trans-1,3-Dichloropropene	ND	0.001		mg/L	1	1/26/2006
Ethylbenzene	ND	0.005		mg/L	1	1/26/2006

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
B - Analyte detected in the associated Method Blank
HT - Sample received past holding time
* - Non-accredited parameter
RL - Reporting / Quantitation Limit for the analysis
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
E - Value above quantitation range
H - Holding time exceeded

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.'s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property, and its surrounding area, resulting from past activities. ASTM E 1527-00, Section 7.3 on Historical Use Information, identifies the prior use requirements for a Phase I environmental site assessment. The ASTM standard requires a review of *reasonably ascertainable standard historical sources. Reasonably ascertainable is defined as information that is publicly available, obtainable from a source with reasonable time and cost constraints, and practically reviewable.* To meet the prior use requirements of ASTM E 1527-00, Section 7.3.4, the following *standard historical sources* may be used: aerial photographs, city directories, fire insurance maps, topographic maps, property tax files, land title records (although these cannot be the sole historical source consulted), building department records, or zoning/land use records. ASTM E 1527-00 requires *"All obvious uses of the property shall be identified from the present, back to the property's obvious first developed use, or back to 1940, whichever is earlier. This task requires reviewing only as many of the standard historical sources as are necessary, and that are reasonably ascertainable and likely to be useful."* (ASTM E 1527-00, Section 7.3.2 page 12.)

EDR's Historical Topographic Map Report includes a search of available public and private color historical topographic map collections.

Topographic Maps
A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Many features are shown by lines that may be straight, curved, solid, dashed, dotted, or in any combination. The colors of the lines usually indicate similar classes of information. For example, topographic contours (brown); lakes, streams, irrigation ditches, etc. (blue); land grids and important roads (red); secondary roads and trails, railroads, boundaries, etc. (black); and features that have been updated using aerial photography, but not field verified, such as disturbed land areas (e.g., gravel pits) and newly developed water bodies (purple).

For more than a century, the USGS has been creating and revising topographic maps for the entire country at a variety of scales. There are about 60,000 U.S. Geological Survey (USGS) produced topo maps covering the United States. Each map covers a specific quadrangle (quad) defined as a four-sided area bounded by latitude and longitude. Historical topographic maps are a valuable historical resource for documenting the prior use of a property and its surrounding area, and due to their frequent availability can be particularly helpful when other standard historical sources (such as city directories, fire insurance maps, or aerial photographs) are not reasonably ascertainable.

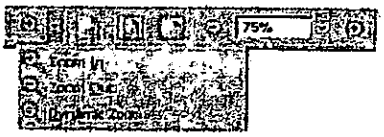
USER'S GUIDE

This User's Guide provides guidelines for accessing Sanborn Map® images and for transferring them to your Word Processor.



Reading Sanborn Maps

- Sanborn Maps document historical property use by displaying property information through words, abbreviations, and map symbols. The Sanborn Map Key provides information to help interpret the symbols and abbreviations used on Sanborn Maps. The Key is available from EDR's Web Site at: http://www.edrnet.com/reports/samples/key.pdf

Organization of Electronic Sanborn Image File

- Sanborn Map Report, listing years of coverage
- User's Guide
- Oldest Sanborn Map Image
- Most recent Sanborn Map Image

Navigating the Electronic Sanborn Image File

1. Open file on screen.
2. Identify TP (Target Property) on the most recent map.
3. Find TP on older printed images.
4. Using Acrobat® Reader®, zoom to 250% in order to view more clearly. (200-250% is the approximate equivalent scale of hardcopy Sanborn Maps.)
   A. On the menu bar, click "View" and then "Zoom to..."
   B. Or, use the magnifying tool and drag a box around the TP

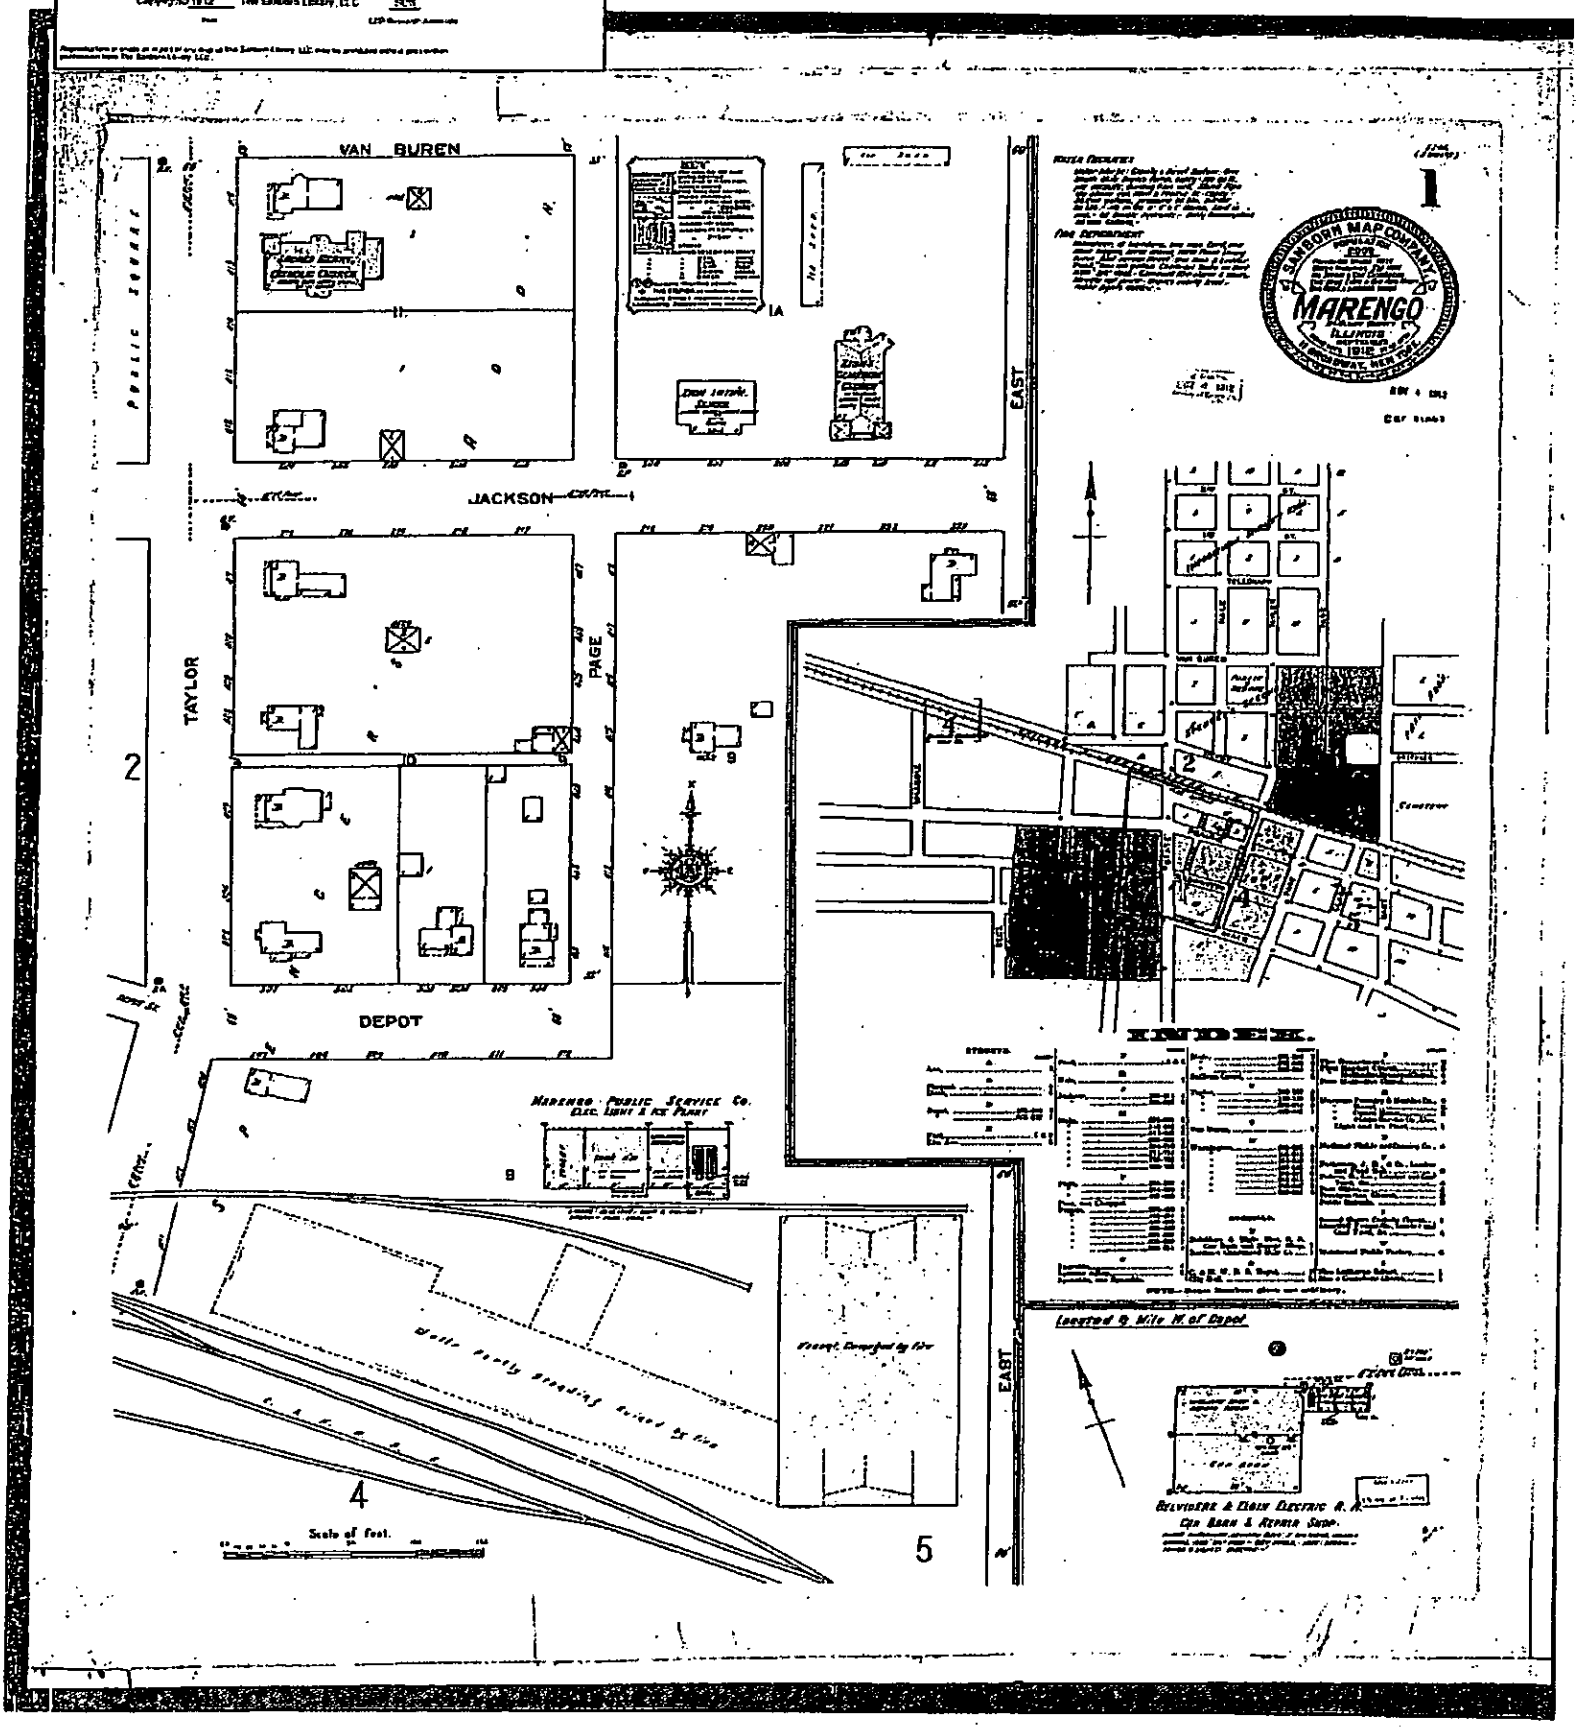
Printing a Sanborn Map From the Electonic File

- EDR recommends printing images at 300 dpi (300 dpi prints faster than 600 dpi)
- To print only the TP area, cut and paste from Acrobat to your word processor application.

Acrobat Versions 6 and 7

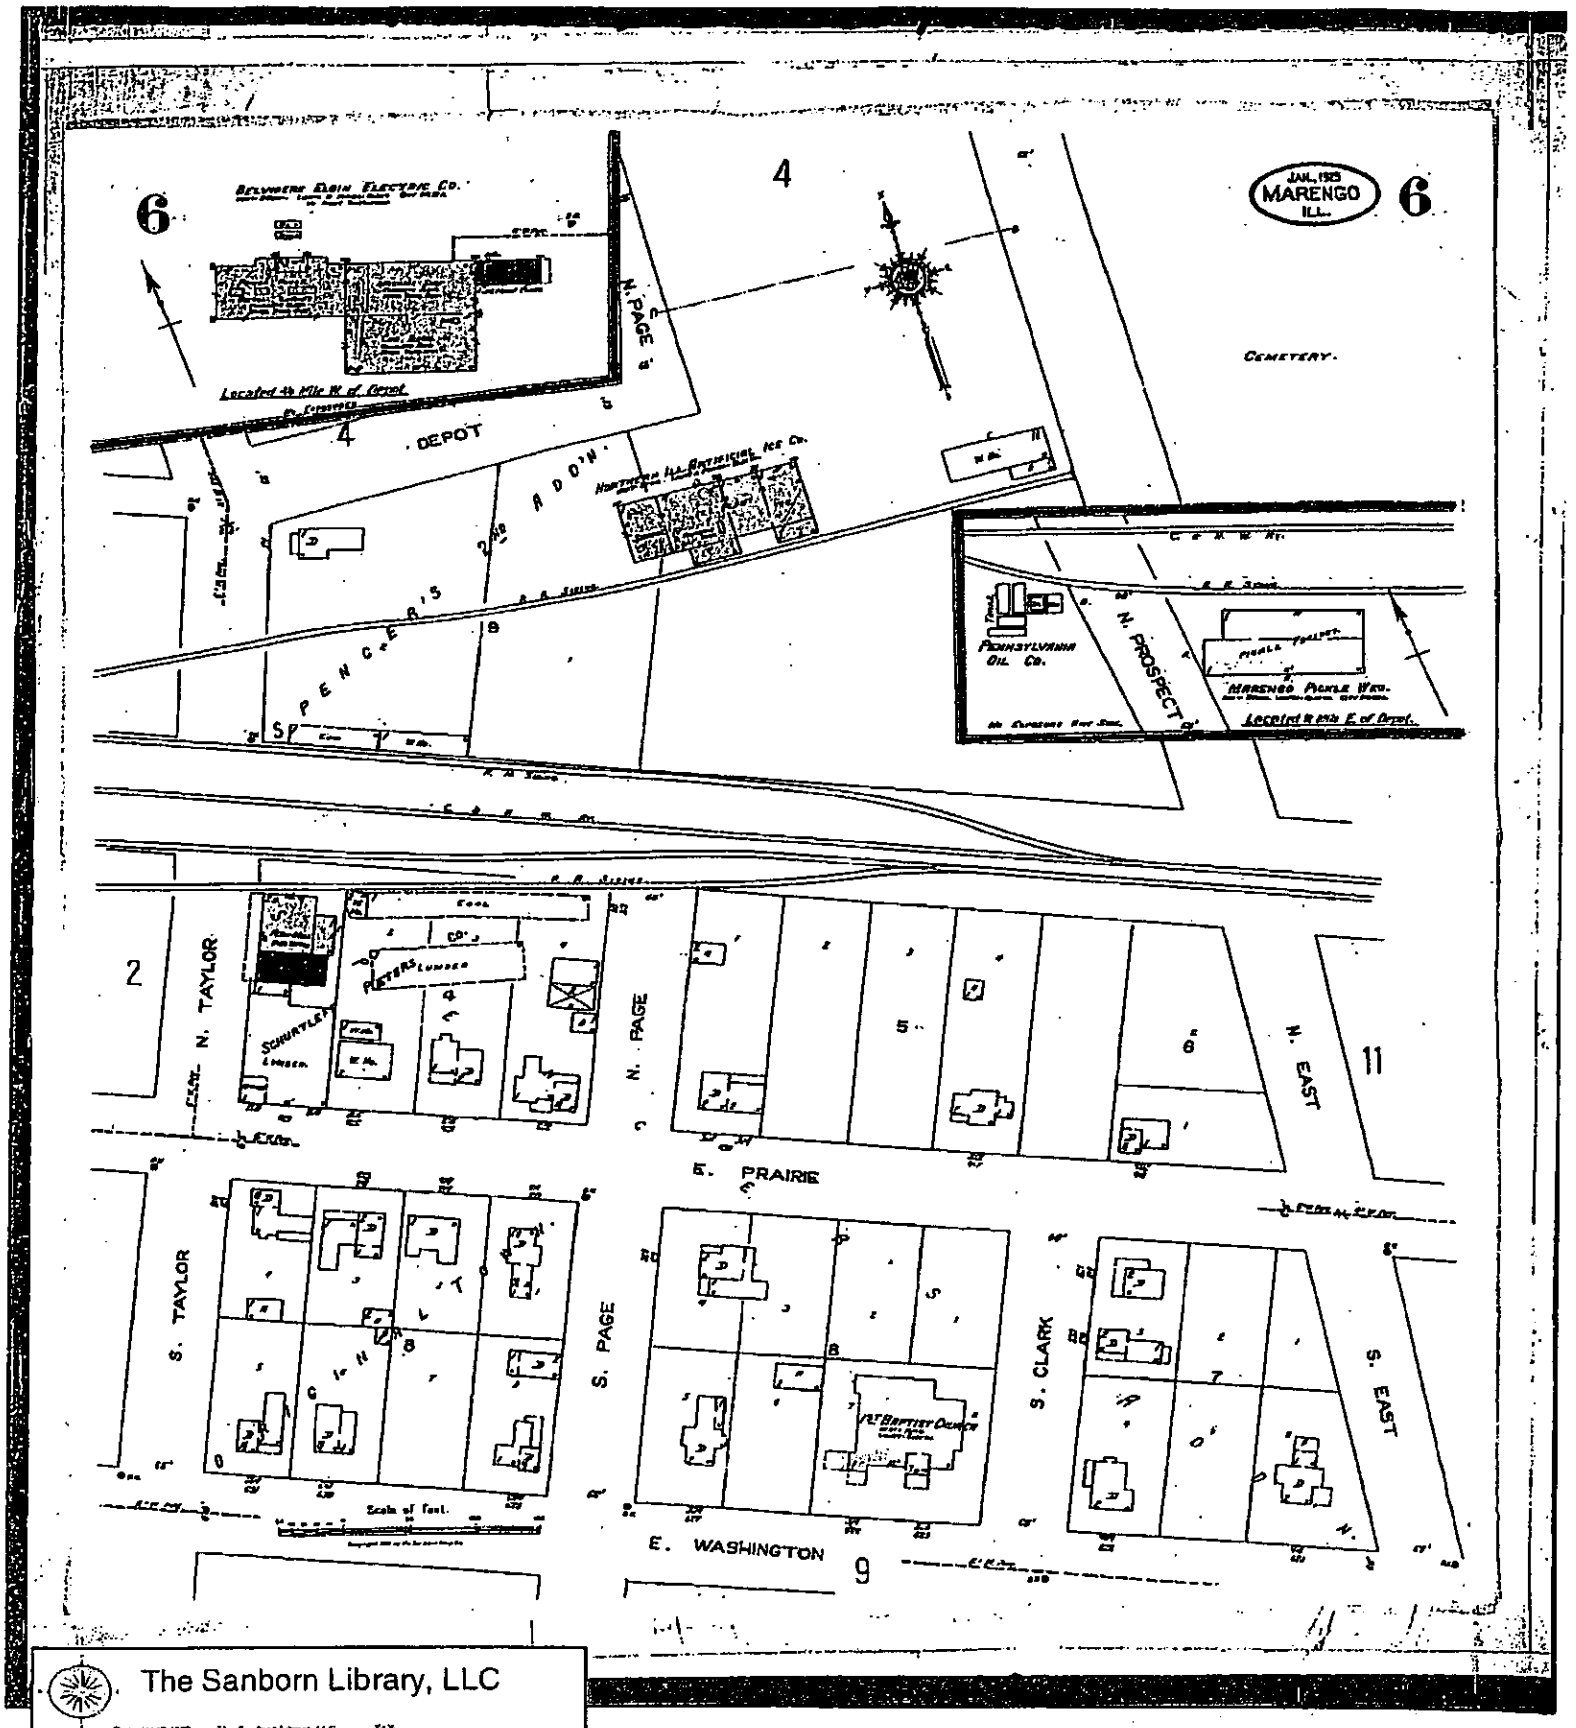
1. Go to the menu bar
2. Click the "Select Tool"
3. Draw a box around the area selected
4. "Right click" on your mouse
5. Select "Copy Image to Clipboard"
6. Go to Word Processor such as Microsoft Word, paste and print.

Acrobat Version 5



1. Go to the menu bar
2. Click the "Graphics Select Tool"
3. Draw a box around the area selected
4. Go to "Menu"
5. Highlight "Edit"
6. Highlight "Copy"
7. Go to Word Processor such as Microsoft Word, paste and print.

Important Information about Email Delivery of Electronic Sanborn Map Images



- Images are grouped intro one file, up to 2MB.
- In cases where in excess of 6-7 map years are available, the file size typically exceeds 2MB. In these cases, you will receive multiple files, labeled as "1 of 3", "2 of 3", etc. including all available map years.
- Due to file size limitations, certain ISPs, including AOL, may occasionally delay or decline to deliver files. Please contact your ISP to identify their specific file size limitations.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 12/05/2005 has revealed that there is 1 LUST site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
FLOIT SAND & GRAVEL CO.	827 NORTH SPONADLE	1/4 - 1/2 ESE	6	14

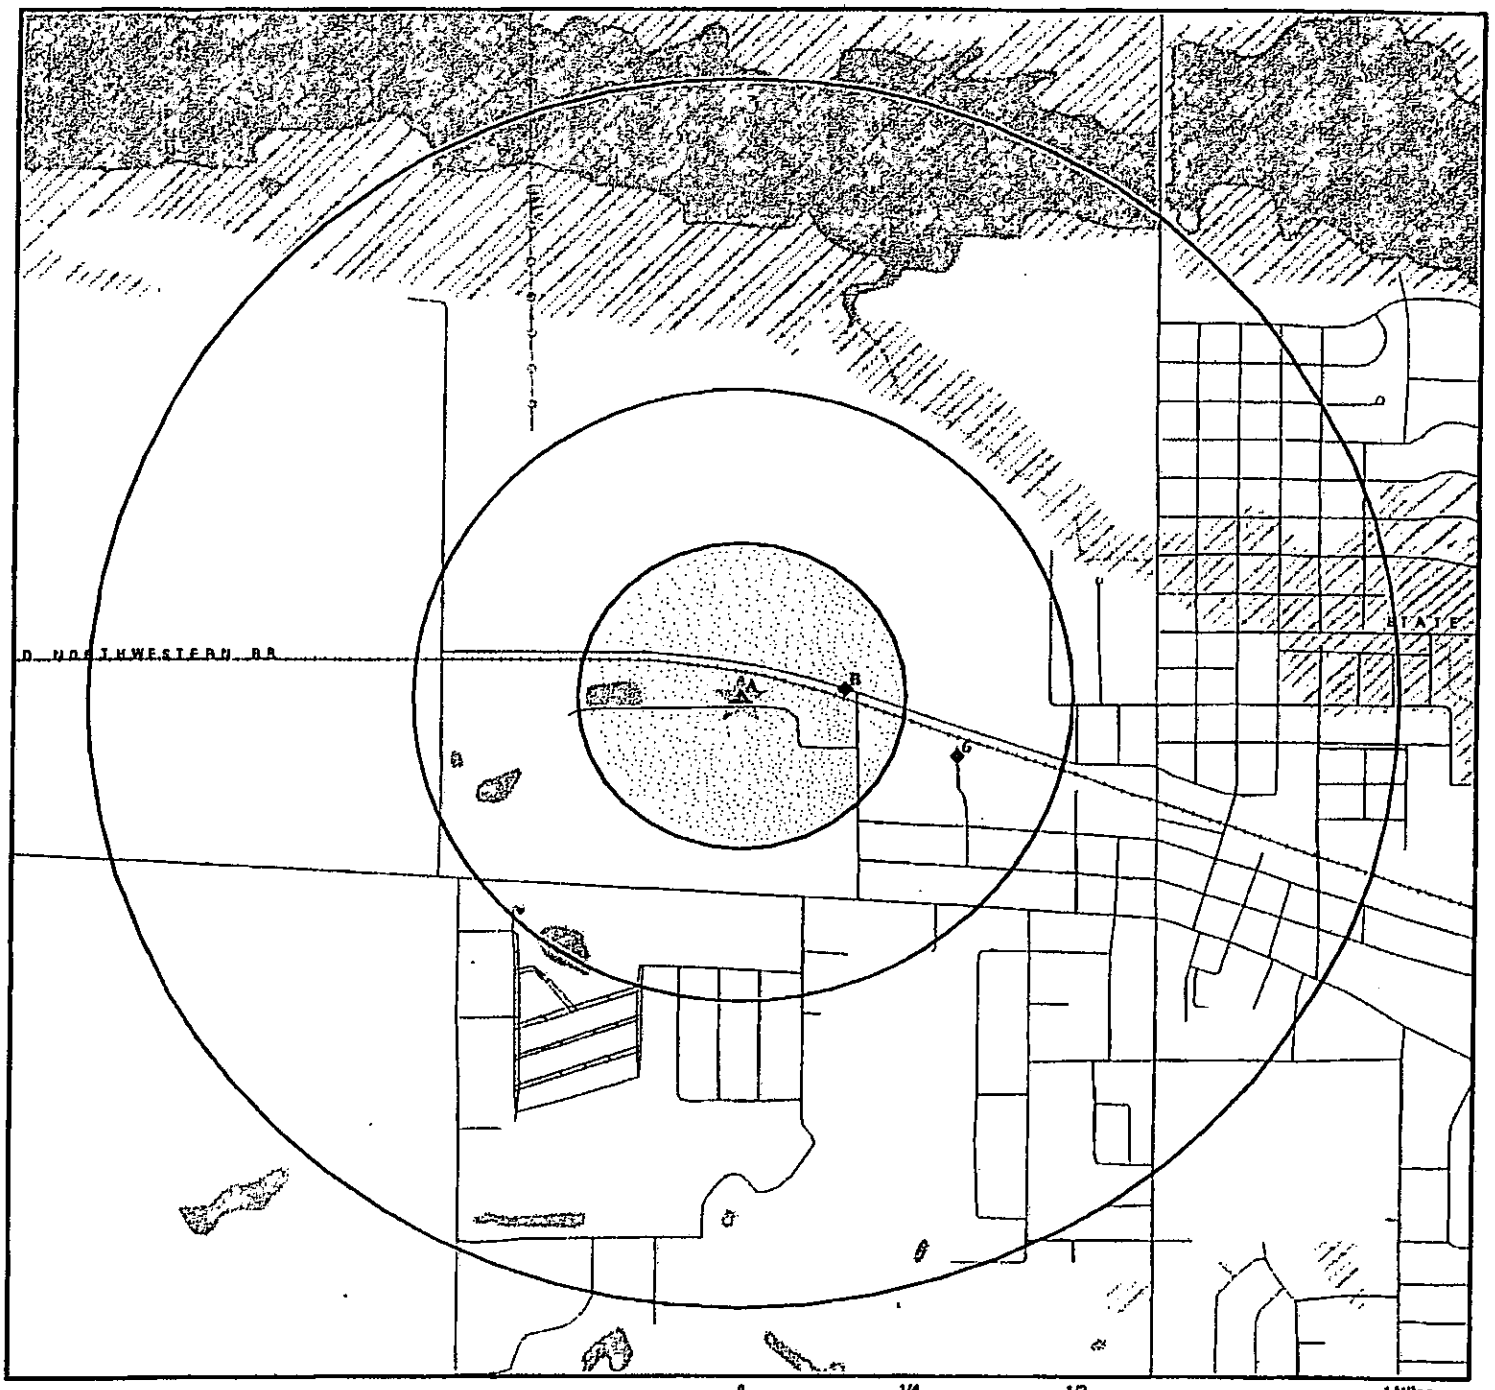
UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Illinois State Fire Marshal's STC Facility List.

A review of the UST list, as provided by EDR, and dated 11/03/2005 has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
STADE GRAIN CO	21602 RAILROAD ST	1/8 - 1/4 E	B4	12

SRP: Illinois Environmental Protection Agency, Site Remediation Program Database

A review of the SRP list, as provided by EDR, and dated 11/14/2005 has revealed that there is 1 SRP site within approximately 0.5 miles of the target property.



