a) If an exposure route is to be excluded, the Defendants shall prepare a Remediation Objectives Report demonstrating that the requirements for excluding an exposure route under 35 Ill. Adm. Code 742 have been satisfied.

b) If the Defendants elect to use the Tier 1 remediation objectives under 35 Ill. Adm. Code 742, the Defendants shall prepare a Remediation Objectives Report stating the applicable remediation objectives for the contaminants of concern.

c) If the Defendants elect to develop remediation objectives appropriate for the remediation site using Tier 2 or Tier 3 procedures under 35 Ill. Adm. Code 742,the Defendants shall prepare a Remediation Objectives Report demonstrating compliance with those procedures.

d) If the Defendants elect to develop remediation objectives appropriate for the remediation site using the area background procedures under 35 Ill. Adm. Code 742, the Defendants shall prepare a Remediation Objectives Report demonstrating compliance with those procedures.

e) If the recognized environmental condition requires remediation measures other than, or in addition to, remediation objectives determined under 35 Ill. Adm. Code 742 (e.g., removal of drums threatening a release), the Remediation Objectives Report shall describe those measures and demonstrate that the measures selected:

1) Will prevent or eliminate the identified threat to human health and the environment;

2) Are technically feasible and can be implemented without creating additional threats to human health and the environment; and

3) Are not inconsistent with the Act and applicable regulations.

f) In the event that the Illinois EPA has determined in writing that the background level for a regulated substance or pesticide poses an acute threat to human health or the environment at the Site when considering the post-remedial action land use, the Defendants shall develop appropriate risk-based remediation objectives in accordance with subsections (a), (b) and/or (c) above.

g) The Remediation Objectives Report shall contain the affirmation of a Licensed Professional Engineer(s) in accordance with 2.d. of this Attachment.

Remedial Action Plan

The plan shall describe the proposed remedy and evaluate its ability and effectiveness to achieve the remediation objectives approved for the remediation site, including but not limited to:

a) *Executive summary. This chapter shall identify the objectives of the Remedial* Action Plan and the technical approach utilized to meet such objectives. At a minimum, this chapter shall include the following elements:

1) The major components (e.g., treatment, containment, removal actions) of the Remedial Action Plan;

2) The scope of the problems to be addressed by the proposed remedial action(s) including the specific contaminants of concern and the physical area to be addressed by the Remedial Action Plan; and

3) Schedule of activities with estimated dates of completion through the recording of any institutional controls.

b) Statement of remediation objectives or reference to Remediation Objectives Report;

c) Remedial technologies selected. This chapter shall describe how each major remedial technology identified in the Remedial Action Plan fits into the overall strategy for addressing the recognized environmental conditions at the remediation site, including but not limited to:

1) *Feasibility of implementation;*

2) Whether the technologies will perform satisfactorily and reliably until the remediation objectives are achieved;

3) Whether remediation objectives will be achieved within a reasonable period of time;

d) Confirmation sampling plan. This chapter shall describe how the effectiveness of the remedial action will be measured. At a minimum, a site-specific sampling plan and quality assurance project plan must be prepared in accordance with the provisions set forth in the Site Investigation requirements in item 1 of this Attachment;

e) Current and post-remediation use of the property;

f) Applicable engineered barriers, institutional controls, and groundwater monitoring. This chapter shall describe any such controls selected or relied upon in determining or achieving remediation objectives, including long-term reliability, operating and maintenance plans, and monitoring procedures;

g) Appendices. References and other informational sources should be incorporated into the appendices; and

h) Licensed Professional Engineer affirmation in accordance with item 2.d. of this Attachment.

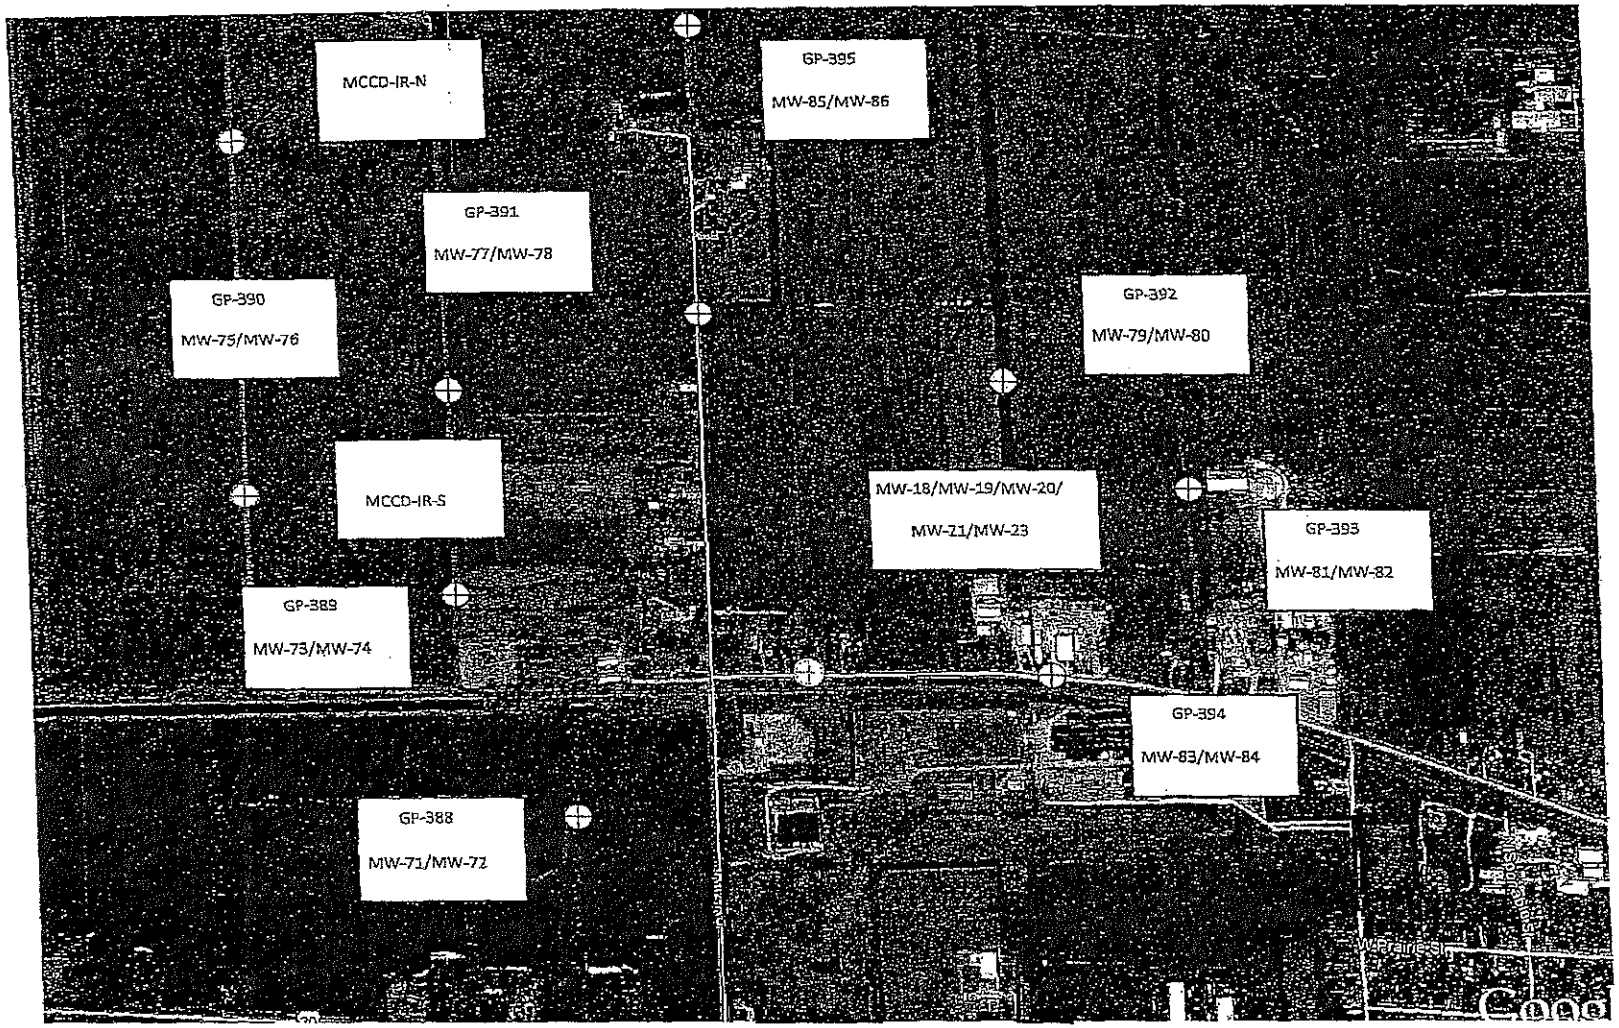

Figure 3: Off-site Sampling Locations: 8 Soil Sample Locations (GP-388...GP-395) and 23 total groundwater samples (identified below)

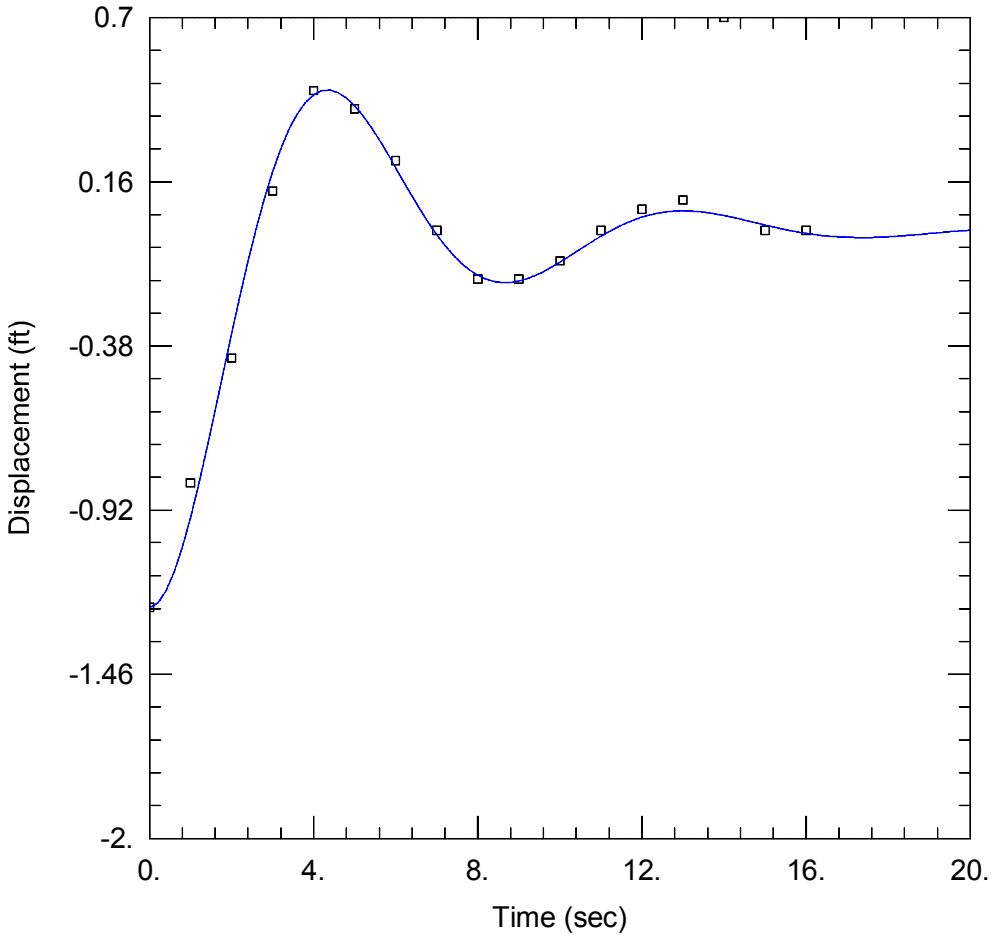
⊕ Cluster wells: 30 ft well screened from 20-30ft + 50 ft well screened from 40-50ft: (8 clusters x 2 depths = 16 GW samples). Soil samples will also be collected from these areas (8 locations x 2 sample depths = 16 soil samples)

⊕ McHenry County Conservation District Well (2 irrigation wells sampled on 12/23. Estimated depth is 55-60 feet. 3 monitoring wells sampled on 12/23 (near southern irrigation well). Estimated depths are 12 feet.)

⊕ Previously installed nested well location: (5 total wells, currently present)



CERTIFICATE OF SERVICE

I, KATHRYN A. PAMENTER, an Assistant Attorney General, do certify that I caused to be served this 11th day of March, 2015, the attached Notice of Filing and First Agreed Modification to Second Agreed Preliminary Injunction Order upon the parties set forth on the Notice of Filing by placing a true and correct copy in an envelope addressed as set forth on said Notice of Filing, first class postage prepaid, and depositing same with the United States Postal Service at 100 West Randolph Street, Chicago, Illinois, at or before the hour of 5:00 p.m.

Kathryn A. Pamenter

Re: Revised Summary of Proposed Supplemental Off-Site Investigation
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Zook:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC in response to the Illinois Environmental Protection Agency's (IEPA) letter dated May 1, 2015 (IEPA Letter) and to provide an amended summary of a proposed supplemental off-site investigation to further assess the off-site subsurface environmental conditions related to the above-referenced property (the Arnold Property). Based on the information summarized in our amended Off-Site Investigation Summary letter report dated May 7, 2015, certain solvent-type compounds[1] and manganese were detected in groundwater collected from various off-site locations at concentrations that exceed the TACO[2] Tier 1 groundwater remediation objectives (GROs) for Class I and/or Class II groundwater. In light of these observations, WCG is proposing a supplemental off-site groundwater assessment to further evaluate the off-site horizontal and vertical extents of the constituents that exceed the TACO Tier 1 GROs.

Based on the information included in our amended Off-Site Investigation Summary, elevated solvent-type compounds were noted in the deeper groundwater monitoring wells that were screened at depths of 40 to 50 feet below ground surface (bgs). Pursuant to the IEPA Letter, WCG is proposing to install as

[1] 1,1-Dichloroethene; Vinyl Chloride; 1,1,1-Trichloroethane; Tetrachloroethene; Trichloroethene; and 1,4-Dioxane.

[2] Title 35, Illinois Administrative Code, Part 742 titled Tiered Approach to Corrective Action Objectives.

1813 N. Mill Street • Suite A • Naperville, Illinois 60653 • 630-717-4848 • wcgrp.com • Offices Nationwide

many as 13 additional groundwater monitoring wells in select off-site locations located to the north, northwest, and east of the Arnold Property. The proposed supplemental monitoring wells will be installed, sampled, and analyzed following the general procedures summarized in the Work Plan. No soil samples are proposed to be collected as part of this supplemental off-site groundwater assessment.

Specifically, proposed monitoring wells MW-79 and MW-80, which were included as part of the initial *Proposed Site Investigation Work Plan* prepared by Environmental Group Services Limited (EGSL) dated December 24, 2014 (Work Plan), will be completed at a location approximately 360 feet west of the originally proposed location (see Figure A, attached), since access to the original location was not authorized by the property owner. Monitoring wells MW-79 and MW-80 will be completed in a cluster to the original proposed depths of 30 and 50 feet, respectively. Monitoring wells MW-79 and MW-80 will be screened at depths of approximately 20 to 30 feet and 40 to 50 feet bgs, respectively.

Three additional deeper groundwater monitoring wells (i.e., monitoring wells MW-87, MW-88, and MW-89) will be completed adjacent to the monitoring well clusters containing monitoring wells MW-74 and MW-84 and in the vicinity of the northernmost existing McHenry County Conservation District (MCCD) irrigation well to further evaluate the vertical extents of groundwater impacts (Figure A). Proposed monitoring wells MW-87, MW-88, and MW-89 will be completed to a depth of 70 feet bgs. Monitoring wells MW-87, MW-88, and MW-89 will be screened at depths of approximately 60 to 70 feet bgs.

In addition, the supplemental off-site groundwater assessment activities will include the installation of as many as seven additional groundwater monitoring wells (i.e., monitoring wells MW-90, MW-91, MW-92, MW-93, MW-94, MW-95, and MW-96) to further assess the environmental condition of the groundwater located offsite. The anticipated groundwater gradient (0.003 feet/foot) in the area to the northwest of the Arnold Property based on regional topographic inforomation, suggests that potential groundwater impacts may extend to depths of approximately 60 to 70 feet. Therefore, three of the proposed monitoring wells (i.e., monitoring wells MW-91, MW-92, and MW-93), which are anticipated to be situated down gradient from previously installed monitoring wells MW-74 and MW-76 and the two existing MCCD irrigation wells that exhibited solvent-type impacts, will be installed to a depth of approximately 70 feet on various additional tracts of land situated to the north and west of the aforementioned monitoring wells and irrigation wells (Figure A). Monitoring wells MW-91, MW-92, and MW-93 will be screened at depths of approximately 60 to 70 feet bgs.

Proposed monitoring well MW-90 will be installed at a location situated to the south, west, and southwest of the southernmost MCCD irrigation well and previously installed monitoring wells MW-18

and MW-74, respectively (Figure A). The proposed location of monitoring well MW-90 is anticipated to be located cross groundwater gradient from previously installed monitoring wells MW-74 and MW-18, which were installed to depths of approximately 50 feet bgs, and up gradient from the southernmost MCCD irrigation well. Therefore, proposed monitoring well MW-90 will be installed to a depth of approximately 50 feet bgs, as this is the approximately depth in which impacts were observed in previously installed monitoring wells MW-74 and MW-18. Monitoring well MW-90 will be screened at a depth of approximately 40 to 50 bgs.

Lastly, proposed monitoring well MW-94 will be installed along the northern Railroad Street right-of-way (Figure A) to further evaluate the eastern horizontal extent of impacts identified in previously installed monitoring well MW-83, which was installed at depth of 30 feet bgs and exhibited higher concentrations of tetrachloroethene and 1,1,1-trichloroethane than the groundwater sample collected from monitoring well MW-84 that was installed at a depth of 50 feet bgs. In light of this, proposed monitoring well MW-94 will be completed to a depth of 30 feet bgs and screened at a depth of 20 to 30 feet bgs. Laboratory analytical data obtained from a groundwater sample collected from monitoring well MW-94 may prove beneficial with narrowing the location of a potential source of impact from the Arnold Property.

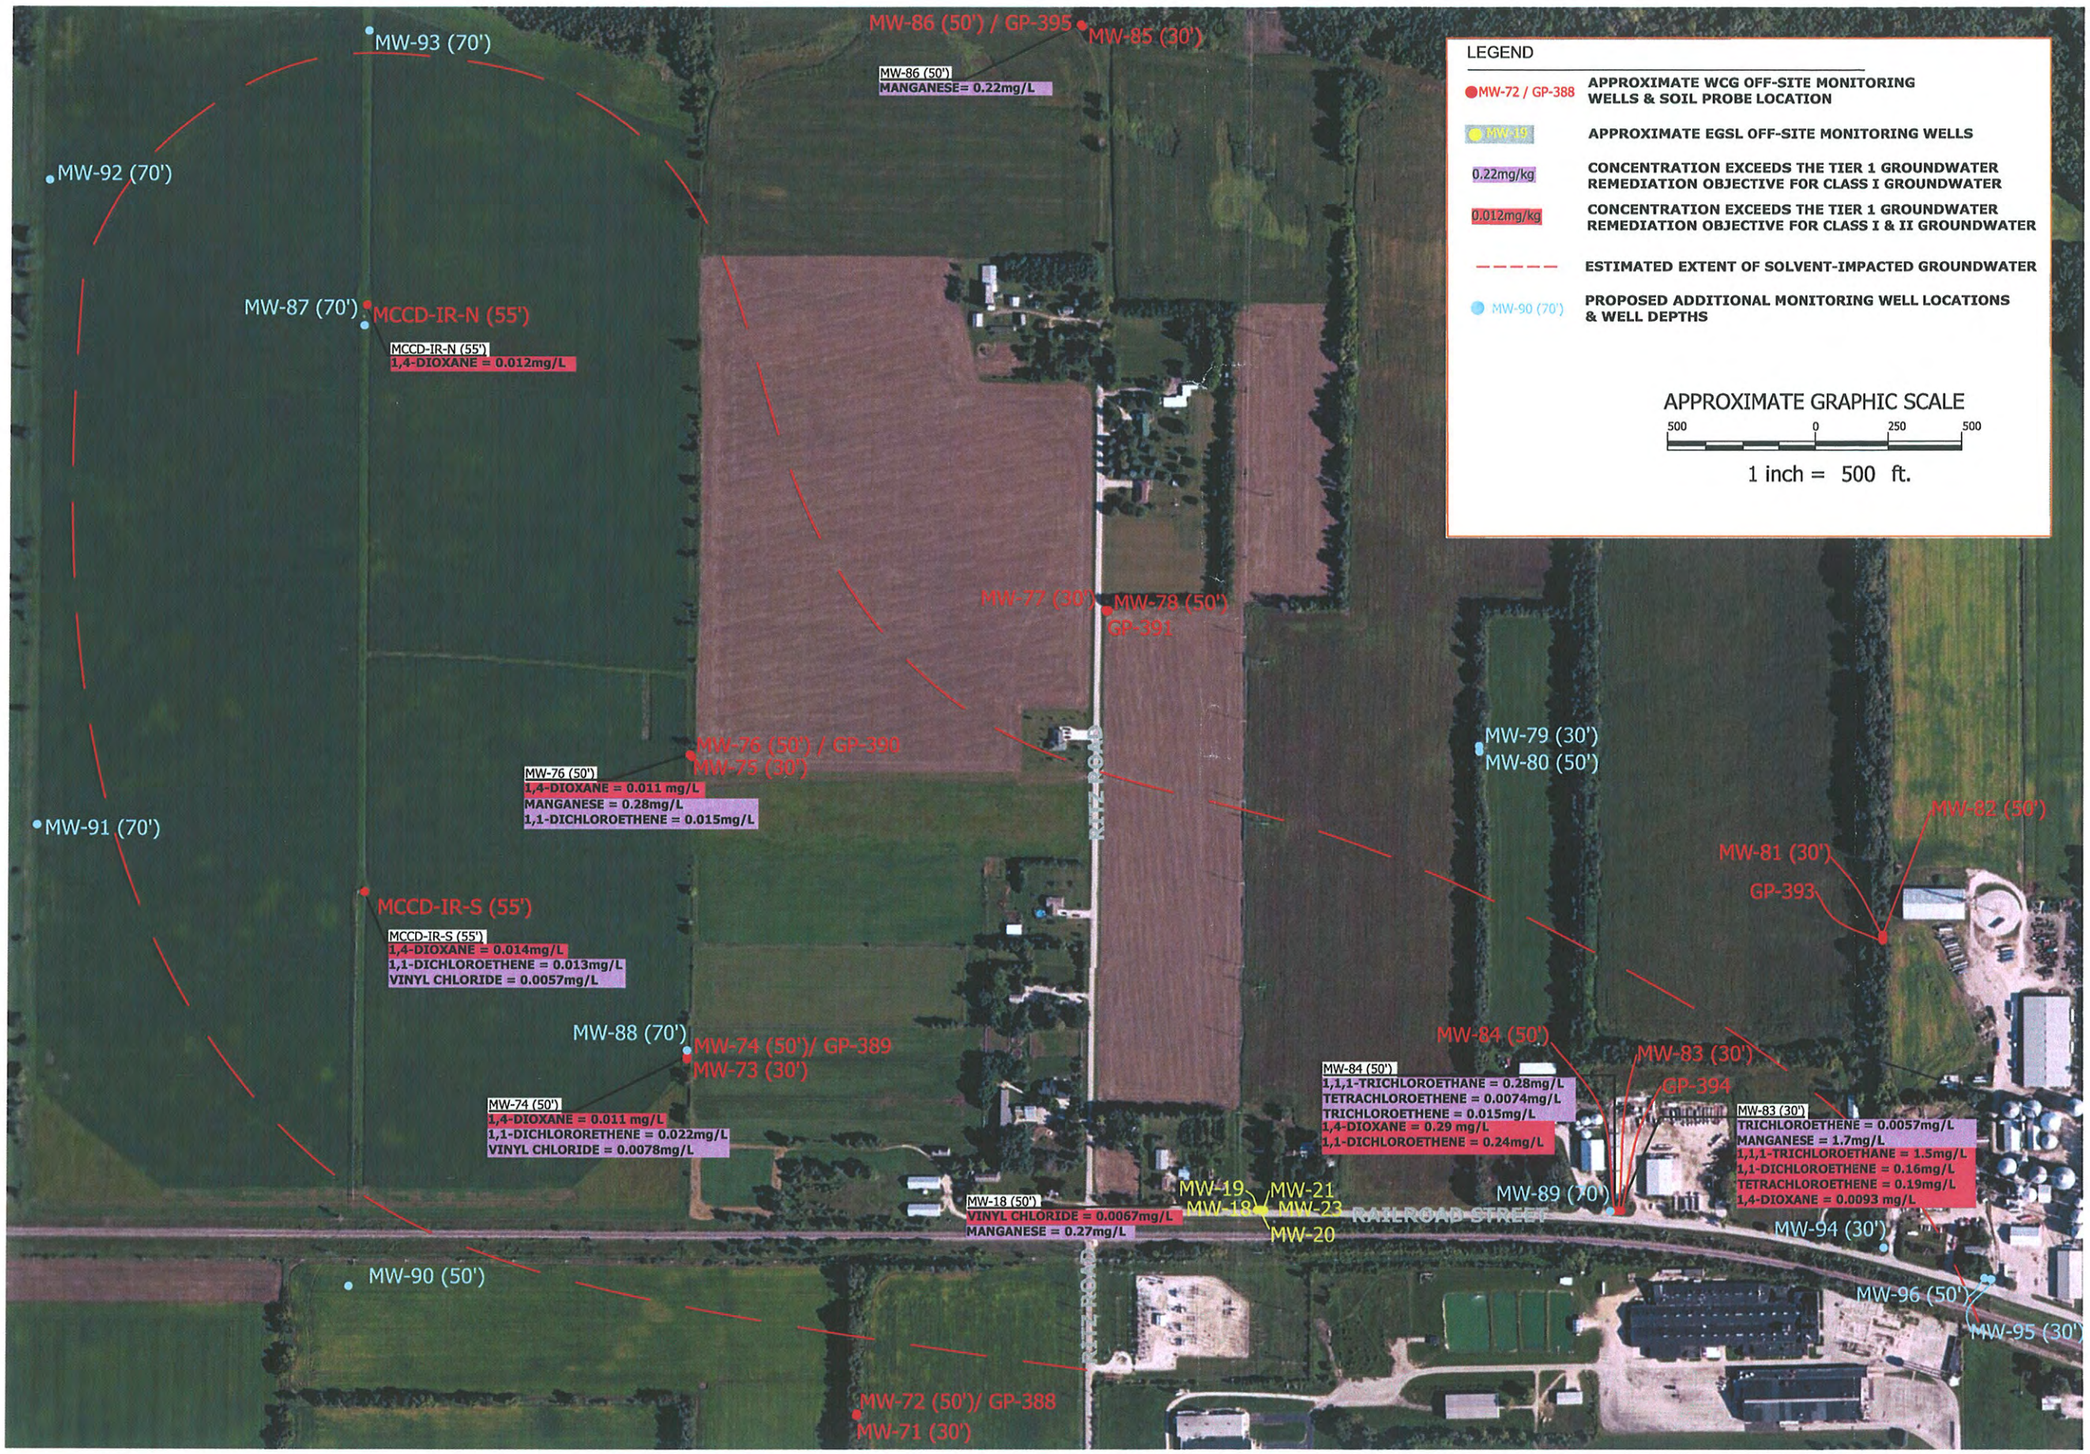
In the event that impacts are observed in monitoring well MW-94, monitoring wells MW-95 and MW-96 will be completed to the southeast of monitoring well MW-94 along the northern Railroad Street right-of-way (Figure A). Proposed monitoring wells MW-95 and MW-96 are anticipated to be situated up groundwater gradient from previously installed monitoring wells MW-83 and MW-84 and proposed monitoring well MW-94. Monitoring wells MW-95 and MW-96 will be completed in a cluster to depths of 30 and 50 feet, respectively, as these are the depths of previously observed solvent-type impacts in monitoring wells MW-83 and MW-84. Monitoring wells MW-95 and MW-96 will be screened at depths of approximately 20 to 30 feet bgs and 40 to 50 feet bgs , respectively.

In light of the information contained in the Off-Site Investigation Summary, WCG believes that a benzene concentration detected in a soil sample collected from soil probe GP-395 (1 to 3 feet below ground surface) and a manganese concentration detected in a groundwater sample collected from monitoring well MW-86 are not related to the Arnold Property. Therefore, we do not propose further off-site soil or groundwater assessment activities in the location of the aforementioned sample points.

We have begun the process to obtain access to the properties for each of the proposed additional monitoring well locations. Contingent on access authorization to each property and the availability of a drilling subcontractor, we anticipate that the supplemental off-site groundwater monitoring wells will be

installed and sampled on or before June 9, 2015. We anticipate that the laboratory analyses will be completed and submitted to the IEPA by June 26, 2015. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental off-site groundwater assessment letter report that will be submitted to the IEPA by July 22, 2015.

We trust that the aforementioned revised supplemental groundwater assessment summary is sufficient for your needs at this time. If you should have any questions or comments concerning the supplemental off-site groundwater assessment work plan, please do not hesitate to contact our office at 630-717-4848.



Very Truly Yours,

Weaver Consultants Group North Central, LLC

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *Amended Off-Site Investigation Summary* (e-mail copy dated May 7, 2015, and received via e-mail cover message dated May 11, 2015/Log 15-59417) and the *Revised Summary of Proposed Supplemental Off-Site Investigation* (e-mail copy dated May 8, 2015, and also received via e-mail cover message dated May 11, 2015/Log 15-59417), both of which were prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, in McHenry County. A Second Agreed Modification was filed May 8, 2015, regarding on-site investigation issues. Both the *Amended Off-Site Investigation Summary* and the *Revised Summary of Proposed Supplemental Off-Site Investigation* are approved, with the approval of the *Proposed Supplemental Investigation* contingent on the installation and sampling of additional monitoring wells to those proposed by Weaver. Comments on both documents are given hereafter.

