Contractor shall provide written notification to the SPOC of any material requiring an SDS that is brought onsite by Contractor in quantities in excess of that material's Superfund Amendments and Reauthorization Act (SARA) Threshold Planning Quantity. Such notification is required for SARA Tier II reporting purposes. Chemical of Interest Reporting (Appendix I) in this specification must be filled out and submitted to the SPOC.

4.7.9 Contractor shall ensure that hazardous chemicals or materials are properly contained, labeled and stored, and that employees are adequately trained to recognize, handle and use hazardous chemicals safely.

Small quantities (i.e., <10 gal.) of hazardous liquids, such as gasoline, diesel fuels or solvents, brought onto site shall be stored in properly labeled safety containers with flame arrestors and self-closing lids. All container labels must include contents information and display hazard symbols clearly on exterior of each container in accordance with NFPA 704M, OSHA 29CFR1910.1200 or other applicable standard.

4.8 Asbestos-Containing Material (ACM) and Lead

4.8.1 In structures built prior to 1981, thermal system insulation, sprayed-on surfacing, and vinyl or asbestos floor tile shall be presumed to be ACM.

- Non-ACM will be labeled as such or otherwise identified by the SPOC and communicated to Contractor.
- Areas containing abatement activities will have warning signs, be barricaded, and will have limited access.

4.8.2 Ameren S&H Management Instruction Asbestos Exposure Controls and Work Practices, ES-REG-203, specifies policies and procedures for contractors performing asbestos abatement work. Hardcopies may be requested from the SPOC.

Electronic Filing: Received, Clerk's Office 09/28/2020

Proposals for an ACM abatement project must designate:

- Scaffolding needs.
- Glove bag and containment areas, including remote decontamination areas. Remote decontamination areas require Ameren SPOC approval.
- Potable water and shower requirements and locations.
- Methods to protect scaffolding tubing from contamination after containment is removed.
- Methods to minimize non-ACM dust outside the containment areas.
- Methods to move ACM bags from containment areas to ACM receptacles.
- List of asbestos workers with copies of current training and state license.

4.8.3 Ameren S&H Lead Management Instruction, ES-REG-211, specifies policies and procedures for Contractors performing lead abatement work. Hardcopies may be requested from the SPOC.

4.9 Safety & Health Training Requirements

4.9.1 Documentation of OSHA training for Contractor craft workers and supervisors must be maintained onsite and made available to Ameren. Effective September 1, 2006, the minimum training standard is OSHA 10 for Contractor craft workers and OSHA 30 for Contractor supervisors.

4.9.2 Contractor will maintain documentation of S&H training on project and must provide requested documentation of training to Company. Contractor shall retain verification of satisfactory training for as long as required by law or six months after completion of contract, whichever is greater.

4.9.3 Job safety awareness meetings will be held with Company and applicable contractors on a frequency determined by Company. The meetings will address industrial safety issues from Contractor job safety reviews.

4.10 Safety & Health Surveys

4.10.1 The SPOC and Ameren S&H personnel will conduct periodic S&H surveys of the project. Any discrepancies will be reported to Contractor management for immediate correction.

4.10.2 These S&H surveys do not relieve Contractors of their responsibility to self-inspect their work and equipment and to conduct their work in a safe and environmentally compliant manner.

4.11 Reporting and Investigating Incidents/Accidents

4.11.1 Contractor shall make an immediate report by telephone to the SPOC of any accident involving injury, death, fire, spill, mishandling of oil, regulated/hazardous waste spill, or any other emergency.

4.11.2 In the event of an emergency, Company has authorized the Plant Shift Supervisor and the SPOC to act as emergency coordinators. Contractor shall proceed with appropriate emergency response measures as directed by Plant Shift Supervisor and the SPOC, and take full responsibility for clean-up and disposal of any wastes or materials.

4.11.3 Contractor shall indemnify Company for all related costs and liabilities.

4.11.4 Contractor shall submit a Monthly Contractor Accident Statistics Report (Attachment A10) by the second day of each month for the preceding month's activities.

4.11.5 Contractor shall investigate all types of events listed in above Item 1.4.11 Incident/Accident Reporting, whether they result in an injury or not, and provide the results of said investigation to Company. An accident investigation does not assign blame; it does determine how to eliminate similar accidents in the future. Company reserves the right to monitor Contractor's investigation, and Contractor shall provide the SPOC with all necessary information to all required Company personnel to perform this monitoring function.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.11.6 Ameren reserves the right to investigate any accidents that occur on its property or in completing work being performed by a Contractor's employee whether they result in an injury or not. Ameren will conduct further investigations for accidental environmental releases or spills, etc.

4.11.7 A signed Witness Statement (Attachment A2) must be completed by each witness providing factual observations.

4.11.8 An Incident/Accident Investigation Report (Attachment A1) must be submitted to the SPOC within 24 hours to document the investigation. Accident facts, causes, and corrective action shall be documented and communicated to employees through S&H meetings.

4.12 Certifications, Inspections, and Permits

4.12.1 Operations may require a Company permit. Such activities may include but are not limited to: hot work, confined space/vessel entry, excavations, asbestos abatement, lead abatement, etc. Contractor shall determine from the SPOC if any of Contractor's activities require a Company permit or Contractor permit.

4.12.2 Some states and local authorities require permits for activities such as: excavations, heavy lifts, asbestos/lead abatement, air permits, water permits, hazardous waste generation, etc.

4.12.3 Contractors shall be responsible to secure and comply with these permits, unless the SPOC has delegated this to others in writing.

4.12.4 A third-party-certified Competent Person shall make a thorough annual inspection of cranes and powered hoisting equipment. Cranes shall be inspected and have deficiencies corrected prior to being put into service. Documentation of crane inspections must be maintained onsite by Contractor.

- Crane hooks shall be inspected by a Competent Person prior to use. Rigging shall be inspected by a Competent Person before each shift. Defective components shall be removed from service immediately. Anti-Two-Block devices, that automatically disengage crane hoist/boom functions when the hook or block approaches the jib or boom tip, shall be used on all cranes.
- All outriggers on mobile cranes must be fully extended and fully deployed when crane is used to lift or support a load.
- If, due to configuration or physical location, all outriggers cannot be fully deployed, calculations must be made from the "on-rubber" section of the load chart. A certified crane specialist must have written calculations and lift instructions reviewed by Ameren. The SPOC may make an exception for light-weight, lift-and-carry operations.

4.12.5 Operators of forklifts, boom lifts, buses, and other mobile equipment must be trained and certified on the operation of the specific equipment.

4.12.6 Operators of cranes must be trained and certified by National Commission for Certification of Crane Operators (CCO), or Operating Engineers Certification Program (OECP). Crane operators must be qualified on each crane type and rating they operate.

4.12.7 Operators of cranes are responsible for completing the Crane Maintenance Safety Checklist (Attachment A16).

4.12.8 Operators of cranes are responsible for providing documentation to Ameren SPOC of required OSHA crane inspections.

4.12.9 Cranes shall not be used to hoist employees without Ameren SPOC approval. Cranes should not be used to hoist personnel except where the Contractor can demonstrate that the erection, use, and dismantling of conventional means of reaching the work area, such as a personnel hoist, ladder, stairways, aerial lift, elevating platform, or scaffold, would be more hazardous, or is not possible because of the project's structural design or worksite conditions.

4.12.10 A Competent Person shall design and a Competent Person shall erect scaffolding. Only the authorized scaffolding erector can make changes to scaffolding.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.12.11 A Competent Person must inspect and tag scaffolding prior to initial use, before each work shift, and after any event that could affect its structural integrity. Untagged scaffolds must not be used.

4.13 Critical Lifts

4.13.1 Critical Determination

Contractor shall submit a Critical Lift Plan for any critical lift. Ameren reserves the right to designate any lift as critical. A lift shall be designated as a critical lift if any one of the following conditions exists:

4.13.1.1 Lifting over 50 tons.

4.13.1.2 Lift exceeds 75% of the rated capacity of the crane.

4.13.1.3 Lift requires the use of more than one crane.

4.13.1.3.1 In no case shall a multiple crane lift be performed in excess of 75% of any one of the crane's individual load rated capacity at the planned radius.

4.13.1.4 Lifting a non-rigid object.

4.13.1.5 Lifting over equipment or material that could cause or result in a release of hazardous material to the environment.

4.13.1.6 The lifted item requires exceptional care in handling because it is being lifted above critical operating equipment or material and/or building structure.

4.13.1.7 The lifted item requires exceptional care in handling because of size, weight, close-tolerance installation, high susceptibility to damage or other unusual factor.

4.13.1.8 Lift performed in proximity of live electrical connections.

4.13.1.9 Lifting of personnel in baskets and/or personnel harnesses. This shall be conducted in accordance with OSHA Standard 29CFR 1926.1431.

4.13.1.10 Lifting of equipment by helicopter.

Any lifts proposed by the contractor that meet the above criteria or determined to be critical by the Project Engineer will be subject to a Critical Lift Plan. Examples of lifts that are generally considered critical are: boiler tube panels, feedwater heaters, conveyor systems, coolers and pump skids, turbines and generators.

4.13.2 Critical Lift Plan

Contractor shall provide a detailed lifting and rigging plan for all lifts identified as critical. All critical lifts will require a Professional Engineer's seal. Prior to executing lift, lift plans must be submitted to the Project Engineer, reviewed and accepted by a structural engineer in the POS Civil/Structural Group. Ameren will review submittals for general design features. Contractor is responsible for accuracy of calculations. Also prior to executing lift, any changes made in the field to the approved lift plan must be approved by the contractor's engineer and accepted by the Ameren POS Project and Structural engineers. A copy of the lift plan must be onsite during the lift and must have been reviewed with all personnel involved with the lift, including the Ameren Construction Supervisor. Ameren's Construction Supervisor shall be provided sufficient notice to allow him/her to witness the critical lift. A critical lift plan shall contain the following, as applicable:

4.13.2.1 Identify the items to be lifted.

4.13.2.2 Weight of the lifted item and total weight of the load (for mobile cranes, see the manufacturer's instructions regarding components and attachments that must be considered as part of the load).

Electronic Filing: Received, Clerk's Office 09/28/2020

4.13.2.3 Center of gravity location.

4.13.2.4 Documented step-by-step instructions.

4.13.2.5 Special precautions, if any (such as outrigger or track cribbing for mobile cranes).

4.13.2.6 Evaluation of hazards associated with the lift that include ground support, soil conditions, allowable soil bearing capacity, underground utilities that could be damaged or suddenly collapse, maximum permissible wind speed and any other physical obstruction.

4.13.2.7 A list of each piece of equipment (e.g., crane, hoist, fork truck), accessory, and rigging component (e.g., slings, shackles, spreader bars, yokes) to be used for the lift. (This list shall identify each piece of equipment by type and rated capacity).

4.13.2.8 Designated checkpoints, hold points and estimated instrument readings, as relevant, so that job progress can be checked against the plan.

4.13.2.9 Rigging sketch(es), which include the following:

- 4.13.2.9.1 Lift point identification
- 4.13.2.9.2 Method(s) of attachment
- 4.13.2.9.3 Load vectors
- 4.13.2.9.4 Sling angles
- 4.13.2.9.5 Accessories used
- 4.13.2.9.6 Other factors affecting the equipment capacity
- 4.13.2.9.7 Rated capacity of equipment in the configuration(s) in which it will be used. (For cranes, many factors affect rated capacity, including boom length, boom angle and work area.)
- 4.13.2.9.8 Percentage of the total weight of the lift to the rated capacity of the equipment in the configuration(s) in which it will be used (see above). Ameren best practices recommend limiting this percentage to less than 90% and shall not exceed 95%.
- 4.13.2.9.9 If rigging points are attached to existing structural steel, it is the responsibility of the contractor's engineer to confirm that the additional loads do not overstress the existing structure, and to design additional bracing/reinforcement if required. Supporting calculations sealed by a Missouri Professional Engineer shall be included with the critical lift plan.

4.13.2.10 A load-path sketch that shows the load path and height at key points in the job. (For lifts with mobile cranes, include the crane position(s) relative to the load and relative to surrounding obstructions.) Where appropriate, include floor-loading diagrams.

