recovery or disposal operations are not covered under an international agreement to which both the United States and the country of import are parties, USEPA will coordinate with the Department of State to provide the complete notification to the country of import and any countries of transit. In all other cases, USEPA will provide the notification directly to the country of import and any countries of transit. A notification is complete when USEPA receives a notification

that USEPA determines satisfies the requirements of subsections (b)(1)(A) through (b)(1)(M).

- 6) If the countries of import and transit consent to the proposed transboundary movements of the hazardous wastes, USEPA will forward an USEPA AOC letter to the exporter documenting the countries' consents. Where any of the countries of import and transit objects to the proposed transboundary movements of the hazardous waste or withdraws a prior consent, USEPA stated that it will notify the exporter.
 - 7) Export of hazardous wastes for recycling or disposal operations that were originally imported into the United States for recycling or disposal operations in a third country is prohibited unless an exporter in the United States complies with the export requirements in Section 722.183, including providing notification to USEPA in accordance with subsection (b)(1). In addition to listing all required information in subsections (b)(1)(A) through (b)(1)(M), the exporter must provide the original consent number issued for the initial import of the wastes in the notification, and receive an AOC from USEPA documenting the consent of the competent authorities in new country of import, the original country of export, and any transit countries prior to reexport.
 - 8) Upon request by USEPA, the exporter must furnish to USEPA any additional information which the country of import requests in order to respond to a notification.
- c) RCRA Manifest Instructions for Export Shipments. The exporter must comply with the manifest requirements of Sections 722.120 through 722.123, with the following exceptions:
- 1) (Block 8): In lieu of the name, site address and USEPA ID number of the designated facility, the exporter must enter the name and site address of the foreign receiving facility;
 - 2) (Block 16): In the International Shipments block, the exporter must check the export box and enter the port of exit (city and state) from the United States.
 - 3) The exporter must list the consent number from the AOC for each hazardous waste listed on the manifest, matched to the relevant list number for the hazardous waste from block 9b. If additional space is needed, the exporter should use Continuation Sheets (USEPA Form 8700-22A).

- 4) The exporter may obtain the manifest from any source that is registered with the USEPA as a supplier of manifests (e.g., a state, a waste handler, or a commercial forms printer).

BOARD NOTE: USEPA maintains a listing of registered sources at <https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry>

d) Movement Document Requirements for Export Shipments

- 1) An exporter must ensure that a movement document meeting the conditions of subsection (d)(2) accompanies each transboundary movement of hazardous wastes from the initiation of the shipment until the wastes reach the foreign receiving facility, including cases where the hazardous waste is stored or sorted by the foreign importer prior to shipment to the foreign receiving facility, except as follows:
- A) For shipments of hazardous waste within the United States solely by water (bulk shipments only), the exporter must forward the movement document to the last water (bulk shipment) transporter to handle the hazardous waste in the United States if exported by water.
- B) For rail shipments of hazardous waste within the United States which start from the company originating the export shipment, the exporter must forward the movement document to the next non-rail transporter, if any, or the last rail transporter to handle the hazardous waste in the United States if exported by rail.
- 2) The movement document must include the following:
- A) The corresponding consent numbers and USEPA hazardous waste numbers for the listed hazardous waste from the relevant USEPA AOCs;
- B) The shipment number and the total number of shipments from the USEPA AOC;
- C) The exporter name and USEPA identification number, address, telephone, fax numbers, and email address;
- D) The foreign receiving facility name, address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

- E) The foreign importer name (if not the owner or operator of the foreign receiving facility), address, telephone, fax numbers, and email address;
- F) A description of each hazardous waste; the quantity of each hazardous waste in the shipment; the applicable hazardous waste numbers for each hazardous waste; the applicable OECD waste code for each hazardous waste from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;
- G) The date movement commenced;
- H) The name (if not exporter), address, telephone, fax numbers, and email of company originating the shipment;
- I) The company name, USEPA identification number, address, telephone, fax, and email address of each transporter;
- J) Identification (license, registered name, or registration number) of means of transport, including types of packaging;
- K) Any special precautions to be taken by transporters;
- L) A declaration and certification signed and dated by the exporter that the information in the movement document is complete and correct;
- M) The appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the foreign receiving facility);
- N) Each U.S. person that has physical custody of the hazardous waste from the time the movement commences until it arrives at the foreign receiving facility must sign the movement document (e.g., transporter, foreign importer, and owner or operator of the foreign receiving facility); and
- O) As part of the contract requirements per subsection (f), the exporter must require that the foreign receiving facility send a copy of the signed movement document to the competent authorities of the countries of import and transit to confirm receipt within three working days of shipment delivery to the exporter. The exporter

must additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).

- e) Duty to Return or Re-Export Hazardous Wastes. When a transboundary movement of hazardous wastes cannot be completed in accordance with the terms of the contract or the consents and alternative arrangements cannot be made to recover or dispose of the waste in an environmentally sound manner in the country of import, the exporter must ensure that the hazardous waste is returned to the United States or reexported to a third country. If the waste must be returned, the exporter must provide for the return of the hazardous waste shipment within ninety days from the time the country of import informs USEPA of the need to return the waste or such other period of time as the concerned countries agree. In all cases, the exporter must submit an exception report to USEPA in accordance with subsection (h).
- f) Export Contract Requirements
- 1) Exports of hazardous waste are prohibited unless they occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). A contract or equivalent arrangements for export of hazardous waste must be executed by the exporter, foreign importer (if different from the foreign receiving facility), and the owner or operator of the foreign receiving facility. The contract or equivalent arrangements must specify responsibilities for each of the exporter, the foreign importer, and the owner or operator of the foreign receiving facility. A contract or equivalent arrangements is valid for the purposes only if each person assuming obligations under the contracts or equivalent arrangements has appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.
 - 2) A contract or equivalent arrangements must specify the name and USEPA identification number of the following:
 - A) The company from where each export shipment of hazardous waste is initiated;
 - B) Each person who will have physical custody of the hazardous wastes;
 - C) Each person who will have legal control of the hazardous wastes; and
 - D) The foreign receiving facility.

- 3) A contract or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the hazardous waste if its disposition cannot be carried out as described in the notification of intent to export. For this contingency, contracts must specify the following:
 - A) That the transporter or foreign receiving facility having actual possession or physical control over the hazardous wastes will immediately inform the exporter, USEPA, and either the competent authority of the country of transit or the competent authority of the country of import of the need to make alternate management arrangements; and
 - B) That the person specified in the contract will assume responsibility for the adequate management of the hazardous wastes in compliance with applicable laws and regulations, including arranging the return of hazardous wastes, providing the notification for re-export to the competent authority in the country of import, including the equivalent of the information required in subsection (b)(1) and the original consent number issued for the initial export of the hazardous wastes in the notification, and obtaining consent from USEPA and the competent authorities in the new country of import and any transit countries, as necessary, prior to re-export.
- 4) A contract must require that the foreign receiving facility send a copy of the signed movement document to confirm receipt within three working days of shipment delivery to the exporter and to the competent authorities of the countries of import and transit. The contract must additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).
- 5) A contract must require that the foreign receiving facility send a copy of the signed and dated confirmation of recovery or disposal to the exporter and to the competent authority of the country of import, as soon as possible, but no later than thirty days after completing recovery or disposal on the waste in the shipment and no later than one calendar year following receipt of the waste. The contract must additionally require that the foreign receiving facility send a copy to USEPA at the same time using the WIETS described in subsection (b)(1).
- 6) A contract must require that the foreign importer or the foreign receiving facility that performed interim recycling operations R12, R13, or RC16, or interim disposal operations D13 through D15 or DC17, (recovery and disposal operations defined in 35 Ill. Adm. Code 722.181) do the appropriate of the following:

- A) Provide the notification required in subsection (f)(3)(B) prior to any re-export of the hazardous wastes to a final foreign recovery or disposal facility in a third country; and
- B) Promptly send copies of the confirmation of recovery or disposal that it receives from the final foreign recovery or disposal facility to the competent authority of the country of import within one year of shipment delivery to the final foreign recovery or disposal facility that performed one of recovery operations R1 through R11, or RC16 or one of disposal operations D1 through D12, DC15, or DC16. The contracts must additionally require that the foreign facility send copies to USEPA at the same time using the WIETS described in subsection (b)(1).

- 7) A contract or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of the country of import and any countries of transit, in accordance with applicable national or international law requirements.

BOARD NOTE: Financial guarantees required by competent authorities are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The United States does not require such financial guarantees at this time; however, some OECD member countries and other foreign countries do. It is the responsibility of the exporter to ascertain and comply with any foreign requirements; in some cases, persons or facilities located in those OECD member countries or other foreign countries may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

- 8) A contract or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of this Subpart H.
- 9) Upon request by USEPA or the Agency, U.S. exporters, importers, or recovery facilities must submit to the requestor copies of contracts, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity).

- g) Annual Reports. The exporter must file an annual report with USEPA no later than March 1 of each year summarizing the types, quantities, frequency, and ultimate destination of all such hazardous waste exported during the previous calendar year. Prior to December 31, 2018, the exporter must mail or hand-deliver annual reports to USEPA for all shipments made the previous calendar

year using one of the appropriate of the addresses specified in Section 722.182(e), or submit to USEPA using the WIETS described in subsection (b)(1) if the exporter has electronically filed USEPA information in AES per subsection (a)(6)(A)(i). Subsequently, the exporter must submit annual reports to USEPA using the WIETS described in subsection (b)(1). The annual report must include all of the following information:

- 1) The USEPA identification number, name, and mailing and site address of the exporter filing the report;
- 2) The calendar year covered by the report;
- 3) The name and site address of each foreign receiving facility;
- 4) By foreign receiving facility, for each hazardous waste exported:
 - A) A description of the hazardous waste;
 - B) The applicable USEPA hazardous waste numbers (from Subpart C or D of 35 Ill. Adm. Code 721) for each waste;
 - C) The applicable waste code from the appropriate OECD waste list in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111;
 - D) The applicable USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111;
 - E) The name and USEPA identification number (where applicable) for each transporter used over the calendar year covered by the report; and
 - F) The consent numbers under which the hazardous waste was shipped, and for each consent number, the total amount of the hazardous waste and the number of shipments exported during the calendar year covered by the report;
- 5) In even numbered years, for each hazardous waste exported, except for hazardous waste produced by exporters of greater than 100 kg but less than 1,000 kg in a calendar month, and except for hazardous waste for which information was already provided pursuant to Section 722.141:
 - A) A description of the efforts undertaken during the year to reduce the volume and toxicity of the waste generated; and

B) A description of the changes in volume and toxicity of the waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984; and

6) A certification signed by the exporter that states:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.

h) Exception Reports

1) The exporter must file an exception report in lieu of the requirements of Section 722.142 (if applicable) with USEPA if any of the following occurs:

A) The exporter has not received a copy of the RCRA hazardous waste manifest (if applicable) signed by the transporter identifying the point of departure of the hazardous waste from the United States within 45 days from the date hazardous waste was accepted by the initial transporter, in which case the exporter must file the exception report within the next 30 days;

B) The exporter has not received a written confirmation of receipt from the foreign receiving facility in accordance with subsection (d) within 90 days from the date the waste was accepted by the initial transporter in which case the exporter must file the exception report within the next 30 days; or

C) The foreign receiving facility notifies the exporter, or the country of import notifies USEPA, of the need to return the shipment to the U.S. or arrange alternate management, in which case the exporter must file the exception report within 30 days of notification, or one day prior to the date the return shipment commences, whichever is sooner.

2) Prior to December 31, 2018, exception reports must be mailed or hand delivered to USEPA using the addresses listed in Section 722.182(e). Subsequently, exception reports must be submitted to USEPA using the WIETS described in subsection (b)(1).

i) Recordkeeping

- 1) The exporter must keep the following records in subsections (i)(1)(A) through (i)(1)(E) and provide them to USEPA or Agency personnel upon request:
 - A) A copy of each notification of intent to export and each USEPA AOC for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;
 - B) A copy of each annual report for a period of at least three years from the due date of the report;
 - C) A copy of any exception reports and a copy of each confirmation of receipt (i.e., movement document) sent by the foreign receiving facility to the exporter for at least three years from the date the hazardous waste was accepted by the initial transporter;
 - D) A copy of each confirmation of recovery or disposal sent by the foreign receiving facility to the exporter for at least three years from the date that the foreign receiving facility completed interim or final processing of the hazardous waste shipment; and
 - E) A copy of each contract or equivalent arrangement established per Section 722.185 for at least three years from the expiration date of the contract or equivalent arrangement.
- 2) The exporters may satisfy these recordkeeping requirements by retaining electronically submitted documents in the exporter's account on USEPA's WIETS, provided that copies are readily available for viewing and production if requested by any USEPA or Agency inspector. No exporter may be held liable for the inability to produce such documents for inspection under this section if the exporter can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS for which the exporter bears no responsibility.
- 3) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by USEPA or the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (i)(3) is subject to Board review pursuant to Section 40 of the Act.

- a) ~~Applicability. Consent must be obtained from the competent authorities of the relevant OECD country of import and country of transit prior to exporting hazardous waste destined for recovery operations subject to this Subpart H. Hazardous wastes subject to Amber control procedures are subject to the requirements of subsection (b) of this Section, and wastes that are not OECD-listed waste are subject to the requirements of subsection (c) of this Section.~~
- b) ~~Amber wastes. Export of hazardous waste from the United States, as described in Section 722.180(a), that is subject to the Amber control procedures is prohibited unless the notification and consent requirements of subsection (b)(1) or subsection (b)(2) of this Section are met.~~
- 1) ~~Transactions requiring specific consent.~~
- A) ~~Notification. At least 45 days prior to commencement of each trans-boundary movement, the exporter must provide written notification in English of the proposed trans-boundary movement to the Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, and the Illinois Environmental Protection Agency, Bureau of Land, Division of Land Pollution Control, P.O. Box 19276, Springfield, IL 62794-9276, with the words "Attention: OECD Export Notification" prominently displayed on the envelope. This notification must include all of the information identified in subsection (d) of this Section. In cases where wastes having similar physical and chemical characteristics, the same United Nations classification, the same USEPA hazardous waste codes, and the Amber wastes are to be sent periodically to the same recovery facility by the same exporter, the exporter may submit one notification of intent to export these wastes in multiple shipments during a period of up to one year. Even when a general notification is used for multiple shipments, each shipment still must be accompanied by its own movement document pursuant to Section 722.184.~~
- B) ~~Tacit consent. If no objection has been lodged by any country concerned (i.e., country of export, country of import, or country of transit) to a notification provided pursuant to subsection (b)(1)(A) of this Section within 30 days after the date of issuance of the Acknowledgement of Receipt of notification by the competent authority of the country of import, the trans-boundary movement may commence. Tacit consent expires one calendar year after the close of the 30-day period; renotification and renewal of all consents is required for exports after that date.~~

- C) ~~Written consent. If the competent authorities of all the relevant OECD importing and transit countries provide written consent in a period less than 30 days, the trans-boundary movement may commence immediately after all necessary consents are received. Written consent expires for each relevant OECD importing and transit country one calendar year after the date of that country's consent unless otherwise specified; renotification and renewal of each expired consent is required for exports after that date.~~
- 2) ~~Trans-boundary movements to facilities pre-approved by the competent authorities of the importing countries to accept specific wastes for recovery.~~
- A) ~~Notification. The exporter must provide USEPA and the Agency a notification that contains all of the information identified in subsection (d) of this Section in English, at least 10 days in advance of commencing shipment to a preapproved facility. The notification must indicate that the recovery facility is preapproved, and may apply to a single specific shipment or to multiple shipments as described in subsection (b)(1)(A) of this Section. This information must be sent to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, and the Illinois Environmental Protection Agency, Bureau of Land, Division of Land Pollution Control, P.O. Box 19276, Springfield, IL 62794-9276, with the words "OECD Export Notification - Pre-approved Facility" prominently displayed on the envelope. General notifications that cover multiple shipments as described in subsection (b)(1)(A) of this Section may cover a period of up to three years. Even when a general notification is used for multiple shipments, each shipment still must be accompanied by its own movement document pursuant to Section 722.184.~~
- B) ~~Exports to pre-approved facilities may take place after the elapse of seven working days from the issuance of an Acknowledgement of Receipt of the notification by the competent authority of the country of import, unless the exporter has received information indicating that the competent authority of any country concerned has objected to the shipment.~~
- e) ~~Waste that is not Green waste or Amber waste. Waste destined for recovery operations that is not Green waste or Amber waste, as defined in Section 722.181, but which is waste hazardous under U.S. national procedures, as defined in~~

~~Section 722.181, is subject to the notification and consent requirements established for the Amber control procedures in accordance with subsection (b) of this Section. Waste destined for recovery operations, that has not been assigned to the OECD Green and Amber lists incorporated by reference in 35 Ill. Adm. Code 720.111(a), and which is not waste hazardous under U.S. national procedures, as defined in Section 722.181, are subject to the Green control procedures.~~

- d) ~~Notification information. Notifications submitted under this Section must include the following information:~~
- 1) ~~The serial number or other accepted identifier of the notification document;~~
 - 2) ~~The exporter's name and USEPA identification number (if applicable), address, telephone, fax number, and email address;~~
 - 3) ~~The importing recovery facility's name, address, telephone, fax number, e-mail address, and technologies employed;~~
 - 4) ~~The importer's name (if not the owner or operator of the recovery facility), address, and telephone, fax number, and e-mail address; whether the importer will engage in waste exchange recovery operation R12 or waste accumulation recovery operation R13 prior to delivering the waste to the final recovery facility; and identification of recovery operations to be employed at the final recovery facility;~~
 - 5) ~~The intended transporters' or their agents' address, telephone, fax, and e-mail address;~~
 - 6) ~~The country of export and relevant competent authority and point of departure;~~
 - 7) ~~The countries of transit and relevant competent authorities and points of entry and departure;~~
 - 8) ~~The country of import and relevant competent authority and point of entry;~~
 - 9) ~~A statement of whether the notification is a single notification or a general notification. If general, include the period of validity requested;~~
 - 10) ~~The dates foreseen for commencement of trans boundary movements;~~
 - 11) ~~The means of transport envisaged;~~

- 12) ~~The OECD waste designation (e.g., Green waste or Amber waste) for each waste type, a description of each waste type, the estimated total quantity of each waste type, the USEPA hazardous waste code for each waste type, and the United Nations number for each waste type;~~
- 13) ~~The specification of the recovery operation, as defined in Section 722.181; and~~
- 14) ~~A certification and declaration signed by the exporter that states as follows:~~

~~“I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into, and that any applicable insurance or other financial guarantees are or must be in force covering the trans-boundary movement.~~

Name: _____

Signature: _____

Date: _____”

~~BOARD NOTE: USEPA does not currently require financial assurance for these waste shipments. However, U.S. exporters may be asked by other governments to provide and certify to such assurance as a condition of obtaining consent to a proposed movement.~~

- e) ~~Certificate of recovery. As soon as possible, but no later than 30 days after the completion of recovery or one calendar year following receipt of the waste, whichever comes first, the U.S. recovery facility must send a certificate of recovery to the exporter and to the competent authorities of the countries of export and import. The recovery facility owner or operator must send the certificate of recovery by mail. Alternatively, the recovery facility owner or operator may send the certificate by e-mail without a digital signature or by fax, so long as the sending is immediately followed by mail. The certificate of recovery must include a signed, written, and dated statement which affirms that the waste materials were recovered in the manner agreed to by the parties to the contract required under Section 722.185.~~

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.184 Imports of Hazardous Waste ~~Movement Document~~

- a) General Import Requirements

- 1) With the exception of subsection (a)(5), the importer of a shipment covered under a consent from USEPA to the country of export issued before December 31, 2016 is subject to that approval and the requirements that existed at the time of that approval until such time the approval period expires. Otherwise, any person that imports hazardous waste from a foreign country into the United States must comply with the requirements of this Part and the special requirements of this Subpart H.
 - 2) Where the country of export does not require the foreign exporter to submit a notification and obtain consent to the export prior to shipment, the importer must submit a notification to USEPA in accordance with subsection (b).
 - 3) The importer must comply with the contract requirements in subsection (f).
 - 4) The importer must ensure compliance with the movement documents requirements in subsection (d); and
 - 5) The importer must ensure compliance with the manifest instructions for import shipments in subsection (c).
- b) Notifications. Where the competent authority of the country of export does not regulate the waste as hazardous waste and, thus, does not require the foreign exporter to submit to it a notification proposing export and obtain consent from USEPA and the competent authorities for the countries of transit, but USEPA does regulate the waste as hazardous waste, the following requirements apply:
- 1) The importer is required to provide notification in English to USEPA of the proposed transboundary movement of hazardous waste at least sixty days before the first shipment is expected to depart the country of export. A notification submitted prior to the electronic import-export reporting compliance date must be mailed or hand delivered to USEPA at the addresses specified in Section 722.182(e). Notifications submitted on or after the electronic import-export reporting compliance date must be submitted electronically using USEPA's WIETS. The notification may cover up to one year of shipments of one or more hazardous wastes being sent from the same foreign exporter, and must include all of the following information:
 - A) The foreign exporter name, address, telephone, fax numbers, and email address;
 - B) The receiving facility name, USEPA identification number, address, telephone, fax numbers, email address, technologies

employed, and the applicable recovery or disposal operations, as defined in Section 722.181;

- C) The importer name (if not the owner or operator of the receiving facility), USEPA identification number, address, telephone, fax numbers, and email address;
- D) The intended transporters or their agents; address, telephone, fax, and email address;
- E) “U.S.” as the country of import, “USA01” as the relevant competent authority code, and the intended U.S. ports of entry;
- F) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and the ports of entry and exit for each country of transit;
- G) The International Standard ISO 3166-1:2013, incorporated by reference in 35 Ill. Adm. Code 720.111, country name alpha-2 code, any code for the OECD/Basel competent authority, and port of exit for the country of export;
- H) A statement of whether the notification covers a single shipment or multiple shipments;
- I) The start and end dates requested for transboundary movements;
- J) The planned means of transport;
- K) A description of each hazardous waste, including whether each hazardous waste is regulated universal waste under 35 Ill. Adm. Code 733, spent lead-acid batteries being exported for recovery of lead under Subpart G of 35 Ill. Adm. Code 726, or industrial ethyl alcohol being exported for reclamation under 35 Ill. Adm. Code 721.106(a)(3)(A); the estimated total quantity of each hazardous waste; the applicable USEPA hazardous waste numbers for each hazardous waste; the applicable waste code from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;
- L) Specification of the recovery or disposal operations, as defined in Section 722.181; and

M) A declaration and certification signed by the exporter that states as follows:

I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into and that any applicable insurance or other financial guarantee is or shall be in force covering the transboundary movement.

Name:

Signature:

Date:

BOARD NOTE: The United States does not currently require financial assurance for these waste shipments.

BOARD NOTE: The United Nations Environment Programme, Basel Convention maintains an on-line list of competent authorities by country (www.basel.int/Countries/CountryContacts/tabid/1342/Default.aspx). The European Commission maintains a list of competent authorities for European Union members (ec.europa.eu/environment/waste/shipments/pdf/list_compent_authorities.pdf).

- 2) Notifications Listing Interim Recycling Operations or Interim Disposal Operations. If the receiving facility listed in subsection (b)(1)(B) will engage in any of the interim recovery operations R12 or R13 or interim disposal operations D13 through D15, the notification submitted according to subsection (b)(1) must also include the final recovery or disposal facility name, address, telephone, fax numbers, email address, technologies employed, and which of the applicable recovery or disposal operations R1 through R11 and D1 through D12, will be employed at the final recovery or disposal facility. The recovery and disposal operations in this subsection are defined in Section 722.181.
- 3) Renotifications. When the foreign exporter wishes to change any of the conditions specified on the original notification (including increasing the estimate of the total quantity of hazardous waste specified in the original notification or adding transporters), the importer must submit a renotification of the changes to USEPA using the allowable methods in subsection (b)(1). Any shipment using the requested changes cannot take place until USEPA and the countries of transit consent to the changes and the importer receives an USEPA AOC letter documenting the consents to the changes.

- 4) A notification is complete when USEPA determines the notification satisfies the requirements of subsections (b)(1)(A) through (b)(1)(M).
- 5) Where USEPA and the countries of transit consent to the proposed transboundary movements of the hazardous wastes, USEPA will forward an USEPA AOC letter to the importer documenting the countries' consents and USEPA's consent. Where any of the countries of transit or USEPA objects to the proposed transboundary movements of the hazardous waste or withdraws a prior consent, USEPA will notify the importer.
- 6) Export of Hazardous Wastes Originally Imported into the United States. Export of hazardous wastes that were originally imported into the United States for recycling or disposal operations is prohibited unless an exporter in the United States complies with the export requirements in Section 722.183(b)(7).

c) RCRA Manifest Instructions for Import Shipments

- 1) When importing hazardous waste, the importer must meet all the requirements of Section 722.120 for the manifest, with the following exceptions:
 - A) (Block 5): In place of the generator's name, address and USEPA identification number, the name and address of the foreign generator and the importer's name, address and USEPA identification number must be used.
 - B) (Block 15): In place of the generator's signature on the certification statement, the importer or its agent must sign and date the certification and obtain the signature of the initial transporter.
- 2) The importer may obtain the manifest form from any source that is registered with the USEPA as a supplier of manifests (e.g., a state, a waste handler, or a commercial forms printer).

BOARD NOTE: USEPA maintains a listing of registered sources at <https://www.epa.gov/hwgenerators/approved-registered-printers-epas-manifest-registry>
- 3) In the International Shipments block (block 16), the importer must check the import box and enter the point of entry (city and state) into the United States.

- 4) The importer must provide the transporter with an additional copy of the manifest to be submitted by the receiving facility to USEPA in accordance with 35 Ill. Adm. Code 724.171(a)(3) and 725.171(a)(3).
- 5) In lieu of the requirements of Section 722.120(d), where a shipment cannot be delivered for any reason to the receiving facility, the importer must instruct the transporter in writing via fax, email, or mail to do the following:
 - A) Return the hazardous waste to the foreign exporter or designate another facility within the United States; and
 - B) Revise the manifest in accordance with the importer's instructions.

d) Movement Document Requirements for Import Shipments

- 1) The importer must ensure that a movement document meeting the conditions of subsection (d)(2) accompanies each transboundary movement of hazardous wastes from the initiation of the shipment in the country of export until it reaches the receiving facility, including cases in which the hazardous waste is stored or sorted by the importer prior to shipment to the receiving facility, except as provided in subsections (d)(1)(A) and (d)(1)(B).
 - A) For shipments of hazardous waste within the United States by water (bulk shipments only), the importer must forward the movement document to the last water (bulk shipment) transporter to handle the hazardous waste in the United States if imported by water.
 - B) For rail shipments of hazardous waste within the United States which start from the company originating the export shipment, the importer must forward the movement document to the next non-rail transporter, if any, or the last rail transporter to handle the hazardous waste in the United States if imported by rail.
- 2) The movement document must include the following:
 - A) The corresponding USEPA AOC numbers and USEPA hazardous waste numbers for the listed waste;
 - B) The shipment number and the total number of shipments under the USEPA AOC number;
 - C) The foreign exporter name, address, telephone, fax numbers, and email address;

- D) The receiving facility name, USEPA identification number, address, telephone, fax numbers, email address, technologies employed, and the applicable recovery or disposal operations, as defined in Section 722.181;
- E) The importer name (if not the owner or operator of the receiving facility), USEPA identification number, address, telephone, fax numbers, and email address;
- F) A description of each hazardous waste, quantity of each hazardous waste in the shipment; the applicable hazardous waste numbers for each hazardous waste; the applicable waste code for each hazardous waste from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and the United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111, for each hazardous waste;
- G) The date movement commenced;
- H) The name (if not the foreign exporter), address, telephone, fax numbers, and email of the foreign company originating the shipment;
- I) The company name, USEPA identification number, address, telephone, fax, and email address of all transporters;
- J) Identification (license, registered name or registration number) of the means of transport, including types of packaging;
- K) Any special precautions to be taken by transporters;
- L) A declaration and certification signed and dated by the foreign exporter that the information in the movement document is complete and correct;
- M) The appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the receiving facility);
- N) Each person that has physical custody of the waste from the time the movement commences until it arrives at the receiving facility must sign the movement document (e.g., transporter, importer, and owner or operator of the receiving facility); and

- O) The receiving facility must send a copy of the signed movement document to the competent authorities of the countries of export and transit to confirm receipt within three working days after shipment delivery to the foreign exporter. For shipments received on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS.
- e) Duty to Return or Export Hazardous Wastes. When a transboundary movement of hazardous wastes cannot be completed in accordance with the terms of the contract or the consents, the provisions of subsection (f)(4) apply. If alternative arrangements cannot be made to recover the hazardous waste in an environmentally sound manner in the United States, the hazardous waste must be returned to the country of export or exported to a third country. The provisions of subsection (b)(6) apply to any hazardous waste shipments to be exported to a third country. If the return shipment will cross any transit country, the return shipment may only occur after USEPA provides notification to and obtains consent from the competent authority of the country of transit, and provides a copy of that consent to the importer.
- f) Import Contract Requirements
- 1) Imports of hazardous waste must occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). A contract or equivalent arrangements must specify responsibilities for each of the foreign exporter, the importer, and the owner or operator of the receiving facility, and each must execute the contract or equivalent arrangements. A contract or equivalent arrangements is valid for the purposes of hazardous waste import only if all persons assuming obligations under the contract or equivalent arrangements have appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.
- 2) Contracts or equivalent arrangements must specify the name and USEPA identification number, where available, of the following persons:
- A) The foreign company from which each import shipment of hazardous waste is initiated;
- B) Each person that will have physical custody of the hazardous wastes;
- C) Each person that will have legal control of the hazardous wastes; and
- D) The receiving facility.

- 3) A contract or equivalent arrangements must specify the use of a movement document in accordance with Section 722.184(d).
- 4) A contract or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the hazardous waste if the wastes' disposition cannot be carried out as described in the notification of intent to export submitted by either the foreign exporter or the importer. In such cases, the contract must specify each of the following:
 - A) That the transporter or receiving facility having actual possession or physical control over the hazardous wastes will immediately inform the foreign exporter, the importer, and the competent authority where the shipment is located of the need to arrange alternate management or return; and
 - B) That the person specified in the contract will assume responsibility for the adequate management of the hazardous wastes in compliance with applicable laws and regulations, including arranging the return of the hazardous wastes, if necessary, providing the notification for re-export as required by Section 722.183(b)(7).
- 5) A contract must specify that the importer or the receiving facility performing interim recycling operations R12, R13, or RC16 or interim disposal operations D13 through D15 or DC15 through DC17, as appropriate, will provide the notification required by Section 722.183(b)(7) prior to the re-export of hazardous waste. The recovery and disposal operations in this subsection are defined in Section 722.181.
- 6) A contract or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of any countries concerned, in accordance with applicable national or international law requirements.

BOARD NOTE: Financial guarantees required by competent authorities are intended to provide for alternate recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The United States does not require such financial guarantees at this time; however, some OECD Member countries or other foreign countries do. It is the responsibility of the importer to ascertain and comply with any financial requirements; in some cases, persons or facilities located in those countries may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.

- 7) A contract or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of this Subpart H.
 - 8) Upon request by USEPA, an importer or disposal or recovery facility must submit to USEPA copies of the contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity).
- g) Confirmation of Recovery or Disposal. The receiving facility must do the following:
- 1) Send copies of the signed and dated confirmation of recovery or disposal to the foreign exporter and to the competent authority of the country of export., as soon as possible, but no later than thirty days after completing recovery or disposal of the waste in the shipment and no later than one calendar year following receipt of the waste. For shipments recycled or disposed of on or after the electronic import-export reporting compliance date, reporting to USEPA must occur electronically using USEPA's WIETS.
 - 2) If the receiving facility performed any of recovery operations R12, R13, or RC16, or disposal operations D13 through D15, or DC17, the receiving facility must promptly send copies of the confirmation of recovery or disposal that it receives from the final recovery or disposal facility to the final recovery or disposal facility that performed one of recovery operations R1 through R11, or RC14 to RC15, or one of disposal operations D1 through D12, or DC15 to DC16, to the competent authority of the country of export within one year of shipment delivery. For confirmations received on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS, or its successor system. The recovery and disposal operations in this subsection (g)(2) are defined in Section 722.181.
- h) Recordkeeping
- 1) The importer must keep the following records and provide them to USEPA or the Agency upon request:
 - A) A copy of each notification that the importer sends to USEPA under subsection (b)(1) and each USEPA AOC the importer receives in response for a period of at least three years from the date the hazardous waste was accepted by the initial foreign transporter; and

- B) A copy of each contract or equivalent arrangement established per subsection (f) for at least three years from the expiration date of the contract or equivalent arrangement.
- 2) The receiving facility must keep the following records:
- A) A copy of each confirmation of receipt (i.e., movement document) that the receiving facility sends to the foreign exporter for at least three years from the date it received the hazardous waste;
- B) A copy of each confirmation of recovery or disposal that the receiving facility sends to the foreign exporter for at least three years from the date that it completed processing the waste shipment;
- C) For the receiving facility that performed any of recovery operations R12, R13, or RC16, or disposal operations D13 through D15, or DC17 (recovery and disposal operations defined in Section 722.181), a copy of each confirmation of recovery or disposal that the final recovery or disposal facility sent to the receiving facility for at least three years from the date that the final recovery or disposal facility completed processing the waste shipment; and
- D) A copy of each contract or equivalent arrangement established per subsection (f) for at least three years from the expiration date of the contract or equivalent arrangement.
- 3) An importers or receiving facility may satisfy these recordkeeping requirements by retaining electronically submitted documents in the importer's or receiving facility's account on USEPA's WIETS, provided that copies are readily available for viewing and production if requested by any USEPA or Agency inspector. No importer or receiving facility may be held liable for the inability to produce such documents for inspection under this Section if the importer or receiving facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS for which the importer or receiving facility bears no responsibility.
- 4) The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested in writing by USEPA or the Agency.

