Subject: R14-10: We Need Coal Ash Rules that Protect Public Health and the Environment:

May 6, 2014

Clerk of the IPCB John Therriault

Dear Clerk of the IPCB Therriault,

Coal combustion produces dangerous coal ash waste that contains mercury, arsenic, lead and other health-threatening pollutants that are leaching into our water supplies. These deadly pollutants increase severe health risks including cancer, neurological disorders, birth defects, reproductive failure, asthma and other serious illnesses. We need the proposed rules for regulation coal combustion in Illinois waste to be strengthened!

We can not survive without water.

Rules governing coal ash pits must include key protections!

Groundwater Contamination:

- Impoundments causing groundwater impairment must be closed by a set date to fully protect the environment and human health.
- Complete removal of waste should be considered as the presumptive closure strategy.

Surface water Contamination:

- The draft rules do not require that threats to surface water be assessed and as such leave downstream waterways vulnerable to toxic pollutants. The rules must protect surface waters from contamination.

Public Participation and Notice:

- Citizens should have the right to be informed and participate in decisions regarding what is to be done with coal combustion waste in their communities.
- The rules must give the public ample time (60 days) to comment meaningfully on any facility's plan and allow the IEPA to hold a public meeting on the plan where there is significant interest.

Financial Burden:

- The weight of coal ash problems is a tremendous burden that communities should not have to bear. The rules should require power companies to provide financial assurances for the coal ash pits at all operating and retired power plants.

I urge you to please stand up for the health and safety of Illinois families by strengthening the IEPA's proposed rules on coal combustion waste at power plants in Illinois!

Sincerely,

Dennis Kneip
403 Jake Ct

Clerk of the IPCB John Therriault

Dear Clerk of the IPCB Therriault,

Coal combustion produces dangerous coal ash waste that contains mercury, arsenic, lead and other health-threatening pollutants that are leaching into our water supplies. These deadly pollutants increase severe health risks including cancer, neurological disorders, birth defects, reproductive failure, asthma and other serious illnesses. We need the proposed rules for regulation coal combustion in Illinois waste to be strengthened!

Rules governing coal ash pits must include key protections!

Groundwater Contamination:

- Impoundments causing groundwater impairment must be closed by a set date to fully protect the environment and human health.
- Complete removal of waste should be considered as the presumptive closure strategy.

Surface water Contamination:

- The draft rules do not require that threats to surface water be assessed and as such leave downstream waterways vulnerable to toxic pollutants. The rules must protect surface waters from contamination.

Public Participation and Notice:

- Citizens should have the right to be informed and participate in decisions regarding what is to be done with coal combustion waste in their communities.
- The rules must give the public ample time (60 days) to comment meaningfully on any facility's plan and allow the IEPA to hold a public meeting on the plan where there is significant interest.

Financial Burden:

- The weight of coal ash problems is a tremendous burden that communities should not have to bear. The rules should require power companies to provide financial assurances for the coal ash pits at all operating and retired power plants.

****PLEASE DO MORE TO PROTECT THE ENVIRONMENT AND PEOPLE FROM TOXIC COAL ASH!**

I urge you to please stand up for the health and safety of Illinois families by strengthening the IEPA's proposed rules on coal combustion waste at power plants in Illinois!

Sincerely,

Carol Jurczewski

We should also begin developing the unified physics technologies noted at www.scientist4u.us. The future can be free of pollutants once disintegrator units are used in cooperation with power plants. The future can be a better place with much fewer pollutants than the twentieth century.

I urge you to please stand up for the health and safety of Illinois families by strengthening the IEPA's proposed rules on coal combustion waste at power plants in Illinois!

How many times do we have to witness accidents where the ash ends up in our waterways before we finally take action to really prevent these kinds of accidents from happening?

Financial Burden:

- The weight of coal ash problems is a tremendous burden that communities should not have to bear. The rules should require power companies to provide financial assurances for the coal ash pits at all operating and retired power plants.

