They are utilizing a sewer laser to run the PCP at 0.40%, beginning at the manhole invert. All pipe being laid contains perforations and filter sock. Besides the grade, the PCP installation, bedding, haunching, and backfills remain unchanged (refer to S-386, Sheet 12, Detail 8). Lamac will be on-site tomorrow to survey the PCP.

CCS/GEO:
The failed destruct was retested (DS-84B), repaired, extrusion welded, and vacuum tested.

FLT/BCI/TSI:
Clay Placement - the north tip of the pond has been covered and now the clay is being placed to the south along Section A. Area = P1-P16, Loads = 160. 11 Trucks are now utilized in the cycle. Additional Personnel (FLT): Eric Bierman

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/15/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 61°AM, 88° PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450LC Excavator, 410J Backhoe, BW 172 Roller, 624H Front End Loader, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 stockpiled the western anchor trench spoils on the NW corner of Pond D.

BTD/Lamac:

PCP-1 has been completed. The trench was excavated, bedded with CA-7, the 8" collector pipe with nonwoven geotextile filter sock was installed, haunched with CA-7, and backfilled with CA-7 and trench material. CO-1 was installed (non-perforated) and has sufficient stickup with a water tight cap. Tyler Union 8" 90° Md fittings are used for the cleanout. The concrete slab and bollard will be installed towards completion (refer to S-386, Sheet 12, Detail 6). PCP-1 was laid at +0.40% from DS-1 invert to CO-1, and the section was compacted. The CO elevation shot with the grade laser is at 443.48. Lamac also shot in PCP-1 at the DS-1 invert, 150' west of DS-1, and at CO-1. BTD continues dewatering in well 2 and in the temporary well next to DS-1. They plan to install additional dewatering wells before DS-2 excavation. Additional 8" perforated DR-18, PVC C900 pipe was delivered. Length = 117'

FLT/BCI/TSI:

Clay Placement - Section A. Panels P-1 to P-45 (northern section) have now been approved for cover. Additional Personnel (FLT): Greg Cornwell; 12 trucks total. They plan to add 4 additional trucks to the cycle next week. The 9520 was demobilized. The excavator loading the trucks at the CBS broke down and FLT could not complete their 10 hour production. This will be fixed tomorrow. Area = P-3 to P-5, P-7, P-9, P-11, P-12, and P-14 to P-16. Loads = 144

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-06-12	OPEN - no issues. None projected for 2x week look ahead.
2012-06-05	OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-06-12	OPEN - no issues. AMS projects 2x teamsters [Fawn lane], 2x laborers [already have CBT - but AMS DT they will go to Robinson].
2012-06-05	OPEN - no issues. AMS has sent 2x employees. M. Wagstaff sent thank you e-mail to JCH. P. Zinsious suggested inviting them to a safety luncheon.

04 AMS SAFETY

20120-06-12 OPEN - no issues.

[01] 1x worker terminated and replaced an operator for safety concerns - AMS zero tolerance policy.
[02] Borrow haul route signage installed on roadway.
[03] Spotters for trucks on site, 1x to 2x laborers. Additional spotters if/as required.
[04] Cooling stations are set up.
[05] J. Tasich on site 06-11. Training 2x laborers today [06-12].
[06] Training tomorrow [06-13] for AMS site-specific.

2012-06-05 OPEN - no issues.
[01] J. Denham reported on 1x AMS operator who was not operating safety while operating the [all terrain] fork lift on 06-01. Worker was suspended for unsafe actions and not wearing a seat belt and is currently under review. AMS has a zero tolerance policy, and if the review proves accurate, the worker will be terminated. Official response and [incident] violation report should be ready by 06-06.
[02] General discussion safety concerns for the vegetative cover hauling [soil materials form the borrow site]. P. Zinsious indicated signs will be placed on Illinois Route 1 northbound and southbound lanes where trucked entering the highway. Currently Illinois is working on the bridge deck that crosses over Raccoon Creek on the haul route. Truckers will not be allowed to deviate form the route and travel the "back way" into the borrow site to avoid the work at the bridge deck. Estimated time of this work on the bridge deck is 6x to 8x Wks.
[03] B. Muesenfechter concern that open liner anchor trenches could be a potential tripping hazard and indicated previous issue at Coffeen [Ameren power plant]. M. Wagstaff indicated depends on trench. J. Denham indicated caution tape will be placed at trenches, on the exterior, as the interior has liner, and cannot penetrate the liner [with posts].
[04] Cooling stations are set up.

05 HOUSEKEEPING

2012-06-12 OPEN - AMS will have walk through today [06-12] for cleanup.

2012-06-05 OPEN - M .Wagstaff concern regarding small pieces of liner. J. Boone indicated daily cleanup.

06 PLANT ACCESS - CBT

20120-06-12 OPEN - B. Simmons Ameren services general discussion of plant access and projected work:
[01] Subcontractor [Miller] and Ameren will use entire coal yard.
[02] Possible set trailer next week, possible same electric service usage.
[03] Project is capacity and clearance scope until through EOY [Hutsonville, Palmyra to Indiana areas].
[04] Starting 06-14 guard form 6:00 AM CT to 6:30 PM CT, then 24/7 when conductors stored/staged on site.
[05] Parking on far west lost, up to 15x personal vehicles.
[06] Subcontractor will not have AER badges, guard will have list update for workers on project. They will only have to show driver's license.
[07] B. Simmons indicated workers not allowed beyond designated area, If caught outside area, will be terminated.
[08] M. Wagstaff is SPOC for this project to the APD project.
[09] Borrow haul traffic only concern.
[10] D. Curlin contact for Miller.

2012-06-05 OPEN - M .Wagstaff reports that Ameren [Services] will begin transmission line work [between Kansas and Illinois], and will be using the coal yard at the Hutsonville plant as storage. Ameren will provide a guard for 12 HR shifts. The contacts at Ameren as Mr. Jim Williams [over the GENCO division] and Mr. Bob Simmons who will be the site SPOC. Work to begin the middle of June 2012. J. Boone indicated concern over coordination of trucks hauling into the site, and M. Wagstaff said no issue, as the trucks can come in through the gate by the [west] PCP line.

08 OSHA LOG - WORK HOURS

2012-06-12 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-11.
No incidents or accidents.
3,304.00 RT
0,700.50 OT
4,004.50 TOTAL

2012-06-05 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-04.
No incidents or accidents.
2,543.50 RT
0,436.50 OT
2,980.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-06-12 AMS, Chesapeake Containment [CCS], BT Drainage [BTD], and returning Belt Construction [BCI] on site.

[04] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[09] Laborers [AMS 3x, CCS 6x]
[02] Operators [AMS 1x, BCI 1x]

[29] Total

2012-06-05 AMS, Chesapeake Containment [CCS], and BT Drainage [BTD] on site.

[03] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[12] Laborers [AMS 2x, CCS 10x]
[02] Operators [AMS 2x]
[01] Teamsters
[00] Survey
[03] Foreman [Full time] [Mr. John Dietzel new Charah/AMS Focus Site Manager on project] [CCS 1x]
[21] Total

02 WORK HOURS AND OVERTIME

2012-06-12	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT. Fawn Lane trucking 10 HR.
2012-06-05	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-06-12	OPEN - no issues. GEO/CCS "gators" leaving this week.
2012-06-05	OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-06-12	OPEN - no issues.
2012-06-05	OPEN - no issues.

02 SUBMITTALS

20120-06-12	Submittal log as published by GEO on 06-09 distributed. General discussion. [01] Submittal log copies distributed. [02] Discussion CA-7 sample for PCP coarse aggregate. [03] No issues.
20120-06-05	Submittal log as published by GEO on 06-2 distributed. General discussion. [01] Submittal log copies distributed. [02] Seed/mulch submittal under review by AER returned. [03] VES-01 to be returned by AER returned. [04] VES-02 M. Wagstaff orally approved returned. [05] SWP3 for APD submitted by AMS as matter of record original signed on 02-28. [06] AMS to submitted dewatering sump under AER review.

08 MATERIAL

01 GENERAL

2012-06-12	OPEN - no issues. [corrected dates below 20120].
2012-06-05	OPEN - no issues.

02 GEOMEMBRANE PRE-CON

2012-06-12	OPEN - no issues.
2012-06-05	Open - no issues. [01] A. Saindon reviewing tests, looks good. However test results for areas will not be ready until about 4:00 PM CT on 06-07. [02] Using stakes on positioned by sandbags and leaving the sandbags in place are acceptable per A. Saindon.

03 CAP VENT PRE-CON

2012-06-12	OPEN - no issues.
2012-06-05	OPEN - no issues. [corrected date errors of "20120" below]

04 PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING

2012-06-12	OPEN - Discussion during Progress Meeting: [01] Lamac to perform record drawing "as-built" survey for AER direct, instead of through AMS. [02] P. Zinsious presented M. Wagstaff concern over the global stability of the PCP trench and Hanson response that proposed new alignment is not acceptable due to the close proximity. [03] R. Porter indicated if higher elevation of excavation, the trench may not be as wide. General consensus of the team is a "wait-and-see" approach [due to the many factors involved]. [04] MW-2R remains undeveloped due to dewatering. [05] BTD to begin PCP on 06-13 in AM. Estimated production rates [provided by BTD for scheduling meeting at Ameren] are shallow = 40 FT/D, average 60 FT/D, and deep[er] = 80 FT/D.
2012-06-05	OPEN - Discussion during Progress Meeting: [01] M. Wagstaff concern on the PCP alignment and liquefaction [due to seismic] of the soil near the pond berm. There was no specification provided by Ameren, and for now the alignment look good, will go with Hanson. [02] J. Boyer reports at area of DS-1 hit shallow sandstone, about 20 FT west from location. Will status once excavation begins if a new location or higher elevation will be required. [03] M .Wagstaff reports that new well MW-2R could not develop due to dewatering. ~~[02]~~ [04] P. Zinsious reports that review of PCP alignment allow for power poles to stay in place [Ameren does not need to remove for now].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-06-12	OPEN - Discussion during Progress Meeting: [01] AMS has removed fencing for now. [02] M. Wagstaff will be in contact with Mr. Wampler to resolve.
2012-06-05	OPEN - Discussion during Progress Meeting: [01] J. Boone reports Mr. Duane Wampler has communicated not happy with fence alignment. [02] AMS has mover the fence back. J. Cravens has been in contact with Wampler. [03] J. Boyer indicated collector tile work in about two weeks [will need coordination with Mr. Wampler]. [04] J. Boyer reports only need in week in this area, as shallow. [05] M. Wagstaff will be in contact with Mr. Wampler to resolve.

10 QUALITY CONTROL

03 CLAY

2012-06-12	OPEN - Roots being pulled out of the material.
2012-06-05	OPEN - no issues begin placement on 06-11.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-06-12	OPEN - Review of schedule 06-07 handed out [01] B. Muesenfechter presented "First Planner" . [02] Open discussion and review of "First Planner" process with Lamac. [03] J. Cravens out 07-13, and P. Zinsious vacation 06-21 - 06-28. [04] Two critical work areas, the clay placement and the PCP. [05] Baseline SC changed to 10-11. Currently SC in projected 10-24. [06] P. Zinsious indicated AMS to increase trucks for borrow haul from 10x to 15x. [07] PCP projected now to start 06-13, will help schedule. [08] Weather days coded.
2012-06-05	OPEN - Review of schedule 06-01 handed out [01] B. Muesenfechter presented "First Planner" . [02] Open discussion and review of "First Planner" process with the Build Team present. [03] Review of draft "First Planner" look-ahead. Individual activity review with modifications of dates and "Last Planner" assignments.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-06-12	OPEN - no issues. AMS sent SOV to M. Wagstaff.
2012-06-05	OPEN - no issues, draft revised on 06-05 few items to revise.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-06-12	OPEN - in progress.
2012-06-05	OPEN - in progress. No further spoils found, AMS to provide cost account.

12 EWO-12 PCP Survey

2012-06-12	CLOSE - Lamac to go direct to AER.
2012-06-05	NEW - AMS coordinate Lamac to survey "as-built" for the PCP installation.

13 EWO-13 Electrical feeder/overhead

2012-06-12	NEW - combined EWO-05 and 07 per AER. AMS to have pricing in day or two.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-06-12	NONE
2012-06-05	CLOSE

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-06-12	NONE
2012-06-05	In progress.

15 PRODUCTION

03 CLAY

2012-06-12	OPEN - Trucks are hauling 11 CY. Currently 10x trucks. Placement as of 06-11 is 1,232 CY.
2012-06-05	OPEN - no issues [projected start 06-11].

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: July 5, 2012

SUBJECT: Weekly Summary Report for June 25, 2012 to June 29, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 52 to 77°F, and temperature highs ranged from 86 to 108°F. Weather delays did not occur this week.

Construction Activities

Anchor trench construction, groundwater collection system installation, fence removal, anchor trench spoil transportation, embankment grading, and clay placement occurred this week. Anchor trench construction included riprap splash pads and rodent guards for the anchor trench outlet toe drains along the northeast and east embankments of Ash Pond D. B&T Drainage continued construction of the groundwater collection system. This included the completion of dewatering sump DS-2, perforated collector pipe PCP-2 and PCP-3, additional cleanout CO-1A and CO-1B, and dewatering. Grades for PCP-2 and PCP-3 were altered due to shallow bedrock. Refer to daily reports for additional information. Lamac Engineering Co. surveyed grades for the groundwater collection system. Ash Management Services, Inc. removed portions of the fence south of Ash Pond B for the temporary construction easement and transported anchor trench spoils from Ash Pond D to Ash Pond A. Fawn Lane Transit, Inc. and Belt Construction, Inc. continue clay placement in Quadrant A. Approximately 15-16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to clay placement documentation for more details. Belt Construction, Inc. also

Electronic Filing: Received, Clerk's Office 09/28/2020

performed clearing and grading on the northeast embankment of Ash Pond D, providing a more gradual slope and promoting surface drainage.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 330D Excavator
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Matt Dishman, Robert Dunkley, James Marks, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. – Austin Ridgley and Steve Anderson
Charah, Inc. – Joe Tasich
B&T Drainage (BTD) – John Boyer, Scott Boyer, Chase Boyer, Colby Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, and Michael Dashiell
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gray Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, and Patrick Wente
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, June 26, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Electronic Filing: Received, Clerk's Office 09/28/2020

Materials

Clay for the vegetative layer, IDOT CA-7 aggregate, 3x6 riprap for anchor trench drains, and rodent guards were delivered.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14282

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/25/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 72°AM, Sunny, 95° PM | Contractor: AMS | Subcontr./Supplier: BTD/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450 LC Excavator, 624H F.E.L., Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

AMS continued removing the chain link fence and pulling posts south of Ash Pond B for the temporary construction easement for the PCP excavation. AMS has a new focus manager that will work at both the CBS and APD - Matt Dishman.

BTD:

The PCP-2 excavation, installation, and backfill continues from DS-2 to DS-1, currently still running at a 0.50% grade towards DS-1. Unless a rock ledge is reached, there will not be a cleanout required between DS-1 and DS-2. An additional pump was placed in the DS-2 manhole to aid dewatering south of Ash Pond A. Due to the significant amount of sand and water flowing into the trench box, the foundation is undercut and approx. 3.0' of CA-7 is being used for the pipe bedding. The pipe haunching and backfill remains the same. Refer to S-386, Sheet 12, Detail 8 for the pipe installation profile. Lamac will survey the PCP tomorrow, wherever the pipe is exposed, for as-built data. Length = 120'

FLT/BCI/TSI:

Clay Placement - South bound on Section A. Two Additional Trucks - Alan Ruholl and Patrick Wente. Area = P-23, 25, 26, 27, and 46 to 55. Loads = 227

Additional Comments:

No. A 14283

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 6/26/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 61°AM, 86° PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450LC Excavator, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, BW172 Roller, Water Truck

AMS:

AMS completed removing the chain link fence south of Ash Pond B for the temporary construction easement for the PCP excavation. All the posts were pulled and the holes were backfilled.

BTD/Lamac:

The PCP-2 excavation and installation was completed. The rest of the PCP-2 backfill and compaction should be completed tomorrow. Field Change: due to the field adjusted DS-1 elevation, the PCP-2 grade had to be field adjusted as well. There was also a shale rock ledge encountered and a cleanout (CO-1A) was installed between DS-1 and DS-2. PCP-2 runs west from DS-2 as follows: DS-2, 150' @ +0.50%, 3' @ 0.50%, 22.5° fitting → 14' → 22.5° fitting, 3' @ 0.50%, tee for CO-1A, and then the rest of the pipe ran +0.50% to DS-1 from the tee. Austin Ridgley and Steve Anderson with Lamac surveyed the flowlines in DS-2, PCP-2 before and after the 22.5° fittings, and MW-2R. Additional IDOT CA-7 aggregate was delivered. Dewatering continues around DS-2 and PCP-3 will begin tomorrow. Length = 140'.

FLT/BCI/TSI:

Clay Placement - South bound on Section A. BCI began stripping the NE embankment on APD (extra work for Ameren) and it will be slightly cut to provide a more gradual slope. The riprap splash pads for the anchor trench outlet drains will begin to be constructed on the NE berm tomorrow. Area = P-46 to 61, and 95. Loads = 240

Misc.: The riprap splash pads for the anchor trench outlet drains will not be Class B2 as indicated on the plans. They will be made of 3x6 riprap (Ameren approved).

No. A 14284

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/27/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 52°AM, 98°PM | Contractor: AMS | Subcontr./Supplier: BTD/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450 LC Excavator, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, BW 172 Roller, Water Truck

AMS:

Delivery - loads of 3x6 riprap. AMS worked on constructing the riprap splash pads for the anchor trench outlet toe drains along the northeast and east embankments of Pond D. 3x6 riprap was used instead of Class B2 and the pads were constructed 2' wide by 7' long (1' above the drain) by 6" deep (cut into the embankment). The rodent guards for the drains have not been delivered yet.

BTD:

Delivery - more 8" perforated C900 DR18 PVC pipe. The pipe was staged south of Pond D. PCP-2 backfill and compaction was completed, excluding the area around the DS-2 manhole. BTD began PCP-3 excavation, installation, and backfill. PCP-3 grade began at 1.75% running east from the DS-2 manhole. At approx. 44' east of DS-2, a hard rock ledge was encountered, and the PCP had to come up to clear the ledge and begin a new grade. An additional cleanout was installed at the new grade (CO-1B). Field Change: PCP-3 runs east from DS-2 as follows: DS2, 44'@ +1.75%, 22.5° fitting → 13' → 22.5° fitting, 3'@ 0.50%, tee for CO-1B, and then continues +0.50% from tee. The majority of PCP-3 is keyed into sandstone. John Boyer shot various grades for the PCP and field tile. Lamac will survey the PCP tomorrow for the as-built. Length = 100'

FLT/BCI/TSI:

Clay Placement - South bound on Section A. BCI continued stripping and cutting the NE embankment on Pond D. FLT Additional Personnel: Bob Smithenry, this makes a total of 16 trucks cycling between CBS and APD. Area = P-46 to 61, and 9S. Loads = 235

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/28/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 70°AM, 105° PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450 LC Excavator, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, BW 172 Roller, Water Truck

AMS:

Delivery – Rodent Guards for the anchor trench outlet toe drains. The riprap splash pads for the anchor trench outlet toe drains were completed along the northeast and east embankments of Pond D. The riprap pads along the south embankment will be constructed at a later date. Sandbags were staged along the liner for both vegetative cover stakes and to hold it in place from contraction and expansion. The 580 cleaned all the paved roads (plant entrance to construction yard) and regraded the gravel plant entrance. The 580 also began moving the stockpiled anchor trench spoils from the northwest corner of Pond D to the southeast corner of the geotubes in Pond A.

BTD/Lamac:

Delivery – loads of IDOT CA-7 aggregate. BTD continued PCP-3 excavation, installation, backfill, and compaction. PCP-3 continues at a +0.50% grade running east from CO-1B. The PCP was laid until the first kink was reached located southwest of Pond B. The dewatering wells (pumps and slotted casings) and manhole shoring were removed from around DS-2. BTD began backfilling around the DS-2 manhole. More sections of the manhole will be installed tomorrow. Currently, there is no dewatering south of Pond A. Austin and Steve with Lamac surveyed the additional cleanout CO-1B and points along PCP-3. Length = 200'.

FLT/BCI/TSI:

Clay Placement – South bound on Section A. BCI completed stripping and grading, producing a more gradual slope, the northeast embankment on Pond D. Area = P-46 to 61, and 95. Loads = 226

AMS:
The rodent guards for the anchor trench outlet toe drains were installed on the NE and E berms. The 580 continued moving the stockpiled anchor trench spoils from the NW corner of APD to the SE corner of the geotubes in APA.

BTD:
Delivery - CAT D5G Dozer. Chase Boyer on-site today. Two manhole sections were added to DS-2 and the manhole top was placed. DS-2 backfill was completed. BTD began finish grading PCP-1, 2, and 3. No pipe was laid today.

FLT/BCI/TSI:
Clay Placement - South bound Section A. Another entrance to the Pond was added on the west side along the Section A and C boundary line.
Area = P-46 to 61, and 95.
Loads = 148

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-06-26 OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-06-26 OPEN - R. Porter scheduled two drivers for Fawn Lane Trucking at Newton.

04 AMS SAFETY

20120-06-26 [01] AER has FWI confined Space plan under review. J. Cravens to monitor confined space for AER, FWI responsible for safety.
[02] B & T has corrected safety glasses.
[03] General safety discussion. Keeping hydrated was discuused.
[04] Joko Taisch on site Monday 6-25 and Friday 6-29.

05 HOUSEKEEPING

2012-06-26 OPEN - No issues.
[01] One dumpster will remain onsite until it is full and then it will be removed.

06 PLANT ACCESS - CBT

20120-06-26 OPEN
[01] Guard on site has been directed not to track/document/work for any of APD project. Guard has been directed to leave the site and lock the gate when AMS SM leaves. Guard will wait outside of gate if still on duty.
[02] M. Wagstaff to confirm new agreements with a Ms. Holly and check on issue with locks.

08 OSHA LOG - WORK HOURS

2012-06-26 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-25.
No incidents or accidents.
4,268.00 RT
912 OT
5,185.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-06-26 AMS, BT Drainage [BTD], Belt Construction [BCI] on site.
[02] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[05] Laborers [AMS 3x, BTD 2x]
[04] Operators [AMS 1x, BCI 1x, BTD 2x]
[16] Teamsters [FLT 15x borrow haul trucking, AMS 1x]
[00] Survey
[02] Foreman [Full time] [2x]
[29] TOTAL

02 WORK HOURS AND OVERTIME

2012-06-26 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Project will be shut down Wednesday 7-4 for the for the 4th of July Holiday.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-06-26 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-06-26 OPEN - no issues.

02 SUBMITTALS

20120-06-26 Submittal log as published by GEO on 06-21 distributed.
[01] Submittal log copies distributed by e-mail, but no copy at meeting.
[02] Frietag submittal on Control Panel needed asap, due to required delivery lead time.

08 MATERIAL

01 GENERAL

2012-06-26 OPEN
[01] Some HDPE Liner was returned.
[02] Structures and stone need to be completed and submitted.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-06-26 OPEN - Discussion during Progress Meeting:
[01] MW-2 has been removed.
[02] Pipe installation is going well, with no current issues.
[03] No snow fence to be installed per Wampler, to help with irrigation.
[04] J. Boyer indicated working directly for Wampler to make field tile connections.
[08] Existing conflicting power/light poles have been removed, except for one.

10 QUALITY CONTROL

03 CLAY

2012-06-26 OPEN - Roots being pulled out of the material as necessary.
[01] Section A should be completed 2-3 days ahead of chedule.
[02] AMS has changed schedule to begin clay placement in Area C in lieu of Section B, after Section A is complete.
[03] Belt to bring second dozer onsite around 7/9 to begin fine grading.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-06-26 OPEN - Review of Last Planner schedule 06-19 handed out
[01] AMS will change the next area of clay placement to Area C, in lieu of Area B as originally scheduled.
[02] AMS intends to begin concrete work ahead of schedule. This is the main reason for changing the area of clay placement on Pond D.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-06-26 OPEN - M. Wagstaff reports pay-app "signed off" for May.
[01] MW has furnished backup information for revised P.O. to AMS. AMS to review and execute if correct.
[02] AMS to submit June Draft Pay Request at next meeting 7-3.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-06-26 OPEN - AMS to investigate including the spoils [ash material] from the liner anchor trench excavation. JD & MW to review costs.

13 EWO-13 Electrical feeder/overhead

2012-06-26 OPEN - AMS presented hard copy of EWO for AER to review; MW evaluating.

14 EWO-14 FIELD TILE LOCATION

2012-06-26 Tiles to be field located between B&T and Wampler. Geotechnology and Ameren to approve proposed locations.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-06-26 OPEN
[1] MW to complete submittal reviews; electrical

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-06-26 OPEN
[1] Concrete submittals needed asap.

15 PRODUCTION

03 CLAY

2012-06-26 OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 06-25 is 21,318 CY.

16 DOCUMENTS TRANSMITTED

2012-06-26 [01] AMS - Last Planner schedule dated 06-19.
[02] GEO - Submittal Log published 06-21.

17 DOCUMENTS REVIEW ONLY

2012-06-26 NONE

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, July 3, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

AER

01 Mr. Mike Wagstaff
02 Mr. Mike Stewart
03 Mr. Bob Muesenfechter

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: July 11, 2012

SUBJECT: Weekly Summary Report for July 2, 2012 to July 6, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 72 to 79°F, and temperature highs ranged from 95 to 106°F. Weather delays did not occur this week. July 4, 2012 was taken as a holiday.

Construction Activities

Groundwater collection system installation, excavation of test pits, and clay placement occurred this week. B&T Drainage continued construction of the groundwater collection system. This included the completion of dewatering sump DS-3, beginning dewatering sump DS-4, perforated collector pipe PCP-3 and PCP-4, and dewatering. The location of the DS-3 manhole was offset west due to shallow bedrock. Grades for PCP-3 and PCP-4 were altered due to shallow bedrock. Test pits were excavated along the PCP-4 alignment to determine the depth of bedrock. Refer to daily reports for additional information. Lamac Engineering Co. surveyed grades for the groundwater collection system. Fawn Lane Transit, Inc. and Belt Construction, Inc. completed clay placement in Quadrant A and began clay placement in Quadrant C. Approximately 15-16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to clay placement documentation for more details.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 330D Excavator
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, James Marks, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. – Jake Lewis and Steve Anderson
Charah, Inc. – Joe Tasich
B&T Drainage (BTD) – John Boyer, Scott Boyer, Colby Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Michael Dashiell, and Eric Blankenship
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gray Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Patrick Wente, and Frank Draper
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, July 3, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer was delivered.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14287

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 7/2/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 72° AM, 98° PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330D Excavator, 450 LC Excavator, 624H Front End Loader, 410J
Site Activities / Observations / Contacts / Notes: Backhoe, BW172 Roller, D5G Dozer, Water Truck

AMS:
Performed housekeeping in construction yard and in trailer lot. Most of the personnel worked at the CBS. Matt Dishman is on vacation this week.

BTD/Lamac:
The DS-2 manhole had to be pumped to dewater the open trench for PCP-3. PCP-3 excavation, backfill, installation, compaction, and finish grading continues. The first and second kink (22.5° fittings) were installed southwest of Pond B. The kinks were moved 80' east per Lamac's revised drawings and to conform to the construction easement. This run of PCP continues at +0.50% towards CO-2, and is currently being placed 3' into the sandstone at the location of the kinks. The PCP-3 excavation ended at the 2nd kink southwest of Pond B. DS-3 excavation and PCP-4 excavation will begin before PCP-3 is completed. It is planned to run the PCP and 12" ADS tile at the same time, south of Pond B. Jake Lewis and Steve Anderson with Lamac surveyed PCP-3 before and after the kinks. Colby Boyer hauled off well casings and pumps. Length = 110'

FLT/BCI/TSI:
Clay Placement - Section A was completed and Section C was started.
Area = P-46 to 61, and 95
Loads = 228

Additional Comments:

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 7/3/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.0 hrs (0.5 hr for lunch)
Weather: Sunny, 75° AM, 95° PM | Contractor: AMS | Subcontr./Supplier: BTD/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330D Excavator, 450LC Excavator, 624H Front End Loader, 410J
Site Activities / Observations / Contacts / Notes: Backhoe, BW 172 Roller, D5G Dozer, Water Truck

AMS:
All personnel worked at the CBS.

BTD:
Pumps and hoses were setup for dewatering south of Pond D. The dewatering was setup to discharge into Pond B. After dewatering began, all the water was pumped out of the wells in a matter of minutes, with very little excess water entering the wells. Therefore, dewatering ceased and will only be performed as needed south of Pond D. PCP pipe was staged and socked south of Pond D. Finish Grading and compaction occured on PCP-1, 2, and 3. No pipe laid.

FLT/BCI/TSI:
Clay Placement – Southbound Section C. A ≈200' strip will be placed on the west side of Section C first to allow the construction of the paved gutter to begin.
Area = P-47 to 52, 95 to 98, and 103.
Loads = 238

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 7/5/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 73°AM, 101° PM | Contractor: AMS | Subcontr./Supplier: BTD/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330 D Excavator, 450 LC Excavator, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, Water Truck

AMS:
All personnel worked at the CBS.

BTD:
The excavation for DS-3 was started and completed. Shallow sandstone was encountered and, therefore, DS-3 was offset approx. 10' west where the rock ledge dropped off. Manhole shoring was set and a slotted PVC pipe was placed in the shoring with CA-7 pack for dewatering. The DS-3 manhole base, and two sections were set and CA-7 was placed around the base for a drainage pack. The manhole is within ≈ 2' of grade. Lamac will survey tomorrow, PCP-4 excavation, installation, and backfill began. PCP-4 is run at +0.5% from DS-3 to CO-2. If rock is encountered, the grade will be adjusted accordingly. Length = 70'

FLT/BCI/TSI:
Clay Placement – Southbound Section C.
Area = P-47 to 52, and 95 to 98.
Loads = 186.

Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 7/6/12

TIME: Arrive: 6:00 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.25 hr for lunch)
Weather: Sunny, 79°AM, 106°PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330D Excavator, 450LC Excavator, 624H Front End Loader, 410J
Site Activities / Observations / Contacts / Notes: Backhoe, BW172 Roller, D5G Dozer, Water Truck

AMS:
All personnel worked at the CBS.

BTD/Lamac:
Continued PCP-4 Excavation, Installation, Backfill, and Compaction. Test pits were excavated between the SW corner of Pond D and the SE corner of Pond B. Bedrock depths varied from 5' to 7'. Therefore, PCP-4 will be adjusted accordingly to compensate for the shallow bedrock depths. 70' west of DS-3, PCP-4 is bedded into sandstone anywhere from 6" to 3'. Excavation of the rock became difficult and the grade of PCP-4 was adjusted. PCP-4 runs as follows: DS-3, 70' west at +0.5%, 60' west with a gradual raise of 8.13', back to +0.5% to Kink southwest of Pond D, and now at a +2.5% to Kink southeast of Pond B. The PCP-4 trench is being left open to a depth of ≈5' for the placement of the GCL. Steve Anderson and Jake Lewis with Lamac surveyed the flowlines in DS-3 and PCP-4 70' west of DS-3. Eric Blankenship took Michael Doshiell's spot for BTD. Length = 150'

FLT/BCI/TSI:
Clay Placement - Southbound Section C (reached the SW corner of Section C).
New Trucker - Frank Draper
Area = P-47 to 52, and 95 to 98.
Loads = 169

Representative: Andrew DeCke | Project No.: J019866.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 7 | Zone: — | Client: Geotechnology | Date: 7-5-12

TIME: Arrive: 6:45 | Depart: 5:15 | Travel: 1.0 | Total: 11.5 (½hr. lunch)
Weather: 70-100 | Contractor: AMS | Subcontr./Supplier: —
Equipment Working: —
Site Activities / Observations / Contacts / Notes: Belt construction continuing to place Minimum of 3Foot Coverage Fill over Geo-Membrane. Using D6 to spread Fill being hauled in From offsite Borrow area. Fill being placed in such a way to prevent Geo-Membrane From being wrinkled and/or being torn or punctured. Fill being placed on Panels: P-47thru 52, 95 thru 98.

Additional Comments:

Contractor Representative — Company
Signature — Date 7-5-12
Geotechnology, Inc. — Date 7/5/12
Engineer's Signature

Notice: The Geotechnology representative is on site solely to observe operations of the contractor identified, form opinions about the accuracy of those operations and report those opinions to the client. The presence and activities of the Geotechnology field representative do not relieve the contractor's obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods and sequence of construction.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-07-03	OPEN - no issues. None projected for 2x week look ahead.
2012-06-26	OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-07-03	OPEN - Freitag to schedule worker at Newton.
2012-06-26	OPEN - R. Porter scheduled two drivers for Fawn Lane Trucking at Newton.

04 AMS SAFETY

20120-07-03
[01] Cooling stations in good order [as weather has been hot and dry].
[02] J. Tasich schedule today 07-03 on site, possible return on 07-06.
[03] Safety luncheon scheduled for next Progress Meeting on 07-10.
[04] Discussion on Charah/AMS policy to disable AM/FM radios is equipment to prevent distractions.
[05] Discussion on Charah/AMS policy for backing equipment, and incident at another Charah site.
[06] Discussion on Charah/AMS policy for cell phones [and associated electronics] for non-essential use to be kept is safe place, as electronics will not be allowed in the equipment.
[07] Barricade areas to have either yellow or red tape with notification/identification tag.
[08] BTD to tag/post confined spaces [4x DS, 1x MH, and 1x CB - collector box]
[09] M. Wagstaff indicated Newton Plant has confined space signs for use on this project.

20120-06-26 [01] AER has FWI confined Space plan under review. J. Cravens to monitor confined space for AER, FWI responsible for safety.
[02] B & T has corrected safety glasses.
[03] General safety discussion. Keeping hydrated was discussed.
[04] Joko Tasich on site Monday 6-25 and Friday 6-29.

05 HOUSEKEEPING

2012-07-03 OPEN - No issues.

2012-06-26 OPEN - No issues.
[01] One dumpster will remain onsite until it is full and then it will be removed.

06 PLANT ACCESS - CBT

20120-07-03 OPEN
[01] General discussion security guard. M. Wagstaff indicated that guard can leave anytime.
[02] R. Porter indicated no issues with the lock [Decatur Alarm?].

20120-06-26 OPEN
[01] Guard on site has been directed not to track/document/work for any of APD project. Guard has been directed to leave the site and lock the gate when AMS SM leaves. Guard will wait outside of gate if still on duty.
[02] M. Wagstaff to confirm new agreements with a Ms. Holly and check on issue with locks.

08 OSHA LOG - WORK HOURS

2012-07-03 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-02.
No incidents or accidents.
4,701.00 RT
1,006.50 OT
5,707.40 TOTAL

2012-06-26 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-25.
No incidents or accidents.
4,268.00 RT
912 OT
5,185.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-07-03 AMS, BT Drainage [BTD], Belt Construction [BCI] on site.
[02] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[03] Laborers [AMS 1x, BTD 2x]
[03] Operators [AMS 0x, BCI 1x, BTD 2x]
[15] Teamsters [FLT 14x borrow haul trucking, AMS 1x]
[00] Survey
[02] Foreman [Full time] [AMS 1x, BTD 1x]
[25] TOTAL

2012-06-26 AMS, BT Drainage [BTD], Belt Construction [BCI] on site.
[02] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[05] Laborers [AMS 3x, BTD 2x]
[04] Operators [AMS 1x, BCI 1x, BTD 2x]
[16] Teamsters [FLT 15x borrow haul trucking, AMS 1x]
[00] Survey
[02] Foreman [Full time] [2x]
[29] TOTAL

02 WORK HOURS AND OVERTIME

2012-07-03 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Project will be shut down Wednesday 7-4 for the for the 4th of July Holiday.

2012-06-26 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Project will be shut down Wednesday 7-4 for the for the 4th of July Holiday.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-07-03 OPEN - no issues.

2012-06-26 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-07-03 OPEN - no issues.

2012-06-26 OPEN - no issues.

02	**SUBMITTALS**	
	20120-07-03	No change to Submittal log as published by GEO. [01] AMS to submit the collector box structure. [01] AMS to submit the CA-6 stone. [03] FWI "Baro Diver" sensor discussion - resubmit correct unit. [04] FWI to submit J. Barrett as qualified/certified HDPE welder/installer. [05] AMS to review with FWI the scope of the handheld devise for the DS controls.
	20120-06-26	Submittal log as published by GEO on 06-21 distributed. [01] Submittal log copies distributed by e-mail, but no copy at meeting. [02] Freitag submittal on Control Panel needed asap, due to required delivery lead time.

08 MATERIAL

01	**GENERAL**	
	2012-07-03	Large boulders found in excavations to be returned to area.
	2012-06-26	OPEN [01] Some HDPE Liner was returned. [02] Structures and stone need to be completed and submitted.

09 ADJACENT PROPERTIES AND PCP LINE

01	**GENERAL**	
	2012-07-03	Field collector tile [01] Alignment and elevation issue. J. Cravens to provide sketch. Review of drawings by team.
	2012-06-26	OPEN - Discussion during Progress Meeting: [01] MW-2 has been removed. [02] Pipe installation is going well, with no current issues. [03] No snow fence to be installed per Wampler, to help with irrigation. [04] J. Boyer indicated working directly for Wampler to make field tile connections. [08] Existing conflicting power/light poles have been removed, except for one.

10 QUALITY CONTROL

03	**CLAY**	
	2012-07-03	NONE
	2012-06-26	OPEN - Roots being pulled out of the material as necessary. [01] Section A should be completed 2-3 days ahead of schedule. [02] AMS has changed schedule to begin clay placement in Area C in lieu of Section B, after Section A is complete. [03] Belt to bring second dozer onsite around 7/9 to begin fine grading.

11 SCHEDULE REVIEW

01	**SCHEDULE**	
	20102-07-03	OPEN. Review of last planner by B. Muesenfechter. [01] M. Wagstaff on vacation 07-04 through WE. [02] M. Wagstaff requested for time being [while subcontractors on look-ahead] to attend the progress meeting. [03] Negative float now shown due to re-schedule. [04] Feedback required from AAA on scope and approval for the electrical EWO's by AER. [05] B. Muesenfechter brief review of fragnets for EWO's. [06] S. Boyer indicated needed field tile submittal information. [07] General review and discussion of DS PCP progress.
	2012-06-26	OPEN - Review of Last Planner schedule 06-19 handed out [01] AMS will change the next area of clay placement to Area C, In lieu of Area B as originally scheduled. [02] AMS intends to begin concrete work ahead of schedule. This is the main reason for changing the area of clay placement on Pond D.

12.0 COST AND BUDGET

02	**AMS PAY APPLICATION - CHANGE REQUEST**	
	2012-07-03	OPEN - P. Zinsious to submit draft pay-app for M. Wagstaff to review. M. Wagstaff back-up documents for EWOs' to PO.
	2012-06-26	OPEN - M. Wagstaff reports pay-app "signed off" for May. [01] MW has furnished backup information for revised P.O. to AMS. AMS to review and execute if correct. [02] AMS to submit June Draft Pay Request at next meeting 7-3.

12.1 EXTRA WORK ORDERS

11	**EWO-11**	**BUILDING SPOILS REMOVAL**
	2012-07-03	OPEN - AMS moving spoils materials as "fill-in" type work. Utilizing existing backhoe on site.
	2012-06-26	OPEN - AMS to investigate including the spoils [ash material] from the liner anchor trench excavation. JD & MW to review costs.
13	**EWO-13**	**Electrical feeder/overhead**
	2012-07-03	OPEN - M. Wagstaff reports Hanson has under review, and should have design drawing at EOW.
	2012-06-26	OPEN - AMS presented hard copy of EWO for AER to review; MW evaluating.

14	**EWO-14**	**FIELD TILE LOCATION**
	2012-07-03	Elevation could be an issues. M. Wagstaff indicated possible change in elevation no-issue. Team to review.
		AER not to pay for removal of shale. Elevation of field tile in lower than the PCP.
	2012-06-26	Tiles to be field located between B&T and Wampler. Geotechnology and Ameren to approve proposed locations.

13 ACTION ITEMS - AER [25]

01	**AMEREN [AER]**	
	2012-07-03	[01] M. Wagstaff to complete submittal reviews; electrical
	2012-06-26	OPEN
		[1] MW to complete submittal reviews; electrical

14 ACTION ITEMS - AMS [21]

01	**ASH MANAGEMENT [AMS]**	
	2012-07-03	[01] Concrete submittals ASAP - P. Zinsious to review.
	2012-06-26	OPEN
		[1] Concrete submittals needed asap.

15 PRODUCTION

03	**CLAY**	
	2012-07-03	OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 07-02 is 33,165 CY. R. Porter presented sketch M/U.
	2012-06-26	OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 06-25 is 21,318 CY.

16 DOCUMENTS TRANSMITTED

2012-07-03	[01] AER - Last Planner schedule dated 06-29.
	[02] AMS - Critical Path schedule dated 06-29
2012-06-26	[01] AMS - Last Planner schedule dated 06-19.
	[02] GEO - Submittal Log published 06-21.

17 DOCUMENTS REVIEW ONLY

2012-07-03	[01] SK-HUT-APD-006-R0 "Groundwater Collection - Section Breakouts"
	[02] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-06-26	NONE

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, July 10, 2012 at Hutsonville

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: July 16, 2012

SUBJECT: Weekly Summary Report for July 9, 2012 to July 13, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 70 to 75°F, and temperature highs ranged from 90 to 98°F. Weather delays did not occur this week.

Construction Activities

Groundwater collection system installation, remote vent and sump discharge pipe installation, electrical conduit installation, manhole coring, paved gutter excavation, electrical layout, and clay placement occurred this week. B&T Drainage continued construction of the groundwater collection system. This included work at dewatering sump DS-3 and DS-4, perforated collector pipe PCP-4, PCP-5, PCP-6, and dewatering. The collector trench was excavated south of Ash Pond A. The remote vents, sump discharge pipe, electrical feeder conduit, and the high and low voltage conduit were installed within the collector trench. DS-1 and DS-2 manholes were cored for the remote vents and the sump discharge pipe. Sump discharge pipe was welded before installation. The paved gutter excavation began and ash spoils excavated were transported to Ash Pond A. Lamac Engineering Co. surveyed grades for the groundwater collection system, paved gutter, and began staking slope diversion berms in Quadrant A. Fawn Lane Transit, Inc. and Belt Construction, Inc. continues clay placement in Quadrant C. Approximately 12 to 16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 330D Excavator
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Steve Graham, and Anna Saindon
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Matt Dishman, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. (LEC) – Jake Lewis and Steve Anderson
B&T Drainage (BTD) – John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Michael Dashiell, and Eric Blankenship
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gray Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Patrick Wente, and Frank Draper
Freitag-Weinhardt, Inc. (FWI) – Mike Burch, Scott Burch, and Jarrod Barrett
AAA Electric, Inc. (AAA) – Joe King and Kyle Davidson
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, July 10, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Electronic Filing: Received, Clerk's Office 09/28/2020

Materials

Clay for the vegetative layer, manhole base and sections for DS-4, 3-inch HDPE DR11 for sump discharge, 1-inch HDPE pipe for remote vents, HDPE fittings, 2-inch schedule 80 stainless steel discharge pipe for sumps, 2-inch schedule 40 PVC conduit for high and low voltage junction box feed, 2-1/2 inch schedule 40 PVC conduit for the electrical feeder, welded wire fabric W1.4xW1.4 for the paved gutter, and IDOT CA-7 aggregate was delivered.

Testing/Sampling

Two samples of the clay vegetative layer on-site were obtained for analytical and geotechnical testing.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

Electronic Filing: Received, Clerk's Office 09/28/2020

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14291

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/9/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 72°AM, 90°PM | Contractor: AMS | Subcontr./Supplier: BTD/LEC/FLT/BCI/TSI/FWI
Equipment Working: D6N Dozer, 330D Excavator, 450 LC Excavator, 624H Front End Loader, BW172
Site Activities / Observations / Contacts / Notes: Roller, D5G Dozer, Water Truck

AMS:

All personnel worked at the CBS. James Marks is no longer working for AMS. Matt Dishman is back on-site, temporarily full time.

BTD/LEC:

The excavation, installation, backfill, and compaction of PCP-4 continued. PCP-4 continues at a +2.5% from the Kink southwest of APD towards the Kink southeast of APB. After the Kink southeast of APB was reached, PCP-4 was ceased and will not continue until the 12" ADS Tile is delivered and can be ran parallel with PCP-3 and PCP-4 south of APB. Jake Lewis and Steve Anderson with LEC surveyed PCP-4 between the Kinks. PCP-5 excavation, installation, and backfill began. PCP-5 is being run at a +0.5% grade from DS-3 towards CO-3. Another section was added to DS-3 and DS-3 backfill continued. Dewatering was also setup in the DS-3 manhole and in the temporary casing adjacent to DS-3. A test pit was excavated at the location of CO-2 to determine the depth of bedrock for both the PCP and ADS Tile. The difference between the ADS flowline in the grade inlet southwest of DS-1 and the bedrock at CO-2 is 0.55', with the rock being the lower elevation. Rock breaking/ripping will be required. Delivery - MH base with sections and additional CA-7. Eric Blankenship is still here for Mike Dashiell. PCP-4 Length = 160', PCP-5 Length = 40', Total = 200'

FWI:

Freitag-Weinhardt, Inc. mobilized. Personnel - Scott Burch and Jarrod Barrett.

FLT/BCI/TSI:

Clay Placement - Southbound Section C.
Area = P-46 to P-49, and P-53 to P-59. Loads = 151

Additional Comments:

Randy Porter — Contractor Representative — AMS — Company
Randy Porter — Signature — 7-9-12 — Date
Anna Sanders — Geotechnology, Inc. — 7-16-12 — Date
Engineer's Signature

Notice: The Geotechnology representative is on site solely to observe operations of the contractor identified, form opinions about the accuracy of those operations and report those opinions to the client. The presence and activities of the Geotechnology field representative do not relieve the contractor's obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods and sequence of construction.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14292

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 7/10/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.5 hr for lunch)
Weather: Sunny, 70°AM, 94°PM | Contractor: AMS | Subcontr./Supplier: BTD/LEC/FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330D Excavator, 450 LC Excavator, 624H Front End Loader, BW 172
Site Activities / Observations / Contacts / Notes: Roller, 410J Backhoe, D5G Dozer, Water Truck

AMS:

All personnel worked at the CBS.

BTD:

The excavation, installation, backfill, and compaction to GCL cap of PCP-5 continued. PCP-5 continues at a +0.5% grade from DS-3 to CO-3. Water has been an issue in the trench south of APD and dewatering continues in DS-3 manhole and adjacent to DS-3 manhole. The boulders excavated south of APA were buried in the PCP-5 backfill. The backfill around DS-1 and DS-2 manholes was excavated to allow access for FWI to begin work. Length = 90'

LEC:

Lamac surveyed PCP-5 and staked out the ℄ for the Paved Gutter with 25' %s on the west side of APD, and began staking slope diversion berms in Section A.

FWI:

Delivery - 6000' of 3" HDPE DR11 for sump discharge, 1000' of 1" HDPE pipe for remote vents, HDPE fittings, 2" Sch. 80 stainless steel discharge pipe for sumps, 2 generators, and a job box (Konex). They will begin butt fusion welding tomorrow.

FLT/BCI/TSI:

Clay Placement - Southbound Section C.
Area = P-46 to P-62, and P-99 to P-102. Loads = 229

Misc.:

Collector conduit will be %s 10' north of the as-built PCP for its entire length. PCS west poles will be %s 5' south of the embankment toe.

Additional Comments:

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14293

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 7/11/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 74° AM, 95° PM | Contractor: AMS | Subcontr./Supplier: BTD/LEC/FWI/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330 D Excavator, 450 LC Excavator, BW 172 Roller,
Site Activities / Observations / Contacts / Notes: 624H Front End Loader, 410J Backhoe, Water Truck

AMS:
The 580 graded the plant entrance and roadways. All other work performed at the CBS.

BTD:
PCP-5 excavation, installation, backfill, and compaction to GCL Cap was completed; Length = 113'. PCP-5 has a consistent grade of +0.5% from DS-3 to CO-3. CO-3 will be installed after completing PCP-6. Additional boulders from the west side of the PCP excavation were buried in PCP-5 excavation. The excavation of DS-4 began. The manhole shoring was set, and dewatering was setup inside the shoring, and adjacent to DS-4. BTD's new schedule: DS-4, PCP-6, CO-3, PCP-7, CO-4, GCL Cap, PCP-4/Tile, PCP-3/Tile, and CO-2 south of APB. Mike Dashiell is back on-site and John Boyer was here. The 410J Backhoe was demobilized. Field Change: The paved gutter on the west side of APD will now be a V-bottom. The flowline and top of slope elevations will remain the same. Refer to S-386, Sheet No. 11, Detail 2.

LEC:
The PCP-5 and additional slope diversion berms were surveyed.

FWI:
Two holes were cored in DS-1 and DS-2 manholes. The first hole is for the 1" HDPE pipe for the remote vents, and the second hole is for the 3" HDPE DR-11 for the sump discharge. The 1" and 3" holes are 1' and 3' below the ground surface, respectively. They began butt fusion welding the 3" HDPE DR-11. A McElroy No. 14 PitBull is being utilized for the butt fusion. (1" IPS - 4" DIPS pipe for the PitBull.). Length Fused = 200'.

FLT/BCI/TSI:
Clay Placement - Southbound Section C.

Additional Comments: Area = P-46 to P-62, 92, 93, 94, 99-102.
Loads = 261

Weather: Sunny, 72° AM, 98° PM | Contractor: AMS | Subcontr./Supplier: AAA/FWI/BTD/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330D Excavator, 450 LC Excavator, BW 172 Roller, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, L245DT Tractor, D5G Dozer, Water Truck

AMS:
Assisted BTD and performed work at the CBS.

AAA:
Joe King staked the layout for the 10 power poles for the overhead electric running from the MCC to APD, and the location of the west pump control panel. Tomorrow the west control panel rack assembly will be installed and they will begin the conduit for the electric feeder.

FWI:
Butt fusion welding 3" HDPE DR11 continued. Length Fused = 800'.

BTD:
DS-4 excavation was completed. The DS-4 manhole base and two sections were set and partially backfilled. PCP-6 excavation, installation, and backfill was started. PCP-6 runs at +3.5% from DS-4 towards CO-3. They began grading the paved gutter on the west side of APD. New Equipment: Kubota L245DT Tractor and another 410J Backhoe. Tomorrow they will begin excavating the conduit collector trench south of APA. Length = 60' feet

FLT/BCI/TSI:
Clay Placement - Southbound Section C.
Area = P-54 → 60 and P92 → 94
Loads = 256

Additional Comments: Note: Paved Gutter Ash Spoils are dumped in Pond A.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-07-10	OPEN - no issues. None projected for 2x week look ahead.
2012-07-03	OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-07-10	OPEN - Freitag to schedule worker at Newton.
2012-07-03	OPEN - Freitag to schedule worker at Newton.

04 AMS SAFETY

2012-07-10 [01] Safety luncheon today. General topics per Charah/AMS policies as noted below on 07-03 Items no. 04, 06, and 06.
[02] AMS to pick up confined space signs.
[03] General safety discussion.
[04] Joko Tasich schedule TBD.

~~20120-07-03~~ [01] Cooling stations in good order [as weather has been hot and dry].
2012-07-03 [02] J. Tasich schedule today 07-03 on site, possible return on 07-06.
[03] Safety luncheon scheduled for next Progress Meeting on 07-10.
[04] Discussion on Charah/AMS policy to disable AM/FM radios is equipment to prevent distractions.
[05] Discussion on Charah/AMS policy for backing equipment, and incident at another Charah site.
[06] Discussion on Charah/AMS policy for cell phones [and associated electronics] for non-essential use to be kept is safe place, as electronics will not be allowed in the equipment.
[07] Barricade areas to have either yellow or red tape with notification/identification tag.
[08] BTD to tag/post confined spaces [4x DS, 1x MH, and 1x CB - collector box]
[09] M. Wagstaff indicated Newton Plant has confined space signs for use on this project.

05 HOUSEKEEPING

2012-07-10 OPEN - No issues.

2012-07-03 OPEN - No issues.

06 PLANT ACCESS - CBT

20120-07-10 OPEN
[01] General discussion - no issues.
[02] R. Porter clarified issue was with the lock and access by G. Musch.

20120-07-03 OPEN
[01] General discussion security guard. M. Wagstaff indicated that guard can leave anytime.
[02] R. Porter indicated no issues with the lock [Decatur Alarm?].

08 OSHA LOG - WORK HOURS

2012-07-10 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-09.
No incidents or accidents.
4,992.00 RT
1,046.50 OT
6,038.50 TOTAL

2012-07-03 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-02.
No incidents or accidents.
4,701.00 RT
1,006.50 OT
5,707.40 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-07-10 AMS, BT Drainage [BTD], Belt Construction [BCI], Freitag [FWI] on site. Introduction M. Dishman Charah/AMS FOCUS Site Manager.

02 WORK HOURS AND OVERTIME

2012-07-10	OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT.
2012-07-03	OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Project will be shut down Wednesday 7-4 for the for the 4th of July Holiday.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-07-10	OPEN - no issues.
2012-07-03	OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-07-10	OPEN - no issues. J. Griffith [Fawn Lane Trucking] partner stroke this week.
2012-07-03	OPEN - no issues.

02 SUBMITTALS

20120-07-10	Submittal log as published by GEO on 06-23 distributed. [01] Submittal log review, and general conversation of codes. [02] S. Boyer need field tile and submittal to continue. M. Wagstaff indicated that if pipe same as drawings [12 In AASHTO], proceed. P. Zinsious to investigate status of submittal. Sand is same as before FA-1. [03] M. Burch hand unit issue, P. Zinsious to review after PM. Baro driver submittal. [04] AAA to submit same requirements [AER/AMS] for pole subcontractor [Plant Brothers] to AMS. [05] AAA submit lift plan [form subcontractor] for crane for pole installation. [06] AER review of FWI confined space plan in progress. [07] FWI and BTD to review water removal form DS after PM.
20120-07-03	No change to Submittal log as published by GEO. [01] AMS to submit the collector box structure. [01] AMS to submit the CA-6 stone. [03] FWI "Baro Diver" sensor discussion - resubmit correct unit. [04] FWI to submit J. Barrett as qualified/certified HDPE welder/installer. [05] AMS to review with FWI the scope of the handheld devise for the DS controls.

08 MATERIAL

01 GENERAL

2012-07-10	General discussion City of Robinson not give the tax COE an extension as plant closing is not providing jobs. P. Zinsious indicated no impact to cost at this time, and will keep AER posted.
2012-07-03	Large boulders found in excavations to be returned to area.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-07-10	OPEN - Discussion during Progress Meeting: [01] S. Boyer indicated that bedrock should not be an issue for field tile installation. Requires submittals [see submittals]. J. cravens indicate elevation delta only about 0.55 FT to date. [02] Pipe installation is going well, with no current issues. Discussed sequence [see schedule section].
2012-07-03	Field collector tile [01] Alignment and elevation issue. J. Cravens to provide sketch. Review of drawings by team.

10 QUALITY CONTROL

03 CLAY

2012-07-10	No issue. A. Saindon indicated that clay samples will be taken on site today for chemical and physical analysis.
2012-07-03	NONE

11 SCHEDULE REVIEW

01 SCHEDULE

2012-07-10	OPEN. Review of last planner by B. Muesenfechter. [01] General discussion introduction Last Planner: sequence, remaining duration units [RDU], and constraints. Last Planner provides a look ahead, engages field supervision, fosters team involvement, commitments and accountability. [02] Substantial completion is 09-28. Clay placement progressing early. [03] Progress has improved two weeks in a row. [04] General review and discussion of DS PCP progress.

~~20102-07-03~~	OPEN. Review of last planner by B. Muesenfechter.
2012-07-03	[01] M. Wagstaff on vacation 07-04 through WE. [02] M. Wagstaff requested for time being [while subcontractors on look-ahead] to attend the progress meeting. [03] Negative float now shown due to re-schedule. [04] Feedback required from AAA on scope and approval for the electrical EWO's by AER. [05] B. Muesenfechter brief review of fragnets for EWO's. [06] S. Boyer indicated needed field tile submittal information. [07] General review and discussion of DS PCP progress.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-07-10	OPEN - M. Wagstaff indicated pay-app no issue.
2012-07-03	OPEN - P. Zinsious to submit draft pay-app for M. Wagstaff to review. M. Wagstaff back-up documents for EWOs' to PO.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-07-10	OPEN - AMS moving spoils materials as "fill-in" continues in progress.
2012-07-03	OPEN - AMS moving spoils materials as "fill-in" type work. Utilizing existing backhoe on site.

13 EWO-13 Electrical feeder/overhead

2012-07-10	OPEN - Final plans by EOW. M. Wagstaff has approved the EWO.
2012-07-03	OPEN - M. Wagstaff reports Hanson has under review, and should have design drawing at EOW.

14 EWO-14 FIELD TILE LOCATION

2012-07-10	Non-issue. Reference Item No. 09.01 2012-07 above.
2012-07-03	Elevation could be an issues. M. Wagstaff indicated possible change in elevation no-issue. Team to review. AER not to pay for removal of shale. Elevation of field tile in lower than the PCP.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-07-10	[01] Fencing VES and/or alignment options. [02] Electrical submittals under review.
2012-07-03	[01] M. Wagstaff to complete submittal reviews; electrical.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT

2012-07-10	[01] Concrete submittals in progress. P. Zinsious to meet with T. Hunt after PM.
2012-07-03	[01] Concrete submittals ASAP - P. Zinsious to review.

15 PRODUCTION

03 CLAY

2012-07-10	OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 07-09 is 42,489 CY. R. Porter presented sketch M/U. LEC performed topographic outline survey to check clay placement estimation. AMS calculated [at time of the survey] 3,608 LD at 11 CY/LD = 39,688 CY. LEC survey area measured by 3 FT THK average calculated to 38,143 CY. This is a delta of only 1,545 CY, and the LD haul rate is agreed will continue to be 11 CY per truck.
2012-07-03	OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 07-02 is 33,165 CY. R. Porter presented sketch M/U.

16 DOCUMENTS TRANSMITTED

2012-07-10	[01] AMS - Last Planner schedule dated 07-06. [02] AMS- Remaining Work schedule dated 07-06. [03] GEO - Submittal Log published 06-23.
2012-07-03	[01] AER - Last Planner schedule dated 06-29. [02] AMS - Critical Path schedule dated 06-29

17 DOCUMENTS REVIEW ONLY

2012-07-10	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-07-03	[01] SK-HUT-APD-006-R0 "Groundwater Collection - Section Breakouts"
	[02] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, July 17, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: July 24, 2012

SUBJECT: Weekly Summary Report for July 16, 2012 to July 20, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 75 to 80°F, and temperature highs ranged from 85 to 102°F. Weather delays occurred on July 18, 2012 from a storm event that occurred the previous evening.

Construction Activities

Groundwater collection system installation, remote vent and sump discharge pipe installation, butt fusion welding, electrical conduit installation, manhole coring, paved gutter construction, paved gutter culvert installation, west pump control panel installation, dewatering sump assembly, and clay placement occurred this week. B&T Drainage continued construction of the groundwater collection system. This included work at dewatering sump DS-3 and DS-4, perforated collector pipe PCP-4, PCP-5, PCP-6, and PCP-7, clean out CO-3 and CO-4, and dewatering. Freitag-Weinhardt, Inc. and AAA Electric, Inc. installed the remote vents, sump discharge pipes, electrical feeder conduit, and the high and low voltage conduit within the collector trench. DS-1 and DS-2 manholes were cored for the installation of junction boxes and conduit drain. The paved gutter excavation west of Ash Pond D was completed, ash spoils excavated were transported to Ash Pond A, and ST Construction, Inc. performed the concrete work. Concrete testing (including slump, air entrainment, and cylinders) was performed by Patriot Engineering, Inc. The southwest culvert for the paved gutter was installed. The west pump control panel rack was assembled and installed. Dewatering sump assembly began, including threading and welding pipe, assembling valves and flanges, and wiring. Lamac

Electronic Filing: Received, Clerk's Office 09/28/2020

Engineering Co. surveyed grades for the groundwater collection system and the east paved ditch. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement in Quadrant B. Approximately 16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 330D Excavator
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Matt Dishman, Robert Dunkley, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. (LEC) – Jake Lewis
B&T Drainage (BTD) – John Boyer, Scott Boyer, Colby Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Michael Dashiell, and Eric Blankenship
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gray Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Patrick Wente, Frank Draper, and Jason Byers
Freitag-Weinhardt, Inc. (FWI) – Scott Burch, Clay Cochran, and Jarrod Barrett
AAA Electric, Inc. (AAA) – Joe King and Kyle Davidson
ST Construction, Inc. (STC) – John Maetin, Jackie Hoover, Gary Hedges, Scott Hilton, and Robert Pressley
Patriot Engineering, Inc. (PEI) – Brandon McDonald and Thad Simpson
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, July 17, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, IDOT Class SI concrete, Seal Tight Deck-O-Foam expansion joint filler, Right Pointe White Water Wax curing compound, and Sonolastic NP-1 elastometric polyurethane joint sealant for the paved gutter, 12-inch ADS Pipe for paved gutter culvert and field tile, 12-inch flared-end sections, and dewatering sump assembly including four sump pumps and accessories. Refer to the submittals for the dewatering sump assembly models and specifications.

Testing/Sampling

Patriot Engineering, Inc. performed concrete testing, including slump and air entrainment testing. Four concrete cylinders were cast and retrieved for testing. Refer to the concrete testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14296

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/16/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 76° AM, 94° PM | Contractor: AMS | Subcontr./Supplier: BTD/FWI/AAA/FLT/BCI/TSI/STC
Equipment Working: D6N Dozer, 330D Excavator, 450LC Excavator, 624H Front End Loader, BW 172 Roller,
Site Activities / Observations / Contacts / Notes: 410J Backhoe, D5G Dozer, L245DT Tractor, Water Truck

AMS:
Assisted BTD, AAA, and performed work at the CBS.

BTD:
The excavation, installation, backfill, and compaction of PCP-6 was completed. PCP-6 runs as follows: DS-4, 60' west @ 3.5%, 80' west @ 3.0%, and @ 2.5% west to CO-3. The installation of CO-3 was completed. Clearing for PCP-7 excavation began. Paved Gutter excavation and grading on the west side of APD continues.

STC:
ST Construction, Inc. arrived on site. Personnel: John Maetin, Jackie Hoover, Gary Hedges, Scott Hilton, and Robert Pressley. The V-bottom gutter was formed on the SW side of APD, and the Welded Wire Fabric (6x6 W1.4xW1.4) was cut and will be floated in 2" from the subgrade during pouring. Field Change: The 1.0' minimum depth between the top of the slope and the flowline was approved not to be followed. Delivery - Seal Tight Deck-O-Foam ½" x 6" x 50' for expansion joint filler.

AAA:
Installed additional 2" and 2½" Schedule 40 PVC Conduit. The 2½" conduit will be the electric feeder to the west pump control panel. The 2" conduit will run from each manhole to the pump control panel, 2 lines per manhole. This will connect to the high and low voltage junction boxes attached to the manhole. Refer to S-386, Sheet 12, Detail 4.

FWI:
Continued butt fusion welding 3" HDPE discharge pipe. Length = 800'.

FLT/BCI/TSI: Additional truck - Jason Byers.

Additional Comments: Clay Placement - Section C was completed and began Section B. Loads = 219

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.5 hrs (no lunch) /PEI
Weather: Sunny, 78° AM, Rain, 98° PM | Contractor: AMS | Subcontr./Supplier: BTD/STC/AAA/FWI/LEC/FLT/
Equipment Working: D6N Dozer, 330D Excavator, 450LC Excavator, 624H Front End Loader, BW 172 BCI/TSI
Site Activities / Observations / Contacts / Notes: Roller, 410J Backhoe, D5G Dozer, L245DT Tractor, Water Truck

AMS:
Delivery - Thompson Pump for dewatering DS-1 and DS-2 to set sumps. Assisted BTD and STC.

BTD:
The excavation, installation, backfill, and compaction of PCP-7 began. PCP-7 is being laid at a 0.90% grade heading east from DS-4. Paved Gutter excavation and grading continued on the west side of APD. Another section of the box culvered draining into APC will have to be removed to complete the gutter in this area. The excavation for the 12" ADS Culvert (w/ metal end sections) began which will drain the gutter on the SW corner of Section C. The 12" Culvert will be placed under the existing 18" HDPE drainage pipe and concrete casing. The manhole box around DS-4 was removed and DS-4 backfill began. An additional trench box was delivered to stack for the PCP-7 excavation. Dewatering continues adjacent to DS-4. Paved Gutter ash spoils dumping into APA continued. Note: detectable warning tape will not be required for the PCP. L = 110'

STC:
They began pouring the Paved Gutter on the west side of Section C. The concrete is being delivered from R&L Ready Mix Concrete, Inc. out of Robinson, IL. The concrete ordered is IDOT Class SI, 4000 psi, ±4" Slump, W/C of 0.4, with 5-7% air-entraining agent. The concrete finish is a smooth rubbed finish with broom. After finishing, Right Point White Water Wax Curing Compound was applied. Due to excessive heat, they began saw cutting contraction joints at 10' intervals (1½"-2" depth). Seal Tight Deck-O-Foam expansion joints were utilized (½" x 6"). In areas of the gutter where the thickness...

Site Activities / Observations / Contacts / Notes:

STC/PEI (cont.):

... is greater than 6", the expansion joints will be doubled to acheive the full depth of the slab. Both expansion and contraction joints will receive Sonolastic NP1 elastometric, gun-grade polyurethane joint sealant. Burlap will be used to cover the concrete to prevent excessive heat and cracking. Patriot Engineering, Inc. will be used as the testing agency for the concrete due short notice of the concrete placement. Test results will be sent to Ameren and/or the CQA Officer. Brandon McDonald with PEI took 4 cylinders, one slump test (4½"), one air test (5.2%), all at a temperature of 85°. Three trucks total delivery - 1(7 cy), 2(8 cy) and 3(6 cy), totalling 21 cy of concrete.

AAA:

The west pump control panel rack assembly was set in place. The 4" stainless steel conduit, to be used for electric feed from the MCC building to the overhead electric, was installed on the existing power pole beside the MCC building. No electric lines have been installed yet.

FWI:

Deliveries - The 4 sumps for the manholes have been delivered, including setup accessories such as the 12 float switches, 4 check valves, 4 flanged pitless adapters (tees), simplex controllers, 4 flow meters, 4 paddlewheel flow sensors, 4 transition reducers, and cables. Refer to project submittals for brands, models, and specifications. The Baro Diver level sensors and data loggers have not been received yet.

LEC: Surveyed flowlines in DS-4, CO-3, and PCP-7, along with the east Paved Ditch.

FLT/BCI/TSI:

Clay Placement - Eastbound on Section B.

Additional Comments: Area = P-29 to P-31, and 62 to 67.
Loads = 215

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 7/18/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.5 hrs (no lunch)
Weather: Sunny, 75° AM, 102° PM | Contractor: AMS | Subcontr./Supplier: BTD/STC/BCI/FWI/AAA
Equipment Working: D6N Dozer, 330 D Excavator, 450 LC Excavator, 624 H Front End Loader,
Site Activities / Observations / Contacts / Notes: 410 J Backhoe, D5G Dozer, Water Truck, 580 Backhoe

AMS:
The plant entrance and access roads were cleaned from the washout. The paved concrete gutter was re-covered with burlap and plastic; the cover had blown off from the storm. Silt fence was installed on the east side of the gutter to prevent further material washing down onto the gutter from the Pond. Housekeeping performed around job trailers.

BTD:
Setup numerous pumps in the PCP trench for dewatering due to the storm. The remaining dewatering wells were removed south of APD. The 12" ADS Culvert was installed on the SW corner of Section C. The flared end sections were installed on the culvert. Field Change: Plastic flared end sections were used instead of metal. The northern flared end will receive a concrete collar when the gutter is completed, and the southern flared end will drain into riprap which drains into the Paved Ditch. Delivery - 12" ADS Field Tile. The manhole boxes were taken apart and demobilized along with the slotted well casings.

STC:
Stripped gutter forms and saw cut contraction joints. Too wet to pour or form gutter. The curing compound was applied from the day before.

BCI:
Graded ash spoils dumped in APA to allow ash spoil dumping within the geotubes.

AAA: Cored DS-1 and DS-2 for the high and low voltage junction boxes, and the conduit drain. They also sized stainless steel fittings and link seals for the core holes.

FWI: The stainless steel (2") discharge pipe was threaded and the check valves were assembled. Clay Cochran established the

Additional Comments: confined space entry for the manholes.
FLT/TSI: No Production; Too Wet for Clay Placement.

Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 7/19/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 80° AM, 101° PM | Contractor: AMS | Subcontr./Supplier: BTD/STC/FWI/LEC/PEI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 330 D Excavator, 450 LC Excavator, 624H Front End Loader, BW 172, 580, Roller, 410J Backhoe, D5G Dozer, L245DT Tractor, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Layout was added to the staked slope diversion berms in Section A and the plant access roads were graded. Assisted BTD, STC, and poured the posts for the west pump control panel.

BTD:
The excavation, installation, backfill to GCL cap, and compaction of PCP-7 was completed. PCP-7 runs from DS-4 east to CO-4 at a +0.9% grade. L=210'. CO-4 was installed and backfilled. The V-bottom paved gutter was regraded on the west side of Section A due to the storm. Paved gutter ash spoils were transported to Ash Pond A.

STC:
The paved gutter on the west side of Section C was poured, finished, and cured. A concrete collar was poured around the 12" ADS Culvert on the SW corner of Section C. Expansion joints were placed every 30' and contraction joints were saw cut every 10'. The forms were stripped in the PM. They began forming, pouring, finishing, and curing the paved gutter on the west side of Section A. The gutter was slightly offset to drain directly into the existing box culvert to prevent an additional precast box section from being taken out. Three concrete batches from R&L Ready Mix were poured: 1(8cy), 2(6.5cy) and 3(8cy) totalling 22.5 cy.

PEI:
Thad Simpson took 4 cylinders, one Slump-5", one Air-5.5% all at 78°.

LEC:
Jake Lewis surveyed PCP-7 during installation.

FWI: Placed link seals on the remote vents in DS-1 and DS-2 and Fused 800' 3" HDPE.

FLT/BCI/TSI: Clay Placement - Eastbound Section B

Additional Comments: Area = P-29 to 33 and 63 to 67. Loads AAA Electric had no production today. = 246

AMS:
Continued transporting anchor trench spoils from the NW corner of APD to APA.

BTD:
Manhole sections including tops were set on DS-3 and DS-4. DS-3 and DS-4 were backfilled to GCL cap. Note: All of the precast manhole tops do not have mastic joint sealant applied yet because they will be pulled during sump pump installation. Mastic will be applied to the tops following sump pump installation. They began finish compaction and grading for the GCL cap, 5' below the ground surface, along PCP-4, PCP-5, PCP-6, and PCP-7. At a depth of 5', the PCP trench will be cut back an additional foot for GCL coverage. Note: As-Built lengths for PCP-5 240', PCP-6 180', and PCP-7 330'. Colby Boyer was here to haul off pumps, hoses, shoring, and generators. Equipment and materials were staged along PCP-3 and PCP-4.

STC:
The paved gutter on the north end of the box culvert on the west side of Section A was poured, finished, cured, saw cut, and the forms were stripped. Contraction joints are every 10' and expansion joints are every 30'. Contractions are 1½"-2" deep, and expansions extend the full depth of the slab. Began forming gutter on the south end of the box culvert on the west side of Section A. Three concrete batches - 1(8cy), 2(8cy), 3(3cy) totalling 19 cy.