Lower Elevation	Address	Dist / Dir	Map ID	Page
STADE PROPERTY	21600 WEST RAILROAD STR	1/8 - 1/4 E	B5	13

EXECUTIVE SUMMARY

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/14/05
Date Data Arrived at EDR: 11/02/05
Date Made Active in Reports: 12/07/05
Number of Days to Update: 35

Source: EPA
Telephone: N/A
Last EDR Contact: 11/02/05
Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Telephone: N/A
Last EDR Contact: 11/02/05
Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 09/19/05
Date Data Arrived at EDR: 10/21/05
Date Made Active in Reports: 10/27/05
Number of Days to Update: 6

Next Scheduled EDR Contact: 12/19/05
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Date of Government Version: 08/22/05
Date Data Arrived at EDR: 09/20/05

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Homes & Centers Listing
Source: Department of Children & Family Services
Telephone: 312-814-4150

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK® - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

300 N. WEST STREET
300 N. WEST STREET
MARENGO, IL 60152

TARGET PROPERTY COORDINATES

Elevation: 820 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

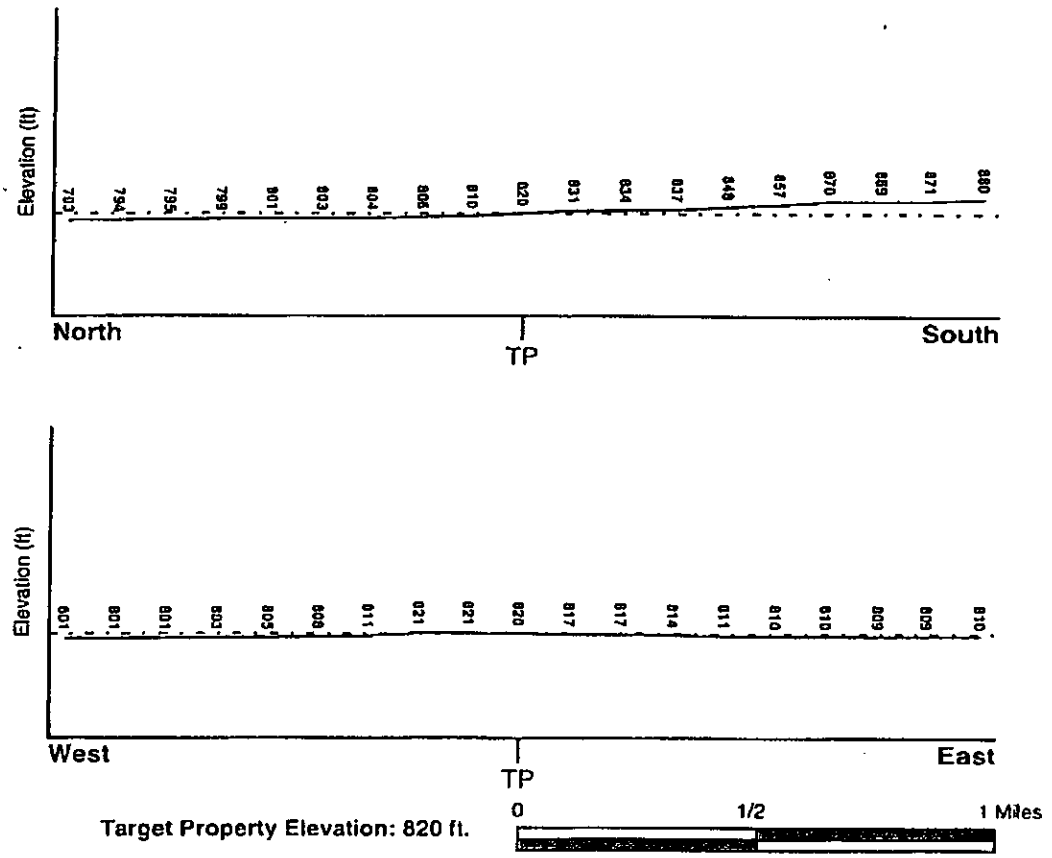
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map:	42088-C5 MARENGO NORTH, IL
General Topographic Gradient:	General North
Source:	USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
MCHENRY, IL	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 1707320175B

Additional Panels in search area:

MARENGO NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were compiled under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era:	Paleozoic	Category:	Stratified Sequence
System:	Ordovician		
Series:	Upper Ordovician (Cincinnatian)		
Code:	O3 *(decoded above as Era, System & Series)*		

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	WARSAW
Soil Surface Texture:	silt loam
Hydrologic Group:	Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	17 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 7.30 Min: 5.60
2	17 inches	33 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.10
3	33 inches	35 inches	gravelly - sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 2.00 Min: 0.60	Max: 8.40 Min: 6.10

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: clay loam
loam
silty clay loam
sandy loam
gravelly - sandy loam
gravelly - loam

Surficial Soil Types: clay loam
loam
silty clay loam
sandy loam
gravelly - sandy loam
gravelly - loam

Shallow Soil Types: clay loam
loam
silty clay loam
sandy loam

Deeper Soil Types: gravelly - coarse sand

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

sand and gravel
sand
silty clay loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

1 EXECUTIVE SUMMARY

On April 24, 2008, Environmental Group Services, Ltd. (EGSL) completed a Phase II Subsurface Soil Investigation at the property located at 300 N. West Street, Marengo, Illinois, hereinafter referred to as the "Subject Property". This investigation was performed in accordance with the regulations set forth in 35 IAC 740 (Site Remediation Program) and 35 IAC 742 (Tiered Approach to Corrective Action Objectives), Tier 1, for Residential properties. The purpose of this investigation was to delineate subsurface contamination adjacent to a historical UST area and adjacent to an area where elevated levels of arsenic were previously detected at the Subject Property.

EGSL conducted a Limited Phase II Subsurface Soil investigation on March 3, 2006. According to the report, arsenic was detected at a concentration of 450 mg/Kg along the northern portion of the Subject Property, between the pump house and Building 2/3/4. Additionally, two, 8,000-gallon underground storage tanks were removed in the immediate vicinity of this area of concern on November 16, 2007. Both tanks were in poor condition at the time of removal, and olfactory and visual observations indicated that the subsurface soil had been negatively impacted; as such, Office of the State Fire Marshal (OSFM) personnel identified that the USTs had been leaking. The incident was subsequently reported to the Illinois Emergency Management Agency (IEMA) and the IEPA Leaking Underground Storage Tank (LUST) section (LUST Incident number 20071279).

On April 24, 2008, EGSL advanced nine soil borings in the above-referenced areas of concern. 13 samples were submitted to *STAT Analysis Corporation* for analyses of BTEX/PNAs and/or Total Arsenic/TCLP Arsenic. According to the laboratory results, none of the samples contained chemicals of concern above IEPA Tier 1 Remediation Objectives (ROs), with the exception of arsenic, which was detected at SP-7 at a concentration of 14.0 mg/Kg, which is slightly above the Tier 1 RO of 13.0 mg/Kg for the ingestion exposure route.

Based on the above-referenced analytical results, it appears that the vertical and horizontal extent of negatively impacted subsurface soil in this area is approximately 1,150 cubic yards in size (1,500 tons).

2 BACKGROUND INFORMATION

2.1 Site Location and Description

The Subject Property is located at 300 North West Street, in a residential/industrial area of Marengo, Illinois and is approximately 45-acres in size. The Subject Property is currently occupied by *Arnold Magnetic Technologies*, which utilizes the site for the manufacturing of magnets and the production of rolled metal products.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

2.2 Previous Site Investigations

EGSL conducted a Limited Phase II Subsurface Soil investigation on March 3, 2006. According to the report, arsenic was detected at a concentration of 450 mg/Kg along the northern portion of the Subject Property, between the pump house and Building 2/3/4. Additionally, two, 8,000-gallon underground storage tanks were removed in the immediate vicinity of this area of concern on November 16, 2007. Both tanks were in poor condition at the time of removal, and olfactory and visual observations indicated that the subsurface soil had been negatively impacted; as such, Office of the State Fire Marshal (OSFM) personnel identified that the USTs had been leaking. The incident was subsequently reported to the Illinois Emergency Management Agency (IEMA) and the IEPA Leaking Underground Storage Tank (LUST) section (LUST Incident number 20071279).

3 PHASE II SUBSURFACE SOIL INVESTIGATION ACTIVITIES

A Phase II Subsurface Soil Investigation was conducted in order to assess the potential for the presence of chemicals of concern (COC) in the subsurface soil present at the site. The investigation was conducted in accordance with 35 IAC 740 (SRP) and the COC were chosen from the Target Compound List (TCL) indicator contaminants identified in Appendix A of Part 740.

3.1 Field Sampling Procedures

EGSL utilized a Geoprobe® 6610DT track-mounted direct-push probe to advance a 5-foot by 2-inch soil sampler in order to retrieve continuous soil samples around the Subject Building. Soil samples were continuously collected to depths of 10 to 15-feet below ground surface (bgs). All soil samplers were lined with acetate tubes.

EGSL collected a total of nine soil samples (SP-1…SP-9) from throughout previously referenced areas of concern. See Appendix A for boring locations.

All soil samples were split into two parts: one to be placed into a sealed plastic bag for headspace analysis of volatile organic vapors and the other to be placed in laboratory supplied containers for potential analysis. The bagged samples were tested in the field with Photo-Ionization Detector (PID). The PID was used to screen each soil sample from each boring location for relative concentration of VOCs and does not provide separation of the contaminants into individual constituents. The utilization of this field-screening device provided immediate on-site data for use in the assessment of the site.

A total of 13 samples were submitted for analysis in order to analytically determine the presence and concentration of COC in the areas of concern. The depth and the type of analysis requested of the samples submitted to *STAT Analysis* are listed below:

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Boring Number	Depth (feet)	BTEX/PNAs	Total Arsenic/ TCLP Arsenic
SP-1	5-7	X	
SP-1	13-15	X	
SP-2	4-6	X	
SP-3	4-6	X	
SP-4	5-7	X	
SP-5	6-8	X	
SP-5	8-10		X
SP-6	13-15		X
SP-7	8-10		X
SP-7	4-6		X
SP-8	8-10		X
SP-9	4-6		X
SP-9	8-10		X

The soil samples targeted for laboratory analysis of VOCs were packed into new 40-milliliter glass vials, pre-preserved in sodium bisulfate and methanol in accordance with EPA Method 5035. The soil samples collected for the remaining analysis were packed into one non-preserved 8-ounce wide-mouth jar with a Teflon-lined cap. *STAT Analysis* supplied all the glass vials and jars. All soil samples were stored on ice during soil sample collection activities and while being transported to *STAT*. Standard Chain-of-Custody procedures were followed to track the sample.

Cross-contamination during soil sampling was minimized by using an Alconox detergent wash and tap water rinse to decontaminate the sampling tools between each probe. Also, other sampling equipment and measurement tools were hand washed with an Alconox detergent wash and rinsed three times with distilled water between soil sample intervals. The tools were then placed on clean and decontaminated surfaces. Disposable latex gloves were worn during the collection of soil sampling events and were changed between each sample.

4 PHASE II SUBSURFACE INVESTIGATION RESULTS

The following section presents the physical and chemical results of the Phase II investigation, which include a description of the site subsurface and regional geology and the chemical findings in the soil samples submitted to the laboratory.

4.1 Subsurface Soil Chemical Results

The analytical test results of the soil samples were compared to the Soil Remediation Objectives (SROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742,

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Tiered Approach to Corrective Action Objectives (TACO), Tier I for Industrial/Commercial and Residential properties and for Soil Component of the Groundwater Ingestion Route (SCGIR) (Class I Groundwater).

Listed below are all chemicals of concern that were detected above IEPA Tier 1 Remediation Objectives:

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	TACO Tier 1 RO (mg/Kg)	Exposure Pathway
Arsenic	GP-7 (4-6)	14.0	13.0	Residential Ingestion Industrial/Commercial Ingestion

5 CONCLUSIONS AND RECOMMENDATIONS

On April 24, 2008, EGSL advanced nine soil borings in the above-referenced areas of concern. 13 samples were submitted to *STAT Analysis Corporation* for analyses of BTEX/PNAs and/or Total Arsenic/TCLP Arsenic. According to the laboratory results, none of the samples contained chemicals of concern above IEPA Tier 1 Remediation Objectives (ROs), with the exception of arsenic, which was detected at SP-7 at a concentration of 14.0 mg/Kg, which is slightly above the Tier 1 RO of 13.0 mg/Kg for the ingestion exposure route.

Based on the above-referenced analytical results, it appears that the vertical and horizontal extent of negatively impacted subsurface soil in this area is approximately 1,150 cubic yards in size (1,500 tons).

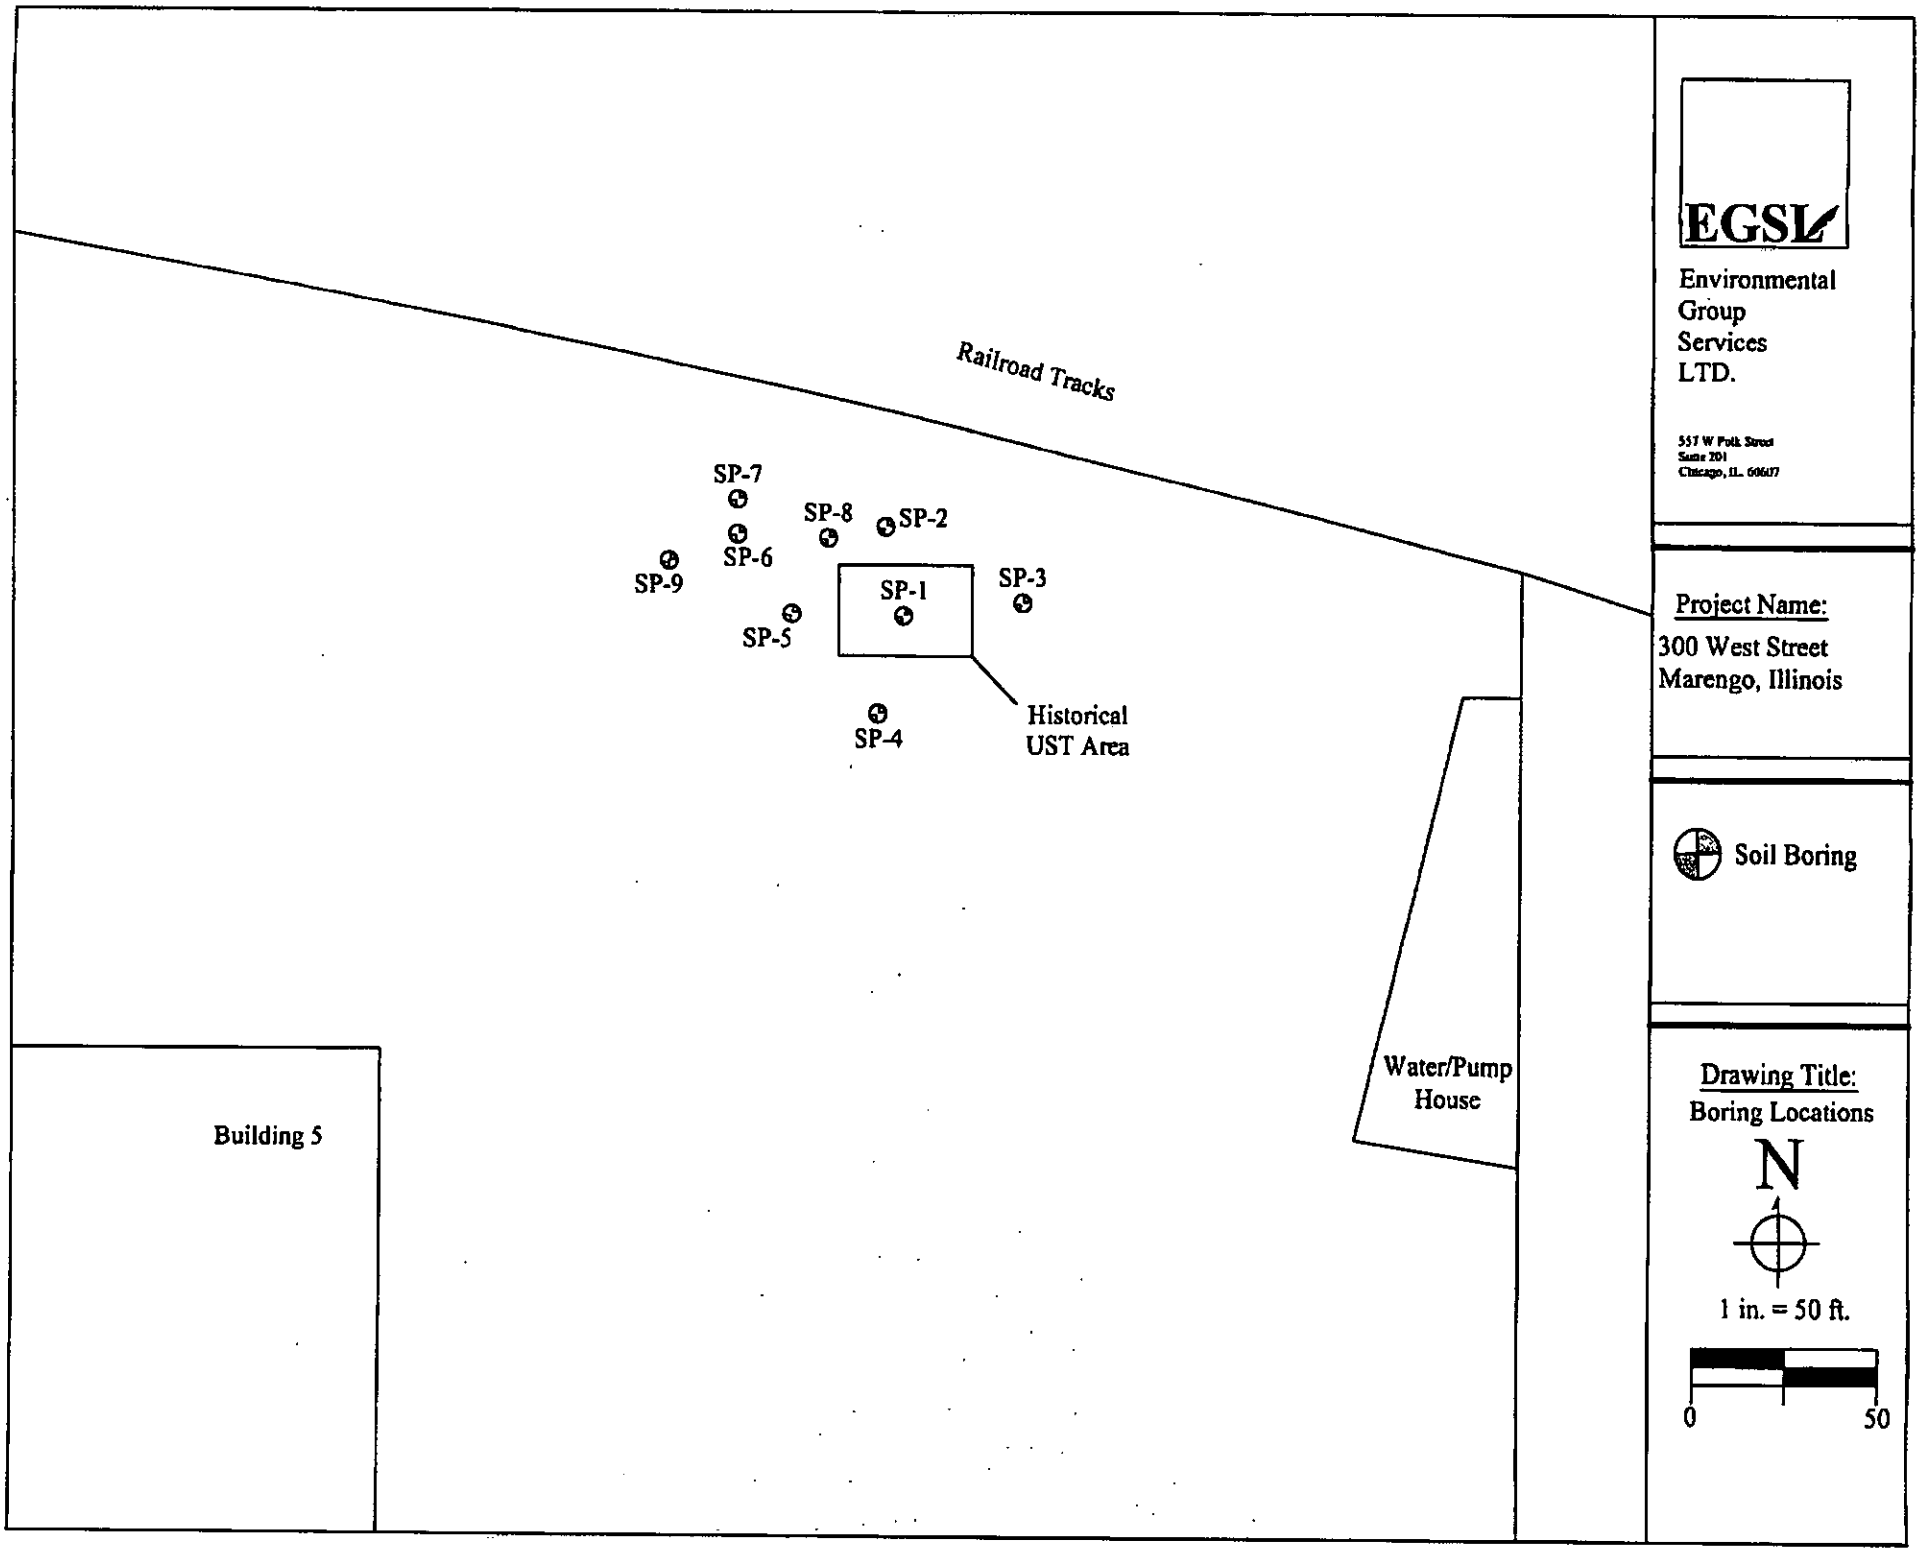
Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

6 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This report pertains to the property located at 300 N. West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

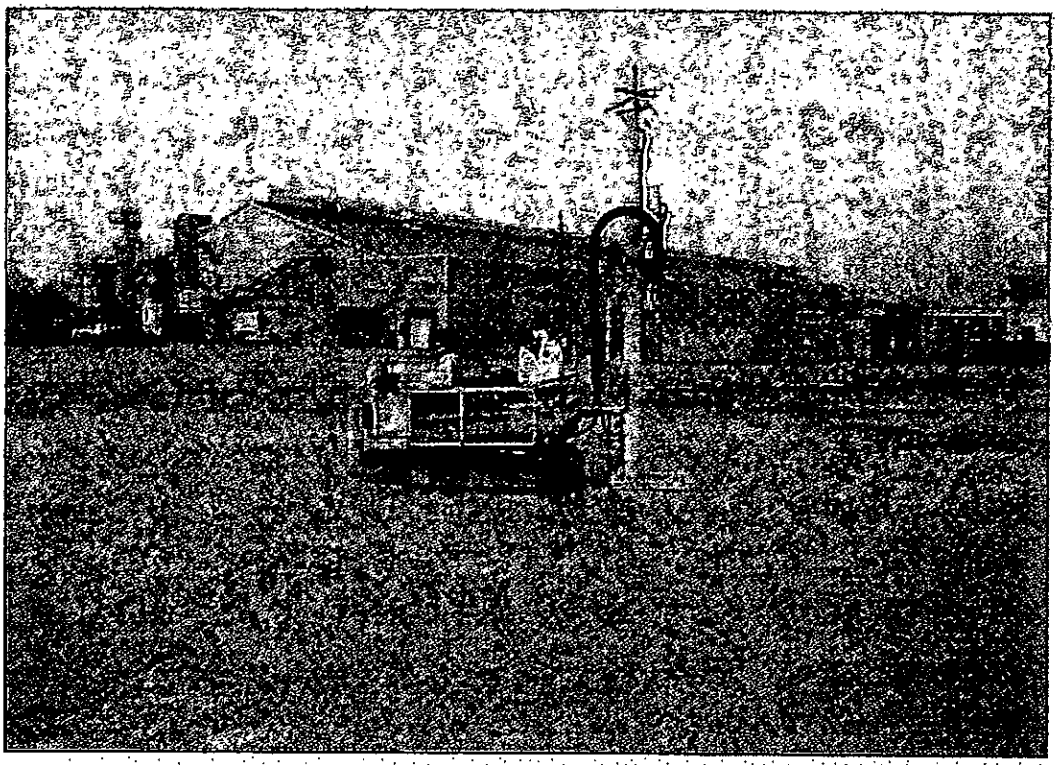
Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED



Bill Lennon
Project Manager

Regina Tourtelot
Report Review



Vahooman Mirkhaef
President

RE: Marengo STAT Project No: 08040817

Dear Bill:

STAT Analysis received 13 samples for the referenced project on 4/25/2008 1:57:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Christiane Schmidt-Lange
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

STAT Analysis Corporation **Date:** *May 01, 2008*

CLIENT: Environmental Group Services, Ltd.
Project: Marengo
Lab Order: 08040817

CASE NARRATIVE

Due to matrix interference, sample SP-1 (5-7) (08040817-001 had recovery for VOC surrogate 4-Bromofluorobenzene outside of control limits (35% recovery, QC Limits 44-114%).

1 EXECUTIVE SUMMARY

Environmental Group Services, Limited (EGSL) of Chicago, Illinois was contracted by *300 West LLC* to perform a Phase I Environmental Assessment of the property located at 300 West Street, Marengo, Illinois (herein referred to as the Subject Property or the Site).

The Subject Property investigation consisted of reviewing environmental regulatory databases of the Illinois Environmental Protection Agency (IEPA), the United States Environmental Protection Agency (USEPA), the Office of the State Fire Marshal (OSFM), and the Illinois Emergency Management Agency and local government agencies; reviewing historical information; and conducting a site assessment. The purpose of this investigation was to identify areas of environmental concern associated with the site.

EGSL performed the site inspection on April 15, 2009 and was escorted by Ms. Jessica Wojick, Corporate Director of Environmental Health and Safety Affairs for *Arnold Magnetic Technologies*. The Subject Property is approximately 72-acres in size and is currently occupied by *Arnold Magnetic Technologies* (Arnold) which utilizes the property for the manufacturing of magnetic components and rolled metal products. The Subject Property was originally developed in the late 1890s and was first utilized as a rail yard and railroad engine manufacturing/maintenance facility. The Subject Property was reportedly purchased by Arnold in the early 1900s, with their magnetic operations/manufacturing beginning in the 1950s.

The following Subject Buildings are currently, or have been historically, located at the Subject Property (see Site Diagram in Appendix A):

- Building 1: Built in the late 1890s and demolished around 2002. Building was approximately 40,000-square-feet in size and was originally utilized for railroad engine manufacturing and repair. Arnold later utilized Building 1 for magnet production, pressing operations, and heat treating.
- Building 2/3/4/7: Original portion of the building (Bldg. 2) constructed in the 1950s, with subsequent additions (Bldgs. 3, 4, and 7) later constructed. The entire building is approximately 135,000-square-feet in size and is currently utilized for office space, maintenance, shipping, and miscellaneous storage. Building 2/3/4/7 was historically utilized for tape-core, powder-core, and winding operations associated with magnetic manufacturing; all manufacturing operations ceased in this building in approximately 2002.
- Building 5: Constructed in the 1950s-1960s and is approximately 74,000-square-feet in size. Currently and historically has been utilized by Arnold for their Alnico Products Division, which manufactures magnetic components by molting, melting, and finishing Aluminum, Nickel, and Cobalt.
- Building 6: Constructed in the 1950s-1960s and demolished in the 1990s. Building 6 was approximately 42,000-square-feet in size and was historically occupied by the Strontium Ferrite Department, which conducted wet processing, mixed metal sludge pressing, iron powder compressing, and baking/grinding operations associated with motor-arc manufacturing.
- Building 8: Constructed between 1950-1970 and is approximately 3,000-square-feet in

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

size. Building 8 is utilized for the storage of landscaping and maintenance equipment, and also contains an approximately 850-foot deep water well that is utilized for potable water for the Subject Property; an associated 100,000-gallon above-ground water holding tank is located directly south of Building 8.

- Building 9: Constructed at an unknown date and demolished in the 1990s. Building 9 was approximately 5,000-square-feet in size and was utilized as an airplane hangar associated with an adjacent private runway (no longer present).
- Building 10: Constructed at an unknown date. Building 10 is approximately 3,000-square-feet in size is currently/has historically been utilized for miscellaneous storage, 55-gallon drum storage, and drum cleaning.
- Building 11/14. Original portion of the building (Bldg. 11) constructed in the 1950s, with subsequent addition (Bldg. 14) later constructed. The entire building is approximately 54,000-square-feet in size and has been utilized by Arnold's Rolled Products Division since the late 1960s. Operations that currently exist within Building 11/14 involve the rolling and finishing operations associated with the production of thin-gauge rolled steel products.
- Building 12: Constructed by 1970 and is approximately 14,000-square-feet in size. Currently and historically utilized as a parts/storage warehouse.
- Building 16: Constructed after 1987 and is approximately 3,200-square-feet in size. Currently and historically utilized as a hazardous and non-hazardous storage shed.

Other buildings associated with the Subject Property include a security booth located by the main entrance, a pump house associated with the wastewater treatment system and pond system, and a pump house associated with the fire suppression system.

A pond system consisting of five ponds and a 16-acre diked percolation field is also located at the Subject Property. Ponds 1-4 are located along the northwestern portion of the Subject Property and are utilized for overflow associated with sanitary sewage, drain returns, well water, and cooling/process wastewater utilized in the manufacturing operations conducted on-site. All sanitary sewer and process water incoming to the ponds is treated within the wastewater treatment system pump house. Treated wastewater from the four ponds is either recycled back to plant operations or discharged via an industrial ditch to Pond 5 and the 16-acre diked percolation field, which are located at the southwestern portion of the Subject Property. The Subject Property was granted Water Pollution Control Permit 2006-EO-0690 from the IEPA on April 21, 2006. As part of the Special Conditions identified on the permit, a series of groundwater monitoring wells and the discharge from Pond 4 must be sampled monthly and submitted for analysis of 1,1,1-Trichloroethane (111-TCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE), Total Dissolved Solids, Nickel, and pH. Results of the analysis are to be submitted to the IEPA semi-annually.

EGSL was provided with the May 15, 2008 and November 14, 2008 water sampling reports that were submitted to the IEPA. According to laboratory results, chemicals of concern were detected in the groundwater at concentrations above IEPA groundwater standards. As such, in February and April, 2008, the IEPA issued Violation Notices L-2008-01057 and L-2008-01123 to Arnold. In order to comply with the Violation Notices, the owners of the Subject Property submitted a Compliance Commitment Agreement (CCA) to the IEPA on June 17, 2008, which was accepted by the IEPA on July 16, 2008. According to the Terms and Conditions of the CCA, the Subject

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Property was to be enrolled into the Site Remediation Program (SRP), which was formally completed on May 28, 2008.

Additional requirements as per the Terms and Conditions of the CCA included the sampling of off-site, down-gradient, private water wells that were being possibly being utilized by the northern and western adjacent properties. On June 19, 2008, EGSL and Mr. Tom Rivera of the IEPA sampled three residential private water wells and submitted the samples for analysis of Volatile Organic Compounds (VOCs). According to laboratory results, none of the samples contained any VOCs above laboratory detection limits; as such, Mr. Rivera concluded that this portion of the Terms and Conditions were complete, with the understanding and agreement that the Subject Property would continue with its process of obtaining a No Further Remediation (NFR) letter from the SRP.

Additional investigations at the Subject Property included a Ground Penetrating Radar (GPR) Survey that was completed by EGSL on September 13, 2006. According to historical site diagrams and interviews with Arnold personnel, nine areas of concern were identified that may have currently or historically contained underground storage tanks (USTs). Results of the GPR Survey indicated that three of the areas of concern contained USTs (five USTs total); the remaining six areas of concern contained anomalies representative of UST excavation areas.

Based on the results of the GPR Survey, EGSL contracted *R.W. Collins Co.* to remove two fuel oil USTs located east of historical Building 1; abandon two, 1,000-gallon rolling oil USTs located within Building 2/3/4/7; and abandon one, 6,000-gallon acetone UST located northeast of Building 2/3/4/7. In November 2007, all five USTs were abandoned/removed with Office of the State Fire Marshal (OSFM) personnel present. Based on the tank integrity of the two fuel oil USTs that were removed, it was determined that the subsurface soil had been negatively impacted. As such, LUST Incident Number 20071279 was assigned to the site. Since no subsurface soil samples were obtained adjacent to the three abandoned USTs, the LUST Incident number also incorporated the three abandoned USTs. Since the Subject Property was to be enrolled into the SRP, the property owners submitted an "Elect to Proceed under the SRP" form to the LUST Department on December 24, 2007.

EGSL recognized the following environmental concerns in connection with the Subject Property as defined by the American Society of Testing and Materials Standard E 1527-05, "Standard Practice for Environmental Site Assessments" during the site assessment:

- Based on the age of the Subject Buildings, suspect lead based paint and suspect asbestos containing building materials are considered environmental concerns; as such, EGSL recommends performing an Asbestos Survey prior to any type of disturbance to the building materials via renovation or demolition. A Lead Based Paint Survey is recommended prior to renovation within the Subject Buildings. Continue with maintaining the painted surfaces, and avoid sanding, chipping, or scraping any painted surfaces until a Lead Based Paint Survey is conducted.

- The Subject Property has been utilized for major industrial purposes for over 100 years. It has been confirmed that operations, activities, and chemicals associated with the

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

historical manufacturing procedures have negatively impacted the subsurface soil and groundwater.

- The Subject Property is currently enrolled into the IEPA's Site Remediation Program. The Subject Property is currently seeking a Comprehensive No Further Remediation Letter for Residential Properties from the SRP.

- The Subject Property is associated with LUST Incident 20071279. This incident is currently being addressed within the SRP.

Based on the above-referenced environmental concerns, EGSL recommends that all necessary investigations and remediation activities be conducted in order to receive a Comprehensive NFR for Residential Properties from the SRP.

The information contained in this report is confidential in nature. This report is exclusively for the use and benefits of 300 West LLC and is not for the use or benefit of, nor may it be relied upon by any other person or entity. The contents of this report may not be quoted in whole or part. The information presented in this report is preliminary and shall not be used for abatement or resolution related services.