4.13.2.11 A sketch indicating lifting and travel speed limitations. (This may be noted on the load path sketch or on a separate sketch.)

4.13.2.12 A sign-off sheet to verify that all inspections/tests required by OSHA are current for all equipment and rigging.

4.13.2.13 The lift plan shall provide specific information for each lift when multiple items of varying weights and/or shapes are included in the lift plan unless an exception is approved by the Ameren structural engineer.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.13.2.14 With their bid proposal, Contractors shall submit a normal weather lay-down plan for each onsite lattice crane, wherein contractors specifically outline the manner in which the crane will be stored in normal weather conditions.

4.13.2.15 With their bid proposal, Contractors shall submit a severe weather lay-down plan for each onsite lattice crane, wherein contractors specifically outline the manner in which the crane will be stored in severe weather conditions.

4.13.2.16 Before construction begins, the selected Contractor shall meet with Ameren representatives and shall outline the means and methods of the Contractor's crane execution plan for each lattice crane expected to be utilized onsite. Execution plan shall include specifics about transition from normal to severe weather crane lay-down plans and critical wind speed for crane position. Cranes shall not be allowed onsite until after the crane execution plan(s) have been reviewed and approved by Ameren representatives.

4.13.2.17 Crane loading shall typically be based on 2,000 pounds per square foot ground pressure, unless known ground conditions dictate/allow otherwise. Ameren representatives shall review and approve planned crane ground loading.

4.13.2.18 When determining and setting load path barricade boundaries, Contractors shall include within the boundary the potential for dropping load during load swing (failed load path). All elevations affected per this potential 'failed load path' shall be barricaded.

4.14 Respiratory Protection

4.14.2 Contractors must provide a copy of their Respiratory Protection Program to the SPOC before they use respirators. The program must comply current Ameren, Federal, State and local requirements including OSHA 29CFR1910.134. The program must properly address the following:

- Respirator selection
- Respirator training and required test fit procedures
- Respirator cleaning, sanitizing, inspection and maintenance
- Respirator user's medical clearance
- Chemical cartridge change-out schedule when applicable.

4.15 S&H Adherence Policy

4.15.2 **Action Level One** – The SPOC will issue a written Notice of S&H Non-Compliance (Attachment A11) and Warning Letter for S&H Non-Compliance (Attachment A12) to Contractor's management and site S&H representative if Contractor fails to comply with an applicable S&H standard.

4.15.3 **Action Level Two** – The SPOC will issue a Written Notice of Temporary Job Suspension (Attachment A13) to Contractor if S&H non-compliance is not corrected by Action Level One, or if Contractor repeatedly fails to comply with applicable S&H regulations. The appropriate Ameren Manager and Contractor's Division Manager, or equivalent, must meet and agree on corrective actions acceptable to Company before Work may resume. Actions may include, but are not limited to:

- Removal of certain Contractor personnel from project.
- Alteration of Contractor's job procedures.
- Having Ameren implement corrective action and backcharge Contractor.

Contractor shall not resume Work until Ameren accepts the proposed corrective actions. Ameren will retain meeting minutes documenting the agreement.

4.15.4 **Action Level Three** – Ameren Management may terminate the contract for cause, if **Action Level One** and **Action Level Two** do not result in Contractor's S&H compliance.

GRINDER SAFETY PLAN

Grinder Guard and Handle Removal PRE-PLAN

Date:	**Job #:**
Customer/Site:	**Location of Work/Unit:**
Description of Task:	**Equipment Identification:**

SCOPE OF WORK AND SCHEDULE (Please list complete description of task)

HAZARD ASSESSMENT TO DETERMINE ALTERNATE TOOL

procedures require a pre-plan whenever personnel remove the guard and handle on a grinder.

Reason:

- Grinding wheel cannot access point of work with guard and handle attached due to narrow gap for welding.

Alternate Methods to Removing Guard and/or Handle:

- Rotary file and die grinder?
- Conical grind stone and pole grinder?
- Other?

SAFETY PRECAUTIONS

- ☐ Cutting wheel CANNOT be used while guard and handle are detached.
- ☐ Grinder must be unplugged when removing guard and handle and when re-attaching.
- ☐ Guard and handle are only to be removed for this specific point of work. All other grinding in the work area must have safety devices attached.
- ☐ Pre-plan will only apply until the weld depth improves to allow for standard grinding operation, i.e. all safety devices attached.
- ☐ Wear face shield and sealed eyewear.
- ☐ Maintain control of grinder at all times, use two hands when operating the grinder.
- ☐ Keep hands/fingers clear of upper portion of the grinder near the wheel.
- ☐ Be aware of body positioning.

AFFECTED PERSONNEL INVOLVED IN WORK MUST READ AND SIGN THIS PRE-PLAN

POWER OPERATIONS HOT WORK CHECKLIST *(EXAMPLE)*

1. DESCRIPTION – JR#

Location _____ Elevation _____
Work to be done: Welding _____ Brazing _____ Open Flame Cutting / Heating _____
Equipment _____

NOTE: Before authorizing welding, cutting, heating, and brazing, this checklist must be completed.

2. PRE-WORK INSPECTION

Hot Work shall not be performed in the following situations:

a. In areas not authorized by Management.

b. In sprinklered buildings while such protection is impaired, unless authorized by Management.

c. In the presence of explosive atmospheres or explosive atmospheres that may develop inside unclean or improperly prepared tanks, pipes or equipment.

d. In areas near the storage of large quantities of exposed, readily ignitable materials.

Prior to welding, cutting heating, and brazing (W/C/H/B), you shall perform these basic precautions:

a. Move the object to be W/C/H/B to an area free of hazards.

b. If the object to be W/C/H/B cannot readily be moved, then you shall remove all movable fire hazards within the vicinity to a safe place.

c. If the object to be W/C/H/B cannot be moved and if all the fire hazards within 35 feet cannot be removed (including cable trays), then, immovable fire hazards shall be shielded and a fire watch provided.

IF THESE BASIC PRECAUTIONS ARE NOT FOLLOWED, WELDING, CUTTING HEATING AND BRAZING SHALL NOT BE PERFORMED. COMPLETE CHECK LIST.

3. ADDITIONAL FIRE WATCH PROVISIONS

N/A	YES	NO		
			a.	Can more than a minor fire develop?
			b.	Are combustible materials closer than 35-ft. to the point of operations?
			c.	Are combustible materials more than 35-ft. but easily ignitable by sparks?
			d.	Do wall or floor openings with a 35-ft. radius expose combustible materials in adjacent areas, including concealed spaces in walls or floors?
			e.	Are combustible materials adjacent to the opposite side of metal partitions, walls, ceilings, or roofs and are they likely to be ignited by conduction or radiation?

NOTE: If you answered yes to any of the above, a fire watch is required. Complete checklist. All of the following conditions must be met, if applicable.

(continued on next page)

Electronic Filing: Received, Clerk's Office 09/28/2020

4. PRECAUTIONS

N/A	YES	NO		
			a.	A fire watch will be provided during and for 30 minutes following welding, cutting, heating and brazing.
			b.	The fire watch shall be supplied with a proper portable fire extinguisher in addition to installed operable plant equipment.
			c.	Cutting and welding equipment is in good condition.
			d.	Combustible materials are protected with covers, guards, or metal shields, or material is removed prior to start of work.
			e.	Nearby workers are suitably protected against heat, sparks, slag and flash.
			f.	Wall or floor openings are covered or enclosures provided. For elevated work, covers are suspended beneath to collect sparks or area below is free of combustibles.
			g.	Enclosed equipment is cleaned of all combustible material and purged of flammable vapors.
			h.	Ducts and /or conveyors are suitably protected or shutdown.
			i.	For work near walls, partitions, ceiling or roofs, proper precautions have been taken to prevent ignition of combustibles inside the barrier of adjacent areas.
			j.	For work on pipes or other metal in contact with combustible walls, partitions, ceilings, or roofs, precautions have been taken to prevent ignition by conduction of heat.
			k.	Other

DEFINITIONS

1. Combustible Material: Any material that, if in the form and under the conditions used, could ignite and burn.

2. Minor Fire: A fire which, if no action is taken to extinguish it, will self-extinguish (burn out), will not propagate (spread to other materials through the continuity of combustibles), and will not damage any permanent plant equipment.

WARNING LETTER OF SAFETY & HEALTH NON-COMPLIANCE

Project Name and Number _____

Your firm, _____, has been found to be in violation of your contract by non-compliance with applicable Federal, State, or Ameren S&H requirements.

On _____, in accordance with the Ameren S&H Adherence Policy, your representative, _____, was given a Notice of S&H Non-Compliance (copy attached). This notice specifies areas where your company does not comply with Federal, State, or Ameren S&H requirements, and requests that these items be corrected immediately. If they are not corrected, more stringent measures will be taken in accordance with Ameren S&H Adherence Policy.

Thank you for your prompt attention to this matter.

WRITTEN NOTICE OF TEMPORARY JOB SUSPENSION

Your company, _____, while working on the _____ project, has been notified of S&H performance deficiencies in accordance with Ameren's S&H Policy. Despite these written notifications requesting that immediate corrective action be taken to improve your S&H performance, improvement has not occurred.

Therefore, in accordance with Action Level Two of the Ameren S&H Adherence Policy, we are hereby notifying you that after securing your equipment, job activities on the project named above are to cease. Activities on this project may be resumed only after your company meets requirements set forth in the Ameren Adherence Policy.

CONTRACTOR'S SUBSTANCE ABUSE POLICY

Policy No. AUE-POL-000001, Rev. 0

1.0 INTRODUCTION

1.1 In an effort to provide a drug- and alcohol-free workplace, Ameren establishes the following policy for Contractors:

2.0 SCOPE

2.1 Working on an Ameren work site and being under the influence of drugs or alcohol creates safety risks for all personnel who work on our work sites.

2.2 The term Contractor refers to all non-Ameren personnel hired to perform a service for Ameren who will be on Ameren property and includes all Contractors, their subcontractors and all other non-Ameren persons who are employed by them with active badges for site access. Visitors and delivery drivers are excluded from these requirements.

2.3 This Policy supersedes GP-06-01, Contractor Substance Abuse Policy.

3.0 IMPLEMENTATION

3.1 Contractors shall establish and maintain a confidential drug and alcohol testing program for each of their employees assigned to work on Ameren property, which shall meet the following minimum requirements.

3.1.1 All employees of a Contractor who are assigned to an Ameren site shall be subject to Contractor's drug and alcohol testing program. Contractor's program shall prohibit employees from buying, selling, consuming, or distributing alcohol or drugs while working for Ameren or while on Ameren property. The program shall also prohibit Contractor employees from reporting to an Ameren site or being on Ameren property while under the influence of alcohol or drugs.

3.1.1.1 Contractor's program shall provide for drug testing for substances listed in Section 3.1.4 of this Policy under the following circumstances: pre-assignment testing; random testing; testing for reasonable cause based on observations by Ameren or Contractor supervisor; and testing after any accident or incident that involves injury to personnel or damage to property.

3.1.2 Contractor shall require pre-assignment drug testing, or will assure that each person who will be assigned to an Ameren location has been tested for drug use within the 120-day period immediately prior to the start of work on Ameren premises. Contractor shall provide written documentation from the testing authority to Ameren Construction Project Lead or Plant Station Point of Contact that its employees are either compliant or non-compliant with this Policy. Contractor employees, who are not in compliance with this Policy, will be subject to Section 3.1.6 of this Policy. To maintain confidentiality, Ameren will not accept actual test results. A previous random drug test or drug test conducted for another reason is sufficient to satisfy the pre-assignment testing requirement if test was conducted during the 120-day period prior to working on Ameren premises, and otherwise satisfies the drug testing requirement in Section 3.1.4 of this Policy. Contractor employees who have taken a pre-assignment drug test will be allowed to work pending test results for no more than 5 working days. Testing may be waived pending Ameren management approval for Contractor employees who are working less than 40 hours annually providing site labor.