PEI:
Thad Simpson took 4 cylinders, one Slump - 4½", one Air - 6%, and a temperature of 77°.

FWI:
Continued staging and butt fusion welding 3" HDPE Sump Discharge. Length Fused = 960'

FLT/BCI/TSI: Section B, Area = 32 to 36, 66 to 69. L = 197

Additional Comments: All electrical conduit in collector trench will be spaced 12" and haunched with IDOT FA-01 Sand.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-07-17	OPEN - no issues. J. King indicated will be a while before access to MCC is required. None projected for 2x week look ahead.
2012-07-10	OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-07-17	OPEN - FWI had 1x at Newton on 07-16. STC had 5x on 07-16.
2012-07-10	OPEN - Freitag to schedule worker at Newton.

04 AMS SAFETY

2012-07-17 [01] J. Tasich on site 07-13. Schedule this week TBD.
[02] R. Porter indicated will pick up signs today for confined space, but further discussion, M. Wagstaff indicated R. Spurgeon [Newton Senior Safety Supervisor] can bring with him when on-site tomorrow [tentatively 10:00 AM CT] for FWI confined space entry review. M. Wagstaff to coordinate the meeting with Mr. Spurgeon.
[03] Relative the confined space entry for the DS, the lids will be removed on 07-17.
[04] B. Muesenfechter inquired about emergency response. S. Burch described details for response [i.e. call 911, he is an EMT, access tripods, 02 monitor 100% of the time, etc...].
[05] B. Muesenfechter inquired about barricade the PCP excavation. R. Porter reported this is dome every day at the end of the day. The barricade consists of either tape and or/berms.
[06] General comment on watching out for traffic as the site is very busy with trucks and the other Ameren contractors on site.

2012-07-10 [01] Safety luncheon today. General topics per Charah/AMS policies as noted below on 07-03 items no. 04, 06, and 06.
[02] AMS to pick up confined space signs.
[03] General safety discussion.
[04] Joko Tasich schedule TBD.

05 HOUSEKEEPING

2012-07-17 OPEN - No issues. M. Wagstaff indicated site is dusty. Traffic level is high [see above] due to truck and Ameren [line] subcontractor.

2012-07-10 OPEN - No issues.

06 PLANT ACCESS - CBT

20120-07-17 No issues.

20120-07-10 OPEN
[01] General discussion - no issues.
[02] R. Porter clarified issue was with the lock and access by G. Musch.

08 OSHA LOG - WORK HOURS

2012-07-17 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-02.
No incidents or accidents.
5,481.00 RT
1,174.00 OT
6,655.00 TOTAL

2012-07-10 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-09.
No incidents or accidents.
4,992.00 RT
1,046.50 OT
6,038.50 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-07-17 AMS, BT Drainage [BTD], Belt Construction [BCI], Freitag [FWI], and AAA Electric.
[02] Geotechnology [work hours not included in OSHA Log above]
[02] Pipe
[00] Mechanical
[02] Electrical
[00] Cement
[09] Laborers [AMS 2x, BTD 2x, STC 5x]
[04] Operators [AMS 0x, BCI 1x, BTD 3x]
[17] Teamsters [FLT 16x borrow haul trucking, AMS 1x]
[00] Survey
[03] Foreman [Full time] [AMS 2x, BTD 1x]
[39] TOTAL

2012-07-10 AMS, BT Drainage [BTD], Belt Construction [BCI], Freitag [FWI] on site. Introduction M. Dishman Charah/AMS FOCUS Site Manager.
[02] Geotechnology [work hours not included in OSHA Log above]
[02] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[04] Laborers [AMS 2x, BTD 2x]

[30] TOTAL

02 WORK HOURS AND OVERTIME

2012-07-17	OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT - STC, FWI, and BTD.
2012-07-10	OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-07-17	OPEN - no issues.
2012-07-10	OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-07-17	OPEN - no issues. J. Griffith [Fawn Lane Trucking] update
2012-07-10	OPEN - no issues. J. Griffith [Fawn Lane Trucking] partner stroke this week.

02 SUBMITTALS

20120-07-17	[01] J. Cravens indicated will update 06-23 submittal log. [02] M. Wagstaff discussion about accelerated work and time for submittal requirements. Look ahead in Last Planner. [03] Field tile submittal P. Zinsious may have to resubmit. [04] M. Burch hand unit issue, P. Zinsious to review after PM. Baro driver submittal. In progress. [05] P. Zinsious indicated A. Saindon review of CA-6 submittal AASHTO qualification issue. [06] AAA submit lift plan [form subcontractor] for crane for pole installation. [07] AER review of FWI confined space plan in progress. [08] Water removal from DS will by AMS. BTD to provide four plugs. No submittal. [09] M. Wagstaff indicated AAA can submit the aluminum wire and the rest of the EWO as no major changes to design. The 3 Phase size for wire is OK. [10] J. King inquired about electrical hand-hold boxes if now required. M. Wagstaff review. [11] J. King indicated AAA to use link seal to seal conduit penetrations. [12] J. King review of location junction boxes - field locate. Orientation of DS [steps] varies per S. Boyer. [13] J. King indicated AAA provide detectable warning tape. BTD will not required as pipe is deep. [14] S. Burch inquired about DS pump control float elevation and weights. [15] S. Burch indicated only two remote vents located on the drawings. FWI will install remote vents on all at no charge. [16] S. Burch inquired about elevation of stand pipe for 2 IN discharge. [17] S. Burch inquired about elevation of stand pipe for 2 IN discharge. [18] Discussion of conduit and pipe above the GCL area. [19] R. Porter request 20OZ geotextile and RR-3 submittals [by AMS].

02 SUBMITTALS

20120-07-10	Submittal log as published by GEO on 06-23 distributed. [01] Submittal log review, and general conversation of codes. [02] S. Boyer need field tile and submittal to continue. M. Wagstaff indicated that if pipe same as drawings [12 In AASHTO], proceed. P. Zinsious to investigate status of submittal. Sand is same as before FA-1. [03] M. Burch hand unit issue, P. Zinsious to review after PM. Baro driver submittal. [04] AAA to submit same requirements [AER/AMS] for pole subcontractor [Plant Brothers] to AMS. [05] AAA submit lift plan [form subcontractor] for crane for pole installation. [06] AER review of FWI confined space plan in progress. [07] FWI and BTD to review water removal form DS after PM.

08 MATERIAL

01 GENERAL

2012-07-17	CLOSE - City of Robinson will not give the tax COE an extension.
2012-07-10	General discussion City of Robinson not give the tax COE an extension as plant closing is not providing jobs. P. Zinsious indicated no impact to cost at this time, and will keep AER posted.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-07-17	OPEN - Discussion during Progress Meeting: [01] S. Boyer confirmed bedrock should not be an issue for field tile installation. [02] Pipe installation is going well, with no current issues. Discussed sequence [see schedule section].
2012-07-10	OPEN - Discussion during Progress Meeting: [01] S. Boyer indicated that bedrock should not be an issue for field tile installation. Requires submittals [see submittals]. J. cravens indicate elevation delta only about 0.55 FT to date. [02] Pipe installation is going well, with no current issues. Discussed sequence [see schedule section].

10 QUALITY CONTROL

2012-07-17	[01] M .Wagstaff concerned about heat and concrete pours. Subcontractor responsible concrete not to crack. [02] R. Porter indicated subcontractor will get burlap to cover the concrete to keep sun heating even more.
2012-07-10	No issue. A. Saindon indicated that clay samples will be taken on site today for chemical and physical analysis.

11 SCHEDULE REVIEW

2012-07-17	OPEN. Review of last planner by B. Muesenfechter. [02] P. Zinsious reiterated for time being [while subcontractors on look-ahead] to attend the progress meeting. [02] Schedule has improved substantial completion date to 09-24 due to clay placement progress. Quadrants A and C clay placement are now complete. [03] Critical path is the clay placement, but another long path is the work now for AAA, FWI and BTD on the PCP. [04] Last week PCP sequencing was modified. [05] Decision made by the team to keep future weather days the same. [06] LEC will be on site today [07-17] to survey the PCP [for AER], and stake the paved concrete ditch [for AMS]. [07] S. Boyer reports GCL not received. [08] Discussion on close out and commission. M. Wagstaff indicated per Specification 16951. [09] S. Burch indicated FWI will provide book at close out with a test results. [10] P. Zinsious will produce [write] brief commission/close out process. [11] S. Burch indicated hydrostatic test will be in sections, at 100 PSI. FWI also has records of all HDPE welds. [12] M. Wagstaff will produce [write] the system OM.
2012-07-10	OPEN. Review of last planner by B. Muesenfechter. [01] General discussion introduction Last Planner: sequence, remaining duration units [RDU], and constraints. Last Planner provides a look ahead, engages field supervision, fosters team involvement, commitments and accountability. [02] Substantial completion is 09-28. Clay placement progressing early. [03] Progress has improved two weeks in a row. [04] General review and discussion of DS PCP progress.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-07-17	No issues.
2012-07-10	OPEN - M. Wagstaff indicated pay-app no issue.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-07-17	[01] AMS moving spoils from excavations of west side road [at paved ditch] of pond to Ash Pond A with wheel loader. [02] AMS moving spoils materials [from previous excavation] as "fill-in" continues in progress.
2012-07-10	OPEN - AMS moving spoils materials as "fill-in" continues in progress.

13 EWO-13 Electrical feeder/overhead

2012-07-17	[01] Final plans possibly 07-17. [02] M. Wagstaff indicated no significant changes to plans, minor variations.
2012-07-10	OPEN - Final plans by EOW. M. Wagstaff has approved the EWO.

14 EWO-14 FIELD TILE LOCATION

2012-07-17	Current non-issue. Reference Item No. 09.01-2012-07-17 above
2012-07-10	Non-issue. Reference Item No. 09.01 2012-07 above.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-07-17	[01] Fencing VES and/or alignment options to be reviewed at later date. Currently AER will submit for security review. [02] Electrical submittals under review. [03] Concrete submittals under review. [04] S. Boyer requested review of 4 FT cut at paved ditch outfall. M. Wagstaff to review after PM.
2012-07-10	[01] Fencing VES and/or alignment options. [02] Electrical submittals under review.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT

2012-07-17	[01] Field tile submittal. [02] Baro driver submittal.
2012-07-10	[01] Concrete submittals in progress. P. Zinsious to meet with T. Hunt after PM.

15 PRODUCTION

03 CLAY

2012-07-17	OPEN - FLT has currently 16x trucks. Placement as of 07-16 is 55,605 CY. R. Porter presented sketch M/U.
2012-07-10	OPEN - Trucks are hauling 11 CY. Currently 15x trucks. Placement as of 07-09 is 42,489 CY. R. Porter presented sketch M/U. LEC performed topographic outline survey to check clay placement estimation. AMS calculated [at time of the survey] 3,608 LD at 11 CY/LD = 39,688 CY. LEC survey area measured by 3 FT THK average calculated to 38,143 CY. This is a delta of only 1,545 CY, and the LD haul rate is agreed will continue to be 11 CY per truck.

16 DOCUMENTS TRANSMITTED

2012-07-17	[01] AER - Last Planner schedule dated 07-10 [02] AMS - Critical Path schedule dated 07-12.
2012-07-10	[01] AMS - Last Planner schedule dated 07-06. [02] AMS- Remaining Work schedule dated 07-06. [03] GEO - Submittal Log published 06-23.

17 DOCUMENTS REVIEW ONLY

2012-07-17	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-07-10	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, July 24, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

AER

01 Mr. Mike Wagstaff
02 Mr. Mike Stewart
03 Mr. Bob Muesenfechter

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: July 31, 2012

SUBJECT: Weekly Summary Report for July 23, 2012 to July 27, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 72 to 81°F, and temperature highs ranged from 93 to 104°F. Weather delays did not occur this week.

Construction Activities

Groundwater collection system installation, field tile installation, deep well utility locate, collector trench excavation, GCL subgrade preparation, butt fusion welding, sump discharge pipe installation, sump pump assembly and installation, paved gutter construction, and clay placement occurred this week. B&T Drainage continued construction of the groundwater collection system. This included work at dewatering sump DS-1 and DS-2 and perforated collector pipe PCP-3 and PCP-4. This completed the installation of the PCP. Field tile installation continued south of Ash Pond A, deep well utilities were potholed northeast of Ash Pond D, collector trench excavation continued south of Ash Pond B, and the subgrade for the GCL was prepared along PCP-4, PCP-5, PCP-6, and PCP-7. Freitag-Weinhardt, Inc. continued butt fusion welding sump discharge pipes, installed sump discharge pipes in the collector trench, and assembled and installed the sump pumps in DS-1 and DS-2. ST Construction, Inc. completed the concrete work for the paved gutter west of Ash Pond D. Concrete testing (including slump, air entrainment, and cylinders) was performed by Patriot Engineering, Inc. Lamac Engineering Co. surveyed grades for the groundwater collection system, field tile, and surveyed the locations of the deep well utilities. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement in Quadrant B. Approximately 16 to 18 trucks were used to haul clay material to Ash Pond D. The

vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 279C Skid Steer
CAT CS-323C Smooth Drum Roller
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 410J Backhoe
John Deere 225C LC Excavator
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ameren Energy Resources – Richard Spurgeon
Ash Management Services, LLC (AMS) – Randy Porter, Matt Dishman, Robert Dunkley, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. (LEC) – Jake Lewis
B&T Drainage (BTD) – John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Eric Blankenship, and Abel English
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Lee Ruholl, Patrick Wente, Frank Draper, Jason Byers, and Aaron Gullett
Freitag-Weinhardt, Inc. (FWI) – Scott Burch and Jarrod Barrett
AAA Electric, Inc. (AAA) – None
ST Construction, Inc. (STC) – John Maetin, Jackie Hoover, Gary Hedges, Scott Hilton, and Robert Pressley
Patriot Engineering, Inc. (PEI) – Brandon McDonald
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, July 24, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, 13 rolls of GSE GundSeal 30 mil Geosynthetic Clay Liner (GCL), Quik-Gel high yield powdered bentonite, IDOT Class SI concrete, and additional 3-inch HDPE sump discharge pipe.

Testing/Sampling

Patriot Engineering, Inc. performed concrete testing, including slump and air entrainment testing. Four concrete cylinders were cast and retrieved for testing. Refer to the concrete testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

No. A 14303

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/23/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25hr for lunch)
Weather: Sunny, 77°AM, 103°PM | Contractor: AMS | Subcontr./Supplier: BTD/STC/PEI/FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 450LC Excavator, 225CLC Excavator, 624H Front End Loader, BW 172
Site Activities / Observations / Contacts / Notes: Roller, 410J Backhoe, D5G Dozer, Water Truck

AMS:
Began dewatering DS-1 manhole with Thompson Pump for sump pump installation. The cured paved gutter was washed with the Water Truck to prepare for the NP-1 joint sealant application tomorrow. Matt Dishman is currently in Kentucky. Brad Bolenbaugh will be back next week.

BTD:
The excavation, installation, backfill, and compaction of PCP-4 continued. PCP-4 runs at +1.75% grade west towards CO-2. When PCP-4 construction passed the GCL Cap limit (+ Elev. 450) on the SE corner of Ash Pond B, the excavation and installation of the 12" ADS Field Tile was included with the PCP-4 construction. Utilities for the deep wells were potholed with a water vacuum excavation truck on the NE corner of APD where the Paved Ditch outfalls into the river. Abel English performed the potholing. Two power lines and one 8" water line was found, all at a depth of 48". Based on the current Cut of the Paved Ditch in this area, the utilities will become a issue. The CAT 330D Excavator was demobilized, and a Deere 225C LC mobilized.

STC:
The paved gutter on the south end of the box culvert on the west side of Section A was poured, finished, cured, saw cut, formed, and stripped. Batches - 1(8cy) 2(8cy) 3(8cy) totalling 24 cy.

PEI:
Brandon McDonald took 4 cylinders, one Slump - 4¾", one Air - 5%, and the temperature was 79°.

FWI:
Assembled sump pump mechanical: tees, pitless adaptors, couplings, paddlewheels w/saddle, 2" butt fusion welded for manhole exit, 3"-2" HDPE reducers, and stainless steel discharge. Delivery - 1600' of 3" HDPE sump discharge pipe.

FLT/BCI/TSI: Clay Placement - Eastbound Section B. Area = P-36, 37, and 68 to 72. Loads = 245

Additional Comments: AER - Richard Spurgeon (safety super) inspected/evaluated Confined Space Entry for manholes.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 7/24/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.5 hrs (no lunch)
Weather: Partly Cloudy, 72°AM, 104° PM sunny | Contractor: AMS | Subcontr./Supplier: BTD/STC/PEI/FWI/LEC/FLT BCI TSI
Equipment Working: D6N Dozer, 450 LC Excavator, 225C LC Excavator, 624H Front End Loader, BW 172
Site Activities / Observations / Contacts / Notes: Roller, 410J Backhoe, D5G Dozer, Water Truck

AMS:

Finished pumping DS-1 and began pumping DS-2. All other work performed at the CBS.

BTD:

Completed PCP-4 excavation, installation, backfill, and compaction running at +1.75% west towards CO-2. CO-3 was installed and backfilled. The excavation, installation, backfill, and compaction of PCP-3 continued. PCP-3 runs at a -1.0% west from CO-2 towards the kink. 12" ADS Field Tile installation continues. Paved Gutter spoils were graded along the roadway and the 8" lines running into DS-1 were plugged for sump pump installation. Length = 160'.

STC:

Completed pouring, finishing, curing, saw cutting, and stripping the paved gutter south of the box culvert, west side Section A. Contraction joints are 10' and expansion joints are 30'. All joints were sealed with NP-1 joint sealant, completing the paved gutter. One batch - 8 cy.

PEI:

Brandon McDonald took 4 cylinders, one Slump - 3½", one Air - 5%, and the temperature was 83°.

FWI:

Setup tripod confined space entry manhole retrieval system w/harness and remote, four gas air monitor. Field Change: The paddlewheel in DS-1 will be 2' below the pitless adaptor. DS-1 Installation: Sump pump, 2" SS discharge pipe, 2" check valve, off+on+alarm floats, paddlewheel, and pitless adaptor. The SO2 divers have not been installed yet.

LEC:

Jake Lewis surveyed the manhole floors, CO-4, PCP-4, Field Tile, and deep well utilities.

FLT/BCI/TSI: Clay Placement - Eastbound Section B.

Additional Comments: ~~Bob Shelhorn is no longer cycling.~~
Area = P-37 to 39, 70 to 74. Loads = 255

Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/25/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 81°PM, 104°PM | Contractor: AMS | Subcontr./Supplier: BTD/FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 450LC Excavator, 225C LC Excavator, 624H Front End Loader, BW 172 Roller, 410J Backhoe, 279C Skid Steer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

Completed dewatering DS-2 manhole. All other work performed at the CBS.

BTD:

Completed PCP-3 excavation, installation, backfill, and compaction running at -1.0% west from CO-2 towards the kink southwest of Ash Pond B. This completes the excavation, installation, initial backfill, and compaction of the groundwater collection system. The installation of the 12" ADS field tile continues. The 8" collector lines running into DS-2 were plugged to allow the installation of the sump pump. A CAT 279C Skid Steer and a CAT CS-323C Smooth Drum Roller was mobilized. The GSE GundSeal Geosynthetic Clay Liner (Smooth HDPE 30 mil) was delivered and the roll numbers are as follows:

140132157	140132161	140132165	and 140132169
140132158	140132162	140132166	
140132159	140132163	140132167	13 Rolls Total*
140132160	140132164	140132168	

The GCL was stored in the car shed for weather protection.

FWI:

All manhole core holes for pipe/conduit will receive link seal. A bracket will be installed towards the top of all the manholes for all the float and sensor wires/cables. DS-2 assembly and installation: Sump pump, 2" SS discharge pipe, 2" check value, off + on + alarm floats, paddlewheel flow sensor, and pitless adaptor.

FLT/BCI/TSI: Clay Placement - Eastbound Section B.

Additional Comments: Area = P-39 to P-44 and P-74 to P-78.
Loads = 278

Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/26/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Cloudy, 75°AM, 93° PM | Contractor: AMS | Subcontr./Supplier: BTD/FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 450 LC Excavator, 225C LC Excavator, 624H Front End Loader, CS-323C Roller, 410J Backhoe, D5G Dozer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Added additional silt fence on the east side of the paved gutter and covered GCL with plastic. All other work performed at the CBS. Matt Dishman will be overseeing Duck Creek next week.

BTD:
Continued 12" ADS Field Tile excavation, installation, and backfill heading west from PCP-3 towards the grade inlet manhole southwest of DS-1 along the south property fence line. The field tile is being installed at a 0.05% grade. The collector trench excavation continued from the kink southwest of Ash Pond B, south of APB, to the beginning location of the GCL placement southeast of APB. The GCL subgrade was graded and rolled along PCP-4, PCP-5, PCP-6, and PCP-7 at a depth of approx. 5'. The trench walls were cut back an additional foot for GCL placement. A depression was left around DS-3 and CO-4 for water accumulation in case of a rain event. Steps were installed in the DS-2 manhole base. The Bomag BW 172 Roller was demobilized. Powdered bentonite will be used for all GCL seams.

FWI:
Installed DS-1 and DS-2 sump discharge pipes in collection trench south of Ash Pond B. Continued butt fusion welding 3" HDPE sump discharge pipe. Fused = 800', Laid = 1040'

AAA:
No Production; will return to the site next week.

FLT/BCI/TSI:
Clay Placement - Eastbound Section B. Began constructing a slope diversion berm in Section C. Area = P-74 to P-78 and P-62 to P-63.
Loads = 276

Site Activities / Observations / Contacts / Notes: 323C Roller, 410J Backhoe, D5G Dozer, Water Truck

AMS:
All work performed at the CBS.

BTD:
Continued the excavation, installation, backfill, and compaction of the 12" ADS Field Tile west from PCP-3, towards the grade inlet manhole southwest of DS-1, along the south property fence line. The field tile is being installed at a 0.05% grade. The manhole tops and lids for DS-1 and DS-2 were reset onto the manholes for safety. GCL will begin next week.

FWI:
Continued staging and butt fusion welding 3" HDPE sump discharge pipes south of Ash Pond D. Threaded end caps and HDPE reducers (3"-2") were welded onto the DS-1 and DS-2 sump discharge pipe manhole entries for Hydrostatic Testing connections. Fittings were prepared for the Water Truck to perform Hydrostatic Testing. Fused = 640' + 10 joints for testing apparatus.

FLT/BCI/TSI:
Clay Placement - Eastbound Section B and slope diversion berms in Section A and Section C.
New Trucks - Aaron Gullett and Lee Ruholl (18 trucks total).
Area = P-63, P-64, and P-78 to P-81.
Loads = 196

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-07-24	OPEN - no issues.
2012-07-17	OPEN - no issues. J. King indicated will be a while before access to MCC is required. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-07-24	OPEN - no issues
2012-07-17	OPEN - FWI had 1x at Newton on 07-16. STC had 5x on 07-16.

04 AMS SAFETY

2012-07-24

[01] J. Tasich on site 07-25.
[02] R. Porter has signs for confined space.
[03] Site inspection by R. Spurgeon 07-23. E-mail form M. Wagstaff from R. Spurgeon with site visit report.
[04] No issues with traffic as the site is very busy with trucks and the other Ameren contractors on site.

2012-07-17 [01] J. Tasich on site 07-13. Schedule this week TBD.
[02] R. Porter indicated will pick up signs today for confined space, but further discussion, M. Wagstaff indicated R. Spurgeon [Newton Senior Safety Supervisor] can bring with him when on-site tomorrow [tentatively 10:00 AM CT] for FWI confined space entry review. M. Wagstaff to coordinate the meeting with Mr. Spurgeon.
[03] Relative the confined space entry for the DS, the lids will be removed on 07-17.
[04] B. Muesenfechter inquired about emergency response. S. Burch described details for response [i.e. call 911, he is an EMT, access tripods, 02 monitor 100% of the time, etc...].
[05] B. Muesenfechter inquired about barricade the PCP excavation. R. Porter reported this is dome every day at the end of the day. The barricade consists of either tape and or/berms.
[06] General comment on watching out for traffic as the site is very busy with trucks and the other Ameren contractors on site.

05 HOUSEKEEPING

2012-07-24 OPEN - No issues.

2012-07-17 OPEN - No issues. M. Wagstaff indicated site is dusty. Traffic level is high [see above] due to truck and Ameren [line] subcontractor.

06 PLANT ACCESS - CBT

20120-07-24 No issues.

20120-07-17 No issues.

08 OSHA LOG - WORK HOURS

2012-07-24 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-23.
No incidents or accidents.
6,093.00 RT
1,258.50 OT
7,351.50 TOTAL

2012-07-17 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] ~~07-02~~. 07-16.
No incidents or accidents.
5,481.00 RT
1,174.00 OT
6,655.00 TOTAL

02 WORK HOURS AND OVERTIME

2012-07-24 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT - STC, FWI, and BTD.

2012-07-17 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT - STC, FWI, and BTD.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-07-24 OPEN - no issues.

2012-07-17 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-07-24	OPEN - no issues.
2012-07-17	OPEN - no issues. J. Griffith [Fawn Lane Trucking] update

02 SUBMITTALS

20120-07-24	Submittal log as published by GEO on 07-21 distributed. [01] Submittal log review, and general conversation. [02] Collector box submittal issue [requires 5 IN holes]. AMS checking on status.
20120-07-17	[01] J. Cravens indicated will update 06-23 submittal log. [02] M. Wagstaff discussion about accelerated work and time for submittal requirements. Look ahead in Last Planner. [03] Field tile submittal P. Zinsious may have to resubmit. [04] M. Burch hand unit issue, P. Zinsious to review after PM. Baro driver submittal. In progress. [05] P. Zinsious indicated A. Saindon review of CA-6 submittal AASHTO qualification issue. [06] AAA submit lift plan [form subcontractor] for crane for pole installation. [07] AER review of FWI confined space plan in progress. [08] Water removal from DS will by AMS. BTD to provide four plugs. No submittal. [09] M. Wagstaff indicated AAA can submit the aluminum wire and the rest of the EWO as no major changes to design. The 3 Phase size for wire is OK. [10] J. King inquired about electrical hand-hold boxes if now required. M. Wagstaff review. [11] J. King indicated AAA to use link seal to seal conduit penetrations. [12] J. King review of location junction boxes - field locate. Orientation of DS [steps] varies per S. Boyer. [13] J. King indicated AAA provide detectable warning tape. BTD will not required as pipe is deep. [14] S. Burch inquired about DS pump control float elevation and weights. [15] S. Burch indicated only two remote vents located on the drawings. FWI will install remote vents on all at no charge. [16] S. Burch inquired about elevation of stand pipe for 2 IN discharge. [17] S. Burch inquired about elevation of stand pipe for 2 IN discharge. [18] Discussion of conduit and pipe above the GCL area. [19] R. Porter request 20OZ geotextile and RR-3 submittals [by AMS].

08 MATERIAL

01 GENERAL

2012-07-24	NEW - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material [02] Collector box submittal.
2012-07-17	CLOSE - City of Robinson will not give the tax COE an extension.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-07-24	OPEN - Discussion during Progress Meeting: [01] No issues - work progressing well.
2012-07-17	OPEN - Discussion during Progress Meeting: [01] S. Boyer confirmed bedrock should not be an issue for field tile installation. [02] Pipe installation is going well, with no current issues. Discussed sequence [see schedule section].

10 QUALITY CONTROL

2012-07-24	[01] Concrete test breaks 1x in 7D and 2x in 28D. [02] A. Saindon to be onsite in the next 2x WKS for more clay samples.
2012-07-17	[01] M .Wagstaff concerned about heat and concrete pours. Subcontractor responsible concrete not to crack. [02] R. Porter indicated subcontractor will get burlap to cover the concrete to keep sun heating even more.

11 SCHEDULE REVIEW

2012-07-24	OPEN. Review of last planner by B. Muesenfechter. [01] Clay cap driving the schedule progress improvement. [02] Substantial completion date 09-17. [03] Paved ditch work on hold in area where conflict of elevation for water line [ref. 13.1 2012-07-24 Item No. 04]. [04] BTD pot holed the electrical lines and waterline. Lamac took elevation shots. [05] M. Wagstaff, J. Cravens and R. Porter to met with S. Boyer on GCL installation after the progress meeting. [06] M. Wagstaff, J. Cravens and R. Porter to met with FWI on HDPE hydro testing after the progress meeting. [07] J. Cravens reported on PCP progress dates.

	2012-07-17	OPEN. Review of last planner by B. Muesenfechter. [02] P. Zinsious reiterated for time being [while subcontractors on look-ahead] to attend the progress meeting. [02] Schedule has improved substantial completion date to 09-24 due to clay placement progress. Quadrants A and C clay placement are now complete. [03] Critical path is the clay placement, but another long path is the work now for AAA, FWI and BTD on the PCP. [04] Last week PCP sequencing was modified. [05] Decision made by the team to keep future weather days the same. [06] LEC will be on site today [07-17] to survey the PCP [for AER], and stake the paved concrete ditch [for AMS]. [07] S. Boyer reports GCL not received. [08] Discussion on close out and commission. M. Wagstaff indicated per Specification 16951. [09] S. Burch indicated FWI will provide book at close out with a test results. [10] P. Zinsious will produce [write] brief commission/close out process. [11] S. Burch indicated hydrostatic test will be in sections, at 100 PSI. FWI also has records of all HDPE welds. [12] M. Wagstaff will produce [write] the system OM.

12.0 COST AND BUDGET

02	**AMS PAY APPLICATION - CHANGE REQUEST**	
	2012-07-24	No issues.
	2012-07-17	No issues.

12.1 EXTRA WORK ORDERS

11	**EWO-11**	**BUILDING SPOILS REMOVAL**
	2012-07-24	OPEN - AMS continues in progress.
	2012-07-17	[01] AMS moving spoils from excavations of west side road [at paved ditch] of pond to Ash Pond A with wheel loader. [02] AMS moving spoils materials [from previous excavation] as "fill-in" continues in progress.
13	**EWO-13**	**Electrical feeder/overhead**
	2012-07-24	OPEN - J. King question on overhead change from aluminum to copper. AMS to provide cost by EOW.
	2012-07-17	[01] Final plans possibly 07-17. [02] M. Wagstaff indicated no significant changes to plans, minor variations.
14	**EWO-14**	**FIELD TILE LOCATION**
	2012-07-24	No issue.
	2012-07-17	Current non-issue. Reference Item No. 09.01-2012-07-17 above

13 ACTION ITEMS - AER [25]

01	**AMEREN [AER]**	
	2012-07-24	[01] Fencing VES and/or alignment options M. Wagstaff to check status. [02] Electrical submittals under review. [03] Concrete submittals under review. [04]Lamac shot elevations pipe same elev. as 4 FT cut at paved ditch outfall. M. Wagstaff to review with Hanson reverse flow line.
	2012-07-17	[01] Fencing VES and/or alignment options to be reviewed at later date. Currently AER will submit for security review. [02] Electrical submittals under review. [03] Concrete submittals under review. [04] S. Boyer requested review of 4 FT cut at paved ditch outfall. M. Wagstaff to review after PM.

14 ACTION ITEMS - AMS [21]

01	**ASH MANAGEMENT**	
	2012-07-24	[01] Field tile submittal. Done 07-19. [02] Baro driver submittal. Done 07-19.
	2012-07-17	[01] Field tile submittal. [02] Baro driver submittal.

15 PRODUCTION

03	**CLAY**	
	2012-07-24	OPEN - no issues [01] Placement as of 07-23 is 65,549 CY. [02] R. Porter presented sketch M/U. [03] Roads are in good shape.
	2012-07-17	OPEN - FLT has currently 16x trucks. Placement as of 07-16 is 55,605 CY. R. Porter presented sketch M/U.

16 DOCUMENTS TRANSMITTED

2012-07-24	[01] AER - Last Planner schedule dated 07-18.
	[02] AMS- Critical path schedule dated 07-18.
	[03] AMS- Contact list dated 07-20.
	[04] GEO - Submittal Log published 07-21.
2012-07-17	[01] AER - Last Planner schedule dated 07-10
	[02] AMS - Critical Path schedule dated 07-12.

17 DOCUMENTS REVIEW ONLY

2012-07-24	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-07-17	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: August 6, 2012

SUBJECT: Weekly Summary Report for July 30, 2012 to August 3, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 72 to 78°F, and temperature highs ranged from 95 to 101°F. Weather delays did not occur this week.

Construction Activities

Field tile installation, collector trench excavation and backfill, GCL subgrade preparation and installation, power pole utility locate, butt fusion welding, sump discharge pipe and remote vent installation, hydrostatic testing, electrical conduit installation, junction box installation, anchor trench spoil transportation, slope diversion berm construction, and clay placement occurred this week. B&T Drainage continued field tile installation, collector trench excavation and backfill, geosynthetic clay liner (GCL) subgrade preparation and installation along PCP-4, PCP-5, PCP-6, and PCP-7. Potholing occurred at the proposed locations for the power poles for existing utilities. Freitag-Weinhardt, Inc. continued butt fusion welding sump discharge pipes and installed the sump discharge pipes and remote vents in the collector trench. Hydrostatic testing of DS-1 and DS-2 sump discharge pipes occurred. AAA Electric, Inc. installed electrical conduit in the collector trench, electrical junction boxes at DS-1 and DS-2, and the west pump control panel. IDOT FA-01 sand was placed around the electrical conduit prior to backfilling the collector trench. Detectable utility tape was placed 12 to 18-inches below the ground surface above the sump discharge pipes and electrical conduit. Lamac Engineering Co. surveyed the locations of the slope diversion berms and letdown channel in Quadrant A and B. Ash Management Services, Inc. continued transporting anchor trench ash spoils from Ash Pond D to

Ash Pond A. Fawn Lane Transit, Inc. and Belt Construction, Inc. completed clay placement in Quadrant B and began clay placement in Quadrant D. Slope diversion berm construction continued in Quadrant A and B. Approximately 13 to 18 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT 279C Skid Steer
CAT CS-323C Smooth Drum Roller
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Greg Siverly, Jeremy Shorter, Brad Bolenbaugh, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. (LEC) – Jake Lewis
B&T Drainage (BTD) – John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Eric Blankenship, and Abel English
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Lee Ruholl, Patrick Wente, Frank Draper, Jason Byers, and Aaron Gullett
Freitag-Weinhardt, Inc. (FWI) – Scott Burch and Jarrod Barrett
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, July 31, 2012. Refer to the attached meeting minutes for additional information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, IDOT FA-01 sand, electrical NEMA junction boxes, 3-inch HDPE pipe, and 8-inch HDPE pipe were delivered.

Testing/Sampling

The 3-inch HDPE sump discharge pipes for DS-1 and DS-2 were hydrostatic tested in accordance with ASTM F2164. Leaks were not observed in the sump discharge pipes. Refer to Freitag-Weinhardt, Inc.'s test documentation for detailed information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

Electronic Filing: Received, Clerk's Office 09/28/2020

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14308

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 7/30/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 78°AM, 100°PM cloudy | Contractor: AMS | Subcontr./Supplier: BTD/AAA/FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450 LC Excavator, 225C LC Excavator, 624H Front End Loader,
Site Activities / Observations / Contacts / Notes: CS-323C Roller, 410J Backhoe, D5G Dozer, 279C Skid Steer, Water Truck

AMS:
The plant access roads and entrance were cleaned/graded. Continued transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. Brad Bolenbaugh is back on site and Matt Dishman is temporarily off site.

BTD:
Final compaction for the GCL subgrade was completed along PCP-4, PCP-5, PCP-6, and PCP-7. The depressions around DS-3 and CO-4 were graded and compacted. The GCL deployment, backfill, grading, and compaction along PCP-4, PCP-5, PCP-6, and PCP-7 has been completed. The GCL has a minimum of 12" overlap along the sides of the trench, and all seams were sealed with powdered bentonite, including the seams around DS-3 + DS-4 manholes and CO-3 + CO-4 cleanouts. 10 GCL rolls were placed and are as follows: 140132157, 140132158, 140132159, 140132163, 140132164, 140132165, 140132166, 140132167, 140132168. BTD recorded the locations of the deployed rolls on S-386, Sheet No. 8. The trench was left open after approx. 2' of backfill was compacted to act as the collector trench for the remote vents, sump discharge pipes, and electrical conduit. The 624H Front End Loader was demobilized.

AAA:
Installed additional 2½" electrical feeder conduit in the collector trench south of APB. Installed additional 2" high/low voltage conduit in collector trench towards DS-1 and DS-2. Installed junction boxes on DS-1 and the conduit drain. Began spacing conduit in collector trench 12" apart.

FWI: Continued butt fusion welding 3" HDPE (L=240') and installed fittings/seals for Hydro Testing.

FLT/BCI/TSI: Clay Placement - East bound Section B. Continued constructing slope diversion berms in Section A and backfilled against paved gutter in Section A. Section B should be finished tomorrow. Area=P-79 to P-86. Loads = 311

AMS:

Continued transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. All other work performed at the CBS.

BTD:

The 12" ADS field tile excavation, installation, backfill, and compaction has been completed up to ≈ 20' of the grade inlet manhole south of Ash Pond A, southwest of DS-1. The field tile runs at a -0.05% west to east. The field tile and field tile outfall onto the paved ditch cannot be completed until the collector trench construction is completed south of Ash Pond D. Until the field tile is completed, it will not be tied into the manhole southwest of DS-1. The collector trench excavation has been completed, tying together all the manholes. This excludes the trench towards the power poles for the electric feeder and the trench towards the east pump control panel. The collector trench south of APD is essentially the backfilled/compacted GCL. The HDPE pipes and electrical conduit will be installed on the north side of the trench in this area to be offset from the ℄ of the PCP. They began demobilizing materials. No major work items can continue until FWI and AAA are finished in the collector trench, the new paved ditch design is complete, etc. BTD will only be on site as needed. Breakdown - CAT 450LC Excavator (2 hrs). Delivery - IDOT FA-01 Sand. Demobilized - CAT 225C LC Excavator.

AAA:

Completed spacing the electrical conduit in the collector trench 12" apart south of Ash Pond A. Installed high/low voltage junction boxes on DS-2 and the conduit drain. Hooked up the high/low voltage conduit to the junction boxes on DS-1 and DS-2. Installed additional 2½" electrical feeder conduit in the collector trench south APB + APD.

Equipment Working:
Site Activities / Observations / Contacts / Notes:

REFER TO PAGE 1

FWI:
Installed additional DS-1 and DS-2 3" HDPE sump discharge pipes in the collector trench south of Ash Pond B and Ash Pond D. Approx. 3100' of HDPE currently in the collector trench. Continued staging and butt fusion welding 3" HDPE sump discharge pipes south of Ash Pond D. DS-1 and DS-2 sump discharge pipes currently run east to DS-3. These two pipes were connected to form a single continuous pipe for Hydro Testing. DS-1 pipe has the water valve and the DS-2 pipe has the air valve. Both sump discharge pipes were filled with water and pressurized to 110 psi. After 15 minutes, the pressure dropped 3 lbs to 107 psi. During the time the pipes were pressurized, there were no visible leaks in any of the butt fusion welded joints. The pressure was released and the connection between DS-1 and DS-2 sump discharge pipes was cut, allowing the water to drain east of DS-3, completing the Hydrostatic Test per ASTM F 2164. The collector trench south of APA and APB can now be backfilled.
LEC:
Jake Lewis surveyed additional slope diversion berms in Section A and Section B, and surveyed the letdown channel/rock chute in Section B. Refer to S-386, Sheet 11, Details 1 and 4.
FLT/BCI/TSI:
Clay Placement - Section B was completed and began placing Eastbound on Section D. Continued constructing slope diversion berms in Section A and backfilled against the paved gutter in Section A.
Area = P-63 to P-66 and P-78 to P-86.
Loads = 311

Weather: Sunny, 75°AM, 98°PM | Contractor: AMS | Subcontr./Supplier: BTD/FWI/AAA/FLT/BCI/TSI
Equipment Working: D6N Dozer, 580 Backhoe, 410J Backhoe, D5G Dozer, CS-323C Roller, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

Continued transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. The collector trench running to the west pump control panel was widened for the 5 runs of electrical conduit to achieve a 12" space between each conduit. Began the excavation for the wrap-around collector trench southeast of Ash Pond B for the 2½" electrical feeder for the west pump control panel to be connected to the overhead electric running along the power poles from the MCC building. All other work at the CBS.

BTD:

Personnel - Brian Schaefer and Michael Switzer. Haunching the electrical conduit with IDOT FA-1 Sand in the collector trench south of Ash Pond A was completed. The collector trench was backfilled, graded, and compacted to approx. 12" to 18" below the ground surface and then the mechanical (water) and electrical detectable tapes were placed within the collector trench over the appropriate piping. After the tape was in place, final backfill of the collector trench south of Ash Pond A began. Approx. 30' of trench was left open for DS-1 and 2, and the panel.

FWI:

Continued installing and butt fusion welding 3" HDPE Sump Discharge Pipes for DS-1, DS-2, and DS-3 in the collector trench south of Ash Pond D. Length Fused = 880'

AAA:

Installed the 2" high/low voltage conduit for DS-1 and DS-2, along with the 2½" electrical feeder conduit, up to the west pump control panel. Installed 2½" electrical feeder conduit and 2" high/low voltage conduit for DS-3 and DS-4 in the collector trench south of Ash Pond D.

FLT/BCI/TSI: Clay Placement - Eastbound Section D.

Additional Comments: Continued constructing slope diversion berms in Sec. A and B. Area = P-63 to P-71. Loads = 306

Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/2/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 72°AM, 101°PM | Contractor: AMS | Subcontr./Supplier: BTD/FWI/AAA/FLT/BCI/TSI
Equipment Working: D6N Dozer, 410J Backhoe, D5G Dozer, CS-323C Roller, 279C Skid Steer, Water Truck

Site Activities / Observations / Contacts / Notes:

AMS:

All work performed at the CBS.

BTD:

Completed final backfill and compaction of the collector trench south of Ash Pond A. Haunching the electrical conduit with IDOT FA-1 Sand in the collector trench south of Ash Pond B was completed. Began backfilling, grading, and compacting the collector trench approx. 12" to 18" below the ground surface and began installing the water and electrical detectable tapes in the collector trench over the appropriate piping. Final backfill of the collector trench south of Ash Pond B began. Began grading PCP spoils off of the south embankment of Ash Pond B. Note: The 3" HDPE Sump Discharge Pipes were also haunched with FA-1 sand in some areas due to the rocky backfill. The remaining GCL and other misc. materials were demobilized.

FWI:

The Zoeller sump pumps were delivered with standard 20' electrical cords. These cords are too short to reach the junction box in DS-2, DS-3, DS-4. If the cords were spliced in the field, it would void the pump's warranty. Therefore, the sump pump in DS-2 was taken out, and 3 pumps were sent to the manufacturer to have 35' cords installed. The electrical cords for the floats are also too short and will have to be replaced for DS-2, DS-3, DS-4. Continued installing and butt fusion welding 3" HDPE sump discharge pipes for DS-1, 2, 3, and 4 in the collector trench.

AAA:

Installed additional 2½" electrical feeder conduit in the wrap-around collector trench southeast of APB. Installed stainless steel conduit with PVC coating on the west pump control panel. Installed junction boxes for DS-1 and DS-2 on the west panel.

Additional Comments: FLT/BCI/TSI: Clay Placement - Eastbound Section D. Area = P-63 to 69, P-92 to 94. Loads = 228

BTD:

Personnel- Brian Schaefer, Abel English, John Boyer. Completed grading the PCP Spoils off of the south embankment of Ash Pond B. Began haunching the electrical conduit with IDOT FA-1 Sand in the collector trench south of Ash Pond D. Completed backfilling, grading, and compacting the collector trench approx. 12"-18" below the ground surface and installing the water and electrical detectable tapes in the collector trench over the appropriate piping south of Ash Pond B. Completed final backfill and compaction of the collector trench south of Ash Pond B. Began excavating the wrap-around collector trench southwest of Ash Pond D for the 2½" electrical feeder conduit for the east pump control panel to be connected to the overhead electric at the power pole southeast of Ash Pond B. Installed the conduit in the wrap-around collector trench. Completed potholing approx. 6' deep for existing utilities at the 10 power pole locations for the overhead electric running from the MCC building to southeast of Ash Pond B. A water vacuum excavation truck was utilized for potholing. Refer to E-386, Sheet 1, Rev. D, 7-17-12 for the 10 proposed power pole locations. Added the last 16" precast section on-site to the DS-4 manhole.

FWI:

Continued installing and butt fusion welding 3" HDPE sump discharge pipes for DS-1, DS-2, DS-3, and DS-4 in the collector trench south of Ash Pond D. Installed the DS-1 and DS-2 1" HDPE Remote Vent pipes onto the west pump control panel with vent, mesh caps. Marked DS-3 for coring. Delivery- 8" HDPE pipe and 3" HDPE pipe. Length Fused = 680'

AAA:

Assembled the east pump control panel rack and staged conduit south of Ash Pond D.

FLT/BCI/TSI: Clay Placement- Eastbound Sec. D.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-07-31	OPEN - no issues.
2012-07-24	OPEN - no issues.

03 EMPLOYEE DRUG TESTING

2012-07-31	OPEN - no issues. FLT 2x on Friday 07-27.
2012-07-24	OPEN - no issues

04 AMS SAFETY

2012-07-31	[01] J. Tasich tentative schedule Wed 08-01 or Thu 08-02. [02] Next scheduled safety luncheon 08-14. [03] Cooling stations are set up, no issues. [04] M. Wagstaff to investigate status [official response] for confined space entry plan submittal.
2012-07-24	[01] J. Tasich on site 07-25. [02] R. Porter has signs for confined space. [03] Site inspection by R. Spurgeon 07-23. E-mail form M. Wagstaff from R. Spurgeon with site visit report. [04] No issues with traffic as the site is very busy with trucks and the other Ameren contractors on site.

05 HOUSEKEEPING

2012-07-31 OPEN - No issues. Watch for blowing paper off of trucks.

2012-07-24 OPEN - No issues.

06 PLANT ACCESS - CBT

20120-07-31 Zinsious badge not operational, M. Wagstaff to investigate.

20120-07-24 No issues.

08 OSHA LOG - WORK HOURS

2012-07-31 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-30.

No incidents or accidents.

02 WORK HOURS AND OVERTIME

2012-07-31 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT.

2012-07-24 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT - STC, FWI, and BTD.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-07-31 OPEN - no issues.

2012-07-24 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-07-31	OPEN - no issues. AAA has inquired if being signatory to NMA is required if subcontractor on site for a day or two. J. Denham briefly defined the NMA agreement with Ameren and clarified that it is required no matter what amount of time a subcontractor is on site.
2012-07-24	OPEN - no issues.

02 SUBMITTALS

20120-07-31	Submittal log as published by GEO on 07-28 distributed. [01] Submittal log review, and general conversation. [02] M. Wagstaff has forwarded collector box submittal to Hanson. BTD to forward hatch details. [03] R. Porter meeting with bated yesterday [07-30] regarding submittals. [04]
20120-07-24	Submittal log as published by GEO on 07-21 distributed. [01] Submittal log review, and general conversation. [02] Collector box submittal issue [requires 5 IN holes]. AMS checking on status.

08 MATERIAL

01 GENERAL

2012-07-31	NEW - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material has been submitted per P. Zinsious. [02] Collector box submittal has been submitted per P. Zinsious. [03] DS lids option to be submitted per R. Porter, round not large enough for pump to be removed. BTD looking into a lightweight aluminum hatch that can be sealed watertight. [04] S. Burch reports 3x pumps and 3x floats ordered/delivered have cords too short. Team brief conversation on options such a splices. FWI to investigate options. R. Porter and J. Cravens indicated that DS installation elevations are either right at or shallower than plan.
2012-07-24	NEW - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material [02] Collector box submittal.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-07-31	OPEN - Discussion during Progress Meeting: [01] Work being completed. GCL liner 100% installed. [02] R. Porter inquired about pulling cap off the clean-out, and future pulling on a riser pipe vertically installed as these clean-outs are. Recommended a mechanical joint [MJ] connection with cap. M. Wagstaff agreed. The PCP line now has total 6x clean-outs. [03] Reference EWO-15 for fence discussion.
2012-07-24	OPEN - Discussion during Progress Meeting: [01] No issues - work progressing well.

10 QUALITY CONTROL

2012-07-31	[01] No results form concrete testing returned to dated per J. Cravens. [02] Discussion on CA-6 gravel verses CA-6 stone. AER allow base of gravel with stone cap, but concern on interlocking. AMS to provide all "white" CA-6 stone for the aggregate roadways. J. Cravens to investigate if geotextile required to be tested per CQA plan. [03] M. Wagstaff concerned over the expansion of the HDPE pipe in the heat relative burial and connections. S. Burch indicated burial will be in the morning when pipe is cool. [04] M. Wagstaff inquired about installation of the GCL. J. Cravens indicated installation correct. Back fill is 18 IN to 24 IN over the GCL. No issues with the GCL and possible soil movement, as some overlaps of material about 5 FT. Seams were sealed with the Bentonite powder. Before placement of the GCL, the fill material was smooth-drum rolled. [05] Clay samples not taken this past week.
2012-07-24	[01] Concrete test breaks 1x in 7D and 2x in 28D. [02] A. Saindon to be onsite in the next 2x WKS for more clay samples.

11 SCHEDULE REVIEW

2012-07-31	OPEN. Review of last planner by M. Wagstaff. Major items: [01] GCL 100% [02] Field tile piping 100% [03] Paved gutter 100% [04] Clay Placement Area B 100% [05] Clay Placement Area C 100% [06] DS1 set pump 100% [07] Roadway aggregates submittal [process] 100%
2012-07-24	OPEN. Review of last planner by B. Muesenfechter. [01] Clay cap driving the schedule progress improvement. [02] Substantial completion date 09-17. [03] Paved ditch work on hold in area where conflict of elevation for water line [ref. 13.1 2012-07-24 Item No. 04]. [04] BTD pot holed the electrical lines and waterline. Lamac took elevation shots. [05] M. Wagstaff, J. Cravens and R. Porter to met with S. Boyer on GCL installation after the progress meeting. [06] M. Wagstaff, J. Cravens and R. Porter to met with FWI on HDPE hydro testing after the progress meeting. [07] J. Cravens reported on PCP progress dates.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-07-31	AMS to submit draft pay-app. M. Wagstaff inquired about credit for PVC option [VES]. AMS confirmed inclusion.
2012-07-24	No issues.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-07-31	OPEN - AMS continues in progress as "fill-in-work" [backhoe was moving materials today - 07-31].
2012-07-24	OPEN - AMS continues in progress.

13 EWO-13 Electrical feeder/overhead

2012-07-31	OPEN - M. Wagstaff, J. King, J. Denham, and P. Zinsious to meet after PM. See below EWO-15 for pole-gate location concern.
2012-07-24	OPEN - J. King question on overhead change from aluminum to copper. AMS to provide cost by EOW.

14 EWO-14 FIELD TILE LOCATION

2012-07-31	CLOSE - work in area and farmer should be done in 2x WKs.
2012-07-24	No issue.

15 EWO-15 FENCE ALIGNMENT

2012-07-31	NEW - AMS to present Value Engineering Submittal [VES-03] for fence alignment along Ash Pond D and adjacent property to Dement-Wampler farmland consisting of reuse of fence fabric, new and relocated gates, and new perimeter fence alignment. M. Wagstaff reported Mr. Duane Holley [AER Engineering] has approved alignment, and Mr. Jim Williams [AER Plant Operations] to review. Discussion of the overhead power pole locations and the proposed gates. J. Cravens has the approximate pole locations marked per plan.

16 EWO-16 AGGREGATE STONE ROADWAY ALIGNMENT

2012-07-31	NEW - AMS to present Value Engineering Submittal [VES-03] for any aggregates stone road alignment.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-07-31	NEW - Paved ditch may be re-aligned due to elevation conflict with existing utilities. Reference Item No. 11-2012-07-24 No. 3 above, and Item No. 13-2012-07-24 No. 04 below. M. Wagstaff reviewing with Hanson, and will walk site after PM. Consideration of installation of drainage pipes across the aggregate roadway.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-07-31	[01] Fencing VES and/or alignment options M. Wagstaff to check status. CLOSE - moved to EWO-15 above. [02] Electrical submittals have been returned, some re-submittals to review. [03] Concrete submittals under review. CLOSE AMS has received. [04] Paved ditch issue, M. Wagstaff to review with Hanson reverse flow line - CLOSE moved to EWO-17 above.
2012-07-24	[01] Fencing VES and/or alignment options M. Wagstaff to check status. [02] Electrical submittals under review. [03] Concrete submittals under review. [04]Lamac shot elevations pipe same elev. as 4 FT cut at paved ditch outfall. M. Wagstaff to review with Hanson reverse flow line.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-07-31	[01] Electrical re-submittals.
2012-07-24	[01] Field tile submittal. Done 07-19.
	[02] Baro driver submittal. Done 07-19.

15 PRODUCTION

03 CLAY

2012-07-31	OPEN - no issues
	[01] Placement as of 07-30 is 80,025 CY [7,275 LD].
	[02] R. Porter presented sketch M/U for review of placement area progress.
2012-07-24	OPEN - no issues
	[01] Placement as of 07-23 is 65,549 CY.
	[02] R. Porter presented sketch M/U.
	[03] Roads are in good shape.

16 DOCUMENTS TRANSMITTED

2012-07-31	[01] AER - Last Planner schedule dated 07-26 [publish date].
	[02] GEO - Submittal Log published 07-28.
2012-07-24	[01] AER - Last Planner schedule dated 07-18.
	[02] AMS- Critical path schedule dated 07-18.
	[03] AMS- Contact list dated 07-20.
	[04] GEO - Submittal Log published 07-21.

17 DOCUMENTS REVIEW ONLY

2012-07-31	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
	[02] S-386 RG M/U for fencing [after main PM].
2012-07-24	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, August 7, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

AER

01 Mr. Mike Wagstaff
02 Mr. Mike Stewart
03 Mr. Bob Muesenfechter

GEO

01 Ms. Anna Saindon
02 Mr. Eric Neuner
03 Mr. Joe Cravens

AMS

01 Mr. Jimmy Boone
02 Mr. John Denham
03 Mr. Joko Tasich
04 Mr. Randy Porter

SUBCONTRACTORS

01	S. Tincher	AAA
02	M. Burch	FWI
03	T. Boyer	BTD
04	T. Hunt	STC

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: August 13, 2012

SUBJECT: Weekly Summary Report for August 6, 2012 to August 10, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny with periods of clouds and isolated thunderstorms. Temperature (°F) lows ranged from 65 to 71°F, and temperature highs ranged from 78 to 99°F. A weather delay occurred on August 9, 2012 from a storm event the previous evening.

Construction Activities

Field tile installation, collector trench excavation and backfill, butt fusion welding, sump discharge pipe and remote vent installation, sump pump assembly, hydrostatic testing, electrical conduit installation, junction box installation, east pump control panel installation, anchor trench spoil transportation, fence layout, slope diversion berm construction, and clay placement occurred this week. B&T Drainage completed field tile installation and collector trench excavation, and continued collector trench backfill and grading. The remote vents for cleanouts CO-3 and CO-4 were installed in the collector trench. Freitag-Weinhardt, Inc. completed butt fusion welding and installing sump discharge pipes for dewatering sumps DS-1, DS-2, DS-3, and DS-4. The remote vents for DS-3 and DS-4 were installed in the collector trench, and the sump pumps were assembled for DS-3 and DS-4. Hydrostatic testing of DS-1, DS-2, DS-3, and DS-4 sump discharge pipes occurred. AAA Electric, Inc. installed electrical conduit in the collector trench, electrical junction boxes at DS-3 and DS-4, and the east pump control panel. IDOT FA-01 sand was placed around the electrical conduit prior to backfilling the collector trench. Detectable utility tape was placed 12 to 18-inches below the ground surface above the sump discharge pipes and electrical conduit. Ash Management Services, Inc. completed transportation

of anchor trench ash spoils from Ash Pond D to Ash Pond A, completing EWO-11. Collins and Hermann, Inc. measured the layouts for the new chain link fence gates per EWO-15. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement in Quadrant D. Slope diversion berm construction continued in Quadrant A and B. Approximately 13 to 16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT CS-323C Smooth Drum Roller
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Matt Dishman, Robert Dunkley, Greg Siverly, Jeremy Shorter, Brad Bolenbaugh, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
B&T Drainage (BTD) – Brian Schaefer, Michael Switzer, and Michael Dashiell
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Lee Ruholl, Patrick Wente, Frank Draper, Jason Byers, and Aaron Gullett
Freitag-Weinhardt, Inc. (FWI) – Scott Burch and Jarrod Barrett
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
Collins and Hermann, Inc. (CHI) – Jacob Williams
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, August 7, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, IDOT FA-01 sand, Propex Geotex 861 geotextile, 1-inch HDPE remote vent pipe, and MJ mechanical fitting bolt-on caps were delivered.

Testing/Sampling

The 3-inch HDPE sump discharge pipes for DS-1, DS-2, DS-3, and DS-4 were hydrostatic tested in accordance with ASTM F2164. Leaks were not observed in the sump discharge pipes. Refer to Freitag-Weinhardt, Inc.'s test documentation for detailed information.

Calibration Records

Calibration information was obtained from Freitag-Weinhardt, Inc. for the Ashcroft Gauge used during the hydrostatic test.

Signature of CQA Officer

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14314

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 8/6/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 71°AM, 94° PM | Contractor: AMS | Subcontr./Supplier: BTD, FWI, AAA, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450 LC Excavator, 410J Backhoe, D5G Dozer,
Site Activities / Observations / Contacts / Notes: CS-323C Roller, Water Truck

AMS:
Continued transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. All other work performed at the CBS.

BTD:
Personnel - Brian Schaefer, Michael Switzer, and Michael Dashiell. Continued haunching the electrical conduit with IDOT FA-1 sand in the collector trench south of Ash Pond D. Continued backfilling, grading, and compacting the collector trench approx. 12" to 18" below the ground surface, and installing the water and electrical detectable tapes in the collector trench over the piping south of Ash Pond D. Began final backfill and compaction of collector trench south of Ash Pond D. Began the collector trench excavation east of Ash Pond D. The 450 LC excavator broke down again. The 279C skid steer was demobilized.

FWI:
The DS-3 and DS-4 manholes were cored for the 3" HDPE sump discharge pipes and the 1" HDPE remote vents. Additional pipe was staged in the collector trench.

AAA:
Powr-Fish Pull Line was run through the 2" high and low voltage conduit between the DS-1 and DS-2 junction boxes, and the west pump control panel junction boxes. The DS-3 and DS-4 manholes were cored for the high and low voltage junction boxes and the conduit drain. Installed additional 2" high and low voltage conduit in the collector trench.

FLT/BCI/TSI:
Clay Placement - Eastbound Section D. Continued constructing slope diversion berms in Section A and B. Area = P-68 to 72, P-92 to 94.

Additional Comments: Loads = ~~234~~ 242

AMS:
Continued transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. All other work performed at the CBS.

BTD:
Continued haunching the electrical conduit with IDOT FA-1 sand in the collector trench south of Ash Pond D. Continued backfilling, grading, and compacting the collector trench approx. 12" to 18" below the ground surface, and installing the utility detectable tapes in the collector trench over the piping south of Ash Pond D. Completed final backfill and compaction of the collector trench up to DS-3. No further collector trench work can continue until additional 3" HDPE sump discharge are hydro tested. Completed the collector trench excavation east of Ash Pond D. Continued the excavation, installation, backfill, and compaction of the 12" ADS field tile south of Ash Pond B and D. Installed a single 12" tee in the field tile southwest of Ash Pond D to tie into Wampler's field tile. Began filling in low spots from the excavations south of Ash Pond A and B.

FWI:
Continued installing and butt fusion welding 3" HDPE sump discharge pipes in the collector trench south and east of Ash Pond D for DS-1, DS-2, DS-3, and DS-4. Installed 2" HDPE fittings + 3"-2" HDPE reducers for DS-3 and DS-4. Prepared fittings for Hydro Test. Fused = 520'.

AAA:
Installed link seals, conduit drains, and junction boxes on DS-3 and DS-4. Installed high and low voltage conduit in the collector trench to the junction boxes. Set the east pump control panel.

FLT/BCI/TSI: Clay Placement - Eastbound Section D.
Area = P-71 to P-75. Loads = 228

Additional Comments: Jacob Williams with Colling and Hermann, Inc. took measurements for the fences and gates.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14316

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/8/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.5 hr for lunch)
Weather: Sunny, 67°AM, 95°PM | Contractor: AMS | Subcontr./Supplier: FWI/FLT/BCI/TSI
Equipment Working: D6N Dozer, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Completed transporting anchor trench ash spoils from the northwest corner of Ash Pond D to the southeast corner of the geotubes in Ash Pond A. This completes EWO-11 Building Spoils Removal. Excavated the collector trench towards the east pump control panel south of Ash Pond D. Cleaned/graded the plant access roads and entrance. All other work at CBS.

FWI:
Completed installing and butt fusion welding the 3" HDPE sump discharge pipes for DS-1, DS-2, DS-3, and DS-4 in the south and east collector trench. Hydrostatic Testing was completed for all four sump discharge HDPE pipes in accordance with ASTM F 2164. This excludes the four 2" HDPE connections at each manhole, and the four 3" HDPE connections at the collector box. These connections will be visually inspected prior to backfill and tested in-service. Hydro Test: All four sump discharge pipes were connected to allow a single hydro test for all four pipes. DS-1 contained the water valve, and DS-2, DS-3, and DS-4 contained bleed values. The value at DS-2 was pressurized and monitored. The pipe system was pressurized to 115 psi and dropped to 112 psi over 10 minutes, passing the test. No leaks in the discharge pipes observed.

Note.: BTD and AAA were not on site today but will return tomorrow.
FLT/BCI/TSI: Clay Placement - Eastbound Section D. Area = 72 to 77, 92 to 94.
Loads = 249

Additional Comments: All cleanouts will receive water-tight, MJ mechanical fittings for the caps.

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/9/12

TIME: Arrive: 6:00 AM | Depart: 3:00 PM | Travel: 1.0 hr | Total: 10 hrs (no lunch)
Weather: Cloudy, 66°AM, sunny 99°PM | Contractor: AMS | Subcontr./Supplier: FWI, AAA, BTD
Equipment Working: 450 LC Excavator, D5G Dozer, 410J Backhoe, CS-323C Roller
Site Activities / Observations / Contacts / Notes:

AMS:
Disassembled remaining fence running north to south at the southwest corner of Ash Pond D. The fence posts will be pulled at a later date. The north/south fence line along the west side of Ash Pond D will no longer have to be reconstructed due to the new gates being installed between Bottom Ash Pond/Pond C, Pond C/Pond B, Pond B/south property line. Refer to EWO-15 for fence detail. Delivery: 4 Rolls of Propex Geotex 861 geotextile. Geotex badge numbers - 2022355105, 2022355188, 2022355382, and 2022355388.

FWI:
Installed 1" HDPE Remote Vents for DS-3, DS-4, in the collector trench south of Ash Pond D, installed the seals in the manholes, and ran the remote vents to the east pump control panel. Began threading the stainless steel sump discharge pipes for DS-3 and DS-4.

AAA:
Installed additional 2½" electrical feeder conduit and 2" high/low voltage conduit in the collector trench south of Ash Pond D, and towards the east pump control panel.

BTD:
Completed the excavation, installation, backfill, and compaction of the 12" ADS field tile, excluding the connection to the grade inlet manhole southwest of DS-1. This will be completed after the paved ditch. Completed the excavation of the collector trench. Installed the saddle and compression fitting in CO-3, and installed the 1" HDPE Remote Vent from CO-3 to the east pump control panel. Completed haunching the electrical conduit with IDOT FA-1 sand in the collector trench. Continued placing detectable utility tape in the collector trench, along with backfilling, grading, and compacting. Delivery -

Additional Comments: IDOT FA-1 Sand, 1" HDPE pipe, and MJ mechanical fittings w/caps for cleanouts.

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/10/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25hr for lunch)
Weather: Sunny, 65°AM, cloudy 78°PM | Contractor: AMS | Subcontr./Supplier: BTD, FWI, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer, CS-323C
Site Activities / Observations / Contacts / Notes: Roller, Water Truck, Kubota L245DT Tractor

AMS:
Cleaned/graded all plant access roads and entrance. All other work performed at CBS.

BTD:
Continued placing detectable utility tape 12"-18" below the ground surface over the 3" HDPE sump discharge pipes and the 1" HDPE remote vents in the collector trench south and east of Ash Pond D. Continued backfilling, grading, and compacting the collector trench south and east of Ash Pond D. Installed the end compression fitting in CO-4, with the saddle, and installed the 1" HDPE remote vent from CO-4 to the top of the embankment on the southeast corner of Ash Pond D. The bollard will be installed at this location when the cleanout bollards are installed. Installed the MJ mechanical fitting bolt-on cap onto CO-3. Reconstructed the anchor trench outlet toe drains (4" ADS) and rip rap pads on the east side of Ash Pond D that were damaged from the collector trench excavation. Began grading the south side of Ash Pond D for the paved ditch survey on Monday.

FWI:
Installed the 1" HDPE remote vents from DS-3 and DS-4 onto the east pump control panel with the 90° fittings and the mesh vent cap. Stubbed off the remote vent from CO-3 and will install the fittings and vent cap at a later date. Assembled the sump pump assemblies for DS-3 and DS-4. This included the threaded stainless steel sump discharge pipes (standpipes), sump pump connection, on/off/alarm floats, paddlewheel flow sensor with saddle, check valve, tee and pitless adaptor, and top caps.

FLT/BCI/TSI: Clay Placement - Eastbound Section D
Area = P-72 to 77, 92 to 94. Loads = 241

Additional Comments: Lamac, ST Construction, and Collins and Hermann to be on site next week.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-08-07	OPEN - no issues. AAA does not project need for next 2x WKS.
2012-07-31	OPEN - no issues.

03 EMPLOYEE DRUG TESTING

2012-08-07	OPEN - no issues. No workers tested this period [week].
2012-07-31	OPEN - no issues. FLT 2x on Friday 07-27.

04 AMS SAFETY

2012-08-07	[01] J. Tasich on site 08-05. [02] Safety luncheon o 08-14 postponed to following week 08-21, e-mail will be sent out. [03] AMS has received AER official response for confined space entry plan submittal. [04] Cooling stations are set up, no issues.
2012-07-31	[01] J. Tasich tentative schedule Wed 08-01 or Thu 08-02. [02] Next scheduled safety luncheon 08-14. [03] Cooling stations are set up, no issues. [04] M. Wagstaff to investigate status [official response] for confined space entry plan submittal.

05 HOUSEKEEPING

2012-08-07 OPEN - No issues.

2012-07-31 OPEN - No issues. Watch for blowing paper off of trucks.

06 PLANT ACCESS - CBT

2012-08-07 OPEN - No issues.

2012-07-31 Zinsious badge not operational, M. Wagstaff to investigate.

08 OSHA LOG - WORK HOURS

2012-08-07 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-06.

No incidents or accidents.

7,051.00 RT

1,409.00 OT

8,460.00 TOTAL

2012-07-31 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 07-30.

No incidents or accidents.

6,570.00 RT

1,328.50 OT

7,898.50 TOTAL

[36] TOTAL

02 WORK HOURS AND OVERTIME

2012-08-07 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT.

2012-07-31 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-08-07 OPEN - no issues.

2012-07-31 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-08-07	OPEN - no issues. AAA subcontractor Plant Brothers AMS review in progress.
2012-07-31	OPEN - no issues. AAA has inquired if being signatory to NMA is required if subcontractor on site for a day or two. J. Denham briefly defined the NMA agreement with Ameren and clarified that it is required no matter what amount of time a subcontractor is on site.

02 SUBMITTALS

20120-08-07	Submittal log as published by GEO on 08-03 distributed. [01] Submittal log review, and general conversation. [02] A. Saindon to have geomembrane warranty reviewed by EOW. [03] J. Cravens reported that testing on the geotextile fabric non-woven will not be required [reference AMS HUT-SUB-023-03]. [04] Collector box submittal review completed - CLOSE [05] Pump and float cord issue resolved by FWI - CLOSE [06] DS hatch [option] researched by R. Porter submitted and resolved. [07] J. King indicated some electrical submittals are critical - P. Zinsious to review.
20120-07-31	Submittal log as published by GEO on 07-28 distributed. [01] Submittal log review, and general conversation. [02] M. Wagstaff has forwarded collector box submittal to Hanson. BTD to forward hatch details. [03] R. Porter meeting with ~~bated~~ BTD yesterday [07-30] regarding submittals.

08 MATERIAL

01 GENERAL

2012-08-07	OPEN - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material [ref. Item No. 07.02-2012-08-07 No. 07 above].
2012-07-31	NEW - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material has been submitted per P. Zinsious. [02] Collector box submittal has been submitted per P. Zinsious. [03] DS lids option to be submitted per R. Porter, round not large enough for pump to be removed. BTD looking into a lightweight aluminum hatch that can be sealed watertight. [04] S. Burch reports 3x pumps and 3x floats ordered/delivered have cords too short. Team brief conversation on options such a splices. FWI to investigate options. R. Porter and J. Cravens indicated that DS installation elevations are either right at or shallower than plan.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-08-07	OPEN - Discussion during Progress Meeting: [01] No issues - work progressing well.
2012-07-31	OPEN - Discussion during Progress Meeting: [01] Work being completed. GCL liner 100% installed. [02] R. Porter inquired about pulling cap off the clean-out, and future pulling on a riser pipe vertically installed as these clean-outs are. Recommended a mechanical joint [MJ] connection with cap. M. Wagstaff agreed. The PCP line now has total 6x clean-outs. [03] Reference EWO-15 for fence discussion.

10 QUALITY CONTROL

2012-08-07	[01] No results form concrete testing returned to dated per J. Cravens. [02] J. Cravens reports geotextile is not required to be tested per CQA plan [ref. Item No. 07.02-2012-08-07 No. 03 above] - CLOSE. [03] M. Wagstaff concerned over the expansion of the HDPE pipe in the heat relative burial and connections. S. Burch indicated burial will be in the morning when pipe is cool. S. Burch indicated installation as described, no issues. CLOSE [04] FWI and AAA report no quality issues. [05] A. Saindon took 3x clay samples today [08-70]. Previous samples analysis passed, no issues. These sample test results will take longer as the samples will be subject to a "shake test" [a type of leachate test]. The result will be available in 2x weeks.
2012-07-31	[01] No results form concrete testing returned to dated per J. Cravens. [02] Discussion on CA-6 gravel verses CA-6 stone. AER allow base of gravel with stone cap, but concern on interlocking. AMS to provide all "white" CA-6 stone for the aggregate roadways. J. Cravens to investigate if geotextile required to be tested per CQA plan. [03] M. Wagstaff concerned over the expansion of the HDPE pipe in the heat relative burial and connections. S. Burch indicated burial will be in the morning when pipe is cool. [04] M. Wagstaff inquired about installation of the GCL. J. Cravens indicated installation correct. Back fill is 18 IN to 24 IN over the GCL. No issues with the GCL and possible soil movement, as some overlaps of material about 5 FT. Seams were sealed with the Bentonite powder. Before placement of the GCL, the fill material was smooth-drum rolled. [05] Clay samples not taken this past week.