BOARD NOTE: Any Agency request for extended records retention under this subsection (h)(4) is subject to Board review pursuant to Section 40 of the Act.

- a) ~~All U.S. parties subject to the contract provisions of Section 722.185 must ensure that a movement document meeting the conditions of subsection (b) of this Section accompanies each trans-boundary movement of wastes subject to Amber control procedures from the initiation of the shipment until it reaches the final recovery facility, including cases in which the waste is stored or sorted by the importer prior to shipment to the final recovery facility, except as provided in this subsection (a).~~
- 1) ~~For shipments of hazardous waste within the United States solely by water (bulk shipments only), the generator must forward the movement document with the manifest to the last water (bulk shipment) transporter to handle the waste in the United States if exported by water (in accordance with the manifest routing procedures at Section 722.123(c)).~~
 - 2) ~~For rail shipments of hazardous waste within the United States that originate at the site of generation, the generator must forward the movement document with the manifest (in accordance with the routing procedures for the manifest in Section 722.123(d)) to the next non-rail transporter, if any, or the last rail transporter to handle the waste in the United States if exported by rail.~~
- b) ~~The movement document must include all information required under Section 722.183 (for notification) as well as the following information:~~
- 1) ~~The date movement commenced;~~
 - 2) ~~The name (if not the exporter), address, telephone, fax numbers, and e-mail of the primary exporter;~~
 - 3) ~~The company name and USEPA identification number of all transporters;~~
 - 4) ~~Identification (license, registered name, or registration number) of means of transport, including types of packaging envisaged;~~
 - 5) ~~Any special precautions to be taken by transporters;~~
 - 6) ~~A certification or declaration signed by the exporter that no objection to the shipment has been lodged as follows:~~

~~“I certify that the above information is complete and correct to the best of my knowledge. I also certify that legally enforceable written contractual obligations have been entered into, that any applicable insurance or other financial guarantees are or must be in force covering the trans-boundary movement, and that (delete sentences that are not applicable):”~~

~~“1. All necessary consents have been received.”;~~

~~“2. The shipment is directed at a recovery facility within the OECD area and no objection has been received from any of the concerned countries within the 30 day tacit consent period.”; or~~

~~“3. The shipment is directed at a recovery facility pre-authorized for that type of waste within the OECD area, such an authorization has not been revoked, and no objection has been received from any of the concerned countries.”~~

~~“Name: _____~~

~~Signature: _____~~

~~Date: _____”; and~~

- ~~7) The appropriate signatures for each custody transfer (e.g., transporter, importer, and owner or operator of the recovery facility).~~
- ~~e) Exporters also must comply with the special manifest requirements of Section 722.154(a), (b), (c), (e), and (i) and importers must comply with the import requirements of Subpart F of this Part.~~
- ~~d) Each U.S. person that has physical custody of the waste from the time the movement commences until it arrives at the recovery facility must sign the movement document (e.g., transporter, importer, and owner or operator of the recovery facility).~~
- ~~e) Within three working days after the receipt of imports subject to this Subpart H, the owner or operator of the U.S. recovery facility must send signed copies of the movement document to the exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460, and to the competent authorities of the country of export and country of transit. If the concerned U.S. recovery facility is an R12 or R13 recovery operation facility, as defined in Section 722.181, the facility owner or operator must retain the original of the movement document for three years.~~

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.185 Contracts (Repealed)

- ~~a) Trans-boundary movements of hazardous wastes subject to the Amber control procedures are prohibited unless they occur under the terms of a valid written contract, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Such~~

~~contracts or equivalent arrangements must be executed by the exporter and the owner or operator of the recovery facility, and must specify responsibilities for each. Contracts or equivalent arrangements are valid for the purposes of this Section only if persons assuming obligations under the contracts or equivalent arrangements have appropriate legal status to conduct the operations specified in the contract or equivalent arrangements.~~

- ~~b) Contracts or equivalent arrangements must specify the following names and USEPA identification numbers, where available:

 - ~~1) The generator of each type of waste;~~
 - ~~2) Each person that will have physical custody of the wastes;~~
 - ~~3) Each person that will have legal control of the wastes; and~~
 - ~~4) The recovery facility.~~~~

- ~~c) Contracts or equivalent arrangements must specify which party to the contract will assume responsibility for alternate management of the wastes if its disposition cannot be carried out as described in the notification of intent to export. In such cases, contracts must specify the following:

 - ~~1) That the person having actual possession or physical control over the wastes will immediately inform the exporter and the competent authorities of the country of export and country of import and, if the wastes are located in a country of transit, the competent authorities of that country; and~~
 - ~~2) That the person specified in the contract will assume responsibility for the adequate management of the wastes in compliance with applicable laws and regulations including, if necessary, arranging the return of wastes and, as the case may be, shall provide the notification for re-export.~~~~

- ~~d) Contracts must specify that the importer will provide the notification required in Section 722.182(c) prior to re-export of controlled wastes to a third country.~~

- ~~e) Contracts or equivalent arrangements must include provisions for financial guarantees, if required by the competent authorities of any country concerned, in accordance with applicable national or international law requirements.~~

~~BOARD NOTE: Financial guarantees so required are intended to provide for alternative recycling, disposal, or other means of sound management of the wastes in cases where arrangements for the shipment and the recovery operations cannot be carried out as foreseen. The U.S. does not require such financial guarantees at this time; however, some OECD member countries do. It is the responsibility of~~

~~the exporter to ascertain and comply with such requirements; in some cases, a transporter or importer may refuse to enter into the necessary contracts absent specific references or certifications to financial guarantees.~~

- ~~f) — Contracts or equivalent arrangements must contain provisions requiring each contracting party to comply with all applicable requirements of this Subpart H.~~
- ~~g) — Upon request by USEPA or the Agency, a U.S. exporter, importer, or recovery facility must submit to USEPA and the Agency copies of contracts, chain of contracts, or equivalent arrangements (when the movement occurs between parties controlled by the same corporate or legal entity). Information contained in the contracts or equivalent arrangements for which a claim of confidentiality is asserted in accordance with 35 Ill. Adm. Code 130 will be treated as confidential and will be disclosed by the Agency only as provided in 35 Ill. Adm. Code 130.~~

~~BOARD NOTE: Although the United States does not require routine submission of contracts at this time, OECD Guidance Manual allows OECD member countries to impose such requirements. When other OECD member countries require submission of partial or complete copies of the contract as a condition to granting consent to proposed movements, USEPA or the Agency will request the required information; absent submission of such information, some OECD member countries may deny consent for the proposed movement. Information submitted to USEPA for which a claim of confidentiality is asserted in accordance with 40 CFR 2.203(b) and 260.2 will be treated as confidential and will be disclosed by USEPA only as provided in 40 CFR 260.2.~~

~~(Source: Repealed at 42 Ill. Reg. _____, effective _____)~~

Section 722.186 Provisions Relating to Recognized Traders (Repealed)

- ~~a) — A recognized trader that takes physical custody of a waste and conducts recovery operations (including storage prior to recovery) is acting as the owner or operator of a recovery facility and must be so authorized in accordance with all applicable federal laws.~~
- ~~b) — A recognized trader acting as an exporter or importer for trans-boundary shipments of waste must comply with all the exporter or importer requirements of this Subpart H.~~

~~(Source: Repealed at 42 Ill. Reg. _____, effective _____)~~

Section 722.187 Reporting and Recordkeeping (Repealed)

- ~~a) — Annual reports. For all waste movements subject to this Subpart H, persons (e.g., exporters, recognized traders, etc.) that meet the definition of primary exporter in Section 722.151 or which initiate the movement documentation pursuant to~~

~~Section 722.184 must file an annual report with the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460 and the Illinois Environmental Protection Agency, Bureau of Land, Division of Land Pollution Control, P.O. Box 19276, Springfield, IL 62794, no later than March 1 of each year summarizing the types, quantities, frequency, and ultimate destination of all such hazardous waste exported during the previous calendar year. (If the primary exporter or the person that initiates the movement document under Section 722.184 is required to file an annual report for waste exports that are not covered under this Subpart H, the person filing may include all export information in one report provided the following information on exports of waste destined for recovery within the designated OECD member countries is contained in a separate Section.) Such reports must include all of the following information:~~

- ~~1) The USEPA identification number, name, and mailing and site address of the exporter filing the report;~~
- ~~2) The calendar year covered by the report;~~
- ~~3) The name and site address of each final recovery facility;~~
- ~~4) By final recovery facility, for each hazardous waste exported, a description of the hazardous waste, the USEPA hazardous waste number (from Subpart C or D of 35 Ill. Adm. Code 721); the OECD waste designation, as defined in Section 722.181, the USDOT hazard class; the name and USEPA identification number (where applicable) for each transporter used; the total amount of hazardous waste shipped pursuant to this Subpart H; and the number of shipments pursuant to each notification;~~
- ~~5) In even numbered years, for each hazardous waste exported, except for hazardous waste produced by exporters of greater than 100 kilograms (kg) but less than 1,000 kg in a calendar month, and except for hazardous waste for which information was already provided pursuant to Section 722.141:

 - ~~A) A description of the efforts undertaken during the year to reduce the volume and toxicity of the waste generated; and~~
 - ~~B) A description of the changes in volume and toxicity of the waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984; and~~~~
- ~~6) A certification signed by the person acting as primary exporter or initiator of the movement document under Section 722.184 that states as follows:~~

~~“I certify under penalty of law that I have personally examined and am familiar with the information submitted in this and all attached documents, and that based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the submitted information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment.”~~

~~b) Exception reports. Any person that meets the definition of primary exporter in Section 722.151 or which initiates the movement document under Section 722.184 must file with USEPA and the Agency an exception report in lieu of the requirements of Section 722.142 (if applicable) if any of the following occurs:~~

- ~~1) The person has not received a copy of the movement documentation signed by the transporter stating point of departure of the waste from the United States within 45 days from the date it was accepted by the initial transporter;~~
- ~~2) Within 90 days from the date the waste was accepted by the initial transporter, the exporter has not received written confirmation from the recovery facility that the hazardous waste was received; or~~
- ~~3) The waste is returned to the United States.~~

~~BOARD NOTE: The primary exporter must file the exception report required by this subsection (b) with USEPA at the following address: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.~~

~~e) Recordkeeping.~~

- ~~1) A person that meets the definition of primary exporter in Section 722.151 or which initiates the movement document under Section 722.184 must keep the following records:~~
 - ~~A) A copy of each notification of intent to export and all written consents obtained from the competent authorities of countries concerned, for a period of at least three years from the date the hazardous waste was accepted by the initial transporter;~~
 - ~~B) A copy of each annual report, for a period of at least three years from the due date of the report;~~
 - ~~C) A copy of any exception reports and a copy of each confirmation of delivery (i.e., movement document) sent by the recovery facility~~

to the exporter, for at least three years from the date the hazardous waste was accepted by the initial transporter or received by the recovery facility, whichever is applicable; and

D) — A copy of each certificate of recovery sent by the recovery facility to the exporter, for at least three years from the date that the recovery facility completed processing the waste shipment.

2) — The periods of retention referred to in this Section are extended automatically during the course of any unresolved enforcement action regarding the regulated activity or as requested by USEPA or the Agency.

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

Section 722.189 OECD Waste Lists (Repealed)

a) — General. For the purposes of this Subpart H, a waste is considered hazardous under U.S. national procedures, and hence subject to this Subpart H, if the following is true of the waste:

1) — The waste meets the federal definition of hazardous waste in 35 Ill. Adm. Code 721.103; and

2) — The waste is subject to any of the following requirements:

A) — The hazardous waste manifesting requirements of Subpart B of this Part, those of corresponding subpart B of 40 CFR 262, or those of a sister state that are analogous to subpart B of 40 CFR 262;

B) — The universal waste management standards of 35 Ill. Adm. Code 733, those of corresponding 40 CFR 273, or those of a sister state that are analogous to 40 CFR 273;

C) — The export requirements in the spent lead acid battery management standards of Subpart G of 35 Ill. Adm. Code 726, those of corresponding subpart G of 40 CFR 266, or those of a sister state that are analogous to the export requirements in subpart G of 40 CFR 266.

b) — If a waste is hazardous under subsection (a) of this Section, it is subject to the Amber control procedures, regardless of whether it is Amber waste, as defined in Section 722.181.

c) — The appropriate control procedures for hazardous wastes and hazardous waste mixtures are addressed in Section 722.182.

~~d) This subsection (d) corresponds with 40 CFR 262.89(e), which incorporates the OECD Guidance Manual by reference. This statement maintains structural consistency with the corresponding federal regulations.~~

(Source: Repealed at 42 Ill. Reg. _____, effective _____)

SUBPART K: ALTERNATIVE REQUIREMENTS FOR HAZARDOUS
WASTE DETERMINATION AND ACCUMULATION OF UNWANTED
MATERIAL FOR LABORATORIES OWNED BY ELIGIBLE ACADEMIC
ENTITIES

Section 722.300 Definitions

The following definitions apply for the purposes of this Subpart K:

~~“Central accumulation area” means an on-site hazardous waste accumulation area subject to Section 722.134(a) and (b), for a large quantity generator, or Section 722.134(d) through (f), for a small quantity generator. A central accumulation area at an eligible academic entity that chooses to be subject to this Subpart K must also comply with Section 722.311 when accumulating unwanted material or hazardous waste.~~

“College or University” means a private or public post-secondary degree-granting academic institution that is accredited by an accrediting agency listed annually by the U.S. Department of Education.

BOARD NOTE: The Department of Education maintains on-line lists of accrediting agencies on the Internet at the following address: www.ed.gov/admins/finaid/accred/accreditation_pg6.html#NationallyRecognized.

“Eligible academic entity” means a college or university, a non-profit research institute that is owned by or which has a formal written affiliation agreement with a college or university, or a teaching hospital that is owned by or which has a formal written affiliation agreement with a college or university.

“Formal written affiliation agreement” for a non-profit research institute means a written document that establishes a relationship between institutions for the purposes of research or education and which is signed by an authorized representative, as that term is defined in 35 Ill. Adm. Code 720.110, from each institution. A relationship that exists on a project-by-project or grant-by-grant basis is not considered a formal written affiliation agreement. “Formal written affiliation agreement” for a teaching hospital means a “master affiliation agreement” and “program letter of agreement,” as these terms are defined in the document entitled “Accreditation Council for Graduate Medical Education: Glossary of Terms,” incorporated by reference in 35 Ill. Adm. Code 720.111, with an accredited medical program or medical school.

“Laboratory” means an area owned by an eligible academic entity where relatively small quantities of chemicals and other substances are used on a non-production basis for teaching or research (or diagnostic purposes at a teaching hospital) and are stored and used in containers that are easily manipulated by one person. Photo laboratories, art studios, and field laboratories are laboratories within the meaning of this definition. Areas such as chemical stockrooms and preparatory laboratories that provide a support function to teaching or research laboratories (or diagnostic laboratories at teaching hospitals) are also laboratories within the meaning of this definition.

“Laboratory clean-out” means an evaluation of the inventory of chemicals and other materials in a laboratory that are no longer needed or which have expired and the subsequent removal of those chemicals or other unwanted materials from the laboratory. A clean-out may occur for several reasons. It may be on a routine basis (e.g., at the end of a semester or academic year) or as a result of a renovation, relocation, or change in laboratory supervisor or occupant. A regularly scheduled removal of unwanted material, as required by Section 722.308, does not qualify as a laboratory clean-out within the meaning of this definition.

“Laboratory worker” means a person who handles chemicals or unwanted material in a laboratory. This may include, but is not limited to, any member of faculty or staff, a post-doctoral fellow, an intern, a researcher, a technician, a supervisor or manager, or a principal investigator. A person does not need to be paid or otherwise compensated for his or her work in the laboratory to be considered a laboratory worker. An undergraduate or graduate student in a supervised classroom setting is not a laboratory worker.

“Non-profit research institute” means an organization that conducts research as its primary function and which files as a nonprofit organization under section 501(c)(3) of the federal tax code (26 USC 501(c)(3)).

“Reactive acutely hazardous unwanted material” means an unwanted material that is one of the acutely hazardous commercial chemical products listed in 35 Ill. Adm. Code 721.133(e) for reactivity.

“Teaching hospital” means a hospital that trains students to become physicians, nurses, or other health or laboratory personnel.

“Trained professional” means a person who has completed the applicable RCRA training requirements of 35 Ill. Adm. Code ~~722.117-725.116~~, for an LQG ~~a large quantity generator~~, or who is knowledgeable about normal operations and emergencies in accordance with Section ~~722.116-722.134(d)(5)(C)~~, for an SQG ~~a small quantity generator~~ or VSQG ~~conditionally exempt small quantity generator~~.

A trained professional may be an employee of the eligible academic entity or a contractor or vendor who meets the requisite training requirements.

“Unwanted material” means any chemical, mixtures of chemicals, products of experiments, or other material from a laboratory that is no longer needed, wanted, or usable in the laboratory and which is destined for hazardous waste determination by a trained professional. Unwanted material includes reactive acutely hazardous unwanted material, material that may eventually be determined not to be solid waste pursuant to 35 Ill. Adm. Code 721.102, or a hazardous waste pursuant to 35 Ill. Adm. Code 721.103. If an eligible academic entity elects to use another equally effective term in lieu of “unwanted material,” as allowed by Section 722.306(a)(1)(A), the equally effective term will have the same meaning, and the material designated by that term will be subject to the same requirements as “unwanted material” under this Subpart K.

“Working container” means a small container (i.e., two gallons (7.6 ℓ) or less) that is in use at a laboratory bench, hood, or other work station, to collect unwanted material from a laboratory experiment or procedure.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.301 Applicability

- a) LQGs Large quantity generators and SQGs small quantity generators. This Subpart K provides alternative requirements to the requirements set forth in Sections 722.111 and 722.115 722.134(e) for determination of hazardous waste and accumulation of hazardous waste in a laboratory owned by an eligible academic entity that chooses to be subject to this Subpart K, provided that the academic entity fulfills the notification requirements of Section 722.303.
- b) VSQGs Conditionally exempt small quantity generators. This Subpart K provides alternative requirements to the conditional exemption set forth in 35 Ill. Adm. Code 722.114 721.105(b) for the accumulation of hazardous waste in a laboratory owned by an eligible academic entity that chooses to be subject to this Subpart K, provided that the academic entity fulfills the notification requirements of Section 722.303.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.302 Opting into the Subpart K Requirements

- a) LQGs Large quantity generators and SQGs small quantity generators. An eligible academic entity has the option of complying with this Subpart K with respect to its laboratories, as an alternative to complying with the requirements set forth in Sections 722.111 and 722.115 722.134(e).

- b) ~~VSQGs~~~~Conditionally exempt small quantity generators~~. An eligible academic entity has the option of complying with this Subpart K with respect to its laboratories, as an alternative to complying with the conditional exemption of 35 Ill. Adm. Code ~~722.114-721.105(b)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.303 Notice of Election into the Subpart K Requirements

- a) If an eligible academic entity elects to become subject to the requirements of this Subpart K, it must notify the Agency and USEPA Region 5 of this election in writing using the Notification of RCRA Subtitle C Activities (Site Identification Form) (USEPA Form 8700-12) for all the laboratories that the eligible academic entity owns or operates under the same USEPA identification number. If the eligible academic entity is a VSQG ~~conditionally exempt small quantity generator~~ (~~CESQG~~) that does not have a USEPA identification number, the VSQG ~~CESQG~~ must notify the Agency and USEPA Region 5 that it has made this choice for all the laboratories that the eligible academic entity owns or operates that are onsite, as defined by 35 Ill. Adm. Code 720.110. If the eligible academic entity has multiple USEPA identification numbers, or if it is a VSQG ~~CESQG~~ with multiple sites, it must submit a separate notification (using USEPA Form 8700-12) for each USEPA identification number (or site, for a VSQG ~~CESQG~~) that it elects to become subject to the requirements of this Subpart K. The eligible academic entity must submit USEPA Form 8700-12 to the Agency and USEPA Region 5 before it begins operating under this Subpart K.

BOARD NOTE: Corresponding 40 CFR 262.203(a) requires the use of the “RCRA Subtitle C Site Identification Form (EPA Form 8700-12).” ~~This is the title that appears on the face of the form.~~ The title on the ~~pre-pended instructions for~~ USEPA Form 8700-12, however, is “Notification of RCRA Subtitle C Activity.” USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-andwww.epa.gov/osw/inforesources/data/form8700/8700-12.pdf. ~~Only the November 2009 version of USEPA Form 8700-12 includes a segment relating to the alternative standards for eligible academic entities.~~

- b) When submitting USEPA Form 8700-12, the eligible academic entity must, at a minimum, fill out each of the following fields on the form:

“1. Reason for Submittal”

“2. Site EPA identification number ~~ID Number~~” (except for a VSQG ~~conditionally exempt small quantity generator~~)

“3. Site Name”

“4. Site Location Information”

“5. Site Land Type”

“6. North American Industry Classification System (NAICS) Code(s) for the Site”

BOARD NOTE: See the definition of “NAICS Code” in 35 Ill. Adm. Code 720.110.

“7. Site Mailing Address”

“8. Site Contact Person”

“9. Operator and Legal Owner of the Site”

“10. Type of Regulated Waste Activity”

“13. Certification”

- c) An eligible academic entity must keep a copy of USEPA Form 8700-12, as filed with the Agency pursuant to subsection (a) ~~of this Section~~, on file at the eligible academic entity for as long as its laboratories are subject to this Subpart K.
- d) A teaching hospital that is not owned by a college or university must keep a copy of its formal written affiliation agreement with a college or university on file at the teaching hospital for as long as its laboratories are subject to this Subpart K.
- e) A non-profit research institute that is not owned by a college or university must keep a copy of its formal written affiliation agreement with a college or university on file at the non-profit research institute for as long as its laboratories are subject to this Subpart K.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.304 Notice of Withdrawal from the Subpart K Requirements

- a) If an eligible academic entity elects to no longer remain subject to the requirements of this Subpart K for all the laboratories that the eligible academic entity owns or operates under the same USEPA identification number, it elects to instead comply with the requirements set forth in Sections 722.111 and 722.115 ~~722.134(e)~~, which are the generally applicable standards for SQGs ~~small quantity generators~~ and LQGs ~~large quantity generators~~. An eligible academic entity must notify the Agency and USEPA Region 5 in writing of this election using the

USEPA Form 8700-12. If the eligible academic entity is a VSQG ~~CESQG~~ that does not have a USEPA identification number, it must notify the Agency and USEPA Region 5 that it has elected to withdraw from the requirements of this Subpart K for all of the laboratories that it owns or operates that are on site ~~on-site~~. The eligible academic entity that is a VSQG ~~CESQG~~ that makes this election must comply with the conditional exemption in 35 Ill. Adm. Code ~~722.114-721.105(b)~~. If the eligible academic entity has multiple USEPA identification numbers, or if it is a VSQG ~~CESQG~~ with multiple sites, it must submit a separate notification (using USEPA Form 8700-12) for each USEPA identification number (or site, for a VSQG ~~CESQG~~) that it elects to withdraw from the requirements of this Subpart K. The eligible academic entity that chooses to withdraw from the requirements of this Subpart K must submit USEPA Form 8700-12 to the Agency and USEPA Region 5 before it begins operating under the standards ~~requirements set forth in Sections 722.111 and 722.115-722.134(e)~~, which are the generally applicable standards for SQGs ~~small quantity generators~~ and LQGs ~~large quantity generators~~, or Section 722.114-35 Ill. Adm. Code ~~721.105(b)~~, which are the generally applicable standards for VSQGs ~~conditionally exempt small quantity generators~~.

BOARD NOTE: Corresponding 40 CFR 262.204(a) requires the use of the “RCRA Subtitle C Site Identification Form (EPA Form 8700-12).” ~~This is the title that appears on the face of the form.~~ The title on the ~~pre-pended instructions for~~ USEPA Form 8700-12, however, is “Notification of RCRA Subtitle C Activity.” USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and ~~www.epa.gov/osw/inforesources/data/form8700/8700-12.pdf~~. ~~Only the November 2009 version of USEPA Form 8700-12 includes a segment relating to the alternative standards for eligible academic entities.~~

- b) When submitting USEPA Form 8700-12, the eligible academic entity must, at a minimum, fill out each of the following fields on the form:

“1. Reason for Submittal”

“2. Site EPA identification number ~~ID Number~~” (except for a VSQG ~~conditionally exempt small quantity generator~~)

“3. Site Name”

“4. Site Location Information”

“5. Site Land Type”

“6. North American Industry Classification System (NAICS) Code(s) for the Site”

BOARD NOTE: See the definition of “NAICS Code” in 35 Ill. Adm. Code 720.110.

“7. Site Mailing Address”

“8. Site Contact Person”

“9. Operator and Legal Owner of the Site”

“10. Type of Regulated Waste Activity”

“13. Certification”

- c) An eligible academic entity must keep a copy of USEPA Form 8700-12, as filed with the Agency pursuant to subsection (a) ~~of this Section~~, on file at the eligible academic entity for three years after the date of the notification of withdrawal.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.306 Container Standards in the Laboratory

An eligible academic entity must manage containers of unwanted material while in the laboratory in accordance with the requirements in this Section.

- a) Labeling: The eligible academic entity must label containers of unwanted material as follows:
- 1) The following information must be affixed or attached to the container:
 - A) The words “unwanted material;”¹ or another equally effective term that is to be used consistently by the eligible academic entity and that is identified in Part I of the Laboratory Management Plan; and
 - B) Sufficient information to alert emergency responders to the contents of the container. Examples of information that would be sufficient to alert emergency responders to the contents of the container include, but are not limited to, the following:
 - i) The name of the chemicals; or
 - ii) The type or class of chemicals, such as organic solvents or halogenated organic solvents.

- 2) The following information may be affixed or attached to the container, but must be associated with the container if not attached to it:
 - A) The date on which the unwanted material first began accumulating in the container; and
 - B) Information sufficient to allow a trained professional to properly identify whether an unwanted material is a solid waste and a hazardous waste and to assign the proper USEPA waste-hazardous waste numbers codes to the material, pursuant to Section 722.111. Examples of information that would allow a trained professional to properly identify whether an unwanted material is a solid waste and hazardous waste include, but are not limited to, the following:
 - i) The name or description of the chemical contents or the composition of the unwanted material or, if known, the product of the chemical reaction;
 - ii) Whether the unwanted material has been used or is unused; and
 - iii) A description of the manner in which the chemical was produced or processed, if applicable.
- b) Management of Containers in the Laboratory. An eligible academic entity must properly manage containers of unwanted material in the laboratory in a way that assures safe storage of the unwanted material and which prevents leaks, spills, emissions to the air, adverse chemical reactions, and dangerous situations that may result in harm to human health or the environment. Proper container management must include the following actions:
 - 1) Containers must be maintained and kept in good condition, and damaged containers must be replaced, overpacked, or repaired;
 - 2) Containers must be compatible with their contents, in order to avoid reactions between the contents and the container; and they must be made of, or lined with, material that is compatible with the unwanted material, so that the container's integrity is not impaired; and
 - 3) Containers must be kept closed at all times, except under the following circumstances:
 - A) A container may be open when adding, removing, or bulking unwanted material;

- B) A working container may be open until the end of the procedure, until the end of the work shift, or until it is full, whichever comes first, at which time either the working container must be closed or its contents emptied into a separate container that is then closed; or
- C) A container may be open when venting of a container is necessary for either of the following reasons:
 - i) It is necessary for the proper operation of laboratory equipment, such as with inline collection of unwanted materials from high performance liquid chromatographs; or
 - ii) It is necessary to prevent dangerous situations, such as a build-up of extreme pressure.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.307 Personnel Training

An eligible academic entity must provide training to all individuals working in its laboratory, as follows:

- a) It must provide training for laboratory workers and students that is commensurate with their duties, so that the workers and students understand the requirements of this Subpart K and can implement them.
- b) An eligible academic entity may provide training for laboratory workers and students in a variety of ways, including, but not limited to, any of the following:
 - 1) Instruction by the professor or laboratory manager before or during an experiment;
 - 2) Formal classroom training;
 - 3) Electronic or written training;
 - 4) On-the-job training; or
 - 5) Written or oral exams.
- c) An eligible academic entity that is an LQG ~~a large quantity generator~~ (see Section 722.127) must maintain for the durations specified in 35 Ill. Adm. Code 725.116(e) documentation which is sufficient to demonstrate that training for all laboratory workers has occurred. Examples of documentation which demonstrates that training has occurred can include, but are not limited to, the following:

- 1) Sign-in or attendance sheets for training sessions;
 - 2) Syllabi for training sessions;
 - 3) Certificates of training completion; or
 - 4) Test results.
- d) A trained professional is required for either of the following tasks:
- 1) A trained professional must accompany the transfer of unwanted material and hazardous waste when the unwanted material and hazardous waste is removed from the laboratory; and
 - 2) A trained professional must make the hazardous waste determination for unwanted material, pursuant to Section 722.111(a) through (d).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.308 Removing Unwanted Material from the Laboratory

- a) Removing containers of unwanted material on a regular schedule. An eligible academic entity must do either of the following:
 - 1) It must remove all containers of unwanted material from each laboratory on a regular interval, not to exceed 12 ~~six~~ months; or
 - 2) It must remove containers of unwanted material from each laboratory within 12 ~~six~~ months after each container's accumulation start date.
- b) The eligible academic entity must specify in Part I of its Laboratory Management Plan whether it will comply with subsection (a)(1) or (a)(2) ~~of this Section~~ for the regular removal of unwanted material from its laboratories.
- c) The eligible academic entity must specify in Part II of its Laboratory Management Plan how it will comply with subsection (a)(1) or (a)(2) ~~of this Section~~ and how the eligible academic entity will develop a schedule for regular removals of unwanted material from its laboratories.
- d) Removing containers of unwanted material when volumes are exceeded.
 - 1) If a laboratory accumulates a total volume of unwanted material (including reactive acutely hazardous unwanted material) in excess of 55 gallons (208 ℓ) before the regularly scheduled removal, the eligible academic entity must ensure that the following requirements are fulfilled for all

containers of unwanted material in the laboratory (including reactive acutely hazardous unwanted material):

- A) The containers are marked on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) with the date on which 55 gallons (208 ℓ) was exceeded; and
 - B) The containers are removed from the laboratory within 10 calendar days after the date on which 55 gallons (208 ℓ) was exceeded, or on the date of the next regularly scheduled removal, whichever comes first.
- 2) If a laboratory accumulates more than one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or more than 1 kg (2.2 lbs) of solid reactive acutely hazardous unwanted material before the regularly scheduled removal, then the eligible academic entity must ensure that the following requirements are fulfilled for all containers of reactive acutely hazardous unwanted material:
- A) The containers are marked on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) with the date on which one quart (0.946 ℓ) or 1 kg was exceeded; and
 - B) The containers are removed from the laboratory within 10 calendar days after the date on which one quart (0.946 ℓ) or 1 kg was exceeded, or at the next regularly scheduled removal, whichever comes first.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.309 Hazardous Waste Determination and Removal of Unwanted Material from the Laboratory

- a) ~~LQGs large quantity generators and SQGs small quantity generators~~. An eligible academic entity that is an LQG a large quantity generator or an SQG a small quantity generator must ensure that a trained professional makes a hazardous waste determination, pursuant to Section 722.111, for unwanted material in any of the following areas within the time given for that area:
 - 1) In the laboratory, before the unwanted material is removed from the laboratory, in accordance with Section 722.310;
 - 2) At an on-site central accumulation area, within four calendar days after the waste arrives in the area, in accordance with Section 722.311; or

- 3) At an on-site interim status or permitted treatment, storage, or disposal facility, within four calendar days after the waste arrives in the facility, in accordance with Section 722.312.
- b) ~~VSQGs~~~~Conditionally exempt small quantity generators~~. An eligible academic entity that is a conditionally exempt small quantity generator must ensure that a trained professional makes a hazardous waste determination, pursuant to Section 722.111(a) through (d), for unwanted material in the laboratory before the unwanted material is removed from the laboratory, in accordance with Section 722.310.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.310 Hazardous Waste Determination in the Laboratory

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material in the laboratory, it must fulfill the following requirements:

- a) A trained professional must make the hazardous waste determination, pursuant to Section 722.111(a) through (d), before the unwanted material is removed from the laboratory.
- b) If an unwanted material is a hazardous waste, the eligible academic entity must do the following:
 - 1) It must write the words “hazardous waste” on the container label that is affixed or attached to the container, before the hazardous waste may be removed from the laboratory;
 - 2) It must write the appropriate USEPA hazardous waste numbers codes on the label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste is transported off-site; and
 - 3) It must count the hazardous waste toward the amount used to determine the eligible academic entity’s generator category status, pursuant to Section 722.113-35 Ill. Adm. Code 721.105(e) and (d), in the calendar month that the hazardous waste determination was made.
- c) A trained professional must accompany all hazardous waste that is transferred from the laboratory to an on-site central accumulation area or on-site interim status or permitted treatment, storage, or disposal facility.
- d) When hazardous waste is removed from the laboratory, the following requirements apply:

- 1) An eligible academic entity that is an LQG ~~a large quantity generator or an SQG a small quantity generator~~ must ensure that its hazardous waste is taken directly from the laboratory to an on-site central accumulation area or to an on-site interim status or permitted treatment, storage, or disposal facility, or the waste is transported off-site.
- 2) An eligible academic entity that is a VSQG ~~conditionally exempt small quantity generator~~ must ensure that its hazardous waste is taken directly from the laboratory to any of the types of facilities listed in Section 722.114-35 Ill. Adm. Code 721.105(f)(3), for acute hazardous waste, or 35 Ill. Adm. Code 721.105(g)(3), for hazardous waste.
- e) An unwanted material that is a hazardous waste is subject to all applicable hazardous waste regulations after it has been removed from the laboratory.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.311 Hazardous Waste Determination at an On-Site Central Accumulation Area

