All units are mg/L unless otherwise noted.

Based on 35 IAC Part 742, Appendix B Table E.

Bolded/Shaded values - Detected results exceeding the lowest Tier I objective. Bolded/Italicized values - Detected values exceeding Chemicals not in TACO Tier I objective.

** - Objectives obtained from Illinois EPA Chemicals not in TACO Tier I Tables.

* - Class II objective may be higher depending on sample pH.

Electronic Filing - Received, Clerk's Office - 06/27/2016 - PCB 2016-097***

RE: Marengo 5-10 STAT Project No: 10050294

Dear Bill Lennon:

STAT Analysis received 8 samples for the referenced project on 5/11/2010 3:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

CASE NARRATIVE

The metals LCS (preparation batch 49348) had recovery outside of control limits for Antimony (145% recovery, QC Limits 80-120%).

The metals MS/MSD prepared from sample MW-1 (10050294-001) had Antimony recovery outside control limits (152%/152% (MS/MSD) recovery, QC limits 75-125%). The MS/MSD had recovery of other analytes outside of control limits, however the analyte concentration in the sample was greater than four times the spiking level for those elements.

RE: Marengo 5-11 STAT Project No: 10050297

Dear Bill Lennon:

STAT Analysis received 8 samples for the referenced project on 5/12/2010 12:00:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

APPENDIX I – EGSL 2010 PHASE II ESA MEMORANDUM

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

MEMORANDUM

TO: JOHN DALEY
SAM MANDARINO
300 WEST LLC

FROM: SHADOW MIRKHAEF
ENVIRONMENTAL GROUP SERVICES, LTD.
557 WEST POLK STREET, SUITE 201 - CHICAGO, ILLINOIS 60607

SUBJECT: 300 WEST STREET – MARENGO, ILLINOIS

DATE: 12/13/2010

Dear Mr. Daley,

Listed below is a summary of our recent findings as of today:

On October 28-29, 2010, EGSL installed five additional groundwater monitoring wells in association with Subject Property, as follows:

- MW-17: on-site, northwestern portion of the Subject Property (60-70 foot screen)
- MW-18: off-site, north of Railroad Street (40-50 foot screen)
- MW-19: off-site, north of Railroad Street (30-40 foot screen)
- MW-20: off-site, north of Railroad Street (20-30 foot screen)
- MW-21: off-site, north of Railroad Street (10-20 foot screen)

On November 10, 2010, EGSL sampled the five groundwater wells and submitted the samples to *STAT Analysis Corporation* for analysis of Volatile Organic Compounds (VOCs) and Target Analyte List Metals (TAL Metals). According to laboratory results, chemicals of concern were detected above IEPA Tier 1 Remediation Objectives in MW-17, -18, -19, and -21 (see attachment A for complete laboratory results).

EGSL forwarded the results to Tim Zook, IEPA Site Remediation Program (SRP) project manager for the Subject Property. As per a phone conversation with Mr. Zook on December 8, 2010, it is anticipated that the following activities will need to be conducted:

- Mr. Zook is in the process of completing a Right-to-Know Memorandum to be submitted to the IEPA Office of Community Relations pertaining to the off-site groundwater contamination.

- A complete well survey of all on-site and off-site wells within a 1000-foot radius of the Subject Property will need to be conducted.
- Deeper wells located both on-site and off-site will need to be installed in order to fully delineate the vertical extent of groundwater contamination.

Attachment A

RE: Marengo, Nov. Water STAT Project No: 10110322

Dear Bill Lennon:

STAT Analysis received 6 samples for the referenced project on 11/10/2010 4:20:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

1. EXECUTIVE SUMMARY

Environmental Group Services, Limited (EGSL), on behalf of *300 West LLC*, conducted this Site Investigation Report for the property located at 300 West Street, Marengo, Illinois (Subject Property). The purpose of the investigation was to delineate the vertical and horizontal extent of subsurface soil and groundwater at the site. This report is also intended to respond to the IEPA Comment Letters dated December 8, 2009 and September 17, 2010.

Previous environmental investigations conducted by EGSL at the Subject Property included the following:

- Limited Phase II Subsurface Soil and Groundwater Investigation Report, dated March 3, 2006. The purpose of this investigation was to determine if any free product was present at the site and to obtain a not-to-exceed cost in regards to obtaining an NFR for the property At that time, 27 soil samples and three groundwater samples were obtained and submitted for Target Compound List chemicals of concern. No free product was identified. This entire report can be found in Appendix A.
- Ground Penetrating Radar Survey, dated September 13, 2006. The purpose of this investigation was to confirm or deny the presence of 12 possible USTs at nine separate areas of the site. GPR results indicated the possible presence of four USTs and four possible excavation areas. This entire report can be found in Appendix B.
- Limited Phase II Subsurface Soil Investigation Report, dated May 27, 2008. The purpose of this report was to delineate subsurface contamination detected in the 2006 Phase II Report and around the UST area associated with LUST incident number 20071279. This entire report can be found in Appendix C.
- Phase I Environmental Site Assessment, dated September 30, 2009. The Phase I was conducted in order to identify any recognized environmental concerns associated with the Subject Property. This report was previously received by the IEPA on October 2, 2009.
- Phase II Subsurface Investigation Report, dated July 15, 2010. The purpose of this report was to address all areas of concern identified in the previous subsurface soil investigations and the previous Phase I Environmental Site Assessment. Forty soil borings and sixteen groundwater wells were installed at the Subject Property. This report was previously received by the IEPA on August 23, 2010.

Subsequent to the submittal of the July 15, 2010 Phase II Subsurface Investigation Report, EGSL conducted the following activities:

- On October 28-29, 2010, five additional monitoring wells were installed (MW-17, -18, -19, -20, and -21). One deep well (MW-17, screened from 60-70 feet) was installed along the northwestern-most nest of wells in order to delineate the vertical extent of VOC impaction in that area. Additionally, four permanent monitoring wells were installed off-site directly north of Railroad Street in order to delineate the horizontal extent of groundwater impaction along the

northwestern portion of the Subject Property. Analytical results indicated that these wells still contained chemicals of concern above Tier 1 Remediation Objectives for Class I Groundwater. A memorandum was issued to *300 West LLC* on December 13, 2010 which included the analytical data and can be found in Appendix D.

- On February 23-24, 2011, two additional monitoring wells were installed (MW-22 and MW-23). MW-22 was installed on-site within the northwestern nest of wells and screened from a depth of 80-90 feet in order to delineate the vertical extent of groundwater impaction in that area. MW-23 was installed within the off-site nest of wells and screened from a depth of 60-70 feet in order to delineate the vertical extent of groundwater impaction in that area. Both of these wells were sampled on March 31, 2011. Neither of the wells contained any chemicals of concern above Tier 1 Remediation Objectives for Class I Groundwater; as such, EGSL has determined that the vertical extent of on-site and off-site groundwater impaction has been defined. Analytical data can be found in Appendix E.
- On March 31, 2011, EGSL was able to access the private, potable wells of the three northern residential properties. With the permission from the homeowners, each well was sampled and submitted for analysis of VOCs. The addresses of the homes, and approximate depths of the wells, are as follows: [redacted] (>60 feet deep), [redacted] (~107 feet deep), [redacted] (>120 feet deep). Analytical results indicated that no VOCs were detected above laboratory detection limits. Analytical data can be found in Appendix F.
- On December 2, 2011, EGSL advanced an additional 11 soil borings at the Subject Property in order to delineate previous detections of elevated chemicals of concern. The purpose of the delineation was to obtain more accurate source widths and depths for future Tier 2 analysis. Analytical data can be found in Appendix G.

The purpose of this report is to compile all of EGSL's subsurface soil and groundwater investigations to-date, and to present all areas of concern that contain contaminants above Tier 1 Remediation Objectives. Upon agreement that all vertical and horizontal extents of subsurface impaction have been adequately defined, EGSL will begin Tier 2 analysis and the associated Remedial Action Completion Report (RACR). The primary focus of this reporting is to determine whether the IEPA is satisfied with the soil and groundwater sampling activities regarding VOCs in the northwestern portion of the site. All other areas of concern are determined to be less difficult to remediate via engineered barriers and/or institutional controls. This report will also address the pertinent items from the previously issued IPEA comment letters. All other items will be addressed with the RACR. Upon review of this report, EGSL requests additional information from the IEPA regarding acceptable avenues pertaining to the groundwater impaction at the northwestern portion of the Subject Property.

It should be noted that all analytical data included in the Appendix of this report is data that has <u>not</u> been previously submitted to the IEPA. Any references to analytical data and/or other pertinent information from the July 15, 2010 Phase II Subsurface Investigation Report can be found in the Appendix in that report.

2. PHASE II SUBSURFACE SOIL INVESTIGATION ACTIVITIES

A Phase II Subsurface Investigation was conducted in order to assess the potential for the presence of chemicals of concern (COC) in the subsurface soil present at the site. The investigation was conducted in accordance with Part 740 (SRP) and the COC were chosen from the Target Compound List (TCL) indicator contaminants identified in Appendix A of Part 740.

2.1 FIELD SAMPLING PROCEDURES

EGSL utilized a Geoprobe® 6610DT to advance a 5-foot soil sampler in order to retrieve continuous soil samples throughout the Subject Property (see Appendix A for boring locations). All soil samplers were lined with acetate tubes.

All soil samples were split into two parts: one to be placed into a sealed plastic bag for headspace analysis of volatile organic vapors and the other to be placed in laboratory supplied containers for potential analysis. The bagged samples were tested in the field with Photo-Ionization Detector (PID). The PID was used to screen each soil sample from each boring location for relative concentration of VOCs and does not provide separation of the contaminants into individual constituents. The utilization of this field-screening device provided immediate on-site data for use in the assessment of the site.

A total of 50 soil borings were advanced throughout the Subject Property. Sixty soil samples were submitted for analysis in order to analytically determine the presence and concentration of COC in the areas of concern (several of the boring locations had two soil samples submitted). The sample locations, sampling date, depth, and the type of analysis requested of the samples are listed below:

Boring Number	Date Obtained	Depth of Sample Submitted for Analysis (feet)	TCL	VOCs	SVOCs	RCRA Metals (+pH)	PCBs

GP-50	12/02/2011	8-10		PCE 11-DCE 111-TCA		Pb/Mn	

The soil samples targeted for laboratory analysis of VOCs were packed into new 40-milliliter glass vials, pre-preserved in sodium bisulfate and methanol in accordance with EPA Method 5035. The soil samples collected for the remaining analysis were packed into one non-preserved 8-ounce wide-mouth jar with a Teflon-lined cap. STAT supplied all glass vials and jars. All soil samples were stored on ice during soil sample collection activities and while being transported to STAT. Standard Chain-of-Custody procedures were followed to track the sample.

Cross-contamination during soil sampling was minimized by using an Alconox detergent wash and tap water rinse to decontaminate the sampling tools between each probe. Also, other sampling equipment and measurement tools were hand washed with an Alconox detergent wash and rinsed three times with distilled water between soil sample intervals. The tools were then placed on clean, decontaminated surfaces. Disposable latex gloves were worn during the collection of soil sampling events and were changed between each sample.

Additionally, a total of 18 groundwater monitoring wells were installed at the Subject Property and five groundwater monitoring wells were installed of-site. The depth of the wells and screen intervals are as follows:

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)

3. PHASE II SUBSURFACE SOIL INVESTIGATION RESULTS

3.1 Previous Environmental Reporting

The analytical test results of the soil and groundwater samples were compared to the Soil Remediation Objectives (SROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742, Tiered Approach to Corrective Action Objectives (TACO), Tier I for Industrial/Commercial and Residential properties and for Soil Component of the Groundwater Ingestion Route (SCGIR) Class I Groundwater. Analytical results indicate that the following chemicals of concern were detected above IEPA Tier 1 Remediation Objectives (please note only samples obtained from May 2010 and beyond are listed):

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	Remediation Objective (mg/Kg)	Exposure Route

4. RESPONSE TO COMMENT LETTERS

4.1 December 8, 2009 Comment Letter

The December 8, 2009 Comment Letter can be found in Appendix H.

- Item 1: EGSL and the RA originally planned to include the two southern parcels owned by the RA. These two parcels contain a percolation field and farmland. Based on early investigative activities, these areas were eliminated from the scope of work.

- Item 2: EGSL was provided with a site diagram from 1961 and no Buildings 13 or 15 were identified. EGSL is still in the process of obtaining more thorough information pertaining to current and historical operations per your request. It should be noted that Arnold Magnetics has down-sized drastically over the past decade, and readily available information has been relatively difficult to obtain. EGSL will still pursue gathering as much information as possible and will provide everything in the RACR.

- Item 3: Pond 5 is technically an overflow pond located along the southwestern portion of the Subject Property, directly southwest of Building 11/14, and directly north of the percolation field. Pond 5 is not lined and is surrounded by native vegetation. It is not similar to Ponds 1-4 and is considered an "overflow" pond. A historical site diagram provided to EGSL identifying the location of Ponds 5 and 6 can be found in Appendix I.

- Item 4: Pond 6 was located directly northwest of Building 6, in the area containing the highest concentrations of VOC in the groundwater. It should be noted that the top 10-15 of subsurface soil in this area is not consistent with the rest of the site and contains black, sludgy material. However, soil analytical results did not confirm any major contamination. Pond 6 was reportedly utilized the same way as Pond 5 as an "overflow" pond and did not appear to be lined. It is EGSL's opinion that this pond, and possible dumping from Building 6 into Pond 6, is the source of the groundwater contamination in that area. A historical site diagram provided to EGSL identifying the location of Ponds 5 and 6 can be found in Appendix I.

- Item 5: See Item 2.

- Item 6: See Item 2. Also, all drawings will include as much information as obtainable.

- Item 7: Due to the length of this project, and the fact that Arnold Technologies is still in current operations, EGSL will submit a formal FOIA request prior to submittal of the RACR.

- Item 8: All PIN(s) and a formal site survey that corresponds with the final Site Base Map will be provided at the time that the NFR is requested.

4.1 September 17, 2010 Comment Letter

The September 17, 2010 Comment Letter can be found in Appendix J. Only the "Comments Regarding Overall Site" will be addressed. Per our previous discussions, it appears that we agreed that the five specific items in the "Comments Related to Groundwater Contamination in the Northwest Portion of the Property and the Possibility of Off-Site Contamination" pertained more to the Bureau of Water permitting and not with obtaining the NFR.

- Item 1: See Item 2 response to the December 8, 2009 Comment Letter.

- Item 2: The GPR Survey can be found in Appendix B, and all previous soil sampling activities included all UST areas as areas of concern.

- Item 3: Previous sampling activities conducted by EGSL can be found in Appendix A and Appendix C.

- Item 4: See Item 2 response to the December 8, 2009 Comment Letter.

- Item 5: Over 80 soil borings and over 20 monitoring wells were advanced throughout the entire

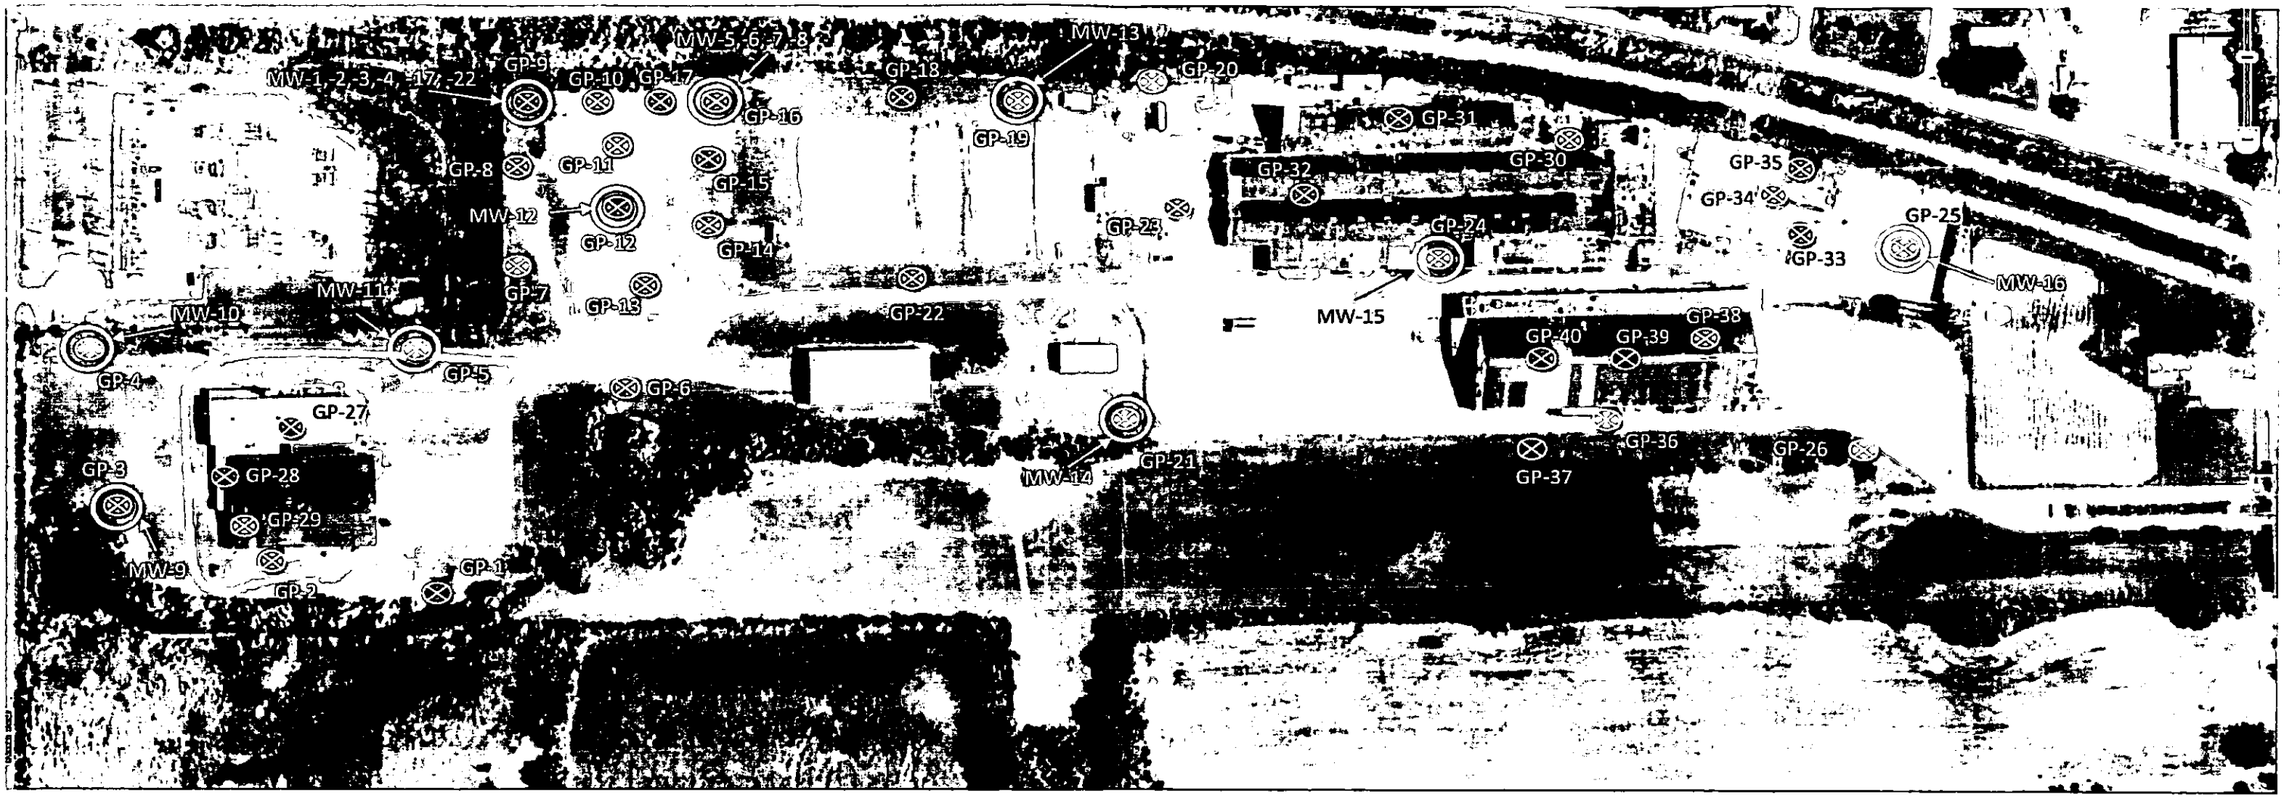
Subject Property ranging from 10 to 90 feet below ground surface. Bedrock was not encountered in any of the areas.

- Item 6: Well installation logs, in addition to the hydro geologic survey and Tier 2 analysis, will be provided with the RACR.

- Item 7: EGSL will gather additional information pertaining to the exact nature of the linings. As witnessed during one of our previous walkthroughs with IEPA, several visual portions of the liners were either torn or in poor condition.

- Item 8: EGSL is currently awaiting a response from some of the municipal entities in regards to finalizing the SRP Well Survey. The final Survey will be included with the RACR.

5. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS



This report pertains to the property located at 300 West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED

Bill Lennon
Project Manager

1 EXECUTIVE SUMMARY

On February 15, 2006, Environmental Group Services, Ltd. (EGSL) completed a Phase II Subsurface Soil and Groundwater Investigation at the property located at 300 N. West Street, Marengo, Illinois, hereinafter referred to as the "Subject Property". This investigation was performed in accordance with the regulations set forth in 35 IAC 740 (Site Remediation Program) and 35 IAC 742 (Tiered Approach to Corrective Action Objectives), Tier 1, for Residential properties. The purpose of this investigation was to confirm or deny the presence of subsurface soil and/or groundwater contamination that may be present at the Subject Property.

The Subject Property is located at 300 N. West Street, in a residential/industrial area of Marengo, Illinois and is approximately 90-acres in size. The Subject Property is currently occupied by Arnold Magnetic Technologies, which utilizes the site for the manufacturing of magnets and the production of rolled metal products.