11 SCHEDULE REVIEW

2012-08-07	OPEN. Review of last planner by P. Zinsious. [01] AID 188 - Clay placement of Section D 30%. [02] AID 237a, 252a, 272a, 294a - DS lid on order [03] AID 206 - Paved ditch work on hold until Hanson information received. [04] AID 255a, 276, 279 - pump and float cord length issue resolved [05] AID 114, 420 - AAA waiting on EWO submittal review [06] AID 191 - APD berms 18% [07] AID EWO 16, EWO 16a - deleted activity as CA-6 stone to be used per plan [see EWO-16]
2012-07-31	OPEN. Review of last planner by M. Wagstaff. Major items: [01] GCL 100% [02] Field tile piping 100% [03] Paved gutter 100% [04] Clay Placement Area B 100% [05] Clay Placement Area C 100% [06] DS1 set pump 100% [07] Roadway aggregates submittal [process] 100%

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-08-07	No issues. AMS submitted pay application this Monday.
2012-07-31	AMS to submit draft pay-app. M. Wagstaff inquired about credit for PVC option [VES]. AMS confirmed inclusion.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS

2012-08-07	OPEN - AMS continues in progress as "fill-in-work", in progress.
2012-07-31	OPEN - AMS continues in progress as "fill-in-work" [backhoe was moving materials today - 07-31].

13 EWO-13 Electrical

2012-08-07	OPEN - AMS has submitted requested B/U information [on Friday 08-03].
2012-07-31	OPEN - M. Wagstaff, J. King, J. Denham, and P. Zinsious to meet after PM. See below EWO-15 for pole-gate location concern.

15 EWO-15 FENCE ALIGNMENT

2012-08-07	OPEN - J. Williams [Illinois representative for CHI] was on site this AM to walk through with R. Porter and price VES. Count on gates: 2x 24 FT and 1x 20 FT. R. Porter recommending guard rail at stilling basin [at culvert between Ash Pond D and Ash Pond C] where fence has been removed, and edge of basin is close to the roadway. CHI currently has a crew on site installing fence around the electrical substation. R. Porter is recommending work to start by EWO, but approval form AER is required.
2012-07-31	NEW - AMS to present Value Engineering Submittal [VES-03] for fence alignment along Ash Pond D and adjacent property to Dement-Wampler farmland consisting of reuse of fence fabric, new and relocated gates, and new perimeter fence alignment. M. Wagstaff reported Mr. Duane Holley [AER Engineering] has approved alignment, and Mr. Jim Williams [AER Plant Operations] to review. Discussion of the overhead power pole locations and the proposed gates. J. Cravens has the approximate pole locations marked per plan.

16 EWO-16 AGGREGATE STONE ROADWAY ALIGNMENT

2012-08-07	CLOSE - AMS to provide CA-6 stone per plans.
2012-07-31	NEW - AMS to present Value Engineering Submittal [VES-03] for any aggregates stone road alignment.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-08-07	OPEN - Hanson to provide elevations. R. Porter has STC on hold until information received.
2012-07-31	NEW - Paved ditch may be re-aligned due to elevation conflict with existing utilities. Reference Item No. 11-2012-07-24 No. 3 above, and Item No. 13-2012-07-24 No. 04 below. M. Wagstaff reviewing with Hanson, and will walk site after PM. Consideration of installation of drainage pipes across the aggregate roadway.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-08-07	[01] Electrical submittals have been returned on 08-03. P. Zinsious to check remainder.
2012-07-31	[01] Fencing VES and/or alignment options M. Wagstaff to check status. CLOSE - moved to EWO-15 above. [02] Electrical submittals have been returned, some re-submittals to review. [03] Concrete submittals under review. CLOSE AMS has received. [04] Paved ditch issue, M. Wagstaff to review with Hanson reverse flow line - CLOSE moved to EWO-17 above.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-08-07	[01] Electrical re-submittals.
2012-07-31	[01] Electrical re-submittals.

15 PRODUCTION

03 CLAY

2012-08-07	OPEN - no issues [01] Placement as of 08-06 is 94,358 CY. [02] R. Porter presented sketch M/U for review of placement area progress - A. Saindon reviewed.
2012-07-31	OPEN - no issues [01] Placement as of 07-30 is 80,025 CY [7,275 LD]. [02] R. Porter presented sketch M/U for review of placement area progress.

16 DOCUMENTS TRANSMITTED

2012-08-07	[01] AER - Last Planner schedule dated 08-02 [publish date]. [02] GEO - Submittal Log published 08-04.
2012-07-31	[01] AER - Last Planner schedule dated 07-26 [publish date]. [02] GEO - Submittal Log published 07-28.

17 DOCUMENTS REVIEW ONLY

2012-08-07	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-07-31	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement [02] S-386 RG M/U for fencing [after main PM].

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, August 14, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

AER

01 Mr. Mike Wagstaff
02 Mr. Mike Stewart
03 Mr. Bob Muesenfechter

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: August 20, 2012

SUBJECT: Weekly Summary Report for August 13, 2012 to August 17, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny with periods of clouds and isolated thunderstorms. Temperature (°F) lows ranged from 60 to 68°F, and temperature highs ranged from 79 to 90°F. A weather delay occurred on August 13 and 17, 2012 from storm events.

Construction Activities

Collector trench backfill, surveying, sump pump assembly and installation, butt fusion welding, electric and junction box installation, slope diversion berm construction, paved ditch construction, and clay placement occurred this week. B&T Drainage completed backfilling the collector trench and began grading the paved ditch south of Ash Pond D. Excavation of outfall swales and installation of the geotextile and rip rap occurred. ST Construction, Inc. began forming, pouring, finishing, and curing the paved ditch along the south side of Ash Pond D. Freitag-Weinhardt, Inc. continued installing sump pumps and associated piping. AAA Electric, Inc. installed electric lines in conduits on the west portion of the groundwater collector trench system and junction boxes on the east pump control panel. Lamac Engineering Co. surveyed slope diversion berms and the paved ditch. Massmann Surveying surveyed the 100-foot certification grid for the vegetative cover. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement in Quadrant D. Slope diversion berm construction continued in Quadrant A and B. Approximately 13 to 16 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI

Electronic Filing: Received, Clerk's Office 09/28/2020

Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT CS-323C Smooth Drum Roller
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Greg Siverly, Jeremy Shorter, Brad Bolenbaugh, Blake Bunting, Eric Sefton, John Denham, and Scott Sewel
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
B&T Drainage (BTD) – Brian Schaefer, Michael Switzer, Michael Dashiell, and John Boyer
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, Alan Ruholl, Lee Ruholl, Patrick Wente, Frank Draper, Frank Walton, Jason Byers, and Aaron Gullett
Freitag-Weinhardt, Inc. (FWI) – Scott Burch and Jarrod Barrett
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
Collins and Hermann, Inc. (CHI) – Jacob Williams
Lamac Engineering Co. (LEC) – Jake Lewis
Massmann Surveying – Rick Koeac
Daylight Land Management (DLM) – John Ziliak
ST Construction, Inc. (STC) – John Maetin, Gary Hedges, Scott Hilton, Robert Pressley, Kenneth Kientzel, and Mark Newlin
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, August 14, 2012. Refer to the attached meeting minutes for additional information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, IDOT FA-01 sand, RR-01 rip rap, RR-04 rip rap, Propex Geotex 861 geotextile, IDOT SI 4000 psi concrete, welded wire fabric W1.4xW1.4 reinforcement, fiberboard with Seal Tight Snap-Caps, Right Pointe White Water Wax curing compound, fencing, guardrails, and 502 Baro Diver level sensors were delivered.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14319

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/13/12

TIME: Arrive: 6:00 AM | Depart: 1:45 PM | Travel: 1.0 hr | Total: 8.75 (no lunch)
Weather: Cloudy w/Rain, 68°AM, Cloudy 80°PM | Contractor: AMS | Subcontr./Supplier: ~~None~~ LEC, CHI, DLM
Equipment Working: None.
Site Activities / Observations / Contacts / Notes:

AMS:
The rest of the geotextile was delivered (9 rolls), totaling 13 rolls. Badge Numbers: 2022355 242, 243, 247, 249, 252, 256, 260, 262, 264.
The 502 Baro Diver sensors were delivered for DS-1, DS-2, DS-3, and DS-4.

LEC:
Jake Lewis with Lamac surveyed additional slope diversion berms and the paved ditch.

CHI:
Jacob Williams with Collins and Hermann delivered all the fencing for the new gates.

DLM:
John Ziliak with Daylight Land Management toured the site to prepare for seeding + mulching.

Rain Day - No Production Occured. *

Additional Comments:

Electronic Filing: Received, Clerk's Office 09/28/2020

No. A 14320

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 8/14/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.0 hrs (0.5 hr for lunch)
Weather: Cloudy, 68°AM, Sunny 83°PM | Contractor: AMS | Subcontr./Supplier: BTD, FWI, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer,
Site Activities / Observations / Contacts / Notes: CS-323C Roller, 762B Scraper, Water Truck

AMS:
Staked cross-section layouts for slope diversion berms and letdown channels in Section A, B, C, and D. Graded plant access roads, plant entrance, and roadways on the pond cap for the dump trucks. Removed remaining fence posts and fence material from the southwest corner of Ash Pond D to the construction yard.

BTD:
Completed backfilling, grading, and compacting the collector trench south and east of Ash Pond D, excluding the four DS manholes and the proposed location of the collector box. Began grading the paved ditch south of Ash Pond D. The paved ditch will be offset approx. 9.0' to the north on the south side of Ash Pond D to bypass the utilities in the collector trench and to be aligned with the 12" ADS field tile outlet. Installed the MJ mechanical fitting bolt-on caps on CO-1, CO-1A, CO-1B, and CO-2. One more cap needs delivered for CO-4. Note: Only remote vents were installed for CO-3 and CO-4; the west end CO's were vented by drilling two 3/8" holes at the top of the pipe, directly below the MJ caps. Mobilized a John Deere 762B Paddle Wheel Scraper for grading along the south property.

FWI:
Reinstalled the sump pump and floats (on, off, alarm) with the longer cords in DS-2. Installed sump pump and assembly in DS-3 and fused the discharge outlet to the sump discharge pipe. Note: all floats and sump cords enter the high voltage junction box, and all paddlewheel and baro sensors enter the low voltage junction box. Applied seal protectant on the bracket for the three floats in all manholes. Note: Baro divers will be installed last due to being self-weighted, they do not attach to the standpipe, and they cannot be exposed to weather and must be wired immediately.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14321

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 8/15/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 60°AM, 88°PM | Contractor: AMS | Subcontr./Supplier: BTD, FWI, AAA, MMS, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Roller, L245DT Tractor, Water Truck

AMS:
Graded plant access roads, plant entrance, and performed housekeeping. All other work at the CBS.

BTD:
Excavated outfall swales to River at the paved ditch outfall section and the rock chute section off the northeast embankment of Ash Pond D. Geotextile was placed in the outfall swales for the rip rap pads (classes B2 and B4). Continued grading the paved ditch south of Ash Pond D. Backfilled around DS-3 and DS-4 manholes. A ≈6' area will be left open at the entry of the sump discharge pipes to inspect the final HDPE welds in-service at the time of commisioning the sump pumps. Delivery - IDOT CA-6 Fill for paved ditch and RR-1 rip rap for outfall swales.

FWI:
Butt fusion welded and installed the 90° fittings for the 1" HDPE remote vent for CO-3 on the east pump control panel and for CO-4 on top of the embankment at the southeast corner of Ash Pond D at the proposed bollard location. Installed the sump pump and assembly in DS-4 and fused the discharge outlet to the sump discharge pipe. Fused the discharge outlets to the sump discharge pipes at DS-1 and DS-2. Work completed until the collector box arrives.

AAA:
Pulled the high voltage electric for the sump pumps and the floats from the alarm control panel on the west pump control panel to the high voltage junction boxes at DS-1 and DS-2. No. 6 wires are used to power the sumps and No. 10 wires are used to power the floats.

MMS:
Rick Koeac with Massmann surveyed the 100' grid for the Ash Pond D clay cap.

FLT/BCI/TSI: BCI cut the southeast embankment corner of Ash Pond D for use as fill for the paved ditch and regraded east embankment.

Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/16/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 66°AM, Cloudy, 90°PM | Contractor: AMS | Subcontr./Supplier: BTD, STC, AAA, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450 LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Roller, L245DT Tractor, Water Truck

AMS:
Graded Ash Pond D clay cap with a drag blade. All other work performed at the CBS.

BTD:
Continued grading and rolling the paved ditch on the south and east sides of Ash Pond D. Placed rip rap in the outfall swales to river on top of the geotextile at the paved ditch outfall section and the rock chute section off the northeast embankment of Ash Pond D. 6" of RR-01 (class B2) was placed for bedding and 16" of RR-04 (class B4) was placed on top. Refer to S-386, Sheet 9, Detail 3 for outfall swale details. Placed CA-6 fill for the paved ditch bedding south of Ash Pond D. Delivery - RR-01 rip rap, RR-04 rip rap, and CA-6 fill for paved ditch.

STC:
Personnel - John Maetin, Gary Hedges, Scott Hilton, Robert Pressley, Kenneth Kientzel, and Mark Newlin. Began forming, pouring, finishing, and curing the paved ditch south of Ash Pond D. All concrete delivered from R&L Ready Mix Concrete, Inc. Materials - IDOT SI 4000 psi concrete, wire mesh reinforcement, and fiber board with Seal Tight Snap Caps for expansion joints. Right Pointe White Water Wax was used for curing. All concrete has a broom finish. Expansion joints are every 30' and contraction joints are every 10'. Refer to S-386, Sheet 11, Detail 5 for paved ditch details. Two trucks delivered - 1(7cy) and 2(8cy) totaling 15 cy.

AAA:
Installed high and low voltage conduit to the east pump control panel for DS-3 and DS-4. Poured the posts for the east pump control panel and began installing junction boxes on the rack.

FLT/BCI/TSI: BCI continued constructing slope diversion berms in Section A and B, and high spots on APD. Clay Placement - Eastbound Sec. D

Additional Comments: Area = P-78 to 82, and P-90 to 94.
Loads = 249

No. A 14323

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/17/12

TIME: Arrive: 6:00 AM | Depart: 11:15 AM | Travel: 1.0 | Total: 6.25 hrs (no lunch)
Weather: Sunny, 65°AM, 79°AM | Contractor: AMS | Subcontr./Supplier: STC
Equipment Working: None
Site Activities / Observations / Contacts / Notes:

STC:
Saw cut contraction joints every 10' (2" depth) in the paved ditch that was poured yesterday.

Misc:
The hydrostatic testing for the HDPE welds at the collector box and the four DS manholes will not be required. These will be visually inspected and in-service tested at commision.

The pipe bollards at the cleanouts and the CO-4 remote vent will now be 7' long with 5' of stickup. The HDPE bollard covers are still required, but the 1" fiberglass stickup pipe with zipties will be omitted. Refer to S-386, Sheet 12, Detail 7 for pipe bollard details.

Angle iron will now be used for valve supports within the collector box.

The stilling basin will be omitted at the box culvert; rip rap will extend down to the box culvert without a rip rap berm. Refer to S-386, Sheet 11, Detail 6 for box culvert details.

The new fence gates and box culvert guard rail were approved. Collins & Hermann delivered the fence and rail materials.

Rain Day: Due to the storm event last night, no production occured today.

Additional Comments: John Denham and Scott Sewell with AMS toured the site.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-08-14	OPEN - no issues.
2012-08-07	OPEN - no issues. AAA does not project need for next 2x WKS.

03 EMPLOYEE DRUG TESTING

2012-08-14	OPEN - no issues. Schedule 1x worker for 08-15.
2012-08-07	OPEN - no issues. No workers tested this period [week].

04 AMS SAFETY

2012-08-14	[01] J. Tasich on site 08-12. [02] Next scheduled safety luncheon 08-21 [brauts - bring a side]. [03] Cooling stations are set up, no issues.
2012-08-07	[01] J. Tasich on site 08-05. [02] Safety luncheon o 08-14 postponed to following week 08-21, e-mail will be sent out. [03] AMS has received AER official response for confined space entry plan submittal. [04] Cooling stations are set up, no issues.

05 HOUSEKEEPING

[04] Collector box submittal review completed - CLOSE [05] Pump and float cord issue resolved by FWI - CLOSE [06] DS hatch [option] researched by R. Porter submitted and resolved. [07] J. King indicated some electrical submittals are critical - P. Zinsious to review.

08 MATERIAL

01 GENERAL

2012-08-14	OPEN - listing for materials that have potential to impact schedule. [01] R. Porter to receive delivery date for collector box tomorrow [08-16].
2012-08-07	OPEN - listing for materials that have potential to impact schedule. [01] Overhead electrical [EWO-13] wire material [ref. Item No. 07.02-2012-08-07 No. 07 above].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-08-14	OPEN - Discussion during Progress Meeting: [01] Lamac [LEC] staked out for fence on property line [south side of property].
2012-08-07	OPEN - Discussion during Progress Meeting: [01] No issues - work progressing well.

10 QUALITY CONTROL

2012-08-14	[01] Results of 7D [seven day] break passed.
2012-08-07	[01] No results form concrete testing returned to dated per J. Cravens. [02] J. Cravens reports geotextile is not required to be tested per CQA plan [ref. Item No. 07.02-2012-08-07 No. 03 above] - CLOSE. [03] M. Wagstaff concerned over the expansion of the HDPE pipe in the heat relative burial and connections. S. Burch indicated burial will be in the morning when pipe is cool. S. Burch indicated installation as described, no issues. CLOSE [04] FWI and AAA report no quality issues. [05] A. Saindon took 3x clay samples today [08-70]. Previous samples analysis passed, no issues. These sample test results will take longer as the samples will be subject to a "shake test" [a type of leachate test]. The result will be available in 2x weeks.

11 SCHEDULE REVIEW

2012-08-14	OPEN - Review of last planner by M. Wagstaff. Report by R. Porter: [01] 138 Fence work set post & install fence duration 4 days, waiting on start date from sub. [02] 139 Fence work set gates 1 day duration, waiting on start date from sub. [03] 188 Clay placement section –D finish date 8-24-12 used 2 rain days since last meeting. Completion 50%. [04] 191 Earthwork slope diversion berms start date 8-06-12 finish 8-31-12. Completion 18% - no change. [05] 192 Earthwork let down channels start date 8-20-12 finish 8-31-12. [06] 193 Earthwork rock chutes start date 8-22-12 finish 8-31-12. [07] 196 Earthwork finish grade start date 9-04-12 finish 9-07-12. [08] 198 Roadways resurface south perimeter road start date 7-27-12 finish 7-31-12. [09] 198A Roadways resurface interior plant roads start date 8-04-12 finish 8-07-12. [10] 199 Roadways new access road to control panel start date 7-27-12 finish 7-29-12. [11] 206 Concrete paved ditch prep. Started 8-14-12 finish 8-17-12. [12] 207 Concrete paved ditch form and pour start date 8-16-12 finish 8-24-12. [13] 208 Concrete paved ditch strip forms and backfill start date 8-27-12 finish 8-31-12. [14] 210 Ground cover mobilization start date 9-04-12 finish 9-04-12. [15] 211 Ground cover erosion control blanket & reinforced mat start date 9-04-12 finish 9-05-12. [16] 212 Ground cover hydro seed & mulch start date 9-06-12 finish 9-13-12. [17] 317 Install collector box 1 day duration, will receive call from County Materials for delivery date. [18] 370 Install 10 new power poles, waiting for delivery date from AAA.
2012-08-07	OPEN. Review of last planner by P. Zinsious. [01] AID 188 - Clay placement of Section D 30%. [02] AID 237a, 252a, 272a, 294a - DS lid on order [03] AID 206 - Paved ditch work on hold until Hanson information received. [04] AID 255a, 276, 279 - pump and float cord length issue resolved [05] AID 114, 420 - AAA waiting on EWO submittal review [06] AID 191 - APD berms 18% [07] AID EWO 16, EWO 16a - deleted activity as CA-6 stone to be used per plan [see EWO-16]

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-08-14	No issues.
2012-08-07	No issues. AMS submitted pay application this Monday.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS

2012-08-14	CLOSE - Work completed.
2012-08-07	OPEN - AMS continues in progress as "fill-in-work", in progress.

13 EWO-13 Electrical

2012-08-14	OPEN - no report.
2012-08-07	OPEN - AMS has submitted requested B/U information [on Friday 08-03].

15 EWO-15 FENCE ALIGNMENT

2012-08-14	OPEN - M. Wagstaff gave verbal approval, will notify P. Zinsious on 08-15.
2012-08-07	OPEN - J. Williams [Illinois representative for CHI] was on site this AM to walk through with R. Porter and price VES. Count on gates: 2x 24 FT and 1x 20 FT. R. Porter recommending guard rail at stilling basin [at culvert between Ash Pond D and Ash Pond C] where fence has been removed, and edge of basin is close to the roadway. CHI currently has a crew on site installing fence around the electrical substation. R. Porter is recommending work to start by EWO, but approval form AER is required.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-08-14	OPEN - Will use CA-6 "gravel" on slopes. M .Wagstaff verbal approval of up to estimated $ 3,000 [approximately 20 loads].
2012-08-07	OPEN - Hanson to provide elevations. R. Porter has STC on hold until information received.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-08-14	[01] Electrical submittals have been returned on 08-03. P. Zinsious to check remainder.
2012-08-07	[01] Electrical submittals have been returned on 08-03. P. Zinsious to check remainder.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-08-14	[01] Electrical re-submittals. CLOSE
	[02] B3 Rip Rap [ref. Item No. 07.02-2012-08-14 No. 04 above]
2012-08-07	[01] Electrical re-submittals.

15 PRODUCTION

03 CLAY

2012-08-14	OPEN - no issues
	[01] Placement as of 08-13 is 102,300 CY.
	[02] R. Porter presented sketch M/U for review of placement area progress.
2012-08-07	OPEN - no issues
	[01] Placement as of 08-06 is 94,358 CY.
	[02] R. Porter presented sketch M/U for review of placement area progress - A. Saindon reviewed.

16 DOCUMENTS TRANSMITTED

2012-08-14	[01] AER - Last Planner schedule dated 08-07 [data date].
	[02] GEO - Submittal Log published 08-10.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: August 31, 2012

SUBJECT: Weekly Summary Report for August 20, 2012 to August 24, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally clear and sunny with periods of cloudy skies. Temperature (°F) lows ranged from 55 to 66°F, and temperature highs ranged from 80 to 96°F. Weather delays did not occur this week.

Construction Activities

The following activities occurred this week: rock chute and letdown channel construction, paved ditch construction, outfall swale construction, field tile installation, collector box installation and piping, pipe bollard installation, electrical and pump control panel installation, subgrade preparation for gravel surfacing, slope diversion berm construction, and clay placement. Ash Management Services, LLC installed rock chutes with geotextile and rip rap, and began constructing letdown channels. B&T Drainage continued grading the paved ditch, placing fill for the paved ditch bedding, and backfilling against the paved ditch. Additional rip rap was placed in the outfall swales to the river. The new field tile was connected to the existing manhole south of Ash Pond A, completing the field tile installation. The collector box was installed adjacent to the existing outfall manhole on the northeast corner of Ash Pond D, and the outlet drainage pipe from the collector box to the manhole was installed. Freitag-Weinhardt, Inc. installed the sump discharge pipes and ball valves inside the collector box. ST Construction, Inc. continued paved ditch concrete construction along the south side of Ash Pond D. Concrete testing, including slump, air entrainment, and cast cylinders, was performed by Patriot Engineering, Inc. The pipe bollards were installed beside the groundwater collection system cleanouts. AAA Electric, Inc.

installed electrical lines in the conduit for the east portion of the groundwater collection system. Junction boxes and conduit were installed on the west and east pump control panels, and the ground rods were installed for both panels. Fawn Lane Transit, Inc. and Belt Construction, Inc. placed soil in Quadrant D for the vegetative cover. Subgrade preparation for the new roadways and gravel surfacing began. Slope diversion berm construction continued in Quadrant C and D. Approximately 12 to 16 trucks were used to haul clay material to Ash Pond D. The vegetative cover was placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

Patriot Engineering, Inc. (PEI) – Thad Simpson
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

J019896.01

The weekly progress meeting was held on Tuesday, August 21, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Clay for the vegetative layer, IDOT CA-6 fill, RR-03 rip rap, RR-04 rip rap, IDOT SI 4000 psi concrete, fiberboard with Seal Tight Snap-Caps, Octocrete non-shrink grout, pipe bollards, bollard covers, and the precast collector box were delivered.

Testing/Sampling

Patriot Engineering, Inc. performed concrete testing for the paved ditch, including slump and air entrainment testing. Four concrete cylinders were cast and retrieved each day for testing. Refer to the concrete testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

No. A 14324

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/20/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 58° AM, Cloudy 80° PM | Contractor: AMS | Subcontr./Supplier: BTD, STC, PEI, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Roller, L245 DT Tractor, Water Truck

AMS:
Graded plant access roads and put up silt fence around the paved ditch south of Ash Pond D.

BTD:
Continued grading and rolling the subgrade for the paved ditch south and east of Ash Pond D. Placed additional rip rap in the outfall swales to river at the paved ditch outfall section and the rock chute section off the northeast embankment of Ash Pond D. Placed CA-6 fill for the paved ditch bedding south of Ash Pond D. Began backfilling against the paved ditch south of Ash Pond D. Backfilled around DS-1 and DS-2 manholes, and around the west and east pump control panels. Delivery - CA-6 fill, RR-04 riprap (B4), and the collector box.

STC:
Continued forming, stripping, pouring, finishing, and curing the paved ditch south of Ash Pond D. Expansion joints were placed every 30'. Three trucks delivered - 1(8cy), 2(8cy), 3(8cy) = 24cy

PEI:
Thad Simpson performed concrete testing for the paved ditch. 75°, 4 cylinders cast, and slump = 3". The air entrainment testing apparatus is currently being repaired. Refer to the project CQA Plan for sampling/testing details. Test tolerances are being field approved.

FLT/BCI/TSI:
BCI backfilled against the paved gutter west of Section C. Additional clay fill was placed on the southwest side of Section C to compensate the shallow, relocated 18" HDPE drainage pipe. Began grading the subgrade for the new gravel road running to the east pump control panel south of Section C. Graded the south embankment of Ash Pond D.

Clay Placement - Eastbound Section D.
Additional Comments: Area = P81 to 84, and P-89.
Loads = 284

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/21/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 55° AM, Sunny 86° PM | Contractor: AMS | Subcontr./Supplier: BTD, STC, PEI, FWI, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450 LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Roller, L245DT Tractor, Water Truck

AMS:
Excavated 6'x6' pad and slopes for the stilling basin at the invert of the existing 2'x5' box culvert on the west side of Ash Pond D. Placed 8 oz. geotextile and RR-03 rip rap (Class B3) onto the excavated pad and slopes up to the box culvert. Delivery - RR-03 rip rap.

BTD:
Continued grading and rolling the subgrade for the paved ditch east of Ash Pond D. Continued placing CA-6 fill for the paved ditch bedding south of Ash Pond D. Excavated and installed the collector box northeast of Ash Pond D, south of the existing outfall manhole. Installed the 8" HDPE drainage pipe from the collector box to the outfall manhole. The collector box exit and the manhole entry received a concrete collar. The inside of the collector box and manhole will receive non-shrink grout.

STC:
Continued forming, stripping, pouring, finishing, curing, and saw cutting the paved ditch south of Ash Pond D. Three trucks delivered - 1(8cy) + 2(8cy) + 3(8cy) = 24 cy

PEI:
Thad Simpson performed concrete testing for the paved ditch. 78°, 4 cylinders cast, Air = 4.2%, and Slump = 2". A rain event occurred from 8:00 AM to 8:45 AM and, therefore, the first concrete truck's pour was delayed. Per ACI 305.1-06, the concrete mixing in the truck had passed its time limit. This also caused the 2" slump. Therefore, the pouring from the first truck was ceased and the remaining concrete was disposed of.

FWI: Butt fusion welded and installed the 3" HDPE ball valves for DS-1, DS-2, DS-3, and DS-4 in the collector box. Angle iron was installed as supports for the valves. Electrofusion couplers were omitted in the box.

AMS:
Excavated the rock chute to the outfall swale to river off the northeast embankment of Ash Pond D. Placed 8 oz. geotextile and RR-03 rip rap into the rock chute. Note- the letdown channel Section C-C at the bottom of the rock chute will be omitted and the rock chute will extend down to the beginning of the outfall swale. Note- the stilling basins at the bottom of the rock chutes will be omitted and all chute containment berms will be 1.0' in height. The rock chute slopes will be as-built to match the current Ash Pond D embankment slopes. Silt fence was placed around the rip rap and the containment berms will be built at a later date.

BTD:
Continued grading the subgrade for the paved ditch east of Ash Pond D. Continued placing CA-6 fill for the paved ditch bedding south of Ash Pond D. Backfilled against the paved ditch and the collector box. Excavated for field tile installation south of Ash Pond A. Drilled holes for pipe bollards beside all the cleanouts and the remote vent for CO-4. Poured concrete collar for 8" HDPE drainage pipe inside existing outfall manhole. Sealed sump discharge pipes and 8" HDPE drainage pipe with Octocrete non-shrink grout inside the collector box northeast of Ash Pond D. Delivery- CA-6 fill, 7 pipe bollards, and Octocrete non-shrink grout

STC:
Continued paved ditch concrete construction south of Ash Pond D. Set and poured the pipe bollards beside the cleanouts. Three trucks delivered- 1(8cy) + 2(8cy) + 3(8cy) = 24 cy

PEI:
Tested concrete for the paved ditch- Temp=75°, Air=4.5%, Slump=3", and 4 cylinders cast.

AAA: Installed junction boxes on the east pump control panel and pulled measurements for the electric feeder from MCC to east and west PCS.

Additional Comments:

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 8/23/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 58°AM, 93°PM | Contractor: AMS | Subcontr./Supplier: BTD, STC, PEI, AAA, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Roller, L245DT Tractor, Water Truck

AMS:
Constructed an additional rock chute to the box culvert riprap swale on the west side of Ash Pond D extending from the slope diversion berms. RR-03 riprap and 8 oz. geotextile were used in the rock chute. Graded the Ash Pond D cap with a drag blade. Delivery – RR03 riprap.

BTD:
Broke a entry hole into the existing grade inlet manhole southwest of DS-1 for the field tile. The new entry will contain the 12" ADS field tile and an existing 6" ADS field tile coming from the southern field. Note - the 6" ADS tile was plugged with soil. Both field tiles were installed and received a concrete collar in the grade inlet manhole. This completed the field tile work items. Backfilled against the grade inlet manhole, DS-1, west pump control panel, and paved ditch. Placed CA-6 fill for the paved ditch bedding. Delivery - CA-6 fill. Demobilized - John Deere 4020 tractor.

STC:
Continued paved ditch concrete construction south of Ash Pond D. Three trucks delivered - 24 cy.

PEI:
Tested concrete for the paved ditch - Temp = 73°, Air = 4.7%, Slump = 3¾", and 4 cylinders cast.

AAA:
Pulled the high voltage electric lines for the sump pump and floats from the pump junction box on the east pump control panel to the high voltage junction box on DS-4. Installed ¾" SS conduit for the paddle wheel flow sensor and 1¼" SS conduit for the Diver level sensor onto the east pump control panel. Note - Herculine is used for all conduit length measurements.

FLT/BCI/TSI: An air bubble developed in the southeast corner of Section D towards clay placement completion. The embankment adjacent to the

Additional Comments: side of the anchor trench was excavated to release the air. Clay placement will continue tomorrow.

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/24/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 66°AM, 96°PM | Contractor: AMS | Subcontr./Supplier: BTD, STC, PEI, AAA, FLT, BCI, TSI
Equipment Working: D6N Dozer, 580 Backhoe, 450LC Excavator, 410J Backhoe, D5G Dozer, 762B
Site Activities / Observations / Contacts / Notes: Scraper, CS-323C Scraper, L245DT Tractor, Water Truck

AMS:
Began constructing letdown channel containment berms on the south side of Ash Pond D. Installed silt fence around the additional rock chute for the box culvert outfall swale on the west side of Ash Pond D. Backfilled against the paved ditch with outfall swale and rock chute spoils.

BTD:
Installed MJ mechanical fitting bolt-on cap on CO-4. Prepared bedding for cleanout and pipe bollard slabs. Note- the concrete slabs will now be SOG (slab-on-grade). Refer to S-386, Sheet 12, Details 5, 6, and 7 for cleanout/pipe bollard details. Placed CA-6 fill for bedding for the paved ditch. Backfilled against the paved ditch. Continued grading and rolling the paved ditch on the east side of Ash Pond D. Installed Foamular 250 moisture-resistant XPS insulation over the existing deep well utilities in the location of the paved ditch on the northeast side of Ash Pond D. Demobilized - CAT D5G Dozer.

STC:
Continued paved ditch concrete construction south of Ash Pond D. Four trucks delivered - 32 cy.

PEI:
Tested concrete for the paved ditch - Temp= 73°, *Air = 3.8%, 5.6%, Slump = (before 25 cy) 3", (after 25 cy) 3¼", and 4 cylinders cast. *Due to the low air content from the first load, the second load was tested and had acceptable results; concrete pouring resumed.

AAA: Installed ¾" SS conduit for the flow sensors and 1¼" SS conduit for the level sensors on the west pump control panel, as well as back panels and receptacle boxes. Installed ground rod and exothermic (cad) welded the ground cable to the ground rod at the west pump control panel.

FLT/BCI/TSI: Finished day placement in Section D,

Additional Comments: completing the vegetative cover. Slope diversion berm construction in Sections C and D.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-08-21	OPEN - no issues. AAA project need for WPA next 2x WKS - 08-31. AMS and AAA to coordinate LOTO. M. Wagstaff to coordinate AER with Mr. Steve Bruner. Confirmation of WPA next Tuesday [08-21].
2012-08-14	OPEN - no issues.

03 EMPLOYEE DRUG TESTING

2012-08-21	OPEN - no issues. Plant Brothers workers to be tested this period [week].
2012-08-14	OPEN - no issues. Schedule 1x worker for 08-15.

04 AMS SAFETY

2012-08-21 [01] J. Tasich on site 08-21. Provided overview, safety reports:
- [01] PPE and safety processes look good - no issues.
- [02] Spotters [laborers] are rotating - no issues.
- [03] No confined space entry this look-ahead.

[02] M. Wagstaff brief discussion regarding connection to Ash Pond C [pump station] WPA/LOTO. To be further discussed 08-21.
[03] Plant Brothers to received site-specific safety training next week.
[04] M. Wagstaff inquired about pump [control] panels. J. King to LOTO.
[05 Brief discussion regarding final connection and testing of the DS pumps. M. Wagstaff concern about final discharge through the collector box until approval of discharge permit by IEPA. M. Wagstaff required the valves LOTO. FWI and R. Porter to coordinate.

2012-08-14 [01] J. Tasich on site 08-12.
[02] Next scheduled safety luncheon 08-21 [brauts - bring a side].
[03] Cooling stations are set up, no issues.

05 HOUSEKEEPING

2012-08-21 OPEN - No issues.
2012-08-14 OPEN - No issues.

06 PLANT ACCESS - CBT

2012-08-21 OPEN - No issues.
2012-08-14 OPEN - No issues.

08 OSHA LOG - WORK HOURS

2012-08-21 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.
No incidents or accidents.
7,771.00 RT
1,523.00 OT
9,294.00 TOTAL

2012-08-14 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13
No incidents or accidents.

02 WORK HOURS AND OVERTIME

2012-08-21 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT. Labor Day holiday 09-03 - no work.
2012-08-14 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-08-21 OPEN - no issues.
2012-08-14 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-08-21	OPEN - no issues. P. Zinsious to track FWI CO.
2012-08-14	OPEN - no issues. AAA subcontractor Plant Brothers AMS review in progress.

02 SUBMITTALS

20120-08-21	Submittal log was distributed as published by GEO on 08-18. [01] Submittal log review, and general conversation. [02] A. Saindon to have geomembrane warranty reviewed by EOW. CLOSE [03] J. Cravens reported that testing on the geotextile fabric non-woven will not be required [reference AMS HUT-SUB-023-03]. CLOSE [04] AMS resubmit B3 Rip Rap for letdown chutes and stilling basins. CLOSE [05] DS hatch [option] researched by R. Porter submitted and resolved. Reinforcing steel in tops required. M. Wagstaff done. CLOSE [06] Wire insulation discussion previous to PM with M. Wagstaff, J. King, and P. Zinsious. [07] General discussion on manuals for close-out: [01] M. Wagstaff requirement 1x copy digital and 1x copy hard bound [02] J. Cravens collected manuals from FWI for Omega and Zoeller, transmitted to P. Zinsious. [08] General discussion on record drawings for close out: [01] Schematics for panels to be included. [02] M. Wagstaff indicated that Lamac will probably do record drawings in AutoCAD. [03] AMS to provide 1x copy to AER, who will forward to LEC.
20120-08-14	Submittal log was distributed as published by GEO on 08-10. [01] Submittal log review, and general conversation. [02] A. Saindon to have geomembrane warranty reviewed by EOW. OPEN [03] J. Cravens reported that testing on the geotextile fabric non-woven will not be required [reference AMS HUT-SUB-023-03]. OPEN [04] AMS resubmit B3 Rip Rap for letdown chutes and stilling basins. [05] Collector box submittal review completed - CLOSE Reinforcing steel in tops required. [06] DS hatch [option] researched by R. Porter submitted and resolved. Reinforcing steel in tops required. [07] J. King indicated some electrical submittals are critical - P. Zinsious to review. OPEN - In progress with Ameren.

08 MATERIAL

01 GENERAL

2012-08-21	OPEN - listing for materials that have potential to impact schedule. [01] M. Burch reports Omega sensor to be ordered. [02] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. [03] Collector box holes for the DS lines are too small for Link-Seal. R. Porter recommended using non-shrink grout as used in other area of the projection man holes. P. Zinsious indicated the exterior could be also coated in a mastic to help seal the penetrations. M. Wagstaff indicated that the box still remains in the flood plain, even with the revised elevations and is to be sealed.
2012-08-14	OPEN - listing for materials that have potential to impact schedule. [01] R. Porter to receive delivery date for collector box tomorrow [08-16].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-08-21	OPEN - Discussion during Progress Meeting: [01] Lamac [LEC] staked out for fence on property line [south side of property]. CLOSE [02] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. M. Wagstaff to investigate.
2012-08-14	OPEN - Discussion during Progress Meeting: [01] Lamac [LEC] staked out for fence on property line [south side of property].

10 QUALITY CONTROL

2012-08-21	[01] No results form concrete testing returned. P. Zinsious to check with STC. [02] J. Cravens reports recent concrete pour slump was about 2 IN. Pour was held up due to rain, and truck walt time exceeded. Therefore approximately 2 CY wasted. [03] HDPE [field tile] no issues. [04] DS-3 ring height issues due to re-grade of the paved concrete ditch. J. king indicated drilling 2x more holes.
2012-08-14	[01] Results of 7D [seven day] break passed.

11 SCHEDULE REVIEW

2012-08-21	OPEN - Review of last planner by M. Wagstaff. [01] Rain day on 08-17. [02] Major changes commentary: [01] Not on LP - AID 199 S = 08-27, D = 2 [01] Not on LP - AID 198 S = 08-27, D = 4 [01] Not on LP - AID 198a S = 09-04, D = 3 [03] Add AID 119a "Install fence and gate" S = 08-27, D = 4 [04] Mark-up on LP, submitted to AER for change.
2012-08-14	OPEN - Review of last planner by M. Wagstaff. Report by R. Porter: [01] 138 Fence work set post & install fence duration 4 days, waiting on start date from sub. [02] 139 Fence work set gates 1 day duration, waiting on start date from sub. [03] 188 Clay placement section –D finish date 8-24-12 used 2 rain days since last meeting. Completion 50%. [04] 191 Earthwork slope diversion berms start date 8-06-12 finish 8-31-12. Completion 18% - no change. [05] 192 Earthwork let down channels start date 8-20-12 finish 8-31-12. [06] 193 Earthwork rock chutes start date 8-22-12 finish 8-31-12. [07] 196 Earthwork finish grade start date 9-04-12 finish 9-07-12. [08] 198 Roadways resurface south perimeter road start date 7-27-12 finish 7-31-12. [09] 198A Roadways resurface interior plant roads start date 8-04-12 finish 8-07-12. [10] 199 Roadways new access road to control panel start date 7-27-12 finish 7-29-12. [11] 206 Concrete paved ditch prep. Started 8-14-12 finish 8-17-12. [12] 207 Concrete paved ditch form and pour start date 8-16-12 finish 8-24-12. [13] 208 Concrete paved ditch strip forms and backfill start date 8-27-12 finish 8-31-12. [14] 210 Ground cover mobilization start date 9-04-12 finish 9-04-12. [15] 211 Ground cover erosion control blanket & reinforced mat start date 9-04-12 finish 9-05-12. [16] 212 Ground cover hydro seed & mulch start date 9-06-12 finish 9-13-12. [17] 317 Install collector box 1 day duration, will receive call from County Materials for delivery date. [18] 370 Install 10 new power poles, waiting for delivery date from AAA.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-08-21	No issues.
2012-08-14	No issues.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: September 6, 2012

SUBJECT: Weekly Summary Report for August 27, 2012 to August 31, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally clear and sunny with periods of cloudy skies. Temperature (°F) lows ranged from 64 to 76°F, and temperature highs ranged from 88 to 96°F. Weather delays occurred on August 27 and 28, 2012 due to wet conditions.

Construction Activities

The following activities occurred this week: rock chute construction, paved ditch construction, vegetative cover potholing and surveying, power pole installation, electrical and pump control panel installation, fencing installation, guardrail installation, slope diversion berm construction, and subgrade preparation for gravel surfacing. Ash Management Services, LLC installed rock chutes with geotextile and rip rap, backfilled against the completed paved ditch, and excavated and backfilled collector trenches for the electrical feeder. B&T Drainage continued preparing the subgrade for the paved ditch and backfilling against the completed paved ditch. The vegetative cover over Ash Pond D was potholed to assess the vegetative layer thickness. Lamac Engineering CO. surveyed the potholed locations and staked the 100-ft. certification grid. ST Construction, Inc. continued paved ditch concrete construction along the south and east sides of Ash Pond D. Concrete testing, including slump, air entrainment, and cast cylinders, was performed by Patriot Engineering, Inc. Plant Brothers Excavating and Construction CO. installed power poles for the overhead electric to the groundwater collection system. AAA Electric, Inc. installed additional electrical conduit for the groundwater collection system, low voltage electric lines for sensors, mini power zone (MPZ) boxes, guy wire anchors for the power poles, and managed the

power pole installation. Collins and Hermann, Inc. installed new fencing, three gates, and a guardrail at the box culvert, completing EWO-15. Fawn Lane Transit, Inc. and Belt Construction, Inc. placed backfill against the completed paved ditch and continued slope diversion berm construction. Subgrade preparation for the new roadways and gravel surfacing continued. Approximately 12 to 16 trucks were used to haul clay material to Ash Pond D. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT CS-323C Smooth Drum Roller
CAT 304C Mini Excavator
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
John Deere 410J Backhoe
New Holland C232 Skid Steer
Case 580 Backhoe
Case 688G Telehandler
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Paul Zinsious, Robert Dunkley, Greg Siverly, Jeremy Shorter, Brad Bolenbaugh, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
B&T Drainage (BTD) – Brian Schaefer, Michael Dashiell, and Abel English
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Greg Lingorfelter, Tom Sager, Eric Bierman, Robert Shehorn, Billie Meadows, John Niles, Brian Griffith, Bob Smithenry, Alan Ruholl, Lee Ruholl, Patrick Wente, Frank Draper, Jason Byers, and Aaron Gullett
Lamac Engineering CO. (LEC) – Austin Ridgley and Jake Lewis
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
ST Construction, Inc. (STC) – John Maetin, Gary Hedges, Scott Hilton, Robert Pressley, Kenneth Kientzel, and Mark Newlin
Patriot Engineering, Inc. (PEI) – Thad Simpson, Jim Wade, and Mark Wooten
Collins and Hermann, Inc. (CHI) – James Fox, Aaron Benjamin, and Chuck Rak
Plant Brothers Excavating and Construction CO. (PBC) – Mike Doss, Terry Mace, and Daniel VanDuyn
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

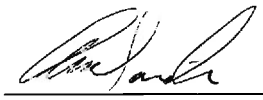
The weekly progress meeting was held on Tuesday, August 28, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: clay for slope diversion berms and backfill, timber power poles, MPZ electrical boxes, guy wire anchors, RR-03 rip rap, IDOT CA-6 fill, IDOT FA-1 sand, and IDOT SI 4000 psi concrete.



Testing/Sampling

Patriot Engineering, Inc. performed concrete testing for the paved ditch, including slump and air entrainment testing. Four concrete cylinders were cast and retrieved each day for testing. Refer to the concrete testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 14887

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 8/27/12

TIME: Arrive: 6:00 AM | Depart: 4:45 PM | Travel: 1.0 hr | Total: 11.5 hrs (0.25 hr for lunch)
Weather: Cloudy/Rain, 74° AM, Sunny 88° PM | Contractor: AMS | Subcontr./Supplier: CHI, BCI, AAA, STC
Equipment Working: D6N Dozer, 580 Backhoe, C232 Skid Steer
Site Activities / Observations / Contacts / Notes:

AMS:
Cleaned and graded plant access roads for traffic. Placed reflective HDPE bollard covers on pipe bollards beside the cleanouts. Removed washed out soil from the paved gutter.

CHI:
Personnel - James Fox, Aaron Benjamin, and Chuck Rak. Mobilized - New Holland C232 Skid Steer. Drilled (12") and set all posts for the fence, gate, and guardrail per EWO-15: Fence Alignment. The fence and gate posts were set between the Bottom Ash Pond and Ash Pond C, between Ash Pond C and Ash Pond B, between Ash Pond B and the south property line, and along the south property line. The guard rail posts were set adjacent to the box culvert on the west side of Ash Pond D. Murphy Masonry, Inc. delivered all the concrete for the posts.

BCI:
Graded the northwest side of Ash Pond D for the turf reinforcement mat at the groin on the slope and swale. Continued constructing slope diversion berms in Section A.

AAA:
Installed the low voltage electrical lines for the paddlewheel flow sensor and the diver level sensor in the 2" PVC conduit for DS-1, DS-2, and DS-4. Note - DS-3 riser will have to be raised, along with the junction boxes, before electric can be installed at this location.

STC: Saw cut contraction joints in the paved ditch.

Additional Comments: Plant Bros. Co. mobilized equipment: Case 688G Telehandler and CAT 304C Mini Excavator.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/28/12

TIME: Arrive: 6:00 AM | Depart: 7:00 PM | Travel: 1.0 hr | Total: 13.75 hrs (0.25 hr for lunch)
Weather: Sunny, 64°AM, 93° PM | Contractor: AMS | Subcontr./Supplier: CHI, PBC, AAA, BCI, LEC, BTD
Equipment Working: D6N Dozer, 580 Backhoe, C232 Skid Steer, 304C Mini Ex., 688G Telehandler
Site Activities / Observations / Contacts / Notes:

*Vegetative Cover Thickness:

Massmann's survey data for the clay cover was received and reviewed. The as-built ash elevations and as-built clay elevations provided an average clay thickness of 2.42', with a range from 0.79' to 4.50', having large areas across the pond with 1.5' to 2.5' of cover. The CQA Plan provides a cover tolerance of 0 to -0.4'. Therefore, based on the survey data, a large amount of fill is required to achieve the required cover thickness. To determine if the survey data was correct and/or there was settlement in the ash, test grid points were chosen across the pond. Austin with LEC staked the grid points and Abel with BTD potholed the points down to the liner by water excavation. LEC then shot the cover and liner elevations, and the cover thickness was measured. The test points, for the majority, matched Massmann's data. Therefore, this provides that the ash has experienced minimal settlement, and the clay cover has experienced significant settlement due to the live loads from the clay placement procedure. In summary, a large amount of clay will have to be placed to achieve the required cover thickness of 3.0', approx. 50,000 cy of material. — LEC will submit their findings by the end of the week and they are scheduled to restake the 100' grid across Ash Pond D with cut and fill grades for additional clay placement. It is estimated that this will extend the project 2 to 4 weeks. Nothing has been officialized at this time and work will proceed as scheduled.

AMS:

Placed silt fence around paved ditch and the subgrade for the new access road towards the east pump control panel. Added rip rap to the box culvert rock chute. Graded the plant access roads and entrance. Backfilled against the paved ditch with outfall swale and rock chute spoils from the northeast embankment of Ash Pond D.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/28/12

TIME: Arrive: _____ Depart: _____ Travel: _____ Total: _____
Weather: _____ Contractor: REFER to PAGE 1 Subcontr/Supplier: _____
Equipment Working: _____
Site Activities / Observations / Contacts / Notes:

CHI:
Installed the guard rail at the box culvert on the west side of Ash Pond D. Installed the chain link fence and rails between the Bottom Ash Pond and Ash Pond C, Ash Pond C and Ash Pond B, Ash Pond B and the south property line, and along the south property line. Only the gates and barb wire remain to be installed. Note - all directions of the barb wire will be matched to existing fencing across the site.

PBC:
Plant Brothers Excavating & Construction Co. mobilized. Personnel - Mike Doss, Terry Mace, and Daniel VanDuyn. Delivery - timber power poles. The 10 proposed power poles from the MCC building to the southeast corner of Ash Pond B were drilled with a 24" auger and installed for overhead electric to the groundwater collection system per EWO-13. All backfill for the power poles was tamped. Drilled 12" holes beside the power poles for the guide wires. Completed the installation and demobilized the CAT 304C Mini Ex. and Case 688G Telehandler.

AAA:
Overseen the power pole installation. Delivery - Mini Power Zone (MPZ) junction boxes. Set anchors, assembled, and installed the MPZ boxes on the west and east pump control panels.

BCI:
Continued constructing slope diversion berms in all Quadrants of Ash Pond D.

Note: Paved ditch construction was delayed two days due to the rain over the weekend.

Additional Comments: CQA plan also requires a minimum thickness of 3 feet for vegetative cover.

FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 8/29/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 76°AM, 93°PM | Contractor: AMS | Subcontr./Supplier: CHI, AAA, BTD, STC, PEI, BCI, FLT
Equipment Working: D6N Dozer, 580 Backhoe, C232 Skid Steer, D5G Dozer, CS-323C Roller, Water Truck

Site Activities / Observations / Contacts / Notes:

AMS:
Excavated the wrap-around collector trenches for the electrical feeder, to the west and east pump control panels, in between Ash Pond D and Ash Pond B, to the power pole on the southeast corner of Ash Pond B. Haunched all conduit in the trenches with FA-1 sand, placed detectable tape over the conduit, and backfilled the collector trenches. Note- the collector trench crossing the gravel road followed E-386, Sheet 5, Detail 3. Backfilled against the paved ditch.

CHI:
Installed the new gates in between Bottom Ash Pond and Ash Pond C, Ash Pond C and Ash Pond B, and Ash Pond B and the south property line. Installed the barb wire on all the new fencing. Completed EWO-15 Fence Alignment and demobilized the New Holland C232 Skid Steer.

AAA:
Installed 2½" electrical feeder PVC conduit in the wrap-around collector trenches to the power pole on the southeast corner of Ash Pond B. Installed the low voltage electric for the flow and level sensors in the conduit from DS-4 to the east pump control panel. Installed conduit to the single phase MPZ box on the east pump control panel.

BTD:
Graded the paved ditch subgrade, placed CA-6 fill for the paved ditch bedding, and backfilled against the paved ditch. Delivery - IDOT CA-6 fill. Remobilized - CAT D5G Dozer.

STC: Continued forming, stripping, pouring, finishing, curing, saw cutting contraction joints, and sealing the paved ditch with NP-1 sealant southeast radius of Ash Pond D. 16 cy.

PEI: Tested concrete for the paved ditch - Will receive today's results next week.

BCI/FLT: Dumping and backfilling against the paved ditch south of Ash Pond D and constructing slope diversion berms.

Equipment Working: D6N Dozer, 580 Backhoe, D5G Dozer, CS-323C Roller, 762B Scraper, Water Truck

Site Activities / Observations / Contacts / Notes:

AMS:
Backfilled wrap-around collector trenches in between Ash Pond D and Ash Pond B up to the power pole for overhead electric on the southeast corner of Ash Pond B. Backfilled against the west pump control panel, graded plant access roads, and began finish grading south of Ash Pond A.

AAA:
Installed the guide wire anchors for the new power poles. Installed the 2½" electric feeder PVC conduit into the single phase MPZ box on the west pump control panel. Exothermic welded the ground cable to the ground rod with CAD weld at the east pump control panel.

BTD:
Continued grading the paved ditch subgrade east of Ash Pond D, placing CA-6 fill for the paved ditch bedding, and backfilling against the paved ditch south of Ash Pond D.

STC:
Continued paved ditch concrete construction east of Ash Pond D. Three trucks delivered - 24 cy.

PEI:
Jim Wade tested paved ditch concrete - Temp = 61°, Slump = 4½", Air = 5.25%, and 4 cylinders.

LEC:
Austin Ridgley and Jake Lewis surveyed the 100' certification grid across the cap of Ash Pond D, with cuts/fills on the stakes. Clay placement will resume next week for additional cover.

BCI/FLT:
Continued dumping and backfilling against the paved ditch south of Ash Pond D and constructing slope diversion berms in all Quadrants.

Additional Comments: Areas across the site were prepared for hurricane effect rains this coming weekend.

AMS:
Put up additional silt fence along the paved ditch. Backfilled against the power pole on the southeast corner of Ash Pond B. Constructed an additional rock chute with geotextile and rip rap on the letdown channel on the southern end of Ash Pond D. The rock chute will extend from the most southern slope diversion berms down to the paved ditch.

BTD:
Continued grading the paved ditch subgrade east of Ash Pond D, placing CA-6 fill for the paved ditch bedding, and backfilling against the paved ditch east of Ash Pond D. Added additional slab bedding at the pipe bollards and cleanouts to 4" below the HDPE bollard covers.

STC:
Continued paved ditch concrete construction east of Ash Pond D. Three trucks delivered - 24 cy.

PEI:
Mark Wooten tested paved ditch concrete - Temp=71°, Slump=2", Air=5.5%, and 4 cylinders cast.

AAA:
Installed 2½" stainless steel conduit onto power pole up to the disconnect for the electric feeder on the southeast corner of Ash Pond B. Installed ¾" stainless steel conduit onto the west pump control panel for the electric to the pumps, floats, and receptacles.

BCI/FLT:
Continued dumping and backfilling against the paved ditch south of Ash Pond D and constructing slope diversion berms in all Quadrants.

Additional Comments:

Randy Foster — Contractor Representative — AMS — Company

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-08-28	OPEN - no issues. AAA projection per revised schedule, M. Wagstaff to coordinate with J. King.
2012-08-21	OPEN - no issues. AAA project need for WPA next 2x WKS - 08-31. AMS and AAA to coordinate LOTO. M. Wagstaff to coordinate AER with Mr. Steve Bruner. Confirmation of WPA next Tuesday [08-21].

03 EMPLOYEE DRUG TESTING

2012-08-28	OPEN - no issues. Schedule Daylight 1x worker for 09-04. Plant Brothers have been tested [on site today 08-28].
2012-08-21	OPEN - no issues. Plant Brothers workers to be tested this period [week].

04 AMS SAFETY

2012-08-28	[01] J. Tasich on site schedule TBD. [02] No safety issues reported. [03] Plant Brothers power pole installation - M. Wagstaff inquire about strap/chocker for pole installation. AAA indicated standard procedure. Rigging was inspected, new choker. Installation [using forklift], work progressing safety. [04] R. Porter has copy of forklift certification.
2012-08-21	[01] J. Tasich on site 08-21. Provided overview, safety reports: [01] PPE and safety processes look good - no issues. [02] Spotters [laborers] are rotating - no issues. [03] No confined space entry this look-ahead. [02] M. Wagstaff brief discussion regarding connection to Ash Pond C [pump station] WPA/LOTO. To be further discussed 08-21. [03] Plant Brothers to received site-specific safety training next week. [04] M. Wagstaff inquired about pump [control] panels. J. King to LOTO. [05 Brief discussion regarding final connection and testing of the DS pumps. M. Wagstaff concern about final discharge through the collector box until approval of discharge permit by IEPA. M. Wagstaff required the valves LOTO. FWI and R. Porter to coordinate.

05 HOUSEKEEPING

2012-08-28 OPEN - No issues.

2012-08-21 OPEN - No issues.

06 PLANT ACCESS - CBT BADGE

2012-08-28 OPEN - No issues.

2012-08-21 OPEN - No issues.

08 OSHA LOG - WORK HOURS

2012-08-28 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13

No incidents or accidents.

8,354.00 RT

1,626.00 OT

9,980.00 TOTAL

2012-08-21 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.

No incidents or accidents.

7,771.00 RT

1,523.00 OT

9,294.00 TOTAL

02 WORK HOURS AND OVERTIME

2012-08-28 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting changed to 06:30 AM CT due to light [safety]. Labor Day holiday 09-03 - no work.

2012-08-21 OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting at 06:00 AM CT. Labor Day holiday 09-03 - no work.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-08-28 OPEN - no issues. Look ahead to removing trailers on 09-28.

2012-08-21 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-08-28	OPEN - no issues. P. Zinsious to track FWI CO. In progress, FWI will have EOW.
2012-08-21	OPEN - no issues. P. Zinsious to track FWI CO.

02 SUBMITTALS

20120-08-28	Submittal log was distributed as published by GEO on 08-25. [01] Submittal log review, and general conversation. [02] Wire insulation discussion previous to PM with M. Wagstaff, J. King, and P. Zinsious. CLOSE [03] P. Zinsious reports that AAA has confirmed receipt of everything needed to proceed with work. [04] AMS has received digital reader submittal form FWI. P. Zinsious to forward. [05] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. [06] R. Porter reports not having information yet from subcontractors on record drawings.
20120-08-21	Submittal log was distributed as published by GEO on 08-18. [01] Submittal log review, and general conversation. [02] A. Saindon to have geomembrane warranty reviewed by EOW. CLOSE [03] J. Cravens reported that testing on the geotextile fabric non-woven will not be required [reference AMS HUT-SUB-023-03]. CLOSE [04] AMS resubmit B3 Rip Rap for letdown chutes and stilling basins. CLOSE [05] DS hatch [option] researched by R. Porter submitted and resolved. Reinforcing steel in tops required. M. Wagstaff done. CLOSE [06] Wire insulation discussion previous to PM with M. Wagstaff, J. King, and P. Zinsious. [07] General discussion on manuals for close-out: [01] M. Wagstaff requirement 1x copy digital and 1x copy hard bound [02] J. Cravens collected manuals from FWI for Omega and Zoeller, transmitted to P. Zinsious. [08] General discussion on record drawings for close out: [01] Schematics for panels to be included. [02] M. Wagstaff indicated that Lamac will probably do record drawings in AutoCAD. [03] AMS to provide 1x copy to AER, who will forward to LEC.

08 MATERIAL

01 GENERAL

2012-08-28	OPEN - listing for materials that have potential to impact schedule. [01] M. Burch reports Omega sensor to be ordered. AMS has submittal [ref. above 07.02.2012-08-28.04]. [02] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. J. King has no feedback, but does not see this as an issue. [03] J. Craven presented report from Massmann survey of the clay grade and the calculated thickness of the clay. Review of the report shows several areas that did not seem to have the correct in place clay thickness relative to what clay had been placed. No determination was made if the data showed settlement in ash, clay [or both], or if there was error. After general discussion of the issue, it was determined that AMS would check the clay thickness in several areas.
2012-08-21	OPEN - listing for materials that have potential to impact schedule. [01] M. Burch reports Omega sensor to be ordered. [02] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. [03] Collector box holes for the DS lines are too small for Link-Seal. R. Porter recommended using non-shrink grout as used in other area of the projection man holes. P. Zinsious indicated the exterior could be also coated in a mastic to help seal the penetrations. M. Wagstaff indicated that the box still remains in the flood plain, even with the revised elevations and is to be sealed.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-08-28	OPEN - Discussion during Progress Meeting: [01] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. M. Wagstaff to investigate. In progress.
2012-08-21	OPEN - Discussion during Progress Meeting: [01] Lamac [LEC] staked out for fence on property line [south side of property]. CLOSE [02] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. M. Wagstaff to investigate.

10 QUALITY CONTROL

2012-08-28 [01] No results form concrete testing returned. P. Zinsious to call STC.
[02] DS-3 ring height issues due to re-grade of the paved concrete ditch. R. Porter to call BTD for update.

2012-08-21 [01] No results form concrete testing returned. P. Zinsious to check with STC.
[02] J. Cravens reports recent concrete pour slump was about 2 IN. Pour was held up due to rain, and truck wait time exceeded. Therefore approximately 2 CY wasted.
[03] HDPE [field tile] no issues.
[04] DS-3 ring height issues due to re-grade of the paved concrete ditch. J. king indicated drilling 2x more holes.

11 SCHEDULE REVIEW

2012-08-28 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain day on 08-27 and 08-28.
[02] Major changes commentary:
[01] Add AID 401 "Testing"] S = 400, 218] P = 312b, 313c, 385, 395] D = 1D] Start 09-11
[02] Change LP form Zinsious to Porter on AID 111, 198, 198a, and 199
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

NO.	LAST PLANNER	AID	ACTIVITY NAME	RDU	START	FINISH	PERCENT	COMMENT
01	AAA-King	124c	Install DS Baro...				50%	
02	AAA-King	279a	DS3 - Electrical wiring...		9/7/2012	9/7/2012

22	CHI-Williams	119	Procurement - receive - fence/gate				100%	R. Porter
23	CHI-Williams	139	Fence - APD - install gate			8/31/2012	25%	R. Porter
24	FWI-Burch	316	PCP-PCR - Connect DS 1-4 piping...				100%	J. Cravens
25	FWI-Burch	300a	Install DS 1-4 external piping				100%	

2012-08-21 OPEN - Review of last planner by M. Wagstaff.
[01] Rain day on 08-17.
[02] Major changes commentary:
[01] Not on LP - AID 199 S = 08-27, D = 2
[01] Not on LP - AID 198 S = 08-27, D = 4
[01] Not on LP - AID 198a S = 09-04, D = 3
[03] Add AID 119a "Install fence and gate" S = 08-27, D = 4
[04] Mark-up on LP, submitted to AER for change.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-08-28 No issues. AMS to submit EOM draft.
2012-08-21 No issues.

12.1 EXTRA WORK ORDERS

15 EWO-15 FENCE ALIGNMENT

2012-08-28 OPEN - AMS to provide back-up information.
2012-08-21 OPEN - AMS to provide back-up information.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-08-28 OPEN - In progress. AMS brining in clay [to fill in adjacent area to make grade].
2012-08-21 OPEN - In progress.

18	EWO-18	VENT PROTECTION RING	
	2012-08-28	NEW - AMS to provide information for ring to protect HDPE vents from damage by [tractor] bush hog [and/or trimmers].	
19	EWO-19	COMMISSIONING	
	2012-08-28	NEW - AMS to provide information for pumping Dewatering Sumps [DS] water from collector sump back to Ash Pond C during commissioning. This is due to IEPA permit not issued. Research what size pump [4 IN or 6 IN] or if a generator/pump combination is required. A confined space entry permit will be required to access the manhole for plugging to outfall line to the river. Projected duration is 2x WKS, operating 24/7 to be able to draw down the groundwater at the DS area for commissioning.	

13 ACTION ITEMS - AER [25]

01	AMEREN [AER]	
	2012-08-28	No report.
	2012-08-21	[01] Electrical submittals have been returned on 08-03. P. Zinsious to check remainder. CLOSE

14 ACTION ITEMS - AMS [21]

01	ASH MANAGEMENT [AMS]	
	2012-08-28	No report.
	2012-02-21	[01] B3 Rip Rap [ref. Item No. 07.02-2012-08-14 No. 04 above] CLOSE

15 PRODUCTION

03	CLAY	
	2012-08-28	OPEN - no issues [01] Placement as of 08-27 is 121,968 CY. [02] R. Porter presented sketch M/U for review of placement area progress.
	2012-08-21	OPEN - no issues [01] Placement as of 08-20 is 112,970 CY. [02] R. Porter presented sketch M/U for review of placement area progress.

16 DOCUMENTS TRANSMITTED

2012-08-28	[01] AER - Last Planner schedule dated 08-21 [data date]. [02] GEO - Submittal Log published 08-25. [03] GEO - Massmann survey packet with GEO spreadsheet elevation point comparison. [04] AMS - revised contact list HUT-APD-CON-2012-08-27
2012-08-21	[01] AER - Last Planner schedule dated 08-14 [data date]. [02] GEO - Submittal Log published 08-18.

17 DOCUMENTS REVIEW ONLY

2012-08-28	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement
2012-08-21	[01] SK-HUT-APD-004-R0 "Project Site - Pond - Quadrant Layout" with M/U to show progress to date of clay placement

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, September 4, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: September 10, 2012

SUBJECT: Weekly Summary Report for September 4, 2012 to September 7, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally mostly cloudy to sunny with periods of fog and rain. Temperature (°F) lows ranged from 68 to 73°F, and temperature highs ranged from 82 to 93°F. Weather delays occurred each day this week due to storm events and wet conditions.

Construction Activities

The following activities occurred this week: repairing impacts from storm events, access road improvement and gravel surfacing, finish grading, additional rip rap wall construction, paved ditch construction, and electrical installations. Ash Management Services, LLC repaired impacts to the paved gutter, paved ditch, and plant access roads from the recent storm events. Access road improvement and gravel surfacing was performed on the existing gravel road south of Ash Pond A and Ash Pond B with geotextile and gravel. Finish grading was performed south of Ash Pond A to promote drainage to the west towards existing manholes. A rip rap wall was constructed along the paved gutter on the west side of Quadrant C to mitigate erosion. ST Construction, Inc. saw-cut contraction joints in the completed paved ditch. AAA Electric, Inc. installed additional stainless steel conduit on the east pump control panel for the junction boxes, guy wires for the power poles, and overhead spool insulators. The disconnect switch, stainless steel conduit, and weather head was installed onto the Ash Pond C service pole. All other subcontracted work items were delayed this week due to the recent storm events. Refer to the daily reports for detailed information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT CS-323C Smooth Drum Roller
JLG 450AJ Articulating Boom Lift
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe

AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
ST Construction, Inc. (STC) – Kenneth Kientzel
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, September 4, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: IDOT CA-6 gravel, IDOT CA-6 fill, RR-03 rip rap, ceramic spool insulators, aluminum aerial cable, and guy wires.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 9/4/12

TIME: Arrive: 6:30 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 11.75 hrs (0.25 hr for lunch)
Weather: Foggy, Sunny, 69° AM, Partly Cloudy, 93° | Contractor: AMS | Subcontr./Supplier: AAA, STC
Equipment Working: D6N Dozer, 580 Backhoe
Site Activities / Observations / Contacts / Notes:

AMS:

Cleaned washed out soil from the paved ditch on the south and east sides of Ash Pond D, and the paved gutter on the west side of Ash Pond D. Began access road improvement south of Ash Pond A and Ash Pond B along the property line. The subgrade for the gravel surfacing was graded south of Ash Pond A and Ash Pond B. IDOT 8 oz. non-woven Propex geotextile was laid over the subgrade, and IDOT CA-6 roadpack was placed on top of the geotextile. Approx. 8" of CA-6 was placed and it was back dragged on top of the geotextile. After back dragging, a dozer was utilized to fine grade the CA-6. All gravel surfacing will be compacted at a later date with a steel drum roller. Refer to S-386, Sheet 2, Detail 1 for access road improvement details. Began finish grading south of Ash Pond A to allow surface drainage to the west towards the existing grade inlet manholes.

AAA:

Installed the disconnect onto the power pole located southwest of Ash Pond C for the new power to the pump in Ash Pond C. 2½" stainless steel conduit was installed onto the power pole on top of the disconnect for the overhead electrical feeder. Installed 1¼" and ¾" stainless steel conduit onto the east pump control panel for the junction boxes.

STC:

Saw cut remaining contraction joints in the paved ditch east of Ash Pond D.

Additional Comments: The site was too wet for FLT, BCI, STC, and BTD to perform work.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 9/5/12

TIME: Arrive: 6:30 AM | Depart: 1:30 PM | Travel: 1.0 hr | Total: 8 hrs (no lunch)
Weather: Sunny, 73°AM, Rain 70°PM | Contractor: AMS | Subcontr./Supplier: AAA
Equipment Working: D6N Dozer, 450AJ Lift
Site Activities / Observations / Contacts / Notes:

AMS:
Continued access road improvement south of Ash Pond A and Ash Pond B along the property line. Gravel surfacing included geotextile over the subgrade and ≈8" of CA-6 over the geotextile. Continued finish grading south of Ash Pond A to promote surface drainage to the west.

AAA:
Installed 1¼" and ¾" stainless steel conduit onto the east pump control panel. Began installing the guy wires for the power poles that will have unbalanced lateral loads from the overhead electric lines. The anchors on the poles were installed approx. 1.0' from the top of the pole. The guy wires connecting the pole and ground anchors are stainless steel ⅜" braided cables. The overlap at the ground anchor follows the electrical code.
Mobilized - JLG 450AJ Articulating Boom Lift

Other:
It began raining in the PM again. Clay Placement has been called off until next week. It is still too wet for FLT, BCI, STC, and BTD to perform work.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 9/6/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 10.75 hrs (0.25 hr for lunch)
Weather: Foggy, Sunny, 68° AM, Sunny, 82° PM | Contractor: AMS | Subcontr./Supplier: AAA
Equipment Working: 580 Backhoe, 450AJ Lift
Site Activities / Observations / Contacts / Notes:

AMS:

Due to the quantity of fill required on the west side of Section C, and the short distance between the PGL and the paved gutter, the slope from the paved gutter to the PGL would be too steep to maintain and mow. Therefore, AMS began constructing a rip rap wall between the PGL and the paved gutter on the west side of Section C. The proposed rip rap wall is made up of RR-03 rip rap and Propex Geotex 8 oz. geotextile overlying the subgrade. Fill was placed behind the rip rap wall to achieve the ≈3' cover at the PGL, as well as act as bedding for the rip rap wall. The wall was also extended around the flared end section of the drainage culvert at the end of the gutter at the southwest corner of Section C. The site was too wet for roadway construction. Delivery - RR-03 rip rap.

AAA:

Completed installing the guy wires for the power poles that will have unbalanced lateral loads from the overhead electric. Installed the spool insulators onto all the power poles for the base neutral messenger wire. Inspected the wiring for the spare 100A/3P breaker with starter in the coal conveyor MCC-1. All energized power running to the MCC-1 will be shut off during wire distribution, breaker replacement, and disconnect installation. Delivery - ceramic spool insulators and 3 conductor #4/0 AWG aluminum aerial cable. Installed the stainless steel weatherhead onto the conduit above the 600V, 200A/3P heavy duty non-fused disconnect switch at the Ash Pond C service pole.

Additional Comments: The site was too wet for FLT, BCI, STC, and BTD to perform work.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-09-04	OPEN: [01] J. King indicated that LOTO of MCC not sufficient, as other lines in. [02] M. Wagstaff to get with plant/local utility to review cut off power, and coordinate with J. King.
2012-08-28	OPEN - no issues. AAA projection per revised schedule, M. Wagstaff to coordinate with J. King.

03 EMPLOYEE DRUG TESTING

2012-09-04	OPEN - no issues. No testing scheduled.
2012-08-28	OPEN - no issues. Schedule Daylight 1x worker for 09-04. Plant Brothers have been tested [on site today 08-28].

04 AMS SAFETY

2012-09-04	[01] J. Tasich on site schedule TBD. [02] No safety issues reported. [03] Plant Brothers power pole installation - M. Wagstaff inquire about strap/chocker for pole installation. AAA indicated standard procedure. Rigging was inspected, new choker. Installation [using forklift], work progressing safety. Work completed - CLOSE [04] Humidity is high [increased temperatures], discussion about keeping hydrated. [05] wind has damaged AMS cooling stations. R. Porter indicated will repair. [06] AAA bringing 45 FT articulated lift on site [for power pole work].

