Date Received: November 06, 2013

Dear Mr. William Lennon:

The above referenced project was analyzed as directed on the enclosed chain of custody record.

All Quality Control criteria as outlined in the methods and current IL ELAP/NELAP have been met unless otherwise noted. QA/QC documentation and raw data will remain on file for future reference. Our accreditation number is 100292 and our current certificate is number 003242: effective 09/03/2013 through 02/28/2014.

I thank you for the opportunity to be of service to you and look forward to working with you again in the future. Should you have any questions regarding any of the enclosed analytical data or need additional information, please contact me at (630) 778-1200.

Sincerely,

Stan Zaworski
Project Manager

Case Narrative

EGSL

Project ID: **Marengo**

First Environmental File ID: **13-6146**

Date Received: **November 06, 2013**

All quality control criteria, as outlined in the methods, have been met except as noted below or on the following analytical report.

Flag	Description	Flag	Description
<	Analyte not detected at or above the reporting limit.	L+	LCS recovery outside control limits; high bias.
B	Analyte detected in associated method blank.	L-	LCS recovery outside control limits; low bias.
C	Identification confirmed by GC/MS.	M	MS recovery outside control limits; LCS acceptable.
D	Surrogates diluted out; recovery not available.	M+	MS recovery outside control limits high bias; LCS acceptable.
E	Estimated result; concentration exceeds calibration range.	M-	MS recovery outside control limits low bias; LCS acceptable.
F	Field measurement.	N	Analyte is not part of our NELAC accreditation.
		ND	Analyte was not detected using a library search routine; No calibration standard was analyzed.
G	Surrogate recovery outside control limits; matrix effect.	P	Chemical preservation pH adjusted in lab.
H	Analysis or extraction holding time exceeded.	Q	The analyte was determined by a GC/MS database search.
J	Estimated result; concentration is less than calib range.	S	Analyte was sub-contracted to another laboratory for analysis.
K	RPD outside control limits.	T	Sample temperature upon receipt exceeded 0-6°C
RL	Routine Reporting Limit (Lowest amount that can be detected when routine weights/volumes are used without dilution.)	W	Reporting limit elevated due to sample matrix.

Sample Batch Comments:

Sample acceptance criteria were met.

Regarding: Proposed Site Investigation Work Plan
1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
(Property at 300 N. West Street)
300 West LLC
Site Remediation Program/Technical Reports

Dear Mr. Zook,

This letter is intended to formally act as a Site Investigation Work Plan (SIWP) for the above-referenced Site. The purpose of the SIWP is to propose additional subsurface soil and groundwater investigative activities based on the presence of negatively impacted soil and groundwater previously detected at the Site. The ultimate goal of the proposed site investigation is to define the nature and full extent of soil and groundwater contamination both on-site and off-site.

In order to facilitate the review of this SIWP and all future reporting, EGSL has subdivided the Site into ten separate areas of concern. The ten subdivisions are described as follows (and identified in Figures 1, 2, and 3):

Area 1: Former Building 6, former Pond 6, and their immediate surrounding vicinity.
Area 2: Ponds 1, 2, 3, and 4, their associated structures (sewage treatment shed, pond treatment shed), and their immediate surrounding vicinity.
Area 3: Building 2/3/4/7, Building 10, and their immediate surrounding vicinity.
Area 4: Former Building 1, Building 8, and their immediate surrounding vicinity.
Area 5: Building 5, its associated parking lots, and their immediate surrounding vicinity.
Area 6: Building 12, Building 16, and their immediate surrounding vicinity.
Area 7: Building 11/14, Pond 5, and their immediate surrounding vicinity.
Area 8: Percolation Field
Area 9: Southern undeveloped portion of the Arnold campus, former Building 9 (airplane hangar), and the southeastern 20 acres of farmland.
Area 10: All off-site areas.

EGSL is fully aware of the IEPA's concern with identifying all Recognized Environmental Conditions (RECs) and Areas of Concern (AOCs) associated with the Subject Property in order to determine all possible areas or sources of negatively impacted soil and/or groundwater. In the IEPA's April 22, 2014 comment letter, Page 3 states that "documents necessary for a thorough and acceptable site investigation typically include figures identifying the locations of items such as historic manufacturing and storage areas, drains, channels, sewers, tanks (above and underground), and equipment, with narrative details of specific operations in specific areas". As you were informed, EGSL was able to review a significant amount of new documentation, maps, and diagrams provided by Arnold Technologies. Several of these were submitted to you in our November 19, 2014 letter. While EGSL does not dispute the IEPA's concern with identifying all RECs and AOCS, we have found it extremely difficult, if not impossible, to determine an exhaustive list of current and/or historical RECs and AOCs associated with this site based on the following:

- Significant manufacturing operations began at the site as early as the 1890s; as such, historical maps and/or information from pre-1950 are extremely limited.
- Manufacturing operations, chemicals, storage areas, buildings, and building configurations have changed numerous times over the past 60+ years.
- The extensive subsurface network of utility piping, sewers, drains, and water/wastewater system throughout all of the developed areas (current and historical) is considered a migration pathway.

Based on the above-referenced concerns, EGSL is considering all current and historical operational areas of the Arnold Magnetics facility an area of concern for all practical purposes. As such, all previous investigations, in conjunction with this SIWP (and subsequent CSIR), are intended to provide a comprehensive overview of the soil and groundwater characteristics of the entire Arnold campus and off-site impacted areas. Please refer to the attached Figures, sampling plan, and narrative below for determination that all historical, potential, and/or possible areas of concern have been/will be investigated.

To-date, EGSL has advanced 79 soil borings and installed 41 monitoring wells at the site (in addition to 5 wells off-site). In order to delineate previously detected areas of impacted soil and/or groundwater, and to address additional areas of the site that have not been thoroughly investigated, EGSL proposes to advance an additional 87 soil borings throughout the Subject Property (in addition to six soil borings off-site), and install an additional 24 on-site groundwater monitoring wells (in addition to 12 off-site groundwater monitoring wells). All soil samples will be advanced to approximate depths of 15 feet below ground surface. Two soil samples will be collected from each boring for analysis (one from 1-3 feet deep, and one from below 3 feet and/or a noticeably impacted area). All proposed groundwater monitoring well locations will consist of two adjacent wells. One of the wells will be advanced to a depth of 30 feet below ground surface, with the adjacent well being advanced to 50 feet below ground surface. The screen interval will be 10 feet in length at the bottom of the corresponding well. The proposed soil boring/monitoring well locations, overlain with the previous soil boring/monitoring well locations, can be found in Figures 2 and 3.

In addition to the above-referenced subsurface investigative activities, EGSL will re-sample the groundwater from the following 11 previously installed wells:

- On-site nested wells located in the northwestern corner of the Subject Property: MW-1, -2, -3, -4, -17, -22
- Off-site nested wells located north of Railroad Street: MW-18, -19, -20, -21, -23

In total, approximately 186 additional soil samples and 41 additional groundwater samples will be submitted for full Target Compound List (TCL) and SPLP Metals analysis. All analytical results will be compiled and reported upon completion of the subsequent Comprehensive Site Investigation Report (CSIR).

The table below itemizes the approximate number of previous soil borings and wells advanced/installed in each of the previously-referenced areas:

Area	Previous Soil Borings	Current Wells	Additional Soil Borings	Additional Wells
1	13	3x – 20 feet 3x – 30 feet 2x – 40 feet 3x – 50 feet 1x – 70 feet 1x – 90 feet	10	0
2	11	1x – 20 feet 4x – 30 feet 2x – 50 feet	0	0
3	23	1x – 20 feet 5x – 30 feet 3x – 50 feet	17	0
4	16	1x – 20 feet 4x – 30 feet 3x – 50 feet	7	0
5	6	0	18	1x – 30 feet 1x – 50 feet
6	2	1x – 20 feet	13	2x – 30 feet 2x – 50 feet
7	8	3x – 20 feet	16	3x – 30 feet 3x – 50 feet
8	0	0	4	4x – 30 feet 4x – 50 feet
9	0	0	2	2x – 30 feet 2x – 50 feet
Area 10 (Off-site)	0	1x – 20 feet 1x – 30 feet 1x – 40 feet 1x – 50 feet 1x – 70 feet	6	6x – 30 feet 6x – 50 feet
TOTALS	79	46	93 (186 samples)	36

Upon completion of the above-referenced activities, a CSIR will be submitted for your review. It is understood that additional sampling may be warranted upon receipt of the analytical data and the IEPA's review of the CSIR. It should be noted that the CSIR will also address the following:

- Updated groundwater surveys in order to obtain current groundwater flow direction(s). An overall site survey, and localized on-site/off-site quadrant surveys of the monitoring well networks will be provided. Updated hydraulic conductivity and gradient results will also be provided.
- Updated and compiled lists of the analytical results from the previous two years of private well sampling. This will include the results of the testing of two McHenry County Conservation District (MCCD) wells, and the additional private well located at 22216 West Grant Highway. These wells were sampled on 12/23/14.

EGSL fully understands the expedited nature of the proposed work identified in this SIWP. Multiple drill crews are anticipated to be working simultaneously in order to perform the site investigations as quickly as possible. Listed below is the order of priority in regards to the work that is to be conducted, in addition to anticipated time-frames (from the date of acceptance of the SIWP by the IEPA):

1. All off-site soil boring and monitoring well installation (within 3 weeks of acceptance of SIWP & signed Access Agreements from land owners). It is our understanding 300 West LLC is currently working to gain access to offsite locations.
    a. Development/sampling of wells, and receipt of analytical results (within 3 weeks from completion of 1).
2. Soil boring and well installation in Areas 8 and 9 (within 5 weeks of acceptance of SIWP).
    a. Development/sampling of wells, and receipt of analytical results (within 3 weeks from completion of 2).
3. Soil boring and well installation in Areas 1-7 (within 8 weeks of acceptance of SIWP).
    a. Development/sampling of wells, and receipt of analytical results (within 3 weeks from completion of 3).
4. Submittal of CSIR to IEPA (within 14 weeks of acceptance of SIWP).

EGSL kindly requests for the IEPA to take special consideration of the following in regards to the above-referenced time-frames:

- Obtaining access agreements for all off-site investigation areas.
- Availability of the subcontractors.
- Logistics with performing intrusive work within the current Arnold operational areas (specifically Buildings 5 and 11/14).
- January/February weather restrictions.

Sincerely,
ENVIRONMENTAL GROUP SERVICES, LIMITED

Bill Lennon

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *December 24, 2014, Proposed Site Investigation Work Plan* (e-mail copy received December 21, 2014, hard copy received December 30, 2014), prepared by Environmental Group Services, Ltd. (EGSL) for the above remediation site. The *Work Plan* is approved, contingent on satisfactory responses to the following comments and questions.

Item 1. Normally one of the first steps in the remediation process is the identification of Recognized Environmental Conditions (RECs) and Areas of Concern (AOCs), with detailed sampling plans subsequently developed. To date, it appears that the EGSL *June 3, 2014, Response to Illinois EPA Comments Letter Dated April 22, 2014* has been the best source of RECs and AOCs. However the information contained therein was not satisfactorily used in the development of a sampling plan.

In the *December 24, 2014, Proposed Site Investigation Work Plan*, EGSL states that it is ". . . extremely difficult, if not impossible, to determine an exhaustive list . . ." of RECs and AOCs; EGSL therefore considers all current and historical operations areas as an AOC, "for all practical purposes." The Illinois EPA does not necessarily agree with the position expressed by EGSL, regarding RECs and AOCs. However, since all soil and groundwater samples are to be analyzed for full Target Compound List contaminants, together with the need for expediency in the identification of contamination on both the site and surrounding areas, the Illinois EPA deems that this approach is acceptable.

When a Comprehensive Site Investigation Report is submitted, analytical results from the proposed sampling should be provided in a clear manner that shows sample locations in relation to RECs and AOCs identified in the EGSL June *3, 2014, Response to Illinois EPA Comments Letter Dated April 22, 2014* and any other applicable sources. Such information should be provided via appropriate drawings and tables.

Item 2. The Illinois EPA requires that sampling and analyses for 1,4-Dioxane be performed at all sample locations. Though not a Target Compound List substance, 1,4-Dioxane has historically been used as a stabilizer for 1,1,1-Trichlorethane and has repeatedly been detected in private wells north of the Arnold site. NOTE – Soil and Groundwater Remediation Objectives ("GROs") for 1,4-Dioxane can be found (listed as p-Dioxane) at the Illinois EPA website http://www.epa.illinois.gov/topics/cleanup-programs/taco/other-chemicals/index. For both Class I and Class II groundwater, the listed GRO is the same, 0.0077 mg/l.

Item 3. Page 3 of the *Work Plan* indicates that soil samples will be analyzed for Synthetic Precipitation Leaching Procedure (SPLP) Metals. *Is it intended to perform SPLP analyses for all Target Compound List metals, or only certain ones? If only some metals, please specify which ones and why.*

Item 4. Page 3 of the *Work Plan* states in the first paragraph that 186 additional soil samples and 41 additional groundwater samples will be collected and analyzed. Though the number of soil samples is consistent with information provided elsewhere in the *Work Plan*, the number of groundwater samples indicated appears to be in error. It appears that an additional 47 groundwater samples are actually proposed – 36 new wells and 11 samples from previously installed wells. *Please provide the proposed number of additional groundwater samples that EGSL will take.*

Item 5. The Illinois EPA requires that Target Compound List substances be sampled and analyzed for in the two McHenry County Conservation District wells shown on Figure 3 of the *Work Plan.*

Item 6. Referring to Figure 3 of the *Work Plan*, it appears that the proposed off-site sampling locations to the north and northwest of the Arnold site are beyond (further from the site) the known locations of groundwater contamination – with the exception that 1,4-Dioxane has been detected in potable wells at 4106 Ritz Road and 4210 Ritz Road. These addresses are for the two homes furthest north on the east side of Ritz Road. The detections noted are reportedly less than Class 1 GRO of 0.0077 mg/l (Item 2 on the previous page). It appears that no detections have been reported in any samples taken from the well at 4501 Ritz Road, the home furthest north on the west side of Ritz Road. *The Illinois EPA is uncertain whether or not the description just made is completely accurate, partially because there is no drawing that shows the locations of both existing private potable wells (not just the home addresses but the actual well locations) and the proposed monitoring well locations. Please provide such a drawing and comment on the accuracy of the Illinois EPA narrative.*

Item 7. An off-site monitoring well cluster and soil sampling must be installed and conducted, respectively, along Railroad Street, in the vicinity of 21816 Railroad Street. Substantial contamination has been noted in samples collected from the private well at this address. In addition, the approximate location is north of the wastewater treatment plant and in the vicinity of a reported overflow ditch.

Item 8. Per a December 24, 2014, e-mail from EGSL, the two previously described McHenry County Conservation District irrigation wells, three nearby monitoring wells belonging to the District and the private well at 22216 West Grant Highway were all sampled on December 23, 2014. This sampling was as performed in conjunction with the quarterly private well sampling program and did not include full Target Compound List analyses. If this sampling indicates the presence of any contaminants, the Illinois EPA will require that the *December 24, 2014, Proposed Site Investigation Work Plan* be supplemented with additional off-site sampling to the west, as soon as practical.

Item 9. The schedule provided on page 4 of the *Work Plan* requires some additional components:

(a) Figures 2 and 3 of the *Work Plan* must be revised so that the proposed sample locations are each labeled to designate specific and unique samples. The revised figures must be resubmitted to the Illinois EPA by January 7, 2015.

(b) On page 4 of the Work Plan, EGSL states that "[m]ultiple drill crews are anticipated to be working simultaneously in order to perform the site investigations as quickly as possible." However, the on-site work is not scheduled to commence until 5 weeks and 8 weeks, respectively, of the acceptance of the Site Investigation Work Plan. Given the stated availability of multiple drill crews, on-site work should commence within 2 weeks of approval of the Site Investigation Work Plan. If not, an explanation of why the on-site work cannot be conducted in this time frame must be submitted.

(c) On page 4 of the Work Plan, EGSL states that off-site soil boring and monitoring well installation will commence "within 3 weeks of acceptance of Site Investigation Work Plan and signed access agreements from land owners. " If the defendants or EGSL are unable to obtain a signed access agreement from any land owner within 3 days after acceptance of the Site Investigation Work Plan by the Illinois EPA, the defendants and/or EGSL must, in writing, notify the Illinois EPA within 24 hours thereafter and propose a different location for the off-site boring and monitoring well installation that was to occur in the location in which the signed access agreement could not be obtained.

(d) Any analytical results from the proposed sampling should be forwarded to the Illinois EPA and Illinois Attorney General's Office, within 24 hours of receipt by EGSL.

(e) Within 5 days after EGSL's receipt of any analytical results, EGSL shall submit a letter report to the Illinois EPA which at a minimum includes:

1. All raw analytical data presented in a tabular format. One table should be submitted for groundwater samples and one table should be submitted for soil samples. These tables should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results and any exceedance of the most stringent objective should be highlighted.

2. Figures which show the sampling locations with the sample names; and

3. If necessary, proposed locations for additional delineation of the nature and extent of contamination with respect to any such exceedances as well as a schedule for implementation.

Please provide an item-by-item response to this letter by January 7, 2015. If no response is received by this date, the *Work Plan* will be considered denied by the Illinois EPA.

If you have any questions, please feel free to contact me at (217) 557-8085, the address indicated on the letterhead, or by e-mail at tim.zook@illinois.gov.

Sincerely,

Timothy D. Zook

Regarding: Response to 12-31-14 IEPA Comment Letter
1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
(Property at 300 N. West Street)
300 West LLC
Site Remediation Program/Technical Reports

Dear Mr. Zook,

This letter is intended to formally act as a response to the Items identified in your comment letter dated December 31, 2014 (found in Attachment A of this report).

Item 1: EGSL fully understands the IEPA's position regarding our comments associated with the identification of RECs and AOCs, and greatly appreciates your understanding at this time. EGSL will provide the sample locations in relation to RECS and AOCs to the best of our ability upon submittal of the CSIR.

Item 2: All soil and groundwater samples will be analyzed for full IEPA Target Compound List (TCL) indicator contaminants, in addition to 1,4-Dioxane.

Item 3: All soil samples will be analyzed for full TCL SPLP Metals, with the exception of cyanide. SPLP cyanide will not be initially analyzed due to analytical time constraints. It should be noted that all samples will be analyzed for total cyanide. If any total cyanide concentrations warrant additional analysis, SPLP and/or TCLP cyanide will be analyzed as necessary.

Item 4: EGSL agrees with the IEPA in regards to the discrepancy. Approximately 53 groundwater samples will be submitted for analysis, as follows: 40 samples from the newly proposed wells + 6 samples from the previously installed northwestern on-site cluster + 5 samples from the previously installed northern off-site cluster (located along the northern easement of Railroad Street) + 2 samples from the McHenry County Conservation District's (MCCD) irrigation wells (refer to Item 5). This total is also dependent on the IEPA's response to Item 6 and Item 7 of this letter.

Item 5: Upon permission and approval from MCCD, the two MCCD irrigation wells will be re-sampled, with groundwater samples analyzed for full TCL indicator contaminants.

Item 6: An aerial photograph identifying the off-site properties and associated addresses can be found in Attachment B. EGSL agrees with the IEPA in identifying that 1,4-Dioxane was detected at 4210 Ritz Road and 4106 Ritz Road at concentrations below the Class I GRO, and no detections of 1,4-Dioxane at the property located 4501 Ritz Road. EGSL proposes to install an additional cluster north of the 4210/4106 Ritz Road properties (as identified in the revised Figure 3 found in Attachment C), if deemed necessary by the IEPA.

Item 7: An additional off-site cluster will be placed in an accessible area north of the Subject Property and south of the 21816 Railroad Street property, as identified in the revised Figure 3 found in Attachment C. Soil samples will also be obtained from this area.

Item 8: EGSL agrees that if any analytical results from the December 23, 2014 sampling identify the presence of contaminants, additional off-site sampling may be requested. EGSL will coordinate with the IEPA and Attorney General in regards to this issue in an expedited manner.

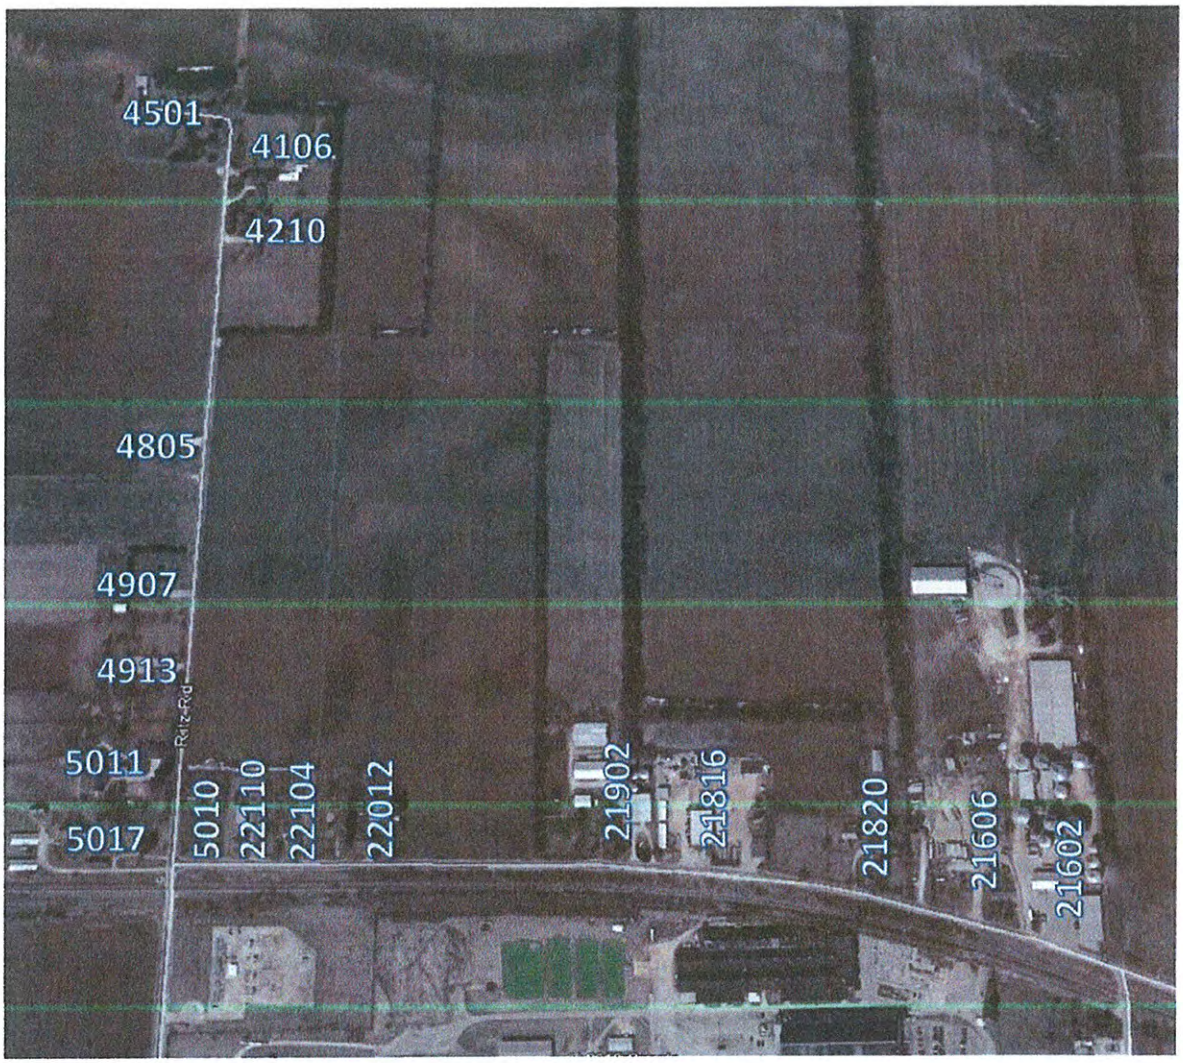
Item 9a: Revised figures can be found in Attachment C.

Item 9b: EGSL will coordinate with the drill crews in an effort to begin on-site work within 2 weeks of approval of the SIWP. This will be dependent upon drill crew availability, and the prioritization of performing all off-site work first.

Item 9c: EGSL will adhere to this Item and will notify the IEPA of any issues of access agreements within the timeframes stated.

Item 9d: All incoming analytical results will be forwarded to the IEPA and AG's office within 24 hours of receipt.

Item 9e: EGSL will adhere to this Item and will submit a letter with the identified requirements within 5 days of receipt of any analytical results.



Sincerely,
ENVIRONMENTAL GROUP SERVICES, LIMITED

Bill Lennon
Project Manager

Re: LPC #1110650003 – McHenry County
Focused Site Investigation Report
Response to Comments
Marengo – Arnold Magnetic Technologies
300 West LLC
Site Remediation Program/Technical Reports

Dear Mr. Zook:

At the request of the property owner, Environmental Group Services, Ltd. has prepared this response to the IEPA Comment Letter (dated January 21, 2014) regarding the submittal of EGSL's Focused Site Investigation Report dated November 18, 2013. This letter is intended to provide clarification and responses to the concerns raised by the IEPA. EGSL responses follow each IEPA comment.

General Comment:
Though the *Focused Site Investigation Report* is denied, the Illinois EPA agrees with EGSL conclusions that the extent of contamination – both vertically and horizontally – has not been defined for certain compounds. As a result, investigations of both soil and groundwater impacts should be expanded to include the residential area north of the Northern Portion of the Site, as well as the southern portion of the property. (Per the Agreed Preliminary Injunction Order Dated August 23, 2013, Northern Portion of the Site refers to the northern half of the subject property.) A proposal for additional sampling, to adequately define the extent of VOCs contamination, is requested at this time. The Illinois EPA notes that the Agreed Order only addresses VOCs. The Arnold Site has been utilized long-term for a variety of industrial activities, and substantial impacts by substances other than VOCs are likely.

Response:
The approved Injunction Order stipulated only the northern portion of the Arnold site was to be investigated for a specific list of volatile organic compounds. The owner of the property is seeking to satisfy the requirements of the Injunction Order with the understanding that further site investigation activities would be required under a Comprehensive Site Closure. EGSL has been directed by the owner to respond to the comments of the IEPA and to satisfy the requests to the greatest extent practicable. EGSL will include the southern portion of the Site and the northern residential community specified in the Injunction Order in future "Site" investigation activities. It is EGSL's understanding that this site/project is to be addressed in two parts: 1) to satisfy the issues and requirements of the Attorney General's (AG) Office; and 2) to perform all necessary investigations, reporting, and remediation associated with obtaining a Comprehensive NFR through the SRP. EGSL proposes to address any and all issues associated VOC contaminated groundwater which is the subject of the injunction order by the AG's office and the source of the groundwater contamination to the residential area. Upon resolution of the groundwater contamination in the near future, the RA may subsequently address and obtain a Comprehensive NFR for the entire site.

Item 1. A Site Investigation Report will be required which combines information in the *Focused Site Investigation Report* with any applicable additional report(s).

Response:
Upon completion of additional site investigation activities, EGSL will prepare and submit a Site Investigation Report to the IEPA. The site investigation report will include additional information obtained by EGSL, including information obtained from Arnold, pertaining to historical Site use and soil and groundwater impacts.

Item 2. Surface Soil Samples – When the Illinois EPA approved (via a letter dated August 21, 2013) the *Site Investigation Work Plan* (dated August 8, 2013) for the Northern Portion of the Site, it was noted that soil samples should be collected from various depths, so that the horizontal as well as vertical extent of contamination can be adequately defined. Per the *Focused Site Investigation Report*, soil samples were collected and analyzed at multiple depths (typically depths such as 5-7 feet or 12-14 feet), but very little surface sampling (depths of 0-3 feet) was performed. Future sampling events should include more surface samples than were collected and analyzed in the sampling performed in September and October 2013. This is particularly important given the history of manufacturing and storage activities at the site, from which surface contamination can reasonably be expected.

Response:
EGSL proposes to include shallow sampling in future soil sampling activities performed at the site. Soil sampling analysis in the future will attempt to delineate the vertical extent of impact through the analysis of three soil samples. Because the contaminants of concern are mainly organic volatile compounds, sample selection will be based mainly on PID assessment. Generally, the sampling protocol will include the interval of first PID reading, highest reading and first zero reading below the suspected contaminant zone or above groundwater occurrence. In the event that the first PID reading occurs at depth or not at all, the surface soil sample may be collected and analyzed. This procedure should provide adequate data to characterize the vertical contaminant profile at each additional soil boring location. Additionally, EGSL assures that an adequate amount of shallow samples (0-3) feet will be collected and analyzed to satisfy IEPA requirements.

Item 3. Private Well Sampling – When the Site Investigation Report referenced in Item 1 is developed, it should include information obtained from the ongoing quarterly private well sampling program that is taking place north of the Northern Portion of the Site. This information includes both analytical results and the depths of the wells, as this information is necessary in attempting to define both the horizontal and vertical extent of the contamination plume(s).

Response:
EGSL will present the results of the offsite groundwater sampling analysis in future reports to the Agency. Results of the sampling events will also be utilized to model the vertical and horizontal transport of the COCs. Homeowners have been asked to provide the depth of their wells to EGSL upon commencement of the offsite potable well sampling program. Many of the residents could not provide EGSL with the information requested. EGSL has turned to the Illinois State Geological Survey (ISGS) and the Illinois State Water Survey (ISWS) for this information. Several but not all wells are listed on each database and the depths reported tend to correspond with the homeowners recollection. Conversation with the homeowner during the quarterly sampling events has started to yield new information regarding the depth of some of these wells. EGSL will continue to pursue this information where possible.

Item 4. The *Focused Site Investigation Report* is lacking in the identification of recognized environmental conditions and areas of concern, characterizing exposure routes, and other items typically included in such reports. Refer also to the requirements in Attachments A and B in the August 23, 2013, Agreed Order. The Illinois EPA previously requested this information in letters dated December 8, 2009, and September 17, 2010, and August 27, 2012. A satisfactory response has not been received for any of these letters. *The adequacy of sampling cannot be determined until appropriate background information has been provided.*

Response:
The Focused Site Investigation Work Plan: Additional Investigation identifies recognized environmental conditions and areas of concern. EGSL received several documents from Arnold that may help to further confirm or identify such recognized environmental conditions and areas of concern. Arnold represents that it has provided to us reasonably obtainable reports relevant to recognized environmental conditions and areas of concern for which it is not claiming confidentiality or a privilege.

With regard to recognized environmental conditions, given the history of the site and a review of previous uses of specific buildings and areas, EGSL has evaluated the following areas and classified some of these areas as recognized environmental conditions and or areas of concern:
The Subject Property was originally developed in the late 1890s and was first utilized as a rail yard and railroad engine manufacturing/maintenance facility. The Subject Property was reportedly purchased by Arnold in the early 1900s, with their magnetic operations/manufacturing beginning in the 1950s. A total of 12 USTs, several ASTs PCB containing transformers and hazardous waste storage areas have been identified at the Site. All current and former UST locations are considered an area of concern, however; while the identification of many closed in place and removed USTs is known, the location of all such USTs has not been fully defined at this time. EGSL will work with Arnold to identify any additional relevant information that may exist regarding these USTs.

The following buildings are currently, or have been historically, located on the Subject:

- Building 1: Built in the late 1890s and demolished around 2002. Building was approximately

40,000-square-feet in size and was originally utilized for railroad engine manufacturing and repair. Arnold later utilized Building 1 for magnet production, pressing operations, and heat treating. Historical usage has been reported to include the generation of spent mineral spirits, TCE and 1,1,1-TCA and possible PCB usage. As such, Building 1 is a REC.

- Building 2/3/4/7: Original portion of the building (Bldg. 2) constructed in the 1950s, with subsequent additions (Bldgs. 3, 4, and 7) later constructed. The entire building is approximately 135,000-square-feet in size and was formerly utilized for office space, maintenance, shipping, and miscellaneous storage. Building 2/3/4/7 was historically utilized for tape-core, powder-core, and winding operations associated with magnetic manufacturing; all manufacturing operations ceased in this building in approximately 2002 and the building is currently unused. Underground storage tanks have been associated with this building complex and at least one tank is believed to be in place under the building slab. As such, Building 2/3/4/7 is a REC.
- Building 5: Constructed in the 1950s-1960s and is approximately 74,000-square-feet in size. Currently and historically has been utilized by Arnold for their Alnico Products Division, which manufactures magnetic components by molting, melting, and finishing Aluminum, Nickel, and Cobalt. This building is currently outside the scope of this investigation. This building reportedly generated spent chlorinated solvents. As such, this building is a REC.
- Building 6: Constructed in the 1950s-1960s and demolished in the 1990s. Building 6 was approximately 42,000-square-feet in size and was historically occupied by the Strontium Ferrite Department, which conducted wet processing, mixed metal sludge pressing, iron powder compressing, and baking/grinding operations associated with motor-arc manufacturing. Pond 6 was formerly located to the northwest of this building. Chlorinated solvent impacted soil and groundwater have been identified within or next to the footprint of this building. While no use of chlorinated solvents have been associated with this building, the discovery of chlorinated solvents in or adjacent to the former structure warrants this are as a REC.
- Building 8: Constructed between 1950-1970 and is approximately 3,000-square-feet in size. Building 8 is utilized for the storage of landscaping and maintenance equipment, and also contains an approximately 850-foot deep water well that is utilized for potable water for the Subject Property; an associated 100,000-gallon above-ground water holding tank is located directly south of Building 8. Chemicals for treating the well water prior to pumping into the storage tank are stored in this building. This building is considered a REC.
- Building 9: Constructed at an unknown date and demolished in the 1990s. Building 9 was approximately 5,000-square-feet in size and was utilized as an airplane hangar associated with an adjacent private runway (no longer present). This building location is currently outside the scope of this investigation. This building formerly had a 1,500 gallon aviation fuel UST associated with it. As such, this building is a REC.
- Building 10: Constructed at an unknown date. Building 10 is approximately 3,000-square-feet in size is currently/has historically been utilized for miscellaneous storage, 55-gallon drum storage, and drum cleaning. Based on the former activity in this area, Building 10 is a REC.
- Building 11/14. Original portion of the building (Bldg. 11) constructed in the 1950s, with subsequent addition (Bldg. 14) later constructed. The entire building is approximately 54,000-square-feet in size and has been utilized by Arnold's Rolled Products Division since the late 1960s. Operations that currently exist within Building 11/14 involve the rolling and finishing operations associated with the production of thin-gauge rolled steel products. This building is currently outside the scope of this investigation. Operations conducted in this building reportedly generated spent chlorinated solvents during cleaning and degreasing operations. As such, this building is a REC.
- Building 12: Constructed by 1970 and is approximately 14,000-square-feet in size. Currently and historically utilized as a parts/storage warehouse. This building is currently outside the scope of this investigation. This building is not considered a REC at this time.

- Building 16: Constructed after 1987 and is approximately 3,200-square-feet in size. Currently and historically utilized as a hazardous and non-hazardous storage shed. This building is currently outside the scope of this investigation. The storage of hazardous waste in this building classifies it as a REC.
- Coolant Ponds: The coolant ponds are reportedly lined with polyethylene and rest on a bed of bentonite. Groundwater analysis from wells installed adjacent to the ponds has been reported to contain chlorinated solvents and volatile organic compounds used in the processing of wastewater. Water samples collected from the coolant ponds were analyzed for volatile organic compounds. The laboratory reported the presence of volatile organic compounds. As such, the coolant ponds are a REC.
- The cooling ponds contain water discharged from all onsite operations. Water flows from the terminus of the cooling ponds to drainage ditches located north and south of the cooling ponds. Water exiting the cooling ponds to the south flows to a percolation field located southeast of building 11/14 via an unlined drainage ditch. Water exiting the north end of the cooling ponds flows offsite toward the railroad right-of-way via an unlined drainage ditch. The final receptor of this water is unknown. Based on the analytical results confirming the presence of volatile organic compounds present in the cooling pond water, the cooling ponds, overflow ditches, and percolation field are considered Areas of Concern.
- Other buildings associated with the Subject Property include a security booth (outside the scope of this investigation) located by the main entrance, a pump house associated with the wastewater treatment system and pond system and a pump house associated with the fire suppression system. These areas are not considered RECs at this time.

Item 5. Appendix C of the *Focused Site Investigation Report* consists of three reports (dated December 2004, March 2006 and April 2008) prepared by ENVIRON International Corporation. Taken together, these reports contain substantially more historical information than anything previously submitted. For example, page V-3 of the 2004 document refers to a 1993 PRC report (which was not submitted) that indicates spent mineral spirits, TCE and 1,1,1-TCA were generated at former Building 1 (likely built in late 1800s or early 1900s, demolished in 2002) in the northeast portion of the site. The same page indicates that electrical transformers were built in Building 1 until the 1950s. Given the time, this obviously raises concerns regarding PCBs. As another example, page V-13 of the 2004 report describes a concrete pad underneath PCBs-containing transformers outside of Building 5.

Though the ENVIRON reports contain much useful information, portions are blacked out – including almost five of the total six pages of the 2006 report (practically everything under a heading "On-site Soil and Ground Water Conditions" is redacted.)

As normally required in the Site Remediation Program – and in this situation as further required in the Attachments of the Agreed Order – reasonably obtainable records relevant to recognized environmental conditions and areas of concern are to be reviewed. The Illinois EPA requests that all records in this regard be reviewed, with copies as appropriate submitted to the Illinois EPA; this includes the documents referred to the ENVIRON reports. It appears likely that there is much more information than has been provided thus far. There is a fairly unusual aspect to the Arnold Site, in that Arnold and predecessors conducted manufacturing operations for years, with a relatively new owner acting as the Remediation Applicant while Arnold continues operations. Even though Arnold is not the Remediation Applicant, its cooperation in allowing for an adequate site investigation is of paramount importance.

Response:
After issue of the IEPA's January 21, 2014 comment letter, additional documentation was provided to EGSL from Arnold. The 1993 PRC PA/VI is provided as Attachment 1. Arnold advised that it has provided to us reasonably obtainable reports relevant to recognized environmental conditions and areas of concern for which it is not claiming confidentiality or a privilege. EGSL will work with Arnold to identify any additional relevant information that may exist.

Item 6. Soil Boring Logs/Monitoring Well Completion Reports – The *Focused Site Investigation Report* includes soil boring logs and monitoring well completion reports for the borings performed and wells installed in September and October 2013. However, this information was not provided for all previous wells and borings. Care should be taken to ensure that proper borings logs and well completion reports are prepared and included in all future submittals. Also, it is noted that even in the *Focused Site Investigation Report*, the boring logs often stop at depths more shallow than monitoring wells installed at the same locations. For example, Soil Boring Log GP-106 indicates the boring was terminated at 15 feet. Monitoring Well MW-31 was installed to 30 feet in the same borehole. Later, Monitoring Well MW-41 was installed adjacent to MW-31. No information is given concerning soil conditions deeper than 15 feet. In the future, boring logs should be provided to the depths of the monitoring wells installed.

Response:
Previous groundwater monitoring wells were blind drilled, meaning wells were installed and set at preselected depths (as determined by EGSL and IEPA) regardless of the geological conditions. In the future, all groundwater monitoring wells will be logged through the entire boring depth. All soil boring and well completion logs will be submitted as part of the Site Investigation Report.

Item 7. Groundwater Contour Maps – Based on local geography (proximity to the Kishwaukee River) and previous investigation, it is believed that groundwater flow is to the north/northwest. Regardless, the Site Investigation Report referenced in Item 1 should include groundwater contour maps, based on the most recent information following the expanded sampling program. (Enough new wells will exist to provide additional information regarding groundwater elevations throughout a fairly large area.)

Response:
In the future, when groundwater monitoring wells are sampled, a sufficient number of previously installed and all newly installed groundwater monitoring wells will be surveyed for depth of water. Data collected will be utilized to determine groundwater flow direction. It should be noted that as many as three historical groundwater surveys were conducted (once by EGSL), and all data relatively coincided with each other and have determined that groundwater flow direction was to the north/northwest.

Item 8. Geological Model of the Site – When the Site Investigation Report referenced in Item 1 is prepared, it should include a geological model of subsurface soil conditions. Having adequate documentation in soil boring logs – as described in Item 6 – will be crucial in this regard.

Response:
In the future geologic models of the site will be included in reports submitted to the IEPA.

Item 9. Planned Installation of Monitoring Wells to 100 feet – In the conclusions section of the *Focused Site Investigation Report*, EGSL recommends the installation of new wells to depths of approximately 100 feet,

adjacent to existing 50 feet wells MW-36, 37, 41, 44 and 46. This is proposed in an effort to define the extent of vertical contamination in those areas. *Procedures should be provided for how these wells will be installed, with emphasize on measures taken to preventing a pathway to contamination to the deeper groundwater.*

Response:
Procedures for the installation of the additional groundwater monitoring wells will be provided in the Site Investigation Work Plan.

Item 10. Addition of 1,4 Dioxane (P-Dioxane) to List of VOCs to be Analyzed – This compound, which is listed as P-Dioxane and indicated to be a carcinogen in Illinois Groundwater Quality Standards (both the Class 1 and Class II standards are 7.7 ug/l), has been historically used as a stabilizer for 1,1,1-TCA. It is requested that it be added to the list of VOCs to be analyzed (both soil and groundwater), in future sampling conducted to define the extent of contamination.

Response:
1,4-Dioxane will be added in the list of chemicals to be analyzed for.

Item 11. *Sampling and Analyses for Items Other than VOCs; Request that PCBs be Sampled/Analyzed* – Illinois EPA comments to this point, regarding sampling, have been limited to VOCs since they are the subject of the *Focused Site Investigation Report* and the Agreed Order. However, the Arnold Site was enrolled in the Site Remediation Program in May 2008, with a Comprehensive No Further Remediation Letter sought. At some point, contaminants other than VOCs will need to be addressed.

Response:
PCB's will be added to the list of chemicals to be analyzed. The original intent of the work currently being performed was to identify and model VOC's in drinking water to satisfy the Injunction Order. PCB's and other contaminants of concern were to be addressed at a later date during the comprehensive investigation phase of the project.

Let me know if you have any questions or require additional information.

Sincerely,

Steve Boom

EXECUTIVE SUMMARY

PRC Environmental Management, Inc. (PRC), performed a preliminary assessment and visual site inspection (PA/VSI) to identify and assess the existence and likelihood of releases from solid waste management units (SWMU) and other areas of concern (AOC) at the Arnold Engineering Company (Arnold) facility in Marengo, McHenry County, Illinois. This summary highlights the results of the PA/VSI and the potential for releases of hazardous wastes or hazardous constituents from SWMUs and AOCs identified. In addition, a completed U.S. Environmental Protection Agency (EPA) Preliminary Assessment Form (EPA Form 2070-12) is included in Attachment A to assist in prioritizing RCRA facilities for corrective action.

The Arnold facility manufactures electrical components including transmission cores and other magnetic materials. The facility generates and manages the following waste streams: spent mineral spirits (D001), spent trichloroethylene (TCE) (F001), spent corrosive (D002), spent nonchlorinated solvents (F003 and F005), nonhazardous paint sludge, nonhazardous waste coolant, nonhazardous foundry sand, nonhazardous foundry dust, nonhazardous waste ethylene glycol, nonhazardous process wastewater, nonhazardous used oil, and nonhazardous wastewater treatment sludge. The facility formerly generated spent 1,1,1-trichloroethane (TCA) (F002) and spent methylene chloride (F002).

Arnold has operated at its current location since about 1958. The facility occupies 80 acres in a mixed-use area and employs about 500 people. The facility was built on vacant land and was originally owned and operated by Allegheny Ludlum Steel, which changed the facility name to Arnold Engineering Company in 1981. SPS Technologies, Inc., purchased the facility in 1987 and is the current owner and operator.

The facility's current regulatory status is that of a large-quantity generator of hazardous waste. Between 1980 and 1987, the facility was regulated under interim status as a hazardous waste treatment, storage, or disposal (TSD) facility. In November 1987, the Illinois Environmental Protection Agency (IEPA) approved the closure of Arnold's Waste Acid Tank (SWMU 1) and Former Drum Storage Area (DSA) (SWMU 3) and withdrew the facility's RCRA Part A permit application.

PRC identified the following 11 SWMUs and one AOC at the facility during the PA/VSI:

Solid Waste Management Units

1. Waste Acid Tank
2. Drum Storage Building
3. Former Drum Storage Area (DSA)
4. Wastewater Treatment System (WTS)
5. Cooling Ponds
6. Building 5 Nonhazardous Waste Roll-Off
7. Foundry Baghouses
8. Neutralization Tank
9. Chlorinated Solvent Satellite Accumulation Areas (SAA)
10. Nonchlorinated Solvent SAAs
11. Used Oil SAAs

Area of Concern

1. Ground-Water Contamination

The potential for release from facility SWMUs 1 through 4, SWMUs 6 through 9, and SWMU 11 to ground water, surface water, air, and on-site soils is low. SWMUs 1 and 3 were closed with IEPA approval in 1987; the rest of these SWMUs have a low potential for release because they either manage nonhazardous waste or have adequate secondary containment.

The potential for release from the Cooling Ponds (SWMU 5) to ground water and on-site, subsurface soils is high. In the event of an overflow caused by storm water, wastewater in the Cooling Ponds can percolate into soils and ground water in the overflow percolation field. The facility representative stated that such overflow has occurred in the past. The potential for release from SWMU 5 to air is low to moderate. Volatile organic compounds (VOC) have been detected in the wastewater at low concentrations. The potential for release from SWMU 5 to surface water is low.

In 1991, VOCs were detected in the ground-water beneath the facility. VOCs included TCA, acetone, and methyl ethyl ketone. The source of the contamination has not been identified. Concentrations were below IEPA action limits, however, IEPA has not closed the issue. PRC considers the Ground-Water Contamination (AOC 1) to be an AOC.

The potential for release to environmental media from the Nonchlorinated Solvent SAAs (SWMU 10) is low to moderate. During the VSI, one of the drums that comprise the unit was

outdoors. The drum was covered but staining was observed beneath it. The facility representative explained that this was not standard practice. However, staining and pitting of the concrete beneath the drum suggests that drums have been managed there before.

The nearest residential area is located about 100 yards north of the facility. The facility has controlled-entry gates and 24-hour guard surveillance.

The nearest surface water body, the Kishwaukee River, is located 1 mile north of the facility and is used for recreational, agricultural, and industrial purposes. A small, intermittent tributary of the Kishwaukee River is located 0.5 mile northeast of the facility.

Ground water is used as an industrial, agricultural, municipal, and private water supply in the area. The nearest drinking water well is located 100 yards north and downgradient of the facility. There are about seven domestic wells downgradient, of and bordering the facility. The depths of these wells range from 45 to 218 feet in the sand and gravel aquifer. The City of Marengo also draws water from the shallow sand and gravel aquifer. Arnold's ground-water monitoring wells indicated ground water at 15 to 20 feet below ground surface (bgs). Arnold's private well is 846 feet bgs. No other active industrial wells lie within a 3-mile radius of the facility.

No sensitive environments are located on site. The nearest sensitive environment, wetlands along the Kishwaukee River, are located about 0.9 mile north of the facility. The wetland areas are made up mostly of seasonally flooded, palustrine, broad-leaved deciduous forest and semi-permanent open water areas.

PRC makes the following recommendations for the facility:

- Continue monthly ground-water monitoring near the Cooling Ponds (SWMU 5) to monitor potential contamination from this unit. If contamination over IEPA action limits is discovered, overflow process wastewater should be contained.
- Line the discharge ditch that is part of the Neutralization Tank (SWMU 8).
- Manage the Nonchlorinated Solvent SAAs (SWMU 10) indoors.
- Determine the nature and extent of the Ground-Water Contamination (AOC 1) and identify if releases are ongoing.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

1.0 INTRODUCTION

PRC Environmental Management, Inc. (PRC), received Work Assignment No. C05087 from the U.S. Environmental Protection Agency (EPA) under Contract No. 68-W9-0006 (TES 9) to conduct preliminary assessments (PA) and visual site inspections (VSI) of hazardous waste treatment and storage facilities in Region 5.

As part of the EPA Region 5 Environmental Priorities Initiative, the RCRA and CERCLA programs are working together to identify and address RCRA facilities that have a high priority for corrective action using applicable RCRA and CERCLA authorities. The PA/VSI is the first step in the process of prioritizing facilities for corrective action. Through the PA/VSI process, enough information is obtained to characterize a facility's actual or potential releases to the environment from solid waste management units (SWMU) and areas of concern (AOC).

A SWMU is defined as any discernible unit at a RCRA facility in which solid wastes have been placed and from which hazardous constituents might migrate, regardless of whether the unit was intended to manage solid or hazardous waste.

The SWMU definition includes the following:

- RCRA-regulated units, such as container storage areas, tanks, surface impoundments, waste piles, land treatment units, landfills, incinerators, and underground injection wells
- Closed and abandoned units
- Recycling units, wastewater treatment units, and other units that EPA has usually exempted from standards applicable to hazardous waste management units
- Areas contaminated by routine and systematic releases of wastes or hazardous constituents. Such areas might include a wood preservative drippage area, a loading or unloading area, or an area where solvent used to wash large parts has continually dripped onto soils.

An AOC is defined as any area where a release to the environment of hazardous waste or constituents to the environment has occurred or is suspected to have occurred on a nonroutine and nonsystematic basis. This includes any area where a strong possibility exists that such a release might occur in the future.

The purpose of the PA is as follows:

- Identify SWMUs and AOCs at the facility
- Obtain information on the operational history of the facility
- Obtain information on releases from any units at the facility
- Identify data gaps and other informational needs to be filled during the VSI

The PA generally includes review of all relevant documents and files located at state offices and at the EPA Region 5 office in Chicago.

The purpose of the VSI is as follows:

- Identify SWMUs and AOCs not discovered during the PA
- Identify releases not discovered during the PA
- Provide a specific description of the environmental setting
- Provide information on release pathways and the potential for releases to each medium
- Confirm information obtained during the PA regarding operations, SWMUs, AOCs, and releases

The VSI includes interviewing appropriate facility staff; inspecting the entire facility to identify all SWMUs and AOCs; photographing all visible SWMUs; identifying evidence of releases; making a preliminary selection of potential sampling parameters and locations, if needed; and obtaining additional information necessary to complete the PA/VSI report.

This report documents the results of a PA/VSI of the Arnold Engineering Company (Arnold) facility (EPA Identification No. ILD 005 163 803) in Marengo, McHenry County, Illinois. The PA was completed on December 9, 1992. PRC gathered and reviewed information from Illinois Environmental Protection Agency (IEPA) and EPA Region 5 RCRA files. PRC also gathered information from the Federal Emergency Management Agency (FEMA), the Illinois State Fire Marshall (ISFM), the Illinois State Geological Survey (ISGS), the Illinois State Water Survey (ISWS), the U.S. Department of Agriculture (USDA), the U.S. Department of Commerce

(USDC), the U.S. Fish and Wildlife Service (USFWS), and the U.S. Geological Survey (USGS). The VSI was conducted on December 10, 1992. It included interviews with facility representatives and a walk-through inspection of the facility. PRC identified 11 SWMUs and one AOC at the facility.

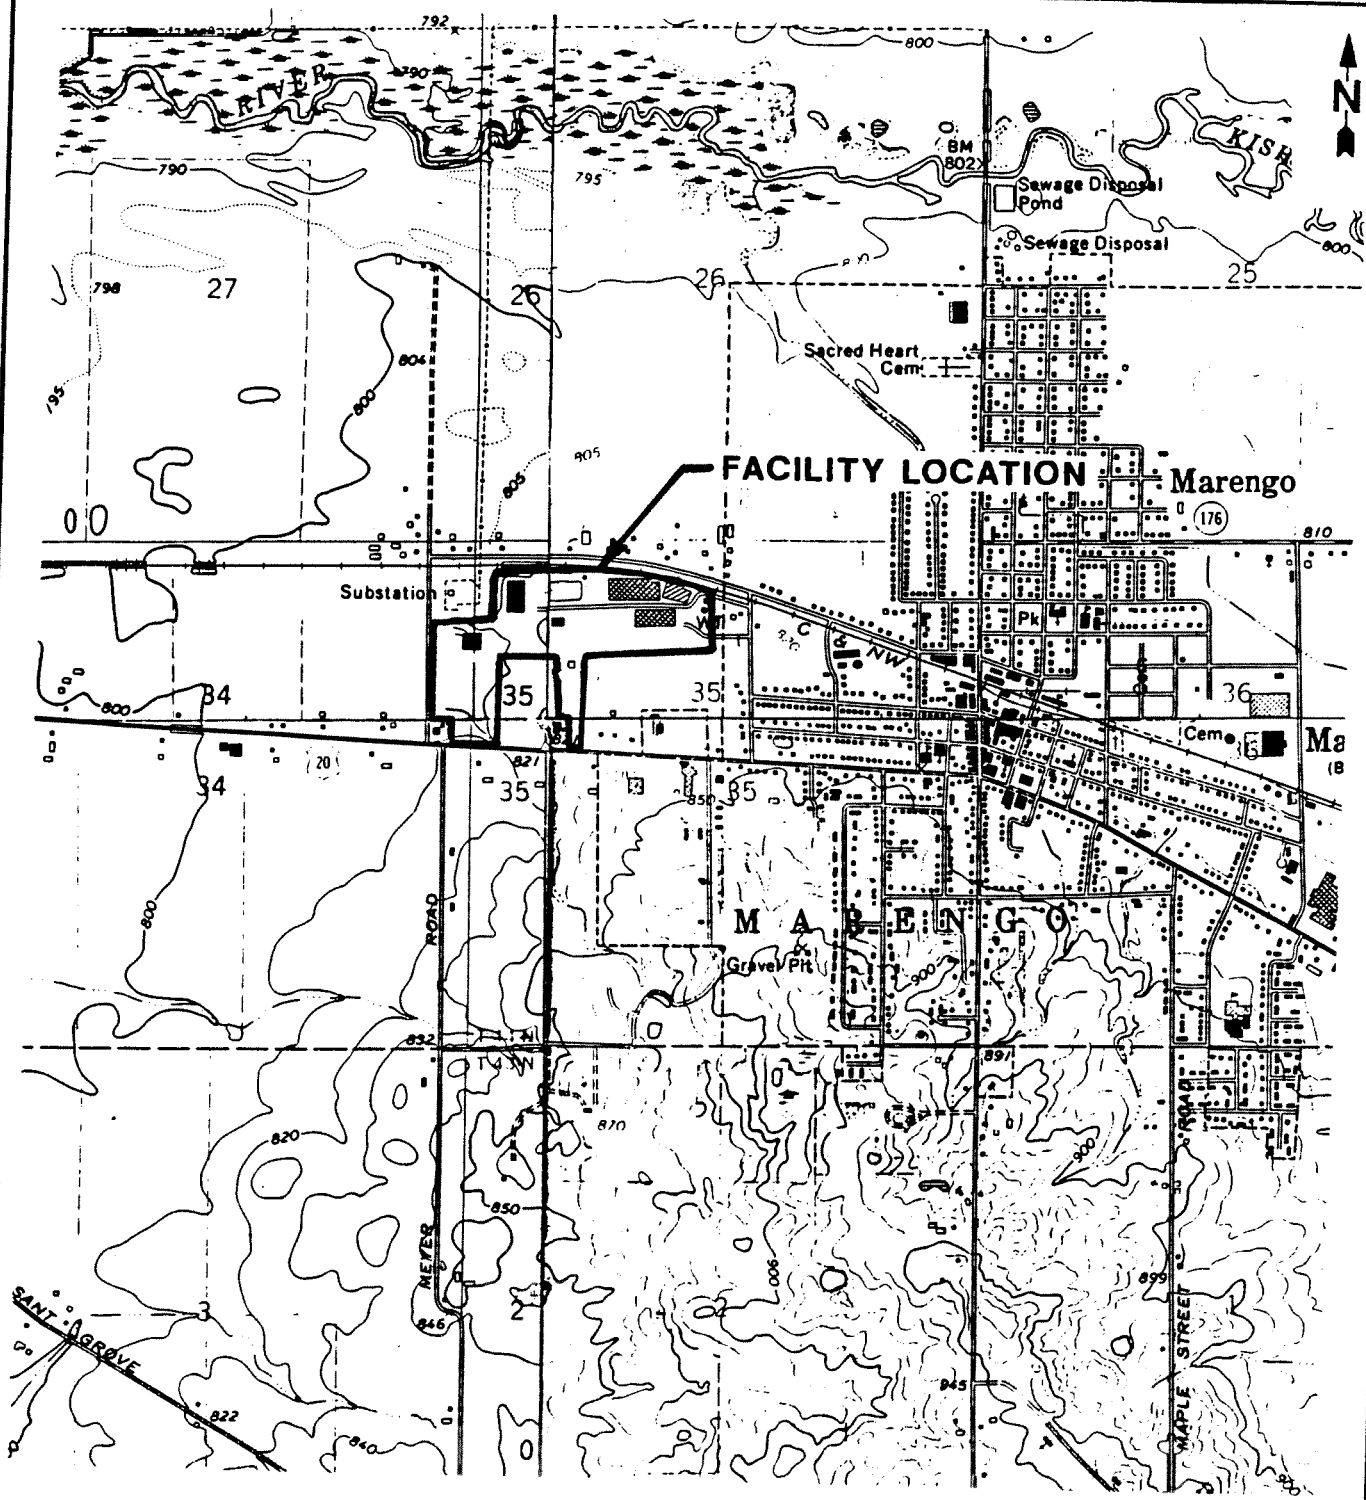
PRC completed EPA Form 2070-12 using information gathered during the PA/VSI. This form is included in Attachment A. The VSI is summarized and 16 inspection photographs are included in Attachment B. Field notes from the VSI are included in Attachment C.