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material at an on-site central accumulation area, it must fulfill the following requirements:

- a) A trained professional must accompany all unwanted material that is transferred from the laboratory to an on-site central accumulation area.
- b) All unwanted material removed from the laboratory must be taken directly from the laboratory to the on-site central accumulation area.
- c) The unwanted material becomes subject to the generator accumulation regulations of Section ~~722.116-722.134(a) (or Section 722.134(j) and (k) for a Performance Track member)~~, for an SQG ~~a large quantity generator~~, or Section 722.117-722.134(d) through (f), for an LQG ~~a small quantity generator~~, as soon as the material arrives in the central accumulation area, except for the “hazardous waste” labeling requirements of Sections 722.116(b)(6) and 722.117(a)(5)-Section 722.134(a)(3) (or Section 722.134(j)(6) for a Performance Track member).
- d) A trained professional must determine, pursuant to Section 722.111(a) through (d), if the unwanted material is a hazardous waste within four calendar days after the unwanted material has arrived at the on-site central accumulation area.
- e) If the unwanted material is a hazardous waste, the eligible academic entity must fulfill the following requirements:

- 1) It must write the words “hazardous waste” on the container label that is affixed or attached to the container, within four calendar days after the unwanted material has arrived at the on-site central accumulation area and before the hazardous waste may be removed from that area;
- 2) It must write the appropriate USEPA hazardous waste numbers codes on the container label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste may be treated or disposed of on-site or transported offsite;
- 3) It must count the hazardous waste toward the amount used to determine the eligible academic entity’s generator category status, pursuant to 35 Ill. Adm. Code 722.113-724.105(e) and (d), in the calendar month that the hazardous waste determination was made; and
- 4) It must manage the hazardous waste according to all applicable hazardous waste regulations.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.312 Hazardous Waste Determination at an On-Site Treatment, Storage, or Disposal Facility

When an eligible academic entity makes the hazardous waste determination, pursuant to Section 722.111, for unwanted material at an on-site interim status or permitted treatment, storage, or disposal facility, it must fulfill the following requirements:

- a) A trained professional must accompany all unwanted material that is transferred from the laboratory to an on-site interim status or permitted treatment, storage, or disposal facility;
- b) All unwanted material removed from the laboratory must be taken directly from the laboratory to the on-site interim status or permitted treatment, storage, or disposal facility;
- c) The unwanted material becomes subject to the terms of the eligible academic entity’s hazardous waste permit or interim status as soon as it arrives at the on-site treatment, storage, or disposal facility;
- d) A trained professional must determine, pursuant to Section 722.111(a) through (d), if the unwanted material is a hazardous waste within four calendar days after the unwanted material has arrived at an on-site interim status or permitted treatment, storage or disposal facility; and

- e) If the unwanted material is a hazardous waste, the eligible academic entity must fulfill the following requirements:
- 1) It must write the words “hazardous waste” on the container label that is affixed or attached to the container within four calendar days after the unwanted material has arrived at the on-site interim status or permitted treatment, storage, or disposal facility and before the hazardous waste may be removed from that facility;
 - 2) It must write the appropriate USEPA hazardous waste numbers codes on the container label that is associated with the container (or on the label that is affixed or attached to the container, if that is preferred) before the hazardous waste may be treated or disposed of on-site or transported off-site;
 - 3) It must count the hazardous waste toward the amount used to determine the eligible academic entity’s generator category status, pursuant to 35 Ill. Adm. Code ~~722.113-721.105(e) and (d)~~ in the calendar month that the hazardous waste determination was made; and
 - 4) It must manage the hazardous waste according to all applicable hazardous waste regulations.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.313 Laboratory Clean-Outs

- a) Once in any 12-month period for each laboratory, an eligible academic entity may opt to conduct a laboratory clean-out that is subject to all the applicable requirements of this Subpart K, except that the following limitations apply:
- 1) If the volume of unwanted material in the laboratory exceeds 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or 1 kg (0.45 lb) of solid reactive acutely hazardous unwanted material), the eligible academic entity is not required to remove all unwanted materials from the laboratory within 10 calendar days after exceeding 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of liquid reactive acutely hazardous unwanted material or 1 kg (0.45 lb) of solid reactive acutely hazardous unwanted material), as required by Section 722.308. Instead, the eligible academic entity must remove all unwanted materials from the laboratory within 30 calendar days after the start of the laboratory clean-out;
 - 2) For the purposes of on-site accumulation, an eligible academic entity is not required to count toward its hazardous waste generator category status, pursuant to 35 Ill. Adm. Code ~~722.113-721.105(e) and (d)~~, a hazardous

waste that is an unused commercial chemical product (one that is listed in Subpart D of 35 Ill. Adm. Code 721 or which exhibits one or more of the characteristics set forth in Subpart C of 35 Ill. Adm. Code 721) that is solely generated during the laboratory clean-out. An unwanted material that is generated prior to the beginning of the laboratory clean-out and which is still in the laboratory at the time the laboratory clean-out commences must be counted toward hazardous waste generator category status, pursuant to 35 Ill. Adm. Code ~~722.113-721.105(c) and (d)~~, if it is determined to be hazardous waste;

- 3) For the purposes of off-site management, an eligible academic entity must count all of its hazardous waste, regardless of whether the hazardous waste was counted toward generator category status under subsection (a)(2) ~~of this Section~~, and if the eligible academic entity generates more than one kg per month of acute hazardous waste or more than 100 kg per month of non-acute hazardous waste (i.e., the VSQG conditionally exempt small quantity generator limits, as defined in 35 Ill. Adm. Code 720.110 ~~of 35 Ill. Adm. Code 721.105~~), the hazardous waste is subject to all applicable hazardous waste regulations when it is transported off site ~~off-site~~; and
 - 4) An eligible academic entity must document the activities of the laboratory clean-out. The documentation must, at a minimum, identify the laboratory being cleaned out, the date the laboratory clean-out began and ended, and the volume of hazardous waste generated during the laboratory clean-out. The eligible academic entity must maintain these records for a period of three years from the date on which the clean-out ended.
- b) For all other laboratory clean-outs conducted during the same 12-month period, an eligible academic entity is subject to all the applicable requirements of this Subpart K, including, but not limited to the following:
- 1) The requirement to remove all unwanted materials from the laboratory within 10 calendar days of exceeding 55 gallons (208 ℓ) (or one quart (0.946 ℓ) of reactive acutely hazardous unwanted material), as required by Section 722.308; and
 - 2) The requirement to count all hazardous waste, including unused hazardous waste, that is generated during the laboratory clean-out toward its hazardous waste generator category status, pursuant to 35 Ill. Adm. Code ~~722.113-721.105(c) and (d)~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.314 Laboratory Management Plan

An eligible academic entity must develop and retain a written Laboratory Management Plan, or revise an existing written plan. The Laboratory Management Plan is a site-specific document that describes how the eligible academic entity will manage unwanted materials in compliance with this Subpart K. An eligible academic entity may write one Laboratory Management Plan for all of the laboratories that it owns which have opted into this Subpart K, even if the laboratories are located at sites with different USEPA identification numbers. The Laboratory Management Plan must contain two parts, with a total of the nine elements identified in subsections (a) and (b) ~~of this Section~~. In Part I of its Laboratory Management Plan, an eligible academic entity must describe its procedures for each of the elements listed in subsection (a) ~~of this Section~~. An eligible academic entity must implement and comply with the specific provisions that it develops to address the elements in Part I of its Laboratory Management Plan. In Part II of its Laboratory Management Plan, an eligible academic entity must describe its best management practices for each of the elements listed in subsection (b) ~~of this Section~~. The specific actions taken by an eligible academic entity to implement each element in Part II of its Laboratory Management Plan may vary from the procedures described in the eligible academic entity's Laboratory Management Plan, without constituting a violation of this Subpart K. An eligible academic entity may include additional elements and best management practices in Part II of its Laboratory Management Plan if it so chooses.

- a) The eligible academic entity must implement and comply with the specific provisions of Part I of its Laboratory Management Plan. In Part I of its Laboratory Management Plan, an eligible academic entity must include the following information:
 - 1) Part I must describe procedures for container labeling in accordance with Section 722.306(a), as follows:
 - A) Identification whether the eligible academic entity will use the term "unwanted material" on the containers in the laboratory. If not, identification of an equally effective term that the eligible academic entity will consistently use in lieu of "unwanted material." The equally effective term, if used, has the same meaning as the term "unwanted material," and the material is subject to the same requirements as if it were called "unwanted material"; and
 - B) Identification of the manner in which information that is "associated with the container" will be imparted.
 - 2) Identification whether the eligible academic entity will comply with Section 722.308(a)(1) or (a)(2) for regularly scheduled removals of unwanted material from the laboratory.

- b) In Part II of its Laboratory Management Plan, an eligible academic entity must include the following information:
- 1) Description of its intended best practices for container labeling and management (see the required standards at Section 722.306);
 - 2) Description of its intended best practices for providing training for laboratory workers and students commensurate with their duties (see the required standards at Section 722.307(a));
 - 3) Description of its intended best practices for providing training to ensure safe on-site transfers of unwanted material and hazardous waste by trained professionals (see the required standards at Section 722.307(d)(1));
 - 4) Description of its intended best practices for removing unwanted material from the laboratory, including the following:
 - A) For regularly scheduled removals, a regular schedule for identifying and removing unwanted materials from its laboratories (see the required standards at Section 722.308(a)(1) and (a)(2));
 - B) For removals when maximum volumes are exceeded, the following:
 - i) Description of the eligible academic entity's intended best practices for removing unwanted materials from the laboratory within 10 calendar days after the date on which unwanted materials have exceeded their maximum volumes (see the required standards at Section 722.308(d)); and
 - ii) Description of its intended best practices for communicating that unwanted materials have exceeded their maximum volumes;
 - 5) Description of its intended best practices for making hazardous waste determinations, including specifying the duties of the individuals involved in the process (see the required standards at Sections 722.111(a) through (d) and 722.309 through 722.312);
 - 6) Describe its intended best practices for laboratory clean-outs, if the eligible academic entity plans to use the incentives for laboratory clean-outs provided in Section 722.313, including the following:
 - A) Procedures for conducting laboratory clean-outs (see the required standards at Section 722.313(a)(1) through (a)(3)); and

- B) Procedures for documenting laboratory clean-outs (see the required standards at Section 722.313(a)(4));
- 7) Description of the eligible academic entity's intended best practices for emergency prevention, including the following information:
- A) Procedures for emergency prevention, notification, and response that are appropriate to the hazards in the laboratory;
 - B) A list of chemicals that the eligible academic entity has, or is likely to have, that become more dangerous when they exceed their expiration date or as they degrade;
 - C) Procedures to safely dispose of chemicals that become more dangerous when they exceed their expiration date or as they degrade; and
 - D) Procedures for the timely characterization of unknown chemicals.
- c) An eligible academic entity must make its Laboratory Management Plan available to laboratory workers, students, or any others at the eligible academic entity who may request it.
- d) An eligible academic entity must review and revise its Laboratory Management Plan as needed.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 722.316 Non-Laboratory Hazardous Waste Generated at an Eligible Academic Entity

An eligible academic entity that generates hazardous waste outside of a laboratory is not eligible to manage that hazardous waste under this Subpart K, and either of the following is true of the waste:

- a) That hazardous waste remains subject to the generator requirements of Sections 722.111 and 722.115, ~~722.134(e) for an LQG a large quantity generator or an SQG a small quantity generator~~ (if the hazardous waste is managed in a satellite accumulation area), and all other applicable generator requirements of 35 Ill. Adm. Code 40 CFR-722; or
- b) That hazardous waste remains subject to the conditional exemption of 35 Ill. Adm. Code 722.114, 721.105(b) for a VSQG conditionally exempt small quantity generator.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART L: ALTERNATIVE STANDARDS FOR EPISODIC GENERATION

Section 722.330 Applicability

This subpart is applicable to VSQGs and SQGs, as defined in 35 Ill. Adm. Code 720.110.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.331 Definitions for This Subpart L

“Episodic event” means an activity or activities, either planned or unplanned, that does not normally occur during generator operations, resulting in an increase in the generation of hazardous wastes that exceeds the calendar month quantity limits for the generator’s usual category.

“Planned episodic event” means an episodic event that the generator planned and prepared for, including regular maintenance, tank cleanouts, short-term projects, and removal of excess chemical inventory.

“Unplanned episodic event” means an episodic event that the generator did not plan or reasonably did not expect to occur, including production process upsets, product recalls, accidental spills, or “acts of nature”, such as tornado, hurricane, or flood.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.332 Conditions for a Generator Managing Hazardous Waste from an Episodic Event

- a) VSQGs. A VSQG may maintain its existing generator category for hazardous waste generated during an episodic event provided that the generator complies with the following conditions:
- 1) The VSQG is limited to one episodic event per calendar year, unless the Agency has determined that an additional episodic event is necessary, as provided in Section 722.333;
 - 2) Notification. The VSQG must notify Agency no later than 30 calendar days prior to initiating a planned episodic event using USEPA Form 8700–12 (Notification of RCRA Subtitle C Activities (Site Identification From)). In the event of an unplanned episodic event, the generator must notify Agency within 72 hours of the unplanned event via phone, email, or fax and subsequently submit USEPA Form 8700–12. The generator must include the start date and end date of the episodic event, the reasons for the event and the types and estimated quantities of hazardous waste expected to be generated as a result of the episodic event, and the

generator must identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to an emergency in compliance with Section 722.116(b)(9)(A);

- 3) USEPA Identification Number. The VSQG must have a USEPA identification number or obtain a USEPA identification number using USEPA Form 8700-12;
- 4) Accumulation. A VSQG is prohibited from accumulating hazardous waste generated from an episodic event on drip pads or in containment buildings. When accumulating hazardous waste in containers and tanks the following conditions apply:
 - A) Containers. A VSQG accumulating in containers must mark or label its containers with the following:
 - i) The words “Episodic Hazardous Waste”;
 - ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labelling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111; and
 - iii) The date when the episodic event began, clearly visible for inspection on each container.
 - B) Tanks. A VSQG accumulating episodic hazardous waste in tanks must do the following:
 - i) Mark or label the tank with the words “Episodic Hazardous Waste”;
 - ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with subpart E (Labeling) and subpart F (Placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or

pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment, or other records to identify the date upon which each episodic event begins; and

iv) Keep inventory logs or records with the information required by subsection (a)(4)(B)(iii) on site and readily available for inspection.

C) The generator must manage hazardous waste in a manner that minimizes the possibility of a fire, explosion, or release of hazardous waste or hazardous waste constituents to the air, soil, or water;

i) Containers must be in good condition and compatible with the hazardous waste being accumulated in them. The generator must keep containers closed except to add or remove waste; and

ii) Tanks must be in good condition and compatible with the hazardous waste accumulated in them. Tanks must have procedures in place to prevent the overflow (e.g., be equipped with a means to stop inflow with systems such as a waste feed cutoff system or bypass system to a standby tank when hazardous waste is continuously fed into the tank). Tanks must be inspected at least once each operating day to ensure all applicable discharge control equipment, such as waste feed cutoff systems, bypass systems, and drainage systems are in good working order and to ensure that the generator operates the tank according to its design by reviewing the data gathered from monitoring equipment such as pressure and temperature gauges from the inspection.

5) The VSQG must comply with the hazardous waste manifest provisions of Subpart B when the VSQG sends its episodic event hazardous waste off site to a designated facility, as defined in 35 Ill. Adm. Code 720.110.

- 6) The VSQG has up to 60 calendar days from the start of the episodic event to manifest and send its hazardous waste generated from the episodic event to a designated facility, as defined in 35 Ill. Adm. Code 720.110.
- 7) A VSQG must maintain the following records for three years from the end date of the episodic event:
 - A) The beginning and end dates of the episodic event;
 - B) A description of the episodic event;
 - C) A description of the types and quantities of hazardous wastes generated during the event;
 - D) A description of how the hazardous waste was managed, as well as the name of the RCRA-designated facility that received the hazardous waste;
 - E) The names of hazardous waste transporters; and
 - F) The approval letter from the Agency if the generator requested the Agency under Section 722.333 to conduct one additional episodic event per calendar year.
- b) SOQs. An SOQ may maintain its existing generator category during an episodic event provided that the generator complies with the following conditions:
 - 1) The SOQ is limited to one episodic event per calendar year, unless the Agency has determined that an additional episodic event is necessary, as provided in Section 722.333;
 - 2) Notification. The SOQ must notify Agency no later than 30 calendar days prior to initiating a planned episodic event using USEPA Form 8700-12 (Notification of RCRA Subtitle C Activities (Site Identification Form)). In the event of an unplanned episodic event, the SOQ must notify Agency within 72 hours of the unplanned event via phone, email, or fax and subsequently submit USEPA Form 8700-12. The SOQ must include the start date and end date of the episodic event, the reasons for the event and the types and estimated quantities of hazardous wastes expected to be generated as a result of the episodic event, and the generator must identify a facility contact and emergency coordinator with 24-hour telephone access to discuss the notification submittal or respond to emergency;
 - 3) USEPA Identification Number. The SOQ must have a USEPA identification number or obtain a USEPA identification number using USEPA Form 8700-12; and

4) Accumulation by SQGs. An SQG is prohibited from accumulating hazardous wastes generated from an episodic event waste on drip pads or in containment buildings. When accumulating hazardous waste generated from an episodic event in containers and tanks, the following conditions apply:

A) Containers. An SQG accumulating episodic hazardous waste in containers must meet the standards at Section 722.116(b)(2) and must mark or label its containers with the following:

- i) The words “Episodic Hazardous Waste”;
- ii) An indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic); hazard communication consistent with the USDOT requirements at subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111. The SQG must also maintain both of the following; and
- iii) The date when the episodic event began, clearly visible for inspection on each container.

B) Tanks. An SQG accumulating episodic hazardous waste in tanks must meet the standards at Section 722.116(b)(3) and must do the following:

- i) Mark or label its tank with the words “Episodic Hazardous Waste”;
- ii) Mark or label its tanks with an indication of the hazards of the contents. Examples include, but are not limited to, the applicable hazardous waste characteristics (i.e., ignitable, corrosive, reactive, or toxic) listed in Subpart C or D of 35 Ill. Adm. Code 721; hazard communication consistent with USDOT requirements at subpart E (labeling) and subpart F (placarding) of 49 CFR 172, incorporated by reference in 35 Ill. Adm. Code 720.111; a hazard statement or pictogram consistent with 29 CFR 1910.1200 (Hazard

Communication), incorporated by reference in 35 Ill. Adm. Code 720.111; or a chemical hazard label consistent with NFPA 704, incorporated by reference in 35 Ill. Adm. Code 720.111;

iii) Use inventory logs, monitoring equipment or other records to identify the date upon which each period of accumulation begins and ends; and

iv) Keep inventory logs or records with the above information on site and available for inspection.

5) The SQG must treat hazardous waste generated from an episodic event on site or manifest and ship such hazardous waste off site to a designated facility (as defined by 35 Ill. Adm. Code 720.110) within 60 calendar days from the start of the episodic event.

6) The SQG must maintain the following records for three years from the end date of the episodic event:

A) The beginning and end dates of the episodic event;

B) A description of the episodic event;

C) A description of the types and quantities of hazardous wastes generated during the event;

D) A description of how the hazardous waste was managed as well as the name of the designated facility (as defined by 35 Ill. Adm. Code 720.110) that received the hazardous waste;

E) The names of hazardous waste transporters; and

F) The approval letter from the Agency if the generator requested the Agency under Section 722.333 to conduct one additional episodic event per calendar year.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.333 Request to Manage One Additional Episodic Event Per Calendar Year

a) After obtaining a provisional variance from the Agency, a generator may conduct a second episodic event not to exceed 60 days in a calendar year without impacting its generator category under the following conditions:

- 1) If a VSQG or SQG has already held a planned episodic event in a calendar year, the generator may conduct an additional unplanned episodic event in that calendar year. The generator must submit a written request for a provisional variance to the Agency within 72 hours after the unplanned event.
 - 2) If a VSQG or SQG has already held an unplanned episodic event in a calendar year. The generator must obtain a provisional variance from the Agency before beginning the additional planned episodic event.
- b) The generator must submit the written request using USEPA Form 8700-12, identifying it as a request for an additional episodic request. The written request must include the following information:
- 1) The reasons why an additional episodic event is needed and the nature of the episodic event;
 - 2) The estimated amount of hazardous waste to be managed from the event;
 - 3) How the generator will manage the hazardous waste;
 - 4) The estimated length of time needed to complete management of the hazardous waste generated from the episodic event—not to exceed 60 days; and
 - 5) Information regarding the previous episodic event managed by the generator, including the nature of the event, whether it was a planned or unplanned event, and how the generator complied with the conditions.
- BOARD NOTE: USEPA Form 8700-12 is available from the Agency, Bureau of Land (217-782-6762). It is also available on-line for download in PDF file format: www.epa.gov/hwgenerators/instructions-and-form-hazardous-waste-generators-transporters-and-treatment-storage-and.
- c) The generator must submit the written request to the Agency either on paper or electronically.
 - d) The generator must retain written approval in its records for three years from the date the episodic event ended.
 - e) If the Agency determines the following is true of the additional episodic event, the Agency must approve the request in writing:
 - 1) The prior episodic event meets the definition of a planned episodic event or unplanned episodic event in Section 722.331;

- 2) The additional episodic event meets the definition of a planned episodic event or unplanned episodic event in Section 722.331;
- 3) The additional episodic event fulfills the criteria of subsection (a)(1) or subsection (a)(2);
- 4) The generator is legitimately having episodic events, and the generator is using this Section for true episodic events and not as a way to regularly avoid managing hazardous waste at a higher generator category;
- 5) The generator will comply with the applicable requirements of Section 722.332(a)(4) through (a)(7) or (b)(4) through (b)(6); and
- 6) The generator will manage the hazardous waste in a way that no violation of the Act or Board regulations will occur.

BOARD NOTE: Any Agency determination made under this Section is not a "RCRA permit", as such is defined in 35 Ill. Adm. Code 702.110, and is not subject to the procedures of 35 Ill. Adm. Code 702, 703, or 705. A failure to obtain Agency approval as provided in this Section subjects the generator to higher generator category standards, and non-compliance may subject the generator to enforcement action.

(Source: Added at 42 Ill. Reg. _____, effective _____)

SUBPART M: PREPAREDNESS, PREVENTION, AND EMERGENCY
PROCEDURES FOR LARGE QUANTITY GENERATORS

Section 722.350 Applicability

The regulations of this Subpart M apply to those areas of an LQG where hazardous waste is generated or accumulated on site.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.351 Maintenance and Operation of Facility

An LQG must maintain and operate its facility in a manner that minimizes the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.352 Required Equipment

The LQG must equip all areas to which Section 722.350 deems this Subpart M applicable with the items in subsections (a) through (d) (unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified in this Section or the actual hazardous waste generation or accumulation area does not lend itself for safety reasons to have a particular kind of equipment specified in this Section). An LQG may determine the most appropriate locations within its facility to locate equipment necessary to prepare for and respond to emergencies. The LQG must have the appropriate of the following equipment:

- a) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
- b) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;
- c) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and
- d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.353 Testing and Maintenance of Equipment

The LQG must test and maintain all required communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment as necessary to assure their proper operation in time of emergency.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.354 Access to Communications or Alarm System

- a) Whenever hazardous waste is being poured, mixed, spread, or otherwise handled, all personnel involved in the operation must have immediate access (i.e., direct or unimpeded access) to an internal alarm or emergency communication device, either directly or through visual or voice contact with another employee, unless such a device is not required under Section 722.352.
- b) In the event there is just one employee on the premises while the facility is operating, the employee must have immediate access (i.e., direct or unimpeded access) to a device, such as a telephone (immediately available at the scene of

operation) or a hand-held two-way radio, capable of summoning external emergency assistance, unless such a device is not required under Section 722.352.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.355 Required Aisle Space

The LQG must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.356 Arrangements with Local Authorities

- a) The LQG must attempt to make arrangements with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, and local hospitals, taking into account the types and quantities of hazardous wastes handled at the facility. The LQG may make arrangements with the Local Emergency Planning Committee, if it is the appropriate organization with which to make arrangements.

BOARD NOTE: The State Emergency Response Commission (SERC) maintains an on-line listing of Local Emergency Planning Committees in Illinois by jurisdiction: www.illinois.gov/iema/Preparedness/SERC/Documents/LEPC_ReleaseReportingContactList.pdf.

- 1) An LQG attempting to make arrangements with its local fire department must determine the potential need for the services of the local police department, other emergency response teams, emergency response contractors, equipment suppliers and local hospitals.
- 2) As part of this coordination, the LQG must attempt to make arrangements, as necessary, to familiarize the above organizations with the layout of the facility, the properties of the hazardous waste handled at the facility and associated hazards, places where personnel would normally be working, entrances to roads inside the facility, and possible evacuation routes, as well as the types of injuries or illnesses which could result from fires, explosions, or releases at the facility.
- 3) Where more than one police or fire department might respond to an emergency, the LQG must attempt to make arrangements designating primary emergency authority to a specific fire or police department, and arrangements with any others to provide support to the primary emergency authority.

- b) The LQG must maintain records documenting the arrangements with the local fire department as well as any other organization necessary to respond to an emergency. This documentation must include documentation in the operating record that either confirms such arrangements actively exist or, in cases where no arrangements exist, confirms that the LQG attempted to make these arrangements.
- c) A facility possessing 24-hour response capabilities may seek a waiver from the authority having jurisdiction over the fire code within the State or facility's locality as far as needing to make arrangements with the local fire department, as well as any other organization necessary to respond to an emergency, provided that the waiver is documented in the operating record.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.360 Purpose and Implementation of Contingency Plan

- a) An LQG must have a contingency plan for the facility. The LQG must design the contingency plan to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.
- b) The LQG must carry out the provisions of the plan immediately whenever there is a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.361 Content of Contingency Plan

- a) The contingency plan must describe the actions required of facility personnel to comply with Sections 722.360 and 722.365 in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the facility.
- b) If the generator has already prepared a Spill Prevention, Control, and Countermeasures (SPCC) Plan in accordance with 40 CFR 112 or some other emergency or contingency plan, the generator needs only amend that plan to incorporate hazardous waste management provisions that are sufficient to comply with the standards of this Part. The generator may develop one contingency plan that meets all regulatory standards.

BOARD NOTE: USEPA recommends that the plan be based on the National Response Team's Integrated Contingency Plan Guidance ("One Plan"). The National Response Team published the Guidance at 61 Fed. Reg. 28642 (June 5, 1996).

- c) The plan must describe arrangements agreed to with the local police department, fire department, other emergency response teams, emergency response contractors, equipment suppliers, local hospitals, or the Local Emergency Planning Committee, if applicable, pursuant to Section 722.356.
- d) The plan must list names and emergency telephone numbers of all persons qualified to act as emergency coordinator (see Section 722.364), and the generator must keep this list up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. If the generator facility has an emergency coordinator continuously on duty because it operates 24 hours per day, every day of the year, the plan may list the staffed position (e.g., operations manager, shift coordinator, shift operations supervisor), as well as an emergency telephone number that will be answered at all times.
- e) The plan must include a list of all emergency equipment at the facility (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external), and decontamination equipment), where this equipment is required. The generator must keep this list up to date. In addition, the plan must include the location and a physical description of each item on the list, and a brief outline of its capabilities.
- f) The plan must include an evacuation plan for generator personnel where there is a possibility that evacuation could be necessary. This plan must describe signals to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires).

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.362 Copies of Contingency Plan

A copy of the contingency plan and all revisions to the plan must be maintained at the LQG facility, and the LQG must to the following:

- a) The LQG must submit a copy of the contingency plan and all revisions to all local emergency responders (i.e., police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services). The generator may also submit this document to the Local Emergency Planning Committee, as appropriate.
- b) An LQG that first becomes subject to these provisions or an LQG that is otherwise amending its contingency plan must at that time submit a quick reference guide of the contingency plan to the local emergency responders identified in subsection (a) or, as appropriate, the Local Emergency Planning Committee. The quick reference guide must include the following elements:

- 1) The types or names of hazardous wastes in layman's terms and the associated hazard associated with each hazardous waste present at any one time (e.g., toxic paint wastes, spent ignitable solvent, corrosive acid, etc.);
 - 2) The estimated maximum amount of each hazardous waste that may be present at any one time;
 - 3) The identification of any hazardous wastes where exposure would require unique or special treatment by medical or hospital staff;
 - 4) A map of the facility showing where hazardous wastes are generated, accumulated, and treated and routes for accessing these wastes;
 - 5) A street map of the facility in relation to surrounding businesses, schools and residential areas to understand how best to get to the facility and also evacuate citizens and workers;
 - 6) The locations of water supply (e.g., fire hydrants and their flow rate);
 - 7) The identification of on-site notification systems (e.g., a fire alarm that rings off site, smoke alarms, etc.); and
 - 8) The name of the emergency coordinators and 24/7 emergency telephone numbers or, in the case of a facility where an emergency coordinator is continuously on duty, the emergency telephone number for the emergency coordinator.
- c) A generator must update its quick reference guides, if necessary, whenever the contingency plan is amended and submit these documents to the local emergency responders identified in subsection (a) or, as appropriate, the Local Emergency Planning Committee.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.363 Amendment of Contingency Plan

The generator must review its contingency plan and immediately amend the plan, if necessary, whenever any of the following occurs:

- a) Applicable regulations are revised;
- b) The plan fails in an emergency;
- c) The generator facility changes—in its design, construction, operation, maintenance, or other circumstances—in a way that materially increases the

potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents or which changes the response necessary in an emergency;

- d) The list of emergency coordinators changes; or
- e) The list of emergency equipment changes.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.364 Emergency Coordinator

At all times, at least one employee must be either on the generator's premises or on call (i.e., available to respond to an emergency by reaching the facility within a short period of time) with the responsibility for coordinating all emergency response measures and implementing the necessary emergency procedures outlined in Section 722.365. Although responsibilities may vary depending on factors such as type and variety of hazardous wastes handled by the facility, as well as type and complexity of the facility, this emergency coordinator must be thoroughly familiar with all aspects of the generator's contingency plan, all operations and activities at the facility, the location and characteristics of hazardous waste handled, the location of all records within the facility, and the facility's layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan.

(Source: Added at 42 Ill. Reg. _____, effective _____)

Section 722.365 Emergency Procedures

- a) Whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) must immediately undertake the following actions:
 - 1) Activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and
 - 2) Notify appropriate state or local agencies with designated response roles if their help is needed.
- b) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of the facility records or manifests and, if necessary, by chemical analysis.
- c) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion. This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are

generated, the effects of any hazardous surface water run-offs from water or chemical agents used to control fire and heat-induced explosions, etc.).

- d) If the emergency coordinator determines that the facility has had a release, fire, or explosion which could threaten human health or the environment outside the facility, the emergency coordinator must report the findings as follows:
- 1) If the assessment indicates that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and
 - 2) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area or the National Response Center (using their 24-hour toll free number 800/424-8802). The report must include:
 - A) The name and telephone number of the reporter;
 - B) The name and address of the generator;
 - C) The time and type of incident (e.g., release, fire, etc.);
 - D) The name and quantity of materials involved, to the extent known;
 - E) The extent of injuries, if any; and
 - F) The possible hazards to human health or the environment outside the facility.
- e) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the generator's facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released hazardous waste, and removing or isolating containers.
- f) If the generator stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.
- g) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. Unless the generator can demonstrate, in accordance with 35 Ill. Adm. Code 721.103(c) or (d), that the recovered material is not a hazardous waste, then

it is a newly generated hazardous waste that must be managed in accordance with all the applicable requirements and conditions for exemption in 35 Ill. Adm. Code 722, 723, and 725.

- h) The emergency coordinator must ensure that the following is true in the affected areas of the facility:
- 1) No hazardous waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and
 - 2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.
- i) The generator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the generator must submit a written report on the incident to the Agency. The report must include the following information:
- 1) The name, address, and telephone number of the generator;
 - 2) The date, time, and type of incident (e.g., fire, explosion, etc.);
 - 3) The name and quantity of materials involved;
 - 4) The extent of injuries, if any;
 - 5) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and
 - 6) The estimated quantity and disposition of recovered material that resulted from the incident.

SUBPART A: GENERAL

Section 723.110 Scope

- a) These regulations establish standards which apply to persons transporting hazardous waste into, out of or through Illinois if the transportation requires a manifest under 35 Ill. Adm. Code 722.
- b) These regulations do not apply to on-site transportation of hazardous waste by generators or by owners or operators of permitted hazardous waste management facilities.