2 PROJECT OVERVIEW & SCOPE OF WORK

Environmental Group Services, Limited (EGSL) conducted the activities as stated in the following scope of work requested by *300 West LLC* with reference to the American Society for Testing and Materials Standard Practice for Environmental Site Assessments (ASTM E1527-05). EGSL declares that this report was developed and performed by an Environmental Professional in accordance with 40 CFR 312 (All Appropriate Inquiries Rule) in order to search for areas of environmental concern associated with the Subject Property, and is intended to satisfy the requirements as set forth in the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability.

2.1 Client Responsibilities

In order to comply with 40 CFR 312 (All Appropriate Inquiries (AAI)) and ASTM E 1527-05 Standard, the client bears the following responsibilities for satisfying certain components of the environmental inquiry:

- Search for Environmental Cleanup Liens
- Consider relationship of the purchase price to the fair market value of property, if not contaminated.
- Consider specialized knowledge or experience on the part of the purchaser.
- Consider commonly known or reasonably ascertainable information about the property.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

FILE COPY

- Consider degree of obviousness of contamination.

Failure of the client to meet these responsibilities could result in forfeiture of CERCLA protection.

2.2 On-Site Inspection

- EGSL conducted an on-site inspection of the Subject Property that consisted of personnel interviews and visual observations to identify areas of environmental concern.
- EGSL visually searched for above-ground storage tanks (ASTs), underground storage tanks (USTs), and associated piping.
- EGSL reviewed environmental documentation files, historical information and records made available to assist in identifying potential environmental liability of the Subject Property.
- EGSL collected photographic documentation of significant environmental features of the Subject Property.

2.3 Inspection of Surrounding Land

EGSL conducted a visual inspection of surrounding land to identify observable potential environmental threats by adjacent land use. EGSL conducted the inspection from the Subject Property and did not enter private properties.

2.4 Site History

- EGSL interviewed knowledgeable people, including current and previous owners/operators, where feasible, to determine past and present uses of the Subject Property.
- Historical Topographic Maps, Sanborn Maps, City Directories and Aerial Photographs were reviewed in order to assist in determining the past uses of the Subject Property.
- EGSL reviewed published literature for geological information for the area of the Subject Property. Intrusive data gathering or sampling of subsurface materials at the Subject Property is beyond the scope of this assessment.

IEPA-DIVISION OF RECORDS MANAGEMENT
RELEASABLE
NOV 27 2013
REVIEWER: EMI

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

- EGSL contacted local agencies to search for information related to environmental files of the Subject Property.

2.5 Regulatory Review

EGSL contracted *Environmental Data Resources* (EDR) to complete a review of all federal and state government regulatory databases as identified in Section 5 of this report.

2.6 Exceptions, Additions and Deletions

There were no exceptions, additions, or deletions from the requirements specified in ASTM Standard E1527-05, with the exception of the following:

- EGSL was not provided with environmental lien search results, nor was EGSL requested by the client to run an environmental lien search.
- EGSL was not provided with a signed ASTM Questionnaire.
- EGSL was not allowed to take photographs from within the interior of the Subject Buildings.

3 SUBJECT PROPERTY DETAILS

3.1 Site Location

The Subject Property is located at 300 West Street, in an industrial, commercial, and residential area of Marengo, Illinois (See Appendix A for Site Location Maps).

3.2 Legal description and PIN Numbers

PIN(s) and legal descriptions were not provided to EGSL.

3.3 Site Description

Size of Property	Irregular-shaped parcel approximately 72-acres in size.
Building/Improvements	Numerous Subject Buildings located throughout the Subject Property (refer to Section 3.4).

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Other Significant Features	Remaining portions of the Subject Property contain asphalt-paved parking areas, landscaping, wastewater treatment ponds, and a diked percolation field (see Site Diagram in Appendix A).

3.4 Building/Improvement Details

The following Subject Buildings are currently, or have been historically, located at the Subject Property:

- Building 1: Built in the late 1890s and demolished around 2002. Building was approximately 40,000-square-feet in size and was originally utilized for railroad engine manufacturing and repair. Arnold later utilized Building 1 for magnet production, pressing operations, and heat treating.
- Building 2/3/4/7: Original portion of the building (Bldg. 2) constructed in the 1950s, with subsequent additions (Bldgs. 3, 4, and 7) later constructed. The entire building is approximately 135,000-square-feet in size and is currently utilized for office space, maintenance, shipping, and miscellaneous storage. Building 2/3/4/7 was historically utilized for tape-core, powder-core, and winding operations associated with magnetic manufacturing; all manufacturing operations ceased in this building in approximately 2002.
- Building 5: Constructed in the 1950s-1960s and is approximately 74,000-square-feet in size. Currently and historically has been utilized by Arnold for their Alnico Products Division, which manufactures magnetic components by molting, melting, and finishing Aluminum, Nickel, and Cobalt.
- Building 6: Constructed in the 1950s-1960s and demolished in the 1990s. Building 6 was approximately 42,000-square-feet in size and was historically occupied by the Strontium Ferrite Department, which conducted wet processing, mixed metal sludge pressing, iron powder compressing, and baking/grinding operations associated with motor-arc manufacturing.
- Building 8: Constructed between 1950-1970 and is approximately 3,000-square-feet in size. Building 8 is utilized for the storage of landscaping and maintenance equipment, and also contains an approximately 850-foot deep water well that is utilized for potable water for the Subject Property; an associated 100,000-gallon above-ground water holding tank is located directly south of Building 8.
- Building 9: Constructed at an unknown date and demolished in the 1990s. Building 9 was approximately 5,000-square-feet in size and was utilized as an airplane hangar associated with an adjacent private runway (no longer present).
- Building 10: Constructed at an unknown date. Building 10 is approximately 3,000-square-feet in size is currently/has historically been utilized for miscellaneous storage, 55-gallon drum storage, and drum cleaning.
- Building 11/14. Original portion of the building (Bldg. 11) constructed in the 1950s, with subsequent addition (Bldg. 14) later constructed. The entire building is approximately 54,000-square-feet in size and has been utilized by Arnold's Rolled Products Division

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

since the late 1960s. Operations that currently exist within Building 11/14 involve the rolling and finishing operations associated with the production of thin-gauge rolled steel products.

- Building 12: Constructed by 1970 and is approximately 14,000-square-feet in size. Currently and historically utilized as a parts/storage warehouse.
- Building 16: Constructed after 1987 and is approximately 3,200-square-feet in size. Currently and historically utilized as a hazardous and non-hazardous storage shed.

See Site Diagram in Appendix A.

3.5 Current and Historical On-site Operations

The Subject Property is currently occupied by Arnold, which utilizes the property for the manufacturing of magnetic components and rolled metal products. The Subject Property was originally developed in the late 1890s and was first utilized as a rail yard and railroad engine manufacturing/maintenance facility. The Subject Property was reportedly purchased by Arnold in the early 1900s, with their magnetic operations/manufacturing beginning in the 1950s.

The Alnico Products Division consists of the manufacturing of magnets and fabricated metal products. Typical operations include the receiving of scrap aluminum, cobalt, nickel, brass, and copper, which is then melted in furnaces. The molten metal is then poured into sand molds consisting of foundry sand (which is not reused and disposed of as non-hazardous waste). The molded metal is then magnetized via a solenoid and finished by fine grinding and cutting.

The Rolled Products Division consists of the rolling and finishing operations associated with the production of thin-gauge rolled steel products. Typical operations include the receiving of stainless steel, titanium, and nickel coils which are then cut and slit through mills. The product undergoes cleaning and surface preparation via a dip tank containing brominated solvents (Leksol) and/or phosphoric acid. The product then undergoes an annealing and heat treating process via furnaces.

It should be noted that chlorinated solvents including TCE, PCE, and methylene chloride were historically utilized for degreasing, cutting, and parts washing operations. All usage of these chlorinated solvents ceased in 2001.

3.6 Visual Observations

The following table lists observations noted during the Subject Property site inspection:

USTs/ASTs	Five, 300-gallon diesel and/or gas ASTs were observed. These ASTs are utilized for back-up generators and/or on-site equipment. No signs of staining or leakage were observed in the AST areas. Several other ASTs ranging in size from 3,000-gallons to 10,000-gallons

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

	were observed adjacent to Buildings 2/3/4/7, 5, and 11/14. These ASTs contained argon, liquid nitrogen, and hydrogen.
Asbestos	Based on the age of the Subject Buildings, suspected asbestos containing materials (ACM) may be present throughout the Subject Buildings.
Lead-Based Paint	In 1978, the Consumer Product safety Commission (CPSC) banned the production of virtually all house paints containing lead greater than 600 milligrams per kilogram (mg/kg). The subject site building was constructed prior to the 1978 CPSC ban. Established guidelines for lead in paint include the Housing and Urban Development 0.5 percent by weight (i.e., 5,000 mg/kg) level. Based on the age of the buildings, there is the possibility of the presence of lead based paint in the buildings. All painted surfaces appeared to be in sound condition at the time of inspection.
Spills/Stains	None Observed
Soil Disturbances	None Observed
Miscellaneous Debris	None Observed
Wells	An 850-foot groundwater well is located in Building 8.
Pits, Ponds, or Lagoons	A pond system consisting of five ponds and a 16-acre diked percolation field is located at the Subject Property. Ponds 1-4 are located along the northwestern portion of the Subject Property and are utilized for overflow associated with sanitary sewage, drain returns, well water, and cooling/process wastewater utilized in the manufacturing operations conducted on-site. All sanitary sewer and process water incoming to the ponds is treated within the wastewater treatment system pump house. Treated wastewater from the four ponds is either recycled back to plant operations or discharged via an industrial ditch to Pond 5 and the 16-acre diked percolation field, which are located at the southwestern portion of the Subject Property.
Wastewater Discharge	Refer to Pond System above.
Stressed Vegetation	None Observed
Septic System	Refer to Pond System above.
Odors	None Observed
Pools of Liquid	None Observed

3.7 Adjacent Properties

North	Railroad tracks, followed by commercial, agricultural, and residential properties.
East	West Street, followed by residential properties.
South	Farmland and commercial properties, followed by Rte. 20
West	ComEd substation, followed by Ritz Road and agricultural properties.

3.8 Topography

Site Elevation	821 ft.
Site Topography	Flat

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Local Topography	General NNE
Groundwater Depth	Multiple groundwater tables.
Groundwater Flow Direction	NNE

4 SITE HISTORY

Emphasis was placed on identifying on-site and off-site environmental conditions most likely to:

- Adversely affect the future site development and usage.
- Present financial liabilities to site owners and developers.
- Be of concern to the various regulatory agencies, in so far as site conditions are covered by current environmental regulations.

Sources for the historical review of the Subject Property and the adjacent properties included interviews, Sanborn Fire Insurance Maps, Aerial Photographs, Topographic Maps, City Directories, Freedom of Information Act (FOIA) Requests, ASTM Questionnaire, and Prior Environmental Reporting, if available.

4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were originally designed for the fire insurance industry to assess fire insurance premiums on structures requiring such insurance. Presently they are used as a tool for determining prior uses of residential, commercial, and industrial properties for potential environmental concerns.

Sanborn map coverage was not available for the Subject Property (see Appendix C).

4.2 Aerial Photographs

Year	Subject Property
1975	Buildings representative of the current Subject Buildings. It should be noted that Buildings 1 and 6 are present at this time.
1981	Poor photo quality.
1998	Buildings representative of the current Subject Buildings. It should be noted that Buildings 1 is present at this time and Building 6 is no longer present.
2007	Buildings representative of the current Subject Buildings.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

See Appendix D for Aerial Photographs.

4.3 Historical Topographic Maps

A topographic map (topo) is a color coded line-and-symbol representation of natural and selected artificial features plotted to a scale. Topos show the shape, elevation, and development of the terrain in precise detail by using contour lines and color coded symbols. Historical topographic maps are a valuable resource for documenting the prior use of a property and its surrounding area; and due to their frequent availability, can be particularly helpful when other standard historical sources (i.e. city directories, fire insurance maps or aerial photographs) are not reasonably ascertainable. The following table indicates the years in which Topographic Map coverage was available for the Subject Property and lists the on-site improvements:

Year	Subject Property
1937	Building 1 identified.
1970	Structures similar in size, shape and location of the current Subject Buildings. Buildings 1 and 6 also present.
1975	Structures similar in size, shape and location of the current Subject Buildings. Building 1 also present.

See Appendix E for Topographic Maps.

4.4 City Directory

City Directories are used as a tool for locating individuals and/or businesses in a particular urban or suburban area. The Subject Property was identified as being occupied by "Arnold Engineering Company" in 1995, 2000, and 2007.

See Appendix F for City Directory.

4.5 Freedom of Information Act Requests

EGSL submitted Freedom of Information Act (FOIA) Requests to the Illinois Environmental Protection Agency Office of Emergency Response (IEPA OER), IEPA Bureau of Land (IEPA Land), IEPA Bureau of Air (IEPA Air), IEPA Bureau of Water (IEPA Water), Illinois Emergency Management Agency Division of Disaster Assistance and Preparedness (IEMA) and the Office of the State Fire Marshal (OSFM) requesting available information regarding the Subject Property. The status/results of those requests are summarized in the following table:

Agency	Date Submitted	Response Received	Results

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Agency	Date Submitted	Response Received	Results
IEPA OER	03.16.09	Not received	
IEPA Land	03.16.09	03.20.09	No documents found.
IEPA Air	03.16.09	03.20.09	Numerous documents pertaining to air permitting, compliance, and violations.
IEPA Water	03.16.09	03.20.09	No documents found.
IEMA	03.16.09	03.18.09	Documentation pertaining to LUST Incident 20071279.
OSFM	03.16.09	03.20.09	Documentation pertaining to the abandonment and removal of 5 USTs. LUST Incident 20071279 reported.
City of Marengo	03.16.09	Not received	

See Appendix G for FOIA correspondence.

4.6 Environmental Lien Search

EGSL was not provided with environmental lien search results, nor was EGSL requested by the client to run an environmental lien search.

4.7 ASTM Questionnaire

EGSL was not provided with a signed ASTM Questionnaire.

4.8 Data Gaps

40 CFR 312 (AAI Rule) defines a data gap as:

"a lack of or inability to obtain information required by the standards and practices listed in the regulation despite good faith efforts by the Environmental Professional or the prospective landowner to gather such information."

EGSL did not recognize any other significant data gaps while conducting this assessment.

4.9 Previous Environmental Reporting

EGSL completed a Ground Penetrating Radar (GPR) Survey on September 13, 2006. According to historical site diagrams and interviews with Arnold personnel, nine areas of concern were identified that may have currently or historically contained underground storage tanks (USTs). Results of the GPR Survey indicated that three of the areas of concern contained USTs (five

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

USTs total); the remaining six areas of concern contained anomalies representative of UST excavation areas.

See Appendix J for previous environmental reporting.

5 GOVERNMENT REGULATORY DATABASES

A regulatory database search was obtained through *Environmental Data Resources* to determine the type and number of environmentally regulated sites which might potentially impact the Subject Property. The databases, search distances, and number of properties within the search distances are summarized in the following table:

Database	Definition	ASTM Search Distance	Subject Property Identified	Sites Identified Within Search Radius
STANDARD ENVIRONMENTAL RECORDS				
NPL	National Priority List (Superfund) – The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program.	1 mile	No	0
Proposed NPL	Proposed National Priority List Sites – A site that has been proposed for listing on the NPL through the issuance of a proposed rule in the Federal Registrar. EPA then accepts public comments on t he site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing	1 mile	No	0
NPL Liens	Federal Superfund Liens – Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability.	Target Property	No	0
Delisted NPL	National Priority List Deletions - The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.	1 mile	No	0
CERCLIS	Comprehensive Environmental Response, Compensation, and Liability Information System - This system contains the data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the NPL and sites which are in the screening and assessment phase for possible inclusion on the NPL.	½ mile	No	0
CERCLIS-NFRAP	CERCLIS No Further Remedial Action Planned – Archived sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of the EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that,	½ mile	YES	0

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Database	Definition	ASTM Search Distance	Subject Property Identified	Sites Identified Within Search Radius
	based upon available information, the location is not judged to be a potential NPL site.			
CORRACTS	Resource Conservation and Recovery Act (RCRA) Corrective Action Activity – CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.	1 mile	YES	0
RCRA TSDF	RCRA Treatment, Storage and Disposal Facility – The database includes selective information on sites which generate, transport, treat and/or dispose of hazardous waste as defined by RCRA. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.	½ mile	No	0
RCRA-LQG	RCRA Large Quantity Generator - Facilities which generate over 1,000kg of hazardous waste, or over 1kg of acutely hazardous waste per month.	¼ mile	No	1
RCRA-SQG	RCRA Small Quantity Generator - Facilities which generate between 100kg and 1000kg of hazardous waste per month.	¼ mile	YES	0
RCRA-CESQG	A RCRA Conditionally Exempt SQG (CESQG) is a facility that generates less than 100 kg of hazardous waste, or less than 1kg of acutely hazardous waste per month.	¼ mile	No	2
US Eng Controls	Engineering Controls Sites List – A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.	½ mile	No	0
US Inst Controls	Sites with Institutional Controls – A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.	½ mile	No	0
ERNS	Emergency Response Notification System – ERNS records and stores information on reported releases of oil and hazardous substances.	Target Property	No	0
CAT	Illinois Category List - Sites on this list are: Notice of Response Action, NPL, Pre/proposed NPL, Completed Remedial Action, SRP, Federal Facilities, and Cleanup Started and/or Completed Sites.	1 mile	No	0
SHWS	State Oversight List - State Hazardous Waste Site - Illinois' equivalent to CERCLIS. These sites may or may not already be listed on the federal CECLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties.	1 mile	No	0
SWF/LF	Solid Waste Landfill – Records typically contain an inventory of solid waste disposal facilities or landfills in a particular state.	½ mile	No	1
IL NIPC	Solid Waste Landfill Inventory – NIPC is an inventory of active and inactive solid waste disposal sites.	½ mile	No	0
LUST	Leaking Underground Storage Tank - The LUST Incident Reports contain an inventory of reported leaking underground storage tank incidents.	½ mile	YES	4
LUST Trust	LUST Payment Priority List – In case sufficient funds are not available in the UST Trust Fund, requests for payment are entered on the Payment Priority List.	½ mile	No	1
Indian LUST	A listing of leaking underground storage tank locations on Indian land.	½ mile	No	0

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Database	Definition	ASTM Search Distance	Subject Property Identified	Sites Identified Within Search Radius
UST	Underground Storage Tank - The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of RCRA	¼ mile	YES	6
Indian UST	A listing of underground storage tank locations on Indian land.	¼ mile	No	0
Eng Controls	Sites with Engineering Controls – Sites using engineered barriers.	½ mile	No	0
Inst Controls	Institutional Controls – Legal or administrative restrictions on land use and/or other activities which effectively limit exposure to contamination may be employed as alternatives to removal or treatment of contamination.	½ mile	No	0
Indian VCP	A listing of voluntary cleanup priority sites on Indian Land.	½ mile	No	0
SRP	Site Remediation Program Database – The database identifies the status of all voluntary remediation projects administered through the pre-notice site cleanup program and the site remediation program.	½ mile	YES	2
Brownfields	Municipal Brownfields Redevelopment Grant Program (MBRGP) – Offers grants to municipalities to assist in site investigation activities, development of cleanup objectives and performance of cleanup activities.	½ mile	No	0
ADDITIONAL ENVIRONMENTAL RECORDS				
US Brownfields	A listing of Brownfields Sites – Included in the listing are Brownfields properties addressed by Cooperative Agreement Recipients and Targeted Brownfields Assessments.	½ mile	No	0
ODI	Open Dump Inventory – An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.	½ mile	No	0
Indian ODI	Location of open dumps on Indian Lands	½ mile	No	0
US CDL	Meth Drug Lab Site Listing – A listing of clandestine/meth drug lab locations.	Target Property		0
CDL	Meth Drug Lab Site Listing – A listing of clandestine/meth drug lab locations.	Target Property	No	0
Liens 2	CERCLA Lien Information – A Federal CERCLA Superfund lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.	Target Property	No	0
LUCIS	Land Use Control Information System – LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.	½ mile	No	0
HMIRS	Hazardous Materials Information Reporting System – HMRIS contains hazardous material spill incidents reported to DOT.	Target Property	No	0
Spills	State Spills – A listing of incidents reported to the Office of Emergency Response.	Target Property	YES	0
RCRA-NonGen	RCRA Non-Generators – Do not presently generate hazardous waste.	¼ mile	No	3
DOT OPS	Department of Transportation, Office of Pipeline Safety Incident and Accident data.	Target Property	No	0
DOD	Department of Defense Sites – This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the US, Puerto Rico and the US Virgin Islands.	1 mile	No	0
FUDS	Formerly Used Defense Sites – The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.	1 mile	No	0
Consent	Superfund (CERCLA) Consent Decrees – Major legal settlements that establish responsibility and standards for cleanup at NPL sites.	1 mile	No	0

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Database	Definition	ASTM Search Distance	Subject Property Identified	Sites Identified Within Search Radius
	Released periodically by the US District Courts after settlement by parties to litigation matters.			
ROD	Records of Decision – ROD documents mandate a permanent remedy at an NPL site containing technical and health information to aid in the cleanup.	1 mile	No	0
UMTRA	Uranium Mill Tailings Sites - Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the mill tailings remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials for the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.	½ mile	No	0
Mines	Mines Master Index File – Contains all mine information numbers issued for mines active or opened since 1971. The data also includes volatile information.	1/4 mile	No	0
TRIS	Toxic Chemical Release Inventory System – TRIS identifies facilities which release toxic chemicals into the air, water and land in reportable quantities under SARA Title III Section 313.	Target Property	YES	0
TSCA	Toxic Substances Control Act – TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.	Target Property	No	0
FTTS	Federal Insecticide, Fungicide and Rodenticide Act (FIFRA)/TSCA tracking system – FTTS tracks administrative cases and pesticide enforcement actions and compliance activities.	Target Property	No	0
HIST FTTS	Historical FTTS database.	Target Property		0
SSTS	Section 7 Tracking Systems – Section 7 requires all registered pesticide-producing establishments to submit a report to the EPA each year.	Target Property	No	0
ICIS	Integrated Compliance Information System – ICIS supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System.	Target Property	No	0
PADS	PCB Activity Database System – PADS identifies generators, transporters, commercial stores and/or brokers and disposers of PCBs who are required to notify the EPA of such activities.	Target Property	No	0
MLTS	Material Licensing Tracking System – MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements.	Target Property	No	0
RADINFO	Radiation Information Database – Contains information about facilities that are regulated by U.S. EPA regulations for radiation and radioactivity.	Target Property	No	0
FINDS	Facility Index System – FINDS contains both facility information and pointers to other sources that contain more detail.	Target Property	YES	0
RAATS	RCRA Administrative Action Tracking System – RAATS contains records based on enforcement actions issued under RCRA pertaining to major violations and includes administrative and civil actions brought by the EPA.	Target Property	No	0
UIC	Underground Injection Wells – Injection wells are used for disposal of fluids by "injection" into the subsurface.	Target Property	No	0
NPDES	A listing of active permits. A listing of facilities currently active in the state. The types of permits are public, private, federal, and state.	Target Property	YES	0
Drycleaners	Illinois Licensed Drycleaners – Any retail drycleaning facility in	¼ mile	No	0

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Database	Definition	ASTM Search Distance	Subject Property Identified	Sites Identified Within Search Radius
	Illinois must apply for a license through the Illinois Drycleaner Environmental Response Trust Fund.			
IMPDMENT	Surface Impoundment Inventory - Statewide inventory of industrial, municipal, mining, oil & gas, and large agricultural impoundment. This study was conducted by the IEPA to assess potential for contamination in shallow aquifers.	½ mile	YES	1
AIRS	A listing of air permits and emissions information.	Target Property	YES	0
Indian Reserv	Indian Reservations – This map layer portrays Indian administered lands of the US that have any area equal to or greater than 640 acres.	1 mile	No	0
SCRD Drycleaners	State Coalition for Remediation of Drycleaners Listing. Comprised of representatives of states with established drycleaner remediation programs.	½ mile	No	0
EDR PROPRIETARY RECORDS				
Manufactured Gas Plants	Database includes records of coal gas plants, compiled by EDR researchers.	1 mile	No	0
EDR Historical Auto Stations	Compiled information from selected national collections of business directories and collected listings of potential gas station/filling station/service station sites that were available to EDR researchers.	¼ mile	No	0
EDR Historical Drycleaners	Compiled information from selected national collections of business directories and collected listings of potential drycleaner sites that were available to EDR researchers.	¼ mile	No	0

See Appendix I for complete EDR Radius Map.

5.1 Surrounding Properties

Numerous adjacent sites were identified within the search radius of the Subject Properties for the several databases. However, based on the location, distance, local geology, and/or status of the sites, none represent a significant environmental concern in regards to the Subject Property.

6 CONCLUSIONS AND RECOMMENDATIONS

EGSL has prepared a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of the Subject Property located at 300 West Street, Marengo, Illinois. Any exceptions to, or deletions from, this practice are described in Section 2.7.

EGSL recognized the following environmental concerns in connection with the Subject Property as defined by the American Society of Testing and Materials Standard E 1527-05, "Standard Practice for Environmental Site Assessments" during the site assessment:

- Based on the age of the Subject Buildings, suspect lead based paint and suspect asbestos containing building materials are considered environmental concerns; as such, EGSL

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

recommends performing an Asbestos Survey prior to any type of disturbance to the building materials via renovation or demolition. A Lead Based Paint Survey is recommended prior to renovation within the Subject Buildings. Continue with maintaining the painted surfaces, and avoid sanding, chipping, or scraping any painted surfaces until a Lead Based Paint Survey is conducted.

- The Subject Property has been utilized for major industrial purposes for over 100 years. It has been confirmed that operations, activities, and chemicals associated with the historical manufacturing procedures have negatively impacted the subsurface soil and groundwater.

- The Subject Property is currently enrolled into the IEPA's Site Remediation Program. The Subject Property is currently seeking a Comprehensive No Further Remediation Letter for Residential Properties from the SRP.

- The Subject Property is associated with LUST Incident 20071279. This incident is currently being addressed within the SRP.

Based on the above-referenced environmental concerns, EGSL recommends that all necessary investigations and remediation activities be conducted in order to receive a Comprehensive NFR for Residential Properties from the SRP.

7 LIMITATIONS

Environmental Group Services, Limited (EGSL) has prepared this report for the exclusive use of *300 West LLC* as it pertains to the property located at 300 West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No other warranty, express or implied, is made as to the professional advice in this report. *Any use of or reliance on this report by a third party shall be at such a party's sole risk.*

EGSL can offer no assurance and assumes no responsibility for site conditions or activities outside the scope of the inquiry requested by *300 West LLC* as outlined in this document. It should be understood by *300 West LLC* that EGSL has relied on the accuracy of documents, oral information, and other materials and information provided by *300 West LLC* and other associated parties. It is recognized that regulatory requirements may change, including the revision of accepted action levels, which could necessitate a review of the discussion, findings, recommendations or conclusions of this report. Any subsequent modification, revision, or verification of this report must be provided in writing by EGSL.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Environmental Group Services, Limited (EGSL) conducted the activities requested by *300 West LLC* with reference to the American Society for Testing and Materials Standard Practice for Environmental Site Assessments (ASTM E1527-05). EGSL declares that this report was developed and performed by an Environmental Professional in accordance with 40 CFR 312 (All Appropriate Inquiries Rule) in order to search for areas of environmental concern associated with the Subject Property, and is intended to satisfy the requirements as set forth in the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability. EGSL declares that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR Part 312.10. EGSL has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. EGSL has developed and performed the All Appropriate Inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

This report pertains to the property located at 300 West LLC, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

Limited Permission To Make Copies

Environmental Group Services (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Springfield, Illinois 62703-4259

Re: File Search Request:
300 West Street
Marengo, Illinois 60152

2043823

Dear Ms. Brunk:

This is written pursuant to the Freedom of Information Act and serves as a request for pertinent information indicating the presence of any hazardous waste sites, landfills, underground storage tanks or other sources of contamination at the above referenced property. If the OSFM has documents pertaining to this property, please forward the results via mail or facsimile.

Facility # 2-043823
Permit # 01608-2007REM
Request Rec'd 10/02/2007
Amended Date
Approval Date 10/2/2007 JC
Permit Expires 4/2/2008

Permit for REMOVAL of Underground Storage Tank(s) and Piping for Petroleum and Hazardous Substances.

Permission to remove underground storage tank(s) or piping is hereby granted. Such removal shall not commence until the contractor the permit was issued to or an employee of that contractor (this does not include a subcontractor) shall establish a date certain to perform the UST activity by contacting the Office of the State Fire Marshal, Division of Petroleum and Chemical Safety, by telephone at the Springfield office between 8:30 a.m. and 12:00 p.m., at which time a mutually agreed upon date and time for the UST activity shall be scheduled. **THIS PERMIT IS VALID FOR SIX MONTHS FROM THE APPROVAL DATE.**

(1) OWNER OF TANKS - Corporation, partnership, or other business entity:	(2) FACILITY - name and address where tanks are located:
300 West LLC 2340 River Road, Suite 310 Des Plaines, IL 60018 Contact:	300 West LLC (Arnold Technologies) 300 N. West Avenue Marengo, McHenry Co., IL Contact:

(3) REMOVAL OF TANKS:

(a) Number and size of tanks being removed: (TK # 3, 4) - 2,000 gallons

(b) Product stored in each tank: (TK # 3, 4) - Fuel Oil

(c) Reason of tanks being removed:

(d) If tank(s) is leaking, indicate IEMA incident number:

(e) Date each tank was last used: (TK # 3, 4) - 12/31/1973

(4) **The owner must notify this Office when completion of tank removal has occurred, on the Notification for Underground Storage Tank Form This form can be obtained at www.state.il.us/osfm or by calling (217)785-1020. After removal is completed, the owner/operator shall perform a site assessment by measuring for the presence of a release where contamination is most likely to be present at the UST site. This is in accordance with the Illinois Administrative Code 170.640 (a) regulations and 40 CFR Part 280.72 (a) Federal Register Requirement.**

(3) ABANDONMENT IN PLACE OF TANKS:

(a) Number and size tanks being abandoned: (TK # 1) - 8,000 gallons, (TK # 2) - 1,000 gallons

(b) Location of tanks being abandoned: CONTAMINATED SITE! IEMA Number: 071279

(4) This permit is VOID if contamination is revealed during abandonment procedures or if tanks are not as indicated on your granted permit site plan. If contamination is revealed, this abandonment can continue only when the contaminated site section (2) of the certification on site condition has been submitted to our Office.

(5) SPECIAL CONTINGENCIES: Tank #1 is adjacent to the building foundation as well as active transformers. Tank #2 is inside building within 5 feet of load bearing wall.

(6) **The owner must notify this Office when completion of tank abandonment has occurred, on the Notification for Underground Storage Tank Form. This form can be obtained at www.state.il.us/osfm or by calling (217)785-1020.**

RE: Request regarding information concerning property(s) in IL: **2009-0680**
Marengo - 300 West St., IL

Dear Bill Lennon:

The FOIA Sector, Bureau of Water, has processed your FOIA request **2009-0680** dated 3/12/2009 for public records pursuant to the Freedom of Information Act ("FOIA") (5 ILCS 140/1 et. Seq.). The Bureau of Water, Water Pollution Control Division has no information regarding the subject of your request, as referenced above.