2.0 FACILITY DESCRIPTION

This section describes the facility's location; past and present operations; waste generating processes and waste management practices; history of documented releases; regulatory history; environmental setting; and receptors.

2.1 FACILITY LOCATION

The Arnold facility is located at 300 West Street in Marengo, McHenry County, Illinois. Figure 1 shows the location of the facility in relation to the surrounding topographic features (latitude 42°15'14" N and longitude 88°37'14" W). The facility occupies 80 acres in a mixed-use area.



The facility is bordered on the north by Chicago and North Western Railroad tracks and residential property, on the west by open farms and residential property, on the south by U.S. Highway 20, and on the east by residential property.

2.2 FACILITY OPERATIONS

Arnold manufactures electrical components, including transmission cores and other magnetic materials. The facility began operations in 1958 and currently employs about 500 people. Before construction of the facility, the land was vacant and idle.

The facility contains 12 buildings with a floor space of about 400,000 square feet. Building 1 contains the maintenance and tool shops, offices, and the Sintered Alnico operation. Buildings 2, 3, 4, and 7 contain the C-Core and Tape-Core operations. Building 5 contains the Samarium Cobalt and Cast Alnico operations. Building 6 formerly contained the Strontium-Ferrite operation and is now vacant. Building 9 was formerly an airplane hangar and is currently vacant. Buildings 11 and 14 contain the Permalloy Strip and rolling mill operations. Building 12 is used for raw material storage. Building 16, the Drum Storage Building (DSB) (SWMU 2), is used for hazardous waste storage.

The facility operates two wastewater treatment systems: the Wastewater Treatment System (WTS) (SWMU 4) and the Cooling Ponds (SWMU 5). SWMU 4 treats process wastewater and waste

FACILITY LOCATION

PRC ENVIRONMENTAL MANAGEMENT, INC.

coolant. Effluent from SWMU 4 is transferred to SWMU 5, where it is cooled and clarified for further use in Arnold's operations. WTS sludge is removed from SWMU 4 and disposed off-site.

Raw materials are stored in aboveground tanks and in containers of various sizes throughout the facility. Building 12 is used solely for raw material storage. Some raw materials, including mineral oil, acetone, methanol, 1,1,1-trichloroethane (TCA), were formerly managed in underground storage tanks (UST).

The facility was originally constructed, owned, and operated by Allegheny Ludlum Steel. In 1981, the name of the facility was changed to Arnold Engineering Company. SPS Technologies, Inc., purchased the facility in 1987 and is the current owner and operator.

2.3 WASTE GENERATION AND MANAGEMENT

This section discusses the wastes generated and managed at the buildings making up the Arnold facility. The facility generates, treats, and stores several hazardous and nonhazardous wastes. The facility determines whether a waste is hazardous or not using two methods: (1) laboratory analysis and (2) knowledge of the generation or treatment of the waste. PRC found no documentation indicating that EPA or IEPA has challenged the classification of waste streams at the facility. Current and former generation and management of both hazardous and nonhazardous wastes are detailed below by facility building, and Table 1 lists current and former waste generation processes by facility building. SWMUs and their current status are identified in Table 2. The locations of SWMUs in relation to the facility layout are shown in Figure 2. Wastes generated at the facility are summarized in Table 3. Waste generation rates, transporters, and final disposition are presented in Table 4.

2.3.1 Building 1

Building 1 houses the maintenance and tool shops, offices, and Sintered Alnico magnet production. The maintenance and tool shops generate spent mineral spirits (D001) and spent TCE (F001) from parts cleaning and degreasing, respectively, and formerly generated spent TCA

TABLE 1

WASTE GENERATING PROCESSES BY BUILDING

BUILDING	PROCESSES	
	Current	Former
Building 1	Sintered Alnico Process and Maintenance and Tool Shops	Unchanged
Buildings 2, 3, 4, and 7	C-Core and Tape Core Processes[a]	Unchanged
Building 5	Samarium Cobalt and Cast Alnico Processes	Unchanged
Building 6	None	Strontium-Ferrite Process[b]
Building 9	None	Airplane Hangar
Buildings 11 and 14	Permalloy Strip Process and rolling mill operation	Unchanged
Building 12	Raw Material Storage	Unchanged
Building 16	Hazardous Waste Storage	Unchanged

Notes:

[a] C-Core and Tape Core production cease by April, 1993.

[b] The Strontium-Ferrite Process was discontinued in July, 1992.

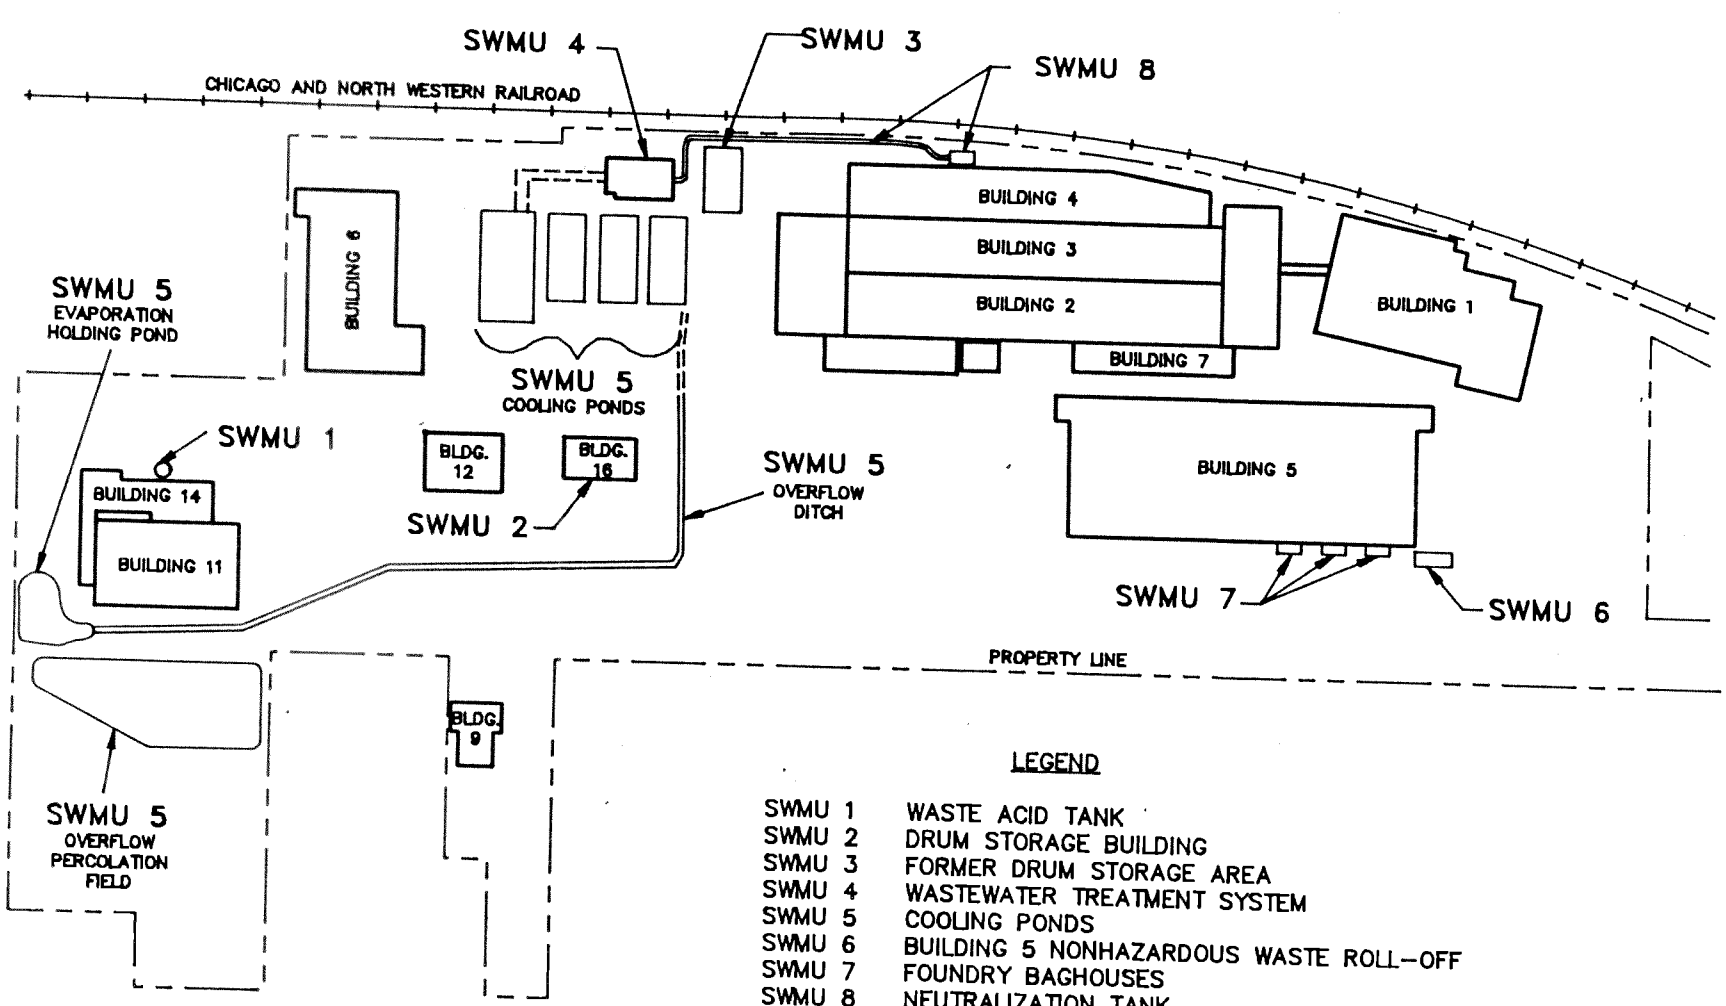

TABLE 2

SOLID WASTE MANAGEMENT UNITS

SWMU Number	SWMU Name	RCRA Hazardous Waste Management Unit[a]	Status
1	Waste Acid Tank	Yes	Inactive; IEPA-approved, RCRA-closed in 1987
2	Drum Storage Building	No	Active; less than 90-day storage of hazardous waste
3	Former Drum Storage Area	Yes	Inactive; IEPA-approved, RCRA-closed in 1987
4	Wastewater Treatment System	No	Active; treatment of nonhazardous waste
5	Cooling Ponds	No	Active; treatment of nonhazardous waste
6	Building 5 Nonhazardous Waste Roll-Off	No	Active; accumulation of nonhazardous waste
7	Foundry Baghouses	No	Active; accumulation of nonhazardous waste
8	Neutralization Tank	No	Active; treatment of hazardous waste
9	Chlorinated Solvent Satellite Accumulation Areas	No	Active; accumulation of hazardous waste
10	Nonchlorinated Solvent Satellite Accumulation Areas	No	Active; accumulation of hazardous waste
11	Used Oil Satellite Accumulation Areas	No	Active; accumulation of hazardous waste

Note:

[a] A RCRA hazardous waste management unit is one that currently requires or formerly required submittal of a RCRA Part A or Part B permit application.

TABLE 3

SOLID WASTES

Waste/EPA Waste Code[a]	Source	Solid Waste Management Unit[b]
Spent mineral spirits/D001	Building 1	None
Spent TCE/F001	Buildings 1, 2, 3, 4, 5, 7, 11, and 14	SWMUs 2 and 9
Spent TCA/F002[c]	Buildings 1, 2, 3, 4, 5, 7, 11, and 14	SWMUs 2, 3, and 9
Spent corrosive/D002	Buildings 2, 3, 4, 7, 11, and 14	SWMUs 1 and 8
Spent nonchlorinated solvents/F003 and F005	Buildings 2, 3, 4, and 7	SWMUs 2, 3, and 10
Paint sludge/NA	Buildings 2, 3, 4, and 7	None
Waste coolant/NA	Buildings 2, 3, 4, and 7	SWMU 4
Spent methylene chloride/F002[c]	Buildings 2, 3, 4, and 7	SWMUs 2, 3, and 9
Foundry sand/NA	Building 5	SWMU 6
Foundry dust/NA	Building 5	SWMUs 6 and 7
Waste ethylene glycol/NA	Building 5	SWMUs 2 and 3
Process wastewater/NA	Buildings 5, 6, 11, and 14	SWMUs 4 and 5
Used oil/NA	Buildings 5, 11, and 14	SWMUs 2, 3, and 11
WTS sludge/NA	WTS	None

Notes:

[a] Not applicable (NA) designates nonhazardous waste.

[b] "None" indicates that the waste stream is not managed on site.

[c] This waste is no longer managed on site.

TABLE 4

WASTE GENERATION RATES, TRANSPORTERS, AND FINAL DISPOSITION

Waste Stream/EPA Waste Code[a]	Generation Rate	Transporter	Final Disposition	Location
Spent mineral spirits/D001	20 gallons per month (gal/mo)	Safety-Kleen	Recycled	Dolton, IL
Spent TCE/ F001	440 gal/mo	Safety-Kleen	Recycled	Dolton, IL
Spent corrosives/D002	--[b]	Managed on site	Neutralized	On Site
Spent nonchlorinated solvents/F003 and F005	550 gal/mo	Safety-Kleen	Fuel blended	Dolton, IL
Paint sludge/NA	1,700 gal/mo	Chemical Waste Management (CWM)	Fixation by Dynacol and landfilled	Dolton, IL
Waste coolant/NA	1,700 gal/mo	Managed on site	Contained in Cooling Ponds	On Site
Foundry sand/NA	96 cubic yards per month	CWM	Landfilled	Cortland, IL
Foundry dust/NA	~ 800 dry gal/mo	CWM	Landfilled	Cortland, IL
Waste ethylene glycol/NA	5 gal/mo	Safety-Kleen	Fuel blended	Dolton, IL
Process wastewater /NA	Recycled at 1,000,000 gallons per day	Managed on site	Recycled	On Site
Used oil/NA	240 gal/mo	Rock Valley Oil	Recycled	Rockford, IL
WTS sludge/NA	850 tons/month	CWM	Landfilled at Parkview Landfill	Menomonee Falls, WI

Notes:

[a] Not applicable (NA) designates nonhazardous wastes.

[b] Facility was unable to provide this information.

(F002). The mineral spirits is contained in a parts cleaner and is continually used until Safety-Kleen Corporation (Safety-Kleen) removes it from the facility. Spent TCE is accumulated in one of two Chlorinated Solvent SAAs (SWMU 9) in Building 1. This waste is eventually stored in the DSB (SWMU 2). Spent TCA was accumulated in a Chlorinated Solvent SAA (SWMU 9). This waste was eventually stored in the DSB (SWMU 2) or the Former DSA (SWMU 3). The facility discontinued the use of TCA in 1991.

Sintered Alnico is a powdered magnet production process. Powdered alloys of aluminum, nickel, and cobalt are blended, pressed, and heated in a sintering furnace. Dust collectors service this production area but the powder is reused in the process rather than sent off as a waste (see Photograph No. 1).

2.3.2 Buildings 2, 3, 4, and 7

Buildings 2, 3, 4, and 7 house the C-Core and Tape Core magnet operations. These operations generate spent corrosive (D002), spent nonchlorinated solvents (F003 and F005), nonhazardous paint sludge, spent TCE (F001), and nonhazardous waste coolant. Spent methylene chloride (F002) and spent TCA (F002) was formerly generated in these buildings.

Spent corrosive (D002) is generated during etching and cleaning operations. This waste is piped to the Neutralization Tank (SWMU 8), where it is neutralized and released to the WTS (SWMU 4). The spent nonchlorinated solvents (F003 and F005) include methyl ethyl ketone, methanol, acetone, and toluene generated during varnishing and painting operations; these solvents are combined into one waste stream and accumulated in one of three Nonchlorinated Solvent SAAs (SWMU 10) in the buildings. After satellite accumulation, this waste is stored in the DSB (SWMU 2) and was formerly stored in the Former DSA (SWMU 3). Nonhazardous paint sludge is generated twice per year when the Neutralization Tank (SWMU 8) is cleaned. This waste is removed from the tank and the facility; it is not managed on site. Spent TCE (F001) is generated during degreasing activities. This waste is accumulated in one of three Chlorinated Solvent SAAs (SWMU 9) in the buildings. After satellite accumulation, this waste is stored in the DSB (SWMU 2). The nonhazardous waste coolant is a synthetic, water-based coolant and water mix generated during machining operations. The waste coolant is released directly to the WTS (SWMU 4). Spent methylene chloride (F002) was formerly generated in these buildings during cleaning operations. This waste was accumulated in a Chlorinated Solvent SAA (SWMU 9). After satellite accumulation, this waste was stored in the DSB (SWMU 2) or the Former DSA (SWMU 3). Spent

TCA (F002) was formerly generated in these buildings during degreasing activities. This waste was accumulated in a Chlorinated Solvent SAA (SWMU 9). After satellite accumulation, this waste was stored in the DSB (SWMU 2) or the Former DSA (SWMU 3).

According to facility representatives, the C-Core and Tape Core operations will be discontinued by April, 1993.

2.3.3 Building 5

Building 5 houses the Samarium Cobalt and Cast Alnico processes. These operations consist of foundry die casting and related operations, including, shot blasting, shaking, grinding, core making, sand molding, and degreasing. These processes generate the following wastes: nonhazardous foundry sand, nonhazardous foundry dust, nonhazardous waste ethylene glycol, nonhazardous process wastewater, spent TCE (F001), and nonhazardous used oil. Spent TCA (F002) was formerly generated in this building.

Nonhazardous foundry sand is collected by shakers, shot blasters, or cyclones and deposited in the Building 5 Nonhazardous Waste Roll-Off (SWMU 6). Nonhazardous foundry dust is collected by several Foundry Baghouses (SWMU 7) around the building. This waste is accumulated in 10- or 55-gallon drums at the baghouses and is ultimately stored in the Building 5 Nonhazardous Waste Roll-Off (SWMU 6). Nonhazardous waste ethylene glycol is generated during the cleaning of a closed-loop cooling line used for the heat treating ovens. The line is cleaned about every 2 years. This waste is stored in the DSB (SWMU 2) and was formerly stored in the Former DSA (SWMU 3). Nonhazardous process wastewater is also generated during cooling operations. This waste is released directly to the WTS (SWMU 4) where it is treated then released to the Cooling Ponds (SWMU 5). Spent TCE (F001) is accumulated in one of two Chlorinated Solvent SAAs (SWMU 9) in the building. After satellite accumulation, this waste is stored in the DSB (SWMU 2). Maintenance activities in Building 5 generate nonhazardous used oil. This waste is accumulated in a Used Oil SAA (SWMU 11) and then stored in the DSB (SWMU 2). This waste was formerly stored in the Former DSA (SWMU 3). Spent TCA (F002) was formerly generated in Building 5. This waste was accumulated in a Chlorinated Solvent SAA (SWMU 9) and stored in the DSB (SWMU 2) or the Former DSA (SWMU 3).

2.3.4 Building 6

Building 6 formerly housed the Strontium-Ferrite magnet production operation which generated nonhazardous process wastewater. The process wastewater was cooling water from baking and grinding operations. This waste was released to the WTS (SWMU 4), where it was treated and released to the Cooling Ponds (SWMU 5). Operations in this building were discontinued in July 1992.

2.3.5 Building 9

Building 9 was formerly an airplane hangar. The building is currently vacant and is not used. No waste generating processes ever were conducted in this building.

2.3.6 Buildings 11 and 14

Buildings 11 and 14 house the Permalloy Strip and rolling mill operations. These operations include magnet forming, cleaning, and annealing. These operations generate nonhazardous used oil, spent corrosive (D002), nonhazardous process wastewater, and spent TCE (F001). Spent TCA (F002) was formerly generated in these buildings.

Nonhazardous used oil is accumulated in the Used Oil SAA (SWMU 11). After satellite accumulation, this waste is stored in the DSB (SWMU 2); it was formerly stored in the Former DSA (SWMU 3). Spent corrosive (D002) is generated during acid and alkaline cleaning of magnet material. This waste is piped to the Neutralization Tank (SWMU 8), where it is treated and then released to the WTS (SWMU 4). Spent corrosive (D002) was formerly stored in the Waste Acid Tank (SWMU 1); the facility closed this SWMU in 1987. Nonhazardous process wastewater is rinse water from acid and alkaline cleaning. This waste is released directly to the Cooling Ponds (SWMU 5). Spent TCE (F001) is generated during degreasing activities. This waste is accumulated in one of three Chlorinated Solvent SAAs (SWMU 9) in the buildings. After satellite accumulation, this waste is stored in the DSB (SWMU 2). Spent TCA (F002) was formerly generated in Buildings 11 and 14. This waste was accumulated in a Chlorinated Solvent SAA (SWMU 9); it was formerly stored in the DSB (SWMU 2) or the Former DSA (SWMU 3).

2.3.7 Building 12

Building 12 is used for raw material storage. No waste generating processes have ever occurred in this building.

2.3.8 Building 16

Building 16 is the DSB (SWMU 2). This building is used for storage of hazardous waste generated at the facility.

2.3.9 WTS

The WTS (SWMU 4) treats process wastewater, waste coolant, surface water runoff and effluent from the Neutralization Tank (SWMU 8). Effluent from this unit is discharged to the Cooling Ponds (SWMU 5). Nonhazardous sludge is removed directly from SWMU 4 and the facility by a private contractor and is landfilled off site.

2.4 HISTORY OF DOCUMENTED RELEASES

This section discusses the history of documented releases to ground water, surface water, air, and on-site soils at the facility.

The facility is required by its water pollution control permit (1991-EO-3485) for the WTS (SWMU 4) and Cooling Ponds (SWMU 5) to perform a monthly analysis of ground water. This requirement is in place because ground water beneath the facility has been found to be contaminated with trace amounts of TCA; however, the concentrations found are below the maximum concentration of 0.2 part per million (ppm) allowable for Class I potable resource ground water in Illinois (PRC, 1993a).

PRC observed no documents in the files reviewed that indicate the origin of the ground-water contamination. The contamination may have come from various facility operations. Arnold stored pure TCA in two 6,000-gallon USTs. According to facility representatives and a consultant's report, the tanks were removed or abandoned and were not leaking (Hunter Environmental Services, 1988). Waste TCA was collected in Chlorinated Solvent SAAs (SWMU 9) and stored in the DSB (SWMU 2) or the Former DSA (SWMU 3). During closure of the Former

DSA (SWMU 3), TCA and acetone were detected in soil samples collected near the unit. However, concentrations were below IEPA action limits, and the closure was approved (IEPA, 1987). Facility representatives were unable to provide information on the management of spent solvents (TCA, MEK, acetone) prior to 1980.

IEPA officials are evaluating data from the facility's monthly ground-water monitoring report. At present, no actions are planned because concentrations of TCA in ground water are below allowable limits. IEPA is requiring monthly sampling until October 1, 1994, when it will review the data and take appropriate action (PRC, 1993b). Ground-water contamination is below the maximum limits, and IEPA does not currently consider this an immediate threat. However, since IEPA has not closed the issue and the source has not been identified, PRC considers the Ground-Water Contamination (AOC 1) an AOC.

2.5 REGULATORY HISTORY

Arnold submitted a Notification of Hazardous Waste Activity form to EPA on August 14, 1980 (Arnold, 1980a). Arnold submitted a RCRA Part A permit application on November 14, 1980 (Arnold, 1980b). The Part A permit application listed container storage (S01) with a capacity of 15,000 gallons; tank storage (S02) with a capacity of 14,000,000 gallons; and a tank treatment (T01) with a capacity of 1,500,000 gallons per day. The following wastes and waste codes were listed on the Part A permit application: lead (D008); TCA (F001); acetone and methanol (F003); methyl ethyl ketone (F005); chromium (D007); spent pickle liquor (K062); phenol (U188); and corrosives (D002). IEPA granted the facility interim status as a treatment, storage or disposal (TSD) facility on an unknown date.

The interim license allowed the facility to treat 1,800 gallons per day in the Neutralization Tank (SWMU 8); store 15,000 gallons of hazardous waste in the Former DSA (SWMU 3); and store 14,000 gallons of hazardous waste in the Waste Acid Tank (SWMU 1). The discrepancies between the volumes listed on the Part A permit application and the volumes allowed under interim status are due to Arnold's inclusion of the WTS (SWMU 4) and Cooling Ponds (SWMU 5) among the tank treatment (T01) and storage (S02) systems listed in the permit application. The WTS (SWMU 4) and Cooling Ponds (SWMU 5) were excluded from licensing as exempt treatment.

PRC observed no documents indicating that lead (D008), chromium (D007), or phenol (U188) wastes were generated or stored at the facility. Spent pickle liquor has been designated and treated as a D002 waste, not as a K062 waste as listed in the Part A permit application.

IEPA inspected the facility on four occasions between 1982 and 1991. RCRA inspections in 1982 and 1988 found Arnold to be in compliance. An inspection in 1991 revealed that the facility operating air emission sources without a permit. An inspection in 1987 revealed apparent violations concerning paperwork deficiencies (IEPA, 1982; 1987; 1988a; 1991a). All violations have since been resolved.

In November 1987, IEPA approved the closure of Arnold's Waste Acid Tank (SWMU 1) and Former DSA (SWMU 3) and withdrew the Part A permit. The treatment units listed in the Part A permit application (SWMUs 4, 5, and 8) were for wastewater treatment and elementary neutralization; therefore, they were not required to undergo RCRA closure. The facility is currently regulated as a large quantity generator of hazardous waste storing waste on site for less than 90 days.

Arnold is required to have a permit (1991-E0-3485) to operate the WTS (SWMU 4) and Cooling Ponds (SWMU 5), because the potential exists for the water to be released through evaporation and percolation (IEPA, 1991b). The application for renewal of this permit states that Arnold has prepared a storm water National Pollutant Discharge Elimination System (NPDES) permit application (Arnold, 1991).

The facility is required to have IEPA operating air permits for the following processes: C-Core and Tape Core (permit numbers 73090127, 73090128, 73100163, 73110161); Permalloy Strip (permit number 73090130); Cast Alnico (permit number 740110046); Samarium Cobalt (permit number 86050072); and Sintered Alnico (permit number 78110021). Before July, 1992, the Strontium-Ferrite process also required a permit (permit number 73090129). The facility has violated its air permits. In May 1991, Arnold was found to be operating the heat cycling oven, the varnish drying oven, a baghouse, and storage tanks without operating air permits. Permits for these sources were subsequently obtained (IEPA, 1991c). The facility has no documented history of odor complaints from area residents.

In May 1986, Arnold informed the ISFM of 12 USTs at the facility. All the USTs stored raw materials. The capacity of USTs 1 through 6, 11, and 12 was 1,500 gallons; the capacity of

USTs 7 through 10 was 6,000 gallons. On August 6, 1990, the facility abandoned USTs 1 through 6, which contained mineral oil. On July 7, 1990, the facility abandoned UST 7 which formerly contained acetone. USTs 1 through 7 were filled with sand and abandoned in place. On July 4, 1990, the facility removed USTs 8 and 9, which formerly contained methanol and TCA, respectively. On July 28, 1990, the facility removed UST 10, which formerly contained TCA. USTs 11 and 12 have been used to store kerosene and gasoline, respectively. UST 11 is still in use. UST 12 is empty and was last used in March 1968. PRC observed no documentation that USTs 11 and 12 were leak tested or had any containment. None of the removed or abandoned USTs were leaking according to leak tests (ISFM, 1986 and 1990; Arnold, 1988 and 1989).

not correct submit correction

USTs 9 and 10 both stored TCA. Ground-Water Contamination (AOC 1) beneath the facility includes low levels of TCA. No soil sampling was documented in the files relating to the removal of UST 9. After UST 10 was removed, three soil samples were obtained from the area of tank 10 and analyzed for TCA. The results of the analysis were 0.02 ppm, 0.09 ppm, and 0.003 ppm (CBC, 1988; Howard Lee & Sons, 1990).

2.6 ENVIRONMENTAL SETTING

This section describes the climate; flood plain and surface water; geology and soils; and ground water in the vicinity of the facility.

2.6.1 Climate

The climate in McHenry County is continental. The average daily temperature is 48.6 degrees Fahrenheit (°F). The highest average daily temperature is 86.3 °F in July. The lowest average daily temperature is 15 °F in January (USDC, 1974).

The total annual precipitation for the county averages 35.62 inches (USDC, 1974). The mean annual lake evaporation for the area is about 30 inches (USDC, 1968). The 1-year, 24-hour maximum rainfall is about 2.5 inches (USDC, 1963).

The prevailing wind is from the west-northwest. Average wind speed is highest in April at 11.7 miles per hour (USDC, 1974).

2.6.2 Flood Plain and Surface Water

The facility is not located in a 100-year flood plain or flood-prone area (FEMA, 1992). The nearest surface water body, the Kishwaukee River, is located about 0.9 mile north of the facility and is used for recreational, agricultural, and industrial purposes. The river flows west with a gradient of 5 feet per mile until it reaches the Rock River system 16 miles downstream. The Rock River flows southwest into the Mississippi River (Roux, 1990).

Surface and storm water runoff from facility ditches, parking lots, and building roofs drains to the WTS (SWMU 4) which discharges to the Cooling Ponds (SWMU 5). The Cooling Ponds include: four recycle ponds; one evaporation holding pond; and an overflow percolation field. SWMU 5 has a total capacity of 8 million gallons and is permitted by IEPA (IEPA, 1991b).

2.6.3 Geology and Soils

The topography of the area has been shaped primarily by glaciers that covered the region in the geologically recent Pleistocene Epoch (ISGS, 1959). Soils directly beneath the facility are of the Saybrook LaRose Series and are dark, well drained to poorly drained soils developed in 0 to 3 feet of loess on calcareous loam till (USDA, 1965).

The first 200 feet of material beneath the facility are glacial till and contain the most important aquifer (sand and gravel aquifer) in the region. Underlying this undifferentiated till are the following rock formations of Ordovician and Cambrian age (top to bottom): Galena dolomite, 170 feet thick; Platteville dolomites and shale, 160 feet thick; Glenwood-St. Peter sandstone, 150 feet thick; Shakopee limestone and dolomite, 120 feet thick; New Richmond dolomitic sandstone, 80 feet thick; Franconia sandstone, 120 feet thick; Ironton-Galesville sandstone, 100 to 300 feet thick; Eau Claire shale and dolomite, 200 to 450 feet thick; and Mt. Simon sandstone, 275 to 900 feet thick. Precambrian-age crystalline rocks underlie the sandstone (Roux, 1990; ISGS, 1959).

2.6.4 Ground Water

The most important aquifer in the vicinity of the facility is the shallow sand and gravel aquifer that exists between 15 and 200 feet below ground surface (bgs) in the region. On-site monitoring wells indicate ground water at about 15 feet bgs flowing north-northwest. There are

several private residential wells downgradient and bordering the facility (Roux, 1990). Three municipal wells located about 1 mile east and upgradient of the facility serve the City of Marengo. The average depth of these wells is 80 feet; the wells draw water from the shallow sand and gravel aquifer. Arnold's private well draws water from about 846 feet bgs. The City of Marengo can utilize Arnold's well in the event of an emergency. The average daily production of the City's wells is 530,899 gallons (IEPA, 1988).

not correct - water main was disconnected in 1990. submit corrected

Other important, but not widely used aquifers in the region include the Glenwood-St. Peter sandstone and the Ironton-Galesville sandstone at about 600 and 1,100 feet bgs, respectively (ISGS, 1959).

2.7 RECEPTORS

The facility occupies 80 acres in a mixed-use area in Marengo, Illinois. Marengo has a population of about 4,500. The facility is bordered on the north by Chicago and North Western Railroad tracks and residential property; on the west by open farm fields and residences; on the south by U.S. Highway 20; and on the east by residential property. The nearest residential area is located about 100 yards north of the facility. The facility has controlled-entry gates and 24-hour guard surveillance.

The nearest surface water body, the Kishwaukee River, is located about 0.9 mile north of the facility and is used for recreational purposes. Other surface water bodies in the area include several small, unnamed, diked ponds 1 to 2 miles south and southwest of the facility. A small, intermittent tributary of the Kishwaukee River is located 0.5 mile northeast of the facility.

Ground water is used as an industrial, agricultural, municipal, and private water supply in the area. The nearest drinking water well is located 100 yards north and downgradient of the facility. PRC observed no documentation that this well has been sampled for volatile organic compounds. There are approximately seven domestic wells downgradient of and bordering the facility. The depths of these wells range from 45 to 218 bgs in the sand and gravel aquifer. The City of Marengo also draws water from the shallow sand and gravel aquifer. Arnold's ground-water monitoring wells indicate ground water at 15 to 20 feet bgs. Arnold's private well is 846 feet bgs. No other active industrial wells lie within a 3-mile radius of the facility (IEPA, 1988b; ISWS, 1993).

No sensitive environments are located on site. The nearest sensitive environment, the wetlands along the Kishwaukee River, is located less than 1 mile north of the facility. The wetland areas are made up mostly of seasonally flooded, palustrine, broad-leaved deciduous forest and semi-permanent open water areas (USFWS, 1977).

3.0 SOLID WASTE MANAGEMENT UNITS

This section describes the 11 SWMUs identified during the PA/VSI. The following information is presented for each SWMU: description of the unit, dates of operation, wastes managed, release controls, history of documented releases, and PRC's observations. Figure 2 shows the SWMU locations.

SWMU 1	**Waste Acid Tank**
Unit Description:	The Waste Acid Tank is outdoors along the northern wall of Building 14. The unit consists of an 8,000-gallon aboveground storage tank (AST) formerly used to store spent corrosive (D002) generated from metal pickling operations. The unit is constructed of rubber-lined steel. The area beneath this unit is diked concrete that is not drained.
Date of Startup:	The facility representative estimated that this unit began operation in the early 1970s.
Date of Closure:	The unit underwent IEPA-approved RCRA closure in 1987 and is currently inactive.
Wastes Managed:	This unit formerly managed spent corrosive (D002) generated from metal pickling operations. Waste from this unit was removed from the facility by a private contractor or neutralized in the Neutralization Tank (SWMU 8).
Release Controls:	This unit is outdoors and consists of a closed, 8,000-gallon, rubber-lined, steel AST. The unit is currently inactive. The area beneath this unit is undrained, diked concrete with a containment capacity of 9,000 gallons.
History of Documented Releases:	No releases from this SWMU have been documented.

Observations:	During the VSI, the unit was empty. PRC observed no evidence of release (see Photograph No. 16).
SWMU 2	**Drum Storage Building (DSB)**
Unit Description:	The DSB is in Building 16, which is about 200 feet south of the Cooling Ponds (SWMU 5). The unit consists of an 80- by 40-foot, aluminum building with a diked, sealed concrete floor. The diking is 12 inches high, and the floor drains to a 100-gallon sump.
Date of Startup:	This unit began operation in 1989.
Date of Closure:	This unit is active.
Wastes Managed:	This unit manages spent TCE (F001), spent nonchlorinated solvents (F003 and F005), nonhazardous used oil, nonhazardous waste ethylene glycol, and unidentified waste awaiting laboratory analytical results. The unit formerly managed spent TCA (F002) and spent methylene chloride (F002). Wastes from this unit are ultimately removed from the facility by various contractors for recycling or fuel blending.
Release Controls:	The unit is a closed, locked building. Wastes are kept in sealed containers. The floor in this unit is sealed, diked concrete that drains to a 100-gallon sump. There is a polypropylene liner beneath the concrete.
History of Documented Releases:	No releases from this SWMU have been documented.
Observations:	During the VSI, the unit contained an undetermined amount of spent nonchlorinated solvents (F003 and F005), used oil, and several containers of unidentified waste. The facility representative explained that the unidentified waste will be characterized and

	disposed of based on the laboratory analysis. PRC observed no evidence of release (see Photographs No. 7 and 8).
SWMU 3	**Former Drum Storage Area (DSA)**
Unit Description:	The Former DSA was outdoors along the northern edge of the facility between Building 4 and the WTS (SWMU 4). The unit consisted of a 22- by 40-foot gravel pad. The unit was used for storage of hazardous wastes in drums. The gravel was underlain by a clay layer that was sloped to the Neutralization Tank (SWMU 8) discharge ditch.
Date of Startup:	The unit began operation in 1981.
Date of Closure:	This unit underwent IEPA-approved RCRA closure in 1987 and is currently inactive.
Wastes Managed:	The unit formerly managed spent nonchlorinated solvents (F003 and F005), spent TCA (F002), spent methylene chloride (F002), nonhazardous used oil, and nonhazardous waste ethylene glycol in 55-gallon drums. Wastes from this unit were ultimately removed from the facility and recycled or fuel blended by various contractors.
Release Controls:	This unit was an outdoor gravel pad over a clay layer. The clay layer was sloped so that runoff would enter the Neutralization Tank (SWMU 8) discharge ditch which drains to the WTS (SWMU 4).
History of Documented Releases:	Soil sampling and analysis during closure revealed TCA and acetone. However, the concentrations detected were below IEPA action limits, and the closure was approved.

Observations:	The unit is no longer active and has been removed. PRC could not observe evidence of release from this unit due to the snow cover (see Photograph No. 12).
SWMU 4	**Wastewater Treatment System (WTS)**
Unit Description:	The WTS is in a shed along the northern boundary of the facility property. The unit consists of four settling tanks used to treat nonhazardous effluent from the Neutralization Tank (SWMU 8); nonhazardous process wastewater from acid and alkaline cleaning operations; and general wastewater from nonproduction sources. The tanks are open-topped and made of concrete. Effluent from this unit is released to the Cooling Ponds (SWMU 5).
Date of Startup:	This unit began operation in 1964.
Date of Closure:	The unit is active.
Wastes Managed:	The unit manages nonhazardous effluent from the Neutralization Tank (SWMU 8), nonhazardous process wastewater from acid and alkaline cleaning operations, and general wastewater from nonproduction sources. Effluent from SWMU 4 is released to the Cooling Ponds (SWMU 5). WTS sludge is not managed on site; it is removed directly from the unit and the facility about twice per year by a private contractor and landfilled.
Release Controls:	The unit consists of in-ground, open-topped concrete tanks that are below a vented building that is subject to wind but not rain.
History of Documented Releases:	No releases from this SWMU have been documented.
Observations:	During the VSI, the unit was operating. PRC entered this unit and observed no evidence of release (see Photograph No. 10).

SWMU 5	**Cooling Ponds**
Unit Description:	This unit is outdoors. The unit consists of four ponds with 2, 3, 4, and 5 million-gallon capacities; an overflow ditch; an approximately 25,000-square-foot evaporation holding pond with an unknown capacity; and an approximately 360,000-square-foot overflow percolation field. The unit is used to treat process wastewater through cooling and settling of solids and to recirculate the wastewater back to the process. During an overflow event, excess water drains to the overflow ditch that flows about 0.4 mile to the open evaporation holding pond. An overflow from the evaporation holding pond would flow south to the open overflow percolation field. The unit circulates about 1.5 million gallons of process wastewater per day. The unit is permitted to operate and discharge to the evaporation holding pond and overflow percolation field by IEPA. The permit requires that monthly ground-water samples be analyzed and that the results be submitted to IEPA for review.
Date of Startup:	This unit began operation in 1965.
Date of Closure:	The unit is active.
Wastes Managed:	The unit manages nonhazardous process wastewater from Buildings 11 and 14, and effluent from the WTS (SWMU 4). Wastewater from this unit is ultimately reused at the facility. Overflow wastewater is subject to evaporation or percolation into the soil.
Release Controls:	The ponds are underlain by a polypropylene liner and layer of bentonite. The evaporation holding pond and overflow percolation field have no release controls.
History of Documented Releases:	No releases from this SWMU have been documented, but the facility representative explained that the evaporation holding pond and overflow percolation field have been used.

Observations:	During the VSI, the ponds were operating but the evaporation holding pond and overflow percolation field were not being used. The facility representative explained that the evaporation holding pond and overflow percolation field were used during overflow periods caused by heavy rains. PRC observed no evidence of release (see Photograph No. 9).
SWMU 6	**Building 5 Nonhazardous Waste Roll-Off**
Unit Description:	The Building 5 Nonhazardous Waste Roll-Off is outdoors at the southeastern corner of Building 5. The unit consists of a steel, 12-cubic-yard roll-off used to accumulate foundry sand and foundry dust. The foundry sand is collected and deposited in this unit by shakers, shot blasters, and cyclones. The area beneath this unit is concrete.
Date of Startup:	This unit began operation in the early 1980s.
Date of Closure:	The unit is active.
Wastes Managed:	The unit manages nonhazardous foundry sand and foundry dust. Waste from this unit is ultimately removed and landfilled by a private contractor.
Release Controls:	The unit is outdoors and consists of an open-topped, plastic-lined steel rolloff. The concrete beneath this unit drains through storm drains to the WTS (SWMU 4).
History of Documented Releases:	No releases from this unit have been documented.
Observations:	During the VSI, the unit contained about 10 cubic yards of waste. PRC noted no evidence of release (see Photograph No. 3).

SWMU 7	**Foundry Baghouses**
Unit Description:	The Foundry Baghouses are outdoors along the southern wall of Building 5. The unit consists of baghouses that collect foundry dust and empty into 10- or 55-gallon drums. The baghouses are over concrete that drains through storm drains to the WTS (SWMU 4).
Date of Startup:	The unit began operation in the mid-1970s.
Date of Closure:	The unit is active.
Wastes Managed:	The unit manages nonhazardous foundry dust. Waste from this unit is stored in the Building 5 Nonhazardous Waste Roll-Off (SWMU 6) and is ultimately removed from the facility by a private contractor.
Release Controls:	The unit is outdoors but consists of closed baghouses and sealed drums. The baghouses are over concrete that drains through storm drains to the WTS (SWMU 4).
History of Documented Releases:	No releases from this unit have been documented.
Observations:	During the VSI, the baghouses were not operating and did not contain waste. PRC noted no evidence of release (see Photograph No. 4).
SWMU 8	**Neutralization Tank**
Unit Description:	The Neutralization Tank is along the northern wall outside of Building 4. The unit is used to treat spent corrosive (D002) generated from paint stripping and cleaning by elementary neutralization and flocculation of solids. The unit consists of a 9,000-gallon, open-topped concrete tank that is enclosed in a shed,

	and an unlined earthen discharge ditch that drains treated waste to the WTS (SWMU 4).
Date of Startup:	The unit began operation in the mid-1970s.
Date of Closure:	The unit is active.
Wastes Managed:	The unit treats spent corrosive (D002) by elementary neutralization and flocculation. Effluent from this unit drains to the WTS (SWMU 4) for further treatment. Nonhazardous paint sludge from SWMU 8 is removed directly from the tank twice per year by a private contractor and is landfilled off site.
Release Controls:	The tank is within an aluminum shed. The discharge ditch is an open-topped, unlined ditch that drains the tank. The ditch is about 100 yards long and drains to the WTS (SWMU 4).
History of Documented Releases:	No releases from this SWMU have been documented.
Observations:	During the VSI, blue staining and blue solid deposits were evident along the entire discharge ditch. The ditch was draining blue-tinted effluent to the WTS (SWMU 4). The blue color was due to paint solids (see Photographs No. 11 and 14). PRC noted no evidence of release from the concrete tank.
SWMU 9	**Chlorinated Solvent SAAs**
Unit Description:	The Chlorinated Solvent SAAs are located indoors throughout the facility. The SAAs contain 55-gallon drums used to accumulate chlorinated solvents generated during degreasing activities. The SAAs are located in Buildings 1, 2, 3, 4, 5, 7, 11, and 14. Floors in the facility buildings are made of concrete and drain through floor drains to the WTS (SWMU 4).

Date of Startup:	The unit began operation in 1980.
Date of Closure:	The unit is active.
Wastes Managed:	The unit manages spent TCE (F001). It formerly managed spent TCA (F002) and spent methylene chloride (F002). Chlorinated solvents are managed in 55-gallon, steel drums. When full, the drums are moved to the DSB (SWMU 2). The drums were formerly moved to the Former DSA (SWMU 3).
Release Controls:	The SAAs are indoors and contain 55-gallon, steel drums. The drums are kept sealed. Floors in the facility buildings are made of concrete and drain through floor drains to the WTS (SWMU 4).
History of Documented Releases:	No releases from this SWMU have been documented.
Observations:	During the VSI, the SAAs contained an undetermined amount of waste. PRC observed no evidence of release (see Photographs No. 2 and 5).
SWMU 10	**Nonchlorinated Solvent SAAs**
Unit Description:	The Nonchlorinated Solvent SAAs are located primarily indoors throughout Buildings 2, 3, 4, and 7; however, one SAA drum was outdoors during the VSI. The SAAs consist of 55-gallon, steel drums. Indoor floor drains and outdoor storm sewer drains at the facility discharge to the WTS (SWMU 4).
Date of Startup:	The unit began operation in 1980.
Date of Closure:	The unit is active.
Wastes Managed:	The SAAs manage spent nonchlorinated solvents (F003 and F005) in 55-gallon drums. When full, the drums are moved to the DSB

	(SWMU 2). The drums were formerly moved to the Former DSA (SWMU 3).
Release Controls:	The drums are kept sealed or covered. Floor drains in the buildings and outdoor storm sewer drains discharge to the WTS (SWMU 4).
History of Documented Releases:	No releases from this unit have been documented.
Observations:	During the VSI, the unit contained an undetermined amount of waste. A facility representative stated that the SAA drums are supposed to be kept indoors and that he did not know why one drum was outdoors. Staining was observed beneath the drum that was outdoors, but the staining was probably not due to this drum, as the SAA drums are usually kept indoors. Staining beneath other SAAs was also observed (see Photographs No. 13 and 15).
SWMU 11	**Used Oil SAA**
Unit Description:	The Used Oil SAAs are indoors in Buildings 5, 11, and 14. Used oils generated from maintenance activities in Building 5 and production activities in Buildings 11 and 14 are accumulated in these units. The units contain one 55-gallon steel drum each. The floor beneath the units is concrete and drains to the WTS (SWMU 4).
Date of Startup:	This unit began operation in about 1970.
Date of Closure:	This unit is active.
Wastes Managed:	This unit manages nonhazardous used oil in 55-gallon steel drums. When full, the drums are moved to the DSB (SWMU 2). The drums were formerly moved to the Former DSA (SWMU 3).

Release Controls:	These units are indoors and consist of 55-gallon steel drums that are kept sealed. The floor beneath the units is made of concrete and drains through floor drains to the WTS (SWMU 4).
History of Documented Releases:	No releases from this SWMU have been documented.
Observations:	During the VSI, the unit contained an undetermined amount of used oil. PRC noted no evidence of release (see Photograph No. 6).

4.0 AREAS OF CONCERN

PRC identified one AOCs during the PA/VSI. This AOC is discussed below; its location is shown in Figure 2.

AOC 1 **Ground-Water Contamination**

In 1989, IEPA renewed Arnold's WTS (SWMU 4) and Cooling Pond (SWMU 5) permit (1989-F0-3870) under the requirement that a ground water monitoring system be installed to monitor the impact of percolation on the quality of ground water underlying the site. The monitoring well locations were required to obtain ground water downgradient from the evaporation holding pond and overflow percolation field. In addition, wastewater samples were to be taken of the treated wastewater prior to discharge to each percolation site and analyzed for acetone, TCA, MEK, and total dissolved solids. Ground-water monitoring samples were to be analyzed for the same constituents (IEPA, 1989). In May 1990, Roux installed a monitoring well network and performed ground-water flow assessment at the facility (Roux, 1990). One upgradient monitoring well was installed to obtain representative ground-water quality near but not affected by the percolation areas. Two downgradient monitoring wells were installed to obtain representative samples of ground water in areas and depths most likely to be contaminated. Monitoring Well-1 (MW-1) serves as the upgradient well and MW-02 and MW-3 serve as downgradient wells. National Environmental Testing Inc. (NET) conducts monthly sampling and Arnold submits semi-annual reports of the ground-water monitoring to IEPA-Division of Water Pollution Control. In May 1990, NET reported less than 1 part per billion (ppb) acetone and MEK, and 26 ppb TCA in overflow wastewater in the evaporation holding pond of SWMU 5. Concentrations in wastewater at the overflow percolation field of SWMU 5 were less than 20 ppb acetone and MEK, and 35 ppb TCA. Ground-water samples collected in May 1992 revealed less than 5 ppb acetone, less than 1

ppb MEK, and 1.3 ppb TCA. To date, concentrations of these VOCs in ground water have remained below IEPA enforcement standards.

PRC was unable to determine the origin of contamination from file documents reviewed. The facility formerly used TCA as a degreaser in its operations. Pure TCA was stored in two 6,000-gallon USTs, Tanks 9 and 10. Waste TCA was collected in Chlorinated Solvent SAAs (SWMU 9) and stored in the DSB (SWMU 2) or the Former DSA (SWMU 3). During the closure of the Former DSA (SWMU 3), TCA and acetone were detected in soil samples from the area underlying the unit; however, the concentrations were below IEPA action limits and the closure was approved. UST 10 was removed on July 28, 1988. Upon removal, soil samples were taken from the west end, center, and east end of the pit where UST 10 had been located. TCA concentrations in soil of 0.003 ppm, 0.09 ppm, and 0.02 ppm, respectively, were found (CBC, 1988). No soil sampling was documented in the files relating to the removal of UST 9. The facility currently uses acetone and MEK. Acetone was formerly managed in UST 7. The UST was abandoned in place and was not leaking. Both acetone and MEK are managed in Nonchlorinated Solvent SAAs (SWMU 10) and the DSB (SWMU 2), and were formerly managed at the Former DSA (SWMU 3). Facility representatives were unable to provide information on the management of spent solvents (TCA, MEK, acetone) prior to 1980. At present, the IEPA does not consider the contamination of ground water an immediate threat to the environment, as VOC concentrations are below IEPA enforcement standards for Class I potable ground water resources; however, the issue is not closed and IEPA will reevaluate the situation after compiling and analyzing data from the monthly sampling, which is scheduled to continue through October 1, 1994.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The PA/VSI identified 11 SWMUs and one AOCs at the Arnold facility. Background information on the facility's location; operations; waste generating processes and waste management practices; history of documented releases; regulatory history; environmental setting; and receptors is presented in Section 2.0. SWMU- and AOC-specific information, such as the unit's description, dates of operation, wastes managed, release controls, history of documented releases, and observed condition, is presented in Sections 3.0 and 4.0. Following are PRC's conclusions and recommendations for each SWMU. Table 5, located at the end of this section, summarizes the SWMUs at the facility and the recommended further actions.

SWMU 1 **Waste Acid Tank**

Conclusions: The past potential for release to ground water, surface water, air, and on-site soils is low. This unit was formerly used to store spent corrosive (D002) generated from metal pickling operations. The tank is aboveground and is made of rubber-lined steel. The area beneath the tank is diked concrete with no drains. There is currently no potential for release from this unit. The unit underwent IEPA-approved RCRA closure in 1987 and is currently inactive.

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 2 **Drum Storage Building (DSB)**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. This unit is an 80- by 40-foot building used to store various wastes until they are removed by contractors for recycling or fuel blending. The unit has a sealed concrete floor. A 12-inch, sealed, concrete dike surrounds the unit. The floor drains to a 100-gallon sump. A liner is located beneath the concrete floor and all wastes are stored in sealed containers.

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 3 **Former Drum Storage Area (DSA)**

Conclusions: The past potential for a release from this unit was high. Soil samples obtained during closure activities revealed TCA and acetone in the gravel; however, the contaminants were detected at levels below IEPA action limits, and the closure was approved. The current potential for release to ground water, surface water, air, and on-site soils is low. This unit, an outdoor 22- by 40-foot gravel pad, was formerly used to store spent nonchlorinated solvents (F003 and F005), spent TCA (F002), spent methylene chloride (F002), nonhazardous used oil, and nonhazardous waste ethylene glycol. The wastes were removed by various contractors and recycled or fuel blended. There is currently no potential for release from this unit. This unit underwent IEPA-approved RCRA closure in 1987 and is currently inactive.

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 4 **Wastewater Treatment System (WTS)**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. The unit consists of four concrete open-topped tanks used to treat nonhazardous Neutralization Tank effluent, nonhazardous process wastewater, and general wastewater. Sludge generated by this unit is removed twice per year by a private contractor and landfilled. The unit lies below a vented building that is subject to wind but not rain. There has been no documented release from this unit.

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 5 **Cooling Ponds**

Conclusions: The overall potential for release to environmental media from this unit is high. The unit consists of four open ponds; an evaporation holding pond; and an overflow percolation field. The unit cools and settles solids out of

process wastewater, which is reused. The potential for release to environmental media is summarized below.

Ground Water and On-Site Soils: The potential for release is high. The ponds are underlain by a liner and a bentonite seal; however, in the event of an overflow, waste can percolate into ground water and soils in the evaporation holding pond and overflow percolation field. Although no releases have been documented, the facility representative stated that overflow has occurred in the past.

Surface Water: The potential for release is low. The nearest surface water body, the Kishwaukee River, is located 1 mile north of the facility. Wastewater in SWMU 5 does not have an overland pathway to migrate off site. Storm sewers at the facility drain to the WTS (SWMU 4).

Air: The potential for release is low to moderate. The ponds are open and subject to volatilization. Volatile organic compounds (VOC) have been detected in the wastewater at low concentrations.

Recommendations: PRC recommends that the facility continue monthly ground-water monitoring near the evaporation holding pond and overflow percolation field. If contamination is discovered, the facility should assess the potential for harm to human health and the environment and conduct appropriate remediation activities.

SWMU 6 **Building 5 Nonhazardous Waste Roll-Off**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. The unit is a 12-cubic-yard, plastic-lined, steel rolloff used to store nonhazardous waste. The unit is subject to wind, but the area around this unit is concrete and drains to the WTS (SWMU 4).

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 7 **Foundry Baghouses**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils from this unit is low. The unit consists of baghouses used to accumulate nonhazardous foundry dust in sealed containers. The baghouses are over concrete that drains to the WTS (SWMU 4).

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 8 **Neutralization Tank**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. The unit consists of a 9,000-gallon, concrete tank and a discharge ditch that drains to the WTS (SWMU 4). The unit is outdoors; however, the tank is enclosed in an aluminum shed. The tank treats spent corrosive (D002), but the waste is rendered nonhazardous before it is released to the discharge ditch. During the VSI, paint solids were observed in the ditch, but this waste has been analyzed and is nonhazardous.

Recommendations: PRC recommends that the facility line the discharge ditch.

SWMU 9 **Chlorinated Solvent SAAs**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. The Chlorinated Solvent SAAs are located indoors and contain 55-gallon, sealed, steel drums used to accumulate chlorinated solvents. The drums rest on concrete floors that drain through floor drains to the WTS (SWMU 4).

Recommendations: PRC recommends no further action for this SWMU at this time.