Prior to the Phase II Investigation, EGSL was provided with the following reporting:

- Monitoring Well Network Installation and Groundwater Flow Assessment, prepared by *Roux Associates, Inc.*, dated May 17, 1990.
- Draft Subsurface Investigation Report, prepared by Environmental Strategies Corporation, dated December 2, 1999.
- Interoffice Memorandum from Thomas Koralewski of Arnold Engineering to Dennis Shea of SPS Technologies, dated July 20, 2000, regarding subsurface soil sampling around MW-3.
- Correspondence from Thomas Koralewski of Arnold Engineering to Thomas McSwiggin of the IEPA Division of Water Pollution Control, dated August 30, 2001, regarding Water Pollution Control Permit 1999-EO-4027.
- Correspondence from Thomas Koralewski of Arnold Engineering to the IEPA Division of Water Pollution Control, dated May 22, 2003, regarding Water Pollution Control Permit 1999-EO-4027.
- Correspondence from Alan Kalaczinski of Arnold Technologies to the Illinois Emergency Management Agency (IEMA), dated July 20, 2004, regarding IEMA Incident number H20040698.
- Analytical data from STAT Analysis Corporation to Don Smith of URS, dated November 26, 2004, December 1, 2004 and December 2, 2004.
- Correspondence from Bill Buscher of the IEPA Bureau of Water to Stephen Brisson of Arnold Technologies, dated May 17, 2005, regarding Water Pollution Control Permit 2004-EO-0971.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Arnold Technologies currently and historically has utilized four wastewater treatment ponds to hold and treat wastewater produced in the manufacturing process. As such, Water Pollution Control Permit numbers 1999-EO-4027 and 2004-EO-0971 were issued for the Subject Property. In order to comply with the Terms and Conditions as stated in the permits, 14 on-site groundwater monitoring wells and one off-site groundwater monitoring wells were installed. Groundwater sampling was conducted in select wells at approximately 1-month intervals. EGSL was provided with groundwater analytical results dating from January 10, 2001 to December 19, 2005. According to analytical data, 1,1,1-Trichloroethane and Tetrachloroethene had been detected in the groundwater above IEPA Tier 1 Remediation Objectives for Class I Groundwater.

It should also be noted that FOIA information was received from the Office of the State Fire Marshal pertaining to the statuses of 12 underground storage tanks that have been historically, or are currently, located on site.

Based on the above-mentioned environmental concerns, EGSL collected 27 soil borings throughout the Subject Property. Additionally, three of the on-site groundwater monitoring wells were sampled (see Site Diagram in Appendix A). All soil and groundwater samples were submitted to STAT Analytical Corporation for analyses of Target Compound List Indicator Contaminants. According to the laboratory results:

- Tetrachloroethene (PCE) was detected at GP-3, GP-5, GP-20, GP-21 and GP-22 at concentrations that exceeded IEPA Tier 1 Remediation Objectives (ROs) for residential Properties.
- Arsenic was detected at GP-2 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Several inorganic metals were detected throughout the Subject Property at concentrations above metropolitan background concentrations.
- 1,1-Dichloroethene was detected at MW-A7 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Tetrachloroethene was detected at MW-3 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- 1,1,1-Trichloroethane was detected at MW-A6 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Iron was detected at MW-A6 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Manganese was detected at MW-3, MW-A6 and MW-A7 at concentrations that exceeded IEPA Tier 1 ROs for residential Properties.

Based on the above-mentioned analytical results, a Tier 2 Risk-Based Site Assessment was performed in regards to the chemicals of concern that exceeded Tier 1 Remediation Objectives. According to Tier 2 site-specific calculations, it has been determined that:

- The Tier 2 site-specific soil RO for Tetrachloroethene (PCE) was above all detected concentrations from the soil samples.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

- Arsenic detected in GP-2 will travel approximately 145 feet before reaching its Tier 2 RO.
- 1,1-Dichloroethene detected in MW-A7 will travel approximately 5 feet before reaching its Tier 2 RO.
- Tetrachloroethene detected in MW-3 will travel approximately 7 feet before reaching its Tier 2 RO.
- 1,1,1-Trichloroethane detected in MW-A6 will travel approximately 5 feet before reaching its Tier 2 RO.
- Iron detected in MW-A6 will travel approximately 27 feet before reaching its Tier 2 RO.
- Manganese detected in MW-3 will travel approximately 53 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A6 will travel approximately 148 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A7 will travel approximately 72 feet before reaching its Tier 2 RO.

Based on the above-mentioned results, EGSL recommends that the Subject Property enroll into the IEPA's Site Remediation Program (SRP) in order to receive a Comprehensive No Further Remediation (NFR) letter for Residential Properties. In order to receive a NFR for the Subject Property, additional soil and groundwater sampling/modeling will be needed, as per the IEPA's discretion. It is anticipated that area of Arsenic above Tier 1 ROs will have to excavated and disposed of in accordance with federal, state and local regulations. Additionally, since the Subject Property is not located in an area with an approved groundwater ordinance, it is also anticipated that a groundwater use restriction, prohibiting the use of on-site groundwater for potable purposes, will have to be implemented for the Subject Property and/or any affected adjacent properties.

2 BACKGROUND INFORMATION

2.1 Site Location and Description

The Subject Property is located at 300 North West Street, in a residential/industrial area of Marengo, Illinois and is approximately 90-acres in size. The Subject Property is currently occupied by Arnold Magnetic Technologies, which utilizes the site for the manufacturing of magnets and the production of rolled metal products.

2.2 Previous Site Investigations

Prior to the Limited Phase II Investigation, EGSL was provided with the following reporting:

- Monitoring Well Network Installation and Groundwater Flow Assessment, prepared by *Roux Associates, Inc.*, dated May 17, 1990.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

- Draft Subsurface Investigation Report, prepared by Environmental Strategies Corporation, dated December 2, 1999.

- Interoffice Memorandum from Thomas Koralewski of Arnold Engineering to Dennis Shea of SPS Technologies, dated July 20, 2000, regarding subsurface soil sampling around MW-3.

- Correspondence from Thomas Koralewski of Arnold Engineering to Thomas McSwiggin of the IEPA Division of Water Pollution Control, dated August 30, 2001, regarding Water Pollution Control Permit 1999-EO-4027.

- Correspondence from Thomas Koralewski of Arnold Engineering to the IEPA Division of Water Pollution Control, dated May 22, 2003, regarding Water Pollution Control Permit 1999-EO-4027.

- Correspondence from Alan Kalaczinski of Arnold Technologies to the Illinois Emergency Management Agency (IEMA), dated July 20, 2004, regarding IEMA Incident number H20040698.

- Analytical data from STAT Analysis Corporation to Don Smith of URS, dated November 26, 2004, December 1, 2004 and December 2, 2004.

- Correspondence from Bill Buscher of the IEPA Bureau of Water to Stephen Brisson of Arnold Technologies, dated May 17, 2005, regarding Water Pollution Control Permit 2004-EO-0971.

According to the above-mentioned reports, Arnold Technologies currently and historically has utilized four wastewater treatment ponds to hold and treat wastewater produced in the manufacturing process. As such, Water Pollution Control Permit numbers 1999-EO-4027 and 2004-EO-0971 were issued for the Subject Property. In order to comply with the Terms and Conditions as stated in the permits, 14 on-site groundwater monitoring wells and one off-site groundwater monitoring wells were installed. Groundwater sampling was conducted in select wells at approximately 1-month intervals. EGSL was provided with groundwater analytical results dating from January 10, 2001 to December 19, 2005. According to analytical data, 1,1,1-Trichloroethane and Tetrachloroethene had been detected in the groundwater above IEPA Tier 1 Remediation Objectives for Class I Groundwater.

It should also be noted that FOIA information was received from the Office of the State Fire Marshal pertaining to the statuses of 12 underground storage tanks that have been historically, or are currently, located on site.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

3 PHASE II SUBSURFACE SOIL INVESTIGATION ACTIVITIES

A Phase II Subsurface Soil Investigation was conducted in order to assess the potential for the presence of chemicals of concern (COC) in the subsurface soil present at the site. The investigation was conducted in accordance with 35 IAC 740 (SRP) and the COC were chosen from the Target Compound List (TCL) indicator contaminants identified in Appendix A of Part 740.

3.1 Field Sampling Procedures

EGSL utilized a Geoprobe® 6610DT track-mounted direct-push probe to advance a 5-foot by 2-inch soil sampler in order to retrieve continuous soil samples around the Subject Building. Soil samples were continuously collected to depths of 10 to 15-feet below ground surface (bgs). All soil samplers were lined with acetate tubes.

EGSL collected a total of 27 soil samples (GP-1…GP-27) from throughout the Subject Property. See Appendix A for boring locations.

All soil samples were split into two parts: one to be placed into a sealed plastic bag for headspace analysis of volatile organic vapors and the other to be placed in laboratory supplied containers for potential analysis. The bagged samples were tested in the field with Photo-Ionization Detector (PID). The PID was used to screen each soil sample from each boring location for relative concentration of VOCs and does not provide separation of the contaminants into individual constituents. The utilization of this field-screening device provided immediate on-site data for use in the assessment of the site.

A total of 27 soil samples were submitted for analysis of Target Compound List (TCL) indicator contaminants in order to analytically determine the presence and concentration of COC in the areas of concern. The depth and the type of analysis requested of the samples submitted to STAT Laboratory are listed below:

Boring Number	Depth	Location	TCL
GP-1	7.5-8.5	Adjacent to the northeast exterior of the footprint of former Building #1	X
GP-2	4-5	Northwest interior of former Building #1	X
GP-3	5-6	Central interior portion of Building #2	X
GP-4	4-5	Northwestern interior of Building #2	X
GP-5	6-7	Western interior of Building #2	X
GP-6	4-5	Northeastern interior of Building #5	X
GP-7	6-7	Northwestern interior of Building #5	X
GP-8	5-6	Western interior of Building #5	X
GP-9	5-6	Northern interior of Building #14	X

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Boring Number	Depth	Location	TCL
GP-10	7.5-8.5	Adjacent to western exterior of former Building #6	X
GP-11	9-10	Adjacent to northern exterior of former Building #6	X
GP-12	8-9	North of Pond #4	X
GP-13	4-5	Adjacent to northern exterior of former Building #1	X
GP-14	4-6	Northeast exterior of Building #2	X
GP-15	5-7	Southeast exterior of Building #2	X
GP-16	6-8	Northern exterior of Building #5	X
GP-17	5-6	Northeast interior of Building #2	X
GP-18	6-8	Southern interior of Building #2	X
GP-19	5-7	Southeast interior of Building #2	X
GP-20	4-5	Northwest exterior of Building #2	X
GP-21	5-6	Northern exterior of Building #2	X
GP-22	4-6	Northern exterior of Building #2	X
GP-23	4-5	Central portion of the Subject Property	X
GP-24	5-6	Central portion of the Subject Property	X
GP-25	4-5	Western interior of former Building #6	X
GP-26	5-6	Southeastern vacant portion of the Subject Property	X
GP-27	5-6	Southwestern vacant portion of the Subject Property	X

The soil samples targeted for laboratory analysis of VOCs were packed into new 40-milliliter glass vials, pre-preserved in sodium bisulfate and methanol in accordance with EPA Method 5035. STAT Laboratory supplied all the glass vials and jars. All soil samples were stored on ice during soil sample collection activities and while being transported to STAT. Standard Chain-of-Custody procedures were followed to track the samples.

Cross-contamination during soil sampling was minimized by using an Alconox detergent wash and tap water rinse to decontaminate the sampling tools between each probe. Also, other sampling equipment and measurement tools were hand washed with an Alconox detergent wash and rinsed three times with distilled water between soil sample intervals. The tools were then placed on clean and decontaminated surfaces. Disposable latex gloves were worn during the collection of soil sampling events and were changed between each sample.

3.2 Monitoring Well Water Sampling

EGSL collected three groundwater samples from the groundwater monitoring wells, located along the northwestern portion of the Subject Property (MW-3, MW-A6, MW-A7), using a new dedicated

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

disposable polyethylene bailer. The groundwater samples were then transferred to the appropriate glass vials and containers for the analysis of TCL indicator contaminants. The groundwater samples were kept on ice in coolers and sent to the laboratory for analysis. Proper chain-of-custody procedures were followed.

3.3 Hydraulic Conductivity Testing

On February 15, 2006, EGSL conducted an in-situ hydraulic conductivity test (slug test) at MW-3. Slug tests are a method of obtaining approximate values for the hydraulic conductivity of the water-bearing materials in the vicinity of each respective well screen. This field procedure consists of displacing a volume of water in the well with a solid PVC "slug" of known volume and recording the change in water level as it recovers to static hydraulic conditions over time. The data collected was input into the Aqtesolv® Hydraulic Conductivity program.

The site-specific hydraulic conductivity results, as concluded from the hydraulic conductivity testing, was **6.812E-04 cm/sec**. Based on these results, the Subject Property groundwater is classified as Class I groundwater as per 35 IAC 620, Subpart B.

See Appendix D for Slug Test Field Data and Aqtesolv® Results.

4 PHASE II SUBSURFACE INVESTIGATION RESULTS

The following section presents the physical and chemical results of the Phase II investigation, which include a description of the site subsurface and regional geology and the chemical findings in the soil and groundwater samples submitted to the laboratory.

4.1 Groundwater Data

The Subject Property groundwater flow direction, as previously determined by site-specific survey data, was determined to be towards the **north-northwest**.

The Subject Property groundwater hydraulic conductivity, as determined by site-specific slug test data, was calculated to be **6.812E-04 cm/sec**. Based on these results, the Subject Property groundwater is classified as Class I groundwater as per 35 IAC 620.

4.2 Subsurface Soil Chemical Results

The analytical test results of the soil samples were compared to the Soil Remediation Objectives (SROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742, Tiered Approach to Corrective Action Objectives (TACO), Tier I for Industrial/Commercial

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

properties and for Soil Component of the Groundwater Ingestion Route (SCGIR) (Class I Groundwater).

Listed below are all chemicals of concern that were detected above IEPA Tier 1 Remediation Objectives:

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	TACO Tier 1 RO (mg/Kg)	Exposure Pathway
Tetrachloroethene (PCE)	GP-3 (5-6) GP-5 (6-7) GP-20 (4-5) GP-21 (5-6) GP-22 (4-6)	1.3 0.092 0.13 1.5 9.7	0.06 0.3	SCGIR Class I Groundwater SCGIR Class II Groundwater
TCLP Arsenic	GP-2 (4-5)	2.0	0.05 0.2	SCGIR Class I Groundwater SCGIR Class II Groundwater
Arsenic	GP-2 (4-5)	450	13.0 13.0 29 120	Residential Ingestion Background Concentration* SCGIR Class I Groundwater SCGIR Class II Groundwater
Chromium	GP-13 (4-5) GP-17 (5-6) GP-21 (5-6) GP-26 (5-6)	19.0 18.0 22.0 24.0	16.2	Background Concentration*
Cobalt	GP-14 (4-6) GP-15 (5-7) GP-20 (4-5) GP-25 (4-5)	170.0 51.0 40.0 22.0	8.9	Background Concentration*
Copper	GP-14 (4-6) GP-19 (5-7)	36.0 20.0	19.6	Background Concentration*
Iron	GP-13 (4-5) GP-21 (5-6) GP-26 (5-6)	17,000 20,000 19,000	15,900	Background Concentration*
Manganese	GP-13 (4-5)	660	636	Background Concentration*
Nickel	GP-14 (4-6) GP-15 (5-7)	160 210	18.0	Background Concentration*
Vanadium	GP-2 (4-5) GP-13 (4-5) GP-17 (5-6) GP-21 (5-6) GP-26 (5-6)	28.0 28.0 33.0 34.0 32.0	25.2	Background Concentration*

* Exceedences were compared to "Concentrations of Inorganic Chemicals in Background Soils for Counties Within Metropolitan Statistical Areas" (IAC 742: Appendix A, Table G).

4.3 Groundwater Chemical Results

The analytical test results of the groundwater samples were compared to the Groundwater Remediation Objectives (GROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742, Tiered Approach to Corrective Action Objectives (TACO), Tier I for Class I Groundwater.

Listed below are all chemicals of concern that were detected above IEPA Tier 1 Remediation Objectives:

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	TACO Tier 1 RO (mg/Kg)	Exposure Pathway
1,1-Dichlorethene	MW-A7	0.13	0.007 0.035	Class I Groundwater Class II Groundwater
Tetrachloroethene	MW-3	0.011	0.005	Class I Groundwater
1,1,1-Trichloroethane	MW-A6	0.46	0.2	Class I Groundwater
Iron	MW-A6	5.5	5.0 5.0	Class I Groundwater Class II Groundwater
Manganese	MW-3 MW-A6 MW-A7	0.3 1.8 0.54	0.15	Class I Groundwater

4.4 Tier 2 Analysis

Tier 2 analysis was conducted in order to determine site specific Remediation Objectives and/or the horizontal extent of chemicals of concern that exceeded Tier 1 Objectives. Site-specific parameters, in order to represent the most stringent ROs, were determined as follows:

Soil Type: Silt (3)
Class of Groundwater: Class I
Type of Environment: Residential (1)
Hydraulic Gradient (i): 1.22E-03 m/m
Hydraulic Conductivity (k): 214 m/yr
Thickness of Aquifer (da): 1.9 meters

R-15 and R-26 calculations resulted in the following observations:

- The Tier 2 site-specific soil RO for Tetrachloroethene (PCE) was determined to be 70.0 ppm, which is above all detected concentrations from the soil samples.
- Arsenic detected in GP-2 will travel approximately 145 feet before reaching its Tier 2 RO.
- 1,1-Dichloroethene detected in MW-A7 will travel approximately 5 feet before reaching its Tier 2 RO.
- Tetrachloroethene detected in MW-A3 will travel approximately 7 feet before reaching its Tier 2 RO.
- 1,1,1-Trichloroethane detected in MW-A6 will travel approximately 5 feet before reaching its Tier 2 RO.
- Iron detected in MW-A6 will travel approximately 27 feet before reaching its Tier 2 RO.
- Manganese detected in MW-3 will travel approximately 53 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A6 will travel approximately 148 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A7 will travel approximately 72 feet before reaching its Tier 2 RO.

See Appendix E for Tier 2 Analysis Tables.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

5 CONCLUSIONS AND RECOMMENDATIONS

Based on the field and analytical test data, the following conclusions have been formulated:

- Tetrachloroethene (PCE) was detected at GP-3, GP-5, GP-20, GP-21 and GP-22 at concentrations that exceeded IEPA Tier 1 Remediation Objectives (ROs) for residential Properties.
- Arsenic was detected at GP-2 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Several inorganic metals were detected throughout the Subject Property at concentrations above metropolitan background concentrations.
- 1,1-Dichloroethene was detected at MW-A7 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Tetrachloroethene was detected at MW-3 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- 1,1,1-Trichloroethane was detected at MW-A6 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Iron was detected at MW-A6 at a concentration that exceeded IEPA Tier 1 ROs for residential Properties.
- Manganese was detected at MW-3, MW-A6 and MW-A7 at concentrations that exceeded IEPA Tier 1 ROs for residential Properties.

Based on the above-mentioned analytical results, a Tier 2 Risk-Based Site Assessment was performed in regards to the chemicals of concern that exceeded Tier 1 Remediation Objectives. According to Tier 2 site-specific calculations, it has been determined that:

- The Tier 2 site-specific soil RO for Tetrachloroethene (PCE) was above all detected concentrations from the soil samples.
- Arsenic detected in GP-2 will travel approximately 145 feet before reaching its Tier 2 RO.
- 1,1-Dichloroethene detected in MW-A7 will travel approximately 5 feet before reaching its Tier 2 RO.
- Tetrachloroethene detected in MW-3 will travel approximately 7 feet before reaching its Tier 2 RO.
- 1,1,1-Trichloroethane detected in MW-A6 will travel approximately 5 feet before reaching its Tier 2 RO.
- Iron detected in MW-A6 will travel approximately 27 feet before reaching its Tier 2 RO.
- Manganese detected in MW-3 will travel approximately 53 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A6 will travel approximately 148 feet before reaching its Tier 2 RO.
- Manganese detected in MW-A7 will travel approximately 72 feet before reaching its Tier 2 RO.

Based on the above-mentioned results, EGSL recommends that the Subject Property enroll into the