Amended Off-Site Investigation Summary, dated May 7, 2015:

The *Amended Summary* was prepared in response to the Illinois EPA review letter dated May 1, 2015,

which approved the April 24, 2015, *Off-Site Investigation Summary*, but listed several errors so that appropriate corrections could be made in future submittals. The *Amended Summary* is similar in format to the original submittal, with several corrections made and additional explanations of certain items provided, and is approved.

Please note that the summary table on pages 10 and 11 is somewhat confusing, given the narrative sections immediately preceding and following it, and appears to be incomplete. This does not substantially change the intent or findings of the *Amended Summary*, and is described only so that similar issues are not repeated in future submittals. The Illinois EPA does not desire another version of the *Off-Site Investigation Summary* only to correct these issues.

First, the short paragraph immediately preceding the table indicates that the table includes all detections (not excursions) of Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), Polychlorinated Biphenyls (PCBs) and pesticides. Second, the paragraph immediately following the table states that excursions of Class I and/or Class II Groundwater Remediation Objectives (GROs) are listed. Regardless of whether detections or excursions were intended to be included, the table does not contain all of either item.

The table does not include references to the 1,4-Dioxane detections/excursions at monitoring wells MW-74, MW-76 and MW-83, nor does it include a reference to the Bis(2-ethylhexyl)phthalete detection/excursion in the Equipment Blank 3 sample. If the table is intended to include all laboratory detections, there were VOCs other than those listed detected, at concentrations that did not exceed applicable GROs, at MW-83 (1,1-Dichloroethane) and MW-84 (several).

Revised Summary of Proposed Supplemental Off-Site Investigation, dated May 8, 2015:

The document is approved, contingent on the installation of additional monitoring wells to those proposed by Weaver. The Illinois EPA notes that the *Revised Summary* indicates on the top of page 2 that as many as 13 additional off-site groundwater monitoring wells are proposed. However, later narrative sections only include references to a maximum of 12 additional wells, with ten wells to be installed in any event (MW-79, MW-80, and MW-87 through MW-94) and two more to be installed later (MW-95 and MW-96) if impacts are found at MW-94. Comments on specific wells follow.

MW-79 (30') and MW-80 (50') – As stated by Weaver, these wells are to be located in a cluster approximately 360 feet west of the originally proposed location, for which authorization could not be obtained from the property owner. The locations, depths, and screened intervals proposed by Weaver are acceptable to the Illinois EPA.

MW-87 (70'), MW-88 (70'), MW-89 (70') – These wells are to be located adjacent to monitoring well clusters containing MW-74 (50'), MW-84 (50'), and the McHenry County Conservation District (MCCD) north irrigation well (55'), and are intended to further evaluate the extent of groundwater impacts that have been noted in the 50 feet and 55 feet deep wells. The locations, depths, and screened intervals proposed by Weaver are acceptable.

MW-90 (50') – The well is proposed south of the MCCD south irrigation well (55') and west/southwest of MW-18 (50') and MW-74 (50'). Groundwater impacts have been noted in the existing 50 feet and 55 feet deep wells. The location, depth, and screened interval of proposed MW-90 (50') are acceptable. *However, the Illinois EPA requires another well to be installed in a cluster at the same location, with the second well installed to 70 feet and screened from 60 to 70 feet.*

MW-91 (70'), MW-92 (70'), MW-93 (70') – The wells are proposed at locations north and west of wells where groundwater impacts have been identified in existing 50 feet and 55 feet deep wells. The locations, depths, and screened intervals of each of the three wells are acceptable. *However, the Illinois EPA requires another well to be installed in a cluster at each of the three locations, with the second well installed to 50 feet and screened from 40 to 50 feet.*

MW-94 (30') – The well is to be located along the Railroad Street right-of-way, east of the existing cluster wells MW-83 (30') and MW-84 (50'), and is intended to further evaluate the extent of eastern horizontal impacts from MW-83. Weaver points out that concentrations of Tetrachloroethene and 1,1,1-Trichloroethane were higher at MW-83 than at MW-84. While this is accurate, concentrations of other VOCs were higher in the deeper well, MW-84. In addition, the Illinois EPA notes that concentrations of certain VOCs in both wells exceeded applicable GROs. The location, depth, and screened interval of proposed MW-94 (30') are acceptable. *However, the Illinois EPA requires another well to be installed in a cluster at the same location, with the second well installed to 50 feet and screened from 40 to 50 feet.*

MW-95 (30') and MW-96 (50'); cluster wells tentatively planned – Weaver proposes that these wells be installed southeast (presumed upgradient) of MW-94, if sampling at MW-94 indicates groundwater impacts. *The location of the cluster wells and plan to wait for sample results from MW-94 is acceptable to the Illinois EPA, provided that a second well is installed to 50 feet at the MW-94 location, with groundwater impacts from that second well also considered before making a decision regarding MW-95 and MW-96. The Illinois EPA shall be informed of the sampling results from the MW-94 location wells, before making a decision on the need for and depth of any wells at the MW-95/MW-96 location.*

Pursuant to the Second Agreed Preliminary Injunction Order, as modified, a response is required within fourteen (14) business days of the receipt of this letter.

Please note that Todd Hall will be taking over as the Project Manager on this matter, due to my pending retirement at the end of this mouth. Future submittals should therefore be directed to Todd at the address indicated on the letterhead or via e-mail at Todd.Hall@Illinois.gov.

Re: Amended Off-Site Investigation Summary and Proposed Supplemental Off-Site Investigation
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Hall:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a response to the comments included in the Illinois Environmental Protection Agency (IEPA) letter dated May 18, 2015 (IEPA Letter) concerning the recently completed and the proposed off-site environmental assessment activities related to the above referenced property (the Arnold Property). The IEPA Letter was issued to provide comments to WCG's *Amended Off-Site Investigation Summary* dated May 7, 2015 and WCG's *Revised Summary of Proposed Supplemental Off-Site Investigation* dated May 8, 2015.

Specifically, the IEPA Letter approved the *Amended Off-Site Investigation Summary* and identified select inadvertent discrepancies in the narrative of the *Amended Off-Site Investigation Summary*. The IEPA did not request revisions to the discrepancies, but provided the comment so that appropriate corrections could be made in future submittals. WCG has noted the identified discrepancies and will incorporate the comments to future submittals.

Additionally, the IEPA provided comments concerning the *Revised Summary of Proposed Supplemental Off-Site Investigation*. Specifically, the IEPA generally approved the proposed supplemental off-site groundwater assessment activities and requested the installation of additional monitoring wells in select locations to further evaluate the off-site groundwater

1813 N. Mill Street • Suite A • Naperville, Illinois 60653 • 630-717-4848 • wcgrp.com • Offices Nationwide

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

conditions. In light of the IEPA's comments, WCG is proposing to install a total of at least 15 monitoring wells and as many as 17 monitoring wells depending on the laboratory analytical data for the groundwater samples collected from the proposed groundwater monitoring well cluster (i.e., monitoring wells MW-94 and MW-125) located to the east of previously completed groundwater monitoring wells MW-83 and MW-84.

In addition to the previously proposed monitoring wells as summarized in our *Revised Summary of Proposed Supplemental Off-Site Investigation* and in the IEPA Letter, the following additional monitoring wells will be incorporated into the proposed supplemental off-site groundwater assessment as requested by the IEPA. Figure A, attached, shows the locations and depths of the monitoring wells that are included in the supplemental off-site groundwater assessment activities, which includes the monitoring wells summarized in the *Revised Summary of Proposed Supplemental Off-Site Investigation* dated May 8, 2015 and the additional monitoring wells requested by the IEPA in the IEPA Letter.

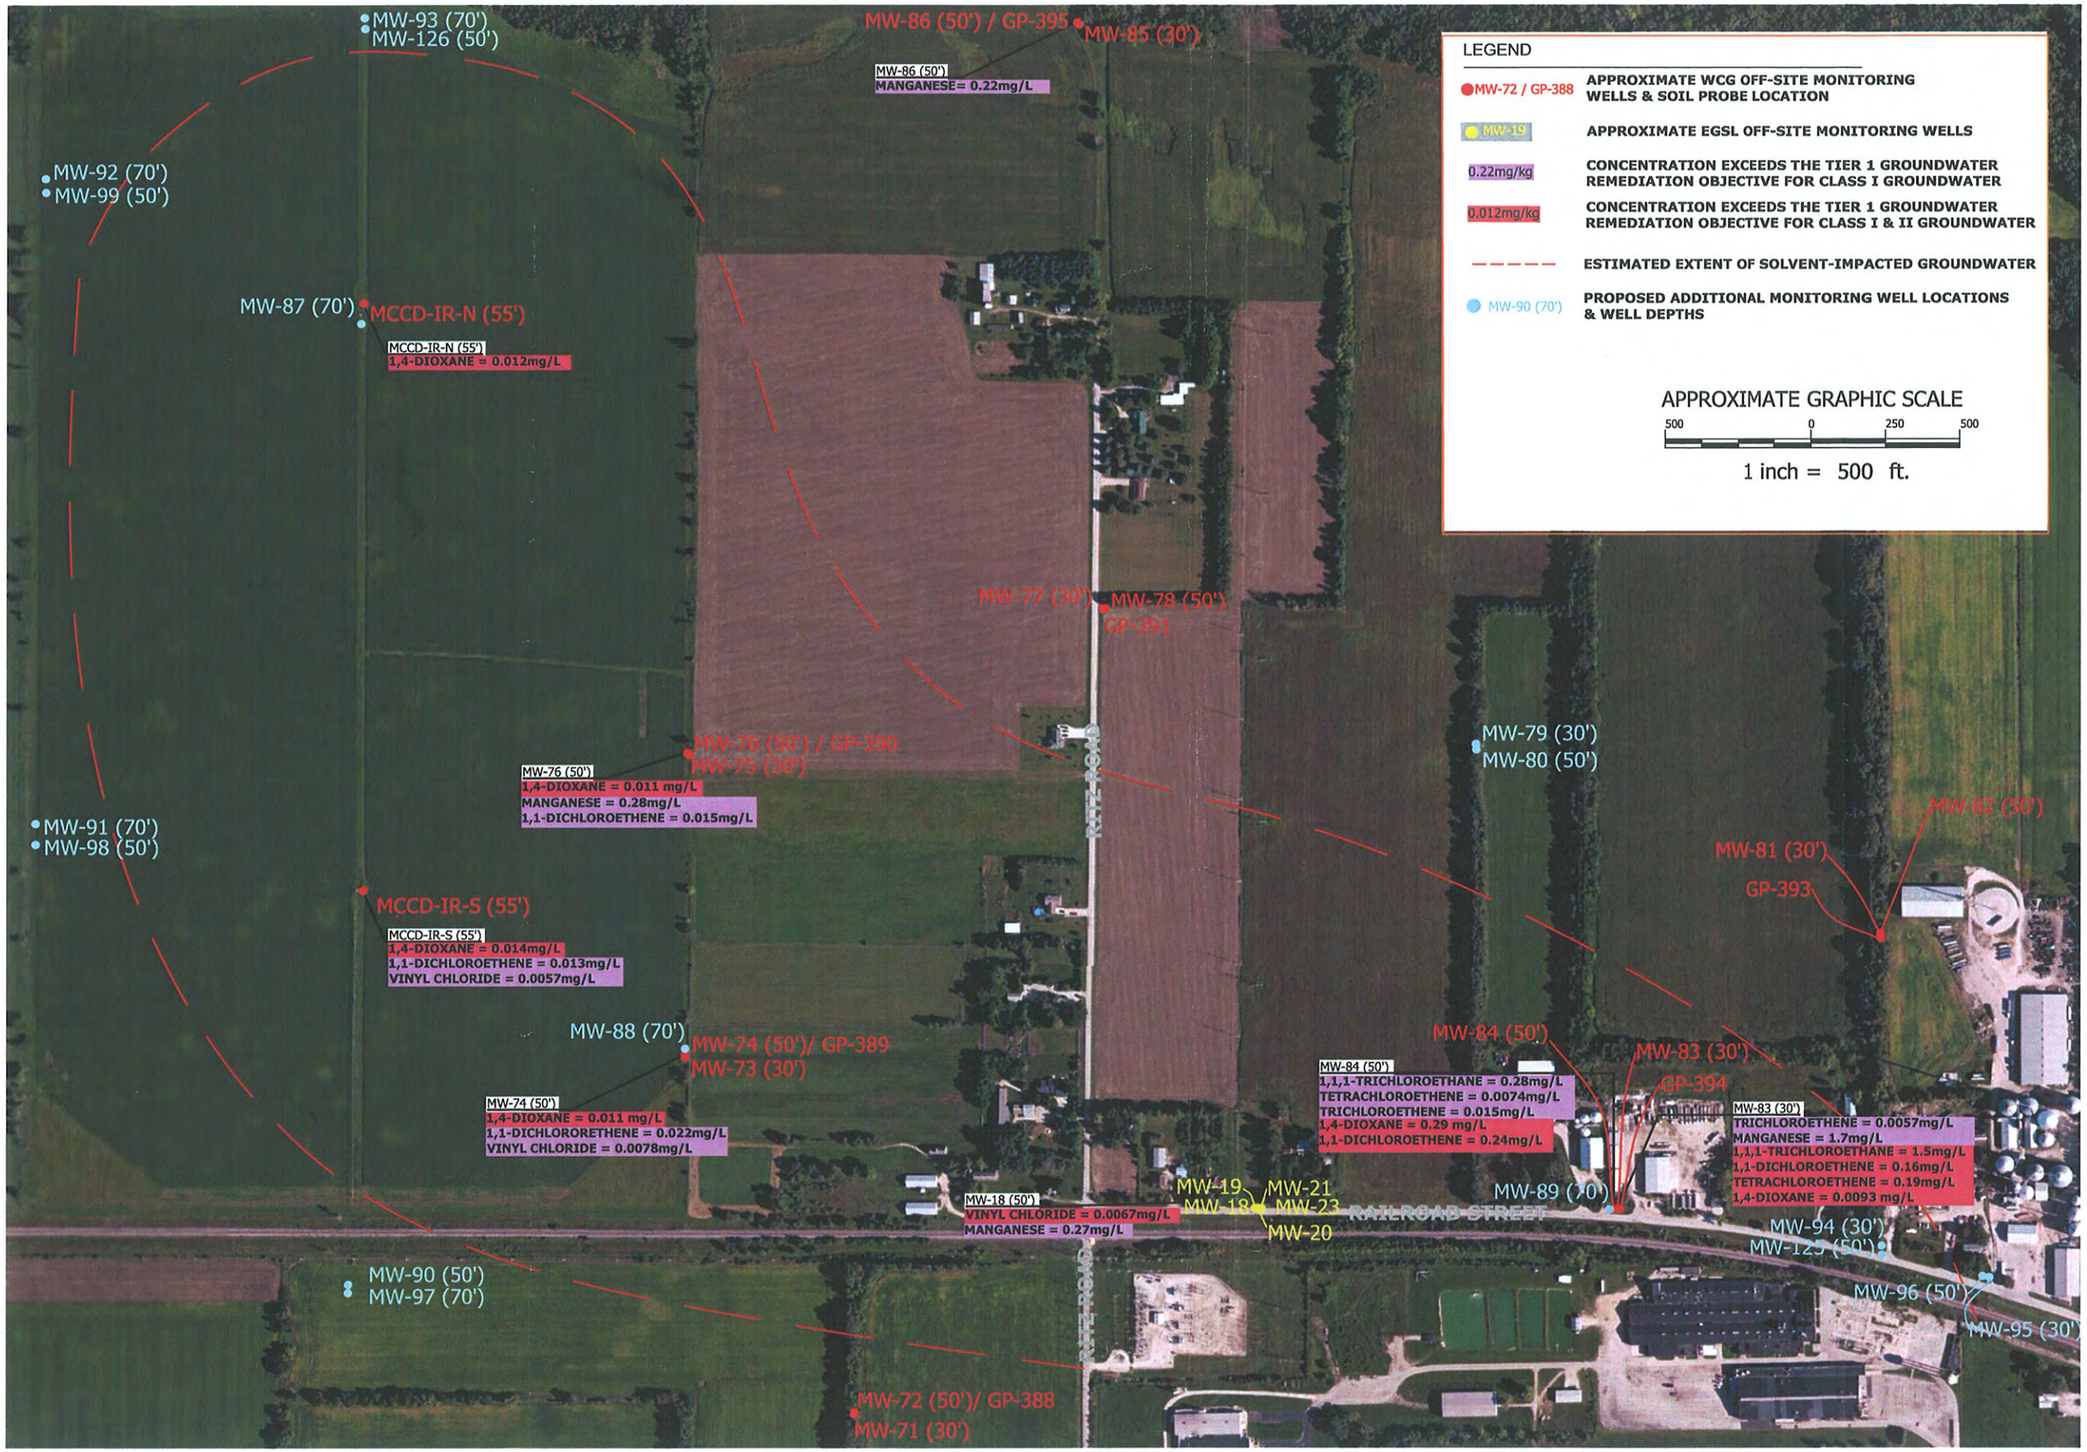
- MW-97 will be completed in a groundwater monitoring well cluster with previously proposed monitoring well MW-90 (50'). Monitoring well MW-97 will be completed to a total depth of approximately 70 feet and will be screened at a depth of 60 to 70 feet below ground surface (bgs).
- MW-98, MW-99, and MW-126 will be completed to depths of 50 feet bgs and screened at depths of 40 to 50 feet bgs. These three monitoring wells will be installed in groundwater monitoring well clusters at previously proposed monitoring wells MW-91 (70'), MW-92 (70'), and MW-93 (70'), respectively.
- MW-125 will be completed in a groundwater monitoring well cluster with previously proposed monitoring well MW-94 (30'). Monitoring well MW-125 will be completed to a total depth of approximately 40 feet and will be screened at a depth of 40 to 50 feet bgs.

We have begun the process to obtain access to the properties for each of the proposed additional monitoring well locations. Contingent on access authorization to each property and the availability of a drilling subcontractor, we anticipate that the supplemental off-site groundwater monitoring wells will be installed and sampled within three weeks of the start of the proposed off-site field activities. We anticipate that the laboratory analyses will be completed and submitted to the IEPA within three weeks of sampling the proposed monitoring wells. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental off-site

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

groundwater assessment letter report that will be submitted to the IEPA within three weeks up receipt of the laboratory analytical data.

We trust that the aforementioned supplemental off-site groundwater assessment summary is sufficient for your needs at this time. If you should have any questions or comments concerning the supplemental off-site groundwater assessment work plan, please do not hesitate to contact our office at 630-717-4848.



Sincerely,

Weaver Consultants Group North Central, LLC

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *Amended Off-Site Investigation Summary and Proposed Supplemental Off-Site Investigation* (e-mail copy dated June 9, 2015 received via e-mail cover message dated June 10, 2015/Log No. 15-59665) and the correction to the *Amended Off-Site Investigation Summary and Proposed Supplemental Off-Site Investigation* (e-mail copy dated June 10, 2015 received via email cover message dated June 11, 2015/Log No. 15-59680), prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, in McHenry County. A Second Agreed Modification was filed May 8, 2015, regarding on-site investigation issues.

In the process of this review an apparent typographical error was identified regarding proposed monitoring well MW-125. The submittal states that monitoring well MW-125 "...will be completed to a total depth of approximately 40 feet and will be screened at a depth of 40 to 50 feet bgs." It should be noted that the well should be completed to a depth of 50 feet (rather than 40 feet as indicated) and screened at a depth of 40 to 50 feet. The 40 feet depth indicated in the submittal was confirmed to be a typographical error in an e-mail message dated June 11, 2015 from Howard C. Jablecki of Klein, Thorpe and Jenkins, Ltd. With clarification of this point, the *Amended Off-Site Investigation Summary and Proposed Supplemental Off-Site Investigation* is approved.

Re: Proposed Revised Supplemental Off-Site Groundwater Investigation
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Catlin:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a summary of a proposed revised supplemental off-site groundwater investigation. The revised supplemental off-site groundwater investigation as summarized in this letter will supersede the proposed supplemental off-site groundwater investigation that was summarized in our letter to the Illinois Environmental Protection Agency (IEPA) dated June 10, 2015 (IEPA Letter) and subsequently approved in a letter from the IEPA dated June 11, 2015.

The proposed revised supplemental off-site groundwater investigation as summarized in this letter incorporates select modifications to the previously IEPA-approved supplemental off-site groundwater investigation plan in light of additional soil and groundwater analytical data that was obtained during our soil and groundwater assessment activities completed at the referenced property (the Arnold Property). In addition, this proposed revised supplemental off-site groundwater investigation proposes modifications to the location of select monitoring wells as 300 West LLC was unable to obtain access authorization from one of the land owners for the installation of two monitoring wells (i.e., monitoring wells MW-79 and MW-80). Furthermore, in light of the depths of the two McHenry County Conservation District (MCCD) irrigation wells and the depths of certain monitoring wells that were installed during the initial off-site groundwater

1316 Bond Street • Suite 108 • Naperville, Illinois 60653 • 630-717-4848 • wcgrp.com • Offices Nationwide

investigation as summarized in our *Amended Off-Site Investigation Summary* dated May 7, 2015, WCG is proposing to modify the depths of select proposed additional off-site monitoring wells to further evaluate the vertical extent of groundwater impacts. Below is a summary of the proposed revised supplemental off-site groundwater investigation.

Summary of Revised Supplemental Off-Site Groundwater Investigation

As summarized in the May 7, 2015 *Amended Off-Site Investigation Summary*, WCG is proposing to install a total of at least 15 monitoring wells and as many as 17 monitoring wells. The groundwater monitoring wells will be installed following the procedures previously used for the initial off-site groundwater investigation as summarized in our May 7, 2015 *Amended Off-Site Investigation Summary*. Groundwater samples collected from the additional monitoring wells will be analyzed for VOCs[1] and 1,4 Dioxane. No soil samples are proposed to be collected as part of the supplemental off-site groundwater investigation. Below is a summary of the proposed revised supplemental off-site groundwater investigation. Figure A, attached, shows the proposed modifications summarized below.

- **MW-79 (30') and MW-80 (50'):** Since 300 West LLC was unable to obtain access authorization from one of the land owners for the installation of these two monitoring wells in the location previously proposed, WCG is proposing to relocate this monitoring well cluster approximately 1,160 feet west of the previously proposed location. The proposed depths will remain unchanged.
- **MW-87, MW-88, and MW-89:** The location of these proposed monitoring wells will remain unchanged and will be completed adjacent to previously installed monitoring well clusters containing monitoring wells MW-74 (50'), MW-84 (50'), and the MCCD north irrigation well (55'). In light of the depth of the MCCD north irrigation well and the depth of previously identified off-site groundwater impacts and the depth of groundwater impacts on the Arnold Property, WCG is proposing to modify the installation depth for monitoring wells MW-87 and MW-88 to approximately 75 feet with the screened interval at a depth of 65 to 75 feet below ground surface (bgs) and modify the installation depth for MW-89 to approximately 80 feet with the screened interval at a depth of 70 to 80 feet bgs in an effort to more fully evaluate the vertical extent of groundwater impacts.

[1] Volatile organic compounds

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

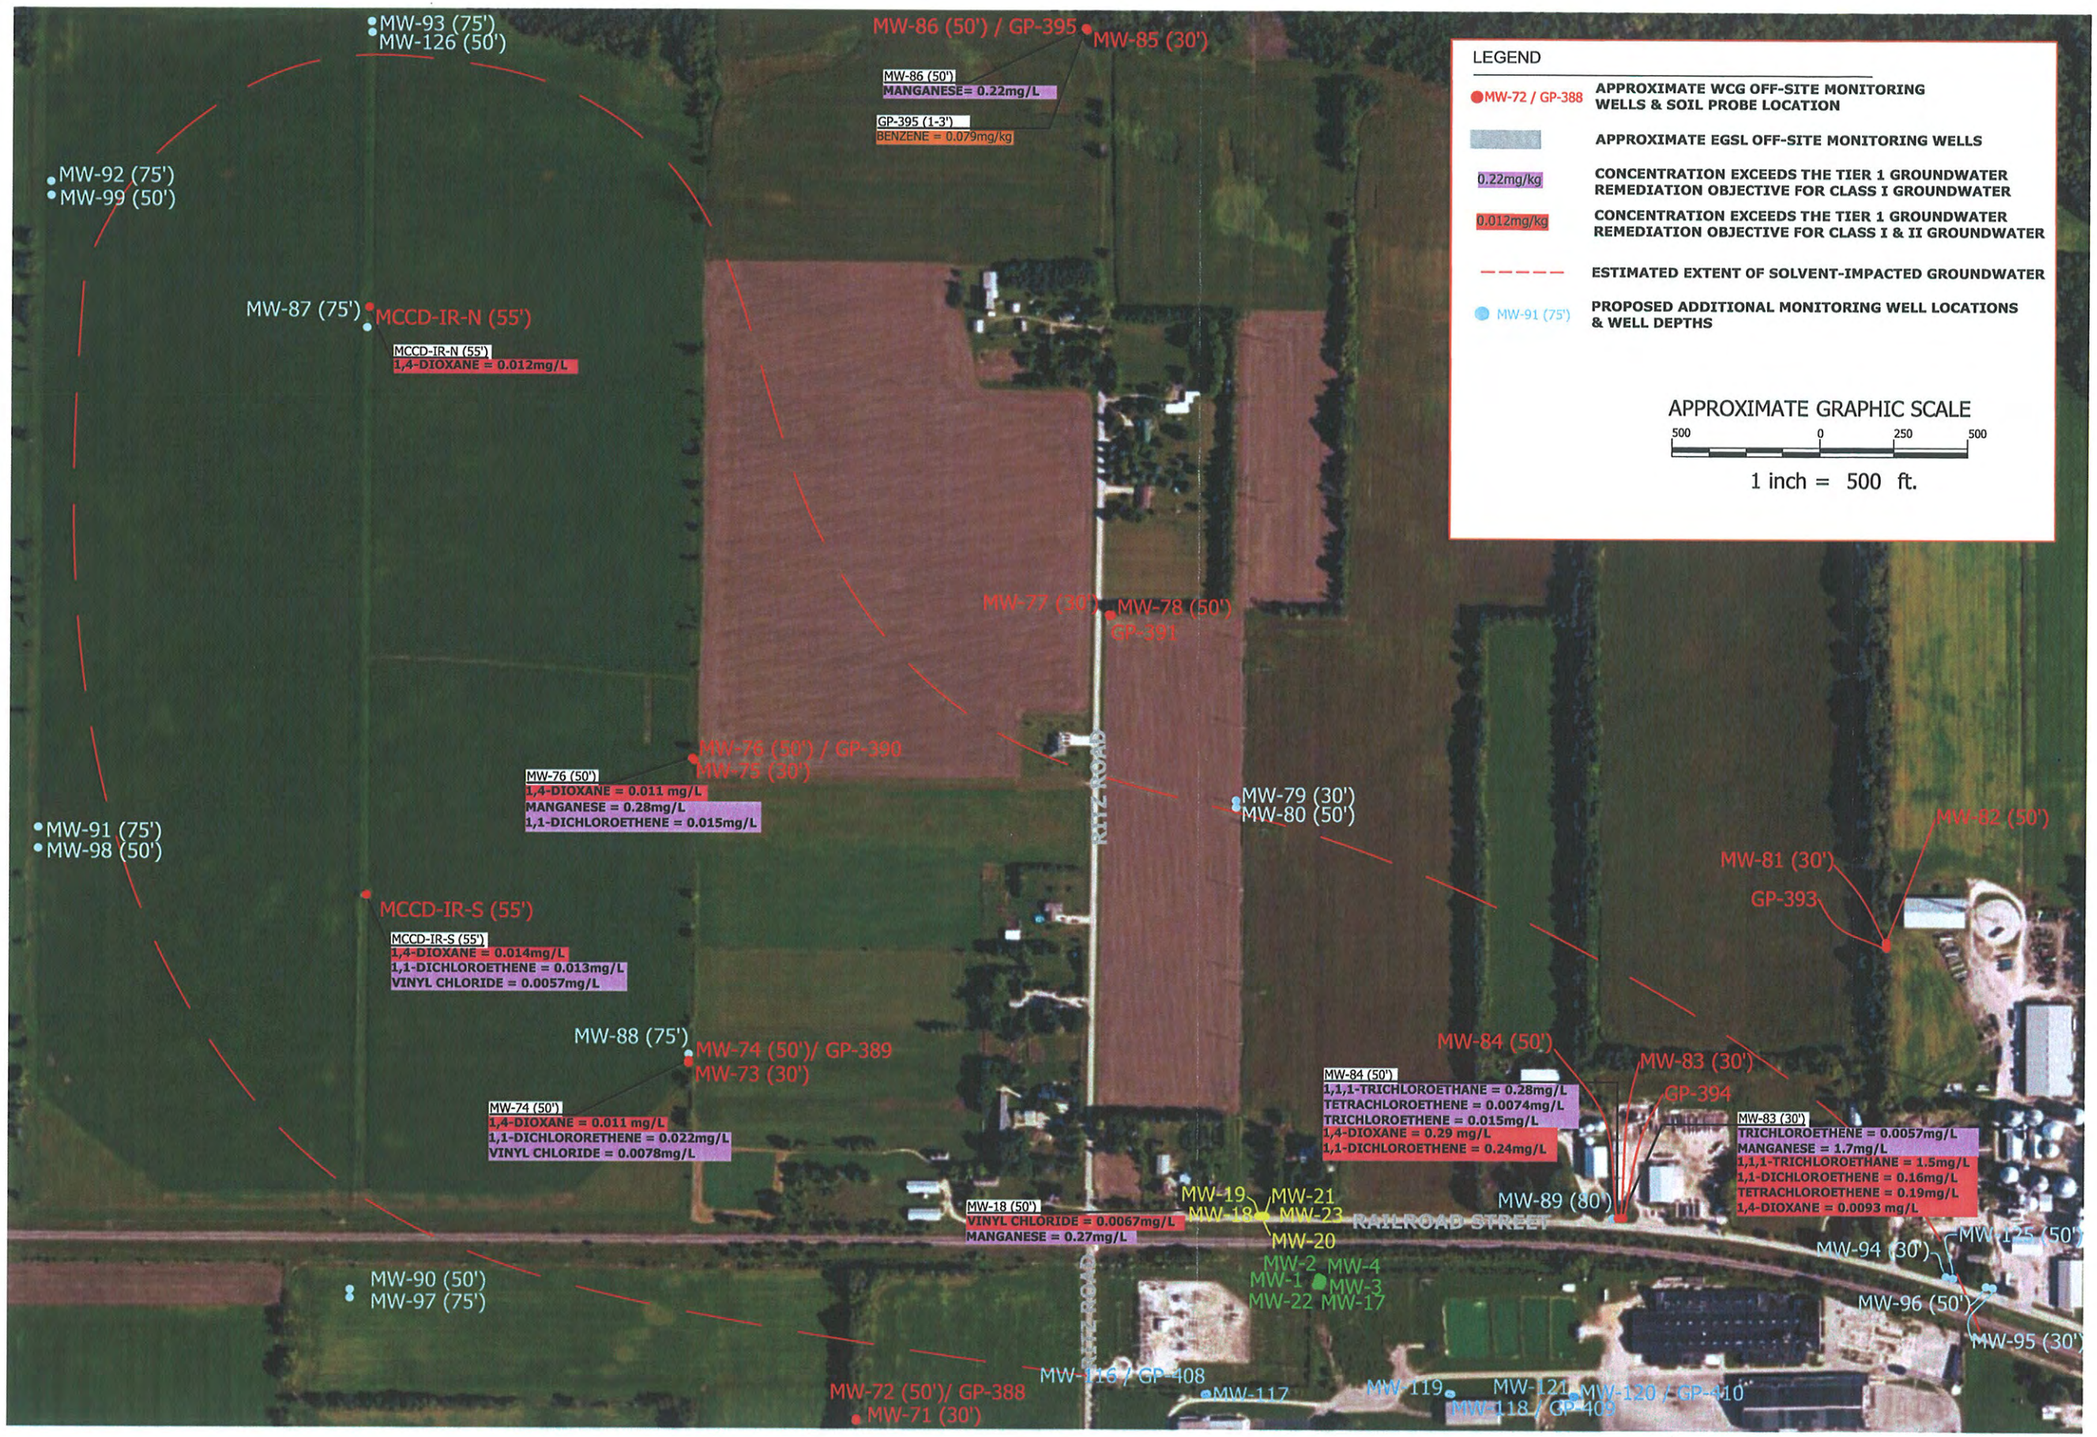
- **MW-90 and MW-97:** The location of this monitoring well cluster will remain unchanged. Additionally, the proposed depth of monitoring well MW-90 will remain unchanged at a proposed total depth of approximately 50 feet bgs with the screen interval at a depth of 40 to 50 feet bgs. In light of the depth of the MCCD north irrigation well and the depth of previously identified groundwater impacts, WCG is proposing to modify the installation depth to approximately 75 feet with the screened interval at a depth of 65 to 75 feet bgs in an effort to more fully evaluate the vertical extent of groundwater impacts.
- **MW-91, MW-92, and MW-93:** The location of these monitoring wells will remain unchanged. In light of the depth of the MCCD north irrigation well and the depth of previously identified groundwater impacts, WCG is proposing to modify the installation depth to approximately 75 feet with the screened interval at a depth of 65 to 75 feet bgs in an effort to more fully evaluate the vertical extent of groundwater impacts.
- **MW-98, MW-99, and MW-126:** The location and depth of these monitoring wells will remain unchanged. Specifically, these monitoring wells will be completed to depths of 50 feet bgs and screened at depths of 40 to 50 feet bgs. These three monitoring wells will be installed in groundwater monitoring well clusters with MW-91 (75'), MW-92 (75'), and MW-93 (75'), respectively.
- **MW-94 (30') and MW-125(50'):** These monitoring wells will be completed in a cluster with previously proposed depths and screen intervals to remain unchanged. In light of the analytical data that was obtained during our soil and groundwater assessment activities completed at the Arnold Property, WCG is proposing to relocate this monitoring well cluster approximately 350 feet eastward of the previously proposed location.
- **MW-95 (30') and MW-96 (50'):** In the event that impacts are observed in monitoring well cluster MW-94 and MW-125, these monitoring wells will be completed to the southeast of monitoring well cluster MW-94 and MW-125 along the northern Railroad Street right-of-way (Figure A). WCG will inform the IEPA of the sampling results from monitoring well cluster MW-94 and MW-125 before making a decision on the need for and depth of any wells at this optional monitoring well cluster location.