- c) A transporter of hazardous waste must also comply with 35 Ill. Adm. Code 722, “Standards Applicable to Generators of Hazardous Waste,” if either of the following occurs:
- 1) It transports hazardous waste into the United States from abroad; or
 - 2) It mixes hazardous waste of different DOT shipping descriptions by placing them into a single container.
- d) A transporter of hazardous waste ~~subject to the manifesting requirements of 35 Ill. Adm. Code 722 or the waste management standards of 35 Ill. Adm. Code 733~~ that is being imported from or exported to any other country of the countries listed in 35 Ill. Adm. Code 722.158(a)(1) for purposes of recovery or disposal is subject to this Subpart and to all other relevant requirements of 35 Ill. Adm. Code 722.Subpart H, including, but not limited to, 35 Ill. Adm. Code 722.183(d) and 722.184 for movement documents.
- e) The regulations in this Part do not apply to transportation during an explosives or munitions emergency response, conducted in accordance with 35 Ill. Adm. Code 724.101(g)(8)(A)(iv) or (g)(8)(D) or 35 Ill. Adm. Code 725.101(c)(11)(A)(iv) or (c)(11)(D), and 35 Ill. Adm. Code 703.121(a)(4) or (c).
- f) 35 Ill. Adm. Code 726.303 identifies how the requirements of this Part apply to military munitions classified as solid waste under 35 Ill. Adm. Code 726.302.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 723.112 Transfer Facility Requirements

- a) _____ A transporter ~~that who~~ stores manifested shipments of hazardous waste in containers meeting the independent requirements of 35 Ill. Adm. Code 722.130 at a transfer facility for a period of 10 ten days or less is not subject to regulations under 35 Ill. Adm. Code 702, 703, 724, 725, 727, or 728 with respect to the storage of those wastes.
- b) _____ When consolidating the contents of two or more containers with the same hazardous waste into a new container, or when combining and consolidating two different hazardous wastes that are compatible with each other, the transporter must mark its containers of 119 gallons (450 ℓ) or less capacity with the following information:
- 1) The words “Hazardous Waste”; and
 - 2) The applicable USEPA hazardous waste numbers in Subparts C and D of 35 Ill. Adm. Code 721, or in compliance with 35 Ill. Adm. Code 722.132(c).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: COMPLIANCE WITH THE MANIFEST SYSTEM AND
RECORDKEEPING

Section 723.120 The Manifest System

- a) No Acceptance Without acceptance without a Manifest manifest.
- 1) Manifest Requirement requirement. A transporter may not accept hazardous waste from a generator unless the transporter is also provided with a manifest form (USEPA Form 8700-22, and if necessary, USEPA Form 8700-22A) signed in accordance with the provisions of 35 Ill. Adm. Code 723.123, or is provided with an e-Manifest that is obtained, completed, and transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3) and signed with a valid and enforceable electronic signature as described in 35 Ill. Adm. Code 722.125.
 - 2) Exports. For exports of hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722, a transporter may not accept hazardous waste without a manifest signed by the generator in accordance with this Section, as appropriate, and for exports occurring under the terms of a consent issued by USEPA on or after December 31, 2016, a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d).
 - A) ~~In the case of exports other than those subject to Subpart H of 35 Ill. Adm. Code 722, a transporter may not accept such waste from a primary exporter or other person if the transporter knows that the shipment does not conform to the USEPA Acknowledgement of Consent; and unless, in addition to a manifest signed by the generator in accordance with this Section, the transporter must also be provided with a USEPA Acknowledgement of Consent that, except for shipment by rail, is attached to the manifest (or shipping paper for exports by water (bulk shipment)).~~
 - B) ~~For exports of hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722, a transporter may not accept hazardous waste without a tracking document that includes all information required by 35 Ill. Adm. Code 722.184.~~
 - 3) This subsection (a)(3) corresponds with 40 CFR 263.20(a)(3), an applicability statement that became obsolete for the purposes of the Illinois rules on September 6, 2006. This statement maintains structural parity with the corresponding federal regulations.

- 4) Use of e-Manifest—~~Legal Equivalence legal equivalence to Paper Forms paper forms for Participating Transporters participating transporters.~~ E-Manifests that are obtained, completed, and transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3), and used in accordance with this Section in lieu of USEPA Forms 8700-22 and 8700-22A, are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in these regulations to obtain, complete, sign, carry, provide, give, use, or retain a manifest.
- A) Any requirement in 35 Ill. Adm. Code 720 through 728 to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 35 Ill. Adm. Code 722.125.
 - B) Any requirement in 35 Ill. Adm. Code 720 through 728 to give, provide, send, forward, or return to another person a copy of the manifest is satisfied when a copy of an e-Manifest is transmitted to the other person by submission to the e-Manifest System.
 - C) Any requirement in 35 Ill. Adm. Code 720 through 728 for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an e-Manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the waste shipment, except that, to the extent that the hazardous materials regulation on shipping papers for carriage by public highway requires transporters of hazardous materials to carry a paper document to comply with 49 CFR 177.817, incorporated by reference in 35 Ill. Adm. Code 720.111, a hazardous waste transporter must carry one printed copy of the e-Manifest on the transport vehicle.
 - D) Any requirement in 35 Ill. Adm. Code 720 through 728 for a transporter to keep or retain a copy of a manifest is satisfied by the retention of an e-Manifest in the transporter's account on the e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or authorized state inspector.
 - E) No transporter may be held liable for the inability to produce an e-Manifest for inspection under this Section if that transporter can demonstrate that the inability to produce the e-Manifest is exclusively due to a technical difficulty with the USEPA e-Manifest System for which the transporter bears no responsibility.

BOARD NOTE: The Board has rendered the language “any requirement in these regulations” in corresponding 40 CFR 263.20(a)(4)(i) through (a)(4)(iv) ~~723.20(a)(4)(A) through (a)(4)(D)~~ as “any requirement in any provision of 35 Ill. Adm. Code 720 through 728” in the appropriate segments of this subsection (a)(4).

- 5) A transporter may participate in the e-Manifest System either by accessing the e-Manifest System from the transporter’s own electronic equipment, or by accessing the e-Manifest System from the equipment provided by a participating generator, by another transporter, or by a designated facility.
- 6) Special Procedures When e-Manifest Is Not Available ~~procedures when e-Manifest is not available~~. If after a manifest has been originated electronically and signed electronically by the initial transporter, and the e-Manifest System should become unavailable for any reason, then the following requirements apply:
 - A) The transporter in possession of the hazardous waste when the e-Manifest becomes unavailable must reproduce sufficient copies of the printed manifest that is carried on the transport vehicle pursuant to subsection (a)(4)(C)(i) ~~of this Section~~, or obtain and complete another paper manifest for this purpose. The transporter must reproduce sufficient copies to provide the transporter and all subsequent waste handlers with a copy for their files, plus two additional copies that will be delivered to the designated facility with the hazardous waste.
 - B) On each printed copy, the transporter must include a notation in the Special Handling and Additional Description space (Item 14) that the paper manifest is a replacement manifest for a manifest originated in the e-Manifest System, must include (if not pre-printed on the replacement manifest) the manifest tracking number of the e-Manifest that is replaced by the paper manifest, and must also include a brief explanation why the e-Manifest was not available for completing the tracking of the shipment electronically.
 - C) A transporter signing a replacement manifest to acknowledge receipt of the hazardous waste must ensure that each paper copy is individually signed and that a legible handwritten signature appears on each copy.
 - D) From the point at which the e-Manifest is no longer available for tracking the waste shipment, the paper replacement manifest copies must be carried, signed, retained as records, and given to a

subsequent transporter or to the designated facility, following the instructions, procedures, and requirements that apply to the use of all other paper manifests.

- 7) ~~Special Procedures~~ procedures for Electronic Signature Methods Undergoing Tests ~~electronic signature methods undergoing tests~~. If a transporter using an e-Manifest signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, then the transporter must sign the e-Manifest electronically and also sign with an ink signature the transporter acknowledgement of receipt of materials on the printed copy of the manifest that is carried on the vehicle in accordance with subsection (a)(4)(C)(i) ~~of this Section~~. This printed copy bearing the generator's and transporter's ink signatures must also be presented by the transporter to the designated facility to sign in ink to indicate the receipt of the waste materials or to indicate discrepancies. After the owner or operator of the designated facility has signed this printed manifest copy with its ink signature, the printed manifest copy must be delivered to the designated facility with the waste materials.
- 8) Imposition of user fee for e-Manifest use. A transporter that is a user of the e-Manifest System may be assessed a user fee by USEPA for the origination or processing of each e-Manifest. USEPA has stated that it will maintain and update from time-to-time the current schedule of e-Manifest user fees, which must be determined based on current and projected e-Manifest System costs and level of use of the e-Manifest System. USEPA has stated that it will publish the current schedule of e-Manifest user fees as an appendix to 40 CFR 262.
- b) Before transporting the hazardous waste, the transporter must sign and date the manifest acknowledging acceptance of the hazardous waste from the generator. The transporter must return a signed copy to the generator before leaving the generator's property.
- c) The transporter must ensure that the manifest accompanies the hazardous waste. In the case of exports occurring under the terms of a consent issued by USEPA to the exporter on or after December 31, 2016, the transporter must ensure that a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) also accompanies the hazardous waste. In the case of imports occurring under the terms of a consent issued by USEPA to the country of export or the importer on or after December 31, 2016, the transporter must ensure that a movement document that includes all information required by 35 Ill. Adm. Code 722.184(d) ~~In the case of exports, the transporter must ensure that a copy of the USEPA Acknowledgement of Consent~~ also accompanies the hazardous waste.

- d) A transporter that delivers a hazardous waste to another transporter or to the designated facility must do the following:
- 1) It must obtain the date of delivery and the handwritten signature of that transporter or of the owner or operator of the designated facility on the manifest;
 - 2) It must retain one copy of the manifest in accordance with Section 723.122; and
 - 3) It must give the remaining copies of the manifest to the accepting transporter or designated facility.
- e) Subsections (c), (d), and (f) do not apply to water (bulk shipment) transporters if all of the following are true:
- 1) The hazardous waste is delivered by water (bulk shipment) to the designated facility;
 - 2) A shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator certification and signatures) accompanies the hazardous waste and, for exports or imports occurring under the terms of a consent issued by USEPA, a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) or 722.184(d), a USEPA Acknowledgement of Consent accompanies the hazardous waste;
 - 3) The delivering transporter obtains the date of delivery and handwritten signature of the owner or operator designated facility on either the manifest or the shipping paper;
 - 4) The person delivering the hazardous waste to the initial water (bulk shipment) transporter obtains the date of delivery and signature of the water (bulk shipment) transporter on the manifest and forwards it to the designated facility; and
 - 5) A copy of the shipping paper or manifest is retained by each water (bulk shipment) transporter in accordance with Section 723.122.
- f) For shipments involving rail transportation, the following requirements apply instead of subsections (c), (d), and (e), which do not apply:
- 1) When accepting hazardous waste from a non-rail transporter, the initial rail transporter must do the following:

- A) It must sign and date the manifest acknowledging acceptance of the hazardous waste;
 - B) It must return a signed copy of the manifest to the non-rail transporter;
 - C) It must forward at least three copies of the manifest to the following entities:
 - i) The next non-rail transporter, if any;
 - ii) The designated facility, if the shipment is delivered to that facility by rail; or
 - iii) The last rail transporter designated to handle the waste in the United States;
 - D) It must retain one copy of the manifest and rail shipping paper in accordance with Section 723.122.
- 2) Rail transporters must ensure that a shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator certification and signatures) and, for exports or imports occurring under the terms of a consent issued by USEPA, a movement document that includes all information required by 35 Ill. Adm. Code 722.183(d) or 722.184(d), a USEPA Acknowledgement of Consent accompanies the hazardous waste at all times.

BOARD NOTE: Intermediate rail transporters are not required to sign ~~either~~ the manifest, movement document, or shipping paper.

- 3) When delivering hazardous waste to the designated facility, a rail transporter must do the following:
 - A) It must obtain the date of delivery and handwritten signature of the owner or operator of the designated facility on the manifest or the shipping paper (if the manifest has not been received by the facility); and
 - B) It must retain a copy of the manifest or signed shipping paper in accordance with Section 723.122.
- 4) When delivering hazardous waste to a non-rail transporter a rail transporter must do the following:

- A) It must obtain the date of delivery and the handwritten signature of the next non-rail transporter on the manifest; and
 - B) It must retain a copy of the manifest in accordance with Section 723.122.
- 5) Before accepting hazardous waste from a rail transporter, a non-rail transporter must sign and date the manifest and provide a copy to the rail transporter.
- g) Transporters that transport hazardous waste out of the United States must do the following:
- 1) Sign and date the manifest in the International Shipments block to indicate the date that the hazardous waste left the United States;
 - 2) Retain one copy in accordance with Section 723.122(d);
 - 3) Return a signed copy of the manifest to the generator; and
 - 4) For paper manifests only, the transporter must do the following:~~Give a copy of the manifest to a U.S. Customs official at the point of departure from the United States.~~
 - A) Send a copy of the manifest to the e-Manifest System in accordance with the allowable methods specified in 35 Ill. Adm. Code 724.171(a)(2)(E); and
 - B) For shipments initiated prior to December 31, 2017, when instructed by the exporter to do so, give a copy of the manifest to a U.S. Customs official at the point of departure from the United States.
- h) A transporter transporting hazardous waste from a generator that generates greater than 100 ~~kg (220 lbs) kilograms~~ but less than 1,000 ~~kg (2,200 lbs) kilograms~~ of hazardous waste in a calendar month need not comply with this Section or Section 723.122 provided that:
- 1) The waste is being transported pursuant to a reclamation agreement provided for in 35 Ill. Adm. Code 722.120(e);
 - 2) The transporter records, on a log or shipping paper, the following information for each shipment:
 - A) The name, address and USEPA Identification Number (35 Ill. Adm. Code ~~722.118-722.112~~) of the generator of the waste;

- B) The quantity of waste accepted;
 - C) All shipping information required by the United States Department of Transportation;
 - D) The date the waste is accepted; and
- 3) The transporter carries this record when transporting waste to the reclamation facility; and
 - 4) The transporter retains these records for a period of at least three years after termination or expiration of the agreement.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 723.121 Compliance with the Manifest

- a) The transporter must deliver the entire quantity of hazardous waste which he has accepted from a generator or a transporter to:
 - 1) The designated facility listed on the manifest; or
 - 2) The alternate designated facility, if the hazardous waste cannot be delivered to the designated facility because an emergency prevents delivery; or
 - 3) The next designated transporter; or
 - 4) The place outside the United States designated by the generator.
- b) Non-Delivery ~~Non-delivery of the Hazardous Waste~~ ~~hazardous waste.~~
 - 1) If the hazardous waste cannot be delivered in accordance with subsection (a) ~~of this Section~~ because of an emergency condition other than rejection of the waste by the designated facility, then the transporter must contact the generator for further directions and must revise the manifest according to the generator's instructions.
 - 2) If hazardous waste is rejected by the designated facility while the transporter is on the premises of the designated facility, then the transporter must obtain the following, as appropriate:
 - A) For a partial load rejection or for regulated quantities of container residues: a copy of the original manifest that includes the facility's date and signature, the manifest tracking number of the new manifest that will accompany the shipment, and a description of

the partial rejection or container residue in the discrepancy block of the original manifest. The transporter must retain a copy of this manifest in accordance with Section 723.122 and give the remaining copies of the original manifest to the rejecting designated facility. If the transporter is forwarding the rejected part of the shipment or a regulated container residue to an alternate facility or returning it to the generator, the transporter must obtain a new manifest to accompany the shipment, and the new manifest must include all of the information required in 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or (f)(1) through (f)(6) or 725.172(e)(1) through (e)(6) or (f)(1) through (f)(6).

- B) For a full load rejection that will be taken back by the transporter: a copy of the original manifest that includes the rejecting facility's signature and date attesting to the rejection, the description of the rejection in the discrepancy block of the manifest, and the name, address, phone number, and USEPA identification number for the alternate facility or generator to whom the shipment must be delivered. The transporter must retain a copy of the manifest in accordance with Section 723.122, and give a copy of the manifest containing this information to the rejecting designated facility. If the original manifest is not used, then the transporter must obtain a new manifest for the shipment and comply with 35 Ill. Adm. Code 724.172(e)(1) through (e)(6) or (f)(1) through (f)(6) or 725.172(e)(1) through (e)(6) or (f)(1) through (f)(6).

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 723.125 Electronic Manifest Signatures---

- a) e-Manifest signatures must meet the criteria described in 35 Ill. Adm. Code 722.125.
- b) This subsection (b) corresponds with 40 CFR 263.25(b), a provision that USEPA has marked "reserved:". This statement maintains structural consistency with the corresponding federal rule.

TITLE 35: ENVIRONMENTAL PROTECTION
SUBTITLE G: WASTE DISPOSAL
CHAPTER I: POLLUTION CONTROL BOARD
SUBCHAPTER c: HAZARDOUS WASTE OPERATING REQUIREMENTS

PART 724
STANDARDS FOR OWNERS AND OPERATORS OF HAZARDOUS WASTE
TREATMENT, STORAGE, AND DISPOSAL FACILITIES

SUBPART A: GENERAL PROVISIONS

Section	
724.101	Purpose, Scope, and Applicability
724.103	Relationship to Interim Status Standards
724.104	Electronic Reporting

SUBPART B: GENERAL FACILITY STANDARDS

Section	
724.110	Applicability
724.111	USEPA Identification Number
724.112	Required Notices
724.113	General Waste Analysis
724.114	Security
724.115	General Inspection Requirements
724.116	Personnel Training
724.117	General Requirements for Ignitable, Reactive, or Incompatible Wastes
724.118	Location Standards
724.119	Construction Quality Assurance Program

SUBPART C: PREPAREDNESS AND PREVENTION

Section	
724.130	Applicability
724.131	Design and Operation of Facility
724.132	Required Equipment
724.133	Testing and Maintenance of Equipment
724.134	Access to Communications or Alarm System
724.135	Required Aisle Space
724.137	Arrangements with Local Authorities

SUBPART D: CONTINGENCY PLAN AND EMERGENCY PROCEDURES

Section	
724.150	Applicability
724.151	Purpose and Implementation of Contingency Plan
724.152	Content of Contingency Plan
724.153	Copies of Contingency Plan
724.154	Amendment of Contingency Plan

- 724.155 Emergency Coordinator
- 724.156 Emergency Procedures

SUBPART E: MANIFEST SYSTEM, RECORDKEEPING AND REPORTING

Section

- 724.170 Applicability
- 724.171 Use of Manifest System
- 724.172 Manifest Discrepancies
- 724.173 Operating Record
- 724.174 Availability, Retention, and Disposition of Records
- 724.175 Annual Facility Activities Report
- 724.176 Unmanifested Waste Report
- 724.177 Additional Reports

SUBPART F: RELEASES FROM SOLID WASTE MANAGEMENT UNITS

Section

- 724.190 Applicability
- 724.191 Required Programs
- 724.192 Groundwater Protection Standard
- 724.193 Hazardous Constituents
- 724.194 Concentration Limits
- 724.195 Point of Compliance
- 724.196 Compliance Period
- 724.197 General Groundwater Monitoring Requirements
- 724.198 Detection Monitoring Program
- 724.199 Compliance Monitoring Program
- 724.200 Corrective Action Program
- 724.201 Corrective Action for Solid Waste Management Units

SUBPART G: CLOSURE AND POST-CLOSURE CARE

Section

- 724.210 Applicability
- 724.211 Closure Performance Standard
- 724.212 Closure Plan; Amendment of Plan
- 724.213 Closure; Time Allowed For Closure
- 724.214 Disposal or Decontamination of Equipment, Structures, and Soils
- 724.215 Certification of Closure
- 724.216 Survey Plat
- 724.217 Post-Closure Care and Use of Property
- 724.218 Post-Closure Care Plan; Amendment of Plan
- 724.219 Post-Closure Notices
- 724.220 Certification of Completion of Post-Closure Care

SUBPART H: FINANCIAL REQUIREMENTS

Section	
724.240	Applicability
724.241	Definitions of Terms as Used in This Subpart
724.242	Cost Estimate for Closure
724.243	Financial Assurance for Closure
724.244	Cost Estimate for Post-Closure Care
724.245	Financial Assurance for Post-Closure Care
724.246	Use of a Mechanism for Financial Assurance of Both Closure and Post-Closure Care
724.247	Liability Requirements
724.248	Incapacity of Owners or Operators, Guarantors, or Financial Institutions
724.251	Wording of the Instruments

SUBPART I: USE AND MANAGEMENT OF CONTAINERS

Section	
724.270	Applicability
724.271	Condition of Containers
724.272	Compatibility of Waste with Container
724.273	Management of Containers
724.274	Inspections
724.275	Containment
724.276	Special Requirements for Ignitable or Reactive Waste
724.277	Special Requirements for Incompatible Wastes
724.278	Closure
724.279	Air Emission Standards

SUBPART J: TANK SYSTEMS

Section	
724.290	Applicability
724.291	Assessment of Existing Tank System Integrity
724.292	Design and Installation of New Tank Systems or Components
724.293	Containment and Detection of Releases
724.294	General Operating Requirements
724.295	Inspections
724.296	Response to Leaks or Spills and Disposition of Leaking or Unfit-for-Use Tank Systems
724.297	Closure and Post-Closure Care
724.298	Special Requirements for Ignitable or Reactive Waste
724.299	Special Requirements for Incompatible Wastes
724.300	Air Emission Standards

SUBPART K: SURFACE IMPOUNDMENTS

Section	
724.320	Applicability

724.321	Design and Operating Requirements
724.322	Action Leakage Rate
724.323	Response Actions
724.326	Monitoring and Inspection
724.327	Emergency Repairs; Contingency Plans
724.328	Closure and Post-Closure Care
724.329	Special Requirements for Ignitable or Reactive Waste
724.330	Special Requirements for Incompatible Wastes
724.331	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027
724.332	Air Emission Standards

SUBPART L: WASTE PILES

Section	
724.350	Applicability
724.351	Design and Operating Requirements
724.352	Action Leakage Rate
724.353	Response Action Plan
724.354	Monitoring and Inspection
724.356	Special Requirements for Ignitable or Reactive Waste
724.357	Special Requirements for Incompatible Wastes
724.358	Closure and Post-Closure Care
724.359	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART M: LAND TREATMENT

Section	
724.370	Applicability
724.371	Treatment Program
724.372	Treatment Demonstration
724.373	Design and Operating Requirements
724.376	Food-Chain Crops
724.378	Unsaturated Zone Monitoring
724.379	Recordkeeping
724.380	Closure and Post-Closure Care
724.381	Special Requirements for Ignitable or Reactive Waste
724.382	Special Requirements for Incompatible Wastes
724.383	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART N: LANDFILLS

Section	
724.400	Applicability
724.401	Design and Operating Requirements
724.402	Action Leakage Rate

724.403	Monitoring and Inspection
724.404	Response Actions
724.409	Surveying and Recordkeeping
724.410	Closure and Post-Closure Care
724.412	Special Requirements for Ignitable or Reactive Waste
724.413	Special Requirements for Incompatible Wastes
724.414	Special Requirements for Bulk and Containerized Liquids
724.415	Special Requirements for Containers
724.416	Disposal of Small Containers of Hazardous Waste in Overpacked Drums (Lab Packs)
724.417	Special Requirements for Hazardous Wastes F020, F021, F022, F023, F026, and F027

SUBPART O: INCINERATORS

Section	
724.440	Applicability
724.441	Waste Analysis
724.442	Principal Organic Hazardous Constituents (POHCs)
724.443	Performance Standards
724.444	Hazardous Waste Incinerator Permits
724.445	Operating Requirements
724.447	Monitoring and Inspections
724.451	Closure

SUBPART S: SPECIAL PROVISIONS FOR CLEANUP

Section	
724.650	Applicability of Corrective Action Management Unit Regulations
724.651	Grandfathered Corrective Action Management Units
724.652	Corrective Action Management Units
724.653	Temporary Units
724.654	Staging Piles
724.655	Disposal of CAMU-Eligible Wastes in Permitted Hazardous Waste Landfills

SUBPART W: DRIP PADS

Section	
724.670	Applicability
724.671	Assessment of Existing Drip Pad Integrity
724.672	Design and Installation of New Drip Pads
724.673	Design and Operating Requirements
724.674	Inspections
724.675	Closure

SUBPART X: MISCELLANEOUS UNITS

Section	
724.700	Applicability

724.701	Environmental Performance Standards
724.702	Monitoring, Analysis, Inspection, Response, Reporting, and Corrective Action
724.703	Post-Closure Care

SUBPART AA: AIR EMISSION STANDARDS FOR PROCESS VENTS

Section

724.930	Applicability
724.931	Definitions
724.932	Standards: Process Vents
724.933	Standards: Closed-Vent Systems and Control Devices
724.934	Test Methods and Procedures
724.935	Recordkeeping Requirements
724.936	Reporting Requirements

SUBPART BB: AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS

Section

724.950	Applicability
724.951	Definitions
724.952	Standards: Pumps in Light Liquid Service
724.953	Standards: Compressors
724.954	Standards: Pressure Relief Devices in Gas/Vapor Service
724.955	Standards: Sampling Connecting Systems
724.956	Standards: Open-ended Valves or Lines
724.957	Standards: Valves in Gas/Vapor or Light Liquid Service
724.958	Standards: Pumps, Valves, Pressure Relief Devices, and Other Connectors
724.959	Standards: Delay of Repair
724.960	Standards: Closed-Vent Systems and Control Devices
724.961	Alternative Percentage Standard for Valves
724.962	Skip Period Alternative for Valves
724.963	Test Methods and Procedures
724.964	Recordkeeping Requirements
724.965	Reporting Requirements

SUBPART CC: AIR EMISSION STANDARDS FOR TANKS, SURFACE
IMPOUNDMENTS, AND CONTAINERS

Section

724.980	Applicability
724.981	Definitions
724.982	Standards: General
724.983	Waste Determination Procedures
724.984	Standards: Tanks
724.985	Standards: Surface Impoundments
724.986	Standards: Containers
724.987	Standards: Closed-Vent Systems and Control Devices
724.988	Inspection and Monitoring Requirements

- 724.989 Recordkeeping Requirements
- 724.990 Reporting Requirements
- 724.991 Alternative Control Requirements for Tanks (Repealed)

SUBPART DD: CONTAINMENT BUILDINGS

Section

- 724.1100 Applicability
- 724.1101 Design and Operating Standards
- 724.1102 Closure and Post-Closure Care

SUBPART EE: HAZARDOUS WASTE MUNITIONS AND EXPLOSIVES STORAGE

Section

- 724.1200 Applicability
- 724.1201 Design and Operating Standards
- 724.1202 Closure and Post-Closure Care

- 724.APPENDIX A Recordkeeping Instructions
- 724.APPENDIX B EPA Report Form and Instructions (Repealed)
- 724.APPENDIX D Cochran's Approximation to the Behrens-Fisher Student's T-Test

SUBPART A: GENERAL PROVISIONS

Section 724.101 Purpose, Scope, and Applicability

- a) The purpose of this Part is to establish minimum standards that define the acceptable management of hazardous waste.
- b) The standards in this Part apply to owners and operators of all facilities that treat, store, or dispose of hazardous waste, except as specifically provided otherwise in this Part or 35 Ill. Adm. Code 721.
- c) This Part applies to a person disposing of hazardous waste by means of ocean disposal subject to a permit issued pursuant to the federal Marine Protection, Research and Sanctuaries Act (33 USC 1401 et seq.) only to the extent they are included in a RCRA permit by rule granted to such a person pursuant to 35 Ill. Adm. Code 703.141. A "RCRA permit" is a permit required by Section 21(f) of the Environmental Protection Act ~~{415 ILCS 5/21(f)}~~ and 35 Ill. Adm. Code 703.121.

BOARD NOTE: This Part does apply to the treatment or storage of hazardous waste before it is loaded onto an ocean vessel for incineration or disposal at sea.

- d) This Part applies to a person disposing of hazardous waste by means of underground injection subject to a permit issued by the Agency pursuant to Section 12(g) of the Environmental Protection Act ~~{415 ILCS 5/12(g)}~~ only to the extent they are required by Subpart F of 35 Ill. Adm. Code 704.

BOARD NOTE: This Part does apply to the above-ground treatment or storage of hazardous waste before it is injected underground.

- e) This Part applies to the owner or operator of a POTW (publicly owned treatment works) that treats, stores, or disposes of hazardous waste only to the extent included in a RCRA permit by rule granted to such a person pursuant to 35 Ill. Adm. Code 703.141.
- f) This subsection (f) corresponds with 40 CFR 264.1(f), which provides that the federal regulations do not apply to T/S/D activities in authorized states, except under limited, enumerated circumstances. This statement maintains structural consistency with USEPA rules.
- g) This Part does not apply to the following:
 - 1) The owner or operator of a facility permitted by the Agency pursuant to Section 21 of the Environmental Protection Act ~~[415 ILCS 5/21]~~ to manage municipal or industrial solid waste, if the only hazardous waste the facility treats, stores, or disposes of is excluded from regulation pursuant to this Part by 35 Ill. Adm. Code 722.114 ~~721.105~~.

BOARD NOTE: The owner or operator may be subject to 35 Ill. Adm. Code 807 and may have to have a supplemental permit pursuant to 35 Ill. Adm. Code 807.210.

- 2) The owner or operator of a facility managing recyclable materials described in 35 Ill. Adm. Code 721.106(a)(2) through (a)(4) (except to the extent that requirements of this Part are referred to in Subpart C, F, G, or H of 35 Ill. Adm. Code 726 or 35 Ill. Adm. Code 739).
- 3) A generator accumulating waste on-site in compliance with 35 Ill. Adm. Code 722.114, 722.115, 722.116, or 722.117 ~~722.134~~.
- 4) A farmer disposing of waste pesticides from the farmer's own use in compliance with 35 Ill. Adm. Code 722.170.
- 5) The owner or operator of a totally enclosed treatment facility, as defined in 35 Ill. Adm. Code 720.110.
- 6) The owner or operator of an elementary neutralization unit or a wastewater treatment unit, as defined in 35 Ill. Adm. Code 720.110, provided that if the owner or operator is diluting hazardous ignitable (D001) wastes (other than the D001 High TOC Subcategory defined in Table T to 35 Ill. Adm. Code 728) or reactive (D003) waste to remove the characteristic before land disposal, the owner or operator must comply with the requirements set out in Section 724.117(b).

- 7) This subsection (g)(7) corresponds with 40 CFR 264.1(g)(7), reserved by USEPA. This statement maintains structural consistency with USEPA rules.
- 8) Immediate Response ~~response~~.
 - A) Except as provided in subsection (g)(8)(B) ~~of this Section~~, a person engaged in treatment or containment activities during immediate response to any of the following situations:
 - i) A discharge of a hazardous waste;
 - ii) An imminent and substantial threat of a discharge of hazardous waste;
 - iii) A discharge of a material that becomes a hazardous waste when discharged; or
 - iv) An immediate threat to human health, public safety, property, or the environment from the known or suspected presence of military munitions, other explosive material, or an explosive device, as determined by an explosives or munitions emergency response specialist as defined in 35 Ill. Adm. Code 720.110.
 - B) An owner or operator of a facility otherwise regulated by this Part must comply with all applicable requirements of Subparts C and D ~~of this Part~~.
 - C) Any person that is covered by subsection (g)(8)(A) ~~of this Section~~ and that continues or initiates hazardous waste treatment or containment activities after the immediate response is over is subject to all applicable requirements of this Part and 35 Ill. Adm. Code 702, 703, and 705 for those activities.
 - D) In the case of an explosives or munitions emergency response, if a federal, State, or local official acting within the scope of his or her official responsibilities or an explosives or munitions emergency response specialist determines that immediate removal of the material or waste is necessary to adequately protect human health or the environment, that official or specialist may authorize the removal of the material or waste by transporters that do not have USEPA identification numbers and without the preparation of a manifest. In the case of emergencies involving military munitions, the responding military emergency response specialist's organizational unit must retain records for three years identifying

the dates of the response, the responsible persons responding, the type and description of material addressed, and its disposition.