3.1.2.1 In lieu of pre-assignment testing, Contractor may accept a certificate signed by Department of Health and Human Services (DHHS), Substance Abuse Mental Health Service Administration (SAMHSA) DHHS/SAMHSA-certified drug testing laboratory indicating the results of drug test performed within the 120-day period immediately prior to working on Ameren premises. Identification cards, which indicate employee's name and date of his/her most recent drug test, may also be accepted if they are traceable to the certification from the DHHS/SAMHSA -certified drug-testing laboratory, which performed the test, and are attested to by Contractor management.

3.1.3 Contractor shall provide site specific random substance abuse testing for each of its employees and its subcontractors' employees assigned to be on Ameren premises. The random testing shall be conducted at a frequency such that a minimum of one test is performed for hours up to the first 2,000 man-hours worked and one additional test for every 2,000 man-hours worked by Contractor, or any of its subcontractors, on Ameren premises. Contractor shall establish a random selection process to ensure that each individual will have an equal chance of being selected and tested each time a

Electronic Filing: Received, Clerk's Office 09/28/2020

random test is scheduled. The random testing pool will include all crafts under the direction of the prime Contractor, including subcontractors. Employees selected for random testing shall not be informed of test until immediately prior to test and shall be accompanied to testing site by a responsible Contractor supervisor as soon as practical on the same day selected. Contractor shall notify Construction Project Lead or Plant Station Point of Contact of random selection results and an Ameren representative may exercise the option of being present during the selection process.

3.1.4 Samples used to comply with this policy shall be analyzed by a NIDA-certified laboratory or quick cup and/or instant cup method. Tests must screen at a minimum for the following substances and levels, however some labor consortium testing programs will be accepted for initial site access only pending Ameren approval. A confirmed positive drug testing will be considered a violation of this policy.

Substance	Initial Level	Confirmed Level
Amphetamines	500 ng/ml	250 ng/ml
Barbiturates	300 ng/ml	200 ng/ml
Benzodiazepines	300 ng/ml	200 ng/ml
Cocaine	150 ng/ml	100 ng/ml
Marijuana	50 ng/ml	15 ng/ml
Methadone	300 ng/ml	200 ng/ml
Opiates	300 ng/ml	150 ng/ml
Oxycodone	100 ng/ml	100 ng/ml
Propoxyphene	300 ng/ml	200 ng/ml
Methamphetamine	500mg/dl	250mg/dl

3.1.5 Contractor's program shall provide for alcohol testing under the following circumstances: random testing; testing for reasonable cause based on observations by Ameren or Contractor supervisor; and testing after any accident or incident that involves injury to personnel or damage to property. Pre-assignment alcohol testing shall not be required. A test result of .04% blood alcohol concentration or greater as indicated by a breathalyzer or similar test will be considered a violation of this Policy.

3.1.6 Individuals who fail a test, refuse to test or otherwise violate this Policy will be denied site access from all Ameren premises. In addition, Contractor shall notify the applicable consortium to remove employee from the active pool. A Contractor employee who is determined to have violated this policy will be denied site access for a period of one year. After a period of one year, if the individual can demonstrate successful completion of a required treatment program based on Contractor's consortium policy, the individual will be given a last-chance opportunity. However, site access will not be permitted unless the individual has a satisfactory return-to-duty drug test. If at any time an individual is found to have a second violation of this Policy, the individual will be permanently denied site access to all Ameren premises. Contractor shall document all non-compliance on a reduction force report and forward the report to Construction Project Lead or Plant Station Point of Contact. The reduction force report shall include the person's name, craft and reason stated "Non-Compliance with Ameren Substance Abuse Policy."

3.1.7 Contractors shall require all of their subcontractors to comply with all provisions of this Substance Abuse Policy. Failure of Contractor or any of its subcontractors to comply with the requirements of this Policy shall be grounds for removal from consideration for any future work and/or termination of the current contract at the discretion of Ameren. Ameren reserves the right to audit Contractor's drug and alcohol testing program at any time to verify compliance with this policy.

3.1.8 Ameren will not be responsible for any expense or loss of wages due to non-compliance with this Policy.

3.1.9 Ameren retains the right to change or modify this Policy at any time. Ameren also retains the right to waive this Policy for any Contractor that is badged as a visitor.

3.1.10 Any documents relating to this Policy will be maintained in confidence and will not be released without written authorization unless otherwise required by law.

CONTRACTOR AGREEMENT OF UNDERSTANDING
(Form CONMGT0)

All Contractors and Subcontractors will be required to sign and submit this form prior to entering and/or starting work on any Ameren property.

- I have been informed of all expectations regarding Ameren Safety / Work rules and ZERO TOLERANCE policies and will immediately investigate and enforce all such rule and policy violations when they are reported or observed.
- I will cooperate to the fullest extent with any Ameren management or security person in investigating ZERO TOLERANCE policy violations.
- I am aware that Ameren plants contain asbestos, lead and flyash. Where necessary, I will abide by all Ameren, OSHA, State and Local policies, procedures and ordinances in all abatement, containment, waste-disposal, employee protection and reporting activities.
- I will obtain and promptly submit all of the required permits to the Ameren-designated Station Point of Contact (SPOC) prior to starting work.
- I will promptly forward all of the required submittals to the Ameren SPOC.
- I will not allow any employee to enter and / or start work on Ameren property before first conducting a Safety / Work Rules orientation and ensuring they have all required personal protective equipment.
- I will report all violations / actions taken to the Ameren SPOC, on form CONMGT1, each Friday before 9:00 AM.
- I will inform the Ameren SPOC of any sub-contractors in my employ and ensure that they are aware of and meet the conditions of this agreement before they enter and / or start work on Ameren property and will have them complete this Contractor Agreement of Understanding Form.
- Any employee found to have violated a ZERO TOLERANCE policy may be removed and barred immediately from Ameren property and will not be allowed to return to any Ameren property in the future.
- I understand that repeated violation of the Work / Safety rules or ZERO TOLERANCE policies may result in my company's removal from Ameren property.

ATTACHMENT A19
SAFETY SCORECARD

SAFETY SCORECARD			
Notwithstanding the provisions below, a "work-related fatality" will result in maximum KPI reduction to the contractor regardless of any other safety criteria.			
KPI payment will be based on criteria that are equally weighted as follows:	Section 1	OSHA recordable rate	33⅓ %
	Section 2	"Rules to Live By" infraction	33⅓ %
	Section 3	Safety observation program	33⅓ %

SECTION 1	OSHA RECORDABLES		
OSHA rate is calculated by the following:			
		2 or more =	0%
		less than 2 =	100% of Section 1
Note: Review based on specific job criteria (i.e., duration of project). Ameren POS safety supervisor has final call on OSHA recordable determination.			

SECTION 2	"RULES TO LIVE BY" OBSERVATIONS		
		1 or more =	$2,000 penalized assessment per Appendix A
		less than 1 =	(add)
Note: Observations that are self-reported by contractor do not apply to this. Only observations by Owner or Owner's representative apply.			

SECTION 3	COMPLETED CARDS		
An agreed-upon safety observation card program will be developed as part of site safety process. Observations are based on number of fully completed, meaningful cards generated by contractor's employees and submitted to Ameren designated representative. These observation cards may show positive coaching as well as corrective coaching. Observation cards completed by Ameren will not be utilized KPI of this section.		< 70 cards =	(deduction)
		70 - 90 cards =	$0
		> 90 cards =	(add)

Electronic Filing: Received, Clerk's Office 09/28/2020

ATTACHMENT A20
GUIDELINE FOR ABANDONING PIPING AND DEMOLISHING ABANDONED PIPING

1.0 GENERAL GUIDELINE FOR PROPERLY ABANDONING AND/OR DEMOLISHING PIPING

The division of responsibility for the following actions to be decided at assignment of work:

1.1 A Competent Person shall pre-plan the job prior to the start of the work.

1.2 Determine pipe to be abandoned or demolished. Review P&ID's and piping isometrics to determine isolation points and material conveyed in piping.

1.3 If a JR is not already in EMPRV, Ameren Single Point of Contact (SPOC) shall create a JR in EMPRV.

1.4 Review WPA requirements with the Responsible Engineer listed on the JR. Ensure proper WPA is in place to isolate lines.

1.5 Conduct a pre-job briefing to discuss site specific safety plan and the following:

1.5.1 PPE required

- Chemical Protection
- Eye & Face Protection
- Foot Protection
- Hand Protection
- Head Protection
- Hearing Protection
- Respiratory Protection

1.5.2 Atmospheric conditions if working in enclosed spaces

1.5.3 WPA

1.6 Ensure proper WPA is in place to isolate lines. As part of WPA, drain lines and confirm all low spots have been drained.

1.7 Take special precautions to ensure environmental spills do not occur.

1.8 At extreme ends of pipe, remove at least a one foot section of pipe from equipment or process piping still in use to ensure complete isolation. Cap ends of process piping that will remain in service.

1.9 For piping that will be abandoned in place, permanently tag abandoned pipe in at least three locations (Steel or Brass tag wired to pipe). Tag shall indicate pipe to be "Abandoned in Place," applicable JR number, and material pipe conveyed.

1.10 For piping to be demolished, remove piping and dispose of properly.

1.11 Update P&ID's and piping isometrics as applicable.

Ameren MISSOURI

ATTACHMENT A21
SITE-SPECIFIC SAFETY PLAN (SSSP)

This plan shall be completed and reviewed with the Corporate Safety Department before work commences. Completed plans shall be maintained and kept on site with the project file.

Section 1: Company and Project Information	
Contractor Company:	
Contractor Address:	
Project Name:	
Project Address:	
Mobilization Date:	

Section 2: Contractor Info	Name	Phone	Email
Project Manager			
Superintendent			
Corporate Safety Representative			
General Foreman			
Site Safety Representative(s)			

Shifts working throughout project: 1st ☐ 2nd ☐ 3rd ☐	Maximum number of workers on site per shift: 1st 2nd 3rd	Number of safety representatives on site per shift: 1st 2nd 3rd

Job Responsibilities:	
Titles:	Description of Job Duties

Section 3: Site Emergency Information		
3.1	Identify the nearest medical facility (e.g., hospital, urgent care, occupational clinic etc.): Address: Phone # Note: Location and directions (including maps) to the nearest facility are required to be on this jobsite.	
3.2	List the local Fire & Rescue Squad Phone #	List the Police Phone #
3.3	Describe your emergency action plan for the project (e.g., response to fire, severe weather, etc.):	

Section 4: Company Safety Mission Statement

Electronic Filing: Received, Clerk's Office 09/28/2020

Section 5: Scope of Work

Describe the activities your company will be performing while on this project. Ensure that all activities are referenced on the AHA of this plan, see Section 13.

Section 6: Subcontractor Information

Will subcontractor(s) be used on this project? ☐ Yes ☐ No

If yes, please provide the information below (add extra copies of this page as needed):

Note: All subcontractors are required to submit a Site Specific Safety Plan.

Subcontractor(s) Name:	Contact Person	Scope of Work	Phone	Email

Section 7: General Information

7.1	Describe how you will secure your jobsite, equipment, and materials to protect public safety and to prevent theft.
7.2	Will there be persons onsite trained in First Aid and CPR? ☐ Yes ☐ No
7.3	Will there be ANSI Z308.1 compliant First Aid Kit(s) and Bloodborne Pathogens Kit(s) located in strategic areas on this project: ☐ Yes ☐ No
7.4	Will restrooms and wash facilities be brought on site? ☐ Yes ☐ No
7.5	How will housekeeping be managed? Describe the control measures to be used and how often they will be performed.
7.6	Do you have a map of the worksite location that includes roads, waterways, railways, bridges, etc.? ☐ Yes ☐ No *Please provide a copy of the map when submitting this document*

Ameren MISSOURI

Sections 8: Project Safety Management	
Owner shall have the authority to immediately stop contractor's work indefinitely for operations which, in the opinion of owner, constitute a safety concern. It is the responsibility of the contractor to adequately satisfy owner of any remediation necessary to provide a safe and healthful workplace. Contractor must have qualified and competent supervision at the site at all times to direct and observe the work.	
8.1	Do you require your supervision to successfully complete the OSHA 30-Hour for Construction Training?
8.2	Do you require your employees to successfully complete the OSHA 10-Hour Construction Training?
8.3	Outline the initial employee orientation on the job site:
8.4	Describe the process that you will use to verify that training within your scope of work has successfully been completed. *Note: Employee training records do not have to be submitted. Ameren reserves the right to review training records which must be readily available upon request.*
8.5	Describe your procedures for Contractor Event Reporting (CER) to Ameren.
8.6	Describe your Job Observation Process in detail:
8.7	Describe your Job Briefing Process in detail:
8.8	Will you have a Hazard Communication Program with a chemical inventory list and Safety Data Sheets (SDS) for chemicals used onsite? ☐ Yes ☐ No NOTE: Chemical inventory list must be onsite at the beginning of the work and Safety Data Sheets (SDS) shall be kept on file at the site by the contractor. SDSs must be available for the contractor and subcontractor employees' review and for review by the owner upon request.