We are in the process of finalizing access to the properties for each of the proposed additional monitoring well locations. We anticipate that the field activities related to the supplemental

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

off-site groundwater investigation will commence the week of August 10, 2015 and will be completed the week of August 24, 2015. We anticipate that the laboratory analyses will be completed and submitted to the IEPA by September 18, 2015. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental off-site groundwater assessment letter report that will be submitted to the IEPA by October 2, 2015.

We trust that the aforementioned revised supplemental off-site groundwater assessment summary is sufficient for your needs at this time. If you should have any questions or comments concerning the revised supplemental off-site groundwater assessment work plan, please do not hesitate to contact our office at 630-717-4848.



Sincerely,

Weaver Consultants Group North Central, LLC

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *Proposed Revised Supplemental Off-Site Groundwater Investigation* (dated July 31, 2015 and received August 4, 2015/Log 15-60073) prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, in McHenry County. The document proposes modifying the proposed well cluster MW-79/MW-80 location 1,160 feet to the west due to access issues, modifying the proposed depth of wells MW-87, MW-88, MW-97, MW-91, MW-92 and MW-93 from 70 feet to 75 feet and modifying the well cluster MW-94/MW125 location 350 to the east of the previously proposed location. The *Proposed Revised Supplemental Off-Site Groundwater Investigation* is considered approved, contingent on the following modifications to the proposed sampling plan.

1. In order to adequately assess the off-site groundwater conditions downgradient of impacted areas of the subject site, the proposal to relocate monitoring well cluster MW-94 and MW-125 approximately 350 feet eastward of the previously proposed location is disapproved. This well cluster should be placed in the originally proposed location.

2. The document states that the groundwater samples will be collected and analyzed for VOCs and 1,4 Dioxane. As proposed and approved in the original sampling plan, the groundwater samples should be collected and analyzed for the full Target Compound List and 1,4 Dioxane.

3. If the horizontal and vertical extent of contamination is not adequately defined based on the sampling results found in the new wells it may be necessary to install additional wells to determine the rate and extent of the contamination.

Future submittals should be directed to my attention at the address indicated on the letterhead or via e-mail at Andrew.catlin@illinois.gov.

Sincerely,

Andrew M. Catlin

Re: Proposed Revised Supplemental Off-Site Groundwater Investigation
Response to Comments
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Catlin:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a response to the your letter dated August 14, 2015 concerning the proposed revised supplemental off-site groundwater investigation. In our *Proposed Revised Supplemental Off-Site Groundwater Investigation* letter dated July 31, 2015, we generally proposed the following:

- Modify the proposed monitoring well cluster MW-79/MW-80 location approximately 1,160 feet to the west due to access issues,
- Modify the proposed depth of monitoring wells MW-87, MW-88, MW-97, MW-91, MW-92 and MW-93 from 70 feet to 75 feet, and
- Modify the monitoring well cluster MW-94/MW125 location approximately 350 feet to the east of the previously proposed location.

In your August 14, 2015 letter, you approved the proposed above modifications contingent upon additional modification to the proposed sampling plan. Below is a brief summary of the Illinois Environmental Protection Agency's (IEPA) requested modifications in italics followed by our response.

- *The location of the proposed monitoring well cluster MW-94/MW-125 should be placed in the originally proposed location.*

  In light of your requested modification, WCG prepared a revised proposed monitoring well location map dated August 28, 2015 that depicts the location of monitoring well

1316 Bond Street • Suite 108 • Naperville, Illinois 60653 • 630-717-4848 • wcgrp.com • Offices Nationwide

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

cluster MW-94/MW-125 in the original location as depicted in our letter dated June 10, 2015. An electronic copy of the aforementioned revised proposed monitoring well location map was forwarded to your office on August 28, 2015 for your reference.

- *As proposed and approved in the original sampling plan, the groundwater samples should be collected and analyzed for the full Target Compound List and 1,4-Dioxane.*

  As summarized in our *Amended Off-Site Investigation Summary* dated May 7, 2015, the compounds of concern detected in groundwater that exceeded the TACO[1] Tier 1 groundwater remediation objectives (GROs), based on the laboratory analysis of 21 off-site groundwater samples, included various volatile organic compounds (VOCs), 1,4-Dioxane, and manganese. Laboratory analyses of the 21 off-site groundwater samples did not identify concentrations of PCBs[2], pesticides, PNAs[3] or additional SVOCs[4] or dissolved Target Compound List metals that exceed the TACO Tier 1 GROs. However, pursuant to your request, WCG will analyze the proposed off-site groundwater samples for the full Target Compound List and 1,4-Dioxane.

- *If the horizontal and vertical extent of contamination is not adequately defined based on the sampling results found in the new wells it may be necessary to install additional wells to determine the rate and extent of the contamination.*

  Upon completion of the Supplemental Off-Site Groundwater Investigation, WCG will prepare a letter report that summarizes the findings of the Supplemental Off-Site Groundwater Investigation and summarizes additional proposed monitoring well locations that may be necessary to further evaluate the off-site groundwater conditions.

In addition to the aforementioned requested IEPA modifications, this letter serves to summarize additional modifications to the proposed Supplemental Off-Site Groundwater Investigation as discussed during a meeting with the IEPA on September 1, 2015. As discussed during this meeting, monitoring wells MW-87, MW-88, MW-91, MW-92, MW-93, MW-98, MW-99, and MW-126 will not be installed, as authorization to access these proposed locations has not been obtained from the McHenry County Conservation District (MCCD). Due to the aforementioned, 300 West LLC proposed additional supplemental off-site groundwater investigation modifications, as discussed during our September 1, 2015 meeting. In light of the above IEPA requested modifications and the lack of access authorization onto the MCCD property, below is a summary of the proposed Supplemental Off-Site Groundwater Investigation as of the date of this letter.

- Complete monitoring well cluster MW-79 (30') and MW-80 (50') at a revised location that is approximately 325 feet south of the previously proposed monitoring well cluster

[1] Title 35, Illinois Administrative Code, Part 742 titled Tiered Approach to Corrective Action Objectives.
[2] Polychlorinated biphenyls
[3] Polynuclear aromatic hydrocarbons
[4] Semi-volatile organic compounds

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

location. This proposed revised location will be beneficial with evaluating the groundwater conditions immediately east of the residences that exhibit impacts to private drinking water supply wells. This monitoring well cluster location will also serve to assess the effectiveness of groundwater remedial activities on the Arnold Magnetic Technologies property (Arnold Property).

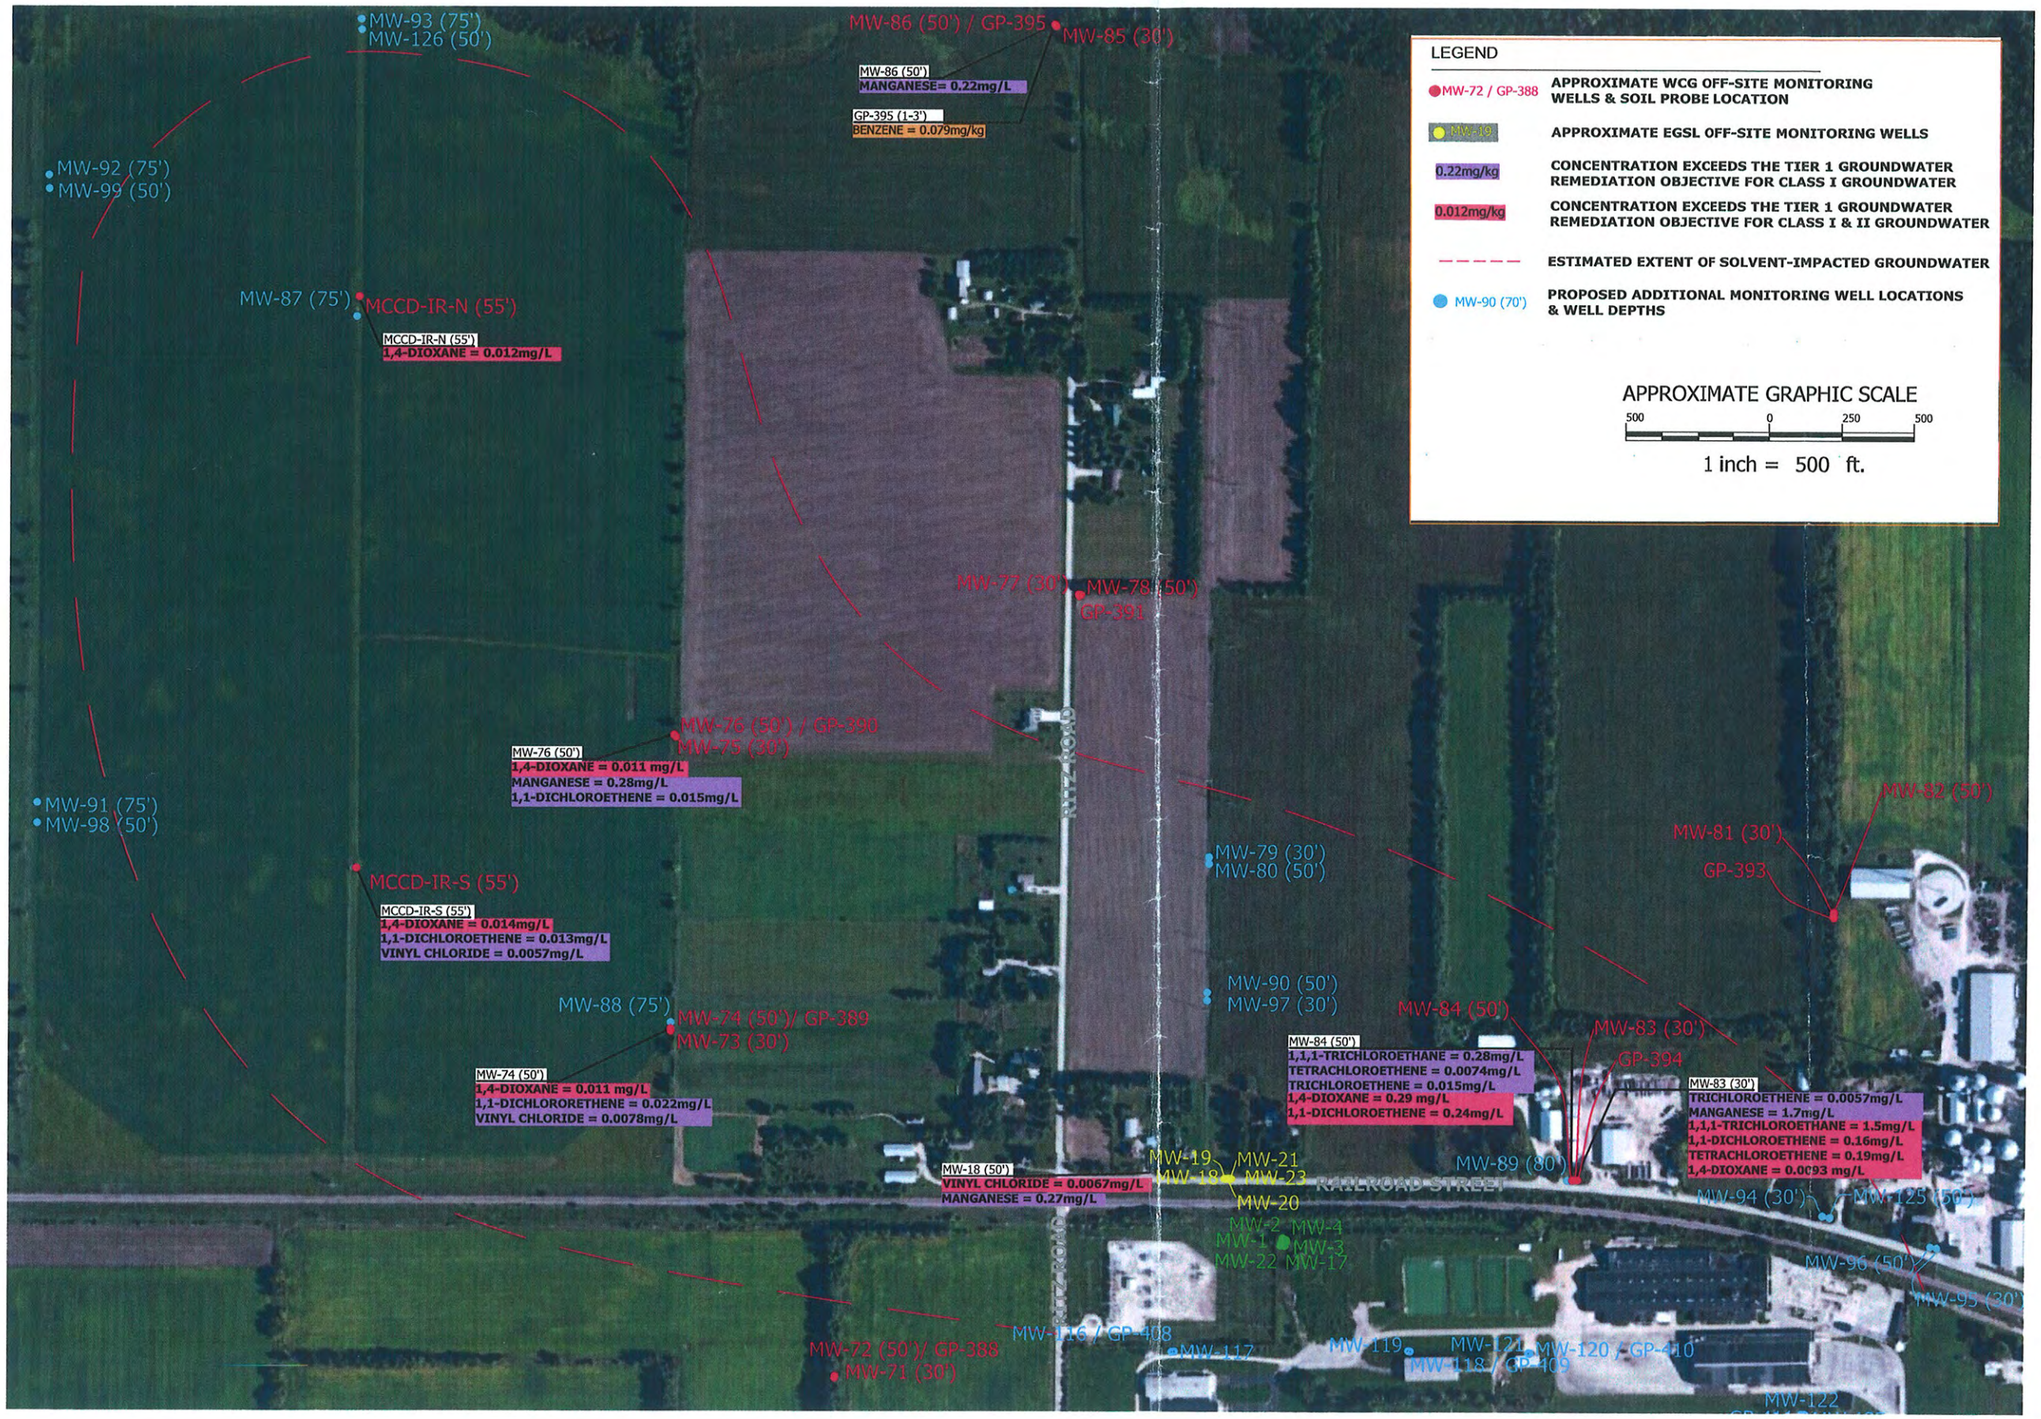
- Complete monitoring well cluster MW-90 (50') and MW-97 (30') at a revised location that is approximately 530 feet south of monitoring well cluster MW-79 (30') and MW-80 (50'). The placement of this monitoring well cluster will serve a similar purpose as mentioned above for monitoring well cluster MW-79 (30') and MW-80 (50').

- Complete monitoring well MW-89 (80') at a location immediately adjacent to previously completed monitoring well cluster MW-83 (30') and MW-84 (50'). The screened interval will be at a depth of 70 to 80 feet below ground surface (bgs) in an effort to more fully evaluate the vertical extent of groundwater impacts.

- Complete monitoring well cluster MW-94 (30') and MW-125 (50') in the original location as depicted in our letter dated June 10, 2015.

In summary, the proposed Supplemental Off-Site Groundwater Investigation will include the installation of as many as seven monitoring wells to the depths indicated above. A revised proposed monitoring well location map (Figure A), dated September 2, 2015, that was presented during the September 1, 2015 meeting with the IEPA to depict the location of above monitoring wells is attached for your reference. In addition, groundwater samples will be collected and analyzed for the full Target Compound List and 1,4-Dioxane.

We trust that the aforementioned revised proposed supplemental off-site groundwater assessment summary as discussed during the September 1, 2015 meeting with the IEPA is sufficient for your needs at this time. If you should have any questions or comments concerning the revised proposed supplemental off-site groundwater assessment work plan, please do not hesitate to contact our office at 630-717-4848.



Sincerely,

Re: On-Site Groundwater Assessment Summary
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Zook:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a summary of the subsurface environmental assessment activities related to the above referenced property (the Property). The assessment activities completed as summarized in this letter consisted of a soil and groundwater assessment of select portions of the Property (**Figure 1**, attached). Since the on-site soil assessment activities are still in progress as of the date of this letter, a summary of the on-site soil assessment activities is not included as part of this letter. This letter serves to summarize only the on-site groundwater assessment activities implemented by WCG.

The groundwater assessment activities summarized in this letter were completed pursuant to a *Proposed Site Investigation Work Plan* prepared by Environmental Group Services Limited (EGSL) dated December 24, 2014 (Work Plan). The Work Plan was subsequently approved by the Illinois Environmental Protection Agency (IEPA) in a comment letter to representatives of 300 West LLC and dated December 31, 2014 (IEPA Letter). The IEPA's approval of the Work Plan was contingent on responses to comments and questions contained in the IEPA Letter, which were provided in a response letter prepared by EGSL and dated January 6, 2015 (EGSL Response Letter).

35 E. Wacker Drive • Suite 1250 • Chicago, Illinois 60601 • 312.922.1030 • wcgrp.com • Offices Nationwide

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Based on information included in the aforementioned documents, prior environmental assessments suggest that solvent-type impacts are present above applicable IEPA soil and groundwater remediation objectives on the Property. In light of this information, WCG was retained by 300 West LLC to implement the portion of the Work Plan related to the additional assessment of on-site soil and groundwater conditions in select locations of the Property to further evaluate the on-site soil and groundwater conditions on the Property. Since the on-site soil assessment activities have not been completed as of the date of this letter, this letter serves to summarize only the groundwater assessment activities implemented by WCG. The groundwater assessment activities summarized in this letter focus only on the on-site areas as defined in the Work Plan and the EGSL Response Letter. The following sections provide a brief summary of the on-site field activities followed by a summary of the laboratory analytical results and findings.

On-Site Groundwater Assessment Field Activities Summary

Based upon our review of the aforementioned documents, WCG understands that solvent-type compounds were previously identified in groundwater in certain locations on the Property, which may have migrated offsite and impacted nearby private drinking water supply wells. Therefore, to further evaluate the on-site subsurface environmental conditions related to the Property, WCG implemented an on-site groundwater assessment as presented in the Work Plan and the EGSL Response Letter.

In light of the aforementioned, the on-site groundwater assessment consisted of the installation of 24 monitoring wells and the laboratory analyses of groundwater collected from six previously installed groundwater monitoring wells. The on-site groundwater assessment field activities (e.g., monitoring well installation and development, and groundwater sampling) were completed from March 16, 2015 through April 8, 2015. Cabeno Environmental Field Services, LLC (Cabeno) was retained by 300 West LLC to implement the on-site soil drilling and monitoring well installation activities. Since the soil assessment activities are currently in progress as of the date of this letter, this section focuses only on the on-site groundwater assessment activities implemented.

The monitoring wells were completed in 12 separate clusters that were located in select locations as identified in the Work Plan. During the assessment activities, WCG surveyed the locations of the on-site monitoring wells installed during this supplemental groundwater

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

assessment using a hand-held GPS unit. The following sections further summarize the on-site groundwater assessment methodologies.

On-Site Groundwater Assessment Methodology

To assess the environmental condition of the groundwater located in select locations on the Property, WCG implemented a groundwater assessment that involved the following:

- Installation of 24 permanent groundwater monitoring wells in 12 select cluster locations on the Property as identified in the Work Plan and the EGSL Response Letter; and

- Sampling of six previously installed on-site monitoring wells (i.e., monitoring wells MW-1, MW-2, MW-3, MW-4, MW-17 and MW-22) located in the northwestern corner of the Property.

Specifically, the 24 monitoring wells were completed in 12 separate clusters, which included two adjacent monitoring wells in each cluster (**Figure 1**). Pursuant to the Work Plan, one of the monitoring wells was installed to a depth of approximately 30 feet below ground surface (bgs), and the adjacent monitoring well was installed to a depth of 50 feet bgs.

Cabeno used a track-mounted Geoprobe® sampling system (e.g., direct-push technology) equipped with hollow-stem augers that were utilized to drill the borehole for each of the monitoring wells. Non-disposable drilling and sampling equipment was decontaminated with a Liquinox/water mixture and clean water rinse between monitoring well locations to mitigate the possibility of cross-contamination. Additionally, Cabeno assembled and utilized a decontamination pad that collected decontamination water generated during the decontamination of certain non-disposable drilling equipment.

Due to the unconsolidated and structurally unstable nature of the geologic material (i.e., well sorted/poorly graded fine and medium sand) in which the monitoring wells were constructed on portions of the Property, Cabeno pumped water into 13 of the 24 monitoring well boreholes in order to prevent the boreholes from collapsing prior to the installation of select monitoring wells. Cabeno used approximately 5 to 100 gallons of water during the drilling of each of the monitoring well boreholes. Cabeno transported the water used to drill select monitoring well boreholes from their office located in New Lenox, Illinois. The water was obtained from the Village of New Lenox Water Department, which obtains their water supply from surface water

from Lake Michigan. To assess the condition of the water supply used by Cabeno, WCG collected a sample of the water from a hose connected to Cabeno's water storage tank (i.e., Equipment Blank 02) during the initial off-site groundwater assessment activities completed in February/March 2015. The equipment blank water sample was submitted for laboratory analysis as summarized in the Laboratory Analytical Methodology section, following.

The monitoring wells were constructed with two-inch diameter, Schedule 40 polyvinyl chloride (PVC) casings with 0.010-inch slotted screens. Pursuant to the Work Plan, ten-foot well screen intervals were installed at the bottom of each monitoring well. The annular space in the screened intervals were filled with commercially available coarse silica sand specifically produced for environmental well installations to a depth approximately two feet above the screen with bentonite clay chips filling the remaining space to the surface. The surface of the monitoring wells were protected and finished with steel well casings that extend approximately 24 to 36 inches from the ground surface.

Following the monitoring well installation, the monitoring wells were developed using typical well development methodology. Since Cabeno pumped water into 13 of the 24 monitoring well boreholes during drilling activities, the volume of water that was used to drill each of the monitoring well boreholes was pumped from the monitoring wells during the monitoring well development activities along with at least 10 additional well volumes. Each on-site monitoring well that was installed and developed as part of the groundwater assessment activities was allowed to recharge for a period of at least 48 hours. Prior to sampling, each monitoring well, including the six previously installed on-site monitoring wells located in the northwestern portion of the Property, were purged of a minimum of three well volumes or until the purge water was clear and reduced of suspended solids/particulates and exhibited stable conditions based upon field measurements of pH, specific conductivity, and temperature. Groundwater samples collected from the on-site monitoring wells were collected using a designated disposable bailer.

It should be noted that due to insufficient groundwater recharge in monitoring wells MW-101, MW-113, MW-122, and MW-123, these monitoring wells were not fully developed, purged or sampled during the groundwater assessment activities summarized in this letter. The insufficient groundwater recharge noted in monitoring wells MW-101, MW-122 and MW-123 may be related to the location of these monitoring wells on a topographically higher elevation

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

than the remaining monitoring wells on the Property. These monitoring wells were situated approximately 10 to 15 feet higher than the remaining monitoring wells installed on the Property and therefore may have been installed to a depth above the elevation of the groundwater at those portions of the Property.

In light of this, WCG proposes to re-evaluate the groundwater conditions, and if conditions are favorable, purge and sample the aforementioned monitoring wells. In the event that the monitoring wells exhibit insufficient groundwater recharge and volume for sampling, WCG proposes to install a deeper monitoring well (i.e., monitoring well MW-124) to a depth of approximately 70 feet at the monitoring well cluster that includes monitoring wells MW-122 and MW-123 (**Figures 1** and **2**). Proposed monitoring well MW-124 will be screened at an interval of approximately 60 to 70 feet bgs. Since monitoring wells MW-101 and MW-113 are included within monitoring well clusters that contain a 50-foot deep monitoring well that exhibited sufficient groundwater recharge for sampling, WCG is not proposing additional deeper monitoring wells in the monitoring well clusters containing MW-101 and MW-113.

