Dear Pollution Control Board members,

I am writing to urge you to support the IEPA mercury rule to reduce power plant mercury emissions by 90% by 2009.

Mercury is a known neurotoxin that already contaminates fish in all Illinois waters-and its main source is coal-fired power plants. Studies have shown that mercury exposure harms the human brain, heart, and immune system.

Developing fetuses and children are especially at risk as even low-level mercury exposure can cause learning disabilities, developmental delay and decreased IQ.

Modern, inexpensive pollution controls can capture 90% of the mercury from power plants. IEPA's rule would simply require Illinois coal-fired power plants to use this technology. Please support the rule to make it clear that putting our children at risk for brain damage is not an acceptable cost of doing business in Illinois.

Sincerely,

Jeffery Biss  
392 Jefferson Ave  
Elgin, IL 60120

Dear Pollution Control Board members,

I am writing to urge you to support the IEPA mercury rule to reduce power plant mercury emissions by 90% by 2009.

Mercury is a known neurotoxin that already contaminates fish in all Illinois waters-and its main source is coal-fired power plants. Studies have shown that mercury exposure harms the human brain, heart, and immune system.

Developing fetuses and children are especially at risk as even low-level mercury exposure can cause learning disabilities, developmental delay and decreased IQ.

Modern, inexpensive pollution controls can capture 90% of the mercury from power plants. IEPA's rule would simply require Illinois coal-fired power plants to use this technology. Please support the rule to make it clear that putting our children at risk for brain damage is not an acceptable cost of doing business in Illinois.

Sincerely,

Barbara Tipton  
711 S Jefferson St  
Woodstock, IL 600983917

Please support the rule to make it clear that putting our children at risk for brain damage is not an acceptable cost of doing business in Illinois.

I have observed the effects of mercury when my sister lived in Milwaukee. They had trouble with companies dumping mercury into Lake Michigan and it resulted in alewives and salmon populations decreasing over a short time period. I know that you don't want to go down in history as a corporate lackie who rubberstamped dangerous legislation that could negatively effect our ecosystems. I appreciate the fact that you will always act in the best interests of people and the god-given gift of this beautiful, life supporting land of Lincoln. It is reassuring to know that you will join me in supporting this rule because it shows your constituents that you truly are going to be accountable for protecting what the Lord has entrusted to all of us.

Dear Pollution Control Board members,

Please support the IEPA mercury rule to reduce power plant mercury emissions by 90% by 2009.

Mercury, a known neurotoxin, already contaminates fish in ALL Illinois waters. We know that its main source is air emissions from coal-fired power plants. Research and medical studies have shown that mercury exposure harms the human brain, heart, and immune system. More information is being gathered on the link between mercury accumulation in the body and autism, as well as Alzheimer's Disease.

Developing fetuses and children are especially at risk as even low-level mercury exposure can cause learning disabilities, developmental delay and decreased IQ.

Best available control technology - modern, affordable pollution controls- can capture 90% of the mercury from power plants. IEPA's rule would require Illinois coal-fired power plants to use this technology. Please support this sensible rule, making it clear that sacrificing public health and the future of our children's abilities is not an acceptable cost of doing business in Illinois.

Sincerely,

Susan Lannin

Developing fetuses and children are especially at risk as even low-level mercury exposure can cause learning disabilities, developmental delay and decreased IQ.

In this great nation we live in we always hear the term patriotism being used. To me, being patriotic means having the best interests of your nation at heart. Our productivity in business is important for GDP growth and advances in our quality and way of life. However, we cannot push economic growth to unsustainable levels. We must ensure that our productivity does not harm the very people it is intended to benefit. This is way it is critical to reduce our levels of pollution emissions. We must leave our beautiful and great country in a condition that will be suitable for those who are sure to follow us.

Modern, inexpensive pollution controls can capture 90% of the mercury from power plants. IEPA's rule would simply require Illinois coal-fired power plants to use this technology. Please support the rule to make it clear that putting our children at risk for brain damage is not an acceptable cost of doing business in Illinois.

Dear Pollution Control Board members,

Please very strongly consider supporting the IEPA mercury rule to reduce power plant mercury emissions.

It is now well-known that mercury is a severe neurotoxin which causes very serious damage and retardation to numerous babies and children in the US and Illinois every year. Most of this toxic mercury comes from coal-burning power plants which select not to utilize modern technologies designed to protect the health of Illinois citizens.

Please support this bill and make the health and well-being of our children a priority. The technology to do so is readily available and affordable. This will also allow us to protect important cultural practices such as fishing in Illinois waters. Fishing in Illinois rivers and lakes, including the one I grew up fishing in with my father and brothers, is an important part of our culture. It is a horrible shame that fish from all these waterways are no longer safe for consumption.

I very strongly urge you to support this bill and work to make Illinois waterways safe again, both for the food and recreation they provide but also for the water they provide us. And protect our children and next generation from neurological damage which is a very serious problem and which is progressing much faster due to the mercury emissions of coal plants.

Sincerely,

Dan Mueth

Dear Pollution Control Board members,

I am writing to urge you to support the IEPA mercury rule to reduce power plant mercury emissions by 90% by 2009.

It is in our best interest to limit the mercury in the environment, to protect our own health and wildlife.

Mercury is a known neurotoxin that already contaminates fish in all Illinois waters-and its main source is coal-fired power plants. Studies have shown that mercury exposure harms the human brain, heart, and immune system.

Developing fetuses and children are especially at risk as even low-level mercury exposure can cause learning disabilities, developmental delay and decreased IQ.

Modern, inexpensive pollution controls can capture 90% of the mercury from power plants. IEPA's rule would simply require Illinois coal-fired power plants to use this technology. Please support the rule to make it clear that putting our children at risk for brain damage is not an acceptable cost of doing business in Illinois.

Sincerely,
