**Subject:** Please Reject Midwest Generation's Petition for a Variance (Docket No. PCB 2013-024)

Feb 5, 2013

Illinois Pollution Control Board Members

Dear Control Board Members,

Please reject Midwest Generation's request for a variance of the historic clean air standards Illinois adopted in 2006 (docket no. PCB 2013-024). Hold the company to its previous commitment, which is vital to protecting public health and the environment.

It is the responsibility and duty of the Board to protect Illinois residents from being taken advantage of by companies like Midwest Generation, which has delayed compliance with clean air laws for long enough and which has hidden behind threats to slash jobs and close plants. As you know from the Board's earlier experience with Ameren, a variance doesn't guarantee jobs or that plants will stay open.

The people of Illinois should not have to suffer from years of extra pollution. Midwest Generation should live up to their promise to install modern pollution controls on schedule.

Mercury pollution is too important of an issue to ignore, and we've already waited too long. Please deny this petition for variance.

Sincerely,

Dr. Michael Houston  
321 N Clark St  
Chicago, IL 60654-4714

Feb 5, 2013

Illinois Pollution Control Board Members

Dear Control Board Members,

Please reject Midwest Generation's request for a variance of the historic clean air standards Illinois adopted in 2006 (docket no. PCB 2013-024). Hold the company to its previous commitment, which is vital to protecting public health and the environment.

It is the responsibility and duty of the Board to protect Illinois residents from being taken advantage of by companies like Midwest Generation, which has delayed compliance with clean air laws for long enough and which has hidden behind threats to slash jobs and close plants. As you know from the Board's earlier experience with Ameren, a variance doesn't guarantee jobs or that plants will stay open.

The people of Illinois should not have to suffer from years of extra pollution. Midwest Generation should live up to their promise to install modern pollution controls on schedule.

Sincerely,

Mr. Harvey Kahler

**Subject:** Please Reject Midwest Generation's Petition for a Variance (Docket No. PCB 2013-024)

Feb 5, 2013

Illinois Pollution Control Board Members

Dear Control Board Members,

Please reject Midwest Generation's request for a variance of the historic clean air standards Illinois adopted in 2006 (docket no. PCB 2013-024). Hold the company to its previous commitment, which is vital to protecting public health and the environment.

It is the responsibility and duty of the Board to protect Illinois residents from being taken advantage of by companies like Midwest Generation, which has delayed compliance with clean air laws for long enough and which has hidden behind threats to slash jobs and close plants. As you know from the Board's earlier experience with Ameren, a variance doesn't guarantee jobs or that plants will stay open.

The people of Illinois should not have to suffer from years of extra pollution. Midwest Generation should live up to their promise to install modern pollution controls on schedule.

Sincerely,

Mr. Peter Gorr  
1025 W Wood St  
Palatine, IL 60067-4861

Dear Control Board Members,

As health professionals living and working in Illinois, we support the Combined Pollutant Standard (CPS) adopted by the Illinois Pollution Control Board in 2007. By controlling power plant emissions of sulfur dioxide (SO<sub>2</sub>), nitrogen oxides (NO<sub>x</sub>), and mercury, the CPS helps protect the air we breathe, the local fish we eat, and the wildlife and natural spaces we love from harmful pollution. We are concerned by the present effort to weaken the CPS before the Illinois Pollution Control Board. We urge you to vote against any action eroding requirements of the CPS standards.

Nationally, coal-fired power plants are the largest sources of SO<sub>2</sub> and mercury emissions, and are among the largest single source emitters of NO<sub>x</sub>. Emissions of these air pollutants impact human and ecosystem health in a number of ways. High levels of SO<sub>2</sub> and NO<sub>x</sub> can exacerbate respiratory symptoms in at-risk individuals (including children and the elderly), including asthma and COPD attacks. Exposure to mercury, a potent neurotoxin, can result in developmental delays (e.g. speech, motor, and memory skills) in children, and cause nervous system damage in adults. Wildlife and plant species are also impacted by the toxic effects of these pollutants, (e.g. reproductive impacts of mercury to wildlife, SO<sub>2</sub>-derived acid rain damage to foliage).

In addition to the health impacts of directly regulated chemicals, SO<sub>2</sub> and NO<sub>x</sub> are also precursors to other harmful pollutants such as fine particulate matter and ground-level ozone. Fine particulate matter (PM<sub>2.5</sub>) is a complex mixture of solid and liquid particles, and a very large proportion of measured PM<sub>2.5</sub> results from the chemical transformation of SO<sub>2</sub> and various NO<sub>x</sub> molecules in the atmosphere.

Numerous scientific studies and authoritative panels have identified PM<sub>2.5</sub> as harmful to human health, with causal linkages found between short- and long-term exposures and premature mortality and cardiovascular effects. According to a 2010 report by the National Research Council, in 2005 alone, the annual health and related damages from particulate, NO<sub>x</sub>, and SO<sub>2</sub> cost the public \$62 billion (2007 USD).

The vast majority (\$53 billion) of these costs were due to health damages associated with the transformation of SO<sub>2</sub> into PM<sub>2.5</sub>.

As it stands, the CPS is designed to require substantial reductions in the emission rates of SO<sub>2</sub>, NO<sub>x</sub>, and mercury. These reductions will allow for substantial gains in the public health of our state and surrounding regions, particularly for vulnerable populations and areas that do not meet federal air quality standards. Notably, two coal-fired power plants regulated by the CPS are in areas that the Illinois EPA has identified as not attaining federal SO<sub>2</sub> standards. By maintaining the present CPS emission rate requirements for each of the pollutants, you will ensure that the health improvements behind the spirit of the law remain intact, and that the public does not bear the costs of polluter non-compliance. We applaud you for your decision to put the CPS in place six years ago, and we ask that you continue to show your support for this standard by voting against any effort to weaken its protective power.

Sincerely,

Dr. Aaron Packman

Evanston, IL 60208

**Subject:** Please Reject Midwest Generation's Petition for a Variance (Docket No. PCB 2013-024)

Feb 5, 2013

Illinois Pollution Control Board Members

Dear Control Board Members,

Please reject Midwest Generation's request for a variance of the historic clean air standards Illinois adopted in 2006 (docket no. PCB 2013-024). Hold the company to its previous commitment, which is vital to protecting public health and the environment.

It is the responsibility and duty of the Board to protect Illinois residents from being taken advantage of by companies like Midwest Generation, which has delayed compliance with clean air laws for long enough and which has hidden behind threats to slash jobs and close plants. As you know from the Board's earlier experience with Ameren, a variance doesn't guarantee jobs or that plants will stay open.

The people of Illinois should not have to suffer from years of extra pollution. Midwest Generation should live up to their promise to install modern pollution controls on schedule.

Sincerely,

Ms. Kaki Dipinto