Laboratory Analytical Methodology

The groundwater and the equipment blank water samples were placed in laboratory-provided and appropriately preserved sample containers, placed in a cooler and packed with ice in an effort to maintain a constant temperature near 4°C. The groundwater and equipment blank water samples were submitted within 24 hours to STAT Analysis Corporation of Chicago, Illinois (STAT), a National Environmental Laboratory Accreditation Program (NELAP) certified laboratory, for laboratory analyses. It should be noted that Equipment Blank 002 water sample was submitted to the laboratory for analysis during the initial off-site groundwater assessment completed in February/March 2015. The equipment blank water sample is included in this summary report, since the Equipment Blank 002 water sample consisted of water that Cabeno used to drill both the off-site and on-site monitoring well boreholes. The data obtained from the analysis of Equipment Blank 002 was used to demonstrate that the water used by Cabeno to drill the monitoring well boreholes did not introduced additional contaminants to the groundwater beneath the Property.

The groundwater and equipment blank water samples were submitted under standard chain-of-custody procedures. The chain-of-custody accounted for the samples from the time of the collection until the sample custodian of the analytical laboratory signs the field chain-of-custody,

taking possession of the sample. Each sample set was recorded by a unique identifier on the chain of custody record, including: the number of containers in the sample set; all persons in contact with the samples; transport personnel; applicable times and dates; and the analysis to be performed on the sample. Sampling and laboratory analysis were performed in general accordance with approved techniques and methods as outlined in *USEPA SW-846, Test Methods For Evaluating Solid Waste, Third Edition,* and other published sources.

Pursuant to the Work Plan and the EGSL Response Letter, the select groundwater and equipment blank water samples were submitted for laboratory analysis of the following constituents:

- Target Compound List (TCL) (including 1,4-Dioxane) – 26 groundwater samples and one equipment blank water sample.

Due to insufficient groundwater recharge in four of the monitoring wells (i.e., monitoring wells MW-101, MW-113, MW-122 and MW-123), these monitoring wells were not fully developed/purged, and an insufficient volume of groundwater was available to collect a sample for laboratory analyses. In addition, it should be noted that the laboratory reported the analytical results for 1,4-Dioxane using two laboratory analytical methods. Therefore, the laboratory analytical results for 1,4-Dioxane were summarized on both the VOC[1] and SVOC[2] soil and groundwater analytical summary tables attached to this letter as reported by the laboratory.

Due to elevated concentrations of various total metals in certain groundwater samples (see Laboratory Analytical Results Summary, following), which may have been a result of the presence of metals on the silt particles that were suspended in the groundwater samples, STAT filtered 22 of the 26 groundwater samples in an effort to reduce the volume of suspended solids that may have been present in the groundwater samples and re-analyzed various groundwater samples for select total dissolved metals. In addition, due to insufficient sample volume, STAT was unable to filter and re-analyze the groundwater sample collected from monitoring well MW-114 for certain total dissolved metals. Therefore, WCG proposes to purge and collected an additional groundwater sample from monitoring well MW-114 and submit the additional groundwater sample to STAT for analysis of total and dissolved metals.

[1] Volatile Organic Compounds
[2] Semi-Volatile Organic Compounds

Laboratory Analytical Results Summary

As mentioned previously, WCG performed an on-site groundwater assessment that consisted of the installation of 24 monitoring wells to depths of 30 and 50 feet, the sampling of 20 of the 24 monitoring wells, and the sampling of six previously installed monitoring wells, and the collection of one equipment blank water sample during the initial off-site groundwater assessment. WCG submitted 26 groundwater samples and one equipment blank water sample (i.e., Equipment Blank 002)[3] for laboratory analysis of TCL, including 1,4-Dioxane. The laboratory analytical results were compared to Illinois' TACO[4] Tier 1 groundwater remediation objectives (GROs). The following sections further summarize the laboratory analytical data for groundwater.

Groundwater Analytical Summary

Laboratory analyses identified no detectable concentrations of VOCs, SVOCs, PCBs or pesticides in soil collected from the on-site groundwater monitoring wells with the exception of the following constituents.

Detected VOC and SVOC Water Analytical Summary	
Sample Location	**Detected Analyte**
MW-03 (30 feet)	Tetrachloroethene*
MW-04 (50 feet)	Tetrachloroethene*
MW-120 (50 feet)	1,1 Dichloroethene*
	1,1 Dichloroethane
	1,1,1-Trichloroethane
	1,4-Dioxane*
MW-121 (30 feet)	1,1 Dichloroethene*
	1,1,1-Trichloroethane
	1,4-Dioxane*
Equipment Blank 002	Bromodichloromethane*
	Chloroform*

* Detected analyte concentration exceeds TACO Tier 1 GROs.

[3] Equipment Blank 002 water sample was collected and analyzed during the initial off-site groundwater assessment. The data obtained from the analysis of Equipment Blank 002 is summarized in this report to document the condition of the water that Cabeno used to drill the on-site monitoring well boreholes.
[4] Title 35, Illinois Administrative Code, Part 742 titled Tiered Approach to Corrective Action Objectives

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

The above-listed detected Bromodichloromethan and Chloroform concentrations detected in the Equipment Blank 002 water sample exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. However, it should be noted that the detected Bromodichloromethane and Chloroform concentrations in the Equipment Blank 002 water sample are commonly found in drinking water as a by-product of the chlorine disinfection process and would not pose an exposure concern with respect to the on-site groundwater assessment, as none of the on-site groundwater samples exhibited detectable Bromodichloromethane or Chloroform concentrations.

The above-listed detected Tetrachloroethene, 1,1-Dichloroethene, and 1,4-Dioxane concentrations exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. The solvent-impacted groundwater appears to be present in both the deep and shallower groundwater depths. Based on our review of the groundwater analytical data, the area of solvent-impacted groundwater identified during this on-site groundwater assessment appears to be located in two separate monitoring well clusters. The first cluster consists of the previously installed monitoring wells located in the northwestern corner of the Property, which is the historical location of Pond 6. The second cluster is located adjacent to Building 16, which is utilized for the storage of hazardous and non-hazardous waste.

Additionally, the analytical data obtained during these on-site groundwater assessment activities did not identify solvent-impacted groundwater on the western or southern portions of the Property, which suggests that the solvent-impacted groundwater may be situated more in the vicinity of the current and historical manufacturing buildings and wastewater treatment ponds located on the northern portions of the Property. **Figure 2** includes a summary of the groundwater analytical results relative to the TACO Tier 1 GROs. Additionally, **Tables 1** and **2**, attached, summarize the VOC and SVOC groundwater laboratory analytical data.

Furthermore, based on the off-site groundwater assessment analytical data as summarized in our *Amended Off-Site Investigation Summary* dated May7, 2015 (Off-Site Investigation Summary), one off-site monitoring well cluster (i.e., monitoring well cluster MW-83 and MW-84) located immediately north of on-site Building 2/3/4/7 and Building 10 exhibited more and in some cases higher concentrations of solvent-type compounds (e.g., Tetrachloroethene, Trichloroethene, 1,1-Dichloroethen, 1,1,1-Trichloroethane, and 1,4-Dioxane) than noted in the two monitoring well clusters installed during this groundwater assessment that exhibited TACO Tier 1 GRO exceedances on the Property. This data further suggests that potential solvent-

impacted groundwater is situated more in the vicinity of the current and historical manufacturing buildings and wastewater treatment ponds located on the northern portions of the Property.

In light of the aforementioned, the extent and nature of the solvent-impacted groundwater has not been fully determined on the Property. Additional on-site groundwater assessment activities may be necessary to further evaluate the extents of solvent impacts in other portions of the Property. In addition, the proposed supplemental off-site groundwater assessment as summarized in our *Revised Summary of Proposed Supplemental Off-Site Investigation* dated May 8, 2015, may prove beneficial with evaluating the potential area of groundwater impacts on the Property. To further evaluate the on-site solvent impacts to groundwater, WCG is proposing to collect and analyze additional groundwater samples from previously installed groundwater monitoring wells located along the northern portions of the Property. Specifically, WCG will collect additional groundwater samples from as many as 30 existing monitoring wells that were previously installed to depths of 30 to 50 feet bgs in and around the former location of Building 6, along the northern and southern sides of the wastewater treatment ponds, in and around Building 2/3/4/7 and Building 10, and in and around the location of former Building 1. The additional groundwater samples collected from these locations will be analyzed for VOCs and 1,4-Dioxane.

In addition, laboratory analyses detected various total metals in 23 of the 26 groundwater samples analyzed, which exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. **Figure 2** includes a summary of the groundwater analytical results relative to the TACO Tier 1 GROs. Additionally, T**able 3** summarizes the groundwater laboratory analytical data for total and dissolved metals. Further, **Table 4** summarizes the groundwater laboratory analytical data for PCBs, which were not detected on the Property.

Due to elevated concentrations of various total metals in certain groundwater samples, which may have been a result of the presence of metals on the silt particles that were suspended in the groundwater samples, STAT filtered 22 of the 26 groundwater samples in an effort to reduce the volume of suspended solids that may have been present in the groundwater samples and re-analyzed various groundwater samples for select total dissolved metals. Due to insufficient sample volume, STAT was unable to filter and re-analyze the groundwater sample collected from monitoring well MW-114 for certain total dissolved metals. Laboratory analyses identified certain totals metals in the groundwater sample collected from monitoring well MW-114 that

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

exceed the TACO Tier 1 GROs. Therefore, WCG proposes to purge and collected an additional groundwater sample from monitoring well MW-114 and submit the additional groundwater sample to STAT for analysis of total and dissolved metals.

Based on the dissolved metals analytical results, the detected manganese concentrations in the groundwater samples collected from monitoring wells MW-104, MW-106, MW-108, MW-111, MW-112, MW-115, MW-116, MW-117, MW-118, MW-03 and MW-04 exceed the TACO Tier 1 GRO for Class I groundwater. The detected manganese concentrations appear to be present widespread throughout the Property, including in portions of the Property that are located at anticipated cross and up groundwater gradient locations from the manufacturing buildings and wastewater treatment ponds on the Property. In addition, similar manganese concentrations were noted offsite as summarized in our Off-Site Investigation Summary. Manganese is found naturally in groundwater. The concentration of manganese in groundwater can fluctuate seasonally and vary with the depth and the geology of an area. Manganese naturally occurs in groundwater that has little or no oxygen, typically in deeper wells (but not always), in areas where groundwater flow is slow, and in areas where groundwater flows through soils rich in organic matter. Other sources of manganese in groundwater may include industrial effluent, acid water drainage, and sanitary waste. In light of the aforementioned information, WCG proposes to sample existing on-site monitoring wells that were installed during prior environmental phases and to analyze as many as four surface water samples collected from two of the wastewater treatment ponds, from the surface water effluent draining from the treatment ponds to Pond 5, and from surface water in Pond 5 to further characterize the nature of the detected dissolved manganese in the groundwater. The proposed monitoring wells to be sampled for manganese include the 30 existing monitoring wells that are proposed to be sampled to further evaluate the solvent impacts to groundwater as summarized previously. Laboratory analyses of the additional groundwater samples and the surface water samples will include pH and total and dissolved manganese.

On-Site Groundwater Assessment Findings

WCG completed an on-site soil and groundwater assessment in an effort to assess the on-site groundwater conditions on the Property. Based on the field sampling, and laboratory analyses performed during this assessment and described in this report, the following findings are set forth.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

- Solvent-impacted groundwater was noted in the deep and shallower groundwater depths in two separate monitoring well clusters located in the northwestern corner of the Property, which is the historical location of Pond 6; and adjacent to Building 16, which is utilized for the storage of hazardous and non-hazardous waste. Analytical data obtained during these on-site groundwater assessment activities did not identify solvent-impacted groundwater on the western or southern portions of the Property, which suggests that the solvent-impacted groundwater may be situated more in the vicinity of the current and historical manufacturing buildings and wastewater treatment ponds located on the northern portions of the Property. Based on the off-site groundwater assessment analytical data as summarized in our Off-Site Investigation Summary, one off-site monitoring well cluster (i.e., monitoring well cluster MW-83 and MW-84) located immediately north of on-site Building 2/3/4/7 and Building 10 exhibited more and in some cases higher concentrations of solvent-type compounds than noted in the two monitoring well clusters installed on-site during this groundwater assessment that exhibited TACO Tier 1 GRO exceedances on the Property. This data further suggests that potential solvent-impacted groundwater may be situated more in the vicinity of the current and historical manufacturing buildings and wastewater treatment ponds.

  In light of the aforementioned, the extent and nature of solvent-impacted groundwater has not been fully determined on the Property. Additional on-site groundwater assessment activities may be necessary to further evaluate the extents of solvent impacts in other portions of the Property. In addition, the proposed supplemental off-site groundwater assessment as summarized in our *Revised Summary of Proposed Supplemental Off-Site Investigation* may prove beneficial with evaluating the potential area of groundwater impacts on the Property. To further evaluate the on-site solvent impacts to groundwater, WCG is proposing to collect and analyze additional groundwater samples from previously installed groundwater monitoring wells located along the northern portions of the Property. Specifically, WCG will collect additional groundwater samples from as many as 30 existing monitoring wells that were previously installed to depths of 30 to 50 feet bgs in and around the former location of Building 6, along the northern and southern sides of the wastewater treatment ponds,

in and around Building 2/3/4/7 and Building 10, and in and around the location of former Building 1.

- Dissolved metals analytical results noted detected manganese concentrations in 11 of the 26 groundwater samples collected from the on-site monitoring wells installed during this groundwater assessment that exceed the TACO Tier 1 GRO for Class I groundwater. The detected manganese concentrations appear to be present widespread throughout the Property, including in portions of the Property that are located in anticipated cross and up groundwater gradient locations from the manufacturing buildings and wastewater treatment ponds on the Property. In addition, similar manganese concentrations were noted offsite as summarized in our Off-Site Investigation Summary. Manganese is found naturally in groundwater. Industrial effluent, acid water drainage, and sanitary waste may also contribute to manganese in the groundwater. In light of the aforementioned information, WCG proposes the following to further evaluate the on-site manganese groundwater concentrations that exceed TACO Tier 1 GROs.
    - Sample and analyze groundwater collected from existing on-site monitoring wells that were installed during prior environmental phases. The proposed monitoring wells to be sampled for manganese include the 30 existing monitoring wells that are proposed to be sampled to further evaluate the solvent impacts to groundwater as summarized previously; and
    - Analyze as many as four surface water samples collected from two of the wastewater treatment ponds, from the surface water effluent draining from the treatment ponds to Pond 5, and from surface water in Pond 5 to further characterize the nature of the detected dissolved manganese in the groundwater.

  Laboratory analyses of the additional groundwater samples and the surface water samples will include pH and total and dissolved manganese.

- Laboratory analyses identified concentrations of various total metals in the groundwater sample collected from monitoring well MW-114 that exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. However, due to insufficient sample volume, the laboratory was unable to filter and re-analyze the groundwater sample collected from monitoring well MW-114 for certain total dissolved metals.

Therefore, WCG proposes to purge and collected an additional groundwater sample from monitoring well MW-114 and submit the additional groundwater sample for analysis of total and dissolved metals.

- Due to insufficient groundwater recharge in monitoring wells MW-101, MW-113, MW-122, and MW-123, these monitoring wells were not fully developed, purged or sampled during the on-site groundwater assessment activities. The insufficient groundwater recharge noted in monitoring wells MW-101, MW-122 and MW-123 may be related to the location of these monitoring wells on a topographically higher elevation than the remaining on-site monitoring wells (i.e., approximately 10 to 15 feet higher than the remaining monitoring wells installed on the Property) and therefore may have been installed to a depth above the elevation of the groundwater at those portions of the Property. In light of this, WCG proposes to re-evaluate the groundwater conditions, and if conditions are favorable, purge and sample the aforementioned monitoring wells. In the event that the monitoring wells exhibit insufficient groundwater recharge for sampling, WCG proposes to install a deeper monitoring well (i.e., monitoring well MW-124) to a depth of approximately 70 feet at the monitoring well cluster that includes monitoring wells MW-122 and MW-123. Proposed monitoring well MW-124 will be screened at an interval of approximately 60 to 70 feet bgs. Since monitoring wells MW-101 and MW-113 are included within monitoring well clusters that contain a 50-foot deep monitoring well that exhibited sufficient groundwater recharge for sampling, WCG is not proposing additional deeper monitoring wells in the monitoring well clusters containing MW-101 and MW-113.

We anticipate that the supplemental on-site groundwater assessment activities as summarized previously (i.e., existing monitoring well sampling, surface water sampling, and additional monitoring well installation) will be implemented on or before July 1, 2015, which is the approximate time frame that the drillers will be performing the proposed off-site supplemental groundwater assessment and would likely be available to install the additional proposed on-site monitoring well, if necessary. We anticipate that the laboratory analyses for the samples that are collected during the additional on-site assessment activities will be completed and submitted to the IEPA by July 22, 2015. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental on-site groundwater assessment letter report that will be submitted to the IEPA by July 31, 2015.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

We trust that this correspondence provides you with the pertinent information related to the on-site groundwater assessment activities. If you should have any questions or comments concerning the aforementioned information, please do not hesitate to contact our office at 630-717-4848.

Sincerely,

Legend:

0.22	Concentration exceeds the Tier 1 GRO for Class I Groundwater.
47	Concentration exceeds the Tier 1 GROs for Class I and Class II Groundwater

Notes:

[a] Tier 1 Groundwater Remediation Objectives (GROs) obtained from Table E of Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective February 23, 2007).

[b] Remediation objectives as listed in the Illinois Environmental Protection Agency's Non-TACO Summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[c] The GRO is equal to the Acceptable Detection Limit (ADL) per Title 35, IAC, Part 620 and Part 742

[d] Groundwater Sample Identification Number

[e] Depth of Groundwater Sampling Well

[f] Groundwater Sampling Date

* Insufficient volume. No sample collected.

< 0.0050 - Below laboratory detection limits

--- No GRO available.

NA - Not Analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend:

0.22 Concentration exceeds the Tier 1 GRO for Class I Groundwater.

47 Concentration exceeds the Tier 1 GROs for Class I and Class II Groundwater.

Notes:

[a] Tier 1 Groundwater Remediation Objectives (GROs) obtained from Table E of Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective February 23, 2007)

[b] Remediation objectives as listed in the Illinois Environmental Protection Agency's Non-TACO Summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[c] Monitoring well identification number and/or groundwater sample identifier.

[d] Depth of Groundwater Monitoring Wells

[e] Groundwater Sampling Date

[f] Milligrams per Liter

* Insufficient volume. No sample collected.

< 0.34 - Below laboratory detection limits

--- No GRO available

NA - Not Analyzed

NA - Not Analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *On-Site Groundwater Assessment Summary* (e-mail copy dated May 11, 2015, and received via e-mail cover message dated May 12, 2015/Log 15-59436), which was prepared by Weaver Consultants Group (Weaver) for the above site pursuant to: (1) the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, in McHenry County; and (2) the Second Agreed Modification to Second Agreed Preliminary Injunction Order, filed May 8, 2015, in McHenry County. The *On-Site Groundwater Assessment Summary* is approved, though more detailed information is needed concerning the proposed collection and analysis of groundwater samples from previously installed monitoring wells in the north portion of the property, as well as of surface water samples associated with the wastewater treatment system. Illinois EPA comments follow.

Item 1. The Illinois EPA notes that the summary Tables 1 through 4, Figure 2, and the summary table on page 7 all indicate that existing monitoring well MW-04 is 50 feet deep. According to information previously submitted to the Illinois EPA, this well is actually approximately 20 feet deep. This does not substantially change the findings of the document, and is listed so that the mistake is not repeated in future submittals.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Item 2. The Illinois EPA agrees with the proposal to install a new monitoring well (MW-124) to a depth of approximately 70 feet (screened from 60 to 70 feet) at the location of the monitoring well cluster that includes MW-122 (50') and MW-123 (30'), in the event that these two wells do not recharge sufficiently to allow for sampling. If only one of these wells provides an adequate quantity of groundwater for sampling, the Illinois EPA should be contacted for guidance before proceeding with the installation of MW-124.

Item 3. On pages 9 and 11 of the *On-Site Groundwater Assessment Summary*, Weaver proposes to further evaluate on-site solvent impacts to groundwater by collecting and analyzing samples from previously installed monitoring wells in certain northern portions of the property. Additional samples are to be collected from "as many as 30 existing monitoring wells", with the samples analyzed for Volatile Organic Compounds and 1,4-Dioxane. Before proceeding with the additional sampling, Weaver should provide details on exactly which wells will be sampled and why. If a phased approach is desired, an appropriate explanation should be provided.

Item 4. On pages 10 and 12 of the *On-Site Groundwater Assessment Summary*, Weaver proposes to further evaluate the presence of manganese in groundwater by collecting and analyzing "as many as four surface water samples" associated with the wastewater treatment system, as well as groundwater samples from the same existing monitoring wells that are to be evaluated for solvent impacts. Before proceeding with the additional sampling, Weaver should provide details on exactly which wells will be sampled and why. If a phased approach is desired, an appropriate explanation should be provided. Similar details should be provided for the surface water sampling.

Pursuant to the Second Agreed Preliminary Injunction Order, as modified, a response is required within fourteen (14) business days of the receipt of this letter.

Please note that Todd Hall will be taking over as the Project Manager for this matter, due to my pending retirement at the end of this month. Future submittals should therefore be directed to Todd at the address indicated on the letterhead or via e-mail at Todd.Hall@Illinois.gov.

Sincerely,

Timothy D. Zook

Re: On-Site Groundwater Assessment Summary
Response to Comments
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Hall:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a response to the comments included in the Illinois Environmental Protection Agency (IEPA) letter dated May 22, 2015 (IEPA Letter) concerning the recently completed and the proposed on-site environmental assessment activities related to the above referenced property (the Property). The IEPA Letter was issued to provide comments to WCG's *On-Site Groundwater Assessment Summary* dated May 11, 2015.

Specifically, the IEPA Letter approved the *On-Site Groundwater Assessment Summary* and requested more detailed information concerning the proposed collection and analysis of groundwater samples from previously installed groundwater monitoring wells in the northern portion of the Property, as well as surface water samples associated with the current on-site wastewater treatment system. In addition, the IEPA Letter provided comments pertaining to four specific items, below are our responses to each of the four items listed in the IEPA Letter.

- **Item 1:** In our *On-Site Groundwater Assessment Summary*, WCG indicated that previously installed monitoring well MW-04 was installed to a depth of 50 feet below ground surface (bgs), which was based on our on-site observations and historical monitoring well and soil boring location maps. However, based on information previously provided to the IEPA, the IEPA indicated that the aforementioned monitoring well MW-04 is approximately 20 feet bgs. In light of this, WCG will re-gauge the monitoring well MW-04 to assess the depth of

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

this monitoring well. We will notify the IEPA of the measured depth for this monitoring well.

- **Item 2:** The IEPA approved the installation of proposed monitoring well MW-124 to a depth of 70 feet bgs in the event that previously installed monitoring wells MW-122 and MW-123 do not recharge sufficiently to allow for sampling. In the event that only one of the two monitoring wells exhibits sufficient recharge, WCG will contact the IEPA prior to installing proposed monitoring well MW-124.
- **Item 3:** In our *On-Site Groundwater Assessment Summary*, WCG proposed to further evaluate the on-site solvent impacts to groundwater by collecting and analyzing groundwater samples from as many as 30 existing on-site monitoring wells. WCG proposes to perform the additional sampling of the existing on-site monitoring wells in a phased approach. In the first phase of sampling, we propose sampling at least nine existing monitoring wells located along the northern property boundary situated north of Buildings 2/3/4/7, east and west of Building 10, between Buildings 2/3/4/7 and former Building 1, and along the north side of former Building 1. Specifically, we propose to collect samples from previously installed monitoring wells MW-30 (30'), MW-43 (50'), MW-42 (50'), MW-41 (50'), MW-31 (30'), MW-32 (30'), MW-39 (50'), MW-40 (50'), and MW-33 (30'), as the location of the aforementioned monitoring wells are located south and southeast (i.e., potentially up gradient) of recently installed off-site monitoring wells MW-83 (30') and MW-84 (50'), which to date, have exhibited the greatest apparent degree of off-site solvent impacts. The groundwater samples collected from the eight aforementioned monitoring wells will be analyzed for volatile organic compounds (VOCs) and 1,4-Dioxane. Subsequent sampling phases, if necessary, will be determined based on the laboratory analytical results obtained from the first sampling phase. WCG will contact the IEPA prior to performing any subsequent sampling phases.
- **Item 4:** In our *On-Site Groundwater Assessment Summary*, WCG proposed to further evaluate the presence of manganese in groundwater by collecting and analyzing as many as four surface water samples associated with the existing wastewater treatment system, as well as groundwater samples collected from select on-site monitoring wells. WCG is proposing to collect surface water samples from two of the wastewater treatment ponds, from the surface water effluent draining from the treatment ponds to Pond 5, and from surface water in Pond 5 to further characterize the nature of the detected dissolved manganese in the groundwater. Additionally, WCG proposes to perform additional sampling of the existing on-site monitoring wells in a phased approach as summarized in

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Item 3, above. In addition to sampling the monitoring wells noted in Item 3, WCG proposes to collect and analyze additional groundwater samples from previously installed monitoring wells MW-29 (30'), MW-13 (20'), MW-26 (30'), MW-46 (50'), and MW-27 (30'). Laboratory analyses of the additional groundwater samples and the surface water samples will include pH and total and dissolved manganese. The additional surface water and groundwater sampling will be performed to obtain representative total and dissolved manganese analytical data for the northern portion of the Property. Subsequent sampling phases, if necessary, will be determined based on the laboratory analytical results obtained from the first sampling phase. WCG will contact the IEPA prior to performing any subsequent sampling phases.

We anticipate that the supplemental on-site groundwater assessment activities as summarized previously (i.e., existing monitoring well sampling, surface water sampling, and additional monitoring well installation) will be implemented within approximately two to three weeks of the IEPA's approval of the proposed supplemental on-site groundwater assessment activities, pending the availability of a drilling subcontractor. We anticipate that the laboratory analyses for the samples that are collected during the additional on-site assessment activities will be completed and submitted to the IEPA within approximately two weeks of completing the supplemental on-site groundwater assessment field activities. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental on-site groundwater assessment letter report that will be submitted to the IEPA within three weeks upon receipt of the laboratory analytical data.

We trust that the aforementioned supplemental off-site groundwater assessment summary is sufficient for your needs at this time. If you should have any questions or comments concerning the supplemental off-site groundwater assessment work plan, please do not hesitate to contact our office at 630-717-4848.

Sincerely,

Re: Supplemental On-Site Groundwater Assessment Summary
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Catlin:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a summary of a supplemental groundwater assessment related to the above referenced property (the Property) pursuant to the Second Agreed Preliminary Injunction Order (Case No. 13CH 1 046), as modified by the First Agreed Modification to Second Agreed Preliminary Injunction filed on March 12, 2015 and the Second Agreed Modification to Second Agreed Preliminary Injunction Order filed on May 8, 2015, in McHenry County Circuit Court.

Based on the off-site groundwater assessment analytical data as summarized in our *Amended Off-Site Investigation Summary* dated May 7, 2015 (Off-Site Investigation Summary), one off-site monitoring well cluster (i.e., monitoring well cluster MW-83 and MW-84) located immediately north of on-site Building 2/3/4/7 and Building 10 exhibited elevated concentrations of solvent-type compounds[1] that exceeded TACO[2] Tier 1 groundwater remediation objectives (GROs). The off-site groundwater data suggest that potential solvent-impacted groundwater may potentially be migrating offsite from an area situated more in the vicinity of the current and historical manufacturing buildings and wastewater treatment ponds located on the northern portions of the Property.

[1] Tetrachloroethene, Trichloroethene, 1,1-Dichloroethen, 1,1,1-Trichloroethane, and 1,4-Dioxane
[2] Title 35, Illinois Administrative Code, Part 742 titled Tiered Approach to Corrective Action Objectives

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

In light of the aforementioned, the potential source, extent and nature of the solvent-impacted groundwater has not been fully determined on the Property. Additional on-site groundwater assessment activities, as summarized in this letter, were completed to further evaluate the potential source area and extents of solvent impacts in other portions of the Property. To further evaluate the on-site solvent impacts to groundwater, WCG collected and analyze additional groundwater samples from previously installed groundwater monitoring wells located along the northern portions of the Property.

The supplemental groundwater assessment activities summarized in this letter were completed pursuant to a sampling plan summarized in our *On-Site Groundwater Assessment Summary* dated May 11, 2015 (On-Site Groundwater Assessment) and a subsequent On-*Site Groundwater Assessment Summary Response to Comments* letter to the Illinois Environmental Protection Agency (IEPA) dated June 10, 2015 (WCG Response Letter), which was prepared in response to the IEPA's comment letter dated May 22, 2015. The following sections provide a brief summary of the supplemental on-site field activities followed by a summary of the laboratory analytical results and findings.

Supplemental On-Site Groundwater Assessment Field Activities Summary

To further evaluate the on-site subsurface environmental conditions related to the Property, WCG implemented a supplemental on-site groundwater assessment as presented in On-Site Groundwater Assessment and the WCG Response Letter. To assess the environmental condition of the groundwater located in select locations on the Property, WCG implemented a supplemental groundwater assessment that involved the following:

- A re-evaluation of the construction of monitoring well MW-4 to assess the depth of the monitoring well;
- Sampling of recently installed monitoring wells MW-113, MW-122 and MW-123 that did not previously recharge sufficiently to allow for sampling during our initial sampling event in April 2015;
- Sampling of nine previously installed on-site monitoring wells [i.e., monitoring wells MW-30 (30'), MW-43 (50'), MW-42 (50'), MW-41 (50'), MW-31 (30'), MW-32 (30'), MW-39 (50'), MW-40 (50'), and MW-33 (30')], as the location of the aforementioned monitoring wells are located south and southeast (i.e., potentially up gradient) of the recently installed off-site monitoring wells MW-83 (30') and MW-84 (50'), which to date, have exhibited the greatest apparent degree of off-site solvent impacts;

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

- Sampling of three previously installed on-site monitoring wells [i.e., monitoring wells MW-26 (30'), MW-46 (50'), and MW-27 (30')]; and
- Sampling of two previously installed on-site monitoring wells [i.e., monitoring wells MW-35 (30') and MW-38 (50')].