- 9) A transporter storing manifested shipments of hazardous waste in containers meeting 35 Ill. Adm. Code 722.130 at a transfer facility for a period of ten days or less.
- 10) The addition of absorbent materials to waste in a container (as defined in 35 Ill. Adm. Code 720) or the addition of waste to absorbent material in a container, provided these actions occur at the time waste is first placed in the container, and Sections 724.117(b), 724.271, and 724.272 are complied with.
- 11) A universal waste handler or universal waste transporter (as defined in 35 Ill. Adm. Code 720.110) that handles any of the wastes listed below is subject to regulation pursuant to 35 Ill. Adm. Code 733 when handling the following universal wastes:
 - A) Batteries, as described in 35 Ill. Adm. Code 733.102;
 - B) Pesticides, as described in 35 Ill. Adm. Code 733.103;
 - C) Mercury-containing equipment, as described in 35 Ill. Adm. Code 733.104; and
 - D) Lamps, as described in 35 Ill. Adm. Code 733.105.
- h) This Part applies to owners and operators of facilities that treat, store, or dispose of hazardous wastes referred to in 35 Ill. Adm. Code 728.
- i) 35 Ill. Adm. Code 726.505 identifies when this Part applies to the storage of military munitions classified as solid waste pursuant to 35 Ill. Adm. Code 726.302. The treatment and disposal of hazardous waste military munitions are subject to the applicable permitting, procedural, and technical standards in 35 Ill. Adm. Code 702, 703, 705, 720 through 728, and 738.
- j) Subparts B, C, and D of this Part and Section 724.201 do not apply to remediation waste management sites. (However, some remediation waste management sites may be a part of a facility that is subject to a traditional RCRA permit because the facility is also treating, storing, or disposing of hazardous wastes that are not remediation wastes. In these cases, Subparts B, C, and D of this Part, and Section 724.201 do apply to the facility subject to the traditional RCRA permit.) Instead of Subparts B, C, and D of this Part, the owner or operator of a remediation waste management site must comply with the following requirements:

- 1) The owner or operator must obtain a USEPA identification number by applying to USEPA Region 5 using USEPA Form 8700-12, as described in Section 724.111;
- 2) The owner or operator must obtain a detailed chemical and physical analysis of a representative sample of the hazardous remediation wastes to be managed at the site. At a minimum, the analysis must contain all of the information that must be known to treat, store, or dispose of the waste according to this Part and 35 Ill. Adm. Code 728, and the owner or operator must keep the analysis accurate and up to date;
- 3) The owner or operator must prevent people who are unaware of the danger from entering the site, and the owner or operator must minimize the possibility for unauthorized people or livestock entering onto the active portion of the remediation waste management site, unless the owner or operator can demonstrate the following to the Agency:
 - A) That physical contact with the waste, structures, or equipment within the active portion of the remediation waste management site will not injure people or livestock that may enter the active portion of the remediation waste management site; and
 - B) That disturbance of the waste or equipment by people or livestock that enter onto the active portion of the remediation waste management site will not cause a violation of the requirements of this Part;
- 4) The owner or operator must inspect the remediation waste management site for malfunctions, deterioration, operator errors, and discharges that may be causing or may lead to a release of hazardous waste constituents to the environment or a threat to human health. The owner or operator must conduct these inspections often enough to identify problems in time to correct them before they harm human health or the environment, and the owner or operator must remedy the problem before it leads to a human health or environmental hazard. Where a hazard is imminent or has already occurred, the owner or operator must immediately take remedial action;
- 5) The owner or operator must provide personnel with classroom or on-the-job training on how to perform their duties in a way that ensures the remediation waste management site complies with this Part, and on how to respond effectively to emergencies;
- 6) The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste, and the owner or operator must

prevent threats to human health and the environment from ignitable, reactive, and incompatible waste;

- 7) For remediation waste management sites subject to regulation under Subparts I through O and Subpart X ~~of this Part~~, the owner or operator must design, construct, operate, and maintain a unit within a 100-year floodplain to prevent washout of any hazardous waste by a 100-year flood, unless the owner or operator can meet the requirements of Section 724.118(b);
- 8) The owner or operator must not place any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground mine, or cave;
- 9) The owner or operator must develop and maintain a construction quality assurance program for all surface impoundments, waste piles, and landfill units that are required to comply with Sections 724.321(c) and (d), 724.351(c) and (d), and 724.401(c) and (d) at the remediation waste management site, according to Section 724.119;
- 10) The owner or operator must develop and maintain procedures to prevent accidents and a contingency and emergency plan to control accidents that occur. These procedures must address proper design, construction, maintenance, and operation of remediation waste management units at the site. The goal of the plan must be to minimize the possibility of, and the hazards from, a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water that could threaten human health or the environment. The plan must explain specifically how to treat, store, and dispose of the hazardous remediation waste in question, and must be implemented immediately whenever a fire, explosion, or release of hazardous waste or hazardous waste constituents occurs that could threaten human health or the environment;
- 11) The owner or operator must designate at least one employee, either on the facility premises or on call (that is, available to respond to an emergency by reaching the facility quickly), to coordinate all emergency response measures. This emergency coordinator must be thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of waste handled, the location of all records within the facility, and the facility layout. In addition, this person must have the authority to commit the resources needed to carry out the contingency plan;

- 12) The owner or operator must develop, maintain, and implement a plan to meet the requirements in subsections (j)(2) through (j)(6) and (j)(9) through (j)(10) ~~of this Section~~; and
- 13) The owner or operator must maintain records documenting compliance with subsections (j)(1) through (j)(12) ~~of this Section~~.

Section 724.103 Relationship to Interim Status Standards

A facility owner or operator that has fully complied with the requirements for interim status—as defined in Section 3005(e) of RCRA and regulations under Subpart C of 35 Ill. Adm. Code 703—must comply with the regulations specified in 35 Ill. Adm. Code 725 in lieu of the regulations in this Part, until final administrative disposition of his permit application is made, except as provided under Subpart S of this Part.

BOARD NOTE: As stated in Section 21(f) of the Illinois Environmental Protection Act [~~415 ILCS 5/21(f)~~], the treatment, storage, or disposal of hazardous waste is prohibited, except in accordance with a RCRA permit. 35 Ill. Adm. Code 703, Subpart C provides for the continued operation of an existing facility that meets certain conditions until final administrative disposition of the owner's or operator's permit application.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART B: GENERAL FACILITY STANDARDS

Section 724.110 Applicability

- a) The regulations in this Subpart B apply to owners and operators of all hazardous waste facilities, except as provided in Section 724.101 and subsection (b) ~~of this Section~~.
- b) Section 724.118(b) applies only to facilities subject to regulation under Subparts I through O and ~~Subpart X of this Part~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.112 Required Notices

- ~~a) Receipt from a foreign source.~~
- ~~a1) The owner or operator of a facility that is arranging ~~has arranged~~ to receive hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722 from a foreign source must submit ~~notify~~ the following required notices: ~~Regional Administrator in writing at least four weeks in advance of the date the waste is expected to arrive~~~~

at the facility. ~~Notice of subsequent shipments of the same waste from the same foreign source is not required.~~

- 1) As required by 35 Ill. Adm. Code 722.184(b), for imports where the competent authority of the country of export does not require the foreign exporter to submit to it a notification proposing export and obtain consent from USEPA and the competent authorities for the countries of transit, such owner or operator of the facility, if acting as the importer, must provide notification of the proposed transboundary movement in English to USEPA using the allowable methods listed in 35 Ill. Adm. Code 722.182(e) at least 60 days before the first shipment is expected to depart the country of export. The notification may cover up to one year of shipments of wastes having similar physical and chemical characteristics; the same United Nations/USDOT identification number from the Hazardous Materials Table in 49 CFR 172.101, incorporated by reference in 35 Ill. Adm. Code 720.111; the same USEPA hazardous waste numbers (from Subpart C or D of 35 Ill. Adm. Code 721); the waste codes from the lists in the OECD Guidance Manual, incorporated by reference in 35 Ill. Adm. Code 720.111; and being sent from the same foreign exporter.

- 2) As required by 35 Ill. Adm. Code 722.184(d)(2)(O), ~~The owner or operator of a recovery facility that has arranged to receive hazardous waste subject to Subpart H of 35 Ill. Adm. Code 722 must provide a copy of the movement document bearing all required signatures to the foreign exporter, to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460; to the Bureau of Land, Division of Land Pollution Control, Illinois Environmental Protection Agency, P.O. Box 19276, Springfield, IL 62794-9276; and to the competent authorities of all other countries concerned within three working days after receipt of the shipment to the foreign exporter; to the competent authorities of the countries of export and transit that control the shipment as an export and transit shipment of hazardous waste, respectively; and, on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's Waste Import Export Tracking System (WIETS). The original of the signed movement document must be maintained at the facility for at least three years. The owner or operator of a facility may satisfy this recordkeeping requirement by retaining electronically submitted documents in the facility's account on USEPA's WIETS, provided that copies are readily available for viewing and production if requested by any USEPA or Agency inspector. No owner or operator of a facility may be held liable for the inability to produce the documents for inspection under this section if the owner or operator of a facility can demonstrate that the inability to produce the document is due~~

exclusively to technical difficulty with USEPA's WIETS for which the owner or operator of a facility bears no responsibility. In addition, such owner or operator must send a certificate of recovery to the foreign exporter, to the competent authority of the country of export, to USEPA's Office of Enforcement and Compliance Assurance at the above address by mail, by e-mail without a digital signature followed by mail, or by fax followed by mail. The owner or operator must complete this sending of a certificate of recovery as soon as possible, but no later than 30 days after the completion of recovery, and no later than one calendar year following the receipt of the hazardous waste.

- 3) As required by 35 Ill. Adm. Code 722.184(f)(4), if the facility has physical control of the waste and it must be sent to an alternate facility or returned to the country of export, such owner or operator of the facility must inform USEPA, using the allowable methods listed in 35 Ill. Adm. Code 722.184(b)(1) of the need to return or arrange alternate management of the shipment.
- 4) As required by 35 Ill. Adm. Code 722.184(g), the facility owner or operator must do the following:
- A) The owner or operator must send copies of the signed and dated confirmation of recovery or disposal, as soon as possible, but no later than 30 days after completing recovery or disposal on the waste in the shipment and no later than one calendar year following receipt of the waste, to the foreign exporter, to the competent authority of the country of export that controls the shipment as an export of hazardous waste. For shipments recycled or disposed of on or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS.
- B) If the facility performed any of recovery operations R12, R13, or RC16 or disposal operations D13 through D15 or DC17, the owner or operator must promptly, within one year of shipment delivery to the final recovery or disposal facility that performed one of recovery operations R1 through R11 or RC16 or one of disposal operations D1 through D12 or DC15 or DC16, send copies of the confirmation of recovery or disposal that it receives from the final recovery or disposal facility to the competent authority of the country of export that controls the shipment as an export of hazardous waste. On or after the electronic import-export reporting compliance date, the owner or operator must make this submission to USEPA electronically using USEPA's WIETS. The

recovery and disposal operations in this subsection (a)(4)(B) are defined in 35 Ill. Adm. Code 722.181.

- b) The owner or operator of a facility that receives hazardous waste from an off-site source (except where the owner or operator is also the generator) must inform the generator in writing that the owner or operator has the appropriate permits for, and will accept, the waste that the generator is shipping. The owner or operator must keep a copy of this written notice as part of the operating record.
- c) Before transferring ownership or operation of a facility during its operating life, or of a disposal facility during the post-closure care period, the owner or operator must notify the new owner or operator in writing of the requirements of this Part and 35 Ill. Adm. Code 702 and 703.

BOARD NOTE: An owner's or operator's failure to notify the new owner or operator of the requirements of this Part in no way relieves the new owner or operator of his obligation to comply with all applicable requirements.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.113 General Waste Analysis

- a) Analysis:
 - 1) Before an owner or operator treats, stores, or disposes of any hazardous wastes, or non-hazardous wastes if applicable under Section 724.213(d), the owner or operator must obtain a detailed chemical and physical analysis of a representative sample of the wastes. At a minimum, the analysis must contain all the information that must be known to treat, store, or dispose of the waste in accordance with this Part and 35 Ill. Adm. Code 728.
 - 2) The analysis may include data developed under 35 Ill. Adm. Code 721 and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes.

BOARD NOTE: For example, the facility's records of analyses performed on the waste before the effective date of these regulations or studies conducted on hazardous waste generated from processes similar to that which generated the waste to be managed at the facility may be included in the data base required to comply with subsection (a)(1) of this Section. The owner or operator of an off-site facility may arrange for the generator of the hazardous waste to supply part or all of the information required by subsection (a)(1) of this Section, except as otherwise specified in 35 Ill. Adm. Code 728.107(b) and (c). If the generator does not supply the information, and the owner or operator chooses to accept a hazardous

waste, the owner or operator is responsible for obtaining the information required to comply with this Section.

- 3) The analysis must be repeated as necessary to ensure that it is accurate and up to date. At a minimum, the analysis must be repeated as follows:
 - A) When the owner or operator is notified, or has reason to believe, that the process or operation generating the hazardous waste, or non-hazardous waste if applicable under Section 724.213(d), has changed; and
 - B) For off-site facilities, when the results of the inspection required in subsection (a)(4) ~~of this Section~~ indicate that the hazardous waste received at the facility does not match the waste designated on the accompanying manifest or shipping paper.
 - 4) The owner or operator of an off-site facility must inspect and, if necessary, analyze each hazardous waste shipment received at the facility to determine whether it matches the identity of the waste specified on the accompanying manifest or shipping paper.
- b) The owner or operator must develop and follow a written waste analysis plan that describes the procedures that it will carry out to comply with subsection (a) ~~of this Section~~. The owner or operator must keep this plan at the facility. At a minimum, the plan must specify the following:
- 1) The parameters for which each hazardous waste, or non-hazardous waste if applicable under Section 724.213(d), will be analyzed and the rationale for the selection of these parameters (i.e., how analysis for these parameters will provide sufficient information on the waste's properties to comply with subsection (a) ~~of this Section~~).
 - 2) The test methods that will be used to test for these parameters.
 - 3) The sampling method that will be used to obtain a representative sample of the waste to be analyzed. A representative sample may be obtained using either of the following:
 - A) One of the sampling methods described in Appendix A to 35 Ill. Adm. Code 721; or
 - B) An equivalent sampling method.

BOARD NOTE: See 35 Ill. Adm. Code 720.121.

- 4) The frequency with which the initial analysis of the waste will be reviewed or repeated to ensure that the analysis is accurate and up to date.
- 5) For off-site facilities, the waste analyses that hazardous waste generators have agreed to supply.
- 6) Where applicable, the methods that will be used to meet the additional waste analysis requirements for specific waste management methods as specified in Sections 724.117, 724.414, 724.441, 724.934(d), 724.963(d), and 724.983 and 35 Ill. Adm. Code 728.107.
- 7) For surface impoundments exempted from land disposal restrictions under 35 Ill. Adm. Code 728.104(a), the procedures and schedules for the following:
 - A) The sampling of impoundment contents;
 - B) The analysis of test data; and
 - C) The annual removal of residues that are not delisted under 35 Ill. Adm. Code 720.122 or which exhibit a characteristic of hazardous waste and either of the following is true of the waste:
 - i) The residues do not meet applicable treatment standards of Subpart D of 35 Ill. Adm. Code 728; or
 - ii) Where no treatment standards have been established, such residues are prohibited from land disposal under 35 Ill. Adm. Code 728.132 or 728.139 or such residues are prohibited from land disposal under 35 Ill. Adm. Code 728.133(f).
- 8) For owners and operators seeking an exemption to the air emission standards of Subpart CC of this Part in accordance with Section 724.982, the following information:
 - A) If direct measurement is used for the waste determination, the procedures and schedules for waste sampling and analysis and the analysis of test data to verify the exemption.
 - B) If knowledge of the waste is used for the waste determination, any information prepared by the facility owner or operator or by the generator of the waste, if the waste is received from off-site, that is used as the basis for knowledge of the waste.

- c) For off-site facilities, the waste analysis plan required in subsection (b) ~~of this Section~~ must also specify the procedures that will be used to inspect and, if necessary, analyze each shipment of hazardous waste received at the facility to ensure that it matches the identity of the waste designated on the accompanying manifest or shipping paper. At a minimum, the plan must describe the following:
- 1) The procedures that will be used to determine the identity of each movement of waste managed at the facility;
 - 2) The sampling method that will be used to obtain a representative sample of the waste to be identified, if the identification method includes sampling; and
 - 3) The procedures that the owner or operator of an off-site landfill receiving containerized hazardous waste will use to determine whether a hazardous waste generator or treater has added a biodegradable sorbent to the waste in the container.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that the waste analysis plan be submitted with Part B of the permit application.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.114 Security

- a) The owner or operator must prevent the unknowing entry, and minimize the possibility for the unauthorized entry, of persons or livestock onto the active portion of the facility, unless the owner or operator demonstrates the following to the Agency:
- 1) That physical contact with the waste, structures or equipment within the active portion of the facility will not injure unknowing or unauthorized persons or livestock that may enter the active portion of a facility; and
 - 2) That disturbance of the waste or equipment, by the unknowing or unauthorized entry of persons or livestock onto the active portion of a facility, will not cause a violation of the requirements of this Part.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that an owner or operator who wishes to make the demonstration referred to above must do so with Part B of the permit application.

- b) Unless the owner or operator has made a successful demonstration under subsections (a)(1) and (a)(2) ~~of this Section~~, a facility must have the following:

- 1) A 24-hour surveillance system (e.g., television monitoring or surveillance by guards or facility personnel) that continuously monitors and controls entry onto the active portion of the facility; or
- 2) Physical Barriers ~~barriers~~.
 - A) An artificial or natural barrier (e.g., a fence in good repair or a fence combined with a cliff), which completely surrounds the active portion of the facility; and
 - B) A means to control entry, at all times, through the gates or other entrances to the active portion of the facility (e.g., an attendant, television monitors, locked entrance, or controlled roadway access to the facility).

BOARD NOTE: The requirements of subsection (b) ~~of this Section~~ are satisfied if the facility or plant within which the active portion is located itself has a surveillance system, or a barrier and a means to control entry, that complies with the requirements of subsection (b)(1) or (b)(2) ~~of this Section~~.

- c) Unless the owner or operator has made a successful demonstration under subsections (a)(1) and (a)(2) ~~of this Section~~, a sign with the legend, “Danger—Unauthorized Personnel Keep Out,”¹ must be posted at each entrance to the active portion of a facility, and at other locations, in sufficient numbers to be seen from any approach to this active portion. The sign must be legible from a distance of at least 25 feet. Existing signs with a legend other than “Danger—Unauthorized Personnel Keep Out” may be used if the legend on the sign indicates that only authorized personnel are allowed to enter the active portion, and that entry onto the active portion can be dangerous.

BOARD NOTE: See Section 724.217(b) for discussion of security requirements at disposal facilities during the post-closure care period.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.115 General Inspection Requirements

- a) The owner or operator must conduct inspections often enough to identify problems in time to correct them before they harm human health or the environment. The owner or operator must inspect the facility for malfunctions and deterioration, operator errors, and discharges that may be causing or may lead to either of the following:
 - 1) Release of hazardous waste constituents to the environment; or
 - 2) A threat to human health.

b) Inspection ~~Schedule-schedule.~~

- 1) The owner or operator must develop and follow a written schedule for inspecting monitoring equipment, safety and emergency equipment, security devices, and operating and structural equipment (such as dikes and sump pumps) that are important to preventing, detecting, or responding to environmental or human health hazards.
- 2) The owner or operator must keep this schedule at the facility.
- 3) The schedule must identify the types of problems (e.g., malfunctions or deterioration) that are to be looked for during the inspection (e.g., inoperative sump pump, leaking fitting, eroding dike, etc.).
- 4) The frequency of inspection may vary for the items on the schedule. However, the frequency should be based on the rate of deterioration of the equipment and the probability of an environmental or human health incident if the deterioration, malfunction, or operator error goes undetected between inspections. Areas subject to spills, such as loading and unloading areas, must be inspected daily when in use. At a minimum, the inspection schedule must include the items and frequencies called for in Sections 724.274, 724.293, 724.295, 724.326, 724.354, 724.378, 724.403, 724.447, 724.702, 724.933, 724.952, 724.953, 724.958, and 724.983 through 724.990, where applicable. 35 Ill. Adm. Code 703 requires the inspection schedule to be submitted with Part B of the permit application. The Agency must evaluate the schedule, along with the rest of the application, to ensure that it adequately protects human health and the environment. As part of this review, the Agency may modify or amend the schedule as may be necessary.

~~BOARD NOTE: 35 Ill. Adm. Code 703 requires the inspection schedule to be submitted with Part B of the permit application. The Agency must evaluate the schedule along with the rest of the application to ensure that it adequately protects human health and the environment. As part of this review, the Agency may modify or amend the schedule as may be necessary.~~

- 5) This subsection (b)(5) corresponds with 40 CFR 264.15(b)(5), which became obsolete when USEPA terminated the Performance Track Program at 74 Fed. Reg. 22741 (May 14, 2009). USEPA has recognized that program-related rules are no longer effective at 75 Fed. Reg. 12989, 12992, note 1 (Mar. 18, 2010). This statement maintains structural consistency with the corresponding federal requirements.

- c) The owner or operator must remedy any deterioration or malfunction of equipment or structures that the inspection reveals on a schedule which ensures that the problem does not lead to an environmental or human health hazard. Where a hazard is imminent or has already occurred, remedial action must be taken immediately.
- d) The owner or operator must record inspections in an inspection log or summary. The owner or operator must keep these records for at least three years from the date of inspection. At a minimum, these records must include the date and time of the inspection, the name of the inspector, a notation of the observations made and the date, and nature of any repairs or other remedial actions.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.116 Personnel Training

- a) The Personnel Training Program ~~personnel training program~~.
 - 1) Facility personnel must successfully complete a program of classroom instruction or on-the-job training that teaches them to perform their duties in a way that ensures the facility's compliance with the requirements of this Part. The owner or operator must ensure that this program includes all the elements described in the document required under subsection (d)(3) ~~of this Section~~.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that owners and operators submit with Part B of the RCRA permit application, an outline of the training program used (or to be used) at the facility and a brief description of how the training program is designed to meet actual jobs tasks.

 - 2) This program must be directed by a person trained in hazardous waste management procedures, and must include instruction that teaches facility personnel hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed.
 - 3) At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems, including, where applicable:
 - A) Procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment;

- B) Key parameters for automatic waste feed cut-off systems;
 - C) Communications or alarm systems;
 - D) Response to fires or explosions;
 - E) Response to groundwater contamination incidents; and
 - F) Shutdown of operations.
- 4) For facility employees that have receive emergency response training pursuant to the federal Occupational Safety and Health Administration (OSHA) regulations at 29 CFR 1910.120(p)(8) and (q), the facility is not required to provide separate emergency response training pursuant to this Section, provided that the overall facility OSHA emergency response training meets all the requirements of this Section.
- b) Facility personnel must successfully complete the program required in subsection (a) ~~of this Section~~ within six months after the effective date of these regulations or six months after the date of their employment or assignment to a facility, or to a new position at a facility, whichever is later. Employees hired after the effective date of these regulations must not work in unsupervised positions until they have completed the training requirements of subsection (a) ~~of this Section~~.
 - c) Facility personnel must take part in an annual review of the initial training required in subsection (a) ~~of this Section~~.
 - d) The owner or operator must maintain the following documents and records at the facility:
 - 1) The job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job;
 - 2) A written job description for each position listed under subsection (d)(1) ~~of this Section~~. This description may be consistent in its degree of specificity with descriptions for other similar positions in the same company location or bargaining unit, but must include the requisite skill, education or other qualifications, and duties of employees assigned to each position;
 - 3) A written description of the type and amount of both introductory and continuing training that will be given to each person filling a position listed under subsection (d)(1) ~~of this Section~~;

- 4) Records that document that the training or job experience required under subsections (a), (b), and (c) ~~of this Section~~ has been given to, and completed by, facility personnel.
- e) Training records on current personnel must be kept until closure of the facility; training records on former employees must be kept for at least three years from the date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.117 General Requirements for Ignitable, Reactive, or Incompatible Wastes

- a) The owner or operator must take precautions to prevent accidental ignition or reaction of ignitable or reactive waste. This waste must be separated and protected from sources of ignition or reaction including but not limited to: open flames, smoking, cutting and welding, hot surfaces, frictional heat, sparks (static, electrical or mechanical), spontaneous ignition (e.g., from heat-producing chemical reactions), and radiant heat. While ignitable or reactive waste is being handled, the owner or operator must confine smoking and open flame to specially designated locations. “No Smoking” signs must be conspicuously placed wherever there is a hazard from ignitable or reactive waste.
- b) Where specifically required by this Part, the owner or operator of a facility that treats, stores or disposes ignitable or reactive waste, or mixes incompatible waste and other materials, must take precautions to prevent reactions that do the following:
 - 1) Generate extreme heat or pressure, fire or explosions, or violent reactions;
 - 2) Produce uncontrolled toxic mists, fumes, dusts or gases in sufficient quantities to threaten human health or the environment;
 - 3) Produce uncontrolled flammable fumes or gases in sufficient quantities to pose a risk of fire or explosions;
 - 4) Damage the structural integrity of the device or facility;
 - 5) Through other like means threaten human health or the environment.
- c) When required to comply with subsection ~~subsections~~ (a) or (b) ~~of this Section~~, the owner or operator must document that compliance. This documentation may be based on references to published scientific or engineering literature, data from trial tests (e.g., bench scale or pilot scale tests), waste analyses (as specified in Section 724.113), or the results of the treatment of similar wastes by similar treatment processes and under similar operating conditions.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.118 Location Standards

- a) Seismic ~~Considerations~~ ~~considerations~~:
- 1) Portions of new facilities where treatment, storage or disposal of hazardous waste will be conducted must not be located within 61 meters (200 feet) of a fault that has had displacement in Holocene time.
 - 2) As used in subsection (a)(1) ~~of this Section~~:
 - A) “Fault” means a fracture along which rocks on one side have been displaced with respect to those on the other side.
 - B) “Displacement” means the relative movement of any two sides of a fault measured in any direction.
 - C) “Holocene” means the most recent epoch of the Quaternary period, extending from the end of the Pleistocene to the present.

BOARD NOTE: Procedures for demonstrating compliance with this standard in Part B of the permit application are specified in 35 Ill. Adm. Code 703.182. Facilities that are located in political jurisdictions other than those listed in appendix VI to 40 CFR 264 (Political Jurisdictions in Which Compliance with § 264.18(a) Must Be Demonstrated), incorporated by reference in 35 Ill. Adm. Code 720.111(b), are assumed to be in compliance with this requirement.

- b) Floodplains:
- 1) A facility located in a 100-year floodplain must be designed, constructed, operated and maintained to prevent washout of any hazardous waste by a 100-year flood, unless the owner or operator can demonstrate the following to the Agency’s satisfaction:
 - A) That procedures are in effect that will cause the waste to be removed safely, before flood waters can reach the facility, to a location where the wastes will not be vulnerable to flood waters; or
 - B) For existing surface impoundments, waste piles, land treatment units, landfills and miscellaneous units, that no adverse effect on human health or the environment will result if washout occurs, considering the following:
 - i) The volume and physical and chemical characteristics of the waste in the facility;

- ii) The concentration of hazardous constituents that would potentially affect surface waters as a result of washout;
 - iii) The impact of such concentrations on the current or potential uses of and water quality standards established for the affected surface waters; and
 - iv) The impact of hazardous constituents on the sediments of affected surface waters or the soils of the 100-year floodplain that could result from washout;
- 2) As used in subsection (b)(1) ~~of this Section~~:
- A) “100-year floodplain” means any land area that is subject to a one percent or greater chance of flooding in any given year from any source.
 - B) “Washout” means the movement of hazardous waste from the active portion of the facility as a result of flooding.
 - C) “100-year flood” means a flood that has a one percent chance of being equalled or exceeded in any given year.

BOARD NOTE: Requirements pertaining to other federal laws that affect the location and permitting of facilities are found in 40 CFR 270.3. For details relative to these laws, see USEPA’s manual for SEA (special environmental area) requirements for hazardous waste facility permits. Though USEPA is responsible for complying with these requirements, applicants are advised to consider them in planning the location of a facility to help prevent subsequent project delays. Facilities may be required to obtain from the Illinois Department of Transportation on a permit or certification that a facility is flood-proofed.

- c) Salt dome formations, salt bed formations, underground mines and caves. The placement of any non-containerized or bulk liquid hazardous waste in any salt dome formation, salt bed formation, underground cave or mine is prohibited.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.119 Construction Quality Assurance Program

- a) Construction Quality Assurance ~~quality assurance~~ (CQA) Program ~~program~~.
 - 1) A CQA program is required for all surface impoundment, waste pile and landfill units that are required to comply with Sections 724.321(c) and (d), 724.351(c) and (d), and 724.401(c) and (d). The program must ensure that the constructed unit meets or exceeds all design criteria and specifications

in the permit. The program must be developed and implemented under the direction of a CQA officer who is a registered professional engineer.

- 2) The CQA program must address the following physical components, where applicable:
 - A) Foundations;
 - B) Dikes;
 - C) Low-permeability soil liners;
 - D) Geomembranes (flexible membrane liners);
 - E) Leachate collection and removal systems and leak detection systems; and
 - F) Final cover systems.

- b) ~~Written CQA Plan-plan.~~ The owner or operator of units subject to the CQA program under subsection (a) ~~of this Section~~ must develop and implement a written CQA plan. The plan must identify steps that will be used to monitor and document the quality of materials and the condition and manner of their installation. The CQA plan must include the following:
 - 1) Identification of applicable units, and a description of how they will be constructed.
 - 2) Identification of key personnel in the development and implementation of the CQA plan, and CQA officer qualifications.
 - 3) A description of inspection and sampling activities for all unit components identified in subsection (a)(2) ~~of this Section~~, including observations and tests that will be used before, during and after construction to ensure that the construction materials and the installed unit components meet the design specifications. The description must cover: Sampling size and locations; frequency of testing; data evaluation procedures; acceptance and rejection criteria for construction materials; plans for implementing corrective measures; and data or other information to be recorded and retained in the operating record under Section 724.173.

- c) ~~Contents of Program-program.~~
 - 1) The CQA program must include observations, inspections, tests and measurements sufficient to ensure the following:

- A) Structural stability and integrity of all components of the unit identified in subsection (a)(2) ~~of this Section~~;
 - B) Proper construction of all components of the liners, leachate collection and removal system, leak detection system, and final cover system, according to permit specifications and good engineering practices and proper installation of all components (e.g., pipes) according to design specifications;
 - C) Conformity of all materials used with design and other material specifications under Sections 724.321, 724.351, and 724.401.
- 2) The CQA program must include test fills for compacted soil liners, using the same compaction methods as in the full scale unit, to ensure that the liners are constructed to meet the hydraulic conductivity requirements of Sections 724.321(c)(1)(A)(ii), 724.351(c)(1)(A)(ii), or 724.401(c)(1)(A)(ii) in the field. Compliance with the hydraulic conductivity requirements must be verified by using in-situ testing on the constructed test fill. The Agency must accept an alternative demonstration, in lieu of a test fill, where data are sufficient to show that a constructed soil liner will meet the hydraulic conductivity requirements of Sections 724.321(c)(1)(A)(ii), 724.351(c)(1)(A)(ii), or 724.401(c)(1)(A)(ii) in the field.
- d) Certification. Waste must not be received in a unit subject to Section 724.119 until the owner or operator has submitted to the Agency by certified mail or hand delivery a certification signed by the CQA officer that the approved CQA plan has been successfully carried out and that the unit meets the requirements of Sections 724.321(c) or (d), 724.351(c) or (d), or 724.401(c) or (d); and the procedure in 35 Ill. Adm. Code 703.247(b) has been completed. Documentation supporting the CQA officer's certification must be furnished to the Agency upon request.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART C: PREPAREDNESS AND PREVENTION

Section 724.132 Required Equipment

All A11 facilities must be equipped with the following, unless the owner or operator demonstrates to the Agency that none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

- a) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;

- b) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police departments, fire departments, or State or local emergency response teams;
- c) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment and decontamination equipment; and
- d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers or water spray systems.

BOARD NOTE: 35 Ill. Adm. Code 703 requires that an owner or operator who wishes to make the demonstration referred to above must do so with Part B of the permit application.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.133 Testing and Maintenance of Equipment

All A-H facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment, where required, must be tested and maintained as necessary to assure its proper operation in time of emergency.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART D: CONTINGENCY PLAN AND EMERGENCY PROCEDURES

Section 724.156 Emergency Procedures

- a) Whenever there is an imminent or actual emergency situation, the emergency coordinator (or the designee when the emergency coordinator is on call) must immediately do the following:
 - 1) He or she must activate internal facility alarms or communication systems, where applicable, to notify all facility personnel; and
 - 2) He or she must notify appropriate State or local agencies with designated response roles if their help is needed.
- b) Whenever there is a release, fire, or explosion, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. The emergency coordinator may do this by observation or review of facility records or manifests and, if necessary, by chemical analysis.
- c) Concurrently, the emergency coordinator must assess possible hazards to human health or the environment that may result from the release, fire, or explosion.

This assessment must consider both direct and indirect effects of the release, fire, or explosion (e.g., the effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off from water or chemical agents used to control fire and heat-induced explosions).

- d) If the emergency coordinator determines that the facility has had a release, fire, or explosion that could threaten human health or the environment outside the facility, the emergency coordinator must report the findings as follows:
 - 1) If the assessment indicates that evacuation of local areas may be advisable, the emergency coordinator must immediately notify appropriate local authorities. The emergency coordinator must be available to help appropriate officials decide whether local areas should be evacuated; and
 - 2) The emergency coordinator must immediately notify either the government official designated as the on-scene coordinator for that geographical area or the National Response Center (using their 24-hour toll free number 800-424-8802). The report must include the following:
 - A) The name and telephone number of the reporter;
 - B) The name and address of the facility;
 - C) The time and type of incident (e.g., release, fire);
 - D) The name and quantity of materials involved, to the extent known;
 - E) The extent of injuries, if any; and
 - F) The possible hazards to human health or the environment outside the facility.
- e) During an emergency, the emergency coordinator must take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing release waste, and removing or isolating containers.
- f) If the facility stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.
- g) Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

BOARD NOTE: Unless the owner or operator can demonstrate, in accordance with 35 Ill. Adm. Code 721.103(d) or (e), that the recovered material is not a hazardous waste, the owner or operator becomes a generator of hazardous waste and must manage it in accordance with all applicable requirements of 35 Ill. Adm. Code 722, 723, and 724.

- h) The emergency coordinator must ensure that the following is true in the affected areas of the facility:
 - 1) No waste that may be incompatible with the released material is treated, stored, or disposed of until cleanup procedures are completed; and
 - 2) All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.
- ~~i) The owner or operator must notify the Agency and appropriate state and local authorities that the facility is in compliance with subsection (h) of this Section before operations are resumed in the affected areas of the facility.~~
- ij) The owner or operator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the owner or operator must submit a written report on the incident to the Agency. The report must include the following:
 - 1) The name, address, and telephone number of the owner or operator;
 - 2) The name, address, and telephone number of the facility;
 - 3) The date, time, and type of incident (e.g., fire, explosion);
 - 4) The name and quantity of materials involved;
 - 5) The extent of injuries, if any;
 - 6) An assessment of actual or potential hazards to human health or the environment, where this is applicable; and
 - 7) The estimated quantity and disposition of recovered material that resulted from the incident.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART E: MANIFEST SYSTEM, RECORDKEEPING AND REPORTING

Section 724.171 Use of Manifest System

- a) Receipt of Manifested Hazardous Waste-

- 1) If a facility receives hazardous waste accompanied by a manifest, the owner, operator, or its agent must sign and date the manifest, as indicated in subsection (a)(2), to certify that the hazardous waste covered by the manifest was received, that the hazardous waste was received except as noted in the discrepancy space of the manifest, or that the hazardous waste was rejected as noted in the manifest discrepancy space.