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

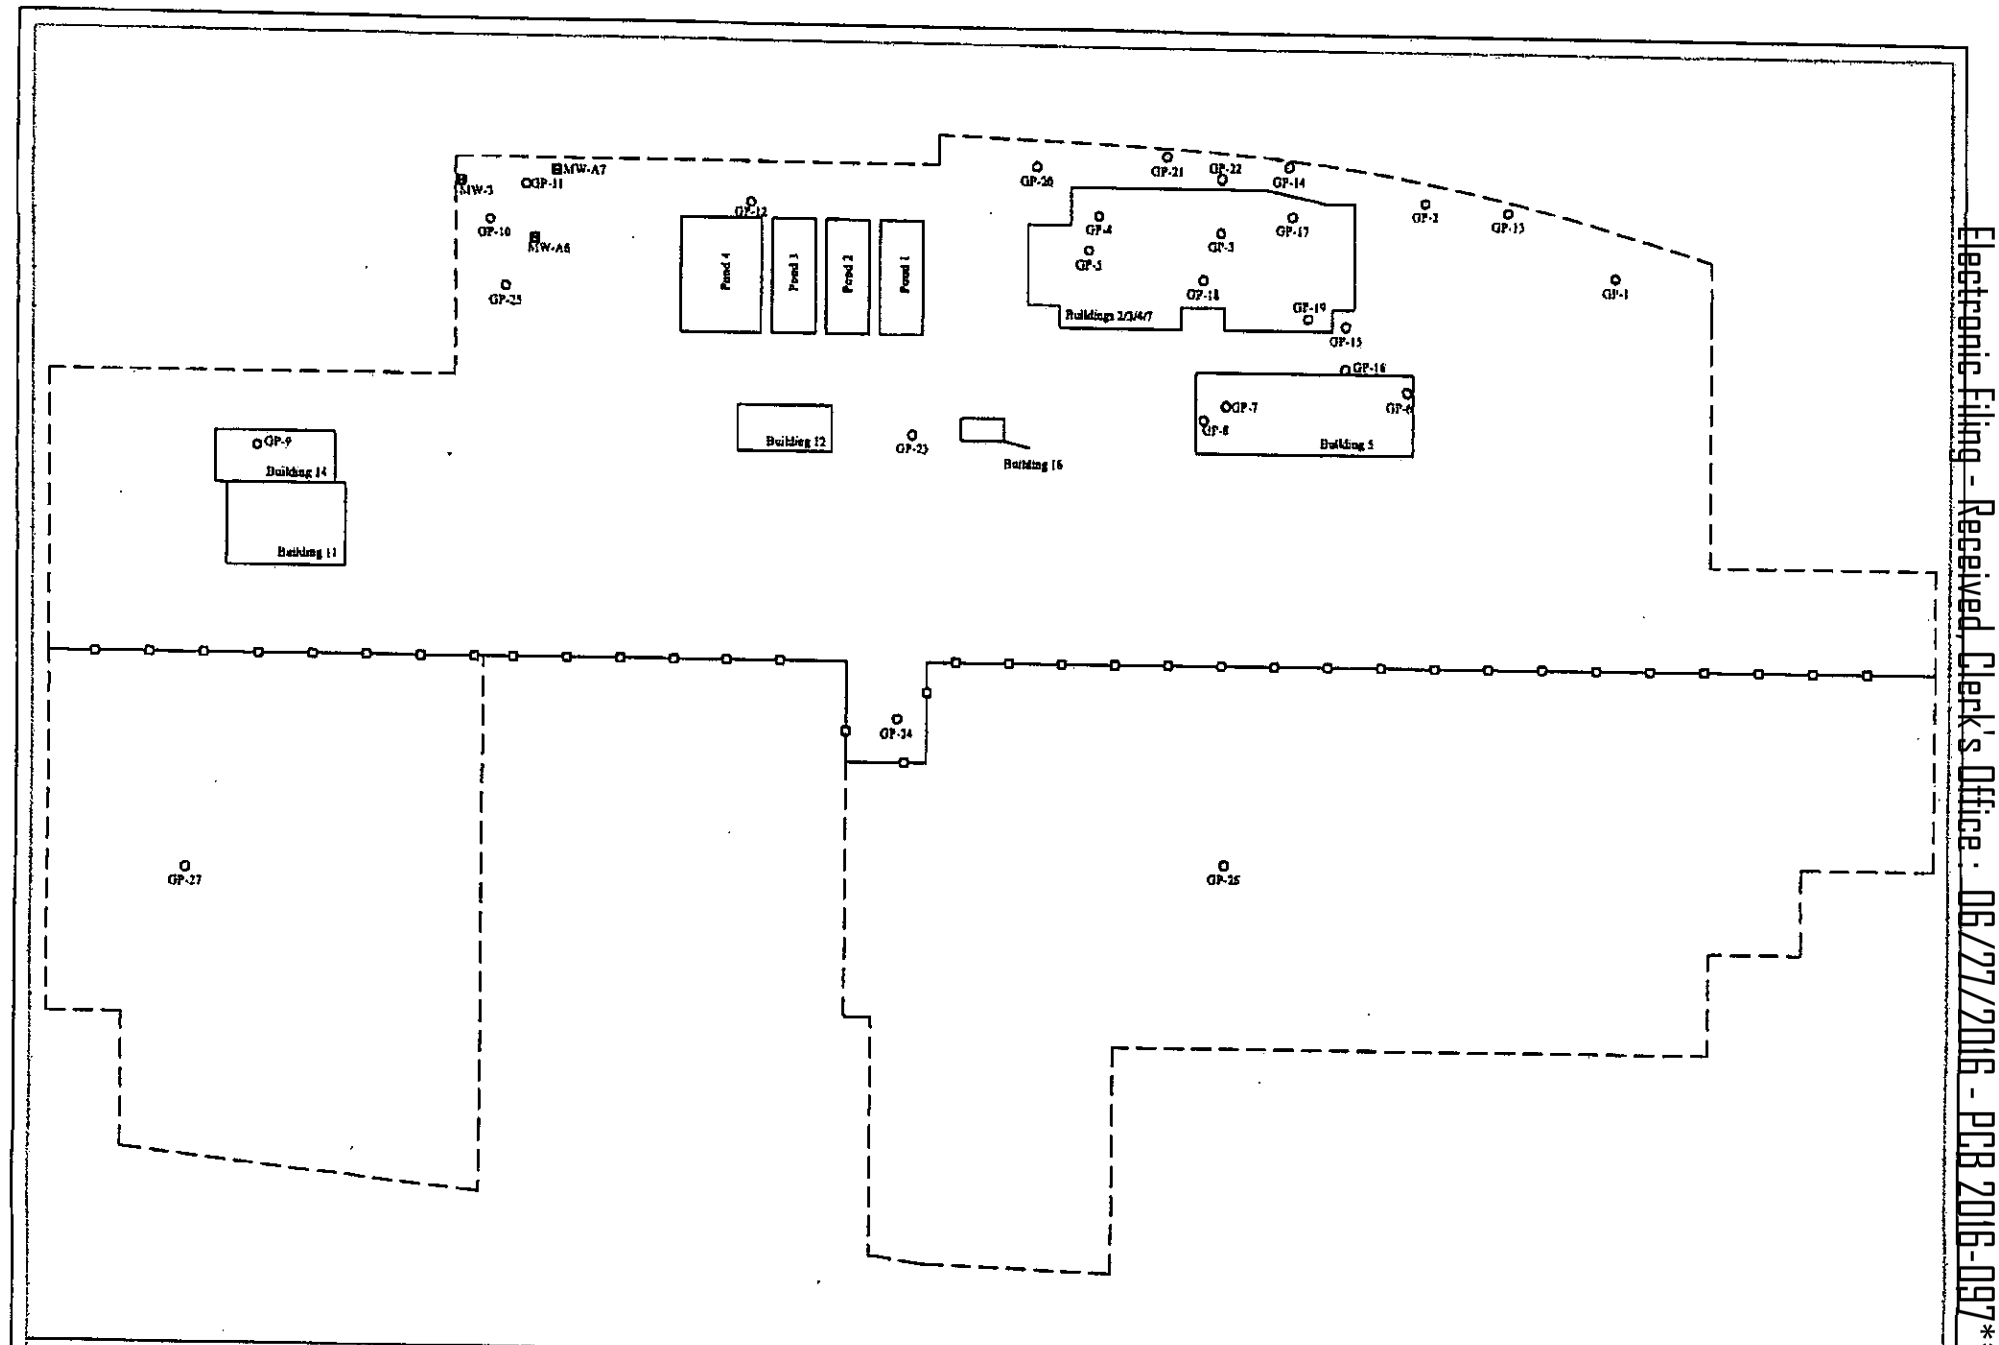
IEPA's Site Remediation Program (SRP) in order to receive a Comprehensive No Further Remediation (NFR) letter for Residential Properties. In order to receive a NFR for the Subject Property, additional soil and groundwater sampling/modeling will be needed, as per the IEPA's discretion. It is anticipated that area of Arsenic above Tier 1 ROs will have to excavated and disposed of in accordance with federal, state and local regulations. Additionally, since the Subject Property is not located in an area with an approved groundwater ordinance, it is also anticipated that a groundwater use restriction, prohibiting the use of on-site groundwater for potable purposes, will have to be implemented for the Subject Property and/or any affected adjacent properties.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

6 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This report pertains to the property located at 300 N West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,



ENVIRONMENTAL GROUP SERVICES, LIMITED

Vahooman Mirkhaef
President

Bill Lennon
Project Manager

MSA - Metropolitan Statistical Area
All units are mg/Kg unless otherwise noted.
Based on 35 IAC Part 742, Appendix A Table G and Urban Area Polycyclic Hydrocarbon Study.
Bolded/Shaded values exceed the within MSA background level.

RE: Marengo STAT Project No: 06010357

Dear Bill Lennon:

STAT Analysis received 15 samples for the referenced project on 1/19/2006. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 563-0371.

Sincerely,

Craig Chawla
Project Manager

CASE NARRATIVE

Sample GP-2 (4-5) (06010357-002) has 1,1,1-Trichloroethane reported with an "E" flag, exceeded the calibration curve range. The medium level dilution was below the reporting level, "J". The more conservative value is reported.

In VOC soil LCS/LCSD analyzed 01/26/06, Carbon Disulfide has high recovery in LCS (132% recovery, QC Limits 70-130%).

Sample MW3 (06010357-013) had low PNA water surrogate recovery for 2-Fluorobiphenyl (42% recovery, QC limits 43-116%).

The metals MS/MSD prepared from sample GP-10 (7.5-8.5) (06010357-010) had Antimony recovery outside control limits (52%/49% recovery, QC limits 75-125%).

RE: Marengo 2

STAT Project No: 06020309

Dear Bill Lennon:

STAT Analysis received 15 samples for the referenced project on 2/15/2006. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 563-0371.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

CASE NARRATIVE

The metals MS/MSD prepared from sample GP-20 (4-5) (06020309-008) had the following outside control limits:
Antimony: 196%/197% (MS/MSD) recovery, QC limits 75-125%
Cobalt: 185% (MS) recovery, QC limits 75-125%; RPD 33%, QC limit <20%
Manganese: 142% (MS) recovery, QC limits 75-125%; RPD 57%, QC limit <20%
Nickel: 196% (MS) recovery, QC limits 75-125%
Iron: RPD 157%, QC limit <20%

EDR Historical Topographic Map Report

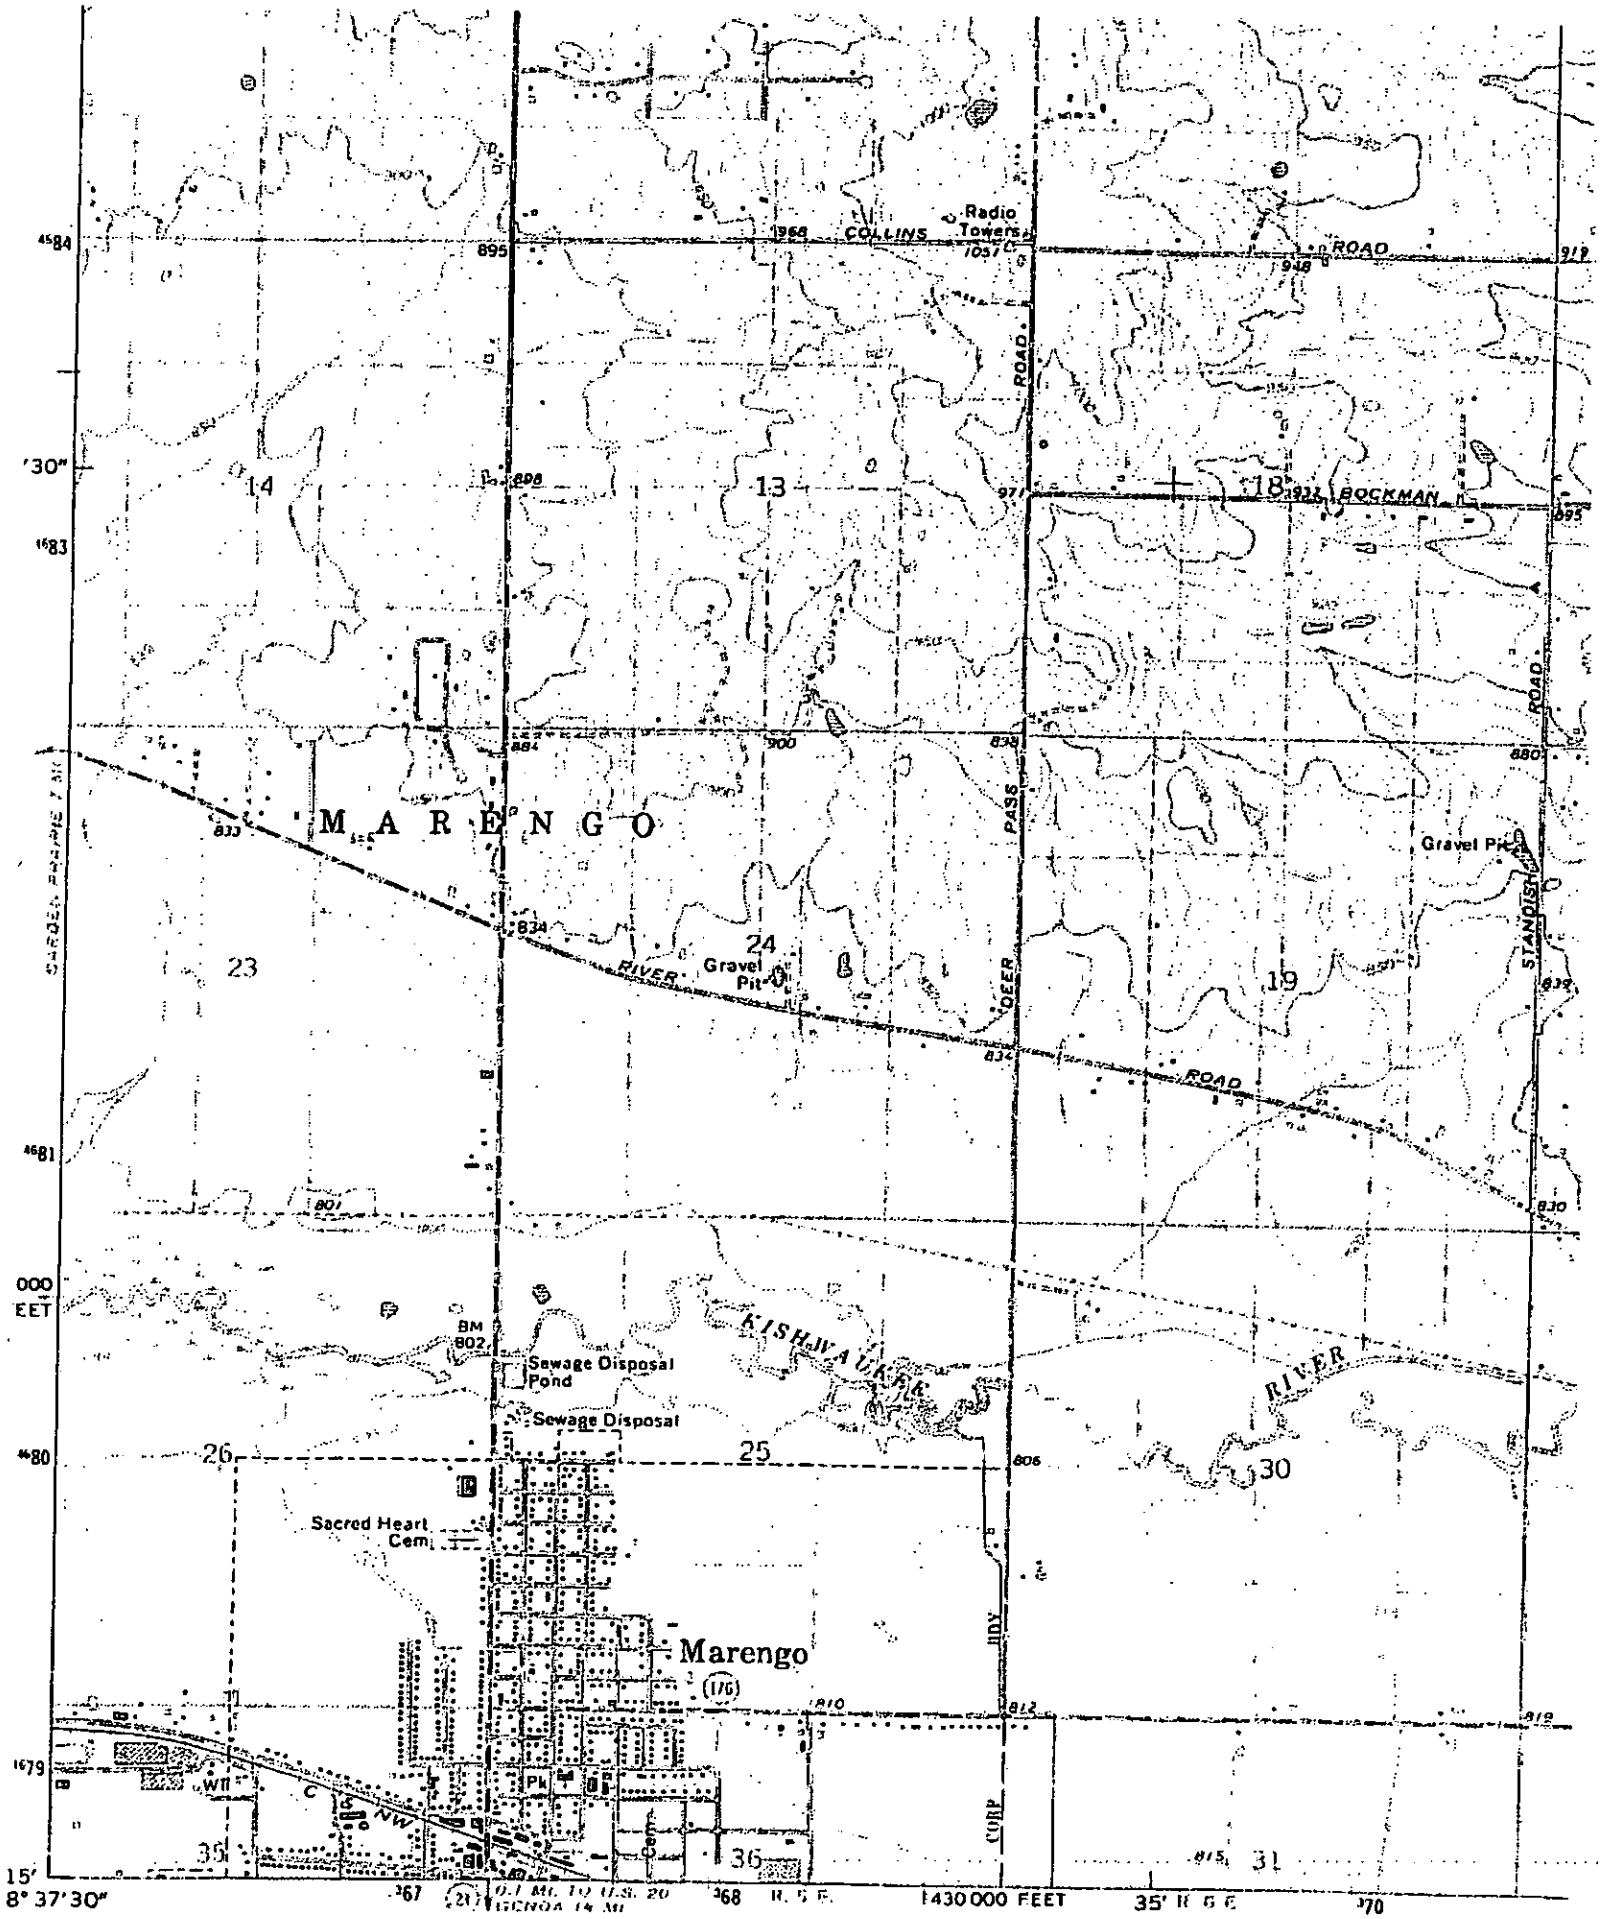
Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.* To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/and use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps
A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); land grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography, but not field verified, such as disturbed land areas (e.g., gravel pits) and newly developed water bodies (purple).



For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.

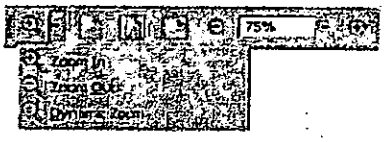
USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.



Reading Sanborn Maps

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: http://www.edrnet.com/reports/samples/key.pdf

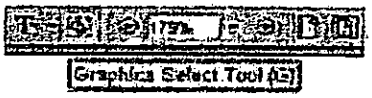
Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
   A. On the menu bar, click "View" and then "Zoom to..."
   B. Or, use the magnifying tool and drag a box around the TP