Figure 1, attached, depicts the location of the on-site groundwater monitoring wells that were the subject of this supplemental on-site groundwater assessment. **Figure 1** also includes the location of the off-site groundwater monitoring well cluster MW-83 (30') and MW-84 (50') that has exhibited the greatest apparent degree of off-site solvent impacts.

Prior to sampling, each of the aforementioned monitoring wells was purged of a minimum of three well volumes or until the purge water was clear and reduced of suspended solids/particulates and exhibited stable conditions based upon field measurements of pH, specific conductivity, and temperature. Groundwater samples collected from the on-site monitoring wells were collected using a designated disposable bailer. In addition, during the supplemental on-site groundwater assessment activities, WCG re-gauged monitoring well MW-4 and determined that monitoring well MW-4 was constructed to a depth of approximately 20 feet.

As discussed in the WCG Response Letter, WCG proposed to sample monitoring wells MW-122 and MW-123, which did not previously recharge sufficiently to allow for sampling during the initial sampling event in April 2015. In the event that monitoring wells MW-122 and MW-123 continued to recharge sufficiently to allow for sampling, WCG proposed to install a deeper monitoring well (i.e., monitoring well MW-124). During the supplemental groundwater assessment activities, monitoring wells MW-122 and MW-123 exhibited sufficient recharge for sampling; therefore, the installation of proposed monitoring well MW-124 was not necessary. Additionally, during the supplemental groundwater assessment activities, WCG also collected a groundwater sample from monitoring well MW-113, which did not previously recharge sufficiently to allow for sampling during the initial sampling event in April 2015.

In addition, the WCG Response Letter proposed to perform additional sampling of the existing on-site monitoring wells in a phased approach. In the first phase of sampling, we initially proposed sampling at least nine existing monitoring wells (i.e., monitoring wells MW-30, MW-43, MW-42, MW-41, MW-31, MW-32, MW-39, MW-40, and MW-33) located along the northern property boundary situated north of Buildings 2/3/4/7, east and west of Building 10, between Buildings 2/3/4/7 and former Building 1, and along the north side of former Building 1. Due to

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

the proximity of monitoring wells MW-35 (30') and MW-38 (50') to identified solvent-impacted soil in the area of former Building 1, WCG collected additional groundwater samples from these monitoring wells to assess the groundwater conditions.

Furthermore, as discussed in the WCG Response Letter, WCG proposed to further evaluate the previously detected manganese concentrations in groundwater. Upon further evaluation of the detected total and dissolved manganese concentrations as summarized in the On-Site Groundwater Assessment and our Off-Site Investigation Summary, WCG noted that manganese was present widespread in both upgradient and downgradient locations on and off the Property. The detected total and dissolved manganese concentrations were noted at similar concentrations at upgradient and downgradient locations onsite and offsite.

As discussed in the On-Site Groundwater Assessment, manganese is found naturally in groundwater. The concentration of manganese in groundwater can fluctuate seasonally and vary with the depth and the geology of an area. Manganese naturally occurs in groundwater that has little or no oxygen, typically in deeper wells (but not always), in areas where groundwater flow is slow, and in areas where groundwater flows through soils rich in organic matter. In light of this, WCG believes that the detected manganese concentrations may potentially be classified as *Area Background*[3] as defined in TACO. Therefore, WCG proposes to determine the area background for manganese in groundwater, as outlined in TACO, upon receipt of additional supplemental off-site groundwater laboratory analytical data from the Supplemental Off-Site Groundwater Investigation that is currently in progress. Based on this modified approach for evaluating the detected manganese concentrations, surface water samples were not collected from various locations on the Property as summarized in the On-Site Groundwater Assessment and the WCG Response Letter.

WCG initially proposed to utilize monitoring wells MW-26 (30'), MW-46 (50'), and MW-27 (30') to further evaluate the manganese concentrations. However, in light of the laboratory analytical data obtained from groundwater collected from monitoring wells MW-30 (30'), MW-43 (50'), MW-42 (50'), MW-41 (50'), MW-31 (30'), MW-32 (30'), MW-39 (50'), MW-40 (50'), and MW-33 (30'), groundwater collected from monitoring wells MW-26 (30'), MW-46 (50'), and MW-27 (30') were also utilized to evaluate for the presence of various VOCs[4].

[3] "Area Background" means concentrations of regulated substances that are consistently present in the environment in the vicinity of a site that are the result of natural conditions or human activities, and not the result solely of releases at the site.
[4] Volatile Organic Compounds

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Laboratory Analytical Methodology

The groundwater samples were placed in laboratory-provided and appropriately preserved sample containers, placed in a cooler and packed with ice in an effort to maintain a constant temperature near 4°C. The groundwater samples were submitted within 24 hours to STAT Analysis Corporation of Chicago, Illinois (STAT), a National Environmental Laboratory Accreditation Program (NELAP) certified laboratory, for laboratory analyses.

The groundwater samples were submitted under standard chain-of-custody procedures. Sampling and laboratory analysis were performed in general accordance with approved techniques and methods as outlined in *USEPA SW-846, Test Methods For Evaluating Solid Waste, Third Edition*, and other published sources.

According to the On-Site Groundwater Assessment and the WCG Response Letter, the proposed laboratory analyses included VOCs and 1,4-Dioxane for the groundwater collected from monitoring wells MW-30 (30'), MW-43 (50'), MW-42 (50'), MW-41 (50'), MW-31 (30'), MW-32 (30'), MW-39 (50'), MW-40 (50'), and MW-33 (30'), and pH and total and dissolved manganese for groundwater collected from monitoring wells MW-26 (30'), MW-46 (50'), and MW-27 (30'). However, pursuant to a *Proposed Site Investigation Work Plan* prepared by Environmental Group Services Limited (EGSL) dated December 24, 2014 (Work Plan), which was approved by the IEPA in a comment letter dated December 31, 2014, the select groundwater samples were submitted for laboratory analysis of the following constituents:

- Target Compound List (TCL) (including 1,4-Dioxane) – 17 groundwater samples.

Due to a laboratory extraction hold time exceedance for the pesticide and 1,4-Dioxane (i.e., USEPA Method 8270) analyses for the groundwater samples collected from monitoring wells MW-30 (30'), MW-43 (50'), MW-42 (50'), MW-41 (50'), and MW-31 (30'), WCG collected additional groundwater samples from the aforementioned monitoring wells for pesticide and 1,4-Dioxane analyses. In addition, it should be noted that the laboratory reported the analytical results for 1,4-Dioxane using two laboratory analytical methods. Therefore, the laboratory analytical results for 1,4-Dioxane were summarized on both the VOC and SVOC[5] groundwater analytical summary tables attached to this letter as reported by the laboratory.

[5] Semi-Volatile Organic Compounds

Laboratory Analytical Results Summary

As mentioned previously, WCG performed a supplemental on-site groundwater assessment that consisted of the sampling of 12 previously installed monitoring wells and 2 recently installed monitoring wells that previously exhibited insufficient recharge for sampling during the initial sampling event in April 2015. WCG submitted 17 groundwater samples for laboratory analysis of TCL, including 1,4-Dioxane. The laboratory analytical results were compared to Illinois' TACO Tier 1 GROs. The following sections further summarize the laboratory analytical data for groundwater that was samples as part of the supplemental on-site groundwater assessment.

Groundwater Analytical Summary

Laboratory analyses identified detectable concentrations of certain VOCs and SVOCs in soil collected from select on-site groundwater monitoring wells. Laboratory analyses identified concentrations of certain total metals and no detectable concentrations of PCBs[6] or pesticides as shown in **Tables 1** through **4**, attached. Additionally, for the purpose of comparison, **Tables 1** through **4** also include the laboratory analytical data obtain during our initial sampling event in April 2015.

Based on our review of the laboratory analytical data, the following detected VOCs and SVOCs exceed the TACO Tier 1 GROs.

Detected VOC and SVOC Water Analytical Summary	
Sample Location	**Detected Analyte**
MW-26 (30 feet)	Tetrachloroethene Trichloroethene
MW-27 (30 feet)	Chloroform Tetrachloroethene
MW-30 (30 feet)	Tetrachloroethene
MW-31 (30 feet)	1,1,1-Trichloroethane 1,1-Dichloroethene Tetrachloroethene
MW-32 (30 feet)	1,1,1-Trichloroethane 1,1-Dichloroethene Tetrachloroethene
MW-33 (30 feet)	No Exceedances

[6] Polychlorinated biphenyls

Detected VOC and SVOC Water Analytical Summary	
Sample Location	**Detected Analyte**
MW-35 (30 feet)	1,1,1-Trichloroethane 1,1-Dichloroethene Tetrachloroethene
MW-38 (50 feet)	No Exceedances
MW-39 (50 feet)	Bis(2-ethylhexyl)phthalate
MW-40 (50 feet)	No Exceedances
MW-41 (50 feet)	1,1-Dichloroethene Tetrachloroethene Trichloroethene Vinyl Chloride 1,4-Dioxane
MW-42 (50 feet)	No Exceedances
MW-43 (50 feet)	No Exceedances
MW-46 (50 feet)	1,1,1-Trichloroethane 1,1-Dichloroethene
MW-113 (30 feet)	No Exceedances
MW-122 (50 feet)	No Exceedances
MW-123 (30 feet)	No Exceedances

The above-listed detected Tetrachloroethene, 1,1-Dichloroethene, 1,1,1-Trichloroethane, Trichloroethene, Chloroform, Vinyl Chloride, Bis(2-ethylhexyl)phthalate, and 1,4-Dioxane concentrations exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. The solvent-impacted groundwater appears to be present in both the deep and shallower groundwater depths; however, detected VOC and SVOC concentrations appear to be more prevalent in the groundwater samples collected from the shallower groundwater with the exception of the groundwater samples collected from monitoring wells MW-41 (50'), MW-46 (50'), and MW-39 (50'), which are located in the vicinity of Building 10, southeast of Pond 4, and northwest of former Building 1, respectively.

Based on our review of the supplemental groundwater analytical data, the highest detected VOC concentrations appear to be located in the area of monitoring well cluster MW-31 (30') and MW-41 (50'). The detected VOC concentrations appear to diminish generally to the west and the east of monitoring well cluster MW-31 (30') and MW-41 (50') as shown in the analytical data for groundwater samples collected from monitoring well cluster MW-30 (30') and MW-43 (50')

and monitoring well cluster MW-32 (30') and MW-39 (50'). The extent of VOC-impacted groundwater has not been fully determined in the area of Building 2/3/4/7, former Building 1, and the eastern side of the wastewater treatment ponds.

In addition, as summarized in the On-Site Groundwater Assessment and based on supplemental laboratory analytical data for groundwater samples collected from monitoring well cluster MW-26 (30') and MW-46 (50') and from monitoring well MW-27 (30'), an additional area of VOC-impacted groundwater was noted in a general area located on the south and southeast side of the wastewater treatment ponds and in the area of Building 16. Based on the On-Site Groundwater Assessment and the supplemental laboratory analytical data, it is unclear whether the VOC-impacted groundwater noted on the south and southeast side of the wastewater treatment ponds and in the area of Building 16 is associated with the VOC-impacted groundwater noted on the north side of Building 2/3/4/7 and former Building 1.

Furthermore, based on the off-site groundwater assessment analytical data as summarized in our Off-Site Investigation Summary, the off-site monitoring well cluster MW-83 (30') and MW-84 (50') located immediately north of on-site Building 2/3/4/7 and Building 10 exhibited slightly diminished VOC concentrations compared to on-site monitoring well cluster MW-31 (30') and MW-41 (50'), and in some cases higher concentrations of solvent-type compounds (e.g., Tetrachloroethene, Trichloroethene, 1,1-Dichloroethene, 1,1,1-Trichloroethane, and 1,4-Dioxane) than noted in groundwater collected from the existing on-site monitoring wells that were sampled as part of this supplemental on-site groundwater assessment. However, to date, the highest detected concentration of 1,4-Dioxane was noted in the groundwater collected from monitoring well MW-84 (50').

Figure 2, attached, includes a summary of the groundwater analytical results obtained during our initial April 2015 groundwater sampling event, as well as from our recent supplemental on-site groundwater assessment relative to the TACO Tier 1 GROs. **Figure 3** includes a summary of the groundwater analytical results obtained during our recent supplemental on-site groundwater assessment relative to the TACO Tier 1 GROs. Additionally, **Tables 1** and **2**, attached, summarize the VOC and SVOC groundwater laboratory analytical data.

Laboratory analyses also detected various total metals in the 17 groundwater samples analyzed, which exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater. **Figures 2** and **3** includes a summary of the groundwater analytical results relative to the TACO Tier 1 GROs. Additionally, **Table 3** summarizes the groundwater laboratory analytical data for total and dissolved metals for the initial groundwater sampling event in April 2015, as well as the total

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

metals laboratory data obtained during the recent supplemental on-site groundwater assessment. Further, **Table 4** summarizes the groundwater laboratory analytical data for PCBs and pesticides, which were not detected on the Property.

Supplemental On-Site Groundwater Assessment Findings

WCG completed a supplemental on-site groundwater assessment in an effort to assess the on-site groundwater conditions on the Property. Based on the field sampling, and laboratory analyses performed during this supplemental assessment and described in this report, the following findings are set forth.

- Solvent-impacted groundwater was noted in the deep and shallower groundwater depths in areas located north of Buildings 2/3/4/7, near Building 10, and in the area of former Building 1. An additional area of VOC-impacted groundwater was noted in a general area located on the south and southeast side of the wastewater treatment ponds and in the area of Building 16.
- Laboratory analyses identified concentrations of various total metals in the 17 groundwater samples collected from the Property that exceed the TACO Tier 1 GROs for Class I and/or Class II groundwater.

In light of the aforementioned analytical data summary, the extent and nature of the solvent-impacted groundwater has not been fully determined on the Property. Specifically, the extent of VOC-impacted groundwater has not been fully determined in the area of Building 2/3/4/7, former Building 1, and the eastern side of the wastewater treatment ponds. Additionally, it is unclear whether the VOC-impacted groundwater noted on the south and southeast side of the wastewater treatment ponds and in the area of Building 16 is associated with the VOC-impacted groundwater noted on the north side of Building 2/3/4/7 and former Building 1.

An additional on-site groundwater assessment sampling phase may be necessary to further evaluate the extents of solvent impacts in other portions of the Property. In addition, the supplemental off-site groundwater assessment, which is currently in progress and was proposed in our *Revised Supplemental Off-Site Groundwater Investigation* letter dated July 31, 2015 and in a subsequent WCG letter to the IEPA dated September 14, 2015, may prove beneficial with further evaluating the groundwater impacts on the Property.

To further evaluate the on-site solvent impacts to groundwater, WCG is proposing to collect and analyze additional groundwater samples from previously installed groundwater monitoring wells located along the northern and eastern portions of the Property. WCG is proposing to collect

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

additional groundwater samples from as many as nine existing monitoring wells that were previously installed to depths of 30 to 50 feet bgs in and around the northern and southern sides of the wastewater treatment ponds, in and around Building 2/3/4/7 and Building 10, and in and around the location of former Building 1 (**Figure 4**). Specifically, we propose to collect additional samples from the following previously installed monitoring wells and monitoring well clusters:

- Monitoring well cluster MW-5 (50'), MW-6 (40'), and MW-7(30');
- Monitoring well cluster MW-29 (30') and MW-44 (50');
- MW-25 (30');
- MW-28 (30');
- MW-36 (30'); and
- MW-37 (30'

The aforementioned monitoring wells are located north, south and west of the wastewater treatment ponds, and inside and immediately west of Building 2/3/4/7. The groundwater samples collected from the nine aforementioned monitoring wells will be analyzed for TCL and 1,4-Dioxane. Subsequent sampling phases, if necessary, will be determined based on the laboratory analytical results obtained from the first and the proposed second sampling phases.

In addition, in light of the elevated concentrations of various total metals that were noted during the supplemental on-site groundwater assessment, WCG is proposing to re-analyze as many as seven of the 17 groundwater samples for select dissolved metals, as the elevated total metal concentrations may have been a result of the presence of metals on the silt particles that were suspended in the supplemental on-site groundwater samples. Specifically, groundwater samples that were collected during this supplemental on-site groundwater assessment from monitoring wells MW-26 (30'), MW-27 (30'), MW-30 (30'), MW-31 (30'), MW-32 (30'), MW-33 (30'), and MW-35 (30'), which exhibited the highest concentrations of total metals, will be filtered at the laboratory in an effort to reduce the volume of suspended solids that may be present in the groundwater samples and re-analyzed for select total dissolved metals.

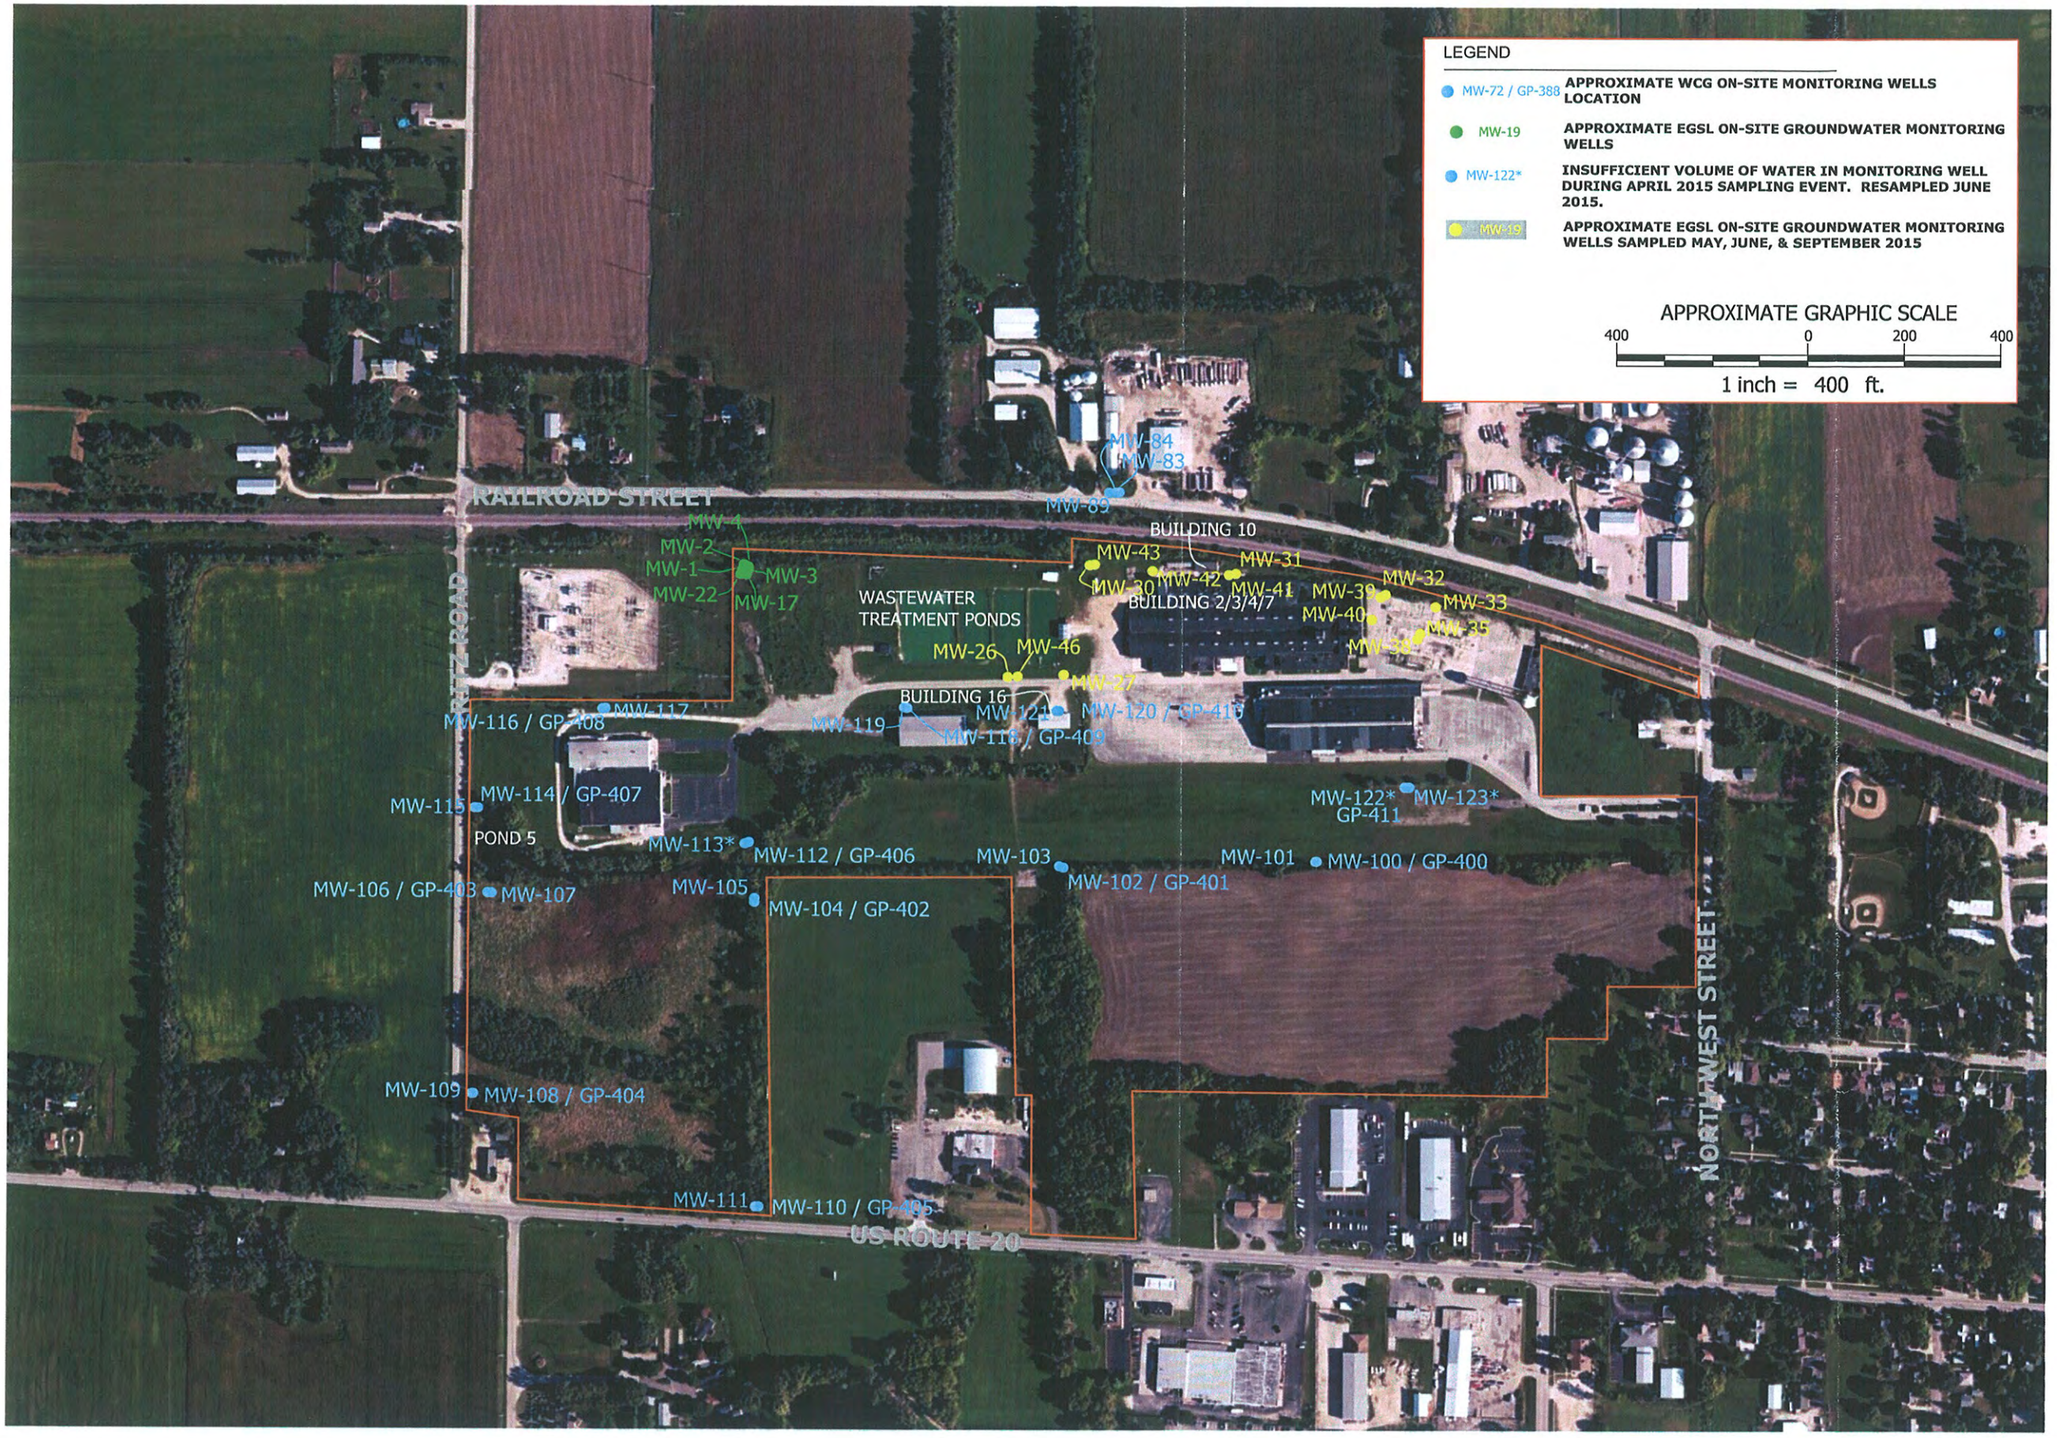
Furthermore, as summarized in the On-Site Groundwater Assessment, dissolved metals analytical results noted manganese concentrations in the groundwater samples that exceed the TACO Tier 1 GRO for Class I groundwater. The detected manganese concentrations appear to be present widespread throughout the Property, including in portions of the Property that are located at anticipated cross and up groundwater gradient locations from the manufacturing buildings and wastewater treatment ponds on the Property. In addition, similar manganese

concentrations were noted offsite as summarized in our Off-Site Investigation Summary. It should be noted that manganese is found naturally in groundwater. The concentration of manganese in groundwater can fluctuate seasonally and vary with the depth and the geology of an area. In light of this, WCG believes that the detected manganese concentrations may potentially be classified as *Area Background* as defined in TACO. Therefore, WCG proposes to determine the area background for manganese in groundwater, as outlined in TACO, upon receipt of additional supplemental off-site groundwater laboratory analytical data from the Supplemental Off-Site Groundwater Investigation that is currently in progress.

We anticipate that the second phase of the supplemental on-site groundwater assessment activities as summarized previously (i.e., existing monitoring well sampling) will be implemented in conjunction with the supplemental off-site groundwater investigation activities, which are currently in progress. We anticipate that the laboratory analyses for the proposed second phase of samples that are collected during the additional supplemental on-site assessment activities will be completed and submitted to the IEPA within five weeks of the IEPA approval of the proposed activities summarized in this letter. Within three weeks upon receipt of the laboratory analytical data WCG will prepare a supplemental on-site groundwater assessment letter report that summarizes the second phase of the supplemental on-site groundwater assessment activities as proposed in this letter.

We trust that this correspondence provides you with the pertinent information related to the on-site groundwater assessment activities. If you should have any questions or comments concerning the aforementioned information, please do not hesitate to contact our office at 630-717-4848.

Sincerely,



Weaver Consultants Group North Central, LLC

Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *Supplemental On-site Groundwater Assessment Summary* (dated September 30, 2015 and received October 1, 2015/Log 15-60506) prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, and the Second Agreed Modification to Second Agreed Preliminary Injunction Order filed on May 8, 2015, in McHenry County. The *Supplemental On-site Groundwater Assessment Summary* is considered approved with the following comment.

1. Since the on-site horizontal and vertical extent of contamination has not been adequately defined, once the proposed sampling is completed it may be necessary to install additional wells to determine the rate and extent of the contamination.

Future submittals should be directed to my attention at the address indicated on the letterhead or via e-mail at Andrew.catlin@illinois.gov.

Sincerely,

Andrew M. Catlin

Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Hall:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a summary of the on-site subsurface environmental assessment activities related to the above referenced property (the Property). The assessment activities completed consisted of a soil assessment of select portions of the Property (**Figure 1**, attached). This letter serves to summarize only the on-site soil assessment activities implemented by WCG.

The assessment activities summarized in this letter were completed pursuant to a *Proposed Site Investigation Work Plan* prepared by Environmental Group Services Limited (EGSL) dated December 24, 2014 (Work Plan). The Work Plan was subsequently approved by the Illinois Environmental Protection Agency (IEPA) in a comment letter to representatives of 300 West LLC and dated December 31, 2014 (IEPA Letter). The IEPA's approval of the Work Plan was contingent on responses to comments and questions contained in the IEPA Letter, which were provided in a response letter prepared by EGSL and dated January 6, 2015 (EGSL Response Letter).

Based on information included in the aforementioned documents, it appears that solvent-type impacts are present above applicable IEPA soil and groundwater remediation objectives on the Property, which are presumed to have migrated off-site and impacted nearby drinking water supply wells on the Off-Site Parcels. In light of this information, WCG was retained by 300 West

1813 N. Mill Street • Suite A • Naperville, Illinois 60653 • 630-717-4848 • wcgrp.com • Offices Nationwide

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

LLC to implement the portion of the Work Plan related to the assessment of the potential on-site impacts to further evaluate the on-site soil conditions on the Property. The soil assessment activities summarized in this letter focus only on the on-site areas as defined in the Work Plan and the EGSL Response Letter. The following sections provide a brief summary of the on-site field activities followed by a summary of the laboratory analytical results and findings.