2012-08-28 [01] J. Tasich on site schedule TBD.
[02] No safety issues reported.
[03] Plant Brothers power pole installation - M. Wagstaff inquire about strap/chocker for pole installation. AAA indicated standard procedure. Rigging was inspected, new choker. Installation [using forklift], work progressing safety.
[04] R. Porter has copy of forklift certification.

05 HOUSEKEEPING

2012-09-04 OPEN - No issues.

2012-08-28 OPEN - No issues.

06 PLANT ACCESS - CBT BADGE

2012-09-04 OPEN: No issues.
[01] R. Porter reports wire for transmission project being delivered. Inquired about when guard would go 24/7.
[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER.
[03] M. Wagstaff indicated need to have locks also for disconnects.

2012-08-28 OPEN - No issues.

08 OSHA LOG - WORK HOURS

2012-09-04 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.
No incidents or accidents.
8,854.00 RT
1,705.00 OT
10,559.00 TOTAL

2012-08-28 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13
No incidents or accidents.
8,354.00 RT
1,626.00 OT
9,980.00 TOTAL

06 MANPOWER [HEAD COUNT]

02 WORK HOURS AND OVERTIME

2012-09-04 OPEN: No issues.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting changed to 07:00 AM CT due to light [safety]
[02] Labor Day holiday 09-03 observed.

	2012-08-28	OPEN - Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting changed to 06:30 AM CT due to light [safety]. Labor Day holiday 09-03 - no work.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-09-04	OPEN: No issues. [01] R. Porter reports electric utility bill for trailers transferred to Miller Construction. [02] Look ahead to removing trailers on 09-28 to remain projected date.
2012-08-28	OPEN - no issues. Look ahead to removing trailers on 09-28.

07 PREVIOUS

01 SUBCONTRACTS

2012-09-04	OPEN - no issues. FWI CO in progress, will report when signature.
2012-08-28	OPEN - no issues. P. Zinsious to track FWI CO. In progress, FWI will have EOW.

02 SUBMITTALS

20120-09-04	Submittal log - no update. [01] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS to provide accordingly. [02] P. Zinsious reports that AAA has confirmed receipt of everything needed to proceed with work. CLOSE [03] AMS has received digital reader submittal form FWI. P. Zinsious to forward. [04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress. [05] R. Porter reports not having information yet from subcontractors on record drawings. In progress.
20120-08-28	Submittal log was distributed as published by GEO on 08-25. [01] Submittal log review, and general conversation. [02] Wire insulation discussion previous to PM with M. Wagstaff, J. King, and P. Zinsious. CLOSE [03] P. Zinsious reports that AAA has confirmed receipt of everything needed to proceed with work. [04] AMS has received digital reader submittal form FWI. P. Zinsious to forward. [05] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. [06] R. Porter reports not having information yet from subcontractors on record drawings.

08 MATERIAL

01 GENERAL

2012-09-04	OPEN - listing for materials that have potential to impact schedule. [01] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. J. King has no feedback, but does not see this as an issue. CLOSE [02] AMS presented copies of letter dated 08-31 "Clay issue recovery - Schedule and work plan": [01] AMS committed to bring in additional clay to make grade elevations. [02] M. Wagstaff inquired about QA/QC of grade. AMS will grade to stake and have Lamac check grade before seed and straw and the Massmann survey. [03] Review of CQA requirement [page A-2] for tolerance is 0 FT to - 0.4 FT. The maximum coverage is 3 FT. [04] Clay recovery duration not shown as additional activities, the activity "fine grade" duration to be extended. [05] M. Wagstaff inquired about scheduling overtime for placement of clay. Review of schedule indicates float. Considering the rain day taken today [09-04], this leaves only one rain day for the next week [as only two were used the recovery duration calculation as noted in the letter]. General discussion that next PM review of progress to determine overtime.
2012-08-28	OPEN - listing for materials that have potential to impact schedule. [01] M. Burch reports Omega sensor to be ordered. AMS has submittal [ref. above 07.02.2012-08-28.04]. [02] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. J. King has no feedback, but does not see this as an issue. [03] J. Craven presented report from Massmann survey of the clay grade and the calculated thickness of the clay. Review of the report shows several areas that did not seem to have the correct in place clay thickness relative to what clay had been placed. No determination was made if the data showed settlement in ash, clay [or both], or if there was error. After general discussion of the issue, it was determined that AMS would check the clay thickness in several areas.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-09-04	OPEN - Discussion during Progress Meeting: [01] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. General discussion and M. Wagstaff approved proceed to plug line as indicated on drawings.
2012-08-28	OPEN - Discussion during Progress Meeting: [01] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. M. Wagstaff to investigate. In progress.

10 QUALITY CONTROL

2012-09-04	[01] AMS received concrete field reports, and forwarded them .P. Zinsious to check on break reports. [02] DS-3 ring height issues due to re-grade of the paved concrete ditch. R. Porter indicated will be delivered with other precast.
2012-08-28	[01] No results form concrete testing returned. P. Zinsious to call STC. [02] DS-3 ring height issues due to re-grade of the paved concrete ditch. R. Porter to call BTD for update.

11 SCHEDULE REVIEW

2012-09-04 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain date 09-04.
[02] Major changes commentary:
[01] Activities 221 and 222 activities to be scheduled out by software.
[02] Delete activities 185a, 185b, 186a, 186b, 187a, 187b, 188a, and 188b as the clay placement will not follow the original quadrant layout. Work for the additional clay placement is included in the "fine grade" activity, and not shown as additional activities, only extending the activity "fine grade" duration [ref. 08.01.2012-09-04.04 above].
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-09-04 No issues. AMS to submit EOM draft. Copy for M. Wagstaff today.

2012-08-28 No issues. AMS to submit EOM draft.

12.1 EXTRA WORK ORDERS

15 EWO-15 FENCE ALIGNMENT

2012-09-04 OPEN - AMS to provide back-up information. In progress.

2012-08-28 OPEN - AMS to provide back-up information.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-09-04 OPEN - In progress.

2012-08-28 OPEN - In progress. AMS brining in clay [to fill in adjacent area to make grade].

18 EWO-18 VENT PROTECTION RING

2012-09-04 OPEN - M. Wagstaff has approved.

2012-08-28 NEW - AMS to provide information for ring to protect HDPE vents from damage by [tractor] bush hog [and/or trimmers].

19 EWO-19 COMMISSIONING

2012-09-04 OPEN - AMS to provide cost for installing a manifold at the collector box to tie together the DS discharge lines to a single discharge line. The single line will then be routed along the east berm of Ash Pond D to the existing Bottom Ash Pond, where water will be able to gravity flow into existing Ash Pond C. This temporary configuration will utilize the new DS pumps, eliminate confined space entry [for now] and will not require a generator/pump combination.

2012-08-28 NEW - AMS to provide information for pumping Dewatering Sumps [DS] water from collector sump back to Ash Pond C during commissioning. This is due to IEPA permit not issued. Research what size pump [4 IN or 6 IN] or if a generator/pump combination is required. A confined space entry permit will be required to access the manhole for plugging to outfall line to the river. Projected duration is 2x WKS, operating 24/7 to be able to draw down the groundwater at the DS area for commissioning.

20 EWO-020 ADDITIONAL RIP-RAP

2012-09-04 OPEN - AMS to provide cost for installing additional rip-rap [RR-3] and geotextile material as necessary to accommodated for grade adjusted in the clay cap along the west slope adjacent to the paved gutter. M. Wagstaff indicated that a 1:1 slope is acceptable in this area. R. Porter and M. Wagstaff to review in the field today.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-09-04 No report.

2012-08-28 No report.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-09-04 No report.

2012-08-28 No report.

15 PRODUCTION

03 CLAY

2012-09-04 OPEN - no issues
[01] Placement as of 08-31 is 127,138 CY.
[02] Additional clay to be placed to make grade elevations [ref. above 08.01.2012-08-28.03].

2012-08-28	OPEN - no issues [01] Placement as of 08-27 is 121,968 CY. [02] R. Porter presented sketch M/U for review of placement area progress.

16 DOCUMENTS TRANSMITTED

2012-09-04	[01] AER - Last Planner schedule dated 08-28 [data date]. [02] AMS - letter dated 08-31 "Clay issue recovery - Schedule and work plan" [03] AMS - 1x 11x17 color copy of Lamac drawings from AMS letter dated 08-31 "Clay issue recovery - Schedule and work plan" to J. Cravens.
2012-08-28	[01] AER - Last Planner schedule dated 08-21 [data date]. [02] GEO - Submittal Log published 08-25. [03] GEO - Massmann survey packet with GEO spreadsheet elevation point comparison. [04] AMS - revised contact list HUT-APD-CON-2012-08-27

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: September 21, 2012

SUBJECT: Weekly Summary Report for September 10, 2012 to September 14, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally mostly cloudy to sunny with periods of rain. Temperature (°F) lows ranged from 58 to 66°F, and temperature highs ranged from 75 to 88°F. Weather delays did not occur this week.

Construction Activities

The following activities occurred this week: repairing impacts from storm events, rip rap wall construction, cap vent protective ring installation, rock chute and rip rap splash pad construction, paved ditch construction, manhole section and lid installation, cleanout concrete slab construction, electrical installations, clay placement, slope diversion berm and letdown channel construction, and finish grading. Ash Management Services, LLC repaired impacts to the rock chutes, swales, paved gutter, and paved ditch from the recent storm events. Construction of the rip rap wall continued along the paved gutter on the west side of Quadrant C. The cap vent precast protective rings were installed, a rock chute was constructed for the paved gutter culvert drainage to the paved ditch, and rip rap pads for the anchor trench outlet toe drains were built on the south embankment of Ash Pond D. B&T Drainage prepared subgrade for the paved ditch and installed precast manhole sections, redesigned manhole lids, and the collector box lid. ST Construction, Inc. completed concrete paved ditch construction on the east side of Ash Pond D and the pipe bollard and cleanout concrete slabs. Concrete testing was performed by Patriot Engineering, Inc. AAA Electric, Inc. installed various electrical lines and equipment. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement, construction of slope diversion berms and let-

Electronic Filing: Received, Clerk's Office 09/28/2020

down channels, and finish grading on the south and east sides of Ash Pond D. Approximately 11 trucks were used to haul clay material to Ash Pond D. Refer to the daily reports for additional information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D5G Bulldozer
CAT CS-323C Smooth Drum Roller
JLG 450AJ Articulating Boom Lift
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
John Deere 410J Backhoe
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
B&T Drainage (BTD) – Brian Schaefer and Michael Dashiell
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
ST Construction, Inc. (STC) – John Maetin, Gary Hedges, Scott Hilton, Robert Pressley, Kenneth Kientzel, and Mark Newlin
Patriot Engineering, Inc. (PEI) – Thad Simpson
Fawn Lane Transit, Inc. (FLT) – Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Tom Sager, Eric Bierman, Alan Ruholl, Patrick Wente, Frank Walton, and Greg Cornwell
Daylight Land Management (DLM) – Jon Ziliak
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, September 11, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: clay for the vegetative layer, four manhole sections, tops, and lids for the DS manholes, seven cap vent protective rings, precast top and aluminum hatch for the collector box, IDOT SI 4000 psi concrete, IDOT CA-6 gravel, IDOT CA-6 fill, and RR-03 rip rap.

Testing/Sampling

Patriot Engineering, Inc. performed concrete testing for the paved ditch, including slump and air entrainment testing. Four concrete cylinders were cast and retrieved each day for testing. Refer to the concrete testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

No. A 14897

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 9/10/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 60°AM, 80° PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Continued constructing the rip rap wall between the PGL and the paved gutter, as well as wrapped around the ends of the paved gutter, on the west side of Section C. RR-03 rip rap overlying 8 oz. nonwoven geotextile was used to build the wall and fill was placed behind the wall for bedding and to achieve ≈3' of cover at the PGL. Site remediation: This past weekend brought an additional 3" of rain to the rain that was received last week. AMS repaired the additional rock chute on the south end of Ash Pond D that was washed out, and began removing the washed out material burying the paved gutter on the west side of Ash Pond D. Other areas that contain gullies and washouts and will need repaired include the entire paved ditch, outfall swales to river, additional rock chutes on the northeast and west sides, and the drainage areas for the anchor trench outlet toe drains.

AAA:
Began hanging the three phase (A,B,C) Priority Wire 4/0AWG AL 600V XLPE aerial cables and messenger cable from the MCC-1 service pole onto the new power poles heading south towards the pump control service pole on the southeast corner of Ash Pond B.

FLT/BCI:
Began the additional clay placement based on the survey data. Clay placement began between the first 2 east/west slope diversion berms on the south end of Ash Pond D, heading westbound. Began constructing letdown channels between the slope diversion berms.

Other: Loads = 179
BTD delivery – 4 manhole sections for the DS manholes, 7 manhole sections for the cap vent rings, 4 manhole tops and aluminum hatch lids, and the collector box top and aluminum hatch.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 9/11/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 59°AM, 86°PM | Contractor: AMS | Subcontr./Supplier: AAA, BTD, STC, PEI, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, D5G Dozer, 410J Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Completed constructing the rip rap wall between the PGL and the paved gutter, as well as wrapped around the ends of the gutter, on the west side of Section C. Began installing the cap vent precast ring barriers. IDOT CA-6 fill was used as bedding for the ring barriers. Site remediation: Completed removing washed out material from the paved gutter.

AAA:
Continued hanging the three phase 4/0AWG aerial cables and messenger cable between the MCC-1 service pole and the pump control service pole on the southeast corner of Ash Pond B.

BTD:
Graded the washed out material on the south and east sides of Ash Pond D to allow vehicular traffic. Continued grading the paved ditch subgrade east of Ash Pond D.

STC:
Continued paved ditch concrete construction east of Ash Pond D. Three trucks delivered - 24 cy.

PEI:
Thad Simpson tested paved ditch concrete - Temp = 78°, Slump = 3", Air = 4.8%, and 4 cylinders cast.

FLT/BCI:
Ash Pond D was divided into 8 Sections to address the additional clay placement, or the clay issue recovery. Refer to the file - Clay Issue Recovery_JRC.pdf for the layout of the 8 Sections. Clay placement was completed in Section 1 and began in Section 2 heading westbound. Completed constructed letdown channels in Section 1 and Section 2.

Other:
Loads = 164
Pump commissioning has been extended to 9/28/12, which pushes substantial completion into the first week of October.

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 9/12/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Partly cloudy, 62°AM, 87°PM | Contractor: AMS | Subcontr./Supplier: AAA, BTD, STC, PEI, FLT, BCI, DLM
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, D5G Dozer, 410J Backhoe, 450LC Excavator

Site Activities / Observations / Contacts / Notes:

AMS:
Completed installing the cap vent precast ring barriers with CA-6 fill bedding. Excavated and prepared the subgrade for the rock chute between the paved gutter culvert drain and the paved ditch. Excavated and built rip rap splash pads with class B2 rip rap for the anchor trench outlet toe drains on the south side of Ash Pond D. Refer to S-386, Sheet 10, Detail 2. Site remediation: Began removing washed out material from the paved ditch south of Ash Pond D.

AAA:
Continued hanging the three phase, 4/0AWG aerial cables and messenger wire between the MCC-1 and pump control service poles. Pulled fishing rope through the 2½" PVC conduit between the west and east pump control panels and the disconnect on the pump control service pole. Wired the floats from DS-4 in the pump control box on the east pump control panel.

BTD:
Continued grading the paved ditch subgrade and backfilling against the paved ditch on the east side of Ash Pond D. Completed constructing the bedding for the cleanout/bollard slabs. Grouted the bottom of the collector box with CW100 self-leveling grout up to the bottom of the 8" HDPE drainage outlet pipe. Installed manhole sections and tops onto the four DS manholes. Installed the collector box top and hatch onto the collector box. Site remediation: Rebuilt the outfall swale to river off of the northeast embankment of Ash Pond D.

STC:
Continued paved ditch concrete construction east of Ash Pond D. Four trucks delivered - 32 cy.

PEI: Tested paved ditch concrete - Temp = 78°, Slump = 3¼", 3", Air = 5.2%, and 4 cylinders cast.

FLT/BCI: Clay placement was completed in Section 2 and began in Section 3. Site remediation: Reconstructed slope diversion berms in Section 1, 2, and 3.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 9/13/12

TIME: Arrive: 6:00 AM | Depart: 7:30 PM | Travel: 1.0 hr | Total: 14.25 hrs (0.25 hr for lunch)
Weather: Cloudy, 66°AM, Sunny 88° PM | Contractor: AMS | Subcontr./Supplier: AAA, BTD, STC, PEI, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, D5G Dozer, 410J Backhoe, 450 LC
Site Activities / Observations / Contacts / Notes: Excavator, 762B Scraper, CS-323C Roller, Water Truck

AMS:
Continued building rip rap splash pads with class B2 rip rap for the anchor trench outlet toe drains on the south end of Ash Pond D. Began constructing the additional rock chute, with RR-03 rip rap and 8 oz. non-woven geotextile between the paved gutter culvert and the beginning of the paved ditch on the southwest side of Ash Pond D. Installed the stainless steel threaded caps and mesh strainer caps onto the cap vents. Site Remediation: Repaired the box culvert swale and rock chute on the west side of Ash Pond D, and repaired and added length to the additional rock chute on the northeast embankment of Ash Pond D.

AAA:
Completed hanging the three phase 4/0AWG aerial cables and braided messenger cable between the MCC-1 and pump control service pole. Pulled the electric feeder, high voltage 4/0AWG cables with ground wire from the disconnect switch on the pump control service pole to the east pump control panel. Note- the overhead electric feed, three phase 480V is split into buried electric feed, single phase 240V when it leaves the disconnect and runs to the pump control panels. Pulled rope through the 2½" PVC conduit from the disconnect switch on the pump control service pole to the west pump control panel. When pulling the rope, the Powr-fish pull line broke inside the PVC conduit. The conduit had to be excavated on the southeast corner of Ash Pond A to get the string out. Anchored the high and low junction boxes onto the new section of DS-1 manhole. Ameren shut off the power to the MCC-1 and the building was tagged (LO/TO) for electrical installations. After disconnecting the power, the fire alarm went off on the Fire Protection Valve House north of the MCC-1. Greg Musch shut off the fire alarm/disconnected.

Site Activities / Observations / Contacts / Notes:

REFER TO PAGE 1

BTD:
Completed grading the paved ditch subgrade, placing CA-6 fill for bedding, and backfilling against the paved ditch east of Ash Pond D. Installed the aluminum lids onto the four manhole precast tops. All lids were sealed with ConSeal CS102 butyl rubber sealant. Released the inflated plug in the new 12" ADS field tile and poured the concrete plug in the existing 15" ADS field tile in the grade inlet southwest of DS-1. Site Remediation: Repaired the outfall swale to river at the end of the paved ditch on the east side of Ash Pond D.

STC:
Completed forming, stripping, pouring, finishing, curing, and saw cutting the paved ditch. Poured the cleanout/bollard slabs along the south property line. Three trucks delivered - 24 cy.

PEI:
Tested concrete for the paved ditch - Temp = 81°, Slump = 3", Air = 5%, and 4 cylinders cast.

FLT/BCI:
Additional clay placement was completed in Section 3 and began in Section 4. Fill material for Section 4 was also gained from cutting the east and northeast embankments of Ash Pond D. Began building letdown channels on the north end of Ash Pond D in Section 3 and 4. Added fill and backfilled against the paved ditch on the south side of Ash Pond D. Began finish grading on the south and east sides of Ash Pond D, as well as the embankments. Loads = 167

DLM:
Jon Ziliak arrived to prepare for landscaping/seeding and mulching.

Equip. maint. and inspection, spotting trucks, and housekeeping across the site.

AAA:
Began pulling the high voltage, electric feeder 4/0AWG cables with ground wire from the disconnect switch on the pump control service pole to the west pump control panel. During the pull, the rope broke leaving the electrical lines abandoned. Various locations of the 2½" PVC conduit was excavated, but the buried electric was not found. More locations of the conduit will be excavated next week to retrieve the electrical lines and finish the pull. Pulled the three phase 4/0AWG aerial cables and messenger cable into the PVC and stainless steel 4" conduit on the MCC-1 service pole, into the MCC-1 building, to the spare bay. LPA was followed since the electric to the MCC-1 was disconnected. Anchored the 4" PVC conduit to the MCC-1 service pole. Pulled the high voltage, 4/0AWG electric feed through the 2½" stainless steel conduit on the Ash Pond C service pole, into the disconnect.

STC:
Sealed the expansion and contraction joints in the paved ditch with NP-1 sealant and stripped the hollard concrete slab forms. The slabs were cured after stripping. STC demobilized.

FLT/BCI:
Continued clay placement in Section 4 and began clay placement in Section 6. Continued cutting the east and northeast embankments of Ash Pond D for fill material in Section 4. Continued building letdown channels on the north end of Ash Pond D in Section 4. Loads = 121

Other:
The temporary discharge into the Bottom Ash Pond has been approved for commissioning.

Additional Comments:

Randy Patel — Contractor Representative — AMS — Company — 9-14-12 — Date
Signature
Geotechnology, Inc. — 9-19-12 — Date
Anna Sandra — Engineer's Signature

Notice: The Geotechnology representative is on site solely to observe operations of the contractor identified, form opinions about the accuracy of those operations and report those opinions to the client. The presence and activities of the Geotechnology field representative do not relieve the contractor's obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods and sequence of construction.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-09-11	OPEN: [01] no date set for WPA, M. Wagstaff sent e-mail to S. Bruner.
2012-09-04	OPEN: [01] J. King indicated that LOTO of MCC not sufficient, as other lines in. [02] M. Wagstaff to get with plant/local utility to review cut off power, and coordinate with J. King.

03 EMPLOYEE DRUG TESTING

2012-09-11	OPEN: [01] None projected. [02] AMS had random [company generated] drug test at the borrow site. No positives [return to work].
2012-09-04	OPEN - no issues. No testing scheduled.

04 AMS SAFETY

2012-09-11	[01] J. Tasich on site schedule TBD. P. Zinsious to check when Joko or Dave Valentine will be on site next. [02] No safety issues reported. [03] Damaged AMS cooling stations will have to replaced, not repaired. [04] AAA has 45 FT articulated lift on site [for power pole work]. Workers observe using harness and correct PPE. [05] P. Zinsious indicated report that safety recall for harnesses [involuntary safety recall from 3M on a self-retracting lanyard. The SRL is manufactured by IKAR under the THOR label]. R. porter indicated AMS does not have this style on site. [06] Brief discussion on the recent rains and muddy site.

2012-09-04 [01] J. Tasich on site schedule TBD.
[02] No safety issues reported.
[03] Plant Brothers power pole installation - M. Wagstaff inquire about strap/chocker for pole installation. AAA indicated standard procedure. Rigging was inspected, new choker. Installation [using forklift], work progressing safety. Work completed - CLOSE
[04] Humidity is high [increased temperatures], discussion about keeping hydrated.
[05] wind has damaged AMS cooling stations. R. Porter indicated will repair.
[06] AAA bringing 45 FT articulated lift on site [for power pole work].

05 HOUSEKEEPING

2012-09-11 OPEN - No issues, other than mud from the rains.

2012-09-04 OPEN - No issues.

06 PLANT ACCESS - CBT BADGE

2012-09-11 OPEN: No issues.
[01] Inquired about when guard would go 24/7. To be determined. M. Wagstaff indicated cameras still active on site.
[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER of approximately 7x locks, 2x keys. M. Wagstaff indicated will discuss with Greg Musch as Ameren has several locks available on site.
[03] M. Wagstaff indicated locks also for disconnects can come form the plant.

2012-09-04 OPEN: No issues.
[01] R. Porter reports wire for transmission project being delivered. Inquired about when guard would go 24/7.
[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER.
[03] M. Wagstaff indicated need to have locks also for disconnects.

08 OSHA LOG - WORK HOURS

2012-09-11 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13
No incidents or accidents.
9,085.00 RT
1,738.00 OT
10,823.00 TOTAL

2012-09-04 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.
No incidents or accidents.
8,854.00 RT
1,705.00 OT
10,559.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE [Alpha by Company]

2012-09-11 Geotechnology [work hours not included in OSHA Log above] Exact count in daily reports, make note if on site.

Total on site: 37

02 WORK HOURS AND OVERTIME

2012-09-11	OPEN: No issues. [01] Standard hours - 7:00 AM CT to 5:30 PM CT. Going back to subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.
2012-09-04	OPEN: No issues. [01] Standard hours - 7:00 AM CT to 5:30 PM CT. Some subcontractors starting changed to 07:00 AM CT due to light [safety] [02] Labor Day holiday 09-03 observed.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-09-11	OPEN: No issues. [01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. [02] Look ahead to removing GEO trailers on 09-28 to remain projected date. AMS to be determined.
2012-09-04	OPEN: No issues. [01] R. Porter reports electric utility bill for trailers transferred to Miller Construction. [02] Look ahead to removing trailers on 09-28 to remain projected date.

07 PREVIOUS

01 SUBCONTRACTS

2012-09-11	OPEN - no issues. P. Zinsious to tracked in legal. FWI pay application shows CO and approved. CLOSE
2012-09-04	OPEN - no issues. FWI CO in progress, will report when signature.

02 SUBMITTALS

20120-09-11	Submittal log dated 09-08 distributed and reviewed. [01] M. Wagstaff indicated review or geo roll inventory [Item No. 21]. [02] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS submitted 09-11. [03] AMS has received digital reader submittal form FWI. AMS submitted 09-11. [04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress. [05] R. Porter reports not having information yet from subcontractors on record drawings. In progress.
20120-09-04	Submittal log - no update. [01] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS to provide accordingly. [02] P. Zinsious reports that AAA has confirmed receipt of everything needed to proceed with work. CLOSE [03] AMS has received digital reader submittal form FWI. P. Zinsious to forward. [04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress. [05] R. Porter reports not having information yet from subcontractors on record drawings. In progress.

08 MATERIAL

01 GENERAL

2012-09-11	OPEN - listing for materials that have potential to impact schedule. [01] J. Cravens distributed sketch "Hutsonville Ash Pond D Closure - Clay Issue Recovery Layout" [not dated].
2012-09-04	OPEN - listing for materials that have potential to impact schedule. [01] General discussion of Baro sensor to be in separate panel box. P. Zinsious recommended FWI research with vendor if placed is electrical panel would other signals/inductance create and issue. J. King has no feedback, but does not see this as an issue. CLOSE [02] AMS presented copies of letter dated 08-31 "Clay issue recovery - Schedule and work plan": [01] AMS committed to bring in additional clay to make grade elevations. [02] M. Wagstaff inquired about QA/QC of grade. AMS will grade to stake and have Lamac check grade before seed and straw and the Massmann survey. [03] Review of CQA requirement [page A-2] for tolerance is 0 FT to - 0.4 FT. The maximum coverage is 3 FT. [04] Clay recovery duration not shown as additional activities, the activity "fine grade" duration to be extended. [05] M. Wagstaff inquired about scheduling overtime for placement of clay. Review of schedule indicates float. Considering the rain day taken today [09-04], this leaves only one rain day for the next week [as only two were used the recovery duration calculation as noted in the letter]. General discussion that next PM review of progress to determine overtime.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-09-11	OPEN - Discussion during Progress Meeting: [01] AMS to seal pipe with brick [8 IN ?] and mortar "long ways", and to cover face with non-shrink grout to seal pipe. This method is a no-cost change to Ameren.
2012-09-04	OPEN - Discussion during Progress Meeting: [01] R. Porter reported that Wampler has requested that [field drain] line be plugged. This line is off site, and not part of the scope of work, and is an issue with the agreement between AER and Wampler. General discussion and M. Wagstaff approved proceed to plug line as indicated on drawings.

10 QUALITY CONTROL

2012-09-11	No issues. [01] AMS received concrete break reports, and forwarded them on 09-11.
2012-09-04	[01] AMS received concrete field reports, and forwarded them .P. Zinsious to check on break reports. [02] DS-3 ring height issues due to re-grade of the paved concrete ditch. R. Porter indicated will be delivered with other precast.

11 SCHEDULE REVIEW

2012-09-11 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]

[01] Rain dates as listed.

[02] Major changes commentary:

- [01] Activities 220, 221 and 222 activities to be scheduled out by software.
- [02] AAA to meet with AMS after PM to review in detail electrical work schedule.
- [03] Change LP on 183 to Porter.

[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

2012-09-04 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain date 09-04.
[02] Major changes commentary:
[01] Activities 221 and 222 activities to be scheduled out by software.
[02] Delete activities 185a, 185b, 186a, 186b, 187a, 187b, 188a, and 188b as the clay placement will not follow the original quadrant layout. Work for the additional clay placement is included in the "fine grade" activity, and not shown as additional activities, only extending the activity "fine grade" duration [ref. 08.01.2012-09-04.04 above].
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-09-11 No issues. P. Zinsious inquired about retainage. Review of calculation on [draft as submitted to Ameren]. Balance over 90% billing to retainage. M. Wagstaff indicated will discuss with J. Skitt at Ameren.

2012-09-04 No issues. AMS to submit EOM draft. Copy for M. Wagstaff today.

12.1 EXTRA WORK ORDERS

AMS distributed HUT-APD-EWO-RPT-2012-09-06-R0 "EWO Basic Report". General discussions of EWO report, procedure, budget, and timing.

15	**EWO-15**	**FENCE ALIGNMENT**
	2012-09-11	OPEN - AMS to provide back-up information. [no report - work complete].
	2012-09-04	OPEN - AMS to provide back-up information. In progress.
17	**EWO-17**	**PAVED DITCH ALIGNMENT**
	2012-09-11	OPEN - Check grade to plan as possibly area included in grade.
	2012-09-04	OPEN - In progress.
18	**EWO-18**	**VENT PROTECTION RING**
	2012-09-11	OPEN - No report [in progress].
	2012-09-04	OPEN - M. Wagstaff has approved.
19	**EWO-19**	**COMMISSIONING**
	2012-09-11	M. Wagstaff indicated possible temporary discharge by IEPA, Ameren investigating. Transmitted packet of sketches and information for basic review of discharge piping option [ref. 16.2012-09-11.05 below for list].
	2012-09-04	OPEN - AMS to provide cost for installing a manifold at the collector box to tie together the DS discharge lines to a single discharge line. The single line will then be routed along the east berm of Ash Pond D to the existing Bottom Ash Pond, where water will be able to gravity flow into existing Ash Pond C. This temporary configuration will utilize the new DS pumps, eliminate confined space entry [for now] and will not require a generator/pump combination.
20	**EWO-20**	**ADDITIONAL RIP-RAP**
	2012-09-11	AMS provide cost.
	2012-09-04	OPEN - AMS to provide cost for installing additional rip-rap [RR-3] and geotextile material as necessary to accommodated for grade adjusted in the clay cap along the west slope adjacent to the paved gutter. M. Wagstaff indicated that a 1:1 slope is acceptable in this area. R. Porter and M. Wagstaff to review in the field today.
21	**EWO-21**	**FIELD TILE LOCATION - LENGTH [was EWO-14]**
	2012-09-11	NEW - AMS to investigate addenda drawings to see if already included in the bid.

15 PRODUCTION

03 CLAY

2012-09-11	OPEN - no issues [01] Placement as of 09-10 is 129,107 CY. [01] General discussion that CY count is "loose delivered" and that trucks CY count is 11 CY, but actually haul more. [02] Trucks were weighed in the beginning to make sure they are legal. [03] Overview of compaction requirements and lessons learned. [04] Estimated requirement to finish 17,000 CY in 8D projected [2,125 CY/D].
2012-09-04	OPEN - no issues [01] Placement as of 08-31 is 127,138 CY. [02] Additional clay to be placed to make grade elevations [ref. above 08.01.2012-08-28.03].

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: September 26, 2012

SUBJECT: Weekly Summary Report for September 17, 2012 to September 21, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally mostly cloudy to sunny with periods of rain. Temperature (°F) lows ranged from 39 to 63°F, and temperature highs ranged from 69 to 78°F. Weather delays did not occur this week.

Construction Activities

The following activities occurred this week: repairing impacts from storm events, additional rip rap wall and rock chute construction, PVC trench excavation and backfill, cap vent ring and cleanout concrete slab construction, finish grading, surveying, electrical installations, clay placement, and letdown channel construction. Ash Management Services, LLC repaired storm impacts to the rock chutes, swales, and paved ditch. The PVC trench between Ash Pond C service pole and pump control panel was excavated, PVC placed in the trench, and backfilled. The rip rap wall construction continued and the rock chute for the paved gutter culvert was completed. Geotextile and CA-6 stone was place inside the cap vent protective ring barriers. Rip rap was placed around the pipe bollard and cleanout concrete slabs and finish grading was performed south and east of Ash Pond D. Massmann Surveying and Lamac Engineering Co. surveyed the vegetative cover. AAA Electric, Inc. performed various electrical installations such as: junction boxes for the dewatering sumps, disconnect switches and electrical conduit for the service poles, high voltage buried electric feed, overhead electric, MCC-1 building, Ash Pond C service pole and pump control panel, dewatering sumps DS-1 and DS-2 junction boxes, and the west pump control panel. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued additional clay

Electronic Filing: Received, Clerk's Office 09/28/2020

placement and completed construction of the letdown channels. Approximately 11 trucks were used to haul clay material to Ash Pond D. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT CS-323C Smooth Drum Roller
JLG 450AJ Articulating Boom Lift
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
Fawn Lane Transit, Inc. (FLT) – Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Tom Sager, Alan Ruholl, Patrick Wente, Frank Walton, Brian Griffith, and Greg Cornwell
Massmann Surveying (MMS) – Rick Koeac and Gary Delf
Lamac Engineering Co. (LEC) – Jake Lewis and Steve Anderson
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, September 18, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: RR-03 rip rap and IDOT CA-6 gravel.

Electronic Filing: Received, Clerk's Office 09/28/2020

Testing/Sampling

AAA Electric, Inc. performed continuity testing on high voltage, single phase and three phase, 2/0 and 4/0 AWG electric cables. Refer to the electric testing records for additional information.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

No. A 14906

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/20/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 51° AM, Rain, Sunny, 73° PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI, LEC, MMS
Equipment Working: D6N Dozer, 580 Backhoe
Site Activities / Observations / Contacts / Notes:

AMS:

Backfilled the remaining trench between the Ash Pond C pump control panel and service pole, and transported the excess spoils to the south side of Ash Pond D to be used as fill. Began preparing and filling the bedding for an additional rip rap wall along the paved gutter on the west side of Section A. Continued disposing of the old fence materials in the construction yard.

AAA:

Pulled the high voltage, three phase 2/0AWG with 600V ground electrical feed from the Ash Pond C pump control panel to the Ash Pond C service pole. Installed the PVC conduit into the disconnect switch and installed the copper clad ground rod, with exothermic (CAD) welding the 600V ground, at the Ash Pond C service pole. Wired the three phase electrical feed in the disconnect switches on the Ash Pond C pump control panel and service pole, and locked out/tagged out the boxes. All electrical work is now completed for Ash Pond C. Wired the high voltage, single phase 4/0AWG electric feeder in the MPZ on the west pump control panel. Installed the copper clad ground rod, with exothermic (CAD) welding the 600V ground, at the pump control service pole, and locked out/tagged out the disconnect. All electrical work is now completed for the pump control service pole. Anchored the junction boxes onto the new manhole section at DS-2, and began wiring the joints for the sump pumps, floats, and paddlewheel (flow) sensor for the west system. Demobilized - JLG 450AJ Art. Lift.

FLT/BCI:

Continued additional clay placement in Section 6. Loads = 200

LEC/MMS:

Lamac and Massmann surveyed the certification grid points for Ash Pond D.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/21/12

TIME: Arrive: 6:00 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: cloudy, 50°AM, 78°PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe
Site Activities / Observations / Contacts / Notes:

AMS:
Continued preparing and filling the bedding for an additional rip rap wall along the paved gutter on the west side of Section A. Continued disposing of the old fence materials in the construction yard. Site Remediation: Completed repairing the box culvert rock chute and swale. Graded the plant access roads and performed housekeeping across the site.

AAA:
Dewatered around DS-3 and re-core drilled the holes for the high and low voltage junction boxes. Installed the junction boxes at a higher elevation at DS-3 and extended the PVC conduit to the junction boxes. Completed wiring all the connections for the pumps, floats, and flow sensors for DS-1, DS-2, and the west pump control panel. All the electrical work is now completed for the west end of the groundwater collection system, excluding the installation of the Baro-Readout Meter and activation of the Mini Divers.

FLT/BCI:
Completed additional clay placement in Section 6. Loads = 195

FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/17/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Cloudy, 63°AM, 73° PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Completed the additional rock chute, with RR-03 rip rap and 8 oz. non-woven geotextile, between the paved gutter culvert and the beginning of the paved ditch on the southwest side of Ash Pond D. Performed finish grading on the south and east sides of Ash Pond D. Backfilled the PVC conduit excavations on the southeast side of Ash Pond B from retrieving the broken lines from pulling electrical wires/cables. Site Remediation: Completed repairing and adding length to the additional rock chute on the northeast embankment of Ash Pond D, and removed washed out material from the paved ditch on the south side of Ash Pond D.

AAA:
Completed pulling the high voltage, electric feeder 4/0AWG, single phase cables with ground wire from the disconnect switch on the pump control service pole to the west pump control panel, through the 2½" PVC conduit. Repaired all PVC conduit from the excavations on the southeast side of Ash Pond B. Began wiring the connections for the ground on the Ash Pond C service pole. Installed an additional ceramic spool insulator on the power pole northwest of Ash Pond C to keep the overhead from coming into contact with the power pole. Installed the disconnect switch on the pump control service pole. Installed the ¾" x 10' copper clad ground rod at the pump control service pole. Cut #6 bare stranded aluminum cables for ground rods.

FLT/BCI:
Completed additional clay placement in Section 4 and began clay placement in Section 5. Completed the letdown channel in Section 4, completing all letdown channels. Loads = 176

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/18/12

TIME: Arrive: 6:00 AM | Depart: 6:15 PM | Travel: 1.0 hr | Total: 13.0 hrs (0.25 hr for lunch)
Weather: Cloudy, 58°AM, Sunny, 69°PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 450AJ Lift, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
Continued finish grading south of Ash Pond D. Placed 8oz. non-woven geotextile and CA-6 stone in the cap vent protective ring barriers, completing EWO-18. Built a gravel pad for the west pump control panel with 8 oz. non-woven geotextile and CA-6 stone. Placed RR-03 rip rap around the bollard/cleanout concrete slabs. Began disposing of the old fence materials stockpiled in the construction yard. Graded the plant access roads. Site Remediation: Continued removing washed out material from the paved ditch south of Ash Pond D. Delivery - CA-6.

AAA:
Wired the three phase and single phase 4/0AWG cables into the disconnect switch on the pump control service pole, completing all overhead electric and disconnect landings. Completed grounding all overhead messenger cables at the MCC-1, Ash Pond C, and pump control service poles. The ground was butt spliced at the pump control service pole, Kearney connected at the Ash Pond C service pole, and the messenger cable was grounded within the MCC-1 building for the MCC-1 service pole. Installed the stainless steel weather head and additional 2½" stainless conduit on the pump control service pole. Tightened all guy wires and straightened all power poles, completing all overhead electrical work. Drilled holes in disconnects for conduit and buried electric entry. Cut cables and prepared lugs for overhead electric landing to existing power in the spare breaker in the MCC-1 building. Tested the overhead electrical feeder, three phase 4/0AWG cables for continuity and shorts.

FLT/BCI:
Continued additional clay placement in Section 5. Loads = 178

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 9/19/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 39°AM, 73°PM | Contractor: AMS | Subcontr./Supplier: AAA, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe
Site Activities / Observations / Contacts / Notes:

AMS:
Excavated and backfilled the existing electrical feed between the Pump House and the Ash Pond C pump control panel. Excavated the new trench for the electrical conduit between the Ash Pond C service pole and pump control panel. The electrical conduit was haunched with FA-01 sand, detectable tape was placed over the conduit, and the trench was backfilled between the Ash Pond C service pole and pump control panel. Continued disposing of the old fence materials in the construction yard and grading the plant access roads.

AAA:
Installed lugs and wired the high voltage, three phase 4/0AWG electrical feed in the spare breaker in the MCC-1 building. The WPA was released for the MCC-1 and Ameren reconnected the power supply to the building. The three phase 4/0AWG was tested for voltage and the spare breaker was turned off and locked out/tagged out to continue electrical work. All electrical work is now completed in the MCC-1 building. Removed the existing high voltage, three phase 2/0AWG w/600V ground buried electrical feed between the Pump House and the Ash Pond C pump control panel. The landing within the breaker box in the Pump House for the Ash Pond C pump control panel electrical feed was disconnected, and the breaker box remains in place to act as a spare breaker. All electrical work is now completed in the Pump House. Tied into the existing buried electrical conduit at the Ash Pond C pump control panel and installed new 2" PVC conduit from the Ash Pond C pump control panel to the Ash Pond C service pole. The existing buried electrical conduit was abandoned.

FLT/BCI: Completed clay placement in Section 5 and continued placement in Section 6. Site Remediation - graded the south and east embankments of Ash Pond D.

BTD: demobilized the D5G Dozer and 410J Backhoe.

Loads = 120

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-09-18	OPEN: [01] WPA opened on 09-13, work completed, AER [S. Bruner] to close. [02] J. King reports Ash Pond C pump station is on.
2012-09-11	OPEN: [01] no date set for WPA, M. Wagstaff sent e-mail to S. Bruner.

03 EMPLOYEE DRUG TESTING

2012-09-18	OPEN - no issues. No testing scheduled for worker screening. Post-incident drug testing in progress [ref. 04.2012-09-18.03 below].
2012-09-11	OPEN: [01] None projected. [02] AMS had random [company generated] drug test at the borrow site. No positives [return to work].

04 AMS SAFETY

2012-09-18

[01] J. Tasich on site schedule TBD. J. Tasich on site last week [Thu 09-13], and safety report [via e-mail]was published.
[02] No safety issues on site reported.
[03] J. Denham reports incident regarding Fawn Lane truck driver that ran truck off road into ditch on return to borrow site. Summary:
- [01] AMS to provide full report later today [09-18].
- [02] Truck was empty on way to borrow site. Driver had a bee get in the cab.
- [03] Driver had bee in cab. Truck ran of road in to ditch approximately 15:50 PM CT [yesterday 09-17].
- [04] Driver was not injured. Sent for post-incident drug testing.
- [05] Truck had to be removed form ditch by tow truck. First estimate of damage [by visual inspection], appears less than $ 500.
- [06] Incident not a "lost time" or "recordable".
- [07] AMS will address with the other subcontractors.
- [08] M. Wagstaff suggested this incident be part of Lessons Learned.

[04] Cooling stations not required, as weather turning.
[05] AAA bringing 45 FT articulated lift remains on site.

2012-09-ii

[01] J. Tasich on site schedule TBD. P. Zinsious to check when Joko or Dave Valentine will be on site next.
[02] No safety issues reported.
[03] Damaged AMS cooling stations will have to replaced, not repaired.
[04] AAA has 45 FT articulated lift on site [for power pole work]. Workers observe using harness and correct PPE.
[05] P. Zinsious indicated report that safety recall for harnesses [involuntary safety recall from 3M on a self-retracting lanyard. The SRL is manufactured by IKAR under the THOR label]. R. porter indicated AMS does not have this style on site.
[06] Brief discussion on the recent rains and muddy site.

05 HOUSEKEEPING

2012-09-18

OPEN: No issues.
[01] AMS begin cleaning up site to de-mob.
[02] R. Porter disposing of concrete and fence posts into dumpster. Will have to go form 40 CY to 30 CY due to weight.

2012-09-11

OPEN - No issues, other than mud from the rains.

06 PLANT ACCESS - CBT BADGE

2012-09-18

OPEN: No issues.
[01] General discussion on site security.
- [01] Guard now stationed on site on Fridays.
- [02] R. Porter reports no guard on Saturdays when there is work on the transmission project.
- [03] R. Porter also reports the guard doe not have a gate key, therefore when AMS leaves, so does the guard.
- [04] M. Wagstaff to investigate the situation.

[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER of approximately 7x locks, 2x keys. M. Wagstaff indicated will discuss with Greg Musch as Ameren has several locks available on site. M. Wagstaff has discussed with G. Musch, and R. Porter reports he was on site 09-13 and 09-14.

2012-09-11

OPEN: No issues.
[01] Inquired about when guard would go 24/7. To be determined. M. Wagstaff indicated cameras still active on site.
[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER of approximately 7x locks, 2x keys. M. Wagstaff indicated will discuss with Greg Musch as Ameren has several locks available on site.
[03] M. Wagstaff indicated locks also for disconnects can come form the plant.

08 OSHA LOG - WORK HOURS

2012-09-18 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.
No incidents or accidents.

9,540.00	RT
1,833.00	OT
11,373.00	**TOTAL**

2012-09-11 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13
No incidents or accidents.

9,085.00	RT

02 WORK HOURS AND OVERTIME

2012-09-18 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Going back to subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.

2012-09-11 OPEN: No issues.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Going back to subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-09-18 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] GEO trailer to be removed around 10-19.
[03] AMS employee trailer to be removed 09-25.

2012-09-11 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction.
[02] Look ahead to removing GEO trailers on 09-28 to remain projected date. AMS to be determined.

07 PREVIOUS

01 SUBCONTRACTS

2012-09-18 OPEN - No issues.

2012-09-11 OPEN - no issues. P. Zinsious to tracked in legal. FWI pay application shows CO and approved. CLOSE

02 SUBMITTALS

20120-09-18 Submittal log dated 09-15 distributed and reviewed.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS submitted 09-11. CLOSE
[03] AMS has received digital reader submittal form FWI. AMS submitted 09-11. AMS to send submittal to AAA. CLOSE
[04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress.
[05] R. Porter gathering information from subcontractors on record drawings.
[06] AMS requiring all subcontractors' to have close-out information to AMS by 09-28 deadline.
[07] Item No. 26 - No longer required due to material change of the PCP.
[08] Item No. 81 - No longer required as information submitted under other submittals [and approved].

20120-09-11	Submittal log dated 09-08 distributed and reviewed. [01] M. Wagstaff indicated review or geo roll inventory [Item No. 21]. [02] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS submitted 09-11. [03] AMS has received digital reader submittal form FWI. AMS submitted 09-11. [04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress. [05] R. Porter reports not having information yet from subcontractors on record drawings. In progress.

08 MATERIAL

01 GENERAL

2012-09-18	OPEN - listing for materials that have potential to impact schedule. [01] FLT not providing as many trucks [to haul clay], only 9x today [09-18], need 12x. Completion of the clay cap recovery potential to be done by next Tue [09-25] or Wed [09-26]. J. Denham to look into this matter with FLT.
2012-09-11	OPEN - listing for materials that have potential to impact schedule. [01] J. Cravens distributed sketch "Hutsonville Ash Pond D Closure - Clay Issue Recovery Layout" [not dated].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-09-18	OPEN - Discussion during Progress Meeting: [01] Pipe sealed with gap per GEO/AER e-mail earlier in the week. CLOSE
2012-09-11	OPEN - Discussion during Progress Meeting: [01] AMS to seal pipe with brick [8 IN ?] and mortar "long ways", and to cover face with non-shrink grout to seal pipe. This method is a no-cost change to Ameren.

10 QUALITY CONTROL

2012-09-18	No issues. [01] AMS received some Patriot billing that did not seem correct. P. Zinsious to research. [02] M. Wagstaff indicated the bill goes direct to GEO technology. No EWO.
2012-09-11	No issues. [01] AMS received concrete break reports, and forwarded them on 09-11.

11 SCHEDULE REVIEW

2012-09-18 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]

[01] Rain dates as listed. No change.

[02] Major changes commentary:

- [01] M. Wagstaff additional activities noted for Close Out.
- [02] Add milestone for hand-off on 10-05.
- [03] General discussion on Lamac survey before Massmann. No work on ground cover until after Massmann info back. Lamac is tentatively to be schedule on 09-19. Planning to have DLF mobilize on 09-24 for ground cover.

[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-09-18 No issues. M. Wagstaff indicated add note [as shown on e-mail], proceed with submission to AER AP. CLOSE

2012-09-11 No issues. P. Zinsious inquired about retainage. Review of calculation on [draft as submitted to Ameren]. Balance over 90% billing to retainage. M. Wagstaff indicated will discuss with J. Skitt at Ameren.

12.1 EXTRA WORK ORDERS

15	**EWO-15**	**FENCE ALIGNMENT**
	2012-09-18	OPEN - AMS to provide back-up information. In progress.
	2012-09-11	OPEN - AMS to provide back-up information. [no report - work complete].
17	**EWO-17**	**PAVED DITCH ALIGNMENT**
	2012-09-18	OPEN - AMS to provide back-up information. In progress.
	2012-09-11	OPEN - Check grade to plan as possibly area included in grade.
18	**EWO-18**	**VENT PROTECTION RING**
	2012-09-18	OPEN - All rings set in place, fabric and stone remains to be installed.
	2012-09-11	OPEN - No report [in progress].
19	**EWO-19**	**COMMISSIONING**
	2012-09-18	OPEN - M. Wagstaff gave oral approval to AMS. Work scheduled by FWI for Sat 09-28, this will allow for pumps to be operational on 10-01. AMS to provide written EWO request.
	2012-09-11	M. Wagstaff indicated possible temporary discharge by IEPA, Ameren investigating. Transmitted packet of sketches and information for basic review of discharge piping option [ref. 16.2012-09-11.05 below for list].
20	**EWO-20**	**ADDITIONAL RIP-RAP**
	2012-09-18	AMS provide cost. In progress.
	2012-09-11	AMS provide cost.
21	**EWO-21**	**FIELD TILE LOCATION - LENGTH [was EWO-14]**
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
	2012-09-11	NEW - AMS to investigate addenda drawings to see if already included in the bid.
22	**EWO-22**	**MECHANICAL CHANGES**
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
	2012-09-11	NEW - AMS to investigate addenda drawings to see if already included in the bid.
23	**EWO-23**	**CONCRETE CHANGES**
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
	2012-09-11	NEW - AMS to investigate addenda drawings to see if already included in the bid.
24	**EWO-24**	**CONDUIT AND PIPE SAND ENCASEMENT**
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
	2012-09-11	NEW - AMS to investigate addenda drawings to see if already included in the bid.
25	**EWO-25**	**ELECTRICAL OVERHEAD UTILITY CHANGES**
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
	2012-09-11	NEW - M. Wagstaff has approved.
26	**EWO-26**	**DS LID MODIFICATIONS FOR PIPING**
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
	2012-09-11	NEW - M. Wagstaff has approved.
27	**EWO-27**	**ADDITIONAL BOLLARDS FOR CLEANOUTS**
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
	2012-09-11	NEW - M. Wagstaff has approved.
28	**EWO-28**	**TAX EXEMPTION**
	2012-09-18	NEW - General discussion for potential EWO due to City of Robinson not renewing tax exemption. AMS to verify no charges from subs.

13 ACTION ITEMS - AER [25]

01	**AMEREN [AER]**	
	2012-09-18	No report.
	2012-09-11	No report.

14 ACTION ITEMS - AMS [21]

01	**ASH MANAGEMENT [AMS]**	
	2012-09-18	No report.
	2012-09-11	No report.

15 PRODUCTION

03 CLAY

2012-09-18	OPEN - no issues [01] Placement as of 09-17 is 137,951 CY. [02] Additional clay to be placed to make grade elevations [ref. above 08.01.2012-08-28.03] in progress.
2012-09-11	OPEN - no issues [01] Placement as of 09-10 is 129,107 CY. [01] General discussion that CY count is "loose delivered" and that trucks CY count is 11 CY, but actually haul more. [02] Trucks were weighed in the beginning to make sure they are legal. [03] Overview of compaction requirements and lessons learned. [04] Estimated requirement to finish 17,000 CY in 8D projected [2,125 CY/D].

16 DOCUMENTS TRANSMITTED

2012-09-18	[01] AER - Last Planner schedule - Current date 09-14 - Data date 09-04 [02] GEO - "Hutsonville Ash Pond D Closure - Clay Issue Recovery Layout" [not dated]. [03] GEO - Submittal Log dated 09-15.
2012-09-11	[01] AER - Last Planner schedule dated 09-04 [data date]. [02] GEO - Submittal Log dated 09-08. [03] AMS - HUT-APD-EWO-RPT-2012-09-06-R0 "EWO Basic Report" [04] GEO - "Hutsonville Ash Pond D Closure - Clay Issue Recovery Layout" [not dated]. [05] AMS - E-mail dated 2012-09-06-16:47 to M. Wagstaff "Hutsonville APD Closure - commissioning - DS discharge - temporary" wit the following attachments [full pump submittal not included only curve]: [01] SK-HUT-APD-025-R0 "Commissioning - DS discharge - Temporary discharge line route" [02] SK-HUT-APD-026-R0 "Commissioning - DS discharge - Collector box manifold" [03] SK-HUT-APD-027-R0 "Commissioning - DS discharge - Pump flow schematic' [04] 11x17 DS pump curve [05] MacAllister Cat Invoice R6873095800 [proposal] for 6 IN pump [06] FWI letter dated 2012-09-07 "Temporary discharge Drain Line"

17 DOCUMENTS REVIEW ONLY

2012-09-18	None.
2012-09-11	B&T Drainage & Excavating letter dated 2012-09-04 to show cost of field collector tile [relative EWO-21].

18 MEETING SCHEDULE

2012-09-18 Changed category form "Next Progress Meeting" to "Meeting Schedule". Schedule for upcoming meetings:

[01] Progress Meeting	Tuesday	September 25, 2012	Standard.
[02] Progress Meeting	**Monday**	**October 1, 2012**	**Day earlier than normal schedule.**
[03] AMS-AER Operations Transfer	Friday	October 5, 2012	To be confirmed.
[03] Lesson Learned	TBD		

19 DISTRIBUTION - STANDARD

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: October 1, 2012

SUBJECT: Weekly Summary Report for September 24, 2012 to September 29, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally mostly cloudy with rain, having periods of clear skies. Temperature (°F) lows ranged from 34 to 63°F, and temperature highs ranged from 70 to 75°F. Weather delays occurred on September 25, 26, 27, and 28.

Construction Activities

The following activities occurred this week: rip rap wall construction, finish grading, electrical installations, ground cover, temporary discharge line installation, and clay placement. Ash Management Services, LLC continued construction of the rip rap wall along the paved gutter on the west side of Quadrant A, and finish graded the vegetative cover. AAA Electric, Inc. completed the electrical installations for the groundwater collection system, excluding final installations for the Diver system and electrical testing, and installed the protective covers for the guy wires. Daylight Land Management began ground cover activities, such as seeding and fertilizing prior to installing the turf reinforcement mats. Freitag-Weinhardt, Inc. installed the headers, manifold, and flexible hose for the temporary discharge line from the collector box to the Bottom Ash Pond. Fawn Lane Transit, Inc. and Belt Construction, Inc. continued clay placement for the vegetative layer. Approximately 11 trucks were used to haul clay material to Ash Pond D. Refer to the daily reports for detailed information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT CS-323C Smooth Drum Roller
John Deere 762B Paddlewheel Scraper
John Deere 450 LC Excavator
John Deere 7330 Tractor
Case 580 Backhoe
Kubota L245DT Tractor
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
AAA Electric, Inc. (AAA) – Joseph King and Kyle Davidson
Fawn Lane Transit, Inc. (FLT) – Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Tom Sager, Alan Ruholl, Patrick Wente, Frank Walton, Brian Griffith, and Greg Cornwell
Daylight Land Management (DLM) – Jon Ziliak, Adam Ziliak, and Billy Georges
Freitag-Weinhardt, Inc. (FWI) – Scott Burch and Jarrod Barrett
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, September 25, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: RR-03 rip rap, Wyatt Seed Co. dry seed mix, Loveland Products 19-19-19 dry fertilizer, Western Excelsior Corp. Excel PP5-10 Turf Reinforcement Mat, and Western Excelsior Corp. Excel CC-4 Erosion Control Blanket.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

No. A 14908

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/24/12

TIME: Arrive: 6:00 AM | Depart: 7:00 PM | Travel: 1.0 hr | Total: 13.75 hrs (0.25 hr for lunch)
Weather: Sunny, 34°AM, 72°PM | Contractor: AMS | Subcontr./Supplier: AAA, DLM, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 7330 Tractor
Site Activities / Observations / Contacts / Notes:

AMS:
Demobilized employee trailer. Filled and graded low areas of the vegetative cover and slope diversion berms. Completed disposing old fence materials in the construction yard.

AAA:
Installed PVC conduit over all the exothermic welded ground cables, and markers/protectors over all the guy wires for the new power poles. Pulled the high and low voltage electric from the east pump control panel to DS-3. Completed wiring all the connections and joints for the pumps, floats, and flow sensors for DS-3, DS-4, and the east pump control panel. All the electrical work is now completed for the east end of the groundwater collection system, excluding the installation of the Baro-Readout Meter and activation of the Mini Divers.

DLM:
Personnel - Jon Ziliak, Adam Ziliak, and Billy Georges. Mobilized - John Deere 7330 Tractor with Reveal 4in1 and 741 self-leveling lift. Began final ground cover for the letdown channels and the northwest groin. The subgrade was prepared, and was fertilized with 19-19-19 dry bagged fertilizer and seeded with turf type dry bagged seed. Excel PP5-10 turf reinforcement mat (100% synthetic) was installed by placing and stapling on the prepared letdown channels and northwest groin. Delivery - Wyatt Seed Co. dry seed mix, Loveland Products dry 19-19-19 fertilizer, and Western Excelsior Corp. Excel PP5-10 turf reinforcement mat rolled erosion control product (RECP) with 100% synthetic components.

FLT/BCI:
Began additional clay placement in Section 7, and filled/graded low areas. Loads = 176

Additional Comments: AMS: Began placing RR-03 rip rap and 8oz. non-woven geotextile for the additional rip rap wall along the paved gutter west of Section A.

Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/25/12

TIME: Arrive: 6:00 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.5 hr for lunch)
Weather: Rain, 54° AM, 70° PM | Contractor: AMS | Subcontr./Supplier: AAA
Equipment Working: None
Site Activities / Observations / Contacts / Notes:

AAA:
Patched unused core holes in DS-3 manhole. Performed housekeeping from electrical installations. All major electrical work items have been completed. Work items remaining include installation of the Baro-Readout meters, engraved name plates for labels, activation of the Diver level sensors, and commissioning of the system. Electrical testing remaining includes continuity and megger.

Other:
Weather Delay, no other work items occured.

Meeting:
Pump commissioning remains scheduled for 10/1/12. Substantial completion has been moved to 10/5/12, moving Project End to 10/17/12.

Note:
As-built drawings are currently being produced by Lamac/AMS and will require further editing and approval from myself before they are submitted to Ameren.

Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 9/29/12

TIME: Arrive: 6:30 AM | Depart: 3:30 PM | Travel: 1.0 hr | Total: 9.75 hrs (0.25 hr for lunch)
Weather: Sunny, 52° AM, 74° PM | Contractor: AMS | Subcontr./Supplier: FWI
Equipment Working: 580 Backhoe
Site Activities / Observations / Contacts / Notes:

Pump Commissioning Temporary Discharge:
FWI and AMS installed the temporary discharge line for sump pump commissioning for the groundwater collection system. The temporary discharge line runs from the collector box on the northeast corner of Ash Pond D, to the Bottom Ash Pond. Four 3" HDPE prefabricated headers were used to connect to the four 3" HDPE sump discharge pipes, inside the collector box, to bring the discharge to the top of the collector box. The headers were short and had to be extended by butt fusion welding additional 3" HDPE pipe. A McElroy Pitbull No. 14 was used for butt fusion. The headers were electrofusion welded to the sump discharge pipes with Central 3" couplings. A Central Easy Fuse Electrofusion Processor was used for electrofusion. The headers were connected to a steel 3" to 6" converter manifold on top of the collector box. The 6" flexible temporary discharge hose was also connected to the steel converter manifold. The headers and flexible hose was bolted to the manifold, and the manifold was anchored to the collector box. The 6" flexible temporary discharge hose was staged, connected by metal bands, and anchored approx. 1400' along the PGL on the northeast embankment of Ash Pond D from the collector box to the bottom ash pond.

AMS:
Continued constructing the rip rap wall along the paved gutter west of Section A.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-09-25	OPEN: [01] WPA opened on 09-13, work completed, AER closed 09-18. [02] J. King indicated no WPA required for continuity or megger testing on 10-01. [03] J. King reported that conduit for connection at Ash Pond C was deep [6FT to 7FT below grade].
2012-09-18	OPEN: [01] WPA opened on 09-13, work completed, AER [S. Bruner] to close. [02] J. King reports Ash Pond C pump station is on.

03 EMPLOYEE DRUG TESTING

2012-09-25	OPEN: [01] None projected. DLM may have some workers to schedule [TBD]. [02] FLT driver involved in last week incident results for DT returned negative, and driver returned to work 09-19.
2012-09-18	OPEN - no issues. No testing scheduled for worker screening. Post-incident drug testing in progress [ref. 04.2012-09-18.03 below].

04 AMS SAFETY

2012-09-25	[01] Correct last week report date [Thu 09-19]. [02] No safety issues reported. [03] J. Tasich reported site down due to rain and lightning. No work, but be aware of muddy site, slips and trips. [04] FWI work this Saturday [09-29] in the collector box will not require confined space entry [permit]. [05] FLT incident DT - negative results [ref. 05.03.2012-09-18.02 above]. [06] R. Porter addressed FLT incident with workers [last week]. [07] R. Porter has to silence the fire pump system alarm at the plant periodically until AER personnel reset the system due to WPA. [08] AAA lift off-site.

2012-09-18 [01] J. Tasich on site schedule TBD. J. Tasich on site last week ~~[Thu 09-13]~~, [09-19] and safety report [via e-mail]was published.
[02] No safety issues on site reported.
[03] J. Denham reports incident regarding Fawn Lane truck driver that ran truck off road into ditch on return to borrow site. Summary:
[01] AMS to provide full report later today [09-18].
[02] Truck was empty on way to borrow site. Driver had a bee get in the cab.
[03] Driver had bee in cab. Truck ran of road in to ditch approximately 15:50 PM CT [yesterday 09-17].
[04] Driver was not injured. Sent for post-incident drug testing.
[05] Truck had to be removed form ditch by tow truck. First estimate of damage [by visual inspection], appears less than $ 500.
[06] Incident not a "lost time" or "recordable".
[07] AMS will address with the other subcontractors.
[08] M. Wagstaff suggested this incident be part of Lessons Learned.
[04] Cooling stations not required, as weather turning.
[05] AAA bringing 45 FT articulated lift remains on site.

05 HOUSEKEEPING

2012-09-25 OPEN: No issues.
[01] Excess fence material [used, in good condition] taken down during demolition to be moved on site by AMS to the storage yard.. R. Porter estimates about 750 FT of fence fabric, top rail, and one gate [double 8 FT].
[02] R. Porter disposing of concrete and fence posts into dumpster. Will have to go form 40 CY to 30 CY due to weight.

2012-09-18 OPEN: No issues.
[01] AMS begin cleaning up site to de-mob.
[02] R. Porter disposing of concrete and fence posts into dumpster. Will have to go form 40 CY to 30 CY due to weight.

06 PLANT ACCESS - CBT BADGE

2012-09-25 OPEN: No issues.
[01] General discussion on site security.
[01] Guard now stationed on site on 5D x 8HRS, which is less time than previous.
[02] Issue with site open, and no guard remains.
[03] M. Wagstaff to investigate the situation, and forward MM to B. Simmons [AER].
[02] Lock final count and distribution to be determined after SC, when AMS leaves site.

2012-09-18 OPEN: No issues.
[01] General discussion on site security.
[01] Guard now stationed on site on Fridays.
[02] R. Porter reports no guard on Saturdays when there is work on the transmission project.
[03] R. Porter also reports the guard doe not have a gate key, therefore when AMS leaves, so does the guard.
[04] M. Wagstaff to investigate the situation.
[02] R. Porter locking new gate, [no open areas to plant], and will provide updated lock count to AER of approximately 7x locks, 2x keys. M. Wagstaff indicated will discuss with Greg Musch as Ameren has several locks available on site. M. Wagstaff has discussed with G. Musch, and R. Porter reports he was on site 09-13 and 09-14.

08 OSHA LOG - WORK HOURS

2012-09-25 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-13
No incidents or accidents.
9,812.00 RT
1,911.00 OT
11,723.00 TOTAL

2012-09-18 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 08-20.
No incidents or accidents.

02 WORK HOURS AND OVERTIME

2012-09-25 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Continue early start some subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.
[02] AMS and FWI scheduled to work this Saturday 09-29 to install DS temporary discharge line.

2012-09-18 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Going back to subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-09-25 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] GEO trailer to be removed around 10-19.
[03] AMS employee trailer off-site.
[04] DLM to bring equipment on site - "4N1", hydro seeder, and tractor.

2012-09-18 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] GEO trailer to be removed around 10-19.
[03] AMS employee trailer to be removed 09-25.

2012-09-18 OPEN - No issues.

02 SUBMITTALS

20120-09-25 No Submittal log update issued.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff has meeting set up today [09-25] with A. Ridgely [Lamac] to discuss record drawings.
[03] R. Porter gathering information from subcontractors on record drawings. AAA input on 09-25.
[04] AMS requiring all subcontractors' to have close-out information to AMS by 09-28 deadline. In progress.
[05] Item No. 26 - No longer required due to material change of the PCP.
[06] Item No. 81 - No longer required as information submitted under other submittals [and approved].

20120-09-18 Submittal log dated 09-15 distributed and reviewed.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff indicated bolt pattern and sealant for the DS hatch required. AMS submitted 09-11. CLOSE
[03] AMS has received digital reader submittal form FWI. AMS submitted 09-11. AMS to send submittal to AAA. CLOSE
[04] M. Wagstaff indicated that Lamac not confirmed yet for record drawings in AutoCAD. Review in progress.
[05] R. Porter gathering information from subcontractors on record drawings.
[06] AMS requiring all subcontractors' to have close-out information to AMS by 09-28 deadline.
[07] Item No. 26 - No longer required due to material change of the PCP.
[08] Item No. 81 - No longer required as information submitted under other submittals [and approved].

08 MATERIAL

01 GENERAL

2012-09-25 OPEN - listing for materials that have potential to impact schedule.
[01] FLT current truck count for clay hauling down. Clay would have been done 09-26, but new date for clay hauling completion is 09-28 based on the weather. J. Denham involved with FLT to resolve. R. Porter indicated trucks working other areas.

2012-09-18 OPEN - listing for materials that have potential to impact schedule.
[01] FLT not providing as many trucks [to haul clay], only 9x today [09-18], need 12x. Completion of the clay cap recovery potential to be done by next Tue [09-25] or Wed [09-26]. J. Denham to look into this matter with FLT.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-09-25 OPEN - Discussion during Progress Meeting:
[01] Additional field tile installed to be located on the record drawings.

2012-09-18 OPEN - Discussion during Progress Meeting:
[01] Pipe sealed with gap per GEO/AER e-mail earlier in the week. CLOSE

10 QUALITY CONTROL

2012-09-25 No issues.
[01] P. Zinsious to researched Patriot billing, received only billing for hours, not analysis. Requested STC combine to one large billing.
[02] P. Zinsious reported STC offered to bill GEO direct. M. Wagstaff indicated billing to go direct to GEO from STC non-issue.
[03] Distribution and general discussion of AMS "Hutsonville APD Closure - Revision Matrix " HUT-APD-DWG-LST-2012-09-21-R0 relative EWO requests, and drawings associated with AER addenda. M. Wagstaff to forward copies of files AMS indicated could not find internally.

2012-09-18 No issues.
[01] AMS received some Patriot billing that did not seem correct. P. Zinsious to research.
[02] M. Wagstaff indicated the bill goes direct to GEO technology. No EWO.

11 SCHEDULE REVIEW

2012-09-25 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain date today [09-25].
[02] Major changes commentary:
[01] AAA checked out Ash Pond C pumps with phase meter.
[02] R. Porter spreadsheet with clay elevations relative Massmann survey.
[03] General discussion on Massmann survey and Lamac survey, as differences at some points both surveyed. Massmann used pointed rod, and GEO indicated that most representative of area within a foot of the stake was used as guideline.
[04] Add activity 10-15 "Finish Punch".
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

2012-09-18 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain dates as listed. No change.
[02] Major changes commentary:
[01] M. Wagstaff additional activities noted for Close Out.
[02] Add milestone for hand-off on 10-05.
[03] General discussion on Lamac survey before Massmann. No work on ground cover until after Massmann info back. Lamac is tentatively to be schedule on 09-19. Planning to have DLF mobilize on 09-24 for ground cover.
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-09-25 No issues.
2012-09-18 No issues. M. Wagstaff indicated add note [as shown on e-mail], proceed with submission to AER AP. CLOSE

12.1 EXTRA WORK ORDERS

GENERAL

2012-09-25 Distribution and general discussion of AMS "Hutsonville APD Closure - Basic EWO Report" HUT-APD-EWO-RPT-2012-09-12-R0.

15 EWO-15 FENCE ALIGNMENT

2012-09-25 OPEN - AMS to provide back-up information. In progress.
2012-09-18 OPEN - AMS to provide back-up information. In progress.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-09-25 OPEN - AMS to provide back-up information. In progress.
2012-09-18 OPEN - AMS to provide back-up information. In progress.

18 EWO-18 VENT PROTECTION RING

2012-09-25 CLOSE
2012-09-18 OPEN - All rings set in place, fabric and stone remains to be installed.

19	EWO-19	**COMMISSIONING**
	2012-09-25	OPEN - M. Wagstaff approved 09-21.
	2012-09-18	OPEN - M. Wagstaff gave oral approval to AMS. Work scheduled by FWI for Sat 09-28, this will allow for pumps to be operational on 10-01. AMS to provide written EWO request.
20	EWO-20	**ADDITIONAL RIP-RAP**
	2012-09-25	OPEN - M. Wagstaff approved 09-21. Work in progress.
	2012-09-18	AMS provide cost. In progress.
21	EWO-21	**FIELD TILE LOCATION - LENGTH [was EWO-14]**
	2012-09-25	OPEN - Reviewed drawings and J. Craven sketch. AMS to further investigate information from BTD.
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
22	EWO-22	**MECHANICAL CHANGES**
	2012-09-25	OPEN - AMS to provide specific backup information. Change are FWI piping, associated cost in other EWO.
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
23	EWO-23	**CONCRETE CHANGES**
	2012-09-25	OPEN - AMS to provide specific backup information.
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
24	EWO-24	**CONDUIT AND PIPE SAND ENCASEMENT**
	2012-09-25	CLOSE - Scope was delineated in AER Addenda, AMS to rescind and delete EWO request.
	2012-09-18	OPEN - AMS to review EWO against AER Addenda and report.
25	EWO-25	**ELECTRICAL OVERHEAD UTILITY ~~CHANGES~~ LOCATION**
	2012-09-25	CLOSE - M. Wagstaff approved 09-21.
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
26	EWO-26	**DS LID MODIFICATIONS FOR PIPING**
	2012-09-25	OPEN - AMS to provide written EWO request for processing.
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
27	EWO-27	**ADDITIONAL BOLLARDS FOR CLEANOUTS**
	2012-09-25	CLOSE - M. Wagstaff approved 09-21.
	2012-09-18	OPEN - AMS to provide written EWO request for processing.
28	EWO-28	**TAX EXEMPTION**
	2012-09-25	OPEN - Close-out after Friday 09-28.
	2012-09-18	NEW - General discussion for potential EWO due to City of Robinson not renewing tax exemption. AMS to verify no charges from subs.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: October 18, 2012

SUBJECT: Weekly Summary Report for October 1, 2012 to October 5, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally mostly cloudy with rain, having periods of clear skies. Temperature (°F) lows ranged from 49 to 58°F, and temperature highs ranged from 50 to 81°F. Weather delays occurred on October 3, 2012.