Printing a Sanborn Map From the Electonic File

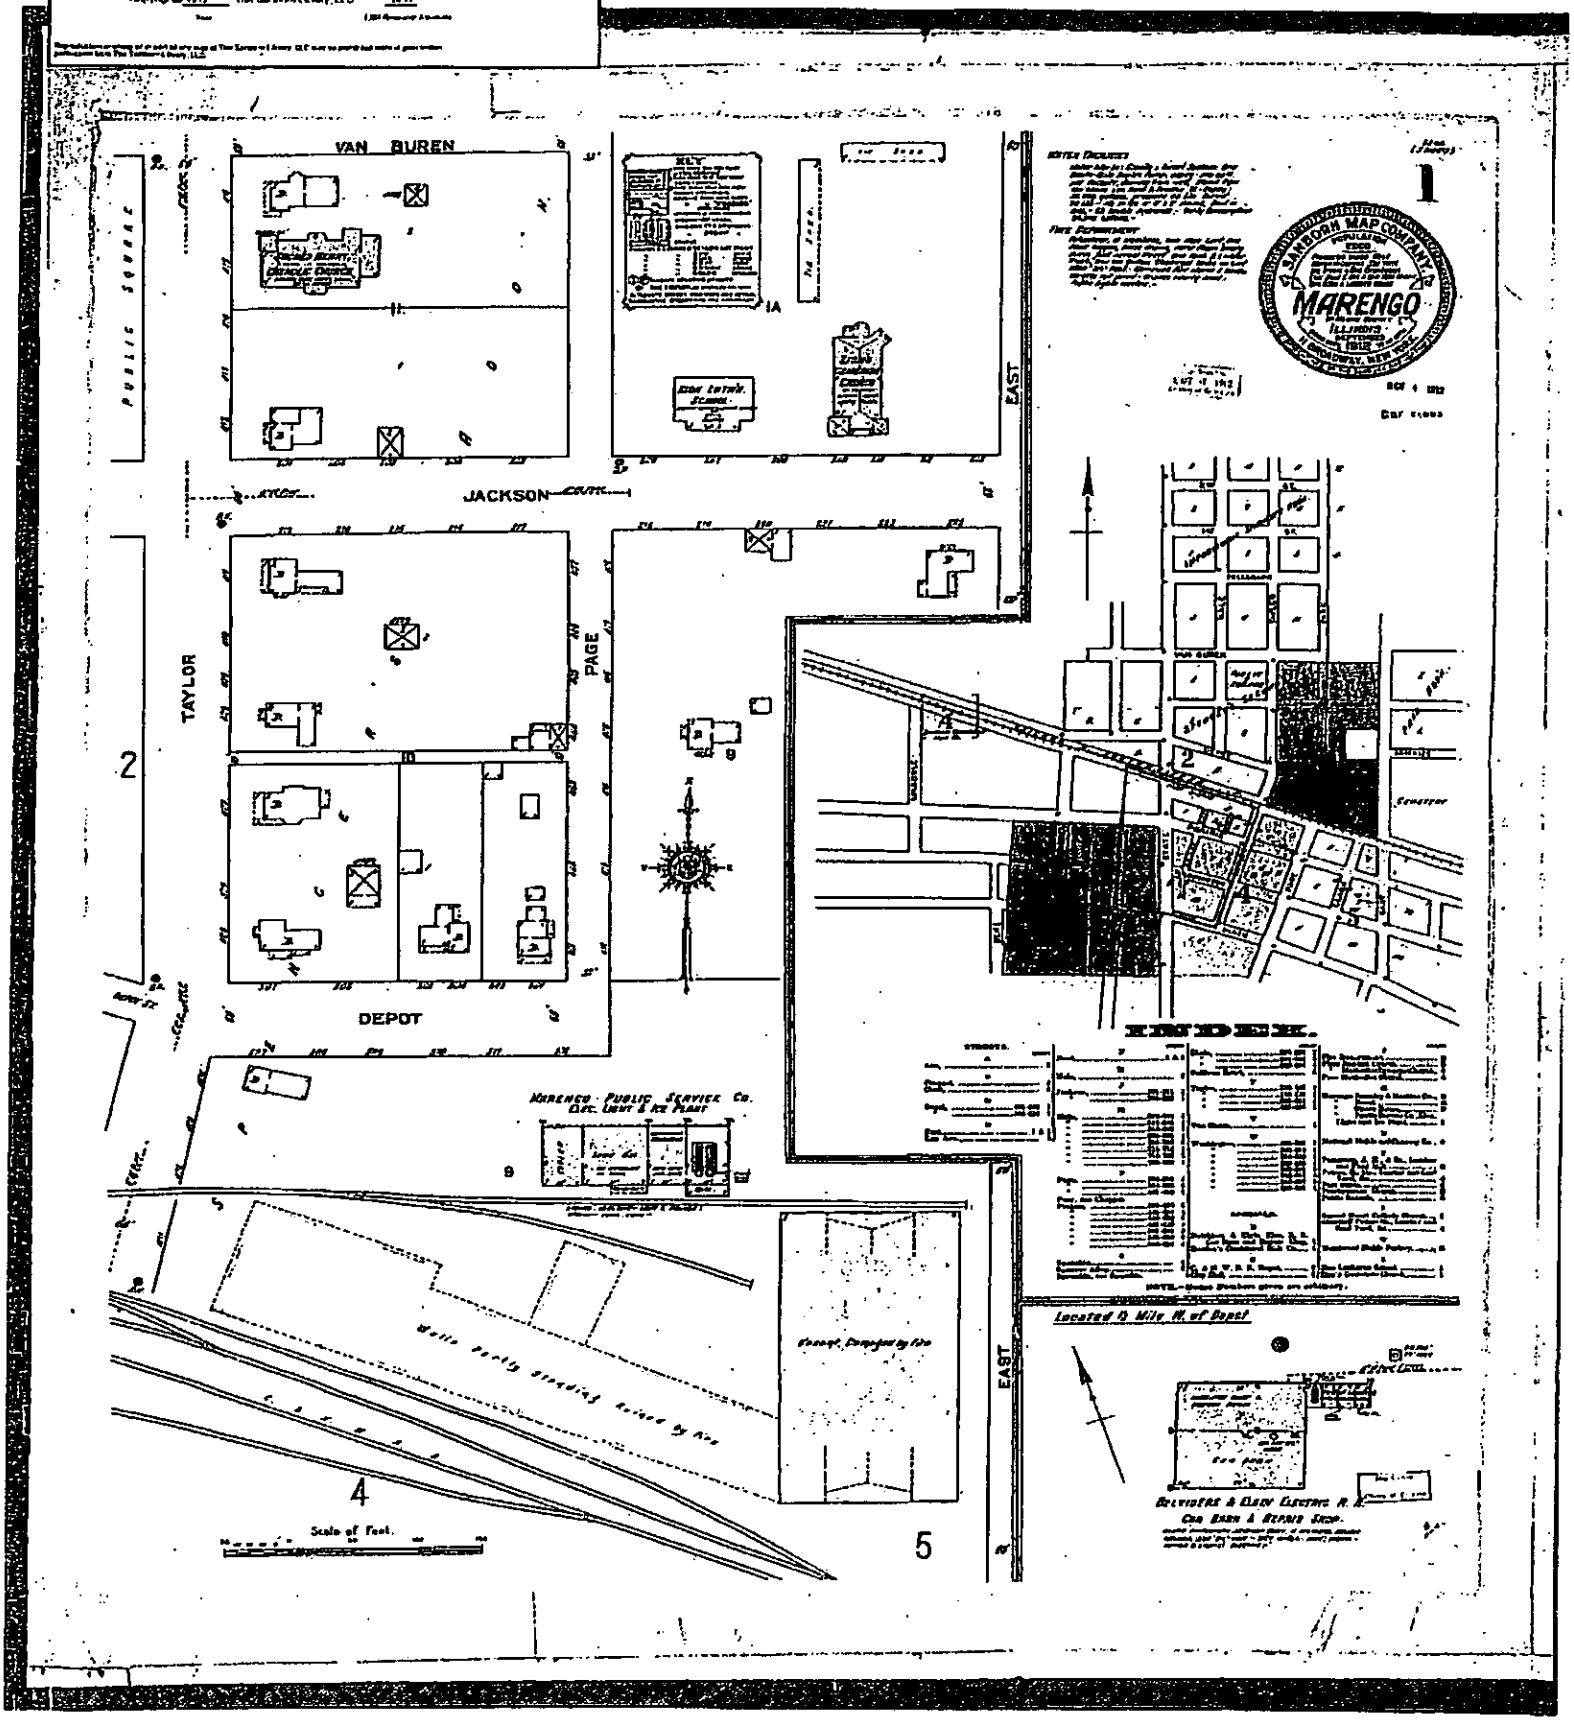


- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

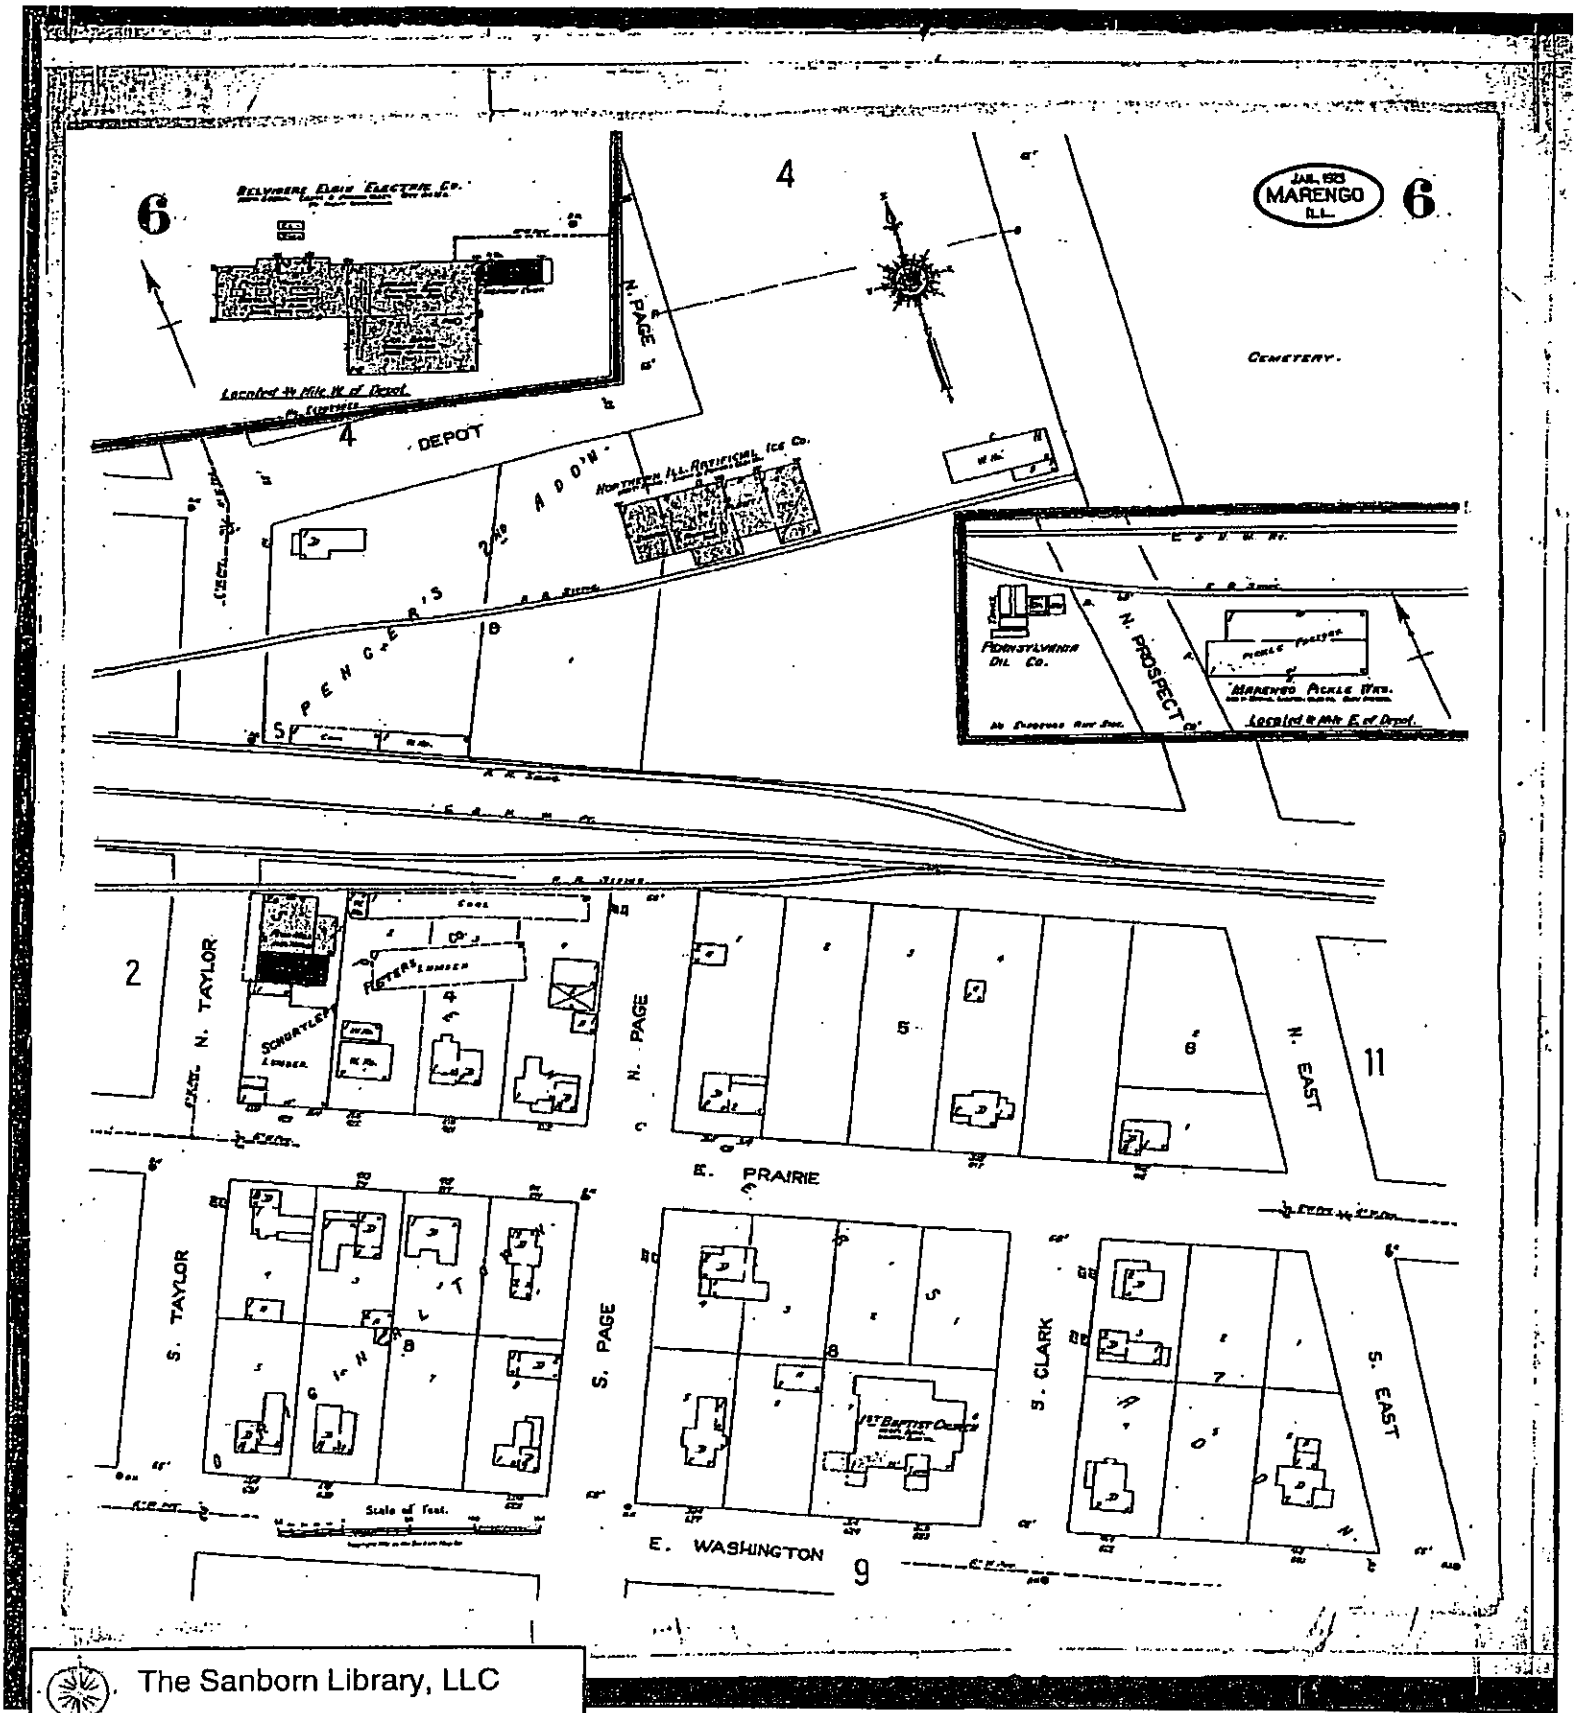
Acrobat Versions 6 and 7

1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

Acrobat Version 5



1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.



Important Information about Email Delivery of Electronic Sanborn Map Images

- Images are grouped intro one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

300 N. WEST STREET
MARENGO, IL 60152

COORDINATES

Elevation: 820 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property: 42088-C5 MARENGO NORTH, IL
Source: USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was identified in the following government records. For more information on this property see page 6 of the attached EDR Radius Map report:

Site	Database(s)	EPA ID
ARNOLD ENGINEERING CO 300 W ST MARENGO, IL 60152	UST	N/A
ARNOLD ENGINEERING CO 300 NORTH WEST ST MARENGO, IL 60152	RCRA-SQG FINDS TRIS CORRACTS CERC-NFRAP	60152RNLDN30
ARNOLD ENGINEERING COMPANY , IL	IMPDMENT	N/A

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 12/05/2005 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
FLOIT SAND & GRAVEL CO.	827 NORTH SPONADLE	1/4 - 1/2 ESE	6	14

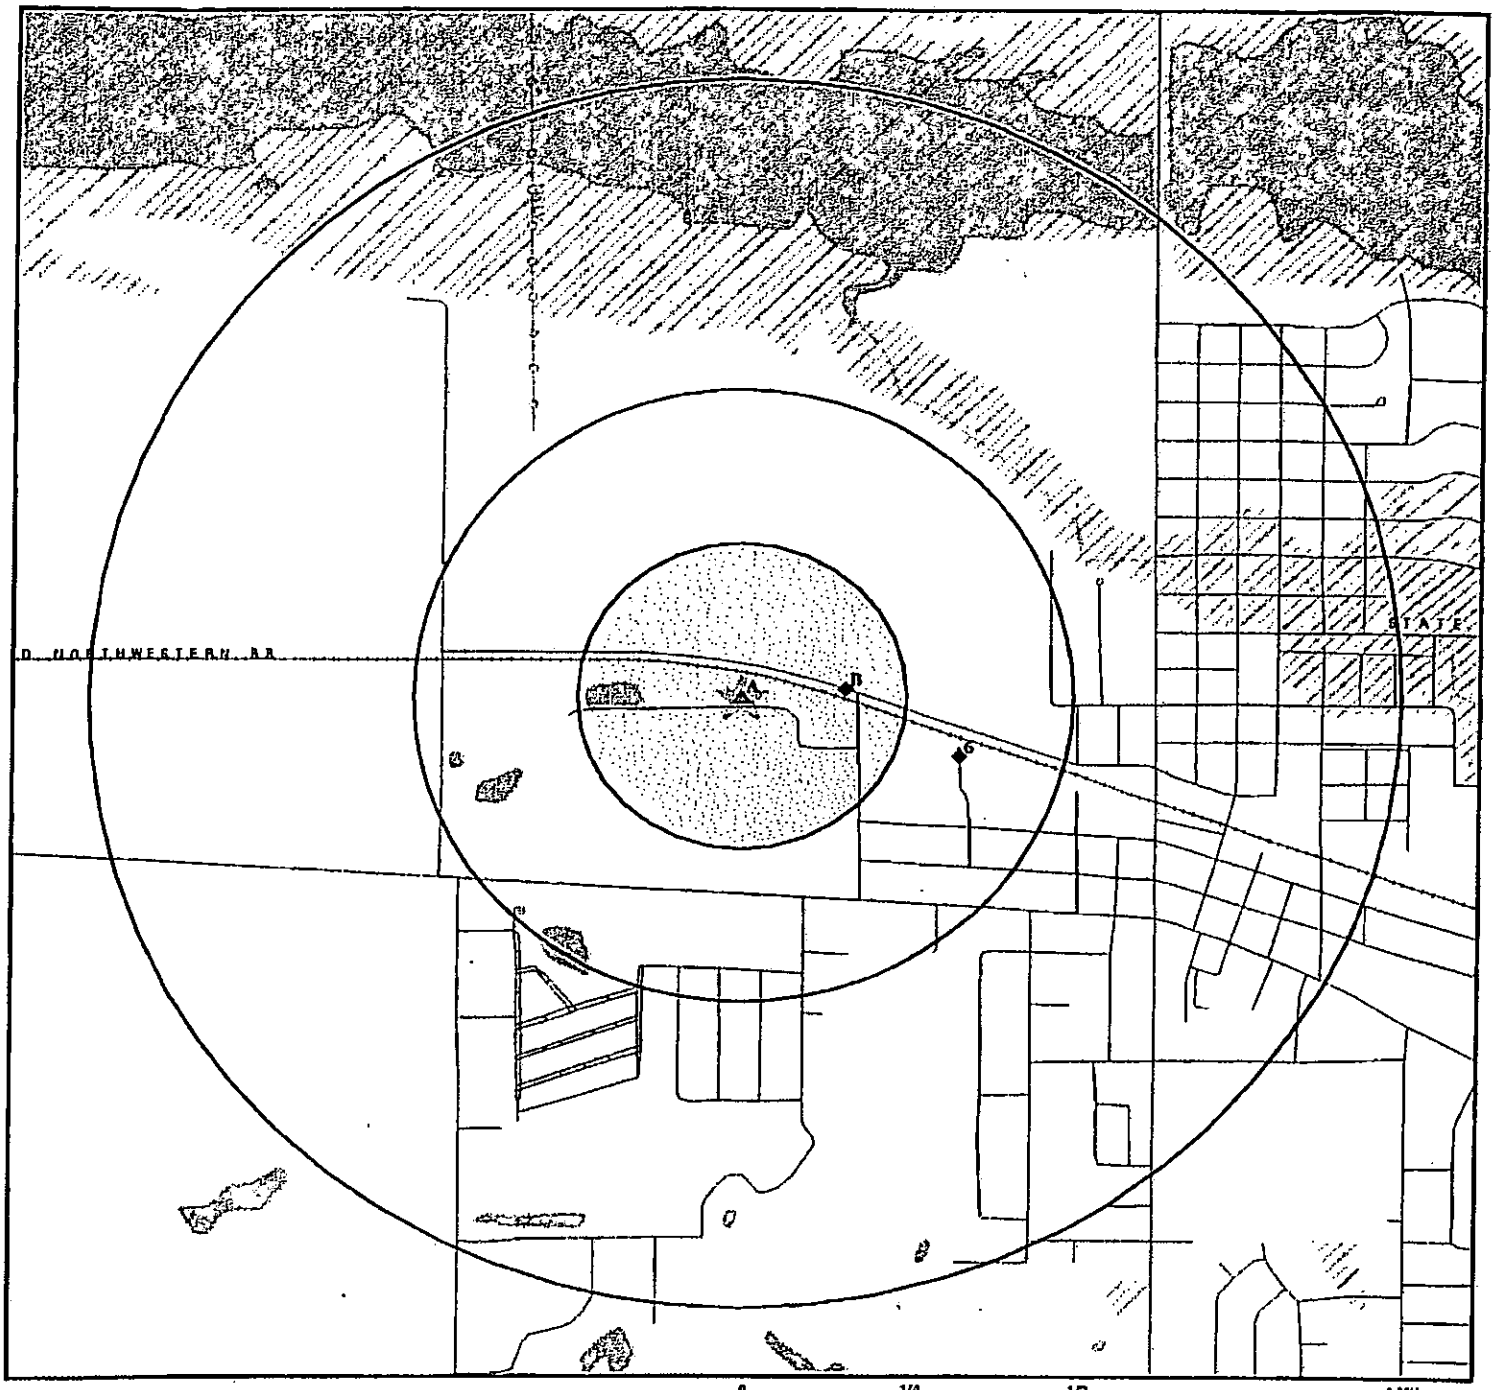
UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Illinois State Fire Marshal's STC Facility List.

A review of the UST list, as provided by EDR, and dated 11/03/2005 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
STADE GRAIN CO	21602 RAILROAD ST	1/8 - 1/4 E	B4	12

SRP: Illinois Environmental Protection Agency, Site Remediation Program Database

A review of the SRP list, as provided by EDR, and dated 11/14/2005 has revealed that there is 1 SRP site within approximately 0.5 miles of the target property.



Lower Elevation	Address	Dist / Dir	Map ID	Page
STADE PROPERTY	21600 WEST RAILROAD STR	1/8 - 1/4 E	B5	13

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/14/05
Date Data Arrived at EDR: 11/02/05
Date Made Active in Reports: 12/07/05
Number of Days to Update: 35

Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

IL NIPC: Solid Waste Landfill Inventory

Solid Waste Landfill Inventory. NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites which previously had never been identified largely because there was no obligation to register such sites prior to 1971.