SWMU 10 **Nonchlorinated Solvent SAAs**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low to moderate. The SAAs are located indoors throughout the

facility; however, during the VSI, one SAA drum was found outdoors. Staining was observed beneath this drum. The SAAs contain 55-gallon, steel drums that are transferred to the DSB (SWMU 2) when full. The floors under these SAAs are made of concrete. The drums are kept sealed or covered.

Recommendations: PRC recommends the facility manage this waste indoors.

SWMU 11 **Used Oil SAAs**

Conclusions: The potential for release to ground water, surface water, air, and on-site soils is low. The Used Oil SAAs are located indoors and contain 55-gallon, sealed, steel drums used to accumulate used oil. the drums rest on concrete floors that drain through floor drains to the WTS (SWMU 4).

Recommendations: PRC recommends no further action for this SWMU at this time.

AOC 1 **Ground-Water Contamination**

Conclusions: Trace amounts of TCA have been found in ground-water. The origin of the contamination is unknown; however, it may have come from one of the areas outlined in Section 4.0. The facility is required to submit semi-annual ground-water monitoring reports to IEPA from monthly ground water samples. Concentrations of TCA in ground-water reported to date have been below IEPA enforcement standards, however, IEPA has not closed the issue and will reevaluate the situation after compiling and analyzing data from ground-water monitoring through October 1, 1994.

Recommendations: PRC recommends that the facility continue monthly ground-water monitoring to determine the nature and extent of the Ground-Water Contamination (AOC 1) and identify if releases are ongoing.

TABLE 5

SWMU AND AOC SUMMARY

SWMU	Dates of Operation	Evidence of Release	Recommended Further Action
1. Waste Acid Tank	Early 1970s to 1987	None	No further action
2. Drum Storage Building	1989 to present	None	No further action
3. Former DSA	1981 to 1987	Soil sampling and analysis during closure revealed TCA and acetone concentrations below IEPA action limits	No further action
4. WTS	1964 to present	None	No further action
5. Cooling Ponds	1965 to present	VOCs have been detected at low concentrations both in the wastewater and ground-water; although no releases have been documented, facility representatives stated that overflows have occurred	Continue monthly ground-water monitoring near the evaporation holding pond and overflow percolation field; If contamination is discovered, assess the potential for harm to human health and the environment and conduct appropriate remedial activities
6. Building 5 Nonhazardous Waste Roll-Off	Early 1980s to present	None	No further action
7. Foundry Baghouses	Mid-1970s to present	None	No further action
8. Neutralization Tank	Mid-1970s to present	During the VSI, blue staining and blue, solid deposits were evident along the entire ditch	Line the discharge ditch

TABLE 5 (continued)

SWMU AND AOC SUMMARY

SWMU	Dates of Operation	Evidence of Release	Recommended Further Action
9. Chlorinated Solvent SAAs	1980 to present	None	No further action
10. Nonchlorinated Solvent SAAs	1980 to present	None	The drums should be kept indoors
11. Used Oil SAAs	About 1970 to present	None	No further action

AOC	Dates of Operation	Evidence of Release	Recommended Further Action
1. Ground-Water Contamination	1991 to present	July 1, 1991	Continue ground-water monitoring to determine the nature and extent of contamination and identify if releases are ongoing

■ A. ACTIVE ☐ B. INACTIVE ☐ C.UNKNOWN

03 YEARS OF OPERATION
1958 BEGINNING YEAR | Present ENDING YEAR ☐ UNKNOWN

04 DESCRIPTION OF SUBSTANCES POSSIBLY PRESENT, KNOWN, OR ALLEGED
Spent corrosive (D002), spent trichloroethylene (TCE) (F001), spent nonchlorinated solvent (F003 and F005), and several nonhazardous wastes including process wastewater, foundry dust, foundry sand, waste coolant, used oil, paint sludge, and waste ethylene glycol. The facility formerly generated spent 1,1,1-trichloroethane (TCA) (F002) and spent methylene chloride (F002).

05 DESCRIPTION OF POTENTIAL HAZARD TO ENVIRONMENT AND/OR POPULATION
Marengo has a population of about 4,500. The nearest residential areas are located adjacent to the facility to the north and east. Ground water flows north toward residential wells. Volatile organic compounds (VOC) have been detected beneath the facility at concentrations below IEPA action limits.

V. PRIORITY ASSESSMENT

01 PRIORITY FOR INSPECTION *(Check one. If high or medium is checked, complete Part 2 - Waste Information and Part 3 - Description of Hazardous Conditions and Incidents.)*
☐ A. HIGH *(Inspection required promptly)* ■ B. MEDIUM *(Inspection required)* ☐ C. LOW *(Inspect on time-available basis)* ☐ D. NONE *(No further action needed; complete current disposition form)*

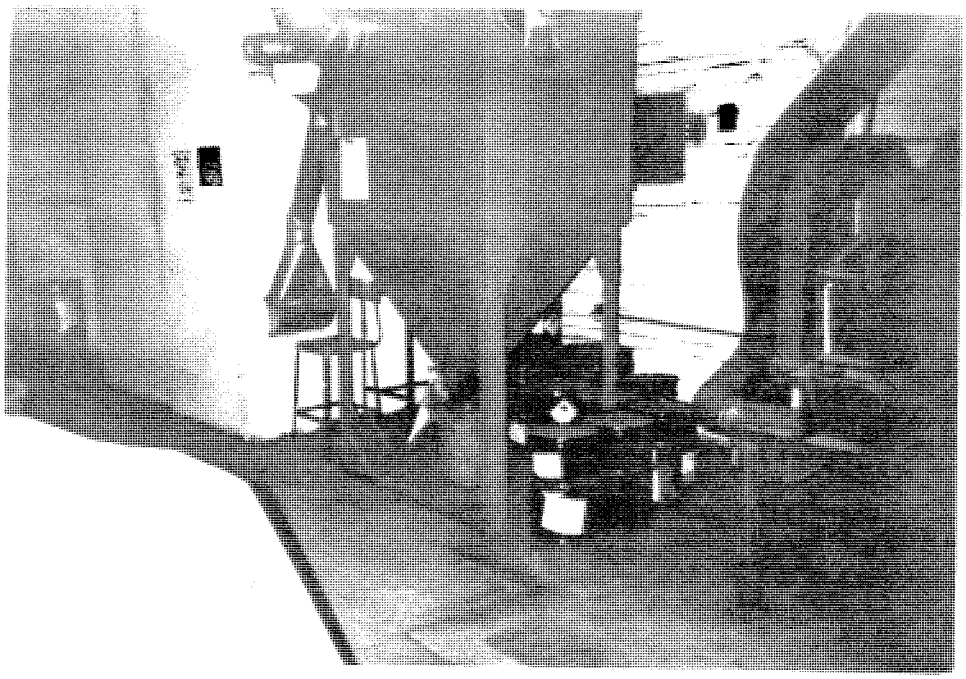
VISUAL SITE INSPECTION SUMMARY AND PHOTOGRAPHS

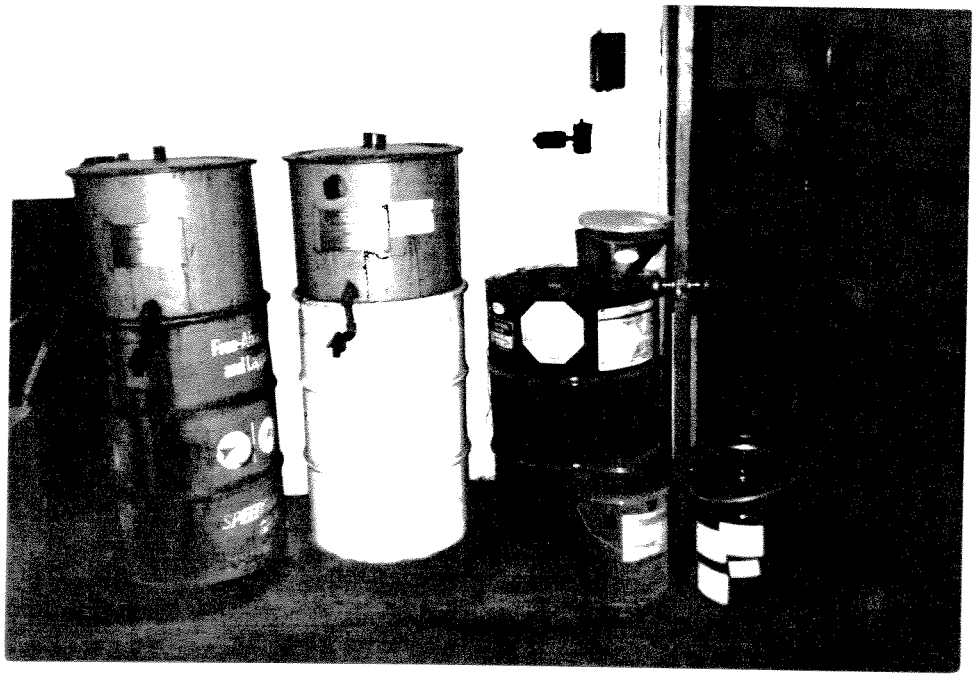
Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

VISUAL SITE INSPECTION SUMMARY



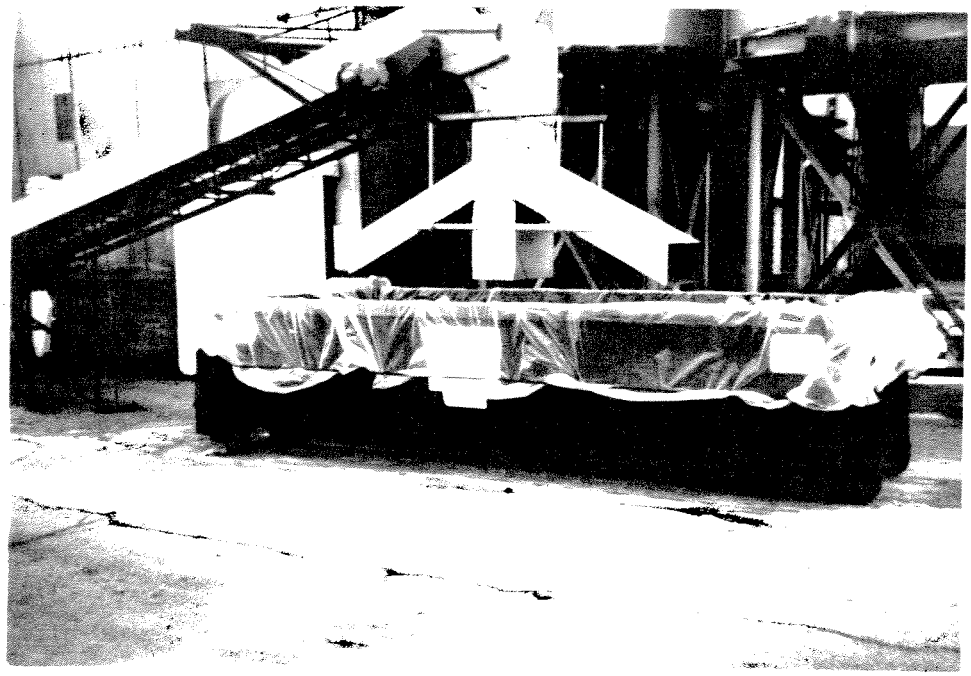
Arnold Engineering Company
300 West Street

Marengo, Illinois 60152

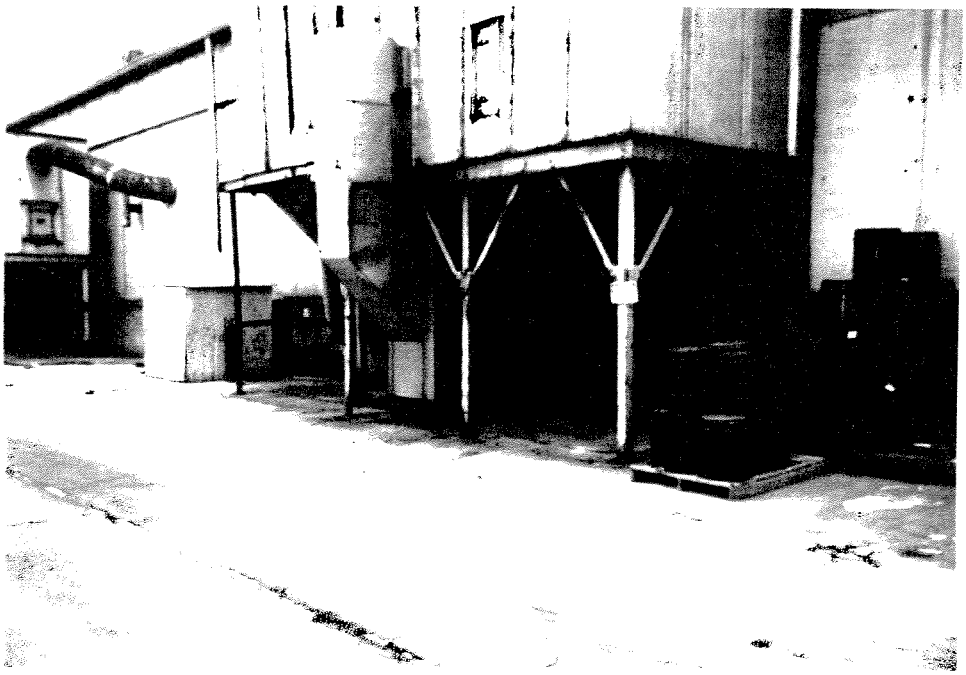


ILD 005 163 803

Date:	December 10, 1992
Primary Facility Representative:	Robert Lippe, Supervisor of Analytical Services, Arnold Engineering Company (Arnold)
Representative Telephone No.:	815-568-2000
Inspection Team:	Trent Schade, PRC Environmental Management, Inc. (PRC) Scott Storlid, PRC
Photographer:	Scott Storlid, PRC
Weather Conditions:	Overcast, wind from the west at 10 to 15 miles per hour, 30 °F
Summary of Activities:	The visual site inspection (VSI) began at 9:00 a.m. with an introductory meeting. The inspection team explained the purpose of the VSI and the agenda for the visit. The facility representative then discussed the facility's past and current operations, solid wastes generated, and release history. The facility representatives provided the inspection team with copies of requested documents. The VSI tour began at 1:10 p.m. The inspection team began in Building 1, where the team viewed Chlorinated Solvent Satellite Accumulation Areas (SAA) (SWMU 9). The tour then moved to Building 5, where the Building 5 Nonhazardous Waste Roll-Off (SWMU 6), Foundry Baghouses (SWMU 7), Chlorinated Solvent SAA (SWMU 9), and Used Oil SAA (SWMU 11) were viewed. The tour then moved to the Drum Storage Building (DSB) (SWMU 2). The team proceeded to view the Cooling Ponds (SWMU 5), Wastewater Treatment System (WTS) (SWMU 4) and the Former DSA (SWMU 3). The inspection team then moved to Buildings 2, 3, 4, and 7, where the Nonchlorinated Solvent SAAs (SWMU 10) and the Neutralization Tank (SWMU 8) were viewed. The tour then proceeded to Buildings 11 and 14 where, the Waste Acid Tank (SWMU 1) was viewed.



The tour concluded at 2:57 p.m., after which the inspection team held an exit meeting with the facility representative. The VSI was completed and the inspection team left the facility at 3:05 p.m.



Photograph No. 1 Location: Building 5

Bureau of Land

Re: LPC#1110650003 McHenry County/Marengo
300 West LLC/Arnold Magnetic Technologies – Marengo
Response to IEPA Comments dated April 22, 2014

Dear Mr. Zook:

On behalf of 300 West LLC, Environmental Group Services, Ltd (EGSL) is submitting this letter to address comments raised by the IEPA regarding the EGSL Response to Comments dated January 21, 2014 and the EGSL Focused Site Investigation Work Plan dated February 20, 2014. IEPA comments are presented in normal text and EGSL's responses are presented as bold italicized text.

February 20, 2014, Response to Illinois EPA Comments Letter Dated January 21, 2014:

The Illinois EPA review letter included a general comment (last paragraph of the first page) requesting that a proposal for additional sampling be developed, to define the extent of Volatile Organic Compounds (VOCs) contamination in soil and groundwater, noting that the August 23, 2013, Agreed Preliminary Injunction Order addressed only VOCs. The same paragraph also indicated that substantial impacts by substances other than VOCs are likely.

The response to the general comment was to indicate that it is EGSL's understanding that the site/project is to be addressed in two parts: (1) VOCs-contaminated groundwater, with the intent

". . . to satisfy the issues and requirements of the Attorney General's (AG) Office"; and (2) "to perform all necessary investigations, reporting, and remediation associated with obtaining a Comprehensive NFR through the SRP." The latter part of the second quote refers to obtaining a No Further Remediation (NFR) Letter (for all contaminants of concern) through the Illinois EPA Voluntary Site Remediation Program (SRP). Regarding (2), the last sentence of the EGSL response to the general comment states, "Upon resolution of groundwater contamination in the near future, the RA may subsequently address

and obtain a Comprehensive NFR for the entire site." Please clarify the intent of (2). Is the Remediation Applicant definitely seeking a Comprehensive NFR Letter for the site/property, or is such a document only being considered, which the use of the word "may" appears to indicate?

EGSL Response. The owner will seek a comprehensive NFR from the IEPA for the entire site in the future.

In addition to the general comment, the Illinois EPA review letter contained eleven items, with the first ten provided for consideration in developing an expanded sampling plan to define VOCs contamination and the eleventh concerning sampling for other substances.

The EGSL responses to Items 1 through 3 and 6 through 10 are acceptable. Since these responses are basically indications that certain activities will be performed in the future, substantive new information has not yet been provided. The Illinois EPA has the following comments on the remaining items.

Item 4 (Repeated in Entirety). The *Focused Site Investigation Report* is lacking in the identification of recognized environmental conditions and areas of concern, characterizing exposure routes, and other items typically included in such reports. Refer also to the requirements in Attachments A and B in the August 23, 2013, Agreed Order. The Illinois EPA previously requested this information in letters dated December 8, 2009, and September 17, 2010, and August 27, 2012. A satisfactory response has not been received for any of these letters. *The adequacy of sampling cannot be determined until appropriate background information has been provided.*

Item 5 (Repeated in Entirety). Appendix C of the *Focused Site Investigation Report* consists of three reports (dated December 2004, March 2006 and April 2008) prepared by ENVIRON International Corporation. Taken together, these reports contain substantially more historical information than anything previously submitted. For example, page V-3 of the 2004 document refers to a 1993 PRC report (which was not submitted) that indicates spent mineral spirits, TCE and 1,1,1-TCA were generated at former Building 1 (likely built in late 1800s or early 1900s, demolished in 2002) in the northeast portion of the site. The same page indicates that electrical transformers were built in Building 1 until the 1950s. Given the time, this obviously raises concerns regarding PCBs. As another example, page V-13 of the 2004 report describes a concrete pad underneath PCBs-containing transformers outside of Building 5.

Though the ENVIRON reports contain much useful information, portions are blacked out – including almost five of the total six pages of the 2006 report (practically everything under a heading "On-site Soil and Ground Water Conditions" is redacted.)

As normally required in the Site Remediation Program – and in this situation as further required in the Attachments of the Agreed Order – reasonably obtainable records relevant to recognized environmental conditions and areas of concern are to be reviewed. The Illinois EPA requests that all records in this regard be reviewed, with copies as appropriate submitted to the Illinois EPA; this includes the documents referred to in the ENVIRON reports. It appears likely that there is much more information than has been provided thus far. There is a fairly unusual aspect to the Arnold Site, in that Arnold and

predecessors conducted manufacturing operations for years, with a relatively new owner acting as the Remediation Applicant while Arnold continues operations. Even though Arnold is not the Remediation Applicant, its cooperation in allowing for an adequate site investigation is of paramount importance.

EGSL Responses to Items 4 and 5 – The responses provide some additional information that EGSL obtained from Arnold. Both items include statements that Arnold indicates ". . . that it has provided to us reasonably obtainable reports relevant to recognized environmental conditions and areas of concern for which it is not claiming confidentially or a privilege." EGSL includes in the Item 4 response a summary of recognized environmental conditions (RECs) and an area of concern (AOC). The RECs are generally entire buildings and the AOC is "cooling ponds" and related areas that received discharges from the ponds.

Illinois EPA Denial of EGSL Response to Items 4 and 5 – While the new information provided is useful, it falls far short of what can reasonably be expected from a company that operated a large industrial site for decades, and still maintains a presence there. For example, Building 2/3/4/7 reportedly occupies approximately 135,000 square feet (3+ acres) and was used for a variety of purposes – including manufacturing. The response to Item 4 describes historic uses of the building in a few sentences and classifies it as a REC. A single building/site of this size and history would on its own pose a significant project in the SRP. Documents necessary for a thorough and acceptable site investigation typically include figures identifying the locations of items such as historic manufacturing and storage areas, drains, channels, sewers, tanks (above and underground), and equipment, with narrative details of specific operations in specific areas. One of the issues that still needs to be addressed is confirmation that the wastewater treatment system ponds are lined, with an accurate assessment of the condition of any liners. Though there are often data gaps (such as from multiple changes in ownership and/or uses of the site), substantially more details are normally known than have been provided for the Arnold site.

EGSL Response to Item 4.

In May 2014, Arnold provided EGSL access to 105 plant drawings depicting various historical site features. EGSL personnel have reviewed the figures and have identified numerous RECs and AOC associated with historical site features. Several of the figures illustrate general building layout and configurations. Some of the figures detail activities performed in a particular building. Other figures detail activities performed in a building but work stations are coded and no master legend was identified to decipher the drawings. EGSL has reviewed the documents provided and presents the following additional observations:

Figure 1

Figure 1, prepared in 1952 illustrates building 2 and the surrounding areas. Of note is the presence of an oil tank at the southeast corner of the building which is assumed to also contain underground piping. This tank and ancillary piping is considered a recognized environmental condition (REC) for oils including PCBs.

Based on the absence of any wastewater treatment system or city sewer line connections illustrated on the figure, ESGL assumes that plant waste waters were discharged to the septic field and sewer lines as illustrated. Given the historic nature of the manufacturing at the facility, any of the contaminants of concern included on the IEPA target compound list (TCL) may have been discharged through these utility lines. EGSL classifies the septic and sewer lines and outfalls as areas of concern (AOC) for TCL.

Figure 2

Figure 2, dated 2-4-61 illustrates the site with all of the buildings and ponds included. Building 1 is the oldest building and is illustrated with a large transformer station along the southern façade of the building. Historical uses of this building appear to have included use as a power plant and a transformer manufacturing plant. PCBs are suspected of being associated with the features of this building. An untitled document dated September 30, 1993 states that these transformers do not contain PCBs. Based on the age and prior usage of this building, further investigation of this building is warranted and this building is considered an AOC.

Figure 2 illustrates two tanks containing "methonal" and "chlorothine" along the north side of building 4. These tanks have reportedly been removed. No excavation sampling is believed to have been performed upon removal of these tanks. These tanks represent a REC for VOCs.

An acetone tank reported to have been removed is illustrated east of building 4. It is believed that no sampling was performed upon removal of the tank. This tank is considered a REC for VOCs.

A vegetable oil tank is illustrated along the northern side of building 5. Vegetable oil is an unregulated substance but the use of the tank may have changed over the years. This tank is considered a REC for oils including PCBs.

A 10,000 gallon gasoline tank is illustrated east of building 9 (former airplane hangar). This tank has been removed. Upon removal it was discovered that this tank was a 1,500 gallon tank. Limited sampling has been performed associated with this tank removal. This tank is considered a REC for aviation fuel (gasoline and lead).

A waste tank is illustrated between buildings 12 and 16. The tank is illustrated as a double wall 300 gallon tank. The tank is not labeled as an AST or UST. This tank is considered a REC for TCL.

A fuel oil tank is illustrated beneath the foundation of building 7. This tank is considered a REC for fuel oil.

Historic ditch lines are illustrated on the drawing. These ditches are historical figures and may have carrier plant process water to what is considered pond 5. These ditches are considered an AOC for TCL.

What appears to be a sewer outflow is illustrated at the north end of the property between the ponds and building 2/3/4/7. Water continues to flow offsite to the north through this outflow. Historic plant process water could have been released through this outflow. This feature is considered an AOC for TCL.

Two 8,000 gallon USTs were removed in 2007. The USTs were reportedly located behind former building 1. The former contents of the tanks is unknown. This location is considered a REC for VOCs, SVOCs and PCBs.

Figure 3

Figure 3 illustrates building 2/3/4/7. Previously discussed features of this figure include the oil tank beneath building 7 foundation, a fuel oil tank east of building 7 and south of building 2, an acetone tank east of building 4 and the two tanks (alcohol and chlorophine tanks) north of building 4.

Building 10 is illustrated as a paint storage building. Numerous historic paint spills are associated with this building. This building is considered a REC for VOCs, oils including PCBs and metals.

Transformers are located along the north side of building 4. Given the age of these transformers, PCB oil is suspect. These transformers are considered a REC.

A 1,500 gallon oil tank is illustrated next to the transformers. This tank is considered a REC for oils including PCBs.

Two mill oil tanks are illustrated at the eastern edge of building 4. These tanks are labeled under floor. These tanks are considered a REC for oils including PCBs.

Generators are illustrated in room 99 of building 4?. Generators identified at the site have been identified as both electric and diesel powered. This generator is considered an AOC for diesel fuel.

Building 4 is illustrated with a paint room and MPP office and stores. The paint used in this building has been identified as containing organic solvents. This area is considered a REC for VOCs, metals and oils including PCBs.

Transformers are illustrated along the south walls of buildings 2 and 7 and the north wall of building 5. Given the age of these transformers they are considered a REC for PCBs.

An emergency generator is illustrated at the south wall of building 2 west of building 7. The small square object adjacent to the generator is assumed to be a fuel tank. This feature is considered a REC for fuel oils.

A 1,500 gallon core oil tank is illustrated on the north wall of building 5. This tank is considered a REC for oils including PCBs.

Figure 4

Figure 4 illustrates the western half of buildings 2, 3 and 4. The figure illustrates the plant processes at an unknown time in the plants history.

Etching tanks are illustrated at the north wall of building 4. This feature may be an AOC for acids.

Hydraulics are illustrated near the north central portion of the figure. It is unclear if this feature is a stand along piece of equipment or a source of hydraulic oil for surrounding equipment. This feature is an AOC for oils including PCBs.

Room 68 is illustrated as an old paint room. Given the nature of paints used at the plant, this room is considered an AOC for VOCs, metals and PCBs.

A boiler is illustrated at the western wall of building 4. A pump is illustrated to the north of the boiler. It is unclear if this pump is powered by electricity or diesel fuel. This feature is an AOC.

Dust collection systems are illustrated at the western outside wall of building 4. Given the types of metals used at the facility including cobalt, this feature is an AOC.

A hydraulic reservoir is illustrated at the southwest corner of building 2. This feature is considered a REC for oils including PCBs.

An acid table is illustrated in the western portion of building 2. This feature is an AOC.

A rinse table is also illustrated in the western portion of building 2. Given the solvents used at the plant, this feature is an AOC.

Figure 5

Figure 5 illustrates building 5. Three transformers are illustrated along the north south walls of building 5. These are considered a REC for PCBs.

A degreaser station (possible solvents) is illustrated at the northwest corner of the building. This feature is considered a REC.

A production machine shop is illustrated near the northwest corner of the building. The production of cuttings and use of oils is suspect with this room. This feature is considered an AOC for metals and oils including PCBs.

Metals storage is illustrated at the northwest corner of the building. This area is a possible AOC for cobalt.

An attritor room is located at the west end of the building. Lubricants are generally used in this process. This area is an AOC for possible VOCs.

A washer is illustrated at the southwest corner of the building. It is unclear if this is a water or solvent washer. This feature is an AOC for solvents.

Figure 6

Figure 6 illustrates the western portion of the Site. Mineral oil pumping and staging tanks are illustrated at the southeast corner of building 11. These tanks are considered a REC for oils.

A pump house is illustrated west of pond 1. A detail of this pump house illustrates one diesel pump. This feature is a REC for diesel fuel.

The hangar tank has been previously discussed and the ponds will be discussed below.

Figure 7

Figure 7 illustrates the Site. Previously discussed site features include the 2 tanks north of building 4 and the metal storage room in building 5.

Acetone and methanol aboveground tanks are illustrated northwest of building 4. These tanks contain underground piping to building 4. The piping is considered a REC for VOCs.

Building 16 has been identified as a liquid waste storage building. This building in an AOC for TCL.

Figure 8

Figure 8 illustrates 4 pump stations throughout the site. Pump stations 1 and 2 are referenced with a tank at each location. Pumping stations 3 and 4 have no tanks reference with them. These features are considered AOCs for fuel oil.

Figure 9

Figure 9 illustrates the construction of the settling ponds. The ponds are illustrated with a note stating the ponds to be sealed with bentonite. Visual inspection of the ponds revealed that they are also lined with a membrane material. The liner was observed with joints that are not sealed providing direct contact between the pond water and the earthen material below. Also illustrated in the figure are distribution pipes apparently protruding at the bottom of each pond connecting one with another. These protrusion can act as a manmade migration pathway allowing seepage from the pond to the subsurface. The ponds are considered a REC for TCL.

Figure 10

Figure 10 illustrates building 14 pits. The pits are approximately 10 feet below grade. The pits illustrated along the north wall are labeled as acid pits. The other 3 pits are not labeled. Even lined the cold joints can act as migration pathways of contaminants of concern. These pits are considered an AOC for VOCs and oils including PCBs.

Figure 11

Figure 11 illustrates former building 6. A septic system is illustrated at the southwest corner of the building. The origin of the septic lines is unknown and may have conveyed plant process waste to the septic field. This feature is considered an AOC for TCL.

In addition, the figure illustrates a "mud line" leading to a "mud pond" located at the northwest corner of the former building. In addition, an overflow line is illustrated along the north of the former

building connecting the mud pond to the settling ponds. This line is believed to convey process water from the building to either the mud or settling ponds. This line is considered an AOC for TCL.

The former building is illustrated with a generator on the north wall of the former building. The power source for this generator is unclear. This area is considered an AOC for fuel oil.

A 1000 KVA transformer bank is illustrated along the north wall of the former building. The date on the drawing is 1966. Transformers of this era are known to have contained PCB oils. This former transformer location is considered a REC for PCBs.

Former building 6 is believed to be used for painting finished product. The painting process may have involved powder coating processes. Cleaning prior to powder coating may have occurred and may have involved solvents in the cleaning process. Specific locations of the various work stations and processes is not identified. The entire building is considered an AOC for VOCs and possibly oils and metals depending on the finish coating applied.

Figure 12

Figure 12 illustrates the layout of the plant in 1961. Of note on this figure is the hand drawn inclusion of apparent additional parking south and southeast of building 5. This appears to answer the question of an apparent building foundation on historical aerial photographs and other overhead views of the site. This area does not appear to represent a REC or AOC.

All of the referenced figures are provided as attachments to this letter.

EGSL Response to IEPA Rejection of Item 5.

EGSL has provided a copy of the documents requested to the IEPA as provided by Arnold.

Item 11. The comment indicated that at some point contaminants other than VOCs will have to be addressed, since a Comprehensive NFR Letter is sought. Specifically, sampling and analyses for PCBs and any other contaminants of concern was requested, to be performed in the near future.

EGSL Response to Item 11. The response indicates that PCBs will be added to the list of chemicals to be analyzed (together with VOCs and 1,4-Dioxane in the next round of sampling). Other contaminants are to be addressed later.

Illinois EPA Acceptance of EGSL Response to Item 11 – Sampling and Analyses for PCBs in the next round of sampling is acceptable. Historical information recently provided indicates some obvious areas of potential contamination with PCBs (such as Building 1, where transformers were manufactured, and PCBs-containing transformers on a concrete pad outside of Building 5), raising concerns. Though other contaminants of concern ultimately need to be addressed, the historical/background information that is the subject of Items 4 and 5 will better allow for an acceptable sampling plan for additional contaminants.

Focused Site Investigation Work Plan: Additional Investigation:

The document proposes to perform an additional 34 on-site soil borings to groundwater, together with the installation of an additional 29 on-site and seven off-site monitoring wells. Sampling and analyses are to be performed for VOCs which have been included in previous rounds of sampling, Polychlorinated Biphenyls (PCBs), and 1,4-Dioxane (P-Dioxane). The *Focused Site Investigation Work Plan* is approved, contingent on the following items.

Item 1. The *Focused Site Investigation Work Plan* includes a rectangular patch of distressed vegetation, indicative of a former structure, near an asphalt drive directly west of the entrance drive. This is classified an as REC and potential AOC, but was not included in the *February 20, 2014, Response*. As the list of other RECs and AOCs was identical in the two documents, this may just be a cut-and-paste mistake. Please clarify.

See responses above for an explanation of this feature.

Item 2. VOCs sampling should include the 35 Target Compound List VOCs in 35 Illinois Administrative Code Section 740, Appendix A, Table A, with analyses performed via Method 8260B, as required by Table A. PCBs should be analyzed by Method 8082, as required by Section 740, Appendix A, Table C. For 1,4-Dioxane, no analytical method is given in Section 740; Method 522 should therefore be used, as was performed for the most recent round of private well sampling.

Finally, soil samples for VOCs analyses should be collected via Method 5035.

EGSL Response. The owner agrees with the request in its entirety and will use the methods indicated when sampling in the future.

Item 3. Groundwater sampling for Sodium is requested in the seven proposed off-site monitoring wells (each to 50 or 100 feet), in the two proposed on-site monitoring wells (each to 100 feet) nearest the wastewater treatment system ponds, in the eight proposed monitoring wells (each to 30 or 50 feet) nearest the seepage field, and in more shallow existing monitoring wells (varying from 20 to 50 feet) nearest the ponds. (If they still exist, it appears that existing wells MW-5, MW-6, MW-7, MW-8, MW-13, MW-25, MW-26, MW-27, MW-28, MW-29, MW-30, MW-43, MW-44, MW-46 and MW-P7 would be appropriate.) Alternative existing wells can also be proposed. Sodium should be sampled via Method 6010B, as required by Section 740, Appendix A, Table D.

EGSL response. EGSL will add sodium to the analyte list for the proposed off-site and 2 100-foot on-site wells. In addition, EGSL will sample existing wells MW-5, 6, 7, 8, 13, 25, 26, 27, 28, 30, 43, 44, 46, and URS MW-P7 for sodium during the next phase of the investigation. Sodium will be sampled via Method 6010B as required.

Item 4. The general scope of the proposed off-site private wells sampling on private properties is acceptable. However, the Illinois EPA notes that septic tank/lateral field systems or some other type of private sewage disposal systems likely exist for the homes on these properties. The locations of these

sewage disposal systems should be noted, with efforts made to have the monitoring wells installed outside the areas impacted by the systems. Per a conversation with Tom Baughman, Environmental Toxicologist with the Illinois Department of Public Health, a minimum separation of 100 feet, and preferably 200 feet, is recommended.

EGSL Response. EGSL will inquire as to the locations of the septic fields and ensure that the proposed wells are greater than 200 feet from them if possible. Distances from the wells to the septic fields will be noted on the boring logs.

Item 5. On page 15 of the *Focused Site Investigation Work Plan* it is stated that the proposed on-site 50 feet deep monitoring wells will be screened from 40 to 50 feet; Figure 2 indicates they will be screened from 45 to 50 feet. Please clarify.

EGSL Response. The well will be screened from 45 to 50 feet below ground surface.

Item 6. Page 15 also includes a statement that the off-site 50 feet deep monitoring wells will be screened from 30 to 50 feet; Figure 3 indicates the same. Why are the off-site wells to be screened differently than the on-site wells?

EGSL Response. The vertical dispersion of the contaminants of concern with distance from the source is unknown. The extended screen interval will allow for a greater probability for capturing the contaminants if present in the unconfined aquifer.

Item 7. For documentation purposes, the next submittal should include a list of all viable monitoring wells.

EGSL Response. **The following table presents the groundwater monitoring wells installed by EGSL that are currently present and viable at the site.**

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)
MW-1	5/3/2010	Earth Solutions	50	40-50
MW-2	5/3/2010	Earth Solutions	40	30-40
MW-3	5/3/2010	Earth Solutions	30	20-30
MW-4	5/4/2010	Earth Solutions	20	10-20

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)
MW-5	5/4/2010	Earth Solutions	50	40-50
MW-6	5/4/2010	Earth Solutions	40	30-40
MW-7	5/5/2010	Earth Solutions	30	20-30
MW-8	5/5/2010	Earth Solutions	20	10-20
MW-9	5/10/2010	EGSL	20	10-20
MW-10	5/10/2010	EGSL	20	10-20
MW-11	5/10/2010	EGSL	20	10-20
MW-12	5/10/2010	EGSL	20	10-20
MW-13	5/10/2010	EGSL	20	10-20
MW-14	5/10/2010	EGSL	20	10-20
MW-15	5/10/2010	EGSL	20	10-20
MW-16	5/10/2010	EGSL	20	10-20
MW-17	10/28/2010	Earth Solutions	70	60-70
MW-18 (off-site)	10/28/2010	Earth Solutions	50	40-50
MW-19 (off-site)	10/29/2010	Earth Solutions	40	30-40
MW-20 (off-site)	10/29/2010	Earth Solutions	30	20-30
MW-21 (off-site)	10/29/2010	Earth Solutions	20	10-20

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)
MW-22	02/23/2011	Earth Solutions	90	80-90
MW-23 (off-site)	02/23/2011	Earth Solutions	70	60-70
MW-24	9/03/2013	Earth Solutions	30	10-30
MW-25	9/03/2013	Earth Solutions	30	10-30
MW-26	9/04/2013	Earth Solutions	30	10-30
MW-27	9/04/2013	Earth Solutions	30	10-30
MW-28	9/05/2013	Earth Solutions	30	10-30
MW-29	9/35/2013	Earth Solutions	30	10-30
MW-30	9/06/2013	Earth Solutions	30	10-30
MW-31	9/06/2013	Earth Solutions	30	10-30
MW-32	9/18/2013	Earth Solutions	30	10-30
MW-33	9/18/2013	Earth Solutions	30	10-30
MW-34	9/18/2013	Earth Solutions	30	10-30
MW-35	9/18/2013	Earth Solutions	30	10-30
MW-36	9/18/2013	Earth Solutions	30	10-30

Well Number	Date Installed	Company	Well Depth (feet below ground surface)	Screen Interval (feet below ground surface)
MW-37	9/18/2013	Earth Solutions	30	10-30
MW-38	10/18/2013	Earth Solutions	50	45-50
MW-39	10/18/2013	Earth Solutions	50	45-50
MW-40	10/22/2013	Earth Solutions	50	45-50
MW-41	10/22/2013	Earth Solutions	50	45-50
MW-42	10/23/2013	Earth Solutions	50	45-50
MW-43	10/23/2013	Earth Solutions	50	45-50
MW-44	10/24/2013	Earth Solutions	50	45-50
MW-45	10/24/2013	Earth Solutions	50	45-50
MW-46	10/24/2013	Earth Solutions	50	45-50

EGSL will attempt to locate previously installed groundwater monitoring wells by others including Roux and URS and determine the viability of these groundwater monitoring wells.

Groundwater monitoring wells installed by others include but may not be limited to:

URS MW-3
URS MW-A4
URS MW-A6
URS MW-A7
URS MW-A8
Roux MW-1, 2 and 3.

High Capacity Irrigation Wells in the Area:

On April 7, 2014, Kristy Morrison of the McHenry County Department of Public Health informed the Illinois EPA that there are as many as four high capacity irrigation wells located on agricultural land northwest of the Arnold site. These wells, at least one of which is regularly used, are reportedly north of Railroad Street and west of Ritz Road. In addition, a new high capacity irrigation well is proposed for land southwest of the Arnold Site, south of U.S. Route 20 and west of Meyer Road. This information is forwarded for your consideration in the development of any hydrogeological profiles/models of the site and surrounding areas and as remediation efforts take place. For additional information on the irrigation wells, Ms. Morrison can be contacted at (815) 334-4585 or by e-mail at klmorrison@co.mchenry.il.us.

EGSL Response. EGSL will take the high capacity irrigation wells into account when developing hydrogeological profiles/models of the site groundwater.

It is requested that a response be received within 45 days of the date of this letter. In addition, a report containing the results of the additional investigation is requested within 60 days of the same date.

EGSL Responds. EGSL is requesting an extension of the 60 day deadline to the submission of the additional investigation results for the following reasons.

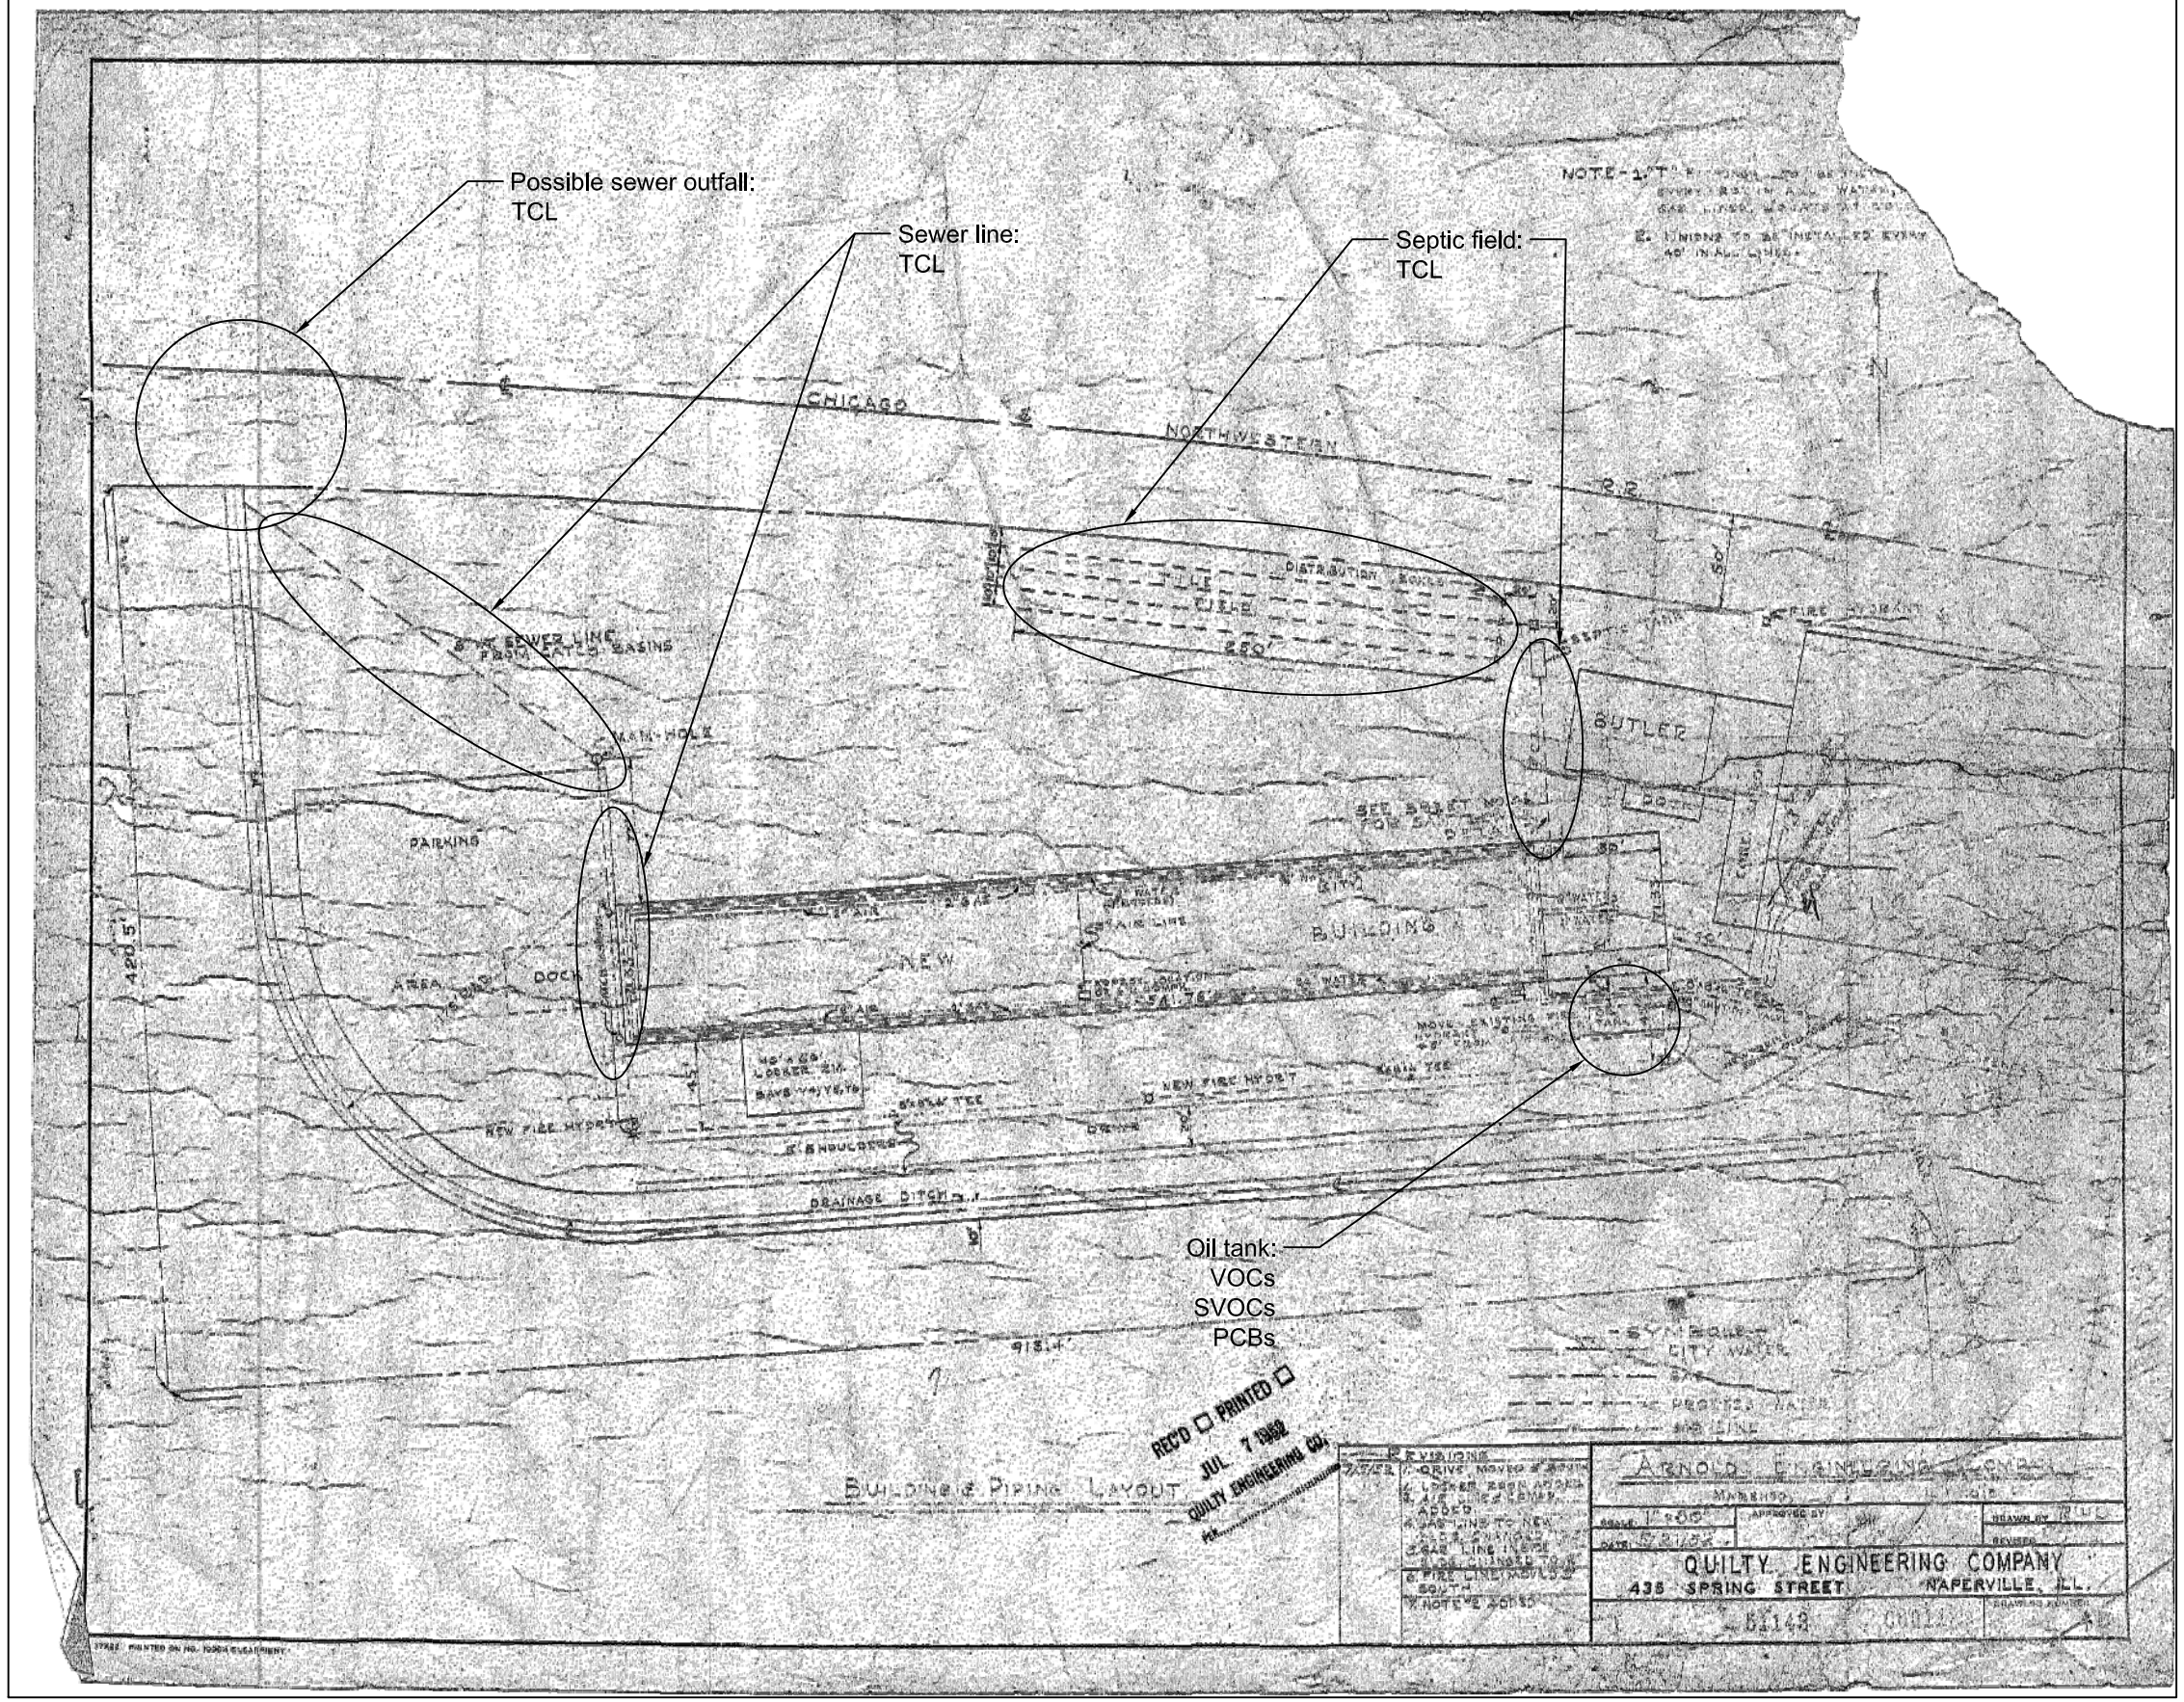
1. ***The overriding objective of this investigation associated with this project is to provide affected properties with a source of clean potable water. To this end, 300 West LLC is proposing to investigate the bedrock aquifer system beneath the site to determine if this is a viable source of potable water. A well is proposed to be drilled on the property to intercept the water bearing unit within the bedrock beneath the site. Water from this well will be collected and analyzed for the contaminants of concern (VOCs and PCBs as well as the state drinking water standards). Upon confirmation of a viable source, 300 West LLC proposes to install new potable water wells at the affected properties.***

2. ***Based on the new information provided by Arnold, as detailed above, the scope of work outlined in the proposed site investigation work plan provided to the IEPA on February 13, 2014 appears to be insufficient to provide the IEPA with the additional site investigation information requested. 300 West LLC is requesting a re-evaluation of the work plan by the IEPA in conjunction with the new information provided and provide additional comments, if appropriate, on the work plan as submitted.***

3. ***Additional site investigation activities as detailed in the site investigation work plan requires a minimum of 30 field work days to complete, an additional 30 days to receive and digest all of the analytical data generated, and an additional 45-60 days to prepare, review, submit to legal counsel for review and comment, revise and ultimately submit to the IEPA.***

300 West LLC anticipates that the activities as presented above in addition to the time required for Agency review and comment will place the completion of these activities at the end of November at the earliest.

Feel free to contact me at (312) 447-1200 or by e-mail at steve@egsl.com if you have any questions or require additional information.



Sincerely,

ENVIRONMENTAL GROUP SERVICES, LIMITED

Steve Boom
Project Manager

Shadow Mirkaef
President

REC/AOC Areas

Notes:

REC areas identified with tanks may contain underslab piping that may present manmade pathways.

Buried sewer lines inside and outside the building may have leaked resulting in potential manmade pathways.

Septic field and outfall may have been used for process water disposal containing contaminants of concern.