Ameren MISSOURI

Section 9: Rules To Live By Hazards and Controls	
9.1	Explain how you will communicate Ameren "Rules to Live By" to your employees on this project and describe the procedures you will follow when a violation occurs.
9.2	Explain your company's disciplinary action protocol as it relates to jobsite safety rules:

Section 10: Employee Engagement and Communication	
10.1	Identify steps your company is going to take to engage your workforce in safety:
10.2	Explain how your company is going to communicate safety information and expectations to your employees?

Section 11: Personal Protective Equipment (PPE)
List the minimum PPE required to access the job site:

Section 12: Safety and Health – Describe how hazards are controlled in the AHA for each 'Yes' answer (see Section 13):	
Will the work scope require any traffic or pedestrian disruptions?	☐ Yes ☐ No ☐ N/A
Will your work require you to penetrate into any surface at any depth?	☐ Yes ☐ No ☐ N/A
Will your work involve any excavations/trenches?	☐ Yes ☐ No ☐ N/A
Will the work scope require work at heights greater than 6 feet?	☐ Yes ☐ No ☐ N/A
Will wire rope guardrail systems be used on this project to protect workers from fall hazards and will an inspection program be implemented to verify safe installation/condition?	☐ Yes ☐ No ☐ N/A
Will the project involve electrical line construction, maintenance or repair activities?	☐ Yes ☐ No ☐ N/A
Will the project involve substation or switchyard construction, maintenance or repair activities?	☐ Yes ☐ No ☐ N/A
Will there be worksite obstructions that may create a hazard to workers such as railroads, bridges, power lines or waterways?	☐ Yes ☐ No ☐ N/A
Will the work scope involve the need to control hazardous energy sources?	☐ Yes ☐ No ☐ N/A
Will the project include work on pressurized vessels or pipes that may affect the integrity of the system such as welding, cutting, brazing, etc.?	☐ Yes ☐ No ☐ N/A
Will steel erection be part of the scope of this project?	☐ Yes ☐ No ☐ N/A

Electronic Filing: Received, Clerk's Office 09/28/2020

Section 12: Safety and Health – Describe how hazards are controlled in the AHA for each 'Yes' answer (see Section 13):	
Will there be potential impalement hazards such as protruding reinforcing steel (rebar)?	☐ Yes ☐ No ☐ N/A
Will any roofing be performed on this project?	☐ Yes ☐ No ☐ N/A
Will earthmoving or drilling equipment be used on this project?	☐ Yes ☐ No ☐ N/A
Will cranes, derricks, or other equipment be used on this project?	☐ Yes ☐ No ☐ N/A
Will a helicopter be used on this project?	☐ Yes ☐ No ☐ N/A
Will the work scope require the need for a critical lift plan that will include the safe rigging practices and prohibit work under suspended loads?	☐ Yes ☐ No ☐ N/A
Will hoists, elevators or conveyors be used on this project?	☐ Yes ☐ No ☐ N/A
Will employees be involved in erecting, disassembling, moving, operating, repairing, maintaining, or inspecting a scaffold system?	☐ Yes ☐ No ☐ N/A
Will the work scope include diving?	☐ Yes ☐ No ☐ N/A
Will the work scope require you to work in a confined space?	☐ Yes ☐ No ☐ N/A
Will welding, cutting, or brazing be performed on this worksite?	☐ Yes ☐ No ☐ N/A
Will the work involve the use of chemicals such as paints, solvents, adhesives, epoxy coatings, corrosives, fuels or other hazardous materials?	☐ Yes ☐ No ☐ N/A
Will lead based materials be used or disturbed on this project?	☐ Yes ☐ No ☐ N/A
Will asbestos containing materials be disturbed on this project?	☐ Yes ☐ No ☐ N/A
Will you be working in or generating a hazardous atmosphere?	☐ Yes ☐ No ☐ N/A
Will appreciable levels of dust be generated that will require control measures?	☐ Yes ☐ No ☐ N/A
Will abrasive blasting be performed on this project?	☐ Yes ☐ No ☐ N/A
Will the work scope involve any environmental hazards that generate flying debris, excessive noise levels, or any other air contaminants not mentioned above?	☐ Yes ☐ No ☐ N/A
Do you have a heat stress prevention program in place?	☐ Yes ☐ No ☐ N/A
Will radioactive materials/sources be used on this project?	☐ Yes ☐ No ☐ N/A
Will hazardous waste (e.g., lead, asbestos, contaminated soils) be generated and properly disposed of on this project?	☐ Yes ☐ No ☐ N/A

Electronic Filing: Received, Clerk's Office 09/28/2020

Section 13: Risk Management

ANTICIPATED HAZARD ANALYSIS (AHA)

Use this form to identify activities that will occur on this project. List all potential hazards associated with that activity. Use the Risk Assessment Code table to determine the risk level of the activity/hazards. Lastly, list all of the controls that will be implemented to control those hazards. When a Job Hazard Analysis is needed, it must be performed, documented, and communicated to workers prior to the start of that activity, see footnote 2.

DIVERSE SUPPLIER BUSINESS PLAN

SUPPLIER / SUBCONTRACTOR BUSINESS PLAN

Note: Please list all diverse and non-diverse sub-contractors on supplier/sub-contractor business plan. Ameren will require bidders to track spend amounts when sub-contracts are awarded to Diverse Suppliers. If bidder is unable to award to Diverse Supplier indicate name of diverse supplier contacted and reason(s) why bidder was unable to award.

Please specify in the pull down below the % diverse supplier participation as part of the bid.

Enter % participation here					
Name of Sub-Contractor	Email	Business Classification of Diverse Sub-Contractor (Select from the Pull Down)	Type of Work/Services to be Provided by Sub-Contractor	Anticipated Value of Work ($) to be Performed	Reason(s) why unable to award to Diverse Sub-Contractor (Select from the Pull Down)

DIVERSE SUPPLIER 2ND TIER REPORT

2nd TIER PROGRAM - DIRECT EXPENDITURES

1st Tier Supplier: _____ **Report Period:** _____

In accordance with Ameren's Request for Proposal/Quotation, the definitions and codes contained herein and the resulting contract/purchase order between Ameren and the Supplier, Supplier shall complete columns 1 through 8, reporting its use of Minority Business Enterprises (MBEs) and (WBEs) in direct connection with goods and services provided under the terms and conditions of said contract/purchase order. Supplier shall also include the name of the Ameren business segment in which the work is being performed.

Use this report when MBE & WBE expenditures are directly attributable to fulfilling a specific contract. You must be able to trace the expenditure directly to the specified contract.

END OF APPENDIX A

Electronic Filing: Received, Clerk's Office 09/28/2020

APPENDIX B – JOB WORKING RULES AND CONTRACT WORK LIMITATIONS
CONTRACTOR REQUIREMENTS - POWER PLANTS

1.0 JOB WORKING RULES

1.1 Contractor must enforce the Ameren Job Working Rules, included in this specification here as Appendix B, as well as the Contractor's own work rules. If the rules conflict, the more restrictive rule applies.

2.0 PLANT ACCESS, PARKING AND SECURITY

2.1 Contractor employees must enter the plant ***only*** at the entrance where their company name is posted. Security cameras monitor entrances to inform supervisors of violations.

2.2 The speed limit is 10-MPH unless otherwise posted.

2.3 Contractor personnel may not ride in the back of a truck on company property or to/from/between job sites unless properly seated with a seat belt.

2.4 Contractor employee vehicles must park in Construction Parking lot or in areas designated for Contractor use.

2.5 Contractor employees must enter and leave through the designated Construction gate.

2.6 Contractor employees must check in and out of project with their immediate Foreman or General Foreman.

2.7 Security will issue an identification badge to Contractor employees after site orientation training. Badges must be visible at all times while on the site.

2.8 If the site has an electronic badge reader, a green LED light indicates that arrival/departure times have been recorded and the gate is unlocked.

2.8.1 If a badge reader is not available, employees must sign the gate register when arriving or departing.

2.9 Lunch boxes, toolboxes, coolers and other containers are subject to inspection when entering or leaving Ameren premises.

2.10 An Ameren Material Pass (Form 5532NS) signed by the Ameren Station Point of Contact (SPOC) and a Contractor supervisor must be presented to Security when tools or materials are taken off site.

2.11 The Security Guards can:

- De-activate / activate a badge when changing plant locations
- Replace a damaged badge or lost badge
- Update the employee name, Contractor company, or craft.

2.12 Cameras and video recording devices are prohibited unless specifically authorized by Ameren management.

3.0 GENERAL REQUIREMENTS

3.1 The more restrictive rule will govern in the event of any conflict between Ameren and Contractor work rules.

3.2 All Contractor/Subcontractor employees must not leave their work areas during assigned work periods. Any reasonable break periods will be established by the Contractor/Subcontractor.

3.3 Only drink water from drinking fountains or lavatories, other outlets may contain river water.

3.4 Certain plant locations, including cafeterias, locker rooms, and washrooms, may be posted as OFF LIMITS to construction or Contractor personnel.

3.5 Written permission is required before using Ameren equipment or tools, except for public pay phones.

Electronic Filing: Received, Clerk's Office 09/28/2020

3.6 Radios or "boom boxes" are not allowed because they can disrupt communication and distract workers.

3.7 Ameren's Smoking Policy
In keeping with Ameren's corporate values, Ameren strives to provide a work environment that promotes and ensures the health and safety of all employees. Smoking presents known health risks to smokers and non-smokers alike. This policy applies to cigarette, pipe, and cigar smoke, as well as e-cigarettes.

3.7.1 Persons Affected
This policy applies to all Ameren employees, vendors, contractors, and visitors at any Ameren facility.

3.7.2 Policy
Smoking is prohibited in all Ameren buildings and any outside posted areas where hazards may exist. Smoking is prohibited within 25 feet from all entrances, exits, windows that open, and ventilation intakes that serve an enclosed area for all Ameren locations. Smoking is not permitted in a multi-occupant Company vehicle or while operating motorized equipment.

3.7.3 Enforcement
Any violation of this policy may result in the individual being removed or barred from Ameren property.

3.8 Daily cleanup of the work area is required. Ameren reserves the right to clean up Contractor's area if Contractor is not fulfilling their housekeeping requirements. Any and all costs associated with the cleanup will be deducted from Contractor's base contract.

4.0 EVACUATION

4.1 If there is an emergency, an evacuation announcement may be made over the plant's public address system. The evacuation assembly area shall be communicated during orientation training.

4.2 In the event of severe weather, an announcement to seek shelter may be made over the public address system. The location of the plant tornado shelter shall be communicated during orientation training.

4.3 To report an emergency, contact the Shift Supervisor immediately using the plant's public address system. Do not hang up. Wait for instructions.

5.0 WORKER'S PROTECTION ASSURANCE OR HOLD CARD PROCEDURE

WARNING: Violation of Workers Protection Assurance (WPA) procedures can cause serious equipment damage, personal injury or death.

When WPA is present, verify that equipment is actually de-energized or in the designated state. Always walk down the job, check voltages, temperatures, pressures, etc. to confirm status.