Date of Government Version: 08/01/88
Date Data Arrived at EDR: 08/01/94
Date Made Active in Reports: 08/12/94

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing
Source: Department of Children & Family Services
Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

300 N. WEST STREET
300 N. WEST STREET
MARENGO, IL 60152

TARGET PROPERTY COORDINATES

Elevation: 820 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

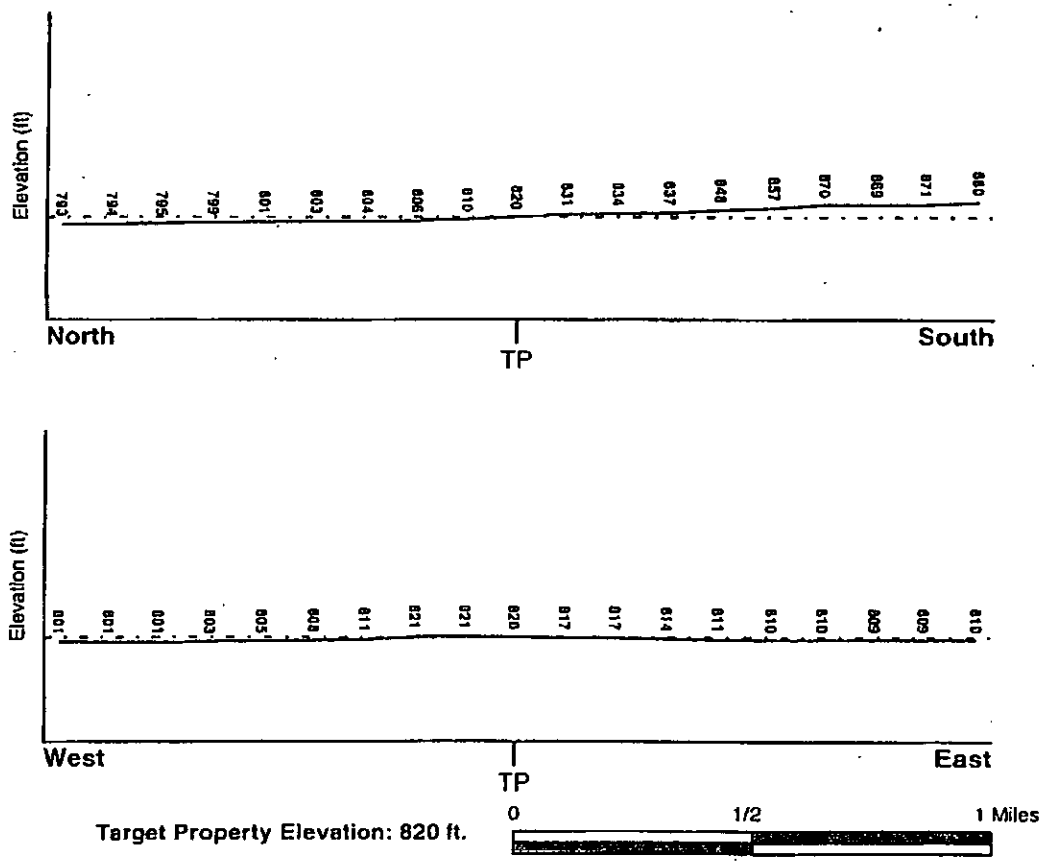
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	42088-C5 MARENGO NORTH, IL
General Topographic Gradient:	General North
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
MCHENRY, IL	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	1707320175B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MARENGO NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were compiled under a Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT **GEOLOGIC AGE IDENTIFICATION**

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovician		
Series:	Upper Ordovician (Cincinnatian)		
Code:	O3 *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	WARSAW
Soil Surface Texture:	silt loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	17 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.60
2	17 inches	33 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.10
3	33 inches	35 inches	gravelly - sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 8.40 Min: 6.10
4	35 inches	60 inches	stratified	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 20.00 Min: 20.00	Max: 8.40 Min: 7.90

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam
loam
silty clay loam
sandy loam
gravelly - sandy loam
gravelly - loam

Surficial Soil Types: clay loam
loam
silty clay loam
sandy loam
gravelly - sandy loam
gravelly - loam

Shallow Soil Types: clay loam
loam
silty clay loam
sandy loam

Deeper Soil Types: gravelly - coarse sand

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

sand and gravel
sand
silty clay loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

1 EXECUTIVE SUMMARY

Environmental Group Services, Limited (EGSL) of Chicago, Illinois was contracted by *John Daley and Associates* to perform a Ground Penetrating Radar (GPR) Survey of the property known as Arnold Technologies, located at 300 North West Street, Marengo, Illinois (herein referred to as the Subject Property or the Site).

The GPR Survey consisted of utilizing a USRADAR Seeker SPR Subsurface Imaging System equipped with a 500 MHz antenna. All areas of concern were scanned utilizing a 3-foot interval grid pattern in North-South and East-West directions. Maximum penetration depth of the GPR system at the Subject Property was approximately 8-feet below ground surface.

A GPR is typically utilized to detect subsurface objects. The GPR system sends a series of radar pulses into the subsurface and then calibrates and processes the information. Any reflected signals showing different characteristics from its surrounding media will represent an anomaly. The anomalies can then be displayed on-screen in order to determine its relative shape and depth. It should be noted that the subsurface anomalies represent the general shape, size and location of subsurface objects, and is in no way fully signifying a specific object and/or excavation.

The purpose of this GPR Survey was to confirm or deny the presence of multiple underground storage tank (UST) systems reported to be located at the Subject Property. Listed below are the areas of concern scanned and GPR Survey results:

Area of Concern	Reported USTs	GPR Results	Scan Number
1	One, 10,000-gallon fuel oil	Anomaly representative of the excavation of an area the could have contained a 10,000-gallon UST	SVY_8
2	One, 1,500-gallon core oil	Anomaly representative of the excavation of an area the could have contained a 1,500-gallon UST	SVY_9
3	One, 6,000-gallon acetone	Anomaly representative of an underground storage tank	SVY_12
4	Two, 1,000-gallon rolling oil	Anomaly representative of two underground storage tanks lying side-by-side	SVY_7
5	One, 20,000-gallon oil	No significant anomalies detected. It should be noted that this area was located within a fenced-in storage area with machinery and equipment present. EGSL was unable to achieve full maneuverability in order to fully depict any subsurface scans in this area.	N/A
6	One, 6,000-gallon menthol alcohol One, 6,000-gallon chlorophine	Anomaly representative of the excavation of an area the could have contained two, 6,000-gallon USTs lying end-to-end	SVY_13

Electronic Filing - Received, Clerk's Office: 06/27/2016 - PCB 2016-097***

Area of Concern	Reported USTs	GPR Results	Scan Number
7	One, 3,500-gallon coolant	No significant UST anomalies detected. It should be noted that this area contained a historical building that was demolished. GPR scans in the reported tank area resulted in numerous shallow anomalies of large debris that may be representative of the remains of the former building; as such, any scans for the UST system were inconclusive.	N/A
8	Two fuel oil tanks of unknown size	Anomaly representative of two underground storage tanks lying side-by-side	SVY_11
9	One, 10,000-gallon gasoline	Anomaly representative of the excavation of an area the could have contained a 10,000-gallon UST	SVY_6

See Appendix A for Area of Concern Locations.
See Appendix B for GPR Scans and Photographic Documentation.

2 CONCLUSIONS AND RECOMMENDATIONS

The Ground Penetrating Radar Survey conducted at nine areas of concern revealed the following:

- GPR Scans in Areas 3, 4 and 8 indicated the possible presence of UST systems in each area. As such, EGSL recommends that subsurface sampling be conducted along all four walls and the floor of each tank system in order to determine if any of the USTs have negatively impacted the subsurface soil.

- GPR Scans in Areas 1, 2, 6 and 9 indicated anomalies characteristic of possible excavations in each area. The locations and dimensions of each possible excavation were representative of the reported UST system for each area. EGSL recommends that subsurface sampling be conducted along all four walls and the floor of each excavation in order to determine if any of the reported former USTs have negatively impacted the subsurface soil.

- GPR Scans in Area 5 were inconclusive to the possible presence of a UST system due to surface debris. EGSL was able to perform limited scans in the area; however, none of the scans indicated any anomalies representative of a UST system. One subsurface soil sample was obtained from this area during a previous subsurface investigation conducted by EGSL; analytical results indicated no chemicals of concern above IEPA Tier 1 Remediation Objectives. EGSL believes that this UST system may still be present; as such, it is recommended that the tank be removed in accordance with all federal, state and, local regulation if encountered during any future demolition activities.

- GPR Scans in Area 7 were inconclusive to the possible presence of a UST system due to subsurface debris related to the historical demolition of the former building. EGSL

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

recommends that a test pit be excavated in the reported area of the UST system in order to confirm or deny its presence.

3 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This report pertains to the property known as Arnold Technologies, located at 300 North West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Appendix C Analytical Data

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

1 EXECUTIVE SUMMARY

On April 24, 2008, Environmental Group Services, Ltd. (EGSL) completed a Phase II Subsurface Soil Investigation at the property located at 300 N. West Street, Marengo, Illinois, hereinafter referred to as the "Subject Property". This investigation was performed in accordance with the regulations set forth in 35 IAC 740 (Site Remediation Program) and 35 IAC 742 (Tiered Approach to Corrective Action Objectives), Tier 1, for Residential properties. The purpose of this investigation was to delineate subsurface contamination adjacent to a historical UST area and adjacent to an area where elevated levels of arsenic were previously detected at the Subject Property.

EGSL conducted a Limited Phase II Subsurface Soil investigation on March 3, 2006. According to the report, arsenic was detected at a concentration of 450 mg/Kg along the northern portion of the Subject Property, between the pump house and Building 2/3/4. Additionally, two, 8,000-gallon underground storage tanks were removed in the immediate vicinity of this area of concern on November 16, 2007. Both tanks were in poor condition at the time of removal, and olfactory and visual observations indicated that the subsurface soil had been negatively impacted; as such, Office of the State Fire Marshal (OSFM) personnel identified that the USTs had been leaking. The incident was subsequently reported to the Illinois Emergency Management Agency (IEMA) and the IEPA Leaking Underground Storage Tank (LUST) section (LUST Incident number 20071279).

On April 24, 2008, EGSL advanced nine soil borings in the above-referenced areas of concern. 13 samples were submitted to *STAT Analysis Corporation* for analyses of BTEX/PNAs and/or Total Arsenic/TCLP Arsenic. According to the laboratory results, none of the samples contained chemicals of concern above IEPA Tier 1 Remediation Objectives (ROs), with the exception of arsenic, which was detected at SP-7 at a concentration of 14.0 mg/Kg, which is slightly above the Tier 1 RO of 13.0 mg/Kg for the ingestion exposure route.

Based on the above-referenced analytical results, it appears that the vertical and horizontal extent of negatively impacted subsurface soil in this area is approximately 1,150 cubic yards in size (1,500 tons).

2 BACKGROUND INFORMATION

2.1 Site Location and Description

The Subject Property is located at 300 North West Street, in a residential/industrial area of Marengo, Illinois and is approximately 45-acres in size. The Subject Property is currently occupied by *Arnold Magnetic Technologies*, which utilizes the site for the manufacturing of magnets and the production of rolled metal products.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

2.2 Previous Site Investigations

EGSL conducted a Limited Phase II Subsurface Soil investigation on March 3, 2006. According to the report, arsenic was detected at a concentration of 450 mg/Kg along the northern portion of the Subject Property, between the pump house and Building 2/3/4. Additionally, two, 8,000-gallon underground storage tanks were removed in the immediate vicinity of this area of concern on November 16, 2007. Both tanks were in poor condition at the time of removal, and olfactory and visual observations indicated that the subsurface soil had been negatively impacted; as such, Office of the State Fire Marshal (OSFM) personnel identified that the USTs had been leaking. The incident was subsequently reported to the Illinois Emergency Management Agency (IEMA) and the IEPA Leaking Underground Storage Tank (LUST) section (LUST Incident number 20071279).

3 PHASE II SUBSURFACE SOIL INVESTIGATION ACTIVITIES

A Phase II Subsurface Soil Investigation was conducted in order to assess the potential for the presence of chemicals of concern (COC) in the subsurface soil present at the site. The investigation was conducted in accordance with 35 IAC 740 (SRP) and the COC were chosen from the Target Compound List (TCL) indicator contaminants identified in Appendix A of Part 740.

3.1 Field Sampling Procedures

EGSL utilized a Geoprobe® 6610DT track-mounted direct-push probe to advance a 5-foot by 2-inch soil sampler in order to retrieve continuous soil samples around the Subject Building. Soil samples were continuously collected to depths of 10 to 15-feet below ground surface (bgs). All soil samplers were lined with acetate tubes.

EGSL collected a total of nine soil samples (SP-1...SP-9) from throughout previously referenced areas of concern. See Appendix A for boring locations.

All soil samples were split into two parts: one to be placed into a sealed plastic bag for headspace analysis of volatile organic vapors and the other to be placed in laboratory supplied containers for potential analysis. The bagged samples were tested in the field with Photo-Ionization Detector (PID). The PID was used to screen each soil sample from each boring location for relative concentration of VOCs and does not provide separation of the contaminants into individual constituents. The utilization of this field-screening device provided immediate on-site data for use in the assessment of the site.

A total of 13 samples were submitted for analysis in order to analytically determine the presence and concentration of COC in the areas of concern. The depth and the type of analysis requested of the samples submitted to *STAT Analysis* are listed below:

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Boring Number	Depth (feet)	BTEX/PNAs	Total Arsenic/ TCLP Arsenic
SP-1	5-7	X	
SP-1	13-15	X	
SP-2	4-6	X	
SP-3	4-6	X	
SP-4	5-7	X	
SP-5	6-8	X	
SP-5	8-10		X
SP-6	13-15		X
SP-7	8-10		X
SP-7	4-6		X
SP-8	8-10		X
SP-9	4-6		X
SP-9	8-10		X

The soil samples targeted for laboratory analysis of VOCs were packed into new 40-milliliter glass vials, pre-preserved in sodium bisulfate and methanol in accordance with EPA Method 5035. The soil samples collected for the remaining analysis were packed into one non-preserved 8-ounce wide-mouth jar with a Teflon-lined cap. *STAT Analysis* supplied all the glass vials and jars. All soil samples were stored on ice during soil sample collection activities and while being transported to *STAT*. Standard Chain-of-Custody procedures were followed to track the sample.

Cross-contamination during soil sampling was minimized by using an Alconox detergent wash and tap water rinse to decontaminate the sampling tools between each probe. Also, other sampling equipment and measurement tools were hand washed with an Alconox detergent wash and rinsed three times with distilled water between soil sample intervals. The tools were then placed on clean and decontaminated surfaces. Disposable latex gloves were worn during the collection of soil sampling events and were changed between each sample.

4 PHASE II SUBSURFACE INVESTIGATION RESULTS

The following section presents the physical and chemical results of the Phase II investigation, which include a description of the site subsurface and regional geology and the chemical findings in the soil samples submitted to the laboratory.

4.1 Subsurface Soil Chemical Results

The analytical test results of the soil samples were compared to the Soil Remediation Objectives (SROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742,

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Tiered Approach to Corrective Action Objectives (TACO), Tier I for Industrial/Commercial and Residential properties and for Soil Component of the Groundwater Ingestion Route (SCGIR) (Class I Groundwater).

Listed below are all chemicals of concern that were detected above IEPA Tier 1 Remediation Objectives:

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	TACO Tier I RO (mg/Kg)	Exposure Pathway
Arsenic	GP-7 (4-6)	14.0	13.0	Residential Ingestion Industrial/Commercial Ingestion

5 CONCLUSIONS AND RECOMMENDATIONS

On April 24, 2008, EGSL advanced nine soil borings in the above-referenced areas of concern. 13 samples were submitted to *STAT Analysis Corporation* for analyses of BTEX/PNAs and/or Total Arsenic/TCLP Arsenic. According to the laboratory results, none of the samples contained chemicals of concern above IEPA Tier 1 Remediation Objectives (ROs), with the exception of arsenic, which was detected at SP-7 at a concentration of 14.0 mg/Kg, which is slightly above the Tier I RO of 13.0 mg/Kg for the ingestion exposure route.

Based on the above-referenced analytical results, it appears that the vertical and horizontal extent of negatively impacted subsurface soil in this area is approximately 1,150 cubic yards in size (1,500 tons).

RE: Marengo STAT Project No: 08040817

Dear Bill:

STAT Analysis received 13 samples for the referenced project on 4/25/2008 1:57:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Christiane Schmidt-Lange
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety unless written approval has been obtained from the laboratory.

APPENDIX D – DECEMBER 2010 MEMORANDUM

MEMORANDUM

TO: JOHN DALEY
SAM MANDARINO
300 WEST LLC

FROM: SHADOW MIRKHAEF
ENVIRONMENTAL GROUP SERVICES, LTD.
557 WEST POLK STREET, SUITE 201 - CHICAGO, ILLINOIS 60607

SUBJECT: 300 WEST STREET – MARENGO, ILLINOIS

DATE: 12/13/2010

Dear Mr. Daley,

Listed below is a summary of our recent findings as of today:

On October 28-29, 2010, EGSL installed five additional groundwater monitoring wells in association with Subject Property, as follows:

- MW-17: on-site, northwestern portion of the Subject Property (60-70 foot screen)
- MW-18: off-site, north of Railroad Street (40-50 foot screen)
- MW-19: off-site, north of Railroad Street (30-40 foot screen)
- MW-20: off-site, north of Railroad Street (20-30 foot screen)
- MW-21: off-site, north of Railroad Street (10-20 foot screen)

On November 10, EGSL sampled the five groundwater wells and submitted the samples to *STAT Analysis Corporation* for analysis of Volatile Organic Compounds (VOCs) and Target Analyte List Metals (TAL Metals). According to laboratory results, chemicals of concern were detected above IEPA Tier 1 Remediation Objectives in MW-17, -18, -19, and -21 (see attachment A for complete laboratory results).

EGSL forwarded the results to Tim Zook, IEPA Site Remediation Program (SRP) project manager for the Subject Property. As per a phone conversation with Mr. Zook on December 8, 2010, it is anticipated that the following activities will need to be conducted:

- Mr. Zook is in the process of completing a Right-to-Know Memorandum to be submitted to the IEPA Office of Community Relations pertaining to the off-site groundwater contamination.

- A complete well survey of all on-site and off-site wells within a 1000-foot radius of the Subject Property will need to be conducted.
- Deeper wells located both on-site and off-site will need to be installed in order to fully delineate the vertical extent of groundwater contamination.

RE: Marengo, Nov. Water STAT Project No: 10110322

Dear Bill Lennon:

STAT Analysis received 6 samples for the referenced project on 11/10/2010 4:20:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

RE: Marengo 70/90 STAT Project No 11030900

Dear Bill Lennon:

STAT Analysis received 2 samples for the referenced project on 3/31/2011 5:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

RE: Marengo Private STAT Project No 11030902

Dear Bill Lennon:

STAT Analysis received 3 samples for the referenced project on 3/31/2011 5:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Project ID: Marengo - 805247
First Environmental File ID: 11-5424
Date Received: December 05, 2011

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 002687: effective 03/01/2011 through 02/28/2012.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Neal Cleghorn
Project Manager

Case Narrative

EGSL

Project ID: **Marengo - 805247**

First Environmental File ID: **11-5424**

Date Received: **December 05, 2011**

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Sample Batch Comments:

Sample acceptance criteria were met.

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Site Remediation Program/Technical Reports

Dear Ms. Crandall:

The Illinois Environmental Protection Agency (IEPA) has reviewed the *Phase I Environmental Site Assessment* (dated September 30, 2009 and received October 2, 2009/Log 09-42701), prepared by Environmental Group Services, Ltd. (EGSL) for the above remediation site. The report is approved, contingent on the following comments and questions being adequately addressed.

Please note that the IEPA records-keeping system has for years used LPC #1110650003 to refer to the Arnold Magnetic Technologies/Arnold Engineering Company facility in Marengo. The same number was assigned to 300 West LLC, when the site was enrolled into the Site Remediation Program via the DRM-1 Form received in May 2008.

Item 1. Area Enrolled in the Site Remediation Program – The DRM-1 Form indicates an approximate size of 40.0 acres. The Executive Summary and Section 3.3 indicate a parcel of approximately 72 acres in size. A Focused No Further Remediation (NFR) Letter is sought, evidently to the appropriate standards for Residential Properties. *Exactly what portions of the site are desired to be enrolled in the program/included in an eventual NFR Letter?*

Please note that in general the Site Remediation Program is designed to accommodate the determination of risk and redevelopment of sites that have been previously contaminated, but for which the source(s) of contamination have been removed or at least have ceased. An NFR Letter, when issued, serves to document the conditions at a particular point in time. As such, an NFR Letter may be appropriate to address a specific incident – such as contamination in the area of the former Building 6/Pond 6 – or areas where manufacturing/storage operations no longer take place. An NFR Letter could be issued for existing manufacturing/storage areas, though I am unsure of what value this would have if the desire is to redevelop the site for residential use quite a few years in the future. *In any case, it is very likely not going to be possible to get an NFR Letter for areas covered by an operating wastewater treatment system. This includes the activated sludge package plant, the ponds and the percolation field.*

We can discuss this item in more detail, if you desire. It may be conceivable to sample/address certain areas of the site in the near future and get an NFR Letter or Letters for these areas. However, other areas – most obviously those including components of the wastewater treatment system – would more appropriately be addressed later, after they are no longer in use. (Areas including former wastewater storage ponds/lagoons have successfully received NFR Letters via the Site Remediation Program.)

Item 2. The uses – current and past – of various buildings on the site are briefly described in the Executive Summary and in Section 3.4. These buildings, some of which no longer exist, are consecutively numbered as 1 through 16, with the exceptions that no buildings 13 and 15 are described. Please clarify and provide additional information, as appropriate.

Item 3. Pond 5 - The Executive Summary and Section 3.6 describe to a wastewater treatment system that includes five ponds and a 16-acre diked percolation field. The Water Recycle System Diagram given as Appendix O shows five ponds, with Pond 5 in the southwest portion of the site. However, the site sketch provided as the third map in Appendix A only indicates four ponds. In addition, IEPA Water Pollution Control Operating Permit No. 2006-EO-0690 (copy provided in Appendix K) only includes four ponds. A review of IEPA files appears to indicate that no Pond 5 has existed for quite some time, though a 1990 report by Roux Associates, Inc. includes the following statement, "During normal operation, treated water is discharged from the treatment lagoons to Pond #5 near the southwest corner of the parcel. During times of heavy precipitation, when the infiltration capacity of Pond #5 is exceeded, water is directed to the percolation fields. Please clarify the discrepancies regarding the existence/use of Pond 5. If Pond 5 no longer exists, please state when it was removed.

Item 4. Pond 6 – A review of IEPA files indicates quite a few references to a Pond 6, which was apparently located in the same general area as Building 6. The IEPA Review Notes for the 2006 Water Pollution Control Operating Permit, which are included in Appendix K, indicates that Pond 6 no longer exists. An IEPA inspection report dated January 22, 2008, indicates that operations in Building 6 were discontinued in 1991, and subsequently the building was torn down and the pond was filled in. Please confirm the history of Pond 6, including both its uses and when it was removed.

Item 5. When the Phase II Environmental Site Assessment is developed, maps/drawings should be provided that show details – both inside buildings and outdoors – such as the various manufacturing areas, ASTs, USTs, and storage areas. This information is necessary in assessing the adequacy of sampling that has been and will be performed. It was noted in Section 2.6 of the Report that ESGL was not allowed to take photographs within the interior of any buildings. The IEPA does not have a problem with this per se, as long as ESGL and Agency representatives are allowed access to provide for appropriate sampling and the development of adequate documentation (including drawings) of site conditions.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Item 6. Site Base Map(s) – When the Site Investigation Report is developed a site base map or maps will be needed, consistent with the requirements of Section 740.210a)7) and Section 740.425b)2)D) of the Site Remediation Program regulations. This is related to Item 5, in that sufficient access will need to be allowed to ESGL to allow for the development of adequate map(s).

