Suite 11-500  
Chicago, IL 60601

Dear Mr. McGill,

Stage II vapor fumes are hazardous not only for the Illinois environmental and gas distributors in Illinois who lose business on lost fumes, but also to the gas consumer who must breath in the fumes. Without proper stage II vapor recovery gas nozzles from gas stations, gas nozzles that lack recovery systems exposes the consumer to carcinogenic gases such as benzene. These gases will also escape the gas station and cost the Illinois economy millions in lost product. Even worse, should this gas continue to be unregulated by vapor protectors, it will disperse amongst the atmosphere and destroy our atmosphere without the production value of being used in as combustibile fuel. This is particularly devastating due to the fact that Illinois pumps for four billion gallons of gas a year and over 940 million gallons of gas will be lost from the fumes. Because you are in a position to act on this unfortunate reality , my colleagues and I at Metea Valley strongly encourage you to propose the idea of stage II vapor recovery at your next meeting with the IPCB for the good of Illinois citizens, Illinois businesses, and the global environment as a whole.

Thank you,

Mr. Richard R. McGill, Jr.

I would like to talk to you about what you are doing. Your job is to protect the environment and what are you doing? Doing the exact opposite. You are killing the environment and also many people. Don't let big oil companies tell you what to do. I want you to think how you would feel if your daughter or son one day woke up to find out they have cancer from the pollution your debating to let more into the air. You also shouldn't remove stage two there will be so much more emissions just being let into the air for it to give innocent people cancer. Your job is to save the world not destroy it

Cory Wong