For the DMR Data, go to: http://www.epa.gov/echo/. At this screen pick Related Links from the list on the left hand side. On the next screen, pick the EPA Envirofacts Warehouse. In the middle of the screen under advanced capabilities, pick queries and pick PCS from the drop down box. At the query form, you must enter the information needed for the site.

Division of Public Water Supplies files contain information pertaining to community water supplies, not specific sites or addresses. We have no information regarding the referenced property(s) in your request. If you wish to receive any well data relative to particular community water supplies or facilities go to: http://www.epa.state.il.us/water/groundwater/source-water-assessment/index.html .

Please contact me at the above referenced number, if you require further assistance.

Sincerely,

Janet Christer

March 17, 2009

Bill,

Per our conversation on Tues. March 16, 2009, I have revised your request regarding Facility #111 812 AAB (Arnold Magnetic Tech). We discussed cutting the request down to under 2 inches by just looking at / copying information from the "FOS" files (i.e violation notices) and the "Legal" files (pending legal action, past legal action, etc.) from 2000 forward. Please find this information enclosed. If you think we have left out anything that you needed, perhaps it is in another file or from an earlier date?

If there I anything else I can do for you, please feel free to contact me by e-mail Ron.Holliday@illinois.gov or by phone 217 782-9329.

Ron Holliday
Legal Investigator
IL EPA, Bureau of Air

List of Withheld Documents
Conversion Table:
2 Ill. Adm. Code Parts 1826 & 1827 – 2 Ill. Adm. Code Part 1828
35 Ill. Adm. Code Part 120 – 35 Ill. Adm. Code Part 130

Pursuant to the repeal of 2 Illinois Administrative Code Parts 1826 and 1827, on December 31, 1999, and the adoption of 2 Illinois Administrative Code Part 1828, on January 1, 2000, it has become necessary to institute a conversion of previously screened and withheld documents. This table offers a conversion for some of the most commonly cited reasons for withholding documents under 2 Ill. Adm. Code Parts 1826 and 1827 to the corresponding reasoning for withholding under 2 Ill. Adm. Code Part 1828. This table also offers a conversion for the most commonly cited reason(s) for withholding under 35 Illinois Administrative Code 120, which was repealed, effective December 21, 2000 and replaced with 35 Illinois Administrative Code 130, effective January 01, 2001. Should you have any additional concerns regarding the conversion of reasons for withholding, please contact a member of the Illinois Environmental Protection Agency, Freedom of Information Act Unit.

Reason for Withholding Under 2 Ill. Adm. Code Parts 1826 &1827	Corresponding Reason for Withholding Under 2 Ill. Adm. Code Part 1828
2 Ill. Adm. Code 1826.202(c)	2 Ill. Adm. Code 1828.202(a)(1)(C)
2 Ill. Adm. Code 1826.202(e)(4)	2 Ill. Adm. Code 1828.202(a)(1)(E)
2 Ill. Adm. Code 1826.202(e)(2)	2 Ill. Adm. Code 1828.202(a)(1)(B)
2 Ill. Adm. Code 1826.403	2 Ill. Adm. Code 1828.405(g)
2 Ill. Adm. Code 1826.202(b)	2 Ill. Adm. Code 1828.202(a)(1)(L)
2 Ill. Adm. Code 1827, Subpart B	2 Ill. Adm. Code 1828.202(a)(1)(F)

Reason for Withholding Under 35 Ill. Adm. Code 120	Corresponding Reason for Withholding Under 35 Ill. Adm. Code Part 130

RE: Conditional Acceptance of Compliance Commitment Agreement
Violation Notice A-2008-00013
I.D. 111812AAB

Dear Mr. Brisson:

On March 10, 2008, the Illinois Environmental Protection Agency ("Illinois EPA") received a proposed Compliance Commitment Agreement ("CCA") from Arnold Magnetic Technologies Corporation. The proposed CCA was submitted in response to the Violation Notice dated January 31, 2008. By this letter, the Illinois EPA conditionally accepts your CCA. Specifically, the CCA is accepted on the condition that the permit application received by Illinois EPA from Arnold Magnetic Technologies Corporation on March 4, 2008, is acceptable to the Illinois EPA.

Failure to fully comply with each of the commitments, modifications and the schedules for achieving each commitment as contained in the CCA may, at the sole discretion of the Illinois EPA, result in referral of this matter to the Office of the Attorney General for formal enforcement action.

The CCA does not constitute a waiver or modification of the terms and conditions of any license or permit issued by the Illinois EPA or any other unit or department of local, state or federal government or of any local, state, or federal statute or regulatory requirement. All required permits or licenses necessary to accomplish the commitments stated above to comply with all local, state or federal laws, regulations, licenses or permits must be acquired in a timely manner. The need for acquisition of any licenses or permits does not waive any of the times for achieving each commitment as contained in the CCA.

Dear Ms. Irwin:

In reference to Violation Notice A-2008-00013, please see the attached Construction Permit and Revised FESOP issued on May 9th., by the Illinois Environmental Protection Agency Division of Air Pollution Control. Based on the enclosed permit we consider the violation cited above as closed.

I would also like to make reference to your letter dated Mar., 27th., 2008, addressed to Mr. Stephen Brisson on this same subject. Mr. Brisson is no longer involved with environmental issues for Arnold Magnetic Technologies Corporation. Please address any environmental or compliance issues for the Marengo Illinois facilities to my attention.

Sincerely,

Alan Kalaczinski

CONSTRUCTION PERMIT

PERMITTEE

Arnold Magnetic Technologies Corporation
Attn: Alan Kalaczinski
300 North West Street
Marengo, Illinois 60152

Application No.: 07110041 I.D. No.: 111812AAB
Applicant's Designation: Date Received: March 4, 2008
Subject: Two Ceramic Core Mixers and Snell Molding Machine
Date Issued: May 9, 2008
Location: 300 North West Street, Marengo, McHenry County, 60152

Permit is hereby granted to the above-designated Permittee to CONSTRUCT emission source(s) and/or air pollution control equipment consisting of two ceramic core mixers and one shell molding machine as described in the above-referenced application. This Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This permit is issued based on the construction of two ceramic core mixers and one shell molding machine not constituting a new major source or major modification pursuant to Title I of the Clean Air Act, specifically the Illinois EPA rules for Major Stationary Sources Construction and Modification, 35 Ill. Adm. Code Part 203. The source has requested that the Illinois EPA establish emission limitations and other appropriate terms and conditions in this permit that limit the volatile organic material (VOM) emissions from above-listed units below the levels that would trigger the applicability of these rules.

b. This permit is issued based on the emissions of Hazardous Air Pollutants (HAP) as listed in Section 112(b) of the Clean Air Act being less than 10 tons/year of any single HAP and 25 tons/year of any combination of such HAPs. As a result, this permit is issued based on the emissions of all HAPs from this project not triggering the requirements of Section 112(g) of the Clean Air.

c. This permit is issued to establish federally enforceable production and operating limitations, which restrict the potential to emit for VOM to less than 25 tons per year so that the source is not subject to the requirements of 35 Ill. Adm. Code Part 218 Subpart TT (Other Emission Units).

2a. No person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to the requirements of 35 Ill. Adm. Code 212.122, pursuant to 35 Ill. Adm. Code 212.123(a), except as allowed by 35 Ill. Adm. Code 212.123(b) and 212.124.

b. Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the emission source.

c. Pursuant to 35 Ill. Adm. Code 212.321(a), no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

3. Pursuant to 35 Ill. Adm. Code 218.301, no person shall cause or allow the discharge of more than 3.6 kg/hour (8 lbs/hour) of organic material into the atmosphere from any emission unit, except as provided in 35 Ill. Adm. Code 218.302, 218.303, or 218.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code 218 Subpart G shall apply only to photochemically reactive material.

4. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hour (25 mph). Determination of wind speed for the purposes of this rule shall be by a one-hour average or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to this rule is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

5. This permit is issued based on the source not being subject to the control requirements of 35 Ill. Adm. Code 218 Subpart TT. Pursuant to 35 Ill. Adm. Code 218.980(b)(1)(A), a source is subject to 35 Ill. Adm. Code 218 Subpart TT if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units, other than furnaces at glass container manufacturing sources and VOM leaks from components, that are not regulated by 35 Ill. Adm. Code Subparts B, E, F, H, Q, R, S, T, (excluding 35 Ill. Adm. Code 218.486), V, X, Y, Z, or BB.

6. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

7a. Emissions from and operation of the ceramic core making operations shall not exceed the following limits:

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Binder Usage (Tons/Month)	Binder Usage (Tons/Year)	Emission Factor (Wt. %)	VOM Emissions (Tons/Month)	VOM Emissions (Tons/Year)
1.2	12.0	50	0.6	6.0

These limits are based on the maximum production rate and engineering estimate of at least 50% of ceramic binder VOM being burned in curing oven.

b. This permit is issued based on negligible emissions of volatile organic materials and particulate matter from shell molding machine. For this purpose, emissions of shall not exceed nominal emission rates of 0.1 lb/hour and 0.44 tons/year.

c. The above limitations are being established in this permit pursuant to Title I of the Clean Air Act , specifically 35 Ill. Adm. Code Part 203, Major Stationary Sources Construction and Modification. The source has requested that the Illinois EPA establish emission limitations and other appropriate terms and conditions in this permit that limit the VOM emissions from the two ceramic core mixers and one shell molding machine below the levels that would trigger the applicability of these rules.

8a. In addition to the limits in Condition 7, emissions from and operation of all emission units at this source not subject to 35 Ill. Adm. Code 218 Subpart E shall not exceed the following limits:

i. Mold making and metal casting

A. Cast Alnico Production: 135 tons/month, 1,560 tons/year

B. DMEA Catalyst Usage: 3.0 tons/month, 30.0 tons/year

C. Emissions from Cast Alnico Production and DMEA Catalyst Usage:

Process	Emission Factor (lb/Ton)	Emission Factor (Wt. %)	Control Efficiency (Wt. %)	VOM Emissions (Lb/Mo)	VOM Emissions (Ton/Yr)
Sand/Binder Mixing/ Forming/Storage	1.8	---	--	243	1.4
Metal Pouring/ Casting	0.14	---	--	19	0.1
Casting Shakeout	1.2	---	--	162	0.9
DMEA Catalyst	----	100	90	600	3.0
				Total	5.4

These limits are based on the maximum production rate, standard emission factors for metal casting and mold shakeout (SCC 3-04-003-20, 3-04-003-31), emission factor for sand/binder mixing/forming/storage derived from the study conducted by Ohio

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Cast Metals Association, scrubber manufacturer's specification and engineering estimate of at least 50% of ceramic binder VOM being burned in curing oven.

ii. This permit is issued based on negligible emissions of volatile organic materials and particulate matter from dewaxing and sintering furnaces. For this purpose, emissions of each pollutant from each emission unit shall not exceed nominal emission rates of 0.1 lb/hour and 0.44 tons/year.

iii. Emissions from the natural gas combustion equipment shall nor exceed the following limits:

A. Natural Gas Usage: 20 mmscf/month, 200 mmscf/year

B. Emissions from the combustion of natural gas:

Pollutant	Emission Factor (lbs/10^6 scf)	Emissions (Tons/Mo)	(Tons/Yr)
Carbon Monoxide (CO)	84	0.8	8.4
Nitrogen Oxides (NO_x)	100	1.0	10.0
Particulate Matter (PM)	7.6	0.1	0.8
Sulfur Dioxide (SO_2)	0.6	0.1	0.1
Volatile Organic Material (VOM)	5.5	0.06	0.6

These limits are based on the maximum production rate and standard emission factors (Tables 1.4-1, 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

b. The above limitations are being established in this permit to ensure that the mold making and metal casting, ceramic core making, dewaxing and sintering furnaces, and shell molding machine are not subject to the control requirements of 35 Ill. Adm. Code 218 Subpart TT, Other Emission Units.

9. The emissions of Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from the source shall not exceed 0.79 tons/month and 7.9 tons/year of any single HAP and 1.99 tons/month and 19.9 tons/year of any combination of such HAPs. As a result of this condition, this permit is issued based on the emissions of any HAP from this source not triggering the requirements of Section 112(g) of the Clean Air Act.

10. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

11a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide, without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Condition 12 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

12a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR Part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

13. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

14a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. Ceramic core binder usage (tons/month, tons/year);

ii. Resin coated sand usage in shell molding (tons/month, tons/year)

iii. VOM and HAP content of resin coated sand in shell molding (% by weight);

iv. Binder usage in mold/core making process (tons/month, tons/year);

vi. Natural gas usage (mmscf/month, mmscf/year); and

v. Monthly and annual CO, NO_x, PM, SO_2, VOM, and HAP emissions with supporting calculations (tons/month, tons/year).

b. All records and logs required by this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

15. If there is an exceedance of or a deviation from the requirements of this permit as determined by the records required by this permit, the

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Permittee shall submit a report to the Illinois EPA's Compliance Section in Springfield, Illinois within 30 days after the exceedance or deviation. The report shall include the emissions released in accordance with the recordkeeping requirements, a copy of the relevant records, and a description of the exceedances or deviation and efforts to reduce emissions and future occurrences.

16. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

17. Pursuant to 35 Ill. Adm. Code 218.990, upon request by the Illinois EPA, the owner or operator of an emission unit which is exempt from the requirements of 35 Ill. Adm. Code 218 Subparts PP, QQ, RR, TT or 35 Ill. Adm. Code 218.208(b) shall submit records to the Illinois EPA within 30 calendar days from the date of the request that document that the emission unit is exempt from those requirements.

18. Two (2) copies of required reports and notifications shall be sent to:

Illinois Environmental Protection Agency
Division of Air Pollution Control
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

and one (1) copy shall be sent to the Illinois EPA's regional office at the following address unless otherwise indicated:

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P. O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR CONSTRUCTION/DEVELOPMENT PERMITS ISSUED BY THE ILLINOIS ENVIRONMENTAL PROTECTION AGENCY

July 1, 1985

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) authorizes the Environmental Protection Agency to impose conditions on permits which it issues.

The following conditions are applicable unless susperseded by special condition(s).

1. Unless this permit has been extended or it has been voided by a newly issued permit, this permit will expire one year from the date of issuance, unless a continuous program of construction or development on this project has started by such time.

2. The construction or development covered by this permit shall be done in compliance with applicable provisions of the Illinois Environmental Protection Act and Regulations adopted by the Illinois Pollution Control Board.

3. There shall be no deviations from the approved plans and specifications unless a written request for modification, along with plans and specifications as required, shall have been submitted to the Agency and a supplemental written permit issued.

4. The permittee shall allow any duly authorized agent of the Agency upon the presentation of credentials, at reasonable times:

   a. to enter the permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit,

   b. to have access to and to copy any records required to be kept under the terms and conditions of this permit,

   c. to inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit,

   d. to obtain and remove samples of any discharge or emissions of pollutants, and

   e. to enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring, or recording any activity, discharge, or emission authorized by this permit.

5. The issuance of this permit:

   a. shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are to be located,

   b. does not release the permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the proposed facilities,

   c. does not release the permittee from compliance with other applicable statutes and regulations of the United States, of the State of Illinois, or with applicable local laws, ordinances and regulations,

   d. does not take into consideration or attest to the structural stability of any units or parts of the project, and

e. in no manner implies or suggests that the Agency (or its officers, agents or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. a. Unless a joint construction/operation permit has been issued, a permit for operation shall be obtained from the Agency before the equipment covered by this permit is placed into operation.

b. For purposes of shakedown and testing, unless otherwise specified by a special permit condition, the equipment covered under this permit may be operated for a period not to exceed thirty (30) days.

7. The Agency may file a complaint with the Board for modification, suspension or revocation of a permit:

a. upon discovery that the permit application contained misrepresentations, misinformation or false statements or that all relevant facts were not disclosed, or

b. upon finding that any standard or special conditions have been violated, or

c. upon any violations of the Environmental Protection Act or any regulation effective thereunder as a result of the construction or development authorized by this permit.

ILLINOIS ENVIRONMENTAL PROTECTION AGENCY

1021 NORTH GRAND AVENUE EAST, P.O. BOX 19506, SPRINGFIELD, ILLINOIS 62794-9506 – (217) 782-2113

ROD R. BLAGOJEVICH, GOVERNOR DOUGLAS P. SCOTT, DIRECTOR

217/782-2113

FEDERALLY ENFORCEABLE STATE OPERATING PERMIT -- REVISED

PERMITTEE

Arnold Magnetic Technologies Corporation
Attn: Stephen Brisson
300 North West Street
Marengo, Illinois 60152

Application No.: 73090130
Applicant's Designation:
Subject: Magnetic Alloys Manufacturing
Date Issued: May 9, 2008
Location: 300 North West Street, Marengo, McHenry County, 60152

I. D. No.: 111812AAB
Date Received: March 4, 2008

Expiration Date: July 13, 2011

Permit is hereby granted to the above-designated Permittee to OPERATE emission source(s) and/or air pollution control equipment consisting of the following equipment pursuant to the above-referenced application:

Permalloy Strip Facility

Five Strip Mills
Strip Treatment Equipment comprised of:
Phosphoric Acid Bath,
Nine Annealing Furnaces, and
Three Cold Degreasers

Sintered Alnico Facility

Jaw Crusher Controlled by Dust Collector,
Ball Mill Controlled by Dust Collector,
Powder Mixer, Scale, Separator, Pulverizers and Screener Controlled by Dust Collectors,
Three Dewaxing Furnaces
Three Sintering Furnaces
Ten Presses

Cast Alnico Facility

Five Induction Furnaces,
Sand Mold/Core Making Equipment Controlled by Baghouse and Scrubber,
Two Heat Treating Furnaces
Die Casting Operations
Bake Oven
Shell Molding Machine

this Permit is subject to standard conditions attached hereto and the following special condition(s):

1a. This federally enforceable state operating permit is issued:

i. To limit the emissions of air pollutants from the source to less than major source thresholds (i.e., 100 tons/year for VOM and PM_{10}, 10 tons/year for a single HAP and 25 tons/year of any combination of such HAPs)). As a result, the source is excluded from the requirements to obtain a Clean Air Act Permit Program (CAAPP) permit. The maximum emissions of this source, as limited by the conditions of this permit are described in Attachment A.

ii. To establish federally enforceable production and operating limitations, which restrict the potential to emit for VOM to less than 25 tons per year so that emission units at this source not regulated by 35 Ill. Adm. Code 218 Subpart E are not subject to the requirements of 35 Ill. Adm. Code Part 218 Subpart TT (Other Emission Units).

b. Prior to initial issuance, a draft of this permit has undergone a public notice and comment period.

c. This permit supersedes all operating permits issued for this location.

2a. This permit is issued based on this source not being a participating source in the Emissions Reduction Market System (ERMS), 35 Ill. Adm. Code Part 205, pursuant to 35 Ill. Adm. Code 205.200. This is based on the source's actual VOM emissions during the seasonal allotment period from May 1 through September 30 of each year being less than 10 tons and the source's baseline emissions also being less than 10 tons.

b. In the event that the source's VOM emissions during the seasonal allotment period equal or exceed 10 tons, the source shall become a participating source in the ERMS and beginning with the following seasonal allotment period, shall comply with 35 Ill. Adm. Code Part 205, by holding allotment trading units (ATUs) for its VOM emissions during each seasonal allotment period, unless the source obtains exemption from the ERMS by operating with seasonal VOM emissions of no more than 15 tons pursuant to a limitation applied for and established in a Clean Air Act Permit Program (CAAPP) permit or a Federally Enforceable State Operating Permit (FESOP).

c. Pursuant to 35 Ill. Adm. Code 205.316(a), any participating or new participating source shall not operate without a CAAPP permit or FESOP. Pursuant to 35 Ill. Adm. Code 205.316(a)(2), if a participating or new participating source does not have a CAAPP permit containing ERMS provisions and the source elects to obtain a permit other than a CAAPP permit, the source shall apply for and obtain a FESOP that contains, in addition to other necessary provisions, federally enforceable ERMS provisions, including baseline emissions, allotment for each seasonal allotment period, identification of any units deemed to be insignificant activities for purposes of the ERMS, emissions calculation methodologies, and provisions addressing all other applicable requirements of 35 Ill. Adm. Code Part 205.

3a. No person shall cause or allow the emission of smoke or other particulate matter, with an opacity greater than 30 percent, into the atmosphere from any emission unit other than those emission units subject to the requirements of 35 Ill. Adm. Code 212.122, pursuant to 35 Ill. Adm. Code 212.123(a), except as allowed by 35 Ill. Adm. Code 212.123(b) and 212.124.

b. Pursuant to 35 Ill. Adm. Code 212.301, no person shall cause or allow the emission of fugitive particulate matter from any process, including any material handling or storage activity, that is visible by an observer looking generally toward the zenith at a point beyond the property line of the emission source.

c. Pursuant to 35 Ill. Adm. Code 212.321(a), no person shall cause or allow the emission of particulate matter into the atmosphere in any one hour period from any new process emission unit which, either alone or in combination with the emission of particulate matter from all other similar process emission units for which construction or modification commenced on or after April 14, 1972, at a source or premises, exceeds the allowable emission rates specified in 35 Ill. Adm. Code 212.321(c).

4a. Pursuant to 35 Ill. Adm. Code 218.182(a), no person shall operate a cold cleaning degreaser unless:

i. Waste solvent is stored in covered containers only and not disposed of in such a manner that more than 20% of the waste solvent (by weight) is allowed to evaporate into the atmosphere;

ii. The cover of the degreaser is closed when parts are not being handled; and

iii. Parts are drained until dripping ceases.

b. Pursuant to 35 Ill. Adm. Code 218.182(b), no person shall operate a cold cleaning degreaser unless:

i. The degreaser is equipped with a cover which is closed whenever parts are not being handled in the cleaner. The cover shall be designed to be easily operated with one hand or with the mechanical assistance of springs, counter-weights or a powered system if:

A. The solvent vapor pressure is greater than 2 kPa (15 mmHg or 0.3 psi) measured at 38°C (100°F);

B. The solvent is agitated; or

C. The solvent is heated above ambient room temperature.

ii. The degreaser is equipped with a device for draining cleaned parts. The drainage device shall be constructed so that parts are enclosed under the cover while draining unless:

A. The solvent vapor pressure is less than 4.3 kPa (32 mmHg or 0.6 psi) measured at 38°C (100°F); or

B. An internal drainage device cannot be fitted into the cleaning system, in which case the drainage device may be external.

iii. The degreaser is equipped with one of the following control devices if the vapor pressure of the solvent is greater than 4.3 kPa (32 mmHg or 0.6 psi) measured at 38°C (100°F) or if the solvent is heated above 50°C (120°F) or its boiling point:

A. A freeboard height of 7/10 of the inside width of the tank or 91 cm (36 in), whichever is less; or

B. Any other equipment or system of equivalent emission control as approved by the Illinois EPA and further processed consistent with 35 Ill. Adm. Code 218.108. Such a system may include a water cover, refrigerated chiller or carbon adsorber.

iv. A permanent conspicuous label summarizing the operating procedure is affixed to the degreaser; and

v. If a solvent spray is used, the degreaser is equipped with a solid fluid stream spray, rather than a fine, atomized or shower spray.

c. Pursuant to 35 Ill. Adm. Code 218.182(c)(3)(B), on and after May 30, 2007 no person shall operate a cold cleaning degreaser with a solvent vapor pressure which exceeds 1.0 mmHg (0.019 psi) measured at 20°C (68°F), unless the person is in compliance with the control requirements of 35 Ill. Adm. Code 218.182(c)(4) or is exempt under 35 Ill. Adm. Code 218.182(f) or (g).

d. Pursuant to 35 Ill. Adm. Code 218.301, no person shall cause or allow the discharge of more than 3.6 kg/hour (8 lbs/hour) of organic material into the atmosphere from any emission unit, except as provided in 35 Ill. Adm. Code 218.302, 218.303, or 218.304 and the following exception: If no odor nuisance exists the limitation of 35 Ill. Adm. Code 218 Subpart G shall apply only to photochemically reactive material.

5. Pursuant to 35 Ill. Adm. Code 212.314, 35 Ill. Adm. Code 212.301 shall not apply and spraying pursuant to 35 Ill. Adm. Code 212.304 through 212.310 and 35 Ill. Adm. Code 212.312 shall not be required when the wind speed is greater than 40.2 km/hour (25 mph). Determination of wind speed for the purposes of this rule shall be by a one-hour average

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

or hourly recorded value at the nearest official station of the U.S. Weather Bureau or by wind speed instruments operated on the site. In cases where the duration of operations subject to this rule is less than one hour, wind speed may be averaged over the duration of the operations on the basis of on-site wind speed instrument measurements.

6. This permit is issued based on the source not being subject to the control requirements of 35 Ill. Adm. Code 218 Subpart TT. Pursuant to 35 Ill. Adm. Code 218.980(b)(1)(A), a source is subject to 35 Ill. Adm. Code 218 Subpart TT if it has the potential to emit 22.7 Mg (25 tons) or more of VOM per year, in aggregate, from emission units, other than furnaces at glass container manufacturing sources and VOM leaks from components, that are not regulated by 35 Ill. Adm. Code Subparts B, E, F, H, Q, R, S, T, (excluding 35 Ill. Adm. Code 218.486), V, X, Y, Z, or BB.

7. In the event that the operation of this source results in an odor nuisance, the Permittee shall take appropriate and necessary actions to minimize odors, including but not limited to, changes in raw material or installation of controls, in order to eliminate the odor nuisance.

8a. Solvent usage and VOM emissions from the degreasers shall not exceed 1.7 tons/month; 16.5 tons/year. For this purpose solvent usage shall be determined as the amount of virgin solvent added to the degreasers minus the amount of waste solvent shipped off site for recycling or disposal.

b. Emissions from and operation of all emission units at this source not subject to 35 Ill. Adm. Code 218 Subpart E shall not exceed the following limits:

i. Mold making and metal casting

A. Cast Alnico Production: 135 tons/month, 1,560 tons/year

B. DMEA Catalyst Usage: 3.0 tons/month, 30.0 tons/year

C. Emissions from Cast Alnico Production and DMEA Catalyst Usage:

Process	Emission Factor (lb/Ton)	Control Efficiency (Wt. %)	VOM Emissions (Lb/Mo)	(Ton/Yr)
Sand/Binder Mixing/ Forming/Storage	1.8	---	--	243	1.4
Metal Pouring/ Casting	0.14	---	--	19	0.1
Casting Shakeout	1.2	---	---	162	0.9
DMEA Catalyst	----	100	90	600	3.0
			Total		5.4

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

These limits are based on the maximum production rate, standard emission factors for metal casting and mold shakeout (SCC 3-04-003-20, 3-04-003-31), emission factor for sand/binder mixing/forming/storage derived from the study conducted by Ohio Cast Metals Association, scrubber manufacturer's specification and engineering estimate of at least 50% of ceramic binder VOM being burned in curing oven.

ii. Ceramic core making

Binder Usage (Tons/Month)	Binder Usage (Tons/Year)	Emission Factor (Wt. %)	VOM Emissions (Lbs/Month)	VOM Emissions (Tons/Year)
1.2	12.0	50	0.6	6.0

These limits are based on the maximum production rate and engineering estimate of at least 50% of ceramic binder VOM being burned in curing oven. The above limitations were established in Permit 07110041, pursuant to 35 Ill. Adm. Code Part 203. These limits ensure that the construction and/or modification addressed in the aforementioned permit does not constitute a new major source or major modification pursuant to Title I of the Clean Air Act, specifically 35 Ill. Adm. Code Part 203.

iii. This permit is issued based on negligible emissions of volatile organic materials and particulate matter from dewaxing and sintering furnaces and shell molding machine. For this purpose, emissions of each pollutant from each emission unit shall not exceed nominal emission rates of 0.1 lb/hour and 0.44 tons/year.

iv. Emissions from the natural gas combustion equipment shall nor exceed the following limits:

A. Natural Gas Usage: 20 mmscf/month, 200 mmscf/year

B. Emissions from the combustion of natural gas:

Pollutant	Emission Factor (lbs/10^6 scf)	Emissions (Tons/Mo)	Emissions (Tons/Yr)
Carbon Monoxide (CO)	84	0.8	8.4
Nitrogen Oxides (NO_x)	100	1.0	10.0
Particulate Matter (PM)	7.6	0.1	0.8
Sulfur Dioxide (SO_2)	0.6	0.4	0.1
Volatile Organic Material (VOM)	5.5	0.06	0.6

These limits are based on the maximum production rate and standard emission factors (Tables 1.4-1, 1.4-2, AP-42, Fifth Edition, Volume I, Supplement D, July 1998).

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

v. The above limitations are being established in Construction permit 07110041 to ensure that the mold making and metal casting, Ceramic core making, dewaxing and sintering furnaces and shell molding machine are not subject to the control requirements of 35 Ill. Adm. Code 218 Subpart TT, Other Emission Units.

c. This permit is issued based on negligible emissions of particulate matter from strip mills, strip treatment equipment, jaw crusher, ball mill, powder mixing operations, sintering furnaces, presses, induction furnaces, sand mold/core making operations, heat treating furnaces and die casting operations. For this purpose, emissions form each emission unit or group of emission units shall not exceed nominal emission rates of 0.1 lb/hour and 0.44 tons/year.

9. The emissions of Hazardous Air Pollutants (HAPs) as listed in Section 112(b) of the Clean Air Act from the source shall not exceed 0.79 tons/month and 7.9 tons/year of any single HAP and 1.99 tons/month and 19.9 tons/year of any combination of such HAPs. As a result of this condition, this permit is issued based on the emissions of any HAP from this source not triggering the requirements to obtain a CAAPP permit from the Illinois EPA and Section 112(g) of the Clean Air Act.

10. Compliance with the annual limits of this permit shall be determined on a monthly basis from the sum of the data for the current month plus the preceding 11 months (running 12 month total).

11a. Pursuant to 35 Ill. Adm. Code 201.282, every emission source or air pollution control equipment shall be subject to the following testing requirements for the purpose of determining the nature and quantities of specified air contaminant emissions and for the purpose of determining ground level and ambient air concentrations of such air contaminants:

i. Testing by Owner or Operator. The Illinois EPA may require the owner or operator of the emission source or air pollution control equipment to conduct such tests in accordance with procedures adopted by the Illinois EPA, at such reasonable times as may be specified by the Illinois EPA and at the expense of the owner or operator of the emission source or air pollution control equipment. The Illinois EPA may adopt procedures detailing methods of testing and formats for reporting results of testing. Such procedures and revisions thereto, shall not become effective until filed with the Secretary of State, as required by the APA Act. All such tests shall be made by or under the direction of a person qualified by training and/or experience in the field of air pollution testing. The Illinois EPA shall have the right to observe all aspects of such tests.

ii. Testing by the Illinois EPA. The Illinois EPA shall have the right to conduct such tests at any time at its own expense. Upon request of the Illinois EPA, the owner or operator of the emission source or air pollution control equipment shall provide,

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

without charge to the Illinois EPA, necessary holes in stacks or ducts and other safe and proper testing facilities, including scaffolding, but excluding instruments and sensing devices, as may be necessary.

b. Testing required by Condition 12 shall be performed upon a written request from the Illinois EPA by a qualified independent testing service.