Construction Activities

The following activities occurred this week: commissioning of the groundwater collection trench system, rip rap placement, roadway restoration and construction, finish grading, repairing impacts from storm events, surveying, electrical installations, final ground cover, and clay placement. The pumps were commissioned for the groundwater collection trench system on October 1, 2012, and personnel from Ameren Energy Resources, Ash Management Services, LLC, AAA Electric, Inc., Freitag-Weinhardt, Inc. and Pine Environmental Services, Inc were present. Continuity testing was performed for the electrical components of the system prior to commissioning. Ash Management Services, LLC completed construction of the rip rap wall along the paved gutter on the west side of Quadrant A, performed roadway restoration, and continued construction of the east pump control panel and south property access roads. Finish grading occured south and east of Ash Pond D and storm impacts were repaired for the paved gutter, paved ditch, rip rap pads, rock chutes, and swales. Lamac Engineering, CO. surveyed quantities for the paved ditch backfill. Massmann Surveying surveyed the vegetative layer and site features for the as-built construction drawings. AAA Electric, Inc. installed the flowmeter readouts for the flow sensors. Daylight Land Management installed turf reinforcement mats, erosion control blankets

Electronic Filing: Received, Clerk's Office 09/28/2020

for Ash Pond D, and performed other ground cover activities such as seeding for the vegetative layer and disturbed areas on-site. Fawn Lane Transit, Inc. and Belt Construction, Inc. completed clay placement for the vegetative layer and finish grading. Approximately 11 trucks were used to haul clay material to Ash Pond D. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT CS-323C Smooth Drum Roller
John Deere 7330 Tractor
John Deere 6430 Tractor
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ameren Energy Resources – Mike Wagstaff, Lionel Chambers, and Terry Hanratty
Pine Environmental Services, Inc. – Mark Winter
Ash Management Services, LLC (AMS) – Randy Porter, Paul Zinsious, John Denham, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
AAA Electric, Inc. (AAA) – Joseph King
Fawn Lane Transit, Inc. (FLT) – Lee Edington, Scott Comer, James Elledge, Jim Urfer, Gary Lamb, Tom Sager, Alan Ruholl, Patrick Wente, Frank Walton, Brian Griffith, and Greg Cornwell
Daylight Land Management (DLM) – Jon Ziliak, Adam Ziliak, Billy Georges, Eric Wells, Jacob Hoalt, Tracy Deisher, and Ivan York
Freitag-Weinhardt, Inc. (FWI) – Jarrod Barrett
Lamac Surveying – Austin Ridgely
Massmann Surveying – Rick Kopac
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Monday, October 1, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Electronic Filing: Received, Clerk's Office 09/28/2020

Materials

The following materials were delivered this week: Wyatt Seed Co. dry seed mix, Ceres Solutions 19-19-19 dry fertilizer, Western Excelsior Corp. Excel CC-4 Erosion Control Blanket, IDOT CA-6 aggregate, and clay for the vegetative layer.

Testing/Sampling

AAA Electric, Inc. performed continuity testing on the electrical components of the groundwater collection system. The megger testing requirement for the electrical components of the system was omitted by Ameren Energy Resources. Refer to the electrical testing records for additional information. The final welds of the sump discharge pipes were visually observed for leaks to complete the hydrostatic testing.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/1/12

TIME: Arrive: 6:00 AM | Depart: 7:00 PM | Travel: 1.0 hr | Total: 14 hrs (no lunch)
Weather: Cloudy, 52° AM, Rain 61° PM | Contractor: AMS | Subcontr./Supplier: AAA, FWI, AER, DLM, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 7330 Tractor, 6430 Tractor
Site Activities / Observations / Contacts / Notes:

AMS/AER/AAA/FWI:

Personnel - Randy Porter, Paul Zinsious, Mike Waggstaff, Lionel Chambers, Joe King, and Jarrod Barrett. AAA installed the Omega Sensor Readouts for the paddlewheel flow sensors for DS-1, 2, 3, and 4, and performed continuity testing for the low and high voltage, 2/0 and 4/0 AWG electric lines for the groundwater collection system, as well as checked for voltage drops. The megger testing requirement, as stated in the project specifications, was omitted for the electric lines. AAA energized the sump pumps for pump commissioning of the groundwater collection system. AER, AMS, and FWI were present for commissioning. No leaks were observed in the exit butt fusion welds, completing the in-service visual inspection of the final welds. All pumps and floats were operational, and no leaks were observed in the temporary discharge line running from the collector box to the Bottom Ash Pond. The operation of the paddlewheel flow sensors will be checked at a later date. The Mini Divers for DS-1, 2, and 4, Baro Diver, and Diver Mate were activated and operational. The cable for DS-3's Mini Diver was cut and could not be activated. The cable will be replaced by operational training on Friday. The pumps will remain on 24/7 at this time, dependent on the NPDES Permit and operational training. The system will be inspected daily for the remainder of the project.

AMS:

Completed constructing the additional rip rap wall along the paved gutter on the west side of Section A. Performed finish grading south of Ash Pond D. Removed temporary fencing around the DS manholes and began final backfill against the manholes.

Site Activities / Observations / Contacts / Notes:

DLM:
Additional Personnel - Eric Wells, Jacob Hoalt, Tracy Deisher, and Ivan York. Mobilized - John Deere 6430 Tractor with 673 self-leveling lift and Haybuster 2564. Began final ground cover for the slope diversion berms. The subgrade was prepared, fertilized with 19-19-19 dry bagged fertilizer, and seeded with turf type dry bagged seed mix. Excel CC-4 erosion control blanket was installed by placing and stapling on the prepared slope diversion berms. Also, the western strip of vegetative cover between the access road and the most western slope diversion berm was fertilized, seeded, and covered with straw.

FLT/BCI:
Completed additional clay placement in Section 7, and began in Section 8. Reconstructed slope diversion berms, performed finish grading on the south embankment of Ash Pond D, and prepared the subgrade for the east pump control panel access road. Additional Personnel - Aaron Gullet, Jason Byers, Kim Edington, and Robby Sanders. Loads = 273

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/2/12

TIME: Arrive: 6:30 AM | Depart: 6:45 PM | Travel: 1.0 hr | Total: 13 hrs (0.25 hr for lunch)
Weather: Cloudy; Rain; 49°AM, 60°PM | Contractor: AMS | Subcontr./Supplier: DLM, LEC, FLT, BCI
Equipment Working: D6N Dozer, 580 Backhoe, 7330 Tractor, 6430 Tractor
Site Activities / Observations / Contacts / Notes:

AMS/FLT/BCI:
Began the new access roadway for the east pump control panel southwest of Ash Pond D with gravel surfacing. Non-woven 8oz. geotextile and IDOT CA-6 gravel were used for the access road. Filled and performed finish grading south of Ash Pond D. Site Remediation- removed washed out material from the paved ditch and paved gutter. Attempted to continue additional clay placement in Section 8, but the excavator broke down at the clay borrow site. Clay placement will continue tomorrow.

DLM:
Completed installing the turf reinforcement mat on the northwest groin and the erosion control blankets on the slope diversion berms, excluding the most southwest slope diversion berm that is incomplete for the entrance to Ash Pond D. Began final ground cover for the vegetative layer and embankments of Ash Pond D, and the areas east and south of Ash Pond D, and south of Ash Pond A and Ash Pond B. Prepared, graded, aerated, fertilized, and seeded the vegetative layer and embankments of Ash Pond D, and the areas east and south of Ash Pond D, and south of Ash Pond A and Ash Pond B. Turf Type dry bagged seed mix was used from Wyatt Seed Co., and 19-19-19 fertilizer was used and delivered from Ceres Solutions in a WillMarr Super 600 buggy. Began straw mulching with a Haybuster on the vegetative layer and embankments of Ash Pond D.

LEC:
Austin surveyed the grid points for the vegetative layer and the fill area along the paved ditch south of Ash Pond D to estimate the quantity of clay used for fill.

Additional Comments: The site is highly saturated from the steady light rain the past two days.

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: ~ | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: ~ | Client: Ameren ER | Date: 10/3/12

TIME: Arrive: 6:30 AM | Depart: 5:15 PM | Travel: 1.0 hr | Total: 11.5 hrs (0.25 hr for lunch)
Weather: Cloudy, 58° AM, Sunny, 76° PM | Contractor: AMS | Subcontr./Supplier: BCI, MMS
Equipment Working: D6N Dozer, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS/BCI:
Cleaned and graded the plant entrance and access roads. Backfilled against D5 manholes, filled low spots on the vegetative layer, and removed remaining temporary silt fence within the property limits. Completed constructing the anchor trench outlet toe drain rip rap splash pads on the south embankment of Ash Pond D. Reconstructed damaged rip rap pads, rock chutes, and swales. Performed finish grading south of Ash Pond D.

MMS:
Rick surveyed the certification grid points for the vegetative cover.

Other:
Weather Delay - The rain from Monday and Tuesday caused the site to become highly saturated and no other work items occured. Ground cover and clay placement will continue tomorrow, and the final ground cover will be crimped with a cultipacker.

Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/4/12

TIME: Arrive: 6:30 AM | Depart: 7:30 PM | Travel: 1.0 hr | Total: 13.75 hrs (0.25 hr for lunch)
Weather: Sunny, 57° AM, 81° PM | Contractor: AMS | Subcontr./Supplier: DLM, FLT, BCI, MMS, LEC
Equipment Working: D6N Dozer, 580 Backhoe, 7330 Tractor, 6430 Tractor, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS/FLT/BCI:
Completed backfilling around DS manholes and finish grading south of Ash Pond D. Added additional fill along the top of the rip rap wall and along the paved gutter adjacent to the plant access road. Continued removing washed out material from the paved gutter and paved ditch. Cleaned and graded plant entrance and access roads. Placed additional fill south of Ash Pond D. Completed additional clay placement in Section 8, completing the 3.0' vegetative layer, Loads = 145. The last slope diversion berm that was left open for an entrance to the pond was completed.

DLM:
Continued seeding and straw mulching on the vegetative layer of Ash Pond D, the embankments of Ash Pond D, east and south areas of Ash Pond D, and south areas of Ash Pond A and Ash Pond B. Completed installing the last set of erosion control blankets on the most southwestern slope diversion berm. Crimping of the straw mulch will begin tomorrow with a disc and cultipacker.

MMS:
The survey of the certification grid points for the vegetative layer was completed. The vegetative thickness was field verified to have thicknesses greater than or equal to 3.00' by comparing to the as-built ash elevations. Began surveying the modified and new site features for the as-built construction drawings.

LEC:
Completed surveying the additional quantity of fill for the paved ditch backfill.

Additional Comments: DLM completed straw mulching in the late PM.

FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/5/12

TIME: Arrive: 6:00 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 11 hrs (no lunch)
Weather: Cloudy, 54°AM, Rain 50°PM | Contractor: AMS | Subcontr./Supplier: DLM, BCI, AAA, AER, FWI, MMS
Equipment Working: D6N Dozer, 580 Backhoe, 7330 Tractor, 6430 Tractor, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS/BCI:
Began roadway improvement/gravel surfacing for the existing roadway south of Ash Pond D along the south property line. Non-woven 8 oz. geotextile and IDOT CA-6 gravel was used for the roadway improvement. Placed additional rip rap along the new access road to the east pump control panel to mitigate erosion. Removed warning signs from Hwy. 1 pertaining to the dump trucks entering and leaving the highway. Cleaned plant access roads.

DLM:
Completed crimping the straw mulch on Ash Pond D, and all other areas on the site disturbed from construction, by utilizing a disc and cultipacker. Demobilized equipment and materials.

AAA:
Began installing the engraved nameplates for the electrical devices.

Pump Commissioning (follow-up) Meeting:
Personnel - Mike Waggoff and Terry Hanratty (AER), Paul Zinsious and John Denham (AMS), Mark Winter (Pine Environmental Services, Inc.), Jarrod Barrett (FWI), and Joe King (AAA). The four sump pumps were evaluated after being in operation since 10/1/12. The data was downloaded, reviewed, and the methodology of the data reduction for the Diver system was discussed. The Diver data provided that DS-1, DS-3, and DS-4 are cycling. DS-2 has yet to reach a low enough water level to cause the pump to cycle. The groundwater collection system was found to be fully operational, and the system was turned over to Ameren's control. The Omega totalizers will be activated next Tuesday when the pumps are re-energized. Note: the pumps will remain off over the weekend.

MMS: Completed surveying the modified and new site features for the as-built construction drawings.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-10-01	OPEN: [01] AMS removed LOTO at Collector Box for DS temporary discharge [ref. new Item No. 15.1 below]. [02] AAA monitoring operation of pumps for start-up. [03] No future WPA's projected.
2012-09-25	OPEN: [01] WPA opened on 09-13, work completed, AER closed 09-18. [02] J. King indicated no WPA required for continuity or megger testing on 10-01. [03] J. King reported that conduit for connection at Ash Pond C was deep [6FT to 7FT below grade].

03 EMPLOYEE DRUG TESTING

2012-10-01	OPEN: [01] None projected. [02] DLM had 4x workers tested today [10-01], and results negative.
2012-09-25	OPEN: [01] None projected. DLM may have some workers to schedule [TBD]. [02] FLT driver involved in last week incident results for DT returned negative, and driver returned to work 09-19.

04 AMS SAFETY

2012-10-01 [01] J. Tasich on site - observations and commentary:
- [01] No safety issues.
- [02] Clay hauling truck operations going well.
- [03] Observed good communications between laborers [spotters] and dozer operators.
- [04] Performed site specific training for 4x workers for DLM.
- [05] Tentative next site visit schedule -10-15 possibly for close out.
- [06] Site drying up. DLM operations brought 2x tractors on site.

[02] Continuing effort to silence the fire pump system alarm at the plant periodically until AER personnel reset the system due to WPA.

2012-09-25 [01] Correct last week report date [Thu 09-19].
[02] No safety issues reported.
[03] J. Tasich reported site down due to rain and lightning. No work, but be aware of muddy site, slips and trips.
[04] FWI work this Saturday [09-29] in the collector box will not require confined space entry [permit].
[05] FLT incident DT - negative results [ref. 05.03.2012-09-18.02 above].
[06] R. Porter addressed FLT incident with workers [last week].
[07] R. Porter has to silence the fire pump system alarm at the plant periodically until AER personnel reset the system due to WPA.
[08] AAA lift off-site.

05 HOUSEKEEPING

2012-10-01 OPEN: No issues.
[01] R. Porter to schedule moving excess fence material.
[02] During cleanup at de-mobilizing, AMS will wash streets one-time when leaving site.
[03] R. Porter reports - appears transmission subcontractor concrete truck washed out at entrance to plant. AMS has washed out at close proximity to the Ash Pond D and placed the concrete in a dumpster to haul off site.

2012-09-25 OPEN: No issues.
[01] Excess fence material [used, in good condition] taken down during demolition to be moved on site by AMS to the storage yard.. R. Porter estimates about 750 FT of fence fabric, top rail, and one gate [double 8 FT].
[02] R. Porter disposing of concrete and fence posts into dumpster. Will have to go form 40 CY to 30 CY due to weight.

06 PLANT ACCESS - CBT BADGE

2012-10-01 OPEN: No issues.
[01] General discussion on site security.
- [01] Guard stationed on site on 5D x 8HRS continues.
- [02] When on site Saturday R. Porter indicated no guard was present.
- [03] M. Wagstaff to investigate the situation, and forward MM to B. Simmons [AER] in progress.

2012-09-25 OPEN: No issues.
[01] General discussion on site security.
- [01] Guard now stationed on site on 5D x 8HRS, which is less time than previous.
- [02] Issue with site open, and no guard remains.
- [03] M. Wagstaff to investigate the situation, and forward MM to B. Simmons [AER].

[02] Lock final count and distribution to be determined after SC, when AMS leaves site.

08 OSHA LOG - WORK HOURS

2012-10-01 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to start of today 10-01 due to meeting change].
No incidents or accidents.
9,900.00 RT
1,964.00 OT
11,864.00 TOTAL

2012-09-25 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] ~~08-13~~ 09-24 [corrected 10-01].
No incidents or accidents.
9,812.00 RT
1,911.00 OT
11,723.00 TOTAL

02 WORK HOURS AND OVERTIME

2012-10-01 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Continue early start some subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.
[02] AMS and FWI work this Saturday 09-29 to install DS temporary discharge line. Work completed.

2012-09-25 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Continue early start some subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.
[02] AMS and FWI scheduled to work this Saturday 09-29 to install DS temporary discharge line.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-10-01 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] DLM equipment on site - "4N1", hydro seeder, tractor, and straw blower.

2012-09-25 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] GEO trailer to be removed around 10-19.
[03] AMS employee trailer off-site.
[04] DLM to bring equipment on site - "4N1", hydro seeder, and tractor.

07 PREVIOUS

01 SUBCONTRACTS

2012-10-01 OPEN - No issues.

2012-09-25 OPEN - No issues.

02 SUBMITTALS

20120-10-01 No Submittal log update issued.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff meeting 09-25 with A. Ridgely [Lamac] to discuss record drawings. CLOSE
[03] R. Porter gathering information from subcontractors on record drawings. FWI delivered "red lines" 09-28.
[04] AMS subcontractors' to have close-out information to AMS by 09-28 deadline. No tax information received, AMS to close.

20120-09-25 No Submittal log update issued.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff has meeting set up today [09-25] with A. Ridgely [Lamac] to discuss record drawings. Procedure is half-size drawings to be marked up by AMS send to GEO for review and secondary mark up for AER.
[03] R. Porter gathering information from subcontractors on record drawings. AAA input on 09-25.
[04] AMS requiring all subcontractors' to have close-out information to AMS by 09-28 deadline. In progress.
[05] Item No. 26 - No longer required due to material change of the PCP.
[06] Item No. 81 - No longer required as information submitted under other submittals [and approved].

08 MATERIAL

01 GENERAL

2012-10-01 OPEN - listing for materials that have potential to impact schedule.
[01] R. Porter reports FLT has 14x trucks hauling today 10-01 making good progress. Clay hauling projected completion for 10-02.

2012-09-25 OPEN - listing for materials that have potential to impact schedule.
[01] FLT current truck count for clay hauling down. Clay would have been done 09-26, but new date for clay hauling completion is 09-28 based on the weather. J. Denham involved with FLT to resolve. R. Porter indicated trucks working other areas.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-10-01 OPEN - No report.

2012-09-25 OPEN - Discussion during Progress Meeting:
[01] Additional field tile installed to be located on the record drawings.

10 QUALITY CONTROL

2012-10-01 No issues.
[01] Patriot billing that STC is to combine to one large billing in progress.
[02] M. Wagstaff to forward copies of files AMS indicated could not find internally. In progress.

2012-09-25 No issues.
[01] P. Zinsious to researched Patriot billing, received only billing for hours, not analysis. Requested STC combine to one large billing.
[02] P. Zinsious reported STC offered to bill GEO direct. M. Wagstaff indicated billing to go direct to GEO from STC non-issue.
[03] Distribution and general discussion of AMS "Hutsonville APD Closure - Revision Matrix " HUT-APD-DWG-LST-2012-09-21-R0 relative EWO requests, and drawings associated with AER addenda. M. Wagstaff to forward copies of files AMS indicated could not find internally.

11 SCHEDULE REVIEW

2012-10-01 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain date 4x last week.
[02] Major changes commentary:
[01] DS temporary discharge line operational [ref. new Item No. 15.1 below].
[02] Punch list walk through date to be determined, tentative 10-08 or 10-09.
[03] AID A4300 change LP to M. Wagstaff and AMS delete.
[04] Operations transfer remains scheduled for 10-05.
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

NO.	LAST PLANNER	AID	ACTIVITY NAME	RDU	START	FINISH	PERCENT	COMMENT

2012-09-25 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain days - 4x last week for total 20xD
[02] Major changes commentary:
[01] AAA checked out Ash Pond C pumps with phase meter.
[02] R. Porter spreadsheet with clay elevations relative Massmann survey.
[03] General discussion on Massmann survey and Lamac survey, as differences at some points both surveyed. Massmann used pointed rod, and GEO indicated that most representative of area within a foot of the stake was used as guideline.
[04] Add activity 10-15 "Finish Punch".
[03] All change were made to the LP sheet and full report submitted to AER. Below is highlight of changes/updates [alpha by LP]:

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-10-01	No issues. AMS to develop draft next pay-app.
2012-09-25	No issues.

12.1 EXTRA WORK ORDERS

GENERAL

2012-10-01	No issues.
2012-09-25	Distribution and general discussion of AMS "Hutsonville APD Closure - Basic EWO Report" HUT-APD-EWO-RPT-2012-09-12-R0.

15 EWO-15 FENCE ALIGNMENT

2012-10-01	OPEN - AMS to provide back-up information. In progress.
2012-09-25	OPEN - AMS to provide back-up information. In progress.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-10-01	OPEN - Lamac to survey area, and provide information for delta between plan and new elevations for fill.
2012-09-25	OPEN - AMS to provide back-up information. In progress.

19 EWO-19 COMMISSIONING

2012-10-01	CLOSE - Work completed. Reference new Item No. 15.1 below.
2012-09-25	OPEN - M. Wagstaff approved 09-21.

20 EWO-20 ADDITIONAL RIP-RAP

2012-10-01	CLOSE - Work completed.
2012-09-25	OPEN - M. Wagstaff approved 09-21. Work in progress.

21 EWO-21 FIELD TILE LOCATION - LENGTH [was EWO-14]

2012-10-01	OPEN - AMS to provide back-up information. In progress.
2012-09-25	OPEN - Reviewed drawings and J. Craven sketch. AMS to further investigate information from BTD.

22 EWO-22 MECHANICAL CHANGES

2012-10-01	OPEN - AMS to provide back-up information. In progress.
2012-09-25	OPEN - AMS to provide specific backup information. Change are FWI piping, associated cost in other EWO.

23 EWO-23 CONCRETE CHANGES

2012-10-01	OPEN - AMS to provide back-up information. In progress.
2012-09-25	OPEN - AMS to provide specific backup information.

26 EWO-26 DS LID MODIFICATIONS FOR PIPING

2012-10-01	OPEN - AMS to provide written EWO request for processing.
2012-09-25	OPEN - AMS to provide written EWO request for processing.

28 EWO-28 TAX EXEMPTION

2012-10-01	CLOSE - No response from subcontractors. AMS to provide notice and documentation.
2012-09-25	OPEN - Close-out after Friday 09-28.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-10-01	[01] J. King indicated after meeting with L. Chambers on site, will forward spreadsheet of electrical panel description tags.
2012-09-25	[01] J. King request spreadsheet of electrical panel description tags.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-10-01	No report.
2012-09-25	No report.

15 PRODUCTION

03 CLAY

2012-10-01	OPEN - no issues [01] Placement as of today [10-01] is no change from 147,510 CY last week due to weather delay - rain days. [02] FLT hauling today [10-01].
2012-09-25	OPEN - no issues [01] Placement as of 09-24 is 147,510 CY. [02] Additional clay to be placed to make grade elevations [ref. above 08.01.2012-08-28.03] in progress.

15.1 CLOSE OUT

01 START UP AND COMMISSION

2012-10-01	NEW [01] Cable to Baro Mini Diver 502 at DS-3 not operational. FWI to obtain replacement before Friday meeting. [02] DS temporary discharge line in place. Line secure. Pumps operational, no issues. [03] Operation of the pumps per plan 24/7 until Friday 10-05, which determination will be made by Ameren if necessary to continue.

16 DOCUMENTS TRANSMITTED

2012-10-01	[01] AER - Last Planner schedule - Current date 09-26 - Data date 09-26
2012-09-25	[01] AER - Last Planner schedule - Current date 09-20 - Data date 09-18. [02] AMS "Hutsonville APD Closure - Basic EWO Report" HUT-APD-EWO-RPT-2012-09-12-R0 [03] AMS "Hutsonville APD Closure - Revision Matrix " HUT-APD-DWG-LST-2012-09-21-R0

17 DOCUMENTS REVIEW-ONLY

2012-10-01	None.
2012-09-25	[01] GEO - "Field Tile Plan Layout-R1_JRC" second page [copy to P. Zinsious] [02] R. Porter spreadsheet with clay elevations relative Massmann survey.

18 MEETING SCHEDULE

2012-10-01	Schedule for upcoming meetings:			
	[01] AMS-AER Operations Transfer	Friday	October 5, 2012	Confirmed.
NOTE>>>>>>>	**[02] Punch List Walkthrough**	**TBD**	**TBD**	**Possible 10-08, or 10-09.**
	[03] Progress Meeting	Monday	October 15, 2012	Day earlier than normal schedule.
	[04] Lesson Learned	TBD		
2012-09-25	Schedule for upcoming meetings:			
	[01] Progress Meeting	Monday	October 1, 2012	Day earlier than normal schedule.
	[02] AMS-AER Operations Transfer	Friday	October 5, 2012	Confirmed.
	[03] NO MEETING THIS WEEK	**Tuesday**	**October 8, 2012**	
	[04] Progress Meeting	Monday	October 15, 2012	Day earlier than normal schedule.
	[05] Lesson Learned	TBD

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: October 18, 2012

SUBJECT: Weekly Summary Report for October 8, 2012 to October 13, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally clear and sunny. Temperature (°F) lows ranged from 31 to 50°F, and temperature highs ranged from 55 to 74°F. Weather delays did not occur this week.

Construction Activities

The following activities occurred this week: roadway restoration and gravel surfacing, repairing impacts from storm events, performing tasks on the punch list, electrical installations, and surveying. Ash Management Services, LLC and Belt Construction, Inc. completed roadway restoration, construction of plant access roads, addressed impacts from storm events, and performed tasks from the punch list. AAA Electric, Inc. installed the engraved nameplates for the electrical components for the groundwater collection system and resistors for the Omega flowmeter readouts. Massmann Surveying completed surveying the new and modified site features for the as-built construction drawings. Refer to the daily reports for detailed information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT CS-323C Smooth Drum Roller
Case 580 Backhoe
Water Truck (Dust Control)

Electronic Filing: Received, Clerk's Office 09/28/2020

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, and Blake Bunting
Charah, Inc. – Joe Tasich
Belt Construction, Inc. (BCI) – Jared Belt
AAA Electric, Inc. (AAA) – Joseph King
Massmann Surveying – Rick Kopac
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, October 9, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: IDOT CA-6 aggregate.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 15009

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/8/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: * 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 31°AM, 60° PM | Contractor: AMS | Subcontr./Supplier: BCI
Equipment Working: D6N Dozer, 580 Backhoe
Site Activities / Observations / Contacts / Notes:

AMS/BCI:
Continued removing washed out material in paved ditch and performed final grading of the plant entrance and access roads. Continued roadway improvement / gravel surfacing for the existing roadway south of Ash Pond D along the south property line. Disposed excess materials in the construction yard. Tightened all the bolts/nuts on the aluminum hatches for the DS manholes. Completed installing the rodent guards in the anchor trench outlet toe drains for Ash Pond D. Delivery - CA-6.

Additional Comments: * +2 hrs for As-Built Drawings
Total = 14.75 hrs

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/9/12

TIME: Arrive: 6:30 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: * 12.25 hrs (no lunch)
Weather: Sunny, 39°AM, 67°PM | Contractor: AMS | Subcontr./Supplier: BCI, AAA
Equipment Working: D6N Dozer, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS/BCI:
Continued disposing of excess materials in the construction yard and stockpiling materials to remain. Completed removing washed out material from the paved ditch. Placed rip rap on the south side of the east pump control panel to mitigate erosion of the panel's gravel pad. Cleaned all cap vents/ protective rings aross Ash Pond D. Began dressing the rip rap wall along the paved gutter and removing excess lathe stakes from Ash Pond D.

AAA:
Completed installing all the engraved nameplates for the new electrical devices, drilled holes in the bottom of the west and east pump control panel junction boxes for drainage, and completed wiring and mounting the Omega DPF75 totalizers. Note: a ¼ Watt, 2000 ohm resistor will have to be added to the totalizers to read flow properly.

Pumps:
All four pumps were turned back on, and the Diver data was downloaded. The temporary discharge line will remain in place.

Additional Comments: * +1.25 hrs for Manual
Total = 13.5 hrs

Weather: Sunny, 48°AM, 55°PM | Contractor: AMS | Subcontr./Supplier: BCI, MMS
Equipment Working: D6N Dozer, 580 Backhoe, Water Truck, CS-323C Roller
Site Activities / Observations / Contacts / Notes:

AMS/BCI:
Cleaned the paved gutter and paved ditch by utilizing the water truck. Watered the embankments of Ash Pond D to promote vegetative growth. Fixed ruts across the vegetative cover from seeding and mulching. Completed dressing rip rap wall along the paved gutter. Gravel surfacing on the east side of Ash Pond D, the north/south access road on the west side of Ash Pond D, and the access road from the pump house to Ash Pond D. Removed remaining lathe stakes from the vegetative cover. Flushed out clogged anchor trench outlet toe drains on the east side of Ash Pond D. Began compacting gravel surface with a smooth drum roller.

MMS:
Rick Kopac finished surveying the new and modified site features for the as-built construction drawings.

Additional Comments: * 11 hrs for Site Activities

Site Activities / Observations / Contacts / Notes:

AMS:
Completed fixing ruts on the vegetative cover. Grouted the floor of the collector box to promote drainage to the outlet pipe from the sump discharge pipes. Installed a confined space entry sign on the collector box. Dressed rip rap on the new site features. Removed all supplies from the storm shelter. Began demobilizing materials from the site.

Additional Comments: * 10.75 hrs for Site Activities
1.0 hr for Manual

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-10-09 OPEN:
[01] None
[02] Pumps to be turned on today [01-09] no WPA required.

2012-10-01 OPEN:
[01] AMS removed LOTO at Collector Box for DS temporary discharge [ref. new Item No. 15.1 below].
[02] AAA monitoring operation of pumps for start-up.
[03] No future WPA's projected.

03 EMPLOYEE DRUG TESTING

2012-10-09 OPEN:
[01] None projected.

2012-10-01 OPEN:
[01] None projected.
[02] DLM had 4x workers tested today [10-01], and results negative.

04 AMS SAFETY

2012-10-09 [01] J. Tasich on site - observations and commentary:
[01] No safety issues.
[02] General awareness.
[03] Focus on not being complacent during close-out process.
[04] General discussion for Charah cell phone and electronic use policy.
[02] Continuing daily effort to silence fire pump system alarm at the plant until AER personnel reset the system due to WPA.

2012-10-01 [01] J. Tasich on site - observations and commentary:
- [01] No safety issues.
- [02] Clay hauling truck operations going well.
- [03] Observed good communications between laborers [spotters] and dozer operators.
- [04] Performed site specific training for 4x workers for DLM.
- [05] Tentative next site visit schedule -10-15 possibly for close out.
- [06] Site drying up. DLM operations brought 2x tractors on site.

[02] Continuing effort to silence the fire pump system alarm at the plant periodically until AER personnel reset the system due to WPA.

05 HOUSEKEEPING

2012-10-09 OPEN: No issues.
[01] Continuing picking up trash and clean-up for demobilization.
[02] Clean-up of streets in progress.
[03] R. Porter reports - appears transmission subcontractor using APD Closure temporary toilets.

2012-10-01 OPEN: No issues.
[01] R. Porter to schedule moving excess fence material.
[02] During cleanup at de-mobilizing, AMS will wash streets one-time when leaving site.
[03] R. Porter reports - appears transmission subcontractor concrete truck washed out at entrance to plant. AMS has washed out at close proximity to the Ash Pond D and placed the concrete in a dumpster to haul off site.

06 PLANT ACCESS - CBT BADGE

2012-10-09 OPEN: No issues.
[01] General discussion on site security.
- [01] Guard stationed on site on 24/7 now.

2012-10-01 OPEN: No issues.
[01] General discussion on site security.
- [01] Guard stationed on site on 5D x 8HRS continues.
- [02] When on site Saturday R. Porter indicated no guard was present.
- [03] M. Wagstaff to investigate the situation, and forward MM to B. Simmons [AER] in progress.

08 OSHA LOG - WORK HOURS

2012-10-09 OPEN - total all hours [including subcontractors]
No incidents or accidents.
10,113.00 RT
2,015.50 OT
12,128.50 TOTAL

2012-10-01 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to start of today 10-01 due to meeting change].
No incidents or accidents.
9,900.00 RT
1,964.00 OT
11,864.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE [Alpha by Company]

2012-10-09 AMS laid off 1x laborer project close-out.

2012-10-09 Geotechnology [work hours not included in OSHA Log above] Exact count in daily reports, make note if on site.

02 WORK HOURS AND OVERTIME

2012-10-09 OPEN: No issues.
[01] Standard hours - 7:00 AM CT to 3:30 PM CT. Overtime reduced unless required as of 10-08.

2012-10-01 OPEN: No issues. No change.
[01] Standard hours - 7:00 AM CT to 5:30 PM CT. Continue early start some subcontractors starting 06:00 AM CT [at borrow site] to get started. Trucks to begin later. Safety awareness will be diligent regarding the time period.
[02] AMS and FWI work this Saturday 09-29 to install DS temporary discharge line. Work completed.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-10-09 OPEN: No issues.
[01] AMS to pull [small office] trailer next week.
[02] Power to trailers to be disconnected.
[03] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.

2012-10-01 OPEN: No issues.
[01] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
[02] DLM equipment on site - "4N1", hydro seeder, tractor, and straw blower.

07 PREVIOUS

01 SUBCONTRACTS

2012-10-09 OPEN - No issues.

2012-10-01 OPEN - No issues.

02 SUBMITTALS

20120-10-09 Submittal log update issued.
[01] GEO - Marked up original of AMS record drawings dated 2012-10-08 [blue ink] to M. Wagstaff only. P. Zinsious request scan copy.
[02] Insert to Item No. 73 for AAA OM submittal. Should have 10-13.
[03] M. Wagstaff to send Baro software info back to P. Zinsious.
[04] Flow totalizer submittal AMS 036-02 logged in OM manual.
[05] M. Wagstaff to send tag information as sent to L. Chambers by AAA back to P. Zinsious.

20120-10-01 No Submittal log update issued.
[01] Item No. 21 - M. Wagstaff indicated review or geo roll inventory. In progress.
[02] M. Wagstaff meeting 09-25 with A. Ridgely [Lamac] to discuss record drawings. CLOSE
[03] R. Porter gathering information from subcontractors on record drawings. FWI delivered "red lines" 09-28.
[04] AMS subcontractors' to have close-out information to AMS by 09-28 deadline. No tax information received, AMS to close.

08 MATERIAL

01 GENERAL

2012-10-09 OPEN - listing for materials that have potential to impact schedule.
[01] GEO requested the sign-off for contractor acceptance of line for clay placement. R. Porter to sign for AMS and scan.
[02] AMS to receive 1x roll IDOT 8oz geotextile on site 10-10 to finish the roadway.
[03] A. Saindon indicated one more CQA certification due, for the final survey, should have 10-10.
[04] FLT work complete [as clay hauling done].

2012-10-01 OPEN - listing for materials that have potential to impact schedule.
[01] R. Porter reports FLT has 14x trucks hauling today 10-01 making good progress. Clay hauling projected completion for 10-02.

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-10-09 OPEN - Discussion during Progress Meeting:
[01] J. Cravens reports post for field tile location to be better delineated.
[02] All work finished on Wampler property.

2012-10-01 OPEN - No report.

10 QUALITY CONTROL

2012-10-09 No issues.
[01] M. Wagstaff to forward copies of files AMS indicated could not find internally. In progress.
[02] P. Zinsious to investigate closing SWP3.
[03] Patriot billing that STC is to combine to one large billing in progress to less than $ 4K.
[04] P. Zinsious to look into 28D break information.

2012-10-01 No issues.
[01] Patriot billing that STC is to combine to one large billing in progress.
[02] M. Wagstaff to forward copies of files AMS indicated could not find internally. In progress.

11 SCHEDULE REVIEW

2012-10-09 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain days - 10-03
[02] Major changes commentary:
[01] AID A4300 LP change to LEC-Ridgely
[02] Project date of Substantial Completion 10-09.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-10-09	Draft Pay Application No. 7 [HUT-APD-Pay-App-7-R0] to M. Wagstaff and J. Cravens for review [after meeting].
2012-10-01	No issues. AMS to develop draft next pay-app.

12.1 EXTRA WORK ORDERS

GENERAL

2012-10-09	No issues.
2012-10-01	No issues.

15 EWO-15 FENCE ALIGNMENT

2012-10-09	OPEN - AMS to provide back-up information. In progress.
2012-10-01	OPEN - AMS to provide back-up information. In progress.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-10-09	OPEN - AMS submitted. AER review. Additional review for existing to plan to revised grade.
2012-10-01	OPEN - Lamac to survey area, and provide information for delta between plan and new elevations for fill.

21 EWO-21 FIELD TILE LOCATION - LENGTH [was EWO-14]

2012-10-09	CLOSE - non-issue.
2012-10-01	OPEN - AMS to provide back-up information. In progress.

22 EWO-22 MECHANICAL CHANGES

2012-10-09	OPEN - AMS to provide back-up information. In progress.
2012-10-01	OPEN - AMS to provide back-up information. In progress.

23 EWO-23 CONCRETE CHANGES

2012-10-09	OPEN - AMS submitted. AER review.
2012-10-01	OPEN - AMS to provide back-up information. In progress.

26 EWO-26 DS LID MODIFICATIONS FOR PIPING

2012-10-09	OPEN - AMS submitted. AER review.
2012-10-01	OPEN - AMS to provide written EWO request for processing.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-10-09	[01] CLOSE - L. Chambers approved spreadsheet of electrical panel description tags per M. Wagstaff.
2012-10-01	[01] J. King indicated after meeting with L. Chambers on site, will forward spreadsheet of electrical panel description tags.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-10-09	No report.
2012-10-01	No report.

15 PRODUCTION

03 CLAY

2012-10-09	CLOSE - work completed.
2012-10-01	OPEN - no issues [01] Placement as of today [10-01] is no change from 147,510 CY last week due to weather delay - rain days. [02] FLT hauling today [10-01].

15.1 CLOSE OUT

01 START UP AND COMMISSION

2012-10-09	General discussion: [01] Cable to Baro Mini Diver 502 at DS-3 not operational. CLOSE - wire installed. [02] Check drawings for electrical box lock requirements. [03] DS temporary discharge line to remain in place, Ameren to remove at their discretion. [04] Distributed AMS - "Hutsonville Power Station - Ash Pond D Closure - Status Report - Turnover" dated 2012-10-05 [05] Omega totalizer to be reviewed today [10-09] by AER for operation. [06] Reviewed both AER and AMS punch list documents, Punch List to be completed 10-16: [01] AER - "Hutsonville Ash Pond D Closure: Project Completion - Punch List Field Items - October 2012" [02] AMS - "Hutsonville Ash Pond D Closure - Punch List - AMS Remaining Work" HUT-APD-PNCH-LST-2012-10-08-R0 [07] Record drawings for DS vents West control Panel had DS-1, and DS-2. East Control Panel has DS-3, DS-4 and CO-3. CO-4 independent. [08] Operation of the pumps per AER.
2012-10-01	NEW [01] Cable to Baro Mini Diver 502 at DS-3 not operational. FWI to obtain replacement before Friday meeting. [02] DS temporary discharge line in place. Line secure. Pumps operational, no issues. [03] Operation of the pumps per plan 24/7 until Friday 10-05, which determination will be made by Ameren if necessary to continue.

16 DOCUMENTS TRANSMITTED

2012-10-09	[01] AER - Last Planner schedule - Current date 10-03 - Data date 10-02.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: October 19, 2012

SUBJECT: Weekly Summary Report for October 15, 2012 to October 17, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally clear and sunny, with periods of cloudy skies. Temperature (°F) lows ranged from 49 to 53°F, and temperature highs ranged from 65 to 76°F. Weather delays did not occur this week.

Construction Activities

The following activities occurred this week: tasks on the punch list, electrical work, and demobilization. AAA Electric, Inc. completed final wiring of the groundwater collection system and installed locks for the electrical components of the system. Ash Management Services, LLC completed the tasks on the punch list. Equipment, materials, and job trailers were demobilized. Refer to the daily reports for detailed information.

The leaning power poles for groundwater collection system have not been repaired. This will be repaired at a later date and Ash Management Services, LLC will be present for the repairs.

Equipment and Personnel On-Site

CAT CS-323C Smooth Drum Roller
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Brad Bolenbaugh, and Blake Bunting
Belt Construction, Inc. (BCI) – Jared Belt
AAA Electric, Inc. (AAA) – Joseph King
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, October 16, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

The following materials were delivered this week: Western Excelsior Double-Net Straw Blanket.

Testing/Sampling

Testing and sampling did not occur this week.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

Electronic Filing: Received, Clerk's Office 09/28/2020

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 10/15/12

TIME: Arrive: 6:00 AM | Depart: 8:45 PM | Travel: 1.0 hr | Total: * 15.25 hrs (0.5 hr for lunch)
Weather: Sunny, 53°AM, 65°PM | Contractor: AMS | Subcontr./Supplier: BCI, AAA
Equipment Working: 580 Backhoe, CS323C Roller
Site Activities / Observations / Contacts / Notes:

AMS:
Completed dressing rip rap on the new site features. Re-rolled all new gravel surfaced plant access roads. Continued demobilizing materials in the construction yard. Demobilized job trailer. Continued housekeeping across site. Delivery - Round Top staples and Western Excelsior Double Net Straw Blanket.

BCI:
Demobilized D6N Dozer and materials.

AAA:
Evaluated the solution to the leaning power poles.

Additional Comments: * 12.25 hrs for Site Activities
3.00 hrs for Manual

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-10-16 OPEN:
[01] None projected.
[02] Pumps to be shut off when GEO leaves [de-mobs] from site. Shut off at rack and MPZ and pump control panel.

2012-10-09 OPEN:
[01] None
[02] Pumps to be turned on today ~~[01-09]~~ 10-09 no WPA required. [corrected 10-16]

03 EMPLOYEE DRUG TESTING

2012-10-16 OPEN:
[01] None projected.

2012-10-09 OPEN:
[01] None projected.

04 AMS SAFETY

2012-10-16 OPEN:
[01] No safety issues.

2012-10-09 [01] J. Tasich on site - observations and commentary:
[01] No safety issues.
[02] General awareness.
[03] Focus on not being complacent during close-out process.
[04] General discussion for Charah cell phone and electronic use policy.
[02] Continuing daily effort to silence fire pump system alarm at the plant until AER personnel reset the system due to WPA.

05 HOUSEKEEPING

2012-10-16 OPEN: No issues.
[01] R. Porter notified Miller Construction of AMS de-mob.

2012-10-09 OPEN: No issues.
[01] Continuing picking up trash and clean-up for demobilization.
[02] Clean-up of streets in progress.
[03] R. Porter reports - appears transmission subcontractor using APD Closure temporary toilets.

06 PLANT ACCESS - CBT BADGE

2012-10-16 OPEN: No issues.
[01] None projected.

2012-10-09 OPEN: No issues.
[01] General discussion on site security.
[01] Guard stationed on site on 24/7 now.

08 OSHA LOG - WORK HOURS

2012-10-16 OPEN - total all hours [including subcontractors]
No incidents or accidents.
10,257.00 RT
2,113.00 OT
12,370.00 TOTAL

2012-10-09 OPEN - total all hours [including subcontractors]
No incidents or accidents.
10,113.00 RT
2,015.50 OT
12,128.50 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE [Alpha by Company]

2012-10-16 Project completion.
2012-10-09 AMS laid off 1x laborer project close-out.

02 WORK HOURS AND OVERTIME

2012-10-16	OPEN: No issues. [01] Standard hours - 7:00 AM CT to 3:30 PM CT to 8HR days. Work completion.
2012-10-09	OPEN: No issues. [01] Standard hours - 7:00 AM CT to 3:30 PM CT. Overtime reduced unless required as of 10-08.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-10-16	OPEN: No issues. [01] AMS trailer gone 10-16. [02] Power to trailers to be disconnected by leaving conduit with wire inside. Coil up spare wire. [03] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.
2012-10-09	OPEN: No issues. [01] AMS to pull [small office] trailer next week. [02] Power to trailers to be disconnected. [03] M. Wagstaff to check if electric utility bill for trailers transferred to Miller Construction. In progress.

07 PREVIOUS

01 SUBCONTRACTS

2012-10-16	OPEN - No issues.
2012-10-09	OPEN - No issues.

02 SUBMITTALS

20120-10-16	Submittal log update issued. [01] GEO - Marked up original of AMS record drawings to be reviewed by AMS. [02] Insert to Item No. 73 for AAA OM submittal. AMS received 10-15, will send hardcopy and PDF scan. [03] M. Wagstaff to send Baro software info back to P. Zinsious. AMS to check receipt. [04] Flow totalizer submittal AMS 036-02 logged in OM manual. In progress. [05] M. Wagstaff to send tag information as sent to L. Chambers by AAA back to P. Zinsious. In progress. [06] Conversation power pole burial depth 5 FT verse 5.5 FT.
20120-10-09	Submittal log update issued. [01] GEO - Marked up original of AMS record drawings dated 2012-10-08 [blue ink] to M. Wagstaff only. P. Zinsious request scan copy. [02] Insert to Item No. 73 for AAA OM submittal. Should have 10-13. [03] M. Wagstaff to send Baro software info back to P. Zinsious. [04] Flow totalizer submittal AMS 036-02 logged in OM manual. [05] M. Wagstaff to send tag information as sent to L. Chambers by AAA back to P. Zinsious.

08 MATERIAL

01 GENERAL

2012-10-16	OPEN - listing for materials that have potential to impact schedule. [01] GEO requested the sign-off for contractor acceptance of line for clay placement. R. Porter to sign for AMS and scan. Done - CLOSE. [02] AMS to receive 1x roll IDOT 8oz geotextile on site 10-10 to finish the roadway. Done - CLOSE. [03] A. Saindon indicated one more CQA certification due, for the final survey, should have 10-10. In progress, J. Cravens sent preliminary to M. Wagstaff who subsequently reviewed with A. Saindon - no issues. [04] R. Porter patching material for seed/straw is Western Excelsior double straw matt.
2012-10-09	OPEN - listing for materials that have potential to impact schedule. [01] GEO requested the sign-off for contractor acceptance of line for clay placement. R. Porter to sign for AMS and scan. [02] AMS to receive 1x roll IDOT 8oz geotextile on site 10-10 to finish the roadway. [03] A. Saindon indicated one more CQA certification due, for the final survey, should have 10-10. [04] FLT work complete [as clay hauling done].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-10-16	Done - CLOSE.
2012-10-09	OPEN - Discussion during Progress Meeting: [01] J. Cravens reports post for field tile location to be better delineated. [02] All work finished on Wampler property.

10 QUALITY CONTROL

2012-10-16	No issues. [01] M. Wagstaff to forward copies of files AMS indicated could not find internally. Done - CLOSE. [02] P. Zinsious to investigate closing SWP3. Discussed possible issue with run-off into the paved ditch. [03] Patriot billing that STC is to combine to one large billing in progress to less than $ 4K. In progress. [04] P. Zinsious to look into 28D break information. In progress.
2012-10-09	No issues. [01] M. Wagstaff to forward copies of files AMS indicated could not find internally. In progress. [02] P. Zinsious to investigate closing SWP3. [03] Patriot billing that STC is to combine to one large billing in progress to less than $ 4K. [04] P. Zinsious to look into 28D break information.

11 SCHEDULE REVIEW

2012-10-16 OPEN - no report [work is substantially complete].

2012-10-09 OPEN - Review of last planner by M. Wagstaff. [AID = Activity Identification, S = successor, P = Predecessor, D = Duration and day]
[01] Rain days - 10-03
[02] Major changes commentary:
[01] AID A4300 LP change to LEC-Ridgely
[02] Project date of Substantial Completion 10-09.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-10-16 No issues. AER to review holding $ 20K for vegetative growth, erosion control, and power pole issue.

2012-10-09 Draft Pay Application No. 7 [HUT-APD-Pay-App-7-R0] to M. Wagstaff and J. Cravens for review [after meeting].

12.1 EXTRA WORK ORDERS

GENERAL

2012-10-16 No issues.

2012-10-09 No issues.

15 EWO-15 FENCE ALIGNMENT

2012-10-16 OPEN - AMS provided revised backup information, AER to review.

2012-10-09 OPEN - AMS to provide back-up information. In progress.

17 EWO-17 PAVED DITCH ALIGNMENT

2012-10-16 OPEN - AMS provided revised backup information, AER to review.

2012-10-09 OPEN - AMS submitted. AER review. Additional review for existing to plan to revised grade.

22 EWO-22 MECHANICAL CHANGES

2012-10-16 OPEN - AMS provided revised backup information, AER to review.

2012-10-09 OPEN - AMS to provide back-up information. In progress.

23 EWO-23 CONCRETE CHANGES

2012-10-16 OPEN - AMS provided revised backup information, M. Wagstaff indicated acceptable.

2012-10-09 OPEN - AMS submitted. AER review.

26 EWO-26 DS LID MODIFICATIONS FOR PIPING

2012-10-16 OPEN - AMS provided revised backup information, M. Wagstaff indicated acceptable.

2012-10-09 OPEN - AMS submitted. AER review.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-10-16 No report.

2012-10-09 [01] CLOSE - L. Chambers approved spreadsheet of electrical panel description tags per M. Wagstaff.

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-10-16 No report.

2012-10-09 No report.

15.1 CLOSE OUT

01 START UP AND COMMISSION

2012-10-16	General discussion: [01] Brief conversation on leaving the blue hose for the DS temporary discharge. The hose will have water in line due to changes in grade [elevation]. The hose can be cut and clamps can be purchased at Rural King. [02] Check drawings for electrical box lock requirements. AAA to bring out locks. [03] DS temporary discharge line to remain in place, Ameren to remove at their discretion. No change. [04] Reviewed GEO "Hutsonville Ash Pond D Closure - Project Completion - Punch List Field Items - October 2012" [05] Omega totalizer to be reviewed today [10-09] by AER for operation. In progress, AAA to install resistor. [07] Vents are remote [flood plain] for CO1, CO1A, CO1B, and CO2, with remaining 2x 3/8 IN holes in the cap. [08] Discussion AAA scheduled for today, no show for Items No. 02 and 05 above.
2012-10-09	General discussion: [01] Cable to Baro Mini Diver 502 at DS-3 not operational. CLOSE - wire installed. [02] Check drawings for electrical box lock requirements. [03] DS temporary discharge line to remain in place, Ameren to remove at their discretion. [04] Distributed AMS - "Hutsonville Power Station - Ash Pond D Closure - Status Report - Turnover" dated 2012-10-05 [05] Omega totalizer to be reviewed today [10-09] by AER for operation. [06] Reviewed both AER and AMS punch list documents, Punch List to be completed 10-16: [01] AER - "Hutsonville Ash Pond D Closure: Project Completion - Punch List Field Items - October 2012" [02] AMS - "Hutsonville Ash Pond D Closure - Punch List - AMS Remaining Work" HUT-APD-PNCH-LST-2012-10-08-R0 [07] Record drawings for DS vents West control Panel had DS-1, and DS-2. East Control Panel has DS-3, DS-4 and CO-3. CO-4 independent. [08] Operation of the pumps per AER.

16 DOCUMENTS TRANSMITTED

2012-10-16	[01] GEO - "Hutsonville Ash Pond D Closure - Project Completion - Punch List Field Items - October 2012"
2012-10-09	[01] AER - Last Planner schedule - Current date 10-03 - Data date 10-02. CQA CERTIFICATION
(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work . CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Prequalification testing of 40 mil high density polyethylene (HDPE) geomembrane for Ash Pond D closure. Information reviewed for compliance with the CQA plan includes the manufacturer liner product data, manufacturer liner quality control data, and third party testing. GSE manufactured the geomembrane and TRI/Environmental Inc. performed third party testing on samples from twelve rolls in accordance with the CQA plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

GSE Lining Technology Inc. manufactured the geomembrane and TRI/Environmental Inc. performed third party testing on twelve samples.

3. NEW SEQUENTIAL WORK TO BEGIN:

Deliver 40 mil HDPE geomembrane to the job site for installation per the manufacturers handling instructions.

CQA CERTIFICATION
(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work . CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

---

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Field moisture density testing using a nuclear gauge (compaction testing) was performed on the upper one foot of the subgrade for Ash Pond D. In addition, an as-built survey was performed on the subgrade for Ash Pond D closure. The compaction testing and survey were performed in compliance with the CQA plan and project specifications.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

The compaction testing was performed by Geotechnology, Inc. and the as-built survey of the subgrade was performed by Massmann Surveying.

3. NEW SEQUENTIAL WORK TO BEGIN:

Chesapeake Containment Systems, Inc. (CCS) will approve the subgrade and install 40 mil high density polyethylene (HDPE) geomembrane on- site (product previously approved). The CCS certificate of acceptance for the subgrade will be provided daily to the CQA officer on-site.

CQA CERTIFICATION
(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work . CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Chesapeake Containment Systems, Inc. (CCS) installed 40 mil high density polyethylene (HDPE) geomembrane on- site (product previously approved) on the north and north east portion of Ash Pond D. Field and laboratory testing for Panels P1 through P17 (not including the southernmost or easternmost seams for this area) were performed in compliance with the CQA plan and project specifications.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

Geotechnology, Inc. performed field quality control of the geomembrane and TRI Environmental provided third party testing of geomembrane destruct samples.

3. NEW SEQUENTIAL WORK TO BEGIN:

The three foot vegetative layer will be placed over the installed 40 mil HDPE geomembrane in the location of P1 through P17 on the north west portion of Ash Pond D by Ash Management Services (AMS).

CQA CERTIFICATION
(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work . CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Ash Management Services, LLC (AMS) installed an anchor trench around the perimeter of Ash Pond D. The anchor trench in section view is approximately two feet deep and two feet wide. The anchor trench was observed to be free of unsuitable material. Chesapeake Containment Systems, Inc. (CCS) installed 40 mil high density polyethylene (HDPE) geomembrane on-site (product previously approved) on the approved Ash Pond D subgrade. The edges of the geomembrane were laid into the anchor trench. Geomembrane installation into the anchor trenches were performed in compliance with the CQA plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

Geotechnology, Inc. performed field quality control of the geomembrane and observed the geomembrane installation in the anchor trench.

3. NEW SEQUENTIAL WORK TO BEGIN:

AMS will install four-inch HDPE perforated drainage pipe with filter sock (product previously approved) in the anchor trench, where applicable, and will backfill the anchor trench with drainage course.

CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Prequalification testing of the groundwater collection trench course aggregate for Ash Pond D closure was provided by Ash Management Services (AMS). Particle size distribution analysis (AASHTO T27 and T11) for one sample of the course aggregate from the Van Tarble & Sons Quarries was provided. The provided aggregate sample meets the IDOT CA-7 classification as specified in the CQA plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

Van Tarble & Sons Quarries provided the aggregate sample and particle size distribution analysis.

3. NEW SEQUENTIAL WORK TO BEGIN:

The submitted course aggregate may be used for the groundwater collection trench.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Prequalification testing of the roadway gravel surfacing aggregate for Ash Pond D closure was provided by Ash Management Services (AMS). Particle size distribution analysis (AASHTO T27 and T11) for one sample of the course aggregate from the Van Tarble & Sons Quarries was provided. The provided aggregate sample meets the IDOT CA-6 classification as specified in the CQA plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

Van Tarble & Sons Quarries provided the aggregate sample and particle size distribution analysis.

3. NEW SEQUENTIAL WORK TO BEGIN:

The submitted course aggregate is IDOT CA-6 and may be used for the roadway gravel resurfacing.

---

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

The material warranty, geomembrane installation warranty, and the installation record drawing was provided in the Closeout Submittals (revision August 9, 2012) by Chesapeake Containment Systems, Inc. for the installation of the 40 mil high density polyethylene (HDPE) geomembrane at the Ash Pond D closure. Information provided in the revised submittal was reviewed for compliance with the CQA plan. The documents in the revised submittal are in accordance with the CQA plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

Representatives of Chesapeake Containment Systems, Inc. performed the 40 mil HDPE geomembrane installation and provided the revised submittals for review.

3. NEW SEQUENTIAL WORK TO BEGIN:

Sequential work was not impacted by this approval.

(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work . CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Chemical analysis and soil index testing were performed on five representative samples of the installed vegetative layer at Ash Pond D. The chemical analysis and soil index testing results are in compliance with the revised CQA plan and project specifications.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

The soil index testing was performed by Geotechnology, Inc. and the chemical analysis of the vegetative layer was performed by Teklab, Inc.

3. NEW SEQUENTIAL WORK TO BEGIN:

The vegetative layer and surface water structures will be graded and the final survey will be performed.

CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

---

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

The vegetative layer was surveyed on a 100 foot grid by Massmann Surveying and Engineering Company for Ash Pond D. The vegetative layer thickness was calculated from survey data to be a minimum of three feet thick in accordance with the CQA Plan.

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

The survey was performed by Massmann Surveying and Engineering Company. Geotechnology, Inc. verified the vegetative layer thickness calculations.

3. NEW SEQUENTIAL WORK TO BEGIN:

The ground cover activities (including mulching, seeding, etc) will be performed.

Standard Proctor Summary for Ash Samples
Ameren Energy Resources
Hutsonville Ash Pond D Closure

Presented in Table 1 are the results of the standard Proctor tests and Atterberg limits performed on the collected ash samples. The ash varies in composition. Ash compaction will require a minimum of 90 percent of the maximum dry density as determined by the standard Proctor test in laboratory (ASTM D 698). For non-plastic ash material, use the average ash maximum dry density from samples Ash 1, 3 and 4, and the average optimum moisture content (presented in Table 2). For ash material that has some plasticity or has characteristics similar to that of "silt", use the value presented in Table 3. The target value to be used in the field will depend on the type of ash that is encountered at the location of testing and will be based upon the judgment of the CQA Technician. In areas that embankment material was used, use the average embankment material value. The contractor will be notified immediately of compaction tests not in conformance.

Table 1
Summary of Laboratory Tests for Collected Ash Samples

Sample	Maximum Dry Density (pcf)	Optimum Moisture Content (%)	Liquid Limit (%)	Plastic Limit (%)	Plasticity Index (%)
Ash 1	74.3	38.3	25	24	1
Ash 2	92.4	19.4	37	34	3
Ash 3	75.5	31.0	NP	NP	NP
Ash 4	76.3	33.5	NP	NP	NP
S Embankment	115.2	10.1	-	-	-
E Embankment	116.4	10.9	-	-	-

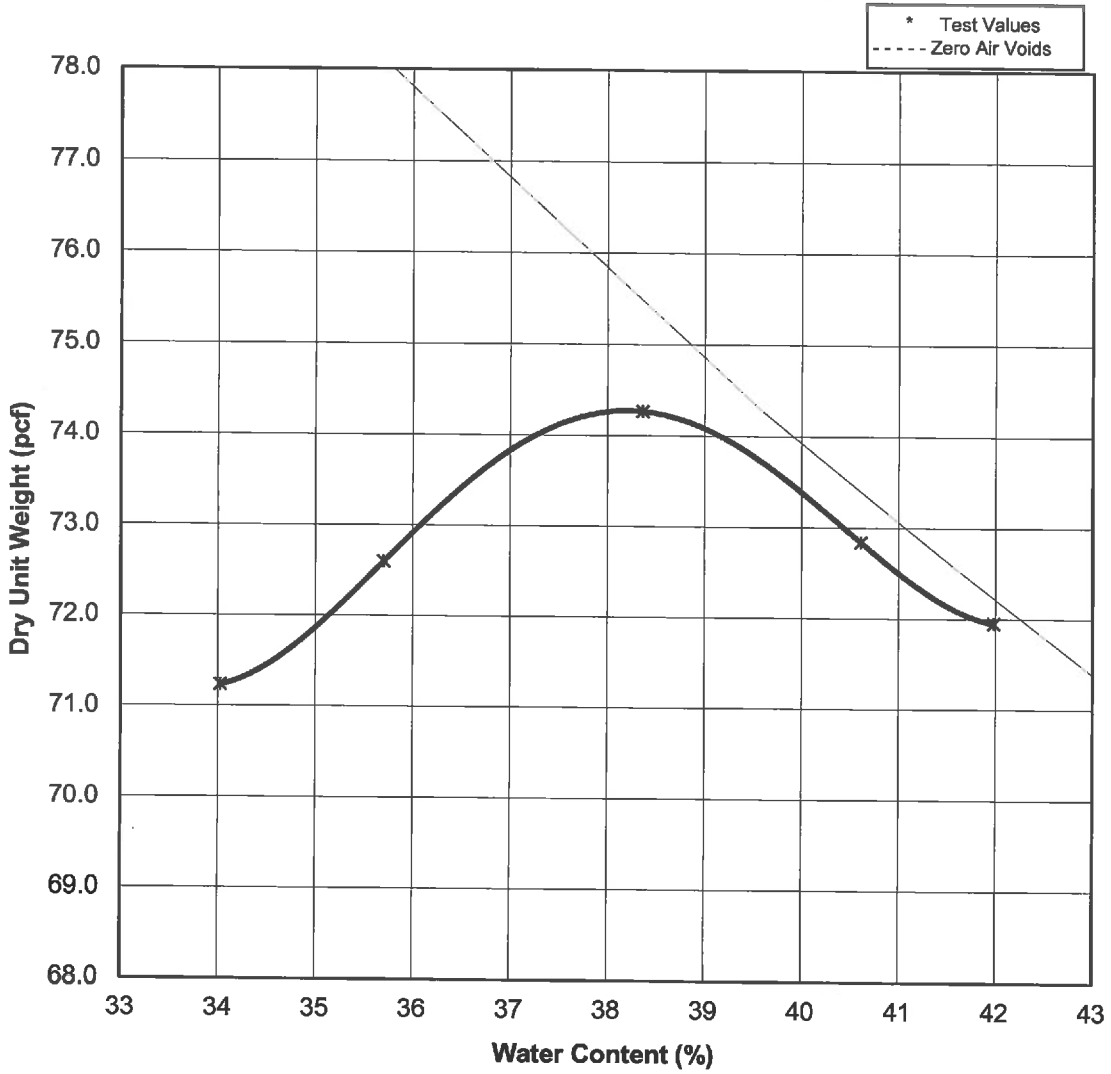
Table 2
Standard Proctor Summary for Non-Plastic Ash

Reference Proctor	Average Maximum Dry Density (pcf)	Average Optimum Moisture Content (%)
Average of Ash 1, 3 and 4 (NP)	75.4	34.4
90% Max Dry Density	67.9	NA

Table 3
Standard Proctor Summary for Plastic Ash

Reference Proctor	Average Maximum Dry Density (pcf)	Average Optimum Moisture Content (%)
Ash 2 (LP)	92.4	19.4
90% Max Dry Density	83.2	NA

Table 4
Standard Proctor Summary for Embankment Material



Reference Proctor	Average Maximum Dry Density (pcf)	Average Optimum Moisture Content (%)
Average Embankment	115.8	10.5
90% Max Dry Density	104.2	NA

RE: J019896.01

WorkOrder: 12070427

Dear Anna Saindon:

TEKLAB, INC received 2 samples on 7/11/2012 4:33:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MB	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

- # - Unknown hydrocarbon
- B - Analyte detected in associated Method Blank
- E - Value above quantitation range
- H - Holding times exceeded
- M - Manual Integration used to determine area response
- ND - Not Detected at the Reporting Limit
- R - RPD outside accepted recovery limits
- S - Spike Recovery outside recovery limits
- X - Value exceeds Maximum Contaminant Level

Subject: Bottle order

Good morning Shelly,

I would like the following bottle order delivered by next Monday afternoon if practicable. If you can give me an estimate on how much it costs for 6 of these I'll get a PO worked up for you too.

Thanks!

Hutsonville Ash Pond D Closure
J019896.01
6 sets in two coolers

RCRA Metals (as TCLP):
SW 846 1311 - Arsenic, Barium, Cadmium, Chromium, Lead, Selenium, Silver
SW 846 7478 - Mercury

CCW Ions (as Totals):
SW 846 6010B - Boron
SW 846 M4500-CLE - Chloride
SW 846 9036- Sulfate

BETX Constituents:
SW 846 8260B - Benzene, Ethylbenzene, Toluene, Xylene

pH - SW 846 9045C Every 25,000 cubic yards per borrow source

Flash Point (Pensky-Martens Closed Cup) - SW 846 1010

RE: J019896.01

WorkOrder: 12070752

Dear Anna Saindon:

TEKLAB, INC received 2 samples on 7/11/2012 4:33:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MB	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero and is determined from analysis of a sample in a given matrix type containing the analyte.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
E - Value above quantitation range	H - Holding times exceeded
J - Analyte detected below quantitation limits	M - Manual Integration used to determine area response
ND - Not Detected at the Reporting Limit	R - RPD outside accepted recovery limits
S - Spike Recovery outside recovery limits	X - Value exceeds Maximum Contaminant Level

June 26, 2012

J019896.01.7310L

Mr. Andrew Antonik
Ameren Energy Generating Company
PO Box 66892
St. Louis, Missouri 63166

Re: Hutsonville Ash Pond Closure

Dear Mr. Antonik:

Submitted within this report are the test results from a sample of aggregate from the above referenced project. The sample was received in our laboratory on June 21, 2012 and tested in general accordance with the test method below.

Test To Determine	Method of Test
Standard Test Method for Sieve Analysis of Fine and Course Aggregates	ASTM C 136

We trust this is the information you require. Please contact the undersigned if you have any questions regarding this report.

Respectfully submitted,

GEOTECHNOLOGY, INC.
Construction Materials Testing Group

Material: Crushed Limestone (IDOT CA 7)

SIEVE ANALYSIS OF FINE AND COARSE AGGREGATES– ASTM C 136

Sieve Size	Total Passing, %	Specification Requirements
1 ½ in.	100.0	100
1 in.	100.0	95±5
¾ in.	94.9	
½ in.	44.3	45±15
⅜ in.	14.0	
No.4	2.4	5±5
No.8	1.9	
No.16	1.8	
No.30	1.7	
No. 50	1.6	
No.100	1.5	
No.200	1.5	

The above sieve analysis satisfies project specifications as Illinois Department of Transportation CA 7 Aggregate (Art. 1004.01).

COVER SHEET

Project: Hutsonville Ash Pond

General Contractor: **Charah, Inc**
12601 Plantside Drive
Louisville, KY 40299

Spec Section: 02800 HDPE Geomembrane Liner
Submittal Ref: 40 Mil LLDPE Geomembrane Liner- Product Data and Manufacturer Qualifications.

NOTES: This submittal is for the initial review of the proposed GSE HDPE Geomembrane Liner. Manufacture of materials will not commence until after a Manufacturer and Product are approved.

Inclusions:

1) Product Data Sheet
2) Manufacturers Quality Assurance
3) Installation Project List
4) Manufacturing Capabilites
5) Manufacturer's Material Warranty

REVIEWER NOTES

GSE HD Textured Geomembrane

GSE HD Textured is a co-extruded textured high density polyethylene (HDPE) geomembrane available on one or both sides. It is manufactured from the highest quality resin specifically formulated for flexible geomembranes. This product is used in applications that require increased frictional resistance, excellent chemical resistance and endurance properties.

Product Specifications

These product specifications meet or exceed GRI GM13.

Electronic Filing: Received, Clerk's Office 09/28/2020

I. QUALITY MANIFEST

GSE Lining Technology, Inc. is committed to providing the highest quality products and services to our customers. This requires a firm, total quality commitment from all individuals within our organization that we will only supply materials that meet or exceed the requirements and specifications of GSE and our customers.

GSE's commitment to quality starts with the highest quality raw materials. The quality of incoming raw materials is controlled at the supplier level with a complete vendor evaluation program in place. This means purchasing only from suppliers who are committed to statistical process control thereby providing a consistent, high level of quality assurance of their products.

II. MANUFACTURING QUALITY ASSURANCE

GSE Lining Technology, Inc. has an on-site Manufacturing Quality Assurance Laboratory at each manufacturing plant. Having a fully equipped, well staffed, dedicated laboratory at each of the manufacturing facilities allows GSE to maintain a high level of quality and up-to-the-minute results on finished products. Each facility follows the same guidelines for evaluating the quality of GSE products and is capable of adapting to market-driven requirements.

A. Objective

The objective of the GSE Quality Assurance program is to define implementation of basic manufacturing quality assurance (MQA) procedures necessary to ensure consistent production of quality products supplied to the geosynthetic market. Note that at this time, these procedures are limited to polyethylene geomembranes.

B. Scope

In order to achieve GSE's stated purpose, a rigorous set of minimum standards and an effective test program to assure compliance has been established. These procedures and requirements are frequently reviewed and adjusted to assure compliance with current market demands and/or predetermined project specifications. These procedures assure that raw materials and process parameters are controlled to provide products complying with GSE's pre-defined minimum characteristics.

III. MANUFACTURING QUALITY ASSURANCE ORGANIZATION

This organization consists of the Manufacturing Quality Assurance Laboratories as well as the manufacturing personnel. The combination of expertise and experience from these groups provides GSE with the proper tools to maintain the highest level of quality and customer service in the industry.

The Quality Assurance Department at GSE is charged by the President to assure that only products meeting both GSE's and the customer's requirements are released for shipment. The Quality Assurance personnel are directly responsible for monitoring testing and providing feedback to the manufacturing department to ensure the production of the specified product quality. Each member of the Quality Assurance team must participate in detailed training that includes factory exposure.

IV. STAFF AND SCHEDULING

The Quality Assurance Laboratories are staffed whenever manufacturing is occurring; this is usually 24 hours per day, 365 days per year. This minimizes the amount of potentially inferior product produced before a manufacturing problem is identified.

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Please check with GSE for current, standard minimum quality assurance procedures and specifications.

GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

V. PRODUCT IDENTIFICATION AND DOCUMENTATION

A. Roll Numbering

Each roll of geomembrane is assigned a unique roll number. The Quality Assurance Laboratory maintains records documenting the raw materials and resulting product quality information.

B. Approval Procedure

Results for each tested roll of product are checked against both GSE and customer specifications for compliance. The Quality Assurance Laboratory approves those materials that meet both of these requirements for shipment.

C. Non-Conformance

Material that does not meet GSE minimum standards is given a roll number but is rejected and not placed into inventory. The material is identified as scrap and will not be utilized.

Material that meets GSE minimum standards but does not meet a stricter customer specification is not allocated to that customer but is placed into inventory as GSE standard material.

D. Documentation

Individual Quality Assurance Certificates are generated and supplied for each roll of geomembrane product to include all relevant quality assurance information about the material(s).

VI. RECORDS RETENTION

GSE maintains reports and/or samples for products produced and sold. Records and/or samples are maintained according to GSE's standard retention policy according to the item.

MATERIAL	ITEM	YEARS
Raw materials	Resin Supplier Test Reports and Certifications	≥2
	GSE Resin Test Reports	≥2
	Resin Sample Retain (Archive)	≥2
Geomembrane	Raw Test Data (in computer database)	≥5
	Quality Control Certificates (in computer database)	≥5
	Sample Retain (approximately one square foot)	≥3

VII. TESTING CAPABILITIES

GSE maintains high capacity, state-of-the-art laboratory equipment suitable for performing the procedures listed in Appendices A-D. GSE's Houston laboratories are accredited by the GAI-LAP program. GSE's Houston laboratories, as part of GSE's Product Division, also hold ISO certification. The appropriate certificates are maintained for review upon request by authorized parties.

A. Routine Testing

Through careful investigation, GSE has developed a strict and thorough Quality Assurance program that exceeds the vast majority of customer specifications including GRI GM13, "Test Properties, Testing

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Please check with GSE for current, standard minimum quality assurance procedures and specifications.

GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

Frequency and Recommended Warranty for High Density Polyethylene (HDPE) Smooth and Textured Geomembranes" and GRI GM17 "Test Properties, Testing Frequency and Recommended Warranty for Linear Low Density Polyethylene (LLDPE) Smooth and Textured Geomembranes". The testing program covers raw materials (see Appendix A) and finished goods (see Appendix B) and is adhered to at all GSE laboratories. The laboratory equipment used by GSE represents the most modern equipment available and meets or exceeds the requirements of all the test standards used.

B. Other Testing Capabilities

In addition to routine testing, GSE laboratories are equipped to perform a wide variety of other tests as required for unusual requests or product development. Further, although the GSE Quality Assurance Laboratories are fully equipped and able to perform most routinely specified tests in the industry, there are some tests that are more economically performed by a dedicated testing facility. GSE believes requirements for such testing should be carefully considered and defined in terms of specific design requirements if they are found to be necessary.

VIII. MATERIAL QUALITY ASSURANCE

GSE Lining Technology, Inc. has established strict specifications for all raw materials and finished products. Test results must fall within the acceptable limits of GSE and customer specifications.

A. Raw Material

GSE primarily uses two types of raw materials, "natural resin" and "masterbatch" in the manufacture of geomembrane products. Natural resin is the base material that is used to make a geomembrane. It contains stabilizers to prevent degradation from occurring during and after extrusion. "Masterbatch" is the term referring to the concentrated carbon black material used with the natural resin to produce the finished product. The natural resin and masterbatch are blended at the appropriate ratio at the manufacturing stage. The masterbatch can contain other additives depending upon the geomembrane product to be produced. GSE verifies the properties of each lot of raw material prior to their utilization.

When natural resin is received, samples are taken and subjected to the tests outlined in Appendix A. All test data are entered into the computer database and checked for accuracy, consistency and compliance with GSE specifications. The material is not accepted unless all standard test requirements are met and the GSE test values meet the requirements set forth in the raw material specifications.

Copies of the supplier's certificate of analysis (COA) for each lot of resin utilized in the production of the materials supplied to a specific project are supplied as standard documentation. In addition, the GSE test results for each lot of resin are provided in a separate report upon request.

Virgin resin is normally received in rail car lots. If resin is received by other transport and/or in other quantities, an equivalent suitable sampling procedure is provided (i.e. not less than one sample per shipment or one sample for each 50,000 lb., 23,000 kg)

B. Geomembrane Products

GSE has implemented a strict and thorough Quality Assurance program for all geomembrane products. The geomembrane product line can be broken into two primary categories: smooth and textured products. Tables containing GSE minimum properties and test frequencies for all GSE geomembrane products includ-

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Please check with GSE for current, standard minimum quality assurance procedures and specifications.

Electronic Filing: Received, Clerk's Office 09/28/2020

ing specialty products such as GSE White (light-reflective geomembrane) and GSE Conductive (field spark-testable geomembrane) are in Appendix B.

1. *On-Line Manufacturing Quality Assurance*

The Quality Assurance program for finished product begins during the manufacturing process. Each manufacturing line is equipped with state-of-the-art monitoring devices that provide feedback on the physical quality of the materials being produced. Each geomembrane production line is equipped with both a thickness gage and spark-testing device.

a) Thickness Measurement

As geomembrane is being produced, thickness readings are taken continuously over the length and width of the roll. These data are used to establish the minimum, maximum and average thickness values for each roll and are verified by thickness testing upon sampling of the finished goods.

b) Spark Testing

An electrical spark detector is in place on each manufacturing sheet line. This apparatus provides immediate notification of holes in the finished product. If a hole is detected, an alarm is triggered and the hole is identified. Rolls containing holes are rejected from standard product inventory.

2. *Smooth Geomembrane Materials*

Smooth geomembrane products available include high density and linear low density polyethylene materials with 2-3% carbon black. Specialty materials include White, electrically conductive, green surfaced, and smooth edge textured geomembranes.

a) Sampling

Geomembrane rolls are sampled for QA testing according to the frequencies in Appendix B. An approximate one-foot by roll width sample is cut for Quality Assurance testing. Specimens for testing are taken from five predetermined positions across the width of the roll. Specimens are cut for testing the machine direction and transverse direction. A "retain" or archive sample approximately 12 x 12 inch (30 x 30 cm) is taken from the corresponding transverse direction position from the laboratory sample. The retain is labeled and kept for future reference (see Section VI).

b) Evaluation of Results

All data are entered into a computer database for calculation and comparison to GSE and customer-specific specifications. If materials do not meet GSE minimums and/or the customer specifications, the manufacturing personnel are immediately notified in order for the appropriate adjustments to be made. Only products meeting GSE minimums and customer specifications will be approved for shipment.

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Please check with GSE for current, standard minimum quality assurance procedures and specifications.

GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

c) Reporting

Every roll of material has a quality assurance roll certificate or Roll Test Data Report (RTDR). This report identifies the standards on which the GSE approval is based along with the actual test results demonstrated by the material.

3. Coextruded Textured Geomembranes

Textured geomembrane is produced utilizing a round die with coextrusion technology. The texture is produced in a process in which one or two of the outer layers of a three-layer extrusion are blended with nitrogen gas. Nitrogen bubbles form in the molten resin and escape upon exiting the die, creating a rough, textured surface. Regular, White, green surfaced, and conductive geomembranes are available with coextruded texturing.

a) Sampling

Geomembrane rolls are sampled for QA testing according to the frequencies in Appendix B. An approximate one-foot by roll width sample is cut for Quality Assurance testing. Specimens for testing are taken from five predetermined positions across the width of the roll. Specimens for testing the machine and transverse direction tensile are cut from each of the five positions. A "retain" or archive sample approximately 12 x 12 inch (30 x 30 cm) is taken from the corresponding transverse direction position from the laboratory sample. The retain is labeled and kept for future reference (see Section VI).

Evaluation of results and reporting practices are the same as for smooth geomembranes.

C. Third Party Conformance Sampling

Some specifications require independent Quality Assurance and/or conformance testing. GSE can provide assistance with the sampling of products by arranging for the conformance samples to be taken during production. By taking samples during production rather than on site, the customer can be assured that the samples are clean and available for conformance testing in a timely manner.

GSE encourages customers to audit GSE manufacturing and manufacturing quality assurance operations and/or to collect samples and conduct independent conformance testing prior to shipment of materials.

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Please check with GSE for current, standard minimum quality assurance procedures and specifications.

Roll Width[3], ft (m)			22.5 (6.9)	22.5 (6.9)	22.5 (6.9)	22.5 (6.9)
Roll Area, ft^2 (m^2)			19,575 (1,819)	12,600 (1,171)	9,675 (899)	7,650 (711)

NOTES:

- +Note 1: Dispersion only applies to near spherical agglomerates. 9 of 10 views shall be Category 1 or 2. No more than 1 view from Category 3.
- GSE Conductive is available in rolls weighing about 3,900 lb (1,769 kg).
- [1]Due to surface effects caused by the conductive layer, these tensile properties are minimum average values.
- [2]GSE Conductive may have an overall carbon black percentage above 3.0% due to the high carbon black loadings in the conductive layer.
- All GSE geomembranes have dimensional stability of ±2% when tested with ASTM D 1204 and LTB of <-77° C when tested with ASTM D 746.
- [3]Roll lengths and widths have a tolerance of ± 1%.
- *Modified.

Carbon Black Content[2] [3], %	ASTM D 1603*/4218	20,000 lb	2.0	2.0	2.0
Carbon Black Dispersion	ASTM D 5596	45,000 lb	+Note 1	+Note 1	+Note 1
Asperity Height	GRI GM 12	second roll	+Note 2	+Note 2	+Note 2
REFERENCE PROPERTY	**TEST METHOD**	**FREQUENCY**	**NOMINAL VALUE**		
Oxidative Induction Time[3], min	ASTM D 3895, 200° C; O_2, 1 atm	200,000 lb	>100	>100	>100
Roll Length[4] (approximate), ft (m)			700 (213)	520 (158)	400 (122)
Roll Width[4], ft (m)			22.5 (6.9)	22.5 (6.9)	22.5 (6.9)
Roll Area, ft² (m²)			15,750 (1,463)	11,700 (1,087)	9,000 (836)

NOTES:

- +Note 1: Dispersion only applies to near spherical agglomerates. 9 of 10 views shall be Category 1 or 2. No more than 1 view from Category 3.
- +Note 2: 10 mil average. 8 of 10 readings ≥7 mils. Lowest individual ≥ 5 mils.
- GSE UltraFlex White Textured is available in rolls weighing about 3,900 lb (1,769 kg).
- [1]The combination of stress concentrations due to coextrusion texture geometry and the small specimen size results in large variation of test results. Therefore, these tensile properties are average roll values.
- [2]GSE UltraFlex White Textured may have an overall ash content greater than 3.0% due to the white layer.
- All GSE geomembranes have dimensional stability of ±2% when tested with ASTM D 1204 and LTB of <-77° C when tested with ASTM D 746.
- [3]The values apply to the black layer only.
- [4]Roll lengths and widths have a tolerance of ± 1%.
- *Modified.

Electronic Filing: Received, Clerk's Office 09/28/2020

MINIMUM WELD PROPERTIES FOR STANDARD HDPE GEOMEMBRANES[1]

Property	Test Method	30 (0.75)	40 (1.0)	60 (1.5)	80 (2.0)	100 (2.5)	120 (3.0)
Peel Strength (fusion), ppi (kN/m)	ASTM D 6392	49 (8.6)	65 (11.4)	98 (17.2)	130 (22.8)	162 (28.4)	196 (34.3)
Peel Strength (extrusion), ppi (kN/m)	ASTM D 6392	39 (6.8)	52 (9.1)	78 (13.7)	104 (18.2)	130 (22.8)	157 (27.5)
Shear Strength (fusion & ext), ppi (kN/m)	ASTM D 6392	61 (10.7)	81 (14.2)	121 (21.2)	162 (28.4)	203 (35.5)	242 (42.4)

[1] These values apply to both coextruded and flat cast produced geomembranes and white-surfaced and conductive products.

MINIMUM WELD PROPERTIES FOR STANDARD LLDPE GEOMEMBRANES[1]

Property	Test Method	30 (0.75)	40 (1.0)	60 (1.5)	80 (2.0)	100 (2.5)
Peel Strength (extrusion) ppi (kN/m)	ASTM D 6392	36 (6.3)	48 (8.4)	72 (12.6)	96 (16.8)	120 (21.0)
Peel Strength (fusion), ppi (kN/m)	ASTM D 6392	38 (6.7)	50 (8.8)	75 (13.1)	100 (17.5)	125 (21.9)
Shear Strength (fusion & ext), ppi (kN/m)	ASTM D 6392	45 (7.9)	60 (10.5)	90 (15.8)	120 (21.0)	150 (26.3)

[1] These values apply to both coextruded and flat cast produced geomembranes to include white-surfaced products.

GSE Installation Project List - Landfills & Caps

Project Name:	Waste Management/Cedar Ridge Landfill Cell 5		
Site Location:	Lewisburg, TN	**GSE No.:**	**519388**
Application:	Sanitary LF		
Owner:	**Waste Management**		
Owner Contact:	John Workman	770 805-3363	
General Contractor:	WMI Cedar Ridge Landfill		
GC Contact:	Keith May	931 359-9032	
Engineering Firm:	Triad Environmental Consultants, Ltd.		
Engineer Contact:	Nancy Sullivan	615 889-6888	
Products:	GSE HD Textured 60 mil	526,500	sq. ft.
	GSE FabriNet DS HF 6 oz	524,900	sq. ft.
	Bentofix NWL	524,116	sq. ft.
Amount:	$845,013		
Date completed:	7/9/2006		

Project Name:	Waste Management/Pheasant RUN RDF Phase 3A		
Site Location:	Briston, WI	**GSE No.:**	**519471**
Application:	Sanitary LF		
Owner:	**Waste Management**		
Owner Contact:	Luci Altieri	630 218-1821	
General Contractor:	WMI Pheasant Run RDF		
GC Contact:	Casey Furlong	262 857-7956	
Engineering Firm:	CQM, Inc.		
Engineer Contact:	Pete Rammer	920 465-3911	
Products:	GSE HD Textured 60 mil	795,600	sq. ft.
	GSE FabriNet DS 6 oz	163,415	sq. ft.
	GSE Geotextile 12 oz	91,000	sq. ft.
Amount:	$621,746		
Date completed:	10/15/2006		

Project Name:	Waste Management/Phoenix Resources Lnadfill 2006 Cap		
Site Location:	Wellsboro, PA	**GSE No.:**	**518568**
Application:	Sanitary LF Cap		
Owner:	**Waste Management**		
Owner Contact:	Tony Eith	215 269-2143	
General Contractor:	WMI Phoenix Resources Landfill		
GC Contact:	RonWilson	570 353-2406	
Engineering Firm:	Blazosky Associates, Inc.		
Engineer Contact:	Karen Finlan	814 238-2060	
Products:	GSE HD Textured 40 mil	740,250	sq. ft.
	GSE FabriNet HS DS 6 oz	720,900	sq. ft.
	GSE Geotextile 6 oz	2,000	sq. ft.
Amount:	$685,287		
Date completed:	8/11/2006

NORTH AMERICAN MANUFACTURING CAPABILITIES

GSE Lining Technology, Inc. with its corporate headquarters located in Houston, Texas, has manufacturing facilities located throughout North America. The manufacturing facilities are located in Houston, Texas; Kingstree, South Carolina; Spearfish, South Dakota; and Barrie, Ontario, Canada. They are each equipped to provide the highest quality product with industry leading technology and maximum output to service customers' needs:

Houston, Texas: Multiple HDPE/LLDPE geomembrane sheet production lines that offer a wide range of products of smooth, textures, colors, thicknesses, and widths. In addition, HDPE geonet/geocomposite production lines are available for many net or composite variations needed for drainage.

Kingstree, South Carolina: HDPE geonet/geocomposite production line that offers the full range of drainage products. In addition, a nonwoven fabric production line that can produce 3 oz. to 32 oz. geotextile material for both environmental and civil markets.

Spearfish, South Dakota: Geosynthetic clay lining (GCL) production lines capable of a full range of geomembrane supported GCLs and/or fabric encased GCLs.

Barrie, Ontario, Canada: GCL production line capable of a full range of fabric encased GCLs.

At these facilities, GSE offers manufacturing capacity of over 1 billion square feet of saleable product per year.

~500,000,000 sf of Geomembrane sheet of all types
~180,000,000 sf of Geonet/ Geocomposite of all types
~450,000,000 sf of Nonwoven fabrics
~200,000,000 sf of GCLs of all types

All facilities operate the workforce on shifts. Each shift is fully staffed with Supervisor, Unit Operators, Quality Control and Maintenance personnel under the supervision of the Production Manager.

PRO RATA LIMITED MATERIAL WARRANTY
FOR GSE LINING TECHNOLOGY, INC.
Geomembrane Products
(U.S.A.)

Date:		Warranty No.:	
Purchaser Name:		Project No.:	
Address:		Effective Date:	
City, State:		Project Name:	
Product Type/Description:	GSE Geomembrane	Project Address:	

GSE Lining Technology, Inc. ("GSE") warrants each GSE product described above to be free from material manufacturing defects (as described by the contract's material specifications) and to be able to withstand normal weathering for a period of **five (5) years** from the date of sale. This limited warranty does not include damages or defects in the GSE product resulting from acts of God, casualty or catastrophe, including but not limited to: earthquakes, floods, piercing hail, tornadoes or force majeure. The term "normal use" does not include, among other things, the exposure of GSE's product to harmful chemicals, abuse by machinery, equipment or people; improper site preparation or placement of cover materials; excessive pressures or stresses from any source. This warranty is intended for commercial use only and is not in effect for the consumer as defined in the Magnuson-Moss Warranty Act.

Should defects or premature loss of use within the scope of this warranty occur, GSE will, at its option, repair or replace the GSE product on a pro rata basis at the current price in such manner as to charge the Purchaser only for that portion of the warranted life which has elapsed since the purchase of the product. GSE shall have the right to inspect and determine the cause of the alleged defect in the product and to take appropriate steps to repair or replace the product if a defect exists that is covered under this warranty.

Any claim for any alleged breach of this warranty must be made in writing, by certified mail or courier, to GSE Lining Technology Co., 19103 Gundle Road, Houston, TX 77073, with the words "Warranty Claim" clearly marked on the face of the envelope, within ten (10) days of Purchaser becoming aware of the alleged defect. Should the required notice not be given, the defect and all warranties are waived by the Purchaser, and Purchaser shall not have rights under this warranty. GSE shall not be obligated to perform any inspection or obligated to perform any repair or replacement under this warranty until the area is made available free from all obstructions, water, dirt, sludge, residuals and liquids of any kind. If after inspection it is determined that there is no claim under this warranty, Purchaser shall reimburse GSE for its costs associated with the site inspection.

In the event the exclusive remedy provided herein fails in its essential purpose, and in that event only, the Purchaser shall be entitled to a return of the purchase price for so much of the product as GSE determines to have violated the warranty provided herein. GSE shall not be liable for direct, indirect, special, consequential or incidental damages resulting from a breach of this warranty including, but not limited to: damages for loss of production, lost profits, personal injury or property damage. GSE shall not be obligated to reimburse Purchaser for any repairs, replacement, modifications or alterations made by Purchaser to GSE's product, unless GSE specifically authorized, in writing, said repairs, replacements, modifications or alterations in advance. GSE liability under this warranty shall in no event exceed the replacement cost of the product sold to the Purchaser for the particular installation in which it failed.

GSE neither assumes nor authorizes any person other than an officer of GSE to assume for it any other or additional liability in connection with the GSE product made on the basis of the Limited Warranty. **GSE MAKES NO WARRANTY OF ANY KIND OTHER THAN THAT GIVEN HEREIN AND HEREBY DISCLAIMS ALL WARRANTIES, INCLUDING BOTH EXPRESS OR IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, AND BY ACCEPTING DELIVERY OF THE PRODUCT, PURCHASER WAIVES ALL OTHER POSSIBLE WARRANTIES. GSE's WARRANTY BECOMES AN OBLIGATION OF GSE TO PERFORM UNDER THE WARRANTY ONLY UPON RECEIPT OF FINAL PAYMENT.**

This warranty is extended to the Purchaser and is non-transferable and non-assignable, i.e. there are no third-party beneficiaries to this warranty.

Dear Mr. Pershall:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Ameren Hutsonsville Power Station Ash Pond D Closure**
TRI Job Reference Number:	E2366-36-03
Material(s) Tested:	12, GSE 40 mil Textured HDPE Geomembrane(s)
Test(s) Requested:	Thickness (ASTM D 5994) Tensile (ASTM D 6693) Puncture Strength (ASTM D 4833) Tear Resistance (ASTM D 1004)

If you have any questions or require any additional information, please call us at 1-800-880-8378.

Sincerely,

MPatel

Shipping Order – Packing List – Original – Not Negotiable

GSE Lining Technology, LLC. Houston, TX

Number BL-0061991

Received at **Houston, TX** from GSE Lining Technology, LLC the property described below, in apparent good order, except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated below, which said Carrier agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any said property, over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service performed hereunder shall be subject to the rates and contract agreed to in writing by GSE Lining Technology, LLC and Carrier. GSE Lining Technology, LLC s obligation to pay freight charges for the shipment is conditioned on (1) the existence of a separate written contract with the carrier transporting the freight and (2) the carrier s name appearing on this Bill of Lading, and other carriers must look solely to a party other than GSE Lining Technology, LLC for payment.

Ship to: CCS/Ameren Hutsonville Ash Pond D
15142 East 1900th Avenue
Randy Porter 502-554-5230
Hutsonville, IL 62433

Roll Certifications Included

Ship date: Apr/28/2012
Branch plant: 1500
Sales order: SO-066934

Shipping instructions: 24 hr and 1 hr PRECALL REQUIRED. all trucks subject to inspection. No weapons, drugs, alchohol, pets, riders, etc. PPE equipment – Hardhat, safety glasses, High Vis Vest, sleeved shirt, long pants, steel toe boots.

Shipping Order – Packing List – Original – Not Negotiable

GSE Lining Technology, LLC. Houston, TX

Number BL-0061960

Received at **Houston, TX** from GSE Lining Technology, LLC the property described below, in apparent good order, except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated below, which said Carrier agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any said property, over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service performed hereunder shall be subject to the rates and contract agreed to in writing by GSE Lining Technology, LLC and Carrier. GSE Lining Technology, LLC s obligation to pay freight charges for the shipment is conditioned on (1) the existence of a separate written contract with the carrier transporting the freight and (2) the carrier s name appearing on this Bill of Lading, and other carriers must look solely to a party other than GSE Lining Technology, LLC for payment.

SHOP DRAWING / SUBMITTAL REVIEW

Shop drawing/submittal review is for design conformity and general conformance with the design concept of the project as given in the contract documents. Subcontractor is responsible for full compliance with contract documents, confirming and correcting all quantities, correlating dimensions at project work site for tolerance, clearance, fabrication process, and techniques of construction. Subcontractor is responsible for coordination of his work with that of all other trades, and performance of the work in a safe and satisfactory manner.

Subject: Questions regarding the Hutsonville geomembrane CQA report

Good morning,

We noticed a few inconsistencies about the Ameren Hutsonville CQA report. Please review the following:

Record Layout Drawing:

- DS-7 should be labeled DS-7A and 7B- Drawing revised to show A and B
- DS-19 should be labeled DS-19A and 19B- Drawing revised to show A and B
- DS-31 is not labeled- Revised to show DS location
- DS-45 is shown on P64/P65 but forms show it at P70/P71- Drawing and repair log showed correct location for DS-45, revised destruct log to actual location
- DS-71 is labeled P90/P95 in the table and P95/P96 on layout- Drawing and repair log showed correct location for DS-71, revised destruct log to show actual location
- DS-84 should be labeled DS-84A1- Revised on drawing

Seaming and Non Destructive Test Log have some entries that do not have all the air pressure test data but says pass. For example, on 6/4/12 Seam 30/64. If these are fails that were repaired with a cap repair, please note as a fail/repair. Changed dashes on seaming log to actual repair number that capped seams.

Thank you for your assistance,

Anna Saindon, PE, RG
Senior Engineer

Project: Hutsonville Ash Pond Closure- Ameren

Attn: Paul Zinsious

Chesapeake Containment Systems is pleased to present the attached record documentation for the Ameren Hutsonville Ash Pond Closure project.

We certify that the enclosed information is a compilation of our documentation for the project and that the installation was performed in accordance with the project specifications.

We further certify that all subgrade surface (surface quality only) was accepted by Chesapeake Containment Systems, Inc. prior to installation of Geosynthetics.

Included in this package are record copies of our field Quality Control, Installation records, and tensiometer certifications

If you should require any additional information please do not hesitate to contact our office.

Thank you

GSE ENVIRONMENTAL™

PRO RATA LIMITED MATERIAL WARRANTY
FOR GSE LINING TECHNOLOGY, LLC
(U.S.A.)

Date:	7/30/12	Warranty No.:	**66934**
Purchaser Name:	Ameren Energy Resources	Project No.:	66934
Address:	1500 Eastport Plaza Drive	Effective Date:	7/1/12
City, State:	Collinsville, IL 62234	Project Name:	Ameren Hutsonville Ash Pond
Product Type/Description:	**GSE Geomembrane Products**	Project Address:	Hutsonville, IL

GSE Lining Technology, LLC ("GSE") warrants each GSE product described above to be free from material manufacturing defects (as described by the contract's material specifications) and to be able to withstand normal weathering for a period of **five (5) years** from the date of sale. This limited warranty does not include damages or defects in the GSE product resulting from acts of God, casualty or catastrophe, including but not limited to: earthquakes, floods, piercing hail, tornadoes or force majeure. The term "normal use" does not include, among other things, the exposure of GSE's product to harmful chemicals, abuse by machinery, equipment or people; improper site preparation or placement of cover materials; excessive pressures or stresses from any source. This warranty is intended for commercial use only and is not in effect for the consumer as defined in the Magnuson-Moss Warranty Act.

Should defects or premature loss of use within the scope of this warranty occur, GSE will, at its option, repair or replace the GSE product on a pro rata basis at the current price in such manner as to charge the Purchaser only for that portion of the warranted life which has elapsed since the purchase of the product. GSE shall have the right to inspect and determine the cause of the alleged defect in the product and to take appropriate steps to repair or replace the product if a defect exists that is covered under this warranty.

Any claim for any alleged breach of this warranty must be made in writing, by certified mail or courier, to GSE Lining Technology, LLC, 19103 Gundle Road, Houston, TX 77073, with the words "Warranty Claim" clearly marked on the face of the envelope, within ten (10) days of Purchaser becoming aware of the alleged defect. Should the required notice not be given, the defect and all warranties are waived by the Purchaser, and Purchaser shall not have rights under this warranty. GSE shall not be obligated to perform any inspection or obligated to perform any repair or replacement under this warranty until the area is made available free from all obstructions, water, dirt, sludge, residuals and liquids of any kind. If after inspection it is determined that there is no claim under this warranty, Purchaser shall reimburse GSE for its costs associated with the site inspection.

In the event the exclusive remedy provided herein fails in its essential purpose, and in that event only, the Purchaser shall be entitled to a return of the purchase price for so much of the product as GSE determines to have violated the warranty provided herein. GSE shall not be liable for direct, indirect, special, consequential or incidental damages resulting from a breach of this warranty including, but not limited to: damages for loss of production, lost profits, personal injury or property damage. GSE shall not be obligated to reimburse Purchaser for any repairs, replacement, modifications or alterations made by Purchaser to GSE's product, unless GSE specifically authorized, in writing, said repairs, replacements, modifications or alterations in advance. GSE liability under this warranty shall in no event exceed the replacement cost of the product sold to the Purchaser for the particular installation in which it failed.

GSE neither assumes nor authorizes any person other than an officer of GSE to assume for it any other or additional liability in connection with the GSE product made on the basis of the Limited Warranty. **GSE MAKES NO WARRANTY OF ANY KIND OTHER THAN THAT GIVEN HEREIN AND HEREBY DISCLAIMS ALL WARRANTIES, INCLUDING BOTH EXPRESS OR IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES, AND BY ACCEPTING DELIVERY OF THE PRODUCT, PURCHASER WAIVES ALL OTHER POSSIBLE WARRANTIES. GSE's WARRANTY BECOMES AN OBLIGATION OF GSE TO PERFORM UNDER THE WARRANTY ONLY UPON RECEIPT OF FINAL PAYMENT.**

This warranty is extended to the Purchaser and is non-transferable and non-assignable, i.e. there are no third-party beneficiaries to this warranty.

CHESAPEAKE CONTAINMENT SYSTEMS, INC.
LIMITED WORKMANSHIP WARRANTY

Warranty No. I12-011-01
Project No: I12-011
Effective Date: 7-1-12

PURCHASER: Ameren Corporation Hutsonville Plant

ADDRESS: 15142 East 1900th Ave

CITY, STATE, ZIP: Crawford County, IL 62433

PROJECT NAME: Hutsonville Ash Pond Closure

DESCRIPTION: 40 mil textured HDPE

ADDRESS: 15142 East 1900th Ave

CITY, STATE, ZIP: Crawford County, IL 62433

CHESAPEAKE CONTAINMENT SYSTEMS, INC. (CCSI) warrants each CCSI LINER SYSTEM installed by CCSI to be free from defects in workmanship. This "Workmanship Warranty" shall be in effect from the date the installation of the Liner System is completed and accepted by the Owner for a period of ONE YEAR of normal use in approved applications.

This Limited Warranty does not include damages or defects in the CCSI Liner System resulting from acts of God, casualty or catastrophe including but not limited to: earthquakes, floods, piercing hail, tornadoes or force majeure. The term "normal use" as used herein does not include, among other things, the exposure of CCSI Liner System to harmful chemicals, abuse of CCSI Liner System by machinery, equipment or people, excessive pressures or stress from any source, subsurface or overburdened soil conditions, and total or differential soil settlements and the effect these may have on the liner system.

Should defects or premature loss of use within the scope of the above Limited Workmanship Warranty occur, CCSI will, at its option, repair or replace the CCSI Liner System on a pro-rata basis at the then current price in such manner as to charge the Purchaser/User only for that portion of the warranted life which has elapsed since purchase of the material. CCSI will have the right to inspect and determine the cause of any alleged defect in the CCSI Liner System and to take appropriate steps to repair or replace the CCSI Liner System if a defect exists and is within the term of this Limited Warranty.

Any claim for any alleged breach of this warranty must be made in writing, by certified mail, to the President of CCSI within thirty (30) days after the alleged defect is noticed. Should the required notice not be given, the defect and all warranties shall be deemed to have been waived by the Purchaser, and Purchaser shall have no right of recovery against CCSI. In the event repairs and/or replacements are to be effected, said repairs and/or replacements shall not become due until the area subject to repair and/or replacement of CCSI Liner System is available to CCSI in a clean, dry, unencumbered condition. This includes, but is not limited to, the area made available for repair and/or replacement of CCSI Liner System to be free from all water, dirt, sludge, residuals, and liquids of any kind.

CCSI's liability under this warranty shall in no event exceed the replacement cost of the material and installation sold to the Purchaser for the particular installation in which it failed. Further, under no circumstances shall CCSI be liable for any special, direct, indirect, or consequential damages arising from loss of production or any other losses including losses due to personal injuries and product liability owing to the failure of the material or installation and no allowance will be made for repairs, replacements, or alterations made by the Purchaser without the express written consent of CCSI.

CCSI neither assumes nor authorizes any person other than an officer of CCSI to assume for it any other or additional liability in connection with the CCSI Liner System made the basis of the Limited Warranty. The Limited Workmanship Warranty on the CCSI Liner System herein is given in lieu of all other possible material warranties, either express or implied, and by accepting delivery of the material Purchaser waives all other possible workmanship warranties, except those specifically given.

The parties expressly agree that the sale hereunder is for commercial or industrial use only.

CCSI's Limited Warranty is extended to the purchaser/owner and is non transferable and non-assignable.

Purchaser acknowledges by acceptance that the Limited Workmanship Warranty given herein is accepted in preference to any and all other possible workmanship warranties.

CCSI MAKES NO WARRANTY OF ANY KIND OTHER THAN THAT GIVEN ABOVE AND HEREBY DISCLAIMS ALL WARRANTIES, BOTH EXPRESS OR IMPLIED, OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE

WARRANTY BECOMES EFFECTIVE UPON RECEIPT OF FINAL PAYMENT

I hereby state I have read and understood the above and foregoing Limited Warranty and agree to such by signing hereunder.

CALIBRATION CERTIFICATE

Chesapeake Containment Systems

Tensiometer Model: Pro-Tester T-0100

Device Calibrated: S-Type load cell
Range: 0 - 750 lbs. Tension
Model No: M2405-750#
Serial No: 233476

Calibration Apparatus:
Pro-Cal unit, model TC-0100/A

A/D Module Model No: T-029
A/D Module Serial No: 3908233476
Channel No: N/A

Dead Weight:

W1	2
W2	152
W3	302

Reference Cell:

R1	2
R2	152
R3	302

Indicator reading with no load: 0

Offset: 2.338462 Scale: 4.348708

Applied Force lbs.	Cell Response:	Deviation Error:
2	2	0.00
52	52	0.00
102	102	0.00
152	152	0.00
202	202	0.00
252	252	0.00
302	302	0.00

Total Deviation Error (%): 0.00%

Temperature at time of calibration: 73 degrees F
Excitation Voltage: 5 V DC

This calibration conforms to the standards set by ASTM E4 and is traceable to NIST standards

Note: A/D Module and load cell above have been systems calibrated and are considered a matched pair. In general, calibrated A/D Modules and load cells are not interchangeable.

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Power Station - Ash Pond D Closure**
TRI Job Reference Number:	**8395**
Material(s) Tested:	(24) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.

Sincerely,

Jennifer T. Tenney

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Power Station - Ash Pond D Closure**
TRI Job Reference Number:	**8407**
Material(s) Tested:	(5) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.

Sincerely,

Jennifer T. Tenney

Jennifer Tenney

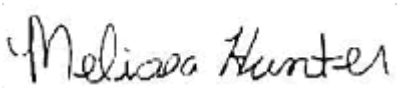
Dear Ms. Saindon,



Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Power Station - Ash Pond D Closure**
TRI Job Reference Number:	**8417**
Material(s) Tested:	(6) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.

Sincerely,

Melissa Hunter

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Power Station - Ash Pond D Closure**
TRI Job Reference Number:	**8486**
Material(s) Tested:	(7) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.

Sincerely,

Melissa Hunter

GEOTEX® BY PROPEX

Product Data
GEOTEX® 861

GEOTEX® 861 is a polypropylene, staple fiber, needlepunched nonwoven geotextile produced by Propex, and will meet the following Minimum Average Roll Values (MARV) when tested in accordance with the methods listed below. The fibers are needled to form a stable network that retains dimensional stability relative to each other. The geotextile is resistant to ultraviolet degradation and to biological and chemical environments normally found in soils.

GEOTEX 861 conforms to the property values listed below[1]. Propex performs internal Manufacturing Quality Control (MQC) tests that have been accredited by the Geosynthetic Accreditation Institute – Laboratory Accreditation Program (GAI-LAP). This product is NTPEP approved for AASHTO standards.

PROPERTY	TEST METHOD	MARV[2] ENGLISH	MARV[2] METRIC
ORIGIN OF MATERIALS			
% U.S. Manufactured Inputs		100%	100%
% U.S. Manufactured		100%	100%
PHYSICAL

Elongation	ASTM D-4632	50%	50%
CBR Puncture	ASTM D-6241	575 lbs	2559 N
Trapezoidal Tear	ASTM D-4533	95 lbs	423 N
ENDURANCE			
UV Resistance % Retained at 500 hrs	ASTM D-4355	70%	70%
HYDRAULIC			
Apparent Opening Size (AOS)[3]	ASTM D-4751	80 US Std. Sieve	0.180 mm
Permittivity	ASTM D-4491	1.5 sec^{-1}	1.5 sec^{-1}
Permeability	ASTM D-4491	0.38 cm/sec	0.38 cm/sec
Water Flow Rate	ASTM D-4491	110 gpm/ft^2	4482 l/min/m^2
ROLL SIZES		15 ft x 300 ft	4.57 m x 91.5 m

NOTES:
1. The property values listed above are effective 04/2011 and are subject to change without notice.
2. Values shown are in weaker principal direction. Minimum average roll values (MARV) are calculated as the typical minus two standard deviations. Statistically, it yields a 97.7% degree of confidence that any samples taken from quality assurance testing will exceed the value reported.
3. Maximum average roll value.

GEOTEX® NONWOVEN GEOTEXTILES

Made from the highest quality polypropylene fibers, our Geotex® nonwoven geotextiles are needlepunched to form a strong fabric that retains its dimensional stability, adding years to the life of any roadway, railroad, landfill or civil/environmental engineering project. Used in subsurface drainage, separation, stabilization, erosion control and cushioning applications, our geotextiles are resistant to ultraviolet (UV) degradation and to biological and chemical environments normally found in soils.

FEATURES & BENEFITS

- Mass per unit areas range from 3 to 17 oz/yd² (100 to 575 g/m²) to guarantee an available product for every application (heavier products may be available by special order)
- Superior chemical resistance in even the most aggressive environmental applications
- Staple fibers needlepunched together to form a sturdy fabric capable of withstanding construction installation stresses
- Contains additives for maximum UV resistance
- Produced at some of the largest, state-of-the-art production facilities to assure uniform product quality

Outperforms and is more cost effective than conventional methods, including:

- **Thicker aggregate layers**
- **Undercutting and removal**
- **Chemical stabilization**
- **Graded, granulated filters**

You can plan and implement road designs that will lower the cost and extend the life of your pavement—and our Roadways And Civil Engineering (R.A.C.E.) software can help. Download it today at geotextile.com.

Geotex® nonwoven geotextiles can be deployed directly on a soft, saturated subgrade.

Wrapping a subsurface drainage system with a Geotex® nonwoven geotextile will improve roadway life.

Robust Geotex® nonwovens stabilize subgrades and prevent the fouling of ballast beneath railway track.

Geotex® heavyweight nonwoven geotextiles allow the construction of landfill drainage layers without fear of liner damage.

KEY PROPERTIES OF GEOTEX® NONWOVEN GEOTEXTILES

- Mass Per Unit Area: Relevant in the design of geomembrane liner protection, this value often "qualifies" a nonwoven geotextile.
- Puncture Strength: Especially during construction, the geotextile must withstand pressures applied from surrounding aggregate.
- Apparent Opening Size: A measurement of the opening sizes of the geotextile, this property is used when selecting the correct filter.
- Permittivity: This value is a measure of the geotextile's ability to pass water. When multiplied by the thickness, you can determine the permeability of the geotextile.

INSTALLATION GUIDELINES

SEPARATION/STABILIZATION GEOTEXTILE FABRICS

INTRODUCTION

Propex's Geotex® family of geotextiles can enhance the performance of paved and unpaved roadways, parking lots, airports, loading docks, and storage areas through separation/stabilization of the roadway structure. The geotextiles provide three important functions: separation/stabilization, drainage, and reinforcement. The fabric serves as a permeable separation/stabilization layer, preventing the aggregate and subgrade soils from intermixing while allowing the passage of water. The geotextile also enhances the structural properties of the subgrade and the roadway aggregate to minimize the cost of the road structure.

The successful use of geotextiles in these applications requires proper installation. The four basic steps of proper installation include:

- Subgrade preparation
- Geotextile placement
- Aggregate placement
- Aggregate compaction

Geotex stabilization geotextiles can be used in most weather and temperature conditions.

Adequate planning and preparation for each installation step will speed construction and ensure good performance.

These guidelines provide recommendations for installation of geotextiles in separation/stabilization applications.

The guidelines are intended to assist the contractor responsible for installation of the specified geotextile.

They are to be considered general guidelines, appropriate for common construction conditions. Specific site conditions, design requirements, or other variables may require modification to these guidelines.

Subgrade Preparation

Initially, the site should be cleared of tree stumps, large stones, and other sharp objects that could puncture the fabric. This step should be performed regardless of subgrade strength.

Roadway subgrade preparation typically involves removal of all vegetation, roots, and topsoil. Localized soft or otherwise unsuitable subgrade areas may be required to be excavated and backfilled with select material. In some very soft soil applications, it is beneficial to leave vegetation, roots, and topsoil in place to limit subgrade soil disturbance and loss of strength.

Geotextile Placement

Two people can easily place Geotex® separation/stabilization geotextiles. The fabric should be rolled out onto the subgrade beginning at a point that allows easy access for construction equipment yet is consistent with the layout plan. On very soft subgrades (CBR<I) the fabric layout and aggregate placement should begin on firm soil on the site perimeter, to establish an "anchor point." From there the fabric can be rolled onto softer sections. The geotextile should not be dragged across the subgrade. The geotextile is usually laid in the direction of construction traffic; however, specific project dimensions may alter this layout. Geotextile panels should be overlapped both side-to-side and end-to-end, in the direction of aggregate placement. The recommended overlap ranges from 1.5 to 3 feet, depending on subgrade strength. Overlap recommendations are provided in Table 1.

Table 1. Recommended Geotextile Overlaps

Subgrade CBR Value	Subgrade R-Value (California)	Subgrade Shear Strength (lb/in²)	Field Estimation of CBR	Recommended Minimum Overlap
< 0.5	_____	≤ 2	_____	Sewn seam required
> 0.5 to 1	_____	> 2 to 4.5	A person can easily walk on the site	3 ft.
> 1 to 2	> 0 to 10	> 4.5 to 8.5	A low ground pressure bulldozer can access the site without significant rutting	2.5 ft.
> 2	> 10	> 8.5	A D4 bulldozer can access the site without significant rutting	1.5 ft.

Alternatively, adjacent fabric edges can be sewn together rather than overlapped. Sewn seams must be used when the geotextile provides significant tensile reinforcement. This is the case, for example, when the subgrade is very soft (CBR<0.5). Sewn seam strength and fabric orientation are important design parameters. In these critical applications, adjacent panels must be placed and sewn in accordance with the specifications provided by the design engineer. Field sewing is performed using a portable sewing machine and typically requires three or four laborers. Presewn panels can be supplied from the factory. Propex Engineering Bulletin No. 611, “Geotextile Sewn Seams,” provides detailed information on both field-sewn and factory-sewn seams.

Soil, rocks, or pins can be used to hold fabric edges and overlaps down until aggregate is placed. On curves, the geotextile may be folded or cut to conform to the curve, as shown in Figure 1. The fold or overlap should be in the direction of construction and can be held in place as described above.

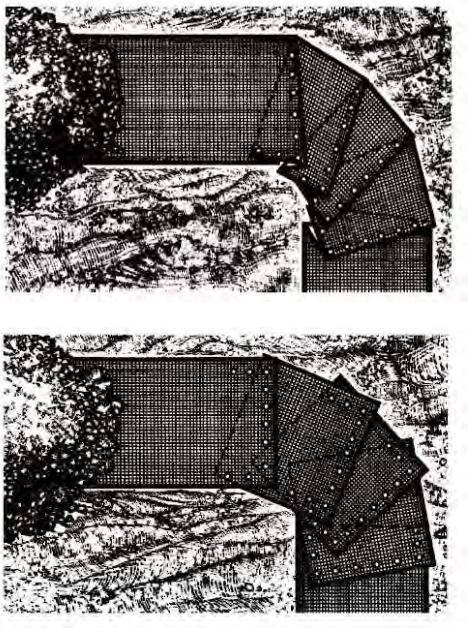

Figure 1 - Top, forming a curve using folds. Bottom, forming a curve using cut pieces.

Aggregate Placement

Aggregate is placed and spread on the fabric using conventional construction practices and equipment. Soil, rocks, or pins should be used to anchor the leading edge of the fabric to prevent it from lifting during placement of the first aggregate lift. The aggregate is typically back-dumped onto the geotextile, as the truck should not drive directly on the fabric. The aggregate is then spread over the geotextile. A tracked bulldozer is best used for this operation. Low ground pressure models are recommended for work on soft subgrades.

Lift thickness should not be less than 6 inches. The first lift should be as thick as necessary to limit rutting to less than 4 inches. During spreading, the bulldozer should blade into the load and slightly upward to prevent stressing the fabric. This procedure should be followed for each load until the fabric is completely covered. The dozer operator can determine which areas may need additional aggregate for good stability by observing aggregate layer rutting.

On very soft subgrades, care should be taken during aggregate placement to ensure that the fabric is not moved out of position nor the subgrade overstressed. Over some very soft soil conditions, "mud waves" may appear during or subsequent to aggregate placement. Mud waves result from overstressing the subgrade during fill placement, causing the subsurface soil to move away and up from the loaded area. They are normally not a problem if they do not heave above the surface of the aggregate base. If severe mud waves are anticipated, a Propex representative can provide information on construction procedures to minimize their adverse effects.

Sudden stops or turns by equipment operating over the geotextile should be avoided. Under typical conditions, vehicles should not be allowed to drive directly on the geotextile. If space constraints make this impractical, the possible damage from direct vehicle contact should be evaluated on a test section of the geotextile. If the fabric is damaged such that it cannot fulfill project requirements, a more damage-resistant geotextile should be specified. If the fabric is damaged during installation, the damaged section should be exposed and a patch of fabric placed over it. The patch should be large enough to overlap onto undamaged areas as recommended in Table 1. The aggregate is then replaced and compacted.

Aggregate Compaction

The aggregate must be compacted as required by the project specifications. The aggregate should be initially compacted by "walking" the tracked bulldozer back and forth over the aggregate while waiting for the next aggregate load. Construction traffic will then compact the aggregate until reasonable stability is obtained. Final compaction is achieved by rolling the area with a vibratory compactor, first without vibration for several passes and then with full vibration. Any weak areas found during final compaction usually indicate inadequate aggregate thickness in those locations. Do not grade ruts down; simply fill with additional aggregate and compact to the specified density. This also applies to any future rut maintenance that might be required.

Construction Monitoring

It is important that the construction conditions and process be monitored. If the actual subgrade has lower strength than that assumed for design, the structural section design thicknesses must be re-evaluated. Observation of rutting of the aggregate layer, for example, can pinpoint weak subgrade areas, allowing design adjustments to be made on site if necessary. One advantage of an unpaved road is the ability to identify and resurface weak areas to avoid overdesigning the entire road. Aggregate base placed for a new pavement may also be monitored for weak areas and corrected before the pavement layer(s) is placed.

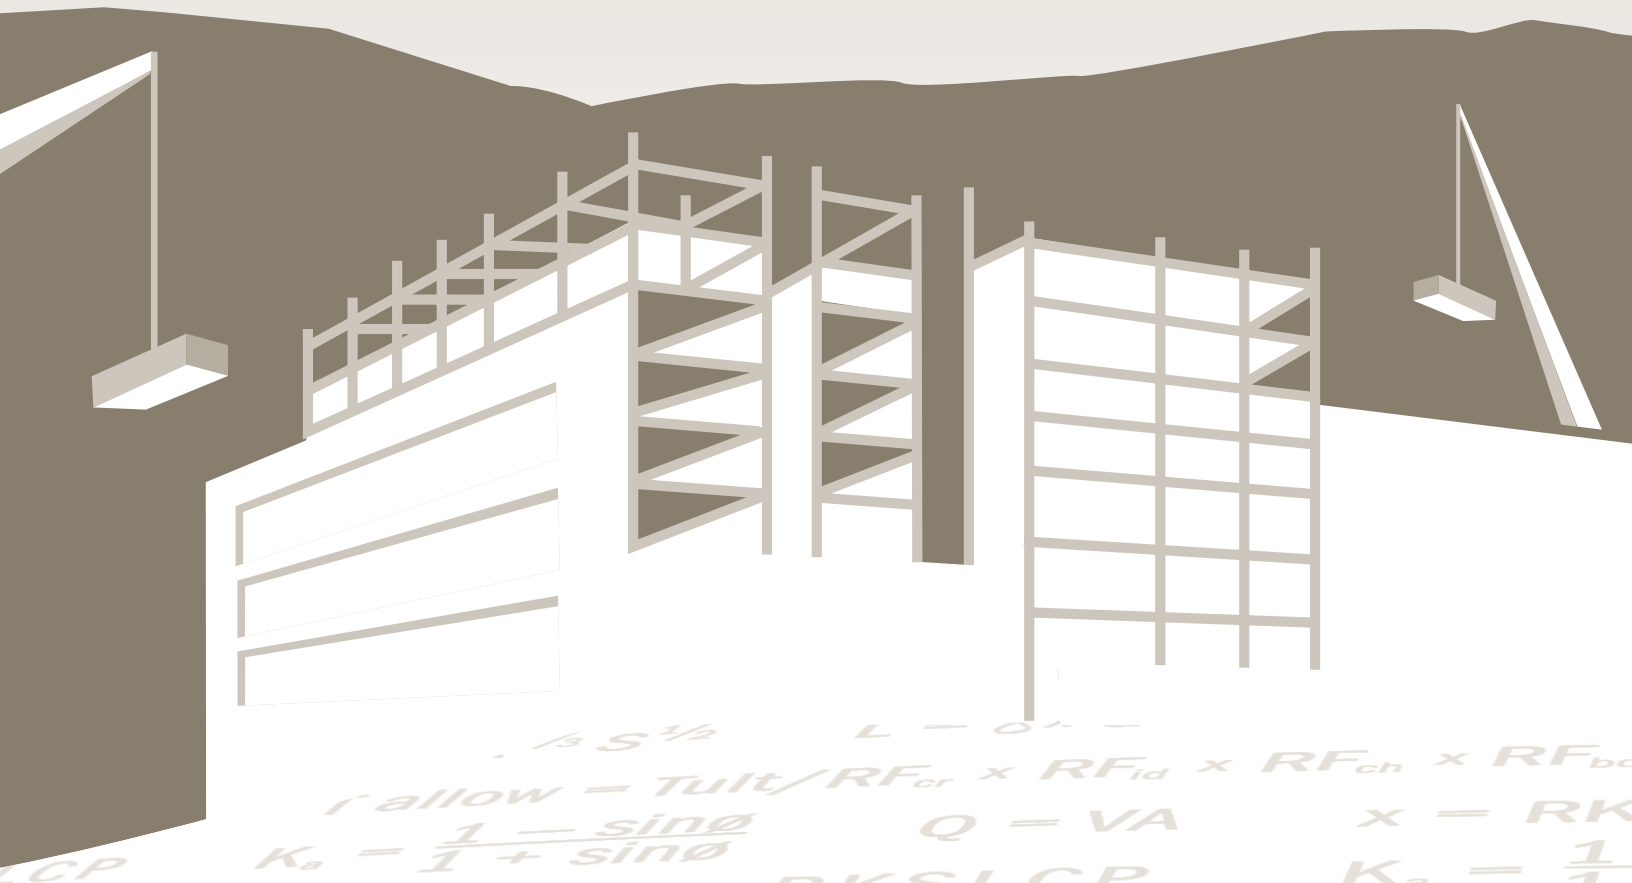
GEOTEXTILE SOLUTIONS

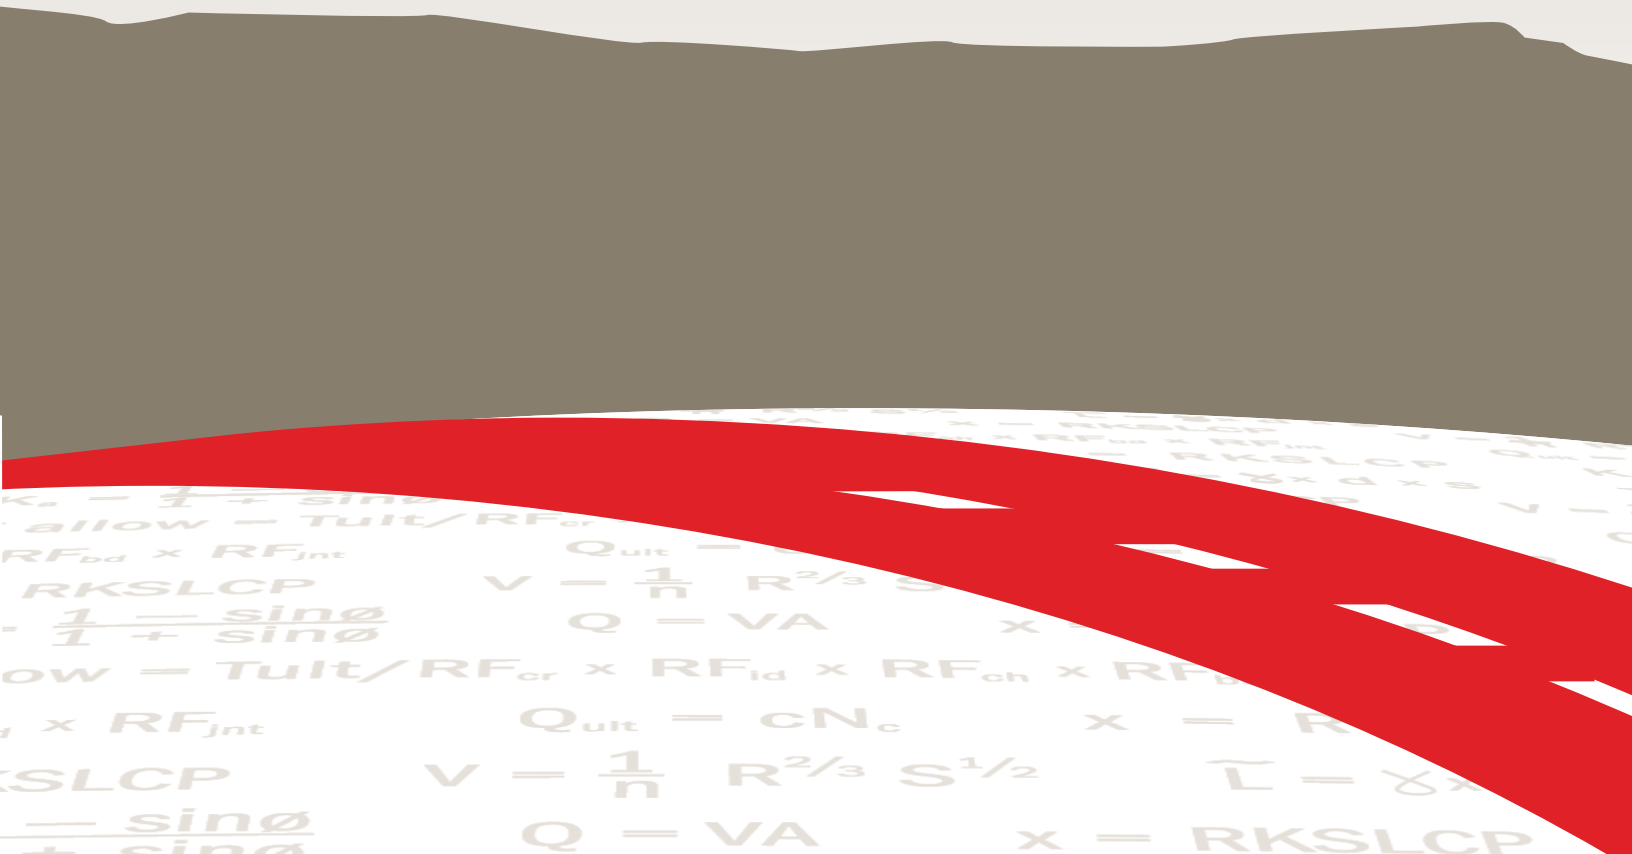
PERFORMANCE GROUNDED IN TECHNOLOGY



PROPEX | THE ADVANTAGE CREATORS.™

GEOSYNTHETICS

Electronic Filing: Received, Clerk's Office 09/28/2020



OUR PASSION FOR CREATING GEOSTABILIZATION SOLUTIONS BEGAN DECADES AGO

Electronic Filing: Received, Clerk's Office 09/28/2020

Starting with just a few nonwoven geotextiles, we quickly perfected and expanded a scientific approach to soil stabilization challenges that helped build an industry as much as our company. A proven solution for a variety of civil and environmental engineering challenges, geotextiles are used to improve performance and reduce costs of subsurface drains, roadways, railroads, embankments, landfills and more.

As the largest geotextile manufacturer in the world, we have designed a wide variety of geotextiles created to deliver superior performance under even the most demanding construction conditions. We also work in partnership with universities, public agencies and private consultants across the U.S. to investigate improvements in civil engineering designs and approaches, and we've developed the industry standards that have made geotextiles such a critical engineering tool. So when you choose a Propex geotextile, you are not just choosing one of the industry's highest performing products, you're choosing the technical knowledge, experience and support that backs it up. Propex—creating the advantages that make you more successful.

Electronic Filing: Received, Clerk's Office 09/28/2020

INNOVATIONS

- Pioneered paving fabrics and the geosynthetic interlayer technology that have improved over one billion square yards of pavement
- As a leader in geotextile production and research, Propex has developed industry standards that have made geotextiles a vital and widely used engineering tool
- Introduced Roadways and Civil Engineering (R.A.C.E.) software for the design of economical new flexible pavements or unpaved roads and for pavement rehabilitation strategies

PERFORMANCE

- Well-documented performance case studies on every product we provide, including over 35 years of performance testing for paving fabrics and a 30-year performance study on woven geotextiles
- Propex has developed the industry's widest range of geostabilization solutions for virtually any construction project
- Strict manufacturing specifications, quality control monitoring and laboratory testing ensure our products consistently meet or exceed the most demanding construction specifications

Electronic Filing: Received, Clerk's Office 09/28/2020

AVAILABILITY

- Vast global network of distributors and representatives assures local product availability
- Utilizing the latest software in forecasting demand, we always have product where and when you need it: distributors have ready access to our full line of geotextiles and keep locally popular products in inventory for quick pickup or delivery to your job site

COST EFFICIENCY

- Our geotextiles are much less costly to install than traditional geostabilization practices such as lime, soil cement or thicker layers of aggregate and pavement
- In unpaved roads, our products reduce the required aggregate by about one-third, and in paved roads, they reduce the structural section while maintaining the full section indefinitely
- Our products can be handled and installed easily

PEOPLE

- Staff includes dedicated engineering professionals with advanced degrees who can provide you with technical expertise, research and specification information
- Maintain industry leadership in trade associations and professional societies

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTEX® GEOTEXTILES

THE FABRIC OF TODAY'S SITE DEVELOPMENT, TRANSPORTATION AND WASTE CONTAINMENT INDUSTRIES.

Propex has been a leading manufacturer of geotextiles for decades with billions of square yards of nonwoven and woven geotextiles installed around the world. From geotextiles for the construction and closure of solid waste landfills to the separation, stabilization and reinforcement of roads, our geotextiles are renowned for their ability to reduce construction and life-cycle costs in a wide range of applications. In fact, Propex has the widest selection of woven and nonwoven geotextiles available, including products that are used for:

GEOTEX® GEOTEXTILES AT A GLANCE

- Dimensionally stable woven and nonwoven solutions for everything from soil stabilization and filtration to roadway and landfill applications
- Resistant to ultraviolet (UV) degradation and to biological and chemical environments normally found in soil
- Outperforms and are more cost-effective than conventional soil methods

- Subsurface drainage
- Roadway separation/ stabilization
- Railroad stabilization
- Embankment reinforcement
- Earth-retaining structures
- Silt fences
- Lagoon closures
- Geomembrane liner protection
- Landfill gas collection
- Landfill drainage systems

1958 — First woven filtration geotextile produced using equipment later purchased

1968 — Began manufacturing nonwoven Petromat® paving products

1982 — Began manufacturing woven stabilization geotextiles

1995 — Began manufacturing high-strength woven geotextiles

2006 — Propex Fabrics Inc. acquires SI® Geosolutions making Propex the world's largest geotextile producer

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTEX® GEOTEXTILES ▸

SUBSURFACE DRAINAGE ▸

During wet weather, water can penetrate a pavement surface into the road base course below. Foundation soils can also retain water that migrates up to the road's base course, causing the pavement to lose its strength, rut, heave in freezing weather and crack at the surface. While aggregate French drains help drain water away, they can become clogged with small soil particles. Nonwoven geotextiles are cost-effective, easily installed filter/separators that keep aggregate or geosynthetic drainage systems clog-free to ensure long-term performance.

ROADWAY SEPARATION/STABILIZATION ▸

As anyone who has dug up and repaired a failed road knows, loss of roadbase support due to subgrade soil contamination is the leading cause of failure. This contamination can happen quickly over soft or wet soils, but still develops even over competent subgrades. Once some of the original road structural section is lost to contamination, the road progressively fails, due to inadequate support for the traffic loading. When placed at the subgrade/roadbase interface, Propex geotextiles provide four functions to enhance roadway performance: separation, stabilization, reinforcement and drainage. These functions help maintain the integrity and strength of the pavement foundation, which ensures long-term performance of any pavement and reduces the required aggregate section to lower project cost.

RAILROAD STABILIZATION ▸

Maintaining track geometry is critical for efficient railroad operation. When subgrade pumps into the overlying ballast, it can destroy the track support system and create an uneven track bed. Nonwoven geotextiles prevent aggregate and ballast from punching into the subgrade and intermixing, reducing maintenance costs and ensuring long-term durability and drainability. High-strength woven geotextiles can reinforce railroad embankments over weak subgrade soils.

EMBANKMENT REINFORCEMENT ▸

During construction of roadways over organic deposits and highly compressible soils, construction equipment often can't travel across the soil without sinking. The soil needs to be strengthened and consolidated. Woven geotextiles provide long-term reinforcement for embankments constructed over soft soil, and can be installed easily. The added reinforcement allows construction equipment to travel across the soft soil, increasing overall site safety and reducing excavation costs.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTEX® GEOTEXTILES ▸

EARTH-RETAINING STRUCTURES ▸

Mechanically Stabilized Earth (MSE) retaining structures built with soil reinforcement fabrics are economical alternatives for designers looking to open up new land for development. Segmental Retaining Walls (SRWs), for example, are the most economical permanent retaining wall system available for fill slope construction. Reinforced steepened slopes using cost-effective high-strength geotextiles between soil lifts reinforce the slope surface and prevent deep-seated failure. In almost every case, earth-retaining structure solutions provide advantages over conventional concrete retaining structures, including:

- Increased land for development
- Installed cost savings of as much as 50% when compared to traditional concrete structures
- Quick and easy installation with reduced labor and equipment costs
- Improved aesthetics and reduced slope failures

SILT FENCES ▸

When attached to wood or metal posts and properly trenched, silt fence fabrics contain overland flow and filter suspended soil particles from water. This not only allows the water to drain efficiently, it also prevents environmental damage to areas next to construction sites. Plus, as sediment accumulates, the fabric's high tensile strength, UV resistance and low maintenance features ensure continued performance throughout the entire life span of the project.

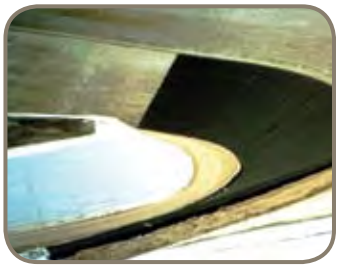
LAGOON CLOSURES ▸

Woven geotextiles make it safe for the rapid deployment of soil caps over industrial sludge lagoons, allowing water to pass vertically during construction and soil separation—an application where geogrids alone can't perform adequately.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOMEMBRANE LINER PROTECTION

When High-Density Polyethylene (HDPE) and other liners are installed during EPA Subtitle D-mandated solid waste landfill construction, they are susceptible to puncture and gouging during and after construction. This type of damage can weaken and possibly rupture the liner if it stretches due to unexpected tension. Heavyweight nonwoven geotextiles can cushion and protect geomembranes from damage by sharp objects. These fabrics enhance puncture, impact and abrasion resistance, allowing landfill system construction and operation without fear of damaging critical liners.



LANDFILL GAS COLLECTION

Maintaining a conduit for gases to escape from landfills can be challenging. Heavyweight nonwoven geotextiles help collect and transport gases that can build up beneath the flexible geomembranes used in the closure of solid waste facilities.

Overall, these geotextiles:

- Allow gas to travel through the porous geotextile laterally across the top of the landfill until it reaches a vent
- Help prevent gas pressure build-up that could explode the liner system
- Are used in the construction of drainage geonet composites for use on more active sites

LANDFILL DRAINAGE SYSTEMS

When placed in close contact with geonet or drainage stone, medium-weight nonwoven geotextiles can filter soil and waste while allowing water and leachate to pass. In new landfill cell construction, workers install a series of liquid or leachate collection pipes or stone filters along the bottom surface. These initial collection areas transport the leachate into one primary collection pipe, which transfers the liquid to a centralized treatment center. To ensure proper leachate collection, medium-weight nonwoven and woven monofilament geotextiles line the initial collection areas.

Specifically, these fabrics:

- Allow the liquid to pass through the initial collection areas
- Prevent clogging of the collection pipe and drainage stone
- Ensure a maintenance-free collection system
- Are used in the construction of drainage geonet composites

Electronic Filing: Received, Clerk's Office 09/28/2020

PAVING PRODUCTS

One of the biggest contributors to roadway deterioration is the softening of subgrade soil that occurs when water infiltrates the base through cracks and pores in the pavement surface. A pavement with a base that is saturated as little as 10% of the time has just 50% of the life of a pavement protected from water infiltration. While typical road maintenance overlays or surface treatments provide only short-term relief, they do not address the real problem: moisture in the roadbase and crack-inducing stresses from the underlying pavement.

Our specialty paving fabrics and repair membranes are specifically engineered to reduce water infiltration and reflective cracking, thereby saving on costly repaving cycles. They have been proven to extend the life of highways, city streets, parking lots, and airport runways and taxiways. These versatile products are used in new asphalt concrete pavements, beneath overlays of rigid and flexible pavements and beneath chip-seal surface treatments.

PETROMAT® PAVING FABRIC

Petromat is the oldest and most widely used fabric interlayer system. This nonwoven fabric is field-saturated with an asphalt cement tack coat to become a continuous moisture barrier and a stress-absorbing interlayer in new or rehabilitated pavements. Petromat typically doubles asphalt concrete overlay life and can more than double the life of a chip-seal surface treatment. When Petromat is included, thicker overlays may also be reduced by as much as 1.5 inches in thickness without losing performance. The installed Petromat system typically costs less than 0.5 inches of asphalt concrete pavement.

PETROTAC® STRIP MEMBRANE

Petrotac is a unique “peel and stick” waterproofing membrane for effective repair of pavement cracks, joints or potholes and for sealing bridge decks. This product is a composite of Petromat nonwoven fabric coated with a rubberized asphalt adhesive mastic. The adhesive mastic easily bonds to the existing pavement surface, allowing for quick, uncomplicated product installation. A unique asphalt top coating ensures an excellent bond with the pavement overlay.

HELP WHEN YOU NEED IT

ONE MORE PROPEX ADVANTAGE

With over 10 locations and more than 2,500 people worldwide, Propex has the resources to help you execute a plan that works. Not only do we have a complete line of products and educational programs for geotextiles, we have the expertise and tools to walk you through the process.

Online. A good place to start is the Propex web site—geotextile.com. There you'll find information about all our geotextile products as well as a complete library of downloadable technical support materials.

Roadway design and rehabilitation software. For help designing the newest, most economical flexible pavements or unpaved surfaces, order our Roadways and Civil Engineering (R.A.C.E.) software. Created to help you plan pavement rehabilitation strategies that will lower the cost and extend the life of your pavement repairs. To order, visit our web site at geotextile.com.

Contact us. Because we are committed to technical support during every phase of your project, Propex has on staff registered, professional engineers to aid you in your civil engineering design, geotextile selection and preparation of specifications. For help and more information, call Propex at **800-621-1273** or visit **geotextile.com**.

SHOP DRAWING / SUBMITTAL REVIEW

Shop drawing/submittal review is for design conformity and general conformance with the design concept of the project as given in the contract documents. Subcontractor is responsible for full compliance with contract documents, confirming and correcting all quantities, correlating dimensions at project work site for tolerance, clearance, fabrication process, and techniques of construction. Subcontractor is responsible for coordination of his work with that of all other trades, and performance of the work in a safe and satisfactory manner.

Erosion Resources & Supply
BOL: 80509000 PO: 1510
GEOTEX® 861 is a polypropylene, staple fiber, needlepunched nonwoven geotextile produced by Propex, and will meet the following Minimum Average Roll Values (MARV) when tested in accordance with the methods listed below. The fibers are needled to form a stable network that retains dimensional stability relative to each other. The geotextile is resistant to ultraviolet degradation and to biological and chemical environments normally found in soils.

GEOTEX 861 conforms to the property values listed below[1]. Propex performs internal Manufacturing Quality Control (MQC) tests that have been accredited by the Geosynthetic Accreditation Institute – Laboratory Accreditation Program (GAI-LAP).

			MARV[2]

Quality Manager

NOTES:
1. The property values listed above are effective 04/2011 and are subject to change without notice.
2. Values shown are in weaker principal direction. Minimum average roll values (MARV) are calculated as the typical minus two standard deviations. Statistically, it yields a 97.7% degree of confidence that any samples taken from quality assurance testing will exceed the value reported.
3. Maximum average roll value.

Subject: RE: Hutsonville Contractor Submittal - Vent Cap] review
Attachments: SK-HUT-APD-020-R0.pdf

Good morning Mike:
Thank you for the time on the phone yesterday discussing the Bentonite VES-01. We submit the following comments referencing the "Terms of Substitution" in Hanson Professional Service, Inc. [HPS] review dated 2012-05-07:

01 GCL Seam realignment for parallel and perpendicular relative the actual in place panel layout [see sketch].
02 No issue.
03 The vendor recommends Bentonite facing down so if there ever was a tear in the geomembrane the Bentonite has an opportunity to swell and close the opening.
04 We submit additional overlap [on center 2 FT MIN] on GCL seams in lieu of sheets rolled under. We do not anticipate settlement of high magnitude.
05 No issue.
06 No issue. We will overlap GCL seams 1 FT MIN, and will use powdered Bentonite.

The GCL we are submitting is 30 MIL.

Value Engineering Submittal VES-01 - Bentonite-Seal

May 7, 2012

We approve the use of a geomembrane backed GCL (Gundseal) if the following criteria is met. A standard GCL is not suitable for this application.

Terms of this substitution are as follows:

1. Panels must be installed so that there is no seam perpendicular to the axis of the trench. (Any settlement will pull along the seam rather than pull the seam apart)
2. Backfill placed below the GCL must be mounded slightly above installation grade. (Settlement will eventually cause the GCL to lay flat)
3. Installation shall be such that the orientation of the GCL shall have the bentonite facing up and the geomembrane facing down.
4. Bentonite sheets shall be rolled under itself at the sides of the trench for a distance of one foot. (see sketch below)
5. Backfilled subgrade shall be smooth drum rolled prior to the installation of the GCL. CQA officer is required to inspect and sign-off on smooth surface per CQA plan.
6. Seams perpendicular to the axis of the trench shall be overlapped 6". Powdered Bentonite is required along seams (similar to CGL installation).

RE: Hutsonville Ash Pond D Closure
Ameren PO No. 567523 R2 - AMS-Charah No. 4115-06-6120
Value Engineering Submittal VES-01 – Bentonite cap option

Dear Mike:

We are offering for Ameren's consideration this Value Engineering Submittal [VES] to replace the specified Bentonite cap for the Perforate Collector Pipe [PCP] trench with a Geosynthetic Clay Liner [GCL] alternate. Use of this material in lieu of the 6 IN thick loose Bentonite cap we believe can provide the same level of permeability, decrease the installation time, provide a better quality of constructability for the sequencing of trench and utility, and realize a credit to Ameren. We submit the following for your review and comment:

Supporting documents attached:

1. GSE Fabric Encased Geosynthetic Clay Liners [Application Sheet]
2. GSE Bentoliner NWL Geosynthetic Clay Liner [Product Data Sheet]
3. GSE Geomembrane Supported Geosynthetic Clay Liners [Application Sheet]
4. GSE Gundseal Geosynthetic Clay Liner – Textured HDPE [Product Data Sheet]
5. AMS SK-HUT-APD-19-R1 "Perforated Collector Pipe – Trench Cross Section – GCL Option"

Benefits of the GCL:

1. GSE indicates the GCL has ability to provide the same level of permeability, for less profile.
2. Material is rolled out onto the trench back fill, saving time over using bulk Bentonite which has to be spread across the trench. This will shorten the overall duration of the PCP schedule.
3. The GCL will provide a more uniform installation thickness, thus ensuring continuous coverage.
4. Installation of the material does not require being wetted down before initial back fill. Since the trench area is not being wetted down, the area will be much cleaner and safer to access.
5. Once backfilled, the trench can be accessed immediately for installation of the utilities [pipe and conduit]. Whereas the loose Bentonite after being wetted and back filled, may require some set time before access for utility installation.
6. No impact to schedule in terms of delivery or installation.

Electronic Filing: Received, Clerk's Office 09/28/2020

Mr. Michael J. Wagstaff, PE, PMP

RE: Hutsonville Ash Pond D Closure
Ameren PO No. 567523 R2 - AMS-Charah No. 4115-06-6120
Value Engineering Submittal VES-01 – Bentonite cap option

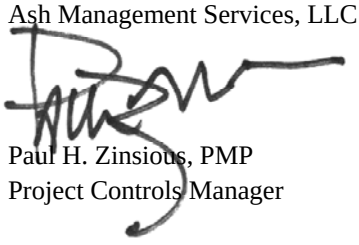
Credit calculations for using the GCL:

The construction documents require the Bentonite cap in the areas of the PCP where grade elevation is below 450 FT, for a length of about 1,203 FT. If the trench average width is approximately 28 FT wide, and we overlap the GCL 1 FT each side, we have a total width of 30 FT. Considering excavation each end of the PCP, we will use 1,250 FT for the total length. We then calculate the total area of GCL:

1,250 LF x 30 FT = 37,500 SF Adding 10% contingency = 37,500 x 1.10 = 41,250 SF

We are submitting two types of GCL for consideration, the NWL GCL, and the Gundseal which has a geomembrane layer. The approximate cost for each [including delivery and tax] per square foot we calculate:

NWL GCL	$ 0.43/SF x 41,250 SF = $ 17,737.50
Gundseal	$ 0.54/SF x 41,250 SF = $ 22,275.00



AMS has a budget line item cost for the Bentonite of $ 55,108.00. We propose a cost savings plan if this alternate is chosen to split the savings 50% between Ameren and AMS:

NWL GCL	$ 55,108 - $ 17,737.50 = $ 37,370.50	Split 50% = $ 18,685.25
Gundseal	$ 55,108 - $ 22,275.00 = $ 32,833.00	Split 50% = $ 16,416.50

We will use union labor rates per the original contract and in accordance working under the National Maintenance Agreement [NMA]. All workers will be Ameren CBT and AMS safety trained, with adherence to Ameren “Rules-to-live-by”. Work will be performed during standard work hours, without consideration for overtime.

