RE: PCB 2013-024

Mr. Therriault

Midwest Generation's dirty coal plants in Illinois have been dumping dangerous sulfur dioxide emissions into the air and making local residents sick for far too long. In order to reduce dangerous pollution and save lives in Illinois, I urge you to require the company to meet the pollution reductions it previously agreed to by voting no on the requested variance.

Sincerely,

Kara Hagen

RE: PCB 2013-024

Mr. Therriault

Midwest Generation's dirty coal plants in Illinois have been dumping dangerous sulfur dioxide emissions into the air and making local residents sick for far too long. In order to reduce dangerous pollution and save lives in Illinois, I urge you to require the company to meet the pollution reductions it previously agreed to by voting no on the requested variance. When this utility says they "cannot afford" pollution reducing equipment, I think I'd have to ask in what way they can't afford this. Does that mean that there is no income beyond operating costs, or that they cannot achieve a higher level of profit over the previous year? I would expect that for any large corporation the safety and well being of the general public and their customers should come before any level of profit. To me if they are making ANY profit then they would have money to provide pollution safeguards at some level. If they cannot provide that expectation of public safety, they should not be operating.

Sincerely,

John Heinz