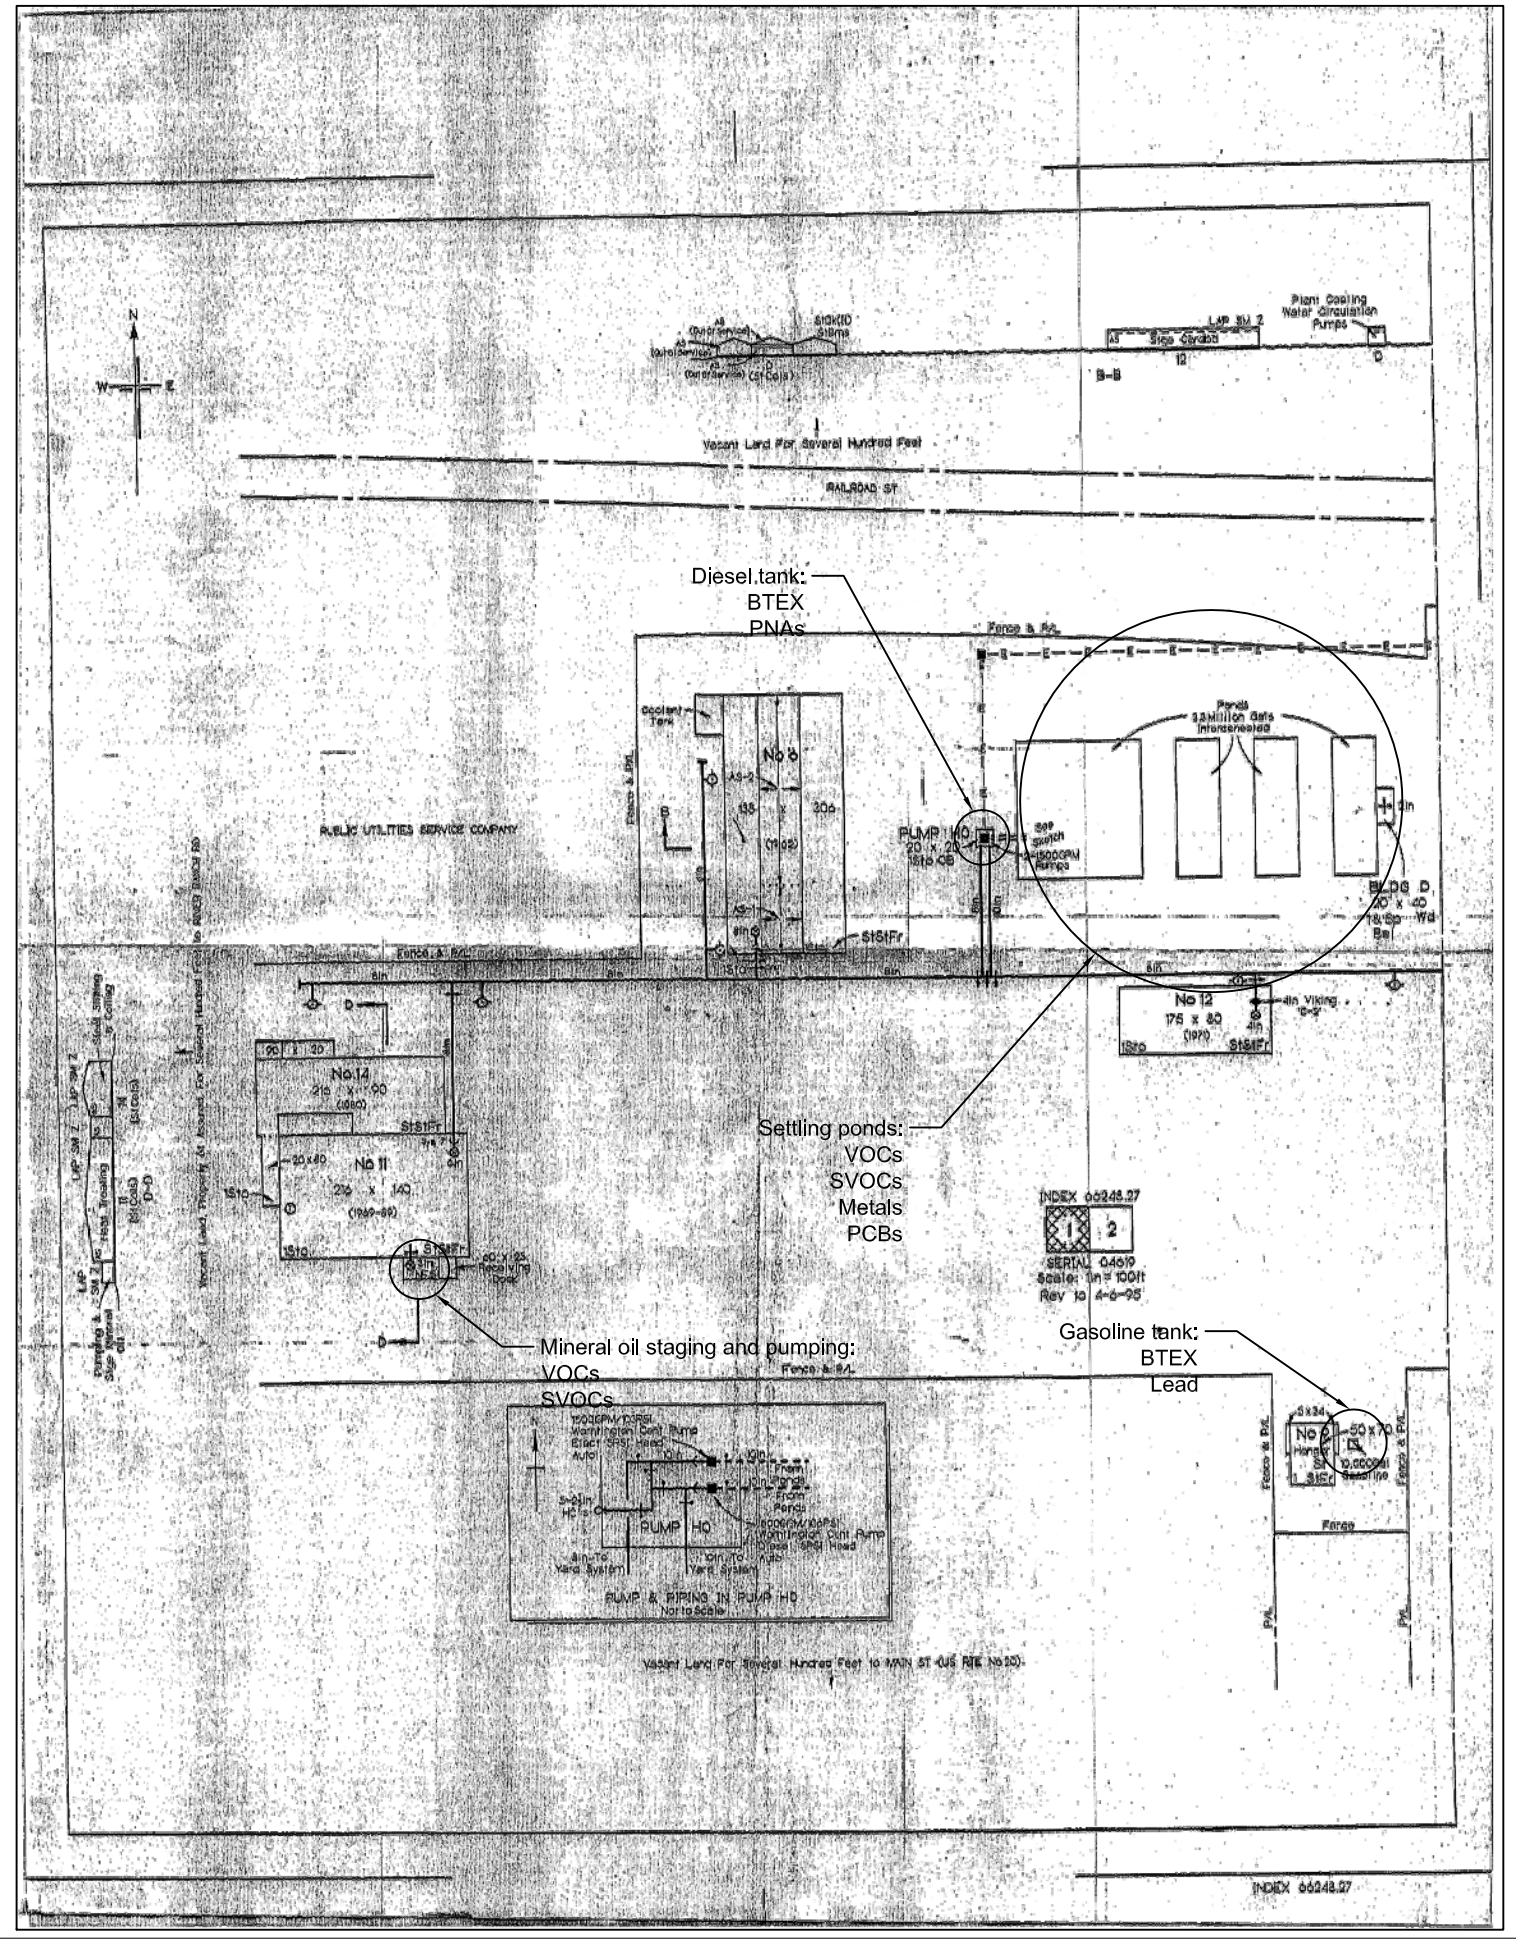
Figure 5.
BLD. 5 REC-AOC Map

Drawing Legend:

REC/AOC Areas

Notes:

Production rooms may have contained machinery that used various oils and solvents in the plant processes. Work stations are identified by codes and uses cannot be determined.



Since Building 5 is a major production building, the historic use of chlorinated cleaners and degreasers is suspect.

Other unidentifiable areas of this buiding are suspect of using chlorinated solvents in the past.

Soil samples were collected and logged by Cabeno Environmental Services

Weaver Consultants Group North Central, LLC
ENVIRONMENTAL & GEOTECHNICAL CONSULTANTS

File: 3892-300-03
Log of Soil Boring: GP- 438
Client: 300 West LLC

WATER LEVEL DATA
_____ Ft WHILE DRILLING
_____ Ft AT COMPLETION
_____ Ft AT ____ HOURS AFTER DRILL

Started: 10/23/2015
Completed: 10/23/2015
Driller: Cabeno Environemental
Helper:
Location: Marengo, IL

		SAMPLE DATA				
DEPTH (ft)	STRATA DEPTH/SOIL DESCRIPTION	SAMPLE NO.	RECOVERY (in.)	PID VALUE	WATER CONTENT	Notes
1.0	Asphalt.	1	48	0	MOIST	
2.0	Clayey silt, black to organish brown, non plastic to low plasticity, trace sand and gravel.			0		GP-438 (1-3')
3.0				0	MOIST	
4.0				0		
5.0				0	MOIST	
6.0		2	60	0		GP-438 (5-7')
7.0				0	MOIST	
8.0				0		
9.0				0	MOIST	
10.0	Silty clay, brown, low to high plasticity, trace sand and gravel.			0		
11.0		3	60	0	MOIST	
12.0				0		
13.0				0	MOIST	
14.0				2.5		
15.0				2.5	MOIST	
16.0						
17.0						
18.0						
19.0						
20.0						
	Bottom of boring at 15'. Boring backfilled with Bentonite chips to ground surface.

ANNULAR SPACE DETAILS

TYPE OF SURFACE SEAL: Concrete

TYPE OF ANNULAR SEALANT: Sand/Bentonite

INSTALLATION METHOD: By hand/Pour

SETTING TIME:

TYPE OF BENTONITE SEAL- GRANULAR, PELLET, SLURRY
(CIRCLE ONE)

INSTALLATION METHOD: By hand/pour

SETTING TIME:

TYPE OF SAND PACK: ANSI/NSF61

#5 GRAIN SIZE: (SIEVE SIZE)

INSTALLATION METHOD: By hand/pour

TYPE OF BACKFILL MATERIAL:
(IF APPLICABLE)

INSTALLATION METHOD:

ELEVATIONS (MSL)*	DEPTHS (BGS) (.01 ft)	
812.72	-3.148	TOP OF PROTECTIVE CASING
812.28	-2.7	TOP OF RISER PIPE
809.572	0	GROUND SURFACE
809.580		TOP OF ANNULAR SEALANT (Inside Protective Casing)
		STATIC WATER LEVEL (AFTER COMPLETION)
809.572	To surface	TOP OF SEAL
773.572	36.0	TOP OF SANDPACK
768.572	41	TOP OF SCREEN

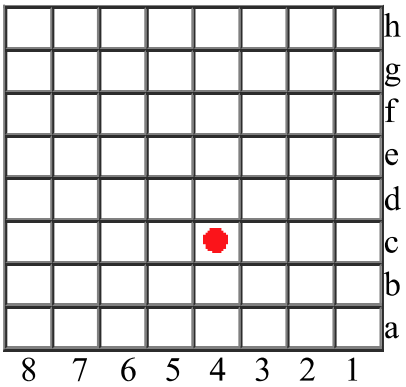
Domestic Wells Database - Plot Location System, Illinois State Water Survey



Domestic Wells Database

10-Acre Plot Location System

The following is an explanation of the ISWS Domestic Wells Database location system.

The location system uses Township, Range, and Section. The location consists of five parts: County abbreviation, Township, Range, Section, and coordinate within the section (subsection or 10-acre plot). Sections are divided into rows of 1/8-mile squares. Each 1/8-mile square contains 10 acres and corresponds to a quarter of a quarter of a quarter section. A normal section of 1 square mile contains 8 rows of 1/8-mile squares; an odd-sized section contains more or fewer rows. Rows are numbered from east to west and lettered from south to north as shown in the diagram.

Example: St. Clair County, FIP No. 163
T2N, R10W
Section 23

The location of the well shown above is 163 2N10W-23.4c. The well point is located at the center of this 10-acre plot.

Weaver Consultants Group

Project No.: 3892-300-03-06

March 2, 2016

Via E-mail: dph.foia@Illinois.gov

Illinois Department of Public Health
Attn: FOIA Officer
535 West Jefferson Street
Springfield, Illinois 62761

Re: Freedom of Information Act Request
Location of Public Water Supply Wells
300 West Street
Marengo, Illinois, McHenry County, 60152

Dear FOIA Officer:

Pursuant to the Freedom of Information Act, **Weaver Consultants Group North Central, LLC** is requesting any available information that may be on file at the Illinois Department of Public Health concerning the above-referenced property. This information should include, but not be limited to, the presence of private or community water wells, well logs, current or historical environmental concerns (e.g., groundwater impacts), permits, inspections, releases, or violations for properties within a 2,500-foot radius of the referenced site. The site is located in Section 35, Township 44 North, Range 5 East.

Please forward the information to my attention at the following address:

Weaver Consultants Group
35 East Wacker Drive
Suite 1250
Chicago, Illinois 60601

If you should have any questions concerning this request, please feel free to contact our office at 312-922-1030. Thank you in advance for your assistance.

Sincerely,

Weaver Consultants Group North Central, LLC

Rachel Carver

image002.png
image003.png

Dear Ms. Carver,

Please find below the Departments response to your FOIA request for environmental records for the property located at 300 West Street, Marengo, Illinois.

The Illinois Department of Public Health (IDPH), Division of Environmental Health can perform a record search on any address that is identified as a school building in Illinois. Staff searched the records and did not find any information regarding the specified address in your request.

IDPH and Illinois Environmental Protection Agency (IEPA) have a Memorandum of Understanding that all Commercial and Public Building notifications will be the responsibility of the IEPA. The address of your request may be classified as a commercial and public building. You can submit your request to them at the following address: IEPA/Asbestos Unit, MC#41, 1021 North Grand Avenue East, P.O. Box 19276, Springfield, IL 62994-9276

The Department's Division of Environmental Health can perform a record search on any well which is classified a non-community public water supply. A non-community public water supply is non-residential and serves at least 25 or more individuals. Staff searched the records and did not find any information regarding the specified property.

The Division does not retain information on community water wells, semi-private or private water wells (those wells owned by individuals). Information regarding these wells may be obtained by contacting the Illinois State Water Survey, 2204 Griffith Drive, Champaign, IL 61820, telephone 217-333-9043.

All information obtained by the Department from any source and all information, data, reports, e-mails, letters, and other documents generated by the Department or any of its delegate agencies concerning any person subject to this Act receiving a blood lead test shall be treated in the same manner as information subject to the provisions of Part 21 of Article VIII of the Code of Civil Procedure and shall not be disclosed. This prohibition on disclosure extends to all information and reports obtained or created by the Department or any of its delegate agencies concerning any regulated facility that has been identified as a potential lead hazard or a source of lead poisoning. (From Section 7 of the Lead Poisoning Prevention Act, 410 ILCS 45)

If our office can be of any more assistance, please contact me.

Sincerely,

William Bryant, MPA
Acting Freedom of Information Officer
Division of Legal Services
Illinois Department of Public Health

COUNTY OF MCHENRY
Department of Health
2200 North Seminary
Woodstock, Illinois 60098
815-334-4510

DATE: March 16, 2016

TO: Ms. Rachel Carver
Email: rcarver@wcgrp.com

FROM: Michael Hill **TITLE:** Public Health Administrator

DEPARTMENT: Health

On March 2, 2016, you requested the following documents: Environmental records related to 300 West Street Marengo and properties within 2500 feet of that location.

Please note that the Department does not have an ability to research records within specific distances of a particular location. Records are maintained by specific address or parcel number. If you would like to provide additional, specific locations, staff will research additional records.

Your request is attached to this letter except for personal phone numbers.

Reason for Denial:

1. Private information is exempt from disclosure. A person's phone number included in the definition of Private information.

Statutory Reference for Exemption Claimed: 5 ILCS 140/7 (1) (b)

You have a right to have the partial denial of your request reviewed by the Public Access Counselor (PAC) at the Office of the Illinois Attorney General. 5 ILCS 140/9.5(a). You can file your Request for Review with the PAC by writing to:

Public Access Counselor
Office of the Attorney General
500 South Second Street
Springfield, Illinois 62706
Fax: 217-782-1396
E-mail: publicaccess@atg.state.il.us

You also have the right to seek judicial review of your denial by filing a lawsuit in the State circuit court. 5 ILCS 140/11.

If you choose to file a Request for Review with the PAC, you must do so within 60 calendar days of the date of this partial denial letter. 5 ILCS 140/9.5(a). Please note that you must include a copy of your original FOIA request and this denial letter when filing a Request for Review with the PAC.

Sincerely,

Michael Hill
Public Health Administrator
Freedom of Information Officer

Non-Community Public Water Supplies
On-Site Inspection Summary

Date: **06/11/15**

Facility: **ARNOLD MAGNETIC TECHNOLOGIES**

Facility ID: **0127209**

A sanitary survey was conducted at the above referenced property on **05/19/15** .
Water samples were also taken.
At the conclusion of the survey, the following was noted:

VERIFY FACILITY POSTED NOTICE FOR NO MONITOR LEAD/COPPER 2012
CERTIFIED OPERATOR--JIM ROOZEE #11353 EXPIRES 2017
THIOSULFATE & REGULAR BOTTLE REQUIRED FOR SAMPLES
Any violations must be corrected within ten (10) days.

Your facility's sampling schedule is..... **ANNUAL**
Your facility's next water sampling is due..... **05/19/16**

Your next scheduled inspection will be: **05/18/17**

If you have any questions, please feel free to contact Kelli Boeckmann, Laboratory Coordinator at (815) 334-4585.

Safe Drinking Water Information System (SDWIS)
Inventory Form

This form is used to collect the information necessary to maintain an accurate database, and to ensure that the monitoring schedules for the public water system are established correctly. Please print form double sided, if possible.

PWS ID Number *(For new systems, the PWS ID will be assigned by IDPH)*: IL3 0127209
(PWS ID: Older PWS IDs have changed to meet Federal requirements. New PWS IDs keep the last 6 digits and add IL3 to the front. (eg. old: 0149384; new IL3149384)

Inventory Update Request *(select one)*
☐ *Add System not in Database* or ☑ Change Information of System already in Database

For new systems: All items on pages one (1) and two (2) must be completed or form will be returned.
For existing systems in inventory: Complete Administrative Contact, Operator Information (if required), and any fields that have changed.

System Changes Include *(please check appropriate boxes):*
☐ Sanitary Survey Date: 05/19/15 *(mm/dd/yyyy)* ☑ Active ☐ Inactive Effective Date: _____ *(mm/dd/yyyy)*

☐ Other _____

Reason for Change(s): Sanitary Survey - update info

☑ Private (P) ☐ Federal Government (F) ☐ State Government (S) ☐ Local Government (L)

System Source(s) Details

Please include system flow diagram, detailing all sources, treatment and storage facilities and distribution system for new systems. If system has more than four sources, please attach additional sheets.

State Assigned Source ID Code For Department Use Only	Source Name (As used by system)	Water Type: GW GUI SW PG PS	Groundwater Sources Only: Well Tag Number (Assigned by IDPH)	Groundwater Sources Only: Well Depth (In Ft.)	Vending (Yes or No)	Seller's PWSID or Name (If water is from city source)	Availability (P; S; E)	Status (A; I)
	Well #1	GW			N		P	A

System Location
Township
Range
Section

Water Type: GW – Ground Water, GUI – Ground Water Under Influence, SW – Surface Water; PG – Purchased Groundwater; PS – Purchased Surface Water
Availability: P – Permanent; S – Seasonal; E – Emergency Status Code: A – Active; I – Inactive

System Treatment Details

Please include treatment plant schematic for new systems. If system has more than two treatment plants, please attach additional sheets. For changes to treatment, please include source details above.

State Assigned Treatment Plant ID For Department Use Only	Treatment Plant Name (If treatment used)	Contributing Sources (List all source names feeding each treatment plant)	Treatment Process Codes (List all that Apply See list in Program Policy 3)	Availability (P; S; E)	Status (A; I)
	Chlorinator	well #1		P	A
	Iron Remover	well #1		P	A

Availability: P – Permanent; S – Seasonal; E – Emergency Status Code: A – Active; I – Inactive

System Storage Details

If system has more than two storage facilities, please attach additional sheets.

State Assigned ID For Department Use Only	Storage Facility Name	Contributing Sources (List all soure and/or plant names that feed each storage facility)	Capacity of Storage Facility (in gallons)	Storage Type (BL;HD;ST;GR)	Avail. (P; S; E)	Status (A; I)
	water tower		100,000	HD	P	A

Storage Type: BL - Bladder; HD – Hydropneumatic; ST – Standpipe; GR – Ground Availability: P – Permanent; S – Seasonal; E – Emergency
Status Code: A – Active; I – Inactive

System Sampling Plan

If system has more than five sampling points, please attach additional sheets.
Do not include lead and copper sampling sites (non-transeint systems), as they are identified on a different form.

Sample Point (Name or id used by system)	Sample Type (RW, CFE, IFE, EP, DS)	Contaminant(s) (List all parameters measured at this sampling point)	Sample Point Location Description (indicate sample point locations on system flow diagram)
well house	RW	bacteria and/or nitrate	Sampling faucet.
lab sink	DS	bacteria and/or nitrate	Sink in work room.

Sample Type: RW – Raw; CFE – Combined Filter Effluent; IFE – Individual Filter Effluent; EP – Entry Point; DS - Distribution System

Operator Copy

McHenry County Department of Health
Non-Community Survey Site Inspection Checklist

Facility Name: Arnold Magnetic Technologies
Facility #: 0132907
Name of operator(s) interviewed: Tom Rasmussen
Inspector: EM

Forms/Information required at time of inspection:

- Current property site plan
- Current MCDH Non-Community Supply Inspection Report
- MCDH Potable Water Chain of Custody Form
- IDPH non-community PWS sample form - Chemistry
- Current IDPH, SDWIS Inventory Form (if available)
- Blank SDWIS Inventory Form
- IDPH non-community handbook
- IDPH, SDW Program Policy #3

Inspection Procedures
Operator interview:

☐ Operator is familiar with program and non-community handbook? A copy of the non-community handbook should be provided if necessary and noted below.

Remarks. _____

☐ Verify current information on the SDWIS form or the water systems detail page. A new SDWIS form shall be updated to reflect any changes. See IDPH, SDW program policy #3. (NOTE: During 2014 and 2015 surveys a new SDWIS form must be completed at the time of inspection)

Remarks: _____

☐ Review current site plan with operator to identify any changes or discrepancies.

Remarks: _____

☐ Verify any routine maintenance and if the supply has been chlorinated in the past 2 weeks.

Remarks: _____

☐ Have any modifications or repairs of the system since last survey? Note: modifications may include distribution system repairs, well repairs, pump replacement or changes in water treatment. Request to see any documentation of repairs or modifications if available. Note any changes below.

Remarks. _____

☐ Any confirmed outstanding violations identified in the IDPH, SDW system must be review with the system operator at time of inspection for current status.

Remarks: _____

McHenry County Department of Health
Non-Community Survey Site Inspection Checklist

Water System / Site Inspection:
The following information must be verify during the inspection and recorded on this checklist.

Water source (check one)
- [x] Ground water
- [ ] Surface water

Number of potable water wells on site: 1

Number of non-potable water wells on site: monitoring wells

Well casing material (check one)
- [ ] PVC
- [x] Steel

Well casing diameter (inside diameter): 10 "

Minimum casing height (check one unless multiple potable wells are present)
- [ ] 8" min above grade (exterior well locations). Casing height 12 "
- [x] 8" min above well house floor. Casing height 12 "
- [ ] 12" min above basement floor, sump pit provided. Casing height _____"
- [ ] Non-compliant Remarks: _____

Well Cap (check applicable)
- [x] Proper cap with adequate seal
- [x] Properly Vented
- [ ] No venting provided (only acceptable on existing driven wells and artesian wells)
- [ ] *Non-compliant Remarks:* _____

Means of frost protection (check one unless multiple potable wells are present)
- [ ] Pitless adapter
- [ ] Well pit (no longer approved method for non community supply)
- [x] Well house
- [ ] Well located in structure served

Type of well pump (check one unless multiple potable wells are present)
- [x] Submersible
- [ ] Centrifugal (jet pump)
- [ ] Hand pump

Distribution(check and complete one unless multiple potable wells are present)
- [x] **Submersible pump**
  - Pump to pressure tank
    - CU: _____"
    - Steel: _____"
    - Other: _____"
- [ ] **Centrifugal pump**
  - Well to pump
    - CU: _____"
    - Steel: _____"
    - Other: _____"

Initial distribution from pressure tank to distribution network
- CU: _____"
- Steel: _____"
- CPVC: _____"
- PEX: _____" Other: _____"

McHenry County Department of Health
Non-Community Survey Site Inspection Checklist

Type of storage (check one unless multiple potable wells are present)

- ☐ Pressure tank
  - Pressure settings _____ min(psi) _____ max(psi)
  - Capacity _____ (gallons)
- ☐ On demand System (variable speed pump)
  - Pressure setting (psi)
- ☑ Above ground tank (gravity fed water towers)
- ☐ Below Ground (buried pressure tanks, pressure tanks in pits or buried storage
- ☐ Other: _____

Treatment Verification (see Treatment process codes IDPH SDW Program Policy #3)

- ☑ Disinfection
  - Type Code(s) Chlorinator / iron removal
- ☐ Filtration
  - *Type Code(s)*
- ☐ Other Forms of Treatment
  - Type Code(s)

Y N

☑ ☐ Sampling point available which represents raw water available for systems with treatment (excluding softeners).

Backflow protection

Visible portions of the water distribution system should be inspected for obvious cross connections or in adequate back flow protection of the potable water supply. The following is a list of common areas of concern.

Y	N	NA	
☑	☐	☐	Sinks equipped with fixtures terminating above the flood rim of the basin or atmospheric devices provided.
☐	☐	☑	Air gap provided for water softener discharge line
☐	☐	☑	Fire suppression systems equipped with air gap or backflow prevention (ie. check valves)
☐	☐	☑	Non-potable water systems (ie. irrigation systems, manufacturing, etc.) using the potable water source as a supply are equipped with backflow prevention (ie. check valves)

Note: Any plumbing related concerns noted during the inspection must be discussed with the operator and the operator shall be informed that the Department will consult with the appropriate plumbing authority regarding the concern.

Sewage disposal

- ☑ Onsite Wastewater Treatment System (OWWTS)
  - The OWWTS must be inspected for any indications of failure. The area of the seepage field, septic tanks and any other system components should be inspected for any indications of active or recent discharges of sewage onto the ground surface. Aerobic treatment units should be inspected to ensure they are in operation. Any potential encroachments over any portion of the OWWTS must be documented and reviewed for compliance. The current use of the system must be consistent with the historical design parameters of the system.
- ☐ Public Sewer

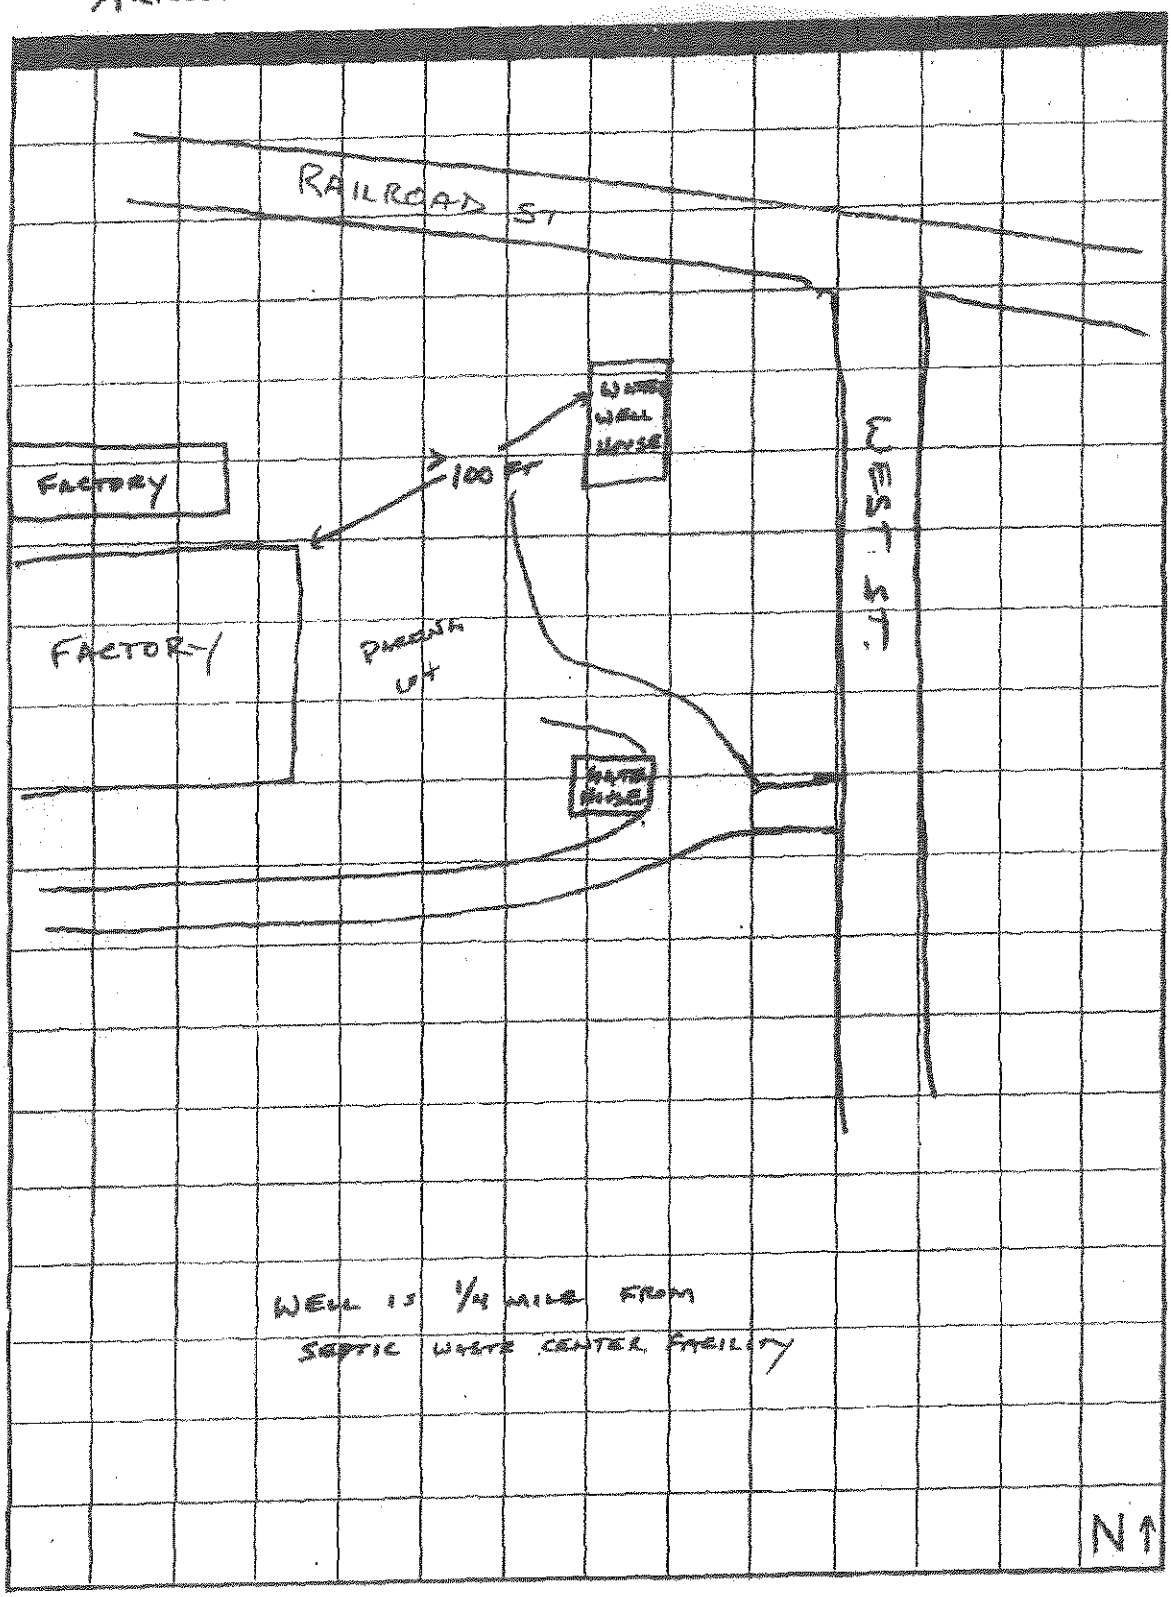
Remarks: IEPA wastewater treatment System

McHenry County Department of Health
Non-Community Survey Site Inspection Checklist

Note: During the site visit any concerns and recommendations for correction are to be discussed with the operator. Photographic documentation of any violations must be taken and recorded per established Department protocol.

Collection of water samples:

☐ *Utilize the most appropriate fixture which represents the distribution system and point of use.* One 100ml water sample shall be collected for bacteriological analysis by MCDH Laboratory. Note utilize regular sample bottle unless system is constantly disinfected with chlorine which requires the use of a thio bottle.



☐ A second 100ml sample shall be collected in a regular sample bottle at the same fixture for Nitrate analysis by IDPH Laboratory.

☐ A MCDH chain of custody form (bacteriological) and IDPH chain of custody form (chemical) must be completed at the time of sample collection. Note if a non-disinfected system has been *chlorinated within the past two weeks the applicable section of the MCDH chain of custody form* shall be completed.

Remarks:

Code Violations/Concerns Noted During Inspection: Wastewater ponds used for dust suppression and processing water.

ARNOLD ENGINEERING
300 N WEST ST
MARENGO, IL 60152

RE: Non-Community Public Water Supplies @ ARNOLD ENGINEERING, 300 N WEST ST, MARENGO, Facility SDWIS #IL3127209

Dear Owner/Operator:

The Drinking Water Systems Code and the Federal Safe Drinking Water Act requires routine chemical and bacteria analysis for all non-community public water supplies. Failure to submit water samples is a violation of the Safe Drinking Water Act and the Illinois Drinking Water System Code.

Currently your facility is classified as a non transient, non community public waters system. A non transient non community water system regularly serves the same 25 individuals, at least six (6) months out of the year. As a facility owner/operator you are required to sample at least once a year for both Nitrates and Total Coliform/E. coli Bacteria. The Illinois Department of Public Health supplies you with an additional water sampling schedule for your VOC's, SOC's, IOC's Lead/Copper, Arsenic and DBP.

The McHenry County Department of Health is responsible for conducting sanitary surveys every other year at each facility located in McHenry County. A sanitary survey will be conducted at your facility around 5/23/2015. The Department will collect the necessary water samples at the time of the survey to meet the Nitrate and Total Coliform/E. coli Bacteria sampling requirements for the 2015 year. Any additional chemical analysis required by IDPH in the 2015 year, will be the responsibility of the owner/operator.

Additional information on the Non-Community Public Water System Program and the responsibilities of a NCPWS owner may be found in the IDPH Non-Community Public Water Supply Program Handbook. Follow the link below to the handbook located on the IDPH website.
www.idph.state.il.us/us/envhealth/ncpws_handbook.htm

If you should have any questions or feel any of the above information is incorrect please do not hesitate to contact me at (815) 334-4585.

Sincerely,

Kelli Boeckmann
Potable Water Program Coordinator

ARNOLD ENGINEERING
300 N WEST ST
MARENGO IL 60152

RE: Non-Community Public Water Supplies@ ARNOLD ENGINEERING, 300 N WEST ST, MARENGO IL 60152
SDWIS ID # IL3127209

Dear Owner/Operator:

The Drinking Water Systems Code and the Federal Safe Drinking Water Act requires routine chemical and bacteria analysis for all non-community public water supplies. A review of our records indicated that the Illinois Department of Public Health has sent you water sample kits the week of 9/14-9/20/14. At this time the Department has not received water sample results for the following:

Nitrate Test
Due by 12/12/14

If you have not received the bottle kits from the state Health Department, bottle kits are available from our Health Department office in Woodstock, and at many of the township offices located in our County (see enclosed list).

Water samples or results are due to our office by December 12, 2014. Please be aware our office only accepts water samples Monday thru Thursday, 8:00-4:30, excluding Holiday and the day preceding a Holiday.

In order to have the water sample collected and results to our office by December 12, 2014 there are a few options.

1. Collect the water sample in an approved container from the state health department or the local health Department and bring the sample into our office Monday thru Thursday. There will be a $15.00 charge to run the total coliform/E.Coli bacteria test. OR

2. Collect the water sample in an approved container from the state health department or the local health Department and send the sample **OVERNIGHT** to the Illinois Department of Public Health. They must receive and run the sample within 48 hours of collection time. There is no additional charge for the sample to be run, however they are required to be shipped with overnight delivery. OR

3. You may contact our Department to schedule a time for Department staff to collect the sample. There is a $50.00 collection fee plus the $15.00 charge to run the total coliform/E.Coli bacteria test. OR

4. Collect the sample and bring it to an Illinois Department of Public Health approved private lab to be run and have the results sent to our Department.

Failure to provide water sampling according to the proper schedule or failure to submit testing results would constitute a violation of the Safe Drinking Water Act and the Illinois Drinking Water Systems Code.

Failure to submit the required sample or results by December 12, 2014 will result in Department staff coming to the facility and collecting the required samples. You will incur a $50.00 charge for the collection that is in addition to the $15.00 to run the total coliform/E.Coli bacteria test.

If you should have any questions or feel any of the above information is incorrect please do not hesitate to contact me at (815) 334-4585.

Sincerely,

Kelli Boeck

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
March 05, 2014

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2019	12/31/2019	12/31/2019	12/31/2016	12/31/2016
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2016 *DBP freq every* 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

FACILITY OPERATOR
ARNOLD ENGINEERING
300 N WEST ST
MARENGO IL 60152

Re: Non-Community Facility @ ARNOLD ENGINEERING, 300 N WEST ST, MARENGO, IL
Facility #IL3127209

Dear FACILITY OPERATOR:

The above referenced facility's potable water is regulated under the federal Safe Drinking Water Act and the Illinois Department of Public Health, 77 Illinois Administrative Code (IAC)Part 900 (Drinking Water Systems Code) , and the Illinois Pollution Control Board regulation, 35 IAC Part 611 (Primary Drinking Water Standards). Currently your facility is classified as a non-transient, non-community public water system. A non-transient non-community water system regularly serves at least 25of the same individuals more than six months per year.

Illinois Department of Public Health is responsible for the approval of construction or alteration of non-community water systems (NCPWS) in addition to providing water sample bottle kits for microbiology and chemistry analysis. The McHenry County Department of Health is responsible for conducting source water assessments for new NCPWS and for conducting sanitary surveys every two years at every active non-licensed, NCPWS within McHenry County.

All owners of non-community public water systems are required to monitor for bacteria and nitrate. The above referenced facility is currently required to sample for bacteria and nitrate annually. Upon receipt of water sample bottle kits from IDPH you are required to sample, complete the laboratory testing form included with the kit and return the bottle(s) to the IDPH laboratory within the allowable holding time. If a private certified laboratory is used, the water system owner is responsible for providing the test results to this Department. Failure to provide water sampling according to the proper schedule or failure to submit testing results would constitute a violation of the Safe Drinking Water Act and the Illinois Drinking Water Systems Code.

In order to ensure your facility remains in compliance, this Department requests you submit the required water samples within 10 days receipt of the water bottle kits from IDPH. Sample results for 2014 shall be submitted to this Department no later than December 12, 2014. Failure to submit the required information by this date will result in Department staff collecting the required samples and include an additional $50.00 charge for collection.

Additional information may be found at the following link for IDPH Non-Community Public Water Supply Program Handbook www.idph.state.il.us/us/envhealth/ncpws handbook.htm which will assist you with information on the Non-Community Public Water System Program and outlines additional responsibilities of a NCPWS owner.

If you should have any questions or feel any of the above information is incorrect please do not hesitate to contact me at (815)334-4585.

Sincerely,

Gail M. Weber

Subject: Arnold Engineering Site, IL3127209 RE: Question on Sampling

Joe/Gail:

Do either of you know the answer to Tim's question regarding the high sodium in the Private wells nearby. Is this naturally occurring or due to Softener use in the area? Although looking at Sodium numbers at Community Water Systems, 20 mg/L looks to be fairly normal. Thanks.

Eric

To: Portz, Eric
Subject: RE: Question on Sampling

Thanks for the information. I forgot to ask about sodium. Do you have any idea of sodium is naturally high in groundwater in the area? Sampling of private wells showed sodium present in concentrations above 20 ppm in some wells, so IDPH (West Chicago Regional Office) included sodium in letters to residents, advising caution be taken to limit sodium intake. The 20 ppm was based on a USEPA Drinking Water Equivalency Level, per the letters. I believe the highest sodium concentration reported from a private well sample was 287 ppm. (I have no idea if water softeners may have been used at some of the residences.)

Cc: Lowder, Neelu
Subject: Question on Sampling

Good Morning Eric,

I hope all is well with you and your family.

I don't know if you are the correct person to ask, but I need to start somewhere. . . . .

I transferred to the IEPA BOL a few years ago, and am now a Project Manager in the Voluntary Site Remediation Program. One of my sites is Arnold Magnetic Technologies in Marengo (McHenry County, east of Rockford). The site has substantial soil and groundwater contamination, mainly VOCs. Contaminated groundwater appears to have migrated off-site to the north and reached several shallow private wells.

QUESTIONS – There is an 850 feet deep well on the Arnold site, which is reportedly used to supply potable and production water for the manufacturing facility. Would DPH have any historical sampling information on this well? Are there any DPH sampling and reporting requirements on wells of this type? I checked with someone in the IEPA DPWS, and was told that we don't require anything since it is a non-community well, under the jurisdiction of DPH.

My phone number is 217/557-8085 if you want to call and discuss the situation.

Thanks,

Tim

Instructions for Monitoring Violations Annual Notice – Chemical Monitoring (Tier 3)

Since most monitoring violations are included in Tier 3, you must provide public notice to persons served within one year after you learn of the violation. Multiple monitoring violations can be serious, check with the Illinois Department of Public Health, Division of Environmental Health (217-782-5830) to make sure you meet the public notification requirements.

Non-community systems must use one of the following: Posting for at least 7 days in conspicuous locations, hand delivery, or by mail.

In addition, systems must use another method reasonably calculated to reach others if they would not be reached by the first method. Such methods could include newspapers, e-mail, or delivery to community organizations. If you post the notice, it must remain posted until the violation is resolved. If the violation has been resolved, you must post the notice for at least one week.

The notice on the reverse is appropriate for insertion in an annual notice. For any monitoring violation for contaminant groups (IOCs, VOCs, SOCs), you may list the group name in the table, but you must provide the name of every chemical in the group on the notice, e.g., in a footnote.

IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.

VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).

SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.

DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Include in your notice the standard language for monitoring and testing procedure violations in italics. If you modify the notice, you may not alter this mandatory language.

Corrective Actions

In your notice, describe corrective actions you took or are taking. Listed below are some steps commonly taken by water systems with monitoring violations. Choose the appropriate language, or develop your own:

We have since taken the required samples, as described in the last column of the table above. The samples showed we are meeting drinking water standards.

We have since taken the required samples, as described in the last column of the table above. The sample for [contaminant] has/has not exceeded the limit.

We plan to take the required samples soon, as described in the last column of the table above.

After Issuing the Notice

Within 10 days after issuing the notice, the owner of the water system shall provide proof of public notice to the Illinois Department of Public Health, Division of Environmental Health (525 W. Jefferson, Springfield, IL 62761). Proof of public notice shall consist of a copy of the notice that was distributed or posted, or each of the 3 full pages of newspaper articles, and the following completed certification:

I hereby affirm that public notice has been provided to consumers by mailing, distributing or posting for at least 7 days in accordance with the delivery, content, and deadline requirements cited above.

DRINKING WATER NOTICE

Monitoring requirements not met for ARNOLD ENGINEERING

We violated a drinking water standard by not testing for chemicals when required. Even though this was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the timeframe listed below, we did not complete all monitoring or testing for the contaminants listed and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, how often we are supposed to sample for [this contaminant/these contaminants] , when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required sampling frequency	When all samples should have been taken	When samples were or will be taken
PBCU Violation	3 years	12/31/2012	

Steps We Are Taking

For more information, please contact _____ at (____) _____-_____.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

State Water System ID#: IL3127209 Date distributed:_____

IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.

VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).

SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.

PBCU includes Lead and Copper.

DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
September 05, 2013

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2019	12/31/2019	12/31/2019	12/31/2016	12/31/2016
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2016 ***DBP freq every*** 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Sincerely,

Jamie Tosetti

Nom-Community Public Water Supply

Dear Owner /Operator:

Effective Dec 10, 2009, the United States Environmental Protection Agency (US EPA) requires all non-transient non-community water supplies to provide a notice of the individual tap results from lead tap water monitoring carried out under the requirements of §141.86 to the persons served by the water system. The consumer notice must include the results of lead tap water monitoring for the tap that was tested, an explanation of the health effects of lead, list steps consumers can take to reduce exposure to lead in drinking water and contact information for the water utility. The notice must also provide the maximum contaminant level goal and the action level for lead and the definitions for these two terms from §141.153(c). The consumer notice must be provided to persons served at the tap that was tested. Non-transient non-community water system can post the results on a bulletin board in the facility to allow users to review the information. A water system must provide the consumer notice as soon as practical, but no later than 30 days after the system learns of the tap monitoring results. The consumer notice must remain posted for 30 days. I have provided a copy of the consumer notice with all of the required information. Please sign, date, and return a copy of the posting to the Illinois Department of Public Health. If you have any questions, please contact me at 217-782-5830.

Sincerely,

Jamie Tosetti
Non-Community Public Water Program

McHenry CHD

Consumer Notice of Lead Water Results at ARNOLD ENGINEERING

What Does This Mean?

Under the authority of the Safe Drinking Water Act, U.S.EPA set the action level for lead in drinking water at 15 ppb. This means that water supply's must ensure that water from the consumer's tap does not exceed this level in at least 90 percent of the taps sampled (90th percentile value). The action level is the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow. If water from the tap exceeds this limit, then the supply must take certain steps to correct the problem. Because lead may pose serious health risks, U.S.EPA set a Maximum Contaminant Level Goal (MCLG) of zero for lead. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

What Are The Health Effects of Lead?

Lead can cause serious health effects if too much enters your body from drinking water or other sources. It can cause damage to the brain and kidneys, and can interfere with the production of red blood cells that carry oxygen to all parts of the body. The greatest risk of lead exposure is to infants, young children, and pregnant women. Scientists have linked the effects of lead on the brain with lowered IQ in children. During pregnancy, the child receives lead from the mother's bones, which may affect brain development. Adults with kidney problems and high blood pressure can be affected by low levels of lead more than healthy adults. Lead is stored in the bones, and it can be released later in life.

What Can I Do To Reduce Exposure to Lead in Drinking Water?

- **Test your water for lead.**
- **Run your tap water to flush out lead.**
  If water hasn't been used for several hours, run water from the tap for 30 seconds or until it becomes cold or reaches a steady temperature before using it for drinking or cooking. This flushes lead-containing water from the pipes.
- **Identify if your plumbing fixtures contain lead.**
- **Look for alternative sources or treatment of water.**
- **Use cold water for cooking and preparing baby formula.**
- **Do not boil water in an attempt to remove lead. This only makes the lead level higher.**

For More Information

Call the water system at _____. For more information on reducing lead exposure and the health effects of lead, visit U.S.EPA's Web site at www.epa.gov/lead, call the National Lead Information Center at 800-424-LEAD, or contact your health care provider.

I,_____, hereby certify that the lead consumer notice and results were posted on _____.

Subject: Non-transient NCPWS

Jamie-

Recently we received copies of the letters dated 2/20/13 requiring chemical analysis for facilities that are in violation of monitoring for VOC, SOC, Lead/ copper etc.

If a sanitary survey is conducted in the near future, should our Department verify if a Drinking Water Notice is posted? What type of action is required by our Department for these facilities?

Gail Weber
McHenry County Department of Health
Laboratory Coordinator

FEB 25 2013

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
February 20, 2013

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2013	12/31/2019	12/31/2019	12/31/2012 overdue	12/31/2016
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly.

DBP Test 12/31/2016 *DBP freq every* 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Sincerely,

Jamie Tosetti

Instructions for Monitoring Violations Annual Notice – Chemical Monitoring (Tier 3)

Since most monitoring violations are included in Tier 3, you must provide public notice to persons served within one year after you learn of the violation. Multiple monitoring violations can be serious, check with the Illinois Department of Public Health, Division of Environmental Health (217-782-5830) to make sure you meet the public notification requirements.

Non-community systems must use one of the following: Posting for at least 7 days in conspicuous locations, hand delivery, or by mail.

In addition, systems must use another method reasonably calculated to reach others if they would not be reached by the first method. Such methods could include newspapers, e-mail, or delivery to community organizations. If you post the notice, it must remain posted until the violation is resolved. If the violation has been resolved, you must post the notice for at least one week.

The notice on the reverse is appropriate for insertion in an annual notice. For any monitoring violation for contaminant groups (IOCs, VOCs, SOCs), you may list the group name in the table, but you must provide the name of every chemical in the group on the notice, e.g., in a footnote.

> IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.
>
> VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).
>
> SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.
>
> DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Include in your notice the standard language for monitoring and testing procedure violations in italics. If you modify the notice, you may not alter this mandatory language.

Corrective Actions

In your notice, describe corrective actions you took or are taking. Listed below are some steps commonly taken by water systems with monitoring violations. Choose the appropriate language, or develop your own:

> We have since taken the required samples, as described in the last column of the table above. The samples showed we are meeting drinking water standards.
>
> We have since taken the required samples, as described in the last column of the table above. The sample for [contaminant] has/has not exceeded the limit.
>
> We plan to take the required samples soon, as described in the last column of the table above.

After Issuing the Notice

Within 10 days after issuing the notice, the owner of the water system shall provide proof of public notice to the Illinois Department of Public Health, Division of Environmental Health (525 W. Jefferson, Springfield, IL 62761). Proof of public notice shall consist of a copy of the notice that was distributed or posted, or each of the 3 full pages of newspaper articles, and the following completed certification:

I hereby affirm that public notice has been provided to consumers by mailing, distributing or posting for at least 7 days in accordance with the delivery, content, and deadline requirements cited above.

DRINKING WATER NOTICE

Monitoring requirements not met for ARNOLD ENGINEERING

We violated a drinking water standard by not testing for chemicals when required. Even though this was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the timeframe listed below, we did not complete all monitoring or testing for the contaminants listed and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, how often we are supposed to sample for [this contaminant/these contaminants] , when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required sampling frequency	When all samples should have been taken	When samples were or will be taken
PBCU Violation	3 years	12/31/2012	

Steps We Are Taking

For more information, please contact _____ at (____) _____-_____.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

State Water System ID#: IL3127209 Date distributed:_____

IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.

VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).

SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.

PBCU includes Lead and Copper.

DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Re: Non-Community Facility @ ARNOLD ENGINEERING, 300 N WEST ST, MARENGO, IL
Facility #IL30127209

Dear Facility Owner:

The above referenced facility's potable water is regulated under the federal Safe Drinking Water Act and the Illinois Department of Public Health, 77 Illinois Administrative Code (IAC)Part 900 (Drinking Water Systems Code) , and the Illinois Pollution Control Board regulation, 35 IAC Part 611 (Primary Drinking Water Standards). Currently your facility is classified as a non-transient, non-community public water system. A non-transient non-community water system regularly serves at least 25 of the same individuals more than six months per year.

Illinois Department of Public Health is responsible for the approval of construction or alteration of non-community water systems (NCPWS) in addition to providing water sample bottle kits for microbiology and chemistry analysis. The McHenry County Department of Health is responsible for conducting source water assessments for new NCPWS and for conducting sanitary surveys every two years at every active non-licensed, NCPWS within McHenry County.

All owners of non-community public water systems are required to monitor for bacteria and nitrate. The above referenced facility is currently required to sample for bacteria and nitrate annually.

The next scheduled bi-ennial sanitary survey for the above referenced facility is scheduled to be conducted on or around 5/30/2013. Please note that water samples will be collected during the sanitary survey of the facility by Department staff for bacteria and nitrate analysis. Samples collected during a sanitary survey will fulfill bacteriological and nitrate sampling requirements for the year in which the sanitary survey is conducted.

Additional information may be found at the following link for IDPH Non-Community Public Water Supply Program Handbook www.idph.state.il.us/us/envhealth/ncpws handbook.htm which will assist you with information on the Non-Community Public Water System Program and outlines additional responsibilities of a NCPWS owner.

If you should have any questions or feel any of the above information is incorrect please do not hesitate to contact me at (815)334-4585.

Sincerely,

Gail M. Weber

Subject: Non-Transient Operators Not Certified

Please send along the attached application for those non-transient non-community supplies in your county(listed in one of the attached) who have not yet become certified or who do not have a certified operator. If they do have a certified operator they need to communicate that to our Springfield staff(Elaine and/or Eric).

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
November 21, 2011

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2013	12/31/2019	12/31/2019	12/31/2012	12/31/2016
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2016 ***DBP freq every*** 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Instructions for Monitoring Violations Annual Notice – Chemical Monitoring (Tier 3)

Since most monitoring violations are included in Tier 3, you must provide public notice to persons served within one year after you learn of the violation. Multiple monitoring violations can be serious, check with the Illinois Department of Public Health, Division of Environmental Health (217-782-5830) to make sure you meet the public notification requirements.

Non-community systems must use one of the following: Posting for at least 7 days in conspicuous locations, hand delivery, or by mail.

In addition, systems must use another method reasonably calculated to reach others if they would not be reached by the first method. Such methods could include newspapers, e-mail, or delivery to community organizations. If you post the notice, it must remain posted until the violation is resolved. If the violation has been resolved, you must post the notice for at least one week.

The notice on the reverse is appropriate for insertion in an annual notice. For any monitoring violation for contaminant groups (IOCs, VOCs, SOCs), you may list the group name in the table, but you must provide the name of every chemical in the group on the notice, e.g., in a footnote.

> IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.
>
> VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).
>
> SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.
>
> DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Include in your notice the standard language for monitoring and testing procedure violations in italics. If you modify the notice, you may not alter this mandatory language.

Corrective Actions

In your notice, describe corrective actions you took or are taking. Listed below are some steps commonly taken by water systems with monitoring violations. Choose the appropriate language, or develop your own:

> We have since taken the required samples, as described in the last column of the table above. The samples showed we are meeting drinking water standards.
>
> We have since taken the required samples, as described in the last column of the table above. The sample for [contaminant] has/has not exceeded the limit.
>
> We plan to take the required samples soon, as described in the last column of the table above.

After Issuing the Notice

Within 10 days after issuing the notice, the owner of the water system shall provide proof of public notice to the Illinois Department of Public Health, Division of Environmental Health (525 W. Jefferson, Springfield, IL 62761). Proof of public notice shall consist of a copy of the notice that was distributed or posted, or each of the 3 full pages of newspaper articles, and the following completed certification:

I hereby affirm that public notice has been provided to consumers by mailing, distributing or posting for at least 7 days in accordance with the delivery, content, and deadline requirements cited above.

DRINKING WATER NOTICE

Monitoring requirements not met for ARNOLD ENGINEERING

We violated a drinking water standard by not testing for chemicals when required. Even though this was not an emergency, as our customers, you have a right to know what happened and what we are doing to correct this situation.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the timeframe listed below, we did not complete all monitoring or testing for the contaminants listed and therefore cannot be sure of the quality of our drinking water during that time.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant(s) we did not properly test for during the last year, how often we are supposed to sample for [this contaminant/these contaminants] , when samples should have been taken, and the date on which follow-up samples were (or will be) taken.

Contaminant	Required sampling frequency	When all samples should have been taken	When samples were or will be taken
Arsenic Violation	3 years	12/31/2010	
DBP Violation	3 years	12/31/2010	

Steps We Are Taking

For more information, please contact _____ at (____) _____-_____.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

State Water System ID#: IL3127209 Date distributed:_____

IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.

VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).

SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.

PBCU includes Lead and Copper.

DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Non-Community Public Water Supplies
On-Site Inspection Summary

Date: **06/16/11**

Facility: **ARNOLD ENGINEERING**

Facility ID: **0127209**

A sanitary survey was conducted at the above referenced property on **05/31/11** .
At the conclusion of the survey, the following was noted:

NO VIOLATIONS AT THIS TIME

Any violations must be corrected within ten (10) days.

Your facility's sampling schedule is..... **ANNUAL**
The next bottle kit should arrive around..... **05/31/12**

Your next scheduled inspection will be: **05/30/13**

If you have any questions, please feel free to contact Gail Weber Laboratory Coordinator, at (815) 334-4585.