I urge you to please stand up for the health and safety of Illinois families by strengthening the IEPA's proposed rules on coal combustion waste at power plants in Illinois!

Subject: R14-10: WE NEED TOUGHER HAZARDOUS COAL ASH RULES WHICH PROTECT BOTH PUBLIC HEALTH AND ENVIRONMENTAL HEALTH!!

May 8, 2014

Clerk of the IPCB John Therriault

Dear Clerk of the IPCB Therriault,

Coal combustion produces dangerous coal ash waste that contains mercury, arsenic, lead and other health-threatening pollutants that are leaching into our water supplies. These deadly pollutants increase severe health risks including cancer, neurological disorders, birth defects, reproductive failure, asthma and other serious illnesses. We need the proposed rules for regulation coal combustion in Illinois waste to be strengthened!

Around the time of this year's "EARTH DAY Celebration"

(Tuesday, April 22) marked my 44th anniversary of being a dedicated and motivated environmental/energy/conservation activist! I have a Bachelor of Science (B.S.) Degree in Biology and Environmental Studies.

Continuing on, along with mountaintop-removal coal mining, carbon emissions, sulfur oxides ("acidic precipitation"), and particulate ('soot') pollution, the dangerous waste byproduct of hazardous coal ash shows that there is no such thing as "so-called 'clean coal!'" With ONLY 37% of our state's hazardous coal ash pits being lined, groundwater contamination has been discovered at EVERY SINGLE coal-fired power station that has been investigated!

(Deteriorating toxic coal ash pits at the Vermillion Coal-Fired Power Station threaten the Middle Fork Vermillion River, Illinois' only designated "National Wild and Scenic River." I do NOT want a breach like the one which recently released ROUGHLY 82,000 TONS of hazardous coal ash at a Duke Energy coal-fired plant on the Dan River in North Carolina. For what it is worth, as an experienced wildlife observer, an avid hiker, and amateur photographer, I would like to explore a 'pristine' Middle Fork Vermillion River uncontaminated with toxic coal ash pollutants--already having been to Giant City State Park and the Shawnee National Forest in South Illinois, and Illinois Beach State Park along Lake Michigan. I have also been to the Pisgah National Forest/Biltmore Estate in North Carolina.) Besides being made MORE STRINGENT TO PREVENT ECOLOGICAL DAMAGES from failing hazardous coal ash pits, the final rules MUST also make sure that the financial burden is NOT left to the communities, and MUST make sure that any (and all) water contamination is immediately and thoroughly cleaner up.

THE FINAL STATEWIDE RULES GOVERNING HAZARDOUS COAL ASH PITS MUST INCLUDE THESE KEY PROVISIONS=
 GROUNDWATER CONTAMINATION:

--Impoundments causing groundwater impairment MUST BE CLOSED BY SET DATE to completely protect environmental quality and our health.

--COMPLETE REMOVAL OF THE WASTE should be considered as the presumptive closure strategy.

SURFACE WATER CONTAMINATION:

--The draft rules do NOT require that threats to surface water be assessed and as such leave downstream waterways vulnerable to toxic chemical pollutants. The final rules MUST PROTECT "surface waters" from that contamination.

B14-10
PUBLIC PARTICIPATION AND NOTICE:

- Citizens should have the RIGHT TO BE INFORMED AND PARTICIPATE IN DECISIONS regarding what is to be done with hazardous coal combustion waste in their communities.
- The final rules MUST give the public ample time (60 days) to comment meaningfully on any facility's plan, and allow the Illinois Environmental Protection Agency (IEPA) to hold a public meeting on the plan where there is significant interest.

FINANCIAL BURDEN:

- The weight of toxic coal ash problems is a TREMENDOUS BURDEN which communities should NOT have to bear! The final rules should REQUIRE electric companies to PROVIDE FINANCIAL ASSURANCES for the hazardous coal ash pits at all operating and retired coal-fired power plants.

I urge you to please stand up for the health and safety of Illinois families by strengthening the IEPA's proposed rules on coal combustion waste at power plants in Illinois!

Sincerely,