- 2) If a facility receives a hazardous waste shipment accompanied by a manifest, the owner, operator, or its agent must do the following:
 - A) The owner, operator, or agent must sign and date, by hand, each copy of the manifest;
 - B) The owner, operator, or agent must note any discrepancies (as defined in Section 724.172) on each copy of the manifest;
 - C) The owner, operator, or agent must immediately give the transporter at least one copy of the manifest;
 - D) The owner, operator, or agent must send a copy (Page 3) of the manifest to the generator within 30 days after delivery;
 - E) Within 30 days after delivery, the owner, operator, or agent must send the top copy (Page 1) of the manifest to the e-Manifest System for purposes of data entry and processing. In lieu of mailing this paper copy to the e-Manifest System operator, the owner or operator may transmit to the e-Manifest System operator an image file of Page 1 of the manifest, or both a data string file and the image file corresponding to Page 1 of the manifest. Any data or image files transmitted to USEPA under this subsection (a) must be submitted in data file and image file formats that are acceptable to USEPA and that are supported by USEPA's electronic reporting requirements and by the e-Manifest System; and
 - F) The owner, operator, or agent must retain at the facility a copy of each manifest for at least three years after the date of delivery.

- 3) ~~The owner or operator of~~ If a facility receiving hazardous waste ~~subject to Subpart H of 35 Ill. Adm. Code 722 imported from a foreign source must do the following;~~ the receiving facility must mail a copy of the manifest and documentation confirming USEPA's consent to the import of hazardous waste to the following address within 30 days after delivery: Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A),

~~U.S. Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460.~~

- A) List the relevant consent number from consent documentation supplied by USEPA to the facility for each waste listed on the manifest, matched to the relevant list number for the waste from block 9b. If additional space is needed, the owner or operator should use Continuation Sheets (USEPA Form 8700-22A); and
 - B) Send a copy of the manifest within 30 days of delivery to USEPA using the addresses listed in 35 Ill. Adm. Code 722.182(e) until the facility can submit such a copy to the e-Manifest system per subsection (a)(2)(E).
- b) If a facility receives, from a rail or water (bulk shipment) transporter, hazardous waste that is accompanied by a shipping paper containing all the information required on the manifest (excluding the USEPA identification numbers, generator's certification, and signatures), the owner or operator, or the owner or operator's agent, must do the following:
- 1) It must sign and date each copy of the manifest or shipping paper (if the manifest has not been received) to certify that the hazardous waste covered by the manifest or shipping paper was received;
 - 2) It must note any significant discrepancies (as defined in Section 724.172(a)) in the manifest or shipping paper (if the manifest has not been received) on each copy of the manifest or shipping paper;
- BOARD NOTE: The Board does not intend that the owner or operator of a facility whose procedures under Section 724.113(c) include waste analysis must perform that analysis before signing the shipping paper and giving it to the transporter. Section 724.172(b), however, requires reporting an unreconciled discrepancy discovered during later analysis.
- 3) It must immediately give the rail or water (bulk shipment) transporter at least one copy of the manifest or shipping paper (if the manifest has not been received);
 - 4) The owner or operator must send a copy of the signed and dated manifest or a signed and dated copy of the shipping paper (if the manifest has not been received within 30 days after delivery) to the generator within 30 days after the delivery; and

BOARD NOTE: Section 722.123(c) requires the generator to send three copies of the manifest to the facility when hazardous waste is sent by rail or water (bulk shipment).

- 5) Retain at the facility a copy of the manifest and shipping paper (if signed in lieu of the manifest at the time of delivery) for at least three years from the date of delivery.
- c) Whenever a shipment of hazardous waste is initiated from a facility, the owner or operator of that facility must comply with the requirements of 35 Ill. Adm. Code 722. The provisions of 35 Ill. Adm. Code 722.115, 722.116, and 722.117 are applicable to the on-site accumulation of hazardous wastes by generators. Therefore, the provisions of 35 Ill. Adm. Code 722.115, 722.116, and 722.117 only apply to owners or operators that are shipping hazardous waste that they generated at that facility or operating as a large quantity generator consolidating hazardous waste from very small quantity generators under 35 Ill. Adm. Code 722.117(f).

~~BOARD NOTE: The provisions of 35 Ill. Adm. Code 722.134 are applicable to the on-site accumulation of hazardous wastes by generators. Therefore, the provisions of Section 722.134 only apply to owners or operators that are shipping hazardous waste that they generated at that facility.~~

- d) As required by 35 Ill. Adm. Code 722.184(d)(2)(O), within three working days after the receipt of a shipment subject to Subpart H of 35 Ill. Adm. Code 722, the owner or operator of a facility must provide a copy of the movement document bearing all required signatures to the foreign exporter and; to the Office of Enforcement and Compliance Assurance, Office of Federal Activities, International Compliance Assurance Division (2254A), Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460; to the Bureau of Land, Division of Land Pollution Control, Illinois Environmental Protection Agency, P.O. Box 19276, Springfield, IL 62794-9276; and to competent authorities of the all other concerned countries of export and transit that control the shipment as an export or transit of hazardous waste. On or after the electronic import-export reporting compliance date, to USEPA electronically using USEPA's WIETS. The original copy of the movement document must be maintained at the facility for at least three years from the date of signature. The owner or operator of a facility may satisfy this recordkeeping requirement by retaining electronically submitted documents in the facility's account on USEPA's WIETS, provided that copies are readily available for viewing and production if requested by any USEPA or authorized state inspector. No owner or operator of a facility may be held liable for the inability to produce the documents for inspection under this section if the owner or operator of a facility can demonstrate that the inability to produce the document is due exclusively to technical difficulty with USEPA's WIETS, for which the owner or operator of a facility bears no responsibility.
- e) A facility must determine whether the consignment state for a shipment regulates any additional wastes (beyond those regulated federally) as hazardous wastes

under its state hazardous waste program. A facility must also determine whether the consignment state or generator state requires the facility to submit any copies of the manifest to that state.

- f) Legal Equivalence to Paper Manifests. E-Manifests that are obtained, completed, transmitted in accordance with 35 Ill. Adm. Code 722.120(a)(3), and used in accordance with this Section in lieu of the paper manifest form are the legal equivalent of paper manifest forms bearing handwritten signatures, and satisfy for all purposes any requirement in 35 Ill. Adm. Code 720 through 728 to obtain, complete, sign, provide, use, or retain a manifest.
- 1) Any requirement in 35 Ill. Adm. Code 720 through 728 for the owner or operator of a facility to sign a manifest or manifest certification by hand, or to obtain a handwritten signature, is satisfied by signing with or obtaining a valid and enforceable electronic signature within the meaning of 35 Ill. Adm. Code 722.125.
 - 2) Any requirement in 35 Ill. Adm. Code 720 through 728 to give, provide, send, forward, or to return to another person a copy of the manifest is satisfied when a copy of an e-Manifest is transmitted to the other person.
 - 3) Any requirement in 35 Ill. Adm. Code 720 through 728 for a manifest to accompany a hazardous waste shipment is satisfied when a copy of an e-Manifest is accessible during transportation and forwarded to the person or persons who are scheduled to receive delivery of the hazardous waste shipment.
 - 4) Any requirement in 35 Ill. Adm. Code 720 through 728 for an owner or operator to keep or retain a copy of each manifest is satisfied by the retention of the facility's e-Manifest copies in its account on the e-Manifest System, provided that such copies are readily available for viewing and production if requested by any USEPA or Agency inspector.
 - 5) No owner or operator may be held liable for the inability to produce an e-Manifest for inspection under this Section if the owner or operator can demonstrate that the inability to produce the e-Manifest is due exclusively to a technical difficulty with the e-Manifest System for which the owner or operator bears no responsibility.
- g) An owner or operator may participate in the e-Manifest System either by accessing the e-Manifest System from the owner's or operator's electronic equipment, or by accessing the e-Manifest System from portable equipment brought to the owner's or operator's site by the transporter that delivers the waste shipment to the facility.

- h) **Special Procedures Applicable to Replacement Manifests.** If a facility receives hazardous waste that is accompanied by a paper replacement manifest for a manifest that was originated electronically, the following procedures apply to the delivery of the hazardous waste by the final transporter:
- 1) Upon delivery of the hazardous waste to the designated facility, the owner or operator must sign and date each copy of the paper replacement manifest by hand in Item 20 (Designated Facility Certification of Receipt) and note any discrepancies in Item 18 (Discrepancy Indication Space) of the paper replacement manifest;
 - 2) The owner or operator of the facility must give back to the final transporter one copy of the paper replacement manifest;
 - 3) Within 30 days after delivery of the hazardous waste to the designated facility, the owner or operator of the facility must send one signed and dated copy of the paper replacement manifest to the generator and send an additional signed and dated copy of the paper replacement manifest to the e-Manifest System; and
 - 4) The owner or operator of the facility must retain at the facility one copy of the paper replacement manifest for at least three years after the date of delivery.
- i) **Special Procedures Applicable ~~procedures applicable to~~ Electronic Signature Methods Undergoing Tests ~~electronic signature methods undergoing tests~~.** If an owner or operator using an e-Manifest signs this manifest electronically using an electronic signature method that is undergoing pilot or demonstration tests aimed at demonstrating the practicality or legal dependability of the signature method, the owner or operator must also sign with an ink signature the facility's certification of receipt or discrepancies on the printed copy of the manifest provided by the transporter. Upon executing its ink signature on this printed copy, the owner or operator must retain this original copy among its records for at least three years after the date of delivery of the waste.
- j) **Imposition of User Fee for e-Manifest Use.** An owner or operator that is a user of the e-Manifest System may be assessed a user fee by USEPA for the origination or processing of each e-Manifest. An owner or operator may also be assessed a user fee by USEPA for the collection and processing of paper manifest copies that owners or operators must submit to the e-Manifest System operator under subsection (a)(2)(E). USEPA has stated that it would maintain and update from time-to-time the current schedule of e-Manifest System user fees, which will be determined based on current and projected e-Manifest System costs and level of use of the e-Manifest System. USEPA has said that it would publish the current schedule of e-Manifest user fees as an appendix to 40 CFR 262.

- k) E-Manifest Signatures. E-Manifest signatures must meet the criteria described in 35 Ill. Adm. Code 722.125.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.172 Manifest Discrepancies

- a) “Manifest discrepancies” are defined as any one of the following:
- 1) Significant differences (as defined by subsection (b) ~~of this Section~~) between the quantity or type of hazardous waste designated on the manifest or shipping paper, and the quantity and type of hazardous waste a facility actually receives;
 - 2) Rejected wastes, which may be a full or partial shipment of hazardous waste that the treatment, storage, or disposal facility cannot accept; or
 - 3) Container residues, which are residues that exceed the quantity limits for empty containers set forth in 35 Ill. Adm. Code 721.107(b).
- b) “Significant differences in quantity” are defined as the appropriate of the following: for bulk waste, variations greater than 10 percent in weight; or, for batch waste, any variation in piece count, such as a discrepancy of one drum in a truckload. “Significant differences in type” are defined as obvious differences that can be discovered by inspection or waste analysis, such as waste solvent substituted for waste acid, or as toxic constituents not reported on the manifest or shipping paper.
- c) Upon discovering a significant difference in quantity or type, the owner or operator must attempt to reconcile the discrepancy with the waste generator or transporter (*e.g.*, with telephone conversations). If the discrepancy is not resolved within 15 days after receiving the waste, the owner or operator must immediately submit to the Agency a letter describing the discrepancy and attempts to reconcile it, and a copy of the manifest or shipping paper at issue.
- d) Rejection of Hazardous Waste ~~hazardous waste~~.
- 1) Upon rejecting waste or identifying a container residue that exceeds the quantity limits for empty containers set forth in 35 Ill. Adm. Code 721.107(b), the facility owner or operator must consult with the generator prior to forwarding the waste to another facility that can manage the waste. If it is impossible to locate an alternative facility that can receive the waste, the facility owner or operator may return the rejected waste or residue to the generator. The facility owner or operator must send the waste to the alternative facility or to the generator within 60 days after the rejection or the container residue identification.

- 2) While the facility owner or operator is making arrangements for forwarding rejected wastes or residues to another facility under this Section, it must ensure that either the delivering transporter retains custody of the waste, or the facility owner or operator must provide for secure, temporary custody of the waste, pending delivery of the waste to the first transporter designated on the manifest prepared under subsection (e) or (f) ~~of this Section~~.
- e) Except as provided in subsection (e)(7) ~~of this Section~~, for full or partial load rejections and residues that are to be sent off-site to an alternate facility, the facility owner or operator is required to prepare a new manifest in accordance with 35 Ill. Adm. Code 722.120(a) and the instructions set forth in subsections (e)(1) through (e)(6) ~~of this Section~~:
- 1) The facility owner or operator must write the generator's USEPA identification number in Item 1 of the new manifest. The facility owner or operator must write the generator's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the generator's site address, then the facility owner or operator must write the generator's site address in the designated space in Item 5.
 - 2) The facility owner or operator must write the name of the alternate designated facility and the facility's USEPA identification number in the designated facility block (Item 8) of the new manifest.
 - 3) The facility owner or operator must copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.
 - 4) The facility owner or operator must copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).
 - 5) The facility owner or operator must write the USDOT description for the rejected load or the residue in Item 9 (USDOT Description) of the new manifest and write the container types, quantity, and volumes of waste.
 - 6) The facility owner or operator must sign the Generator's/Officer's Certification to certify, as the offeror of the shipment, that the waste has been properly packaged, marked and labeled and is in proper condition for transportation, and mail a signed copy of the manifest to the generator identified in Item 5 of the new manifest.
 - 7) For full load rejections that are made while the transporter remains present at the facility, the facility owner or operator may forward the rejected

shipment to the alternate facility by completing Item 18b of the original manifest and supplying the information on the next destination facility in the Alternate Facility space. The facility owner or operator must retain a copy of this manifest for its records, and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility owner or operator must use a new manifest and comply with subsections (e)(1) through (e)(6) ~~of this Section.~~

- f) Except as provided in subsection (f)(7) ~~of this Section,~~ for rejected wastes and residues that must be sent back to the generator, the facility owner or operator is required to prepare a new manifest in accordance with 35 Ill. Adm. Code 722.120(a) and the instructions set forth in subsections (f)(1) through (f)(6) and (f)(8) ~~of this Section:~~
- 1) The facility owner or operator must write the facility's USEPA identification number in Item 1 of the new manifest. The facility owner or operator must write the facility's name and mailing address in Item 5 of the new manifest. If the mailing address is different from the facility's site address, then the facility owner or operator must write the facility's site address in the designated space for Item 5 of the new manifest.
 - 2) The facility owner or operator must write the name of the initial generator and the generator's USEPA identification number in the designated facility block (Item 8) of the new manifest.
 - 3) The facility owner or operator must copy the manifest tracking number found in Item 4 of the old manifest to the Special Handling and Additional Information Block of the new manifest, and indicate that the shipment is a residue or rejected waste from the previous shipment.
 - 4) The facility owner or operator must copy the manifest tracking number found in Item 4 of the new manifest to the manifest reference number line in the Discrepancy Block of the old manifest (Item 18a).
 - 5) The facility owner or operator must write the USDOT description for the rejected load or the residue in Item 9 (USDOT Description) of the new manifest and write the container types, quantity, and volumes of waste.
 - 6) The facility owner or operator must sign the Generator's/Offerrer's Certification to certify, as offeror of the shipment, that the waste has been properly packaged, marked and labeled and is in proper condition for transportation.
 - 7) For full load rejections that are made while the transporter remains at the facility, the facility owner or operator may return the shipment to the generator with the original manifest by completing Item 18b of the

manifest and supplying the generator's information in the Alternate Facility space. The facility owner or operator must retain a copy for its records and then give the remaining copies of the manifest to the transporter to accompany the shipment. If the original manifest is not used, then the facility owner or operator must use a new manifest and comply with subsections (f)(1) through (f)(6) and (f)(8) ~~of this Section~~.

- 8) For full or partial load rejections and container residues contained in non-empty containers that are returned to the generator, the facility owner or operator must also comply with the exception reporting requirements in 35 Ill. Adm. Code 722.142(a).
- g) If a facility owner or operator rejects a waste or identifies a container residue that exceeds the quantity limits for empty containers set forth in 35 Ill. Adm. Code 721.107(b) after it has signed, dated, and returned a copy of the manifest to the delivering transporter or to the generator, the facility owner or operator must amend its copy of the manifest to indicate the rejected wastes or residues in the discrepancy space of the amended manifest. The facility owner or operator must also copy the manifest tracking number from Item 4 of the new manifest to the Discrepancy space of the amended manifest, and must re-sign and date the manifest to certify to the information as amended. The facility owner or operator must retain the amended manifest for at least three years from the date of amendment, and must, within 30 days, send a copy of the amended manifest to the transporter and generator that received copies prior to their being amended.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.173 Operating Record

- a) The owner or operator must keep a written operating record at the facility.
- b) The following information must be recorded as it becomes available and maintained in the operating record for three years unless otherwise provided as follows:
- 1) A description and the quantity of each hazardous waste received and the methods and dates of its treatment, storage, or disposal at the facility, as required by Appendix A ~~of this Part~~. This information must be maintained in the operating record until closure of the facility;
 - 2) The location of each hazardous waste within the facility and the quantity at each location. For disposal facilities, the location and quantity of each hazardous waste must be recorded on a map or diagram that shows each cell or disposal area. For all facilities, this information must include cross-references to manifest document numbers, if the waste was accompanied

by a manifest. This information must be maintained in the operating record until closure of the facility;

BOARD NOTE: See Section 724.219 for related requirements.

- 3) Records and results of waste analyses and waste determinations performed as specified in Sections 724.113, 724.117, 724.414, 724.441, 724.934, 724.963, and 724.983 and in 35 Ill. Adm. Code 728.104(a) and 728.107;
- 4) Summary reports and details of all incidents that require implementing the contingency plan, as specified in Section 724.156(j);
- 5) Records and results of inspections, as required by Section 724.115(d) (except these data need to be kept only three years);
- 6) Monitoring, testing, or analytical data and corrective action data where required by Subpart F ~~of this Part~~ or Sections 724.119, 724.291, 724.293, 724.295, 724.322, 724.323, 724.326, 724.352 through 724.354, 724.376, 724.378, 724.380, 724.402 through 724.404, 724.409, 724.702, 724.934(c) through (f), 724.935, 724.963(d) through (i), 724.964, and 724.982 through 724.990. Maintain in the operating record for three years, except for records and results pertaining to groundwater monitoring and cleanup, which must be maintained in the operating record until closure of the facility;
- 7) For off-site facilities, notices to generators as specified in Section 724.112(b);
- 8) All closure cost estimates under Section 724.242 and, for disposal facilities, all post-closure care cost estimates under Section 724.244. This information must be maintained in the operating record until closure of the facility;
- 9) A certification by the permittee, no less often than annually: that the permittee has a program in place to reduce the volume and toxicity of hazardous waste that the permittee generates, to the degree the permittee determines to be economically practicable, and that the proposed method of treatment, storage, or disposal is that practicable method currently available to the permittee that minimizes the present and future threat to human health and the environment;
- 10) Records of the quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension of the effective date of any land disposal restriction granted pursuant to 35 Ill. Adm. Code 728.105, a petition pursuant to 35 Ill. Adm. Code 728.106 or a certification under 35 Ill. Adm. Code 728.108, and the applicable notice

required of a generator pursuant to 35 Ill. Adm. Code 728.107(a). This information must be maintained in the operating record until closure of the facility;

- 11) For an off-site treatment facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;
- 12) For an on-site treatment facility, the information contained in the notice (except the manifest number), and the certification and demonstration, if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;
- 13) For an off-site land disposal facility, a copy of the notice, and the certification and demonstration, if applicable, required of the generator or the owner or operator of a treatment facility under 35 Ill. Adm. Code 728.107 or 728.108, whichever is applicable;
- 14) For an on-site land disposal facility, the information contained in the notice required of the generator or owner or operator of a treatment facility under 35 Ill. Adm. Code 728.107, except for the manifest number, and the certification and demonstration, required under 35 Ill. Adm. Code 728.108, whichever is applicable;
- 15) For an off-site storage facility, a copy of the notice, and the certification and demonstration if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;
- 16) For an on-site storage facility, the information contained in the notice (except the manifest number), and the certification and demonstration if applicable, required of the generator or the owner or operator under 35 Ill. Adm. Code 728.107 or 728.108;
- 17) Any records required under Section 724.101(j)(13);
- 18) Monitoring, testing, or analytical data where required by Section 724.447 must be maintained in the operating record for five years; and
- 19) Certifications, as required by Section 724.296(f), must be maintained in the operating record until closure of the facility.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.175 Annual Facility Activities Report

The owner or operator must ~~complete prepare~~ and submit USEPA Form 8700-13 A/B a single copy of an annual facility activities report to the Agency by March 1 of each year ~~and~~. The report form supplied by the Agency must be used for this report. The annual facility activities report must cover facility activities during the previous calendar year, ~~and must include the following information:~~

- a) ~~— The USEPA identification number, name, and address of the facility;~~
- b) ~~— The calendar year covered by the report;~~
- e) ~~— For off-site facilities, the USEPA identification number of each hazardous waste generator from which the facility received a hazardous waste during the year; for imported shipments, the report must give the name and address of the foreign generator;~~
- d) ~~— A description and the quantity of each hazardous waste the facility received during the year. For off-site facilities, this information must be listed by USEPA identification number of each generator;~~
- e) ~~— The method of treatment, storage, or disposal for each hazardous waste;~~
- f) ~~— This subsection (f) corresponds with 40 CFR 264.75(f), which USEPA has designated as “reserved.” This statement maintains structural consistency with the USEPA rules;~~
- g) ~~— The most recent closure cost estimate under Section 724.242, and, for disposal facilities, the most recent post-closure cost estimate under Section 724.244;~~
- h) ~~— For generators that treat, store or dispose of hazardous waste on-site, a description of the efforts undertaken during the year to reduce the volume and toxicity of the waste generated;~~
- i) ~~— For generators that treat, store or dispose of hazardous waste on-site, a description of the changes in volume and toxicity of waste actually achieved during the year in comparison to previous years, to the extent such information is available for years prior to 1984; and~~
- j) ~~— The certification signed by the owner or operator of the facility or the owner or operator’s authorized representative.~~

BOARD NOTE: Corresponding 40 CFR 264.75 requires biennial reporting. The Board has required annual reporting, since Section 20.1 of the Act [415 ILCS 5/20.1 (2006)] requires the Agency to assemble annual reports, and only annual facility activities reports will enable the Agency to fulfill this mandate.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.176 Unmanifested Waste Report

- a) If a facility accepts for treatment, storage, or disposal any hazardous waste from an off-site source without an accompanying manifest, or without an accompanying shipping paper, as described by 35 Ill. Adm. Code 723.120(e), and if the waste is not excluded from the manifest requirement by 35 Ill. Adm. Code 260 through 265, then the owner or operator must prepare and submit a letter to the Agency within 15 days after receiving the waste. The unmanifested waste report must contain the following information:
- 1) The USEPA identification number, name, and address of the facility;
 - 2) The date the facility received the waste;
 - 3) The USEPA identification number, name, and address of the generator and the transporter, if available;
 - 4) A description and the quantity of each unmanifested hazardous waste the facility received;
 - 5) The method of treatment, storage, or disposal for each hazardous waste;
 - 6) The certification signed by the owner or operator of the facility or its authorized representative; and
 - 7) A brief explanation of why the waste was unmanifested, if known.
- b) This subsection (b) corresponds with 40 CFR 264.76(b), which USEPA has marked “reserved.”. This statement maintains structural consistency with the corresponding federal regulations.

BOARD NOTE: Small quantities of hazardous waste are excluded from regulation under this Part and do not require a manifest. Where a facility receives unmanifested hazardous wastes, USEPA has suggested that the owner or operator obtain from each generator a certification that the waste qualifies for exclusion. Otherwise, USEPA has suggested that the owner or operator file an unmanifested waste report for the hazardous waste movement.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART F: RELEASES FROM SOLID WASTE MANAGEMENT UNITS

Section 724.190 Applicability

- a) Types of Units ~~units~~.

- 1) Except as provided in subsection (b) ~~of this Section~~, the regulations in this Subpart F apply to owners and operators of facilities that treat, store or dispose of hazardous waste. The owner or operator must satisfy the requirements identified in subsection (a)(2) ~~of this Section~~ for all wastes (or constituents thereof) contained in solid waste management units at the facility regardless of the time at which waste was placed in such units.
 - 2) All solid waste management units must comply with the requirements in Section 724.201. A surface impoundment, waste pile, land treatment unit, or landfill that receives hazardous waste after July 26, 1982 (referred to in this Subpart F as a “regulated unit”) must comply with Sections 724.191 through 724.200, in lieu of Section 724.201, for purposes of detecting, characterizing, and responding to releases to the uppermost aquifer. The financial responsibility requirements of Section 724.201 apply to regulated units.
- b) The owner or operator’s regulated unit or units are not subject to regulation for releases into the uppermost aquifer under this Subpart F if the following is true:
- 1) The owner or operator is exempted pursuant to Section 724.101; or
 - 2) The owner or operator operates a unit that the Agency finds:
 - A) Is an engineered structure.
 - B) Does not receive or contain liquid waste or waste containing free liquids.
 - C) Is designed and operated to exclude liquid, precipitation, and other runoff and runoff.
 - D) Has both inner and outer layers of containment enclosing the waste.
 - E) Has a leak detection system built into each containment layer.
 - F) The owner or operator will provide continuing operation and maintenance of these leak detection systems during the active life of the unit and the closure and post-closure care periods.
 - G) To a reasonable degree of certainty, will not allow hazardous constituents to migrate beyond the outer containment layer prior to the end of the post-closure care period; or
 - 3) The Agency finds, pursuant to Section 724.380(d), that the treatment zone of a land treatment unit that qualifies as a regulated unit does not contain

levels of hazardous constituents that are above background levels of those constituents by an amount that is statistically significant, and if an unsaturated zone monitoring program meeting the requirements of Section 724.378 has not shown a statistically significant increase in hazardous constituents below the treatment zone during the operating life of the unit. An exemption pursuant to this subsection (b) can only relieve an owner or operator of responsibility to meet the requirements of this Subpart F during the post-closure care period; or

- 4) The Agency finds that there is no potential for migration of liquid from a regulated unit to the uppermost aquifer during the active life of the regulated unit (including the closure period) and the post-closure care period specified pursuant to Section 724.217. This demonstration must be certified by a qualified geologist or geotechnical engineer. In order to provide an adequate margin of safety in the prediction of potential migration of liquid, the owner or operator must base any predictions made pursuant to this subsection (b) on assumptions that maximize the rate of liquid migration; or
 - 5) The owner or operator designs and operates a pile in compliance with Section 724.350(c).
- c) The regulations under this Subpart F apply during the active life of the regulated unit (including the closure period). After closure of the regulated unit, the following is true of the applicability of the regulations in this Subpart F:
- 1) Do not apply if all waste, waste residues, contaminated containment system components, and contaminated subsoils are removed or decontaminated at closure;
 - 2) Apply during the post-closure care period pursuant to Section 724.217 if the owner or operator is conducting a detection monitoring program pursuant to Section 724.198; or
 - 3) Apply during the compliance period pursuant to Section 724.196 if the owner or operator is conducting a compliance monitoring program pursuant to Section 724.199 or a corrective action program pursuant to Section 724.200.
- d) This Subpart F applies to miscellaneous units if necessary to comply with Sections 724.701 through 724.703.
- e) The regulations of this Subpart F apply to all owners and operators subject to 35 Ill. Adm. Code 703.161, when the Agency issues a post-closure care permit or other enforceable document that contains alternative requirements for the facility, as provided in 35 Ill. Adm. Code 703.161. When alternative requirements apply to a

facility, a reference in this Subpart F to “in the permit” must mean “in the enforceable document.”

- f) A permit or enforceable document can contain alternative requirements for groundwater monitoring and corrective action for releases to groundwater applicable to a regulated unit that replace all or part of the requirements of 35 Ill. Adm. Code 724.191 through 724.200, as provided pursuant to 35 Ill. Adm. Code 703.161, where the Board or Agency determines the following:
- 1) The regulated unit is situated among solid waste management units (or areas of concern), a release has occurred, and both the regulated unit and one or more solid waste management units (or areas of concern) are likely to have contributed to the release; and
 - 2) It is not necessary to apply the groundwater monitoring and corrective action requirements of 35 Ill. Adm. Code 724.191 through 724.200 because alternative requirements will adequately protect human health and the environment.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.191 Required Programs

- a) Owners and operators subject to this Subpart F must conduct a monitoring and response program as follows:
- 1) Whenever hazardous constituents pursuant to Section 724.193 from a regulated unit are detected at a compliance point pursuant to Section 724.195, the owner or operator must institute a compliance monitoring program pursuant to Section 724.199. “Detected” is defined as statistically significant evidence of contamination, as described in Section 724.198(f).
 - 2) Whenever the groundwater protection standard pursuant to Section 724.192 is exceeded, the owner or operator must institute a corrective action program pursuant to Section 724.200. “Exceeded” is defined as statistically significant evidence of increased contamination, as described in Section 724.199(d).
 - 3) Whenever hazardous constituents pursuant to Section 724.193 from a regulated unit exceed concentration limits pursuant to Section 724.194 in groundwater between the compliance point pursuant to Section 724.195 and the downgradient facility property boundary, the owner or operator must institute a corrective action program pursuant to Section 724.200; or

- 4) In all other cases, the owner or operator must institute a detection monitoring program pursuant to Section 724.198.
- b) The Agency must specify in the facility permit the specific elements of the monitoring and response program. The Agency may include one or more of the programs identified in subsection (a) ~~of this Section~~ in the facility permit as may be necessary to adequately protect human health and the environment and must specify the circumstances under which each of the programs will be required. In deciding whether to require the owner or operator to be prepared to institute a particular program, the Agency must consider the potential adverse effects on human health and the environment that might occur before final administrative action on a permit modification application to incorporate such a program could be taken.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.193 Hazardous Constituents

- a) The Agency must specify in the facility permit the hazardous constituents to which the groundwater protection standard of Section 724.192 applies. Hazardous constituents are constituents identified in Appendix H of 35 Ill. Adm. Code 721 that have been detected in groundwater in the uppermost aquifer underlying a regulated unit and that are reasonably expected to be in or derived from waste contained in a regulated unit, unless the Agency has excluded them under subsection (b) ~~of this Section~~.
- b) The Agency must exclude a constituent in Appendix H of 35 Ill. Adm. Code 721 from the list of hazardous constituents specified in the facility permit if it finds that the constituent is not capable of posing a substantial present or potential hazard to human health or the environment. In deciding whether to grant an exemption, the Agency must consider the following:
- 1) Potential adverse effects on groundwater quality, considering the following:
 - A) The physical and chemical characteristics of the waste in the regulated unit, including its potential for migration;
 - B) The hydrogeological characteristics of the facility and surrounding land;
 - C) The quantity of groundwater and the direction of groundwater flow;
 - D) The proximity and withdrawal rates of groundwater users;

- E) The current and future uses of groundwater in the area;
 - F) The existing quality of groundwater, including other sources of contamination, and their cumulative impact on the groundwater quality;
 - G) The potential for health risks caused by human exposure to waste constituents;
 - H) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents;
 - I) The persistence and permanence of the potential adverse effects; and
- 2) Potential adverse effects on hydraulically-connected surface water quality, considering the following:
- A) The volume and physical and chemical characteristics of the waste in the regulated unit;
 - B) The hydrogeological characteristics of the facility and surrounding land;
 - C) The quantity and quality of groundwater and the direction of groundwater flow;
 - D) The patterns of rainfall in the region;
 - E) The proximity of the regulated unit to surface waters;
 - F) The current and future uses of surface waters in the area and any water quality standards established for those surface waters;
 - G) The existing quality of surface water, including other sources of contamination, and the cumulative impact on surface water quality;
 - H) The potential for health risks caused by human exposure to waste constituents;
 - I) The potential damage to wildlife, crops, vegetation, and physical structures caused by exposure to waste constituents; and
 - J) The persistence and permanence of the potential adverse effects.
- c) In making any determination under subsection (b) ~~of this Section~~ about the use of groundwater in the area around the facility, the Agency must consider any

identification of underground sources of drinking water and exempted aquifers made under 35 Ill. Adm. Code 704.123.

- d) The Agency must make specific written findings in granting any exemptions under subsection (b) ~~of this Section~~.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.196 Compliance Period

- a) The Agency must specify in the facility permit the compliance period during which the groundwater protection standard of Section 724.192 applies. The compliance period is the number of years equal to the active life of the waste management area (including any waste management activity prior to permitting, and the closure period.)
- b) The compliance period begins when the owner or operator initiates a compliance monitoring program meeting the requirements of Section 724.199.
- c) If the owner or operator is engaged in a corrective action program at the end of the compliance period specified in subsection (a) ~~of this Section~~, the compliance period is extended until the owner or operator can demonstrate that the groundwater protection standard of Section 724.192 has not been exceeded for a period of three consecutive years.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.197 General Groundwater Monitoring Requirements

The owner or operator must comply with the following requirements for any groundwater monitoring program developed to satisfy Section 724.198, 724.199, or 724.200.