12a. Pursuant to 35 Ill. Adm. Code 212.107, for both fugitive and nonfugitive particulate matter emissions, a determination as to the presence or absence of visible emissions from emission units shall be conducted in accordance with Method 22, 40 CFR Part 60, Appendix A, except that the length of the observing period shall be at the discretion of the observer, but not less than one minute. 35 Ill. Adm. Code 212 Subpart A shall not apply to 35 Ill. Adm. Code 212.301.

b. Pursuant to 35 Ill. Adm. Code 212.109, except as otherwise provided in 35 Ill. Adm. Code Part 212, and except for the methods of data reduction when applied to 35 Ill. Adm. Code 212.122 and 212.123, measurements of opacity shall be conducted in accordance with Method 9, 40 CFR Part 60, Appendix A, and the procedures in 40 CFR 60.675(c) and (d), if applicable, except that for roadways and parking areas the number of readings required for each vehicle pass will be three taken at 5-second intervals. The first reading shall be at the point of maximum opacity and second and third readings shall be made at the same point, the observer standing at right angles to the plume at least 15 feet away from the plume and observing 4 feet above the surface of the roadway or parking area. After four vehicles have passed, the 12 readings will be averaged.

c. Pursuant to 35 Ill. Adm. Code 212.110(a), measurement of particulate matter emissions from stationary emission units subject to 35 Ill. Adm. Code Part 212 shall be conducted in accordance with 40 CFR Part 60, Appendix A, Methods 5, 5A, 5D, or 5E.

d. Pursuant to 35 Ill. Adm. Code 212.110(b), the volumetric flow rate and gas velocity shall be determined in accordance with 40 CFR Part 60, Appendix A, Methods 1, 1A, 2, 2A, 2C, 2D, 3, and 4.

e. Pursuant to 35 Ill. Adm. Code 212.110(c), upon a written notification by the Illinois EPA, the owner or operator of a particulate matter emission unit subject to 35 Ill. Adm. Code Part 212 shall conduct the applicable testing for particulate matter emissions, opacity, or visible emissions at such person's own expense, to demonstrate compliance. Such test results shall be submitted to the Illinois EPA within thirty (30) days after conducting the test unless an alternative time for submittal is agreed to by the Illinois EPA.

13. Pursuant to 40 CFR 63.10(b)(3), if an owner or operator determines that his or her stationary source that emits (or has the potential to emit, without considering controls) one or more hazardous air pollutants

regulated by any standard established pursuant to section 112(d) or (f) of the Clean Air Act, and that stationary source is in the source category regulated by the relevant standard, but that source is not subject to the relevant standard (or other requirement established under 40 CFR Part 63) because of limitations on the source's potential to emit or an exclusion, the owner or operator must keep a record of the applicability determination on site at the source for a period of 5 years after the determination, or until the source changes its operations to become an affected source, whichever comes first. The record of the applicability determination must be signed by the person making the determination and include an analysis (or other information) that demonstrates why the owner or operator believes the source is unaffected (e.g., because the source is an area source). The analysis (or other information) must be sufficiently detailed to allow the USEPA and/or Illinois EPA to make a finding about the source's applicability status with regard to the relevant standard or other requirement. If relevant, the analysis must be performed in accordance with requirements established in relevant subparts of 40 CFR Part 63 for this purpose for particular categories of stationary sources. If relevant, the analysis should be performed in accordance with USEPA guidance materials published to assist sources in making applicability determinations under Section 112 of the Clean Air Act, if any. The requirements to determine applicability of a standard under 40 CFR 63.1(b)(3) and to record the results of that determination under 40 CFR 63.10(b)(3) shall not by themselves create an obligation for the owner or operator to obtain a Title V permit.

14. Pursuant to 35 Ill. Adm. Code 212.110(e), the owner or operator of an emission unit subject to 35 Ill. Adm. Code Part 212 shall retain records of all tests which are performed. These records shall be retained for at least three (3) years after the date a test is performed.

15a. The Permittee shall maintain records of the following items so as to demonstrate compliance with the conditions of this permit:

i. The Permittee shall maintain the following records to allow the confirmation of actual VOM emissions during the seasonal allotment period:

A. Records of operating data and other information for each individual emission unit or group of related emission units at the source, as appropriate, to determine actual VOM emissions during the seasonal allotment period;

B. Records of the VOM emissions, in tons, during the seasonal allotment period, with supporting calculations, for each individual emission unit or group of related emission units at the source, determined in accordance with the procedures that may be specified in this permit; and

C. Total VOM emissions from the source, in tons, during each seasonal allotment period, which shall be compiled by November 30 of each year.

ii. Solvent usage in degreasers (gallons/month, gallons/year);

iii. Certified amount of waste solvent shipped off (gallons/month, gallons/year);

iv. Certified VOM content of waste solvent (lbs/gallon);

v. Binder usage in mold/core making process (tons/month, tons/year);

vi. Resin coated sand usage in shell molding (tons/month, tons/year);

vii. VOM and HAP content of resin coated sand in shell molding (% by weight);

vii. Natural gas usage (mmscf/month, mmscf/year); and

viii. Monthly and annual CO, NO_x, PM, SO_2, VOM and HAP emissions with supporting calculations (tons/month, tons/year).

b. All records and logs required by this permit shall be retained at a readily accessible location at the source for at least five (5) years from the date of entry and shall be made available for inspection and copying by the Illinois EPA or USEPA upon request. Any records retained in an electronic format (e.g., computer) shall be capable of being retrieved and printed on paper during normal source office hours so as to be able to respond to an Illinois EPA or USEPA request for records during the course of a source inspection.

16. If there is an exceedance of or a deviation from the requirements of this permit, as determined by the records required by this permit, the Permittee shall submit a report to the Illinois EPA's Compliance Section in Springfield, Illinois within 30 days after the exceedance or deviation. The report shall include the emissions released in accordance with the recordkeeping requirements, a copy of the relevant records, and a description of the exceedance or deviation, and efforts to reduce emissions and future occurrences.

17. Pursuant to 35 Ill. Adm. Code 212.110(d), a person planning to conduct testing for particulate matter emissions to demonstrate compliance shall give written notice to the Illinois EPA of that intent. Such notification shall be given at least thirty (30) days prior to the initiation of the test unless a shorter period is agreed to by the Illinois EPA. Such notification shall state the specific test methods from 35 Ill. Adm. Code 212.110 that will be used.

18. Pursuant to 35 Ill. Adm. Code 218.990, upon request by the Illinois EPA, the owner or operator of an emission unit which is exempt from the requirements of 35 Ill. Adm. Code 218 Subparts PP, QQ, RR, TT or 35

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Ill. Adm. Code 218.208(b) shall submit records to the Illinois EPA within 30 calendar days from the date of the request that document that the emission unit is exempt from those requirements.

19. Two (2) copies of required reports and notifications shall be sent to:

Illinois Environmental Protection Illinois EPA
Division of Air Pollution Control
Compliance Section (#40)
P.O. Box 19276
Springfield, Illinois 62794-9276

and one (1) copy shall be sent to the Illinois EPA's regional office at the following address unless otherwise indicated:

Illinois Environmental Protection Illinois EPA
Division of Air Pollution Control - Regional Office
9511 West Harrison
Des Plaines, Illinois 60016

It should be noted that this permit has been revised to include operation of two ceramic core mixers and one shell molding machine described in Construction Permit 07110041.

If you have any questions on this permit, please call Valeriy Brodsky at 217/782-2113.

Edwin C. Bakowski, P.E.
Acting Manager, Permit Section
Division of Air Pollution Control

Date Signed: 5/9/2008

Attachment A - Emissions Summary

This attachment provides a summary of the maximum emissions from this facility operating in compliance with the requirements of this federally enforceable permit. In preparing this summary, the Illinois EPA used the annual operating scenario which results in maximum emissions from such a plant. The resulting maximum emissions are below the levels (e.g., 100 tons per year of VOM, 10 tons per year for a single HAP, and 25 tons per year for any combination of such HAP) at which this source would be considered a major source for purposes of the Clean Air Act Permit Program. Actual emissions from this source will be less than predicted in this summary to the extent that less material is handled and control measures are more effective than required in this permit.

	E M I S S I O N S (Tons/Year)						
Emission Units	CO	NO_x	PM	SO_2	VOM	Single HAP	Total HAPs
Degreasers					16.5		
Mold/Core Making					11.4		
Dewaxing, Sintering Furnaces			0.4		0.4		
Shell Molding Machine			0.4		0.4		
Fuel Combustion Equipment	8.4	10.0	0.8	0.1	0.6		
Metal Processing and Sand Handling			4.8				
	8.4	10.0	6.4	0.1	29.3	7.9	19.9

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

STATE OF ILLINOIS
ENVIRONMENTAL PROTECTION AGENCY
DIVISION OF AIR POLLUTION CONTROL
P.O. BOX 19506
SPRINGFIELD, ILLINOIS 62794-9506

STANDARD CONDITIONS FOR OPERATING PERMITS

May, 1993

The Illinois Environmental Protection Act (Illinois Revised Statutes, Chapter 111-1/2, Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

The following conditions are applicable unless superseded by special permit conditions(s).

1. The issuance of this permit does not release the Permittee from compliance with state and federal regulations which are part of the Illinois State Implementation Plan, as well as with other applicable statues and regulations of the United States or the State of Illinois or with applicable local laws, ordinances and regulations.

2. The Illinois EPA has issued this permit based upon the information submitted by the Permittee in the permit application. Any misinformation, false statement or misrepresentation in the application shall be ground for revocation under 35 Ill. Adm. Code 201.166.

3. a. The Permittee shall not authorize, cause, direct or allow any modification, as defined in 35 Ill. Adm. Code 201.102, of equipment, operations or practices which are reflected in the permit application as submitted unless a new application or request for revision of the existing permit is filed with the Illinois EPA and unless a new permit or revision of the existing permit(s) is issued for such modification.

   b. This permit only covers emission sources and control equipment while physically present at the indicated plant location(s). Unless the permit specifically provides for equipment relocation, this permit is void for an item of equipment on the day it is removed from the permitted location(s) or if all equipment is removed, notwithstanding the expiration date specified on the permit.

4. The Permittee shall allow any duly authorized agent of the Illinois EPA, upon the presentation of credentials, at reasonable times:

   a. To enter the Permittee's property where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. To have access to and to copy any records required to be kept under the terms and conditions of this permit;

   c. To inspect, including during any hours of operation of equipment constructed or operated under this permit, such equipment and any equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. To obtain and remove samples of any discharge or emission of pollutants; and

   e. To enter and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring or recording any activity, discharge or emission authorized by this permit.

5. The issuance of this permit:

   a. Shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are located;

b. Does not release the Permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the facilities;

c. Does not take into consideration or attest to the structural stability of any unit or part of the project; and

d. In no manner implies or suggests that the Illinois EPA (or its officers, agents, or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. The facilities covered by this permit shall be operated in such a manner that the disposal of air contaminants collected by the equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereunder.

7. The Permittee shall maintain all equipment covered under this permit in such a manner that the performance of such equipment shall not cause a violation of the Environmental Protection Act or regulations promulgated thereuner.

8. The Permittee shall maintain a maintenance record on the premises for each item of air pollution control equipment. This records shall be made available to any agent of the Environmental Protection Agency at any time during normal working hours and/or operating hours. As a minimum, this record shall show the dates of performance and nature of preventative maintenance activities.

9. No person shall cause or allow continued operation during malfunction, breakdown or startup of any emission source or related air pollution control equipment if such operation would cause a violation of an applicable emission standard or permit limitation. Should a malfunction, breakdown or startup occur which results in emissions in excess of any applicable standard or permit limitation, the Permittee shall:

a. Immediately report the incident to the Illinois EPA's Regional Field Operations Section Office by telephone, telegraph, or other method as constitutes the fastest available alternative, and shall comply with all reasonable directives of the Illinois EPA with respect to the incident;

b. Maintain the following records for a period of no less than two (2) years:

i. Date and duration of malfunction, breakdown, or startup,

ii. Full and detailed explanation of the cause,

iii. Contaminants emitted and an estimate of quantity of emissions,

iv. Measures taken to minimize the amount of emissions during the malfunction, breakdown or startup, and

v. Measures taken to reduce future occurrences and frequency of incidents.

10. If the permit application contains a compliance program and project completion schedule, the Permittee shall submit a project completion status report within thirty (30) days of any date specified in the compliance program and project completion schedule or at six month intervals, whichever is more frequent.

11. The Permittee shall submit an Annual Emission Report as required by 35 Ill. Adm. Code 201.302 and 35 Ill. Adm. Code Part 254.

RE: Conditional Acceptance of Compliance Commitment Agreement
Violation Notice A-2008-00013
I.D. 111812AAB

Dear Mr. Brisson:

On March 10, 2008, the Illinois Environmental Protection Agency ("Illinois EPA") received a proposed Compliance Commitment Agreement ("CCA") from Arnold Magnetic Technologies Corporation. The proposed CCA was submitted in response to the Violation Notice dated January 31, 2008. By this letter, the Illinois EPA conditionally accepts your CCA. Specifically, the CCA is accepted on the condition that the permit application received by Illinois EPA from Arnold Magnetic Technologies Corporation on March 4, 2008, is acceptable to the Illinois EPA.

Failure to fully comply with each of the commitments, modifications and the schedules for achieving each commitment as contained in the CCA may, at the sole discretion of the Illinois EPA, result in referral of this matter to the Office of the Attorney General for formal enforcement action.

The CCA does not constitute a waiver or modification of the terms and conditions of any license or permit issued by the Illinois EPA or any other unit or department of local, state or federal government or of any local, state, or federal statute or regulatory requirement. All required permits or licenses necessary to accomplish the commitments stated above to comply with all local, state or federal laws, regulations, licenses or permits must be acquired in a timely manner. The need for acquisition of any licenses or permits does not waive any of the times for achieving each commitment as contained in the CCA.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Written communication should be directed to Pamela Irwin, Illinois EPA, Bureau of Air, Compliance Unit, P.O. Box 19276, Springfield, Illinois 62794-9276. All communications must reference the Violation Notice number in this matter.

Questions regarding this matter should be directed to Pamela Irwin at (217) 782-5811.

Sincerely,

Raymond E. Pilapil, Manager
Compliance Section
Bureau of Air

Subject: **Violation Notice: A-2008-00013**
Site I.D.: 111812AAB
Arnold Magnetic Technologies Corporation – Marengo Facility

Dear Ms. Irwin:

Arnold Magnetic Technologies Corporation (Arnold) respectfully submits this written response to Violation Notice A-2008-00013, received on January 31, 2008. The Notice listed violations of the Illinois Environmental Protection Act, the Illinois Administrative Code, and the permit issued to Arnold's Marengo, Illinois facility (Site I.D.: 111812AAB). This response constitutes a proposed Compliance Commitment Agreement (CCA) pursuant to Section 31 of the Illinois Environmental Protection Act (Act).

As required by the Violation Notice, this response addresses each of the violations specified in Attachment A to the Violation Notice. Where applicable, an explanation of the activities Arnold will implement and the time schedule for the completion of each activity is also included.

Violation 1: Section 9(b) of the Act and condition 5(b) of Federally Enforceable State Operating Permit (FESOP) No. 73090130: Arnold Magnetic Technologies exceeded 0.5 tons of binder usage per month, 3.2 tons of binder usage per year, 500 lbs of VOM emissions per month, and 1.6 tons of VOM emissions per year.

Response: As explained in its notification letter, based upon the monthly records of binder usage required to be maintained pursuant to condition 10 of the FESOP, Arnold learned on October 1, 2007 that it had released volatile organic material (VOM) in conjunction with the usage of a ceramic coremaking binder at the Marengo facility during the month of September 2007 in an amount that exceeded its monthly limits set forth in condition 5b of the permit, and, based on the same one-month's use, it exceeded the total annual emissions limit. Specifically, Arnold's FESOP allows Arnold to use 0.5 tons per month and 3.2 tons annually. Arnold used a total of 4,400 pounds during September 2007 in the first month of an expanded operation to meet its obligations to a customer following the shut-down of an Arnold Magnetics facility in Europe. As a result of one month's exceedence (September) Arnold used a total of 9,800 pounds (4.9 tons) of the binder from October 2006 through September 2007.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

In addition, Arnold's FESOP states that Arnold may emit 500 pounds per month and 1.67 tons per year of VOM in conjunction with the use of the ceramic coremaking binder. These emissions are based on the FESOP's VOM emission factor of 50% for this binder. In September 2007, Arnold emitted a total of 2,200 pounds of VOM. As a result of September's exceedance, 2.45 tons of VOM were emitted from October 2006 through September 2007, exceeding the annual limit.. If annual emissions are determined on a running 12-month basis, it is possible that the annual limit will be exceeded until October 2008, when the September 2007 month falls out of the calculation, or until the revised permit is received. Arnold understands that this CCA resolves all actual and potential violations associated with this matter, including, specifically, the rolling annual limit issue.

The company's intent was to maintain its ability to meet customer demand following the closing of the facility in Europe. Arnold emphasizes that the exceedance of the binder limits was unintentional. This increase in production did not otherwise change the process or the equipment, but did change the mix of product. The high usage of the binder for ceramic molds and accessory ceramic material (cups) was not anticipated despite efforts to maintain consistent compliance with its permit.

As soon as the exceedance was detected, production levels were immediately reduced and accessory material (cups) made in house for the ceramic molds were purchased from a supplier in an amount that will ensure on-going compliance. This containment action ensures that emissions stayed within the monthly limits of the existing permit for the remainder of 2007 and in 2008 (until the permit is modified).

In addition, the following further mitigation measures were instituted:

- Because the additional production will be absorbed as a result of the closure of the European facility, Arnold applied in November 2007 to Illinois EPA for a construction permit to modify the limits in the existing FESOP for the ceramic coremaking binding agent, and recently amended this application per the attached correspondence.

- Staff were retrained on the purpose and use of the emissions tracking report.

- A staff review of the report each month and enhanced reporting procedures have ensured rigorous oversight of chemical and material usage, and the need for further operational limitations, if any.

Violation 2: Section 9(b) of the Act and 35 ILL. Adm. Code 201.142: Arnold Magnetic Technologies failed to obtain a construction permit prior to increasing binder usage and VOM emissions from ceramic coremaking.

Response: Prior to receiving the attachment to the Violation Notice, Arnold submitted a construction permit application to modify its current FESOP to increase the limits on binder usage and VOM emissions for the ceramic coremaking process. The application requests modified ton-per-year limits above the Marengo facility's running 12-month totals for October 2006 through September 2007. The Illinois EPA received the application on November 19, 2007.

On December 17, 2007, the Illinois EPA issued a determination (Notice of Incompleteness) that the application must include additional information to be considered complete. The information required was not related to the request to increase binder usage limits, but to a separate request to increase usage limits for other, unrelated emission units at the Marengo facility. Arnold has since submitted a revised application that addresses the deficiencies mentioned in the Notice of Incompleteness.

A copy of the revised application is included with this response (Attachment 1).

Violation 3: Section 9(b) of the Act and 35 ILL. Adm. Code 201.143: Arnold Magnetic Technologies failed to obtain a revised operating permit prior to increasing binder usage and VOM emissions from ceramic coremaking.

Response: Prior to receiving the attachment to the Violation Notice, Arnold submitted an application to modify its current FESOP to increase the limits on binder usage and VOM emissions for the ceramic coremaking process. The application requests modified ton-per-year limits above the Marengo facility's running 12-month totals for October 2006 through September 2007. The Illinois EPA received the application on November 19, 2007.

As mentioned in the response to Violation 2, the Illinois EPA issued a determination (Notice of Incompleteness) that the application must include additional information to be considered complete. The information required was not related to the request to increase binder usage limits, but to a separate request to increase usage limits for other, unrelated emission units at the Marengo facility. Arnold has since submitted a revised application that addresses the deficiencies mentioned in the Notice of Incompleteness.

A copy of the revised application is included with this response (Attachment 1).

Violation 4: Section 9(b) of the Act and 35 ILL. Adm. Code 201.143: Arnold Magnetic Technologies failed to pay applicable construction permit fees.

Response: Arnold paid the applicable construction permit fee of $6,000 with the submission of the construction permit application in November 2007. It confirmed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

with you that payment has been received. Attachment 2 is the copy of the cancelled check.

Other Mitigation Factors: Arnold requests that Illinois EPA consider the following additional factors in mitigation with respect to resolving the above-referenced violations:

- The duration of the violation was extremely short (just the month in which the usage exceeded permit limits) and as soon as it became aware of the situation it was immediately corrected by the company through institutional controls;
- No environmental harm resulted from the violation;
- The company promptly disclosed it (as required by its permit) and instituted preventive measures to prevent any recurrence in the future;
- The company has a strong record of compliance and has no similar prior violations, and has demonstrated that no deterrence is necessary;
- The company paid the construction permit fee and thus has realized no economic benefit from non-compliance.

Arnold is strongly committed to maintaining strict compliance with its permit, and it will work cooperatively and as quickly as possible with the Illinois EPA to obtain the modification it has requested.

Respectfully,

John Lombardo, General Manager

Revised Application for Construction Permit and Modification of FESOP

Source ID: 111812AAB

Dear Mr. Bakowski:

Arnold Magnetic Technologies Corporation (Arnold) submits the enclosed application for a construction permit and modification of Arnold's Federally Enforceable State Operating Permit (FESOP). This submission revises Application No. 07110041 submitted to the Illinois Environmental Protection Agency (Illinois EPA) on November 19, 2007. It is submitted in response to the Notice of Incompleteness (NOI) issued to Arnold on December 17, 2007.

Fee Determination
It is Arnold's understanding that this revised application will not require a new fee determination and that the permit application fee ($6,000) submitted with the above referenced application may be applied to the modifications proposed in this application. As shown in the attached 197-FEE form, the revised application proposes three new emission units. No additional fee is required, because the previously proposed modifications of the core making machine and cold-cleaning degreasers are hereby withdrawn (as discussed below).

Response to Notice of Incompleteness
The NOI issued to Arnold determined that the requested increase in usage of degreaser solvent would exceed major source thresholds that remain applicable to emission units constructed or modified by Arnold between November 15, 1992 and June 15, 2005. The proposed increase would therefore trigger applicability of 35 IAC Part 203: Major Stationary Source Construction and Modification (Part 203).

To avoid becoming subject to the requirements of Part 203, Arnold withdraws the request to increase usage of degreaser solvent. Arnold will continue to comply with all emission

limits taken to avoid applicability of Part 203 to the source before the expiration of the 1-hour National Ambient Air Quality Standard (NAAQS) for ozone.

In addition, Arnold withdraws its request to increase usage of binder in the existing mixer used in the ceramic core making operation. The increase in binder usage would have resulted in increased VOM emissions of 1.4 tons per year.

Proposed New Modification

With this revised application, Arnold proposes to install two new mixers that will replace the existing mixer in the ceramic core making process. In addition, Arnold will replace the existing core making mixing basin with 10 smaller basins. The existing mixer will not be used following installation of the new mixers. Arnold requests that the mixer not be listed as an emission unit in the revised FESOP.

The installation of the new core making mixers will not affect the efficiency or productivity of other processes or operations within the Arnold facility. Arnold believes that the proposed changes will not result in any debottlenecking of production or operations within the facility and will not increase emissions from any other emission units.

Arnold will continue to mix binder (prehydrolyzed ethyl silicate) with a ceramic sand to form ceramic cores. The VOM emissions that are generated from the use of the binder in the ceramic mixing process are estimated by the same method used in previous applications. To meet growing demand for its product, Arnold requests a binder usage limit of 24,000 pounds per year for the new core making mixers. Arnold estimates potential VOM emissions of 6 tons per year based on a conservative VOM loss factor of 50%. Table 1 shows proposed binder usage limits and the resulting emissions of VOM.

Applicability of Part 203 (Nonattainment New Source Review)

The increase in VOM emissions resulting from binder mixing in the modified core making process will not be subject to Part 203 (Nonattainment New Source Review or NSR requirements). The requested VOM emission limits for the proposed modifications would be issued under the requirements of NSR programs established after the expiration of the 1-hour NAAQS for ozone. Under the 8-hour ozone standard, McHenry County is designated as a moderate non-attainment area. Since the Arnold facility is an existing minor stationary source, the applicable major source threshold is 100 tons per year. As Table 1 demonstrates, the increase in VOM emissions resulting from the installation of the new core making mixers will not exceed the applicable major source threshold.

Installation of Shell Molding Machine

As in the original application to modify the current FESOP, Arnold proposes to install an electric shell molding machine, which will have negligible VOM emissions. Arnold requests that the information submitted regarding the shell molding machine in the original application be incorporated by reference in this revised application.

Modification of FESOP
The source will remain a minor source of regulated air pollutants. Table 2 summarizes emissions of VOM from all proposed and existing emission units within the Arnold facility.

Incorporation by Reference
This application incorporates by reference the following information submitted with the original permit application:

- Figure 1 – Site Plan
- Attachment C – Faskure 309FT MSDS for Shell Molding Machine
- 220-CAAPP – Shell Molding Machine
- 215-CAAPP

By submission of the 199-CAAPP form, Arnold certifies that the data and information previously submitted and referenced above remains true, correct, and current.

If you have any questions or need further information regarding this revised application, please contact me at (815) 568-2316.

Sincerely,

Alan Kalaczinski
Facilities / HR Manager
The Arnold Engineering Co.

Application For Construction Permit

(For CAAPP & FESOP Sources only)

For Illinois EPA use only
ID number:
Permit number:
Date received:

This form is to be used by CAAPP and FESOP sources to supply information necessary to obtain a construction permit. Please attach other necessary information and completed CAAPP forms regarding this construction/modification project.

Source Information

1. Source name: Arnold Magnetic Technologies Corporation		
2. Source street address: 300 N. West Street		
3. City: Marengo		4. Zip code: 60152
5. Is the source located within city limits? ☐ Yes ☒ No		
6. Township name: Marengo	7. County: McHenry	8. ID number: 111812AAB

Owner Information

9. Name: Arnold Magnetic Technologies Corporation		
10. Address: 770 Linden Avenue		
11. City: Rochester	12. State: New York	13. Zip code: 14625

Operator Information (if different from owner)

14. Name: Arnold Magnetic Technologies Corporation		
15. Address: 300 N. West Street		
16. City: Marengo	17. State: Illinois	18. Zip code: 60152

Applicant Information

19. Who is the applicant? ☐ Owner ☒ Operator	20. All correspondence to: (check one) ☐ Owner ☐ Operator ☒ Source
21. Attention name and/or title for written correspondence: Alan Kalaczinski	
22. Technical contact person for application: Alan Kalaczinski	23. Contact person's telephone number: (815) 568-2316

This Agency is authorized to require and you must disclose this information under 415 ILCS 5/39. Failure to do so could result in the application being denied and penalties under 415 ILCS 5 et seq. It is not necessary to use this form in providing this information. This form has been approved by the forms management center.

Summary Of Application Contents

24.	Does the application address whether the proposed project would constitute a new major source or major modification under each of the following programs: a) Non-attainment New Source Review – 35 IAC Part 203; b) Prevention of Significant Deterioration (PSD) – 40 CFR 52.21; c) Hazardous Air Pollutants: Regulations Governing Constructed or Reconstructed Major Sources – 40 CFR Part 63?	☒ Yes ☐ No
25.	Does the application identify and address all applicable emissions standards, including those found in the following: a) Board Emission Standards – 35 IAC Chapter I, Subtitle B; b) Federal New Source Performance Standards – 40 CFR Part 60; c) Federal Standards for Hazardous Air Pollutants – 40 CFR Parts 61 and 63?	☒ Yes ☐ No
26.	Does the application include a process flow diagram(s) showing all emission units and control equipment, and their relationship, for which a permit is being sought?	☒ Yes ☐ No
27.	Does the application include a complete process description for the emission units and control equipment for which a permit is being sought?	☒ Yes ☐ No
28.	Does the application include the information as contained in completed CAAPP forms for all appropriate emission units and air pollution control equipment, listing all applicable requirements and proposed exemptions from otherwise applicable requirements, and identifying and describing any outstanding legal actions by either the USEPA or the Illinois EPA? Note: The use of "APC" application forms is not appropriate for applications for CAAPP sources. CAAPP forms should be used to supply information.	☒ Yes ☐ No
29.	If the application contains TRADE SECRET information, has such information been properly marked and claimed, and have two separate copies of the application suitable for public inspection and notice been submitted, in accordance with applicable rules and regulations?	☐ Yes ☐ No ☒ Not Applicable, No TRADE SECRET information in this application
30.	Does the application include a complete form 197-FEE, "FEE DETERMINATION FOR CONSTRUCTION PERMIT APPLICATION" for the emission units and control equipment for which a permit for construction or modification is being sought?	☒ Yes ☐ No

Note 1: Answering "No" to any of the above may result in the application being deemed incomplete.

Signature Block

This certification must be signed by a responsible official. Applications without a signed certification will be deemed incomplete.

31. I certify under penalty of law that, based on information and belief formed after reasonable inquiry, the statements and information contained in this application are true, accurate and complete.

Authorized Signature:

PROCESS EMISSION UNIT DATA AND INFORMATION

FOR AGENCY USE ONLY
ID NUMBER:
EMISSION POINT #:
DATE:

SOURCE INFORMATION

1) SOURCE NAME: Arnold Magnetic Technologies Corporation

2) DATE FORM PREPARED: 2/28/08

3) SOURCE ID NO. (IF KNOWN): 111812AAB

GENERAL INFORMATION

4) NAME OF EMISSION UNIT: Mixer #1 and Mixer #2

5) NAME OF PROCESS: Ceramic Core Making Mixer

6) DESCRIPTION OF PROCESS: Blends binder and sand in mixer for ceramic molds

7) DESCRIPTION OF ITEM OR MATERIAL PRODUCED OR ACTIVITY ACCOMPLISHED: Mixture for ceramic molds

8) FLOW DIAGRAM DESIGNATION OF EMISSION UNIT: See application for Permit #73090130

9) MANUFACTURER OF EMISSION UNIT (IF KNOWN):

10) MODEL NUMBER (IF KNOWN):

11) SERIAL NUMBER (IF KNOWN):

12) DATES OF COMMENCING CONSTRUCTION, OPERATION AND/OR MOST RECENT MODIFICATION OF THIS EMISSION UNIT (ACTUAL OR PLANNED)

a) CONSTRUCTION (MONTH/YEAR): 4/2008

b) OPERATION (MONTH/YEAR): 4/2008

c) LATEST MODIFICATION (MONTH/YEAR):

13) DESCRIPTION OF MODIFICATION (IF APPLICABLE):

THIS AGENCY IS AUTHORIZED TO REQUIRE THIS INFORMATION UNDER ILLINOIS REVISED STATUTES, 1991, AS AMENDED 1992, CHAPTER 111 1/2, PAR. 1039.5. DISCLOSURE OF THIS INFORMATION IS REQUIRED UNDER THAT SECTION. FAILURE TO DO SO MAY PREVENT THIS FORM FROM BEING PROCESSED AND COULD RESULT IN THE APPLICATION BEING DENIED. THIS FORM HAS BEEN APPROVED BY THE FORMS MANAGEMENT CENTER.

APPLICATION PAGE _____

FOR APPLICANT'S USE

14) DOES THE EMISSION UNIT HAVE MORE THAN ONE MODE OF OPERATION? ☐ YES ☒ NO

IF YES, EXPLAIN AND IDENTIFY WHICH MODE IS COVERED BY THIS FORM (NOTE: A SEPARATE PROCESS EMISSION UNIT FORM 220-CAAPP MUST BE COMPLETED FOR EACH MODE):

15) PROVIDE THE NAME AND DESIGNATION OF ALL AIR POLLUTION CONTROL EQUIPMENT CONTROLLING THIS EMISSION UNIT, IF APPLICABLE (FORM 260-CAAPP AND THE APPROPRIATE 260-CAAPP ADDENDUM FORM MUST BE COMPLETED FOR EACH ITEM OF AIR POLLUTION CONTROL EQUIPMENT):

N/A

16) WILL EMISSIONS DURING STARTUP EXCEED EITHER THE ALLOWABLE EMISSION RATE PURSUANT TO A SPECIFIC RULE, OR THE ALLOWABLE EMISSION LIMIT AS ESTABLISHED BY AN EXISTING OR PROPOSED PERMIT CONDITION? ☐ YES ☒ NO

IF YES, COMPLETE AND ATTACH FORM 203-CAAPP, "REQUEST TO OPERATE WITH EXCESS EMISSIONS DURING STARTUP OF EQUIPMENT".