On-Site Soil Assessment Field Activities Summary

Based upon our review of the aforementioned documents, WCG understands that previously identified solvent-type compounds may have potentially migrated off-site from the Property and impacted nearby private drinking water supply wells. Therefore, to further evaluate the on-site subsurface environmental conditions related to the previously identified environmental impacts on the Property, WCG implemented an on-site soil assessment as presented in the Work Plan and the EGSL Response Letter.

In light of the aforementioned, the on-site soil assessment consisted of the installation of 79 soil probes. The on-site soil assessment field activities (e.g., soil drilling and soil sampling) were completed from March 16, 2015 through May 27, 2015. Cabeno Environmental Field Services, LLC (Cabeno) was retained by 300 West LLC to implement the on-site drilling activities.

During the assessment activities, WCG surveyed the locations of the soil probes that had adjacent monitoring wells using a hand-held GPS unit. The following sections further summarize the on-site soil assessment methodologies.

Soil Assessment Methodology

To assess the environmental condition of the soil located on the Property, WCG implemented a soil assessment as summarized in the following section. Specifically, the soil assessment included the collection of various soil samples from 79 soil probes that were completed in select locations on the Property (i.e., one soil probe completed in each of the 12 monitoring well cluster locations, as well as additional locations in and around the buildings on the Property).

The 12 soil probes (i.e., soil probes GP-400 through GP-411) that were completed within each of the 12 monitoring well clusters were generally completed from March 16, 2015 through March 27, 2015 in advance of the on-site groundwater assessment. The 12 aforementioned soil probes were completed to a depth of 50 feet and were subsequently converted to groundwater monitoring wells that were utilized to further assess the on-site groundwater conditions. The

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

remaining 67 soil probes were advanced to a depth of 15 feet in locations situated in and around the on-site buildings.

Soil probes were advanced using a track-mounted Geoprobe® sampling system (e.g., direct-push technology) or a hand-cart Geoprobe® sampling system. Soils collected from the drilling activities were visually classified and logged by a WCG field representative. Upon retrieval of soil samples, a split sample from each sample interval was placed in a separate re-sealable zip-lock bag for organic vapor screening using a portable photoionization detector (PID). Representative samples from the soil probes were collected and placed into pre-cleaned laboratory-supplied sample containers for subsequent laboratory analysis. Following the completion of each soil probe and soil sampling activities, the soil probe boreholes were converted to a groundwater monitoring well.

Pursuant to the Work Plan, at least two discrete soil samples were collected from each soil probe for laboratory analysis from approximate depths of 1 to 3 feet bgs and from the two-foot interval above the water table exhibiting the greatest indication of environmental impact, based on field screening results (i.e., visual/olfactory observations and PID results). If no impacts were identified during field screening, a sample was selected from the depth interval most likely to be impacted (e.g., immediately above shallow zones of saturation). Additionally, non-disposable drilling and sampling equipment was decontaminated with a Liquinox/water mixture and clean water rinse between probe locations to mitigate the possibility of cross-contamination.

It should be noted that, due to the on-site field conditions during our soil assessment activities, five of the pre-defined soil probe identification numbers were inadvertently changed from the soil probe location plan that was provided to the IEPA by 300 West, LLC. The revised probe identification numbers are summarized in the following table:

Revised Soil Probe Identification Numbers	
Proposed Soil Probe Number	**Actual Soil Probe Number**
GP-307	GP-310
GP-309	GP-307
GP-310	GP-309
GP-341	GP-342
GP-342	GP-341

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

In addition, during the on-site soil assessment activities, a duplicate soil probe was completed at soil probe GP-409. The initial soil probe GP-409 was completed on March 27, 2015 to a depth of 50 feet bgs with samples collected at depths of 1 to 3 feet and 11 to 13 feet. The second soil probe GP-409 was completed on May 14, 2015 to a depth of 15 feet bgs with samples collected at depths of 1 to 3 feet and 6 to 8 feet. The results are presented in **Tables 1A-E** through **4A-E**.

In the Work Plan, soil probes were proposed to be completed in Area 7, which included Buildings 11/14. The proposed soil probe locations were situated in and around Building 11/14. However, due to the nature of the manufacturing that occurs in Building 11/14, we were unable to gain access to the building to complete the proposed interior soil probes. Buildings 11/14 are used for precision thin-metal manufacturing utilizing sensitive equipment that would be disrupted by soil probing activities.

Laboratory Analytical Methodology

The soil samples were placed in laboratory-provided and appropriately preserved sample containers, placed in a cooler and packed with ice in an effort to maintain a constant temperature near 4°C. The soil samples were submitted within 24 hours to STAT Analysis Corporation of Chicago, Illinois (STAT), a National Environmental Laboratory Accreditation Program (NELAP) certified laboratory, for laboratory analyses.

The soil samples were submitted under standard chain-of-custody procedures. The chain-of-custody accounted for the samples from the time of the collection until the sample custodian of the analytical laboratory signs the field chain-of-custody, taking possession of the sample. Each sample set was recorded by a unique identifier on the chain of custody record, including: the number of containers in the sample set; all persons in contact with the samples; transport personnel; applicable times and dates; and the analysis to be performed on the sample. Sampling and laboratory analysis were performed in general accordance with approved techniques and methods as outlined in *USEPA SW-846, Test Methods For Evaluating Solid Waste, Third Edition*, and other published sources.

Pursuant to the Work Plan and the EGSL Response Letter, the select soil samples were submitted for laboratory analysis of the following constituents:

- Target Compound List (TCL) (including 1,4-Dioxane) – 157 soil samples; and
- TCL Synthetic Precipitation Leaching Procedure (SPLP) Metals (including cyanide) – 157 soil samples.

It should be noted that the laboratory reported the analytical results for 1,4-Dioxane using two laboratory analytical methods. Therefore, the two laboratory analytical results for 1,4-Dioxane for each soil sample were summarized on both the VOC[1] and SVOC[2] soil analytical summary tables attached to this letter as reported by the laboratory.

Laboratory Analytical Results Summary

As mentioned previously, WCG performed an on-site soil assessment that consisted of the completion of 79 soil probes. WCG submitted 157 soil samples for laboratory analysis of TCL and TCL SPLP metals. The laboratory analytical results were compared to Illinois' TACO[3] Tier 1 soil remediation objectives (SROs).

During the soil assessment activities, WCG noted that the soil generally consisted of concrete, asphalt, and/or gravel fill within the upper 24 inches overlying sandy or silty clay to the depth of the soil probes. Groundwater was generally encountered at depths between 8 and 12 feet bgs during drilling.

During the soil assessment activities, WCG noted that the soil collected from each soil probe exhibited no apparent petroleum or chemical odors or staining with the exception of faint petroleum odors noted in soil probes GP-338 at a depth of 10 to 15 feet bgs, GP-340 at depths of 5 to 6 feet bgs and 10 to 11 feet bgs, GP-342 at a depth of 5 to 6 feet bgs, and GP-305 at a depth of 12 to 13 feet bgs. WCG measured organic vapor concentrations of soil ranging from 0.2 to 47.5 parts per million (ppm) when screened with a PID.

Laboratory analyses identified detectable concentrations of certain VOCs, SVOCs, and PCBs[4] in soil collected from the on-site soil probes as shown in **Tables 1A-E** through **4A-E**. Based on our review of the laboratory analytical data, the following VOCs, SVOCs, and/or PCBs exceed the TACO Tier 1 SROs.

Figures 2 through **6** include a summary of the soil analytical results relative to the TACO Tier 1 SROs. **Tables 1A-E**, **2A-E**, **3A-E**, and **4A-E** summarize the laboratory soil analytical data.

Based on our review of the laboratory analytical data, the detected VOC concentrations listed in the above table exceed the TACO Tier 1 soil component of the Class I Groundwater exposure route SRO. The soil probes that exhibited concentrations of VOCs that exceed the TACO Tier 1 SROs are generally located in Buildings 2/3/4/7 and portions of Building 10, Building 5, and Former Building 1. **Figure 7** shows the approximate extent of VOC impact; however, the horizontal and vertical extents of impact have not been fully determined.

In addition, based on our review of the laboratory analytical data, certain PNAs and select SVOC constituents were detected in soil probes located in Former Building 1 and a portion of Building 5 that exceed the TACO Tier 1 SROs. In general, the PNA compounds listed in the above table

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

exceed the TACO Tier 1 ingestion exposure route SRO for residential and/or commercial/industrial property uses as well as the soil background concentration listed in TACO. The SVOC constituents listed in the above table (i.e., carbozole and 2,4-dinitotoluene) along with the detected benzo(a)anthracene concentration in soil probe GP-328 (1 to 3 feet bgs) exceed the TACO Tier 1 soil component of the Class I and/or Class II Groundwater exposure route SRO. **Figure 7** shows the approximate extent of PNA and SVOC impacts; however, the horizontal extent of PNA and SVOC impacts has not been fully determined, and the vertical extent appears to be approximately 1 to 5 feet bgs.

According to the laboratory analytical data, detected PCB concentrations (i.e., Aroclor 1248) in soil collected from soil probe GP-374 (1 to 3 feet and 6 to 8 feet bgs) adjacent to Building 11/14 that exceed the TACO Tier 1 ingestion exposure routes SROs for residential and commercial/industrial property uses. **Figure 7** shows the approximate extent of PCB impact; however, the vertical and horizontal extents of the PCB impact have not been fully defined.

In addition, laboratory analyses detected various total metals in the 157 soil samples analyzed. Certain detected total metal concentrations exceed the soil background metal concentrations listed in TACO and the TACO Tier 1 ingestion exposure routes for residential and/or commercial/industrial property uses. Specifically, soil collected from soil probes GP-312 (1 to 3 feet bgs), GP-329 (1 to 3 feet bgs), GP-331 (5-7 feet bgs), and GP-333 (1 to 3 feet bgs) situated near Building 10 and within the Former Building 1 exhibited total arsenic concentrations that exceed the TACO Tier 1 soil ingestion exposure route SROs for residential and commercial/industrial property uses and the soil background concentrations listed in TACO. The horizontal extents of the total arsenic impacts have not been fully defined, and the vertical extent is estimated to be approximately 1 to 7 feet bgs.

The detected total mercury concentrations noted in soil collected from soil probes GP-329 (1 to 3 feet bgs) and GP-334 (1 to 3 feet bgs) situated within Former Building 1 exceeds the TACO Tier 1 SRO for the construction worker inhalation exposure route. The horizontal extents of the total mercury impacts have not been fully defined, and the vertical extent is estimated to be approximately 1 to 8 feet bgs.

Based on our review of the laboratory analytical data, the detected total manganese concentration noted in soil probe GP-410 (1 to 3 feet bgs) situated near Building 16 exceed the TACO Tier 1 ingestion exposure route SRO for residential property uses. Since the Property currently consists of an industrial property use, the residential exposure route would not be

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

applicable for the Property. Therefore, the detected total manganese concentration noted in soil probe GP-410 (1 to 3 feet bgs) would not be a concern to the Property. No further assessments are proposed to further evaluate this detected manganese concentration.

Laboratory analyses of soil collected from soil probe GP-329 (1 to 3 feet bgs) situated in Former Building 1 identified detected concentrations of total chromium, cobalt, copper, lead and thallium[5] that exceed the TACO Tier 1 ingestion exposure routes SROs for residential and/or commercial/industrial property uses. The horizontal extents of the aforementioned metals have not been fully defined, and the vertical extent is estimated to be approximately 1 to 7 feet bgs.

Furthermore, SPLP TCL metals analyses were performed to assess the potential for the total metals to leach from the soil and migrate to the groundwater. Based on our review of the SPLP TCL metals analytical results, 92 of the 157 soil samples analyzed exhibited concentrations of various metals[6] that exceed the TACO Tier 1 SRO for the soil component of the Class I and/or Class II groundwater ingestion exposure routes (**Tables 3A** through **3E**). This data suggests that the various metals may leach from the soil and migrate to the groundwater. However, based on the findings of the on-site groundwater assessment as summarized in our letter dated May 11, 2015, none of the metals that exceed the TACO Tier 1 SROs for the soil component of the Class I and/or Class II groundwater ingestion exposure routes were detected as dissolved metals at concentrations that exceed the TACO Tier 1 groundwater remediation objectives (GROs) in the groundwater collected from the 30 monitoring wells that were sampled during our on-site groundwater assessment activities performed in March and April 2015 with the exception of manganese. The on-site groundwater data suggests that manganese may be leaching from the soil into the groundwater at the Site. It should be noted that only two soil samples collected from soil probes GP-348 (3 to 5 feet bgs) and GP-356 (1-3 feet bgs) exhibited manganese concentrations that exceed the TACO Tier 1 SRO for the soil component of the Class I groundwater ingestion exposure route. Additional assessment activities to evaluate the dissolved manganese concentrations in groundwater are summarized in our letters dated May 11, 2015 and June 10, 2015.

[5] The laboratory reporting limiting exceeds the TACO Tier 1 SROs.
[6] Aluminum, antimony, arsenic, iron, lead, manganese, nickel, and vanadium.

On-Site Soil Assessment Findings

WCG completed an on-site soil assessment in an effort to assess the on-site soil conditions in the vicinity of the Property. Based on the field sampling, and laboratory analyses performed during this assessment and described in this report, the following findings are set forth.

- Laboratory analyses identified certain solvent-type compounds in soil collected in Buildings 2/3/4/7 and portions of Building 10, Building 5, and Former Building 1 that exceed the TACO Tier 1 soil component of the Class I Groundwater exposure route SRO. This data suggests that the solvent-type compounds that exceed the TACO Tier 1 SROs may potentially leach from the soil and migrate to the groundwater and potentially migrate offsite through the groundwater onto the adjoining properties. It should be noted that groundwater exhibiting the highest concentrations of certain solvent-type compounds was encountered in recently installed off-site groundwater monitoring wells situated immediately north of the Property and to the northwest of the solvent-type impacts noted in soil on the Property during this on-site soil assessment.

  The horizontal and vertical extents of on-site soil impact have not been fully determined. Therefore, WCG proposes to perform a supplemental on-site soil assessment consisting of the completion of an additional 24 soil probes in and around the area of identified VOC impacts. Eleven of the soil probes will be completed to a depth of 20 feet bgs immediately adjacent to the previously completed soil probes that exhibited soil with VOC concentrations that exceed the TACO Tier 1 SROs. One deep sample will be collected from each of the 11 soil probes to evaluate the vertical extent of VOC impacts. The remaining additional 13 soil probes (i.e., proposed soil probes GP-383 through GP-388, GP-390, GP-397, GP-398, GP-412 through GP-415) are proposed to be completed to a depth of 15 feet bgs. Two soil samples will be collected from each of the 15-foot soil probes at depths sufficient to evaluate the horizontal and vertical extents. Soil samples collected from the aforementioned locations will be analyzed for VOCs. **Figure 8**, attached, shows the location of the proposed additional on-site soil probes.

- Laboratory analyses identified certain PNAs and select SVOC constituents in Former Building 1 and a portion of Building 5 that exceed the TACO Tier 1 SROs. Certain PNA

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

compounds exceed the TACO Tier 1 ingestion exposure route SRO for residential and/or commercial/industrial property uses as well as the soil background concentration listed in TACO. The select SVOC constituents (i.e., carbozole and 2,4-dinitotoluene) along with the detected benzo(a)anthracene concentration in soil probe GP-328 (1 to 3 feet bgs) exceed the TACO Tier 1 soil component of the Class I and/or Class II Groundwater exposure route SRO. The horizontal extent of PNA and SVOC impacts has not been fully determined, and the vertical extent appears to be approximately 1 to 5 feet bgs. Therefore, WCG proposes to perform a supplemental on-site soil assessment consisting of the completion of an additional five soil probes (i.e., soil probes GP-392 through GP-394, GP-397, GP-415 and GP-416) in and around the area of identified PNA and SVOC impacts. **Figure 8**, attached, shows the location of the proposed additional on-site soil probes.

The soil probes are proposed to be completed to a depth of 15 feet bgs. Two soil samples will be collected from each of the 15-foot soil probes at depths sufficient to evaluate the horizontal and vertical extents of impact. Soil samples will be analyzed for SVOCs. Note that soil probes GP-397 and GP-415 will be utilized to assess the extents of VOC impacts as describe previously.

- Laboratory analyses detected PCB concentrations (i.e., Aroclor 1248) in soil collected from soil probe GP-374 (1 to 3 feet and 6 to 8 feet bgs) adjacent to Building 11/14 that exceed the TACO Tier 1 ingestion exposure routes SROs for residential and commercial/industrial property uses. The vertical and horizontal extents of the PCB impact have not been fully defined. Therefore, WCG proposes to perform a supplemental on-site soil assessment consisting of the completion of an additional four soil probes in the area of Buildings 11/14. Soil probes GP-380 through GP-382 will be completed to a depth of 15 feet bgs. Two soil samples will be collected from each of the soil probes at depths to assess the horizontal and vertical extent of PCBs. The fourth proposed soil probe will be completed immediately adjacent to previously completed soil probe GP-374 that exhibited PCB impacts. One deep sample (i.e., deeper than 10 feet bgs) will be collected from the soil probe to evaluate the vertical extent of PCB impacts. Soil samples will be analyzed for PCBs. **Figure 8**, attached, shows the location of the proposed additional on-site soil probes.

- Laboratory analyses identified certain total metals[7] in soil samples collected from soil probes situated near Building 16, near Building 10, and within the Former Building 1 that exceed the soil background metal concentrations listed in TACO and the TACO Tier 1 ingestion exposure routes for residential and/or commercial/industrial property uses. The horizontal extents of the aforementioned total metals have not been fully determined. The vertical extent of total arsenic, chromium, cobalt, copper, lead and thallium is estimated to be approximately 1 to 7 feet bgs near Building 10 and within the Former Building 1. The horizontal extents of the aforementioned total metals have not been fully determined. Therefore, WCG proposes to perform a supplemental on-site soil assessment consisting of the completion of an additional 10 soil probes (i.e., proposed soil probes GP-384, GP-389, GP-391, GP-392, and GP-394 through GP-399) situated in and around the previously identified soil probes that exhibited certain total metal impacts. **Figure 8**, attached, shows the location of the proposed additional on-site soil probes.

  The soil probes are proposed to be completed to a depth of 15 feet bgs. Two soil samples will be collected from each of the 15-foot soil probes at depths sufficient to evaluate the horizontal and vertical extents of impact. Soil samples will be analyzed for the above-listed total metals. Note that soil probes GP-384, GP-397, and GP-398 will be utilized to assess the extents of VOC impacts as describe previously, and soil probe GP-397 will also be utilized to assess the extents of PNA and SVOCs as described previously.

  It should be further noted that since the Property currently consists of an industrial property use, the residential exposure route would not be applicable for the Property. Therefore, the detected total manganese concentration noted in soil probe GP-410 (1 to 3 feet bgs) is not proposed to be further assessed at this time.

- Laboratory analyses identified detected total mercury concentrations in soil collected from soil probes GP-329 (1 to 3 feet bgs) and GP-334 (1 to 3 feet bgs) situated within Former Building 1 that exceeds the TACO Tier 1 SRO for the construction worker inhalation exposure route. The horizontal extents of the total mercury impacts have not been fully defined, and the vertical extent is estimated to be approximately 1 to 8

[7] Arsenic, chromium, cobalt, copper, lead, manganese, and thallium.

feet bgs. Therefore, WCG proposes to perform a supplemental on-site soil assessment consisting of the completion of an additional two soil probes (i.e., soil probes GP-398 and GP-399). **Figure 8**, attached, shows the location of the proposed additional on-site soil probes. These proposed probes will be completed following the procedures summarized previously for the assessment of the total metal impacts. Soil probe GP-GP-398 will be utilized to assess the extents of VOC and total metal impacts as describe previously, and soil probe GP-399 will also be utilized to assess the extents of certain total metals as described previously. Soil samples collected from these proposed soil probes will also be analyzed for total mercury.

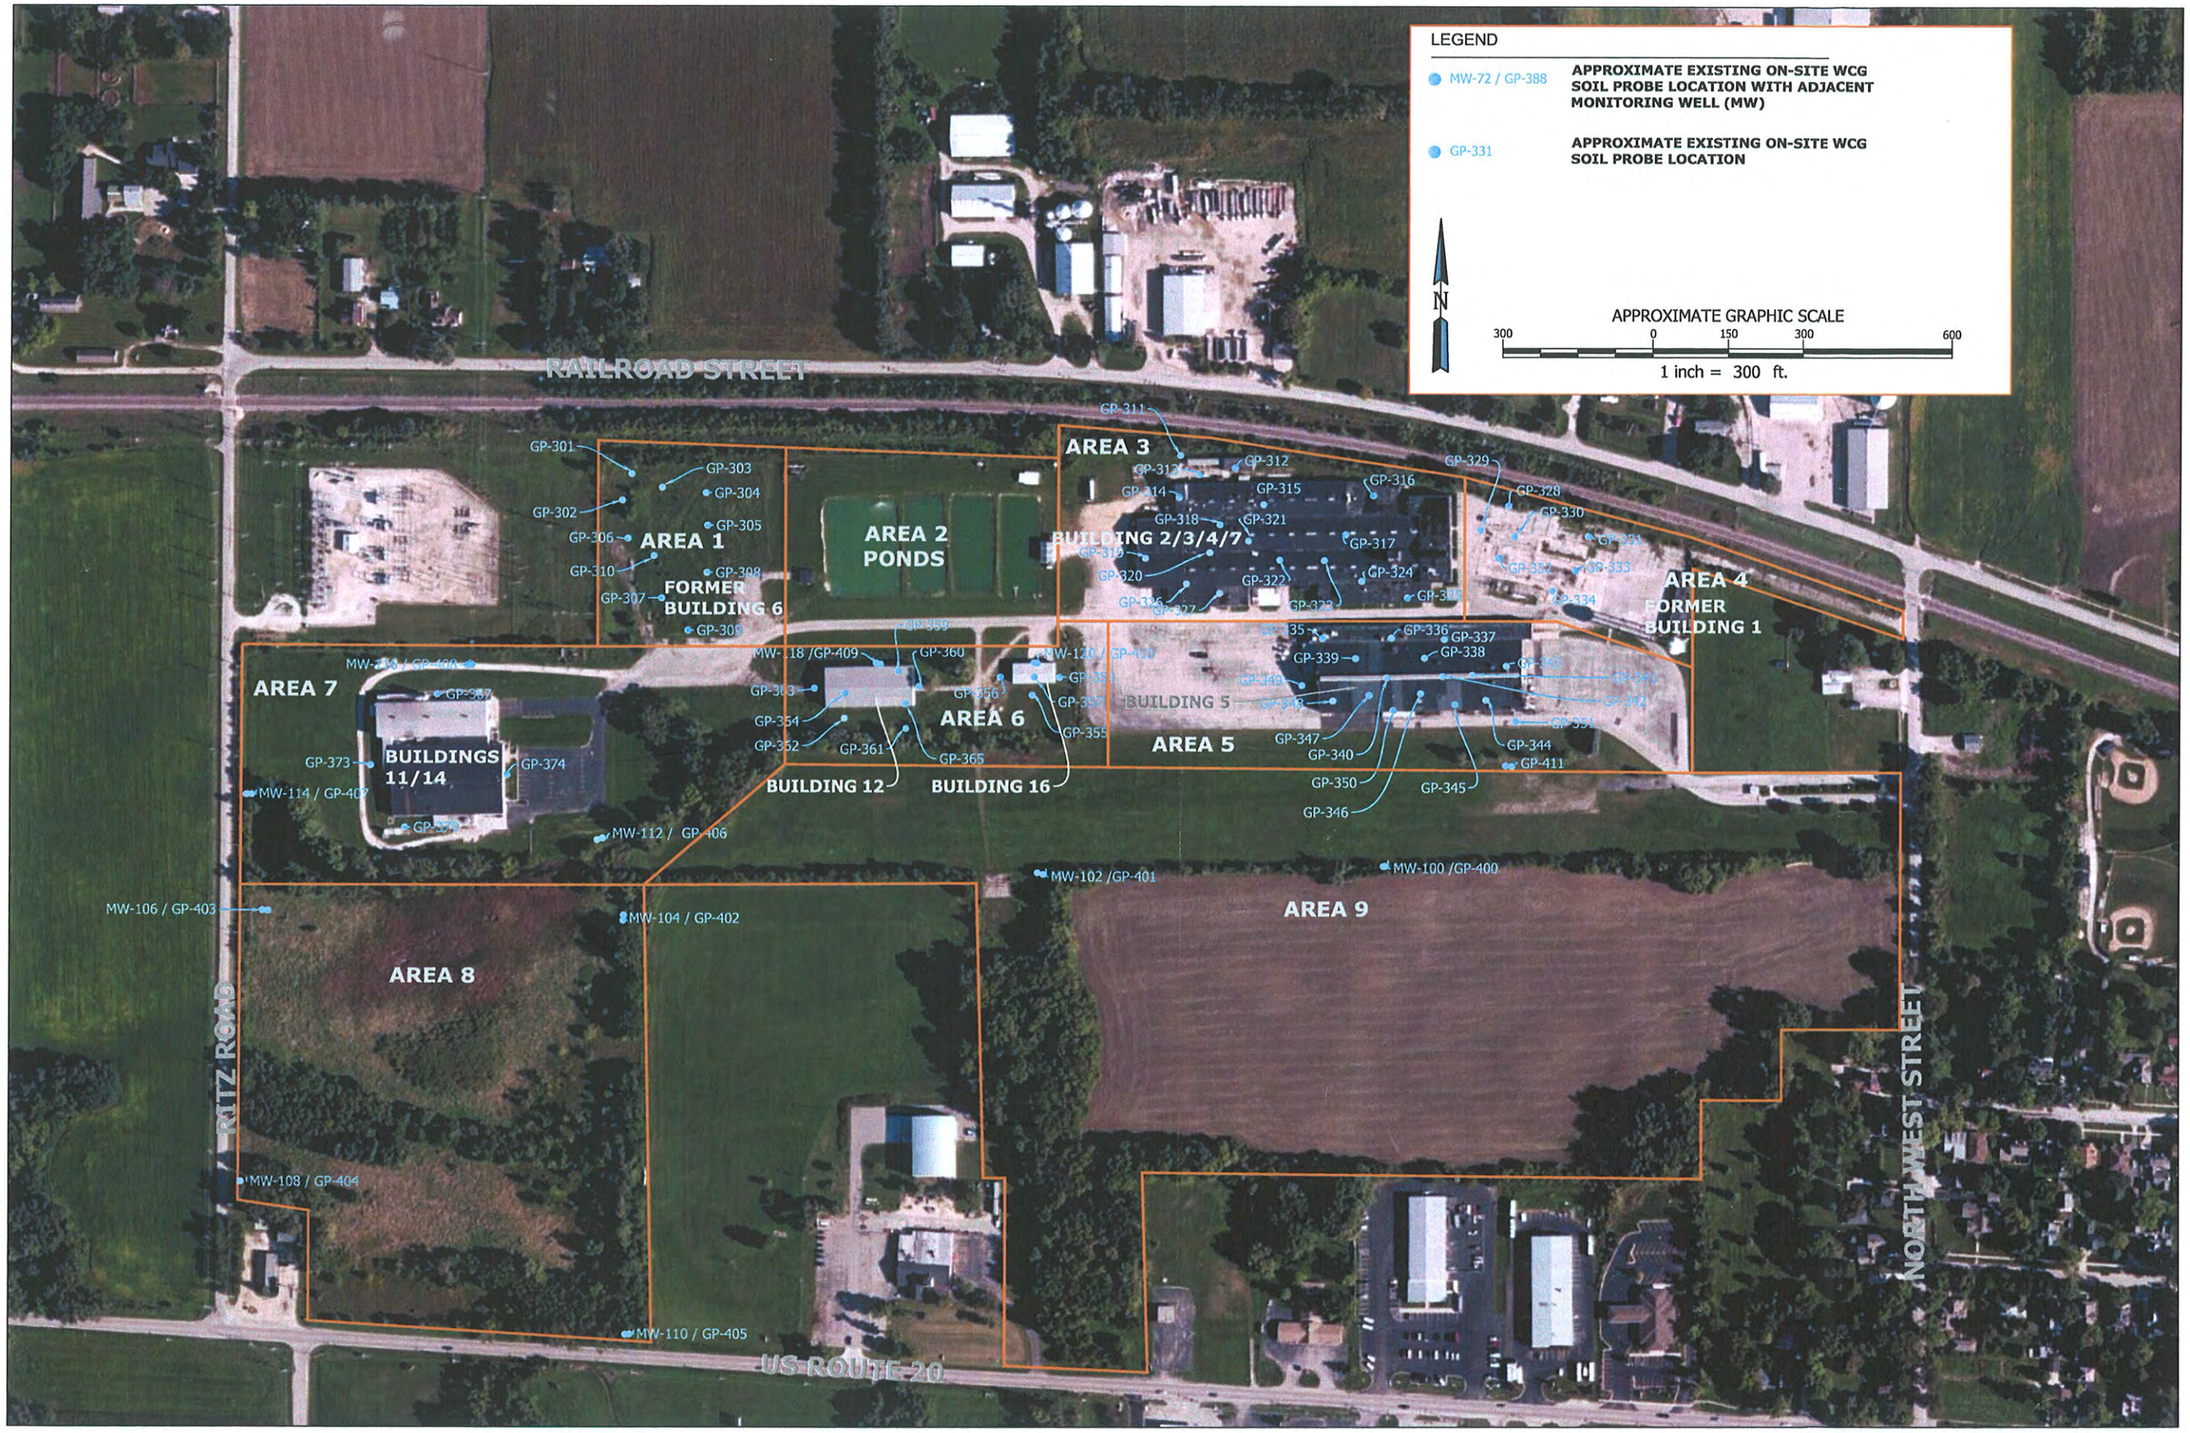
- Based on our review of the SPLP TCL metals analytical results, 92 of the 157 soil samples analyzed exhibited concentrations of various metals that exceed the TACO Tier 1 SRO for the soil component of the Class I and/or Class II groundwater ingestion exposure routes. This data suggests that the various metals may leach from the soil and migrate to the groundwater. However, based on the findings of the on-site groundwater assessment as summarized in our letter dated May 11, 2015, none of the metals that exceed the TACO Tier 1 SROs for the soil component of the Class I and/or Class II groundwater ingestion exposure routes were detected as dissolved metals at concentrations that exceed the TACO Tier 1 GROs in the groundwater collected from the 30 monitoring wells that were sampled during our previous on-site groundwater assessment activities with the exception of manganese. It should be noted that only two soil samples collected from soil probes GP-348 (3 to 5 feet bgs) and GP-356 (1-3 feet bgs) exhibited manganese concentrations that exceed the TACO Tier 1 SRO for the soil component of the Class I groundwater ingestion exposure route. Additional assessment activities to evaluate the dissolved manganese concentrations in groundwater are summarized in our letters dated May 11, 2015 and June 10, 2015.