- a) The groundwater monitoring system must consist of a sufficient number of wells, installed at appropriate locations and depths to yield groundwater samples from the uppermost aquifer that fulfill the following requirements:
- 1) They represent the quality of background groundwater that has not been affected by leakage from a regulated unit. A determination of background groundwater quality may include sampling of wells that are not hydraulically upgradient from the waste management area where the following is true:
 - A) Hydrogeologic conditions do not allow the owner or operator to determine what wells are upgradient; or

- B) Sampling at other wells will provide an indication of background groundwater quality that is as representative or more representative than that provided by the upgradient wells;
 - 2) They represent the quality of groundwater passing the point of compliance; and
 - 3) They allow for the detection of contamination when hazardous waste or hazardous constituents have migrated from the hazardous waste management area to the uppermost aquifer.
- b) If a facility contains more than one regulated unit, separate groundwater monitoring systems are not required for each regulated unit provided that provisions for sampling the groundwater in the uppermost aquifer will enable detection and measurement at the compliance point of hazardous constituents from the regulated units that have entered the groundwater in the uppermost aquifer.
- c) All monitoring wells must be cased in a manner that maintains the integrity of the monitoring well bore hole. This casing must be screened or perforated and packed with gravel or sand, where necessary, to enable collection of groundwater samples. The annular space (i.e., the space between the bore hole and well casing) above the sampling depth must be sealed to prevent contamination of samples and the groundwater.
- d) The groundwater monitoring program must include consistent sampling and analysis procedures that are designed to ensure monitoring results that provide a reliable indication of groundwater quality below the waste management area. At a minimum the program must include procedures and techniques for the following:
 - 1) Sample collection;
 - 2) Sample preservation and shipment;
 - 3) Analytical procedures; and
 - 4) Chain of custody control.
- e) The groundwater monitoring program must include sampling and analytical methods that are appropriate for groundwater sampling and that accurately measure hazardous constituents in groundwater samples.
- f) The groundwater monitoring program must include a determination of the groundwater surface elevation each time groundwater is sampled.

- g) In detection monitoring or where appropriate in compliance monitoring, data on each hazardous constituent specified in the permit will be collected from background wells and wells at the compliance points. The number and kinds of samples collected to establish background must be appropriate for the form of statistical test employed, following generally accepted statistical principles. The sample size must be as large as necessary to ensure with reasonable confidence that a contaminant release to groundwater from a facility will be detected. The owner or operator will determine an appropriate sampling procedure and interval for each hazardous constituent listed in the facility permit that must be specified in the unit permit upon approval by the Agency. This sampling procedure must fulfill the following requirements:
- 1) It may be a sequence of at least four samples, taken at an interval that assures, to the greatest extent technically feasible, that an independent sample is obtained, by reference to the uppermost aquifer's effective porosity, hydraulic conductivity and hydraulic gradient, and the fate and transport characteristics of the potential contaminants; or
 - 2) It may be an alternate sampling procedure proposed by the owner or operator and approved by the Agency.
- h) The owner or operator must specify one of the following statistical methods to be used in evaluating groundwater monitoring data for each hazardous constituent that, upon approval by the Agency, will be specified in the unit permit. The statistical test chosen must be conducted separately for each hazardous constituent in each well. Where practical quantification limits (pqls) are used in any of the following statistical procedures to comply with subsection (i)(5) ~~of this Section~~, the pql must be proposed by the owner or operator and approved by the Agency. Use of any of the following statistical methods must adequately protect human health and the environment and must comply with the performance standards outlined in subsection (i) ~~of this Section~~.
- 1) A parametric analysis of variance (ANOVA) followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's mean and the background mean levels for each constituent.
 - 2) An analysis of variance (ANOVA) based on ranks followed by multiple comparisons procedures to identify statistically significant evidence of contamination. The method must include estimation and testing of the contrasts between each compliance well's median and the background median levels for each constituent.

- 3) A tolerance or prediction interval procedure in which an interval for each constituent is established from the distribution of the background data, and the level of each constituent in each compliance well is compared to the upper tolerance or prediction limit.
 - 4) A control chart approach that gives control limits for each constituent.
 - 5) Another statistical test method submitted by the owner or operator and approved by the Agency.
- i) Any statistical method chosen pursuant to subsection (h) ~~of this Section~~ for specification in the unit permit must comply with the following performance standards, as appropriate:
- 1) The statistical method used to evaluate groundwater monitoring data must be appropriate for the distribution of chemical parameters or hazardous constituents. If the distribution of the chemical parameters or hazardous constituents is shown by the owner or operator to be inappropriate for a normal theory test, then the data should be transformed or a distribution-free theory test should be used. If the distributions for the constituents differ, more than one statistical method may be needed.
 - 2) If an individual well comparison procedure is used to compare an individual compliance well constituent concentration with background constituent concentrations or a groundwater protection standard, the test must be done at a Type I error level no less than 0.01 for each testing period. If a multiple comparisons procedure is used, the Type I experimentwise error rate for each testing period must be no less than 0.05; however, the Type I error of no less than 0.01 for individual well comparisons must be maintained. This performance standard does not apply to tolerance intervals, prediction intervals or control charts.
 - 3) If a control chart approach is used to evaluate groundwater monitoring data, the specific type of control chart and its associated parameter value must be proposed by the owner or operator and approved by the Agency if the Agency finds it to adequately protect human health and the environment.
 - 4) If a tolerance interval or a prediction interval is used to evaluate groundwater monitoring data, the levels of confidence and, for tolerance intervals, the percentage of the population that the interval must contain, must be proposed by the owner or operator and approved by the Agency if the Agency finds these parameters to adequately protect human health and the environment. These parameters will be determined after considering

the number of samples in the background database, the data distribution, and the range of the concentration values for each constituent of concern.

- 5) The statistical method must account for data below the limit of detection with one or more statistical procedures that adequately protect human health and the environment. Any practical quantification limit (pql) approved by the Agency pursuant to subsection (h) ~~of this Section~~ that is used in the statistical method must be the lowest concentration level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operating conditions that are available to the facility.
- 6) If necessary, the statistical method must include procedures to control or correct for seasonal and spatial variability, as well as temporal correlation in the data.
- j) Groundwater monitoring data collected in accordance with subsection (g) ~~of this Section~~, including actual levels of constituents, must be maintained in the facility operating record. The Agency must specify in the permit when the data must be submitted for review.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.198 Detection Monitoring Program

An owner or operator required to establish a detection monitoring program under this Subpart F must, at a minimum, discharge the following responsibilities:

- a) The owner or operator must monitor for indicator parameters (e.g., specific conductance, total organic carbon, or total organic halogen), waste constituents or reaction products that provide a reliable indication of the presence of hazardous constituents in groundwater. The Agency must specify the parameters or constituents to be monitored in the facility permit, after considering the following factors:
 - 1) The types, quantities, and concentrations of constituents in wastes managed at the regulated unit;
 - 2) The mobility, stability, and persistence of waste constituents or their reaction products in the unsaturated zone beneath the waste management area;
 - 3) The detectability of indicator parameters, waste constituents, and reaction products in groundwater; and

- 4) The concentrations or values and coefficients of variation of proposed monitoring parameters or constituents in the groundwater background.
- b) The owner or operator must install a groundwater monitoring system at the compliance point as specified under Section 724.195. The groundwater monitoring system must comply with Sections 724.197(a)(2), 724.197(b), and 724.197(c).
- c) The owner or operator must conduct a groundwater monitoring program for each chemical parameter and hazardous constituent specified in the permit pursuant to subsection (a) ~~of this Section~~ in accordance with Section 724.197(g). The owner or operator must maintain a record of groundwater analytical data, as measured and in a form necessary for the determination of statistical significance under Section 724.197(h).
- d) The Agency must specify the frequencies for collecting samples and conducting statistical tests to determine whether there is statistically significant evidence of contamination for any parameter or hazardous constituent specified in the permit conditions under subsection (a) ~~of this Section~~ in accordance with Section 724.197(g).
- e) The owner or operator must determine the groundwater flow rate and direction in the uppermost aquifer at least annually.
- f) The owner or operator must determine whether there is statistically significant evidence of contamination for any chemical parameter or hazardous constituent specified in the permit pursuant to subsection (a) ~~of this Section~~ at a frequency specified under subsection (d) ~~of this Section~~.
 - 1) In determining whether statistically significant evidence of contamination exists, the owner or operator must use the methods specified in the permit under Section 724.197(h). These methods must compare data collected at the compliance points to the background groundwater quality data.
 - 2) The owner or operator must determine whether there is statistically significant evidence of contamination at each monitoring well at the compliance point within a reasonable period of time after completion of sampling. The Agency must specify in the facility permit what period of time is reasonable, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.
- g) If the owner or operator determines pursuant to subsection (f) ~~of this Section~~ that there is statistically significant evidence of contamination for chemical parameters or hazardous constituents specified pursuant to subsection (a) ~~of this Section~~ at

any monitoring well at the compliance point, the owner or operator must do the following:

- 1) Notify the Agency of this finding in writing within seven days. The notification must indicate what chemical parameters or hazardous constituents have shown statistically significant evidence of contamination.
- 2) Immediately sample the groundwater in all monitoring wells and determine whether constituents in the list of Appendix I ~~of this Part~~ are present, and if so, in what concentration. However, the Agency must allow sampling for a site-specific subset of constituents from the Appendix I list ~~of this Part~~ and for other representative or related waste constituents if it determines that sampling for that site-specific subset of contaminants and other constituents is more economical and equally effective for determining whether groundwater contamination has occurred.
- 3) For any compounds in Appendix I ~~of this Part~~ found in the analysis pursuant to subsection (g)(2) ~~of this Section~~, the owner or operator may resample within one month or at an alternative site-specific schedule approved by the Agency and repeat the analysis for those compounds detected. If the results of the second analysis confirm the initial results, then these constituents will form the basis for compliance monitoring. If the owner or operator does not resample for the compounds set forth in subsection (g)(2) ~~of this Section~~, the hazardous constituents found during this initial Appendix I analysis will form the basis for compliance monitoring.
- 4) Within 90 days, submit to the Agency an application for a permit modification to establish a compliance monitoring program meeting the requirements of Section 724.199. The application must include the following information:
 - A) An identification of the concentration of any constituent in Appendix I ~~of this Part~~ detected in the groundwater at each monitoring well at the compliance point;
 - B) Any proposed changes to the groundwater monitoring system at the facility necessary to meet the requirements of Section 724.199;
 - C) Any proposed additions or changes to the monitoring frequency, sampling and analysis procedures or methods, or statistical methods used at the facility necessary to meet the requirements of Section 724.199;

- D) For each hazardous constituent detected at the compliance point, a proposed concentration limit under Section 724.194(a)(1) or (a)(2), or a notice of intent to seek an alternate concentration limit under Section 724.194(b).
- 5) Within 180 days, submit the following to the Agency:
- A) All data necessary to justify an alternate concentration limit sought under Section 724.194(b); and
 - B) An engineering feasibility plan for a corrective action program necessary to meet the requirement of Section 724.200, unless the following is true:
 - i) All hazardous constituents identified under subsection (g)(2) ~~of this Section~~ are listed in Table 1 of Section 724.194 and their concentrations do not exceed the respective values given in that table; or
 - ii) The owner or operator has sought an alternate concentration limit under Section 724.194(b) for every hazardous constituent identified under subsection (g)(2) ~~of this Section~~.
- 6) If the owner or operator determines, pursuant to subsection (f) ~~of this Section~~, that there is a statistically significant difference for chemical parameters or hazardous constituents specified pursuant to subsection (a) ~~of this Section~~ at any monitoring well at the compliance point, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis or statistical evaluation, or natural variation in the groundwater. The owner or operator may make a demonstration under this subsection (g) in addition to, or in lieu of, submitting a permit modification application under subsection (g)(4) ~~of this Section~~; however, the owner or operator is not relieved of the requirement to submit a permit modification application within the time specified in subsection (g)(4) ~~of this Section~~ unless the demonstration made under this subsection (g) successfully shows that a source other than a regulated unit caused the increase, or that the increase resulted from error in sampling, analysis, or evaluation. In making a demonstration under this subsection (g), the owner or operator must do the following:
- A) Notify the Agency in writing, within seven days of determining statistically significant evidence of contamination at the

compliance point, that the owner or operator intends to make a demonstration under this subsection (g);

- B) Within 90 days, submit a report to the Agency that demonstrates that a source other than a regulated unit caused the contamination or that the contamination resulted from error in sampling, analysis, or evaluation;
 - C) Within 90 days, submit to the Agency an application for a permit modification to make any appropriate changes to the detection monitoring program facility; and
 - D) Continue to monitor in accordance with the detection monitoring program established under this Section.
- h) If the owner or operator determines that the detection monitoring program no longer satisfies the requirements of this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.199 Compliance Monitoring Program

An owner or operator required to establish a compliance monitoring program under this Subpart F must, at a minimum, discharge the following responsibilities:

- a) The owner or operator must monitor the groundwater to determine whether regulated units are in compliance with the groundwater protection standard under Section 724.192. The Agency must specify the groundwater protection standard in the facility permit, including the following:
 - 1) A list of the hazardous constituents identified under Section 724.193;
 - 2) Concentration limits under Section 724.194 for each of those hazardous constituents;
 - 3) The compliance point under Section 724.195; and
 - 4) The compliance period under Section 724.196.
- b) The owner or operator must install a groundwater monitoring system at the compliance point as specified under Section 724.195. The groundwater monitoring system must comply with Section 724.197(a)(2), 724.197(b), and 724.197(c).

- c) The Agency must specify the sampling procedures and statistical methods appropriate for the constituents and facility, consistent with Section 724.197(g) and (h).
 - 1) The owner or operator must conduct a sampling program for each chemical parameter or hazardous constituent in accordance with Section 724.197(g).
 - 2) The owner or operator must record groundwater analytical data as measured and in a form necessary for the determination of statistical significance under Section 724.197(h) for the compliance period of the facility.
- d) The owner or operator must determine whether there is statistically significant evidence of increased contamination for any chemical parameter or hazardous constituent specified in the permit, pursuant to subsection (a) ~~of this Section~~, at a frequency specified under subsection (f) ~~of this Section~~.
 - 1) In determining whether statistically significant evidence of increased contamination exists, the owner or operator must use the methods specified in the permit under Section 724.197(h). The methods must compare data collected at the compliance points to a concentration limit developed in accordance with Section 724.194.
 - 2) The owner or operator must determine whether there is statistically significant evidence of increased contamination at each monitoring well at the compliance point within a reasonable time period after completion of the sampling. The Agency must specify that time period in the facility permit, after considering the complexity of the statistical test and the availability of laboratory facilities to perform the analysis of groundwater samples.
- e) The owner or operator must determine the groundwater flow rate and direction in the uppermost aquifer at least annually.
- f) The Agency must specify the frequencies for collecting samples and conducting statistical tests to determine statistically significant evidence of increased contamination in accordance with Section 724.197(g).
- g) The owner or operator must annually determine whether additional hazardous constituents from Appendix I ~~of this Part~~, which could possibly be present but are not on the detection monitoring list in the permit, are actually present in the uppermost aquifer and, if so, at what concentration, pursuant to procedures in Section 724.198(f). To accomplish this, the owner or operator must consult with the Agency to determine the following on a case-by-case basis: which sample collection event during the year will involve enhanced sampling; the number of

monitoring wells at the compliance point to undergo enhanced sampling; the number of samples to be collected from each of these monitoring wells; and, the specific constituents from Appendix I ~~of this Part~~ for which these samples must be analyzed. If the enhanced sampling event indicates that Appendix I constituents are present in the ground water that are not already identified in the permit as monitoring constituents, the owner or operator may resample within one month or at an alternative site-specific schedule approved by the Agency, and repeat the analysis. If the second analysis confirms the presence of new constituents, the owner or operator must report the concentration of these additional constituents to the Agency within seven days after the completion of the second analysis and add them to the monitoring list. If the owner or operator chooses not to resample, then it must report the concentrations of these additional constituents to the Agency within seven days after completion of the initial analysis, and add them to the monitoring list.

- h) If the owner or operator determines, pursuant to subsection (d) ~~of this Section~~ that any concentration limits under Section 724.194 are being exceeded at any monitoring well at the point of compliance, the owner or operator must do the following:
- 1) Notify the Agency of this finding in writing within seven days. The notification must indicate what concentration limits have been exceeded.
 - 2) Submit to the Agency an application for a permit modification to establish a corrective action program meeting the requirements of Section 724.200 within 180 days, or within 90 days if an engineering feasibility study has been previously submitted to the Agency under Section 724.198(g)(5). The application must at a minimum include the following information:
 - A) A detailed description of corrective actions that will achieve compliance with the groundwater protection standard specified in the permit under subsection (a) ~~of this Section~~; and
 - B) A plan for a groundwater monitoring program that will demonstrate the effectiveness of the corrective action. Such a groundwater monitoring program may be based on a compliance monitoring program developed to meet the requirements of this Section.
- i) If the owner or operator determines, pursuant to subsection (d) ~~of this Section~~, that the groundwater concentration limits under this Section are being exceeded at any monitoring well at the point of compliance, the owner or operator may demonstrate that a source other than a regulated unit caused the contamination or that the detection is an artifact caused by an error in sampling, analysis, or statistical evaluation, or natural variation in groundwater. In making a

demonstration under this subsection (i), the owner or operator must do the following:

- 1) Notify the Agency in writing within seven days that it intends to make a demonstration under this subsection (i);
 - 2) Within 90 days, submit a report to the Agency that demonstrates that a source other than a regulated unit caused the standard to be exceeded or that the apparent noncompliance with the standards resulted from error in sampling, analysis, or evaluation;
 - 3) Within 90 days, submit to the Agency an application for a permit modification to make any appropriate changes to the compliance monitoring program at the facility; and
 - 4) Continue to monitor in accord with the compliance monitoring program established under this Section.
- j) If the owner or operator determines that the compliance monitoring program no longer satisfies the requirements of this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.200 Corrective Action Program

An owner or operator required to establish a corrective action program pursuant to this Subpart F must, at a minimum, discharge the following responsibilities:

- a) The owner or operator must take corrective action to ensure that regulated units are in compliance with the groundwater protection standard pursuant to Section 724.192. The Agency must specify the groundwater protection standard in the facility permit, including the following:
 - 1) A list of the hazardous constituents identified pursuant to Section 724.193;
 - 2) Concentration limits pursuant to Section 724.194 for each of those hazardous constituents;
 - 3) The compliance point pursuant to Section 724.195; and
 - 4) The compliance period pursuant to Section 724.196.
- b) The owner or operator must implement a corrective action program that prevents hazardous constituents from exceeding their respective concentration limits at the

compliance point by removing the hazardous waste constituents or treating them in place. The permit will specify the specific measures that must be taken.

- c) The owner or operator must begin corrective action within a reasonable time period after the groundwater protection standard is exceeded. The Agency must specify that time period in the facility permit. If a facility permit includes a corrective action program in addition to a compliance monitoring program, the permit will specify when the corrective action must begin and such a requirement will operate in lieu of Section 724.199(i)(2).
- d) In conjunction with a corrective action program, the owner or operator must establish and implement a groundwater monitoring program to demonstrate the effectiveness of the corrective action program. Such a monitoring program may be based on the requirements for a compliance monitoring program pursuant to Section 724.199 and must be as effective as that program in determining compliance with the groundwater protection standard pursuant to Section 724.192 and in determining the success of a corrective action program pursuant to subsection (e) ~~of this Section~~ where appropriate.
- e) In addition to the other requirements of this Section, the owner or operator must conduct a corrective action program to remove or treat in place any hazardous constituents pursuant to Section 724.193 that exceed concentration limits pursuant to Section 724.194 in groundwater, as follows:
 - 1) At the following locations:
 - A) Between the compliance point pursuant to Section 724.195 and the downgradient facility property boundary; and
 - B) Beyond the facility boundary, where necessary to adequately protect human health and the environment, unless the owner or operator demonstrates to the Agency that, despite the owner's or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such action. The owner and operator are not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site access is denied. On-site measures to address such releases will be determined on a case-by-case basis.
 - 2) The permit will specify the following measures to be taken:
 - A) Corrective action measures pursuant to this subsection (e) must be initiated and completed within a reasonable period of time considering the extent of contamination.

- B) Corrective action measures pursuant to this subsection (e) may be terminated once the concentration of hazardous constituents pursuant to Section 724.193 is reduced to levels below their respective concentration limits pursuant to Section 724.194.
- f) The owner or operator must continue corrective action measures during the compliance period to the extent necessary to ensure that the groundwater protection standard is not exceeded. If the owner or operator is conducting corrective action at the end of the compliance period, the owner or operator must continue that corrective action for as long as necessary to achieve compliance with the groundwater protection standard. The owner or operator may terminate corrective action measures taken beyond the period equal to the active life of the waste management area (including the closure period) if the owner or operator can demonstrate, based on data from the groundwater monitoring program pursuant to subsection (d) ~~of this Section~~, that the groundwater protection standard of Section 724.192 has not been exceeded for a period of three consecutive years.
- g) The owner or operator must report in writing to the Agency on the effectiveness of the corrective action program. The owner or operator must submit these reports annually.
- h) If the owner or operator determines that the corrective action program no longer satisfies this Section, the owner or operator must, within 90 days, submit an application for a permit modification to make any appropriate changes to the program.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.201 Corrective Action for Solid Waste Management Units

- a) The owner or operator of a facility seeking a permit for the treatment, storage, or disposal of hazardous waste must institute corrective action as necessary to adequately protect human health and the environment for all releases of hazardous waste or constituents from any solid waste management unit at the facility, regardless of the time at which waste was placed in such unit.
- b) Corrective action will be specified in the permit in accordance with this Section and Subpart S ~~of this Part~~. The permit will contain schedules of compliance for such corrective action (where such corrective action cannot be completed prior to issuance of the permit) and assurances of financial responsibility for completing such corrective action.
- c) The owner or operator must implement corrective action measures beyond the facility property boundary, where necessary to adequately protect human health and the environment, unless the owner or operator demonstrates to the Agency

that, despite the owner or operator's best efforts, the owner or operator was unable to obtain the necessary permission to undertake such actions. The owner and operator are not relieved of all responsibility to clean up a release that has migrated beyond the facility boundary where off-site access is denied. On-site measures to address such releases will be determined on a case-by-case basis. Assurances of financial responsibility for such corrective action must be provided.

- d) This Section does not apply to remediation waste management sites unless they are part of a facility subject to a permit for treating, storing, or disposing of hazardous wastes that are not remediation wastes.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART G: CLOSURE AND POST-CLOSURE CARE

Section 724.213 Closure; Time Allowed for Closure

- a) All permits must require that, within 90 days after receiving the final volume of hazardous waste, or the final volume of non-hazardous wastes, if the owner or operator complies with all the applicable requirements of subsections (d) and (e) ~~of this Section~~, at a hazardous waste management unit or facility, the owner or operator treat, remove from the unit or facility, or dispose of on-site, all hazardous wastes in accordance with the approved closure plan, unless the owner or operator makes the following demonstration by way of permit application or modification application. The Agency must approve a longer period if the owner or operator demonstrates that the following is true:
- 1) Either of the following:
 - A) The activities required to comply with this subsection (a) will, of necessity, take longer than 90 days to complete; or
 - B) All of the following is true:
 - i) The hazardous waste management unit or facility has the capacity to receive additional hazardous wastes, or has the capacity to receive non-hazardous wastes, if the owner or operator complies with subsections (d) and (e) ~~of this Section~~; **Section**;
 - ii) There is a reasonable likelihood that the owner or operator or another person will recommence operation of the hazardous waste management unit or facility within one year; and

- iii) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and
 - 2) The owner or operator has taken and will continue to take all steps to prevent threats to human health and the environment, including compliance with all applicable permit requirements.
- b) All permits must require that the owner or operator complete partial and final closure activities in accordance with the approved closure plan and within 180 days after receiving the final volume of hazardous wastes, or the final volume of non-hazardous wastes, if the owner or operator complies with all applicable requirements in subsections (d) and (e) ~~of this Section~~, at the hazardous waste management unit or facility, unless the owner or operator makes the following demonstration by way of permit application or modification application. The Agency must approve a longer closure period if the owner or operator demonstrates as follows:
 - 1) Either of the following:
 - A) The partial or final closure activities will, of necessity, take longer than 180 days to complete; or
 - B) All of the following:
 - i) The hazardous waste management unit or facility has the capacity to receive additional hazardous wastes, or has the capacity to receive non-hazardous wastes, if the owner or operator complies with subsections (d) and (e) ~~of this Section~~;
 - ii) There is reasonable likelihood that the owner or operator will recommence operation of the hazardous waste management unit or facility within one year; and
 - iii) Closure of the hazardous waste management unit or facility would be incompatible with continued operation of the site; and
 - 2) The owner and operator have taken and will continue to take all steps to prevent threats to human health and the environment from the unclosed but not operating hazardous waste management unit or facility including compliance with all applicable permit requirements.
- c) The demonstration referred to in subsections (a)(1) and (b)(1) ~~of this Section~~ must be made as follows:

- 1) The demonstration in subsection (a)(1) ~~of this Section~~ must be made at least 30 days prior to the expiration of the 90-day period in subsection (a) ~~of this Section~~; and
 - 2) The demonstration in subsection (b)(1) ~~of this Section~~ must be made at least 30 days prior to the expiration of the 180-day period in subsection (b) ~~of this Section~~, unless the owner or operator is otherwise subject to deadlines in subsection (d) ~~of this Section~~.
- d) Continued Receipt of Non-Hazardous Waste ~~non-hazardous waste~~. The Agency must permit an owner or operator to receive only non-hazardous wastes in a landfill, land treatment unit, or surface impoundment unit after the final receipt of hazardous wastes at that unit if the following is true:
- 1) The owner or operator requests a permit modification in compliance with all applicable requirements in 35 Ill. Adm. Code 702, 703, and 705, and in the permit modification request demonstrates the following:
 - A) That the unit has the existing design capacity as indicated on the Part A application to receive non-hazardous wastes;
 - B) That there is a reasonable likelihood that the owner or operator or another person will receive non-hazardous wastes in the unit within one year after the final receipt of hazardous wastes;
 - C) That the non-hazardous wastes will not be incompatible with any remaining wastes in the unit, or with the facility design and operating requirements of the unit or facility pursuant to this Part;
 - D) That closure of the hazardous waste management unit would be incompatible with continued operation of the unit or facility; and
 - E) That the owner or operator is operating and will continue to operate in compliance with all applicable permit requirements;
 - 2) The request to modify the permit includes an amended waste analysis plan, groundwater monitoring and response program, human exposure assessment required pursuant to 35 Ill. Adm. Code 703.186, and closure and post-closure plans and updated cost estimates and demonstrations of financial assurance for closure and post-closure care, as necessary and appropriate, to reflect any changes due to the presence of hazardous constituents in the non-hazardous wastes, and changes in closure activities, including the expected year of closure if applicable pursuant to Section 724.212(b)(7), as a result of the receipt of non-hazardous wastes following the final receipt of hazardous wastes;

- 3) The request to modify the permit includes revisions, as necessary and appropriate, to affected conditions of the permit to account for the receipt of non-hazardous wastes following receipt of the final volume of hazardous wastes; and
 - 4) The request to modify the permit and the demonstrations referred to in subsections (d)(1) and (d)(2) ~~of this Section~~ are submitted to the Agency no later than 120 days prior to the date on which the owner or operator of the facility receives the known final volume of hazardous wastes at the unit or no later than 90 days after the effective date of this Section, whichever is later.
- e) Surface Impoundments ~~impoundments~~. In addition to the requirements in subsection (d) ~~of this Section~~, an owner or operator of a hazardous waste surface impoundment that is not in compliance with the liner and leachate collection system requirements in Section 724.321(c), (d), or (e) must receive non-hazardous wastes only as authorized by an adjusted standard pursuant to this subsection (e).
- 1) The petition for adjusted standard must include the following:
 - A) A plan for removing hazardous wastes; and
 - B) A contingent corrective measures plan.
 - 2) The removal plan must provide for the following:
 - A) Removing all hazardous liquids; and
 - B) Removing all hazardous sludges to the extent practicable without impairing the integrity of the liner or liners, if any; and
 - C) Removal of hazardous wastes no later than 90 days after the final receipt of hazardous wastes. The Board will allow a longer time, if the owner or operator demonstrates the following:
 - i) That the removal of hazardous wastes will, of necessity, take longer than the allotted period to complete; and
 - ii) That an extension will not pose a threat to human health and the environment.
 - 3) The following requirements apply to the contingent corrective measures plan:

- A) It must meet the requirements of a corrective action plan pursuant to Section 724.199, based upon the assumption that a release has been detected from the unit.
 - B) It may be a portion of a corrective action plan previously submitted pursuant to Section 724.199.
 - C) It may provide for continued receipt of non-hazardous wastes at the unit following a release only if the owner or operator demonstrates that continued receipt of wastes will not impede corrective action.
 - D) It must provide for implementation within one year after a release, or within one year after the grant of the adjusted standard, whichever is later.
- 4) Definition of “Release.” ~~“release.”~~ A release is defined as a statistically significant increase (or decrease in the case of pH) over background values for detection monitoring parameters or constituents specified in the permit, or over the facility’s groundwater protection standard at the or over the facility’s groundwater protection standard at the point of compliance, if applicable, detected in accordance with the requirements in Subpart F ~~of this Part.~~
- 5) In the event of a release, the owner or operator of the unit must do the following:
- A) Within 35 days, the owner or operator must file with the Board a petition for adjusted standard. If the Board finds that it is necessary to do so in order to adequately protect human health and the environment, the Board will modify the adjusted standard to require the owner or operator to fulfill the conditions of subsections (e)(5)(A)(i) and (e)(5)(A)(ii) ~~of this Section.~~ The Board will retain jurisdiction or condition the adjusted standard so as to require the filing of a new petition to address any required closure pursuant to subsection (e)(7) ~~of this Section.~~
 - i) Begin to implement that corrective measures plan in less than one year; or
 - ii) Cease the receipt of wastes until the plan has been implemented.
 - B) The owner or operator must implement the contingent corrective measures plan.

- C) The owner or operator may continue to receive wastes at the unit if authorized by the approved contingent measures plan.
- 6) Annual Report-report. During the period of corrective action, the owner or operator must provide annual reports to the Agency that do the following:
- A) They must describe the progress of the corrective action program;
 - B) They must compile all groundwater monitoring data; and
 - C) They must evaluate the effect of the continued receipt of non-hazardous wastes on the effectiveness of the corrective action.
- 7) Required Closure-closure. The owner or operator must commence closure of the unit in accordance with the closure plan and the requirements of this Part if the Board terminates the adjusted standard, or if the adjusted standard terminates pursuant to its terms.
- A) The Board will terminate the adjusted standard if the owner or operator failed to implement corrective action measures in accordance with the approved contingent corrective measures plan.
 - B) The Board will terminate the adjusted standard if the owner or operator fails to make substantial progress in implementing the corrective measures plan and achieving the facility's groundwater protection standard, or background levels if the facility has not yet established a groundwater protection standard.
 - C) The adjusted standard will automatically terminate if the owner or operator fails to implement the removal plan.
 - D) The adjusted standard will automatically terminate if the owner or operator fails to timely file a required petition for adjusted standard.
- 8) Adjusted Standard Procedures-standard procedures. The following procedures must be used in granting, modifying or terminating an adjusted standard pursuant to this subsection (e).
- A) Except as otherwise provided, the owner or operator must follow the procedures of Section 28.1 of the Act-[415 ILCS 5/28.1] and 35 Ill. Adm. Code 101 and 104 to petition the Board for an adjusted standard.
 - B) Initial justification. The Board will grant an adjusted standard pursuant to subsection (e)(1)-of this Section if the owner or

operator demonstrates that the removal plan and contingent corrective measures plans meet the requirements of subsections (e)(2) and (e)(3) ~~of this Section~~.