17) PROVIDE ANY LIMITATIONS ON SOURCE OPERATION AFFECTING EMISSIONS OR ANY WORK PRACTICE STANDARDS (E.G., ONLY ONE UNIT IS OPERATED AT A TIME):

NONE

OPERATING INFORMATION

18) ATTACH THE CALCULATIONS, TO THE EXTENT THEY ARE AIR EMISSION RELATED, FROM WHICH THE FOLLOWING OPERATING INFORMATION, MATERIAL USAGE INFORMATION AND FUEL USAGE DATA WERE BASED AND LABEL AS EXHIBIT 220-1. REFER TO SPECIAL NOTES OF FORM 202-CAAPP.

19a) MAXIMUM OPERATING HOURS	HOURS/DAY: 24	DAYS/WEEK: 7	WEEKS/YEAR: 52	
b) TYPICAL OPERATING HOURS	HOURS/DAY: 24	DAYS/WEEK: 5	WEEKS/YEAR: 52	
20) ANNUAL THROUGHPUT	DEC-FEB(%): 25	MAR-MAY(%): 25	JUN-AUG(%): 25	SEP-NOV(%): 25

FUEL USAGE DATA

22a) MAXIMUM FIRING RATE (MILLION BTU/HR):	b) TYPICAL FIRING RATE (MILLION BTU/HR):	c) DESIGN CAPACITY FIRING RATE (MILLION BTU/HR):
N/A		

d) FUEL TYPE:

☐ NATURAL GAS ☐ FUEL OIL: GRADE NUMBER _____ ☐ COAL ☐ OTHER _____

IF MORE THAN ONE FUEL IS USED, ATTACH AN EXPLANATION AND LABEL AS EXHIBIT 220-2.

e) TYPICAL HEAT CONTENT OF FUEL (BTU/LB, BTU/GAL OR BTU/SCF):	f) TYPICAL SULFUR CONTENT (WT %., NA FOR NATURAL GAS):
g) TYPICAL ASH CONTENT (WT %., NA FOR NATURAL GAS):	h) ANNUAL FUEL USAGE (SPECIFY UNITS, E.G., SCF/YEAR, GAL/YEAR, TON/YEAR):

23) ARE COMBUSTION EMISSIONS DUCTED TO THE SAME STACK OR CONTROL AS PROCESS UNIT EMISSIONS? ☐ YES ☐ NO

IF NO, IDENTIFY THE EXHAUST POINT FOR COMBUSTION EMISSIONS:

APPLICABLE RULES

24) PROVIDE ANY SPECIFIC EMISSION STANDARD(S) AND LIMITATION(S) SET BY RULE(S) WHICH ARE APPLICABLE TO THIS EMISSION UNIT (E.G., VOM, IAC 218.204(j)(4), 3.5 LBS/GAL):

REGULATED AIR POLLUTANT(S)	EMISSION STANDARD(S)	REQUIREMENT(S)
Same as FESOP #73090130		

25) PROVIDE ANY SPECIFIC RECORDKEEPING RULE(S) WHICH ARE APPLICABLE TO THIS EMISSION UNIT:

REGULATED AIR POLLUTANT(S)	RECORDKEEPING RULE(S)	REQUIREMENT(S)
Same as FESOP #73090130		

26) PROVIDE ANY SPECIFIC REPORTING RULE(S) WHICH ARE APPLICABLE TO THIS EMISSION UNIT:

REGULATED AIR POLLUTANT(S)	REPORTING RULE(S)	REQUIREMENT(S)
Same as FESOP #73090130		

27) PROVIDE ANY SPECIFIC MONITORING RULE(S) WHICH ARE APPLICABLE TO THIS EMISSION UNIT:

REGULATED AIR POLLUTANT(S)	MONITORING RULE(S)	REQUIREMENT(S)
Same as FESOP #73090130		

28) PROVIDE ANY SPECIFIC TESTING RULES AND/OR PROCEDURES WHICH ARE APPLICABLE TO THIS EMISSION UNIT :

REGULATED AIR POLLUTANT(S)	TESTING RULE(S)	REQUIREMENT(S)
Same as FESOP #73090130		

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

29) DOES THE EMISSION UNIT QUALIFY FOR AN EXEMPTION FROM AN OTHERWISE APPLICABLE RULE? ☐ YES ☒ NO

IF YES, THEN LIST BOTH THE RULE FROM WHICH IT IS EXEMPT AND THE RULE WHICH ALLOWS THE EXEMPTION. PROVIDE A DETAILED EXPLANATION JUSTIFYING THE EXEMPTION. INCLUDE DETAILED SUPPORTING DATA AND CALCULATIONS. ATTACH AND LABEL AS EXHIBIT 220-3, OR REFER TO OTHER ATTACHMENT(S) WHICH ADDRESS AND JUSTIFY THIS EXEMPTION.

COMPLIANCE INFORMATION

30) IS THE EMISSION UNIT IN COMPLIANCE WITH ALL APPLICABLE REQUIREMENTS? ☒ YES ☐ NO

IF NO, THEN FORM 294-CAAPP "COMPLIANCE PLAN/SCHEDULE OF COMPLIANCE – ADDENDUM FOR NON COMPLYING EMISSION UNITS" MUST BE COMPLETED AND SUBMITTED WITH THIS APPLICATION.

31) EXPLANATION OF HOW INITIAL COMPLIANCE IS TO BE, OR WAS PREVIOUSLY, DEMONSTRATED:

Recordkeeping of bnder usages and VOM emissions => compared to existing FESOP limits

32) EXPLANATION OF HOW ONGOING COMPLIANCE WILL BE DEMONSTRATED:

Recordkeeping of bnder usages and VOM emissions => compared to existing FESOP limits

TESTING, MONITORING, RECORDKEEPING AND REPORTING

33a) LIST THE PARAMETERS THAT RELATE TO AIR EMISSIONS FOR WHICH RECORDS ARE BEING MAINTAINED TO DETERMINE FEES, RULE APPLICABILITY OR COMPLIANCE. INCLUDE THE UNIT OF MEASUREMENT, THE METHOD OF MEASUREMENT, AND THE FREQUENCY OF SUCH RECORDS (E.G., HOURLY, DAILY, WEEKLY):

PARAMETER	UNIT OF MEASUREMENT	METHOD OF MEASUREMENT	FREQUENCY
Binder Usage	Ton/mo Ton/yr	Log	Daily
VOM Emission	Ton/mo Ton/yr	Log	Daily

33b) BRIEFLY DESCRIBE THE METHOD BY WHICH RECORDS WILL BE CREATED AND MAINTAINED. FOR EACH RECORDED PARAMETER INCLUDE THE METHOD OF RECORDKEEPING, TITLE OF PERSON RESPONSIBLE FOR RECORDKEEPING, AND TITLE OF PERSON TO CONTACT FOR REVIEW OF RECORDS:

PARAMETER	METHOD OF RECORDKEEPING	TITLE OF PERSON RESPONSIBLE	TITLE OF CONTACT PERSON
Binder Usage	Spreadsheets	Unit Manager	Unit Manager
VOM Emission	Spreadsheets	Unit Manager	Unit Manager

c) IS COMPLIANCE OF THE EMISSION UNIT READILY DEMONSTRATED BY REVIEW OF THE RECORDS? ☒ YES ☐ NO

IF NO, EXPLAIN:

d) ARE ALL RECORDS READILY AVAILABLE FOR INSPECTION, COPYING AND SUBMITTAL TO THE AGENCY UPON REQUEST? ☒ YES ☐ NO

IF NO, EXPLAIN:

34a) DESCRIBE ANY MONITORS OR MONITORING ACTIVITIES USED TO DETERMINE FEES, RULE APPLICABILITY OR COMPLIANCE:

N/A

b) WHAT PARAMETER(S) IS(ARE) BEING MONITORED (E.G., VOM EMISSIONS TO ATMOSPHERE)?

N/A

c) DESCRIBE THE LOCATION OF EACH MONITOR (E.G., IN STACK MONITOR 3 FEET FROM EXIT):

N/A

34d) IS EACH MONITOR EQUIPPED WITH A RECORDING DEVICE? ☐ YES ☐ NO

IF NO, LIST ALL MONITORS WITHOUT A RECORDING DEVICE:

N/A

e) IS EACH MONITOR REVIEWED FOR ACCURACY ON AT LEAST A QUARTERLY BASIS? ☐ YES ☐ NO

IF NO, EXPLAIN:

N/A

f) IS EACH MONITOR OPERATED AT ALL TIMES THE ASSOCIATED EMISSION UNIT IS IN OPERATION? ☐ YES ☐ NO

IF NO, EXPLAIN:

N/A

35) PROVIDE INFORMATION ON THE MOST RECENT TESTS, IF ANY, IN WHICH THE RESULTS ARE USED FOR PURPOSES OF THE DETERMINATION OF FEES, RULE APPLICABILITY OR COMPLIANCE. INCLUDE THE TEST DATE, TEST METHOD USED, TESTING COMPANY, OPERATING CONDITIONS EXISTING DURING THE TEST AND A SUMMARY OF RESULTS. IF ADDITIONAL SPACE IS NEEDED, ATTACH AND LABEL AS EXHIBIT 220-4:

TEST DATE	TEST METHOD	TESTING COMPANY	OPERATING CONDITIONS	SUMMARY OF RESULTS
N/A				

36) DESCRIBE ALL REPORTING REQUIREMENTS AND PROVIDE THE TITLE AND FREQUENCY OF REPORT SUBMITTALS TO THE AGENCY:

REPORTING REQUIREMENTS	TITLE OF REPORT	FREQUENCY
35 IAC 254	Annual Emission Report	Annual

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/10/2008 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/10/2008 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Illinois Environmental Protection Agency's Available Disposal for Solid Waste in Illinois--Solid Waste Landfills Subject to State Surcharge list.

A review of the SWF/LF list, as provided by EDR, and dated 12/01/2007 has revealed that there is 1

EXECUTIVE SUMMARY

SWF/LF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
MARENGO MUNICIPAL	120 EAST PRAIRIE	E 1/4 - 1/2 (0.441 mi.)	26	123

State and tribal leaking storage tank lists

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Illinois Environmental Protection Agency's LUST Incident Report.

A review of the LUST list, as provided by EDR, and dated 02/06/2009 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

IMPDMENT: Statewide inventory of industrial, municipal, mining, oil & gas , and large agricultural impoundment. This study was conducted by the Illinois EPA to assess potentail for contamination of shallow aquifers. This was a one-time study.Although many of the impoundments may no longer be present, the sites may be contaminated.

A review of the IMPDMENT list, as provided by EDR, and dated 12/31/1980 has revealed that there is 1 IMPDMENT site within approximately 0.5 miles of the target property.

Corrective Action Summary:
Event date: 03/25/1993
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity because of a lack of technical data. An evaluation has been completed, but further data is necessary to determine stabilization measures, feasibility or appropriateness. This status should be changed when data becomes available.

Event date: 03/31/1993
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Facility Has Received Notices of Violations:
Regulation violated: Not reported
Area of violation: Generators - General
Date violation determined: 04/03/1985
Date achieved compliance: 06/27/1985

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 09/29/2008
Date Data Arrived at EDR: 10/10/2008
Date Made Active in Reports: 11/19/2008
Number of Days to Update: 40

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/29/2008

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 09/29/2008
Date Data Arrived at EDR: 10/10/2008
Date Made Active in Reports: 11/19/2008
Number of Days to Update: 40

Next Scheduled EDR Contact: 04/27/2009
Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/07/2008
Date Data Arrived at EDR: 10/16/2008
Date Made Active in Reports: 12/08/2008
Number of Days to Update: 53

Source: EPA

Last EDR Contact: 01/30/2009
Next Scheduled EDR Contact: 04/13/2009
Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007
Date Data Arrived at EDR: 12/06/2007

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Transporters, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Next Scheduled EDR Contact: N/A
Data Release Frequency: No Update Planned

State- and tribal - equivalent CERCLIS

SHWS: State Oversight List
State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 12/17/2008
Date Data Arrived at EDR: 12/17/2008

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge
Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/01/2007

Data Release Frequency: Annually

IL NIPC: Solid Waste Landfill Inventory
Solid Waste Landfill Inventory. NIPC is an inventory of active and inactive solid waste disposal sites, based on state, local government and historical archive data. Included are numerous sites which previously had never been identified largely because there was no obligation to register such sites prior to 1971.

LUST TRUST: Underground Storage Tank Fund Payment Priority List
In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Local Lists of Hazardous waste / Contaminated Sites

CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

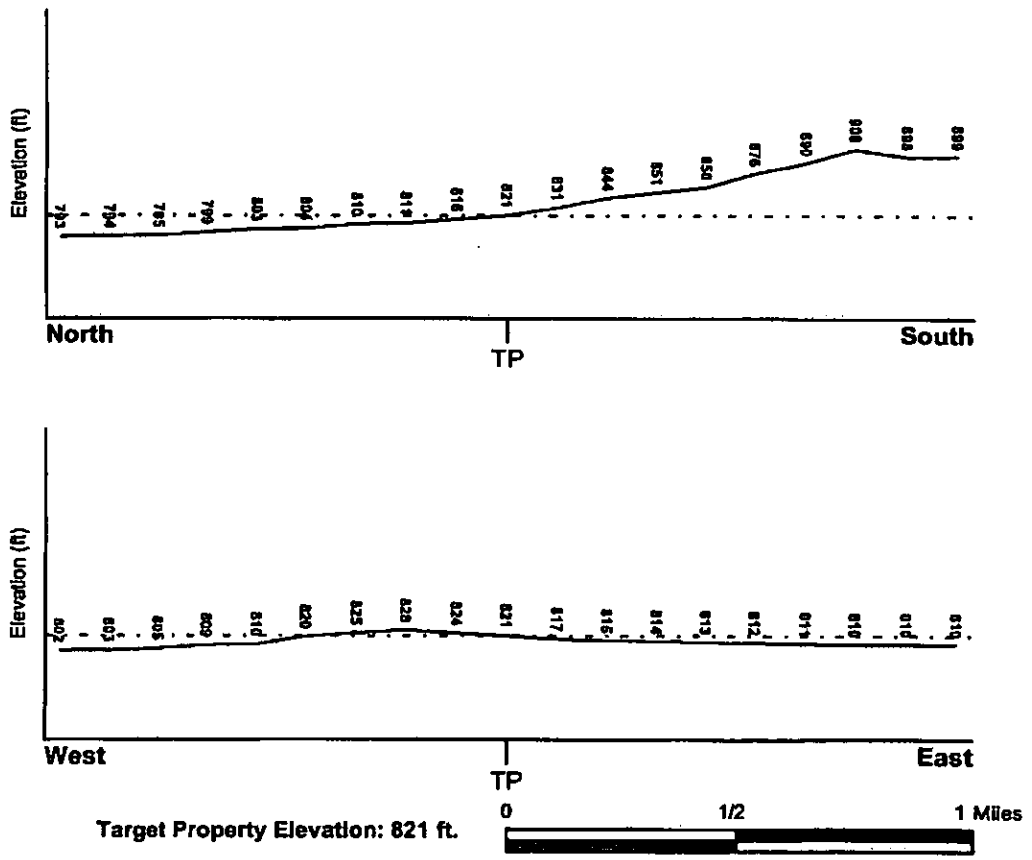
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
MCHENRY, IL	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property:	1704820001B

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MARENGO NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

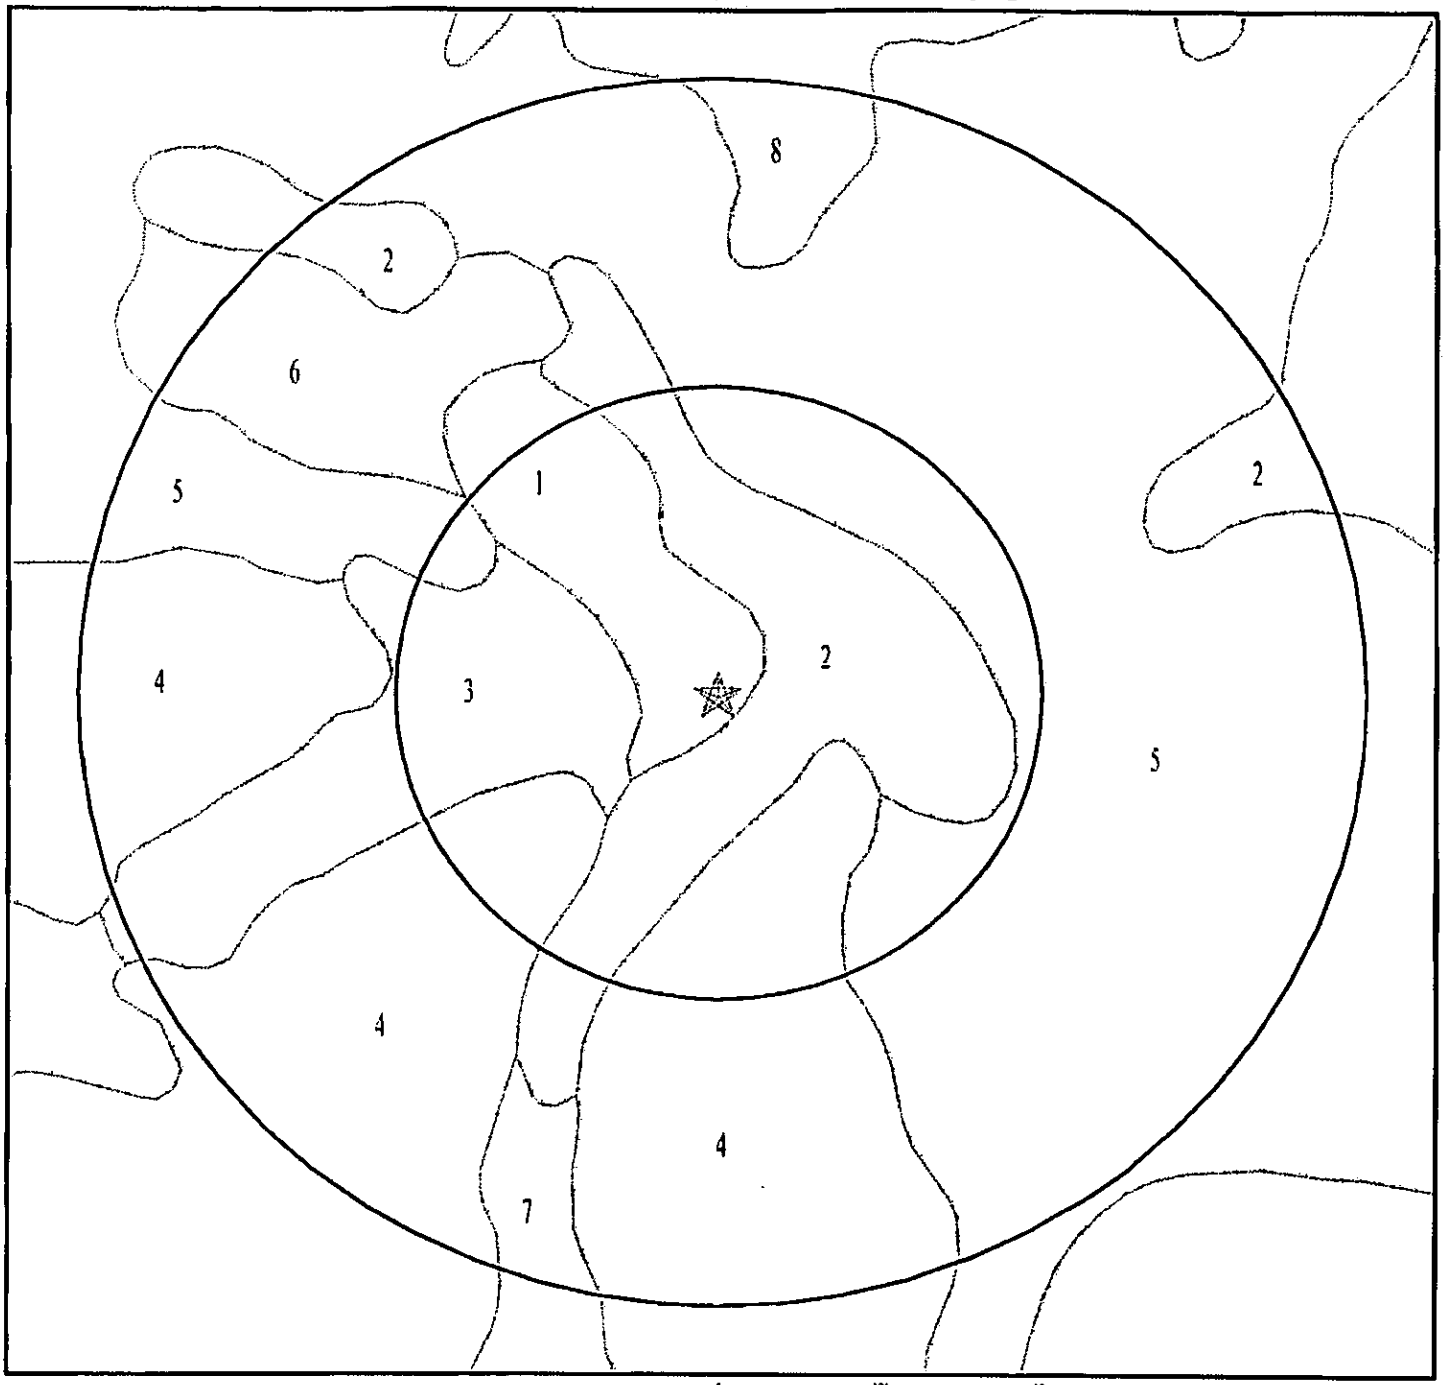
GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT



Era:	Paleozoic
System:	Ordovician
Series:	Upper Ordovician (Cincinnatian)
Code:	O3 *(decoded above as Era, System & Series)*

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Lorenzo

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	7 inches	loam	Not reported	Not reported	Max: 141.14 Min: 141.14	Max: 8.4 Min: 7.4
2	7 inches	18 inches		Not reported	Not reported	Max: 141.14 Min: 141.14	Max: 8.4 Min: 7.4
3	18 inches	59 inches		Not reported	Not reported	Max: 141.14 Min: 141.14	Max: 8.4 Min: 7.4

Soil Map ID: 2

Soil Component Name: Lahoguess

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Somewhat poorly drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 53 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	loam	Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 8.4 Min: 6.6
2	14 inches	38 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 8.4 Min: 6.6
3	38 inches	46 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 8.4 Min: 6.6
4	46 inches	59 inches		Not reported	Not reported	Max: 141.14 Min: 42.34	Max: 8.4 Min: 6.6

Soil Map ID: 3

Soil Component Name: La Rose

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

1 EXECUTIVE SUMMARY

Environmental Group Services, Limited (EGSL) of Chicago, Illinois was contracted by *John Daley and Associates* to perform a Ground Penetrating Radar (GPR) Survey of the property known as Arnold Technologies, located at 300 North West Street, Marengo, Illinois (herein referred to as the Subject Property or the Site).

The GPR Survey consisted of utilizing a USRADAR Seeker SPR Subsurface Imaging System equipped with a 500 MHz antenna. All areas of concern were scanned utilizing a 3-foot interval grid pattern in North-South and East-West directions. Maximum penetration depth of the GPR system at the Subject Property was approximately 8-feet below ground surface.

A GPR is typically utilized to detect subsurface objects. The GPR system sends a series of radar pulses into the subsurface and then calibrates and processes the information. Any reflected signals showing different characteristics from its surrounding media will represent an anomaly. The anomalies can then be displayed on-screen in order to determine its relative shape and depth. It should be noted that the subsurface anomalies represent the general shape, size and location of subsurface objects, and is in no way fully signifying a specific object and/or excavation.

The purpose of this GPR Survey was to confirm or deny the presence of multiple underground storage tank (UST) systems reported to be located at the Subject Property. Listed below are the areas of concern scanned and GPR Survey results:

Area of Concern	Reported USTs	GPR Results	Scan Number
1	One, 10,000-gallon fuel oil	Anomaly representative of the excavation of an area the could have contained a 10,000-gallon UST	SVY_8
2	One, 1,500-gallon core oil	Anomaly representative of the excavation of an area the could have contained a 1,500-gallon UST	SVY_9
3	One, 6,000-gallon acetone	Anomaly representative of an underground storage tank	SVY_12
4	Two, 1,000-gallon rolling oil	Anomaly representative of two underground storage tanks lying side-by-side	SVY_7
5	One, 20,000-gallon oil	No significant anomalies detected. It should be noted that this area was located within a fenced-in storage area with machinery and equipment present. EGSL was unable to achieve full maneuverability in order to fully depict any subsurface scans in this area.	N/A
6	One, 6,000-gallon menthol alcohol One, 6,000-gallon chlorophine	Anomaly representative of the excavation of an area the could have contained two, 6,000-gallon USTs lying end-to-end	SVY_13

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Area of Concern	Reported USTs	GPR Results	Scan Number
7	One, 3,500-gallon coolant	No significant UST anomalies detected. It should be noted that this area contained a historical building that was demolished. GPR scans in the reported tank area resulted in numerous shallow anomalies of large debris that may be representative of the remains of the former building; as such, any scans for the UST system were inconclusive.	N/A
8	Two fuel oil tanks of unknown size	Anomaly representative of two underground storage tanks lying side-by-side	SVY_11
9	One, 10,000-gallon gasoline	Anomaly representative of the excavation of an area the could have contained a 10,000-gallon UST	SVY_6

See Appendix A for Area of Concern Locations.
See Appendix B for GPR Scans and Photographic Documentation.

2 CONCLUSIONS AND RECOMMENDATIONS

The Ground Penetrating Radar Survey conducted at nine areas of concern revealed the following:

- GPR Scans in Areas 3, 4 and 8 indicated the possible presence of UST systems in each area. As such, EGSL recommends that subsurface sampling be conducted along all four walls and the floor of each tank system in order to determine if any of the USTs have negatively impacted the subsurface soil.

- GPR Scans in Areas 1, 2, 6 and 9 indicated anomalies characteristic of possible excavations in each area. The locations and dimensions of each possible excavation were representative of the reported UST system for each area. EGSL recommends that subsurface sampling be conducted along all four walls and the floor of each excavation in order to determine if any of the reported former USTs have negatively impacted the subsurface soil.

- GPR Scans in Area 5 were inconclusive to the possible presence of a UST system due to surface debris. EGSL was able to perform limited scans in the area; however, none of the scans indicated any anomalies representative of a UST system. One subsurface soil sample was obtained from this area during a previous subsurface investigation conducted by EGSL; analytical results indicated no chemicals of concern above IEPA Tier 1 Remediation Objectives. EGSL believes that this UST system may still be present; as such, it is recommended that the tank be removed in accordance with all federal, state and, local regulation if encountered during any future demolition activities.

- GPR Scans in Area 7 were inconclusive to the possible presence of a UST system due to subsurface debris related to the historical demolition of the former building. EGSL

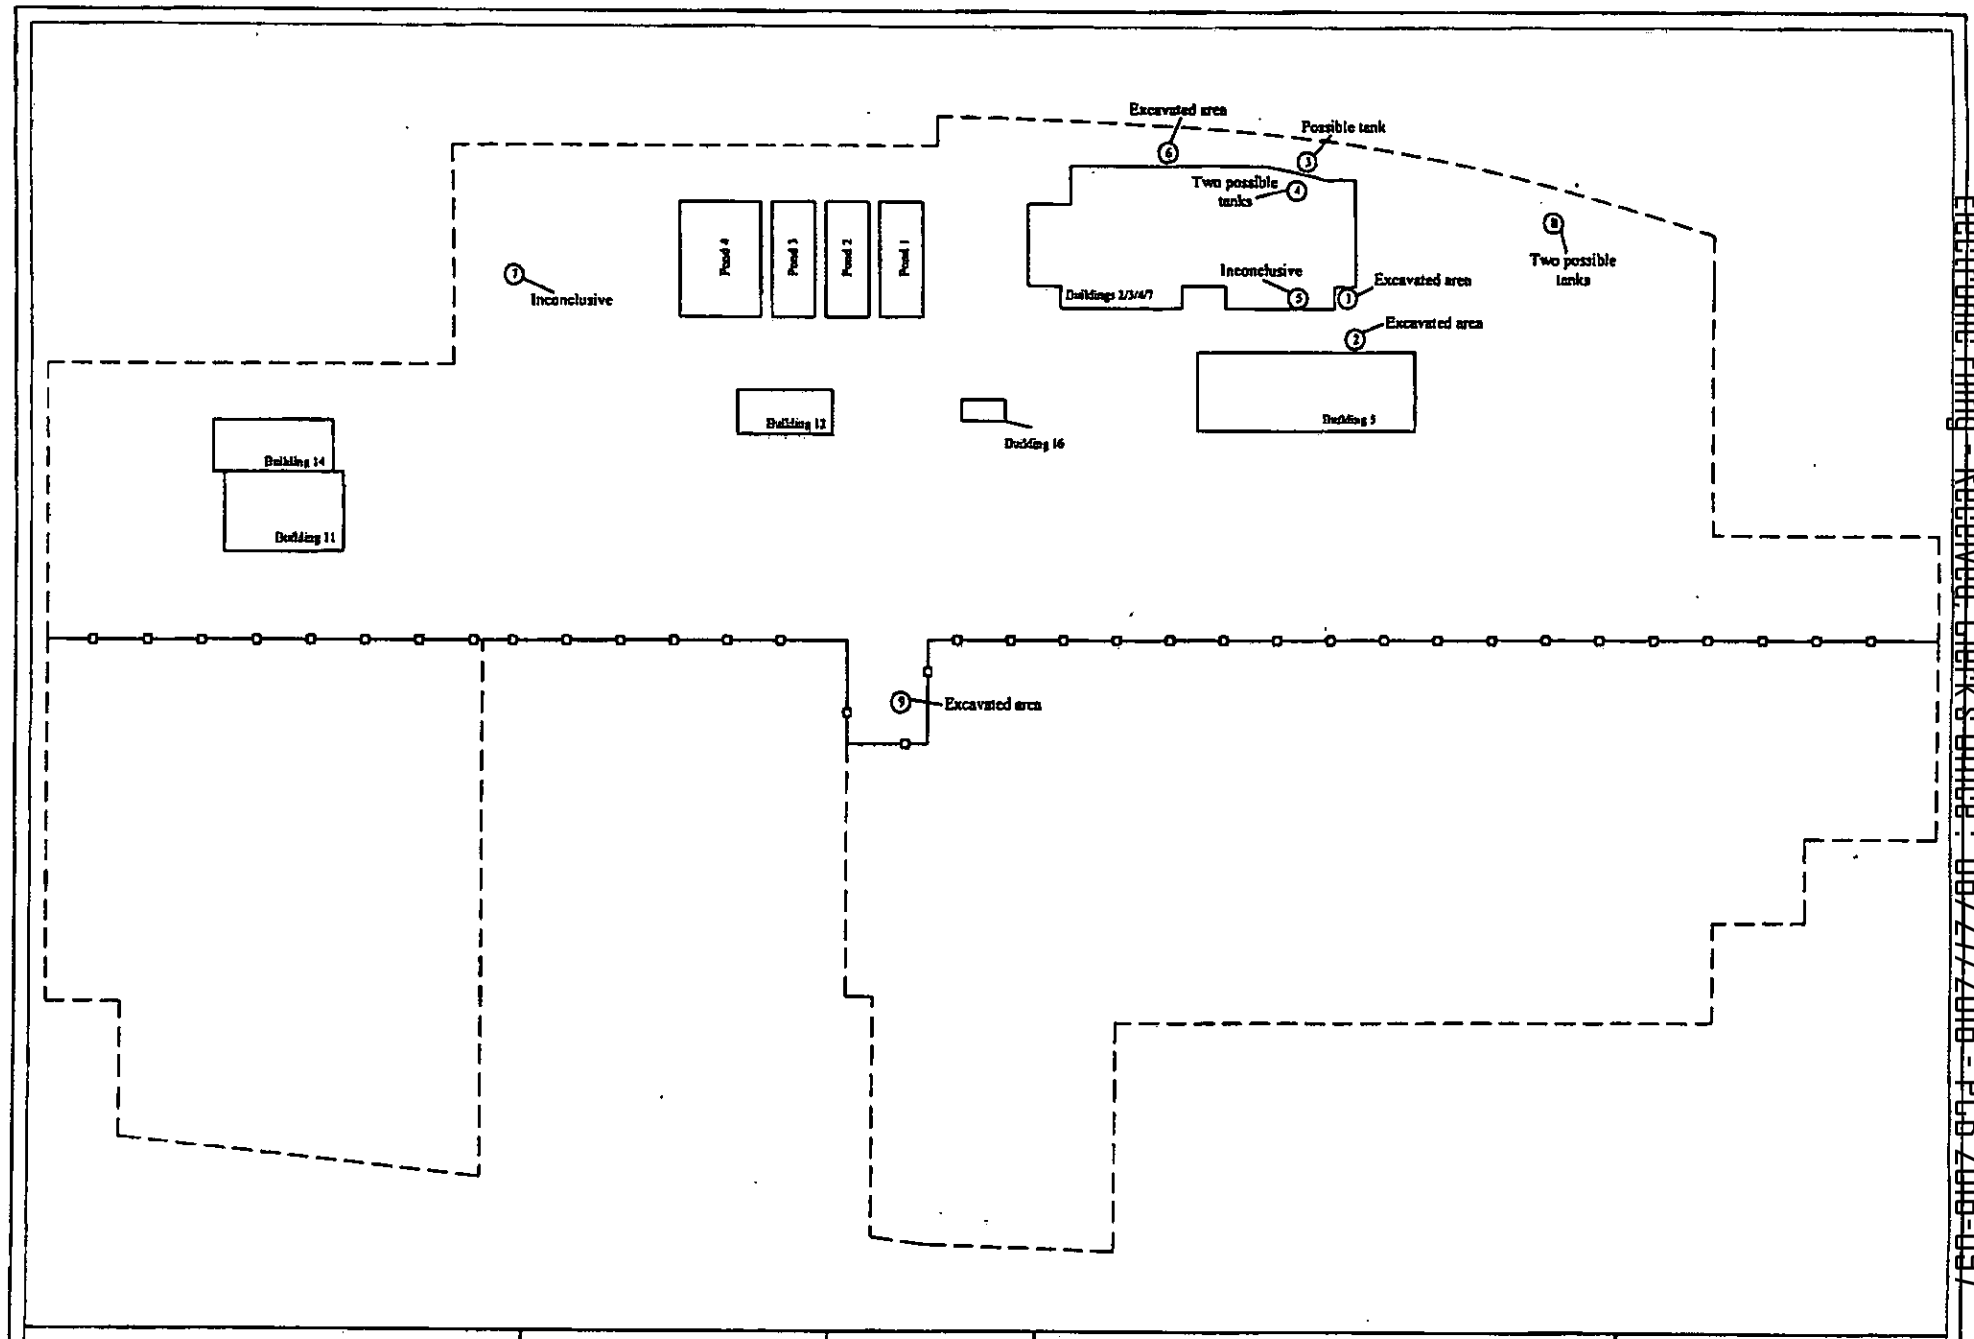
Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

recommends that a test pit be excavated in the reported area of the UST system in order to confirm or deny its presence.