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
May 10, 2011

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2013	12/31/2019	12/31/2019	12/31/2012	12/31/2010 overdue
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2010 overdue ***DBP freq every*** 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Sincerely,

Jamie Tosetti

Instructions for Monitoring Violations Annual Notice – Chemical Monitoring (Tier 3)

Since most monitoring violations are included in Tier 3, you must provide public notice to persons served within one year after you learn of the violation. Multiple monitoring violations can be serious, check with the Illinois Department of Public Health, Division of Environmental Health (217-782-5830) to make sure you meet the public notification requirements.

Non-community systems must use one of the following: Posting for at least 7 days in conspicuous locations, hand delivery, or by mail.

In addition, systems must use another method reasonably calculated to reach others if they would not be reached by the first method. Such methods could include newspapers, e-mail, or delivery to community organizations. If you post the notice, it must remain posted until the violation is resolved. If the violation has been resolved, you must post the notice for at least one week.

The notice on the reverse is appropriate for insertion in an annual notice. For any monitoring violation for contaminant groups (IOCs, VOCs, SOCs), you may list the group name in the table, but you must provide the name of every chemical in the group on the notice, e.g., in a footnote.

> IOCs include Antimony, Barium, Beryllium, Cadmium, Chromium, Cyanide, Mercury, Nickel, Selenium, and Thallium.
>
> VOCs include 1, 1 – Dichloroethylene, 1, 1, 1 –Trichloroethane, 1, 2 – Dichloroethane, 1, 2 – Dichloropropane, 1,1,2 – Trichloroethane, 1,2,4 – Trichlorobenzene, Benzene, Carbon tetrachloride, cis-1, 2 – Dichloroethylene, Dichloromethane, Ethylbenzene, Monochlorobenzene, o-Dichlorobenzene, Para-dichlorobenzene, Styrene, Tetrachloroethylene, Toluene, Trans - 1, 2 – Dichloroethylene, Trichloroethylene, Vinyl Chloride, Xylene, and 1, 2 - Dibromo-3-Chloropropane (DBCP).
>
> SOCs include 2,4 –D, 2,4,5 - TP (Silvex), Alachlor, Atrazine, Carbofuran, Chlordane, Ethylene Dibromide, Heptachlor, Heptachlor Epoxide, Lindane, Methoxychlor, PCBs, Pentachlorophenol, Toxaphene, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl)adipate, Di(2-ethylhexyl)phthalate, Dinoseb, Diquat, Endothall, Endrin, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, and Simazine.
>
> DBPs include trihalomethanes (THMs), and haloacetic acids (HAAs).

Include in your notice the standard language for monitoring and testing procedure violations in italics. If you modify the notice, you may not alter this mandatory language.

Corrective Actions

In your notice, describe corrective actions you took or are taking. Listed below are some steps commonly taken by water systems with monitoring violations. Choose the appropriate language, or develop your own:

> We have since taken the required samples, as described in the last column of the table above. The samples showed we are meeting drinking water standards.
>
> We have since taken the required samples, as described in the last column of the table above. The sample for [contaminant] has/has not exceeded the limit.
>
> We plan to take the required samples soon, as described in the last column of the table above.

After Issuing the Notice

Within 10 days after issuing the notice, the owner of the water system shall provide proof of public notice to the Illinois Department of Public Health, Division of Environmental Health (525 W. Jefferson, Springfield, IL 62761). Proof of public notice shall consist of a copy of the notice that was distributed or posted, or each of the 3 full pages of newspaper articles, and the following completed certification:

I hereby affirm that public notice has been provided to consumers by mailing, distributing or posting for at least 7 days in accordance with the delivery, content, and deadline requirements cited above.

ARNOLD ENGINEERING
300 N WEST ST
MARENGO IL 60152

Re: Non-Community Facility @ ARNOLD ENGINEERING, 300 N WEST ST, MARENGO, IL
Facility #IL3127209

Dear Facility Owner:

The above referenced facility's potable water is regulated under the federal Safe Drinking Water Act and the Illinois Department of Public Health, 77 Illinois Administrative Code (IAC)Part 900 (Drinking Water Systems Code) , and the Illinois Pollution Control Board regulation, 35 IAC Part 611 (*Primary Drinking Water Standards*). Currently your facility is classified as a non-transient, non-community public water system. A non-transient non-community water system regularly serves at least 25of the same individuals more than six months per year.

Illinois Department of Public Health is responsible for the approval of construction or alteration of non-community water systems (NCPWS) in addition to providing water sample bottle kits for microbiology and chemistry analysis. The McHenry County Department of Health is responsible for conducting source water assessments for new NCPWS and for conducting sanitary surveys every two years at every active non-licensed, NCPWS within McHenry County.

All owners of non-community public water systems are required to monitor for bacteria and nitrate. The above referenced facility is currently required to sample for bacteria and nitrate annually.

The next scheduled bi-ennial sanitary survey for the above referenced facility is scheduled to be conducted on or around 6/3/2011. Please note that water samples will be collected during the sanitary survey of the facility by Department staff for bacteria and nitrate analysis. Samples collected during a sanitary survey will fulfill bacteriological and nitrate sampling requirements for the year in which the sanitary survey is conducted.

Additional information may be found at the following link for IDPH Non-Community Public Water Supply Program Handbook www.idph.state.il.us/us/envhealth/ncpws handbook.htm which will assist you with information on the Non-Community Public Water System Program and outlines additional responsibilities of a NCPWS owner.

If you should have any questions or feel any of the above information is incorrect please do not hesitate to contact me at (815)334-4585.

Sincerely,

Gail M. Weber

Subject: NCWS Nitrate sampling for 2009
Attachments: Nitrate pre-compliance Report.pdf

Everyone:

Attached is the compliance report for nitrates 2009. It is hard to believe that 25% of our systems were not sampled last year. Please look over your systems, bookmarked by county and IDPH regional office, and do one of two things.

1. Send me the sample data to enter into SDWIS, or
2. Send me a V&E form if you haven't already.

Special note to Dupage County: This report was run before your December Samples were put in.

Thank you! DJ.

Non-Community Public Water Supplies
On-Site Inspection Summary

Date: **06/16/09**

Facility: **ARNOLD ENGINEERING**

Facility ID: **0127209**

A sanitary survey was conducted at the above referenced property on **06/03/09** .
At the conclusion of the survey, the following was noted:

NO VIOLATIONS AT THIS TIME

Any violations must be corrected within ten (10) days.

Your facility's sampling schedule is..... **ANNUAL**
The next bottle kit should arrive around..... **06/03/10**

Your next scheduled inspection will be: **06/03/11**

If you have any questions, please feel free to contact Gail Weber Laboratory Coordinator, at (815) 334-4585.

Re: MONITORING VIOLATION NOTICE- ARNOLD ENGINEERING, 300 N WEST STREET, MARENGO, IL
Facility #IL3127209

Dear Owner:

This referenced facility's potable water is monitored under the Safe Drinking Water Act. You are required to submit samples of your drinking water to the Illinois Department of Public Health annually for microbiology and chemistry analysis.

The Illinois Department of Public Health has sent a water sample bottle kit to this address and you have failed to provide a **satisfactory microbiology water sample.** Such a failure is a violation of the Rules for Drinking Water Systems. It is important that you take the sample as soon as it arrives following the proper sampling procedure. All water samples must be received at the laboratory within thirty (30) hours after the time and date of collection for microbiology. The microbiology analysis may brought in to our laboratory for analysis or submitted to the Illinois Department of Public Health laboratory.

If you are receiving bottles when the facility is not open, when the system has been shut off for the season, if you are receiving the wrong type of bottle or if the address is incorrect, please contact me at (815) 334-4585.

Sincerely,

Gail M. Weber

NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLIES
SDWIS ID: IL3127209
August 12, 2008

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2013	12/31/2019	12/31/2019	12/31/2009	12/31/2010
VOC freq every 6 years	*SOC freq every* 9 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

 # Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:
Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2010 *DBP freq every* 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Sincerely,

Jamie Tosetti

PWS ID: 0127209 SDWIS ID: IL3127209
May 11, 2007

Dear Owner/Operator:

The Drinking water Systems Code (77 ILCS Code 900) requires routine chemical analysis for non-transient, non-community drinking water systems. A quarterly review of our records indicates that your facility's sampling schedule is as follows:

VOC Test	*SOC Test*	*IOC Test*	*Lead/Copper Test* *During June-Sept*	*Arsenic test date*
12/31/2013	12/31/2007	12/31/2019	12/31/2009	12/31/2007
VOC freq every 6 years	*SOC freq every* 3 years	*IOC freq every* 9 years	*Pb/Cu freq every* 3 years	*Arsenic freq every* 3 years

Pb/Cu SAMPLE SITES: 5

Additional Testing for Systems that Disinfect:

Our records indicate your system uses chlorine as a disinfectant. Routine testing for total trihalomethanes and haloacetic acids is required between June-Sept for systems sampling less often than quarterly:

DBP Test 12/31/2010 *DBP freq every* 3 years

These chemical analyses must be sampled before the dates shown. The results must then be forwarded to this office within 10 days after the above dates.

If you have any questions, or for a complete listing of required chemicals, please contact Jamie Tosetti or Eric Portz in the Division of Environmental Health at 217-782-5830, TTY 800-547-0466 (for the hearing impaired only). All correspondence must include the PWS ID, referenced above, for your facility.

Re: Reminder that samples are due for Disinfection / Disinfection Byproducts

Dear Owner/Operator:

Current information in our files indicates your non-transient, non-community public water supply adds a disinfectant and is thus subject to the Stage 1 Disinfection / Disinfection Byproducts Rule (D/DBPR). This letter is to serve as a reminder that your supply is required to take one annual sample for Total Trihalomethanes (TTHMs) and five Haloacetic Acids (HAA5s) during the month of warmest water temperature as a minimum.

Please make arrangements to test for these contaminants by October 15, 2005 if this monitoring has not been performed.

Outlined below are the requirements of the D/DBR:

1) Beginning January 1, 2004 your supply was subject to Maximum Contaminant Levels (MCLs) for Total Trihalomethanes (TTHMs) of 0.080 mg/L and five Haloacetic Acids (HAA5s) of 0.060 mg/L. The monitoring frequency for your supply is one annual sample during the month of warmest water temperature as a minimum. The samples should be taken at the location of maximum residence time in the distribution system.

2) Beginning January 1, 2004 your supply was subject to Maximum Residual Disinfectant Levels (MRDL) for Chlorine of 4.0 mg/L as Cl2 (free chlorine). The MRDL is calculated as a running annual average. The monitoring frequency and locations should be the same as your Total Coliform Rule (TCR) samples. If your supply takes one annual coliform sample or up to several monthly coliform samples, the free chlorine residual must be checked at the same time(s) and location(s) and reported for all coliform sample(s). Please report these results separate from your TCR samples no later than the 10th day after the end of the quarter to the address given below. It is our goal, in the future, to have you report these results with your TCR samples on the sample sheet.

3) 40 CFR 141.132(f) requires that you develop a monitoring plan for items 1 & 2 above and have it *available for inspection.*

Please send your quarterly free Chlorine residual measurements to the following address:

Illinois Dept. of Public Health
Division of Environmental Health
Non-Community Public Water Supply Program
525 West Jefferson St.
Springfield, IL 62761-0001

If you have any questions, please notify this Department at 217-785-2062.

A sanitary survey was conducted at the above referenced property on **05/31/05** .
At the conclusion of the survey, the following was noted:

NO VIOLATIONS AT THIS TIME

Your facility's sampling schedule is..... **ANNUAL**
The next bottle kit should arrive around..... **05/31/06**

Your next scheduled inspection will be: **05/31/07**

If you have any questions, please feel free to contact Daniel E. Guif, Water Well Program Coordinator, at (815) 334-4585.

MARENGO, IL 60152

Re: Regulations for Disinfection / Disinfection Byproducts

Dear Owner/Operator:

Current information in our files indicates your non-transient, non-community public water supply adds Chlorine as a disinfectant. Therefore, new regulations adopted under the federal Safe Drinking Water Act are in effect for your non-transient, non-community public water supply. Outlined below are the major highlights under the new rule for disinfection / disinfection byproducts This rule, which has been adopted in 35 IL Adm. Code 611, is thus incorporated into the Drinking Water Systems Code by reference.

Stage 1 Disinfectants / Disinfection byproducts Rule (D/DBPR)

1) Beginning January 1, 2004 your supply was subject to Maximum Contaminant Levels (MCLs) for Total Trihalomethanes (TTHMs) of 0.080 mg/L and five Haloacetic Acids (HAA5s) of 0.060 mg/L. The monitoring frequency for your supply is a minimum of one annual sample during the month of warmest water temperature. Please make arrangements to test for these contaminants in the appropriate month this summer.

2) Beginning January 1, 2004 your supply was subject to Maximum Residual Disinfectant Levels (MRDL) for Chlorine of 4 0 mg/L as Cl2 (free chlorine). The MRDL is calculated as a running annual average. The monitoring frequency and locations should be the same as your Total Coliform Rule (TCR) samples. If your supply takes one annual coliform sample or up to several monthly coliform samples, the free chlorine residual must be checked at the same time(s) and location(s) and reported for all coliform sample(s). Please begin reporting these results separate from your TCR samples no later than the 10th day after the end of the quarter to the address given below. It is our goal, in the future, to have you report these results with your TCR samples on the same sample sheet.

3) 40 CFR 141.132(f) requires that you develop a monitoring plan for items 1 & 2 above and have it available for inspection. A copy of the 40 CFR 141.132(f) language is enclosed.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Please send your quarterly free Chlorine residual measurements to the following address:

Illinois Dept. of Public Health
Division of Environmental Health
Non-Community Public Water Supply
525 West Jefferson St.
Springfield, IL 62761-0001

Enclosed is a quick reference guide for the Stage 1 D/DBPR. I have tried to outline the critical elements of this new rule that applies to your water system. If you anticipate your water system will have difficulties meeting any of these new regulatory requirements or you have any questions, please notify this Department at 217-785-2062.

Sincerely,

Eric Portz, P.E.
Non-Community Public Water System Program
Division of Environmental Health

cc: McHenry County Hlth Dept

Enclosures

40 CFR 141.132(f)

(f) Monitoring plans. Each system required to monitor under this subpart must develop and implement a monitoring plan The system must maintain the plan and make it available for inspection by the State and the general public no later than 30 days following the applicable compliance dates in Sec 141 130(b) All Subpart H systems serving more than 3300 people must submit a copy of the monitoring plan to the State no later than the date of the first report required under Sec 141 134 The State may also require the plan to be submitted by any other system After review, the State may require changes in any plan elements The plan must include at least the following elements

(1) Specific locations and schedules for collecting samples for any parameters included in this subpart

(2) How the system will calculate compliance with MCLs, MRDLs, and treatment techniques

(3) If approved for monitoring as a consecutive system, or if providing water to a consecutive system, under the provisions of Sec 141 29, the sampling plan must reflect the entire distribution system

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

United States Environmental Protection Agency | Office of Water (4606) | EPA 816-F-01-010 May 2001 www epa gov/safewater

EPA

Stage 1 Disinfectants and Disinfection Byproducts Rule: A Quick Reference Guide

Overview of the Rule

Title	Stage 1 Disinfectants and Disinfection Byproducts Rule (Stage 1 DBPR) 63 FR 69390 - 69476, December 16, 1998, Vol 63, No 241 Revisions to the Interim Enhanced Surface Water Treatment Rule (IESWTR), the Stage 1 Disinfectants and Disinfection Byproducts Rule (Stage 1 DBPR), and Revisions to State Primacy Requirements to Implement the Safe Drinking Water Act (SDWA) Amendments 66 FR 3770, January 16, 2001, Vol 66, No 29
Purpose	Improve public health protection by reducing exposure to disinfection byproducts Some disinfectants and disinfection byproducts (DBPs) have been shown to cause cancer and reproductive effects in lab animals and suggested bladder cancer and reproductive effects in humans
General Description	The Stage 1 DBPR is the first of a staged set of rules that will reduce the allowable levels of DBPs in drinking water The new rule establishes seven new standards and a treatment technique of enhanced coagulation or enhanced softening to further reduce DBP exposure The rule is designed to limit capital investments and avoid major shifts in disinfection technologies until additional information is available on the occurrence and health effects of DBPs.
Utilities Covered	The Stage 1 DBPR applies to all sizes of community water systems and nontransient noncommunity water systems that add a disinfectant to the drinking water during any part of the treatment process and transient noncommunity water systems that use chlorine dioxide

Public Health Benefits

Implementation of the Stage 1 DBPR will result in	▸ As many as 140 million people receiving increased protection from DBPs ▸ 24 percent average reduction nationally in trihalomethane levels ▸ Reduction in exposure to the major DBPs from use of ozone (DBP = bromate) and chlorine dioxide (DBP = chlorite)
Estimated impacts of the Stage 1 DBPR include	▸ National capital costs $2 3 billion ▸ National total annualized costs to utilities $684 million ▸ 95 percent of households will incur an increase of less than $1 per month ▸ 4 percent of households will incur an increase of $1-10 per month ▸ <1 percent of households will incur an increase of $10-33 per month.

Critical Deadlines and Requirements

For Drinking Water Systems	
January 1, 2002	Surface water systems and ground water systems under the direct influence of surface water serving ≥ 10,000 people must comply with the Stage 1 DBPR requirements
January 1, 2004	Surface water systems and ground water systems under the direct influence of surface water serving < 10,000, and all ground water systems must comply with the Stage 1 DBPR requirements.
For States	
December 16, 2000	States submit Stage 1 DBPR primacy revision applications to EPA (triggers interim primacy)
December 16, 2002	Primacy extension deadline - all states with an extension must submit primacy revision applications to EPA

Regulated Contaminants/Disinfectants

Regulated Contaminant	MCL (mg/L)	MCLG (mg/L)	Regulated Disinfectant	MRDL (mg/L)	MRDLG (mg/L)
Total Trihalomethanes (TTHM)	0.080		Chlorine	4.0 as Cl_2	4
Chloroform		-			
Bromodichloromethane		zero			
Dibromochloromethane		0.06			
Bromoform		zero			
Five Haloacetic Acids (HAA5)	0.060		Chloramines	4.0 as Cl_2	4
Monochloroacetic acid		-			
Dichloroacetic acid		zero			
Trichloroacetic acid		0.3	Chlorine dioxide	0.8	0.8
Bromoacetic acid		-			
Dibromoacetic acid		-			
Bromate (plants that use ozone)	0.010	zero	*Stage 1 DBPR includes maximum residual disinfectant levels (MRDLs) and maximum residual disinfectant level goals (MRDLGs) which are similar to MCLs and MCLGs, but for disinfectants.		
Chlorite (plants that use chlorine dioxide)	1.0	0.8			

Enhanced coagulation/enhanced softening to improve removal of DBP precursors (See Step 1 TOC Table) for systems using conventional filtration treatment.

Step 1 TOC Table - Required % Removal of TOC

Source Water TOC (mg/L)	Source Water Alkalinity, mg/L as $CaCO_3$		
	0-60	> 60-120	> 120
> 2.0 to 4.0			
> 4.0 to 8.0			
> 8.0			

[1] Systems meeting at least one of the alternative compliance criteria in the rule are not required to meet the removals in this table

[2] Systems practicing softening must meet the TOC removal requirements in the last column to the right

Routine Monitoring Requirements

	Coverage	Monitoring Frequency	Compliance
TTHM/HAA5	Surface and ground water under the direct influence of surface water serving ≥ 10,000	4/plant/quarter	Running annual average
	Surface and ground water under the direct influence of surface water serving 500 - 9,999	1/plant/quarter	Running annual average
	Surface and ground water under the direct influence of surface water serving < 500	1/plant/year in month of warmest water temperature**	Running annual average of increased monitoring
	Ground water serving ≥ 10,000	1/plant/quarter	Running annual average
	Ground water serving < 10,000	1/plant/year in month of warmest water temperature**	Running annual average of increased monitoring
Bromate	Ozone plants	Monthly	Running annual average
Chlorite	Chlorine dioxide plants	Daily at entrance to distribution system, monthly in distribution system	Daily/follow-up monitoring
Chlorine dioxide	Chlorine dioxide plants	Daily at entrance to distribution system	Daily/follow-up monitoring
Chlorine/Chloramines	All systems	Same location and frequency as TCR sampling	Running annual average
DBP precursors	Conventional filtration	Monthly for total organic carbon and alkalinity	Running annual average

** System must increase monitoring to 1 sample per plant per quarter if an MCL is exceeded

For additional information on the Stage 1 DBPR

Call the Safe Drinking Water Hotline at 1-800-426-4791, visit the EPA web site at www.epa.gov/safewater, or contact your State drinking water representative.

06/01/04

Dear Owner/Operator:

A review of our records indicates that the above-mentioned facility has sample results due for the following chemicals, as required by the Drinking Water Systems Code (77 ILCS Code 900) for

HERBICIDE/PESTICIDE DUE: ~~06/30/03~~ 6/30/06 JT.
INORGANICS DUE: ~~03/31/03~~ 6/30/06
LEAD TESTS DUE: 06/30/04

These chemical analyses were due on the dates shown. If these analyses have been completed, contact the laboratory that performed the tests and make sure the results are forwarded to this office. It is imperative that these tests be completed and the results obtained in this office by September 30, 2004.

If you have any questions concerning this letter, please call me at 217-782-5830, Fax 217-785-0253 or TTY (hearing impaired use only) 800-547-0466. Any correspondence must include the seven digit identification number for your site, which is 0127209.

DEAR ARNOLD ENGINEERING/BOB LIPPE:

THIS OFFICE HAS RECEIVED THE RESULTS OF LEAD AND COPPER ANALYSES PERFORMED ON YOUR NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLY ON 10/13/2003. THIS TESTING IS REQUIRED BY UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. THESE ANALYSES HAVE SHOWN THAT THE LEAD ACTION LEVEL HAS BEEN EXCEEDED. THEREFORE, IN ACCORDANCE WITH THE ABOVE REGULATIONS, YOU ARE REQUIRED TO PERFORM THE FOLLOWING:

1. CONTINUE SAMPLING FOR LEAD AND COPPER EVERY SIX MONTHS FROM THE NUMBER OF TAPS REQUIRED ACCORDING TO THE POPULATION SERVED:

POPULATION SERVED	NUMBER OF TAPS TO BE SAMPLED
3,301 - 10,000	40
501 - 3,300	20
101 - 500	10
< OR = 100	5

2. SAMPLE FOR THE FOLLOWING WATER QUALITY PARAMETERS:
   A. ALKALINITY C. WATER TEMPERATURE E. CONDUCTIVITY
   B. CALCIUM D. PH
   THE ANALYSES FOR THESE PARAMETERS MUST BE REPORTED WITHIN THE NEXT SIX MONTH SAMPLING PERIOD, BY 06/30/2004:

POPULATION SERVED	NUMBER OF TAPS TO BE SAMPLED
3,301 - 10,000	3
501 - 3,300	2
< OR = 500	1

3. WITHIN 60 DAYS, DISTRIBUTE COPIES OF THE ENCLOSED EDUCATIONAL MATERIALS DESCRIBING THE HAZARDS OF LEAD IN DRINKING WATER OR IMPLEMENT AN EDUCATIONAL PROGRAM WHICH WARNS OF THE HAZARDS OF CONSUMING WATER WHICH CONTAINS HIGH LEVEL OF LEAD.
4. IF YOU HAVE NOT ALREADY DONE SO, WITHIN 6 MONTHS, SUBMIT TO THIS DEPARTMENT A CORROSION CONTROL PLAN TO REDUCE THE CONCENTRATION OF LEAD AND COPPER IN YOUR WATER SUPPLY.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

SINCERELY,

Jamie Tostette

DEAR ARNOLD ENGINEERING/BOB LIPPE:

WE HAVE RECEIVED THE RESULTS OF CHEMICAL ANALYSES PERFORMED ON YOUR WATER SUPPLY IN COMPLIANCE WITH UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (USEPA) REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. THE TABLE BELOW SHOWS THE STATUS OF EACH CATEGORY TESTED AS REPORTED BY A LABORATORY AND INDICATES WHEN YOU WILL BE REQUIRED TO TEST FOR THESE CONTAMINANTS AGAIN. TEST CYCLES ARE DETERMINED ACCORDING TO A COMBINATION OF CURRENT RESULTS, ORIGINAL VULNERABLITY AND PREVIOUS RESULTS. IF ACTION IS REQUIRED TO IMPROVE THE QUALITY OF YOUR WATER SUPPLY, INSTRUCTIONS HAVE BEEN ENCLOSED.

BECAUSE THE VULNERABILITY ASSESSMENT PERFORMED BY OUR DEPARTMENT HAS DETERMINED YOUR SUPPLY IS NOT VULNERABLE TO ASBESTOS CONTAMINATION, YOU ARE GRANTED A PERMANENT WAIVER TO INITIAL AND FUTURE SAMPLING FOR ASBESTOS. FURTHER COPPER AND LEAD SAMPLING REQUIREMENTS WILL BE REPORTED TO YOU SEPARATELY.

A REVISED COPY OF THIS LETTER WILL BE SENT TO YOU EACH TIME WE RECEIVE NEW TEST RESULTS. IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

SINCERELY,

Jamie Tostetti

Subject Drinking Water Tests for Inorganic Chemicals, Herbicides & Pesticides
Facility ID No. 0127209

Dear Mr Tosetti

Enclosed are the analyses from the potable water supply system at The Arnold Engineering Company facility at 300 N West Street in Marengo These tests were performed to comply with 77 ILCS Code 900

TestAmerica obtained the samples of water from the well for these tests TestAmerica and PDC Laboratories performed the analyses on the water samples

The test results indicate that small amounts of barium and fluoride are present in the water There are no detectable amounts of regulated organic or other inorganic chemicals in the potable water supply

Attn Jamie Tosetti

Subject Drinking Water Tests for Inorganic Chemicals, Herbicides & Pesticides
Facility ID No 0127209

Dear Mr Tosetti.

Enclosed are the analyses from the potable water supply system at The Arnold Engineering Company facility at 300 N West Street in Marengo These tests were performed to comply with 77 ILCS Code 900

TestAmerica obtained the samples of water from the well for these tests TestAmerica and PDC Laboratories performed the analyses on the water samples

The test results indicate that small amounts of barium and fluoride are present in the water There are no detectable amounts of regulated organic or other inorganic chemicals in the potable water supply

Sincerely,

Thomas J Koralewski

Non-Community Public Water Supplies
On-Site Inspection Summary

Date: **06/17/03**

Facility: **ARNOLD ENGINEERING**

Facility ID: **0127209**

A sanitary survey was conducted at the above reference property on **06/11/03** .
At the conclusion of the survey, the following was noted:

NO VIOLATIONS AT THIS TIME

Your facility's sampling schedule is..... **ANNUAL**
The next bottle kit should arrive around..... **06/11/04**

Your next scheduled inspection will be: **6/10/2005**

If you have any questions, please feel free to contact Daniel E. Guif, Water Well Program Coordinator, at (815) 334-4585.

NON-COMMUNITY PUBLIC WATER SUPPLIES
On-Site Inspection Summary

DATE: October 06, 1995

TO: Arnold Engineering
300 N. West St.
Marengo, IL 60152

FROM: McHenry County Health Department

RE: Non-Community Well Survey

Facility ID Number: 0127209

A sanitary survey was conducted at the above referenced property on August 16, 1995 . At the conclusion of the survey, the following was noted:

Violation found: There was coliform bacteria present in your water sample.
By October 12, 1995, please submit 5 re-samples.
Your facility has been placed on an annual sampling schedule. The water bottle kit should arrive around June 15 of each year.

The next scheduled inspection will be 8-97

If you have any questions, please feel free to contact David St.Jules, R.S., at (815) 334-4585.

INSTRUCTIONS

1. The region or local health department must complete this form and discuss this plan and its purpose with the water supply operator and/or owner.

2. Enter the information requested on this form at the time of the next scheduled inspection and submit if this form has not previously been completed. Submit the form to the Division of Environmental Health, 525 West Jefferson Street, Springfield, Illinois 62761. A copy must be retained by the water system and the region or local health department office.

3. A sample siting plan is required by U.S.E.P.A. rules to assure that samples are collected from acceptable and representative locations.

4. Samples are to be collected from the tap location indicated.

5. If the supply plans on collecting samples from more than one location, list all of those locations.

NON-COMMUNITY PUBLIC WATER SUPPLIES ON-SITE INSPECTION SUMMARY

DATE: June 29, 1993

TO: Arnold Engineering
300 North West Street
Marengo, IL 60152
attn: Bob Lippe

FROM: MCHENRY COUNTY HEALTH DEPARTMENT

RE: NON-COMMUNITY WELL SURVEY

Facility ID Number: 0127209

A sanitary survey was conducted at the above referenced property on June 8, 1993. At the conclusion of the survey, the following was noted:

No violations noted at the time of survey. The facility has been placed on an annual sampling schedule for bacteria and nitrates. The water bottle kit should arrive around June 8th of each year.

The next scheduled inspection will be June 1995.

If you have any questions, please feel free to contact David St. Jules, RS at 815-334-4585.

Dear Owner/Operator·

A review of our records indicates that the above-mentioned facility has sample results due for the following chemicals, as required by the Drinking Water Systems Code (77 ILCS Code 900) for

HERBICIDE/PESTICIDE DUE. 06/30/03
INORGANICS DUE: 03/31/03

These chemical analyses were due on the dates shown. If these analyses have been completed, contact the laboratory that performed the tests and make sure the results are forwarded to this office. It is imperative that these tests be completed and the results obtained in this office by June 30, 2003.

If you have any questions concerning this letter, please call me at 217-782-5830, Fax 217-785-0253 or TTY (hearing impaired use only) 800-547-0466. Any correspondence must include the seven digit identification number for your site, which is 0127209.

NON-COMMUNITY PUBLIC WATER SUPPLIES
WATER SAMPLE RESULTS

MEMORANDUM

TO: Arnold Engineering Co.

FACILITY ID NUMBER:

FROM: [illegible]

RE: Non-Comm Well Survey

DATE: 10-4-91

The water sample that was taken by this Department during the sanitary survey has been analyzed and found to be satisfactory for coliform bacteria and nitrates.

A copy of this report will be forwarded to the Illinois Department of Public Health. This sample will count as a routine sample for this quarter. However, you must maintain the required water sampling schedule and return water containers promptly to the IDPH.

For convenience, regular bacterial water samples can also be brought to this Department on scheduled sample days and times. A $13.00 charge is required for all samples brought in. The Department will then take care of the necessary paperwork for these types of samples.

Should you have any further questions, please contact this office at 815-338-2514.

McHENRY COUNTY
DEPT. OF HEALTH

Mr. Joe O'Connor, Regional Supervisor
Illinois Department of Public Health
245 West Roosevelt Rd., Bldg. 5
West Chicago, Illinois 60185

Dear Mr. O'Connor:

We received a letter from the City of Marengo dated November 29, 1990 informing us that the four inch water line interconnecting Marengo's Public Water Supply with Arnold Engineering has been physically disconnected (see letter attached).

Since Arnold Engineering Company is no longer connected to the Marengo water system and now obtains water only from its private industrial well, we are reclassifying it as a non-community non-interconnected public water supply and therefore it falls under the jurisdiction of the Illinois Department of Public Health.

If you have questions, please advise this office located at 595 South State Street, Elgin, Illinois, phone (708)741-7771.

Very truly yours,

ENVIRONMENTAL PROTECTION AGENCY

Reference: Physical Disconnection of Arnold Engineering Company

Dear Bud,

This letter is to inform you that on November 28, 1990 the existing four inch water main serving Arnold Engineering was physically disconnected from Marengo's Public Water Supply.

The City of Marengo, Water Dept., shut off the existing four inch main line valve serving Arnold Engineering. They then removed a four foot section of the existing cast iron main, after the valve, and installed two four inch M J end caps to seal off both ends. To assure thrust blocking, a treated 4x4 approximately four foot long was placed between the end caps.

Completion of this work eliminates the cross connection that existed between Arnold Engineering and the Marengo Public Water Supply. If you have any questions concerning this correspondence please contact me at (815) 568-7467.

Sincerely

Chuck McLaughlin

August 15, 1990

RECEIVED
SEP 17 1990
McHENRY COUNTY
DEPT. OF HEALTH

Facility No. (New Supply)
MARENGO -- Arnold Engineering Company

Mr. Robert A Lippe, Supervisor of Analytical Services
Arnold Engineering Company
300 North West Street
Marengo, Illinois 60153

Gentlemen:

On June 26, and August 9, 1990, Engineer Abad of this office inspected the Arnold Engineering water system. You were contacted.

A public water supply is define as a water source and distribution system which regularly provides water to 15 or more services or 25 or more people. If the people served are regular residents, the system is a community, public water supply. If the people served are not regular residents the system is considered to be a non-community, public water supply.

The Illinois Environmental Protection Agency supervises the construction and operation of all community, public water supplies and any inter-connected, noncommunity, public water supplies.

Based on our visits we have classified the Arnold Engineering Company water system as an inter-connected, non-community, public water supply and therefore, subject to public water supply rules and regulations and under this Agency's jurisdiction.

You have indicated that you propose to completely disconnect your water system from the Marengo community water supply (as an alternative you could install a reduced pressure backflow preventor in the service line). If you elect to do either of these then you would be classified as a non-community, non-interconnected public water supply and be under the jurisdiction of the Illinois Department of Public Health.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

You further report that you plan to install a hydrant on the city's side of the disconnected service line and connect to this hydrant to obtain water from the city when your well is down for repairs..

We would not recommend obtaining water in this manner because of the potential that contamination, which might be hazardous to the employees, would be introduced in making the emergency connection.

We will plan to reinspect your water supply in approximately thirty (30) days to determine what option you have elected.

We appreciate the cooperation and courtesy extended to us during our visits. If you have question regarding the above do not hesitate to advise this office located at 595 South State Street, Elgin Illinois, phone 312-741-7771.

Very truly yours,

Environmental Protection Agency

DEAR ARNOLD ENGINEERING/BOB LIPPE:

THIS OFFICE HAS RECEIVED THE RESULTS OF LEAD AND COPPER ANALYSES PERFORMED ON YOUR NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLY. THIS TESTING IS REQUIRED BY UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. LABORATORY ANALYSES HAVE SHOWN THAT THE LEAD AND COPPER ACTION LEVELS ESTABLISHED IN THESE RULES HAVE NOT BEEN EXCEEDED IN YOUR WATER SUPPLY IN A 3 YEAR SAMPLING PERIOD. YOU ARE REQUIRED TO CONTINUE SAMPLING EVERY 3 YEARS, FROM THE SAME NUMBER OF TAPS. USEPA REQUIRES THAT ANNUAL SAMPLES BE COLLECTED DURING ONE OF THE FOLLOWING MONTHS: JUNE, JULY, AUGUST, SEPTEMBER: 2003. IF YOUR FACILITY IS NOT IN OPERATION DURING THESE MONTHS, SAMPLING SHOULD BE DONE AFTER THE FACILITY HAS BEEN REOPENED FOR AT LEAST ONE WEEK. YOU WILL RECEIVE SEPARATE NOTIFICATION OF TEST RESULTS AND TESTING DUE DATES FOR VOLATILE ORGANIC CHEMICALS, PESTICIDES AND HERBICIDES AND INORGANIC CHEMICALS.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

SINCERELY,

RICHARD PETRELLA, P.E.

EAR ARNOLD ENGINEERING/BOB LIPPE:

WE HAVE RECEIVED THE RESULTS OF CHEMICAL ANALYSES PERFORMED ON YOUR ATER SUPPLY IN COMPLIANCE WITH UNITED STATES ENVIRONMENTAL PROTECTION AGENCY USEPA) REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS EPARTMENT. THE TABLE BELOW SHOWS THE STATUS OF EACH CATEGORY TESTED AS EPORTED BY A LABORATORY AND INDICATES WHEN YOU WILL BE REQUIRED TO TEST OR THESE CONTAMINANTS AGAIN. TEST CYCLES ARE DETERMINED ACCORDING TO A OMBINATION OF CURRENT RESULTS, ORIGINAL VULNERABLITY AND PREVIOUS RESULTS. F ACTION IS REQUIRED TO IMPROVE THE QUALITY OF YOUR WATER SUPPLY, NSTRUCTIONS HAVE BEEN ENCLOSED.

BECAUSE THE VULNERABILITY ASSESSMENT PERFORMED BY OUR DEPARTMENT HAS ETERMINED YOUR SUPPLY IS NOT VULNERABLE TO ASBESTOS CONTAMINATION, YOU ARE RANTED A PERMANENT WAIVER TO INITIAL AND FUTURE SAMPLING FOR ASBESTOS. URTHER COPPER AND LEAD SAMPLING REQUIREMENTS WILL BE REPORTED TO YOU EPARATELY.

A REVISED COPY OF THIS LETTER WILL BE SENT TO YOU EACH TIME WE ECEIVE NEW TEST RESULTS. IF YOU HAVE ANY QUESTIONS CONCERNING THESE EQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, 800)547-0466.

June 26, 2000

Illinois Department of Public Health
525-535 West Jefferson Street
Springfield, IL 62761-0001

Attn.: Richard T. Petrella, P.E.

Subject: Drinking Water Tests for Herbicides, Pesticides, Lead, Copper
Facility ID No. 0127209

Dear Mr. Petrella:

Enclosed are the analyses from the potable water supply system at The Arnold Engineering Company facility at 300 N. West Street in Marengo. These tests were performed to comply with 77 ILCS Code 900.

Baxter & Woodman Consulting Engineers obtained the samples of water from the well for these tests. First Environmental Laboratories, Inc., performed the analyses on the water samples.

The test results indicate that small amounts of lead and copper, considerably below any action levels established by U.S. EPA, are present in the water. There are no detectable amounts of pesticides or herbicides in the potable water supply.

Sincerely,

Thomas J. Koralewski

ARNOLD ENGINEERING
300 N WEST STREET
MARENGO IL 60152

0127209

DEAR ARNOLD ENGINEERING/BOB LIPPE:

WE HAVE RECEIVED THE RESULTS OF CHEMICAL ANALYSES PERFORMED ON YOUR WATER SUPPLY IN COMPLIANCE WITH UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (USEPA) REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. THE TABLE BELOW SHOWS THE STATUS OF EACH CATEGORY TESTED AS REPORTED BY A LABORATORY AND INDICATES WHEN YOU WILL BE REQUIRED TO TEST FOR THESE CONTAMINANTS AGAIN. TEST CYCLES ARE DETERMINED ACCORDING TO A COMBINATION OF CURRENT RESULTS, ORIGINAL VULNERABLITY AND PREVIOUS RESULTS. IF ACTION IS REQUIRED TO IMPROVE THE QUALITY OF YOUR WATER SUPPLY, INSTRUCTIONS HAVE BEEN ENCLOSED.

BECAUSE THE VULNERABILITY ASSESSMENT PERFORMED BY OUR DEPARTMENT HAS DETERMINED YOUR SUPPLY IS NOT VULNERABLE TO ASBESTOS CONTAMINATION, YOU ARE GRANTED A PERMANENT WAIVER TO INITIAL AND FUTURE SAMPLING FOR ASBESTOS. FURTHER COPPER AND LEAD SAMPLING REQUIREMENTS WILL BE REPORTED TO YOU SEPARATELY.

A REVISED COPY OF THIS LETTER WILL BE SENT TO YOU EACH TIME WE RECEIVE NEW TEST RESULTS. IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

SINCERELY,

RICHARD PETRELLA, P.E.

Subject: Drinking Water Tests for Volatile Organic Compounds
Facility ID No. 0127209

Dear Mr. Petrella:

Enclosed are the analyses from the potable water supply system at The [redacted] Company facility at 300 N. West Street in Marengo. These tests were performed to comply with 77 ILCS Code 900.

The test results indicate that no detectable amounts of any regulated volatile organic compound are present in the potable water supply.

Sincerely,

Thomas J. Koralewski

Dear Mr. Zehner:

Enclosed are the analytical results for the samples by First Environmental Laboratories, Inc. on November 8, 1999. These samples were analyzed as directed on the enclosed chain of custody record.

Project Summary

Analyses were performed in accordance with EPA Method 524.2. All raw data, including QA/QC documentation will remain on file for future reference

I thank you for the opportunity to be of service, and look forward to working with you again in the future. Should you have any questions, or need any additional information, please feel free to contact me at (630) 778-1200.

Sincerely,

William H. Mottashed
Project Manager

Dear Owner/Operator:

A review of our records indicates that the above-mentioned facility has sample results due for the following chemicals, as required by the Drinking Water Systems Code (77 ILCS Code 900) for

INORGANICS DUE: 03/31/00

These chemical analyzes were due on the dates shown. If these analyzes have been completed, contact the laboratory that performed the tests and make sure the results are forwarded to this office. It is imperative that these tests be completed and the results obtained in this office by March 31, 2000.

If you have any questions concerning this letter, please call me at 217-782-5830, Fax 217-785-0253 or TTY (hearing impaired use only) 800-547-0466. Any correspondence must include the seven digit identification number for your site, which is 0127209.

Sincerely,

Richard T. Petrella, P.E.

DEAR ARNOLD ENGINEERING/BOB LIPPE:

THIS OFFICE HAS RECEIVED THE RESULTS OF LEAD AND COPPER ANALYSES PERFORMED ON YOUR NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLY. THIS TESTING IS REQUIRED BY UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. LABORATORY ANALYSES HAVE SHOWN THAT THE LEAD AND COPPER ACTION LEVELS ESTABLISHED IN THESE RULES HAVE NOT BEEN EXCEEDED IN YOUR WATER SUPPLY IN AN ANNUAL SAMPLING PERIOD. YOU ARE REQUIRED TO CONTINUE SAMPLING EVERY 3 YEARS, FROM THE SAME NUMBER OF TAPS. USEPA REQUIRES THAT ANNUAL SAMPLES BE COLLECTED DURING ONE OF THE FOLLOWING MONTHS: JUNE, JULY, AUGUST, SEPTEMBER: 2000. IF YOUR FACILITY IS NOT IN OPERATION DURING THESE MONTHS, SAMPLING SHOULD BE DONE AFTER THE FACILITY HAS BEEN REOPENED FOR AT LEAST ONE WEEK. YOU WILL RECEIVE SEPARATE NOTIFICATION OF TEST RESULTS AND TESTING DUE DATES FOR VOLATILE ORGANIC CHEMICALS, PESTICIDES AND HERBICIDES AND INORGANIC CHEMICALS.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

SINCERELY,

Richard Petrella

DEAR ARNOLD ENGINEERING/BOB LIPPE:

WE HAVE RECEIVED THE RESULTS OF CHEMICAL ANALYSES PERFORMED ON YOUR WATER SUPPLY IN COMPLIANCE WITH UNITED STATES ENVIRONMENTAL PROTECTION AGENCY (USEPA) REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. THE TABLE BELOW SHOWS THE STATUS OF EACH CATEGORY TESTED AS REPORTED BY A LABORATORY AND INDICATES WHEN YOU WILL BE REQUIRED TO TEST FOR THESE CONTAMINANTS AGAIN. TEST CYCLES ARE DETERMINED ACCORDING TO A COMBINATION OF CURRENT RESULTS, ORIGINAL VULNERABLITY AND PREVIOUS RESULTS. IF ACTION IS REQUIRED TO IMPROVE THE QUALITY OF YOUR WATER SUPPLY, INSTRUCTIONS HAVE BEEN ENCLOSED.

BECAUSE THE VULNERABILITY ASSESSMENT PERFORMED BY OUR DEPARTMENT HAS DETERMINED YOUR SUPPLY IS NOT VULNERABLE TO ASBESTOS CONTAMINATION, YOU ARE GRANTED A PERMANENT WAIVER TO INITIAL AND FUTURE SAMPLING FOR ASBESTOS. FURTHER COPPER AND LEAD SAMPLING REQUIREMENTS WILL BE REPORTED TO YOU SEPARATELY.

A REVISED COPY OF THIS LETTER WILL BE SENT TO YOU EACH TIME WE RECEIVE NEW TEST RESULTS. IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TTY, (800)547-0466.

Dear Owner/Operator:

A review of our records indicates that the above-mentioned facility has sample results due for the following chemicals, as required by the Drinking Water Systems Code (77 ILCS Code 900) for

COPPER TESTS DUE
HERBICIDE/PESTICIDE TESTS PAST DUE
LEAD TESTS DUE

These chemical analyzes are due by June 30, 1997. If these analyzes have been completed, contact the laboratory that performed the tests and make sure the results are forwarded to this office. It is imperative that these tests be completed and the results obtained in this office by **July 15, 1997.**

If you have any questions concerning this letter, please call me at 217-782-5830, Fax 217-785-0253 or TTY (hearing impaired use only) 800-547-0466. Any correspondence must include the seven digit identification number for your site, which is **0127209.**

LABORATORY ANALYSES HAVE SHOWN THAT THE LEAD AND COPPER ACTION LEVELS ESTABLISHED IN THESE RULES HAVE NOT BEEN EXCEEDED IN YOUR WATER SUPPLY IN AN ANNUAL SAMPLING PERIOD. YOU ARE REQUIRED TO CONTINUE SAMPLING ANNUALLY, FROM THE SAME NUMBER OF TAPS. USEPA REQUIRES THAT ANNUAL SAMPLES BE COLLECTED DURING ONE OF THE FOLLOWING MONTHS: JUNE, JULY, AUGUST, SEPTEMBER: 1996. IF YOUR FACILITY IS NOT IN OPERATION DURING THESE MONTHS, SAMPLING SHOULD BE DONE AFTER THE FACILITY HAS BEEN REOPENED FOR AT LEAST ONE WEEK. YOU WILL RECEIVE SEPARATE NOTIFICATION OF TEST RESULTS AND TESTING DUE DATES FOR VOLATILE ORGANIC CHEMICALS, PESTICIDES AND HERBICIDES AND INORGANIC CHEMICALS.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TDD, (800)547-0466.

SINCERELY,

Richard Petrella

DEAR ARNOLD ENGINEERING/BOB LIPPE:

THIS OFFICE HAS RECEIVED THE RESULTS OF LEAD AND COPPER ANALYSES PERFORMED ON YOUR NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLY. THIS TESTING IS REQUIRED BY UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. LABORATORY ANALYSES HAVE SHOWN THAT THE LEAD AND COPPER ACTION LEVELS ESTABLISHED IN THESE RULES HAVE NOT BEEN EXCEEDED IN YOUR WATER SUPPLY IN THE SECOND 6 MONTH SAMPLING PERIOD. YOU ARE NOW ADVISED THAT YOU MAY REDUCE TESTING FREQUENCY TO ANNUALLY (BY 12/31/1995) AS WELL AS REDUCE THE NUMBER OF TAPS SAMPLED BASED ON THE POPULATION YOU SERVE. SEE THE ATTACHED TABLE. YOU WILL RECEIVE SEPARATE NOTIFICATION OF TEST RESULTS AND TESTING DUE DATES FOR VOLATILE ORGANIC CHEMCIALS, PESTICIDES AND HERBICIDES, AND INORGANIC CHEMICALS.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TDD, (800)547-0466.

SINCERELY,

Richard Petrella

REPORT OF ANALYSIS

Unless specifically noted, this sample has been analyzed for pollutional bacteria called "coliforms" which are normally present in the intestinal tract of humans, birds, and land animals. They are always found in sewage, and are generally present in surface water and shallow ground water. Coliforms in a water sample usually indicate that pollution is entering the water supply and that organisms which cause intestinal infections may be present or may gain entrance to the supply. Proper location, construction, and maintenance of a supply will prevent pollution from entering, thus insuring bacteriologically safe water.

OPINIONS Indicates the quality of the water for drinking at the time of collection.

BACTERIOLOGICAL

S–Satisfactory-Indicates no coliform bacteria present.

U–Unsatisfactory-Incicates coliform bacteria is present, or questionable growth that is confirmed positive for coliform bacteria.

NITRATE

S–Satisfactory-Content satisfactory.

U–Unsatisfactory-Content is greater than 10 milligrams per liter which may be harmful to children under the age of one, and to pregnant women.

ANALYSIS OF REPORT

Unless specifically noted, this sample has been analyzed for pollutional bacteria called "Coliforms" which are normally present in the intestinal tract of humans, birds, and land animals. They are always found in sewage. Coliforms in water samples usually indicate that pollution is entering the water supply and organisms which cause intestinal infections may be present or may gain entrance to the supply. Proper well location, construction, and maintenance may prevent pollution from entering, thus assuring bacteriologically safe water.

Nitrate (as N) content of 10.0 milligrams per liter or greater may be harmful to children under the age of one, and to pregnant women.

RESULTS / OPINIONS

P=Present
A=Absent
S=Satisfactory, Indicates no coliform bacteria is present.
U=Unsatisfactory, Indicates coliform bacteria is present. Disinfection is required followed by resampling.
I=Inconclusive, A high level of bacteria other than coliform bacteria was found. A good quality drinking water should have little or no bacteria present. We recommend disinfection of the supply and then resampling.

ANALYSIS OF REPORT

Unless specifically noted, this sample has been analyzed for pollutional bacteria called "Coliforms" which are normally present in the intestinal tract of humans, birds, and land animals. They are always found in sewage. Coliforms in water samples usually indicate that pollution is entering the water supply and organisms which cause intestinal infections may be present or may gain entrance to the supply. Proper well location, construction, and maintenance may prevent pollution from entering, thus assuring bacteriologically safe water.

Nitrate (as N) content of 10.0 milligrams per liter or greater may be harmful to children under the age of one, and to pregnant women.

REPORT OF ANALYSIS

Unless specifically noted, this sample has been analyzed for pollutional bacteria called "coliforms" which are normally present in the intestinal tract of humans, birds, and land animals. They are always found in sewage, and are generally present in surface water and shallow ground water. Coliforms in a water sample usually indicate that pollution is entering the water supply and that organisms which cause intestinal infections may be present or may gain entrance to the supply. Proper location, construction, and maintenance of a supply will prevent pollution from entering, thus insuring bacteriologically safe water.

OPINIONS Indicates the quality of the water for drinking at the time of collection.

BACTERIOLOGICAL

S--Satisfactory-Indicates no coliform bacteria present.

U--Unsatisfactory-Indicates coliform bacteria is present, or questionable growth that is confirmed positive for coliform bacteria.

NITRATE

S--Satisfactory-Content satisfactory.

U--Unsatisfactory-Content is greater than 10 milligrams per liter which may be harmful to children under the age of one, and to pregnant women.

ARNOLD ENGINEERING
300 N WEST STREET
MARENGO IL 60152

0127209

DEAR ARNOLD ENGINEERING/BOB LIPPE:

THIS OFFICE HAS RECEIVED THE RESULTS OF LEAD AND COPPER ANALYSES PERFORMED ON YOUR NON-TRANSIENT, NON-COMMUNITY PUBLIC WATER SUPPLY. THIS TESTING IS REQUIRED BY UNITED STATES ENVIRONMENTAL PROTECTION AGENCY REGULATIONS AND THE DRINKING WATER SYSTEMS CODE ADOPTED BY THIS DEPARTMENT. LABORATORY ANALYSES HAVE SHOWN THAT THE LEAD AND COPPER ACTION LEVELS ESTABLISHED IN THESE RULES HAVE NOT BEEN EXCEEDED IN YOUR WATER SUPPLY IN THE SECOND 6 MONTH SAMPLING PERIOD. YOU ARE NOW ADVISED THAT YOU MAY REDUCE TESTING FREQUENCY TO ANNUALLY (BY 12/31/1995) AS WELL AS REDUCE THE NUMBER OF TAPS SAMPLED BASED ON THE POPULATION YOU SERVE. SEE THE ATTACHED TABLE. YOU WILL RECEIVE SEPARATE NOTIFICATION OF TEST RESULTS AND TESTING DUE DATES FOR VOLATILE ORGANIC CHEMCIALS, PESTICIDES AND HERBICIDES, AND INORGANIC CHEMICALS.

IF YOU HAVE ANY QUESTIONS CONCERNING THESE REQUIREMENTS, PLEASE CONTACT THIS OFFICE AT (217)782-5830, OR, FOR TDD, (800)547-0466.

SINCERELY,

Richard Petrella

Kristy Morrison

From: Zook, Tim [Tim.Zook@Illinois.gov]
Sent: Wednesday, April 09, 2014 3:41 PM
To: Kristy Morrison
Subject: FW: Arnold Magnetics site groundwater concerns

Hi Kristy,

See below message, which we just received from Tom Baughman.

From: Baughman, Tom
Sent: Wednesday, April 09, 2014 3:29 PM
To: pries@fastbytes.com
Cc: Zook, Tim; Sarah Berg; pmnomm@co.mchenry.il.us; Denny, Tiffanie
Subject: Arnold Magnetics site groundwater concerns

Mr. Patrick Ries – In your letter of April 7, 2014, you expressed several concerns about the Arnold Magnetics site and associated groundwater contamination.

The reference to an on-site former industrial landfill was from a telephone conversation with Illinois EPA in which they speculated that Arnold may have disposed of solvents and other wastes onto or into the ground, in addition to using the waste ponds. I do not know if they have established whether or not such a landfill exists or disposal of solvents onto the ground surface occurred.

While a more complete groundwater investigation is always desirable, it is not always available on initial assessments of a site (such as the one I did). I had limited information and made the best conclusions using the information that was available at the time. As more information becomes available, any site assessment may need to be updated.

The Illinois EPA believes that the general groundwater flow is to the northwest, toward the Kishwaukee River. The plume of chlorinated organic solvents extends to the northwest of the site and is a prime clue to the direction of groundwater flow. Plumes of contaminated groundwater typically extend in a narrow band downgradient of a contaminant source, and they usually are not much wider than the contaminant source itself. This has been found to be true in many investigations of contaminant sources, both of landfills and industrial sites.

I did not know that Arnold had discharged sodium hypochlorite into their wastewater ponds, and this certainly could have contributed to sodium contamination of groundwater, given sufficient discharge from the ponds into the groundwater. However, this sodium would be in a narrow plume, like the VOCs, and not in scattered wells around the site. The one thing the wells with sodium all had in common were water softeners. The water softeners may not have been the only source, and Arnold, road salt, or natural sources may have contributed. However, all the wells with elevated sodium also had water softeners, and no well without a water softener had elevated sodium. This suggests that the water softeners may have been the primary source of sodium for most of the wells. That said, yes, if Arnold discharged sodium to their wastewater ponds, they could have contributed to sodium in downgradient wells. Given that, it might be

reasonable to continue sampling for sodium in downgradient wells. However, it should be done with the understanding that Arnold likely is not the only source of sodium in those wells, and Arnold even may not be the most important source of sodium in those wells.

One thing to keep in mind is that the USEPA DWEL for sodium is for someone on a sodium-restricted diet. USEPA also considers the DWEL for sodium to be outdated and in need of revision upward. Until the number is revised, however, we need to use the existing DWEL.

Sodium is an essential nutrient, with the average adult needing about 500 milligrams per day (mg/d). Most Americans consume 4,000 to 6,000 mg/d of sodium, with diet being the largest contributor. A low sodium diet is 1,000 to 3,000 mg/d. The National Research Council recommends a maximum of 2,400 mg/d, and this has been incorporated into U.S. Food and Drug Administration guidelines for food.

The USEPA DWEL is 20,000 ppb = 20 mg/liter. The well you reference has 22,200 parts per billion (ppb) = 22.2 mg/liter. An adult drinking 2 liters of water from that well would ingest 44.4 mg/d, which is much less than the amount even in a sodium-restricted diet. The greatest concentration of sodium detected in a well near the Arnold site was 287,000 ppb = 287 mg/liter. An adult drinking 2 liters of water from that well would ingest 574 mg/day of sodium. That may contribute a substantive amount to someone on a low sodium diet. What we really need is for USEPA to develop a new DWEL, based on current recommendations for sodium-restricted diets and standard assumptions of drinking water ingestion rates (generally 2 liters per day for an adult).

Please feel free to contact me by phone or email if you have additional concerns. Your daughter or son-in-law who live near the Arnold site also may contact me.

Re: #707070801H
IDPH December 10, 2013 Letter to Mr. Tim Zook (IEPA)

Dear Mr. Baughman:

As part of a FOIA request I had made to IEPA concerning the Arnold Engineering/300 West LLC site in Marengo, Illinois, I was able to review your letter to Mr. Tim Zook, dated December 10, 2013. One of the properties impacted by the contamination from the Arnold property is owned by my daughter and son-in-law. Since they became aware of this situation in June 2013, I have been helping them understand the issues regarding this contamination issue.

