

ILLINOIS POLLUTION CONTROL BOARD
November 11, 1971

CHICAGO VITREOUS CORP.)
)
)
v.) # 71-241
)
)
ENVIRONMENTAL PROTECTION AGENCY)

Opinion of the Board (by Mr. Currie):

Chicago Vitreous Corp. manufactures porcelain enamel frits principally for the appliance industry. It petitions for confirmation of an Air Contaminant Emission Reduction Program approved by the Air Pollution Control Board for bringing particulate emissions into compliance with regulations. Completion of the program has been delayed a few weeks but is expected by December 15 of this year. Because of the brief time involved we thought it not worthwhile to incur the expense and trouble of a hearing. The Agency's recommendation is that we grant the variance subject to the company's having a stack test performed and subject to the submission of information and control programs for other plant sources. We shall do so, omitting the usual bond requirement because the variance is to expire almost before a bond could be filed.

ORDER

Chicago Vitreous Corp. is hereby granted a variance to permit the emission of particulate matter in excess of regulation limits from its smelters numbered 4, 5, 7, and 8, until December 15, 1971, on the following conditions:

1. The submission of a report of stack tests under normal operating conditions not later than January 15, 1972;
2. The submission of a report as to the status and control plans for other potential contaminant sources in the plant by January 15, 1972;
3. As agreed in the petition, until the control equipment for the smelters included in this variance is operative, the smelters shall not be operated during times when adverse weather conditions create a hazard of nuisance.

I, Christan Moffett, Acting Clerk of the Pollution Control Board, certify that the Board adopted the above Opinion this 11 day of November, 1971.

Christan Moffett
