ORDER OF THE BOARD (by Mr. Seaman):

The parties to the above-captioned cause shall file, on or before November 25, 1974, briefs concerning the following issues which are unclear from a reading of the Stipulation and Proposal For Settlement.

1. The Board cannot clearly ascertain the volume of discharges or the concentration of contaminants therein. A flow sheet indicating the points of discharge of both process water and cooling water would also be helpful.
2. The Stipulation states that Federal has been successful in reducing its discharge to the Illinois River by over 97%. It is unclear, however, whether that reduction was in terms of volume of discharge or percentage of contaminants.
3. Mention is made of a "concentrated waste stream." However, the volume and composition of that stream is not clear; nor are the reasons for Federal's position that it may not be technologically or economically practical to reduce the BOD or SS levels of the waste stream.
4. Paragraph B.5 of the Settlement Proposal allows fifteen months for miscellaneous final adjustments of the water stream. The procedures contemplated are unclear and we are unable to ascertain to what extent said procedures are dependent upon the preceding items of Paragraph B.

IT IS SO ORDERED.

I, Christian L. Moffett, Clerk of the Illinois Pollution Control Board, does hereby certify that the above Order was adopted on this 31<sup>st</sup> day of October, 1974 by a vote of 5-0.