I have performed considerable document review and have an understanding of the issues pertaining to this groundwater contamination situation. In reviewing your letter to Mr. Tim Zook, I have identified some issues that I would like to point out to you.

On page 2 of your letter, second paragraph, IDPH references that the source of contamination may have been "past disposal in an on-site former industrial landfill". Is IDPH just listing possible sources of contamination in a generic sense, or do they have specific knowledge of an on-site former industrial landfill on the Arnold property?

On Page 2 of your letter, the last paragraph, you present a discussion associated with sodium in the groundwater. IDPH states that "The source of sodium may not have been the Arnold site". This statement is ambiguous as to whether or not Arnold is the source of sodium contamination. IDPH goes on further suggesting that since only three of the wells had VOCs that exceeded MCLs, the other four wells with sodium greater than the DWEL were not in the contaminant plume of VOCs. "That suggests the Arnold site was not the source of sodium." IDPH goes on to state that "water softeners releasing sodium to septic systems are the most likely source of sodium in groundwater of the area."

On Page 5 of your letter, first paragraph, "IDPH also concludes that exposure to sodium in some wells may increase the risk of high blood pressure in some people. However, this sodium most likely was from water softeners discharging sodium into groundwater through septic systems and not the Arnold site."

The above comments by IDPH are all speculative, and as such, should not be the overriding factor in determining whether or not sodium should be added to the list of analytes for the private drinking water wells. In fact, as illustrated below, the conclusion reached by IDPH is based on faulty assumptions.

As an example, 4805 Ritz Road has the private well located east of the house, while the septic system is located west of the house. The distance separating these two points is over 100 feet. By IDPH's own admission, groundwater is flowing west/northwest. That means the private well is located hydraulically upgradient from the septic system. Further, there are no known septic systems hydraulically upgradient from this property's well for over 1,500 feet. The concentration of sodium in the sample taken from this

Asset Resource Management LLC

920/948-0993 • 866/607-7785 (Fax)
pries@fastbytes.com

property's well was 22,200 ppb. It would seem from this single example that IDPH logic is faulty concerning sodium in the groundwater.

In addition, I would like to point out that in Arnold's "Semi-Annual Report for Monitoring Wells for Wastewater Ponds", dated November 29, 2011, they indicated that they were changing their anti-fouling agent from sodium hypochlorite to hydrogen peroxide. This anti-fouling agent is added to the wastewater flows going into Ponds 1-4 and eventually the leach fields. The average daily flow through the ponds appears to be 20,000 gallons per hour.

This leads me to speculate that Arnold has used sodium hypochlorite in their ponds for a long period of time ending in November 2011. There has been no documentation provided as to the construction of the ponds or their liner system, if any, to date. In addition, by design, the leach field southwest of the ponds is designed to leach to the groundwater table. Any use of the anti-fouling agent would be expected to continue to flow to the leach fields, and enter the groundwater system. Because this has not been included in the groundwater investigations to date, I cannot make conclusions as to whether the high sodium concentrations found in the private drinking water wells are indicative of natural groundwater conditions, or impacted by the Arnold treatment system.

Furthermore, Arnold/300 West has not provided a geologic or hydrogeologic model of the area. While we can all speculate that groundwater is flowing west/northwest, we cannot know for certain the direction of groundwater flow, or the rate of the groundwater flow until a detailed hydrogeologic investigation is completed of the site and surrounding area. In fact, improper conclusions were reached when initial off-site private well sampling was performed on private wells immediately north of the subject property. This initial sampling did not report any off-site contamination. It is clear now that the conclusion reached as a part of this initial off-site sampling was incorrect.

Adding sodium to the analyte list for the private well owners should be under $25 per sample. Until all sources of groundwater contamination at the Arnold site are identified, and the extent of groundwater contamination is identified, I find it incredulous that IDPH does not recommend adding sodium to the parameter list for the private drinking water supplies.

I am requesting that IDPH re-visit this issue considering this additional information.

Thank you.

Sincerely,

Patrick Ries, P.E.

Subject: Arnold Magnetic Technologies/300 West LLC Site (Marengo)

Good Afternoon Patrick, et al:

I am the Illinois EPA/Bureau of Land/Voluntary Site Remediation Program Project Manager for the subject site. As I think you are aware, the site has had long-term use as a manufacturing facility. Though VOCs are reportedly no longer used in manufacturing operations, they were used for decades. Soil and groundwater sampling on the site raised sufficient concerns that off-site sampling was conducted. This eventually led to sampling of private wells on 17 properties north of the Arnold Site. (Groundwater flow is apparently to the NW, towards the Kishwaukee Fiver.) Chemicals of concern in the private wells are 1,1-Dichloroethylene, 1,1,1-Trichloroethane, cis-1,2-Dichloroethylene, 1,2-Dichloroethane, trans-1,2-Dichloroethylene, Trichloroethylene, Tetrachloroethylene, Vinyl Chloride, Chloroform, Bromodichloromethane and Bromomethane. Laboratory results indicate that several of these VOCs have been reported in concentrations above MCLs, in certain wells. In some other wells, VOCs have been detected, but at concentrations less than MCLs.

Though it may not be attributable to activities at the Arnold Site, relatively high levels of Sodium were reported in some of the private well samples. In this context, relatively high means in excess of the 20,000 ppb USEPA Drinking Water Equivalency Level.

The Attorney General's Office is involved with the Arnold Site and has filed a complaint. In addition, the AGO has been involved in discussions with the defendants concerning the possibility of installing Whole-house Treatment Systems for the residences on many of the 17 properties that have private wells.

In a DRAFT Order, the AGO has included language specifying that the Treatment Systems be capable of meeting MCLs for the VOCs listed above, along with meeting a Sodium level of 20,000 ppb. The design specs of the Treatment Systems are to be submitted to IEPA for review and approval.

COMMENTS AND QUESTION – The Illinois EPA does not have the expertise to "approve" such treatment systems for private homes. In addition, wells from individual homes are actually under the jurisdiction of IDPH and local Health Departments, rather than IEPA. I would therefore like to see IDPH and the McHenry County Health Department have the opportunity to review (and approve, if appropriate) any proposed Whole House Treatment Systems. The AGO desires to have contact information included in the DRAFT Order. **Is there someone I can use as a contact for the McHenry County Health Department?**

Please give me a call at 217/557-8085 is you want to discuss the situation.

Tim

December 10, 2013

Mr. Tim Zook
Bureau of Land
Illinois Environmental Protection Agency
1021 North Grand Avenue East
P.O. Box 19276
Springfield, Illinois 62794-9276

Dear Mr. Tim Zook:

On July 7, 2008 and on June 3 and July 24, 2013, the Illinois Environmental Protection Agency (Illinois EPA) asked the Illinois Department of Public Health (IDPH) to interpret the results of water samples from private wells near the Arnold Magnetic Technologies (Arnold) site, Marengo, Illinois, and send letters of interpretation to the owners of those wells. On November 13, 2013, Illinois EPA requested IDPH input on proposed water treatment systems to remove volatile organic compounds (VOCs) and sodium from private wells near the Arnold site.

Background and History

To evaluate the Arnold site, IDPH reviewed information supplied by Illinois EPA, including a site fact sheet, emails, maps, information about nearby private wells, and water sampling results from nearby private wells sampled on June 19, 2008 and on May 14 and July 8, 2013. IDPH also reviewed information on the Arnold website.

The Arnold site is at 300 N. West Street, Marengo, Illinois. The site is on rural land north of Marengo, with scattered farm homes and small businesses nearby. Some of the businesses are combination business and residential.

In Marengo in the late 1800s, the electrical engineer, Bion J. Arnold, founded the Arnold Electric Power Station Company, which supplied power to an electric interurban railroad. They also designed and built power, heat, and electric railway generating systems. Subsequently, the company name was changed to the Arnold Company, the Arnold Engineering Company, and, finally, to Arnold Magnetic Technologies. In addition to the Marengo headquarters, Arnold now has branches in Rochester, NY, Marietta, OH, Ogallala, NE, Norfolk, NE, the United Kingdom, Switzerland, and China. The present owner of Arnold is 300 West LLC.

Over the years, Arnold has made specialty magnets for many industries, including aerospace applications, airplanes (commercial and military), anti-aircraft shells, automobiles, computers, electrical power generation, home appliances, loudspeakers, magnetic separators, medical devices, microphones, military tanks, radios, solenoids, televisions, trains, and transformers.

After finding chlorinated solvents in on-site groundwater and soil, Arnold enrolled in the Illinois EPA Voluntary Site Remediation Program. Arnold no longer uses chlorinated organic solvents, and the on-site contamination evidently was from past use. The source of contamination may have been past spills, past disposal onto the ground surface, or past disposal in an on-site former industrial landfill. At the request of Illinois EPA, on June 19, 2008, a consultant hired by Arnold sampled three residential private wells west and northwest from the site. Analysis of those samples found no VOCs. At the request of Illinois EPA, IDPH sent letters to the well owners interpreting the sampling results.

Subsequent on-site groundwater investigations found that the direction of groundwater flow was to the west-northwest, toward private wells that were not sampled in 2008. On May 14, 2013, a consultant hired by Arnold sampled 13 private wells west, west-northwest, northwest, north, and northeast of the site for VOCs and inorganic chemicals, and on July 8, 2013, a consultant hired by Arnold sampled 17 private wells west, west-northwest, northwest, north, and northeast of the site for VOCs. These samples included wells closer to the site than wells sampled in 2008. All samples were taken before any water treatment devices. At the request of Illinois EPA, IDPH sent letters to the well owners interpreting the sampling results.

Exposures and Associated Health Risks

Analysis of private well samples taken after any water treatment device on May 14, 2013 found no inorganic compounds that exceeded any governmental drinking water standard or guideline, except for sodium:

Well	Sodium Concentration (ppb)	Governmental Standard or Guideline (ppb)	Source of Standard or Guideline
1	22,200	20,000	DWEL
3	233,000	20,000	DWEL
4	287,000	20,000	DWEL
8	190,000	20,000	DWEL
9	25,400	20,000	DWEL
10	59,200	20,000	DWEL
11	32,300	20,000	DWEL

ppb = Parts per billion
DWEL = Drinking Water Equivalency Level – guideline established by the U.S. Environmental Protection Agency. Concentration of a chemical in water that can be consumed for a lifetime without risk of adverse non-cancerous health effects.

The source of sodium may not have been the Arnold site. Although sodium exceeded the drinking water equivalency level (DWEL) in seven wells, only three of those wells had VOCs that exceeded a maximum contaminant level (MCL). The other four wells with sodium greater than the DWEL were not in the contaminant plume of VOCs, which extended northwest from the Arnold site. That suggests the Arnold site was not the source of sodium. Common sources of sodium in water include road salt and water softeners. Also, water softeners release considerable sodium to septic systems, which can cause elevated sodium concentrations in groundwater. The vicinity has lesser-used rural roads, so water softeners releasing sodium to septic systems are the most likely source of sodium in groundwater of the area. Of the 14 homes or businesses with

wells sampled for sodium, nine had water softeners, three did not, and the status of the others was unknown. Of the nine with water softeners, six had sodium concentrations greater than the DWEL, but none of the three without water softeners had sodium concentrations greater than the DWEL. This further suggests that the source of sodium in groundwater was water softeners discharging sodium into groundwater through septic systems. When sodium is greater than 20,000 parts per billion (ppb), IDPH recommends that people with high blood pressure, with a heart condition, or on a sodium-restricted diet consult their physician if they are drinking this water. Sodium has long been a major dietary factor affecting the risk of high blood pressure. Many studies have shown that reducing sodium intake can reduce blood pressure.

Analysis of private well samples taken on May 14, 2013 found the following concentrations of VOCs greater than drinking water standards:

Well	Chemical	Concentration (ppb)	Governmental Standard or Guideline (ppb)	Source of Standard or Guideline
2	Trichloroethene	6.47	5	MCL

ppb = parts per billion
MCL = Maximum Contaminant Level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.

Analysis of private well samples taken on July 8, 2013 found the following concentrations of VOCs that exceeded drinking water standards:

Well	Chemical	Concentration (ppb)	Governmental Standard or Guideline (ppb)	Source of Standard or Guideline
2	1,1-Dichloroethene	14.3-20.5	7	MCL
	Trichloroethene	7.03-7.3	5	MCL
3	1,1-Dichloroethene	53.3-56.5	7	MCL
	cis-1,2-Dichloroethene	21.6-30.2	70	MCL
	Vinyl chloride	1.53-2.34	2	MCL
4	Trichloroethene	5.25	5	MCL
5	1,1-Dichloroethene	7.69	7	MCL

ppb = parts per billion
MCL = Maximum Contaminant Level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.

In the May 14 and July 8, 2013 samples, four wells had at least one VOC that exceeded an MCL. VOCs that exceeded an MCL in at least one well included 1,1-dichloroethene, trichloroethene, and vinyl chloride.

The detected concentrations of 1,1-dichloroethene, trichloroethene, and vinyl chloride were less than concentrations that may cause non-cancerous effects. Some chemicals may cause cancer, although chemically-induced cancers cannot be distinguished from cancers that occur naturally. Studies of long-term ingestion of 1,1-dichloroethene by animals have not provided consistent evidence whether it may cause cancer. The U.S. Environmental Protection Agency (USEPA) concluded that the evidence is suggestive that 1,1-dichloroethene may be carcinogenic, but the evidence is insufficient to assess the cancer-causing potential in humans.

In animals, long-term exposure to low levels of trichloroethene may increase the risk of liver, kidney, or lung cancer. Using the USEPA oral exposure cancer slope factor and the greatest detected concentration of trichloroethene, drinking 2 liters of water per day by a 70 kilogram

adult for a 70 year lifetime would increase their estimated cancer risk by about 1 in 100,000, which would be a low increased risk of cancer.

Vinyl chloride is a known human carcinogen, and liver cancer, lung cancer, cancers of the blood-forming and lymphatic systems, and cancers of the brain and central nervous system have been observed in workers who inhaled large concentrations of vinyl chloride long-term. No studies have linked ingestion of vinyl chloride to cancer in humans, but long-term ingestion of vinyl chloride can cause liver cancer in animals. Using the USEPA oral exposure cancer slope factor and the greatest detected concentration of vinyl chloride, drinking 2 liters of water per day by a 70 kilogram adult for a 70 year lifetime would increase their estimated cancer risk by about 9 in 100,000, which would be a low increased risk of cancer. The cancer risks from trichloroethene and vinyl chloride would be in addition to the background rate of 1 in 3 people who get cancer during their lifetime.

Presently, Arnold is supplying bottled water to the businesses and residents with contaminated wells, which ended ingestion exposure to VOCs in groundwater. IDPH recommended using adequate ventilation during showering to minimize inhalation of VOCs. These actions would minimize exposure to VOCs and minimize any increased cancer risk.

Illinois EPA asked about the feasibility of using a whole-house water treatment system to remove VOCs and sodium. IDPH usually does not recommend a particular treatment method, but states what actions are needed to reduce exposure. If a water treatment system is used, it should be certified by ANSI/NSF. The following website can be searched for ANSI/NSF-approved water treatment devices:

http://info.nsf.org/Certified/dwtu/

Although sodium in some wells exceeded the DWEL, the sodium most likely was from water softeners discharging sodium into the groundwater through septic systems. Water softeners also use ion exchange to remove hardness-causing minerals such as calcium and manganese, and put sodium into the water in exchange. Consequently, the water after a water softener contains more sodium that the original well water. All water samples were taken before any water softener.

Activated charcoal can remove VOCs; however, to ensure effectiveness, the activated charcoal in the filter must be replaced regularly. Failure to replace the activated charcoal will render the filter ineffective with time. Consequently, providing municipal water or another alternate water source is a preferable solution.

Conclusions and Recommendations

IDPH concludes that past exposure to VOCs in some private wells near the site may have adversely impacted people's health. Past lifetime exposure to trichloroethene and vinyl chloride in some private wells near the Arnold site may have increased the risk of some cancers. However, the increased risk is too small to be observable against the 1 and 3 people who naturally get cancer during their lifetime. Furthermore, Arnold has provided the users of these wells with bottled water, and IDPH recommended using adequate ventilation during showering

to minimize inhalation of VOCs. These actions would minimize exposure to VOCs and minimize any increased cancer risk. Consequently, if people follow the recommendations of IDPH, present exposure to VOCs from private wells should be minimal and is not expected to harm people's health.

IDPH also concludes that exposure to sodium in some wells may increase the risk of high blood pressure in some people. However, this sodium most likely was from water softeners discharging sodium into groundwater through septic systems and not the Arnold site.

IDPH recommends:

- For wells with concentrations of a VOC that exceeds the MCL, we recommend that the water not be used for drinking or cooking, and that adequate ventilation be used during showering. An alternate water supply should be used for drinking and cooking.
- If a water treatment device is used, it should be certified for that purpose by ANSI/NSF. Proper and timely maintenance of any water treatment device (including filter element replacement) must be performed, or the device will become ineffective and not an acceptable alternative.
- For wells with concentrations of a VOC that does not exceed the MCL, we do not recommend any change in the use of water; however, we recommend quarterly sampling to ensure that concentrations do not change with time.
- For wells with concentrations of sodium greater than the DWEL, we recommend that people with high blood pressure, with a heart condition, or on a sodium-restricted diet consult their physician if they are drinking this water.

If you have any questions about this document, please contact me at our West Chicago Regional Office, 630-293-6800 or tom.baughman@illinois.gov.

Inspect Date:	1/22/2008	End Time:	1:00 PM

Complaint Details :

Karen Katamay with Illinois EPA - BOW asked for assistance with assessing and looking into groundwater contamination within atleast 1 onsite monitoring well that has chlorinated solvent contamination exceeding the clean drinking water standards.

Summary :

Site will be sent a VN by Tom Rivera, DesPlaines BOL/FOS, for 12(a) and 12(d) of the Act, in late February or early March 2008. Suggested Resolutions will include:

Enrolling in the Illinois EPA- Site Remediation Program.

Investigating onsite and offsite groundwater to determine the source and extent of the contamination.

Conduct soil and groundwater remediation, if necessary, to meet all applicable soil and groundwater objectives.

CONFIDENTIAL

MEMORANDUM

CONFIDENTIAL

DATE: April 29, 2008

TO: BUREAU of LAND File

FROM: TAR Thomas Rivera, Environmental Protection Specialist, Des Plaines BOL

SUBJECT: 1110650003 – McHenry County
Marengo/Arnold Magnetic Technologies
FOS

RECEIVED
JAN 0 8 2009
McHENRY COUNTY
DEPT. OF HEALTH

The purpose for this memo is to document a record review that I conducted of groundwater monitoring well sample results from monitoring wells located on the subject site (site). The site is located at 300 N. West Street in Marengo, Illinois. I also reviewed a March 17, 1990 dated Investigation Report (Monitoring Well Network Installation and Groundwater Flow Assessment at the Arnold Engineering Company) that was prepared by Roux Associates, Inc. The sample results and Investigation Report were provided to me by Karen Katamay (Bureau of Water, Des Plaines FOS) in approximately December 2007. The sample results show that elevated levels of chlorinated solvent contamination is present in on site groundwater, and has been for approximately 20 years. The Investigation Report shows that shallow groundwater flow under the site is towards the north-northwest, in the direction of the nearby Kishwaukee River. A synopsis of the sample results are in the attached Exceedances Summary Document that was prepared by Ms. Katamay. The attached Site Map depicts the site, the surrounding down gradient private well area and the location of the most impacted on site monitoring wells.

1,1,1-Trichloroethane (1,1,1-TCA) was detected as high as 4,900 ppb, in 1999, in on site groundwater monitoring well MW-3. More recently in 2007, 1,1,1-TCA was detected as high as 501 ppb in on site groundwater monitoring well MW-A7. Tetrachloroethene (PCE) was detected as high as 18.8 ppb, in 2007, in on site groundwater monitoring well MW-3. PCE contamination in MW-3 has steadily increased over the past approximately 6 years. Other on site groundwater monitoring wells have chlorinated solvent detections as well, but MW-3 and MW-A7 have shown the highest concentrations of 1,1,1-TCA and PCE. Residential/nonresidential private water wells are located to the north-northwest, directly down gradient of the site. The private wells are within ½ mile of the site and its unknown at this time if the private wells have been impacted by the chlorinated solvent groundwater contamination.

After receiving the groundwater contamination information from Ms. Katamay, I Initially conducted a complaint follow-up, under Complaint ID# C08-087 (see the attached Complaint Log). However, due to the elevated levels of chlorinated solvents and the fact that residential potable private wells are immediately down gradient of the site, I sent the site owner and

operator a Violation Notice (VN). I sent the owner and operator of the site a VN for violating Section 12(a) and 12(d) of the {Illinois} Environmental Protection Act. The operator, Arnold Magnetic Technologies, was sent a February 28, 2008 dated VN, under VN # L-2008-01057. The owner, 300 West LLC, was sent an April 15, 2008 dated VN, under VN # L-2008-01123. In both VNs, I asked that the source(s) of 1,1,1-TCA and PCE, and other related contaminants, that were detected in groundwater under the site be determined by conducting an Investigation under BOL's Site Remediation Program (SRP), and remediate if necessary also under the SRP. I also asked that the nearby down gradient private wells be sampled for Volatile Organic Compounds from an unfiltered and unsoftened tap.

Attention: Al Kalaczinski

Re: **Violation Notice, L-2008-01057**
LPC #1110650003 – McHenry County
Marengo/Arnold Magnetic Technologies
Compliance File

Dear Mr. Kalaczinski:

This constitutes a Violation Notice pursuant to Section 31(a)(1) of the [Illinois] Environmental Protection Act, 415 ILCS 5/31(a)(1), and is based on a record review completed on February 26, 2008 by representatives of the Illinois Environmental Protection Agency (Illinois EPA).

The Illinois EPA hereby provides notice of violations of environmental statutes, regulations, or permits as set forth in Attachment A to this letter. Attachment A includes an explanation of the activities that the Illinois EPA believes may resolve the specified violations, including an estimate of a reasonable time period to complete the necessary activities. However, due to the nature and seriousness of the violations cited, please be advised that resolution of the violations may require the involvement of a prosecutorial authority for purposes that may include, among others, the imposition of statutory penalties.

A written response which may include a request for a meeting with representatives of the Illinois EPA, must be submitted via certified mail to the Illinois EPA within 45 days of receipt of this letter. The response must address each violation specified in Attachment A and include for each an explanation of the activities that will be implemented and the time schedule for the completion of that activity. The written response will constitute a proposed Compliance Commitment Agreement (CCA) pursuant to Section 31 of the Act. The Illinois EPA will review the proposed CCA and will accept or reject it within 30 days of receipt.

If a timely written response to this Violation Notice is not provided, it shall be considered to be a waiver of the opportunity to respond and to meet provided by Section 31(a) of the Act, and the Illinois EPA may proceed with a referral to the prosecutorial authority.

Written communications should be directed to:

Illinois EPA – Bureau of Land
Attn: Charles Grigalauski
9511 West Harrison Street, 3rd Floor
Des Plaines, Illinois 60016

All communications must include reference to this **Violation Notice Number, L-2008-01057.**

The text of the Act referenced herein is available at www.ipcb.state.il.us. If you have questions regarding this matter, please contact Thomas Rivera at 847/294-4079.

ATTACHMENT A

1. Pursuant to Section 12(a) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(a)), no person shall cause, threaten or allow the discharge of any contaminants into the environment in any State so as to cause or tend to cause water pollution in Illinois, either alone or in combination with matter from other sources, or so as to violate regulations or standards adopted by the Pollution Control under this Act.

   A violation of Section 12(a) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(a)) is alleged for the following reason: **The discharge of contaminants was caused and allowed in a way that caused water pollution. Chlorinated solvent contamination above the Class 1 groundwater objectives is present in on site groundwater. The groundwater contamination has been present for approximately 20 years. Shallow groundwater flow under the site is to the north-northwest, towards the nearby Kishwaukee River. Residential/nonresidential private water wells are located to the north-northwest, directly down gradient of the site. The private wells are within ½ mile of the site and its unknown at this time if the private wells have been impacted by the chlorinated solvent groundwater contamination.**

   1,1,1-Trichloroethane (1,1,1-TCA) was detected as high as 4,900 ppb, in 1999, in on site groundwater monitoring well MW-3. More recently in 2007, 1,1,1-TCA was detected as high as 501 ppb in on site groundwater monitoring well MW-A7. Tetrachloroethene (PCE) was detected as high as 18.8 ppb, in 2007, in onsite groundwater monitoring well MW-3. PCE contamination in MW-3 has steadily increased over the past approximately 6 years. Other on site groundwater monitoring wells have chlorinated solvent detections as well, but MW-3 and MW-A7 have shown the highest concentrations of 1,1,1-TCA and PCE.

2. Pursuant to Section 12(d) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(d)), no person shall deposit any contaminants upon the land in such place and manner so as to create a water pollution hazard.

   A violation of Section 12(d) of the {Illinois} Environmental Protection Act (415 ILCS 5/12(d)) is alleged for the following reason: **Contaminants were deposited upon the land in such a place and manner that created a water pollution hazard. Chlorinated solvent contamination above the Class 1 groundwater objectives is present in on site groundwater. The groundwater contamination has been present for approximately 20 years. Shallow groundwater flow under the site is to the north-northwest, towards the nearby Kishwaukee River. Residential/nonresidential private water wells are located to the north-northwest, directly down gradient of the site. The private wells are within ½ mile of the site and its unknown at this time if the private wells have been impacted by the chlorinated solvent groundwater contamination.**

   1,1,1-TCA was detected as high as 4,900 ppb, in 1999, in on site groundwater monitoring well MW-3. More recently in 2007, 1,1,1-TCA was detected as high as 501 ppb in on site groundwater monitoring well MW-A7. PCE was detected as high as 18.8 ppb, in 2007, in on site groundwater monitoring well MW-3. PCE contamination in MW-3 has steadily increased over the past approximately 6 years. Other on site

groundwater monitoring wells have chlorinated solvent detections as well, but MW-3 and MW-A7 have shown the highest concentrations of 1,1,1-TCA and PCE.

SUGGESTED RESOLUTIONS

1. Immediately determine the source(s) of 1,1,1-TCA, PCE and other related contaminants that are present in groundwater under the subject site by conducting an Investigation.

2. Immediately determine the extent of 1,1,1-TCA, PCE and other related contaminants in soil and groundwater, both on site and off site, by conducting an Investigation.

3. Collect representative groundwater samples from all down gradient residential/nonresidential private water wells (approximately 16) located within approximately ½ mile of the site, see the attached map. The private water well samples shall be collected from an unfiltered and unsoftened spigot, after an appropriate water system purge is conducted. The samples shall be analyzed for Volatile Organic Compounds at an Illinois EPA approved laboratory. Illinois EPA would like to oversee the sampling event.

4. Remediate, if necessary, to meet all applicable remediation objectives for soil and groundwater.

* Immediately manage the groundwater to mitigate impairment caused by the release of volatile organic compounds.

* All copies of receipts/manifests, and analytical reports must be submitted to the Illinois EPA that document the proper disposal of any waste (i.e. impacted soil, contaminated groundwater). The receipts/manifests must be submitted within 10 days after the off-site shipment.

* Within 45 days from the receipt of this letter, enroll in the Site Remediation Program.

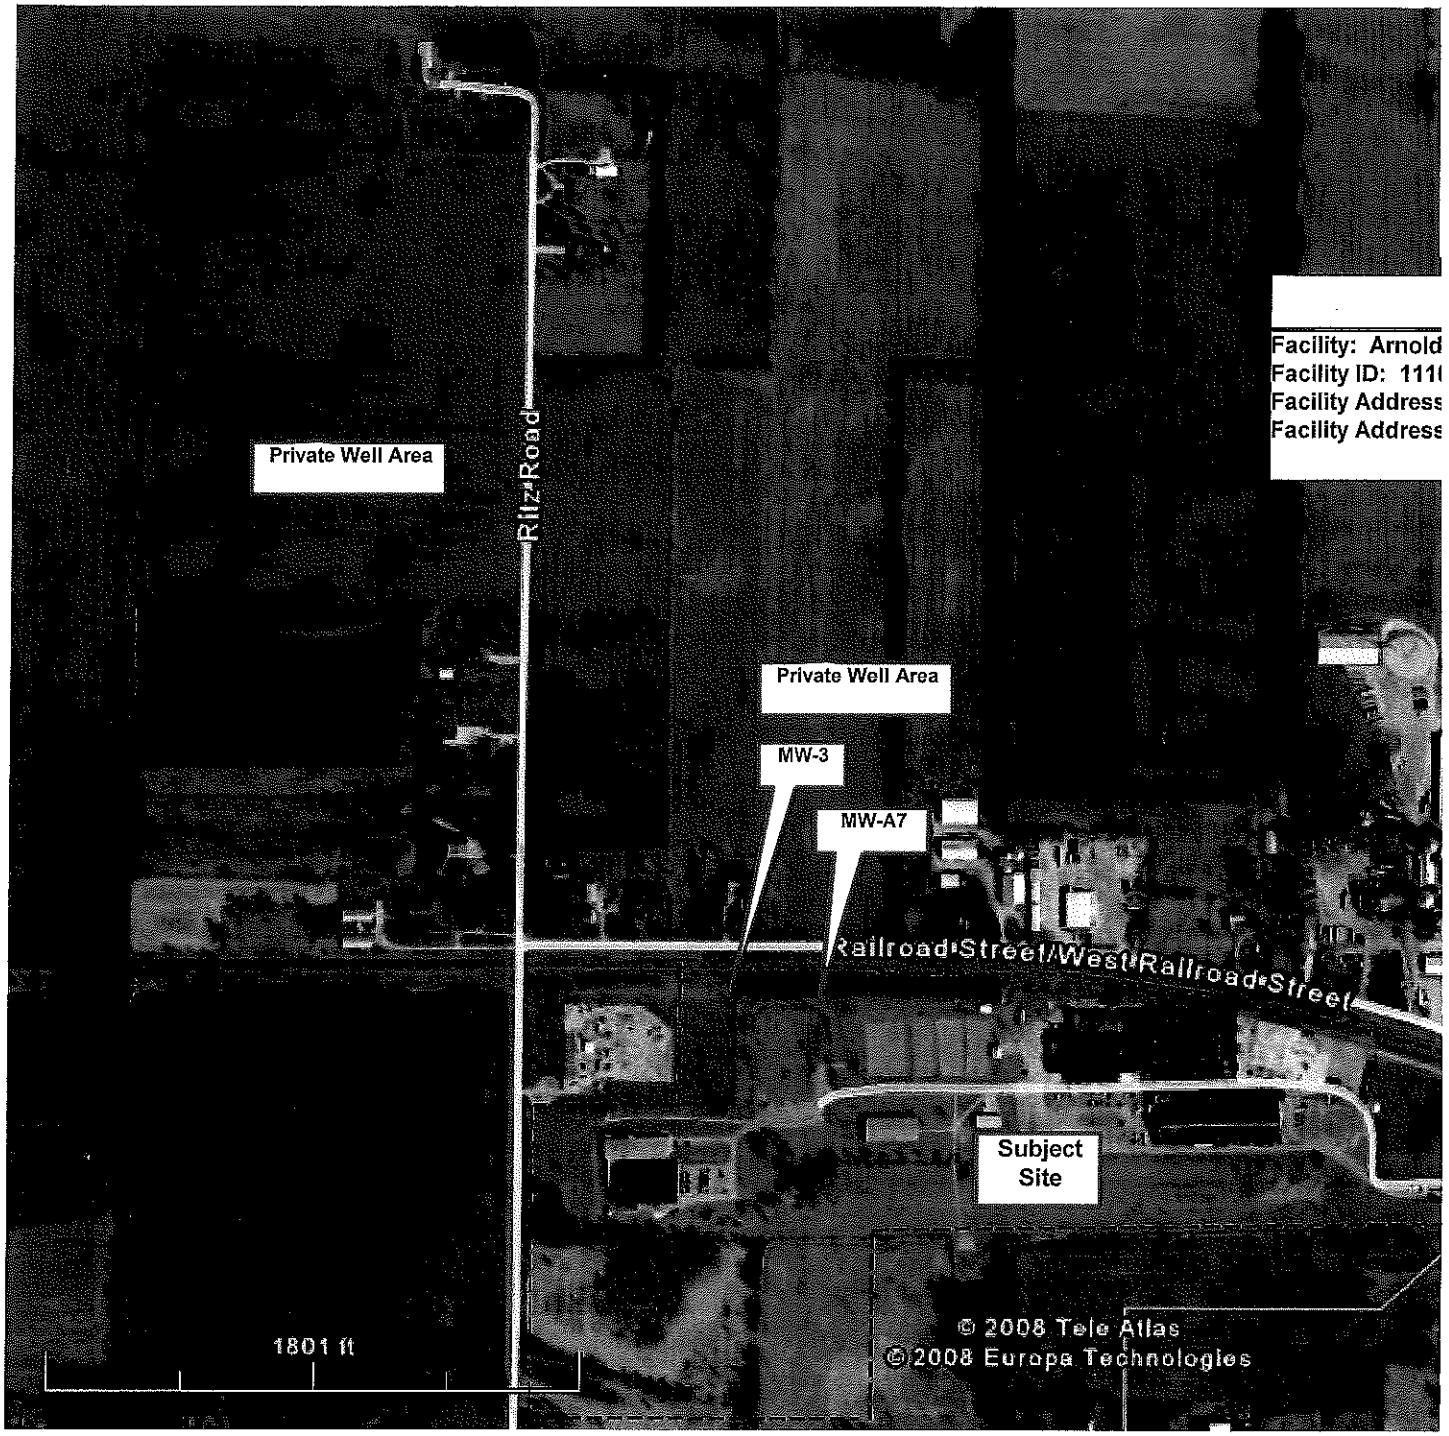
* A Site Investigation Work Plan shall be submitted within 30 days of the Illinois EPA approval of the Site Remediation application.

* The Site Investigation shall be implemented within 30 days of the Illinois EPA approval of the Site Investigation Work Plan.

* The Site Investigation Report shall be submitted within 180 days of approval of the Site Investigation Work Plan.

* The Remediation Objectives Report shall be submitted within 30 days of approval of the Site Investigation Report.

* The Remedial Action Plan shall be submitted within 30 days of Illinois EPA approval



of the Remedial Objectives Report.

* **The remedial action shall be implemented within 30 days of Illinois EPA approval of the Remediation Action Plan.**

* **The Remedial Action Completion Report shall be submitted within 365 days of Illinois EPA approval of the Remedial Action Plan.**

The written response to this Violation Notice must include information in rebuttal, explanation, or justification of each alleged violation and must be submitted to the Illinois EPA by certified mail, within 45 days of receipt of this Violation Notice. The written response must also include a proposed Compliance Commitment Agreement that commits to specific remedial actions, includes specified times for achieving each commitment, and may include a statement that compliance has been achieved.

RECEIVED
JUL 30 2015
McHENRY COUNTY
DEPT. OF HEALTH

Ms. Kathryn A. Parmenter
Assistant Attorney General
Environmental Bureau
69 W. Washington St., 18th Floor
Chicago, IL 60602

Dear Ms. Parmenter:

Enclosed herewith is a Resolution adopted by the Marengo Township Board of Trustees at their regular monthly meeting on July 20, 2015. It concerns the environmental contamination issue that you have been working on recently in unincorporated Marengo Township.

Please note that the Township recognizes your office has been actively engaged in attempting to resolve this issue with the alleged perpetrators of this contamination. The Township and its' affected constituents are grateful for that. However, the Township is seeking an expeditious solution to this issue consistent with the Resolution.

After more than two years of discussions and interactions, it is apparent that only minimal progress has been made to date in seeking a satisfactory outcome. Furthermore, the remediation plans offered to date have fallen far short of addressing the long-term affects of this contamination, and subsequent clean up. In the meantime, residents continue to be at health risk throughout the affected area.

On behalf of Marengo Township, we ask that you elevate this issue to a "top priority" at this time in order to seek an expeditious resolution including using the courts, if necessary, to develop a well-defined and executable remediation plan.

Respectfully,

Steven L. Weskerna

Steven L. Weskerna, MBA
Supervisor
Marengo Township

Groundwater Contamination Resolution
Marengo Township
McHenry County, Illinois
July 20, 2015.

Whereas, a portion of Marengo Township is the subject of hazardous groundwater contamination in the area of Railroad Street and Ritz Road. The breadth and depth of the contaminated groundwater zone has not yet been determined. But, it is known to have contaminated the drinking water supplies of more than ten residential properties in the Township.

Whereas, the hazardous contamination has been determined to originate from property owned by 300 West, LLC, upon which Arnold Engineering Company has been engaged in manufacturing operations for more than 75 years.

Whereas, specific ground-water chemical contamination in residents' wells has been determined to be dangerously above established drinking water standards as set forth by the United States and Illinois Environmental Protection Agencies for safe and potable drinking water, thereby dangerously affecting and limiting both residential and business usage, property values, and quality of life of Township residents within a broad area of this general location.

Whereas, although Arnold has apparently known of the groundwater contamination for more than 20 years, the Illinois Attorney General's Office has been engaged with Arnold Engineering Company and 300 West, LLC for the past two years in environmental litigation and the negotiation of various potential short and long term remedies in order to restore and provide affected individuals, businesses, and entities with safe drinking and bathing water.

Now Therefore Be It Resolved, by The Supervisor and Board of Trustees of Marengo Township that;

The Illinois Attorney General's Office take immediate action against Arnold Engineering and 300 West to finalize a reasonable, but well-defined plan to provide for safe and potable tap water for all those affected within the subject area of contamination, and provide for the involvement of all affected Township residents in the development, definition and speedy implementation of that plan.

Further undertake and enforce a plan for the long-term remedial clean up of the aquifer in order to restore all affected in the area to a whole.

Adopted and Approved by Roll Call Vote this 20th day of July, 2015

RECEIVED
SEP 08 2015
McHENRY COUNTY
DEPT. OF HEALTH

Fact Sheet #2 **August 31, 2015**

300 West LLC/Arnold Engineering Co.
Site Investigation, Marengo, Illinois
Agency Identification # 170000116265

Site Background

The Arnold Engineering Co. ("Arnold") operates at the property located at 300 North West Street in Marengo, Illinois (the "Site"). 300 West LLC ("300 West") owns the property on which Arnold operates.

Historical chlorinated solvent use on the Site is presumed to be the cause of chemical contamination in local groundwater. Routine monitoring of on-site groundwater per the conditions of an Illinois EPA water permit revealed contamination by certain solvent-related chemicals. Testing of a few off-site private wells north of the Site began in 2008. No site-related chemicals were reported as being detected in private wells until 2013. 300 West and Arnold (collectively known as, the "Defendants") have denied the allegations regarding responsibility for area groundwater contamination.

Illinois EPA's referral to the Office of the Illinois Attorney General and the status of the Case

In June 2013, the Illinois EPA referred the contamination of residential wells located near the Site to the Office of the Illinois Attorney General (OIAG) for resolution through enforcement. Following the filing of a Complaint in June 2013, Agreed Orders were entered in McHenry County Circuit Court in June 2013, August 2013 and July 2014, requiring the Defendants to:

- Provide bottled water to certain private well owners near the Site,
- Conduct quarterly sampling of certain private wells, and
- Conduct an on-site and off-site investigation to determine the nature of the contamination, including volatile organic compounds (VOCs) and 1,4-dioxane, and the extent of the contamination including the depth.

The OIAG is proceeding on behalf of the State of Illinois to seek a permanent, safe drinking water alternative for affected private well users and a remedy for both the on-site soil and groundwater contamination and off-site groundwater contamination.

In March 2015, the OIAG filed a First Amended Complaint against the Defendants. The parties to the litigation are currently conducting fact discovery, which must be completed by September 30, 2015. When the fact discovery is completed, the case will proceed to the expert discovery phase. This will include the identification of testifying expert witnesses, the production of related documents and the taking of expert depositions. Expert discovery must be completed by January 15, 2016, unless otherwise ordered by the Court. After expert discovery is completed, the parties may file various motions and the case will proceed toward trial. A trial date has not been set by the Court. The next scheduled status hearing is on January 20, 2016 at 10:00 am at the McHenry County Courthouse. The OIAG and Illinois EPA will continue to provide updates during this process.

What is being done to protect water users from the contamination?

Bottled water is currently being provided to residents whose private wells have been affected by site-related contamination. However, it is not a permanent solution. The OIAG is pursuing the litigation of the pending case, while also attempting, with the Illinois EPA, to negotiate a permanent drinking water remedy with the Defendants. The Defendants recently proposed that filtration systems be installed in certain homes. The Illinois EPA and OIAG are evaluating the Defendants' proposal. Because of the ongoing litigation, the State cannot comment on the proposal, other than to note that no permanent remedy has been selected to date. The Illinois EPA and OIAG are also considering other possible options including connection to the City of Marengo (City) water supply.

The Defendants are required to sample private drinking water wells near and in the direction of groundwater flow to the Site on a quarterly basis pursuant to an Agreed Order. Any changes in sampling would require a modified order. A copy of the Agreed Orders may be found on the Illinois EPA webpage: http://www.epa.illinois.gov/topics/compliance-enforcement/enforcement-orders/index, using the term "300 West" in the Case Name field.

City of Marengo Water Supply

The City's water supply wells are located on the east side of Marengo in an area of groundwater that is not affected by the contamination from the Site. Also, in accordance with state and federal law, the community water supply is frequently tested to ensure water quality for all of the public water supply users. Sampling results have consistently shown the City's water supply to be in compliance for regulated contaminants. Illinois EPA's Drinking Water Watch provides analytical results and copies of consumer reports for public water supplies - http://water.epa.state.il.us/dww/index.jsp.

Questions regarding the Proposed Filtration Systems

Many questions have been received from area residents regarding the filtration systems proposed by the Defendants. Residents with affected wells have raised concerns about how effective the systems would be to remove the contaminants of concern; whether they would require a lot of space; how much annual maintenance might cost; how access agreements will be developed; whether there is a plan for clean water for livestock and crops; and whether money would be set aside in escrow to cover any maintenance issues or potential damage from operational failures. The State is evaluating the Defendants' filtration system proposal and, as such, is unable to provide answers to the foregoing questions at this time. However, if the filtration system proposal moves forward, answers to the residents' questions regarding the filtration system proposal will be provided.

Site Investigation

Pursuant to the Second Agreed Preliminary Injunction Order, as modified, the Defendants are required to conduct both on-site and off-site soil and groundwater sampling to define the extent of contamination. This is proceeding in a step-wise fashion continuing outward until the vertical and lateral boundaries of the contamination area is defined. In addition, the Defendants are required to submit letter reports, which show both on-site and off-site sampling data and locations. After completion of the soil and groundwater investigation to define the nature and extent of contamination, the Defendants are required to submit a Comprehensive Site Investigation and Remedial Objectives Report to the Illinois EPA that contains information on the vertical and lateral extent of the off-site groundwater contamination plume(s) as well as the on-site areas of soil and groundwater contamination. The report will also contain details such as maps depicting the contamination plumes, tables of environmental sampling data, ground surface

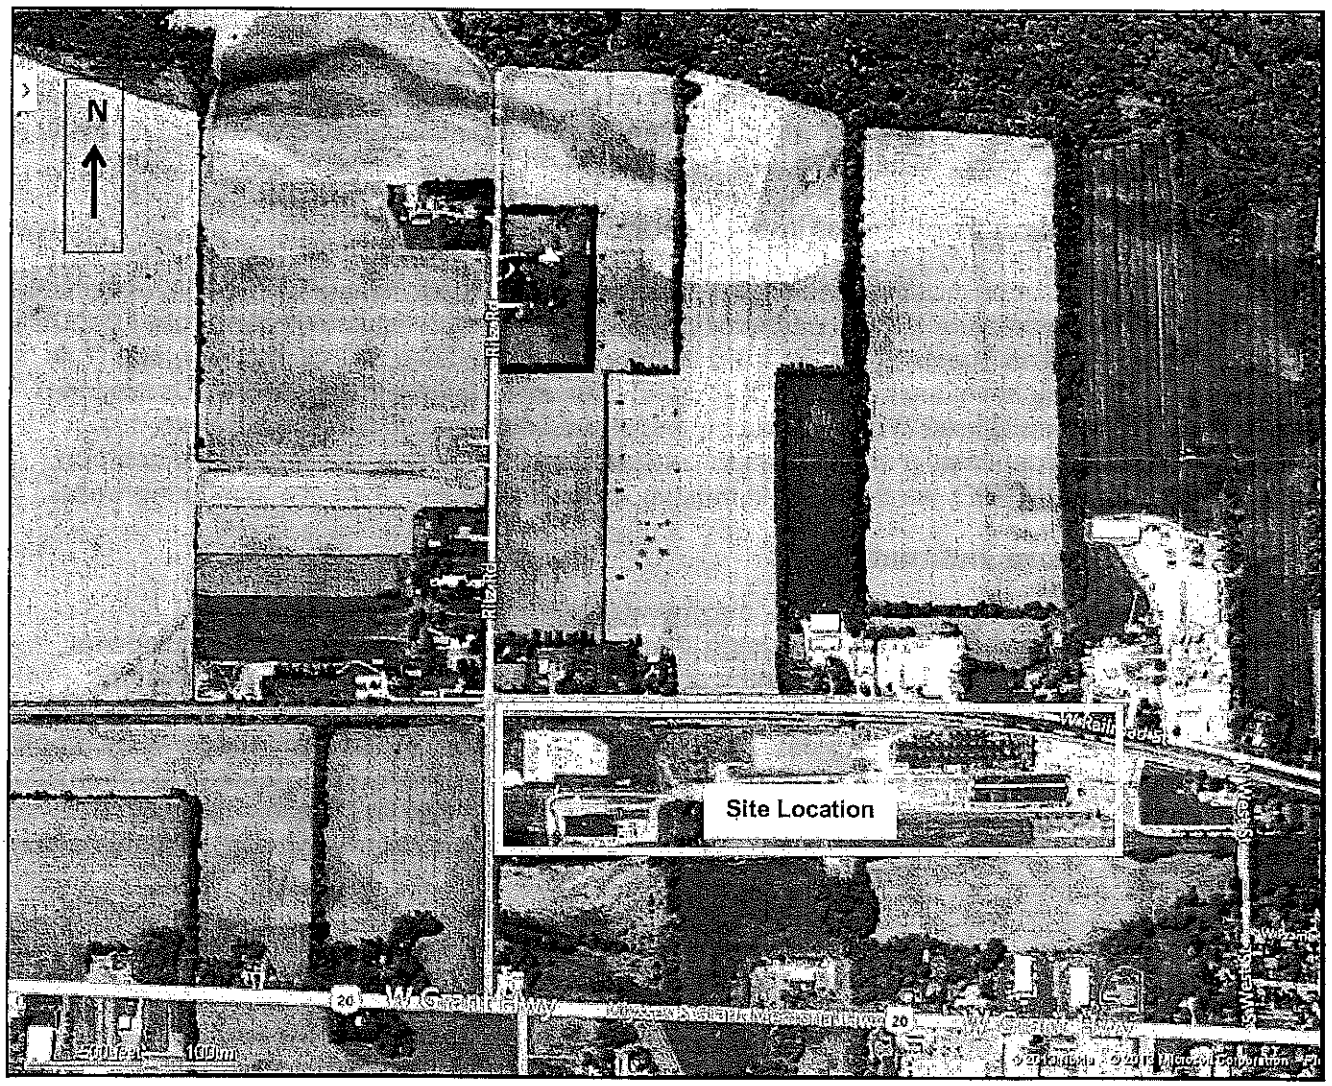
contours, and groundwater flow direction. The Defendants are required to submit the foregoing reports after the site investigation work is completed.

Once Illinois EPA receives and approves the Comprehensive Site Investigation and Remedial Objectives Report, the next step is for the Defendants to propose in a Remedial Action Plan a technically adequate remedy or remedies for both on-site and off-site contamination. When received, the Remedial Action Plan will also be posted on the Illinois EPA webpage.

What compounds have been found in the groundwater?

Volatile organic compounds including chlorinated solvents tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA) and breakdown products cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), 1,2-Dichloroethane (1,2-DCA), 1,1-dichloroethylene (1,1-DCE), and vinyl chloride have been detected in groundwater associated with the Site. VOCs are man-made chemicals commonly used in manufacturing processes and found in cleaning solvents. 1,4-dioxane has also been detected in many of the private well samples to date. Additionally, chloroform, methyl tert-butyl ether (MTBE), lead, iron, and manganese were detected in off-site monitoring wells.

How can I obtain more information?



The Illinois EPA has established a webpage, http://www.epa.illinois.gov/topics/community-relations/sites/arnold-magnetic-technologies/index that includes information and links to documents related to the Site, including existing court orders and a previous Site fact sheet and notice letter. Additionally, the Comprehensive Site Investigation Report, which includes results of all the investigation work, maps and environmental sampling data, will be posted when it is received and reviewed by Illinois EPA. Other documents not available on the webpage may be obtained through a Freedom of Information Act request at http://www.epa.illinois.gov/foia/index. The Illinois EPA site identification number for the site is 170000116265. Please note that due to the pending litigation, certain information and documents may not be disclosed.

INFORMATIONAL MEETING REGARDING WATER MAIN CONNECTION PROPOSAL

You are invited to attend a meeting at which representatives of the City of Marengo, 300 West, LLC and The Arnold Engineering Company will be present to discuss the proposed water main connection and installation in the City of Marengo to certain properties located near 300 North West Street, Marengo, Illinois. Representatives of the Illinois Environmental Protection Agency and the Illinois Attorney General's Office will also be in attendance.

Date: October 15, 2014

Time: 6:30 pm

Location: Marengo City Hall, 132 East Prairie Street, Marengo, IL (Second Floor)

For more information: please contact Bob Jaydos at (630) 673-1692

INFORMATIONAL MEETING
REGARDING WATER MAIN CONNECTION PROPOSAL

NO FILMING

Date: October 15, 2014

Time: 6:30 pm

Location: Marengo City Hall, 132 East Prairie Street, Marengo, IL (Second Floor)

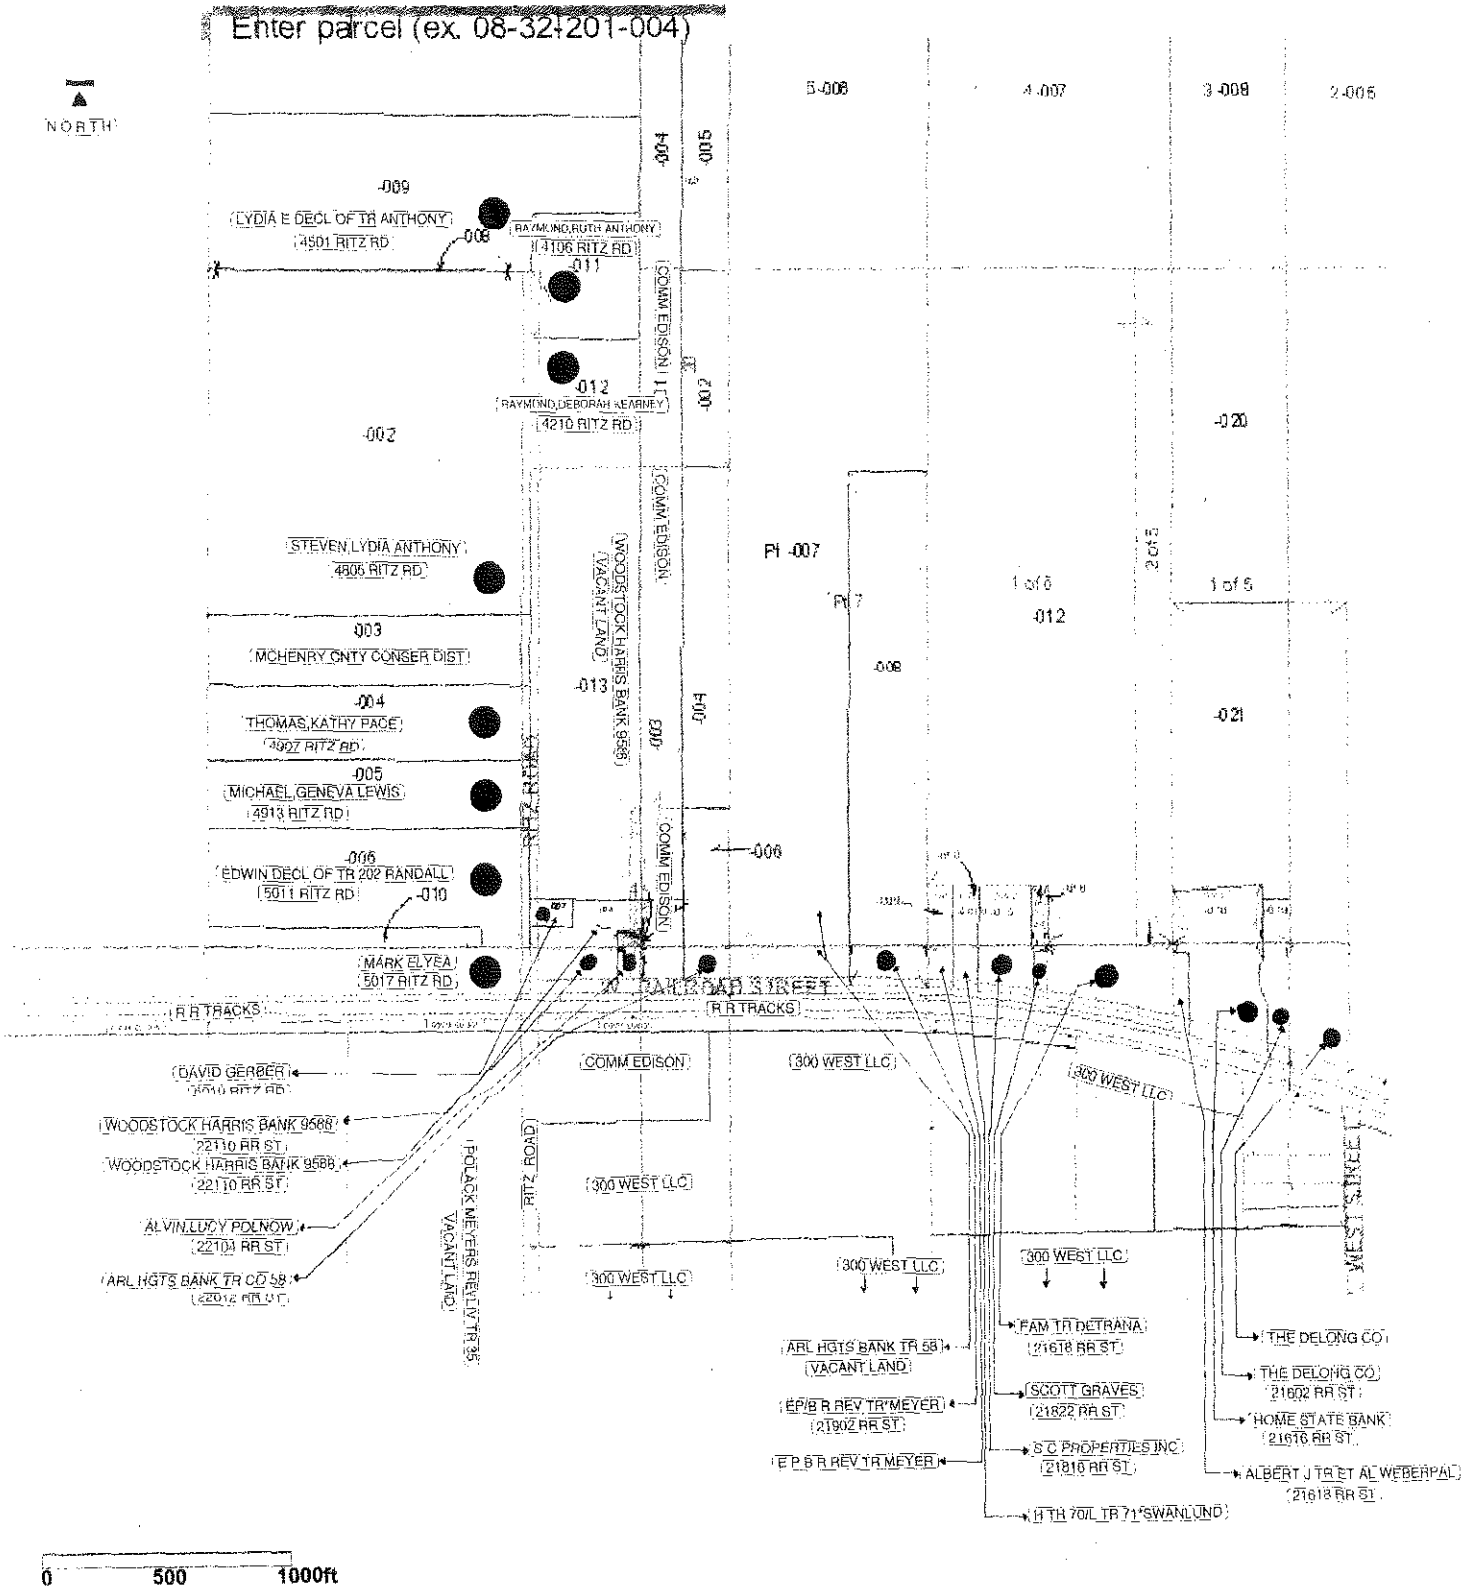
AGENDA

1. Introductions
   a. City of Marengo
   b. 300 West LLC
   c. The Arnold Engineering Company
   d. Illinois Environmental Protection Agency
   e. Illinois Attorney General's Office

2. Explanation as to Why Connecting Residences to the City of Marengo Water System is the Best Approach
   a. Drinking water quality of deep sandstone aquifer
   b. Possible migration of contaminants between aquifers

3. Discussion of Litigation Status and Timing

4. Water Main Connection
   a. Process/Timeline
   b. Residents shall not be required to pay for:
      1. the water main installation
      2. hook-ups to private residences
      3. capping of private wells
      4. replacement landscaping
   c. Anticipated cost of water bills
   d. Annexation



5. Questions and Answers re Expansion of Water Mains

Kristi Morrison
McHenry County Health Department

Hi Kristi,

Per our telephone conversation, I am forwarding the meeting notice for you and Patty Nomm. Thank you for agreeing to participate in this public meeting regarding the proposed installation of a Marengo community water supply main to the residents and businesses along Railroad Street and Ritz Road near the Arnold Engineering site in McHenry County. We appreciate your taking time to join us at the meeting. We anticipate, as I'm sure do you, that citizens will have questions about the proposed project that they will want to direct to their local and state health officials.