Item 7. Freedom of Information Act Requests – Section 4.5 includes a summary of FOIA responses from various governmental entities. It is noted that no documents were found by the IEPA Bureau of Land or Bureau of Water. Since I know that both of these Bureaus have had substantial involvement with the site, I looked into this issue. The EGSL requests for information were only for the site "300 West Street" in Marengo, without the name Arnold Magnetic Technologies or Arnold Engineering. Taken literally, it was reported that no documents were found. The address most often used has been 300 North West Street. *Revised FOIA requests should be submitted to IEPA, with references to Arnold. The Bureau of Land Request should include a reference to LPC #1110650003; the Bureau of Water Request should include references to recent Permits issued for the site.*

Item 8. A legal description and PIN numbers for the property will ultimately be needed. In cases where the remediation site boundaries are exactly the same as the legal descriptions, it should be explicitly so stated. In cases where the remediation site boundaries are not exactly the same as the legal descriptions, the remediation site boundaries should be described in detail. (When legal and remediation site descriptions are lengthy, it is beneficial if they can be forwarded in WORD form, via e-mail. This makes it easier to incorporate the descriptions into NFR letters, with less likelihood of errors. If you don't have them in WORD, but can e-mail them anyway, I may be able to convert them here.)

The IEPA requests a written response to the items just described. Note that two (2) copies are required of all future correspondence regarding the site. All correspondence should be directed to the first address indicated at the top of the first page.

If you have any questions or desire additional information, please contact me at (217) 557-8085. In addition, I would like to be informed at least one week prior to the start of any sampling events planned for the site. If it works into our schedules, either Tom Rivera or I may try to be present for a portion of the sampling.

Sincerely,

Timothy D. Zook

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Site Remediation Program/Technical Reports

Dear Ms. Crandall:

The Illinois Environmental Protection Agency (IEPA) has reviewed the *Phase II Subsurface Investigation Report* (dated July 15, 2010 and received August 12, 2010/Log 10-45604), prepared by Environmental Group Services, Ltd. (EGSL) for the above remediation site. The document provides the results of soil and groundwater sampling performed in May 2010. For the most part, sample results are listed with excursions of Tier 1 SROs shown, without any kind of indication as to what RECS exist or the extent of contamination in the area of the sample(s). IEPA comments are divided into two sections – one regarding the overall site and one related specifically to the issue of groundwater contamination in the northwest portion of the property and the possibility of such contamination extending off-site.

As has been noted previously, the IEPA records-keeping system has for years used LPC #1110650003 to refer to the Arnold Magnetic Technologies/Arnold Engineering Company facility in Marengo. The same number was assigned to 300 West LLC, when the site was enrolled into the Site Remediation Program via the DRM-1 Form received in May 2008.

Comments Regarding Overall Site:

Item 1. Since a Comprehensive No Further Remediation (NFR) Letter is desired for the site, the requirements given in Sections 740.415, 740.420 and 740.425 must be addressed. Please note that, as described in the first paragraph of Section 740.420, all recognized environmental conditions (RECs) and all related contaminants of concern are to be identified. Furthermore, as described in Section 740.425a), the Phase I and Phase II Assessments are to be combined into one Site Investigation Report. The *Phase I Environmental Site Assessment* (dated September 30, 2009 and received October 2, 2009/Log 09-42701), did contain quite a bit of background information – such as when specific buildings were constructed (and sometimes later demolished) and brief narrative descriptions of the general uses of the various buildings. However, this is a large site, with a number

of relatively large buildings. As such, much more specific information is needed about areas of concern (AOCs) and RECs. The following comment is a repeat of item 5 from my December 8, 2009, Review Letter on the *Phase I Environmental Site Assessment*.

> When the Phase II Environmental Site Assessment is developed, maps/drawings should be provided that show details – both inside buildings and outdoors – such as the various manufacturing areas, ASTs, USTs, and storage areas. This information is necessary in assessing the adequacy of sampling that has been and will be performed. It was noted in Section 2.6 of the Report that ESGL was not allowed to take photographs within the interior of any buildings. The IEPA does not have a problem with this per se, as long as ESGL and Agency representatives are allowed access to provide for appropriate sampling and the development of adequate documentation (including drawings) of site conditions.

Item 2. The *Phase I Environmental Site Assessment* includes as Appendix J a Ground Penetrating Radar Survey which was performed in an attempt to identify suspect UST locations. As a result of this survey, two fuel oil USTS were removed in 2007 (reportedly assigned Lust Incident Number 20071279 due to impacted soils) and three USTs were abandoned in place. Was any sampling performed related to the UST issues? If so, please provide details.

Item 3. In discussions with Bill Lennon of EGSL, it was indicated that there are laboratory results from past sampling events. I particularly recall sample results from 2006 being mentioned. Please provide more information on this issue. Historic sample results may be useful – in conjunction with the 2010 sample results – to define potential AOCs and/or RECs.

Item 4. This is mostly a combination of the issues raised in Items 1 through 3. When developing a Comprehensive Site Investigation Report, the consultant should correlate sample locations to the locations of specific manufacturing areas, ASTs, USTs, storage areas, Ground Penetrating Radar Survey anomalies, etc. Many of these areas will presumably be classified as AOCs and/or RECs – and should be clearly identified as such on appropriate maps, drawings and tables. For your information, enclosed are two tables prepared for unrelated projects, which were beneficial for purposes of reviewing what was sampled for and why. Showing the depths at which particular locations were sampled is always useful in summary tables. (The tables listed on pages 2 through 4 of the *Phase II Subsurface Investigation Report* appear to be fine – except that they do not contain a columns or quick references as to why particular borings/sampling locations were chosen.)

Item 5. What is the depth to bedrock on the property?

Item 6. The vast majority of the soil borings described in the *Phase II Subsurface Investigation Report* (boring logs included as Appendix B) were performed to a depth of 10 feet, with the maximum to 15 feet – apparently without bedrock ever being encountered. However, two sets of

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

nested monitoring wells were installed, each to a maximum depth of approximately 50 feet, and eight other wells were installed, each to approximately 20 feet. Boring/Monitoring Well installation logs should be provided for all wells. These logs may contain information on the depth to bedrock.

Item 7. It has been reported that the ponds associated with the wastewater treatment system are lined. What materials were used to line the ponds? What information exists concerning the current condition(s) of the lining(s)? Please provide details.

Item 8. For your information, attached is a copy of the Site Remediation Program Well Survey Procedures. A detailed map should be developed in accordance with this document, with the precise locations of all wells identified. It has been previously indicated that a number of private wells exist within 1000 feet of the site. In fact, three of the nearby wells were sampled in 2008. However, because of known groundwater contamination within the site boundaries – particularly the VOCs contamination in the extreme northwest portion of the site – a detailed map is necessary. Once such a map is provided, the need for off-site sampling will be reassessed. If the information is known or can be readily determined, the approximate depths of each of the private wells should also be indicated. (A this time it appears that the northwest portion of the site is of the greatest concern for groundwater contamination; however, this may simply be because of the availability of historic groundwater monitoring data related to the wastewater treatment facilities. Per the Well Survey Procedures document, all wells within 1000 feet of the site in all directions should be identified and located.)

Comments Related to Groundwater Contamination in the Northwest Portion of the Property and the Possibility of Off-Site Contamination:

Item 1. I am aware of one off-site monitoring well. In response to a requirement in DWPC Permit No. 2004-EO-0971, in November 2004 a new well, MW-A9, was installed in the railroad right-of-way approximately 300 feet downgradient (north/northwest) of MW-3. Starting in November 2004, MW-A9 was sampled on the same schedule as the other (DWPC-Permitted) monitoring wells, 1/month for 1,1,1-TCA, PCE, TCE, TDS, Nickel and pH. *Monthly sampling was performed from November 2004 through April 2006, with all VOCs results reported as less than laboratory detection limits. Sampling was discontinued after April 2006; I am not aware of any explanation for this.* If MW-A9 still exists, it is recommended that routine 1/month sampling of it be implemented again, for the parameters just listed and 1,1-DCE, on the same schedule as the other long-term monitoring wells listed in the DWPC Permit. It is also recommended that MW-9 be sampled at least once for Target Compound List VOCs (Site Remediation Program Section 740.Appendix A, Table A), SVOCs (Table B), and Inorganics (Table D).

Item 2. In the event that MW-9 no longer exists, it is recommended that a replacement well be installed in approximately the same location – with sampling to be performed as described in Item 1.

Item 3. It is recommended that 1,1-DCE be added to the lists of VOCs sampled 1/month at the DWPC-Permitted monitoring wells.

Item 4. The locations of the DWPC Permitted monitoring wells should be shown relative to the private wells identified per the Well Survey Procedures.

Item 5. The VOCs (1,1,1-TCA, 1,1-DCE, PCE and TCE) identified in concentrations above the Class 1 GROs, in historic DWPC-Permitted monitoring wells and/or the May 2010 EGCL sampling, are all substantially heavier than water, with specific gravities varying from approximately 1.2 to 1.6. As indicated in the *Phase II Subsurface Investigation Report*, contamination in the form of excursions of Class I GROs has been reported at various elevations in the nested monitoring wells in the extreme northwest corner of the property, with excursions as deep as 40 to 50 feet. It may be beneficial to install nested wells near the MW-A9 location, for use in attempting to identify and quantify off-site contamination. Please discuss.

As a final comment, please be aware that a response has not yet been received for the December 8, 2009, IEPA review letter, regarding the *Phase I Environmental Site Assessment*. In the process of preparing a Comprehensive Site Investigation Report, the items in that letter should be addressed.

The IEPA requests a written response to the items just described. Note that two (2) copies are required of all future correspondence regarding the site. All correspondence should be directed to the first address indicated at the top of the first page.

If you have any questions or desire additional information, please contact me at (217) 557-8085. As has been stated in the past, I would like to be informed at least one week prior to the start of any sampling events planned for the site.

Sincerely,

Timothy D. Zook

Environ Identified Areas of Concern

5401 West 65th Street
Bedford Park, IL
Project No. 08-0405

Location	Description of Area of Concern	Borings	Sampling Parameters
E-1	Building N-100; paint thinning and mixing, drum storage	None	NA
E-2	Suspect Vent Pipe on outside wall of Building M	GP-2	Soil - VOC, SVOC, Total Metals GW - VOC
E-3	Former UST #4 (15,000 gallon heating oil)	None	
E-4	Outside transformer yards (north and south yards)	GP-4	VOC, SVOC, PCB
E-5	Budget Rent-a-Car; two 500 gallon ASTs	None	
E-6	Former Drum Stoage Area	GP-6	VOC, SVOC, Total Metals, PCB
E-7	Former Propane AST area	None	
E-8	Budget Rent-a-Car 12,000 gallon gasoline UST area	GP-8	VOC, SVOC
E-9	Former Combustion By-Products Co. Area	GP-9	VOC, SVOC, Total Metals
E-10	Former Reade Manufacturing Co. (weed killer)	GP-10, GP-43, GP-44	Soil - VOC, SVOC, Total Metals, PCB, Pesticides, Herbicides GW - VOC, SVOCs, Metals
E-11	Former Coal Pit storage area for old boiler room	GP-11	VOC, SVOC, Total Metals
E-12	Former Incinerator	None	
E-13	Former drum storage pad	GP-13	VOC, SVOC, Total Metals, PCB
E-14	Former drum storage pad	GP-14	VOC, SVOC, Total Metals, PCB
E-15	Former UST #2 (10,000 gallon diesel fuel)	None	
E-16	Former UST #9 (6,000 gallon gasoline)	GP-16	Soil - VOC, SVOC, Total Metals GW - VOC, SVOCs, Metals
E-17	Former UST #5 and #5a (two 1,500 gallon kerosene USTs	None	
E-18	UST #1 (120 gallon gasoline UST)	GP-18	Soil - VOC, SVOC GW - VOC, SVOCs, Metals
E-19	Former UST #3 (280 gallon alcohol UST)	None	
E-20	Suspect UST #7 and UST #8 (two 1,000 gallon gasoline)	None	
E-21	UST #6 2,500 gallon Naphtha abandoned in place	None	
E-22	Former suspect debris pile	GP-22	VOC, SVOC, Total Metals, PCB
E-23	Former suspect debris pile	GP-23	VOC, SVOC, Total Metals, PCB
E-24	Former chemical storage	GP-24A	VOC, SVOC, Total Metals, PCB
E-25	Former drummed product storage area	GP-25	VOC, SVOC, Total Metals
E-26	Former drummed product storage area	None	
E-27	Former satellite waste accumulation area	GP-27	VOC, SVOC, Total Metals, PCB
E-28	Former satellite waste accumulation area	GP-28	VOC, SVOC, Total Metals, PCB
E-29	Former naptha storage shed	GP-29	VOC, SVOC
E-30	Former "spongy soil" area	GP-30	Soil - VOC, SVOC, Total Metals, PCB, Pesticides, Herbicides
E-31	Former PCB Electrical capacitor storage shed	GP-31	VOC, SVOC, Total Metals, PCB
E-32	Former flammable storage room	GP-32	VOC, SVOC
E-33	Former Cole Oil Manufacturer	None	
E-34	Former Lake Shore Oil/Former Superior Graphite factory	None	
E-35	Former Central Brake Shoe and Foundry Company, Former American Brake Shoe and Former Barton Chemical Co.	None	
E-36	Former Continental Can Company	None	
E-37	Former Continental Can Company	None	
E-38	Belt Railway of Chicago	None	
E-39	Suspect Large White AST	GP-39	VOC, SVOC, Total Metals
		GP-40	VOC, SVOC, Total Metals
		GP-41	VOC, SVOC, Total Metals
		GP-42	VOC, SVOC, Total Metals
		GP-45	VOC, SVOC, PCB, Pest/Herb

Site Remediation Program ("SRP") Well Survey Procedures

The remediation site shall be identified by the Remediation Applicant ("RA") as that property, or portion of a property, where a No Further Remediation ("NFR") letter is requested.

The site investigation report shall include a map identifying all on-site and off-site injection and withdrawal wells (pursuant to 35 Illinois Administrative Code ("35 IAC") Part 740.425(b)(2)(D)(ii) and 740.435(b)(2)(C)(ii)) within at least 1,000 feet of the remediation site in accordance with 35 IAC 740.210(a)(7). **Pursuant to 35 IAC Part 1600.210, all community water supply wells shall be identified within 2,500 feet of the property and all setback zones and regulated recharge areas shall be identified on the property.** This information shall be collected by the consultant, by contacting all of the following sources:

Illinois State Geological Survey;
Illinois State Water Survey;
Illinois EPA Division of Public Water Supply;
Illinois Department of Public Health;
County and Municipal Health Departments; and
Local water supply entity (i.e., public water districts, public water supply companies).

The consultant may obtain the information through appropriate web sites, written inquiry or by telephone to identify potential water wells within the distances identified above. The consultant, shall submit a map with the locations of all on-site and off-site injection and withdrawal wells within at least 1,000 feet of the remediation site (no less than one inch equals 200 feet), **all community water supply wells within 2,500 feet of the remediation site and identify all setback zones and regulated recharge areas located on the remediation site. One or more tables shall also be submitted listing all applicable setback zones and regulated recharge areas for each community water supply well and other potable water supply wells. A narrative should accompany the information identifying each entity contacted to identify the potable water supply wells and protected areas, the name and title of each person contacted at each entity, and field observations, if any, associated with the identification and location of potable water supply wells. The information shall be certified by stating all of the above sources have been contacted.**

If the site investigation or remediation objectives report identifies that contamination has migrated off the remediation site or is predicted to travel off the remediation site, the consultant, shall provide a map identifying all the on-site and off-site injection and withdrawal wells within 1,000 feet and **all community water supply wells within 2,500 feet of the most downgradient point of contamination. All setback zones and regulated recharge areas should also**

be identified within the most downgradient point of contamination. This information shall be collected by the consultant, by contacting all of the following sources:

Illinois State Geological Survey;
Illinois State Water Survey;
Illinois EPA Division of Public Water Supply;
Illinois Department of Public Health;
County and Municipal Health Departments; and
Local water supply entity (i.e., public water districts, public water supply companies).

In addition to the above sources, a physical well survey may be required to positively identify any water wells. This physical survey will include, at a minimum, the placement of written information at properties within the measured or modeled distance of the groundwater plume.

The consultant shall submit a map with the locations of all on-site and off-site injection and withdrawal wells within at least 1,000 feet of the most downgradient point of contamination (no less than one inch equals 200 feet), **all community water supply wells within 2,500 feet of the most downgradient point of contamination and the location of all setback zones and regulated recharge areas within the most downgradient point of contamination. One or more tables shall also be submitted listing all applicable setback zones and regulated recharge areas for each community water supply well and other potable water supply wells. A narrative should accompany the information identifying each entity contacted to identify the potable water supply wells and protected areas, the name and title of each person contacted at each entity, and field observations, if any, associated with the identification and location of potable water supply wells.** The information shall be certified by stating all of the above sources have been contacted.

The Source Water Assessment and Protection Program (SWAPP) data base can be accessed through the Illinois EPA website under public water supply.

NOTE: If contamination at a remediation site cannot be modeled due to geology constraints (i.e., bedrock), the information requested above shall be collected at a distance to be determined by the Illinois EPA on a site-by-site basis.

1. EXECUTIVE SUMMARY

This report is in response to the IEPA' Office of Community Relations correspondence letter (Letter), dated November 20, 2012. The purpose of this report is to address the six comments (Comments) identified in the Letter (complete Letter can be found in Attachment A).

2. SUPPLEMENTAL INFORMATION

The purpose of this section is to provide supplemental information needed in order to address portions of the Comments. This includes an on-site groundwater monitoring well elevation survey, groundwater flow direction modeling, hydraulic gradient determination, and hydraulic conductivity calculations. This information was necessary in order to perform Tier 2 modeling of subsurface groundwater impaction.

2.1 Groundwater Monitoring Well Elevation Survey

EGSL conducted a well elevation survey in order to determine the site-specific direction of groundwater flow. After a benchmark location was chosen, the height of the measuring tool was recorded as to serve as a reference height for the monitoring wells. The tops of the well risers and tops of the protective casings were then measured and recorded. Water level measurements were collected from all of the on-site wells using an electronic water level indicator and recorded in field logs. The water level indicator was decontaminated between monitoring wells with distilled water and an Alconox solution.

Elevation Survey can be found in Attachment B.

2.2 Groundwater Flow Direction

Due to the size of the Subject Property, and the relatively large number of on-site groundwater monitoring wells installed by EGSL (18 total on-site wells), site-specific groundwater flow direction calculations were conducted in two separate areas. These areas were chosen due to the relatively elevated concentrations of chemicals of concern in the groundwater. Groundwater flow direction was obtained by locating an arbitrary location (point D) that had the same water-level elevation as the well with the mid-water elevation. To find point D, the 3-point mathematical proportional method was utilized:

Let x = the distance from the low water elevation to point D.

$$\frac{\textbf{Elevation (mid point – low point)}}{\textbf{Elevation (high point – low point)}} = \frac{x}{\textbf{distance (low point to high point)}}$$

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

The first area consisted of monitoring wells MW-9, MW-10, and MW-11. This area is located north of the percolation field (aka Pond #5):

$$\frac{\text{90.83 feet (MW-9)} - \text{88.16 feet (MW-10)}}{\text{92.20 feet (MW-11)} - \text{88.16 feet (MW-10)}} = \frac{x}{474 \text{ feet}}$$

x = 313.26 feet = Point D

The second area consisted of monitoring wells MW-1*, MW-12, and MW-13. This area is located to the north and northwest of the pond systems, historical Building #6, and historical Pond #6. *Please note that MW-1 is part of a nested well system with MW-2, MW-3, and MW-4. All four wells contained a groundwater elevation that was +/- 0.04 feet of each other; as such the average elevation of 84.43 feet was utilized.

$$\frac{\text{95.91 feet (MW-12)} - \text{84.43 feet (MW-1*)}}{\text{103.57 feet (MW-13)} - \text{84.43 feet (MW-1*)}} = \frac{x}{711 \text{ feet}}$$

x = 426.0 feet = Point D

After plotting Point D for both surveyed areas, the groundwater flow direction was determined to be to the northwest (see Attachment C for Groundwater Flow Direction Map). Please note that this coincides with the information historical documentation of groundwater flow direction, as determined in the Monitoring Well Network Installation and Groundwater Flow Assessment, prepared by *Roux Associates*, Inc., dated May 17, 1990. A complete copy of this report can be found in Attachment D.

2.3 Hydraulic Gradient

Hydraulic gradient was recalculated by determining the difference in elevations of the groundwater levels between two wells, and dividing that number by the distance between the two wells in the direction of groundwater flow. EGSL selected five sets of wells located throughout the entire Subject Property in order to obtain a site-specific average hydraulic gradient. After determining the gradient for each of the five selected areas, the site-specific average was calculated.

MW-11 and MW-1

$$\frac{92.20 \text{ ft} - 84.45 \text{ ft}}{408.2 \text{ ft}} = 0.0190$$

MW-11 and MW-10

$$\frac{92.20 \text{ ft} - 88.16 \text{ ft}}{474.2 \text{ ft}} = 0.0085$$

MW-9 and MW-10
90.83 ft – 88.16 ft = 0.0112
239.2 ft

MW-13 and MW-1
103.57 ft – 84.45 ft = 0.0269
711.1 ft

MW-12 and MW-1
95.91 ft – 84.45 ft = 0.0506
226.3 ft

Average Gradient = 0.02324 ft/ft

2.4 Hydraulic Conductivity Testing

EGSL conducted in-situ hydraulic conductivity tests at four of the monitoring wells (MW-10, MW-13, MW-14, and MW-16). Due to the relatively instant recharge of the on-site wells, hydraulic conductivity testing was conducted by utilizing a *Midwest Geosciences Group* Pneumatic Hi-K Slug™ system in coordination with an *In-Situ Inc.* Level Troll 700 Instrument®. The data collected was input into the Aqtesolv® Hydraulic Conductivity program.

The site-specific hydraulic conductivity results were as follows:

MW-10: 0.001611 ft/sec
MW-13: 0.001740 ft/sec
MW-14: 0.001608 ft/sec
MW-16: 0.001966 ft/sec

The average of the above = 0.001731 ft/sec = 5.276 E-02 cm/sec.

See Appendix E for Field Data and Aqtesolv® Results.

2.5 Summary of Detected Groundwater Impaction

As documented in EGSL's Site Investigation Report, dated March 27, 2012, the following table identifies all concentrations of chemicals of concern that were detected above IEPA Tier 1 Remediation Objectives for Class I Groundwater (maximum concentrations highlighted):

Groundwater

Chemical	Monitoring Well Number	Concentration Detected (mg/L)	Remediation Objective (mg/L)	Exposure Route
INORGANIC				
Aluminum	MW-3 MW-4	8.1 4.8	3.5	Class I Groundwater

Right-to-Know Response Report

2.6 Tier 2 Analysis for GCGIR Class I Exceedances

R26

$$C_{(x)} = C_{source} \bullet \exp\left[\left(\frac{X}{2\alpha_x}\right) \bullet \left(1 - \sqrt{1 + \frac{4\lambda \bullet \alpha_x}{U}}\right)\right] \bullet erf\left[\frac{S_w}{4 \bullet \sqrt{\alpha_y \bullet X}}\right] \bullet erf\left[\frac{S_d}{2 \bullet \sqrt{\alpha_z \bullet X}}\right]$$

Tier 2 R26 analysis was conducted in order to determine the horizontal extent of Tier 1 GCGIR exceedances identified in Section 2.5. Site-specific parameters for each negatively impacted monitoring well location, in order to represent the most stringent ROs, were determined as follows:

General Site Specific Input Data:
Soil Type: Sand (2) – as determined from site-specific soil borings.
Class of Groundwater: Class I – as determined from on-site hydraulic conductivity tests.
Remediation Objective Comparison Values: Residential (1)
Hydraulic Gradient (i): 0.02324 ft/ft
Hydraulic Conductivity (k): 5.276 E-02 cm/sec
Thickness of Aquifer (da): 15 ft – as determined from saturated well depth.
Source Depth (Sd): 80 ft (as determined from "clean" water samples from MW-22).
Source Width (Sw): 50 ft (as determined from maximum delineation of adjacent borings).