5.1 WPA is Ameren's procedure to tag equipment or systems that have been de-energized or put in a specified state, to allow for service or testing. The energy in a system may be electrical, mechanical, pneumatic, hydraulic, chemical, kinetic or nuclear.

5.2 All employees should receive site-specific WPA training including descriptions of the tags and their functions. Workers must sign on and off WPA protection as directed by their supervisor.

5.3 Contractor/Subcontractor employees shall observe all WPA rules and comply with WPA tags at all times. Never use an elevator that has a WPA card on the call button.

6.0 SUBSTANCE ABUSE

ATTENTION: Employees who refuse to take a drug test or have been found to be non-compliant will be escorted off-site immediately and may be subject to permanent barring from Ameren facilities.

6.1 Possession, and/or use of alcohol or drugs, is STRICTLY PROHIBITED.

Electronic Filing: Received, Clerk's Office 09/28/2020

6.1.1 Drugs, stimulants, "pep pills," tranquilizers, and similar substances are allowed only if prescribed by a doctor.

6.2 Ameren's Contractor's Substance Abuse Policy requires pre-employment and random drug testing of Contractor employees.

7.0 HARASSMENT AND WORKPLACE VIOLENCE POLICIES

7.1 Ameren Corporation has a zero-tolerance policy for behavior that is prohibited under Ameren's EEO & Anti-Harassment Policy and Ameren's Workplace Violence Policy Statement. These policies apply to Ameren employees and Contractor/Subcontractor employees.

7.2 Ameren intends that employees, contractors, customers, vendors, and visitors, never feel threatened, intimidated, harassed, offended or demeaned by any individual's actions, presence, conduct, or communication while they are on Ameren property.

7.3 The following behaviors and actions are **STRICTLY PROHIBITED** anywhere on Company property and may result in permanent barring from all Ameren facilities:

- Willful violation of safety rules or safe working practices
- Possession of unauthorized firearms, weapons or explosives and/or materials/components that could be used to make explosive devices
- Damaging, mutilating, or willful abuse of supplies, equipment & tools, vandalism of company property, or property of others
- Gambling or stealing
- Urinating in an undesignated area
- Harassment by anyone and in any form
    - Harassment includes, but is not limited to, unwelcome or unsolicited conduct or hostility based on or directed at a person or group because of race, color, religion, sex, national origin, ethnicity, age, disability, veteran status, pregnancy, marital status, sexual orientation or any other protected factor.
    - Conduct that may be considered offensive, hostile, demeaning, or derogatory, regardless of whether it is physical, verbal, or graphic in nature and whether it is done in person, or delivered via phone, fax, e-mail, text message, over a PA system, company mail, or by any other means.
    - Examples of Prohibited Physical Conduct:
        - → Bullying, wrestling, fighting, horseplay, or spitting on an individual,
        - → Sexual conduct such as rape, sexual battery, molestation, stalking, or attempts to commit such assaults, unwelcome touching, hugging, massaging, etc.
    - Examples of Prohibited Verbal Conduct:
        - → Threatening/intimidating someone (both explicit and implied),
        - → Verbal abuse, jokes, derogatory comments, references, or derogatory slurs of a sexual, racial, ethnic, or religious nature.
    - Examples of Prohibited Non-Verbal Conduct:
        - → Wearing of offensive clothing, hats, patches, etc.
        - → Displaying stickers, drawings, or posters that depict nooses, confederate "Rebel" flags, KKK paraphernalia, swastikas, or magazines, books, pictures or videotapes with sexual content.
        - → Drawing/displaying graffiti, specifically graffiti that is sexual, racial, or otherwise offensive, hostile, demeaning or derogatory to any individual/group or known to incite anger/violence.
        - → Using gestures that are obscene, or known to incite anger/violence.

Electronic Filing: Received, Clerk's Office 09/28/2020

7.4 Other behaviors and actions, not specifically set forth in this list, may violate Ameren zero tolerance policies.

8.0 WORKPLACE HAZARDS

8.1 Work near coal dust, fly ash, lime, or ferric/lead paint removal projects can create airborne contaminates. Do not use compressed air to clean surfaces or clothing. Use properly equipped vacuum, wet methods or other approved methods for cleaning.

8.2 All plants have asbestos-containing insulation and building materials (ACM). Treat all suspect materials as if they are asbestos.

8.3 Asbestos abatement projects may be in progress. Barricades will restrict access to areas with abatement projects. Only trained personnel using Personal Protection Equipment (PPE) may handle asbestos.

8.4 Personnel who are medically required to use syringes shall take them home, properly packaged for disposal. Only trained employees using PPE shall handle items contaminated with blood or other body fluids. Report any bloodborne related issues to the SPOC.

9.0 FOREIGN MATERIAL EXCLUSION (FME)

9.1 Foreign Material Exclusion protects critical plant components and systems, from contamination or damage. Systems such as feed water, condensate, steam, oil, and electrical controls and motors may suffer significant damage from foreign materials. See Foreign Material Exclusion Requirements (Appendix X) for additional requirements and details.

9.2 Foreign material contamination can come from sources such as:

- Welding and gas cutting debris,
- Metal chips, shavings and filings,
- Corrosion that produces flakes of metallic substances,
- Cleaning materials, such as shot from blasting, rags & lint,
- Forgotten tools or any material that falls out of worker's pockets,
- Water leaks/spills, cutting fluids, solvents, etc.

9.3 To prevent damage from foreign objects follow these work practices:

- Clean dirt, oil and fly ash from around covers, caps and other devices before opening.
- Remove welding electrodes, stubs and broken flux coating material from internal work areas in closed systems.
- Cover openings on turbines, generators, pumps, pipes, tubes, electrical cabinets/motors and other critical components during maintenance activities.
- Track tools, parts and materials allowed in an FME work area.
- Allow only materials necessary for the task into the work area; do not allow personal items such as jewelry or change.
- Secure all tools, safety glasses, badges, gloves and other loose items with lanyards, tape or other means.
- Catch clippings from cable ties, stripped wires, etc.
- Vacuum or wipe out electrical cabinets after repairs/modifications to remove moisture, metal chips, knockouts, clippings, etc.

Electronic Filing: Received, Clerk's Office 09/28/2020

I, the undersigned, have read the Job Working Rules. I have completed site orientation training and I understand:

- The Job Working Rules
- Site-specific instructions, including Worker's Protection Assurance procedures
- Safety requirements

I acknowledge that a violation of any of these provisions will be grounds for immediate removal from Ameren property and I may be subject to permanent barring from all Ameren facilities.

END OF APPENDIX B

Electronic Filing: Received, Clerk's Office 09/28/2020

APPENDIX C
DESIGN FOR SAFETY GUIDE

OBJECTIVE

Develop and maintain design guidelines to ensure engineering designs reduce safety risks for construction, operations, and maintenance of equipment and facilities.

These Guidelines reflect Ameren's commitment to incorporate safety into all designs. The designer of record is ultimately responsible for adherence to all governing Federal, State, and Local code requirements.

While attempts will be made to follow the recommendations in this guideline during the engineering phase there will be occasions where conditions and physical constraints may render some recommendations impractical or unattainable.

Several of the Design for Safety recommendations are subjective and can vary from plant to plant (i.e. serviceable access for equipment, pipe labeling, & color coding). Ameren Engineering and contracted consultants must engage plant stakeholders during the design phase to accommodate plant specific safety and operating requirements.

GENERAL FACILITY SAFETY DESIGN

YES	NO	N/A	
☐	☐	☐	General Arrangement layouts shall provide for adequate serviceable access for operation, maintenance, and replacement; i.e. personnel access, tool access, cart access, vertical lift access, fork truck access.
☐	☐	☐	Stairs shall not be used as access platforms. No valves, controls, equipment, etc., shall be positioned / designed to be accessed by personnel standing on stairs.
☐	☐	☐	Permanent, well identified and load rated fall protection tie-offs, shall be incorporated into the building structure at removable handrails and access hatchways.
☐	☐	☐	Self-closing swing gates are to be used instead of chains and clips at all personnel access openings for fall protection guarding where the elevated surface is used as a work platform or walkway.
☐	☐	☐	Non-slip "Mebac" ladder rung covers should be used on all fixed access ladders.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	All new handrails shall be fabricated utilizing 1 ½" diameter standard pipe rails and posts. Posts shall be spaced a maximum 6'-0 on centers. Rails shall include one (1) top rail (top of top rail shall be 42 inches above walking surface); **two (2) mid rails** *equally spaced to provide increased fall protection*; and a standard 4" high toeboard.
☐	☐	☐	OSHA required clearance to handrails on stairs (3") must be maintained. Structural bracing, electric conduit, or mechanical piping is not located within the required clearance space.
☐	☐	☐	No more than a 3" open gap is maintained between a walking surface and the side of a piece of equipment penetrating the walking surface.
☐	☐	☐	When practical, valves shall be located to allow for ergonomically correct operation.
☐	☐	☐	When practical, provide stairs rather than ladders to equipment, valves, etc. that requires routine access for operations and/or maintenance.
☐	☐	☐	Provide chain wheel operators for valves that cannot be accessed from a permanently installed ladder or platform.
☐	☐	☐	When possible, design stairs with lower angle of stairway rise (6½" R, 11" T). Stair landings are provided every 10 to 12 treads.
☐	☐	☐	When possible, no low mounted equipment, piping, ducting, conduit, etc. in travels paths. No "duck-unders". Use a minimum design head clearance of 7'-0".

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	All 90 degree corners of structural steel members and plate trimmed / clipped where close to personnel access areas.
☐	☐	☐	Maintenance and replacement access considered when locating lighting fixtures (especially on stairways, over tops of equipment and high overhead locations).
☐	☐	☐	Underground utilities shall be designed and installed with warning and location indicators for future excavations in the areas of buried utilities.
☐	☐	☐	Underground utilities shall be designed and installed at shallowest depth possible (while maintaining freeze protection and surface surcharge loads) to minimize deep trenching hazards.
☐	☐	☐	Thermal protection guarding incorporated into design where required.
☐	☐	☐	Utilize above ground liquid containments or rigid structural underground containment. Avoid below grade lined pits.
☐	☐	☐	Incorporate seismic shut-off valves for gas service lines entering buildings and at meter locations. (Application mostly at non-power plant, off-site buildings / facilities).
☐	☐	☐	Walkways shall be clear of protruding obstructions and bump hazards. No valves, valve stems, valve handles, controls, equipment, etc. shall be positioned / designed within the normal walking path within personnel walkways. If not possible, paint or otherwise safeguard.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Utilize yellow warning striping along edges of personnel walkways to guide / warn walking personnel of potential obstructions, ramps, bump hazards, grade / slope changes.
☐	☐	☐	Provide personnel access to all roofs for inspection and maintenance purposes.
☐	☐	☐	Provide permanent fall protection tie-offs that are well identified, load rated, and incorporated into the building structure on roofs where there are no parapets or guard railing. (Review the need for fall protection tie-offs on specific roof areas on a case-by-case basis).
☐	☐	☐	To eliminate the need for fall protection tie-offs, when practical building roof parapets should be designed high enough to meet OSHA fall protection guarding requirements.
☐	☐	☐	Where possible, roof mounted equipment shall not be designed and installed closer than 15' to open, unguarded edge of roof.
☐	☐	☐	Provide fall protection guarding at edge of roof (without parapet) where roof mounted equipment is installed closer than 15' to open edge of roof.
☐	☐	☐	Provide fall protection guarding on both sides of a fixed roof access ladder onto roofs with no parapet or guard railing.
☐	☐	☐	Provide fall protection guarding or tie-off point at all personnel access roof hatches.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Provide fall protection guarding at roof mounted sky lights (many commercial skylights are available with security grills that will act as fall protection guarding).
☐	☐	☐	Design roof mounted equipment, ducting, and piping with adequate clearance for roof maintenance and replacement. Design clearances shall meet the NRCA recommendations for equipment to roof clearances.
☐	☐	☐	Provide service power for roof mounted equipment.
☐	☐	☐	Eliminate tripping hazards on roofs / floors. No low to roof / floor mounted electric conduits and drain pipes.
☐	☐	☐	Utilize safety balls on lightning protection air terminals. Eliminate impalement hazard of pointed air terminals on roofs.
☐	☐	☐	"Roof slippery when wet" signs shall be installed at all personnel access points onto roofs.
☐	☐	☐	Provide lighting on roofs in areas of personnel access for maintenance of equipment.
☐	☐	☐	Design mechanical / electrical equipment and components to be water tight for wash down cleaning.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Provide the proper quantity and type of fire extinguishers and hose stations.
☐	☐	☐	Provide proper washdown facilities (hose reels, supply pipes, drains) to allow facility cleaning.
☐	☐	☐	Assure proper safety signage is in place (chemicals, hearing protection, etc.).
☐	☐	☐	Assure roof drains are not placed where water will freeze and become a slipping hazard.
☐	☐	☐	Provide ice dams on sloped roofs above doorways and walkways to prevent and/or break up sliding ice.

