Respondents.)

PCB 09-10

Response to Written Discovery Request

Now comes Geoff Pahios and Alpine Automotive, and in response to the Complainants Written Discovery Request, states as follows:

1. No time logs are kept. Call logs are attached.
2. No written instructions exist. My drivers are instructed to unload vehicles after 10:00 p.m. on the west side of the building if they are able to be driven under their own power.
3. Vehicles are moved daily Monday through Friday between the hours of 7:00 a.m. and 5:00p.m.
4. A tree line of 24 seven to ten foot evergreens was planted on the north property line. An existing tree was left for additional screening and noise reduction. A hood was also installed on the

exhaust blower to redirect exhaust to the west instead of the north. A fence was installed around the exhaust blower for added noise reduction. Work with air tools was eliminated outside in the rear lot. Vehicles in drivable condition that were towed in were left on the west side of the building after 10:00p.m.

5. No work was to be done outside in the rear lot with any air tools. All attempts were made to reduce noise in the rear lot knowing that we have residential neighbors.
6. None, investigation continues.
7. That is an employee preference. It is whatever that employee personally selects.
8. None, investigation continues.
9.
 - a) A study was done by Acoustic Associates
 - b) Acoustic Associates, Roger Harmon and Geoff Pahios.
 - c) See report
 - d) See report
 - e) See report
 - f) None
 - g) See report
10. Alpine Automotive never bought the property.
11. The property is zoned I1.

12. I, my employees, and anyone associated with Acoustics Associates. See attached list. Investigation continues as to any other witnesses.
13. Tom Thunder of Acoustic Associates, Jeff Struve, Vince Teronde. See attached list. Investigation continues.
 - a) Noise
 - b) The Respondent does not violate any noise standards or ordinances
 - c) Qualifications will be stated at the hearing.
 - d) See attached, investigation continues.
14. see answer to #12
15. I do not recall any specific conversations at this time.
16. See attached list. Investigation continues as to additional witnesses.
17. No one other than my attorneys.
18. I do not have a log for all noise sources. I would refer to the sound study for this.
19. I am not qualified to answer this question.
20. The Respondent declines to answer this question as it has no relevance to the issues in this case.
21. There is no fan on the south side of the building. The fan on the north side of the building is turned on when any vehicle inside

the building is running to extract the exhaust fumes from inside the shop. The fan is made by Harvey Exhaust. It was installed in February of 2007 and I do not have the make and model for this unit at the present time. There is no federal OSHA standard for heat, but OSHA can use the "General Duty Clause" to protect workers. The General Duty section of the Occupational safety and Health Act requires that employers provide their workers with employment and a place of employment that are free from recognized hazards that have caused or are likely to cause death or serious injury.

22. The rear bay doors are the north doors, not the south. Work is done daily in summer months with the north doors open. All types of work are conducted from oil change to engine replacements. No set conditions exist. Doors are opened by the employees during the summer months. Equipment used are air tools, jacks, hoists, tire machines, floor machines, wheel balancers, scan tools of all types, all types of hand tools from wrenches to screwdrivers, welders, torches, plasma cutters, alignment machines and any other automotive related tools not mentioned.

28. No video footage exists.

30. None. Employees were to report any issues to the manager and ignore the residents. If anyone came onto the property they were told to speak with me.

31. Same question as # 18. See answer to #18.

Geoff Pahios, president of
Alpine Automotive, Inc.

CERTIFICATION

The undersigned certifies that the statements set forth in this instrument are true and correct, except as to matters stated to be on information and belief, and as to such matters the undersigned certifies as aforesaid that he verily believes the same to be true.

Re: Environmental Noise Assessment

Dear Geoff:

We visited your shop on Tuesday, 5/6/08, to observe operations and to conduct sound testing. This testing was performed to assess noise emissions from your facility. Noise sampling was obtained using a precision sound level meter connected to a digital recorder. This equipment was set up at the location seen in aerial photo below. This location is in a buffer area between the shop and the residential homes to the north. In addition, we made a continuous video recording of the shop activities and the surrounding area. Audio and video recordings were performed to ensure a comprehensive noise analysis could be made with positive source identification.

Sound Level Time History

We began our recording at 2:13 PM and continued it for over one hour. A calibration tone was placed on the recording so that we could analyze the spectrum and levels with our sound analysis software. A trace of the overall sound level as a function of time is shown in Fig 1. The blue dotted line shows the sound level recorded second-by-second. The solid red line is the 1-minute moving average called the equivalent level (Leq).

Significant sources include air grinders, chisels, impact wrenches, high pressure blowers, tire pressure hoses, and impacts. I listened to the audio recording and viewed the video to identify the peaks in the trace plotted in Fig 1. Events that were shop-related are shown in the upper part of the

chart. Those associated with normal ambient noise or the neighboring bays are labeled in the lower half of the chart. From time to time, there were impacts and loud talking from the shop. However, the most significant source was from the air impact wrenches.

The greatest noise, however, came from the jets that passed overhead. As you can see in the Fig. 1, these events came at regular intervals. The next greatest noise was actually from the neighboring bay where impacts and loud talking occurred outdoors during the loading and unloading of trucks.

State of Illinois Noise Limits

The State of Illinois has limits that apply to the noise radiated from an auto service facility to residential property. Its limits pertain to the 1-hour average level - not the 1-second sound level or the 1-minute Leq. Its limits are also expressed for each of nine different frequency bands from 32-8000 Hz. For simplicity, the State's limit 9-frequency limits could be weighted according to the way humans perceive sound and then totaled to be able to use a single number value. For daytime operations, that single number limit would be 55 dB and is often referred to the "monitoring" limit. This level is marked in Fig. 1 for reference.

As you can see, the 1-minute averages (Leq) from the shop do not exceed 55 dBA. Accordingly, the noise from your shop could not possibly exceed a 1-hour average of 55 dB. In fact, the 1-hour Leq for all the noise observed at that location (shop and extraneous noise combined) was 51 dB.

Conclusion

Based on our data and observations, the noise from your shop does not appear to exceed the State noise limits. However, the impact wrench is clearly the most significant source because of its high audibility and its abrupt and distinct character. This noise could be reduced if you hang clear vinyl strips over the overhead doors. If need be, a small cutout could be made for easier employee access. Also, the strips could be hung from an arm that swings open automatically to allow a car or truck to pass. Such doors are often seen in car washes.

I hope this report gives you the information you need to know. Be sure to let me know if you have any questions.

Sincerely,

Thomas D. Thunder, AuD, FAAA, INCE
Audiologist and Acoustical Engineer

Alpine Towing