All VOC detections above IEPA Tier 1 Remediation Objectives were modeled. The highest concentrations of Inorganics for each individual chemical were modeled.

R-26 analysis determined that, under the most stringent circumstances, potential groundwater migration distances of the above-referenced COCs traveled the following distances from their source locations before they reached their groundwater ROs:

Chemical	Monitoring Well	Screen Depth (feet)	Concentration Detected (mg/L)	Distance to Compliance (mi)	Distance to Compliance (feet)
INORGANICS					
Aluminum	MW-13	10-20	44	21800	715
Antimony	MW-8	10-20	0.0085	2800	92
Arsenic	MW-8	10-20	0.28	12350	405
Barium	MW-3	20-30	2.7	2600	85
Chromium	MW-13	10-20	0.16	3300	108
Iron	MW-8	10-20	360	56800	1864
Lead	MW-9	10-20	0.17	30700	1008
Manganese	MW-8	10-20	31	97500	3200

*Indicates an off-site well

See Attachment F for Tier 2 GCGIR Analysis.

2.7 GCGIR Class I Plume Diagrams

VOCS: The maximum plume (in the direction of groundwater flow) of VOCs has been diagramed. It should be noted that the Tetrachloroethene (PCE) exceedance at MW-7, which traveled 1,000 feet before reaching compliance, encompassed all other VOC plumes; as such, only PCE is modeled on the diagram.

See Attachment G for VOC (PCE) Plume Diagram.

Inorganics: The maximum plume (in the direction of groundwater flow) of Inorganics has been diagramed. It should be noted that the Manganese exceedance at MW-8, which traveled 3,200 feet before reaching compliance, encompassed all other Inorganic plumes; as such, only Manganese is modeled on the diagram.

See Attachment H for Inorganic (Manganese) Plume Diagram.

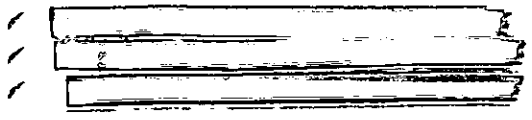
3. OFF-SITE PROPERTIES WITHIN THE MODELED PLUMES AND HISTORICAL OFF-SITE SAMPLING

EGSL has determined that the following addresses are within the modeled plumes:



It should be noted that EGSL and Tom Rivera from the IEPA Bureau of Land contacted all owners of the north and northwesterly private wells in May of 2008. The complete list can be found in Attachment I. All listed entities were sent a letter (Attachment J) by Tom Rivera on behalf of IEPA and EGSL requesting permission to sample their private well water. Of the 20 letters sent out, 5 were returned by the USPS due to incorrect and/or invalid addresses. Of the 15 remaining letters that were delivered, only three entities responded, as follows (responses can be found in Attachment K):

All three wells were sampled by IEPA and EGSL on June 19, 2008. Groundwater samples were submitted for analysis of VOCs; all results came back non-detect (see Attachment L for email from Tom Rivera and analytical results).

Subsequent to the above-referenced sampling activities, EGSL installed a nested well system within the northerly easement of the Railroad Street right-of-way. Due to the presence of negatively impacted groundwater within the nested well system, EGSL personally contacted the residential dwellings directly adjacent to the well system, as follows:

All owners gave permission to EGSL to sample their private wells. On March 31, 2011, each well was sampled and submitted for analysis of VOCs. According to laboratory results, all samples came back non-detect for VOCs (see Attachment M for analytical results).

Finally, EGSL has performed a search of the ISGS database pertaining to off-site private wells within ¼ mile of the Subject Property (see Attachment N). Upon review of this report, the pertinent wells will be investigated further in conjunction with the direction of the IEPA Right-to-Know Committee, IEPA Bureau of Land/Site Remediation Program, and IEPA Bureau of Water.

4. SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This report pertains to the property located at 300 West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED

Re: 1110650003 – McHenry County
Marengo/Arnold Magnetic Technologies
Information Demand Letter
File Code 02A

Certified Mail Return Receipt Requested

Dear Mr. Kaser:

Pursuant to Section 25d-2 of the Illinois Environmental Protection Act (Act), 415 ILCS 5/25d-2, the Illinois EPA is required to evaluate releases of contaminants whenever it determines that the extent of soil, soil gas, or groundwater contamination may extend beyond the boundary of the site where the release occurred. The Illinois EPA has performed a contaminant evaluation for the Arnold Magnetic Technologies site located at 300 North West Street in Marengo regarding groundwater contamination.

Based on the information contained in the *Phase I Environmental Site Assessment*, dated September 30, 2009, the *Phase II Subsurface Investigation Report* dated July 15, 2010, and the *Site Investigation Report* dated March 27, 2012, the Illinois EPA has determined that groundwater contamination beyond the boundary of the Arnold Magnetic Technologies poses a threat of exposure to the public above the appropriate Tier 1 remediation objectives and the Class I groundwater quality standards and that notice to the owners of the nearby properties must be given pursuant to Section 25d-3 of the Act, 415 ILCS 5/25d-3. The groundwater contamination consists of volatile organic compounds (VOCs) including tetrachloroethylene, vinyl chloride, 1,1-dichloroethylene as well as the metals iron, lead and manganese.

The Illinois EPA is requesting that the following information be provided to us pursuant to Section 25d-4 of the Act, 415 ILCS 5/25d-4 within 30 calendar days of receipt of this letter:

1. The direction of groundwater flow in the area of the site and surrounding private wells as established by a formal determination of hydraulic gradient;
2. A comprehensive door-to-door private well survey within 1500 feet of the site;
3. A report of which private wells' 200-foot setback zones would be anticipated to be in contact with the site-related plume of chlorinated solvents;
4. The highest historical concentrations on-site of the above-named VOC and other groundwater contaminants;
5. A detailed map of the site, including monitoring well locations and the on-site area of VOC contamination, and which clearly shows proximity to area residences and businesses; and

6. Sampling of private wells within 1500 feet of the site in the direction of groundwater flow from the area of contamination (ostensibly former building #6 and pond #6) in consultation with the Illinois EPA Project Manager, Tim Zook.

The request above may include information that has already been collected by any entity hired by you or working on your behalf regarding this site. If the requested information is contained in a documents previously submitted to the Agency, please indicate the name of the document and the specific page or pages where the information may be found in the document.

The information should be submitted to me at:

Dean Studer, Office of Community Relations
Illinois EPA
1021 North Grand Avenue East, mail code #5
P.O. Box 19276
Springfield, Illinois 62794-9276

Once this information is received, the Illinois EPA will review this information to confirm that notice is required pursuant to the Act. Upon such confirmation, the Illinois EPA may contact you to provide an opportunity for you to provide the required notice. In the event that this information should demonstrate that notification is not required under the Act, the Illinois EPA will notify you of this determination.

Please be aware that any person who knowingly makes a false, fictitious, or fraudulent material statement, orally or in writing, to the Illinois EPA commits a Class 4 felony. A second or subsequent offense after conviction is a Class 3 felony, 415 ILCS 5/44(h).

Should you have questions regarding the notification or Right-to-Know processes, or if you would like to discuss the information request, please contact me at (217) 558-8280. Questions regarding the technical nature of the site can be directed to Tim Zook, Project Manager, at 217/557-8085.

Sincerely,

Dean Studer

1.0 EXECUTIVE SUMMARY

This report summarizes the methods and results of activities undertaken by Roux Associates, Inc. to establish a ground-water monitoring network at the Arnold Engineering magnet manufacturing facility in Marengo, Illinois. The work was conducted to satisfy a wastewater treatment plant permit requirement to install a ground water monitoring network to assess potential impacts the facility may have had on local ground-water quality. Activities which were undertaken during this project are summarized below:

- A background review was conducted to estimate the probable ground-water flow direction at the site.
- Three stainless steel ground-water monitoring wells were installed in selected areas of the site.
- The horizontal and vertical coordinates of the well casings were established and referenced to a United States Geologic Survey datum.
- Weekly ground-water elevation measurements were taken in all wells for a five-week period from March 2, 1990 to March 27, 1990.
- The ground-water elevation data was reduced and used to generate potentiometric surface maps from which ground-water flow directions were interpreted.

Based on the above activities, Roux Associates conclude that, during the study period, ground water at the facility was flowing in generally a north-northwesterly direction.

This conclusion was previously provided to Arnold Engineering in a letter dated April 9, 1990. Roux Associates understands that Arnold Engineering has negotiated an exemption

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

from the permit requirement of three downgradient wells, and that the Illinois Environmental Protection Agency (IEPA) will accept the current well configuration.

2.0 INTRODUCTION

The Arnold Engineering Company owns and operates a wastewater treatment facility at its magnet manufacturing plant in Marengo, Illinois. The wastewater treatment facility consists of a series of four settling ponds with a capacity of three-million gallons, two overflow ponds, a ten acre diked percolation field and an extended aeration activated sludge treatment plant. Wastewater influent sampling conducted at the facility during August, 1989 indicated that trace amounts of 1,1,1-trichloroethane, methanol, acetone and methylethyl ketone were present in grab samples.

Arnold Engineering received a renewal of their wastewater facility operation permit from the Illinois Environmental Protection Agency (IEPA) in October, 1989. A number of special requirements were cited as conditions of renewal of Water Pollution Control Permit number 1989-EO-3870. One of the special conditions was a requirement to install a network of ground-water monitoring wells around the treatment facility to assess potential impacts the facility may have had on local ground-water quality.

Roux Associates Inc., was retained by the Arnold Engineering Company in February,1990

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

to install the monitoring well network in accordance with the specifications outlined in the water pollution control permit.

Salient requirements for the monitoring well network specified in IEPA Water Pollution Control Permit number 1989-EO-3870 are outlined below:

- At least one monitoring well must be located hydraulically upgradient of the percolation sites. The purpose of this well is to collect representative samples of ground water not affected by percolation areas.
- At least three monitoring wells located hydraulically downgradient of the percolation sites. Locations and depths of wells must be chosen in a manner such that representative samples of ground water most likely to be contaminated will be collected.
- Monitoring wells must be at least two inches in diameter and cased with a material which will not react with the samples. The well screen must be packed with sand or gravel and the annular space sealed to prevent infiltration. Well riser pipe must be protected and secured.

This report describes the methods and results of Roux Associates Inc. activities to install the monitoring network.

3.0 SITE DESCRIPTION

The Arnold Engineering Company magnet manufacturing facility is located on approximately 80 acres in the northwest quarter of Section 35, Township 44 north, Range 5 east of the Third Principal Meridian in southwestern Mc Henry County, Illinois (Figure 1). The plant manufactures magnets for a wide range of industrial uses.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

3.1 Facility Description

The facility is bounded to the east by residential property in the City of Marengo, to the north and west by open farm fields and residences and to the south by U.S. Highway 20 and commercial property. The Chicago and Northwestern railroad runs along the northern boundary and at the northwest portion of the parcel. A Commonwealth Edison electrical substation lies adjacent to the facility.

The wastewater treatment facility is located between the Arnox Building and manufacturing buildings on the north side of the property (Figure 2). During normal operation, treated water is discharged from the treatment lagoons to Pond #5 near the southwest corner of the parcel. During times of heavy precipitation, when the infiltration capacity of Pond #5 is exceeded, water is directed to the percolation fields.

3.2 Geology and Hydrogeology

The Arnold Engineering property is located on the Kishwaukee River lowland (Figure 3). The river lies approximately one mile north of the plant and flows west in this reach with an average gradient of five feet per mile. A small intermittent tributary to the Kishwaukee River is located one-half mile northeast of the plant. Slopes on the property are slight.

Geologic maps and reports available for the area indicate that glacial drift in excess of fifty

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

feet thick overlie dolomites of the Silurian System. A generalized geologic column for the vicinity is provided in Figure 4. Two distinct glacial till members exist on the property. The Henry Formation which is a thick, permeable and unconsolidated deposit of well sorted sand and gravel is present on the western third of the property and the remainder of the site is underlain by a uniform sandy-loam till of the Wedron Formation, except for a small area of made land in the area surrounding the Arnox Building.

At the outset of the study, it was anticipated that the water table would be encountered at a depth of fifteen to twenty feet below the surface and the general direction of ground-water flow would be slightly west of north. The predicted direction of ground-water flow is based on the assumption that the Kishwaukee River, located one-mile to the north, is the primary discharge area for shallow ground water.

4.0 FIELD ACTIVITIES

Roux Associates subcontracted with Fox Drilling, Inc. of Itasca, Illinois to provide soil boring and monitoring well installation services. All drilling and well installation activities were supervised by a Roux geologist. Geologic and monitoring well construction logs were prepared using data collected in the field during drilling operations, these logs are provided in the Appendices.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

4.1 Well Installation

Installation of the three monitoring wells began on February 21, 1990 and was completed the following day. The wells were constructed of two-inch diameter stainless steel casing and eleven foot lengths of stainless steel slotted screen. Each borehole was advanced using a truck-mounted rotary drill rig equipped with 3-3/4" inside diameter hollow-stem augers. Each boring was advanced to a depth approximately four feet below the water table. Figure 5 depicts the locations of the ground-water monitoring wells. These locations were chosen based upon the predicted direction of ground-water flow determined from the review of published geologic information.

The specific location of monitoring well MW-3 was dictated by the presence of thirty-thousand kilovolt overhead power lines along the properties north side and a shed on the east side of the pond. These two factors necessitated that the pond be approached from the west with the drill rig. Permission to access the location from the substation property was obtained from Commonwealth Edison.

During well drilling, split spoon samples were retrieved at five foot intervals at each borehole. The samples were visually examined by a Roux Associates geologist and scanned with an Hnu photoionization detector for possible volatile organic compounds (VOCs.) No contamination was detected in any of the samples and all samples and cuttings were discarded on site. An eleven-foot long well screen was set six-inches above the bottom of the borehole. After decontamination with a steam cleaner. Washed filter sand was packed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

around the well screen to a depth of two-feet above the screen. A two-foot thick bentonite plug was then placed above the filter sand and hydrated using distilled water. The remainder of the annular space was backfilled with cuttings and capped with a cement grout. A locking protective casing was placed over the wellhead in a concrete pad and secured with a padlock. All well materials were steam-cleaned and rinsed with distilled water prior to installation.

4.2 Well Development

Each of the monitoring wells were developed by purging using a one-quarter gallon bottom-fill teflon bailer. The wells were bailed until the water was free of sediment. The bailer was cleaned between wells using a non-phosphate soap and triple-rinsed with distilled water.

5.0 RESULTS OF GROUND-WATER FLOW INVESTIGATION

Upon completion of the well installation phase, Roux Associates Inc. subcontracted with Heritage Engineering Company of Rockford, Illinois to provide surveying services at the site. The top of each wellhead was established to the nearest one-hundredth foot using U.S. Geological Survey (U.S.G.S.) datum. The wells were also located on a survey plat of the property.

Depth to water table measurements were taken once a week for five successive weeks using

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

an electronic water-level indicator. This data was reduced to produce water table elevations with respect to U.S.G.S. datum. A summary of water-table elevation data is provided in Table 1.

A ground-water flow map was prepared for each week that water level measurements were taken, and these maps can be found in Appendix B. The data and maps indicate that during the five-week study period the ground-water flow direction was toward the north-northwest for every week but the week of March 15, 1990. During this week, the ground-water flow direction was toward the north. It should be noted that excessive rainfall occurred in the area prior to the time the March 15, 1990 measurements were taken and it is possible that levels had not yet equilibrated after heavy rains. Measurements taken during successive weeks show that flow had returned to a northwesterly direction.

6.0 CONCLUSIONS

Arnold Engineering Company was required to establish a monitoring well network around the perimeter of a wastewater treatment facility in Marengo as a condition of wastewater permit 1989-EO-3870. Roux Associates was retained by Arnold Engineering to install the monitoring well network according to permit requirements.

Based upon the geologic information available and a visual investigation of the site prior to the installation of monitoring wells, the general ground-water flow direction was predicted to be in a northwesterly direction. Monitoring well locations and depths were chosen based

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

on the preliminary information and constructed to facilitate their use as sampling wells to collect both floating and sinking constituents. During a five-week investigation, water levels in the wells were observed and recorded. A series of ground-water flow maps were prepared from the data which indicates that the hyrdogeologic conditions predicted from preliminary information were encountered, except for a possibly anomalous reading taken after a series of heavy rains in the area. Monitoring well MW-1 serves as the upgradient well and wells MW-2 and MW-3 serve as downgradient wells. MW-2 and MW-3 are downgradient of the percolation field and overflow ponds.

If the north-northwest ground-water flow direction is stable with time, the current monitoring network should produce representative ground-water samples from areas upgradient and downgradient of the diked percolation field and overflow ponds. We understand that NET Midwest personnel will conduct the required sampling of the wells.

Respectfully Submitted,

David L. Miller

AND DATUM 810 FEET ☐ SURVEYED ☒ ESTIMATED
INSTALLATION DATE(S) February 22, 1990
DRILLING METHOD Hollow-stem auger
DRILLING CONTRACTOR Fox Drilling - Itasca, Illinois
DRILLING FLUID None

DEVELOPMENT TECHNIQUE(S) AND DATE(S)
Developed by purging with a teflon bailer, 02/22/90

FLUID LOSS DURING DRILLING N/A GALLONS
WATER REMOVED DURING DEVELOPMENT 10 GALLONS
STATIC DEPTH TO WATER 16 FEET BELOW M.P.
PUMPING DEPTH TO WATER N/A FEET BELOW M.P.
PUMPING DURATION N/A HOURS
YIELD N/A GPM N/A DATE N/A
SPECIFIC CAPACITY N/A GPM/FT.
WELL PURPOSE Monitoring well downgradient of a percolation field.

REMARKS Stainless steel well screen and riser. Well was surveyed on March 15, 1990 by Heritage Engineering of Rockford, Il. Top of casing elevation is 810.43 feet above mean sea level.

HYDROGEOLOGIST Steven Wanner

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

SYSTEM OR SERIES	Hydrogeologic units and thickness	Graphic log	Rock type	Water-yielding characteristics
PLEISTOCENE	Drift (0 – 400')		Unconsolidated glacial deposits, loess and alluvium	Water yields variable, largest from thick outwash deposits in western part of county
SILURIAN	Niagaran-Alexandrian (0 – 100')		Dolomite, very pure to very silty; cherty; shale partings toward base	Yields moderate to large supplies where crevices and overlain by permeable sand and gravel. Productivity lessens with thinning of dolomite and thickening of shale
ORDOVICIAN	Maquoketa (0 – 200')		Shale, green and blue with limestone and dolomite beds	Yields small to moderate supplies from dolomite and fractured shale
	Galena-Platteville (0 – 300')		Dolomite, with shale in middle, limestone and chert in lower part	Yields moderate to large supplies only in areas where not overlain by Maquoketa, as near Union and Marengo
	Glenwood-St. Peter (200 – 350')		Sandstone, fine- to coarse-grained; shale at top; locally cherty, red shale at base	Yields small to moderate quantities of water
	Prairie du Chien (100'±)		Dolomite, sandy, cherty, interbedded with sandstone	Yields small amounts of water from sandstone and crevices in dolomite
CAMBRIAN	Eminence-Potosi Franconia (200'±)		Dolomite, white, fine-grained Sandstone, fine- to medium-grained	Yields small amounts of water from crevices in dolomite and sandstone
	Ironton-Galesville (100 – 300')		Sandstone, fine- to medium-grained, well sorted	Most productive aquifer in Cambrian-Ordovician Systems; can yield large supplies of water
	Eau Claire (200 – 450')		Shale and siltstone; dolomitic	Shales generally not water-yielding; acts as confining layer at base of Cambrian-Ordovician aquifer system
	Mt. Simon (275' in NW to 950' in SE)		Sandstone, coarse grained, lenses of shale and siltstone	Yields moderate amounts of water; water quality generally good within McHenry County, but deteriorates with depth
PRECAMBRIAN			Granite, red	Not water-yielding

DRAFT

May 5, 2008

Resident
[redacted]

Dear Resident:

The Illinois Environmental Protection Agency (Illinois EPA) and Environmental Group Services Limited (EGSL) are planning a private well water sampling event in your area. Due to manufacturing businesses that operate in your area, we would like to check to make sure that volatile organic compounds (VOCs) have not impacted private wells. Residences and businesses on Ritz Road and Railroad Street are locations that we would like to collect private well water samples and then have the samples analyzed for VOCs at an Illinois EPA accredited laboratory.

I highly recommend that you allow us to sample your private well. The sampling will be conducted at no charge to you and you'll be provided the VOC sample analytical results and a letter from an Illinois Department of Public Health (IDPH) Toxicologist approximately 6 weeks after your private well is sampled. Most likely we'll be able to collect the water sample directly from your outside water spigot. We have to collect the water sample from an unfiltered and unsoftened spigot after a 20 minute water purge is conducted.

Please contact me as soon as possible at **847/294-4079**; I would like to discuss this with you further. Please fill out the attached private well sampling access form and FAX it to my attention at **847/294-4083**, or mail it to me at the below listed address, or return it to me the day your water is sampled. If your not home you can tape the form to your front door.

Attachments: Private Well Analytical.pdf

MFD

Hi Tom,

Attached are sample results for 3 residential private well water samples that **Environmental Group Services Limited** and I collected on June 19, 2008, for the purpose of checking if VOC groundwater impacts have occurred from a nearby Manufacturing site. Please review the results and report your review information to the residences in writing, see the below list of addresses and names with the corresponding sample numbers. Please attach the appropriate sample results to your letters and disregard the trip blank sample results, chain of custody form and QC results. Pease copy Sarah Berg at the McHenry County Public Health Department on the letters and attached sample results. Sarah's is the lead groundwater person at the County now. I will copy Environmental Group Services Limited on the letters, via e-mail, when I receive my copy from you.

Thank You and here Is the necessary information. As always, I appreciate your help.