COMMENTS TO GENERAL FACILITY SAFETY DESIGN:

Electronic Filing: Received, Clerk's Office 09/28/2020

ELECTRICAL SAFETY DESIGN

YES	NO	N/A	
☐	☐	☐	Walk down conduit and cable tray routes before installation to identify hazards such as tripping, head, thermal, chemical, etc.
☐	☐	☐	The location, cable tray material, and conduit shall be designed for the identified hazards for that specific location.
☐	☐	☐	Place electrical equipment in accessible locations.
☐	☐	☐	Electrical Room Egress: Provide at least two exit paths even if Code allows one exit for "un-occupied space". These spaces frequently become temporary Control Centers during construction, commissioning, and start-up.
☐	☐	☐	Cabinet/enclosures shall be designed to allow sufficient space for maintenance if maintenance to be performed inside the cabinet/enclosure.
☐	☐	☐	Provide sufficient space to allow for cabinet / enclosure access doors to fully open.
☐	☐	☐	Provide sufficient space for electrical equipment as defined by NEC in walkways, area between cabinets, etc. for forklifts, routine maintenance, etc.
☐	☐	☐	All control switches shall be accessible from outside of the cabinet.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Provide the manufacturer's recommended spacing for equipment cooling.
☐	☐	☐	Obtain arc flash incident energy level and labels for any equipment rated 480V and higher or greater than 125KVA at 120VAC & above per NFPA 70E.
☐	☐	☐	Consider extra guarding of high voltages (Plexiglas) in electrical cabinets to reduce PPE requirements.
☐	☐	☐	Switchgear shall be specified to provide "Lock Out" capability.
☐	☐	☐	Equipment shall be designed for the ratings for which it will be subject to (i.e., maximum voltage, short circuit current, continuous current, ambient temperature, etc.).
☐	☐	☐	Equipment, cable, conduit, tray, etc. shall be labeled with the voltage level.
☐	☐	☐	Equipment shall be labeled with normal power feed and backup power feed (if applicable).
☐	☐	☐	Consider backup power feed for systems where failure of normal power feed would result in a hazardous event.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Label all equipment with appropriate equipment description (if applicable).
☐	☐	☐	When possible, critical conduits shall be installed in a duct bank rather than direct buried.
☐	☐	☐	Control cabinets and wiring termination cabinets shall be accessible from platforms or at grade level. Ladders shall be avoided.
☐	☐	☐	Provide fall protection tie-off points at tops of transformers.

COMMENTS TO ELECTRICAL SAFETY DESIGN:

Electronic Filing: Received, Clerk's Office 09/28/2020

MECHANICAL SAFETY DESIGN

YES	NO	N/A	
☐	☐	☐	Walking or climbing surfaces are sheltered or maintained in a manner to avoid slippery surfaces from rain or ice. (Review on a case-by-case basis).
☐	☐	☐	Emergency drainage systems are provided to direct flammable liquid leakage to a safe location.
☐	☐	☐	Provide eye wash stations at locations where liquids are sampled or "open fluids" are otherwise handled.
☐	☐	☐	Stairs, ladders, or ramps are provided at all locations where equipment design or maintenance actions require personnel to abruptly change elevation by more than 12 inches.
☐	☐	☐	Fixed ladders designed with a slope of 75 degrees or more where practical.
☐	☐	☐	Whenever practical, provide adequate access for maintenance personnel to all mechanical components, small-bore piping, ducts, valves, thermowells, flow meters and other appropriate instrumentation on piping runs and equipment units which require inspecting, testing, servicing, adjusting, greasing, removal, replacement, or repair.
☐	☐	☐	When practical, locate instruments, sample points, valves, etc. that require frequent readings, calibration, operation, etc. to allow for walk-up access.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Specify equipment to include handling features that will aid in grasping, removing, and carrying equipment.
☐	☐	☐	Labeling and coding is provided for service and adjustment points to clearly identify the key aspects of the maintenance activity.
☐	☐	☐	Equipment and components shall be labeled with weights for lifting and removing for later maintenance or replacement. When modifying existing equipment, determine the weight of the existing equipment plus modifications and label or revise the existing labels accordingly. When possible, the label shall include references to the calculation, project, and/or drawing number.
☐	☐	☐	Provide lifting devices (lifting lugs, beams, monorail, etc.) for maintenance and replacement of equipment. Lifting devices shall be labeled with the rated lifting capacity.
☐	☐	☐	Provide Indicators for convenient and reliable determination of fluid levels.
☐	☐	☐	Drain fittings are provided to support fluid removal readily and safely.
☐	☐	☐	Ensure design basis application for failure modes on all positioned equipment. Example, loss of air, loss of DC, etc.
☐	☐	☐	Standardize parts, maintenance and adjustment points as much as possible. For example, use the same size and type of bolts to eliminate special wrenches/tools. Utilize common rigging points to minimize types of rigging connections, etc. If standardization is not possible, clearly differentiate specialized items with signs, markings, etc.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Minimize steam hazards, heat hazards, sharp corners, edges, and projections on equipment.
☐	☐	☐	Equipment should be placed on concrete housekeeping pads, especially where standing water might accumulate.
☐	☐	☐	Add equipment protection features to guard against hazards that cannot be removed or designed out of the system.
☐	☐	☐	Specify that equipment vendor technical manuals deal with one specific equipment model rather than with many different equipment models.
☐	☐	☐	Valves shall be provided with "Lock Out" devices.
☐	☐	☐	Provide adequate isolation valving and venting for WPA, maintenance, etc. on piping systems and equipment. Follow applicable code/standard section requirements.

COMMENTS TO MECHANICAL SAFETY DESIGN:

Electronic Filing: Received, Clerk's Office 09/28/2020

CHEMICAL SAFETY DESIGN

YES	NO	N/A	
☐	☐	☐	Insure that bulk chemical tanks have separate containment areas. Containment areas shall be washable and have the ability to be drained.
☐	☐	☐	All materials used to construct storage tanks, containment, piping, etc. must be verified to be compatible for use with the chemicals used in each specific application.
☐	☐	☐	Lengths of chemical piping runs should be minimized. Chemical supply tanks and pumps should be designed to be as close to injection points as possible. Overhead chemical piping runs should be minimized. When used, labels shall be affixed to the floor beneath the piping with proper hazard communication. Chemical lines must be labeled a minimum of every 10 feet. All PVC/CPVC chemical piping must be protected from foot traffic.
☐	☐	☐	Chemical day tanks shall be properly sized to minimize the number of drums in the work area.
☐	☐	☐	Designate storage areas for each type of chemical, taking into account compatibility of each.
☐	☐	☐	Provide sufficient room for servicing instruments around bulk chemical storage tanks.
☐	☐	☐	Drains to sump shall be located around all chemical feed equipment. Local wash down water must be provided in chemical feed area. Include hose and hose reels for local wash down water.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	All laboratory areas must contain proper first-aid kit(s).
☐	☐	☐	Material for chemical spill control (pigs, pads, soda ash, etc.) shall be located in a designated area close to chemicals.
☐	☐	☐	Personal protective equipment shall be located in a designated area close to chemicals.
☐	☐	☐	Chemicals shall be transferred to equipment (mixing tanks or day tanks) in a way to minimize chances of contacting personnel and avoid manual dumping of bottles and drums.
☐	☐	☐	Chemical containers must be labeled with chemical names and HAZCOM placards.
☐	☐	☐	All safety showers shall be supplied with tepid water. Safety showers located outside shall also be covered and protected from the wind. Safety shower activation shall signal an alarm in the control room.
☐	☐	☐	All concrete and equipment exposed to chemicals shall be coated with an appropriate chemical-resistant coating.
☐	☐	☐	PA shall be located convenient to all chemical use areas, but beyond the area that could be engulfed by a chemical spill.

Electronic Filing: Received, Clerk's Office 09/28/2020

YES	NO	N/A	
☐	☐	☐	Operating and Maintenance personnel shall be isolated from all chemical pumps and feed systems by plastic screens or curtains.

COMMENTS TO CHEMICAL SAFETY DESIGN:

END OF APPENDIX C

Electronic Filing: Received, Clerk's Office 09/28/2020

APPENDIX D
STANDARD CONTRACTOR SCHEDULING REQUIREMENTS

1.0 PRE-BID/AWARD REQUIREMENTS

1.1 Contractor bids shall be rejected if they are not accompanied by a schedule. The scheduling tool shall be Primavera Enterprise (P6) unless otherwise authorized by Ameren Construction managing supervisor in writing.

1.2 Contractor's bid schedule shall reflect sufficient level of detail that effectively communicates the methodology of work/execution plan. The bid schedule shall be defined in compliance with the milestones, project constraints and deliverables required by Ameren.

1.3 Contractor shall indicate the calendar of their work schedule (days/week, shifts/day, hours/day) that is the basis for their schedule.

1.4 Contractor shall identify projected manpower required to execute project and shall also provide an assessment of labor availability based on prevailing market conditions.

1.5 Contractor shall identify the hierarchy of their project management team, including an organization chart of how they report to the Project Manager and how they report into the project management system.

1.6 The individual responsible for updating the Contractor's schedule shall be identified in the bid along with a personal resume.

1.7 Contractor's bid shall list any exceptions to the standard schedule requirements.

2.0 PRE-OUTAGE REQUIREMENTS AFTER AWARD

2.1 Contractor's point of contact for schedule submittals/updates will be the Ameren Project Scheduler. All schedule iterations and revisions shall be coordinated and approved through the Project Scheduler.

2.2 Contractor shall be required to organize the schedule according to requirements specified by Ameren's Project Scheduler, and shall include a work breakdown structure (WBS) that follows the provided sample schedule to facilitate schedule review and reporting.

2.2.1 Contractor shall develop their resource loaded schedule using Ameren's outage planning milestones within two weeks following contract award date. During this time frame, the Contractor and Project Scheduler will collaborate to develop a mutually acceptable schedule. Contractor's schedule will then be installed in the Ameren network to be used as the working schedule during pre-outage, outage execution and post outage.

2.2.2 Contractor is required to provide an onsite scheduler to provide updates to Ameren Project Scheduler for scheduling progress once installed in Ameren network.

2.2.3 Ameren will provide onsite network access to Contractor for scheduling review.

2.2.4 Ameren will make milestone to milestone ties, and other appropriate relationship ties between Contractor schedule and Ameren integrated outage schedule.

2.3 Contractor baseline shall be established after both Contractor and Project Scheduler mutually agree on schedule. This will be completed before the start of the outage. In accordance with outage planning milestones, the baseline schedule shall be compared to the actual schedule during the course of the outage.

3.0 OUTAGE EXECUTION/SUPPORT REQUIREMENTS

3.1 Contractor shall provide an onsite scheduler, unless otherwise authorized by Ameren, to provide updates to the Project Scheduler. Contractor scheduler will provide the following update information:

3.1.1 Activities worked on

Electronic Filing: Received, Clerk's Office 09/28/2020

3.1.2 Actual durations and resources used

3.1.3 Remaining durations

3.1.4 Percent complete

3.1.5 Expected finish dates

3.2 Contractor shall update/analyze the schedule daily. The schedule shall provide accurate reflection of progress throughout the outage. Schedule analysis should include risk management strategies to assure that outage milestones are achieved.