Please advise if this alternate is acceptable to Ameren, and if Ameren would like to pursue further investigation. Feel free to call with any questions.

Respectfully,
Ash Management Services, LLC

Application Sheet

Fabric Encased Geosynthetic Clay Liners

FABRIC ENCASED GEOSYNTHETIC CLAY LINERS (GCLS)

GSE BentoLiner GCL is produced by distributing a uniform layer of the sodium bentonite between two geotextiles. Fibers from the upper nonwoven geotextile are needlepunched through the layer of bentonite and incorporated into the lower geotextile (either a woven or a scrim nonwoven). This process results in a strong mechanical bond between the fabrics. A heat treating process is then used to modify and more permanently lock the needlepunched fibers into place.

The sodium bentonite clay utilized in GSE BentoLiner GCL is a naturally occurring clay mineral that swells as liquid enters between its clay platelets. When hydrated under confinement, the bentonite swells to form a low permeability clay layer with a hydraulic conductivity value of $5x10^{-9}$ cm/sec which is an equivalent hydraulic protection of several feet of compacted clay. Unique properties, including increased internal shear resistance and long term creep resistance, make GSE BentoLiner GCL ideal for a wide range of containment lining applications.

GSE BentoLiner GCL

NEEDLEPUNCHING MAKES A DIFFERENCE

By needlepunching fibers through the sodium bentonite clay layer, a completely uniform, reinforced GCL is produced with shear strength, creep resistance, and stability advantages important to any application.

HIGH SHEAR RESISTANCE

Needlepunching reinforces the otherwise weak layer of sodium bentonite clay. Unreinforced bentonite is susceptible to shear failure, even on gentle slopes. The GSE BentoLiner GCL needlepunching process consistently reinforces the bentonite layer with thousands of high tenacity fibers that resist and transfer the shearing stresses into the encapsulating geotextiles.

UNIFORM BENTONITE CONTENT

The uniform confinement provided by the fibers from the needlepunching process resist lateral migration of the bentonite clay within the GSE BentoLiner GCL in either the dry or hydrated state. As a result, a consistent bentonite content is preserved throughout the composite, in turn resulting in a consistent low permeability.

GREATER INSTALLATION DURABILITY

During installation, the needlepunched fibers hold the bentonite in place and prevent the GCL from separating. GSE BentoLiner GCL is more durable over a wider range of installation conditions, and, because it is needlepunched, it can greatly reduce the adverse effects of premature hydration during installation.

Soil cover operations over installed GSE BentoLiner GCL.

SUPERIOR GCL SLOPE PERFORMANCE

With GSE BentoLiner GCL, the clay component is no longer the limiting factor on side slopes. You can use GSE BentoLiner GCL to replace compacted clay layers on steep side slopes and be assured of low permeability without sacrificing slope stability. The inherent confining stress from the needlepunching also improves the hydraulic properties of GSE BentoLiner GCL under low confining stress applications.

Improved slope stability utilizing GSE BentoLiner GCL.

-Continued-

Electronic Filing: Received, Clerk's Office 09/28/2020

Application Sheet

ASSURANCE QUALITY CONTROL

Because GSE BentoLiner GCL is factory manufactured liner products, the controlled environment of the production facility allows for greater control over critical performance characteristics. The intensive manufacturing quality control program ensures consistent hydraulic and physical properties through the latest ASTM testing procedures.

The thorough manufacturing quality control minimizes the expensive and time consuming on-site quality assurance testing required for compacted clay liners. GSE BentoLiner GCL provides consistent high quality performance.

GSE BentoLiner deployed in a composite bottom liner system.

MORE VERSATILE THAN COMPACTED CLAY

GSE BentoLiner GCL is part of an important trend towards the combined use of geosynthetics and clay materials in containment applications. In a typical composite liner system, GCL works synergistically with polyethylene and other geomembrane materials to maximize liner system efficiency.

INCREASED AIRSPACE AND LINER EFFICIENCY

In a composite landfill liner system, GSE BentoLiner GCL can in many cases completely replace or significantly reduce the required thickness of the compacted clay layer. This results in less excavation and re-compaction as well as increased containment volume. And, in a landfill, increased airspace means increased revenues.

CAPS AND CLOSURES

GSE BentoLiner GCL is ideally suited for use in landfill caps and closures. Used alone, or in conjunction with a geomembrane, GSE BentoLiner GCL is resistant to the deleterious effects of differential settlement and seasonal temperature fluctuations.

GSE BentoLiner deployed on a landfill closure.

EASY TO INSTALL

GSE BentoLiner GCL is the widest fabric encased GCL in the industry. The widest width, coupled with available custom lengths, makes GSE BentoLiner the most versatile GCL available.

Simple, cost-effective installation techniques make GSE BentoLiner GCL a practical alternative to a compacted clay liner for a wide range of applications.

Deployment of GSE BentoLiner GCL.

ENGINEERING SUPPORT

The GSE Engineering Support Staff is comprised of multidisciplinary product professionals to support you across a range of project requirements. This includes knowledge in geomembrane, geosynthetic clay liners, geonet, geocomposite, nonwoven geotextile and concrete protection products and application solutions. Rely on our technical staff to help you solve your project issues.

CUSTOM FABRICATION

The GSE Custom Fabrication Group builds products to your exact specifications. We have extensive experience in prefabricated polyethylene products and components. A few examples of our custom fabricated products are Aqua Tanks, Quick Containment, concrete protection liners, boots, sumps, pads, pipes, daily covers, temporary containment, containment boom and other products to fulfill your fabrication needs.

INSTALLER NETWORK

The GSE Installer Network leads the industry with the most experienced, large, and flexible crews available around the world to meet your installation requirements. Each installer is equipped with state-of-the-art welding and testing equipment to ensure a successful installation. Selecting a qualified installer with the right product knowledge is critical to your success. Let GSE connect you to the right installer to handle your installation project of any size from start to finish.

PRODUCT DATA SHEET

GSE BentoLiner NWL Geosynthetic Clay Liner

GSE BentoLiner "NWL" is a needle-punched reinforced composite geosynthetic clay liner (GCL) comprised of a uniform layer of granular sodium bentonite encapsulated between a nonwoven and a scrim-nonwoven geotextile for dimensional stability. The product is intended for moderate to steep slopes and moderate to high load applications where increased internal shear strength is required.

AT THE CORE:

This composite clay liner is composed of a uniform layer of granular sodium bentonite between a nonwoven and scrim-nonwoven textile for dimensional stability.

Product Specifications

Tested Property	Test Method	Frequency	Value
Geotextile Property			
Cap Nonwoven, Mass/Unit Area	ASTM D 5261	1/200,000 ft²	6.0 oz/yd² MARV(1)
Carrier Scrim Nonwoven, Mass/Unit Area	ASTM D 5261	1/200,000 ft²	6.0 oz/yd² MARV
Bentonite Property			
Swell Index	ASTM D 5890	1/100,000 lb	24 ml/2 g min
Moisture Content	ASTM D 4643	1/100,000 lb	12% max
Fluid Loss	ASTM D 5891	1/100,000 lb	18 ml max
Finished GCL Property			
Bentonite, Mass/Unit Area(2)	ASTM D 5993	1/40,000 ft²	0.75 lb/ft² MARV

Application Sheet

Geomembrane Supported Geosynthetic Clay Liners

GEOMEMBRANE SUPPORTED GEOSYNTHETIC CLAY LINERS (GCLS)

The GSE GundSeal GCL product composite provides the highest swelling and sealing of bentonite clay with the chemical resistance and impermeability of a polyethylene geomembrane.

GSE GundSeal consists of high quality sodium bentonite adhered to a 15 mil to 80 mil smooth or texture HDPE geomembrane, making it a unique one product composite liner for containment applications. A spunbonded geotextile is adhered to the bentonite surface to protect the bentonite during installation.

Given the documented hydraulic sealing provided by GSE GundSeal, the ease of its installation, and cost savings made possible by the simplicity of installing a single product, GSE GundSeal provides an effective alternative to conventional geomembrane and compacted clay or fabric GCL liner installations.

GSE GundSeal geomembrane supported GCL.

APPLICATIONS

GSE GundSeal is generally used in one of two fundamental capacities: (1) In a bottom liner system to contain fluid, such as in landfills, surface impoundments, and secondary containment applications, and (2) In a cover system to keep fluid out, such as in landfill caps and remediation closure applications. In either capacity, there are two general installation configurations to consider:

1. Single composite mode. In this mode the bentonite side of the material is installed face down and the geomembrane side face up, to form a one-product composite (geomembrane-clay) liner. Normally, given the effectiveness of the overlap seams, the overlaps are not mechanically joined but are simply overlapped for self-sealing. Alternately, it is possible to weld the geomembrane seams together, either using standard geomembrane hot-wedge or extrusion welding procedures.

Installation of overlapped GSE GundSeal as a composite liner on a closure project.

2. Encapsulated mode. In this mode, a supplemental overlying geomembrane is installed against the bentonite side of GSE GundSeal forming a geomembrane-bentonite-geomembrane composite liner. In this case, GSE GundSeal is usually installed with the bentonite side facing up with a supplemental geomembrane installed over the GSE GundSeal bentonite surface. The advantages of the encapsulated mode are that it increases fluid containment capability and also improves slope stability by keeping the bentonite dry over most of the area where GSE GundSeal has been deployed.

Installation of GSE GundSeal with an overlying GSE White geomembrane, forming encapsulated GundSeal.

HYDRAULIC PERFORMANCE

When utilized as a one product composite liner, the hydraulic performance of GSE GundSeal is superior to conventional geomembrane/compacted clay lining systems, given its excellent intimate contact, minimal wrinkles, and self sealing overlapped seams.

When utilized in an encapsulated liner(geomembrane/clay/geomembrane), GSE GundSeal hydraulic performance results in 17,000 times less leakage when compared to conventional geomembrane /compacted clay composite liner systems.

-Continued-

Electronic Filing: Received, Clerk's Office 09/28/2020

Application Sheet

Examples of hydraulic and leakage comparisons between GSE GundSeal and conventional composite liner systems for different composite liner applications can be found in the GSE GundSeal Design Manual.

OVERLAPPED SEAM INTEGRITY

Given the excellent lay flat properties of installed GSE GundSeal liner, resulting in minimal geomembrane wrinkles, proven hydraulic performance of the overlap seams, and regulatory acceptance, GSE GundSeal seams can simply be overlapped with confidence that the composite lining system integrity will be maintained. Overlapped GSE GundSeal vs. conventional composite liners with welded geomembrane seams derive hydraulic performance benefits as well as economic savings due to decreased installation costs.

BENTONITE PROTECTION BY THE HDPE GEOMEMBRANE BACKING

The geomembrane backing of GSE GundSeal includes a high quality GSE HDPE geomembrane ranging in thickness from 15 mil to 80 mil (0.4 mm to 2.0 mm), and can be smooth or textured surface, depending on project slope requirements. In addition to providing an impermeable and chemical resistant carrier for the bentonite, the geomembrane backing also provides effective long-term protection and durability of the bentonite against cation exchange, wet/dry cycles, differential settlement, and bentonite contact with liquids and soils that may decrease the swelling and sealing capability of the bentonite.

SHEAR STRENGTH

If the bentonite must be kept dry in order to maintain a higher factor of safety for stability, then the 'encapsulated GSE GundSeal liner system is used. When GSE GundSeal is deployed in the encapsulated mode with a separate overlying geomembrane (geomembrane/bentonite/geomembrane),the textured geomembranes protect the bentonite from hydration and provide long term stability for sloping applications. Hydration of the bentonite is limited to areas adjacent to geomembrane defects and overlapped GSE GundSeal seams, resulting in up to 90% of the bentonite remaining dry over the life of the project.

The encapsulated GSE GundSeal liner system has been used successfully on many critical sloping applications in Europe, Asia, and the U.S. The design approach includes using a prorated shear strength design methodology that is discussed in detail in the GSE GundSeal Design Manual.

EASE OF INSTALLATION

Another advantage of the GSE GundSeal GCL is that with its HDPE geomembrane backing, it is easy to install. GSE GundSeal GCL panels are the longest and widest GCL rolls available in the industry thus providing fewer seams, lower scrap factor, and decreased roll handling during installation. A spun-bonded geotextile is attached to the bentonite surface for protection during material installation. GundSeal material can be unrolled or pulled into position without dislodging the bentonite.

Geomembrane deployed over GSE GundSeal forming encapsulated bentonite for slope performance.

THE GSE GUNDSEAL GCL DESIGN MANUAL

For a free copy of the state-of-the-practice design manual for utilizing GCLs in composite lining (geomembrane-clay) applications, please give us a call.

ENGINEERING SUPPORT

The GSE Engineering Support Staff is comprised of multidisciplinary product professionals to support you across a range of project requirements. This includes knowledge in geomembrane, geosynthetic clay liners, geonet, geocomposite, nonwoven geotextile and concrete protection products and application solutions. Rely on our technical staff to help you solve your project issues.

PRODUCT DATA SHEET

GSE GundSeal Geosynthetic Clay Liner (Textured HDPE)

GSE GundSeal geosynthetic clay liner (GCL) is a composite liner system that consists of a high quality sodium bentonite adhered to a textured high density polyethylene (HDPE) geomembrane with a spunbonded geotextile to protect the bentonite during installation. This one product composite liner system combines the low permeability of an HDPE geomembrane with the self-seaming characteristics of bentonite clay. The intimate contact of the bentonite with the geomembrane provides the best leak protection in the industry.

AT THE CORE:

A composite liner system that combines the low permeability of an HDPE geomembrane with the self-seaming characteristics of bentonite clay to provide the best leak protection in the industry.

1.0 INTRODUCTION

This manual provides an overview of the GSE Installation Quality Assurance procedures consistent with industry accepted practices to ensure that the GSE GundSeal GCL products installed will best perform for its intended purpose. In addition, all installation work will be performed in strict accordance per the customer's specifications. Please read the procedures below completely before you begin. If you need further clarification, contact the GSE Installation Department for assistance or please refer to ASTM D 6102, Standard Guide for Installation of Geosynthetic Clay Liners and ASTM D 5888, Standard Guide for Storage and Handling of Geosynthetic Clay Liners. Remember safety first and use safe practices always on every project.

2.0 UNLOADING PROCEDURES

As with all lifting or unloading operations, appropriate equipment and experienced personnel should be employed along with proper safe handling methods. The party responsible for unloading the GSE GundSeal, should contact GSE prior to shipment, to determine the correct unloading methods and equipment, if different from the pre-approved and specified methods as described below.

Lifting GCL rolls can typically be accomplished with by using a 2.5 in - 3.0 in (63 mm - 75 mm) outside diameter (O.D.) steel pipe (preferably solid), with a wall thickness capable of providing sufficient beam strength to support the weight of the roll, which average less than 3,000 lb (1,364 kg) and the length is approximately 18 ft (5.5 m). This core pipe is inserted through the hollow center of the GCL cardboard core. Heavy-duty slings or chains, which are approximately 10 ft (3.1 m) long, each are attached to each end of the pipe, which are then fastened to a I-beam spreader bar or a GSE approved alternative. Care should be taken to ensure that lifting chains or straps do not rub, chafe, or otherwise damage the GCL. A crane, backhoe, front-end loader or another suitable piece of construction equipment can then lift the entire assembly.

An all-terrain, extendable boom forklift, such as a Lull or Caterpillar Telehandler, can be fitted with a special, solid steel "carpet pole" or stinger, typically 14.0 ft (4.3 m) in length having an outside diameter of no more then 3.38 in (8.6 mm). The carpet pole can be inserted into the hollow cardboard core of the GCL roll.

The roll should not be fully suspended until the pole extends through the entire length of the core tube or you run the risk that the core may break creating additional handling and unloading difficulties.

A properly structured and supported pole can be used to unload GCL rolls onsite. As an alternative, straps that are appropriately rated can be used as a GSE approved lifting method to unload GCL rolls. Lifting straps are supplied on every roll. Each GCL roll label contains roll weight information that should be consulted in determining appropriate lifting equipment and factors of safety.

The CQA inspector or owner's representative should verify that only appropriate handling equipment is utilized, i.e. equipment that does not pose any danger to personnel or undue risk of damage or deformation to the liner material.

10A 55 80/ 21149

www.gseworld.com
This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Specifications subject to change without notice.

Electronic Filing: Received, Clerk's Office 09/28/2020

All roll numbers should be recorded during the unloading operations and compared to shipping papers to ensure receipt of only project compliant materials. Furthermore, rolls should be visually inspected for damage and suspect rolls marked, recorded, and set aside for further investigation by CQA personnel.

3.0 STORAGE

While stored GCL needs to be kept dry and away from potential flooding or high storm runoff. On the job site storage methods include; storing the rolls tarped on pallets; storing the rolls under roof in a clean, dry protected area; and storing the rolls on a flat, dry, stable surface suitably covered with protective waterproof tarps. Rolls can be stacked as long as it is done in a manner that prevents them from rolling, shifting, or spontaneously moving. Maximum roll height should be determined by CQA personnel, but never more than can be safely managed considering site conditions, equipment and personnel.

Stored rolls should be tarped and remain in their original, unopened plastic shipping sleeves to prevent damage and undue prehydration prior to installation. Any rolls that come in contact with water should be examined by CQA or an owner's representative prior to installation. Prehydrated or physically damaged rolls should be set aside for further examination to determine the plausibility of repair or need to replace.

4.0 SUBGRADE PREPARATION

The surface upon which the GSE GundSeal is installed should be smooth and free of wheel ruts, debris, roots, sticks, and sharp rocks larger than 1.0 inch. Site specific compaction requirements should be followed in accordance with the project plans and specifications. At a minimum, the site should be smooth rolled the level of compaction such that installation equipment or other construction vehicles traffic does not cause rutting greater than 1.0 in (25 mm).

In applications where the product is the sole barrier, subgrade surfaces consisting of gravel or granular soils may not be acceptable due to their large void content. For these applications, the subgrade shall contain no sharp objects greater than 0.75 in (18 mm). Immediately prior to deployment of the GCL, the subgrade shall be final compacted to fill in any remaining voids or desiccation cracks and to ensure that no sharp irregularities or abrupt elevation changes exist greater than 1.0 in (25 mm). The surfaces to be lined shall be maintained in this condition, free of standing water. The subgrade surface and preparation should be inspected and certified by a CQA inspector prior to GSE GundSeal placement.

Upon approval by the CQA inspector, it is the geosynthetic installer's responsibility to communicate to the engineer of any changes in the condition of the subgrade, that might render it out of compliance, with any of the requirements of the project specification or ASTM standard.

5.0 DEPLOYMENT FOR OVERLAPPED SEAMS

As rolls are selected for deployment, the labels should be removed and recorded by the installer, along with any other pertinent information. The rolls should only be transported from the storage area using approved lifting equipment as described in section 2.0 and the rolls should be deployed properly as outlined below.

A. *Installation Options*

GSE GundSeal can either be installed with the geomembrane side down, facing the subgrade, or

IOA GS Rev. 21.09

www.gseworld.com

This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Specifications subject to change without notice.

GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

with the bentonite side down, facing the subgrade. The installation procedures for these two methods are different given that additional care must be taken when installing the bentonite side down to prevent the bentonite from dislodging from the geomembrane backing.

Final decision on GSE GundSeal deployment should be left to the design or CQA engineer or an owner's representative.

Care should also be taken to keep unloading and installation equipment and vehicles from making excessive contact with the bentonite portion of the product during installation operations.

1. *Deployment Geomembrane Side Down*
   Methods of deployment range from manually pulling the GSE GundSeal from a suspended roll to securing the roll end and unrolling each panel as the equipment slowly moves backwards.

   Laborers should manually move the panels to their final and proper position paying strict adherence to required overlaps. Cutting the panels after placement is accomplished with a sharp hook blade utility knife or equivalent.

2. *Deployment Bentonite Side Down*
   The GSE GundSeal roll should be aligned next to the adjacent product sheet prior to unrolling. The installation equipment then begins unrolling the panel as the equipment moves in the direction of material deployment. For final material alignment, laborers should manually move the panels to the proper position with the required overlap distance. Care should be taken not to dislodge the sodium bentonite during installation.

B. *Seams*
   Seaming between adjacent GSE GundSeal panels is accomplished by overlapping adjacent roll edges. The addition of supplemental granular bentonite into the seams is not required. When deployed geomembrane side up, longetudinal/lengthwise seams should be overlapped a minimum of 12.0 in (300 mm) unless engineering specifications indicate otherwise. Overlap of butt/widthwise seams should be a minimum of 12.0 in (300 mm), unless engineering specifications indicate otherwise. Overlap line markings can be printed on the longetudinal/lengthwise edges during the manufacturing process to facilitate added accuracy of the overlap distance.

   When deployed geomembrane side down, overlapped longitudinal/lengthwise seams should be a minimum 6.0 in (150 mm), unless engineering specifications indicate otherwise. Overlapped butt/widthwise seams should be a minimum 12.0 in (300 mm), unless engineering specifications indicate otherwise.

If the bentonite coating of the product becomes wet (> 30% moisture) allow the bentonite layer to air-dry before completing installation. [Note: GSE GundSeal bentonite coating will be dry for installation when desiccation marks show across the bentonite surface]. Alternately, the hydrated bentonite area can be patched with the same product material. For installations where shear strength is of concern, the hydrated area should be removed and patched with the equivalent material. If roll edges become

IQA GS BDE 21.09

Electronic Filing: Received, Clerk's Office 09/28/2020

hydrated, the overlap should be increased by the width of hydrated area to ensure a minimum 6.0 in (150 mm) of dry bentonite overlap.

6.0 DEPLOYMENT FOR WELDING GEOMEMBRANE SEAMS

The following procedures are guidelines for fusion welding and extrusion welding GSE GundSeal GCL geomembrane seams. These procedures are in addition to the standard GSE GundSeal installation procedures as discussed in sections 1.0 to 5.0 of this manual and in the GSE Installation Quality Assurance Manual for geomembrane products.

To facilitate welding panels together a 9.0 in (225 mm) wide protective tape is placed on both lengthwise edges during the manufacturing process. The tape is typically removed after winding rolls, thus providing bentonite free edges for welding prior to edge welding, the GSE GundSeal is installed in accordance with sections 1.0 to 5.0 of these guidelines.

A. *Seam Layout*

GSE GundSeal with bentonite free edges material should be deployed bentonite side down (geomembrane side up) in accordance with sections 1.0 to 5.0.

For fusion welded seams, a GSE GundSeal seam strip is deployed below the seam area with the bentonite facing up and centered under the overlap to be welded. Seam strips are typically GSE GundSeal with 15.0 mil (0.4 mm) HDPE geomembrane backing fabricated into 2.0 ft (600 mm) wide panels, effectively replaces the bentonite removed from the GSE GundSeal rolls during manuafacturer to facilitate welding. The typical length of each is 200 ft (61 m).

End of roll edges (widthwise) do not have bentonite free edges. Therefore, seams are made by overlapping panels a minimum of 6.0 in (150 mm) and extrusion welding a separate overlying geomembrane cap strip over the seam area. Alternately, the widthwise seams can be extrusion welded by scraping, or removing, a bentonite strip approximately 3.0 in (75 mm) wide and directly extrusion welding the two geomembranes together.

B. *Lengthwise Seaming Preparation & Fusion Welding*

Standard welding and support equipment should be used as outlined in the GSE Installation Quality Assurance Manual for geomembrane products.

1. After aligning the adjacent panels lengthwise, manually fold back the edges to inspect the bentonite free edge or remaining protective edge tape. The edges of the GSE GundSeal should be folded back far enough to allow the edges to lay flat with no undue stress applied to the geomembrane backing. The taped edges, the entire length of the seam, should be exposed.

2. Unroll the seam strip, bentonite side up. The seam strip should be installed directly below the two GSE GundSeal panels, centered directly under the final seam location, with the bentonite side of the seam strip facing upward. Seam strips should be overlapped a minimum of 6.0 in (150 mm) with the overlying bentonite coating of both base panel edges.

IQA: GS REV 9/21/09

GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

3. Visually inspect the upper and lower exposed geomembrane surfaces. The surfaces must be clean and free of moisture, dust, dirt and any foreign materials.

4. Fold the roll edges back into the position to be welded. The overlap should lay flat and directly on top of the seam strip. Seams should be aligned with the fewest possible number of wrinkles and "fish mouths".

5. Trial seams should be made in accordance with standard GSE geomembrane seaming procedures prior to each welding period. Fusion welded and extrusion welded trial seams should be made with representative GSE GundSeal material and bentonite free geomembrane edges.

6. Fusion weld the seam using standard geomembrane seaming procedures as outlined in the GSE Installation Quality Assurance Manual for geomembrane products.

7. Non-destructive seam testing should be carried out on the complete length of the fusion weld using standard air pressure testing methods.

8. Destructive seam testing should be carried out as outlined in the GSE Installation Quality Assurance Manual for geomembrane products.

C. Widthwise Seam Preparation & Extrusion Welding

1. Widthwise seams, typically 17.5 ft (5.3 m) wide, should be overlapped a minimum of 6.0 in (150 mm).

2. Seams should be aligned with the fewest possible number of wrinkles and "fish mouths".

3. The seams should be welded by placement of a geomembrane cap strip over the seam and extrusion welding the cap strip to the geomembrane backings on both sides of the overlap. Alternately, the geomembrane backings of the GSE GundSeal panels can be extrusion welded together directly. This is accomplished by removing approximately 3.0 in (75 mm) of the bentonite coating from the outer edge of the upper geomembrane. Bentonite can be removed by "scraping" the geomembrane with a dull putty knife or equivalent that will not damage the geomembrane. The overlap should include a minimum 6.0 in (150 mm) of bentonite overlap that does not include the edge with scraped off bentonite.

4. Non-destructive seam testing should be carried out on the complete length of weld by standard vacuum testing procedures.

5. Destructive seam testing should be carried out as outlined in the GSE Installation Quality Assurance Manual for geomembrane products.

Electronic Filing: Received, Clerk's Office 09/28/2020

D. Patching & Repairs For Welded GSE GundSeal

1. GSE GundSeal material should be inspected for cuts, tears or areas of bentonite loss.

2. The area to be repaired or patched must be free of contamination by foreign matter. Patches should be constructed of the same material as the damaged or affected area. Patches should have a minimum 6.0 in (150 mm) of bentonite overlap completely around the perimeter of the damaged area.

3. All patches should be secured to the underlying geomembrane backing material by extrusion welding the complete perimeter of the patch to base the GSE GundSeal liner as outlined in this section.

4. Non-destructive seam testing should be carried out on the complete length of weld by standard vacuum testing procedures.

7.0 ATTACHMENT DETAILS

GSE GundSeal attachments to structures, including concrete, steel and fiber glass, is accomplished by mechanically attaching the edge of the product liner to the structure by stainless steel batten strip. Alternately, for irregular shapes and PVC or HDPE pipe penetrations, GSE GundSeal is attached utilizing a supplemental fabricated HDPE geomembrane pipe boot.

The GSE GundSeal panel is deployed against concrete or steel structures with the bentonite side against the structure. As with geomembrane attachments, the leading edge of the GSE GundSeal liner is secured to the structure by a stainless steel batten strip around the perimeter of the structure. The liner should extend a minimum 6.0 in (150 mm) vertically upward on side walls.

Loose granular sodium bentonite or bentonite paste should be liberally applied at corners and areas where the bentonite may not be continuously in direct contact with the structure or subgrade.

GSE GundSeal should be attached to pipes and fiberglass with a separate HDPE pipe boot fabricated to fit snugly against the pipe or protrusion. The boot must lay flat against the adjacent installed GSE GundSeal panels.

GSE GundSeal should be deployed with the geomembrane side facing up adjacent to the pipe penetration. The end of the pipe boot sleeve should be attached to the pipe surface with a steel band fastened snugly around the perimeter of the pipe surface. Alternately, if the pipe is polyethylene, the end of the pipe boot sleeve can be extrusion welded to pipe surface. The pipe boot skirt should extend completely around the perimeter of the structure or penetration through the base of the liner and extend a minimum 1.0 ft (300 mm) over the adjacent geomembrane backing.

10A GS RDE 21/09

8.0 ANCHORING

GSE GundSeal is typically anchored in a trench around the perimeter of the lined area, which provides the required pullout resistance. In most cases, GCL can be anchored in the same trench as any adjacent

www.gseworld.com
This information is provided for reference purposes only and is not intended as a warranty or guarantee. GSE assumes no liability in connection with the use of this information. Specifications subject to change without notice.
GSE and other trademarks in this document are registered trademarks of GSE Lining Technology, Inc. in the United States and certain foreign countries.

Electronic Filing: Received, Clerk's Office 09/28/2020

geosynthetic liner components (if used). Dimensions and locations of the trench should be provided in the project drawings. Alternately, the material may be anchored by deploying additional run out of material, a minimum of 3.0 ft (1.0 m), past the slope crest and toe. Typically GCL should not be deployed in tension. The force holding the GCL in place should be provided by friction between the GCL and adjacent materials.

Steps should be taken to ensure that precipitation does not accumulate in the trench prior to backfilling. The GCL should only cover the front face and bottom of the anchor trench. The trench should be backfilled and properly compacted prior to placing cover soil on the slopes.

9.0 REPAIRS

Repair all damaged areas by placing a patch of the same material over the damaged area. Overlap of the patch around the damaged area should be a minimum 12.0 in (300 m) in all directions. For installations with the geomembrane side up, the patch may be secured to the installed GSE GundSeal geomembrane backing with duct tape or equivalent adhesive tape if desired.

10.0 INSPECTION

Prior to soil covering the panels, penetrations and any other details should be visually inspected to ensure full coverage and proper orientation. Once the installed GSE GundSeal material has been approved the next layer of geosynthetics or soil covering may be applied.

11.0 COVER MATERIAL

When placing cover material directly on top of the GSE GundSeal geomembrane backing, the soil should be pushed perpendicular to the product seams, where possible from the upper sheet to the lower sheet. Care should be taken to prevent soil from being lodged into and separating the product seams. A minimum of 1.0 ft (300 mm) of cover soil should be placed over the deployed liner with approximately 2.0 ft (600 mm) for high traffic areas to ensure adequate protection and prevent sodium bentonite free swell.

Cover soil should be free of all rocks greater than 0.75 in (18 mm) diameter, sharp or angular objects, sticks, roots or debris.

When the product is deployed with the bentonite side up (geomembrane against the subgrade), it is recommended to cover all exposed bentonite within the same day. This is typically accomplished by installing a geomembrane directly over the bentonite layer.

North American Pipe Corporation™

AWWA C900-07: Municipal Water *Pipe*

North American Pipe's AWWA C900-07 PVC product line is manufactured to meet the needs of modern municipal water distribution systems. With top quality raw materials and modern processing technology North American Pipe's C900-07 pipe meets all industry standards in addition to our own rigorous quality control standards. North American Pipe's C900-07 pipe utilizes Reiber style gaskets throughout the entire product offering. North American Pipe produces a full range of CIOD pipe in DR-14, DR-18, and DR-25 classifications. Whether specifying or installing our pipe you can be assured that North American Pipe will provide the pipe "Right, On Time, All the Time".

Short Form Specification
AWWA C900-07 Municipal Water Pipe

Pipe Standard:	AWWA C900-07
Pipe Compound:	ASTM D1784 Cell Class 12454
Gasket:	ASTM F477
Integral Bell Joint:	ASTM D3139
Certifications:	ANSI/NSF Standard 61 UL Standard 1285 DR18 & DR14: FM 1612
Applications:	Water
Color:	Blue
Lay Length:	20'
Installation:	North American Pipe's Installation Guide for PVC Pressure Pipe

ADS FILTER SOCK SPECIFICATION

Scope

This specification describes 2- through 24-inch (50- to 600 mm) ADS SOCK synthetic wrap.

Filter Fabric Requirements

- The ADS SOCK shall meet the requirements of ASTM D6707.
- ADS sock products as listed on this specification meet Ontario Provincial Standard Specification 1860, Material Specifications for Geotextiles, dated March 1998.

Filter Fabric Properties

Property	Test Method	
Material	-	Polyester
Fabric	-	Knitted
Permitivity (min.)	ASTM D4491	5.5 sec^{-1}
Puncture Resistance (min.)	ASTM D6241	1000 N
AOS (max.)	ASTM D4751	0.600 mm 30 U.S. Sieve
FOS (max.)	CAN/CGSB-148.1, M10-94	450 microns
Mass (relaxed)	ASTM D3887	3.0-3.9 oz/yd^2
Mass (applied minimum)		2.7-3.5 oz/yd^2
Thickness (min.)	ASTM D4491	24.0 mils
Permeability (K) (min.)	ASTM D4491	0.390 cm/sec
Burst Strength (min.)	ASTM D3887	830 kpa
Air Permeability (min.)	ASTM D737	700 ft^3/ft^2/min
Water Flow Rate (min.)	ASTM D4491 (2" constant head)	300 $gal/min/ft^2$
Yarn Denier	-	150
Specific Gravity	-	1.3
Melt Temperature	-	450^{o} F

Freitag-Weinhardt, Inc HDPE PIPE/FITTINGS BUTT FUSION BONDING PROCEDURE HDPE - 1	Revision : 2 Date: July 7, 2009

Scope: Butt fusion bonding high-density polyethylene (HDPE) piping and fittings. This butt fusion bonding procedure is acceptable for use on Local Plumbing Code, NFDA and Factory Mutual HDPE plastic pipe where formal qualification is required in accordance with Project Specifications.

Materials to be Joined:	**Diameter and Thickness Range Qualified:**	
Pipe: ASTM D3350, PE	Diameter	Thickness
Fittings: ASTM D3350, PE	Pipe: Table 1, 2, 3, 4	Table 1, 2,3, 4
Resin: 345464C	Fitting: Table 1, 2, 3, 4	Table 1, 2, 3, 4
Other:		
Joint Design Butt Fusion	**Procedure Qualification Record:** In accordance with Project Specification.	

Butt Fusion Machines-
1"-4" OD Pipe- McElroy Model Pitbull #14, No Data Logger (Mechanical Bonding)
2"-8" OD Pipe- McElroy Model 28 with Data Logger
8"-24" OD Pipe- McElroy Model 824 with Data Logger
4"-12" OD Pipe- McElroy Model 412 with Data Logger

Note- This procedure was specifically prepared for the above pipe/fitting materials and butt fusion machines and is not suitable for any other pipe/fitting material or butt fusion machine combination. If other pipe/fitting materials or butt fusion machines are contemplated for use, preparation and issuance of a suitable butt fusion bonding procedure for those materials and butt fusion machine combinations. The Tables in this procedure contain the butt fusion parameters specifically for the materials and machines listed herein.

* All fusion machines shall be supplied with the appropriate clamp insets for all pipe diameters that will be bonded.
* Spare facer blades.
* Must have sufficient amount of pipe support stands for each machine in operation.
* Stub end holder for butt fusion.
* Hydraulic extension hoses as necessary for ditch fusion.
* All fusion machines shall be supplied with a heater plate, properly sized heater adapters, and a built in surface temperature pyrometer . Hand held infared heat indicator will be used to verify temperture per checklist.

* Where power is not available, electrical generator(s) sized in accordance with the fusion machine manufacturer's recommendations.
* Clean rags or paper towels with isopropyl alcohol and or approved alcohol wipes for one time use to clean the facer plate and blades, hot plate and prepared pipe ends.

Document No. HDPE 1

FREITAG-WEINHARDT, INC.

* Electric or gas powered chain saws, with extra chains and extra chain guides that can use a water/detergent mix as the chain lubricant. **Warning-** Oil is **"prohibited"** as a chain lubricant. The exhaust on gas powered chain saws must be directed away from the HDPE pipe surface. Oil deposits on the HDPE pipe from the chain lubricant or engine exhaust must be removed.

Daily Fusion Machine Maintenance Checklist:

1. At the start of each shift for each fusion machine used, complete top section of Form 1a or 1b as applicable.

Daily Heater Maintenance Checklist:

1. At the start of each shift for each heater used, complete the bottom section of Form 1a or 1b as applicable.

Bonding Procedure:

1. When fusing full-length pipe, position pipe support roller stands on each end of the fusion machine to help support and align the pipe. On shorter lengths use stands needed on each side of the fusion machine if at all possible.
2. Sections of pipe that have visible oil, hydraulic fluid, gasoline, diesel or other oily contaminate must be cleaned prior to installation in fusion machine. Solvent or detergent cleaning is acceptable.
3. Clamp the two pipe sections in the jaws. On short sections of pipe or fittings that use only one clamp, it is important that they are properly oriented in the clamp to avoid an uneven fusion bead. Install the long item that uses two stationary clamps first, and face it square. Place the short item loosley in the moving clamp and butt it flush against the face of the stationary item. Tighten the clamp on the short item, insuring the item stays flush with the stationary item. When both items are short they should be butted flush and kept flush until they are both tightly clamped in the fusion machine. **Caution-**The weld face of each short item must be square prior to final butt fusion set up. Other methods of insuring proper pipe to pipe or pipe to fitting orientation will be considered when submitted for review.
4. It is acceptable to directly bond fittings that are one SDR larger than the pipe SDR, otherwise the fitting must be counter bored to a depth of 1 1/2 to 2 inches with a trailing tapered transition of 33-45 degrees. In instances where the maximum counter bore shoulder height is no greater than the maximum allowable single bead width (see Tables as applicable), a trailing tapered transition is preferred, but not necessary. Actual fitting end wall thickness measurements shall be made for fabricated or mitered fittings to verify the fitting dimension is no more than one SDR larger than the pipe size. The minimum wall thickness for the pipe size shall be used as the basis of comparison. Fittings, due to their size or configuration, that cannot be counter bored shall have pre-bored and tapered pup piece bonded onto the fitting prior to installation in the piping system. Fitting configurations that deviate from these requirments shall be reviewed and dispositioned by project engineering on an item by item basis.
5. If necessary, use the lifting roller (on machines that have a lifting roller) to help straighten the pipe long enough to get it clamped in the jaws.
6. Position the facer betweem the two ends of pipe.
7. Face the pipe until no visible gap exists
8. Remove facer.
9. Bring the two ends of pipe together at fusion pressure to make sure they don't slip in the clamp jaws. If slippage occurs, the pipe will have to be reloaded in the jaws and facing repeated until no slippage occurs.

Document No. HDPE 1

FREITAG-WEINHARDT, INC.

Bonding Procedure: (continued)

10. Move the pipe ends together and visually check for alignment. There shall not be any visible gap between the two pipe faces. The OD misalignment shall be less than 10% of the pipe wall thickness. The pipe clamps shall be adjusted as necessary until pipe ends are propely aligned. Pipe ends that are necked down and are difficult to align shall be cut off a minmum of 6 inches. Out of round pipe that cannot be aligned may be cut off from 6 to 24 inches prior to attempting realignment. **Caution-** The pipe shall not be contaminated by chain saw chain oil or direct impingement of the exhaust on gasoline powered chain saws (see last comment in above tools and equipment section).
11. Prior to final trimming, to control dust intrusion and to preclude rapid internal cooling of the pipe, insure open ends of the pipe are covered with a cap or a plastic bag tapered to the pipe. Also clean the pipe ends prior to final trimming using clean rags or paper towell and a 70-98% solution of isoproply alcohol.
12. Clean both sides of the heater plate using paper towel or clean rags and isopropyl alcohol just prior to heating pipe.
13. The isopropyl alcohol shall be dispensed using a plastic bottle or hand spray bottles. Used rags or paper towels shall be discarded.
14. Once the pipe is aligned and final trimmed, insert the heater plate and heat the pipe in accordance with Table 1, 2 ,3 or 4 depending on the pipe size and fusion machine being used.
15. Once the heater is clear of the pipe ends, quickly move the carriage to the left (or together depending on the fusion machine being used) and bring the pipe ends together and hold them at fusion pressure through the fusion time and cool down times listed in Table 1,2 , 3 or 4. At any time after bonding, the pipe end covers may be removed to aid in cooling.
16. <u>When using a Fully Hydraulic Butt Fusion Machine</u> the operator shall monitor the pressure gauge to insure the machine maintains the fusion pressure according to the values and times listed in the approprite Table.
17. <u>When using a Manual Hydraulic Butt Fusion Machine</u> the operator shall monitor the pressure gauge and and maintain the fusion pressure according to the values and time listed in Table.
18. <u>When using a Mechanical Butt Fusion Machine</u> the operator shall bring the pressure/torque up the valve required and once achieved then the locking cam shall be engaged to hold the pressure for the time listed.
19. Once the pipe has been maintained under pressure for the minimum time indicated in the appropriate Table, and has cooled per table the clamps can be removed from the pipe
20. At this point the pipe may be handled very carefully insuring no stresses are induced on the competed bond. If pipe is to be rough handled, end pulled or lifted where the pipe bond area bends or is stretched, then the pipe must be additionally cooled in accordance with Figure 1.

Bonding Qualification Procedure:

1. When the Machine butt fusion technique is used for bonding HDPE pipe and fitting, destructive testing of trial samples shall be performed:
   * At the start of each shift, unless bonder has already been tested on previous shift.
   * When the ambient temperature changes more than 30 deg F.
   * Pipe Diameter Changes,
   * Or the pipe wall thickness changes.

Document No. HDPE 1

FREITAG-WEINHARDT, INC.

Bonding Qualification Procedure: (continued)

2. The primary destructive fusion bond test to be used shall be the bend strap test. The bend strap test shall be be prepared as follows:
   * A trial fusion bond shall be made and allowed to cool to ambient temperature;
   * A test strap that is at least 15 pipe wall thicknesses long on each side o the fused joing, and aobut 1-1/2 wall thicknesses wides shall be cut from the pipe;
   * The strap shall be bent across the root (root bend) so that both ends of the strap touch;
   * Any disbondment or cracking at the fusion bond is unacceptable.

   If failure occurs, fusion procedures and/or machine set-up shall be changed, and a new trial fusion bond and bent strap test speciman prepared and tested. Production fusion bonding shall not proceed until a test joint has passed the strap test. A test strap from thick wall may require considerable force to bend.

3. A continuous data recording system ("data-logger") shall be approved for substitution of portions of the required production testing. Production bend testing shall be mandatory (See Paragraph 2 above) when the continuous data recording system is not utilized. Seller shall submit detaild, including any forms, for approval by the Buyer. Approval for use of a continuous data recording system, in lieu of production bend testing, shall be based on acceptable output.

Shipping, Handling, Unloading and Storage of Pipe and Fittings:

During shipping, handling or storage, pipe and fittings shall be bundled or stacked in accordance with the pipe/fitting manufacturer's recommendations. Escessive bundling or stacking that results in bends, knicks, or uncorrectable ovality shall be rejected. Nylon straps shall be used to tie down loads during shipping. Wide web nylon slings and spreader bars shall be used during pipe handling. Chains, cables shall not be used for material handling. Cuts and gouges greater than 10% of the pipe wall thickness shall be cut out and discarded. Minor scuffing or scratching is acceptable.

Environmental Requirements:

Outside Temperature: 50F to 100F Method of Measurement: Thermometer

(Actual pipe temperature at the time of fusion, will indicate bonding procedure requirements such as heat soak time. Temperatures outside this range shall require special fusion temperature/heat soak time charts.)

Particulates: Indications of airborne/surface dust, grit, chemicals or other contaminants will require cleaning to maintain fusion equipment cleanliness and inparticular pipe and end face cleanliness prior to and during fusing activities.

Bonding Documentation:

1. At the beginning of every shift the fusion machine, facer unit and heaters shall be inspected in accordance with the maintenance checklist Form 1a or 1b as applicable. Items on the checklist that are not applicable to a given machine can be ignored and items missing shall be added.
2. At the beginning of each shift and at any time power is lost pr pipe size is changed, the heater plate shall be checked for proper heat level. Refer to Table 1, 2,3, or 4 for parameters applicable for the fusion machine being used.
3. The actual bonding parameters used for reach and every bond shall be documented.
4. HDPE Bonder Certification shall be documented.

Document No. HDPE 1

FREITAG-WEINHARDT, INC.

Bonder Qualification:

1. Every HDPE Bonder shall receive training on the use of the specific fusion machine and the bonding procedure, and shall perform at least one pipe to pipe bond on each fusion machine that they will be required to use. The field-welding engineer shall select the Bonder qualification pipe size, normally the larges pipe OD or within 25% of the largest pipe OD, to be bonded on a specific fusion machine. The Bonder must satisfactorily demonstrate his/her knowledge on the bonding procedure, the use of the specific fusion machine and make at least one pipe to pipe test bond. The test bond can either be cut out of the pipe and bend tested or the bonded pipe can be hydrotested.
2. The Bonder qualification test shall be documented on HDPE Bonder Certification Record (Test Strap Log) and shall include copies of Daily Bonding Report for the test bond.

Inspection:

1. Visual inspection shall include the following-
   - Proper ID of the item
   - Proper DR for pipe to fitting bonds (check actual wall thickness and fabricated or mitered fittings for possible counter boring)
   - Alignment of the item during fit up
   - Completed fusion bead width
   - Surface gouges, kinks, cuts or cracks
   - Evidence of mishandling
   - Documentation of the work in progress or completed
2. Visually inspect at least 5% of each Bonder's work. The fusion beads shall be within the minimum and maximum limits listed in the bonding procedure. All fusion beads shall be uniformly shaped and sized the full circumference of the bond.
3. Visually observe the Bonder perform a bond on approximately one of every 20 bonds. The Field Welding Engineer has the discretion to extend or reduce the inspection frequency based on past performance.
4. Bonds that are visually suspect or where it has been determined that the Bonder has not followed approved procedures shall require the bond to be cut out and three inside face bend back test performed. Should the bend back samples fail, further cut outs from other bonds from the same Bonder's work shall be made until all bend back tests pass.

Bonding Parameters:

Table 1: 2"-8" OD Pipe- McElroy Model 28 with Data Logger
Table 2: 8"-24" OD Pipe- McElroy Model 824 with Data Logger
Table 3: 1"-4" OD Pipe-McElroy Model Pitbull 314 - No Data Logger (Mechanical Bonding)

HDPE PIPE/FITTINGS BUTT FUSION BONDING PROCEDURE
HDPE-1

REVISION:2
DATE:7/6/09

FORM1a-HYDRAULIC BONDING EQUIPMENT MAITENANCE CHECKLIST			
Daily Fusion Machine Checklist		**Date/Time:**	
Fusion Machine ID:		**Checker:**	
Item to Check	**Satisfactory**	**Needs Repair**	**Repair comment**
1. Fusion Machine is clean			
2. Hydraulic Reservoir is filled to correct level.			
3. Hydraulic gauges are calibrated.			
4. Hydraulic cylinders are free of leaks, scratches, or gouges.			
5. All pivot points lubricated(jaws, front axle)			
6. All hydraulic hoses free of leaks and in good condition.			
7. All hardware is with unit.(inserts, pins, etc.)			
8. Inserts fit and pin properly.			
9. All rest buttons are on facer.			
10. Rest buttons are on inner movable and inner fixed jaw.			
11. Pipe lift and roller lubricated and in good condition.			
12. Brake functions properly.			
13. Jaws are aligned properly.			
14. Power cord and plug in good condition.			
15. Spare fuses in electric control panel.			
16.All hydraulic valves and pressure reducing valves function.			
17. All nuts and bolts are tight.			
18. Generator in good condition and voltage output correct.			
19. All wiring in good condition and functions properly.			
Daily Facer Unit Maintenance Checklist		**Face Unit ID:**	
Item to Check	**Satisfactory**	**Needs Repair**	**Repair comment**
1. Facer motor rotates the facer properly.			
2. Facer is secure to support arms and in alignment with jaws.			
3. Facer hydraulic cylinder travel is adjusted correctly.			
4. Cutting blades are sharp and properly positioned.			
5. Facer is clean, free of dirt, oil, grease, etc.			
Item to Check	**Satisfactory**	**Needs Repair**	**Repair comment**
1. Verify cord and plug are in good condition.			
2. Verify heater surface is clean and in good condition.			
3. Verify heater is secured to support arms and in alignment with jaws.			
4. Verify heater hydraulic cylinder travel is adjusted correctly.			
5. Verify the thermometer is in good working order.			
6. Test temp. controller by allowing heater to cycle 4 times.			
7. Surface temperature of heater shall be checked with a pyrometer at the start of each shift, when pipe size changes during the shift, and whenever power is lost to the heater. Test 4 spots at (12,3. 6 and 9 O' clock) on each side of heater in the area of contact for each pipe size being welded.			
8. Pyrometer calibration verified at the start of each shift using a standard Pyrometer/Calibrator			
9.Check receptacles for damage.

FORM 1b – MECHANICAL BONDING EQUIPMENT MAINTENANCE CHECKLIST

Daily Fusion Machine Maintenance Checklist:

Date/Time: _____ / _____

Fusion Machine ID: _____ Checker: _____

Item to Check	Satisfactory	Needs Repair	Repair Comment
1. Unit- Machine is clean			
2. Unit- Clamp knob bearings lubricated and moves freely			
3. Unit- Moveable jaw lubricated and moves freely			
4. Unit- Locking cam works properly			
5. Unit- Guide rods are not damaged			
6. Unit- Clamping jaw and insert grooves are clean			
7. Unit- Spring clips work properly			
8. Unit- All nuts and bolts are tight			
9. Unit- Lever handles are with unit			
10. Unit- Torque wrench adapter available and in good condition			
11. Unit- Torque wrench is available, calibrated and in good condition			
12. Chassis- Brake and unit lockdown clamps are adjusted properly			
13. Chassis- Outrigger adjusting screws work freely			
14. Chassis- All nuts and bolts tight			

Daily Facer Unit Maintenance Checklist:

Facer Unit ID: _____

Item to Check	Satisfactory	Needs Repair	Repair Comment
1. Facer motor rotates the facer properly			
2. Facer is secure to support arms and in alignment with jaws			
3. Facer hydraulic cylinder travel is adjusted correctly			
4. Cutting blades are sharp and properly positioned			
5. Facer is clean, free of dirt, oil, grease, etc.			

Daily Heater Maintenance Checklist:

Heater Plate ID: _____

Item to Check	Satisfactory	Needs Repair	Repair Comment
1. Verify cord and plug are in good condition			
2. Verify heater surface is clean and in good condition			
3. Verify heater is secured to support arms and in alignment with jaws			
4. Verify heater hydraulic cylinder travel is adjusted correctly			
5. Verify thermometer is in good working order			
6. Test temp controller by allowing heater to cycle 4 times			
7. Surface Temperature of heater shall be checked with a pyrometer at the start of each shift, when pipe sizes change during the shift and whenever power is lost to the heater. Test 4 spots (at 12, 3, 6 and 9 O'clock) on each side of heater in the area of contact for each pipe size being welded.			
8. Pyrometer calibration verified at the start of every shift using a standard Pyrometer / Calibrator.			
9. Check receptacles for damage			

Daily Data Logger Maintenance Checklist:

Data Logger ID: _____

Item to Check	Satisfactory	Needs Repair	Repair Comment
1. Condition of wiring and unit is properly functioning			
2. Verify Output coincide with Maintenance Outputs above.

REF: Calibration of Trimble 5603 DR 200 SN# 63320778

Dear Mr. Massmann,

Please note that the above unit has been calibrated to meet with the factory specified tolerances for this unit. The summary of the tolerances is given below. If you require any further details please feel free to call us.

Prism Mode accuracy (STD)	= 0.007 ft ± 2ppm (2mm ± 2 ppm)
Prism Mode accuracy (D- bar)	= 0.003 ft ± 1ppm (1mm ± 1 ppm)
DR Mode accuracy <200 m	= 0.007 ft ± 2ppm (2mm ± 2 ppm)
Angle accuracy	= 3" σ based on DIN 18723

Yours sincerely

Farshad Behbahani
Repair Center Manager-Technology Solutions

The American Association for Laboratory Accreditation

World Class Accreditation

Accredited DoD ELAP Laboratory

A2LA has accredited

ARDL, INC.

Mount Vernon, IL

for technical competence in the field of

Environmental Testing

In recognition of the successful completion of the A2LA evaluation process that includes an assessment of the laboratory's compliance with ISO/IEC 17025:2005, the 2003 NELAC Chapter 5 Standard, and the requirements of the Department of Defense Environmental Laboratory Accreditation Program (DoD ELAP) as detailed in the current DoD Quality System Manual for Environmental Laboratories (QSM); accreditation is granted to this laboratory to perform recognized EPA methods as defined on the associated A2LA Environmental Scope of Accreditation. This accreditation demonstrates technical competence for this defined scope and the operation of a laboratory quality management system (*refer to joint ISO-ILAC-IAF Communiqué dated 8 January 2009*).

Presented this 14th day of November 2011.

President & CEO
For the Accreditation Council
Certificate Number 3115.01
Valid to March 31, 2013

For the tests or types of tests to which this accreditation applies, please refer to the laboratory's Environmental Scope of Accreditation.

STATE OF ILLINOIS

ENVIRONMENTAL PROTECTION AGENCY
NELAP - RECOGNIZED
ENVIRONMENTAL LABORATORY ACCREDITATION

is hereby granted to

ARDL, INC.

400 AVIATION DRIVE, P.O. BOX 1566

MT. VERNON, IL 62864

NELAP ACCREDITED
ACCREDITATION NUMBER #100308

According to the Illinois Administrative Code, Title 35, Subtitle A, Chapter II, Part 186, ACCREDITATION OF LABORATORIES FOR DRINKING WATER, WASTEWATER AND HAZARDOUS WASTES ANALYSIS, the State of Illinois formally recognizes that this laboratory is technically competent to perform the environmental analyses listed on the scope of accreditation detailed below.

The laboratory agrees to perform all analyses listed on this scope of accreditation according to the Part 186 requirements and acknowledges that continued accreditation is dependent on successful ongoing compliance with the applicable requirements of Part 186. Please contact the Illinois EPA Environmental Laboratory Accreditation Program (IL ELAP) to verify the laboratory's scope of accreditation and accreditation status. Accreditation by the State of Illinois is not an endorsement or a guarantee of validity of the data generated by the laboratory.

Gary Germann
Manager
Environmental Laboratory Accreditation Program

Janet Cruse
Accreditation Officer
Environmental Laboratory Accreditation Program

Certificate No.: 002869
Expiration Date: 04/30/2012
Issued On: 01/25/2012

STATE OF ILLINOIS

ENVIRONMENTAL PROTECTION AGENCY
NELAP - RECOGNIZED
ENVIRONMENTAL LABORATORY ACCREDITATION

is hereby granted to

TEKLAB, INCORPORATED
5445 HORSESHOE LAKE RD.
COLLINSVILLE, IL 62234

NELAP ACCREDITED
ACCREDITATION NUMBER #100226

According to the Illinois Administrative Code, Title 35, Subtitle A, Chapter II, Part 186, ACCREDITATION OF LABORATORIES FOR DRINKING WATER, WASTEWATER AND HAZARDOUS WASTES ANALYSIS, the State of Illinois formally recognizes that this laboratory is technically competent to perform the environmental analyses listed on the scope of accreditation detailed below.

The laboratory agrees to perform all analyses listed on this scope of accreditation according to the Part 186 requirements and acknowledges that continued accreditation is dependent on successful ongoing compliance with the applicable requirements of Part 186. Please contact the Illinois EPA Environmental Laboratory Accreditation Program (IL ELAP) to verify the laboratory's scope of accreditation and accreditation status. Accreditation by the State of Illinois is not an endorsement or a guarantee of validity of the data generated by the laboratory.

Celeste M. Crowley
Acting Manager
Environmental Laboratory Accreditation Program

John South
Accreditation Officer
Environmental Laboratory Accreditation Program

Certificate No.: 003000
Expiration Date: 01/31/2013
Issued On: 10/18/2012

State of Illinois
Environmental Protection Agency

Certificate No.: 003000

Awards the Certificate of Approval

Teklab, Incorporated
5445 Horseshoe Lake Rd.
Collinsville, IL 62234

RE: Medina Valley Cogen, LLC
Meredosia Energy Center
Ash Pond Closures

Mr. Buscher,

I am pleased to inform you that Medina Valley Cogen, LLC has completed closure of the inactive Fly Ash and Bottom Ash Ponds at Meredosia Power Station. The closure project was deemed substantially complete December 5, 2018 in accordance with the Closure Plan approved by IEPA on March 8, 2017.

Enclosed are two copies of the Construction Quality Assurance (CQA) Report and Certification dated January 18, 2019, as required by Title 35, Part 840, Subpart A, Section 840.134. Please note that the Post-Closure Care Plan was submitted previously and approved by IEPA as part of the Closure Plan.

In accordance with Section 840.144, Annual Reports are due no later than March 28 of each year during the closure and throughout the post-closure care period. Ameren plans to submit an annual report containing groundwater monitoring data and any closure or post-closure activities after December 5, 2018.

If you have any questions or comments regarding this submittal, please contact me at (314) 957-3202 or at mwagstaff@ameren.com.

Sincerely,

Michael J. Wagstaff, P.E.
Consulting Engineer
On behalf of Medina Valley Cogen, LLC

RE: Construction Quality Assurance Report
Closure of the Bottom Ash Pond and Fly Ash Pond
Meredosia Power Station
800 South Washington Street
Meredosia, Morgan County, Illinois
Geotechnology Project Number: J024917.04

Dear Mr. Wagstaff:

Attached is the Construction Quality Assurance report for the referenced site. This report is documentation of the activities associated with the closure of the Bottom Ash Pond and the Fly Ash Pond at the Meredosia Power Station in Meredosia, Morgan County, Illinois performed through December 5, 2018. Site activities ceased on December 5, 2018 after reaching substantial completion. Final punch-list activities will be performed after the conclusion of winter weather and will be summarized in an addendum letter.

If you have any questions or comments regarding the attached information, please contact the undersigned at (314) 997-7440.

Very truly yours,

GEOTECHNOLOGY, INC.

Anna M. Saindon, P.E., Ph.D.

1.0 PROJECT BACKGROUND

Geotechnology, Inc. prepared this Construction Quality Assurance (CQA) report for the Bottom Ash Pond and Fly Ash Pond closure at the Meredosia Power Station in Meredosia, Morgan County, Illinois. The CQA report was prepared in general accordance with the Coal Combustion Residual (CCR) surface impoundment closure guidance of 35 Illinois Administrative Code (IAC) 840.146 entitled Site-Specific Closures of Coal Combustion Waste Surface Impoundments Subpart A: Closure of Ash Pond D, Hutsonville Power Station Construction Quality Assurance Program.

The Meredosia Power Station is located in the floodplain east of the Illinois River, south of Meredosia in Morgan County, Illinois, which is located in west-central Illinois. The Meredosia Power Station ash ponds are located in the south half of Section 21 and the north half of Section 28, T.16N, R.13W. The plant generated electricity from 1948 until February 2012. A third ash pond referred to as the "Old Ash Pond" was previously closed, and will not be further discussed in this report. The Bottom Ash Pond and Fly Ash Pond were constructed of native materials. A site overview with key feature locations is provided on Figure 1.

The Bottom Ash Pond was constructed in 1972 with a design surface area of 11 acres, a height of 24 feet and a volume of approximately 90 acre-feet. The Bottom Ash Pond reportedly received low-volume wastewater, bottom ash, and storm water runoff. The site operates under NPDES Permit IL0000116 Outfall 003 for the Bottom Ash Pond.

The Fly Ash Pond was constructed in 1968. The Fly Ash Pond has a surface area of 34 acres, a height of 24 feet and a volume of approximately 500 acre-feet. The Fly Ash Pond reportedly received fly ash, low-volume wastewater, and storm water runoff. The site operates under NPDES Permit IL0000116 Outfall 004 for the Fly Ash Pond. A Fly Ash Stockpile formerly located southeast of the Fly Ash Pond was clean closed as part of closure activities.

Clean closure activities for the Bottom Ash Pond generally consisted of CCR material removal, backfill to design grade with soil fill, construction of surface water control structures, and vegetation. A berm with CCR materials was closed-in-place in order to provide access to a river dock on the site. Closure activities for the berm generally consisted of placement, grading, and compaction of bottom ash and soil fill to design grade and installation of a ClosureTurf system consisting of 40-mil high density polyethylene (HDPE) MicroSpike geomembrane, a synthetic turf geotextile, and sand infill. ArmorFill was placed in the sand infill.

Closure activities for the Fly Ash Pond included placement of CCR materials excavated from the Bottom Ash Pond and the Fly Ash Stockpile, grading and compacting the subgrade to design slopes, construction of surface water control structures, and installation of a ClosureTurf system consisting of 40-mil MicroSpike HDPE geomembrane, a synthetic turf geotextile, and sand infill. ArmorFill will be placed in the sand infill in the stormwater ditches at the perimeter of the Fly Ash Pond in the spring of 2019.

2.0 CLEAN CLOSURE ACTIVITIES

2.1 CCR Removal Activities

CCR was removed from the Bottom Ash Pond and the Fly Ash Stockpile to facilitate clean closure of these areas. The berm in the Bottom Ash Pond was excluded from clean closure activities and is discussed later in this report. CCR removal at the Bottom Ash Pond began on March 12, 2018 and concluded on May 23, 2018. CCR removal at the Fly Ash Stockpile began on June 12, 2018 and concluded on July 11, 2018. A CQA representative periodically observed the CCR removal activities to assess the extent of CCR removal. CCR removed from the Bottom Ash Pond and the Fly Ash Stockpile was placed in the Fly Ash Pond. The CQA Certifications by the CQA Officer are provided in Appendix B. After CCR removal and CQA Officer approval, the areas were brought to final grade, stormwater controls were installed, and the areas were vegetated.

2.2 Coal Pile

The Coal Pile was used to store coal for use at the power plant during operation. The excess coal stored in the Coal Pile after the power plant operation ceased was removed prior to the beginning of this project. Residual coal spoils were present in the coal yard after removal activities were performed. Approximately two feet of soil and residual coal spoils were removed from the Coal Pile and a runoff area southwest of the Coal Pile. The residual coal materials and mixed soils were placed in the Fly Ash Pond. The CQA Certifications by the CQA Officer are provided in Appendix B.

2.3 Survey of Final Grade

The finished grade of the Bottom Ash Pond, the Coal Pile, and the Fly Ash Stockpile was surveyed by a licensed surveyor for a final as-built drawing. The results of the survey are illustrated and summarized on Figure 2.

2.4 Surface Water Management

Surface water management structures in the Bottom Ash Pond, the Coal Pile, and the Fly Ash Stockpile, including ditches and outfalls, were built in accordance with the design and approved modifications thereof.

2.5 Vegetation

After the Bottom Ash Pond, the Coal Pile, and the Fly Ash Stockpile were brought to final grade, they were fertilized and seeded using synthetic mats and straw to establish vegetation.

3.0 SUBGRADE PREPARATION

Subgrade preparation at the Bottom Ash Pond Berm began on June 5, 2018 and was completed on June 29, 2018. Subgrade preparation at the Fly Ash Pond began on May 7, 2018 and was completed on August 14, 2018.

Subgrade preparation activities at the Bottom Ash Pond Berm generally consisted of placement and compaction of fill soils in approximately 12-inch lifts, performing compaction testing, and surveying the final subgrade elevations.

Subgrade preparation activities at the Fly Ash Pond generally consisted of placing CCR material excavated from the Bottom Ash Pond and the Fly Ash Stockpile, placing residual coal spoils and mixed soils from the Coal Pile, grading the CCR materials placed in the Fly Ash Pond, compacting the top 12-inches of subgrade material, performing compaction testing, and surveying the final subgrade elevations. In addition, the prepared subgrade was visually assessed by the CQA Officer to observe that the surface was relatively smooth and free of deleterious materials (i.e. jagged, irregularly-shaped protrusions) that could damage the geomembrane.

3.1 Laboratory Testing

Two soil fill bulk samples and four CCR bulk samples were collected and submitted to the Geotechnology soil laboratory for standard Proctor moisture-density relationship testing. The laboratory testing results are summarized and presented in Appendix C.

One pre-qualification sample was collected of off-site backfill soils to be used as backfill in the Bottom Ash Pond (outside the berm area) and in the Fly Ash Stockpile. Additional conformance samples were collected for every 25,000 cubic yards of backfill brought onto the site. The laboratory testing results are summarized and presented in Appendix C.

3.2 Subgrade Compaction

Moisture/density tests were performed on each 12-inch lift of soil fill placed at the Bottom Ash Pond Berm and on the upper 12 inches of the Fly Ash Pond subgrade. The moisture/density results were compared to the standard Proctor moisture-density relationship laboratory testing data to assess the compaction. The project specifications require the subgrade to be compacted to 90 percent of the maximum standard Proctor dry density. Areas of failed moisture/density tests were re-compacted and re-tested as needed. Based on the laboratory and field testing results, the subgrade was compacted in general conformance with the CQA plan. The field tests are summarized in Table 1 (Bottom Ash Pond Berm) and Table 2 (Fly Ash Pond), and field reports with results are provided in Appendix C.

In addition to moisture/density testing, the Fly Ash Pond and the Bottom Ash Pond Berm subgrade were proof rolled using an 84-inch Sakai smooth drum roller under the observation of a CQA Representative to visually confirm firmness and stability of fill prior to placement of HDPE geomembrane.

Compaction of backfill materials at the Bottom Ash Pond (outside of the berm area) was performed using an 84-inch Sakai smooth drum roller. A proof roll of each lift using the smooth drum roller was used to confirm compaction of the Bottom Ash Pond backfill materials.

3.3 Survey of Final Grade

The finished grade of the Fly Ash Pond was surveyed by a licensed surveyor prior to installation of the geomembrane. The results of the survey are illustrated and summarized on Figure 2.

4.0 HDPE GEOMEMBRANE

40-mil HDPE MicroSpike geomembrane placement at the Bottom Ash Pond Berm began on August 6, 2018 and was completed on August 16, 2018.

40-mil HDPE MicroSpike geomembrane placement at the Fly Ash Pond began on August 17, 2018 and was completed on October 30, 2018.

Site activities ceased on December 5, 2018 after reaching substantial completion. Final punch-list activities will be performed after the conclusion of winter weather and will be summarized in an addendum letter.

Final punch-list activities are not required at the Bottom Ash Pond Berm. Final punch-list activities at the Fly Ash Pond include minor repair to the HDPE geomembrane.

4.1 Prequalification Testing

The geomembrane manufacturer, Agru America, Inc., supplied an inventory list of the 40-mil HDPE MicroSpike geomembrane rolls to the owner and the CQA Officer. The geomembrane manufacturer submitted samples from the prequalification rolls to an independent geosynthetics laboratory for verification of selected manufacturer's guaranteed properties (presented in Appendix D). On each geomembrane roll selected for sampling, a 2-foot long sample was collected along the entire width of the roll.

In addition, the manufacturer submitted documentation that the materials supplied were tested for the parameters listed in the manufacturers list of guaranteed properties at the required testing frequency. The results of the testing, including identification of tested rolls, were submitted to the CQA Officer for review. The manufacturer certified that all tested rolls met the manufacturer's guaranteed properties in accordance with the specified testing frequency rate (Appendix D).

Geomembrane prequalification testing was completed prior to delivery. Copies of the testing results are provided in Appendix D.

4.2 Installer Certification of Placement Surface

The geomembrane installer's inspection and acceptance of the prepared subgrade surface as suitable for the geomembrane installation is documented through Certificates of Acceptance (Appendix F). Certificates of Acceptance were provided to the CQA Officer each day for the area covered by geomembrane that day.

4.3 Seam Overlap Testing

The geomembrane installer arranged the geomembrane panels in an orientation to reduce the number of field seams. Within the geomembrane footprint, seam overlaps were field measured by the geomembrane installer to verify that the required 3 inches of overlap was met for each seam. Seam overlaps were generally "shingled" in the direction of the downslope. The CQA Officer and field representatives made independent measurements of the seam overlaps for additional verification.

4.4 Non-Destructive Testing

The geomembrane installer performed non-destructive testing of seams at the frequency specified in the CQA Plan. The seams were non-destructively tested over the full-length using a vacuum test unit, air pressure test, or other methods (i.e., spark testing for geomembrane boots around penetrations for pipeline supports and electric pole guy wires) approved by the CQA Officer. Vacuum testing and air pressure testing procedures are presented in Sections 4.4.1 and 4.4.2. Testing was completed as the seaming progressed. The CQA Officer and field representatives observed the non-destructive testing performed by the geomembrane installer. The geomembrane installer submitted all non-destructive field-testing results to the CQA Officer (Appendix D).

4.4.1 Air Pressure Testing (Double Fusion Welds)

Double fusion welders were typically used to fuse two panels of geomembrane together. Air pressure testing procedures for double fusion welds follow.

The air pressure test equipment included:

- Air pump (manual or motor driven) or air compressor equipped with pressure gauge capable of generating and sustaining a pressure of 25 to 30 pounds per square inch (psi) and mounted on a cushion to protect the geomembrane,
- Rubber hose with fittings and connections, and
- Sharp hollow needle with pressure gauge.

The air pressure test procedure was as follows:

1. Both ends of the seam to be tested were sealed.
2. A needle was inserted into the tunnel created by the fusion weld.
3. A protective cushion was inserted between the air pump and the geomembrane.
4. The air pump was energized to a pressure between 25 psi and 30 psi. The valve was closed, and the pressure was sustained for a minimum of five minutes.
5. If loss of pressure exceeded 3 psi or did not stabilize, the leaking area was located, then repaired and retested until passing test results were obtained.

6. At the conclusion of a passing air pressure test, the opposite end of the seam was slit and the subsequent drop in pressure was observed. Our observation of the pressure drop indicated that the seam passed.
7. The needle was removed. An extrusion-welded repair is required at each air test penetration.

4.4.2 Vacuum Testing (Extrusion Welds)

Extrusion welds were typically used for repairs and protrusions through the geomembrane. Vacuum testing procedures for extrusion welds follow.

The vacuum test equipment included:

- Vacuum box assembly consisting of a rigid housing with a transparent viewing window, soft neoprene gasket attached to the bottom, port hole or valve assembly and a vacuum gauge;
- Vacuum tank and pump assembly equipped with a pressure controller and pipe connections;
- Rubber pressure or vacuum hose with fittings and connections;
- Bucket; and
- Soapy solution.

The vacuum test procedure was as follows:

1. The vacuum pump was energized and tank pressure was adjusted to approximately 10 inches of mercury.
2. A strip of geomembrane approximately 12 inches wide by 48 inches long (an area larger than the coverage of the vacuum box) was wetted with the soapy solution.
3. The box was placed over the wetted area.
4. The bleed valve was closed and the vacuum valve opened.
5. A leak tight seal was verified.
6. The geomembrane was observed for at least ten seconds through the viewing window for the presence of soap bubbles.
7. When bubbles were not observed after 10 seconds, the vacuum valve was closed, and the bleed valve opened. The box was moved to the next adjoining area, and the process was repeated.
8. All areas where soap bubbles appeared were marked, repaired, and retested until passing test results were obtained.

4.4.3 Spark Testing (Extrusion Welds at Penetrations)

The spark test equipment included:

- An electrically conductive tape or wire placed beneath the seam prior to welding;
- A hand-held holiday spark tester; and
- A conductive wand that generates a high voltage.