We anticipate that the supplemental on-site soil assessment activities (i.e., the completion of at least 39 soil probes) as summarized previously will be implemented within approximately one week of the IEPA's approval of the proposed supplemental on-site soil assessment activities, pending the availability of a drilling subcontractor. We anticipate that the laboratory analyses for the samples that are collected during the additional on-site assessment activities will be completed and submitted to the IEPA within approximately two weeks of completing the supplemental on-site soil assessment field activities. Upon receipt of the laboratory analytical

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

data, WCG will prepare a supplemental on-site soil assessment letter report that will be submitted to the IEPA within three weeks upon receipt of the laboratory analytical data.

We trust that this correspondence provides you with the pertinent information related to the Off-Site Parcels. If you should have any questions or comments concerning the aforementioned information, please do not hesitate to contact our office at 630-717-4848.



Sincerely,

Weaver Consultants Group North Central, LLC

Carl R. Dawes
Naperville Operations Manager

Notes:
[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[c] Only parameters exhibiting concentrations above laboratory detection limits are presented in the table
[c] Soil probe identification number
[d] Soil sample depth below ground surface (bgs)
[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency. Toxicity Assessment Unit dated October 30, 2012
[g] Soil probe sampling date
[b] Duplicate soil probe GP-409 sample taken on 5/14/2015
NA - Not analyzed
< 0.004E - Helios laboratory detection limits
--- - No numerical objective or background concentrations for MSAs available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.83 Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater

Notes

[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[d] Only parameters exhibiting concentrations above laboratory detection limits are presented in the table
[c] Soil probe identification number
[d] Soil sample depth below ground surface (bgs)
[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012
[g] Soil probe sampling date
NA - Not analyzed
< 0.0085 - Below laboratory detection limits
--- No remedial objective or background concentration for MSAs available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.53	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater
0.44	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and Class II Groundwater

Notes:

[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)

[b] Only parameters exhibiting concentrations above laboratory detection limits are presented in the table

[c] Soil probe identification number

[d] Soil sample depth below ground surface (fbgs)

[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[g] Soil probe sampling date

NA - Not analyzed

< 0.0038 - Below laboratory detection limits

---- No remedial objective or background concentration for MSAs available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.53 Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater

Notes

[a] Tier 1 Soil Remediation Objectives (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 effective July 15, 2013.

[b] Only parameters exhibiting concentrations above laboratory detection limits are presented on the table

[c] Soil probe identification number

[d] Soil sample depth below ground surface (bgs)

[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[g] Soil probe sampling date

NA - Not analyzed

< 0.0038 - Below laboratory detection limits

--- No remedial objective or background concentration for MSAs available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Note:
[a] Tier 1 Soil Remediation Objectives (Residential, Industrial/Commercial, Construction Worker) per 35 IAC 742 effective July 15, 2013.
[b] Soil sample depth, below ground surface (bgs).
[c] Milligrams per kilogram, mg/kg.

[d] Bolded values/numbers are labeled on the Illinois Environmental Protection Agency's website as prepared by the Illinois Environmental Protection Agency - Records Automatic Unit dated October 31, 2012.
[e] Soil sample sampling date.
NA - Not analyzed.
< #### - Below laboratory detection limit.
--- - No established objective or background concentration for VOCs available.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Notes:
[a] Tier 1 Soil Remediation Objectives (35 Illinois Administrative Code, Part 742, effective July 15, 2013)
[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Soil Quality Statistics Report for Illinois," IEPA/BOL/97-147, Appendix A, Table H
[c] GP-301 (5/13/15) 1-3'
[d] milligrams per kilogram (mg/kg)
[e] Retained as contaminant of concern in the Illinois Environmental Protection Agency's summary offer as requested by the Illinois Protection Agency Security Assessment Unit dated October 16, 2012
[f] Not Analyzed per Approved Remedial Action Plan Log # 111-4 on October 17, 2012
[g] Sample collected 5/13/15
< 0.019 = Below laboratory detection limit
NA = Not analyzed
N/A = Not applicable
--- = Screened objective or background concentration for MSAs not listed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.53	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and/or Class II Groundwater
4.5	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater
2600	Concentration exceeds the Tier 1 SRO for the Soil Ingestion Exposure Route for Residential Property

Notes:

[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013).

[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Polycyclic Aromatic Hydrocarbons Study", TACO 35 IAC 742, Appendix A, Table G.

[c] Soil probe identification number

[d] Soil sample depth below ground surface (bgs)

[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[g] Milligrams per liter (mg/L)

[h] Soil probe sampling date

[i] Duplicate soil probe GP-409 sample taken on 5/14/2015

< 0.34 - Below laboratory detection limits

--- No SRO or Background Concentration for MSAs available.

NA - Not analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

6.2	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and Class II Groundwater
0.16	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater
32	Concentration exceeds the Tier 1 SRO for Residential and/or Industrial/Commercial

Notes:
[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Polycyclic Aromatic Hydrocarbons Study", TACO 35 IAC 742, Appendix A, Table G.
[c] Soil probe identification number
[d] Soil sample depth below ground surface (bgs)
[e] Milligrams per kilogram (mg/kg)
[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012
[g] Milligrams per liter (mg/L)
[h] Soil probe sampling date
< 0.34 - Below laboratory detection limits
--- No SRO or Background Concentration for MSAs available.
NA - Not analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

1 µg/m3

0.53	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and/or Class II Groundwater
2.6	Concentration exceeds the Tier 1 SRO Ingestion Route for Residential and/or Industrial/Commercial
4.6	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater
1.0	Concentration exceeds the Tier 1 SRO Inhalation Route for Construction Worker

Notes
[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Polycyclic Aromatic Hydrocarbons Study", TACO 35 IAC 742, Appendix A, Table G
[c] Soil probe identification number
[d] Soil sample depth below ground surface (bgs)
[4] Milligrams per kilogram (mg/kg)
[1] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[5] Milligrams per liter (mg/L)
[6] Soil probe sampling date
< 0.34 - Below laboratory detection limits
--- No SRO or Background Concentration for MSAs available
NA - Not analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.53	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and/or Class II Groundwater
3.8	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater
310	Concentration exceeds the Tier 1 SRO Ingestion Route for Residential and/or Industrial/Commercial
0.55	Concentration exceeds the Tier 1 SRO Inhalation Route for Construction Route

Notes

[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 effective July 15, 2013)
[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Polycyclic Aromatic Hydrocarbons Study", TACO 35 IAC 742, Appendix A, Table G
[c] Soil probe identification number
[d] Soil sample depth below ground surface (bgs)
[e] Milligrams per kilogram (mg/kg)
[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012.
[g] Milligrams per liter (mg/L)
[h] Soil probe sampling date
< 0.34 - Below laboratory detection limits
--- No SRO or Background Concentration for MSAs available
NA - Not analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Legend

0.53	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I and Class II Groundwater
4.6	Concentration exceeds the Tier 1 SRO for the Soil Component of Groundwater Ingestion Route for Class I Groundwater

Notes:

[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)

[b] Background concentrations for Metropolitan Statistical Areas (MSAs) obtained from "Urban Area Polycyclic Aromatic Hydrocarbons Study", TACO 35 IAC 742, Appendix A, Table G.

[c] Soil probe identification number

[d] Soil sample depth below ground surface (bgs)

[e] Milligrams per kilogram (mg/kg)

[f] Remediation objectives as listed in the Illinois Environmental Protection Agency's summary table as prepared by the Illinois Environmental Protection Agency Toxicity Assessment Unit dated October 30, 2012

[g] Milligrams per liter (mg/L)

[h] Soil probe sampling date

< 0.34 - Below laboratory detection limits

--- No SRO or Background Concentration for MSAs available

NA - Not analyzed

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Notes:
[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[b] Soil probe identification number and/or soil sample identification
[c] Soil sample depths below ground surface (bgs)
[d] Milligrams per kilogram (mg/kg)
[e] Result does not exceed Acceptable Detection Limit (ADL) per Title 35 Part 620 and Part 742
[f] Soil probe sampling date
[g] Duplicate soil probe GP-409 sample taken on 5-14-2015. Results compared to prior GP-409 soil samples.
NA - Not analyzed
< 0.0018 - Below laboratory detection limits
--- No SRO available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Notes:
[a] Tier 1 Soil Remediation Objective (SRO) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2013)
[b] Soil probe identification number and on soil sample identification
[c] Soil sample depths below ground surface (bgs)
[d] Milligrams per kilogram (mg/kg)
< Result does not exceed Acceptable Detection Limit (ADL) per Title 35 Part 620 and Part 742
[e] Soil probe sampling date
NA - Not analyzed
< 0.0018 - Below laboratory detection limits
--- No SRO available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Notes:
[a] Tier 1 Soil Remediation Objective (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 (effective July 15, 2015)
[b] Soil probe identification number and on soil sample identification
[c] Soil sample depths below ground surface (bgs)
[d] Milligrams per kilogram (mg/kg)
< Result does not exceed Acceptable Detection Limit (ADL) per Title 35 Part 620 and Part 742
[e] Soil probe sampling date
NA - Not analyzed
< 0.0018 - Below laboratory detection limits
--- No SRO available

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Notes:
[a] Tier 1 Soil Remediation Objectives (SROs) from Tiered Approach to Corrective Action Objectives (TACO) 35 IAC 742 effective July 15, 2013.
[b] Soil probe identification number and/or soil sample identification.
[c] Soil sample depths below ground surface (bgs).
[d] Milligrams per kilogram (mg/kg).
[e] Result does not exceed Acceptable Remediation Level (ARL) per Title 35 Part 620 and Part 742.
[f] Soil probe sampling date.
NA Not analyzed.
< 0.0028 Below laboratory detection limits.
--- No SRO available.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

Re: LPC #1110650003 – McHenry County
Marengo – Arnold Magnetic Technologies
300 West LLC
Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *On-Site Soil Assessment Summary* (e-mail copy dated June 30, 2015 received via e-mail cover message dated July 1, 2015/Log No. 15-59992), prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the Second Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed May 8, 2015. Weaver's June 30, 2015 letter references a December 24, 2014 EGSL Work Plan, December 31, 2014 IEPA letter and January 6, 2015 EGSL response letter as the basis for its completion of on-site soil investigative work. As previously discussed, the Second Agreed Preliminary Injunction Order, as modified, governs all on-site and off-site investigation activities.

The *On-Site Soil Assessment Summary* letter report referenced above has been approved with the following conditions.

1. The Second Agreed Preliminary Injunction Order, as modified, included the advancement and sampling of 9 soil probes within Buildings 11/14 in Area 7 that were not completed. Please provide a plan for completing these borings or propose an alternate plan to address potential soil impacts beneath these buildings.

2. In order to clarify exactly what sampling is being proposed to further define the extent of contamination at the site, please provide a table showing the proposed probe boring locations (i.e. GP-100), the proposed boring depths for each probe, the number and depths for samples proposed to be collected from each probe, the proposed laboratory analyses that will be conducted on each sample and a brief explanation for the purpose of each sample (i.e. "to define the extent of VOC contamination in Area 3").

3. Please provide boring locations for each of the soil probes that have been proposed to define the vertical extent of contamination at locations, "adjacent to the previously completed soil probes...". It is suggested that naming of these borings follow the format of adding a "D" to the boring that it will be placed adjacent to (i.e. original boring GP-100, new deep boring GP-100(D)). These proposed boring locations should then be included on the proposed on-site soil probe location map (Figure 8 of the submittal).

4. For the additional probe locations that were proposed to define the horizontal extent of VOC and PCB impacts (GP-383 through GP-388, GP-390, GP-397, GP-398, GP-412 through GP-415 and GP-380 through GP-382), the additional sampling probes should include deep sampling in addition to the proposed shallow and intermediate depth sampling since existing sampling has indicated the shallow and intermediate sampling is not adequate to define the vertical extent of impacts for these contaminants. Please provide this information in the table to be provided in response to comment #2 above.

5. Please provide information concerning the potential source of elevated inorganic contamination identified in soil probe GP-329 and identify the potential for elemental mercury having been present on the site as a chemical of concern.

Pursuant to the Second Agreed Modification to Second Preliminary Injunction Order, a response to these comments is required within fourteen (14) business days of the receipt of this letter.

Sincerely,

NVL Andrew M Catlin

Re: On-Site Soil Assessment Summary
Response to Comments
1110650003– McHenry County
Marengo – Arnold Magnetic Technologies
300 North West Street
Marengo, Illinois
Site Remediation Program/Technical Reports

Dear Mr. Catlin:

Weaver Consultants Group North Central, LLC (WCG) has prepared this letter on behalf of 300 West LLC to provide a response to the comments included in the Illinois Environmental Protection Agency (IEPA) letter dated July 27, 2015 (IEPA Letter) concerning the recently completed and the proposed on-site environmental assessment activities related to the above referenced property (the Property). The IEPA Letter was issued to provide comments to WCG's *On-Site Soil Assessment Summary* dated June 30, 2015. In addition, this letter was completed to provide proposed modifications to the proposed supplemental on-site soil assessment. The proposed modifications to the supplemental on-site soil assessment as summarized in this letter will supersede the proposed supplemental on-site soil assessment that was summarized in our June 30, 2015 *On-Site Soil Assessment Summary*.

Specifically, the IEPA Letter approved the *On-Site Soil Assessment Summary* and requested more additional information concerning the proposed collection and analysis of soil samples on the Property. The IEPA Letter provided comments pertaining to five specific items, which are briefly summarized below. Our responses to each of the five items are provided below.

- **Item 1:** The IEPA Letter requested a plan for completing nine previously proposed soil probes that were not completed in the interior portions of Buildings 11/14 as part of the initial on-site soil assessment activities, or propose an alternative to address potential soil impacts beneath these buildings. As summarized in our *On-Site Soil Assessment Summary*,

due to the nature of the manufacturing (i.e., precision thin-metal manufacturing utilizing sensitive equipment) that is performed in Buildings 11/14, WCG was not granted access to the interior of Buildings 11/14 to complete nine of the previously proposed soil probes. In light of this, WCG proposes an alternative plan to further assess the area of Buildings 11/14.

Specifically, the construction of Buildings 11/14 includes building footings that extend approximately 4 to 6 feet below the ground surface (bgs), which could potentially impede the migration of possible contaminants of concern situated at shallow depths beneath Buildings 11/14. To further assess the potential for possible contaminants of concern to migrate beneath and beyond the depths of the building footings, WCG proposes to complete an additional six soil probes (i.e., soil probes GP-432 through GP-437) around the perimeter of Buildings 11/14. These six soil probes will be completed to a depth of 15 feet bgs. Two soil samples will be collected from each of the 15-foot soil probes at depths of 6 to 8 feet bgs and 12 to 14 feet bgs to evaluate the horizontal and vertical extents of potential soil impacts that may extend beyond the building footings. Soil samples collected from the aforementioned sample intervals will be analyzed for the Target Compound List.

In addition, as summarized in our June 30, 2015 *On-Site Soil Assessment Summary*, WCG also proposed the completion of an additional four soil probes on the east side of Buildings 11/14. Soil probes GP-380 through GP-382 and an additional soil probe adjacent to previously completed soil probe GP-374 [i.e., soil probe GP-374(D)] were proposed to be completed to a depth of 15 feet bgs. In our *On-Site Soil Assessment Summary*, we initially proposed that two soil samples will be collected from each of the soil probes at depths to assess the horizontal and/or vertical extent of PCBs. However, in an effort to further evaluate the potential soil impacts that may extend beyond the building footings, the proposed number of samples and the laboratory analyses of the soil samples collected from soil probes GP-380 and GP-382 will be modified to include at least three soil samples from each soil probe to be analyzed for the Target Compound List. Soil samples will be collected from depths of 1 to 3 feet, 6 to 8 feet, and 13 to 15 feet bgs.

Figures A and **C**, attached, show the location of the proposed additional on-site soil probes in the area of Buildings 11/14. Additionally, a summary table of the proposed supplemental on-site soil assessment, which includes a summary of the proposed soil probes, probe depths, number of samples, sample intervals, and laboratory analyses, is attached to this letter for your reference.

- **Item 2:** The IEPA requested a table that summarizes the proposed soil probe locations, the proposed soil probe depths, the number and depths of samples proposed from each soil probe, the proposed laboratory analyses, and an explanation of the purpose of each sample. In light of the IEPA's request, a summary table of the proposed supplemental on-site soil assessment, which includes a summary of the proposed soil probes, probe depths, number of samples, sample intervals, and laboratory analyses, is attached to this letter for your reference. In addition, **Figures A**, **B** and **C**, attached, show the location of the proposed additional on-site soil probes provided in the attached proposed supplemental on-site soil assessment summary.
- **Item 3:** The IEPA requested clarification on the location of the proposed soil probes that will be completed to further evaluate the vertical extent of impacts. **Figures A**, **B**, and **C**, attached, depict the location of the proposed soil probes that will be completed to further evaluate the vertical extent of soil impacts noted in our June 30, 2015 *On-Site Soil Assessment Summary.* The proposed soil probes that will be completed to further evaluate the vertical extents are designated with "(D)" at the end of the soil probe number. These soil probes are also included on the attached proposed supplemental on-site soil assessment summary.

  Please note that due to the depths and the concentration levels of certain VOCs previously identified on the Property, WCG has modified the proposed depths of the soil probes that will be utilized to further evaluate the vertical and horizontal extents of VOC impacts. The soil probes that will be utilized to evaluate the vertical extent of VOC impact will be completed to a proposed depth of 20 feet bgs. The modified proposed soil probe depths are included in the attached proposed supplemental on-site soil assessment summary.

- **Item 4:** The IEPA requested that additional deep samples be analyzed from proposed soil probes GP-383 through GP-388, GP-390, GP-397, GP-398, GP-412 through GP-415, and GP-380 through GP-382. WCG has incorporated the deeper samples to the attached proposed supplemental on-site soil assessment summary. Additionally, as noted in our response for Item 3, WCG has modified the proposed depths of the soil probes that will be utilized to further evaluate the vertical and horizontal extents of VOC impacts. The soil probes that will be utilized to evaluate the vertical extent of VOC impact will be completed to a proposed depth of 20 feet bgs. The modified proposed soil probe depths are included in the attached proposed supplemental on-site soil assessment summary.

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

In addition, please note that several of the proposed on-site soil probe identification numbers correspond with existing and/or previously proposed off-site soil probe identification numbers. Therefore, WCG has revised select proposed soil probe identification numbers as summarized in the following table.

Revised Proposed Soil Probe Identification Numbers	
Proposed Soil Probe Number	**Revised Proposed Soil Probe Number**
GP-388	GP-417
GP-389	GP-418
GP-390	GP-419
GP-391	GP-438
GP-392	GP-430
GP-393	GP-421
GP-394	GP-431
GP-395	GP-423

The attached proposed supplemental on-site soil assessment summary includes the above-listed revised proposed soil probe identification numbers. Additionally, **Figures A**, **B**, and **C**, attached, also depict the location of the revised proposed soil probe identification numbers.

- **Item 5:** The IEPA requested additional information concerning the potential source of elevated inorganic constituents noted in soil collected from soil probe GP-329 and the potential for elemental mercury having been present on the Property as a chemical of concern. Based on our review of a historical environmental document[1] that summarizes the historical use of the Property, the Property was originally developed in the late 1890s and was first utilized as a rail yard and railroad engine manufacturing/maintenance facility. The Property was reportedly purchased by Arnold Magnetic Technologies (Arnold) in the early 1900s, with their magnetic operations/manufacturing beginning the late 1950s.

  In addition, according to the historical property use information, Building 1, which is located in Area 4 on the Property and is the location of the elevated inorganic constituents noted in soil collected from soil probe GP-329, was built in the late 1890s and was demolished in approximately 2002. Building 1 was originally utilized for railroad engine manufacturing and

[1] Focused Site Investigation Work Plan: Additional Investigation prepared by Environmental Group Services Limited (EGSL) dated February 19, 2014.

repair. Arnold later utilized Building 1 for magnet production, pressing operations, and heat treating. In light of the historical uses of the Property, it is possible that the historical operations at the Property may potentially be the source of elevated inorganic constituents and total mercury noted in shallow subsurface soil in isolated sample locations in the vicinity of Building 1.

As summarized in our June 30, 2015 *On-Site Soil Assessment Summary*, WCG proposed to perform a supplemental on-site soil assessment consisting of the completion of an additional 10 soil probes (i.e., proposed soil probes GP-384, GP-389, GP-391, GP-392, and GP-394 through GP-399) situated in and around the previously identified soil probes that exhibited certain total metal impacts. As summarized in Item 4, please note that the proposed soil probe identification numbers for the soil probes that will be utilized to further evaluate the horizontal and vertical extents of certain total metal impacts have been revised to avoid duplication with existing off-site soil probe identification numbers. The attached proposed supplemental on-site soil assessment summary includes the revised proposed soil probe identification numbers. Additionally, **Figures A**, **B**, and **C**, attached, also depict the location of the revised proposed soil probe identification numbers.

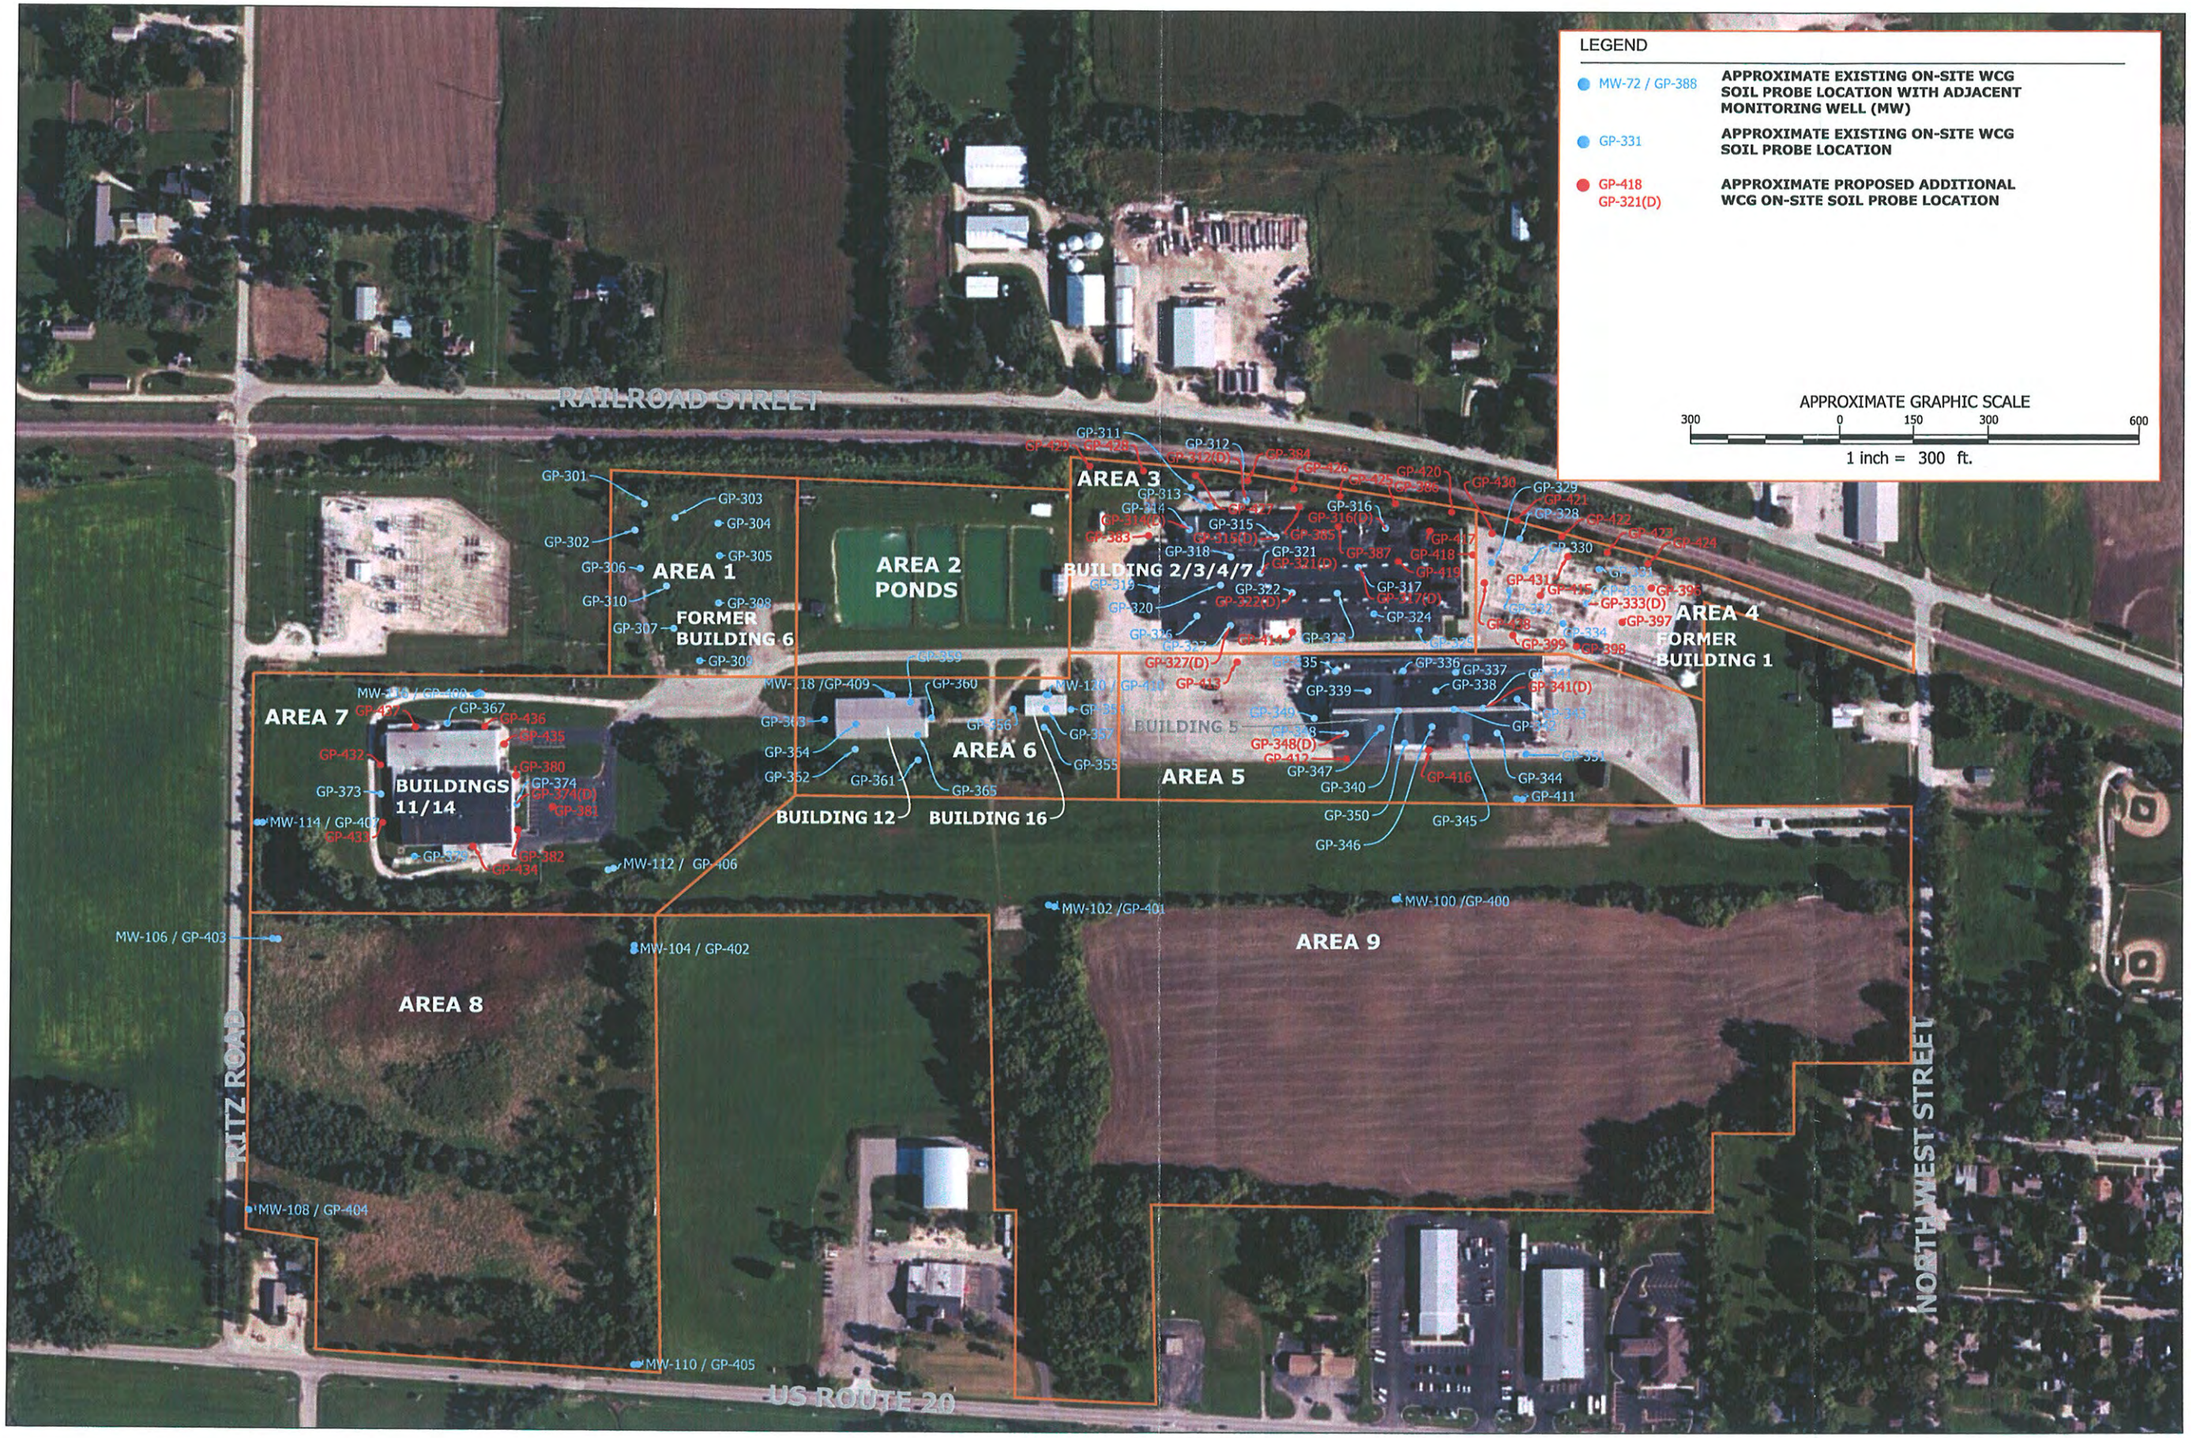
In addition to the proposed modifications to the proposed supplemental on-site soil assessment as summarized in Items 1 through 5, above, and in light of the findings from both the on-site soil assessment and the off-site groundwater investigation, WCG is also proposing to complete at least 12 deep soil probes along the northern property boundary to further assess the nature and extent of VOC impacts in soil noted in Areas 3 and 4. The proposed soil probes will be completed to a depth of 65 feet bgs. Soil samples will be collected from within each 5-foot sample interval (i.e., 13 total soil samples per soil probe), unless specified otherwise within the attached proposed supplemental on-site soil assessment summary, as multiple proposed deep soil probes will be utilized to evaluate the vertical and horizontal extents of impacts for other compounds of concern. Soil samples collected from each sample interval will be analyzed for VOCs. It should be noted that multiple soil samples will be analyzed for other compounds of concern (e.g., PNAs and total metals) as specified within the attached proposed supplemental on-site soil assessment summary. **Figures A** and **B**, attached, also depict the location of the deeper soil probes proposed to be completed along the northern property boundary.