3.3 Contractor shall provide updates to Project Scheduler daily by 8:00 a.m. Several iterations of schedule edits/updates may be required before the Contractor's schedule may be scheduled with the integrated outage schedule. Ameren's Project Scheduler will analyze all schedules together with the integrated outage schedule and will post the updated integrated outage schedule to outage home page by 1:30 p.m.

3.4 Contractor will supply and develop activities, resources and associated project logic for added EWO work within one day of award of contract. Ameren will update Contractor with EWO work.

3.5 Ameren Project scheduler will inform the Contractor scheduler or single point of contact, Ameren engineering and responsible plant personnel of any high-risk activities that may impact the outage schedule and milestones on the Integrated Outage Schedule as required.

3.6 If Contractor progress is not meeting or will not meet the outage milestones, Ameren will require Contractor to participate in a re-evaluation of remaining work to ensure that milestone dates will be met for outage.

4.0 POST-OUTAGE SCHEDULE REQUIREMENTS

4.1 Contractor shall attend post-outage critique meetings that include a review of schedule performance.

END OF APPENDIX D

Electronic Filing: Received, Clerk's Office 09/28/2020

APPENDIX E
SAFETY DATA SHEETS
CONTRACTOR AFFIDAVIT PURCHASE ORDER NO.

As the responsible party for the firm of _____, I do here state that I have requested, received, read, understand, and will abide by and enforce the guidelines and conditions set forth in the Safety Data Sheets (SDS) provided by the product manufacturer for each hazardous chemical product delivered to and/or used in connection with the work specified in _____. I further state that I have the most current copy of the SDS for each hazardous chemical my firm has brought on site.

I further state that I am aware of, understand, and will fully implement the requirements of the OSHA Hazard Communication Standard (CFR 29, Part 1910.1200) and other workers' right-to-know laws.

I further state that I understand that Ameren maintains copies of SDS's on chemical substances at this facility. If any question arises regarding any chemicals to which employees may come into contact, an SDS on that chemical shall be reviewed. A copy of the SDS's is available from the Ameren SPOC.

I further state that I will maintain copies of the required SDS for each hazardous chemical used while on Ameren property; and will insure that the Safety Data Sheets are readily accessible during each work shift to employees when they are in their work areas.

I further state that the information contained within the SDS has been disseminated to all parties who have a right or need to know; and that all workers and other effected parties have received adequate and appropriate training in the hazards, handling, and use of hazardous chemicals.

APPENDIX K
PLANT ACCESS, PARKING & SECURITY

1.0 Plant Access, Parking and Security

1.1 Contractor employees, visitors and vendors must enter the plant *only* at the entrance where their company name is posted. Security cameras monitor entrances to inform supervisors of violations.

1.2 Security will direct contractor employees to work rules training the first time employees report to the site.

1.3 Employees must document their completion of site specific work rules training before they are allowed unescorted access to the site.

1.3.1 Computer Based Training (CBT) is typically used for work rules orientation and to document training.

1.3.2 Contractor employees must read and sign a hard-copy of the Job Working Rules if an orientation video or oral presentation is used for training.

1.3.3 If alternative training has been used due to a temporary CBT malfunction, then employees must take the CBT training when the system is restored.

1.4 Contractor's Employee Identification

1.4.1 Ameren Contractor ID badges containing the Contractor employee's name and Contractor ID number are issued when work rules training is completed.

1.4.2 Security will re-activate an existing badge if the employee has completed the site work rules orientation within the last 12 months.

1.4.3 Security will de-activate badges at the end of each job.

1.4.3.1 Contractor shall inform the Single Point of Contact (SPOC) when employees will complete their work on the site using the Reduction in Force Report (Attachment A7).

1.4.4 Daily gate logs will be used to validate invoices and may be provided to the Contractor upon request. If the plant has electronic badge readers, employee arrival and departure times are automatically recorded.

1.4.5 Contractor shall provide employees with hard hats of the same color. The hard hats must have Contractor's name or company logo on either the sides or the front of the hard hat.

1.4.6 Security will apply labels with the employee's first and last names to the front and back of each hard hat.

1.4.7 Contractor may provide a hard hat storage container at the Construction gate. PPE is required to access the site.

1.5 Contractor Access

1.5.1 Business agents, vendor/sales representatives, contractor executives and other contractor visitors shall park in the construction parking lot and be escorted on-site.

1.5.2 Consultant badge holders may park in either the construction parking lot or the Ameren employee parking lot visitor space, depending on the purpose of the visit.

1.5.3 A contractor employee who has completed CBT/Work Rules training may escort visitors and ensure Ameren work rules are followed.

1.5.4 Contractor visitors are issued a Visitor's badge and are required to wear a hard hat and safety glasses.

Electronic Filing: Received, Clerk's Office 09/28/2020

1.6 Vehicles Beyond the Security Gate

1.6.1 Only contractor work vehicles with an Ameren mirror tag are permitted beyond the security gate. Contractor can request a mirror tag for vehicles necessary to complete the Work by submitting an Authorization for Site Vehicle Pass form.

1.6.1.1 Vehicles must have Contractor name or Logo on each side and must have an insurance certificate verifying $1,000,000.00 minimum liability coverage.

1.6.1.2 Contractor work vehicles, commercial vehicles, or contract carrier vehicles without a mirror tag will be held at the gate until cleared by the SPOC.

1.6.2 Vehicle drivers and all passengers must swipe/sign-in at the construction gate.

1.6.3 Contractor vehicles leaving the plant will be inspected by Security.

1.6.3.1 Tools and materials being removed on Contractor vehicles must have an Ameren Material Pass (Form 5532NS) signed by the SPOC and a Contractor supervisor for Security to retain.

1.7 Use of Plant Facilities

Note: The policies are on Scholar, the Ameren intranet. Go to *Employee Center, Corporate Policies, Policies by Topic, Technology*.

1.7.1 Contractors who have Ameren computers, phones and fax machines are "Privileged Users" and must comply with the following policies.

- Electronic Mail Policy
- Facsimile Machine Usage Policy
- Information Resources Acceptable Use Policy
- Internet/Intranet Usage Policy
- System Access Control Policy
- Wireless Communication Policy

1.7.2 Work areas must be restored to a condition that is approved by the SPOC.

BASE BID

The scope of **BASE BID** shall include all work included in the Plans and Specification as outlined on this bid form.

Having examined all Bidding Documents, including the Request for Quotation, and Plans and Specification prepared by Geotechnology, Inc. and CDG Engineers, Inc. for the project entitled above dated 04-29-2016 and having visited the site and examined all conditions affecting work, the undersigned proposes to furnish all labor, materials, equipment, and appliances required by said work for a Stipulated Sum of:

BASE BID:

_____ DOLLARS (_____)

For purposes of progress payment submittals only, this base bid can be divided as follows:

Ash Pond Closure	Quantity	Unit	Total Cost
Mobilization/Demobilization	1.0	LS	$
Erosion and Sediment Control Measures	1.0	LS	$
Surface Water Management	1.0	LS	$
Clearing and Grubbing	1.0	LS	$
Removal of Improvements	1.0	LS	$
Earthwork (Ash)	427,216	CY	$
Earthwork (Borrow)	167,076	CY	$
Earthwork Misc. Grading (Ditches, Swales, etc)	5,943	CY	$
ClosureTurf™	42.8	AC	$

REVIEWER: JMR

Dear Mr. Bollinger;

This transmittal responds to the AmerenEnergy Medina Valley Cogen, LLC (Ameren) supplemental data and responses received at the Illinois Environmental Protection Agency ("Agency") headquarters, dated February 6, 2017, which amends the "Closure Plan: Fly Ash Pond and Bottom Ash Pond, Meredosia Power Station". The Agency has reviewed the additional data and responses Ameren provided, and finds that the document adequately addresses the Agency's comments dated November 1, 2016.

The Agency notes that Ameren has committed to submitting a signed groundwater management zone ("GMZ") application upon the Agency's approval of the Meredosia Station Closure Plan which includes the initial plan dated August 15, 2016 as modified by the supplemental information dated February 6, 2017. The Agency hereby approves the Closure Plan for the Meredosia Station. The Agency will acknowledge approval of the signed GMZ application under separate cover.

Thank you for your attention to these matters. If you have any questions or concerns, please contact Lynn Dunaway of my staff or me at the letterhead address or 217/785-4787.

Sincerely,

William E. Buscher

1 INTRODUCTION

1.1 Overview

Union Electric Company d/b/a Ameren Missouri (hereafter referred to as Ameren) operated two on-site coal ash impoundments (Ponds 2 and 3) south of the Venice Power Plant in Venice, Illinois. Coal ash from the power plant was sluiced to the ponds from the 1950's until the late 1970's, when the last of the coal-burning units at the plant was converted to burn oil. Oil ash, process wastewater, and storm water continued to be pumped to the ponds from 1977 until 1999, and storm water and process wastewater were routed through the ponds until 2005. The ponds have not been used since 2005, when a new storm water and process wastewater treatment system was constructed immediately north of the ash ponds.

Ameren is proposing to close the Venice ponds in place, following an approach that will generally conform to regulatory provisions adopted by the Illinois Pollution Control Board concerning the closure of a coal ash impoundment in Hutsonville, Illinois (35 IAC 840 et seq.). Sections 1 through 4 of this closure plan follow the structure for a closure plan listed in those rules. Table 1-1 lists specific closure plan elements prescribed in 35 IAC 840.130 and sections within this closure plan where those elements are addressed.

This closure plan also includes elements from 35 IAC 840 that would not otherwise be included in the closure plan, in order to document Ameren's intent to close the Venice ponds consistent with the rule. Therefore, Section 5 of this closure plan describes post-closure maintenance of the cover system following an approach similar to 35 IAC 840.136, the elements required for a post-closure care plan (840.138 and 840.140), and descriptions of the elements that will be incorporated into the final cover construction and closure report (840.134), post-closure report (840.142).

A schedule for implementation and completion of these activities is provided in Section 6.

1.2 Site Map

The Venice ash impoundments (hereafter referred to as the Venice ponds) are located in St. Clair County (the power plant property straddles the border between Madison and St. Clair counties), Township 2 North, Range 10 West, Section 2 (Figure 1-1). The ash ponds are bounded to the north by the Venice power plant, to the east by property owned by Norfolk Southern Rail, to the south by property owned by Terminal Rail Road Association, and to the west by the Metro East Sanitary District's flood control levee for the Mississippi River. The property on which the levee exists and the adjacent Mississippi River bank are owned by Ameren. A map of the site layout is provided as Figure 1-2. This map identifies all

Electronic Filing: Received, Clerk's Office 09/28/2020

pertinent features (e.g., the Mississippi River and levee), buildings, the ash impoundments, and all existing wells.

1.3 Site Description

Materials managed in the Venice ponds included coal fly and bottom ash, oil fly ash, and low-volume wastes associated with generation of electric power. All materials managed in the ponds were generated at the Venice Power Plant.

The ponds occupy a combined area of approximately 58 acres with each being roughly the same size. The estimated volume of material in the ponds is 1,425,000 cubic yards with an average depth of 30 feet in Pond 2 and 26 feet in Pond 3. Both ponds are unlined, consistent with industry practice of the time of their construction in the 1950's.

As part of closure planning, the structural integrity of the ponds was evaluated. This evaluation included the proposed final cover and related grading plan. The results of this evaluation demonstrate that the proposed topographic configuration of the ponds and final cover meet or exceed the relevant stability criteria specified in 35 IAC 811.304. Further details regarding this evaluation are provided in Section 4.2.