The spark test procedure was as follows:

1. Note: Care should be taken if flammable gases may be present in the area of testing.
2. Place the electrically conductive tape or wire beneath the seam prior to welding.
3. A trial seam containing a con-welded segment shall be subject to a visual calibration test to ensure that such a defect will be identified under the planned machine settings and procedures (i.e., exposed wire will cause a spark to occur).
4. Upon completion of the weld, enable the spark tester and hold approximately 1 inch above the weld, moving slowly over the entire length of the weld in accordance with ASTM 6365.
5. A spark indicates a hole in the seam. If there is no spark, the weld has a passing test.
6. Mark, repair, and retest areas where sparks occur.

4.5 Destructive Testing

Destructive seam tests were performed at randomly selected geomembrane locations as seaming work progressed. The purpose of the destructive seam tests was to evaluate seam strength. The CQA Officer or field representatives observed the field destructive testing performed by the geomembrane installer.

The geomembrane installer submitted the results of the field destructive testing to the CQA Officer. An independent laboratory selected by the CQA Officer performed the destructive seam tests, consisting of peel and shear strength testing. The destructive seam testing results (field-testing and independent testing) are presented in Appendix D.

4.5.1 Testing Location and Frequency

The CQA Officer or field representative selected the destructive test locations where seam samples were removed for testing at a minimum frequency of one sample per 500 feet of seaming. This minimum frequency is the average taken throughout the entire area of placement and does not include retests. In addition, the CQA Officer or field representative could select additional destructive seam sample locations at their discretion. Destructive seam test locations include random seam testing and areas of possible defects (excess crystallinity, contamination, offset welds, equipment malfunction).

4.5.2 Sampling Procedures

Destructive seam samples were obtained as the seaming progressed. This method was used to facilitate approval of the destructive testing results prior to covering the geomembrane with the next layer of the closure construction. The CQA Officer or field representative assigned a number to each destructive seam sample and marked the location and seaming information on each collected sample. The destructive seam sample location was recorded on an as-built drawing. The locations of the destructive seam samples were repaired in accordance with the CQA Plan. The repairs were subsequently vacuum tested.

4.5.3 Field Testing

The geomembrane installer used a tensiometer to test four 1-inch wide strips from each sample identified for destructive testing. In accordance with the CQA Plan, the field destructive tests consisted of two samples for peel adhesion and two samples for shear strength. Upon successful field-testing, the remaining destructive seam samples were qualified to be submitted for independent laboratory testing.

4.5.4 Laboratory Testing

Samples that passed the prequalifying field tests were submitted to the independent testing laboratory. Ten specimens from each destructive seam sample were tested: five specimens were tested for shear strength and five specimens were tested for peel adhesion. Laboratory testing was in accordance with "Standard Test Method for Determining the Integrity of Nonreinforced Geomembrane Seams Produced Using Thermo-Fusion Methods" (ASTM D 6392). Acceptance was based on the criteria outlined in the Geosynthetic Research Institute (GRI) standard GRI GM19 as provided in the CQA Plan.

4.5.5 Procedures for Failed Destructive Tests

If a destructive sample did not pass either a field or a laboratory test, the geomembrane installer had two options to remediate the failure. The geomembrane installer could reconstruct and repair the seam between any two passed test locations completed by the same technician on the same day. Alternatively, the geomembrane installer could trace the welding path to an intermediate location at least 10 feet from the failed test in either direction and take additional destructive seam samples. The additional samples were then field-tested prior to sending to the independent laboratory for testing as previously described. If the additional samples passed, then the seam was reconstructed between the two passing samples. If the additional samples failed, then the process was repeated to establish the zone in which the seam should be reconstructed.

Reconstructed seams were bounded by two locations with passing laboratory destructive tests. In cases that exceeded 150 feet of reconstructed seam, a destructive sample was taken from the zone in the reconstructed area. The geomembrane installer documented the actions taken in conjunction with destructive test failures (Appendix D).

5.0 SYNTHETIC TURF GEOTEXTILE

Synthetic turf geotextile placement at the Bottom Ash Pond Berm began on August 14, 2018 and was completed on August 16, 2018.

Synthetic turf geotextile placement at the Fly Ash Pond began on August 17, 2018 and was completed on November 22, 2018.

Site activities ceased on December 5, 2018 after reaching substantial completion. Final punch-list activities will be performed after the conclusion of winter weather and will be summarized in a Final Construction Quality Assurance Report.

Final punch-list activities are not required at the Bottom Ash Pond Berm. Final punch-list activities at the Fly Ash Pond include minor repair of synthetic turf geotextile.

5.1 Prequalification Testing

The geomembrane manufacturer, Agru America, Inc., supplied an inventory list of the synthetic turf geotextile rolls to the owner and the CQA Officer. The synthetic turf geotextile manufacturer submitted samples from the roll list to an independent geosynthetics laboratory for verification of selected manufacturer's guaranteed properties (presented in Appendix E). On each synthetic turf geotextile roll selected for sampling, a 2-foot long sample was collected along the entire width of the roll.

In addition, the manufacturer submitted documentation that the materials supplied were tested for the parameters listed in the manufacturers list of guaranteed properties at the required testing frequency. The results of the testing, including identification of tested rolls, were submitted to the CQA Officer for review. The manufacturer certified that all tested rolls met the manufacturer's guaranteed properties in accordance with the specified testing frequency rate (Appendix E).

Synthetic turf geotextile prequalification testing was completed prior to delivery. Copies of the testing results are provided in Appendix E.

5.2 Field Installation Monitoring

The CQA Officer or designated representative observed the synthetic turf geotextile as it was placed and welded. The placed synthetic turf geotextile was observed for wrinkles that could fold over and, if observed, required repairs were performed in these areas. The synthetic turf geotextile welds were observed for locations where the surface synthetic turf was melted and, if observed, required repairs were performed in these areas.

6.0 SAND INFILL AND ARMORFILL

Sand infill placement at the Bottom Ash Pond Berm occurred on October 15-16, 2018. ArmorFill placement at the Bottom Ash Pond Berm occurred on October 17, 2018.

Sand infill placement at the Fly Ash Pond began on September 12, 2018 and was substantially completed on November 30, 2018.

One prequalification test and one conformance test were performed for the sand used as synthetic turf geotextile infill. The analytical testing results are provided and summarized in Appendix C.

The sand was spread and brushed into place on the synthetic turf geotextile with a thickness between 0.50 and 0.75 inch. The CQA Officer or designated representative measured the thickness of the sand using a caliper on an approximately 100-foot grid.

Site activities ceased on December 5, 2018 after reaching substantial completion. Final punch-list activities will be performed after the conclusion of winter weather and will be summarized in an addendum letter.

Final punch-list activities are not required at the Bottom Ash Pond Berm.

At the Fly Ash Pond, cold temperatures and wet weather prevented effective sand placement and brushing near the conclusion of site activities for winter weather. Final punch-list activities at the Fly Ash Pond include final brushing and thickness testing of sand on the eastern portion and the perimeter ditch of the Fly Ash Pond, as well as placement, brushing, and testing at HDPE geomembrane repair locations.

7.0 SURFACE WATER MANAGEMENT

Surface water control structures generally included ditch and outlet structures at the Fly Ash Pond perimeter, two outfalls from the site to the Illinois River, and other piping/rip-rap placements on the site. A final as-built survey was performed.

A copy of the surface water management structure survey data is provided on Figure 2. Additional information on the field observations are provided in Appendix A.

8.0 SIGNATURE

As Construction Quality Assurance (CQA) Officer for the construction of the closure of the Fly Ash Pond and the Bottom Ash Pond (from February 9, 2018 to December 5, 2018), located at the Ameren Energy Resources, Meredosia Power Station in Meredosia, Illinois, I am familiar with the plans and specifications, and the CQA Plan as prepared and approved for the project. Based on my observations and the observations of the Construction Quality Assurance Officers-In-Absentia (Steve Graham, Jessie Goodwin, Kyle Henson, and Alyssa Okom), it is my professional opinion that the construction was completed as described in this Report. CQA certification by the owner's representative does not relieve the contractor of their obligations to furnish all work in accordance with the contract.

Rosanna M. Saindon, P.E., Ph.D.
Illinois Licensed Professional Engineer
Project Manager
Geotechnology, Inc.

CERTIFICATION

Aquaterra Environmental Solutions, Inc. hereby certifies that the Final Cover Construction and Closure of Ash Ponds 2 & 3 at the Venice Power Station in Venice, Illinois were completed in general accordance with the *Closure Plan, Venice Power Plant Ash Ponds 2 & 3, Venice Power Plant, Venice, Illinois* dated February 4, 2011 (amended March 25, 2011) and the project design plans and specifications.

Prepared and Submitted By:

Matt Ballance, P.E.
Illinois Licensed Professional Engineer No. 062-053087
Aquaterra Environmental Solutions, Inc.

CONSTRUCTION QUALITY ASSURANCE AND CLOSURE REPORT
ASH PONDS 2 & 3 CLOSURE
VENICE POWER STATION
NOVEMBER 2012

1.0 INTRODUCTION

Aquaterra Environmental Solutions, Inc. (Aquaterra) was retained by Ameren Missouri (Ameren) to provide construction quality assurance (CQA) services during the construction of the final cover system and closure of Ash Ponds 2 & 3 at Ameren's Venice Power Station located in Venice, Illinois. Ash Ponds 2 & 3 occupied a total of approximately 59 acres. The Ash Ponds 2 & 3 final cover construction and closure included the following components:

- Clearing and grubbing of each ash pond surface.
- Coal ash grading in each pond to provide a firm subgrade for the geomembrane liner to be installed on top of the coal ash grading layer.
- Installation of 40-mil LLDPE geomembrane liner over both ponds.
- Installation of a double-sided geocomposite comprised of a high-density polyethylene (HDPE) geonet laminated between geotextile layers on top of the geomembrane liner in each pond.
- Placement of a 3-feet thick protective cover layer consisting of 2.5 feet of protective cover soil and 6 inches of topsoil in each pond.
- Installation of pump stations and the associated piping networks in each pond
- Abandonment of former ash pond discharge pipes and removal of related structures.

The Ash Ponds 2 & 3 final cover construction and closure were completed from August 2011 to April 2012. Aquaterra was responsible for observing and documenting the Ash Ponds 2 & 3 final cover construction activities including the installation of geosynthetic materials, protective soil cover, and storm water management controls. Aquaterra's CQA officer and CQA technicians verified the materials used during construction and construction procedures were in general compliance with the *Closure Plan, Venice Power Plant Ash Ponds 2 & 3, Venice Power Plant, Venice, Illinois* (Closure Plan) dated February 4, 2011 (amended March 25, 2011) and the project design plans and specifications. The Closure Plan was approved by the Illinois Environmental Protection Agency (IEPA) on May 6, 2011. A copy of the project as-built construction drawings is included in Appendix A.

The following sections describe the CQA and closure activities performed during construction and present the data generated documenting that the final cover construction and closure for Ash Ponds 2 & 3 were completed in general accordance with the Closure Plan and project design plans and specifications.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.0 SCOPE OF WORK

The following CQA activities were performed by Aquaterra during the final cover construction and closure of Ash Ponds 2 & 3 to verify completion in accordance with the Closure Plan and design plans and specifications:

- Observed the coal ash grading surface in each ash pond.
- Observed the construction of and reviewed the construction testing documentation provided by Ameren for the two new storm water pump stations in each pond.
- Observed the grouting and capping of the three former discharge pipes within the ash ponds that previously penetrated the Metro East Sanitary District (MESD) Levee for discharge to the Mississippi River.
- Observed the installation of the two new storm water pump station discharge pipes extending from each new pump station over the MESD Levee to the two new discharge points located along the east bank of the Mississippi River.
- Reviewed the geomembrane liner and geocomposite material conformance test results.
- Observed and documented the placement, seaming, and seam testing of the geomembrane liner installed on top of the coal ash grading layer in each pond.
- Reviewed the placement of geocomposite on top of the geomembrane liner in each pond.
- Observed the placement of the protective soil layer on top of the geocomposite in each ash pond.

The CQA personnel observed and photographed the final cover construction and closure activities for Ash Ponds 2 & 3. The construction photographs are included in Appendix B. The CQA personnel recorded daily CQA activities, construction observations, and field test results on daily field activities reports in accordance with the requirements outlined in the Closure Plan or per standard practices in the industry. Copies of these daily reports are included in Appendix C.

Electronic Filing: Received, Clerk's Office 09/28/2020

3.0 PROJECT ORGANIZATION

The following parties had substantial involvement during the final cover construction and closure for the Ash Ponds 2 & 3 at the Venice Power Station:

Owner
Ameren Missouri
3700 South Lindbergh Boulevard
St. Louis, Missouri 63127
Mr. Glenn Eberhart, P.E. – Project Manager
Mr. James Patrick – Construction Manager

Third Party CQA Firm
Aquaterra Environmental Solutions, Inc. (Aquaterra)
13 Executive Drive, Suite 1
Fairview Heights, Illinois 62208
Mr. Matt Ballance, P.E. – CQA Officer
Mr. Andy Limmer, P.G. – Senior Hydrogeologist
Mr. Michael J. Mueller, P.E. – Senior Project Manager
Mr. Collin Carson – CQA Technician
Mr. Randy Homburg – CQA Technician
Mr. Tim Pool – CQA Technician
Mr. Joshua Allen – CQA Technician

General Contractor
Plocher Construction Company, Inc.
2808 Thole-Plocher Road
Highland, Illinois 62249
Mr. Scott Plocher, P.E. - Owner
Mr. Mark Plocher – Site Superintendent

Geosynthetic Liner Installation Contractor
Geo-Synthetics, LLC (GSI)
2401 Pewaukee Road
Waukesha, Wisconsin 53188
Mr. Dave Schuster – Project Manager
Mr. Vince Sisoumphou – Superintendent
Mr. Tok Sisoumphou – Quality Control

Electronic Filing: Received, Clerk's Office 09/28/2020

Geosynthetic Testing Laboratory
TRI Environmental, Inc. (TRI)
9603 Bees Cave Road
Austin, Texas 78733
Ms. Jennifer Tenney – Project Manager

Earthwork Contractor
Bloomsdale Excavating Company, Inc. (Bloomsdale Excavating)
12211 State Route Y
Bloomsdale, Missouri 63627
Mr. Chuck Bauman – Site Superintendent

Soil Testing Laboratory
SCI Engineering, Inc.
650 Pierce Boulevard
O'Fallon, Illinois 62269
Mr. Theodore R. Reitz – Project Manager

Surveyor
Kuhlman design Group, Inc.
15 East Washington
Belleville, Illinois 62220
Mr. Michael Huber, P.L.S.
Mr. James P. Barganier, L.S.I.T.

3.1 CQA Officer-In-Absentia Designation

Mr. Matt Ballance, P.E. of Aquaterra, an Illinois-licensed professional engineer, served as the CQA officer during the construction of Ash Ponds 2 & 3 final cover. Mr. Collin Carson was the lead Aquaterra CQA technician. Mr. Randy Homburg, Mr. Tim Pool, and Mr. Josh Allen of Aquaterra additionally served as the CQA technicians during the completion of the Ash Ponds 2 & 3 final cover construction activities as-needed, based on the pace of final construction at the site. Mr. Ballance designated these individuals as the CQA officers-in-absentia to oversee the site construction activities during the times when Mr. Ballance was not on site. Mr. Ballance visited the site on a routine basis and during critical times of construction to observe the Ash Ponds 2 & 3 construction activities and progress. A copy of the written CQA officer-in-absentia designation is included in Appendix D.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.0 PROJECT MEETINGS

A series of pre-construction meetings were held during the initial stages of the Ash Ponds 2 & 3 final cover construction and closure project. The pre-construction meetings were held to introduce parties involved in the project, establish lines of communication, develop an understanding of the work including CQA and closure requirements, and review the project schedule and site safety procedures. In addition to the pre-construction meetings, weekly or biweekly construction meetings were held by Ameren and attended by the necessary CQA and contractor personnel. Informal daily meetings were held at the site to address scheduling, specific questions regarding daily work plans, weather conditions, etc. These meetings, where relevant, are summarized in the daily field activities reports included in Appendix C.

Electronic Filing: Received, Clerk's Office 09/28/2020

5.0 COAL ASH GRADING LAYER

Following the clearing and grubbing of vegetation from the two ash ponds' surfaces, the coal ash surface in each pond was graded by Bloomsdale Excavating operating as a subcontractor to Plocher Construction to the appropriate elevations and grades in accordance with the Closure Plan and design plans. Prior to the initiation of the placement of the geomembrane liner on top of the coal ash grading layer in each pond, the Aquaterra CQA technician observed the surface of the coal grading layer in each pond for soft or damaged areas. The coal ash grading layer surface in each pond was found to be acceptable to provide a firm base suitable for the geomembrane liner construction. The geomembrane installation contractor, GSI operating as a subcontractor to Plocher Construction, submitted a subgrade acceptance form for each day that geomembrane liner was installed, certifying in writing that the surface on which the geomembrane liner was to be installed was acceptable.

The necessary storm water management controls were implemented during grading of the coal ash layer in each pond to control ash contact water utilizing diversion berms and silt fences during construction. The coal ash grading layer was surveyed to confirm the coal ash grading layer surface in each pond was constructed to the appropriate elevations and grades. The coal ash grading layer in each pond was surveyed on a 100-foot by 100-foot grid. A copy of the certified survey data is included in Appendix E.

Electronic Filing: Received, Clerk's Office 09/28/2020

6.0 GEOMEMBRANE LINER

This section describes construction and CQA activities associated with the installation of the geomembrane liner. Approximately 59 total acres of 40-mil smooth LLDPE geomembrane liner was placed on the top of the final coal ash grading layers of Ash Ponds 2 & 3. Approximately 23 acres of 40-mil LLDPE geomembrane liner were placed over Ash Pond 2, and approximately 36 acres of 40-mil LLDPE geomembrane liner were placed over Ash Pond 3. The geomembrane liner was installed above the coal ash grading layer and attached to the sides of the exterior walls of each pump station, as well as on the vertical legs of each existing electric transmission tower in the ash pond areas to provide a geomembrane seal for these structures as indicated in the design plans. The CQA program for the geomembrane liner involved the following:

- Performing the inventory of the geomembrane liner material rolls.
- Confirming the conformance test results met industry specifications.
- Observing geomembrane liner placement and field seaming activities.
- Observing trial welds.
- Observing non-destructive and destructive testing.
- Reviewing destructive test results.
- Observing repairs.

6.1 Surface Acceptance

Before the geomembrane liner installation began, the CQA technician and the geomembrane contractor observed the soil surface over which the geomembrane liner would be placed and found the surface was generally free of irregularities that could damage the geomembrane liner. The geomembrane liner installation contractor accepted the surface for geomembrane liner installation. The geomembrane liner installation contractor's subgrade acceptance report is included in Appendix F.

6.2 Geomembrane Liner Material Inventory and Certifications

The CQA technician inventoried the geomembrane liner rolls delivered to the site. Specific geomembrane liner roll information was documented on a material inventory record form for each roll of geomembrane liner material. The geomembrane liner rolls were observed for possible damage and visible defects. The material inventory records are included in Appendix F.

In accordance with the requirements identified in the project specifications, the geomembrane liner manufacturer provided geomembrane liner material conformance test results for the 40-mil LLDPE geomembrane liner materials. The conformance test results listed on the quality control certificates were compared to the minimum standards listed in Geosynthetic Research Institute's Test Method GM19 (GRI GM 19). The geomembrane liner conformance test results met or exceeded the minimum standards. Copies of the geomembrane liner conformance test results are presented in Appendix F.

6.3 Panel Placement

The CQA technician observed the deployment of the geomembrane liner panels. GSI deployed panels to the required dimensions, assigning each panel an identification number as shown on the GSI geomembrane liner panel as-built drawing included in Appendix F. The panels were temporarily held in place with sand bags. The CQA technician observed the geomembrane liner surface as it was deployed and marked visible defects for repair. The geomembrane liner panel placement records are included in Appendix F.

6.4 Seaming and Testing

The geomembrane liner installation contractor seamed the panels together using fusion and extrusion welding techniques. Seaming was performed using procedures generally consistent with project requirements and standard geomembrane liner installation practices. The testing of the geomembrane liner field seams was completed as the seaming work progressed in the Ash Ponds 2 & 3 areas.

The date, welding machine number, operator, and time were recorded for each seam completed in the Seam/Non-Destructive Test Record. The seams were identified by adjacent panels; for example, a seam between panel P1 and P2 is identified as seam P1/P2. The seam/non-destructive testing logs are included in Appendix F.

6.4.1 Trial Weld Tests

Each welding technician and welding apparatus performed a trial weld each time the equipment was started. If technicians operating a particular piece of equipment changed or the welding apparatus was operated for more than five hours, an additional series of trial weld tests were performed. During each trial weld test, the technician welded an approximately 3-foot long seam in environmental conditions similar to those in which the actual seaming would be performed. Three test specimens were then cut from the trial weld and tested on site for seam strength in peel and shear for both fusion and extrusion welds. The CQA technician also visually observed the seam samples for evidence of overheating

Electronic Filing: Received, Clerk's Office 09/28/2020

or over-grinding. If welding equipment did not pass the trial weld test, the welding equipment was either adjusted by the seaming technician and retested or removed from service. The trial welds were performed at the beginning of each day, after each restart of the welding machine, and after five hours of operation. The trial weld records are included in Appendix F.

6.4.2 Non-Destructive Tests

To check for seam continuity, the geomembrane liner installation contractor conducted non-destructive tests on all seams, patches, and repairs as geomembrane installation progressed. For fusion-welded seams, air pressure testing was used to test the integrity of the seams. A pressure loss of more than 2 pounds per square inch (psi) over a 5-minute span indicated a failed test. The seams were then retested or repaired with extrusion welding. For extrusion-welded seams and other irregular areas, the seams were tested using the vacuum box method. The non-destructive tests met the minimum project requirements. The non-destructive test results are included in the seam/non-destructive testing records included in Appendix F.

6.4.3 Destructive Tests

Destructive testing, used to evaluate seam strength, consisted of performing testing in the field. One destructive seam test was completed for approximately every 500 linear feet of seam over the full length of the geomembrane seams. A total of 256 destructive seam samples were collected for testing (see the geomembrane panel as-built layout in Appendix F for the sample locations). Each destructive sample was divided into three sections: one was field-tested by the geomembrane contractor, one was sent to an off-site laboratory, TRI, for laboratory testing, and one was retained as an archive sample by Ameren. The destructive seam samples tested in the field met the minimum project requirements. The destructive seam samples tested in the laboratory by TRI passed the minimum project testing requirements. Two destructive seam tests, DS-177 and DS-183, initially failed the laboratory destructive testing. However, each failing seam sample location was repaired and re-sampled in accordance with GRI GM 19. The new replacement destructive seam tests, DS-177A and DS-177B, were collected 10-feet on either side of DS-177, and both DS-177A and DS-177B passed. The new replacement destructive seam tests, DS-183A and DS-183B, were collected 10-feet on either side of DS-183, and both DS-183A and DS-183B passed. The destructive seam field and laboratory testing results are included in Appendix F.

Electronic Filing: Received, Clerk's Office 09/28/2020

6.4.4 Defects and Repairs

The CQA technician monitored the geomembrane liner and seams for defects, holes, blisters, and signs of damage during installation. Portions of the geomembrane or seams that exhibited flaws, holes, or failed non-destructive tests were repaired. Repairs were completed using patching, extrusion welding, cap stripping, or other industry-standard means. Repairs were non-destructively tested using the vacuum box method and satisfied project requirements. The repair records are included in Appendix F.

Electronic Filing: Received, Clerk's Office 09/28/2020

7.0 GEOCOMPOSITE

This section describes construction and CQA activities associated with the installation of the geocomposite as part of the Ash Ponds 2 & 3 construction.

7.1 Geocomposite

GSI placed doubled-sided geocomposite panels on top of the geomembrane liner in Ash Ponds 2 & 3 to the required dimensions similar to the geomembrane panel layout. The double-sided geocomposite included a HDPE geonet laminated between two, 6-ounce/square yard geotextiles. The CQA program for the geocomposite installation included the following components:

- Accepting the geocomposite rolls as required by the based on a review of the manufacturer's certifications.
- Reviewing and accepting the geocomposite conformance test results.
- Observing the placement of the geocomposite panels.
- Observing plastic ties and sewing of the geocomposite panels.

7.1.1 Material Acceptance

The CQA technician inventoried the geocomposite rolls delivered to the Venice Power Station. Specific geocomposite roll information was documented on a material inventory record form for each roll of geocomposite material. The geocomposite rolls were examined for possible damage and visible defects. The material inventory records are included in Appendix F.

GSI provided manufacturer's quality control certificates for the two-sided geocomposite rolls delivered to the site. Copies of the certificates are included in Appendix F. The certification sheets were reviewed to verify the geocomposite rolls met the Closure Plan and design requirements and the manufacturer's published material specifications and standards.

7.1.2 Geocomposite Placement

The CQA technician observed the placement of the geocomposite panels over the top of the geomembrane liner without damaging the geomembrane. The CQA technician observed the geocomposite panel surfaces for damage as the geocomposite material was deployed. Damaged panels were repaired. The CQA technician observed the proper overlap of the panels, the connection of the geonet portion of the geocomposite together with plastic ties on a 5-foot spacing, and sewing the geotextile portion of the geocomposite together. The placement of the geocomposite was performed in general compliance with the project

Electronic Filing: Received, Clerk's Office 09/28/2020

specifications. The geocomposite was temporarily anchored with sand bags, until the final protective soil layer was constructed.

Electronic Filing: Received, Clerk's Office 09/28/2020

8.0 PROTECTIVE SOIL LAYER

The protective soil layer was placed on top of the geocomposite in Ash Ponds 2 & 3. The protective soil layer included 2.5 feet of protective cover soils and 6 inches of topsoil. The initial protective cover soil was generally placed in a minimum 12-inch thick lift across each pond using a low ground pressure bulldozer to avoid damage to the geocomposite. The CQA technician visually screened this material for roots, rocks, and other debris during placement. The CQA technician additionally visually screened the 6-inch thick topsoil layer for the same unacceptable materials. Eleven samples of the protective cover soil were randomly collected, and four samples of the vegetative topsoil material were collected for laboratory analysis in accordance with the project specifications. The soil sample analytical test results met the minimum project requirements. Copies of the soil sample test results are included in Appendix G. The 3-foot thick protective soil layer final survey results are included in Appendix E.

The entire 59-acre area of Ash Ponds 2 & 3 was seeded following the completion of the protective soil layer construction in general accordance with the Closure Plan and design specifications requirements. The work was completed by drilling a mixture of grass seeds (native grasses)into the final cover areas of each pond. The seeded areas were covered with straw.

Electronic Filing: Received, Clerk's Office 09/28/2020

9.0 STORM WATER MANAGEMENT CONTROLS

In accordance with the Closure Plan requirements, Aquaterra observed the construction of the new storm water management controls for Ash Ponds 2 & 3. The final cover systems for each pond were designed and constructed to drain inwardly from each pond's perimeter to a new storm water pump station constructed in each pond. Each storm water pump station included a duplex wet well pump system installed in each pump station well vault. The pump stations each were equipped with automatic controls and instrumentation to discharge storm water to new discharge points along the east bank of the Mississippi River. New gravel access roads were constructed to access each pump station location in accordance with the design plans.

The North Pump Station constructed in Ash Pond 2 included an 18-inch HDPE force main discharge pipe that extended over the MESD Levee to a new outfall discharge point along the river bank. The South Pump Station constructed in Ash Pond 3 included a 20-inch HDPE force main discharge pipe that extended over the MESD Levee to a new outfall discharge point along the river bank. The new pump station force mains were constructed in accordance with the design plans and included air relief valves. Each outfall discharge point included pipe outlets constructed and anchored on top of new concrete pads and surrounded by rip rap armor protection. Each pipe outfall was equipped with a pressure flap to open only when the storm water pump stations are in operation.

The new storm water pump stations, force main discharge pipes, and outfalls were constructed in accordance with the Closure Plan and the design plans and specifications. Aquaterra reviewed the construction documentation and test results for the pump stations and appurtenances provided by Ameren to confirm appropriate construction. The new storm water pump stations, force main piping, and outfalls were constructed to the appropriate elevations as indicated on the as-built construction drawings in Appendix A.

Prior to the start of the ash pond final cover construction, three former ash pond drain lines that had extended from the ash ponds and had penetrated the MESD Levee were filled with grout and capped in accordance with the design plans. Three former Illinois Department of Transportation (IDOT) underdrains located in the northeast corner of Ash Pond 2 were relocated as indicated on the design plans

Electronic Filing: Received, Clerk's Office 09/28/2020

10.0 GENERAL COMMENTS AND CONCLUSION

Aquaterra Environmental Solutions, Inc. and other firms as described in this report have performed testing and made observations to demonstrate that final cover construction and closure of Ash Ponds 2 & 3 at the Venice Power Station have been completed in general accordance with the *Closure Plan, Venice Power Plant Ash Ponds 2 & 3, Venice Power Plant, Venice, Illinois* and the project design plans and specifications.

Based upon our observations and the enclosed test results, Aquaterra concludes that the final cover construction and closure of Ash Ponds 2 & 3 at the Venice Power Station in Venice, Illinois were completed in general accordance with the *Closure Plan, Venice Power Plant Ash Ponds 2 & 3, Venice Power Plant, Venice, Illinois* and the project design plans and specifications.

This report has been prepared for the exclusive use by Ameren Missouri for the Venice Power Station for specific application to the project discussed and has been prepared in accordance with generally accepted engineering practices.

PROJECT COORDIINATE SYSTEM

THE PROJECT COORDINATE SYSTEM IS BASED UPON THE ILLINOIS DEPARTMENT OF TRANSPORTATION'S (IDOT'S) COORDINATE SYSTEM FOR THE MISSISSIPPI RIVER BRIDGE (MRB) PROJECT DUE TO THE PROXIMITY OF THAT PROJECT'S ACCESS ROAD 1 TO THE VENICE ASH PONDS. PER SHEET 14, ENTITLED "REFERENCE POINTS', OF IDOT'S "ILLINOIS APPROACH STRUCTURE FOR THE NEW I-70 MISSISSIPPI RIVER BRIDGE", THE MRB COORDINATE SYSTEM IS BASED UPON THE UNIVERSAL TRANSVERSE MERCATOR (UTM) SYSTEM (ZONE 15 NORTH) MODIFIED BY A PROJECTION FACTOR OF 0.999660620 AND CONVERTED TO UNITS OF US SURVEY FEET (1 METER = 2.38083333 US SURVEY FEET). THE UTM COORDINATES OF THE BENCHMARK TO WHICH THE PROJECTION FACTOR WAS APPLIED ARE:

4280127.66 NORTH
748201.64 EAST

THIS BENCHMARK IS LOCATED WITHIN THE CONCRETE MEDIAN ON THE EAST SIDE OF ILLINOIS ROUTE 3 (ST. CLAIR AVE) BETWEEN 2 RAILROAD BRIDGES APPROXIMATELY 0.1 MILE SOUTH OF 1ST STREET (IN FRONT OF 301 ST. CLAIR AVE) IN NATIONAL CITY, ILLINOIS. CONTROL POINTS HAVE BEEN LOCATED ON SITE AS SHOWN ON DRAWING 7824-Y-502160.

THE HORIZONTAL DATUM IS THE NORTH AMERICAN DATUM OF 1983 (NAD 83).

THE VERTICAL DATUM IS THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88).

CONTRACTOR NOTES:

1. CONSTRUCT 4-FOOT HIGH (ASH CONTACT WATER) DIVERSION BERM (SEE DETAIL 2, SHEET 7824-Y-202164) AND SILT FENCE (SEE DETAIL 1, SHEET 7824-Y-502164) PRIOR TO ANY LAND DISTURBING ACTIVITIES (INCLUDING CLEARING AND GRUBBING).
2. CLEAR AND GRUB ALL TREES AND BRUSH ON THE NORTHERN SLOPE OF ASH POND 2 AND THE SOUTHERN SLOPE OF ASH POND 3. TREES AND BRUSH SHALL BE CHIPPED AND STOCKPILED OR INCORPORATED INTO THE GEOMEMBRANE SUBGRADE SURFACE, AS DIRECTED BY THE COMPANY.
3. EXISTING VERTICAL VALVE STRUCTURES SHALL BE REMOVED IN THERE ENTIRETY. EXISTING HORIZONTAL PIPE WILL BE ABANDONED IN PLACE.
4. EXISTING HORIZONTAL PIPES PENETRATING THE LEVEE SHALL BE EXCAVATED TO ALLOW VISUAL INSPECTION AND VERIFICATION THAT THEY HAVE BEEN PROPERLY ABANDONED. IF THE PIPE IS FOUND NOT TO BE PLUGGED, IT SHALL BE FILLED WITH NON-SHRINK GROUT EXTENDING 50-FT BEYOND THE INTERIOR AND EXTERIOR TOE OF THE LEVEE IN ACCORDANCE WITH US ARMY CORPS OF ENGINEERS SPECIFICATIONS (SEE DETAIL 3, SHEET 7824-Y-502164).
5. ABANDON EXISTING DRAINAGE PIPE IN PLACE IN ACCORDANCE WITH THE TECHNICAL SPECIFICATIONS.
6. CONTRACTOR SHALL STORE AND STAGE EQUIPMENT IN A LOCATION APPROVED BY THE COMPANY.

CONTRACTOR NOTES:

1. THE GEOMEMBRANE SUBGRADE SHALL BE COMPRISED OF COAL ASH GRADED ACCORDING TO THE TOPOGRAPHY SHOWN.
2. PREPARE GEOMEMBRANE SUBGRADE LAYER TO BE SMOOTH, UNIFORM, AND FREE OF ALL SHARP OR ANGULAR OBJECTS INCLUDING STONES, PLANT ROOTS, MULCH, OR OTHER DEBRIS. SUBGRADE LAYER MUST BE APPROVED BY THE ENGINEER AND/OR COMPANY AND GEOMEMBRANE INSTALLER PRIOR TO INSTALLATION OF GEOMEMBRANE.
3. ASH CONTACT WATER GENERATED DURING GEOMEMBRANE SUBGRADE GRADING OPERATIONS AND GEOMEMBRANE INSTALLATION SHALL BE MANAGED IN ACCORDANCE WITH CONTRACTOR'S ASH CONTACT WATER MANAGEMENT PLAN. ASH CONTACT WATER MAY BE USED FOR DUST CONTROL PURPOSES IN AREAS WHERE ASH IS EXPOSED.
4. CONTRACTOR SHALL MAINTAIN 4-FT HIGH ASH CONTACT WATER CONTAINMENT BERM UNTIL GEOMEMBRANE INSTALLATION IS INSTALLED ON NORTH SLOPE. BERM MATERIAL SHALL BE REMOVED AND PLACED UNDER GEOMEMBRANE PRIOR TO COMPLETION OF THE GEOMEMBRANE.
5. CONTRACTOR SHALL ATTACH GEOMEMBRANE TO EXISTING CAHOKIA-ROXFORD 345kV TRANSMISSION LINE TOWER FOUNDATION PILES ACCORDING TO DETAIL 4, SHEET 7824-Y-502164.
6. CONTRACTOR SHALL FIELD VERIFY LOCATIONS OF AND EXTEND THE EXISTING IDOT UNDERDRAIN OUTLETS AS INDICATED IN DETAIL 5, SHEET 7824-Y-502164 AND IN ACCORDANCE WITH THE TECHNICAL SPECIFICATIONS. TRENCH SPOILS SHALL BE MANAGED WITHIN THE ASH PONDS AND BENEATH THE GEOSYNTHETIC COVER. DAYLIGHT EXTENSION AT BASE OF SLOPE IN THE NORTHEAST CORNER OF THE ASH PONDS OUTSIDE THE GEOSYNTHETIC COVER LIMITS.

CONTRACTOR NOTES:

1. PLACE 3 FEET OF COVER MATERIAL OVER THE GEOCOMPOSITE DRAINAGE LAYER. COVER MATERIAL FILL SHALL CONSIST OF 2 FEET 6 INCHES OF GENERAL FILL AND 6 INCHES OF TOPSOIL MEETING THE REQUIREMENTS OF THE TECHNICAL SPECIFICATIONS.
2. FILL PLACED ON THE GEOCOMPOSITE SHOULD BE FREE OF ANGULAR OR SHARP MATERIALS INCLUDING STONES, WOOD, CONCRETE OR METAL THAT COULD PUNCTURE OR TEAR THE GEOMEMBRANE DURING FILLING AND GRADING ACTIVITIES. COVER FILL WILL BE SUBJECT TO COMPANY AND/OR ENGINEER INSPECTION AND APPROVAL PRIOR TO USE.
3. LINE SWALES WITH SINGLE WIDTH OF EROSION MAT PER SPECIFICATIONS. CENTER MAT ON SWALE INVERT.
4. SEED AND MULCH ALL AREAS DISTURBED BY THE WORK IN ACCORDANCE WITH THE TECHNICAL SPECIFICATIONS.
5. MAINTAIN THE SILT FENCE ALONG THE NORTH SLOPE OF ASH POND 2 UNTIL FINAL STABILIZATION AND ACCEPTANCE OF WORK.

GENERAL NOTES:

1. ALL EQUIPMENT ASSOCIATED WITH THE 13.8KV DISTRIBUTION EXTENSION SHALL BE PROVIDED BY CONTRACTOR. REFER TO STANDARD DETAILS IN APPENDIX L OF THE SPECIFICATIONS FOR AMEREN SPEC'S AND DETAILS REFERENCED IN THE KEY NOTES.

KEY NOTES:

1. HANDHOLE SHALL BE LOCATED AT A MAXIMUM 500 FOOT SPACING.
2. CONDUIT SHALL BE INSTALLED ON TOP OF UNER AND FILL PROVIDED OVER THE TOP OF THE CONDUIT. CONDUIT TO BE 36" BELOW TOP OF FILL. REFER TO AMEREN SPEC 2.2.225 FOR 13.8KV UNDERGROUND CABLE REQUIREMENTS.

KEY NOTES:

3. EXISTING 13.8KV POLE SHALL HAVE A NEW CROSS ARM INSTALLED ON THE ~~NORTH~~ SOUTH SIDE OF THE POLE FOR A NEW FUSED CUTOUT SWITCH. PROVIDE NEW 15A FUSED CUTOUT SWITCH ON NEW CROSS ARM. THIS CUTOUT SWITCH SHALL BE USED FOR THE NEW TRANSFORMER FOR EACH PUMP STATION. PROVIDE JUMPER CABLES FROM EXISTING DEADEND TO EACH FUSED CUTOFF SWITCH. ROUTE RIGID METAL CONDUIT 15' UP POLE AND TRANSITION TO PVC CONDUIT. PVC CONDUIT SHALL BE ROUTED UP TO 3' BELOW LOCATION OF NEW CROSSARM. PROVIDE CONDUIT SUPPORTS AS REQUIRED. THIS CONDUIT SHALL BE INSTALLED ON EAST SIDE OF POLE BELOW NEW FUSED CUTOUT SWITCH. REFER TO UNDERGROUND ELECTRICAL TRANSITION DETAIL FOR UNDERGROUND INSTALLATION AND AMEREN DETAILS DS 04 00 41, DS 10 12 10, AND SPEC 18.

KEY NOTES:

4. DUCTBANK SHALL BE MINIMUM 19" WIDE BY 8" DEEP AND REINFORCED WITH 4000 PSI CONCRETE. REFER TO AMEREN SPEC 6 FOR ADDITIONAL REQUIREMENTS.

NORTH POND PUMP STATION LOWER PLAN

0 1' 2' 4' 8'

NORTH POND PUMP STATION UPPER PLAN

0 1' 2' 4' 8'

GENERAL NOTES:

1. DRAWINGS OF PUMPING STATION PIPING, PUMPS AND COVERS ARE DETAILED USING FLYGT EQUIPMENT.
2. STAINLESS STEEL CABLE FOR HOISTING PUMPS SHALL BE FASTENED TO COVER LID PER SPECIFICATIONS.
3. STATION PIPING, FITTINGS, AND VALVES SHALL BE AWWA C151 DUCTILE IRON, SPECIAL THICKNESS CLASS 53, CONFORMING TO SPECIFICATIONS.
4. CONTRACTOR INSTALLING PUMPS SHALL CHECK ALIGNMENT OF PUMPS AND GUIDE BARS WITH CASTINGS BEFORE ASSEMBLY TO ALLOW PROPER REMOVAL OF PUMPS.
5. EXACT DIMENSIONS AND POSITION OF PUMP ACCESS HATCH IN TOP SLAB SHALL BE PROVIDED BY PUMP MANUFACTURER TO ALLOW PROPER POSITIONING OF GUIDE RAILS AND UNRESTRICTED REMOVAL OF PUMPS.
6. ALL ANCHORS, BOLTS AND FABRICATED METAL WITHIN WET WELL SHALL BE STAINLESS STEEL.
7. SEE SPECIFICATIONS FOR CONDUIT, FITTINGS, AND INSTALLATION REQUIREMENTS OF ELECTRICAL WORK BETWEEN WET WELL AND MOTOR CONTROL PANEL. ALL ELECTRICAL WORK AND EQUIPMENT IN WETWELL AND HATCH OPENINGS SHALL BE RATED FOR A CLASS I, DIVISION 2, GROUP D LOCATION.
8. CONTRACTOR IS CAUTIONED THAT NOT ALL PIPING AND FITTINGS ARE SHOWN. CONTRACTOR SHALL FURNISH ALL PIPING AND FITTINGS REQUIRED TO COMPLETE THE INSTALLATION WITH NO ADDITIONAL COST TO OWNER.
9. PROVIDE ADDITIONAL REINFORCING AT OPENINGS IN WALLS AND SLABS PER DETAIL C (7824-Y-502174).

KEY NOTES:

1. PUMP ACCESS FLOOR DOOR.
2. VALVE VAULT ACCESS DOOR.
3. BLIND FLANGE WITH 2 1/2-INCH SCREWED HOLE AT INVERT OF DUCTILE IRON PIPE.
4. 10-INCH PLUG VALVE WITH EXTENDED STEM TO VALVE BOX IN TOP SLAB.
5. 10-INCH CHECK VALVE. LOCATE LEVER AND WEIGHT NORTH OF NORTH CHECK VALVE AND SOUTH OF SOUTH CHECK VALVE.
6. 18-INCH HDPE SDRII FORCE MAIN.
7. 2 1/2-INCH SOLENOID OPERATED BALL VALVE. POWER TO SOLENOID VALVE SHALL BE FROM PUMP STATION CONTROL PANEL.
8. INSTALL 4-INCH PIPE THROUGH WALL. SEAL ANNULAR SPACE WITH LINK SEAL ON BOTH INNER AND OUTER FACES.
9. VALVE BOX CAST IN TOP SLAB (TYP.). CONTRACTOR TO COORDINATE LOCATION OF VALVE BOXES DIRECTLY OVER OPERATING NUTS ON EXTENSION STEMS.
10. 10x18-INCH INCREASER.
11. 4-INCH DI DRAIN PIPE.
12. PRESSURE RELIEF VALVE NEAR CENTER OF WEST EXTERIOR WETWELL WALL, I.E. 414.00, SEE DETAIL E (7824-Y-502174). LEAVE OPENING IN CONCRETE FILLET FOR VALVE.
13. 4" PVC PERFORATED DRAIN PIPE W/GEOTEXTILE WRAP, TYPICAL, ALL AROUND WET WELL, I.E. 425.20, CONNECT TO DUCTILE IRON TEE AND PENETRATE THROUGH NORTH, EAST, AND SOUTH WET WELL WALLS AT THREE LOCATIONS, WITH DUCTILE IRON WALL PIPE, ALSO SEE TYPICAL WETWELL SECTION ON 7824-Y-502168.
14. CONNECT DUCTILE IRON PIPE TO HDPE PER DETAIL J (7824-Y-502174).
15. 4-INCH PLUG VALVE WITH STEM EXTENSION TO VALVE BOX IN TOP SLAB.
16. PORTABLE S.S. DAVIT CRANE W/PEDESTAL BASE (1000 LB. CAPACITY). LOCATE PER MFR. DIRECTION.
17. 4" DUCTILE IRON FLGxFLG VENT PIPING @ EL. 431.67, CENTER IN SOUTH WALL. PROVIDE 24 MESH S.S. SCREEN AND FOLLOWER FLANGE.
18. EMBEDDED GREY IRON FALL PROTECTION TIE-OFF ANCHOR WITH MINIMUM 5000 LB LOAD CAPACITY, PACIFIC MARINE & INDUSTRIAL MODEL PJ3490, 3 1/2" EMBED, MOUNT FLUSH WITH TOP SURFACE OF TOP SLAB, CENTER ON FLOOR DOOR IN NORTH AND SOUTH DIRECTION.
19. PROVIDE 1/2" TAPS, BALL VALVES AND REMOVABLE PIPE END CAP AS SHOWN FOR PRESSURE GAGE CONNECTIONS.

(3) 10-INCH PLUG VALVE.
(4) STAINLESS STEEL WIRE MESH GRIP (TYP. OF FLOAT, TRANSDUCER AND PUMP CABLES).
(5) 3/8-INCH STAINLESS STEEL HOOKS ATTACHED TO TOP OF WET WELL. ONE FOR EACH CABLE.
(6) INSULATED THROAT BUSHING (TYP.).
△2 (7) 1-INCH PVC COATED RIGID CONDUIT (TYP. FOR EACH FLOAT SUBMERSIBLE PRESSURE TRANSDUCER CABLE AND SOLENOID VALVE POWER CABLE).
(8) 2-INCH PVC COATED RIGID CONDUIT (TYP. FOR EACH PUMP CABLE).
(9) ANCHOR BOLTS PER MANUFACTURER'S RECOMMENDATIONS.
(10) SS CABLE.
(11) REMOVABLE FLOAT AND TRANSDUCER SUPPORTS (2) (SS CABLE AND PVC COATED WEIGHT).
(12) PRESSURE RELIEF VALVE NEAR CENTER OF WEST EXTERIOR WETWELL WALL, I.E. 414.00, SEE DETAIL E 7824-Y-502174. LEAVE OPENING IN CONCRETE FILLET FOR VALVE.
(13) 2x6 KEYWAY, TYPICAL EACH END OF ALL CONCRETE FILLETS.
(14) ALUMINUM GRATING TO HAVE 2 1/4 x 3/16" BEARING BARS SPACED 3 9/16" O.C.
(15) CONTINUOUS EMBEDDED ∠2 1/2" x 2 1/2" x 1/4" ALUMINUM GRATING SUPPORT ANGLE WITH STRAP ANCHORS @ MAX. 24" O.C.
(16) CONTINUOUS ∠2 1/2" x 2 1/2" x 1/4" ALUMINUM GRATING SUPPORT ANGLE FASTENED TO CONCRETE W/5/8" DIA. S.S. EXPANSION BOLTS @18" O.C.
(17) 2"x12" CONTINUOUS BLOCK OUT FOR SLAB BEARING.
(18) EXTEND STEM TO VALVE BOX IN TOP SLAB (TYP.).
(19) VALVE BOX (TYP.).
(20) 2 1/2-INCH SOLENOID CONTROLLED BALL VALVE THREADED INTO BLIND FLANGE AT INVERT OF DUCTILE IRON PIPE.
(21) SEAL ANNULAR SPACE AROUND 4-INCH DRAIN PIPE WITH LINK SEAL ON BOTH INNER AND OUTER FACES.
(22) HDPE TO DUCTILE IRON CONNECTION. SEE DETAIL J 7824-Y-502174.
(23) 4" POLYETHYLENE PERFORATED DRAIN PIPE W/GEOTEXTILE WRAP, TYPICAL ALL AROUND WET WELL. I.E. 425.20, CONNECT TO DUCTILE IRON TEE AND PENETRATE THROUGH NORTH, EAST, AND SOUTH WET WELL WALLS AT THREE LOCATIONS, WITH DUCTILE IRON WALL PIPE, ALSO SEE TYPICAL WETWELL SECTION ON 7824-Y-502168.
(24) 4" DUCTILE IRON FLGxFLG VENT PIPING ℄ EL. 431.67, CENTER IN SOUTH WALL. PROVIDE 24 MESH S.S. SCREEN AND FOLLOWER FLANGE.

SOUTH POND PUMP STATION LOWER PLAN

0 1' 2' 4' 8'

SOUTH POND PUMP STATION UPPER PLAN

0 1' 2' 4' 8'

GENERAL NOTES:

1. DRAWINGS OF PUMPING STATION PIPING, PUMPS AND COVERS ARE DETAILED USING FLYGT EQUIPMENT.
2. STAINLESS STEEL CABLE FOR HOISTING PUMPS SHALL BE FASTENED TO COVER LID PER SPECIFICATIONS.
3. STATION PIPING, FITTINGS, AND VALVES SHALL BE AWWA C151 DUCTILE IRON, SPECIAL THICKNESS CLASS 53, CONFORMING TO SPECIFICATIONS.
4. CONTRACTOR INSTALLING PUMPS SHALL CHECK ALIGNMENT OF PUMPS AND GUIDE BARS WITH CASTINGS BEFORE ASSEMBLY TO ALLOW PROPER REMOVAL OF PUMPS.
5. EXACT DIMENSIONS AND POSITION OF PUMP ACCESS HATCH IN TOP SLAB SHALL BE PROVIDED BY PUMP MANUFACTURER TO ALLOW PROPER POSITIONING OF GUIDE RAILS AND UNRESTRICTED REMOVAL OF PUMPS.
6. ALL ANCHORS, BOLTS AND FABRICATED METAL WITHIN WET WELL SHALL BE STAINLESS STEEL.
7. SEE SPECIFICATIONS FOR CONDUIT, FITTINGS, AND INSTALLATION REQUIREMENTS OF ELECTRICAL WORK BETWEEN WET WELL AND MOTOR CONTROL PANEL. ALL ELECTRICAL WORK AND EQUIPMENT IN WETWELL AND HATCH OPENINGS SHALL BE RATED FOR A CLASS I, DIVISION 2, GROUP D LOCATION.
8. CONTRACTOR IS CAUTIONED THAT NOT ALL PIPING AND FITTINGS ARE SHOWN. CONTRACTOR SHALL FURNISH ALL PIPING AND FITTINGS REQUIRED TO COMPLETE THE INSTALLATION WITH NO ADDITIONAL COST TO OWNER.
9. PROVIDE ADDITIONAL REINFORCING AT OPENINGS IN WALLS AND SLABS PER DETAIL C 7824-Y-502174.

KEY NOTES:

1. PUMP ACCESS FLOOR DOOR.
2. VALVE VAULT ACCESS DOOR.
3. BLIND FLANGE WITH 2 1/2-INCH SCREWED HOLE AT INVERT OF DUCTILE IRON PIPE.
4. 12-INCH PLUG VALVE WITH EXTENDED STEM TO VALVE BOX IN TOP SLAB.
5. 12-INCH CHECK VALVE. LOCATE LEVER AND WEIGHT NORTH OF NORTH CHECK VALVE AND SOUTH OF SOUTH CHECK VALVE.
6. 20-INCH HDPE SDR11 FORCE MAIN.
7. 2 1/2-INCH SOLENOID OPERATED BALL VALVE. POWER TO SOLENOID VALVE SHALL BE FROM PUMP STATION CONTROL PANEL.
8. INSTALL 4-INCH PIPE THROUGH WALL. SEAL ANNULAR SPACE WITH LINK SEAL ON BOTH INNER AND OUTER FACES.
9. VALVE BOX CAST IN TOP SLAB (TYP.). CONTRACTOR TO COORDINATE LOCATION OF VALVE BOXES DIRECTLY OVER OPERATING NUTS ON EXTENSION STEMS.
10. 12x20-INCH INCREASER.
11. 4-INCH DI DRAIN PIPE.
12. PRESSURE RELIEF VALVE NEAR CENTER OF WEST EXTERIOR WETWELL WALL, I.E. 414.00, SEE DETAIL E 7824-Y-502174. LEAVE OPENING IN CONCRETE FILLET FOR VALVE.
13. 4" PVC PERFORATED DRAIN PIPE W/GEOTEXTILE WRAP, TYPICAL ALL AROUND WET WELL, I.E. 425.20, CONNECT TO DUCTILE IRON TEE AND PENETRATE THROUGH NORTH, EAST, AND SOUTH WET WELL WALLS AT THREE LOCATIONS, WITH DUCTILE IRON WALL PIPE, ALSO SEE TYPICAL WETWELL SECTION ON 7824-Y-502168.
14. CONNECT DUCTILE IRON PIPE TO HDPE PER DETAIL J 7824-Y-502174.
15. 4-INCH PLUG VALVE WITH STEM EXTENSION TO VALVE BOX IN TOP SLAB.
16. PORTABLE S.S. DAVIT CRANE W/PEDESTAL BASE (1000 LB. CAPACITY). LOCATE PER MFR. DIRECTION.
17. 4" DUCTILE IRON FLGxFLG VENT PIPING @ EL. 431.67, CENTER IN SOUTH WALL. PROVIDE 24 MESH S.S. SCREEN AND FOLLOWER FLANGE.
18. EMBEDDED GREY IRON FALL PROTECTION TIE-OFF ANCHOR WITH MINIMUM 5000 LB LOAD CAPACITY, PACIFIC MARINE & INDUSTRIAL MODEL P3490, 3 1/2" EMBED, MOUNT FLUSH WITH TOP SURFACE OF TOP SLAB, CENTER ON FLOOR DOOR IN NORTH AND SOUTH DIRECTION.
19. PROVIDE 1/2" TAPS, BALL VALVES AND REMOVABLE PIPE END CAP AS SHOWN FOR PRESSURE GAGE CONNECTIONS.

Work Comments/Observations and Test Results
Met with Mark Plocher of Plocher Construction and went over schedule and plan of attack regarding the pipe grouting and the 40mil. LLDPE liner installation. After meeting with Mr. Plocher, Josh Allen and Collin Carson visted Pond 3 and documented the excavation of the existing discharge pipe located at the south end of the project site.

Work Comments/Observations and Test Results

Met with James Patrick and Mark Plocher at 0900 and they began to direct the grouting of the center pipe, located in the middle of both Ponds 2 & 3, from the west side. A plug was purchased to plug up the pipe because the valve would not close. 2 laborers assisted, 1 trackhoe operator dug around the pipe to create better access as well as 1 employee from Badger Daylilghting. An employee from Howard Concrete Pumping, Inc. was there to pump grout into the entire length of pipe, starting from the west side (Mississippi River) until it came out the east end. The plug was no longer necessary, instead a metal hatch was fabricated. It took 12 yards of grout to fill the entire length of pipe.

Work Comments/Observations and Test Results
Arrived on site at 0830. North pipe area was completely prepped and ready to be filled with grout. CSI was here as well as a Howard Concrete Pumping truck. In all 10 yards of grout were used to fill the north pipe, located in Pond 2. It was too dark to photograph the grout on the east side (Pond 2 side of levee), but I witnessed the grout flowing into east end from west end.

Work Comments/Observations and Test Results

Had 0730 meeting with Ameren group. Met GSI immedietaley thereafter and they began deploying. James Patrick wants survey markers where the acceptable subgrade meets the unacceptable. Seam 3-4 on the liner did not seam well due to the fly ash subgrade. The fly ash would roll up into the wedge and would deter it from moving forward, which in turn created "Burnouts." GSI began implementing a "Rub-sheet" which seperated the subgrade and the wedge from actually having direct contact with each other.

Tests Completed/Observed

Trial Welds
Air Testing

Work Comments/Observations and Test Results

Met with GSI at 0700 and they began the day by deploying geocomposite. GSI had to prepare an area because the dirt trucks arrived for the first time. The area to begin accepting dirt was located in the southeast section of the project site in Pond 3. KDG, the surveyors, certified more subgrade to the north. Winds became too strong after lunch. GSI bagged up and secured all FML that has already been deployed then focused on repairs and the deployment of geocomposite.

Work Comments/Observations and Test Results

Met with GSI at 0700 and they began the day by making repairs, air testing, and deploying geocomposite. Fill dirt continued to be placed on geocomposite throughout the entire day. Beginning at 1000 Bloomsdale & Plocher began excavating 5' deep around the pylons of the power transformer located on the east side and south of the north power transformer, located at panel 103. After lunch winds became strong, 20-30 mph north and the possibility of "blacking out," the south pond becmae impossible. GSI continued making repairs and deploying geocomposite. I sent destructs 96-149 to TRI Environmental.

GSI continued once again deploying geocomposite and making repairs. Fill dirt continues to be hauled in on areas that have been tested and covered with geocomposite. Construction of the pipeline that will discharge from the south pump station to the river, began on the west side of the levee on 10/6/11 and continued into today. This has been documented via photographs.

GSI worked in the rain unitl 1100, when it became too much to work in. Before 1100 geocomposite was deployed and a minimal amount of repairs were made. GSI did employ the use of a tent to shield the repairs from moisture, that then allowed them to make the repairs.

APPENDIX D

CQA OFFICER-IN-ABSENTIA DOCUMENTATION

CQA Officer-In-Absentia Designation
Ash Ponds 2 & 3 Closure
Venice Power Station

As the construction quality assurance (CQA) officer assigned to the completion of the final cover construction and closure of the Ash Ponds 2 & 3 at the Venice Power Station in Venice, Illinois, I assume full responsibility for the CQA services performed during the completion of this project. I will be absent at times from the project site during the completion of the ash pond closure construction.

During my absence from the site, I appoint Collin Carson, Randy Homburg, Tim Pool, and Josh Allen of Aquaterra to serve the CQA roles of project CQA technician and CQA Officer-in-Absentia to perform the required CQA services and oversee the project construction activities. These individuals are technically qualified and experienced to perform the CQA services. I assume responsibility for all inspections and reports completed by the CQA officer-in-absentia during the absence of the CQA officer.

Matt Ballance, P.E.
CQA Officer

Michael S. Huber, PLS — Date
Illinois PLS NO. 035.002622 EXP: 11/30/12

April 5, 2012

Scott Plocher
Plocher construction
2808 Thole Plocher Road, Highland, Il. 62249

Cc: Aquaterra – Environmental
Attn: Matthew Ballance

Kuhlmann Design Group, inc. on April 4, 2012 performed an as-built survey of the south Ash pond closure area at the Ameren Venice Power Plant. During the as-built survey of finish ground data, specific vertical datum at pre-determined horizontal positions were checked for vertical accuracy collected on April 3, 2012. The following is the data comparison by point number that was collected:

Point Number	Elev. 4-3-12	Elev. 4-4-12 (KDG	Diff.
288	435.38	435.41	-0.03
292	439.56	439.55	0.01
294	436.77	436.75	0.02
296	433.67	433.66	0.01

APPENDIX F

GEOMEMBRANE LINER AND GEOCOMPOSITE INSTALLATION DOCUMENTATION

Included in this Appendix:

- Geomembrane Liner Contractor's Subgrade Acceptance Report
- Geomembrane Liner Material Inventory Records
- Geomembrane Liner Conformance Test Results
- Geocomposite Conformance Test Results
- Geomembrane Liner Panel As-Built Drawing
- Geomembrane Liner Panel Placement Records
- Geomembrane Liner Trial Weld Records
- Geomembrane Liner Seam/Non-Destructive Testing Records
- Geomembrane Liner Additional Non-Destructive Test Records
- Geomembrane Liner Destructive Test Records
- Geomembrane Liner Destructive Laboratory Test Results
- Geomembrane Liner Repair Records

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOMEMBRANE LINER CONTRACTOR'S SUBGRADE ACCEPTANCE REPORT

Subgrade Surface Acceptance

Date: 9/12/2011

Project: AMEREN VENICE Superintendent: VINCE SISOUMPHOU

Project # 31045

Location: Venice, IL **Partial:** 1 **Final:** _____

This document only applies to the acceptability of surface conditions for installation of geosynthetic products. GSI does not accept responsibility for compaction, elevation or moisyure content, nor for the surface maintenance during deployment. Structural integrity of the subgrade and maintenance of these conditions are the responsibility of the owner or earthwork contrator.

FROM PANEL 1 TO PANELS 16 ON ASH POND #3.

For GEO-SYNTHETICS, INC.

VINCE SISOUMPHOU

For Owner / Contractor

Collin Carson

Acceptance Number: 1 Area Accepted 306,240 s.f. Total Area Accepted to date: 306,240 s.f.

Weld Lot Data Report

LOT IDENTIFICATION		RESIN INFORMATION	
Rod Lot Number	121004664	Resin Lot	CBE812100
Product Name	VFROD5MM	Resin Type	7104
Production Date	8/1/2011	Resin Vendor	Chevron Phillips

Physical Property	Test Method	Test Results
Carbon Content, %	ASTM D4218	2.22
Thickness, mil	ASTM D374*	189

APPROVED
D.G.
8/1/2011
QA

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOCOMPOSITE CONFORMANCE TEST RESULTS

SKAPS

September 30, 2011
Geo Synthetics LLC
2401 Pewaukee Rd
Waukesha, WI 53188

Ref. : Ameren Venice Plant, Venice, IL
Customer P.O. # 14926-01
Product : TN 350-2-6

We certify that the TN 350-2-6 drainage geocomposite, meets the project requirements as stated in the specifications. The properties listed in this section are:

Property	Test Method	Unit	Required Value	Qualifier
Geonet[3]				
Thickness	ASTM D 5199	mil	300	Minimum
Carbon Black	ASTM D 4218	%	2.0	Minimum
Tensile Strength	ASTM D 5035	lbs/in	75	Minimum
Melt Flow	ASTM D 1238[2]	g/10 min	1.0	Maximum
Density	ASTM D 1505	g/cm^3	0.94	Minimum
Composite				
Ply Adhesion	ASTM D 7005	lb/in	1.0	MARV[5]
Transmissivity[1]	ASTM D 4716	m^2/sec	6.0 x 10^{-3}	MARV
Geotextile[3 & 4]				
Fabric Weight	ASTM D 5261	oz/yd^2	6.0	MARV
Grab Strength	ASTM D 4632	lbs	160	MARV
Puncture Resistance	ASTM D 4833	lbs	90	MARV
Water Flow Rate	ASTM D 4491	gpm/ft^2	110	MARV
Permittivity	ASTM D 4491	sec^{-1}	1.50	MARV
Permeability	ASTM D 4491	cm/sec	0.3	MARV
AOS	ASTM D 4751	US Sieve	70	MARV
UV Resistance	ASTM D 4355	%/hrs	70/500	MARV

Notes:

1 Transmissivity measured using water at 21 ± 2 °C (70 ± 4 °F) with a gradient of 0.01 and a confining pressure of 1000 psf between ottawa sand & textured liner after 100 hours.
2 Condition 190/2.16
3 Geotextile and Geonet properties are prior to lamination.
4 Geotextile data is provided by the supplier.
5 MARV is statistically defined as mean minus two standard deviations and it is the value which is exceeded by 97.5% of all the test data.

Sincerely,
Nilay Patel

ASTM D 4716

Client:	Geo Synthetics LLC.	**Job #**	4417
Project:	Ameren Venice Plant, Venice, IL		
Product:	TN 350-2-6		

Test Configuration:

Test Information:

Boundary Conditions:	Ottawa Sand Geocomposite Textured Liner	**Normal Load:** **Gradient:** **Seating Time:** **Flow Direction:**	1000 0.01 100 hours MD

Test Results:

Roll No.	Pressure, psf	Gradient	Transmissivity, m^2/sec
			100 hours
44171010001	1000	0.01	6.45×10^{-3}

POLYETHYLENE RESIN CERTIFICATION

Customer Name : Geo Synthetics LLC
Project Name : Ameren Venice Plant, Venice, IL
Geocomposite Manufacturer : SKAPS Industries
Geocomposite Production Plant : Commerce, GA
Geocomposite Brand Name : TN 350-2-6

We, the Geonet Manufacturer, hereby certify the following for the material delivered to the above referenced project:

Resin Supplier	Resin Production Plant	Resin Brand Name	Resin Lot Number	Property	Test Method	Units	Resin Supplier Value	Tested Value*
Chevron Phillips Chemical Company	Chevron, TX	HDPE	CHVX890461	Density	ASTM D1505	gm / cc	0.9500	0.9506
				Melt flow Index	ASTM D1238[(a)]	gm / 10 min	0.32	0.32

(a) Condition 190/2.16
* Data from SKAPS Quality Control

571 Industrial Parkway, Commerce, GA 30529 Ph : 706-336-7000 Fax : 706-336-7007 Email : info@skaps.com

Electronic Filing: Received, Clerk's Office 09/28/2020

Product : TN 350-2-6
Project : Ameren Venice Plant, Venice, IL

We, the Geocomposite Manufacturer, hereby certify the following for the material delivered to the above referenced project :

GEOCOMP ROLL#	FABRIC ROLL#	WEIGHT oz/sq yd	MD TENSILE lbs.	XMD TENSILE lbs.	PUNCTURE lbs.	AOS us sieve	WATER-FLOW gpm/sq ft	PERM-ABL cm/sec	PERM-ITY sec^{-1}

SKAPS

September 30, 2011
Geo Synthetics LLC
2401 Pewaukee Rd
Waukesha, WI 53188

Ref. : Ameren Venice Plant, Venice, IL
Customer P.O. # 14926-01
Product : TN 350-2-6

We certify that the TN 350-2-6 drainage geocomposite, meets the project requirements as stated in the specifications. The properties listed in this section are:

Property	Test Method	Unit	Required Value	Qualifier
Geonet[3]				
Thickness	ASTM D 5199	mil	300	Minimum
Carbon Black	ASTM D 4218	%	2.0	Minimum
Tensile Strength	ASTM D 5035	lbs/in	75	Minimum
Melt Flow	ASTM D 1238[2]	g/10 min	1.0	Maximum
Density	ASTM D 1505	g/cm^3	0.94	Minimum
Composite				
Ply Adhesion	ASTM D 7005	lb/in	1.0	MARV[5]
Transmissivity[1]	ASTM D 4716	m^2/sec	6.0 x 10^{-3}	MARV
Geotextile[3 & 4]				
Fabric Weight	ASTM D 5261	oz/yd^2	6.0	MARV
Grab Strength	ASTM D 4632	lbs	160	MARV
Puncture Resistance	ASTM D 4833	lbs	90	MARV
Water Flow Rate	ASTM D 4491	gpm/ft^2	110	MARV
Permittivity	ASTM D 4491	sec^{-1}	1.50	MARV
Permeability	ASTM D 4491	cm/sec	0.3	MARV
AOS	ASTM D 4751	US Sieve	70	MARV
UV Resistance	ASTM D 4355	%/hrs	70/500	MARV

Notes:

1 Transmissivity measured using water at 21 ± 2 °C (70 ± 4 °F) with a gradient of 0.01 and a confining pressure of 1000 psf between ottawa sand & textured liner after 100 hours.
2 Condition 190/2.16
3 Geotextile and Geonet properties are prior to lamination.
4 Geotextile data is provided by the supplier.
5 MARV is statistically defined as mean minus two standard deviations and it is the value which is exceeded by 97.5% of all the test data.

Sincerely,
Nilay Patel
Nilay Patel
QA Manager

APPROVED 5 QA

ASTM D 4716

Client:	Geo Synthetics LLC.	**Job #**	4417
Project:	Ameren Venice Plant, Venice, IL		
Product:	TN 350-2-6		

Test Configuration:

12 X 12 Test Surface

Test Information:

Boundary Conditions:	Ottawa Sand Geocomposite Textured Liner	**Normal Load:** **Gradient:** **Seating Time:** **Flow Direction:**	1000 0.01 100 hours MD

Test Results:

Roll No.	Pressure, psf	Gradient	Transmissivity, m^2/sec 100 hours
44171010255	1000	0.01	6.34×10^{-3}

SKAPS

September 30, 2011
Geo Synthetics LLC
2401 Pewaukee Rd
Waukesha, WI 53188

Ref. : Ameren Venice Plant, Venice, IL
Customer P.O. # 14926-01
Product : TN 350-2-6

We certify that the TN 350-2-6 drainage geocomposite, meets the project requirements as stated in the specifications. The properties listed in this section are:

Property	Test Method	Unit	Required Value	Qualifier
Geonet[3]				
Thickness	ASTM D 5199	mil	300	Minimum
Carbon Black	ASTM D 4218	%	2.0	Minimum
Tensile Strength	ASTM D 5035	lbs/in	75	Minimum
Melt Flow	ASTM D 1238[2]	g/10 min	1.0	Maximum
Density	ASTM D 1505	g/cm^3	0.94	Minimum
Composite				
Ply Adhesion	ASTM D 7005	lb/in	1.0	MARV[5]
Transmissivity[1]	ASTM D 4716	m^2/sec	6.0 x 10^{-3}	MARV
Geotextile[3 & 4]				
Fabric Weight	ASTM D 5261	oz/yd^2	6.0	MARV
Grab Strength	ASTM D 4632	lbs	160	MARV
Puncture Resistance	ASTM D 4833	lbs	90	MARV
Water Flow Rate	ASTM D 4491	gpm/ft^2	110	MARV
Permittivity	ASTM D 4491	sec^{-1}	1.50	MARV
Permeability	ASTM D 4491	cm/sec	0.3	MARV
AOS	ASTM D 4751	US Sieve	70	MARV
UV Resistance	ASTM D 4355	%/hrs	70/500	MARV

Notes:

1 Transmissivity measured using water at 21 ± 2 °C (70 ± 4 °F) with a gradient of 0.01 and a confining pressure of 1000 psf between ottawa sand & textured liner after 100 hours.
2 Condition 190/2.16
3 Geotextile and Geonet properties are prior to lamination.
4 Geotextile data is provided by the supplier.
5 MARV is statistically defined as mean minus two standard deviations and it is the value which is exceeded by 97.5% of all the test data.

Sincerely,
Nilay Patel
Nilay Patel
QA Manager

APPROVED 5 QA

ASTM D 4716

Client:	Geo Synthetics LLC	**Job #**	4417
Project:	Ameren Venice Plant, Venice, IL		
Product:	TN 350-2-6		

Test Configuration:

Test Information:

Boundary Conditions:	Ottawa Sand Geocomposite Textured Liner	**Normal Load:** **Gradient:** **Seating Time:** **Flow Direction:**	1000 0.01 100 hours MD

Test Results:

Roll No.	Pressure, psf	Gradient	Transmissivity, m^2/sec
			100 hours
44171010510	1000	0.01	6.95×10^{-3}

Client Name: Ameren UE
Aquaterra Project Name: Fly Ash Closure CQA
Project Location: Venice, Illinois
Pond 3
Aquaterra Project Number: 4923.10

Specifications: 40 mil

	Wedge	Extrusion
Peel(P)	50	44
Shear(S)	60	60

Aquaterra CQA Technician: Collin Carson
Installing Company: GSI
QC Personnel: TOR

AQUATERRA

Electronic Filing: Received, Clerk's Office 09/28/2020

Trial Weld Record

Client Name: Ameren UE
Aquaterra Project Name: Fly Ash Closure CQA
Project Location: Venice, Illinois
Pond 3
Aquaterra Project Number: 4923.10

Specifications: 40 mil

	Wedge	Extrusion
Peel(P)	50	44
Shear(S)	60	60

Aquaterra CQA Technician: Tim Pool
Installing Company: GSI
QC Personnel: TOR

Trial Weld Record

Client Name: Ameren UE
Aquaterra Project Name: Fly Ash Closure CQA
Project Location: Venice, Illinois
Pond 3
Aquaterra Project Number: 4923.10

Specifications: 40 mil

	Wedge	Extrusion
Peel(P)	50	44
Shear(S)	60	60

Aquaterra CQA Technician: Collin Carson
Installing Company: GSI
QC Personnel:

Trial Weld Number	Date	Time	Weather	Seamer Initials	Machine Number	Machine Properties	Weld Type	Type of Material	Test Values lbs/inch						Pass/ Fail	Comments