- C) The Board will include the following conditions in granting an adjusted standard pursuant to subsection (e)(1) ~~of this Section~~:
- i) A plan for removing hazardous wastes.
 - ii) A requirement that the owner or operator remove hazardous wastes in accordance with the plan.
 - iii) A contingent corrective measures plan.
 - iv) A requirement that, in the event of a release, the owner or operator must do as follows: within 35 days, file with the Board a petition for adjusted standard; implement the corrective measures plan; and, file semi-annual reports with the Agency.
 - v) A condition that the adjusted standard will terminate if the owner or operator fails to do as follows: implement the removal plan; or timely file a required petition for adjusted standard.
 - vi) A requirement that, in the event the adjusted standard is terminated, the owner or operator must commence closure of the unit in accordance with the requirements of the closure plan and this Part.
- D) Justification in the ~~Event~~ event of a ~~Release~~ release. The Board will modify or terminate the adjusted standard pursuant to a petition filed pursuant to subsection (e)(5)(A) ~~of this Section~~, as provided in that subsection or in subsection (e)(7) ~~of this Section~~.
- 9) The Agency must modify the RCRA permit to include the adjusted standard.
- 10) The owner or operator may file a permit modification application with a revised closure plan within 15 days after an adjusted standard is terminated.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.216 Survey Plat

No later than the submission of the certification of closure of each hazardous waste disposal unit, the owner or operator must submit to any local zoning authority or authority with jurisdiction over local land use and to the Agency and record with land titles, a survey plat indicating the location and dimensions of landfill cells or other hazardous waste disposal units with respect to permanently surveyed benchmarks. This plat must be prepared and certified by a professional land surveyor. The plat filed with the local zoning authority or the authority with jurisdiction over local land use must contain a note, prominently displayed, that states the owner's and operator's obligation to restrict disturbance of the hazardous waste disposal unit in accordance with the applicable regulations of Subpart G of this Part.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.217 Post-Closure Care and Use of Property

- a) Post-Closure Care Period~~-care period~~.
- 1) Post-closure care for each hazardous waste management unit subject to the requirements of Sections 724.217 through 724.220 must begin after completion of closure of the unit and continue for 30 years after that date and must consist of at least the following:
 - A) Monitoring and reporting in accordance with the requirements of Subparts F, K, L, M, N, and X ~~of this Part~~; and
 - B) Maintenance and monitoring of waste containment systems in accordance with the requirements of Subparts F, K, L, M, N, and X ~~of this Part~~.
 - 2) Any time preceding partial closure of a hazardous waste management unit subject to post-closure care requirements or final closure, or any time during the post-closure care period for a particular unit, the Board may, in accordance with the permit modification procedures of 35 Ill. Adm. Code 702, 703, and 705, do either of the following:
 - A) Shorten the post-closure care period applicable to the hazardous waste management unit or facility if all disposal units have been closed and the Board has found by an adjusted standard issue pursuant to Section 28.1 of the Act ~~[415 ILCS 5/28.1]~~ and 35 Ill. Adm. Code 101 and 104 that the reduced period is sufficient to adequately protect human health and the environment (e.g., leachate or groundwater monitoring results, characteristics of the waste, application of advanced technology or alternative disposal, treatment, or re-use techniques indicate that the hazardous waste management unit or facility is secure); or

- B) Extend the post-closure care period applicable to the hazardous waste management unit or facility if the Board has found by an adjusted standard issue pursuant to Section 28.1 of the Act ~~415 ILCS 5/28.1~~ and 35 Ill. Adm. Code 101 and 104 that the extended period is necessary to adequately protect human health and the environment (e.g., leachate or groundwater monitoring results indicate a potential for migration of hazardous wastes at levels that may be harmful to human health and the environment).
- b) The Agency must require continuation at partial or final closure of any of the security requirements of Section 724.114 during part or all of the post-closure period when either of the following is true:
- 1) Hazardous wastes may remain exposed after completion of partial or final closure; or
 - 2) Access by the public or domestic livestock may pose a hazard to human health.
- c) Post-closure use of property on or in which hazardous wastes remain after partial or final closure must never be allowed to disturb the integrity of the final cover, liners, or any other components of the containment system or the function of the facility's monitoring systems, unless the Agency finds, by way of a permit modification, that the disturbance is necessary for either of the following reasons:
- 1) It is necessary to the proposed use of the property, and will not increase the potential hazard to human health or the environment; or
 - 2) It is necessary to reduce a threat to human health or the environment.
- d) All the post-closure care activities must be in accordance with the provisions of the approved post-closure plan as specified in Section 724.218.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.218 Post-Closure Care Plan; Amendment of Plan

- a) **Written Plan.** The owner or operator of a hazardous waste disposal unit must have a written post-closure care plan. In addition, certain surface impoundments and waste piles from which the owner or operator intends to remove or decontaminate the hazardous wastes at partial or final closure are required by Sections 724.328(c)(1)(B) and 724.358(c)(1)(B) to have contingent post-closure care plans. Owners or operators of surface impoundments and waste piles not otherwise required to prepare contingent post-closure care plans under Sections 724.328(c)(1)(B) or 724.358(c)(1)(B) must submit a post-closure care plan to the Agency within 90 days from the date that the owner or operator or Agency

determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of Sections 724.217 through 724.220. The plan must be submitted with the permit application, in accordance with 35 Ill. Adm. Code 703.183, and approved by the Agency as part of the permit issuance proceeding under 35 Ill. Adm. Code 705. In accordance with 35 Ill. Adm. Code 703.241, the approved post-closure care plan will become a condition of any RCRA permit issued.

- b) For each hazardous waste management unit subject to the requirements of this Section, the post-closure care plan must identify the activities that will be carried on after closure and the frequency of these activities, and include at least the following:
- 1) A description of the planned monitoring activities and frequencies that they will be performed to comply with Subparts F, K, L, M, N, and X ~~of this Part~~ during the post-closure care period.
 - 2) A description of the planned maintenance activities, and frequencies at which they will be performed, to ensure the following:
 - A) The integrity of the cap and final cover or other containment systems in accordance with the requirements of Subparts F, K, L, M, N, and X ~~of this Part~~; and
 - B) The function of the facility monitoring equipment in accordance with the requirements of Subparts F, K, L, M, N, and X ~~of this Part~~.
 - 3) The name, address, and phone number of the person or office to contact about the hazardous disposal unit during the post-closure care period.
 - 4) For a facility where alternative requirements are established at a regulated unit under Section 724.190(f), 724.210(c), or 724.240(d), as provided under 35 Ill. Adm. Code 703.161, either the alternative requirements that apply to the regulated unit, or a reference to the enforceable document containing those requirements.
- c) Until final closure of the facility, a copy of the approved post-closure care plan must be furnished to the Agency upon request, including request by mail. After final closure has been certified, the person or office specified in subsection (b)(3) ~~of this Section~~ must keep the approved post-closure care plan during the remainder of the post-closure care period.
- d) Amendment of ~~Plan-plan~~. The owner or operator must submit a written notification of or request for a permit modification to authorize a change in the approved post-closure care plan in accordance with the applicable requirements of

35 Ill. Adm. Code 703 and 705. The written notification or request must include a copy of the amended post-closure care plan for review or approval by the Agency.

- 1) The owner or operator may submit a written notification or request to the Agency for a permit modification to amend the post-closure care plan at any time during the active life of the facility or during the post-closure care period.
- 2) The owner or operator must submit a written notification of or request for a permit modification to authorize a change in the approved post-closure care plan whenever any of the following occurs:
 - A) Changes in operating plans or facility design affect the post-closure care plan;
 - B) There is a change in the expected year of closure if applicable;
 - C) Events occur during the active life of the facility, including partial and final closures, that affect the approved post-closure care plan;
or
 - D) The owner or operator requests establishment of alternative requirements to a regulated unit under Section 724.190(f), 724.210(c), or 724.240(d).
- 3) The owner or operator must submit a written request for a permit modification at least 60 days prior to the proposed change in facility design or operation, or no later than 60 days after an unexpected event has occurred that has affected the post-closure care plan. An owner or operator of a surface impoundment or waste pile that intends to remove all hazardous waste at closure and is not otherwise required to submit a contingent post-closure care plan under Sections 724.328(c)(1)(B) or 724.358(c)(1)(B) must submit a post-closure care plan to the Agency no later than 90 days after the date that the owner or operator or Agency determines that the hazardous waste management unit must be closed as a landfill, subject to the requirements of Section 724.410. The Agency must approve, disapprove, or modify this plan in accordance with the procedure in 35 Ill. Adm. Code 703 and 705. In accordance with 35 Ill. Adm. Code 703.241, the approved post-closure care plan will become a permit condition.
- 4) The Agency may request modifications to the plan under the conditions described in subsection (d)(2) ~~of this Section~~. The owner or operator must submit the modified plan no later than 60 days after the request, or no later than 90 days if the unit is a surface impoundment or waste pile not previously required to prepare a contingent post-closure care plan. Any

modifications requested by the Agency must be approved, disapproved, or modified in accordance with the procedure in 35 Ill. Adm. Code 703 and 705.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

Section 724.219 Post-Closure Notices

- a) No later than 60 days after certification of closure of each hazardous waste disposal unit, the owner or operator of a disposal facility must submit to the Agency, to the County Recorder and to any local zoning authority or authority with jurisdiction over local land use, a record of the type, location, and quantity of hazardous wastes disposed of within each cell or other disposal unit of the facility. For hazardous wastes disposed of before January 12, 1981, the owner or operator must identify the type, location, and quantity of the hazardous waste to the best of the owner or operator's knowledge and in accordance with any records the owner or operator has kept.
- b) Within 60 days after certification of closure of the first hazardous waste disposal unit and within 60 days after certification of closure of the last hazardous waste disposal unit, the owner or operator must do the following:
 - 1) Record a notation on the deed to the facility ~~property—~~or ~~property—~~or on some other instrument that is normally examined during title ~~search—~~that search—~~that~~ will in perpetuity notify any potential purchaser of the property as follows:
 - A) That the land has been used to manage hazardous wastes; and
 - B) That its use is restricted pursuant to this Subpart G; and
 - C) That the survey plat and record of the type, location, and quantity of hazardous wastes disposed of within each cell or other hazardous waste disposal unit of the facility required by subsection (a) ~~of this Section~~ and Section 724.216 have been filed with the Agency, the County Recorder and any local zoning authority or authority with jurisdiction over local land use; and
 - 2) Submit a certification to the Agency, signed by the owner or operator, that the owner or operator has recorded the notation specified in subsection (b)(1) ~~of this Section~~, including a copy of the document in which the notation has been placed, to the Agency.
- c) If the owner or operator or any subsequent owner or operator of the land upon which a hazardous waste disposal unit is located wishes to remove hazardous wastes and hazardous waste residues, the liner, if any, or contaminated soils, such

person must request a modification to the post-closure plan in accordance with the applicable requirements in 35 Ill. Adm. Code 703 and 705. The owner and operator must demonstrate that the removal of hazardous wastes will satisfy the criteria of Section 724.217(c). By removing hazardous waste, the owner or operator may become a generator of hazardous waste and must manage it in accordance with all applicable requirements of 35 Ill. Adm. Code 703 and 720 through 728, and 738. If the owner or operator is granted a permit modification or otherwise granted approval to conduct such removal activities, the owner or operator may request that the Agency approve either of the following:

- 1) The removal of the notation on the deed to the facility property or other instrument normally examined during title search; or
- 2) The addition of a notation to the deed or instrument indicating the removal of the hazardous waste.

(Source: Amended at 42 Ill. Reg. _____, effective _____)

SUBPART H: FINANCIAL REQUIREMENTS

Section 724.241 Definitions of Terms as Used in This Subpart

For the purposes of this Subpart H, the following terms have the given meanings:

- a) “Closure plan” means the plan for closure prepared in accordance with the requirements of Section 724.212.
- b) “Current closure cost estimate” means that the most recent of the estimates prepared in accordance with Section 724.242(a), (b), and (c).
- c) “Current post-closure cost estimate” means the most recent of the estimates prepared in accordance with Section 724.244(a), (b), and (c).
- d) “Parent corporation” means a corporation that directly owns at least 50 percent of the voting stock of the corporation which is the facility owner or operator; the latter corporation is deemed a “subsidiary” of the parent corporation.
- e) “Post-closure plan” means the plan for post-closure care prepared in accordance with the requirements of Sections 724.217 through 724.220.
- f) The following terms are used in the specifications for the financial test for closure, post-closure care, and liability coverage. The definitions are intended to assist in the understanding of these regulations and are not intended to limit the meanings of terms in a way that conflicts with generally accepted accounting practices.

“Assets” means all existing and all probable future economic benefits obtained or controlled by a particular entity.

“Current assets” means cash or other assets or resources commonly identified as those that are reasonably expected to be realized in cash or sold or consumed during the normal operating cycle of the business.

“Current liabilities” means obligations whose liquidation is reasonably expected to require the use of existing resources properly classifiable as current assets or the creation of other current liabilities.

“Current plugging and abandonment cost estimate” means the most recent of the estimates prepared in accordance with 35 Ill. Adm. Code 704.212(a), (b), and (c).

“Independently audited” refers to an audit performed by an independent certified public accountant in accordance with generally accepted auditing standards.

“Liabilities” means probable future sacrifices of economic benefits arising from present obligations to transfer assets or provide services to other entities in the future as a result of past transactions or events.

“Net working capital” means current assets minus current liabilities.

“Net worth” means total assets minus total liabilities and is equivalent to owner’s equity.

“Tangible net worth” means the tangible assets that remain after deducting liabilities; such assets would not include intangibles, such as goodwill and rights to patents or royalties.

- g) In the liability insurance requirements the terms “bodily injury” and “property damage” have the meanings given below. The Board intends the meanings of other terms used in the liability insurance requirements to be consistent with their common meanings within the insurance industry. The definitions given below of several of the terms are intended to assist in the understanding of these regulations and are not intended to limit their meanings in a way that conflicts with general insurance industry usage.

“Accidental occurrence” means an accident, including continuous or repeated exposure to conditions, that results in bodily injury or property damage neither expected nor intended from the standpoint of the insured.

“Bodily injury” means bodily injury, sickness, or disease sustained by a person, including death resulting from any of these at any time. However,

this term does not include those liabilities that, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for bodily injury.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term.

“Environmental damage” means the injurious presence in or upon land, the atmosphere, or any watercourse or body of water of solid, liquid, gaseous, or thermal contaminants, irritants, or pollutants.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This term is used in the definition of “pollution incident.”

“Legal defense costs” means any expenses that an insurer incurs in defending against claims of third parties brought under the terms and conditions of an insurance policy.

“Nonsudden accidental occurrence” means an occurrence that takes place over time and involves continuous or repeated exposure.

“Pollutants” means any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals, and waste.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This definition is used in the definition of “pollution incident.”

“Pollution incident” means emission, discharge, release, or escape of pollutants into or upon land, the atmosphere or any watercourse or body of water, provided that such emission, discharge, release, or escape results in “environmental damage.” The entirety of any such emission, discharge, release, or escape must be deemed to be one “pollution incident.”

“Waste” includes materials to be recycled, reconditioned, or reclaimed. The term “pollution incident” includes an “occurrence.”

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term. This definition is used in the definition of “property damage.”

“Property damage” means as follows:

Either of the following:

Physical injury to, destruction of or contamination of tangible property, including all resulting loss of use of that property; or

Loss of use of tangible property that is not physically injured, destroyed or contaminated, but has been evacuated, withdrawn from use or rendered inaccessible because of a “pollution incident.”

This term does not include those liabilities that, consistent with standard insurance industry practices, are excluded from coverage in liability insurance policies for property damage.

BOARD NOTE: Derived from the Insurance Services Office, Inc. definition of this term.

“Sudden accidental occurrence” means an occurrence that is not continuous or repeated in nature.

- h) “Substantial business relationship” means the extent of a business relationship necessary under applicable state law to make a guarantee contract issued incident to that relationship valid and enforceable. A “substantial business relationship” must arise from a pattern of recent or ongoing business transactions, in addition to the guarantee itself, such that the Agency can reasonably determine that a substantial business relationship currently exists between the guarantor and the owner or operator that is adequate consideration to support the obligation of the guarantee relating to any liability towards a third party ~~third party~~. “Applicable state law,” as used in this subsection (h), means the laws of the State of Illinois and those of any sister state that govern the guarantee and the adequacy of the consideration.

BOARD NOTE: Derived from 40 CFR 264.141(h) ~~(2017)-(2014)~~ and the discussion at 53 Fed. Reg. 33938, 33941-33943 (Sep. 1, 1988). This term is also independently defined in 35 Ill. Adm. Code 725.141(h) and 727.240(b)(8). Any Agency determination that a substantial business relationship exists is subject to Board review pursuant to Section 40 of the Act ~~[415 ILCS 5/40]~~.

Section 724.242 Cost Estimate for Closure

- a) The owner or operator must have detailed a written estimate, in current dollars, of the cost of closing the facility in accordance with the requirements in Sections 724.211 through 724.215 and applicable closure requirements in Sections 724.278, 724.297, 724.328, 724.358, 724.380, 724.410, 724.451, 724.701 through 724.703, and 724.1102.

- 1) The estimate must equal the cost of final closure at the point in the facility's active life when the extent and manner of its operation would make closure the most expensive, as indicated by its closure plan (see Section 724.212(b)).
 - 2) The closure cost estimate must be based on the costs to the owner or operator of hiring a third party to close the facility. A third party is a party who is neither a parent nor a subsidiary of the owner or operator. (See definition of parent corporation in Section 724.241(d)). The owner or operator may use costs for on-site disposal if the owner or operator demonstrates that on-site disposal capacity will exist at all times over the life of the facility.
 - 3) The closure cost estimate must not incorporate any salvage value that may be realized with the sale of hazardous wastes, or non-hazardous wastes if permitted by the Agency pursuant to Section 724.213(d), facility structures or equipment, land, or other assets associated with the facility at the time of partial or final closure ~~hazardous wastes that might have economic value.~~
 - 4) The owner or operator must not incorporate a zero cost for hazardous wastes, or non-hazardous wastes if permitted by the Agency pursuant to Section 724.213(d), that might have economic value.
- b) During the active life of the facility, the owner or operator must adjust the closure cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instruments used to comply with Section 724.243. For owners and operators using the financial test or corporate guarantee, the closure cost estimate must be updated for inflation within 30 days after the close of the firm's fiscal year and before submission of updated information to the Agency as specified in Section 724.243(f)(3). The adjustment may be made by recalculating the maximum costs of closure in current dollars, or by using an inflation factor derived from the annual Implicit Price Deflator for Gross National Product (Deflator) as published by the U.S. Department of Commerce in its Survey of Current Business, as specified in subsections (b)(1) and (b)(2) ~~of this Section.~~ The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year.
- 1) The first adjustment is made by multiplying the closure cost estimate by the inflation factor. The result is the adjusted closure cost estimate.
 - 2) Subsequent adjustments are made by multiplying the latest adjusted closure cost estimate by the latest inflation factor.

BOARD NOTE: The table of Deflators is available as Table 1.1.9., "Implicit Price Deflators for Gross Domestic Product," in the National Income and Product Account Tables, published by U.S. Department of Commerce, Bureau of Economic Analysis, National Economic Accounts, available on-line at the following web address: www.bea.gov/national/nipaweb/TableView.asp?SelectedTable=13&FirstYear=2002&LastYear=2004&Freq=Qtr.

- c) During the active life of the facility the owner or operator must revise the closure cost estimate no later than 30 days after the Agency has approved the request to modify the closure plan, if the change in the closure plan increases the cost of closure. The revised closure cost estimate must be adjusted for inflation, as specified in subsection Section 724.242(b).
- d) The owner or operator must keep the following at the facility during the operating life of the facility: the latest closure cost estimate prepared in accordance with subsections Sections 724.242(a) and (c) and, when this estimate has been adjusted in accordance with subsection Section 724.242(b), the latest adjusted closure cost estimate.

Section 724.243 Financial Assurance for Closure

An owner or operator of each facility must establish financial assurance for closure of the facility. The owner or operator must choose from the options that are specified in subsections (a) through (f) ~~of this Section~~.

- a) Closure Trust Fund ~~trust fund~~.
 - 1) An owner or operator may satisfy the requirements of this Section by establishing a closure trust fund that conforms to the requirements of this subsection (a) and submitting an original signed duplicate of the trust agreement to the Agency. An owner or operator of a new facility must submit the original signed duplicate of the trust agreement to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage or disposal. The trustee must be an entity that has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or State agency.
 - 2) The wording of the trust agreement must be that specified in Section 724.251, and the trust agreement must be accompanied by a formal certification of acknowledgment, as specified in Section 724.251. Schedule A of the trust agreement must be updated within 60 days after a change in the amount of the current closure cost estimate covered by the agreement.

- 3) Payments into the trust fund must be made annually by the owner or operator over the term of the initial RCRA permit or over the remaining operating life of the facility as estimated in the closure plan, whichever period is shorter; this period is hereafter referred to as the “pay-in period.”. The payments into the closure trust fund must be made as follows:

- A) For a new facility, the first payment must be made before the initial receipt of hazardous waste for treatment, storage, or disposal. A receipt from the trustee for this payment must be submitted by the owner or operator to the Agency before this initial receipt of hazardous waste. The first payment must be at least equal to the current closure cost estimate, except as provided in subsection (g) ~~of this Section~~, divided by the number of years in the pay-in period. Subsequent payments must be made no later than 30 days after each anniversary date of the first payment. The amount of each subsequent payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(CE - CV)}{Y}$$

~~$$\text{Next payment} = \frac{(CE - CV)}{Y}$$~~

Where:

- CE = the current closure cost estimate
 CV = the current value of the trust fund
 Y = the number of years remaining in the pay-in period

- B) If an owner or operator establishes a trust fund as specified in 35 Ill. Adm. Code 725.243(a) and the value of that trust fund is less than the current closure cost estimate when a permit is awarded for the facility, the amount of the current closure cost estimate still to be paid into the trust fund must be paid in over the pay-in period as defined in subsection (a)(3) ~~of this Section~~. Payments must continue to be made no later than 30 days after each anniversary date of the first payment made pursuant to 35 Ill. Adm. Code 725. The amount of each payment must be determined by the following formula:

$$\text{Next Payment} = \frac{(CE - CV)}{Y}$$

$$\text{Next payment} = \frac{(CE - CV)}{Y}$$

Where:

CE = the current closure cost estimate

CV = the current value of the trust fund

Y = the number of years remaining in the pay-in period

- 4) The owner or operator may accelerate payments into the trust fund or may deposit the full amount of the current closure cost estimate at the time the fund is established. However, the owner or operator must maintain the value of the fund at no less than the value that the fund would have if annual payments were made as specified in subsection (a)(3) ~~of this Section~~.
- 5) If the owner or operator establishes a closure trust fund after having used one or more alternate mechanisms specified in this Section or in 35 Ill. Adm. Code 725.243, its first payment must be in at least the amount that the fund would contain if the trust fund were established initially and annual payments made according to specifications of this subsection (a) and 35 Ill. Adm. Code 725.243, as applicable.
- 6) After the pay-in period is completed, whenever the current closure cost estimate changes, the owner or operator must compare the new estimate with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner or operator, within 60 days after the change in the cost estimate, must either deposit an amount into the fund so that its value after this deposit at least equals the amount of the current closure cost estimate or obtain other financial assurance as specified in this Section to cover the difference.
- 7) If the value of the trust fund is greater than the total amount of the current closure cost estimate, the owner or operator may submit a written request to the Agency for release of the amount in excess of the current closure cost estimate.
- 8) If an owner or operator substitutes other financial assurance, as specified in this Section for all or part of the trust fund, it may submit a written request to the Agency for release of the amount in excess of the current closure cost estimate covered by the trust fund.
- 9) Within 60 days after receiving a request from the owner or operator for release of funds as specified in subsection (a)(7) or (a)(8) ~~of this Section~~,

the Agency must instruct the trustee to release to the owner or operator such funds as the Agency specifies in writing.

- 10) After beginning partial or final closure, an owner or operator or another person authorized to conduct partial or final closure may request reimbursement for closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursement for partial closure only if sufficient funds are remaining in the trust fund to cover the maximum costs of closing the facility over its remaining operating life. Within 60 days after receiving bills for partial or final closure activities, the Agency must instruct the trustee to make reimbursement in those amounts as the Agency specifies in writing if the Agency determines that the partial or final closure expenditures are in accordance with the approved closure plan, or otherwise justified. If the Agency determines that the maximum cost of closure over the remaining life of the facility will be significantly greater than the value of the trust fund, it must withhold reimbursement of such amounts as it deems prudent until it determines, in accordance with subsection (i) ~~of this Section~~, that the owner or operator is no longer required to maintain financial assurance for final closure of the facility. If the Agency does not instruct the trustee to make such reimbursements, the Agency must provide the owner or operator with a detailed written statement of reasons.
- 11) The Agency must agree to termination of the trust when either of the following occurs:
 - A) An owner or operator substitutes alternate financial assurance, as specified in this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i).
- b) Surety Bond Guaranteeing Payment ~~bond guaranteeing payment into a Closure Trust Fund-closure trust fund.~~
 - 1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (b) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, “Companies Holding Certificates of Authority as Acceptable Sureties on Federal Bonds and as Acceptable Reinsuring Companies;”, on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: <http://www.fms.treas.gov/c570/>.

- 2) The wording of the surety bond must be that specified in Section 724.251.
- 3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements specified in subsection (a) ~~of this Section~~ except as follows:
 - A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and
 - B) Until the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:
 - i) Payments into the trust fund as specified in subsection (a) ~~of this Section~~;
 - ii) Updating of Schedule A of the trust agreement (see 35 Ill. Adm. Code 724.251) to show current closure cost estimates;
 - iii) Annual valuations, as required by the trust agreement; and
 - iv) Notices of nonpayment as required by the trust agreement.
- 4) The bond must guarantee that the owner or operator will do one of the following:
 - A) Fund the standby trust fund in an amount equal to the penal sum of the bond before the beginning of final closure of the facility;
 - B) Fund the standby trust fund in an amount equal to the penal sum within 15 days after an order to begin final closure is issued by the Board or a U.S. district court or other court of competent jurisdiction; or
 - C) Provide alternate financial assurance as specified in this Section, and obtain the Agency’s written approval of the assurance provided, within 90 days after receipt by both the owner or

operator and the Agency of a notice of cancellation of the bond from the surety.

- 5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond.
 - 6) The penal sum of the bond must be in an amount at least equal to the current closure cost estimate, except as provided in subsection (g) ~~of this Section.~~
 - 7) Whenever the current closure cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Agency or obtain other financial assurance, as specified in this Section, to cover the increase. Whenever the current closure cost estimate decreases, the penal sum may be reduced to the amount of the current closure cost estimate following written approval by the Agency.
 - 8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.
 - 9) The owner or operator may cancel the bond if the Agency has given prior written consent based on its receipt of evidence of alternate financial assurance as specified in this Section.
- c) Surety Bond Guaranteeing Performance ~~bond guaranteeing performance of Closure-closure.~~
- 1) An owner or operator may satisfy the requirements of this Section by obtaining a surety bond that conforms to the requirements of this subsection (c) and submitting the bond to the Agency. An owner or operator of a new facility must submit the bond to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The bond must be effective before this initial receipt of hazardous waste. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury.

BOARD NOTE: The U.S. Department of the Treasury updates Circular 570, "Companies Holding Certificates of Authority as Acceptable Sureties

on Federal Bonds and as Acceptable Reinsuring Companies,”² on an annual basis pursuant to 31 CFR 223.16. Circular 570 is available on the Internet from the following website: <http://www.fms.treas.gov/c570/>.

- 2) The wording of the surety bond must be that specified in Section 724.251.
- 3) The owner or operator who uses a surety bond to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the bond, all payments made thereunder will be deposited by the surety directly into the standby trust fund in accordance with instructions from the Agency. This standby trust must meet the requirements specified in subsection (a) ~~of this Section~~, except as follows:
 - A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the surety bond; and
 - B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations:
 - i) Payments into the trust fund, as specified in subsection (a) ~~of this Section~~;
 - ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current closure cost estimates;
 - iii) Annual valuations, as required by the trust agreement; and
 - iv) Notices of nonpayment, as required by the trust agreement.
- 4) The bond must guarantee that the owner or operator will do the following:
 - A) Perform final closure in accordance with the closure plan and other requirements of the permit for the facility whenever required to do so; or
 - B) Provide alternative financial assurance, as specified in this Section, and obtain the Agency’s written approval of the assurance provided, within 90 days after receipt by both the owner or operator and the Agency of a notice of cancellation of the bond from the surety.
- 5) Under the terms of the bond, the surety will become liable on the bond obligation when the owner or operator fails to perform as guaranteed by the bond. Following a final judicial determination or Board order finding that the owner or operator has failed to perform final closure in accordance

with the approved closure plan and other permit requirements when required to do so, under the terms of the bond the surety will perform final closure, as guaranteed by the bond, or will deposit the amount of the penal sum into the standby trust fund.

- 6) The penal sum of the bond must be in an amount at least equal to the current closure cost estimate.
 - 7) Whenever the current closure cost estimate increases to an amount greater than the penal sum, the owner or operator, within 60 days after the increase, must either cause the penal sum to be increased to an amount at least equal to the current closure cost estimate and submit evidence of such increase to the Agency or obtain other financial assurance as specified in this Section. Whenever the current closure cost estimate decreases, the penal sum may be reduced to the amount of the current closure cost estimate following written approval by the Agency.
 - 8) Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner or operator and to the Agency. Cancellation may not occur, however, during the 120 days beginning on the date of receipt of the notice of cancellation by both the owner or operator and the Agency, as evidenced by the return receipts.
 - 9) The owner or operator may cancel the bond if the Agency has given prior written consent. The Agency must provide such written consent when either of the following occurs:
 - A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i) ~~of this Section.~~
 - 10) The surety must not be liable for deficiencies in the performance of closure by the owner or operator after the Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i) ~~of this Section.~~
- d) Closure Letter ~~letter~~ of Credit ~~credit~~.
- 1) An owner or operator may satisfy the requirements of this Section by obtaining an irrevocable standby letter of credit that conforms to the requirements of this subsection (d) and submitting the letter to the Agency. An owner or operator of a new facility must submit the letter of credit to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The letter of credit must

be effective before this initial receipt of hazardous waste. The issuing institution must be an entity that has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency.

- 2) The wording of the letter of credit must be that specified in Section 724.251.
- 3) An owner or operator who uses a letter of credit to satisfy the requirements of this Section must also establish a standby trust fund. Under the terms of the letter of credit, all amounts paid pursuant to a draft by the Agency must be deposited by the issuing institution directly into the standby trust fund in accordance with instructions from the Agency. This standby trust fund must meet the requirements of the trust fund specified in subsection (a) ~~of this Section~~, except as follows:
 - A) An original, signed duplicate of the trust agreement must be submitted to the Agency with the letter of credit; and
 - B) Unless the standby trust fund is funded pursuant to the requirements of this Section, the following are not required by these regulations.
 - i) Payments into the trust fund, as specified in subsection (a) ~~of this Section~~;
 - ii) Updating of Schedule A of the trust agreement (as specified in Section 724.251) to show current closure cost estimates;
 - iii) Annual valuations, as required by the trust agreement; and
 - iv) Notices of nonpayment, as required by the trust agreement.
- 4) The letter or credit must be accompanied by a letter from the owner or operator referring to the letter of credit by number, issuing institution, and date and providing the following information: the USEPA identification number, name and address of the facility, and the amount of funds assured for closure of the facility by the letter of credit.
- 5) The letter of credit must be irrevocable and issued for a period of at least one year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one year unless, at least 120 days before the current expiration date, the issuing institution notifies both the owner or operator and the Agency by certified mail of a decision not to extend the expiration date. Under the terms of the letter of credit, the 120

days will begin on the date when both the owner or operator and the Agency have received the notice, as evidenced by the return receipts.

- 6) The letter of credit must be issued in an amount at least equal to the current closure cost estimate, except as provided in subsection (g) ~~of this Section.~~
 - 7) Whenever the current closure cost estimate increases to an amount greater than the amount of the credit, the owner or operator, within 60 days after the increase, must either cause the amount of the credit to be increased so that it at least equals the current closure cost estimate and submit evidence of such increase to the Agency, or obtain other financial assurance, as specified in this Section, to cover the increase. Whenever the current closure cost estimate decreases, the amount of the credit may be reduced to the amount of the current closure cost estimate following written approval by the Agency.
 - 8) Following a final judicial determination or Board order finding that the owner or operator has failed to perform final closure in accordance with the closure plan and other permit requirements when required to do so, the Agency may draw on the letter of credit.
 - 9) If the owner or operator does not establish alternative financial assurance, as specified in this Section, and obtain written approval of such alternative assurance from the Agency within 90 days after receipt by both the owner or operator and the Agency of a notice from issuing institution that it has decided not to extend the letter of credit beyond the current expiration date, the Agency must draw on the letter of credit. The Agency may delay the drawing if the issuing institution grants an extension of the term of the credit. During the last 30 days of any such extension the Agency must draw on the letter of credit if the owner or operator has failed to provide alternative financial assurance, as specified in this Section, and obtain written approval of such assurance from the Agency.
 - 10) The Agency must return the letter of credit to the issuing institution for termination when either of the following occurs:
 - A) An owner or operator substitutes alternative financial assurance, as specified in this Section; or
 - B) The Agency releases the owner or operator from the requirements of this Section in accordance with subsection (i) ~~of this Section.~~
- e) Closure Insurance ~~insurance.~~

- 1) An owner or operator may satisfy the requirements of this Section by obtaining closure insurance that conforms to the requirements of this subsection (e) and submitting a certificate of such insurance to the Agency. An owner or operator of a new facility must submit the certificate of insurance to the Agency at least 60 days before the date on which hazardous waste is first received for treatment, storage, or disposal. The insurance must be effective before this initial receipt of hazardous waste. At a minimum, the insurer must be licensed to transact the business of insurance or be eligible to provide insurance as an excess or surplus lines insurer in one or more States.
- 2) The wording of the certificate of insurance must be that specified in Section 724.251.
- 3) The closure insurance policy must be issued for a face amount at least equal to the current closure cost estimate, except as provided in subsection (g) ~~of this Section~~. The term “face amount” means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer’s future liability will be lowered by the amount of the payments.
- 4) The closure insurance policy must guarantee that funds will be available to close the facility whenever final closure occurs. The policy must also guarantee that, once final closure begins, the insurer will be responsible for paying out funds, up to an amount equal to the face amount of the policy, upon the direction of the Agency to such party or parties, as the Agency specifies.
- 5) After beginning partial or final closure, an owner or operator or any other person authorized to conduct closure may request reimbursement for closure expenditures by submitting itemized bills to the Agency. The owner or operator may request reimbursements for partial closure only if the remaining value of the policy is sufficient to cover the maximum costs of closing the facility over its remaining operating life. Within 60 days after receiving bills for closure activities, the Agency must instruct the insurer to make reimbursement in such amounts, as the Agency specifies in writing, if the Agency determines that the partial or final closure expenditures are in accordance with the approved closure plan or otherwise justified. If the Agency determines that the maximum cost of closure over the remaining life of the facility will be significantly greater than the face amount of the policy, it must withhold reimbursement of such amounts that it deems prudent, until it determines, in accordance with subsection (i) ~~of this Section~~, that the owner or operator is no longer required to maintain financial assurance for closure of the facility. If the Agency does not instruct the insurer to make such reimbursements, the

Agency must provide the owner or operator with a detailed written statement of reasons.

- 6) The owner or operator must maintain the policy in full force and effect until the Agency consents to termination of the policy by the owner or operator, as specified in subsection (e)(10) ~~of this Section~~. Failure to pay the premium, without substitution of alternative financial assurance, as specified in this Section, will constitute a significant violation of these regulations, warranting such remedy as the Board may impose pursuant to the Environmental Protection Act. Such violation will be deemed to begin upon receipt by the Agency of a notice of future cancellation, termination or failure to renew due to nonpayment of the premium, rather than upon the date of expiration.
- 7) Each policy must contain a provision allowing assignment of the policy to a successor owner or operator. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused.