Sincerely,

Carol L. Fuller

Sent: Monday, October 06, 2014 2:19 PM
To: Ersel Schuster
Subject: Arnold Engineering Site

Hi Ersel:

One of my staff spoke with Carol Fuller of the IEPA regarding the Arnold Engineering site. She provided the following information:

- No remediation has been completed because the actual source/plume of contamination has not yet been determined. The IEPA is still working with the responsible party's consultant to obtain an acceptable plan to address the contamination/remediation. The contaminants are *chlorinated VOCs*.

- Several potential options have been evaluated for the residents who have been impacted, including in-home treatment, installation of a community water well at Arnold, and deeper replacement water wells. As you said, the current proposal is to run community water out to the residents from Marengo. Carol was not able to answer what would happen if residents chose to decline connection to community water at this time.

- Apparently, the Attorney General is hosting a meeting at Marengo City Hall for the residents on October 15th at 6:30 p.m. Although, we have not been specifically invited by the Attorney General, it is my understanding that it is a public meeting. We will have a staff representative attend.

I will follow up with you after that meeting. If you need additional information before then, please let me know.

Subject: Naturally-occuring metals in groundwater

Hi Sara,

My name is Emily and I'm working with Carol Fuller in the IEPA Office of Community Relations on a Right to Know site in Marengo. We found high concentrations of different metal contaminants in the site's monitoring wells, and I was wondering if you know generally which metals you find naturally occurring in the groundwater in that area. It would help us put our numbers into perspective.

Thank you!
Emily

Subject: RE: Naturally-occuring metals in groundwater

Hi Sarah,

Okay, good to know, thanks. I've been sifting through our water systems database but haven't been able to find a pattern with anything yet based on the non-coliform sampling on the wells nearby (I've been looking mostly at Well 6).

If this helps at all here are some of the highest concentrations recorded (from 2010) that we're trying to put in perspective:

- Aluminum: 44mg/L — 44000 ppb. MCL. Secondary St. 50-200
- Iron: 360 mg/L — 360000 ppb. Sec (3 ppm)
- Arsenic: .28 mg/L — 280 ppb – MCL 10 ppb
- Barium: 2.7 mg/L — 2700 ppb (2000 ppb)
- Manganese: 31 mg/L — 31000 ppb rec. 50 ppb.
- Lead: .17 mg/L — 170 ppb MCL 15 ppb.

} monitoring well onsite Arnold's

all over MCL/secondary Standard or Recommended Levels.

– Will be sampling neighboring properties VOC's + metal screen

Historic sampling appears to be VOC's & Nickel

Thanks for your help,
Emily

Subject: RE: Naturally-occuring metals in groundwater

Emily,

I do know that we find arsenic naturally occurring through-out the County, ranging from 1ppb to 40+ ppb. Marengo area has had some detections over the MCL of 10 ppb. If I had some other data I may be able to assist. We could also look at the Community Water Supply Consumer Reports or some literature from ISGS or ISWS. Could you let me know what types of metals and levels you are interest in investigating.

Thanks,
Sarah

Re: LPC# 1110650003 – McHenry County
Marengo/ Arnold Magnetic Technologies
300 North West Street
Marengo, IL 60152
RTK Notification Correspondence—02A

Dear Mr. O'Connor:

The Illinois Environmental Protection Agency (Illinois EPA) wishes to provide you this notice under subsection 25d-3 of the Illinois Environmental Protection Act that chemical contamination of volatile organic compounds (VOCs) including chlorinated solvents tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1,1-Trichoroethane (1,1,1-TCA) and breakdown products cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), 1,1-dichloroethylene (1,1-DCE), 1,2-Dichloroethane (1,2-DCA) and vinyl chloride have been detected in groundwater associated with the facility (the Site) located at 300 N. West Street, Marengo, Illinois that is owned by 300 West LLC and operated by The Arnold Engineering Co. a/k/a Arnold Magnetic Technologies Corporation. VOCs are man-made chemicals commonly found in cleaning solvents. The known area or the area potentially affected by this contamination is called the Area of Concern (see Figure 1).

Arnold Magnetic Technologies is located on a site that was used as a generating station for an electric interurban railroad since the late 1880s. Later, since approximately the 1930s, magnet products manufacturing has occurred and continues today. Historical chlorinated solvent use on the site is presumed to be the cause of the groundwater contamination.

In May 2013, Illinois EPA staff and the facility's consultants conducted sampling of private wells in the Area of Concern for private and business property owners. Property owners that agreed to sampling were recently notified by the Illinois Department of Public Health (IDPH) whether or not their wells had VOC contamination levels that were greater than the Class I groundwater standards. Those homeowners whose water contamination levels were greater than Class I groundwater standards have been provided with bottled water by 300 West LLC, the owner of the Site. Groundwater is moving in a northwesterly direction from the site. It is a possibility that additional wells may have unacceptable levels of chemical contamination in the future.

Illinois EPA is currently working with the Illinois Office of the Attorney General to require 300 West LLC and Arnold Magnetic Technologies to continue providing bottled water to the properties where groundwater standards were violated, to conduct regular sampling of the wells in the Area of Concern, to

evaluate long-term alternate water supplies and implement them if necessary, and to propose a schedule for further investigative and corrective activities. Illinois EPA and IDPH recommend that all well owners in the Area of Concern have their wells tested for VOCs and possibly other site-related constituents.

Please see the attached fact sheet for more information. If you have any further questions about this notice, you may contact:

Illinois Environmental Protection Agency
Lisa Bonnett, Director

Fact Sheet # 1

300 West LLC and Arnold Magnetic Technologies Corporation
300 N. West Street, Marengo, McHenry County, Illinois

Background

Arnold Magnetic Technologies is located on a site that was used as a generating station for an electric interurban railroad since the late 1880s and, since approximately the 1930s, magnet products manufacturing has occurred and continues today. Historical chlorinated solvent use on the site is presumed to be the cause of a threat to area groundwater.

Volatile organic compounds (VOCs) including chlorinated solvents tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA) and breakdown products cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), 1,2-Dichloroethane (1,2-DCA), 1,1-dichloroethylene (1,1-DCE), and vinyl chloride have been detected in groundwater associated with the facility (the Site) owned by 300 West LLC and operated by The Arnold Engineering Co. a/k/a Arnold Magnetic Technologies Corporation. VOCs are man-made chemicals commonly found in cleaning solvents. The area potentially affected by this contamination is called the Area of Concern (see Figure 1).

In May 2013, Illinois EPA staff and the facility's consultants conducted sampling of private wells in the Area of Concern for residents and businesses. 300 West LLC, the Site owner, provided bottled water to residents whose wells had unacceptable levels of VOCs. Illinois EPA is currently working with the Illinois Office of the Attorney General to require 300 West LLC and Arnold Magnetic Technologies to provide bottled water to the properties where groundwater has been contaminated and to take additional steps to investigate and clean up the Site.

What contaminants were found at this site?

Chlorinated solvent chemicals and breakdown products have been detected in the soil and groundwater. The highest concentrations found in groundwater on-site during 2010-2011 are (in milligrams per liter, mg/L):

- Tetrachloroethylene (PCE): 0.12 mg/L
- Trichloroethylene (TCE): 0.01 mg/L
- 1,1,1-trichloroethane (1,1,1-TCA) 0.3 mg/L
- 1,1-dichloroethylene (1,1-DCE): 0.044 mg/L

Additionally, in off-site wells, the following were detected:

- cis-1,2-dichloroethylene (cis-1,2-DCE): 0.019 mg/L
- trans-1,2-dichloroethylene (trans-1,2-DCE): 0.0058 mg/L
- Vinyl Chloride: 0.0025 mg/L

Illinois Environmental Protection Agency
Office of Community Relations
P.O. Box 19276
Springfield, Illinois 62794-9276

www.epa.state.il.us
Phone: (217) 782-2829
Fax: (217) 785-7725
TDD: (217) 782-9143

What are the Class I groundwater standards for these chemicals?

• PCE	0.005 mg/L
• TCE	0.005 mg/L
• 1,1,1-TCA	0.2 mg/L
• 1,1-DCE	0.007 mg/L
• 1,2-DCA	0.005 mg/L
• Vinyl Chloride	0.002 mg/L
• Cis-1,2-DCE	0.07 mg/L
• Trans-1,2-DCE	0.10 mg/L

Were any contaminants found on the Site but not in the off-site wells?

Yes. Other groundwater contaminants such as metals were found in some on-site wells during 2010-2011:

	Amount Detected	Class I Standard
• Aluminum	44.0 mg/L	3.5 mg/L
• Iron	360.0 mg/L	5.0 mg/L
• Lead	0.17 mg/L	0.0075 mg/L
• Manganese	31.0 mg/L	0.15 mg/L

What should I do if sampling results show levels above Class I Groundwater Standards?

Illinois EPA sends the laboratory results to the Illinois Department of Public Health (IDPH), and IDPH sends a letter to each well owner explaining the sampling results and providing recommendations about any changes in water use.

What adverse health effects are associated with exposure to VOCs?

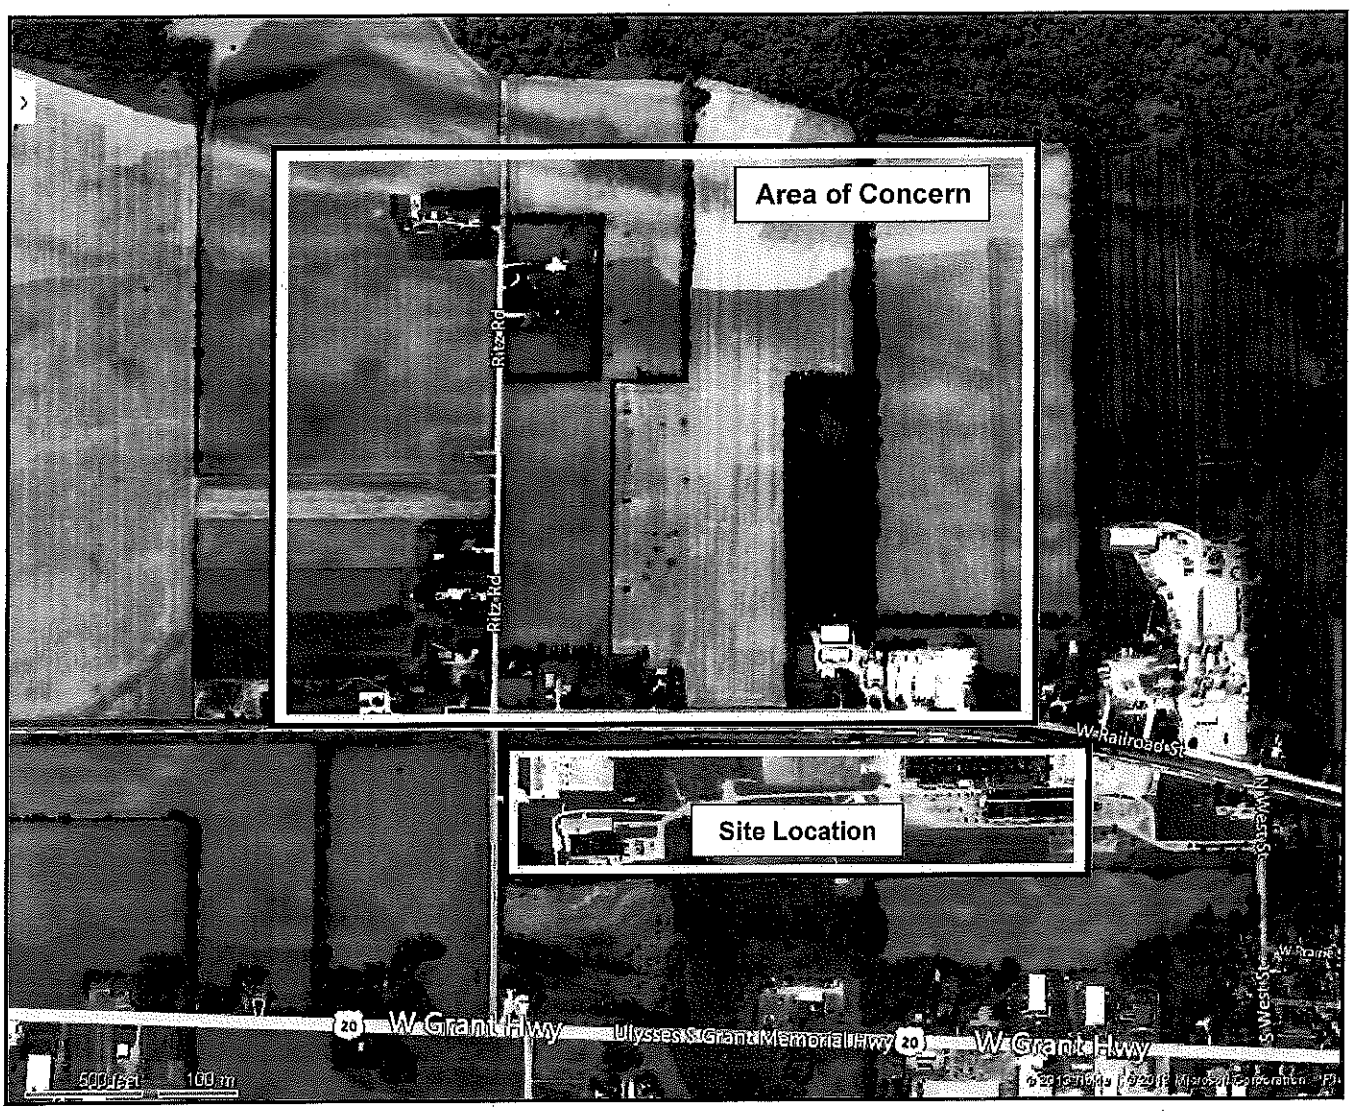
Exposure to low levels over long periods of time may be associated with impaired immune system function, kidney or liver damage, and may increase the risk of cancer.

Is the company taking action for the contamination?

The owner of the site, 300 West LLC, has acted promptly in responding to the immediate concerns raised by the discovery of contamination in private and non-community water wells and have indicated their willingness to continue to investigate and correct contamination related to the site.

What are the next steps?

Illinois EPA is pursuing a court order through the Illinois Office of the Attorney General to compel the site owner and operator to complete certain tasks by a specific timeline. These tasks include:



- Providing bottled water to well owners whose wells have site-related contamination;
- Conduct regular sampling of the private and semi-private wells in the Area of Concern;
- Evaluate long-term alternate water supplies and implement them if necessary; and
- Prepare a schedule for further investigative and corrective activities.

Re: LPC# 1110650003 – McHenry County
Marengo/ Arnold Magnetic Technologies
300 North West Street
Marengo, IL 60152
RTK Notification Correspondence—02A

Dear Mr. McNulty:

The Illinois Environmental Protection Agency (Illinois EPA) wishes to provide you this notice under subsection 25d-3 of the Illinois Environmental Protection Act that chemical contamination of volatile organic compounds (VOCs) including chlorinated solvents tetrachloroethylene (PCE), trichloroethylene (TCE), 1,1,1-Trichoroethane (1,1,1-TCA) and breakdown products cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), 1,1-dichloroethylene (1,1-DCE), 1,2-Dichloroethane (1,2-DCA) and vinyl chloride have been detected in groundwater associated with the facility (the Site) located at 300 N. West Street, Marengo, Illinois that is owned by 300 West LLC and operated by The Arnold Engineering Co. a/k/a Arnold Magnetic Technologies Corporation. VOCs are man-made chemicals commonly found in cleaning solvents. The known area or the area potentially affected by this contamination is called the Area of Concern (see Figure 1).

Arnold Magnetic Technologies is located on a site that was used as a generating station for an electric interurban railroad since the late 1880s. Later, since approximately the 1930s, magnet products manufacturing has occurred and continues today. Historical chlorinated solvent use on the site is presumed to be the cause of the groundwater contamination.

In May 2013, Illinois EPA staff and the facility's consultants conducted sampling of private wells in the Area of Concern for private and business property owners. Property owners that agreed to sampling were recently notified by the Illinois Department of Public Health (IDPH) whether or not their wells had VOC contamination levels that were greater than the Class I groundwater standards. Those homeowners whose water contamination levels were greater than Class I groundwater standards have been provided with bottled water by 300 West LLC, the owner of the Site. Groundwater is moving in a northwesterly direction from the site. It is a possibility that additional wells may have unacceptable levels of chemical contamination in the future.

Illinois EPA is currently working with the Illinois Office of the Attorney General to require 300 West LLC and Arnold Magnetic Technologies to continue providing bottled water to the properties where groundwater standards were violated, to conduct regular sampling of the wells in the Area of Concern, to

evaluate long-term alternate water supplies and implement them if necessary, and to propose a schedule for further investigative and corrective activities. Illinois EPA and IDPH recommend that all well owners in the Area of Concern have their wells tested for VOCs and possibly other site-related constituents.

Please see the attached fact sheet for more information. If you have any further questions about this notice, you may contact:

Fact Sheet # 1

300 West LLC and Arnold Magnetic Technologies Corporation
300 N. West Street, Marengo, McHenry County, Illinois

Background

Arnold Magnetic Technologies is located on a site that was used as a generating station for an electric interurban railroad since the late 1880s and, since approximately the 1930s, magnet products manufacturing has occurred and continues today. Historical chlorinated solvent use on the site is presumed to be the cause of a threat to area groundwater.

Volatile organic compounds (VOCs) including chlorinated solvents tetrachloroethylene (PCE), trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA) and breakdown products cis-1,2-dichloroethylene (cis-1,2-DCE), trans-1,2-dichloroethylene (trans-1,2-DCE), 1,2-Dichloroethane (1,2-DCA), 1,1-dichloroethylene (1,1-DCE), and vinyl chloride have been detected in groundwater associated with the facility (the Site) owned by 300 West LLC and operated by The Arnold Engineering Co. a/k/a Arnold Magnetic Technologies Corporation. VOCs are man-made chemicals commonly found in cleaning solvents. The area potentially affected by this contamination is called the Area of Concern (see Figure 1).

In May 2013, Illinois EPA staff and the facility's consultants conducted sampling of private wells in the Area of Concern for residents and businesses. 300 West LLC, the Site owner, provided bottled water to residents whose wells had unacceptable levels of VOCs. Illinois EPA is currently working with the Illinois Office of the Attorney General to require 300 West LLC and Arnold Magnetic Technologies to provide bottled water to the properties where groundwater has been contaminated and to take additional steps to investigate and clean up the Site.

What contaminants were found at this site?

Chlorinated solvent chemicals and breakdown products have been detected in the soil and groundwater. The highest concentrations found in groundwater on-site during 2010-2011 are (in milligrams per liter, mg/L):

- Tetrachloroethylene (PCE): 0.12 mg/L
- Trichloroethylene (TCE): 0.01 mg/L
- 1,1,1-trichloroethane (1,1,1-TCA) 0.3 mg/L
- 1,1-dichloroethylene (1,1-DCE): 0.044 mg/L

Additionally, in off-site wells, the following were detected:

- cis-1,2-dichloroethylene (cis-1,2-DCE): 0.019 mg/L
- trans-1,2-dichloroethylene (trans-1,2-DCE): 0.0058 mg/L
- Vinyl Chloride: 0.0025 mg/L

Illinois Environmental Protection Agency
Office of Community Relations
P.O. Box 19276
Springfield, Illinois 62794-9276

www.epa.state.il.us
Phone: (217) 782-2829
Fax: (217) 785-7725
TDD: (217) 782-9143

What are the Class I groundwater standards for these chemicals?

• PCE	0.005 mg/L
• TCE	0.005 mg/L
• 1,1,1-TCA	0.2 mg/L
• 1,1-DCE	0.007 mg/L
• 1,2-DCA	0.005 mg/L
• Vinyl Chloride	0.002 mg/L
• Cis-1,2-DCE	0.07 mg/L
• Trans-1,2-DCE	0.10 mg/L

Were any contaminants found on the Site but not in the off-site wells?

Yes. Other groundwater contaminants such as metals were found in some on-site wells during 2010-2011:

	Amount Detected	Class I Standard
• Aluminum	44.0 mg/L	3.5 mg/L
• Iron	360.0 mg/L	5.0 mg/L
• Lead	0.17 mg/L	0.0075 mg/L
• Manganese	31.0 mg/L	0.15 mg/L

What should I do if sampling results show levels above Class I Groundwater Standards?

Illinois EPA sends the laboratory results to the Illinois Department of Public Health (IDPH), and IDPH sends a letter to each well owner explaining the sampling results and providing recommendations about any changes in water use.

What adverse health effects are associated with exposure to VOCs?

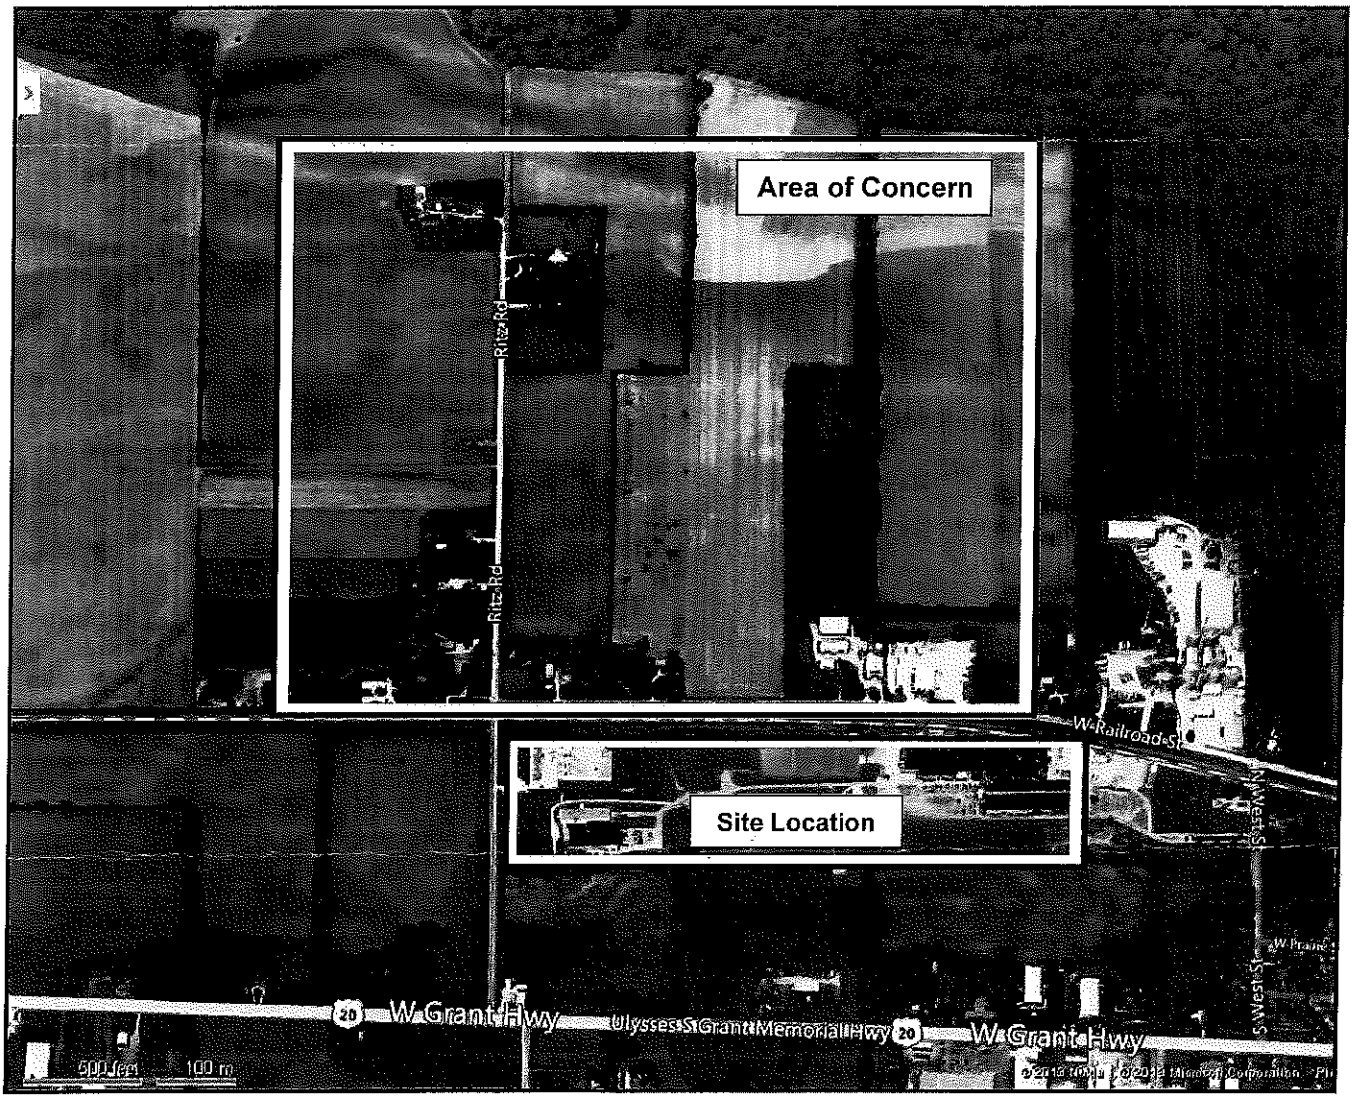
Exposure to low levels over long periods of time may be associated with impaired immune system function, kidney or liver damage, and may increase the risk of cancer.

Is the company taking action for the contamination?

The owner of the site, 300 West LLC, has acted promptly in responding to the immediate concerns raised by the discovery of contamination in private and non-community water wells and have indicated their willingness to continue to investigate and correct contamination related to the site.

What are the next steps?

Illinois EPA is pursuing a court order through the Illinois Office of the Attorney General to compel the site owner and operator to complete certain tasks by a specific timeline. These tasks include:



- Providing bottled water to well owners whose wells have site-related contamination;
- Conduct regular sampling of the private and semi-private wells in the Area of Concern;
- Evaluate long-term alternate water supplies and implement them if necessary; and
- Prepare a schedule for further investigative and corrective activities.

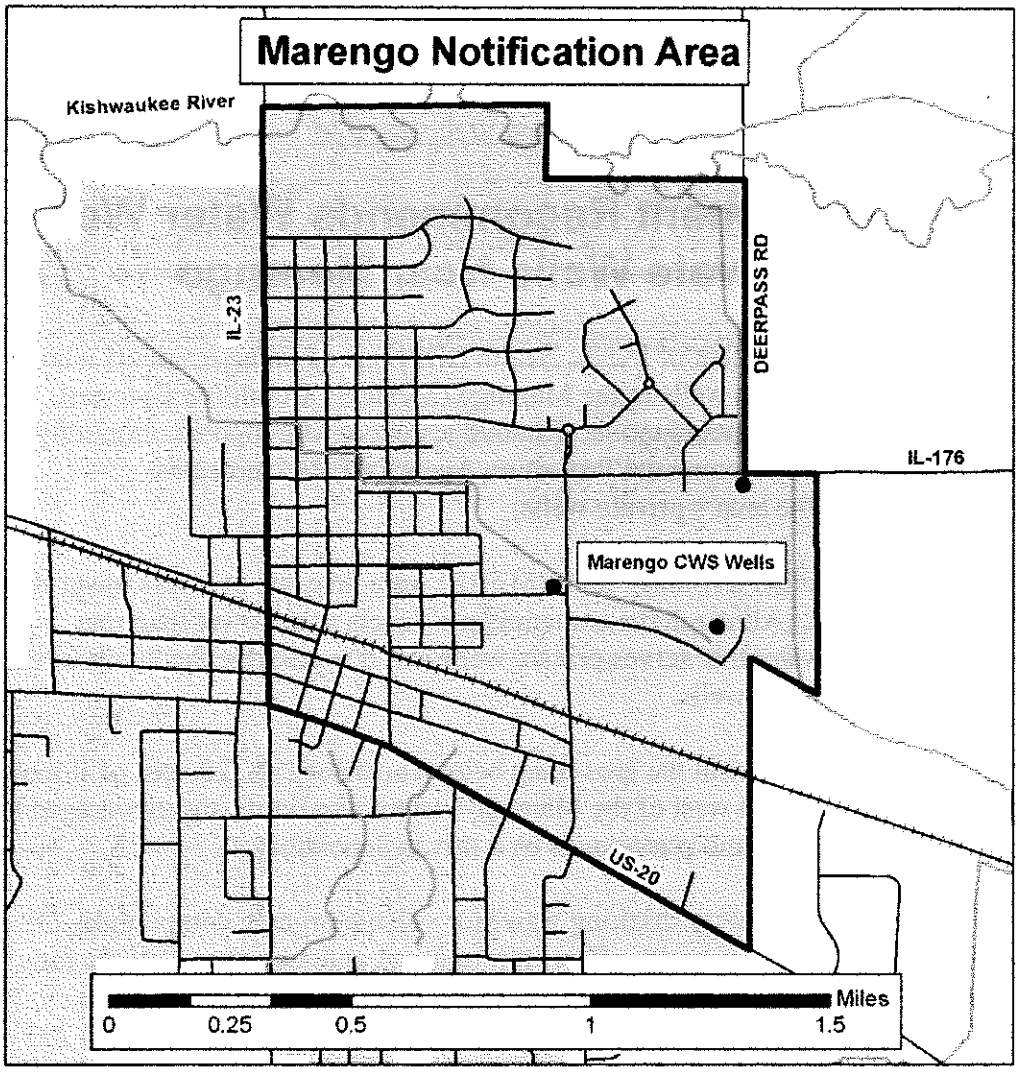
State Health Department Recommends Water Well Testing for Private Wells Near Marengo

SPRINGFIELD - The Illinois Department of Public Health (IDPH) is advising residents who obtain their drinking water from private wells in the Marengo (McHenry County) area to test their water for possible groundwater contamination. Routine testing of Marengo's community water supply wells by the Illinois Environmental Protection Agency (IEPA) indicates contaminants could be present in the area's private wells.

The contaminants benzene and methyl tert-butyl ether (MTBE) were detected at levels lower than the Illinois Groundwater Standard. Although the contaminants' levels were lower than the standard, this is the same groundwater that serves private wells and it is possible the levels of the contaminants may be higher in private wells.

Residents with private wells located within the area (map below) north of U.S. 20, east of Illinois 23, south of the Kishwaukee River, and west of the Marengo eastern city limits are encouraged to have their water tested for volatile organic compounds by a private laboratory.



For a list of laboratories certified to analyze drinking water for volatile organic compounds, interpretation of test results, contaminant health effects information, and recommendations for individuals who regularly consume well water, contact Joe O'Connor, IDPH West Chicago Regional Office, 245 West Roosevelt Road, Bldg 5, West Chicago, IL. 60185, phone (630) 293-6800 or joe.o'connor@illinois.gov.

The risk of adverse health effects depends on the levels of contaminants in the water and the length of exposure. Long-term exposure to these chemicals may result in an increased health risk to the liver and kidneys.

-more-

No violations of State of Illinois or federal drinking water standards have occurred in Marengo's community water supply. For information concerning the community water supply contact Dean Studer at 217-558-8280 or via email at dean.studer@illinois.gov

This information has been compiled from historic data and is provided to the public to ensure full disclosure of state records.

McHENRY COUNTY
DEPT. OF HEALTH

CERTIFIED-RETURN RECEIPT REQUESTED

December 20, 2005

McHenry County Health Department
2200 North Seminary Avenue
Woodstock, Illinois 60098

Attn: Patty Nomm

Dear Ms. Nomm:

Enclosed please find copies of two letters, one water use survey and the well sampling results that went out to home owners on Railroad street in Marengo, Illinois on December 7, 2005.

Per our previous conversations this is related to the special permit requirements from the IEPA for Arnold Engineering relative to its groundwater permit for the Marengo, Illinois plant.

Please contact me if you have any questions. You can call me directly at (585) 385-9010 x233 (office) or (585) 727-7631 (cell). Thank you for your assistance.

Sincerely,

Stephen A. Brisson
Environmental Health and Safety Coordinator

December 20, 2005

Mr. John Hanecker
22110 Railroad Street
Marengo, Illinois 60152

Subject: September 26, 2005 Water Survey and Well Sampling Request

Dear Mr. Hanecker:

Enclosed please find a copy of the laboratory report presenting results of the well sampling we conducted on your property on November 1, 2005. We are pleased to inform you that all results are reported by the laboratory to be "Non-detect" meaning that none of the substances analyzed for were detected in your water samples.

On behalf of Arnold Magnetic Technologies please accept our thanks for completing the water use survey and for allowing us the opportunity to complete the sampling of your well.

Please contact me if you have any questions about the results. You can call me directly at (815) 568-2433 (office) or (585) 727-7631 (cell).

Sincerely,

Stephen A. Brisson

ARNOLD®
MAGNETIC TECHNOLOGIES

Arnold Engineering Resident
Marengo, Illinois

Dear Resident:

We are writing to inform you about a Water Use Survey we will be conducting in August, as part of a renewal permit process at Arnold Engineering Company in Marengo, Illinois (Arnold). On July 30, 2004 the Illinois Environmental Protection Agency (Illinois EPA) issued Arnold a Water Pollution Control Permit. This permit enables Arnold to treat and monitor various wastewater discharges produced from the facility. This permit is a renewal permit and compliments previous permits which date back to the late 1980's. The Illinois EPA is the governing body that issues permits to ensure that the environment, and specifically, the waters of the state are protected for their particular use.

To ensure this protection, the Illinois EPA has recently requested Arnold Engineering to collect well information as part of a Water Use Survey. In addition to water use information from the Arnold property, this survey also includes the collection of samples from any adjacent residential wells and submission of these samples to an independent laboratory for analysis. Your participation in this survey and water sample collection is voluntary, and we can arrange a date and time convenient for you to collect a water sample from your well(s). Attached you will find a Water Use Survey form which will provide Illinois EPA with technical information about the well and its use on your property. It would be very helpful to our Survey if you would complete the form and return to my attention in the enclosed self-addressed stamped envelope.

Upon receipt of your completed form, I or another Arnold representative will call you to arrange for the sampling. If and/or when you have given us your permission, an Arnold employee and representative(s) will arrive at your home to explain the sampling procedure and collect the sample. The samples are collected from at least two taps in your home, generally the kitchen sink and an outdoor faucet. The sampling should take no longer than 30-45 minutes. The sample will then be delivered to an independent laboratory for analysis. The test results will be sent directly to you and they usually arrive in approximately four weeks. Sampling and analysis will be completed at no charge to you.
If you have any questions about the results when they arrive, you may contact Patty Nomm of the McHenry County Health Department at (815) 334-4585 who can assist you.

Please contact me if you have any questions about this Water Use Survey or the enclosed form. You can call me directly at (815) 568-2433 (office) or (585) 727-7631 (cell). Thank you in advance for your participation and cooperation in the Survey.

Sincerely,

Stephen A. Brisson
EH&S Coordinator

Dear Ms. Nomm:

Enclosed please find copies of three letters and one water use survey that went out to home owners on Railroad street in Marengo, Illinois on Monday September 26, 2005.

Per our previous conversations this is related to the special permit requirements from the IEPA for Arnold Engineering relative to its groundwater permit for the Marengo, Illinois plant.

Please contact me if you have any questions. You can call me directly at (585) 385-9010 x233 (office) or (585) 727-7631 (cell). Thank you for your assistance.

Sincerely,

Stephen A. Brisson

CASE NARRATIVE

Samples were received at the laboratory on 11-2-05 at 10:30 am.

Temperature of the cooler was 0.9C (acceptable range is 0 to 6C)

Vials were preserved. pH was checked before analysis. pH<2.

Samples were stored in refrigerator "VOA-1" at a temperature of 3C.

Samples were checked out of refrigerator "VOA-1" on 11-2-05 at 12:20pm to be set up on the instrument.

Refer to analysis times on the report.

Dear Ms. Randall:

I received your letter questioning which agency is responsible for ensuring the remediation of the existing groundwater contamination in the area of Ritz Road, Marengo. I do understand that much of the affected area is located within unincorporated McHenry County; however, the authority and responsibility to regulate groundwater contamination concerns, throughout all of Illinois, rest with the Illinois Environmental Protection Agency. One of my staff has recently spoken to a representative of the Attorney General's Office regarding the situation. It is my understanding that the extent of the contamination is still under investigation, and this determination must be made before a remediation plan can be approved. However, you will need to confirm the exact status of the investigation with the Illinois Environmental Protection Agency. If you need a contact name and telephone number, please do not hesitate to contact my office, we would be happy to identify one for you.

Should you have any questions or wish to discuss this further, please contact the Division of Environmental Health at 815-334-4585.

Sincerely,

Patricia Nomm
Director of Environmental Health

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Dear Patty Nomm,

Arnold Engineering Co. of Marengo is not within the Marengo city limits. Ritz Road is not within the Marengo city limits either. But Arnolds and my Ritz Road and some Railroad Street neighbors and I are in McHenry County. Since Arnolds is responsible for contaminating our properties with toxic waste polluting our ground water I would like to know who is responsible for getting them to clean up the site. It seems to me that the AG and EPA and Arnolds are looking to treat the symptom with bottled water and not looking for the cure which is CLEANING UP THE SITE NOW! This has been a problem for many years. It could have been cleaned up by now. Whatever you can do to help us would be appreciated.

Sincerely,

Gertrude Randall

Dear Mr. Hanecker:

On June 19, 2008, Environmental Group Services, Ltd. and the Illinois Environmental Protection Agency sampled the water from your well. TestAmerica Laboratories, Inc. analyzed these samples and found no volatile organic compounds in your water. Consequently, we do not recommend any changes in your use of water. Please feel free to contact Mr. Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or Tom.Baughman@illinois.gov if you have any questions.

Subject: RE: Arnold Magnetics site in Marengo - VOC contamination found in private wells

Joe and Tiffanie – I just talked to Carol Fuller. The samples were taken May 2013 from 17 private wells. They're going to call the people with the 3 wells that exceeded an MCL to tell them not to drink the water. Tom Rivera will be sending me the sampling results, and I'll draft the letters as usual. The company plans to resample all the wells for confirmation, so we'll send a second round of letters once those results are available. Carol said that the company is willing to do whatever it takes to deliver acceptable water to the people (bottled water, city water). A village water main is nearby, but would require discussion with the village/annexation.

Dear Patti and Tiffanie,

I wanted to make you aware of some VOC results in private wells in unincorporated Marengo just north of the Arnold Magnetics site. The site, Arnold Magnetics, is in IEPA Site Remediation Program; there was a 2008 Violation Notice to the previous owner. The new owner conducted private well testing downgradient from the site at the request of the IEPA Project Manager, Tim Zook with assistance from Tom Rivera, Investigator in the DesPlaines Regional Office.

17 private wells were sampled. VOCs were found in 6 of them. One well has vinyl chloride at 1.5 ppb; another well shows VOCs including vinyl chloride at .54 ppb. Two other wells show TCE – one at 6.47 ppb and one at 4.47 ppb.

I just wanted to give you a heads up. Patti, I wonder whether the McHenry County Health Department would have records of private well depths in the area? We have very little information on that from the existing databases. Could you please let me know about that?

Tiffanie and Joe, I would like to speak with you about what message IDPH will likely give, particularly to the homeowners where vinyl chloride is present or the MCL for TCE is exceeded. Will there be a recommendation for using bottled water? We will be talking with the consultant and site owner very soon and will ask them to provide bottled water, if that is your recommendation. Tom Rivera will forward the laboratory data sheets to you along with the rest of the sampling summary package.

Please let me know a good time to talk by phone. Thanks!

Hi Patty,

Were you able to find out whether or not you have any info on well depths in the area of the Arnold Magnetic Technologies site (see the highlighted portion of the email below)? Thanks for any information you are able to provide to us.

IDPH has sent letters out this week to the residents whose wells were tested. Two were advised not to use their water for drinking or cooking. I arranged with the owners of the site to provide bottled water to those two homes.

I have not received copies of the letters yet; I asked yesterday that Tom Baughman with IDPH – West Chicago copy me. You may also want to ask him to copy you on the letters.

Sincerely,

Carol L. Fuller

Subject: Arnold Magnetics FOIA

Ms. Dowson,

Please accept this email as a FOIA request for specific information related to the Arnold Magnetics site, located at 300 North West Street, Marengo IL LPC#111065003, USEPA#ILD005163803.

Specifically I am requesting:

1. All water sampling data results from the installed monitoring wells, onsite and offsite for March and April 2015.
2. All water sampling data results from the offsite irrigation wells sampled in March and April 2015 including the analysis report.

Additionally, any groundwater modeling data for the proposed community water well to serve the City of Marengo.

The requested information may be emailed to me.

Please let me know if you need anything else. Thank you.

Analytical Report for STAT Work Order: 15030346 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 2 samples for the referenced project on 3/12/2015 1:43:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese; Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030272 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 3/10/2015 5:00:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030214 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 5 samples for the referenced project on 3/9/2015 4:20:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030139 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 6 samples for the referenced project on 3/5/2015 5:30:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

CASE NARRATIVE

The VOC water Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/10/2015 had recovery of Bromomethane outside of control limits (62% (LCS) recovery, QC limits 70-130%).

The VOC soil Method Blank analyzed 03/11/2015 had recovery of Toluene-d8 outside of control limits (79% recovery, QC limits 85-110%). Recovery of all other surrogates were within control limits.

The VOC soil Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/11/2015 had recovery of the following compounds outside of control limits:
Bromomethane: (53%/55% (LCS/LCSD) recovery (QC limits 70-130%)
Toluene-d8 surrogate: (111% (LCS) recovery (QC limits 85-110%)

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030665 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo

Dear Carl Dawes:

STAT Analysis received 2 samples for the referenced project on 3/23/2015 6:11:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030617 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 4 samples for the referenced project on 3/20/2015 6:09:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

707070801H January 26, 2016

Mr. Raymond and Ms. Ruth Anthony
4106 Ritz Rd.
Marengo, IL 60152

Dear Mr. and Ms. Anthony:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. The analysis found 1,4-dioxane at a concentration less than the governmental standard for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,4-Dioxane	4.6	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class 1 groundwater standard established by the Illinois Environmental Protection Agency

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Steve Anthony
4805 Ritz Rd.
Marengo, IL 60152

Dear Mr. Anthony:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals at concentrations less than governmental standards for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1-Dichloroethene	2.0	7	MCL
cis-1,2-Dichloroethene	0.75	70	MCL
1,4-Dioxane	1.7	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency

Consequently, we do not recommend any changes in your use of water. Although the concentrations of 1,1-dichloroethene, cis-1,2-dichloroethene, and 1,4-dioxane did not exceed the drinking water standard for public water supplies, we recommend quarterly sampling of your well for VOCs to ensure that the concentrations do not change with time. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Thomas Pace
4907 Ritz Rd.
Marengo, IL 60152

Dear Mr. Pace:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1-Dichloroethene	36	7	MCL
1,2-Dichloroethane	1.1	5	MCL
cis-1,2-Dichloroethene	20	70	MCL
trans-1,2-Dichloroethene	7.0	100	MCL
1,4-Dioxane	15	7.7	Class I
Methyl-tert-butyl ether (MTBE)	0.96	70	Class I
Trichloroethene	2.6	5	MCL
Vinyl chloride	1.2	2	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

The concentration of 1,1-dichloroethene and 1,4-dioxane exceeded their regulatory concentrations for public water supplies; consequently, we recommend that you do not use your water for drinking or cooking, and that you use adequate ventilation during showering. The concentration of 1,1-dichloroethene was less than concentrations that may cause non-cancerous effects. Cancer studies of animals that ingested 1,1-dichloroethene have not provided consistent

evidence whether it may cause cancer. In animals, 1,4-dioxane can cause liver cancer and nasal cancer. Using the cancer slope factor for 1,4-dioxane developed by the U.S. Environmental Protection Agency (USEPA), drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 1.3 in 100,000. This would result in a low increased cancer risk. For evaluating cancer risks and establishing cleanup levels of contaminants that may cause cancer, USEPA recommends using a target cancer risk between 1/10,000 and 1/1,000,000. About 1 in 3 people get cancer at some point in their lifetime, and cancers caused by chemicals cannot be distinguished from cancers that occur spontaneously. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Mike Lewis
4913 Ritz Rd.
Marengo, IL 60152

Dear Mr. Lewis:

The Illinois Department of Public Health has reviewed the laboratory results of two water samples collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your samples for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your samples for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1,1-Trichloroethane	11	200	MCL
Carbon tetrachloride	N.D.-1.4	5	MCL
1,1-Dichloroethene	22-24	7	MCL
cis-1,2-Dichloroethene	12-13	70	MCL
1,4-Dioxane	2.8-3.1	7.7	Class I
Tetrachloroethene	5.6-6.0	5	MCL
trans-1,2-Dichloroethene	3.2-3.4	100	MCL
Trichloroethene	15-16	5	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

The concentrations of 1,1-dichloroethene, tetrachloroethene, and trichloroethene exceeded their regulatory concentrations for public water supplies; consequently, we recommend that you do not use your water for drinking or cooking, and that you use adequate ventilation during showering. In animals, long-term exposure to low levels of tetrachloroethene may increase the risk of liver or kidney cancer. Using the cancer slope factor developed for tetrachloroethene by the U.S. Environmental Protection Agency (USEPA), drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 3.6 in 10,000,000. This would result in no increased risk of cancer. In animals, long-term exposure to

low levels of trichloroethene may increase the risk of liver, kidney, or lung cancer. Using the cancer slope factor for trichloroethene developed by USEPA, drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 2.1 in 100,000. This would result in a low increased risk of cancer. The concentration of 1,1-dichloroethene was less than concentrations that may cause non-cancerous effects. Cancer studies of animals that ingested 1,1-dichloroethene have not provided consistent evidence whether it may cause cancer. The estimated increased cancer risk for each chemical cannot be added to obtain a total increased cancer risk from all the chemicals. For evaluating cancer risks and establishing cleanup levels of contaminants that may cause cancer, USEPA recommends using a target cancer risk between 1/10,000 and 1/1,000,000. About 1 in 3 people get cancer at some point in their lifetime, and cancers caused by chemicals cannot be distinguished from cancers that occur spontaneously. If you have any questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor

Mr. David Gerber
5010 Ritz Rd.
Marengo, IL 60152

Dear Mr. Gerber:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1-Dichloroethene	2.9	7	MCL
1,4-Dioxane	15	7.7	Class I
Vinyl chloride	0.51	2	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency

The concentration of 1,4-dioxane exceeded its regulatory concentration for public water supplies; consequently, we recommend that you do not use your water for drinking or cooking, and that you use adequate ventilation during showering. In animals, 1,4-dioxane can cause liver cancer and nasal cancer. Using the cancer slope factor for 1,4-dioxane developed by the U.S. Environmental Protection Agency (USEPA), drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 1.3 in 100,000. This would result in a low increased cancer risk. For evaluating cancer risks and establishing cleanup levels of contaminants that may cause cancer, USEPA recommends using a target cancer risk between 1/10,000 and 1/1,000,000. About 1 in 3 people get cancer at some point in their lifetime, and cancers caused by chemicals cannot be distinguished from cancers that occur

spontaneously. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Ms. Gertrude Randall
5011 Ritz Rd.
Marengo, IL 60152

Dear Ms. Randall:

The Illinois Department of Public Health has reviewed the laboratory results of water samples collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your samples for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your samples for 1,4-dioxane. Our evaluation of the data was based on the assumption that the samples were collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals:

Chemical	Northern Well (in ppb)	Southern Well (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1-Dichloroethene	15	5.2	7	MCL
cis-(1,2)-Dichloroethene	2.1	N.D.	70	MCL
trans-(1,2)-Dichloroethene	0.97	N.D.	100	MCL
1,4-Dioxane	15	2.0	7.7	Class I
Tetrachloroethene	6.8	0.97	5	MCL
1,1,1-Trichloroethane	4.7	8.2	200	MCL
Trichloroethene	4.9	1.4	5	MCL
Vinyl chloride	0.62	N.D.	2	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
N.D. = Not detected.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency

In the northern well, the concentration of 1,4-dioxane, tetrachloroethene, and 1,1-dichloroethene exceeded their regulatory concentrations for public water supplies; consequently, we recommend that you do not use water from the northern well for drinking or cooking, and that you use adequate ventilation during showering. In animals, 1,4-dioxane can cause liver cancer and nasal cancer. Using the cancer slope factor for 1,4-dioxane developed by the U.S. Environmental Protection Agency (USEPA), drinking 2 liters of water per day from your well for a 70 year

lifetime would result in an estimated increased cancer risk of 1.3 in 100,000. This would result in a low increased cancer risk. In animals, long-term exposure to low levels of tetrachloroethene may increase the risk of liver or kidney cancer. Using the cancer slope factor developed for tetrachloroethene by USEPA, drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 4.1 in 10,000,000. This would result in no increased risk of cancer. Cancer studies of animals that ingested 1,1-dichloroethene have not provided consistent evidence whether it may cause cancer. The estimated increased cancer risk for each chemical cannot be added to obtain a total increased cancer risk from all the chemicals. For evaluating cancer risks and establishing cleanup levels of contaminants that may cause cancer, USEPA recommends using a target cancer risk between 1/10,000 and 1/1,000,000. About 1 in 3 people get cancer at some point in their lifetime, and cancers caused by chemicals cannot be distinguished from cancers that occur spontaneously.

In the southern well, the concentrations of chemicals did not exceed their governmental standards. Consequently, we do not recommend any changes in your use of water from the southern well. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Dear Owner:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your business on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental or Standard
1,4-Dioxane	31	7.7	Class I
Polychlorinated biphenyls	0.21	0.5	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.

The concentration of 1,4-dioxane exceeded its regulatory concentration for public water supplies; consequently, we recommend that you do not use your water for drinking or cooking, and that you use adequate ventilation during showering. In animals, 1,4-dioxane can cause liver cancer and nasal cancer. Using the cancer slope factor for 1,4-dioxane developed by the U.S. Environmental Protection Agency (USEPA), drinking 2 liters of water per day from your well for a 70 year lifetime would result in an estimated increased cancer risk of 2.7 in 100,000. This would result in a low increased cancer risk. For evaluating cancer risks and establishing cleanup levels of contaminants that may cause cancer, USEPA recommends using a target cancer risk between 1/10,000 and 1/1,000,000. About 1 in 3 people get cancer at some point in their lifetime, and cancers caused by chemicals cannot be distinguished from cancers that occur spontaneously. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water.

If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Gregg Stade, Manager
The DeLong Company
21602 W. Railroad St.
Marengo, IL 60152

Dear Mr. Stade:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your business on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected no VOCs, PCBs, or 1,4-dioxane. Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor

Ms. Ginger Koch
Farm Service and Supplies
21606 W. Railroad St.
Marengo, IL 60152

Dear Ms. Koch:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your business on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected no VOCs, PCBs, or 1,4-dioxane. Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Kevin Stark
Stark Service, Inc.
21816 W. Railroad St.
Marengo, IL 60152

Dear Mr. Stark:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your business on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following chemicals concentrations less than governmental standards for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,1-Dichloroethene	1.4	7	MCL
cis-1,2-Dichloroethene	1.4	70	MCL
1,4-Dioxane	0.74	7.7	Class I
Trichloroethene	4.9	5	MCL

ppb = parts per billion or micrograms of chemical per liter of water.
MCL = maximum contaminant level – enforceable level established by the U.S. Environmental Protection Agency for public water supplies to reduce the chances of adverse health effects from contaminated drinking water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your

water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Mr. Gene Meyer
21902 W. Railroad St.
Marengo, IL 60152

Dear Mr. Meyer:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected the following volatile organic compounds. The analysis found the 1,4-dioxane at a concentration less than the governmental standard for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,4-Dioxane	3.6	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Mr. Peter Steiger
22012 W. Railroad St.
Marengo, IL 60152

Dear Mr. Steiger:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls, and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. The analysis found 1,4-dioxane at a concentration less than the governmental standard for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,4-Dioxane	1.2	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Ms. Jennifer Saucedo
22104 ~~22014~~ Railroad St.
Marengo, IL, 60152

Dear Ms. Saucedo:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. In your water, the laboratory detected 1,4-dioxane at a concentration less than the governmental standard for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,4-Dioxane	1.2	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor

ILLINOIS EPA - BOL
DES PLAINES OFFICE

245 West Roosevelt Road • West Chicago, Illinois 60185-3739 dph.illinois.gov

707070801H January 26, 2016

Mr. John Hanecker
22110 W. Railroad St.
Marengo, IL 60152

Dear Mr. Hanecker:

The Illinois Department of Public Health has reviewed the laboratory results of a water sample collected at your home on November 30, 2015 by Weaver Consultants Group, Naperville, IL and provided to us on January 20, 2016. Suburban Laboratories, Inc., Geneva, IL analyzed your sample for volatile organic chemicals (VOCs) and polychlorinated biphenyls (PCBs), and American Water, Belleville, IL analyzed your sample for 1,4-dioxane. Our evaluation of the data was based on the assumption that the sample was collected and handled properly, and that appropriate analytical techniques were used by the laboratory. The analysis found 1,4-dioxane at a concentration less than the governmental standard for drinking water:

Chemical	Concentration (in ppb)	Governmental Standard (in ppb)	Source of Governmental Standard
1,4-Dioxane	4.6	7.7	Class I

ppb = parts per billion or micrograms of chemical per liter of water.
Class I = Class I groundwater standard established by the Illinois Environmental Protection Agency.

Consequently, we do not recommend any changes in your use of water. Because the concentrations of chemicals may change with time, we recommend quarterly sampling of your water. If you have questions about these results, please contact Thomas Baughman, Ph.D., at our West Chicago Regional Office at 630-293-6800 or tom.baughman@illinois.gov.

Sincerely,

Joe O'Connor
Senior Public Service Administrator

Kristy

Following up on our call, attached please find (a) the recent sampling results for the irrigation wells and (b) the Second Agreed Preliminary Injunction Order and modifications thereto.

Please let me know if you have any questions.