3 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

This report pertains to the property known as Arnold Technologies, located at 300 North West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,



ENVIRONMENTAL GROUP SERVICES, LIMITED

SUBJECT: ARNOLD ENGINEERING CORPORATION (MARENGO FACILITY) - Wastewater Treatment and Recycle System - McHenry County

RECEIVED
MAY 1 2006
Div. Water Pollution Control
Field Operations
Section - Reg. 2

PERMITTEE TO OWN AND OPERATE

Arnold Engineering Corporation
300 N. West Street
Marengo, Illinois 60152

Permit is hereby granted to the above designated Permittee(s) to construct and/or operate water pollution control facilities described as follows:

Wastewaster treatment and recycle system consisting of a series of four ponds (ponds #1-4) of 3 million gallon total capacity, one extended aeration activated sludge treatment plant tributary to Pond#1, one diked percolation field and all pumps, piping and appurtenances necessary to treat sanitary wastewater, cooling water and process wastewater (an average of 2,200,000 gpd, and a maximum of 2,500,000 gpd). Treated wastewater from the four ponds (Ponds #1-4) will either be recycled back to plant operations or discharged to the percolation field via an industrial ditch.

This Permit renews and replaces Permit Number 2004-EO-0971 which was previously issued for the herein permitted facilities.

This operating permit expires on March 31, 2011.

This Permit is issued subject to the following Special Condition(s). If such Special Condition(s) require(s) additional or revised facilities, satisfactory engineering plan documents must be submitted to this Agency for review and approval for issuance of a Supplemental Permit.

SPECIAL CONDITION 1: This Permit is issued with the expressed understanding that there shall be no surface discharge from these facilities. If such discharge occurs, additional or alternate facilities shall be provided. The construction of such additional or alternate facilities may not be started until a Permit for the construction is issued by this Agency.

SPECIAL CONDITION 2: Issuance of this permit does not release the Permittees from any liability for prior violations of the Act or Rules and Regulations promulgated thereunder.

SPECIAL CONDITION 3: The operation of the treatment facilities must be under the direct and active field supervision of a

THE STANDARD CONDITIONS OF ISSUANCE INDICATED ON THE REVERSE SIDE MUST BE COMPLIED WITH IN FULL. READ ALL CONDITIONS CAREFULLY.

WATER POLLUTION CONTROL PERMIT

LOG NUMBERS: 0690-06

PERMIT NO.: 2006-EO-0690

DATE ISSUED: APR 21 2006

FINAL PLANS, SPECIFICATIONS, APPLICATION AND SUPPORTING DOCUMENTS
PREPARED BY: Arnold Engineering Company

SUBJECT: ARNOLD ENGINEERING CORPORATION (MARENGO FACILITY) - Wastewater Treatment and Recycle System - McHenry County

Chapter 1, Part 312.

SPECIAL CONDITION 4: All sludges generated on site shall be disposed of at a site and in a manner acceptable to the Agency.

SPECIAL CONDITION 5: Monitoring and Reporting Requirements

A. Samples shall be collected of the treated wastewater at a point representative of the dicharge from Pond #4 (final stage) but prior to entry into the ditch tributary to the percolation field. Monthly samples shall also be collected from the monitoring wells identified in the permit application as MW-1, MW-2, MW-3, MW-A4, MW-A5, MW-A6, MW-A7, and MW-A8. All samples shall be analyzed for the following parameters:

Parameter	Sample Type	Frequency	Class I Groundwater Quality Standards
1.1.1 - trichloroethane, mg/l	Grab	Once/Month	0.2 mg/l
Tetrachloroethylene, mg/l	Grab	Once/Month	0.005 mg/l
Trichloroethylene, mg/l	Grab	Once/Month	0.005 mg/l
Total Dissolved Solids, mg/l	Grab	Once/Month	1,200 mg/l
Nickel, mg/l	Grab	Once/Month	0.1 mg/l
pH	Grab	Once/Month	6.5 - 9.0 SU

B. Flow rate from Pond #4 to the ditch tributary to the percolation field shall be recorded, in million gallons per day, as a daily maximum and monthly average.

C. Monitoring shall be conducted according to test procedures approved in 40 CFR 136 or other Agency approved methods. The monitoring results and flow data shall be tabulated and submitted to the Agency on a semi-annual basis (May and November of each year) to the following addresses:

READ ALL CONDITIONS CAREFULLY:
STANDARD CONDITIONS

The Illinois Environmental Protection Act (Illinois Revised Statutes Chapter 111-12. Section 1039) grants the Environmental Protection Agency authority to impose conditions on permits which it issues.

1. Unless the construction for which this permit is issued has been completed, this permit will expire (1) two years after the date of issuance for permits to construct sewers or wastewater sources or (2) three years after the date of issuance for permits to construct treatment works or pretreatment works.

2. The construction or development of facilities covered by this permit shall be done in compliance with applicable provisions of Federal laws and regulations, the Illinois Environmental Protection Act, and Rules and Regulations adopted by the Illinois Pollution Control Board.

3. There shall be no deviations from the approved plans and specifications unless a written request for modification of the project, along with plans and specifications as required, shall have been submitted to the Agency and a supplemental written permit issued.

4. The permittee shall allow any agent duly authorized by the Agency upon the presentations of credentials:

   a. to enter at reasonable times, the permittee's premises where actual or potential effluent, emission or noise sources are located or where any activity is to be conducted pursuant to this permit;

   b. to have access to and copy at reasonable times any records required to be kept under the terms and conditions of this permit;

   c. to inspect at reasonable times, including during any hours of operation of equipment constructed or operated under this permit, such equipment or monitoring methodology or equipment required to be kept, used, operated, calibrated and maintained under this permit;

   d. to obtain and remove at reasonable times samples of any discharge or emission of pollutants;

   e. to enter at reasonable times and utilize any photographic, recording, testing, monitoring or other equipment for the purpose of preserving, testing, monitoring, or recording any activity, discharge, or emission authorized by this permit.

5. The issuance of this permit:

   a. shall not be considered as in any manner affecting the title of the premises upon which the permitted facilities are to be located;

   b. does not release the permittee from any liability for damage to person or property caused by or resulting from the construction, maintenance, or operation of the proposed facilities;

   c. does not release the permittee from compliance with other applicable statutes and regulations of the United States, of the State of Illinois, or with applicable local laws, ordinances and regulations;

   d. does not take into consideration or attest to the structural stability of any units or parts of the project;

   e. in no manner implies or suggests that the Agency (or its officers, agents or employees) assumes any liability, directly or indirectly, for any loss due to damage, installation, maintenance, or operation of the proposed equipment or facility.

6. Unless a joint construction/operation permit has been issued, a permit for operating shall be obtained from the agency before the facility or equipment covered by this permit is placed into operation.

7. These standard conditions shall prevail unless modified by special conditions.

8. The Agency may file a complaint with the Board for suspension or revocation of a permit:

   a. upon discovery that the permit application contained misrepresentations, misinformation or false statement or that all relevant facts were not disclosed; or

   b. upon finding that any standard or special conditions have been violated; or

   c. upon any violation of the Environmental Protection Act or any Rules or Regulation effective thereunder as a result of the construction or development authorized by this permit.

PROJECT:

Arnold Magnetic Technologies Corporation requests to renew of Water Pollution Control Operating no. 2004-EO-0971. The existing system neither discharge to POTW nor associated with a municipal sewer. An on-site well provides the potable and process water.

The recycled water system contains a series of 4 ponds of 3 million gallons and 1.5 mgd of cooling water through a separate distribution system. A 850 feet deep private well supplies sanitary water, make-up cooling water, and process water and approximately 126,000gpd flows into the recycle water system. Arnold Magnetic technologies indicated that "no changes have been made to the subject system since the existing operating permit was issued in 2004".

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Subject: The Arnold Engineering Corporation
Data: 0690-06

UPDATE:

In the previous permit, IEPA requested Arnold Engineering Corporation to collect the samples of treated wastewater monthly, and that includes 1,1,1-Trichloroethane, Tetrachloroethylene, Trichloroethylen, Total Dissolved Solids, Nickel, and pH. In November 14, 2005, IEPA received the semi-annual report of groundwater monitoring. The samples came from the Well #1, Well #2, Well #3, Outfall Pond 4, and the flow rates of Pond #5. *Received the fax of the data sheet, the reading of sampling data is below the standard.*

Talk to the applicant Stephen Brisson on Monday, April 17, 2006 (1:00pm). I asked him about the Special Condition 6 because I didn't find any data for MWA4, MWA5, MWA6, MWA7, and MWA8. It also didn't include the pH reading. I also checked the Special Condition 9 with him, and I can't find the Pond 6 in the site map, which came with the application. Mr. Brisson told me they would send the next report in May 2006. However, I told him I don't have any data of MWA4-MWA8. He could not answer me the questions. He told me he would ask Don Smith (URS Corporation) to answer my questions.

Don Smith (URS Corporation) called me on Monday, April 17, 2006 (1:50pm). He said he would fax the data of MWA4, MWA5, MWA6, MWA7, and MWA8 including pH reading next day (Tuesday, April 18, 2006). He also indicated the Pond 6 and the building next to the Pond 6, which were not exiting anymore after IEPA issued the previous permit (July, 2004). Therefore, URS could not have any sampling data from Pond 6. Arnold set up an off-site MW-09 at the previous location of Pond 6 for sampling (the West of approximately 300 feet from Pond 1). Arnold faxed some sampling data and the results were U, which were the analyses not detected (April 18, 2006)

Stephen Brisson fax 11 pages information (on Tuesday, April 18, 2006) to indicate that Arnold receive that validated results and all results were below the method detection limits (5 ug/l) of three private well down gradient (north and northwest) of the facility. *(The Special Conditions 5 and 9 in the previous permit will not included in the new permit)* In the letter, it also indicated that Arnold Engineering has checked the records and 1, 1,1 – Tirchoroethane has not been used at the facility for many years. Arnold also was not observing any increase in concentration of any other contaminants in any of the other wells on and off site. *(The Special Condition 8 in the previous permit will not be included in the new permit).* In the letter, Mr. Brisson also indicated that Arnold completed a Waste Use Survey. *(The Special Condition 7 will not be included in the new permit).*

ACTION:

The Agency will issue a permit with appropriate special conditions.

13. SLUDGE DISPOSAL: Schedule G must be submitted.

14. EXCESS FLOW TREATMENT: Schedule E must be provided if applicable.

15. SYSTEMS RELIABILITY: Briefly describe provisions for operation during power failures, flooding, peak loads, equipment failures, maintenances shutdowns, and other emergencies

Each pump has an alarm to notify Maintenance if a failure occurs. There are redundant pumps so that, if a failure occurs, alternate pumps activate to handle the flow.

16. Can primary treatment and disinfection be provided at all times? YES ☒ NO ☐ . What will be effect of primary treatment and disinfection alone on the receiving stream? No receiving stream

17. DETECTABLE LEVELS OF CYANIDE: Does the treatment works in question receive detectable level of cyanide. YES ☐ NO ☒ If yes, submit Schedule L.

18. TREATMENT WORKS OPERATOR: List names of certified operators and certification class.

Heinz Boecker - Class 7

19. POTABLE WATER SUPPLY:

19.1 Does the project include the construction of any potable water supply wells? YES ☐ NO ☒

19.2 Will any connections be made to an existing potable water supply? YES ☐ NO ☒

SCHEDULE G SLUDGE DISPOSAL & UTILIZATION

1. Name of Project The Arnold Engineering Co.
2. General Information
   2.1 Source(s) Amcodyne Extended Aeration Activated Sludge Treatment Plant
   2.2 Production Volume per year 2,000 gal. Dry Tons per year 0.2
   2.3 Sludge to be disposed of is: Liquid x Dry Tons
   2.4 Sludge is: Aerobically digested [x], Anaerobically digested [ ], Heat Anaerobically digested [ ], Raw [ ], Chemically Stabilized [ ], Composted [ ], Wastewater Lagoon [ ], WTP Lime [ ], WTP Alum [ ], WTP Iron [ ], Other [ ].
   If other, describe _____. Mixture [ ], If mixture, describe _____
   2.5 Is the sludge defined as hazardous by State or Federal Law? YES [ ] NO [x]. If yes, basis.
   2.6 Is sludge to be stored on the STP site? YES [ ] NO [x] If yes, type of storage, lagoon [ ], storage tank [ ], Other [ ]. If other, describe _____ capacity of storage, _____ cu. ft.
   2.7 Sludge Hauling
      2.7.1 Name(s), address(es) and Illinois Transporters I.D. Numbers
      Beaver Oil Co.; 6037 Lenzi; Hodgkins, IL 60525; IL Transporter # 0014 (last used in approximately 2001, no sludge has been transported off-site since that date due to decreased system usage).
      2.7.2 For industrial generators, has Illinois Generator ID Number and Authorization Number been issued? YES [x] NO [ ] If no, contact the Division of Land Pollution Control.
      Illinois Generator ID Number 1110650003
      Authorization Number F5242-03
3. Methods of Sludge Disposal and/or Utilization
   3.1 Land Application
      3.1.1 Indicate the number of dry tons of sludge per year to be disposed by each of the following methods:
      Agricultural land [ ], Commercial Fertilizer Production [ ], Dedicated Land Disposal [ ], Disturbed Land Reclamation [ ], Silviculture [ ], Horticultural Lands [ ], Public Distribution [ ], Other [x].
      If other, specify Beaver Oil indicates that the sludge was treated and recycled;there was no disposal.
      3.1.2 Sludge Disposal Site Location. Provide a map (USGS Quadrangle map or plat map) showing location.
      Name of USGS Quadrangle Map (7.5 or 15 minute) or plat map N/A
      3.1.3 Provide soil survey map and soil description for disposal site. Identify name of soil survey and map sheet number for each soil survey map provided.

3.1.4 Is sludge to be stored at disposal site? YES ☐ NO ☐ . If yes, describe and state the storage volume N/A cubic feet.

3.1.5 Provide a copy of sludge user information sheet and completed, signed copies for any known users.

3.1.6 In a narrative description provide operating practices and design features to prevent ground and/or surface water pollution, potable water supply wellhead protection and other buffer distances, calculations supporting storage capacity, total acres available, soil characteristics, operational contingencies, etc.

N/A

3.1.7 Submit calculations of sludge application rate for agronomic rate, organic loading and metal loading rate.

3.2 Landfilling ☐ on-site ☐ off-site

3.2.1 Sanitary Landfill ☐ Special Waste Landfill ☐ Hazardous Waste Landfill ☐ Other ☐

If other, specify N/A

3.2.2 Name and Location of Landfill(s)

N/A

3.2.3 IEPA Permit Number(s) N/A ; ;

3.3 Incineration

3.3.1 Name and Location N/A

3.3.2 IEPA Permit Number(s) N/A ; ;

3.3.3 Ultimate Disposal of Incinerator residue

N/A

4. Sludge Characteristics

Submit complete analyses of sludge characteristics in mg/kg dry wt. basis unless otherwise indicated. The analyses shall be performed unless the sludge is disposed of by incineration or at an off-site landfill. Analyses performed shall include but not be limited to parameters below:

Parameter	Parameter
% TS	Sulfur
% VS	Aluminum (total)
COD mg/l	Arsenic (total)
pH	Barium (total)
BOD_5 mg/l	Cadmium (total)
Acidity meq of CaCO3 at pH	Cobalt (total)
Alkalinity meq of CaCO3 at pH	Chromium, hex (total)
Oil and Grease mg/l	Chromium (total)
Phenols mg/l	Copper (total)
Cyanide	Iron (total)
Sulfate (total) mg/l	Mercury (total)
Sulfide (total) mg/l	Manganese (total)
Sodium	Molybdenum (total)
EC mmhos/cm	Nickel (total)
TOC	Lead (total)

SCHEDULE J INDUSTRIAL TREATMENT WORKS CONSTRUCTION OR PRETREATMENT WORKS

1. NAME AND LOCATION:
   - 1.1 Name of project The Arnold Engineering Co.
   - 1.2 Plant Location
     - 1.2.1 NW (Quarter Section) 35 (Section) 44N (Township) 5E (Range) 3rd P.M.
     - 1.2.2 Latitude 42 deg. 15 min. 14 sec. °NORTH
     - 1.2.3 Longitude 88 deg. 37 min. 14 sec. °WEST
     - 1.2.3 Name of USGS Quadrangle Map (7.5 or 15 minute) Harvard IL -WI 15 Minute
2. NARRATIVE DESCRIPTION AND SCHEMATIC WASTE FLOW DIAGRAM: (see instructions)

   Original application submitted in 1975. Updates were submitted in 1984, 1989, and 1993. With the exception of flow rates, operation of the system has remained essentially the same since 1993. Updated description attached.

   - 2.1 PRINCIPAL PRODUCTS:

     Industrial and commercial magnets and magnetic materials.

   - 2.2 PRINCIPAL RAW MATERIALS:

     Aluminum, nickel, cobalt, iron, steel, acids, oils

3. DESCRIPTION OF TREATMENT FACILITIES:
   - 3.1 Submit a flow diagram through all treatment units showing size, volumes, detention times, organic loadings, surface settling rate, weir overflow rate, and other pertinent design data. Include hydraulic profiles and description of monitoring systems.
   - 3.2 Waste Treatment Works is: Batch ☐ , Continuous ☑ , No. of Batches/day _____ , No. of Shifts/day _____
   - 3.3 Submit plans and specifications for proposed construction.
   - 3.4 Discharge is: Existing ☑ ; Will begin on _____
4. DIRECT DISCHARGE IS TO: Receiving Stream ☐ Municipal Sanitary Sewer ☐ Municipal storm or municipal combined sewer ☐

   If receiving stream or storm sewer are indicated complete the following:

   Name of receiving stream N/A ; tributary to N/A ;

   tributary to N/A ; tributary to N/A ;
5. Is the treatment works subject to flooding? Yes ☐ No ☐ If so, what is the maximum flood elevation of record (in reference to the treatment works datum) and what provisions have been made to eliminate the flooding hazard?

   Area is not subject to flooding.
6. APPROXIMATE TIME SCHEDULE: Estimated construction schedule:

   Start of Construction _____ ; Date of Completion _____

   Operation Schedule _____ ; Date Operation Begins _____

   100% design load to be reached by year _____
7. DESIGN LOADINGS
   - 7.1 Design population equivalent (one population equivalent is 100 gallons of wastewater per day, containing 0.17 pounds of BOD_5 and 0.20 pounds of suspended solids:

     BOD N/A ; Suspended Solids N/A ; Flow N/A
   - 7.2 Design Average Flow Rate N/A MGD.

7.3 Design Maximum Flow Rate N/A MGD.

7.4 Design Minimum Flow Rate N/A MGD.

7.5 Minimum 7-day, 10-year low flow N/A cfs N/A MGD.

Minimum 7-day, 10-year flow obtained from N/A

7.6 Dilution Ratio N/A : .

8. FLOW TO TREATMENT WORKS (if existing):

8.1 Flow (last 12 months)

8.1.1 Average Flow 1.3 MGD

8.1.2 Maximum Flow 1.5 MGD

8.2 Equipment used in determining above flows

9. Has a preliminary engineering report for this project been submitted to this Agency for Approval?

Yes ☒ No ☐ . If so, when was it submitted and approved. Date Submitted 9/30/1964

Certification # 19640-FA-546

Dated October 9, 1964

10. List Permits previously issued for the facility:

1994-EO-1340-2, 1999-EO-4027, 2004-EO-0971

11. Describe provisions for operation during contingencies such as power failures, flooding, peak loads, equipment failure, maintenance shut downs and other emergencies.

Backup pumps are present to provide assistance in case of main pump failure.

12. Complete and submit Schedule G if sludge disposal will be required by this facility.

13. WASTE CHARACTERISTICS: Schedule N must be submitted.

14. TREATMENT WORKS OPERATOR CERTIFICATION: List names and certification numbers of certified operators:

Heinz Boecker - Class 7 Operator

This Agency is authorized to require this information under Illinois Revised Statutes, 1979, Chapter 111 1/2, Section 1039. Disclosure of this information is required under that section. Failure to do so may prevent this form from being processed and could result in your application being denied.

Re: **Violation Notice, L-2008-01057**
LPC #1110650003 – McHenry County
Marengo/Arnold Magnetic Technologies
Compliance File

Dear Mr. Kalaczinski:

This constitutes a Violation Notice pursuant to Section 31(a)(1) of the [Illinois] Environmental Protection Act, 415 ILCS 5/31(a)(1), and is based on a record review completed on February 26, 2008 by representatives of the Illinois Environmental Protection Agency (Illinois EPA).

The Illinois EPA hereby provides notice of violations of environmental statutes, regulations, or permits as set forth in Attachment A to this letter. Attachment A includes an explanation of the activities that the Illinois EPA believes may resolve the specified violations, including an estimate of a reasonable time period to complete the necessary activities. However, due to the nature and seriousness of the violations cited, please be advised that resolution of the violations may require the involvement of a prosecutorial authority for purposes that may include, among others, the imposition of statutory penalties.

A written response which may include a request for a meeting with representatives of the Illinois EPA, must be submitted via certified mail to the Illinois EPA within 45 days of receipt of this letter. The response must address each violation specified in Attachment A and include for each an explanation of the activities that will be implemented and the time schedule for the completion of that activity. The written response will constitute a proposed Compliance Commitment Agreement (CCA) pursuant to Section 31 of the Act. The Illinois EPA will review the proposed CCA and will accept or reject it within 30 days of receipt.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

If a timely written response to this Violation Notice is not provided, it shall be considered to be a waiver of the opportunity to respond and to meet provided by Section 31(a) of the Act, and the Illinois EPA may proceed with a referral to the prosecutorial authority.

Written communications should be directed to:

Illinois EPA – Bureau of Land
Attn: Charles Grigalauski
9511 West Harrison Street, 3rd Floor
Des Plaines, Illinois 60016

All communications must include reference to this **Violation Notice Number, L-2008-01057.**

The text of the Act referenced herein is available at www.ipcb.state.il.us. If you have questions regarding this matter, please contact Thomas Rivera at 847/294-4079.

Sincerely,

Charles T. Grigalauski, Regional Manager
Field Operations Section
Bureau of Land

ATTACHMENT A

1. Pursuant to Section 12(a) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(a)), no person shall cause, threaten or allow the discharge of any contaminants into the environment in any State so as to cause or tend to cause water pollution in Illinois, either alone or in combination with matter from other sources, or so as to violate regulations or standards adopted by the Pollution Control under this Act.

   A violation of Section 12(a) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(a)) is alleged for the following reason: **The discharge of contaminants was caused and allowed in a way that caused water pollution. Chlorinated solvent contamination above the Class 1 groundwater objectives is present in on site groundwater. The groundwater contamination has been present for approximately 20 years. Shallow groundwater flow under the site is to the north-northwest, towards the nearby Kishwaukee River. Residential/nonresidential private water wells are located to the north-northwest, directly down gradient of the site. The private wells are within ½ mile of the site and its unknown at this time if the private wells have been impacted by the chlorinated solvent groundwater contamination.**

   1,1,1-Trichloroethane (1,1,1-TCA) was detected as high as 4,900 ppb, in 1999, in on site groundwater monitoring well MW-3. More recently in 2007, 1,1,1-TCA was detected as high as 501 ppb in on site groundwater monitoring well MW-A7. Tetrachloroethene (PCE) was detected as high as 18.8 ppb, in 2007, in onsite groundwater monitoring well MW-3. PCE contamination in MW-3 has steadily increased over the past approximately 6 years. Other on site groundwater monitoring wells have chlorinated solvent detections as well, but MW-3 and MW-A7 have shown the highest concentrations of 1,1,1-TCA and PCE.

2. Pursuant to Section 12(d) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(d)), no person shall deposit any contaminants upon the land in such place and manner so as to create a water pollution hazard.

   A violation of Section 12(d) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(d)) is alleged for the following reason: **Contaminants were deposited upon the land in such a place and manner that created a water pollution hazard. Chlorinated solvent contamination above the Class 1 groundwater objectives is present in on site groundwater. The groundwater contamination has been present for approximately 20 years. Shallow groundwater flow under the site is to the north-northwest, towards the nearby Kishwaukee River. Residential/nonresidential private water wells are located to the north-northwest, directly down gradient of the site. The private wells are within ½ mile of the site and its unknown at this time if the private wells have been impacted by the chlorinated solvent groundwater contamination.**

   1,1,1-TCA was detected as high as 4,900 ppb, in 1999, in on site groundwater monitoring well MW-3. More recently in 2007, 1,1,1-TCA was detected as high as 501 ppb in on site groundwater monitoring well MW-A7. PCE was detected as high as 18.8 ppb, in 2007, in on site groundwater monitoring well MW-3. PCE contamination in MW-3 has steadily increased over the past approximately 6 years. Other on site groundwater monitoring wells have chlorinated solvent detections as well, but MW-3 and MW-A7 have shown the highest concentrations of 1,1,1-TCA and PCE.

SUGGESTED RESOLUTIONS

1. Immediately determine the source(s) of 1,1,1-TCA, PCE and other related contaminants that are present in groundwater under the subject site by conducting an Investigation.

2. Immediately determine the extent of 1,1,1-TCA, PCE and other related contaminants in soil and groundwater, both on site and off site, by conducting an Investigation.

3. Collect representative groundwater samples from all down gradient residential/nonresidential private water wells (approximately 16) located within approximately ½ mile of the site, see the attached map. The private water well samples shall be collected from an unfiltered and unsoftened spigot, after an appropriate water system purge is conducted. The samples shall be analyzed for Volatile Organic Compounds at an Illinois EPA approved laboratory. Illinois EPA would like to oversee the sampling event.

4. Remediate, if necessary, to meet all applicable remediation objectives for soil and groundwater.

* Immediately manage the groundwater to mitigate impairment caused by the release of volatile organic compounds.