We anticipate that the proposed supplemental on-site soil assessment activities with the proposed modifications (i.e., the completion of at least 51 soil probes) as summarized previously will be

Electronic Filing - Received, Clerk's Office : 06/27/2016 - PCB 2016-097***

implemented within approximately two weeks of the IEPA's approval of the modified proposed supplemental on-site soil assessment activities, pending the availability of a drilling subcontractor. We anticipate that the laboratory analyses for the samples that are collected during the additional on-site assessment activities will be completed and submitted to the IEPA within approximately two weeks of completing the supplemental on-site soil assessment field activities. Upon receipt of the laboratory analytical data, WCG will prepare a supplemental on-site soil assessment letter report that will be submitted to the IEPA within three weeks upon receipt of the laboratory analytical data.

We trust that the aforementioned proposed supplemental on-site soil assessment summary along with the attached figures are sufficient for your needs at this time. If you should have any questions or comments concerning the proposed supplemental on-site soil assessment modifications, please do not hesitate to contact our office at 630-717-4848.



Sincerely,

Weaver Consultants Group North Central, LLC

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-312(D)	20	1	18 to 20	VOCs	Evaluate the vertical extent of VOCs noted at shallow and intermediate depths for previously completed soil probes in Area 3.
GP-314(D)	20	1	18 to 20	VOCs	
GP-315(D)	20	1	18 to 20	VOCs	
GP-316(D)	20	1	18 to 20	VOCs	
GP-317(D)	20	1	18 to 20	VOCs	
GP-321(D)	20	1	18 to 20	VOCs	
GP-322(D)	20	1	18 to 20	VOCs	
GP-327(D)	20	1	18 to 20	VOCs	
GP-333(D)	20	1	18 to 20	VOCs	Evaluate the vertical extent of VOCs noted at shallow and intermediate depths for previously completed soil probe in Area 4.
GP-341(D)	20	1	18 to 20	VOCs	Evaluate the vertical extent of VOCs noted at shallow and intermediate depths for previously completed soil probes in Area 5.
GP-348(D)	20	1	18 to 20	VOCs	
GP-374(D)	15	1	13 to 15	PCBs	Evaluate the vertical extent of PCBs noted at shallow and intermediate depths for previously completed soil probe on the east side of Building 11/14 in Area 7.
GP-380	15	3	1 to 3 6 to 8 13 to 15	Target Compound List	Evaluate the horizontal and vertical extent of PCBs noted at shallow and intermediate depths for previously completed soil probe GP-374 on the east side of Building 11/14 in Area 7. This probe will also serve to evaluate the potential migration of contaminants of concern below and beyond the depths of the building footings.
GP-381	15	3	1 to 3 6 to 8 13 to 15	PCBs	Evaluate the horizontal and vertical extent of PCBs noted at shallow and intermediate depths for previously completed soil probe GP-374 on the east side of Building 11/14 in Area 7.
GP-382	15	3	1 to 3 6 to 8 13 to 15	Target Compound List	Evaluate the horizontal and vertical extent of PCBs noted at shallow and intermediate depths for previously completed soil probe GP-374 on the east side of Building 11/14 in Area 7. This probe will also serve to evaluate the potential migration of contaminants of concern below and beyond the depths of the building footings.

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-383	20	3	1 to 3 8 to 10 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probe GP-314 in Area 3.
GP-384	65	13	1 to 3 5 to 7, and within each 5-foot Interval thereafter	VOCs (13) Total Arsenic (2)	Evaluate the environmental conditions along the northern property boundary and north of soil probe GP-312 in Area 3, which previously exhibited elevated concentrations of VOCs. Evaluate the horizontal and vertical extents of total arsenic noted in previously completed soil probe GP-312 in Area 3. Samples will be selected from the 1 to 3- and 5 to 7-foot intervals for VOCs and total arsenic analyses. The soil samples collected from the remaining sample intervals will be analyzed for VOCs.
GP-385	20	3	1 to 3 6 to 8 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probes GP-315 and GP-312 in Area 3.
GP-386	65	13	Within each 5-foot interval	VOCs	Evaluate the environmental conditions along the northern property boundary and north of soil probe GP-316 in Area 3, which previously exhibited elevated concentrations of VOCs.
GP-387	20	3	1 to 3 5 to 9 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in the area of previously completed soil probes GP-315, GP-316 and GP-317 in Area 3.
GP-396	15	2	1 to 3 5 to 7	Total Arsenic	Evaluate the horizontal and vertical extents of total arsenic noted in previously completed soil probe GP-331 in Area 4.
GP-397	20	4	1 to 3 4 to 6 6 to 8 18 to 20	VOCs (3) Total Arsenic (2) Total Mercury (2)	Evaluate the horizontal and vertical extents of VOCs and total arsenic noted in previously completed soil probe GP-333 in Area 4 and total mercury noted in previously completed soil probe GP-334 in Area 4. Samples will be selected from the 1 to 3-foot interval for VOCs and total arsenic and mercury analyses. Samples will be selected from the 4 to 6-foot interval for total arsenic and mercury analyses. The soil samples collected from the remaining sample intervals will be analyzed for VOCs.

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-398	20	4	1 to 3 4 to 6 6 to 8 18 to 20	VOCs (3) Total Arsenic (2) Total Mercury (2)	Evaluate the horizontal and vertical extents of VOCs and total arsenic noted in previously completed soil probe GP-333 in Area 4 and total mercury noted in previously completed soil probe GP-334 in Area 4. Samples will be selected from the 1 to 3-foot interval for VOCs and total arsenic and mercury analyses. Samples will be selected from the 4 to 6-foot interval for total arsenic and total mercury analyses. The soil samples collected from the remaining sample intervals will be analyzed for VOCs.
GP-399	15	2	1 to 3 4 to 8	PNAs (2) Total Mercury (2)	Evaluate the horizontal and vertical extents of PNAs noted in previously completed soil probe GP-332 and total mercury noted in previously completed soil probe GP-334 in Area 4. A deeper sample collected from approximately 12 to 14 feet will be submitted to the laboratory and placed on hold for potential vertical extent analyses.
GP-412	20	3	1 to 3 4 to 8 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probe GP-348 in Area 5.
GP-413	20	3	1 to 3 7 to 9 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probe GP-327 in Area 3.
GP-414	20	3	1 to 3 6 to 8 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probe GP-322 in Area 3.
GP-415	20	4	1 to 3 4 to 6 6 to 8 18 to 20	VOCs (3) PNAs (2) Total Arsenic (2) Total Mercury (2)	Evaluate the horizontal and vertical extents of VOCs and total arseni noted in previously completed soil probe GP-333, PNAs noted in previously completed soil probe GP-332, and total mercury noted on previously completed soil probe GP-334 in Area 4. Samples will be selected from the 1 to 3-foot interval for VOCs, PNAs, total arsenic and total mercury analyses. Samples will be selected from the 4 to 6-foot interval for PNAs, total arsenic and total mercury analyses. The soil samples collected from the remaining sample intervals will be analyzed for VOCs.

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-416	15	2	1 to 3 6 to 8	SVOCs	Evaluate the horizontal and vertical extents of 2,4-Dinitotoluen noted in previously completed soil probe GP-346 in Area 5.
GP-417	20	3	1 to 3 7 to 9 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probe GP-316 in Area 3.
GP-418	15	2	1 to 3 5 to 7	Target Compound List Metals	Evaluate the horizontal and vertical extents of various total metals, including total mercury, noted in previously completed soil probe GP-329 in Area 4.
GP-419	20	3	1 to 3 7 to 9 18 to 20	VOCs	Evaluate the horizontal and vertical extents of VOCs noted in previously completed soil probes GP-316 and GP-317 in Area 3.
GP-420	65	13	Within Each 5-foot Interval	VOCs	Evaluate the environmental conditions along the northern property boundary and north of Area 3 and Area 4, which previously exhibited elevated concentrations of VOCs.
GP-421	65	13	1 to 3 5 to 7, and within each 5-foot Interval thereafter	VOCs (13) PNAs (2)	Evaluate the horizontal and vertical extents of PNAs noted in previously completed soil probes GP-328 and GP-332 in Area 4. Evaluate the environmental conditions along the northern property boundary and north of Area 3 and Area 4, which previously exhibited elevated concentrations of VOCs. Samples will be selected from the 1 to 3- and 5 to 7-foot intervals for VOCs and PNA analyses. The soil samples collected from the remaining sample intervals will be analyzed for VOCs.
GP-422	65	13	1 to 3 5 to 7, and within each 5-foot Interval thereafter	VOCs (13) PNAs (2)	
GP-423	65	13	1 to 3 5 to 7, and within each 5-foot Interval thereafter	VOCs (13) Total Arsenic (2)	Evaluate the environmental conditions along the northern property boundary and north of Area 3 and Area 4, which previously exhibited elevated concentrations of VOCs. Evaluate the horizontal and vertical extents of total arsenic noted in previously completed soil probe GP-331 in Area 4. Samples will be selected from the 1 to 3- and 5 to 7-foot intervals for VOCs and total arsenic analyses. Soil samples collected from the remaining intervals will be analyzed for VOCs.

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-424	65	13	Within Each 5-foot Interval	VOCs	Evaluate the environmental conditions along the northern property boundary and north of Area 3 and Area 4, which previously exhibited elevated concentrations of VOCs.
GP-425	65	13	Within Each 5-foot Interval		
GP-426	65	13	Within Each 5-foot Interval		
GP-427	65	13	Within Each 5-foot Interval		
GP-428	65	13	Within Each 5-foot Interval		
GP-429	65	13	Within Each 5-foot Interval		
GP-430	15	2	1 to 3 5 to 7	PNAs (2) Target Compound List Metals (2)	Evaluate the horizontal and vertical extents of PNAs noted in previously completed soil probe GP-328 and various total metals, including total mercury, noted in previously completed soil probe GP-329 in Area 4. A deeper sample collected from approximately 12 to 14 feet will be submitted to the laboratory and placed on hold for potential vertical extent analyses.
GP-431	15	2	1 to 3 5 to 7	PNAs (2) Total Arsenic (2)	Evaluate the horizontal and vertical extents of PNAs noted in previously completed soil probe GP-328 and total arsenic noted in previously completed soil probe GP-331 in Area 4. A deeper sample collected from approximately 12 to 14 feet will be submitted to the laboratory and placed on hold for potential vertical extent analyses.
GP-432	15	2	6 to 8 12 to 14	Target Compound List	Building 11/14 footings extend 4 to 6 feet below ground surface and would be anticipated to impede the migration of potential contaminants of concern at shallow depths beneath Building 11/14. These probes will be completed to evaluate the potential migration of contaminants of concern below and beyond the depths of the building footings.
GP-433	15	2	6 to 8 12 to 14	Target Compound List	
GP-434	15	2	6 to 8 12 to 14	Target Compound List	

Proposed Supplemental On-Site Soil Assessment Summary					
Soil Probe Identification	**Depth (feet)**	**Number of Samples**	**Sample Interval (feet)**	**Laboratory Analyses**	**Purpose**
GP-435	15	2	6 to 8 12 to 14	Target Compound List	Building 11/14 footings extend 4 to 6 feet below ground surface and would be anticipated to impede the migration of potential contaminants of concern at shallow depths beneath Building 11/14. These probes will be completed to evaluate the potential migration of contaminants of concern below and beyond the depths of the building footings.
GP-436	15	2	6 to 8 12 to 14	Target Compound List	
GP-437	15	2	6 to 8 12 to 14	Target Compound List	
GP-438	15	2	1 to 3 5 to 7	PNAs (2) Target Compound List Metals (2)	Evaluate the horizontal and vertical extents of PNAs noted in previously completed soil probe GP-332 and various total metals noted in previously completed soil probe GP-329 in Area 4. A deeper sample collected from approximately 12 to 14 feet will be submitted to the laboratory and placed on hold for potential vertical extent analyses.

Superfund/Technical Reports

Dear Mr. Daley:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the *On-Site Soil Assessment Summary Response to Comments* letter report (dated August 19, 2015 and received August 21, 2015/Log 15-60220) prepared by Weaver Consultants Group (Weaver) for the above site pursuant to the First Agreed Modification to Second Agreed Preliminary Injunction Order (No. 13 CH 1046), filed March 12, 2015, in McHenry County. The document includes responses to the five conditions contained in the Illinois EPA's July 27, 2015 approval letter and proposes additional deep soil probes and VOC sampling along the northern property boundary of the site. The *On-Site Soil Assessment Summary Response to Comments* letter report is considered approved.

Sincerely,

Andrew M. Catlin

Analytical Report for STAT Work Order: 15020634 Revision 0

RE: 3892-300-03, 300 West-Marengo, Marengo, Illinois

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 2/27/2015 6:25:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Michelle Budniak
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

CASE NARRATIVE

The VOC soil Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/05/2015 had recovery of Bromomethane outside of control limits (41%/55% (LCS/LCSD) recovery, QC limits 70-130%; 28% RPD, QC limits <20%).

SPLP samples: GP-390 (1-3) (15020634-001) and GP-390 (6-8) (15020634-002) had the Continuing Calibration Verification(CCV) recovery outside of control limits for Iron (110.2% recovery, QC Limits 90-110%)

Analytical Report for STAT Work Order: 15020616 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 2/27/2015 4:30:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

CASE NARRATIVE

The VOC soil Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/06/2015 had recovery of Bromomethane outside of control limits (51%/56% (LCS/LCSD) recovery, QC limits 70-130%).

Sample GP-389 (16-18) (15020616-003) had recovery of VOC surrogate Dibromofluoromethane outside of control limits (69% recovery, QC Limits 83-119%). Recovery of all other surrogates were within control limits.

The VOC water Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/09/2015 had recovery of Bromomethane outside of control limits (49%/48% (LCS/LCSD) recovery, QC limits 70-130%).

The Metals Calibration Verification (CCV) had recovery of Iron outside of control limits (110.2% recovery, QC Limits 90-110%). This CCV is associated with analysis of SPLP extract of GP-389 (1-3) (15020616-002) and GP-389 (16-18) (15020616-003).

Analytical Report for STAT Work Order: 15030096 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 3/4/2015 5:40:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Michelle Budniak
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030085 Revision 0

RE: 3892-300-03, 300 West - Marengo, Merengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 3/3/2015 6:40:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030183 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 1 sample for the referenced project on 3/6/2015 6:00:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030451 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 2 samples for the referenced project on 3/16/2015 2:35:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

Analytical Report for STAT Work Order: 15030665 Revision 0

RE: 3892-300-03, 300 West - Marengo, Marengo

Dear Carl Dawes:

STAT Analysis received 2 samples for the referenced project on 3/23/2015 6:11:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030272 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 3/10/2015 5:00:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030346 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 2 samples for the referenced project on 3/12/2015 1:43:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030139 Revision 2

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 6 samples for the referenced project on 3/5/2015 5:30:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

CASE NARRATIVE

The VOC water Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/10/2015 had recovery of Bromomethane outside of control limits (62% (LCS) recovery, QC limits 70-130%).

The VOC soil Method Blank analyzed 03/11/2015 had recovery of Toluene-d8 outside of control limits (79% recovery, QC limits 85-110%). Recovery of all other surrogates were within control limits.

The VOC soil Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 03/11/2015 had recovery of the following compounds outside of control limits:
Bromomethane: (53%/55% (LCS/LCSD) recovery (QC limits 70-130%)
Toluene-d8 surrogate: (111% (LCS) recovery (QC limits 85-110%)

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030758 Revision 1

RE: 3892-300-03, 300 - West Marengo, Marengo, McHenry

Dear Carl Dawes:

STAT Analysis received 2 samples for the referenced project on 3/25/2015 5:00:00 PM. The analytical results are presented in the following report.

This report is revised to reflect changes made after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030862 Revision 0

RE: 3892-300-03-02, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 14 samples for the referenced project on 3/27/2015 6:10:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

CASE NARRATIVE

The VOC soil method blank analyzed on 04/01/2015 had recovery of VOC surrogate Dibromofluoromethane outside of control limits (122% recovery, QC Limits 83-119%). Recovery of all other surrogates were within control limits.

The VOC soil Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) analyzed 04/01/2015 had recovery of Bromomethane outside of recovery limits (67% (LCS) recovery (QC limits 70-130%).

Analytical Report for STAT Work Order: 15030214 Revision 2

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 5 samples for the referenced project on 3/9/2015 4:20:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussion yesterday, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-72 (Lab ID 15030272): Iron, Lead, and Manganese
2. MW-73 (Lab ID 15030139): Iron, Lead, and Manganese
3. MW-81 (Lab ID 15030272): Iron, Lead, and Manganese.
4. MW-71 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
5. MW-75 (Lab ID 15030139): Aluminum, Iron, Lead, and Manganese
6. MW-77 (Lab ID 15030214): Aluminum, Iron, Lead, and Manganese
7. MW-74 (Lab ID 15030139): Iron and Manganese.
8. MW-76 (Lab ID 15030183): Manganese
9. MW-86 (Lab ID 15030214): Manganese.
10. MW-83 (Lab ID 15030346): Aluminum, Arsenic, Chromium, Copper, Iron, Lead, and Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030576 Revision 1

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 3 samples for the referenced project on 3/19/2015 5:10:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Work Order: 15030576 Revision 1

CASE NARRATIVE

Sample GP-404 (8-10) (15030576-003) had recovery of VOC surrogate Dibromofluoromethane outside of control limits (72% recovery, QC Limits 74-150%). Recovery of all other surrogates were within control limits.

The Continuing Calibration Verification (CCV) for the SPLP samples GP-404 (1-3) (15030576-002) and GP-404 (8-10) (15030576-003) had recovery outside of control limits for Aluminum (113% recovery, QC Limits 90-110%).

The Continuing Calibration Verification (CCV) for sample MW-19 (15030576-001) had recovery outside of control limits for Magnesium (113% recovery, QC Limits 90-110%).

Craig,

Please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-19 (Lab ID 15030576-001): Aluminum, Iron, Lead, and Manganese

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15040026 Revision 0

RE: 3892-300-03-01, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 1 sample for the referenced project on 4/1/2015 4:05:00 PM. The analytical results are presented in the following report.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Analytical Report for STAT Work Order: 15030617 Revision 2

RE: 3892-300-03, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 4 samples for the referenced project on 3/20/2015 6:09:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.Tl report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall beco property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Pursuant to our discussions, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-23 (Lab ID 15030977): Aluminum, Iron, Lead, Manganese, and Vanadium.
2. MW-18 (Lab ID 15030977): Aluminum, Iron, Lead, Manganese
3. MW-20 (Lab ID 15030617): Aluminum, Antimony, Iron, Lead, Manganese, Nickle, Thallium, and Vanadium.
4. MW-21 (Lab ID 15030617): Aluminum, Antimony, Chromium, Copper, Iron, Lead, Manganese, Nickle, Selenium, Thallium, and Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15030977 Revision 1

RE: 3892-300-03-01, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 11 samples for the referenced project on 3/31/2015 5:40:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Yes. Please analyze these samples for Target Compound List and 1,4-dioxane.

Thanks,
Sarah McGinnis

Hi Sarah,

Yesterday we received some samples from the Marengo site. Sample "MCCD-IR-S" was received but was not listed on the COC.

Do you need this sample analyzed? Please review the attached COC.

Craig,

Pursuant to our discussions, please filter the following water samples and analyze for the metals indicated with a standard turnaround time.

1. MW-23 (Lab ID 15030977): Aluminum, Iron, Lead, Manganese, and Vanadium.
2. MW-18 (Lab ID 15030977): Aluminum, Iron, Lead, Manganese
3. MW-20 (Lab ID 15030617): Aluminum, Antimony, Iron, Lead, Manganese, Nickle, Thallium, and Vanadium.
4. MW-21 (Lab ID 15030617): Aluminum, Antimony, Chromium, Copper, Iron, Lead, Manganese, Nickle, Selenium, Thallium, and Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15040252 Revision 2

RE: 3892-300-03-02, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 6 samples for the referenced project on 4/8/2015 5:12:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.Tl report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall beco property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Please filter the following water samples and analyze for the metals indicated. We will need the results by **Thursday, May 7th by 10:00 am**.

1. MW-1 (Lab ID 15040252): Manganese
2. MW-2 (Lab ID 15040252): Iron and Manganese
3. MW-17 (Lab ID 15040252): Manganese.
4. MW-100 (Lab ID 15040025): Aluminum, Antimony, Iron, Lead, Manganese, and Vanadium
5. MW-102 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
6. MW-104 (Lab ID 15040025): Manganese.
7. MW-105 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
8. MW-106 (Lab ID 15040112): Manganese.
9. MW-107 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
10. MW-108 (Lab ID 15040112): Manganese.
11. MW-109 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Nickel, Vanadium.
12. MW-111 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
13. MW-112 (Lab ID 15040112): Manganese.
14. MW-114(Lab ID 15040112): Iron, Lead, Manganese.
15. MW-115 (Lab ID 15040112): Aluminum, Arsenic, Chromium, Iron, Lead, Manganese, Nickel, Thallium, and Vanadium.
16. MW-116 (Lab ID 15040112): Manganese.
17. MW-117 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
18. MW-118 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
19. MW-119 (Lab ID 15040158): Aluminum, Iron, Lead, Manganese, Vanadium.
20. MW-120 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
21. MW-121 (Lab ID 15040158): Aluminum, Chromium, Iron, Lead, Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15040025 Revision 1

RE: 3892-300-03-02, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 5 samples for the referenced project on 4/1/2015 4:05:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Craig Chawla
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. Tl report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall beco property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Water - Samples pH checked?	Yes ☑	No ☐	Checked by: JOK
Water - Samples properly preserved?	Yes ☐	No ☑	pH Adjusted? Yes

Any No response must be detailed in the comments section below.

Comments: 2mL of NaOH was added to 250ml NaOH preserved for all samples for cyanide analysis. 2mL of Nitric acid was also add to 500ml HNO3 poly preserved for sample ID MW-104 for metal analysis.

Craig,

Please filter the following water samples and analyze for the metals indicated. We will need the results by **Thursday, May 7th by 10:00 am**.

1. MW-1 (Lab ID 15040252): Manganese
2. MW-2 (Lab ID 15040252): Iron and Manganese
3. MW-17 (Lab ID 15040252): Manganese.
4. MW-100 (Lab ID 15040025): Aluminum, Antimony, Iron, Lead, Manganese, and Vanadium
5. MW-102 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
6. MW-104 (Lab ID 15040025): Manganese.
7. MW-105 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
8. MW-106 (Lab ID 15040112): Manganese.
9. MW-107 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
10. MW-108 (Lab ID 15040112): Manganese.
11. MW-109 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Nickel, Vanadium.
12. MW-111 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
13. MW-112 (Lab ID 15040112): Manganese.
14. MW-114(Lab ID 15040112): Iron, Lead, Manganese.
15. MW-115 (Lab ID 15040112): Aluminum, Arsenic, Chromium, Iron, Lead, Manganese, Nickel, Thallium, and Vanadium.
16. MW-116 (Lab ID 15040112): Manganese.
17. MW-117 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
18. MW-118 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
19. MW-119 (Lab ID 15040158): Aluminum, Iron, Lead, Manganese, Vanadium.
20. MW-120 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
21. MW-121 (Lab ID 15040158): Aluminum, Chromium, Iron, Lead, Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15040158 Revision 1

RE: 3892-300-03-02, 300 West - Marengo, Marengo, IL

Dear Sarah McGinnis:

STAT Analysis received 4 samples for the referenced project on 4/6/2015 5:01:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capoccia
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone.This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

Craig,

Please filter the following water samples and analyze for the metals indicated. We will need the results by **Thursday, May 7th by 10:00 am**.

1. MW-1 (Lab ID 15040252): Manganese
2. MW-2 (Lab ID 15040252): Iron and Manganese
3. MW-17 (Lab ID 15040252): Manganese.
4. MW-100 (Lab ID 15040025): Aluminum, Antimony, Iron, Lead, Manganese, and Vanadium
5. MW-102 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
6. MW-104 (Lab ID 15040025): Manganese.
7. MW-105 (Lab ID 15040025): Aluminum, Iron, Lead, Manganese, and Vanadium
8. MW-106 (Lab ID 15040112): Manganese.
9. MW-107 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
10. MW-108 (Lab ID 15040112): Manganese.
11. MW-109 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Nickel, Vanadium.
12. MW-111 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
13. MW-112 (Lab ID 15040112): Manganese.
14. MW-114(Lab ID 15040112): Iron, Lead, Manganese.
15. MW-115 (Lab ID 15040112): Aluminum, Arsenic, Chromium, Iron, Lead, Manganese, Nickel, Thallium, and Vanadium.
16. MW-116 (Lab ID 15040112): Manganese.
17. MW-117 (Lab ID 15040112): Aluminum, Iron, Lead, Manganese, Vanadium.
18. MW-118 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
19. MW-119 (Lab ID 15040158): Aluminum, Iron, Lead, Manganese, Vanadium.
20. MW-120 (Lab ID 15040158): Aluminum, Iron, Lead, and Manganese.
21. MW-121 (Lab ID 15040158): Aluminum, Chromium, Iron, Lead, Manganese, Nickel, Vanadium.

If you should have any questions concerning the aforementioned, please feel free to contact me at 630-717-4848.

Regards,

Carl

Analytical Report for STAT Work Order: 15040112 Revision 1

RE: 3892-300-03-02, 300 West-Marengo, Marengo

Dear Sarah McGuiness:

STAT Analysis received 11 samples for the referenced project on 4/3/2015 5:30:00 PM. The analytical results are presented in the following report.

This report is revised to reflect additional analysis requested after the last report revision.

All analyses were performed in accordance with the requirements of 35 IAC Part 186 / NELAC standards. Analyses were performed in accordance with methods as referenced on the analytical report. Those analytical results expressed on a dry weight basis are also noted on the analytical report.

All analyses were performed within established holding time criteria, and all Quality Control criteria met EPA or laboratory specifications except when noted in the Case Narrative or Analytical Report. If required, an estimate of uncertainty for the analyses can be provided. A listing of accredited methods/parameters can also be provided.

Thank you for the opportunity to serve you and I look forward to working with you in the future. If you have any questions regarding the enclosed materials, please contact me at (312) 733-0551.

Sincerely,

Frank Capocci
Project Manager

The information contained in this report and any attachments is confidential information intended only for the use of the individual or entities named above. The results of this report relate only to the samples tested. If you have received this report in error, please notify us immediately by phone. This report shall not be reproduced, except in its entirety, unless written approval has been obtained from the laboratory. This analytical report shall become property of the Customer upon payment in full. Otherwise, STAT will be under no obligation to support, defend or discuss the analytical report.

PCBs	**SW8082 (SW3510C)**			Prep Date: **4/8/2015**		Analyst: **GVC**
Aroclor 1016	ND	0.00050		mg/L	1	4/8/2015
Aroclor 1221	ND	0.00050		mg/L	1	4/8/2015

Qualifiers:
ND - Not Detected at the Reporting Limit
J - Analyte detected below quanititation limits
B - Analyte detected in the associated Method Blank
HT - Sample received past holding time
* - Non-accredited parameter
RL - Reporting / Quantitation Limit for the analysis
S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
E - Value above quantitation range
H - Holding time exceeded