Thank you.
Katie

PEOPLE OF THE STATE OF ILLINOIS, *ex rel.* LISA MADIGAN, Attorney General of the State Illinois,	)	
Plaintiff,	)	
v.	)	No. 13 CH 1046
300 WEST LLC, an Illinois limited liability co. and THE ARNOLD ENGINEERING CO., an Illinois corporation,	)	
Defendants.	)	

SECOND AGREED MODIFICATION TO SECOND AGREED PRELIMINARY INJUNCTION ORDER

1. On June 11, 2014, the Court entered a Second Agreed Preliminary Injunction Order with 300 West LLC ("300 West") and The Arnold Engineering Co. ("Arnold" and together with 300 West "the Defendants"), in which the Defendants agreed to certain compliance provisions ("Second Agreed Order").

2. On March 12, 2015, the First Agreed Modification to Second Agreed Preliminary Injunction Order was filed with the Court (the "First Agreed Modification").

3. Sections IV.10(b)(ii) and (iii) of the Second Agreed Order, as modified, are hereby deleted in their entirety and replaced with the following:

ii. ***On-Site Monitoring Well Sampling Deadlines.***

1) On or before March 27, 2015, the Defendants shall complete the installation of all monitoring wells, as depicted on Exhibit 1.

2) On or before April 8, 2015, the Defendants shall complete

sampling of all on-Site monitoring well locations, as depicted on Exhibit 1.

3) On or before April 15, 2015, the Defendants shall submit to Illinois EPA analytical results of samples for all on-Site monitoring well locations, as depicted on Exhibit 1.

4) On or before May 8, 2015, the Defendants shall submit to Illinois EPA via email (with hard copies to be submitted thereafter) an on-Site monitoring well letter report setting forth:

(aa) All raw analytical data presented in tabular format (The table should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results, and any exceedance of the most stringent objective should be highlighted);

(bb) Figures which show the sampling locations with the location identifications (e.g. GW-1, GW-2); and

(cc) If necessary to delineate the nature and extent of on-Site contamination, a proposed plan with proposed locations for additional delineation of the nature and extent of contamination as well as a schedule for implementation.

5) If the Illinois EPA approves with conditions or disapproves of such on-Site monitoring well letter report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval.

iii. ***On-Site Soil Boring and Sampling Deadlines.***

1) On or before May 20, 2015, the Defendants shall complete all on-Site soil boring locations and all sampling at such locations, as depicted on Exhibit 1.

2) On or before June 17, 2015, the Defendants shall submit to Illinois EPA analytical results of samples for all on-Site

soil boring locations, as depicted on Exhibit 1.

3) On or before June 30, 2015, the Defendants shall submit to Illinois EPA via email (with hard copies to be submitted thereafter) an on-Site soil sampling letter report setting forth:

(aa) All raw analytical data presented in tabular format (The table should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results, and any exceedance of the most stringent objective should be highlighted);

(bb) Figures which show the sampling locations with the location identifications (e.g. SP-1, SP-2); and

(cc) If necessary to delineate the nature and extent of on-Site contamination, a proposed plan with proposed locations for additional delineation of the nature and extent of contamination as well as a schedule for implementation.

5) If the Illinois EPA approves with conditions or disapproves of such on-Site soil sampling letter report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval.

4. This Second Agreed Modification to Second Agreed Preliminary Injunction Order is incorporated by reference in the Second Agreed Order that was entered by this Court on June 11, 2014, as modified by the First Agreed Modification filed on March 12, 2015.

5. Except as modified herein, all of the other provisions of the Second Agreed Order that was entered by this Court on June 11, 2014, as modified by the First Agreed Modification filed on March 12, 2015, remain in full force and effect.

6. This Second Agreed Modification to Second Agreed Preliminary Injunction Order may be executed by the parties in one or more counterparts, all of which taken together, shall constitute one and the same instrument.

CERTIFICATE OF SERVICE

I, KATHRYN A. PAMENTER, an Assistant Attorney General, do certify that I caused to be served this 7th day of May, 2015, the attached Notice of Filing and Second Agreed Modification to Second Agreed Preliminary Injunction Order upon the parties set forth on the Notice of Filing by placing a true and correct copy in an envelope addressed as set forth on said Notice of Filing, first class postage prepaid, and depositing same with the United States Postal Service at 100 West Randolph Street, Chicago, Illinois, at or before the hour of 5:00 p.m.

Kathryn A. Pamenter

IN THE CIRCUIT COURT OF THE TWENTY-SECOND JUDICIAL CIRCUIT
McHENRY COUNTY, ILLINOIS
CHANCERY DIVISION

FILED
McHenry County, Illinois
JUN 11 2014
KATHERINE M. KEEFE
Clerk of the Circuit Court

PEOPLE OF THE STATE OF ILLINOIS, *ex rel.* LISA MADIGAN, Attorney General of the State Illinois,	)	
Plaintiff,	)	
v.	)	No. 13 CH 1046
300 WEST LLC, an Illinois corporation, and THE ARNOLD ENGINEERING CO., an Illinois corporation a/k/a Arnold Magnetic Technologies Corporation,	)	
Defendants.	)	

SECOND AGREED PRELIMINARY INJUNCTION ORDER

This cause coming before this Court on Plaintiff's Motion for Preliminary Injunction; due notice having been given; the Court having jurisdiction over the parties and the subject matter herein; and the Court otherwise being duly advised in the premises;

NOW THEREFORE, Plaintiff having alleged that a substantial danger to the environment or to the health and welfare of persons exists pursuant to the Illinois Environmental Protection Act, 415 ILCS 5/1 *et seq.* (2012) ("Act"), and the parties having agreed to the entry of this Second Agreed Preliminary Injunction Order, the Court enters the following preliminary injunction pursuant to Section 43(a) of the Act, 415 ILCS 5/43(a) (2012), which shall remain in effect until further order of this Court. IT IS HEREBY ORDERED THAT:

I. BACKGROUND

1. Plaintiff incorporates by reference herein the allegations in its Verified Complaint for Injunction and Civil Penalties filed on June 14, 2013 (the "Verified Complaint"). On April 1, 2014, Defendant The Arnold Engineering Co. filed its Answer and Verification of Defendant The Arnold Engineering Co. On April 4, 2014, Defendant 300 West LLC filed its Answer to the Verified Complaint.

2. On June 14, 2013, this Court entered the Agreed Immediate Injunction Order.

3. On August 23, 2013, this Court entered the Agreed Preliminary Injunction Order. This Second Agreed Preliminary Injunction Order supercedes the Agreed Preliminary Injunction Order entered on August 23, 2013.

II. GENERAL PROVISIONS

4. This Order is not a final resolution of the merits of Plaintiff's Verified Complaint, but rather addresses current concerns regarding the groundwater contamination alleged in the Verified Complaint. This Order does not, nor is it intended to, determine the liability of the Defendants for the subject matter of the Verified Complaint, except as to their compliance with the requirements of this Second Agreed Preliminary Injunction Order itself.

5. This Second Agreed Preliminary Injunction Order and compliance therewith shall not be interpreted as constituting an admission to any of the allegations of the Verified Complaint to which both Defendants have filed an Answer.

6. This Order shall apply to and bind the Plaintiff and the Defendants.

III. CONTINUED ACTION

7. Bottled Water Delivery. The Defendants are currently providing bottled water to certain private water well owners and shall continue to provide an alternative source of drinking

water to the owners of the private water wells located at 4907 Ritz Road, 4913 Ritz Road, 4805 Ritz Road, 5010 Ritz Road, 5011 Ritz Road, 21902 Railroad St. and 22104 Railroad St. in Marengo, McHenry County, Illinois (collectively, the "Private Well Properties") by replenishing the water consumed by the residents in each Private Well Property so as to provide at least 2 gallons per person per day at each Private Well Property, on a weekly basis or such other schedule as agreed to in writing by the resident.

a. The Defendants shall continue distributing potable drinking water to each of the owners of the Private Well Properties until the Defendants receive written authorization from the Illinois Attorney General's Office and the Illinois EPA that they may cease such drinking water distribution or until such further Order of the Court.

b. The Defendants may submit a written request to the Illinois EPA to modify this Paragraph III.7. To the extent the Illinois EPA approves such written request, the parties may modify this Paragraph III.7. without further Order of the Court.

8. Well Water Sampling. The Defendants shall conduct water sampling at the private water wells as follows:

a. Subject to Paragraph III.8.h. herein, the Defendants shall cause water sampling to be conducted from the drinking water wells at the following properties in Marengo, McHenry County, Illinois (the "Water Sampling Properties"):

4501 Ritz Road	4106 Ritz Road
4210 Ritz Road	4805 Ritz Road
4907 Ritz Road	4913 Ritz Road
5011 Ritz Road	5017 Ritz Road
5010 Ritz Road	22110 Railroad St.
22104 Railroad St.	22012 Railroad St.
21902 Railroad St.	21816 Railroad St.
21820 Railroad St.	21606 Railroad St.
21602 Railroad St.	

b. The Defendants shall test each water sample for 1,1-Dichloroethylene, 1,1,1-Trichloroethane, cis-1,2-Dichloroethylene, 1,2-Dichloroethane, trans-1,2-Dichloroethylene, Trichloroethylene, Tetrachloroethylene, Vinyl Chloride, Chloroform, Bromodichloromethane, Bromomethane and 1,4-Dioxane (P-Dioxane) (collectively referred to herein as the "Chlorinated VOCs").

c. Prior to conducting the water sampling at the Water Sampling Properties, the Defendants shall provide at least twenty-four hour advance notice to the owners of the Water Sampling Properties and the Illinois EPA that such water sampling shall be conducted.

d. Commencing with the quarter beginning January 1, 2014, the Defendants shall conduct the water sampling on a date within the first 30 days of each quarter beginning January 1, April 1, July 1, and October 1 of each year.

e. Samples must be analyzed by an Illinois EPA certified laboratory.

f. The Defendants shall submit the results of such water sampling to the Illinois EPA within forty-five (45) days of the date that each water sampling event occurs.

g. The Defendants shall continue to conduct water sampling at the Water Sampling Properties until the Defendants receive written authorization from the Illinois EPA that they may cease conducting such sampling or until such further Order of the Court.

h. The Defendants shall promptly notify the Illinois EPA if they are unable to obtain access to any of the Water Sampling Properties to conduct the water sampling. To the extent an owner of a Water Sampling Property refuses to provide access for water

sampling on such property, within five (5) days after the scheduled sampling date, the Defendants shall provide the Illinois EPA with a notarized affidavit attesting as such.

IV. PRELIMINARY REMEDIAL ACTION BY DEFENDANTS

9. **Definitions**. For purposes of this Second Agreed Preliminary Injunction Order:

a. "Site" shall mean 300 North West Street, Marengo, McHenry County, Illinois.

10. **Site Investigation**

a. ***Recognized Environmental Conditions.*** On or before June 6, 2014, the Defendants shall submit to the Plaintiff a list of all Recognized Environmental Conditions. The term "recognized environmental conditions" means "the presence or likely presence of any hazardous substances or petroleum products in, on, at or from a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

b. ***Focused Site Investigation Report.*** On or before June 6, 2014 or such later date to which all of the parties hereto and the Illinois EPA shall agree, the Defendants shall submit to the Plaintiff a response to the Illinois EPA's April 22, 2014 letter to the Defendants. On or before June 23, 2014 or such later date to which all of the parties hereto and the Illinois EPA shall agree, the Defendants shall submit to the Plaintiff a supplement to the November 20, 2013 Focused Site Investigation Report containing the results of the additional investigation of the Site required by the Illinois EPA in correspondence dated January 21, 2014 and

April 22, 2014, including any soil and groundwater contamination extending beyond the boundaries of the Site, which supplement shall meet the requirements of Attachments A and B hereto. Until the Plaintiff fully approves the Focused Site Investigation Report, the Defendants shall respond to Plaintiffs' conditions or deficiencies in writing within the timeframes set forth in the Plaintiff's written approvals with conditions or disapprovals.

11. ***Remedial Objectives Report.*** Within forty-five (45) days of the Plaintiff's approval of the Focused Site Investigation Report, the Defendants shall submit to the Plaintiff a Remedial Objectives Report that meets the requirements of Attachment C hereto. The Defendants may be required to submit separate soil and groundwater Remedial Objectives Reports. If the Plaintiff approves with conditions or disapproves of the Remedial Objectives Report(s), the Defendants shall, within the time set forth in the Plaintiff's written approval with conditions or disapproval, submit a proposal to the persons identified in Section V (Notices), that addresses all conditions or deficiencies identified by the Plaintiff. Until the Plaintiff fully approves the Remedial Objectives Report(s), the Defendants shall respond to Plaintiffs' conditions or deficiencies in writing within the timeframes set forth in the Plaintiff's written approval with conditions or disapproval.

12. ***Remedial Action Plan.*** Within forty-five (45) days of the Plaintiff's approval of the Remedial Objectives Report, the Defendants shall submit to the Plaintiff a Remedial Action Plan that includes a schedule for implementation and meets the requirements of Attachment D hereto. The Defendants may be required to submit separate soil and groundwater Remedial Action Plans. If the Plaintiff approves with conditions or disapproves of the Remedial Action Plan(s), the Defendants shall, within the time set forth in the Plaintiff's written approval

with conditions or disapproval, submit a proposal to the persons identified in Section V (Notices), that addresses all conditions or deficiencies identified by the Plaintiff. Until the Plaintiff fully approves the Remedial Action Plan(s), the Defendants shall respond to Plaintiffs' conditions or deficiencies in writing within the timeframes set forth in the Plaintiff's written approval with conditions or disapproval.

13. **Quarterly Reports**. Commencing on July 15, 2014, the Defendant shall submit Quarterly Reports to the Plaintiff by the fifteenth (15) day of the month following the end of each quarter after the date of entry of this Consent Order (ie., April 15, July 15, October 15 and January 15). Each Quarterly Report shall describe the work performed pursuant to this Consent Order during the previous quarter, the work anticipated during the next quarter, and any delays in work that may be anticipated. Quarterly Reports shall be submitted until such time that a final Remedial Action Completion Report is approved by the Plaintiff.

VIII. STIPULATED PENALTIES

17. If the Defendants fail to complete any activity or fail to comply with any of the *reporting requirements* by the dates specified in this Order, the Defendants shall pay to Plaintiff stipulated penalties in the amount of $250.00 per day, per violation, until such time that compliance is achieved. To the extent an owner of a Water Sampling Property refuses to grant access to the Defendants to conduct water sampling, this Section *VIII* shall not apply solely to the extent the Defendants comply with Paragraph III.8.h.

18. In the event Plaintiff determines that a violation that could be subject to stipulated penalties has occurred, Plaintiff will provide written notification of such violation to the Defendants and their representatives identified in Section V of this Order. Failure by Plaintiff to provide such written notification shall not be construed as a waiver of Plaintiff's right to seek stipulated penalties under this Order.

19. All stipulated penalties owed shall be payable within forty-five (45) calendar days of the receipt of written demand from Plaintiff, unless such penalties, or any portion thereof, are disputed by the Defendants, which dispute shall be resolved pursuant to Section X of this Order. All penalties shall be paid by certified check or money order payable to the "Illinois EPA" for deposit in the Environmental Protection Trust Fund and delivered to:

Illinois Environmental Protection Agency
Fiscal Services Division
1021 North Grand Avenue East
P.O. Box 19276
Springfield, Illinois 62794-9276

The case name and case number shall appear on the face of the certified check or money order.

A copy of the certified check or money order and any transmittal letter shall be sent to:

Kathryn A. Pamenter
Environmental Bureau
Illinois Attorney General's Office
69 W. Washington St, 18th Flr.
Chicago, Illinois 60602

IX. COST RECOVERY

20. The Defendants shall reimburse the Illinois EPA for all reasonable and necessary future costs incurred and documented by the Illinois EPA in its oversight of the investigation of the Site and such other areas beyond the Site that the Defendants may be required to investigate and/or remediate for soil and groundwater contamination, and its review and evaluation of documents and reports submitted to it pursuant to the Second Agreed Preliminary Injunction Order consistent with the reimbursement of project costs incurred by the Illinois EPA under the Site Remediation Program, including, but not limited to, all costs associated with Community Relations activities ("Future Response Costs"). Future Response Costs shall mean all unpaid, reasonable and necessary costs incurred by the Illinois EPA on and after July 1, 2013. Future Response Costs shall include direct program costs, allocated program costs and indirect costs.

a. Direct program costs shall include, but are not limited to, all related payroll costs for all applicable organizational units, outside contractor/consultants fees, travel costs, and costs associated with photographs, maps, and laboratory services.

b. Allocated program costs represent program costs that are related to the overall program operations, including but not limited to, fiscal services, bill preparation and clerical duties, Division of Legal Counsel program meetings and regulatory preparation and implementation, and staff program meetings and management oversight for the Bureau of Land,

Bureau of Water, Office of Emergency Response, Toxicity Assessment Unit, and Office of Community Relations.

c. Indirect costs are those costs incurred by the Illinois EPA in day-to-day operations, including but not limited to, the operation and maintenance of buildings, utilities and administrative costs.

21. The Illinois EPA will submit to the Defendant on a quarterly basis invoices for Future Response Costs incurred during the billing period.

a. Within forty-five (45) days of the receipt of each invoice, the Defendant shall pay, unless contested pursuant to Section X (Dispute Resolution) of this Second Agreed Preliminary Injunction Order, the Future Response Costs detailed therein by means of a check or checks made payable to the Illinois Environmental Protection Agency for deposit into the Hazardous Waste Fund.

b. The case name, case number, LPC # 1110650003, LP52-62W, and the Defendants' FEIN numbers shall appear on the face of the check. The Defendants shall send each check and a copy of the Illinois EPA invoice to:

Division of Administration
Fiscal Services Section
Illinois EPA
1021 North Grand Avenue East
P. O. Box 19276
Springfield, Illinois 62794-9276

c. If the Defendants do not receive an invoice in the time frame indicated in Paragraph 21, this does not waive the Illinois EPA's right to submit an invoice or receive cost reimbursement for Future Response Costs.

d. A copy of the check(s) and the transmittal letter shall be sent to:

Kathryn A. Pamenter
Assistant Attorney General
Environmental Bureau
Illinois Attorney General's Office
69 W. Washington Street, Suite 1800
Chicago, Illinois 60602

22. The dispute resolution procedures set forth in Section X of this Second Agreed Preliminary Injunction Order shall be the exclusive mechanism for resolving disputes regarding the Defendants' obligation to reimburse the Illinois EPA for its Future Response Costs; except that for purposes of this Section IX only, the informal negotiation period shall be extended to twenty-one (21) days after written initiation of dispute resolution proceedings.

X. DISPUTE RESOLUTION

23. The parties shall use their best efforts to resolve any and all disputes or differences of opinion arising with regard to this Order, informally and in good faith, within seven (7) days of a party providing notice to the other parties of such a dispute. If, however, a dispute arises concerning this Order that the parties are unable to resolve informally, either party may, by written motion, within three (3) days of conclusion of the informal resolution efforts, request that an evidentiary hearing be held before the Circuit Court for the Twenty-Second Judicial Circuit, McHenry County, Illinois, to resolve the dispute between the parties. Upon Plaintiff's establishment of a prima facie violation of the Order, the Defendants shall bear the burden of proving that it did not violate this Order. Stipulated penalties shall not attach if the Defendants prevail in a dispute resolution.

XI. FORCE MAJEURE

24. The Defendants may declare *force majeure* in appropriate circumstances as follows:

a. A *force majeure* event is an event arising solely beyond the control of the Defendants, which prevents the timely performance of any of the requirements of this Order. For the purposes of this Order, *force majeure* shall include, but is not limited to, events such as, floods, fires, tornadoes, other natural disasters, labor disputes beyond the reasonable control of the Defendants, or prohibitions imposed by any court having jurisdiction over the Defendants.

b. When, in the opinion of the Defendants, a *force majeure* event occurs which causes or may cause a delay in the performance of any of the requirements of this Order, the Defendants shall orally notify the Plaintiff within forty-eight (48) hours of the occurrence. Written notice shall be given to the Plaintiff as soon as practicable, but no later than ten (10) business days after the claimed occurrence.

c. Failure by the Defendants to comply with the notice requirements of the preceding paragraph shall render this *force majeure* provision voidable by Plaintiff as to the specific event for which the Defendants have failed to comply with the notice requirement. If voided, this section shall be of no effect as to the particular event involved.

d. An increase in costs associated with implementing any requirement of this Order shall not, by itself, excuse the Defendants under the provisions of this Order from a failure to comply with such a requirement.

XII. RIGHT OF ENTRY

25. In addition to any other authority, the Illinois EPA, its employees and representatives, and the Attorney General, her agents and representatives, shall have the right of entry into and upon the portions of the Site owned by or under control of the Defendants and

which are the subject of this Order, at all reasonable times for the purpose of carrying out inspections of the Site. Plaintiff agrees to comply with any safety regulations in effect at the Site at the time of inspection. In conducting such inspections, the Illinois EPA, its employees and representatives, and the Attorney General, her employees and representatives, may take photographs, samples, and collect information, as they deem necessary. Plaintiff shall provide upon the Defendants' written request copies of any photographs, files, records, data or information collected during said inspection.

XIII. EXTENSIONS AND MODIFICATIONS

26. The parties may, by mutual consent, extend any compliance dates or modify the terms of this Order without leave of court. Any such agreed modification shall be in writing, signed by authorized representatives of each party and incorporated into this Order by reference. Any request for modification shall be made by the Defendants in writing and shall be independent of any other submittal made pursuant to this Order. Moreover, notice of a request for any proposed modification shall be provided to the Plaintiff's representatives listed in Section V of this Order.

XIV. RESERVATION OF RIGHTS

27. Nothing contained herein shall be deemed at this time, and compliance with this order by the Defendants shall not be deemed, an admission of any wrongful conduct or violation of any applicable statute, law or regulations thereunder by the Defendants, nor a finding of fact or adjudication by this Court of any of the facts or claims contained in the Verified Complaint. Plaintiff reserves the right to seek additional technical relief and civil penalties in this matter.

28. This Order is without prejudice to and shall not act as a waiver of any right of contribution the Defendants may now or in the future have against any other person or entity.

XV. RETENTION OF JURISDICTION

29. This Court shall retain jurisdiction of this matter and shall consider any motion by Plaintiff or the Defendants for the purposes of interpreting and enforcing the terms and conditions of this Order.

XVI. SIGNATURE

30. This Order may be signed in counterparts, all of which shall be considered one agreement.

XVII. STATUS CONFERENCE WITH THE COURT

31. This matter is set for a status conference on June 26, 2014 at 9:15 a.m. without further notice.

[Remainder of Page Blank; Continued on Page 16]

WHEREFORE the parties, by their representatives, enter into this Second Agreed Preliminary Injunction Order and submit it to the Court that it may be approved and entered.

Attachment A

Site Investigation -- General

A site investigation shall be performed to identify all or specified recognized environmental conditions existing at the remediation site, the related contaminants of concern, and associated factors that will aid in the identification of risks to human health, safety and the environment, the determination of remediation objectives, and the design and implementation of a Remedial Action Plan.

a) If the Defendants have elected under the application for review and evaluation services to obtain a No Further Remediation Letter covering all recognized environmental conditions and related contaminants of concern for the remediation site, then the procedures provided under 35 Ill. Adm. Code 740.420 and 740.425 shall be followed.

b) If the Defendants have elected under the application for review and evaluation services to obtain a No Further Remediation Letter covering a limited number of recognized environmental conditions and related contaminants of concern as specified by the RA, then the procedures provided under 35 Ill. Adm. Code Sections 740.430 and 740.435 shall be followed.

c) The Defendants may revise an election at any time by initiating a modification of the Review and Evaluation Services Agreement under 35 Ill. Adm. Code 740.220 and performing the appropriate site investigation, if necessary.

d) Site investigations shall satisfy the following data quality objectives for field and laboratory operations to ensure that all data is scientifically valid and of known precision and accuracy:

1) All field sampling activities relative to sample collection, documentation, preparation, labeling, storage, shipment and security, quality assurance and quality control, acceptance criteria, corrective action, and decontamination procedures shall be conducted in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846), Vol. One, Ch. One (Quality Control) and Vol. Two (Field Manual), incorporated by reference at 35 Ill. Adm. Code 740.125. If approved by the Agency, such activities also may be conducted in accordance with ASTM standards, methods identified in "A Compendium of Superfund Field Operations Methods" (EPA/540/0-87-001, OSWER Directive 9355.0-14, December 1987), "Subsurface Characterization and Monitoring Techniques: A Desk Reference Guide, Volume I: Solids and Ground Water, Appendices A and B" (EPA/625/R-93/003a, May 1993),

"Subsurface Characterization and Monitoring Techniques: A Desk Reference Guide, Volume II: The Vadose Zone, Field Screening and Analytical Methods, Appendices C and D" (EPA/625/R-93/003b, May 1993), incorporated by reference at 35 Ill. Adm. Code 740.125, or other procedures.

2) All field measurement activities relative to equipment and instrument operation, calibration and maintenance, corrective action, and data handling shall be conducted in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846), Vol. One, Ch. One (Quality Control), incorporated by reference at 35 Ill. Adm. Code 740.125, or with an equipment or instrument manufacturer's or vendor's published standard operating procedures.

3) All laboratory quantitative analysis of samples to determine concentrations of regulated substances or pesticides shall be conducted fully in accordance with "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (SW-846), incorporated by reference at 35 Ill. Adm. Code 740.125, relative to all facilities, equipment and instrumentation, operating procedures, sample management, test methods, equipment calibration and maintenance, quality assurance and quality control, corrective action, data reduction and validation, reporting, and records management. The practical quantitation limit (PQL) of the test methods selected must be less than or equal to the most protective Tier 1 soil remediation objectives in 35 Ill. Adm. Code 742 Appendix B, applicable groundwater remediation objectives under 35 Ill. Adm. Code 742 Appendix B, or, if already determined, the remediation objective concentrations for the site. If a contaminant of concern is not identified in 35 Ill. Adm. Code Part 742 or the remediation objectives for the site have not been determined, the PQL shall equal the lowest concentration that reliably can be achieved within specified limits of precision and accuracy during routine laboratory operating conditions but shall not be greater than ten times the method detection limit.

4) All field or laboratory measurements of samples to determine physical or geophysical characteristics shall be conducted in accordance with ASTM standards or other procedures as approved by the Agency.

5) All laboratory quantitative analyses of samples to determine concentrations of any regulated substances or pesticides that require more exacting detection limits or cannot be analyzed by standard methods identified in "Test Methods for Evaluating Solid

Waste, Physical/Chemical Methods" (SW-846), incorporated by reference at 35 Ill. Adm. Code 740.125, shall be conducted in accordance with analytical protocols developed in consultation with and approved by the Agency.

6) Effective January 1, 2003, all quantitative analyses of samples collected on or after that date and utilizing any of the approved test methods identified in 35 Ill. Adm. Code 186.180 shall be completed by an accredited laboratory in accordance with the requirements of 35 Ill. Adm. Code 186. Quantitative analyses not utilizing an accredited laboratory in accordance with Part 186 shall be deemed invalid.

Focused Site Investigation

The focused site investigation shall be performed where the Defendants have specified limitations on the recognized environmental conditions or contaminants of concern to be covered by the No Further Remediation Letter. At a minimum the focused site investigation shall include:

a) A remediation site evaluation to identify the following features as relevant to the focus of the investigation:

1) Current and post-remediation use(s) of the remediation site and surrounding areas that are immediately adjacent to the remediation site;
2) Physical setting including features relevant to geologic, hydrogeologic, hydrologic, and topographic conditions; structures or other improvements on the remediation site; public thoroughfares adjoining the remediation site, as well any roads, streets, and parking facilities on the remediation site; utilities located on or adjacent to the remediation site; source of potable water supply; and sewage disposal system;
3) The presence of containers and storage tanks containing the selected contaminants of concern, including contents, and assessment of leakage or potential for leakage; and
4) Any other environmental, geologic, geographic, hydrologic or physical conditions of concern at the remediation site and surrounding areas immediately adjacent to the remediation site;

b) Review of reasonably obtainable records relevant to the recognized environmental conditions and the related contaminants of concern for the remediation site and areas immediately adjacent to the remediation site, records of environmental enforcement actions and their subsequent responses, any previous response actions conducted by either local, State, federal or private parties, and a list of documents and studies prepared for the remediation site;

c) Characterization of sources and potential sources of recognized environmental conditions and the related contaminants of concern, identifying:

1) The sources or potential sources of the contaminants of concern;
2) The sampling, analyses, and field screening measurements indicating the concentrations of the contaminants of concern; and
3) The statutory or regulatory classification of the contaminants of concern and contaminated materials (e.g., hazardous waste, hazardous substance, special waste);

d) Characterization of the extent of the contaminants of concern, identifying:

1) The actual contaminated medium or media of concern;
2) The three-dimensional configuration of the contaminants of concern with concentrations delineated; and
3) The nature, direction, and rate of movement of the contaminants of concern and degradation products;

e) Characterization of current and post-remediation exposure routes, identifying:

1) All natural and man-made pathways that are on the remediation site, in rights-of-way attached to the remediation site, or in any areas surrounding the remediation site that may be adversely affected as a result of a release from the recognized environmental conditions and whether there is evidence of migration of contaminants of concern, in either solution or vapors, along such pathways that may potentially threaten human or environmental receptors or that may cause explosions in basements, crawl spaces, utility conduits, storm or sanitary sewers, vaults or other spaces;
2) The locations of any human and environmental receptors and receptor exposure routes; and
3) Current and post-remediation uses of affected or potentially affected land, groundwater, surface water, and sensitive habitats; and

Characterization of significant physical features of the site and vicinity that may affect contaminant transport and risk to human health, safety and the environment.

Attachment B

1. General

All plans and reports required by the Agreed Preliminary Injunction Order shall be submitted to the Plaintiff with attachments and accompanying documentation as necessary. Plans and reports shall be mailed or delivered to the address designated by the Order. Plans and reports that are hand-delivered to the Plaintiff shall be delivered during the Plaintiff's normal business hours.

All plans and reports submitted to the Plaintiff shall include:

a) The full legal name, address and telephone number of the Defendant or any authorized agent acting on behalf of the Defendant, and any contact persons to whom inquiries and correspondence must be addressed;

b) The original signature of the Defendant or of any authorized agent acting on behalf of the Defendant;

c) The name of the Licensed Professional Engineer (LPE) or Geologist responsible for site activities and preparation of the plan or report, the date of preparation, registration number, license expiration date, and professional seal; and

d) The LPE or Geologist responsible for the site investigations, remedial activities, and preparation of the plans or reports shall affirm by original signature as follows:

"I attest that all site investigations or remedial activities, including review of laboratory data, that are the subject of this plan or report were performed under my direction and this document and all attachments were prepared under my direction or reviewed by me, and, to the best of my knowledge and belief, the work described in the plan or report has been designed or completed in accordance with the Act, and generally accepted engineering practices, and the information presented, including any qualified laboratory data, is accurate and complete."

2. Site Investigation Report -- Focused Site Investigation

a) Data and results from the focused site investigation shall be combined into one Site Investigation Report.

b) A Site Investigation Report for the focused site investigation shall include the results and methodologies of the investigation performed pursuant to 35 Ill. Adm. Code 740.430 and the following chapters:

1) Executive summary. This chapter shall identify the objectives of the site investigation and the technical approach utilized to meet such objectives. It shall state the recognized environmental conditions and related

contaminants of concern specified by the Defendants and the data limitations in the assessment;

2) Site description.

A) If a phase I environmental site assessment has been completed in accordance with 35 Ill. Adm. Code 740.420(a), then the results may be submitted in accordance with 35 Ill. Adm. Code 740.425;

B) This subchapter shall state the method used for the evaluation of the remediation site and areas immediately adjacent to the remediation site and document the observations obtained (e.g., grid patterns or other systematic approaches used for large properties). It shall describe the regional location, pertinent boundary features, general facility physiography, geology, hydrogeology, and current and post-remediation uses of the remediation site and areas immediately adjacent to the remediation site;

C) Site base map(s) meeting the requirements of 35 Ill. Adm. Code 740.210(a)(7) and including the following:

i) The sources or potential sources of the contaminants of concern, spill areas, and other suspected areas for the specified contaminants of concern;

ii) On-site and off-site injection and withdrawal wells; and

iii) All buildings, tanks, piles, utilities, paved areas, easements, rights-of-way and other features, including all known past and current product and waste underground tanks or piping;

D) A legal description or reference to a plat showing the boundaries of the remediation site, or, for a Federal Landholding Entity, a common address, notations in any available facility master land use plan, site specific GIS or GPS coordinates, plat maps, or any other means that identifies the site in question with particularity;

3) Enforcement or response actions. This chapter shall include the following information as relevant to the recognized environmental conditions:

A) A summary of environmental enforcement actions for the remediation site and areas immediately adjacent to the remediation site and their subsequent responses;

B) Any previous response actions conducted by either local, State, federal or private parties at those sites; and

C) A list of documents and studies prepared for those sites;

4) Site-specific sampling plan. This chapter shall indicate those applicable physical and chemical methods utilized for contaminant source investigations, soil and sediment investigations, hydrogeological

investigations, surface water investigations, and potential receptor investigations;

5) Documentation of field activities. This chapter shall include the results of the field activities to determine physical characteristics. At a minimum, this chapter shall include the following elements:

A) Narrative description of the field activities conducted during the investigation;

B) The quality assurance project plan utilized to document all monitoring procedures (e.g., sampling, field measurements and sample analysis) performed during the investigation, so as to ensure that all information, data and resulting decisions are technically sound, statistically valid, and properly documented; and

C) Presentation of the data in an appropriate format (e.g., tabular and graphical displays) such that all information is organized and presented logically and that relationships between the different investigations for each medium are apparent;

6) Endangerment assessment. This chapter shall analyze the results of the field activities and characterize the extent of contamination (qualitative and quantitative) for contaminants of concern related to the recognized environmental conditions and compare the site information with the applicable provisions of 35 Ill. Adm. Code 742. This chapter shall:

A) Describe any recognized environmental conditions, evaluate exposure routes, including threatened releases, and evaluate exposure routes excluded under 35 Ill. Adm. Code 742;

B) Describe the nature, concentration and extent of contaminants of concern within all environmental media at the remediation site and assess the observed and potential contaminant fate and transport;

C) Describe the significant physical features of the remediation site and vicinity that may affect contaminant transport and risk to human health, safety and the environment; and

D) Compare the concentrations of the contaminants of concern with the corresponding Tier 1 remediation objectives under 35 Ill. Adm. Code 742;

7) Conclusion. This chapter shall assess the sufficiency of the data in the report and recommend future steps;

8) Appendices. Supporting documentation, references and data sources, including, but not limited to, field logs, well logs, and reports of laboratory analyses, shall be incorporated into the appendices with reports containing laboratory analyses of samples collected on or after January 1, 2003,

including the following:

A) Accreditation status of the laboratory performing the quantitative analyses;

B) Certification by an authorized agent of the laboratory that all analyses have been performed in accordance with the requirements of 35 Ill. Adm. Code 186 and the scope of accreditation; and

9) Licensed Professional Engineer or Geologist affirmation in accordance with 35 Ill. Adm. Code 740.410.

Attachment C

Determination of Remediation Objectives

a) If the site investigation reveals evidence of the existence of one or more contaminants of concern, the Defendants shall develop remediation objectives in accordance with 35 Ill. Adm. Code 742 or other remediation measures as appropriate (e.g., removal of drums threatening a release).

b) Where there will be no reliance on an institutional control to achieve compliance, or where an institutional control will be relied upon to limit site use to industrial/commercial use, compliance with remediation objectives shall be demonstrated as follows:

1) For groundwater remediation objectives:
   A) Sampling points shall be located on the remediation site in areas where, following site investigation, concentrations of contaminants of concern exceeded remediation objectives.
   B) Compliance with the groundwater remediation objectives at applicable sampling points shall be determined in accordance with 35 Ill. Adm. Code 742.225.

2) For soil remediation objectives:
   A) Sampling points shall be located on the remediation site in areas where, following site investigation, concentrations of concern exceeded remediation objectives.
   B) Compliance with soil remediation objectives at applicable sampling points shall be determined in accordance with 35 Ill. Adm. Code 742.225.

c) Where an institutional control or remediation measure will be relied upon to achieve compliance, compliance shall be determined based on approval by the Illinois EPA of the institutional control or remediation measure and the timely implementation of the institutional control or remediation measure (e.g., if an institutional control prohibiting the use of groundwater within the boundaries of the remediation site as a potable water supply is obtained under 35 Ill. Adm. Code 742 Subpart J, sampling points shall be located at the boundary of the remediation site).

d) Upon completing the determination of remediation objectives, the Defendants shall compile the information into a Remedial Objectives Report meeting the requirements listed below for submittal to the Illinois EPA.

Remedial Objectives Report

The Remedial Objectives Report shall address the recognized environmental condition(s) and related contaminants of concern that were identified in the site investigation conducted pursuant to this Part.

a) If an exposure route is to be excluded, the Defendants shall prepare a Remedial Objectives Report demonstrating that the requirements for excluding an exposure route under 35 Ill. Adm. Code 742 have been satisfied.

b) If the Defendants elect to use the Tier 1 remediation objectives under 35 Ill. Adm. Code 742, the Defendants shall prepare a Remedial Objectives Report stating the applicable remediation objectives for the contaminants of concern.

c) If the Defendants elect to develop remediation objectives appropriate for the remediation site using Tier 2 or Tier 3 procedures under 35 Ill. Adm. Code 742, the Defendants shall prepare a Remedial Objectives Report demonstrating compliance with those procedures.

d) If the Defendants elect to develop remediation objectives appropriate for the remediation site using the area background procedures under 35 Ill. Adm. Code 742, the Defendants shall prepare a Remedial Objectives Report demonstrating compliance with those procedures.

e) If the recognized environmental condition requires remediation measures other than, or in addition to, remediation objectives determined under 35 Ill. Adm. Code 742 (e.g., removal of drums threatening a release), the Remedial Objectives Report shall describe those measures and demonstrate that the measures selected:
   1) *Will prevent or eliminate the identified threat to human health and the* environment;
   2) Are technically feasible and can be implemented without creating additional threats to human health and the environment; and
   3) Are not inconsistent with the Act and applicable regulations.

f) In the event that the Illinois EPA has determined in writing that the background level for a regulated substance or pesticide poses an acute threat to human health or the environment at the Site when considering the post-remedial action land use, the Defendants shall develop appropriate risk-based remediation objections in accordance with subsections (a), (b) and/or (c) above. (Section 58.5(b)(3) of the Act)

g) The Remedial Objectives Report shall contain the affirmation of a Licensed Professional Engineer(s) in accordance with Paragraph 1(d) of Attachment A.

Attachment D

Remedial Action Plan

If the approved remediation objectives for any regulated substance of concern established under the Remedial Objectives Report are less than the levels at the remediation site prior to any remedial action, the Defendants shall prepare a Remedial Action Plan. The plan shall describe the proposed remedy and evaluate its ability and effectiveness to achieve the remediation objectives approved for the remediation site [*415 ILCS 5/58.6(d)*], including but not limited to:

a) Executive summary. This chapter shall identify the objectives of the Remedial Action Plan and the technical approach utilized to meet such objectives. At a minimum, this chapter shall include the following elements:
   1) The major components (e.g., treatment, containment, removal actions) of the Remedial Action Plan;
   2) The scope of the problems to be addressed by the proposed remedial action(s) including the specific contaminants of concern and the physical area to be addressed by the Remedial Action Plan; and
   3) Schedule of activities with estimated dates of completion;

b) Statement of remediation objectives or reference to the Remedial Objectives Report;

c) Remedial technologies selected. This chapter shall describe how each major remedial technology identified in the Remedial Action Plan fits into the overall strategy for addressing the recognized environmental conditions at the remediation site, including but not limited to:
   1) Feasibility of implementation;
   2) Whether the technologies will perform satisfactorily and reliably until the remediation objectives are achieved; and
   3) Whether remediation objectives will be achieved within a reasonable period of time.

e) Confirmation sampling plan. This chapter shall describe how the effectiveness of the remedial action will be measured. At a minimum, a site-specific sampling plan and quality assurance project plan must be prepared.

f) Current and post-remediation use of the property;

g) Applicable engineered barriers, institutional controls, and groundwater monitoring. This chapter shall describe any such controls selected or relied upon in determining or achieving remediation objectives, including long-term reliability, operating and maintenance plans, and monitoring procedures;

h) Appendices. References and other informational sources should be incorporated into the appendices; and

i) Licensed Professional Engineer affirmation in accordance with Paragraph 1(d) of Attachment A.

KATHERINE M. KEEFE
McHENRY CTY. CIR. CLK.

IN THE CIRCUIT COURT OF THE TWENTY-SECOND JUDICIAL CIRCUIT
McHENRY COUNTY, ILLINOIS
CHANCERY DIVISION

PEOPLE OF THE STATE OF ILLINOIS, *ex rel.* LISA MADIGAN, Attorney General of the State Illinois,	)	
Plaintiff,	)	
v.	)	No. 13 CH 1046
300 WEST LLC, an Illinois limited liability co. and THE ARNOLD ENGINEERING CO., an Illinois corporation a/k/a Arnold Magnetic Technologies Corporation,	)	
Defendants.	)	

FIRST AGREED MODIFICATION TO SECOND AGREED PRELIMINARY INJUNCTION ORDER

1. On June 11, 2014, the Court entered a Second Agreed Preliminary Injunction Order with 300 West, LLC ("300 West") and The Arnold Engineering Co. ("Arnold" and together with 300 West "the Defendants"), in which the Defendants agreed to certain compliance provisions ("Second Agreed Order").

2. Section IV.10(b) of the Second Agreed Order that was entered by this Court on June 11, 2014 is hereby deleted in its entirety and replaced with the following:

b. ***Comprehensive Site Investigation.***

i. ***Off-Site Sampling Deadlines.***

1) On or before March 9, 2015, the Defendants shall complete all off-Site soil borings and install all monitoring wells, as depicted on Exhibit 1.

2) On or before March 16, 2015, the Defendants shall

complete sampling of all off-Site soil boring and monitoring well locations, as depicted on Exhibit 1.

3) On or before March 23, 2015, the Defendants shall submit to Illinois EPA analytical results of samples for all off-Site soil boring and monitoring well locations, as depicted on Exhibit 1.

4) On or before April 6, 2015, the Defendants shall submit to Illinois EPA via email (with hard copies to be submitted thereafter) an off-Site letter report setting forth:

(aa) All raw analytical data presented in tabular format (one table should be submitted for groundwater samples and one table should be submitted for soil samples. These tables should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results, and any exceedance of the most stringent objective should be highlighted);

(bb) Figures which show the sampling locations with the location identifications (e.g. GW-1, GW2); and

(cc) If necessary to delineate the nature and extent of off-Site contamination, a proposed plan with proposed locations for additional delineation of the nature and extent of contamination as well as a schedule for implementation.

5) If the Illinois EPA approves with conditions or disapproves of such off-Site letter report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval.

ii. ***On-Site Monitoring Well Sampling Deadlines.***

1) On or before March 27, 2015, the Defendants shall complete the installation of all monitoring wells, as depicted on Exhibit 1.

2) On or before April 8, 2015, the Defendants shall complete sampling of all on-Site monitoring well locations, as depicted on Exhibit 1.

3) On or before April 15, 2015, the Defendants shall submit to Illinois EPA analytical results of samples for all on-Site monitoring well locations, as depicted on Exhibit 1.

4) On or before April 29, 2015, the Defendants shall submit to Illinois EPA via email (with hard copies to be submitted thereafter) an on-Site monitoring well letter report setting forth:

(aa) All raw analytical data presented in tabular format (The table should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results, and any exceedance of the most stringent objective should be highlighted);

(bb) Figures which show the sampling locations with the location identifications (e.g. GW-1, GW-2); and

(cc) If necessary to delineate the nature and extent of on-Site contamination, a proposed plan with proposed locations for additional delineation of the nature and extent of contamination as well as a schedule for implementation.

5) If the Illinois EPA approves with conditions or disapproves of such on-Site monitoring well letter report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval.

iii. ***On-Site Soil Boring and Sampling Deadlines.***

1) On or before April 13, 2015, the Defendants shall complete all on-Site soil boring locations, as depicted on Exhibit 1.

2) On or before April 23, 2015, the Defendants shall complete sampling of all on-Site soil boring locations, as depicted on Exhibit 1.

3) On or before April 30, 2015, the Defendants shall submit to Illinois EPA analytical results of samples for all on-Site soil boring locations, as depicted on Exhibit 1.

4) On or before May 14, 2015, the Defendants shall submit to Illinois EPA via email (with hard copies to be submitted thereafter) an on-Site soil sampling letter report setting forth:

(aa) All raw analytical data presented in tabular format (The table should at a minimum include: sample location, depth of sample, most stringent remediation objective, analytical results, and any exceedance of the most stringent objective should be highlighted);

(bb) Figures which show the sampling locations with the location identifications (e.g. SP-1, SP-2); and

(cc) If necessary to delineate the nature and extent of on-Site contamination, a proposed plan with proposed locations for additional delineation of the nature and extent of contamination as well as a schedule for implementation.

5) If the Illinois EPA approves with conditions or disapproves of such on-Site soil sampling letter report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval.

iv. ***Alternative Sampling Locations.***

To the extent that the Defendants are unable to (a) complete any soil borings, (b) install any monitoring wells or (c) obtain samples in any location depicted on Exhibit 1, the Defendants shall, within twenty-four (24) hours of making each such determination, notify the Illinois EPA via email (Tim Zook at Tim.Zook@Illinois.gov and

Neelu.Lowder@Illinois.gov) of such determination and (a) specify why the boring/well could not be placed as originally depicted, (b) if an alternate location is chosen, the basis for its selection and its location, and (c) if no alternate is chosen, the basis for abandoning the location. However, in no event shall the date to complete the soil borings, install the monitoring wells or collect samples, be extended without prior written approval of the Plaintiff.

v. ***Comprehensive Site Investigation Report.***

Within thirty (30) days of the Illinois EPA's approval of the last report required under Section IV.10.b.i.-iii. above, the Defendants shall submit to the Illinois EPA a Comprehensive Site Investigation Report for review and approval in accordance with the requirements detailed in Attachment 1, attached hereto and incorporated herein. The Comprehensive Site Investigation Report shall be signed and sealed by an Illinois Licensed Professional Engineer or Geologist. If the Illinois EPA approves with conditions or disapproves of the Comprehensive Site Investigation Report, the Defendants shall, within fourteen (14) business days after receiving the Illinois EPA's written notice of such approval with conditions or disapproval, unless the Illinois EPA grants, in writing, a longer time period, submit a proposal to the Illinois EPA, that addresses all conditions or deficiencies identified by the Illinois EPA in its approval with conditions or disapproval. If the Defendants disagree with Illinois EPA's disapproval of, or conditions imposed with respect to, the Comprehensive Site Investigation Report, the Defendants shall, within twenty-one (21) days of receipt of the notice of disapproval or approval with conditions, invoke Dispute Resolution in accordance with Section X herein.

3. Paragraph 11 of the Second Agreed Order that was entered by this Court on June 11, 2014 is hereby deleted in its entirety and replaced with the following:

> ***Remedial Objectives Report.*** Within forty-five (45) days of the Plaintiff's approval of the Comprehensive Site Investigation Report, the Defendants shall submit to the Plaintiff a Remedial Objectives Report that meets the requirements of Attachment C hereto. The Defendants may be required to submit separate soil and groundwater Remedial Objectives Reports. If the Plaintiff approves with conditions or disapproves of the Remedial Objectives Report(s), the Defendants shall, within the time set forth in the Plaintiff's written approval with conditions or disapproval, submit a proposal to the persons identified in Section V (Notices), that addresses all conditions or deficiencies identified by the Plaintiff. Until the Plaintiff fully approves the Remedial Objectives Report(s), the Defendants shall respond to Plaintiffs' conditions or deficiencies in writing within the timeframes set forth in the Plaintiff's written approval with conditions or disapproval.

4. The references to Attachments B and C in Paragraphs IV.11. and 12. of, and the corresponding attachments to, the Second Agreed Preliminary Injunction Order are hereby deleted in their entirety and replaced with Attachment 1, attached hereto and incorporated by referenced therein.

5. This First Agreed Modification to Second Agreed Preliminary Injunction Order is incorporated by reference in the Second Agreed Order that was entered by this Court on June 11, 2014.

6. Except as modified herein, all of the other provisions of the Second Agreed Order that was entered by this Court on June 11, 2014, remain in full force and effect.

7. This First Agreed Modification to Second Agreed Preliminary Injunction Order may be executed by the parties in one or more counterparts, all of which taken together, shall constitute one and the same instrument.

ATTACHMENT 1

Reports – General

All plans and reports required by the Consent Order shall be submitted to the Illinois EPA with attachments and accompanying documentation as necessary. Plans and reports shall be mailed or delivered to the address designated by the Consent Order. Plans and reports that are hand-delivered to the Illinois EPA shall be delivered during the Illinois EPA's normal business hours.

All plans and reports submitted to the Illinois EPA shall include:

a) The full legal name, address and telephone number of the Defendants or any authorized agent acting on behalf of the Defendants, and any contact persons to whom inquiries and correspondence must be addressed;

b) The original signature of the Defendants or of any authorized agent acting on behalf of the Defendants;

c) The name of the Licensed Professional Engineer (LPE) responsible for site activities and preparation of the plan or report, the date of preparation, registration number, license expiration date, and professional seal; and

d) The LPE responsible for the site investigations, remedial activities, and preparation of the plans or reports shall affirm by original signature as follows:

"I attest that all site investigations or remedial activities, including review of laboratory data, that are the subject of this plan or report were performed under my direction and this document and all attachments were prepared under my direction or reviewed by me, and, to the best of my knowledge and belief, the work described in the plan or report has been designed or completed in accordance with the Act, and generally accepted engineering practices, and the information presented, including any qualified laboratory data, is accurate and complete."

Comprehensive Site Investigation

The comprehensive site investigation is designed to identify all recognized environmental conditions and all related contaminants of concern that may be expected to exist at a remediation site. The comprehensive site investigation shall be performed in two phases as set forth below.

a) The phase II environmental site assessment shall determine the nature, concentration, direction and rate of movement, and extent of the contaminants of concern at the remediation site and the significant physical features of the remediation site and vicinity that may affect contaminant fate and transport and

risk to human health, safety and the environment. At a minimum, the phase II environmental site assessment shall include:

1) Sampling, analyses, and field screening measurements indicating the concentrations of contaminants, if any, from the Target Compound List and any other contaminants whose presence has been indicated by the phase I environmental site assessment. Based on the phase I environmental site assessment, the Illinois EPA may add or delete contaminants from the Target Compound List for sampling, analyses, and field screening measurements;

2) Characterization of sources and potential sources of recognized environmental conditions and the related contaminants of concern, identifying:

   A) The sources or potential sources of contamination;

   B) The contaminants of concern;

   C) Statutory or regulatory classification of the contaminants of concern and contaminated materials (e.g., hazardous waste, hazardous substance, special waste);

3) Characterization of the extent of contaminants of concern, identifying:

   A) The actual contaminated medium or media;

   B) The three-dimensional configuration of contaminants of concern with concentrations delineated; and

   C) The nature, direction, and rate of movement of the contaminants of concern;

4) Characterization of present and post-remediation exposure routes, identifying:

      A) All natural and man-made pathways that are on the remediation site, in rights-of-way attached to the remediation site, or in any areas surrounding the remediation site that may be adversely affected as a result of a release (from the recognized environmental conditions) and whether there is evidence of migration of contaminants of concern, in either solution or vapors, along such pathways that may potentially threaten human or environmental receptors or that may cause explosions in

basements, crawl spaces, utility conduits, storm or sanitary sewers, vaults or other spaces;

B) The locations of any human and environmental receptors and receptor exposure routes; and

C) Current and post-remediation uses of affected or potentially affected land, groundwater, surface water, and sensitive habitats; and

5) Characterization of significant physical features of the remediation site and vicinity that may affect contaminant fate and transport and risk to human health, safety and the environment.

Comprehensive Site Investigation Report

a) Site investigation results for both Phase I and Phase II of the comprehensive site investigation shall be combined into one Site Investigation Report.

b) A Site Investigation Report for a comprehensive site investigation shall include, but not be limited to, the following chapters:

1) Executive summary. This chapter shall identify the objectives of the site investigation and the technical approach utilized to meet such objectives. It shall state whether recognized environmental conditions were identified and the data limitations in the assessment;

2) Site characterization. This chapter shall include the compilation of all sources reviewed and information obtained as a result of the site investigation as required by this Consent Order, including but not limited to:

A) Sources consulted or reviewed. This subchapter shall contain a list of reference documents used in completing the site investigation;

B) Site history. This subchapter shall present a chronological summary of the historic uses of the remediation site as prescribed by "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM E 1527-00).

C) Site description. This subchapter shall describe the regional location, pertinent boundary features, general facility physiography, geology, hydrogeology, existing and potential migration pathways and exposure routes, and current and post-

remediation uses of the remediation site and surrounding areas that are immediately adjacent to the remediation site;

D) Site base map(s) including the following:

i) A distance of at least 1,000 feet around the remediation site at a scale no smaller than one inch equal to 200 feet;

ii) Map scale, north arrow orientation, date, and location of the site with respect to township, range and section;

iii) Remediation site boundary lines, with the owners of property adjacent to the remediation site clearly indicated, if reasonably identifiable;

iv) Surrounding land uses (e.g., residential property, industrial/commercial property, agricultural property, and conservation property);

v) The sources or potential sources of the contaminants of concern, spill areas, and other suspected areas for any or all contaminants of concern;

vi) On-site and off-site injection and withdrawal wells; and

vii) All buildings, tanks, piles, utilities, paved areas, easements, rights-of-way and other features, including all known past and current product and waste underground tanks or piping; and

E) A legal description or reference to a plat showing the boundaries of the remediation site, or, for a Federal Landholding Entity, a common address, notations in any available facility master land use plan, site specific GIS or GPS coordinates, plat maps, or any other means that identifies the site in question with particularity;

3) Site-specific sampling plan. This chapter shall indicate those applicable physical and chemical methods utilized for contaminant source investigations, soil and sediment investigations, hydrogeological investigations, surface water investigations, and potential receptor investigations;

4) Documentation of field activities. This chapter shall include the results of the field activities to determine physical characteristics. At a minimum, this chapter shall include the following elements:

A) Narrative description of the field activities conducted during the investigation;

B) The quality assurance project plan utilized to document all monitoring procedures (e.g., sampling, field measurements and sample analyses) performed during the investigation, so as to ensure that all information, data and resulting decisions are technically sound, statistically valid, and properly documented; and

C) Presentation of the data in an appropriate format (e.g., tabular and graphical displays) such that all information is organized and presented logically and that relationships between the different investigations for each medium are apparent;

5) Endangerment assessment. This chapter shall analyze the results of the field activities and characterize the extent of contamination (qualitative and quantitative) for contaminants of concern and compare the remediation site information with the applicable provisions of 35 Ill. Adm. Code 742. This chapter shall:

A) Describe any recognized environmental conditions, evaluate exposure routes, including threatened releases, and evaluate exposure routes excluded under 35 Ill. Adm. Code 742;

B) Describe all conditions the LPE has determined to be de minimis along with the rationale for each such de minimis determination;

C) Describe the nature, concentration and extent of contaminants of concern within all environmental media at the remediation site and assess the observed and potential contaminant fate and transport;

D) Describe the significant physical features of the remediation site and vicinity that may affect contaminant transport and risk to human health, safety and the environment; and

E) Compare the concentrations of the contaminants of concern with the corresponding Tier 1 remediation objectives under 35 Ill. Adm. Code 742;

6) Conclusion. This chapter shall assess the sufficiency of the data in the report and recommend future steps;

7) Appendices. References and data sources, including but not limited to field logs, well logs, and reports of laboratory analyses, shall be incorporated into the appendices with reports containing laboratory analyses of samples collected on or after January 1, 2003, including the following:

A) Accreditation status of the laboratory performing the quantitative analyses;

B) Certification by an authorized agent of the laboratory that all analyses have been performed in accordance with the requirements of 35 Ill. Adm. Code 186 and the scope of accreditation; and

8) Licensed Professional Engineer affirmation in accordance with 1(d) of this Attachment.

Remediation Objectives Report

The Remediation Objectives Report shall address the recognized environmental condition(s) and related contaminants of concern that were identified in the site investigation conducted pursuant to this Part.