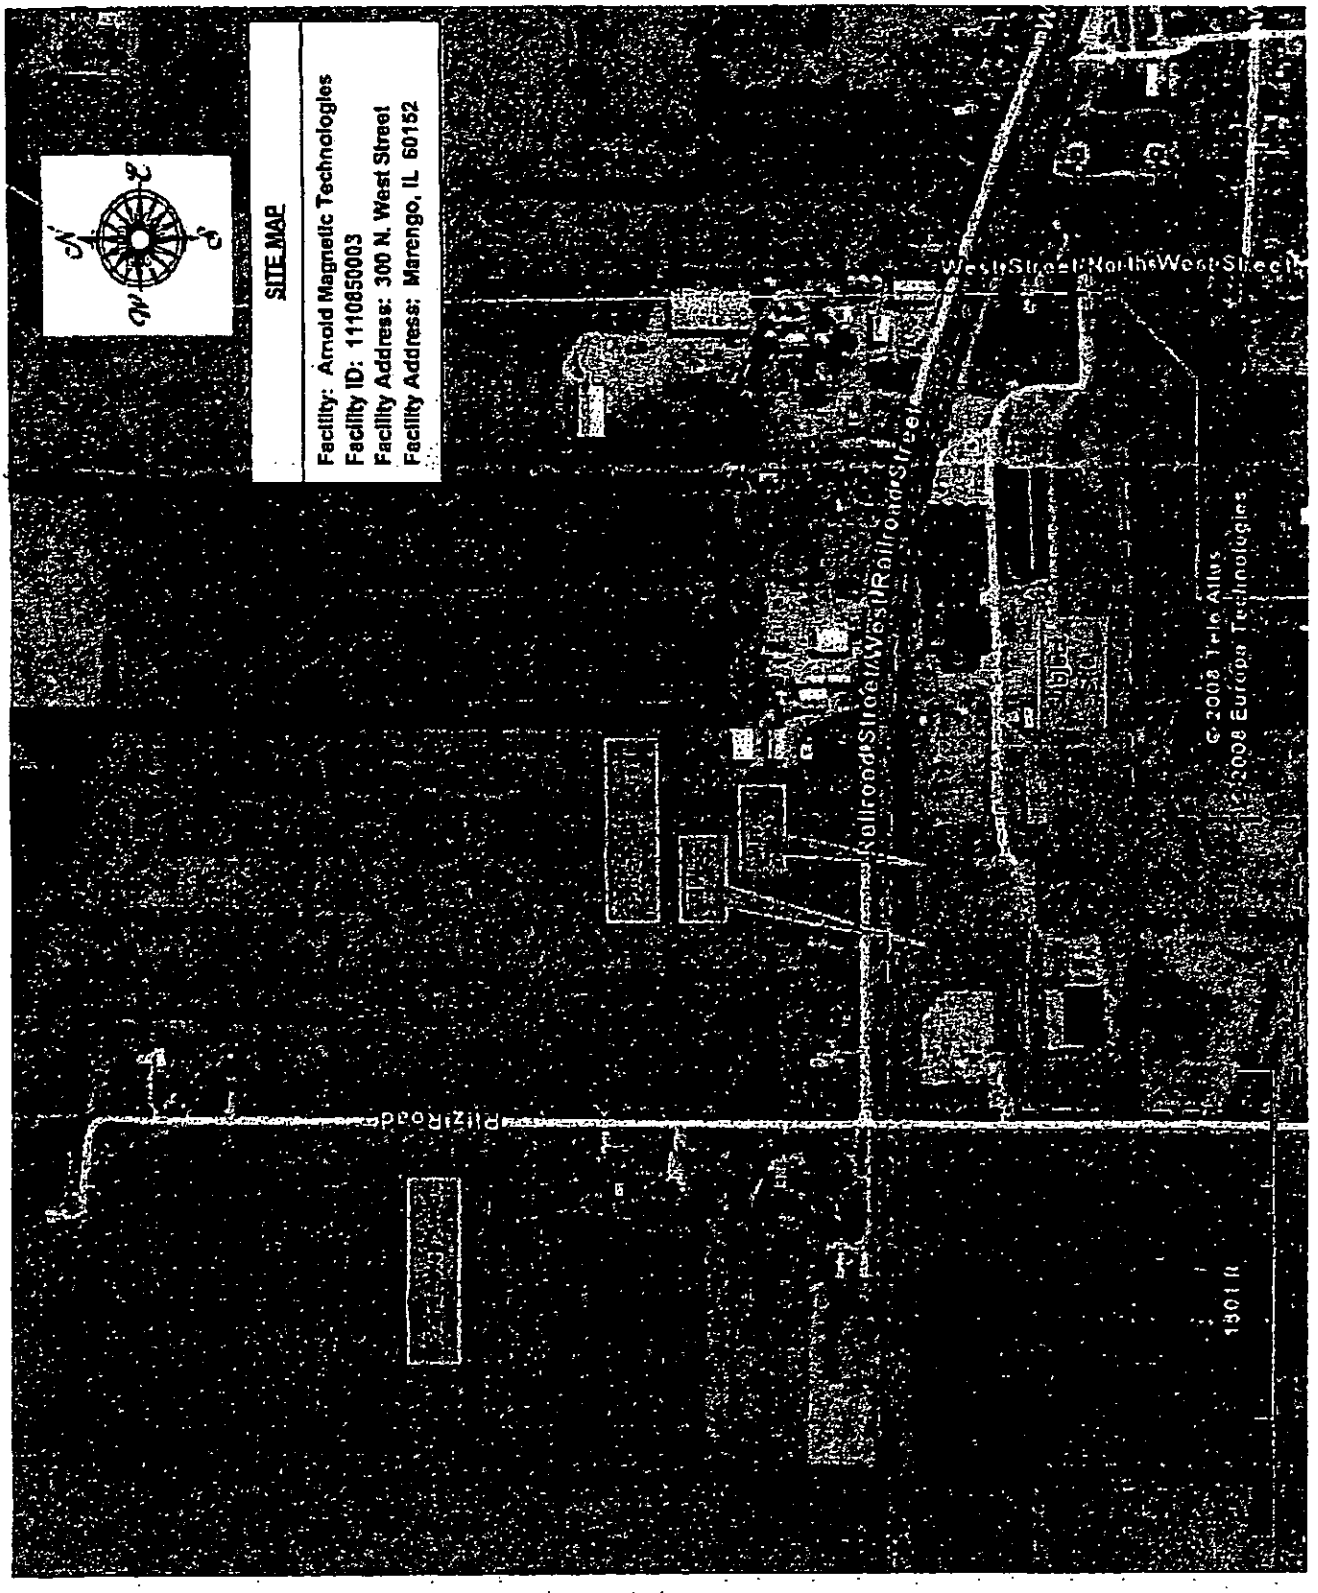
* All copies of receipts/manifests, and analytical reports must be submitted to the Illinois EPA that document the proper disposal of any waste (i.e. impacted soil, contaminated groundwater). The receipts/manifests must be submitted within 10 days after the off-site shipment.

* Within 45 days from the receipt of this letter, enroll in the Site Remediation Program.

* A Site Investigation Work Plan shall be submitted within 30 days of the Illinois EPA approval of the Site Remediation application.

* The Site Investigation shall be implemented within 30 days of the Illinois EPA approval of the Site Investigation Work Plan.

* The Site Investigation Report shall be submitted within 180 days of approval of the Site Investigation Work Plan.



* The Remediation Objectives Report shall be submitted within 30 days of approval of the Site Investigation Report.

* The Remedial Action Plan shall be submitted within 30 days of Illinois EPA approval of the Remedial Objectives Report.

* The remedial action shall be implemented within 30 days of Illinois EPA approval of the Remediation Action Plan.

* **The Remedial Action Completion Report shall be submitted within 365 days of Illinois EPA approval of the Remedial Action Plan.**

The written response to this Violation Notice must include information in rebuttal, explanation, or justification of each alleged violation and must be submitted to the Illinois EPA by certified mail, within 45 days of receipt of this Violation Notice. The written response must also include a proposed Compliance Commitment Agreement that commits to specific remedial actions, includes specified times for achieving each commitment, and may include a statement that compliance has been achieved.

Attention: Thomas Rivera

Re: Violation Notice Number, L-2008-01123

Dear Mr. Rivera:

This letter shall serve as a written response to Violation Notice Number L-2008-01057 on behalf of 300 West LLC, owner of the property at 300 N. West Street, Marengo.

1. The source of 1,1,1-TCA and PCE detected in the groundwater monitoring wells along the northwestern portion of the subject property was reportedly related to historical operations conducted in that area. A historical subject building ("Building #6") was located at the northwestern corner of the subject property and was reportedly demolished approximately 10-20 years ago. Historical industrial operations conducted within Building #6 reportedly utilized chlorinated solvents in production processes. The historical utilization of chlorinated solvents in this area is believed to be the source of elevated levels of 1,1,1-TCA and PCE in the groundwater.

2. 300 West LLC has engaged Environmental Group Services Limited ("EGSL"), and EGSL currently is working with Mr. Thomas Rivera of the IEPA regarding off-site groundwater sampling. Addresses were obtained from all of the northern, western, and northwestern properties that are possibly utilizing groundwater wells for potable purposes. Mr. Rivera sent letters to all of the neighboring addresses requesting access to the properties in order to sample the groundwater wells for each of the sites. At this time, Mr. Rivera and EGSL are awaiting for responses from the neighboring properties. Upon receipt of any and all responses, neighboring wells will be sampled, and all groundwater samples will be submitted to an accredited laboratory of analysis of VOCs. It is anticipated that the on-site sampling will be complete in approximately one month.

3. The subject property has been enrolled into the IEPA's Site Remediation Program (SRP). Tim Zook has been assigned as the project manager for the site. Upon submittal of the Remedial Action Completion Report (RACR), a Comprehensive NFR for residential properties will be requested for the entire subject property. The RACR is anticipated to be complete by December 2008.

Do not hesitate to call me (312.420.6046) with any questions.

Very truly yours,

John M. Daley

Re: **Compliance Proposal dated June 17, 2008**
Violation Notice L-2008-01123 and L-2008-01057
BOL # 1110650003 – McHenry County
Marengo/Arnold Magnetic Technologies
Compliance File

RECEIVED
JUL 18 2008
IEPA-BOL
DES PLAINES OFFICE

Dear Mr. Daley:

On June 17, 2008 the Illinois Environmental Protection Agency ("Illinois EPA") received your transmittal concerning Arnold Magnetic Technologies in response to the Febraury 28, 2008 and April 15, 2008 Violation Notice. This transmittal proposed certain steps and initiatives, whose purpose was to bring Arnold Magnetic Technologies into compliance with State law and regulations remedying the violations alleged in the Violation Notice, **L-2008-01123 and L-2008-01057**. Unfortunately, the Illinois EPA cannot consider this transmittal as a Compliance Commitment Agreement ("CCA") under the Illinois Environmental Protection Act, Section 31(a)(2) [415 ILCS 5/31(a)(2) (1996)], because the transmittal was received after the 45-day deadline.

Nonetheless, the Illinois EPA evaluated your proposal and we are pleased to inform you that the timely implementation of the proposal will allow the resolution of this matter short of formal enforcement at this time. However, this matter remains open to formal enforcement if necessary. The failure to achieve compliance as proposed will result in the reconsideration of this matter including referral to the Office of the Attorney General, the State's Attorney of McHenry County, or the United States Environmental Protection Agency for formal enforcement and the imposition of penalties.

Further, if any of the alleged violations remain the subject of disagreement between the Illinois EPA and Arnold Magnetic Technologies, this matter may be considered for referral to the Office of the Attorney General, the State's Attorney of McHenry County, or the United States Environmental Protection Agency for formal enforcement action and the imposition of penalties.

Written communications should be directed to:

Illinois EPA – Bureau of Land
Attn: Charles Grigalauski
9511 West Harrison, 3rd Floor
Des Plaines, Illinois 60016

All communications must include reference to your **Violation Notice L-2008-01123 and L-2008-01057**. If you have questions regarding this matter, please contact **Thomas Rivera** at **847/294-4079**.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Illinois EPA FOIA Exemption Reference Sheet SID: 12171

Agency ID: 170000116265 Media File Type LAND
Bureau ID: 1110650003
Site Name: Arnold Magnetic Technologies
Site Address1: 300 N West St
Site Address2:
Site City: Marengo State: IL Zip: 60152-

This record has been determined to be partially or wholly exempt from public disclosure

Exemption Type:

Redaction

Exempt Doc #: 15 **Document Date:** 11/18/2013 **Staff:** EMI

Document Description: FOCUSED SITE INVESTIGATION REPORT - VOL 5

Category ID: 31A **Category Description:** SITE REMEDIATION - TECHNICAL **Exempt Type:** Redaction

Permit ID: **Date of Determination:** 11/27/2013

For Agency Use Only
Thomas Rivera
Illinois EPA - BOL

WELL ID#: _____

Sample Date _____ Sampler Initials _____

To Be Completed by Resident

~~CONFIDENTIAL~~ mef

PRIVATE WELL SAMPLING ACCESS

[redacted]

(Please make corrections here if label is incorrect)

NAME: _____ Job#- [redacted]

ADDRESS: _____ [redacted]

PUBLIC WATER? _____

NOTE: If you have public water, no need to complete the rest of the form. Just mail it in.

PRIVATE WELL? Yes

RESIDENTS: [redacted] Adults (over age 18); ___ Children (Ages: _____)
Expectant Mother? _____

TELEPHONE: (Home: [redacted] (Work: [redacted]
Best time to call after [redacted] my cell phone

Well Location, relative to house? South side of house DEPTH of WELL? 180

Do you make use of the well water for:

DRINKING?	✓ Yes	___ No
COOKING?	✓ Yes	___ No
BATHING?	✓ Yes	___ No
Do you use BOTTLED WATER?	___ Yes	✓ No
Do you use a WHOLE-HOUSE filter?	___ Yes	✓ No; Type - Fabric (for particles) ___ Activated charcoal ___

Other (kitchen only, etc.)- _____

Do you use a WATER SOFTENER? X Yes ___ No

Is there an OUTSIDE, Unfiltered/Unsoftened Spigot/Tap? X Yes ___ No

Where is it? back of our house

(If you have no outside spigot/tap that we can access, we will contact you to make other arrangements).

COMMENTS (Dog/Locked Gate, Etc.): [redacted] is [redacted] up.

Permission To Sample Well? X Yes ___ No

Date 5/27/08 Signature [redacted]

THE LEADER IN ENVIRONMENTAL TESTING

ANALYTICAL REPORT

Job Number: 500-12141-1

Job Description: Marengo -- Drinking Water VOCs

For:
Environmental Group Services Ltd
557 West Polk Street
Suite 201
Chicago, IL 60607

Attention: Bill Lennon

Margaret Kniest

Margaret Kniest
Project Manager II
margaret.kniest@testamericainc.com
06/30/2008

These test results meet all the requirements of NELAC for accredited parameters.

The Lab Certification ID# is 100201.

All questions regarding this test report should be directed to the TestAmerica Project Manager whose signature appears on this report. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

Job Narrative
500-J12141-1

Comments
No additional comments.

Receipt
All samples were received in good condition within temperature requirements.

GC/MS VOA
No analytical or quality issues were noted.

Question	T / F/ NA	Comment
Radioactivity either was not measured or, if measured, is at or below background		
The cooler's custody seal, if present, is intact.		
The cooler or samples do not appear to have been compromised or tampered with.		
Samples were received on ice.		
Cooler Temperature is acceptable.		
Cooler Temperature is recorded.		
COC is present.		
COC is filled out in ink and legible.		
COC is filled out with all pertinent information.		
There are no discrepancies between the sample IDs on the containers and the COC.		
Samples are received within Holding Time.		
Sample containers have legible labels.		
Containers are not broken or leaking.		
Sample collection date/times are provided.		
Appropriate sample containers are used.		
Sample bottles are completely filled.		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs		
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.		
If necessary, staff have been informed of any short hold time or quick TAT needs		
Multiphasic samples are not present.		
Samples do not require splitting or compositing.

Springfield, IL 62794-9276

Subject: The Arnold Engineering Company
Marengo, Illinois
Permit No. 2006-EO-0690

To Whom It May Concern:

Enclosed is the semiannual report of groundwater monitoring activities at the The Arnold Engineering Company (Arnold) facility, located at 300 N. West Street in Marengo, Illinois. Also included is the record of wastewater flow entering Pond #5 at the facility. This report documents the period from May 1, 2008 through October 31, 2008.

Arnold continues to utilize Prairie Analytical Systems (Prairie), a NELAC-certified laboratory, of Springfield, Illinois, to perform its monthly groundwater sampling events. Prairie was contracted by Arnold in August 2005. If there are any questions, please contact me at (815) 568-2316.

Please note that Permit No. 2006-EO-0690 applies to The Arnold Engineering Co., 300 N. West St., Marengo, IL., 60152.

Sincerely,

Alan Kalaczinski

Alan Kalaczinski

ARNOLD MAGNETIC TECHNOLOGIES

May 15, 2008

Illinois Environmental Protection Agency
Division of Water Pollution Control
Compliance Assurance Section
1021 North Grand Avenue East
P.O. Box 19276
Springfield, IL 62794-9276

Subject: Arnold Magnetic Technologies
Marengo, Illinois
Permit No. 2006-EO-0690

To Whom It May Concern:

Enclosed is the semiannual report of groundwater monitoring activities at the Arnold Magnetics Technologies (Arnold) facility, located at 300 N. West Street in Marengo, Illinois. Also included is the record of wastewater flow entering Pond #5 at the facility. This report documents the period from November 1, 2007 through April 30, 2008.

Arnold continues to utilize Prairie Analytical Systems (Prairie), a NELAC-certified laboratory, of Springfield, Illinois, to perform its monthly groundwater sampling events. Prairie was contracted by Arnold in August 2005. Please note that groundwater samples from monitoring wells MW-A6 and MW-A7 could not be collected for the month of February after several attempts, due to inclement weather conditions. If there are any questions, please contact me at (815) 568-2316.

Sincerely,

Alan Kalaczinski
Facilities Manager

1 EXECUTIVE SUMMARY

Environmental Group Services, Ltd. (EGSL) completed a Phase II Subsurface Investigation at the property located at 300 West Street, Marengo, Illinois, hereinafter referred to as the "Subject Property". This investigation was performed in accordance with the regulations set forth in 35 IAC 740 (Site Remediation Program, (SRP)) and 35 IAC 742 (Tiered Approach to Corrective Action Objectives (TACO)), Tier 1, for Industrial/Commercial and Residential properties.

2 PHASE II SUBSURFACE SOIL INVESTIGATION ACTIVITIES

A Phase II Subsurface Investigation was conducted in order to assess the potential for the presence of chemicals of concern (COC) in the subsurface soil present at the site. The investigation was conducted in accordance with Part 740 (SRP) and the COC were chosen from the Target Compound List (TCL) indicator contaminants identified in Appendix A of Part 740.

2.1 Field Sampling Procedures

EGSL utilized a Geoprobe® 6610DT to advance a 5-foot soil sampler in order to retrieve continuous soil samples throughout the Subject Property (see Appendix A for boring locations). All soil samplers were lined with acetate tubes.

All soil samples were split into two parts: one to be placed into a sealed plastic bag for headspace analysis of volatile organic vapors and the other to be placed in laboratory supplied containers for potential analysis. The bagged samples were tested in the field with Photo-Ionization Detector (PID). The PID was used to screen each soil sample from each boring location for relative concentration of VOCs and does not provide separation of the contaminants into individual constituents. The utilization of this field-screening device provided immediate on-site data for use in the assessment of the site.

A total of 40 soil borings were advanced throughout the Subject Property. Forty-nine soil samples were submitted for analysis in order to analytically determine the presence and concentration of COC in the areas of concern (nine of the boring locations had two soil samples submitted). The sample locations, sampling date, depth, and the type of analysis requested of the samples are listed below:

Boring Number	Date Obtained	Depth of Sample Submitted for Analysis (feet)	TCL	VOCs	SVOCs	RCRA Metals (+pH)
GP-1	5/10/2010	6-8	X			
GP-2	5/10/2010	4-6		X		
GP-3	5/10/2010	4-6		X		
GP-4	5/10/2010	3-5		X	X	X

The soil samples targeted for laboratory analysis of VOCs were packed into new 40-milliliter glass vials, pre-preserved in sodium bisulfate and methanol in accordance with EPA Method 5035. The soil samples collected for the remaining analysis were packed into one non-preserved 8-ounce wide-mouth jar with a Teflon-lined cap. STAT supplied all glass vials and jars. All soil

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

samples were stored on ice during soil sample collection activities and while being transported to STAT. Standard Chain-of-Custody procedures were followed to track the sample.

Cross-contamination during soil sampling was minimized by using an Alconox detergent wash and tap water rinse to decontaminate the sampling tools between each probe. Also, other sampling equipment and measurement tools were hand washed with an Alconox detergent wash and rinsed three times with distilled water between soil sample intervals. The tools were then placed on clean, decontaminated surfaces. Disposable latex gloves were worn during the collection of soil sampling events and were changed between each sample.

Additionally, a total of 16 groundwater monitoring wells were installed at the Subject Property. On May 3-5, 2010, *Earth Solutions, Inc.* installed two nests of four wells (eight total wells) in the northwestern portion of the Subject Property. On May 10-12, 2010, EGSL installed an additional eight wells throughout the Subject Property. The depth of the wells and screen intervals are as follows:

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)
MW-1	5/3/2010	Earth Solutions	50	40-50
MW-2	5/3/2010	Earth Solutions	40	30-40
MW-3	5/3/2010	Earth Solutions	30	20-30
MW-4	5/4/2010	Earth Solutions	20	10-20
MW-5	5/4/2010	Earth Solutions	50	40-50
MW-6	5/4/2010	Earth Solutions	40	30-40
MW-7	5/5/2010	Earth Solutions	30	20-30
MW-8	5/5/2010	Earth Solutions	20	10-20
MW-9	5/10/2010	EGSL	20	10-20
MW-10	5/10/2010	EGSL	20	10-20
MW-11	5/10/2010	EGSL	20	10-20
MW-12	5/10/2010	EGSL	20	10-20
MW-13	5/10/2010	EGSL	20	10-20
MW-14	5/10/2010	EGSL	20	10-20
MW-15	5/10/2010	EGSL	20	10-20
MW-16	5/10/2010	EGSL	20	10-20

All groundwater samples were submitted for Target Compound List indicator contaminants.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

3 PHASE II SUBSURFACE SOIL INVESTIGATION RESULTS

The following section presents the physical and chemical results of the Phase II investigation, which include a description of the site subsurface and regional geology and the chemical findings in the soil samples submitted to the laboratory.

3.1 Physical Findings

The subsurface geology of the boring locations generally consisted of sand or sandy silt throughout the majority of the Subject Property (See Appendix B for complete boring logs).

3.2 Chemical Results

The analytical test results of the soil and groundwater samples were compared to the Soil Remediation Objectives (SROs) derived from the Illinois Environmental Protection Agency (IEPA) "adopted" IAC 742, Tiered Approach to Corrective Action Objectives (TACO), Tier I for Industrial/Commercial and Residential properties and for Soil Component of the Groundwater Ingestion Route (SCGIR) Class I Groundwater. Analytical results indicate that the following chemicals of concern were detected above IEPA Tier 1 Remediation Objectives (see Appendix C for complete analytical data):

Soil

Chemical	Sample Number (Depth)	Concentration Detected (mg/Kg)	Remediation Objective (mg/Kg)	Exposure Route

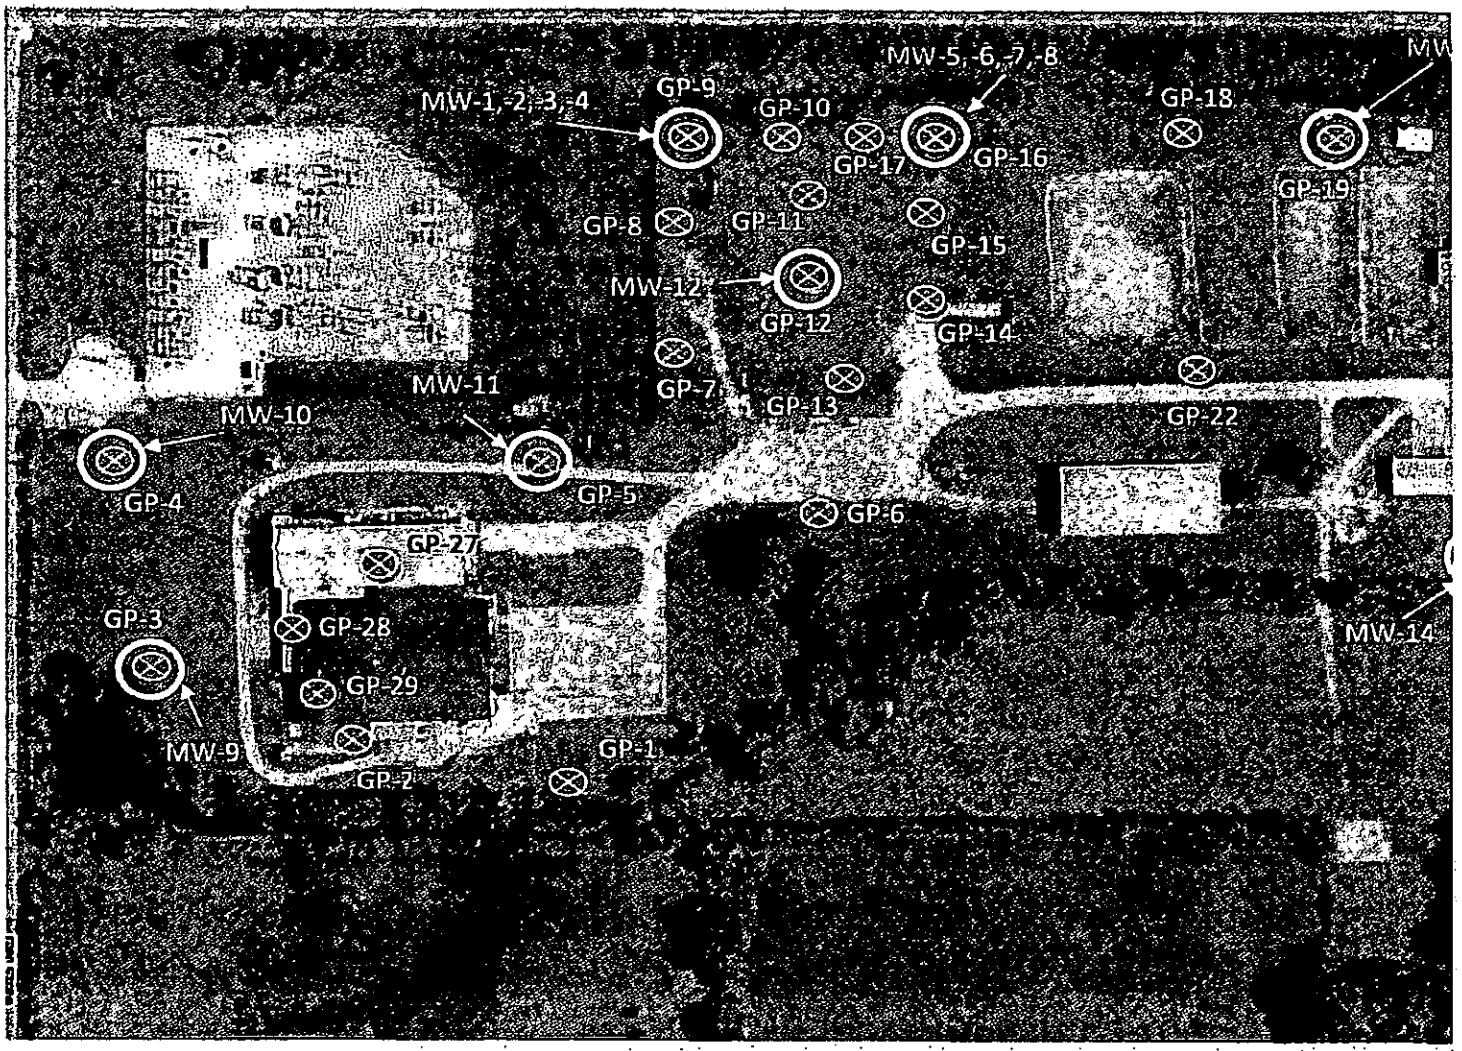
4 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS



This report pertains to the property located at 300 West Street, Marengo, Illinois. Our professional services have been performed using the degree of care and skill ordinarily exercised under similar circumstances by environmental professionals practicing in this field. The representations made in this report are accurate and true to the best knowledge of the undersigned.

Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED

Bill Lennon
Project Manager

Vahooman Mirkhaef
President

INORG Analyte	Residential Route Specific Values for Soil		pH Specific Soil Component of Groundwater Ingestion Route Values		
	Ingestion	Inhalation	Class I	Class II	
	pH Range 7.75 to 8.24				
Aluminum	78,000	1,000,000			
Antimony	31	---	5	20	
Arsenic	13.0/11.3	750	31	120	3.2
Barium	5,500	690,000	2,100	2,100	44
Beryllium	160	1,300	8,000	1,000,000	
Cadmium	78	1,800	430	4,300	< 0.54
Calcium	---	---			
Chromium	230	270	28	No Data	13
Cobalt	4,700	---	See TCLP/SPLP	See TCLP/SPLP	
Copper	2,900	---	330,000	330,000	
Cyanide	1,600	---	40	120	
Iron	55,000	---	See TCLP/SPLP	See TCLP/SPLP	
Lead	400	---	107	1,420	6.4
Magnesium	325,000	---			
Manganese	1,600	69,000 / 8,700*	See TCLP/SPLP	See TCLP/SPLP	
Mercury	23	10 / 0.1*	8.0	40	< 0.027
Nickel	1,600	13,000	3,800	76,000	
Potassium	---	---			
Selenium	390	---	2.4	2.4	< 1.1
Silver	390	---	110		< 1.1
Sodium	---	---			
Thallium	6.3	---	3.8	38	
Vanadium	550	---	980	See TCLP/SPLP	
Zinc	23,000	---	53,000	110,000	

The actual laboratory determined pH values are listed and used for reference purposes.
NDA - No Data Available for this pH range.
All units are mg/Kg unless otherwise noted.
Based on 35 IAC Part 742, Appendix B Table A.
Class I / II objectives based on 35 IAC Part 742, Appendix B Tables C & D.
Bolded/Shaded values exceed the lowest pH specific remediation objective.
Chromium Class I / II objectives based on hexavalent chromium.
* - Construction Worker Inhalation Objective from Appendix B, Table B.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

All units are mg/Kg unless otherwise noted.

Based on 35 IAC Part 742, Appendix B Table B.

Bolded/Shaded values have detected results exceeding the lowest Tier I remediation objective. Bolded/Italicized values have detected results exceeding the Chemicals not in TACO Tier I objectives.

* - Objectives obtained from Illinois EPA Chemicals Not In TACO Tier I Tables.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

The actual laboratory determined pH values are listed and used for reference purposes.
NDA - No Data Available for this pH range.
All units are mg/Kg unless otherwise noted.
Based on 35 IAC Part 742, Appendix B Table B.
Class I / II objectives based on 35 IAC Part 742, Appendix B Tables C & D.
Bolded/Shaded values exceed the lowest pH specific remediation objective.
Chromium Class I / II objectives based on hexavalent chromium.

RE: Marengo 5-10 STAT Project No: 10050296

Dear Bill Lennon:

STAT Analysis received 29 samples for the referenced project on 5/11/2010 3:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

CASE NARRATIVE

Sample GP-9 (5-7) (10050296-009) had recovery for the following PNA soil surrogates outside of control limits:
2-Fluorobiphenyl: 305% recovery, (QC Limits 30-115%)
4-Terphenyl-d14: 183% recovery, (QC Limits 18-137%)

The metals LCS (preparation batch 49347) had recovery outside of control limits for Antimony (152% recovery, QC Limits 80-120%). Antimony was not detected in the associated samples.

The actual laboratory determined pH values are listed and used for reference purposes.
NDA - No Data Available for this pH range.
All units are mg/Kg unless otherwise noted.
Based on 35 IAC Part 742, Appendix B Table B.
Class I / II objectives based on 35 IAC Part 742, Appendix B Tables C & D.
Bolded/Shaded values exceed the lowest pH specific remediation objective.
Chromium Class I / II objectives based on hexavalent chromium.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

RE: Marengo 5-11 STAT Project No: 10050298

Dear Bill Lennon:

STAT Analysis received 23 samples for the referenced project on 5/12/2010 12:00:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Catia Giannini
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory.

CASE NARRATIVE

Sample GP-27(1-3) (10050298-001) had recovery for PNA surrogate Nitrobenzene-d5 outside of control limits (121% recovery, QC Limits 23-120%).

The metals LCS (preparation batch 49322) had recovery outside of control limits for Antimony (149% recovery, QC Limits 80-120%). Antimony was not detected in the associated samples.

The metals MS/MSD prepared from sample GP-33 (3-5) (10050298-011) had Antimony recovery outside control limits (30%/33% (MS/MSD) recovery, QC limits 75-125%). The MS/MSD had recovery of other analytes outside of control limits, however the analyte concentration in the sample was greater than four times the spiking level for those elements. The metals MS/MSD had relative percent difference (RPD) outside of control limits for calcium: 25% RPD, (QC limits < 20%)

The metals serial dilution(SD) prepared from sample GP-33 (3-5) (10050298-011) had relative percent difference (RPD) outside of control limits for the following elements:
Aluminum : 10.9% RPD, (QC limits < 10%)
Calcium: 11.7% RPD, (QC limits < 10%)
Iron: 14.1% RPD, (QC limits < 10%)
Manganese: 13.7% RPD, (QC limits < 10%)
Zinc: 10.1% RPD, (QC limits < 10%)