RE: Marengo Private STAT Project No 11030902

Dear Bill Lennon:

STAT Analysis received 3 samples for the referenced project on 3/31/2011 5:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

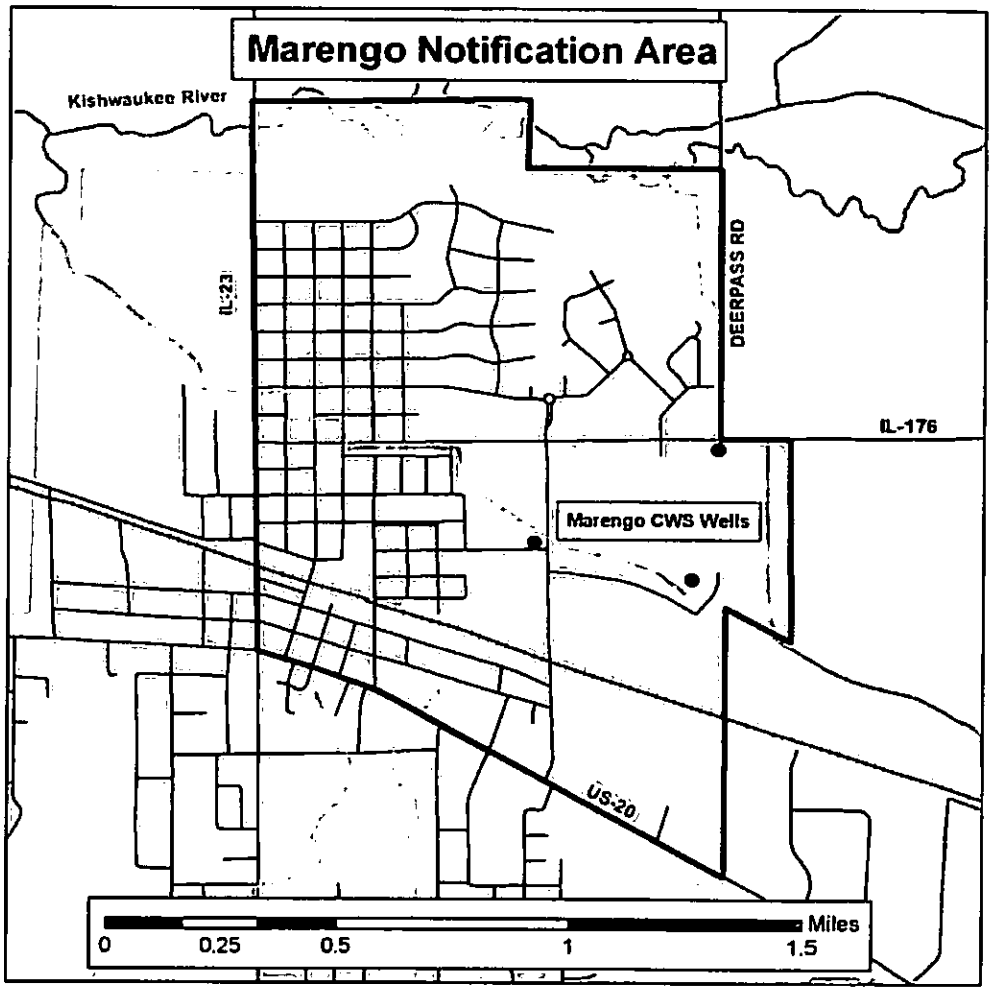
State Health Department Recommends Water Well Testing for Private Wells Near Marengo

SPRINGFIELD - The Illinois Department of Public Health (IDPH) is advising residents who obtain their drinking water from private wells in the Marengo (McHenry County) area to test their water for possible groundwater contamination. Routine testing of Marengo's community water supply wells by the Illinois Environmental Protection Agency (IEPA) indicates contaminants could be present in the area's private wells.

The contaminants benzene and methyl tert-butyl ether (MTBE) were detected at levels lower than the Illinois Groundwater Standard. Although the contaminants' levels were lower than the standard, this is the same groundwater that serves private wells and it is possible the levels of the contaminants may be higher in private wells.

Residents with private wells located within the area (map below) north of U.S. 20, east of Illinois 23, south of the Kishwaukee River, and west of the Marengo eastern city limits are encouraged to have their water tested for volatile organic compounds by a private laboratory.

For a list of laboratories certified to analyze drinking water for volatile organic compounds, interpretation of test results, contaminant health effects information, and recommendations for individuals who regularly consume well water, contact Joe O'Connor, IDPH West Chicago Regional Office, 245 West Roosevelt Road, Bldg 5, West Chicago, IL. 60185, phone (630) 293-6800 or joe.o'connor@illinois.gov.



The risk of adverse health effects depends on the levels of contaminants in the water and the length of exposure. Long-term exposure to these chemicals may result in an increased health risk to the liver and kidneys.

-more-

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

No violations of State of Illinois or federal drinking water standards have occurred in Marengo's community water supply. For information concerning the community water supply contact Dean Studer at 217-558-8280 or via email at dean.studer@illinois.gov

This information has been compiled from historic data and is provided to the public to ensure full disclosure of state records.

Municipality: **Marengo**

County: **McHenry**

LPC Number:

OC: **00083007**

ORDINANCE NO. 00-5-1

ORDINANCE PROHIBITING THE USE OF GROUNDWATER AS A POTABLE WATER SUPPLY BY THE INSTALLATION OR USE OF POTABLE WATER SUPPLY WELLS OR BY ANY OTHER METHOD

WHEREAS, certain property in the City of Marengo, located McHenry County in the State of Illinois, with the common addresses of 536 North State Street, 600 North State Street, and 602 North State Street, and legally described in Exhibit A, and all property within a 2500 feet radius of these properties, as fully described and shown as Exhibit B hereto and hereinafter referred to as the "Affected Area," has been used over a period of time for commercial/industrial purposes; and

WHEREAS, because of said use concentrations of certain chemicals constituents in the groundwater beneath the City may exceed Class I groundwater quality standards for potable resource groundwater as set forth in 35 Illinois Administrative Code 620 or Tier 1 residential remediation objectives as set forth in 35 Illinois Administrative Code 742; and

WHEREAS, the City of Marengo currently has an ordinance requiring mandatory hookup to the City's water supply system, Ordinance No. 92-7-2, passed and approved July 13, 1992; and

WHEREAS, the City of Marengo desires to further limit potential threats to human health from groundwater contamination while facilitating the redevelopment and productive use of properties that are the source of said chemical constituents;

NOW, THEREFORE, BE IT ORDAINED by the City Council of Marengo, McHenry County, Illinois, as follows:

Section One: Recitals.

The recitals set forth above are incorporated by reference as if fully set forth and they are hereby made an integral part of this ordinance.

Section Two: **Use of Groundwater as a Potable Water Supply Prohibited by the Installation of New Wells.**

The use or attempt to use as a potable water supply, groundwater from within the Affected Area, by the installation or drilling of wells or by any other method is hereby prohibited, except at points of withdrawal by the City within the Affected Area. This ordinance shall not prohibit the continued use of wells within the Affected Area in operation on the effective date of this ordinance, only the installation of new wells within Affected Area from the effective date of this ordinance forward.

Section Three: **Penalties.**

Any person violating the provisions of this ordinance shall be subject to a fine of not less than $25.00 and not more than $500.00 per day for each day said person is deemed to be in violation of this ordinance.

Section Four: **Definitions.**

1. "Person" is any individual, partnership, co-partnership, firm, company, limited liability company, corporation, association, joint stock company, trust, estate, political subdivision, or any other legal entity, or their legal representatives, agents, or assigns.

2. "Potable water" is any water used for human or domestic consumption, including, but not limited to, water used for drinking, bathing, swimming, washing dishes, or preparing foods.

Section Five: **Repealer.**

All ordinances, including but not limited to City of Marengo Ordinance No. 92-7-2, or parts of ordinances in conflict with this ordinance are hereby repealed insofar as they are in conflict with this ordinance.

Section Six: **Severability.**

If any provision of this ordinance or its application to any person or under any circumstances in adjudged invalid, such adjudication shall not affect the validity of the ordinance as a whole or of any portion not adjudged invalid.

Section Six: **Miscellaneous.**

The City will establish a registry to all sites within its corporate limits that have received "No Further Remediation"determinations from the Illinois Environmental Protection Agency. Carls Oil Company, Inc. will establish this registry on behalf of the City and will bear the expense of this registry in an amount not to exceed $3,000.00. Carls Oil Company will update this registry for two years from the date this Ordinance is in full force and effect. Carls Oil Company will bear the expense to update the registry for two years in an amount not to exceed $1,000.00.

Section Seven: **Effective Date**

THIS ORDINANCE shall be in full force and effect from and after its passage, approval and publication as required by law.

ADOPTED this 8th **day of** May **, 2000, pursuant to a roll call vote as follows:**

Alderman Elected and Qualified to vote: 8

AYES: Brandt, Keenum, Peacock, Remke, Secor, Hammortree, Jenkner and Kolberg

NAYS: None

ABSENT: None

APPROVED by me this 8th **day of** May **, 2000.**

Dennis Hammortree, Mayor

CONSENT AGENDA

The following items were brought up for approval:

A. Approval of Minutes for April 24, 2000 C.O.W. Meeting and April 10, 2000 City Council Minutes.
B. Approval of Spectrum Contract.
C. Approval of Environmental Technology & Assessment Contract.
D. Authorization for Mayor to sign COPS Agreement.
E. Authorization for Attorney to do codification.
F. Approval for Legion to use City Hall for their "Poppy Days."
G. Approval for Chamber to sell raffle tickets.

A motion was made by Alderman Remke and seconded by Alderman Keenum to approve the consent agenda with a "yes" vote by all. Alderman Brandt requested that an addendum be added to the April 10, 2000 City Council minutes to read that he abstained from the Brandt Bros. Oil bill.

APPROVAL OF BILLS FOR PAYMENT

Approval was given to pay the bills with a few questions.

OLD BUSINESS

A. An ordinance prohibiting the use of Groundwater as a potable water supply. After some discussion the ordinance stating a radius of 2500 feet from the corner of Rts. 23 and 176 will not be allowed to drill a new well but must hook up to city water, was passed with a motion by Alderman Remke and a second by Alderman Hammortree. This ordinance is number 00-05-01. All voted "yes".

Attorney McArdle recommended that the Mayor sign a Memorandum of Understanding that would exempt the City of Marengo from Ordinance 00-05-01 was moved by Alderman Peacock with a second by Alderman Keenum and a "yes" vote by all.

B. Northwest Pallet was deferred to Executive Session.

C. Harold Warren could not make the meeting tonight to discuss the bonding issue, so he has been asked to appear at the May C.O.W. meeting.

OFFICER AND STAFF REPORTS

The Treasurer's report, the Engineer's report and the Attorney's report was given with a few minor questions. The attorney brought up a project which will be brought up later in the Zecchin subdivision. Mr. Zecchin was present and his engineer, Mr. Loeppert. Mr. Loeppert presented to the council a rough concept map on what Mr. Zecchin would like to do with the property he

MEMORANDUM OF UNDERSTANDING BETWEEN THE CITY OF MARENGO AND THE ILLINOIS ENVIRONMENTAL PROTECTION AGENCY REGARDING THE USE OF A LOCAL GROUNDWATER OR WATER WELL ORDINANCE AS AN ENVIRONMENTAL INSTITUTIONAL CONTROL

I. PURPOSE AND INTENT

A. This Memorandum of Understanding ("MOU") between the City of Marengo (the "City") and the Illinois Environmental Protection Agency ("Illinois EPA") is entered into for the purpose of satisfying the requirements of 35 Ill. Adm. Code 742.1015 for the use of groundwater or water well ordinances as environmental institutional controls. The Illinois EPA has reviewed the City's groundwater or water well ordinance, Ordinance No. 00 - 5-1 (the "Ordinance")(Attachment A) and determined that the Ordinance prohibits the use of groundwater for potable purposes and/or the installation and use of new potable water supply wells by private entities but does not expressly prohibit those activities by the City itself. In such cases, 35 Ill. Adm. Code 742.1015(a) provides that the City may enter into an MOU with the Illinois EPA to allow the use of the Ordinance as an institutional control.

B. The intent of this Memorandum of Understanding is to specify the responsibilities that must be assumed by the City to satisfy the requirements for MOUs as set forth at 35 Ill. Adm. Code 742.1015(i).

II. DECLARATIONS AND ASSUMPTION OF RESPONSIBILITY

In order to ensure the long-term integrity of the Ordinance as an environmental institutional control and that risk to human health and the environment from contamination left in place in reliance on the Ordinance is effectively managed, the City of Marengo hereby assumes the following responsibilities pursuant to 35 Ill. Adm. Code 742.1015(i):

A. The City will notify the Illinois EPA Bureau of Land of any proposed ordinance changes or requests for variance at least 30 days prior to the date the local government is scheduled to take action on the proposed change or request (35 Ill. Adm. Code 742.1015(i)(4);

B. The City will maintain a registry of all sites within its corporate limits that have received "No Further Remediation" determinations from the Illinois EPA (35 Ill. Adm. Code 742.1015(i)(5));

C. The City will review the registry of sites established under paragraph II.B. prior to siting public potable water supply wells within the area covered by the ordinance (35 Ill. Adm. Code 742.1015(i)(6)(A));

D. The City will determine whether the potential source of potable water has been or may be affected by contamination left in place at the sites traced and reviewed under paragraphs II. B. and C. (35 Ill. Adm. Code 742.1015(i)(6)(B)); and

E. The City will take action as necessary to ensure that the potential source of potable water is protected from contamination or treated before it is used as a potable water supply (35 Ill. Adm. Code 742.1015(i)(6)(C)).

NOTE: Notification under paragraph II. A. above or other communications concerning this MOU should be directed to:

Manager, Division of Remediation Management
Bureau of Land
Illinois Environmental Protection Agency
P.O. Box 19276
Springfield, IL 62794-9276

III. SUPPORTING DOCUMENTATION

The following documentation is required by 35 Ill. Adm. Code 742.1015(i) and is attached to this MOU:

A. Attachment A: A copy of City of Marengo Ordinance No. 00-5-1 certified by the city clerk that it is the current, controlling law (35 Ill. Adm. Code 742.1015(i)(3));

B. Attachment B: Identification of the legal boundaries within which the ordinance is applicable (certification by city clerk or other official that the ordinance is applicable everywhere within the corporate limits; if ordinance is not applicable throughout the entire city or village, legal description and map of area showing sufficient detail to determine where ordinance is applicable) (35 Ill. Adm. Code 742.1015(i)(2));

C. Attachment C: A statement of the authority of the City to enter into this MOU (council resolution, code of ordinances, inherent powers of mayor or other official signing MOU – attach copies) (35 Ill. Adm. Code 742.1015(i)(1)).

IN WITNESS WHEREOF, the lawful representatives of the parties have caused this MOU to be signed as follows:

For: The City of Marengo

BY: Dennis Hammortree DATE: 5/8/00
Acting Mayor, Dennis Hammortree

FOR: Illinois Environmental Protection Agency

BY: Gary P. King DATE: 9/15/00
(Name and title of signatory)

Key: Sample Submitted for Analysis; Sample on Hold at Laboratory

Geologist: S. Boom

Boring Depth: 20 feet

Groundwater Depth: Not Detected

EGSL Project No: 805247

Note: Boring backfilled with cuttings unless otherwise noted, Stratification lines are approximate; in-situ transition between soil types may be gradual.

APPENDIX M – WELL COMPLETION LOGS

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Illinois Environmental Protection Agency **Well Completion Report**

Site Number: _____ County: McHenry

Site Name: Arnold Engineering Co. Well #: MW-24

State Plane Coordinate: X 9050218.64 Y 2035002.55 (or) Latitude: ___ ___ ___ Longitude: ___ ___ ___ Borehole #: GP-100

Surveyed by: B. Lennon IL Registration #: _____

Drilling Contractor: Earth Solutions Driller: _____

Consulting Firm: EGSL Geologist: S. Boom

Drilling Method: Hollow Stem Auger Drilling Fluid (Type): N/A

Logged By: _____ Date Started: _____ Date Finished: _____

Report Form Completed By: S. Boom Date: 11/7/2013

ANNULAR SPACE DETAILS

Type of Surface Seal: Concrete

Type of Annular Sealant: Bentonite (Hydrated)

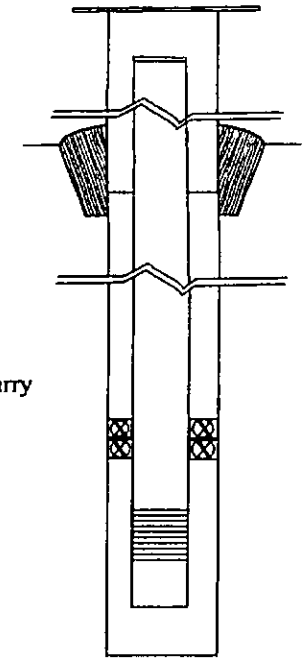
Installation Method: Bottom Up

Setting Time: 24 Hours

Type of Bentonite Seal - - Granular, Pellet, Slurry (Choose One)

Installation Method: Bottom Up

Setting Time: 24 Hours



Type of Sand Pack: 20-40 Sand

Grain Size: 20-40 (Sieve Size)

Installation Method: Hollow Stem Auger

Type of Backfill Material: N/A (if applicable)

Installation Method: N/A

Elevations (MSL)*	Depths (BGS)	(.01ft.)
813.843	0.10	Top of Protective Casing
813.263	-0.48	Top of Riser Pipe
813.743	0.00	Ground Surface
812.743	-1.00	Top of Annular Sealant
792.443	-21.30	Static Water Level (After Completion)
812.743	-1.00	Top of Seal
805.743	-8	Top of Sand Pack
803.743	-10	Top of Screen
783.743	-30	Bottom of Screen
783.743	-30	Bottom of Well
783.743	-30	Bottom of Borehole

* Referenced to a National Geodetic Datum

WELL CONSTRUCTION MATERIAL

(Choose one type of material for each area)

Protective Casing	SS304, SS316, PTFE, PVC, or Other
Riser Pipe Above W.T.	SS304, SS316, PTFE, PVC, or Other
Riser Pipe Below W.T.	SS304, SS316, PTFE, PVC, or Other
Screen	SS304, SS316, PTFE, PVC, or Other

CASING MEASURMENTS

Diameter of Borehole (inches)	5.75
ID of Riser Pipe (inches)	2.0
Protective Casing Length (feet)	1.0
Riser Pipe Length (feet)	49.52
Bottom of Screen to End Cap (feet)	0.30
Screen Length (1st slot to last slot) (feet)	4.5
Total Length of Casing (feet)	45
Screen Slot Size **	.010

**Hand-Slotted Well Screens are Unacceptable

* Referenced to a National Geodetic Datum

WELL CONSTRUCTION MATERIAL

(Choose one type of material for each area)

Protective Casing	SS304, SS316, PTFE, PVC, or Other
Riser Pipe Above W.T.	SS304, SS316, PTFE, PVC, or Other
Riser Pipe Below W.T.	SS304, SS316, PTFE, PVC, or Other
Screen	SS304, SS316, PTFE, PVC, or Other

CASING MEASURMENTS

Diameter of Borehole (inches)	5.75
ID of Riser Pipe (inches)	2.0
Protective Casing Length (feet)	1.0
Riser Pipe Length (feet)	49.52
Bottom of Screen to End Cap (feet)	0.30
Screen Length (1st slot to last slot) (feet)	4.5
Total Length of Casing (feet)	45
Screen Slot Size **	.010

**Hand-Slotted Well Screens are Unacceptable

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Report Form Completed By: S. Boom — Date: 11/7/2013

ANNULAR SPACE DETAILS

Type of Surface Seal: Concrete

Type of Annular Sealant: Bentonite (Hydrated)

Installation Method: Bottom Up

Setting Time: 24 Hours

Type of Bentonite Seal - - Granular, Pellet, Slurry (Choose One)

Installation Method: Bottom Up

Setting Time: 24 Hours

Type of Sand Pack: 20-40 Sand

Grain Size: 20-40 (Sieve Size)

Installation Method: Hollow Stem Auger

Type of Backfill Material: N/A (if applicable)

Installation Method: N/A

September 11, 2013

Mr. William Lennon
EGSL
557 W. Polk Street
Suite 201
Chicago, IL 60607

Project ID: 300 West
First Environmental File ID: 13-4868
Date Received: September 04, 2013

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003102: effective 02/14/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zawolski
Project Manager

Case Narrative

EGSL

Project ID: **300 West**

First Environmental File ID: **13-4868**

Date Received: **September 04, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **300 West**

First Environmental File ID: **13-4908**

Date Received: **September 05, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
G	Surrogate recovery outside control limits; matrix effect.	ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
H	Analysis or extraction holding time exceeded.	P	Chemical preservation pH adjusted in lab.
J	Estimated result; concentration is less than calib range.	Q	The analyte was determined by a GC/MS database search.
K	RPD outside control limits.	S	Analyte was sub-contracted to another laboratory for analysis.
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	T	Sample temperature upon receipt exceeded 0-6°C
		W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Neal Cleghorn
Project Manager

Case Narrative

EGSL

Project ID: **300 West**

First Environmental File ID: **13-4930**

Date Received: **September 06, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **300 West**

First Environmental File ID: **13-4959**

Date Received: **September 09, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Neal Cleghorn
Project Manager

Case Narrative

EGSL

Project ID: **300 West**

First Environmental File ID: **13-5210**

Date Received: **September 20, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Method Comments

Lab Number	Sample ID	Comments:
13-5210-009	GP-118 (9-10)	*Volatile Organic Compounds* The reporting limits are elevated due to matrix interference.
13-5210-010	GP-118 (11-13)	*Volatile Organic Compounds* The reporting limits are elevated due to matrix interference.
13-5210-015	GP-121 (8-9)	*Volatile Organic Compounds* The reporting limits are elevated due to matrix interference.
13-5210-016	GP-121 (13-14)	*Volatile Organic Compounds* The reporting limits are elevated due to matrix interference.

Analytical Report

Client: EGSL
Project ID: 300 West
Sample ID: DISCHARGE
Sample No: 13-5210-039

Date Collected: 09/18/13
Time Collected: 12:00
Date Received: 09/20/13
Date Reported: 09/27/13

Results are reported on a dry weight basis.

Analyte	Result	R.L.	Units	Flags
Volatile Organic Compounds	**Method: 5035A/8260B**			
Analysis Date: 09/26/13				
Vinyl acetate	< 10.0	10.0	ug/kg	
Vinyl chloride	< 10.0	10.0	ug/kg	
Xylene, Total	< 5.0	5.0	ug/kg

October 25, 2013

Mr. William Lennon
EGSL
557 W. Polk Street
Suite 201
Chicago, IL 60607

Project ID: Arnold
First Environmental File ID: 13-5754
Date Received: October 18, 2013

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **Arnold**

First Environmental File ID: **13-5754**

Date Received: **October 18, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **300 West - 805247**

First Environmental File ID: **13-5410**

Date Received: **October 02, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Project ID: Marengo
First Environmental File ID: 13-6146
Date Received: November 06, 2013

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **Marengo**

First Environmental File ID: **13-6146**

Date Received: **November 06, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.