1.4 Description of Closure Activities

1.4.1 Final Cover

The Venice ponds are dewatered. They have been cleared of vegetation and re-graded in accordance with the proposed storm water management plan (Section 4.3). A geosynthetic cover will be placed over the re-graded ash, consisting of (from bottom up) a 40-mil polyvinyl chloride (PVC) geomembrane; a geocomposite drainage layer, consisting of a high-density polyethylene geonet with geotextile adhered to the top and bottom of the net, to drain infiltrated surface water; and a 3 foot thick protective soil layer. The protective layer will have 2.5 feet of rooting zone soil and 6 inches of topsoil to support the establishment of vegetation to minimize erosion and exposure of the geosynthetics. This cover design meets the requirements of 35 IAC 811.314, and provides a barrier to infiltration and subsequent generation and release of leachate. The cover system will extend to the levee on the west, with the exact extent subject to approval by the US Army Corps of Engineers, and will extend across the north berm. The cover system will extend to, but not cross, the east and south berms. The Illinois Department of Transportation (IDOT) is constructing an access road along the east side of the Venice ponds to their Mississippi River Bridge (I-70) project located just to the south of the ash ponds. The cover will be terminated along side of this access road, rather than crossing it, since it will be constructed after IDOT's

access road is completed and while they are using the road to access the bridge project. The south berm will be left intact to prevent runoff of storm water off site to the south and avoid contributions to potential flooding within this area, which is a closed depression.

1.4.2 Storm Water Management

The south and east berms are located immediately adjacent to the property boundary, and there is no property outside of the ash ponds to the east and south for managing storm water runoff from the cover. Due to insufficient grade and concerns for erosion of the levee, Ameren is unable to direct storm water runoff from the cover to the west. Managing storm water runoff from the cover north of the ash ponds would result in an unacceptable impact to Ameren's operations. As a result, there is no feasible option for draining storm water off the cover. Therefore, storm water derived from precipitation falling onto the cover will be routed toward two low areas designed into the north and south ends of the cover and pumped from these locations over the levee to the Mississippi River. The cover will be graded such that there is no off-site contribution, or run-on, of storm water from areas outside of the ash ponds.

1.5 Description of Groundwater Management Zone

In March 2010, Ameren presented to IEPA for approval the establishment of a groundwater management zone (GMZ). Subsequent to the March 2010 presentation, Ameren attempted to negotiate an access agreement with the property owner to the south; however, the terms requested by the property owner were not practical for a long-term monitoring and compliance program. In February 2010, Ameren notified IEPA that an impasse had been reached and IEPA agreed that a GMZ confined to the property boundary could be an alternative approach. The revised GMZ is illustrated on Figure 1-3, and mapped in detail in Appendix L. The legal description for the GMZ is as follows:

> A tract of land situated partly in the County of Madison and party in the County of St. Clair, State of Illinois, located in Southwest Quarter (SW¼) of Section 36, Township 3 North Range 10 West and Section 1, Township 2 North Range 10 West of the Third Principal Meridian, more particularly described as follows: Starting at a point which is marked by an Old Iron Pin in the Northwest corner of U.S Survey 623 which has Illinois State Plane coordinates of N 52868.31 E 55930.60, is the Point of Beginning;
>
> Thence 1,342.7 ft. S 26°58'50"E to a point that is on the line between U.S. Survey 623 and 764, thence 1,980.7 ft. S 23°02'58"E to a point , thence 84.5 ft. S48°09'30"W to a point which is the intersection of the east line of Lot 100, as shown and described on a plat prepared by Julius Pitzman, City Surveyor of St. Louis, Missouri, and filed for record in Plat Book "H", Page 31 , of the records of St. Clair County, Illinois, and U.S. Survey 764, said point having an Illinois State Plane coordinate of N 49792.782 E 57252.320,, thence 290.84 ft. S48°24'34"W to a point which is the

southwest corner of US Survey 764, thence 1,634.28 ft. S 77°11'49"W to the east shore line of the Mississippi River, thence following the east shore line of the Mississippi River in a northerly direction to a point that is 3,556.4 ft. N07°5'19"W of the last described point and 934.1 ft. S 83°45'07"W from the Northwest corner of U.S Survey 623 (point of beginning); thence 840.8 ft. N 68°00'47"E to a point, thence 259.98 ft. S 34°55'54"E back to the point of the Point of Beginning. Said parcel containing approximately 104 +/- acres at normal river stage.

Groundwater within the GMZ discharges to the Mississippi River. Ameren understands that none of the groundwater impairments associated with the Venice ponds significantly impact water quality within the Mississippi River as discussed below in Section 2.4.2.

2 HYDROGEOLOGIC INVESTIGATION

2.1 Background

Hanson Engineers performed a hydrogeological assessment of Venice ponds 2 and 3 in 2000 (Appendix A). Activities included installation of groundwater monitoring wells, characterization of hydrogeology, and characterization of groundwater quality near the ponds. That assessment was performed while the ponds were active for storm water management at the power plant. The ponds were removed from service in 2005 and have received only precipitation since that time.

In 2009 a supplemental hydrogeologic assessment was performed by Natural Resource Technology, Inc. (NRT) to supplement the work of the Hanson report and to characterize groundwater quality near the ash ponds. Activities included collection of groundwater grab samples beyond the limits of the existing monitoring well network to define the vertical and horizontal extent of groundwater impacts associated with the ash ponds, a potable well survey, and fate and transport modeling. The results of the NRT investigations were presented in a series of Technical Memorandums:

- Technical Memorandum No.1 "Potable Well Survey, Hydrogeologic Assessment, and Modifications to the Groundwater Monitoring Program, Venice Ash Impoundment" (Appendix B);
- Technical Memorandum No.2 "Supplemental Hydrogeological Assessment, Venice Ash Ponds" (Appendix C);
- Technical Memorandum No.3 "Boron Loading to the Mississippi River from Venice Ponds 2 and 3" (Appendix D);
- Technical Memorandum No.4 "Evaluation of Closure Alternatives, Venice Ash Ponds" (Appendix E);
- Technical Memorandum No.5 "Predicted Change in Percolation, Venice Ash Impoundment" (Appendix F); and,
- Technical Memorandum No.6 "Groundwater Modeling of Venice Former Ash Ponds" (Appendix G).

The supplemental investigation performed by NRT conformed with the hydrogeological interpretations made in the Hanson, 2000 report. The text in the subsections below summarizes results of both hydrogeologic investigations with references to the attached reports as appropriate.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.2 Site Description

2.2.1 Geology

The site is located in the Mississippi River valley floodplain, in an area referred to as the American Bottoms. Approximately 80 feet of alluvial deposits associated with the Mississippi River underlie the site. Those alluvial deposits are underlain by Mississippian-aged limestone bedrock. The natural undisturbed soil profile generally consists of clayey silt overlying sand and gravel. The upper 20 to 30 feet of the alluvial deposits contain alternating layers of silt, sand, and clay; while the lower 60 to 50 feet primarily consist of sand and gravel. During supplemental investigation activities, undisturbed soils were observed at ground surface in the floodplain west of the Mississippi River levee and in the field south of the ash ponds east of the levee.

Fill material greater than 10 feet thick, which contained coal ash, was observed in the berm that surrounds the ash ponds, the former coal pile storage area north of the ponds, and within the ash ponds themselves (Figure 2-1). Fill material less than 10 feet thick, and which did not contain coal ash, was observed east of the ash ponds.

2.2.2 Mississippi River Characterization

The nearest United States Army Corps of Engineers (USACE) gauging station is located approximately 2.5 river miles upstream of the site, in Granite City, Illinois (Lock and Dam 27 lower). From 1965 through 2008, the mean annual elevation of the Mississippi River was 393.55 feet MSL (mean sea level) at Lock and Dam 27.

Using the monthly mean elevation data provided by the USACE, it was determined that the Mississippi River stage regularly exceeds the mean annual stage during the months of March, April, May, and June (Table 2-1), and occasionally exceeds mean annual stage at other times of the year. During these periods, groundwater at the site may be flowing away from the river in an east or southeasterly direction (flow reversal). During the majority of the year, groundwater flows toward the river.

2.2.3 Groundwater Flow

Groundwater flow contours for four consecutive quarterly monitoring events are illustrated in Figures 2-2 through 2-5. Groundwater is typically encountered at a depth of 20 to 30 feet at the site. Groundwater flow in the region is controlled by the Mississippi River, and water levels within the monitoring wells rise and fall with river stage. The predominant groundwater flow direction is northeast to southwest (toward

the Mississippi River) during most of the year. During periods of high river stage, usually the spring or early summer months, groundwater flow direction is northwest to southeast (away from the river).

Hydraulic gradients and groundwater velocity were calculated for the periods shown on Figures 2-2 through 2-5 (Table 2-2). Hydraulic gradients during these events ranged from 0.001 to 0.008 toward the river and 0.004 to 0.006 away from the river. The geometric mean hydraulic conductivity of the uppermost aquifer is 2.89×10^{-3} cm/s (Table 2-3). Assuming an effective porosity of 0.25, groundwater flow velocities ranged from 13 ft/yr to 90 ft/yr.

Using river elevation data collected near the Venice ponds during quarterly sampling events, the following generalizations can be made:

- Flow reversals are commonly observed on site when the Mississippi River elevation is above 400 feet MSL;
- The water table is nearly flat or exhibits variable flow patterns (normal and/or reversed) on site when the Mississippi River elevation is between 390 and 400 feet MSL; and,
- Normal flows are commonly observed on site when the Mississippi River elevation is below 390 feet MSL.

The direction of groundwater flow across the site is dependant both on Mississippi River level and the duration of such elevated river stage. Short periods of elevated river stage may cause flow reversals in the western monitoring wells near the riverbank. Sustained periods of elevated river stage are typically required to change the direction of groundwater flow across the entire site.

Elevated river stage may also have an impact on groundwater quality by raising groundwater levels across the site and saturating fly ash at the base of the former ponds. Subsurface profile B-B' (Figure 2-1) indicates the base of ash is approximately 400 feet MSL. In monitoring wells located near the central portions of the former ponds (MW-4 and MW-6) groundwater levels have been observed above 400 feet approximately 15% of the time (see Figure 9 in Tech Memo 2, Appendix C).

Groundwater elevations in excess of 400 feet have been coincident with the June quarterly sampling event. However, it is noteworthy that groundwater in these wells occurs episodically as the river level does not rise above 400 feet every year (there is a three year period from 2005 through 2007 where observed groundwater levels were below 400 feet in both wells). Review of USACE daily mean elevation data indicate that river elevations during 2005 and 2006 also rarely exceeded 400 feet. This suggests that to the extent groundwater comes into contact with ash, such communication occurs during the spring or early summer on an episodic and non-annual basis.

2.3 Monitoring Well Network

Construction details for the existing monitoring well network are summarized in Table 2-4.

2.3.1 Existing Perched Groundwater Monitoring Wells

The existing monitoring well network consists of nine separate sampling locations surrounding the former ponds (Figure 1-2). Some locations include a well to monitor perched groundwater (those wells have a "P" following the name, e.g. MW-2P). Since 2000, the perched zone wells have been typically dry. Boron concentrations in the perched zone wells are consistently lower than its Class I standard (Tech Memo 2, Appendix C), including wells MW-5P and MW-7P. The only exception was observed at MW-2P where two boron samples obtained prior to dewatering of the pond (one in 1999 and one in 2001) had concentrations higher than 2 mg/L. More recent observations (2008 and 2009) at MW-2P were below the Class I standard. The lack of apparent impacts at MW-5P and MW-7P demonstrates that the perched zone is not a migration pathway. The migration pathway is the saturated zone as indicated by elevated concentrations of boron, an indicator constituent for coal ash leachate, at wells MW-5 and MW-7.

The perched zone wells are screened in a sand and gravel lens that only contains significant amounts of water during extremely wet periods. Accordingly, sampling at these locations can occur only during periods of flood events. For example, the last time samples were collected from MW-8P and MW-9P was in June of 2008, during a period of record rainfall and flooding in portions of Iowa, Illinois, and Wisconsin that resulted in widespread flooding along the Mississippi River.

The lack of boron exceedances in the perched zone monitoring wells, combined with the observation that these wells are often dry, indicates that migration is not currently occurring via the perched zone. Rather, the perched zone reflects recharge during rainy periods. Because the perched wells do not monitor the contaminant migration pathway, they were not included in the groundwater quality discussions that follow. It is further recommended that these wells be removed from the proposed monitoring well network and permanently abandoned.

2.3.2 Existing Zone of Saturation Monitoring Wells

The existing monitoring well network consists of nine separate locations around the former ponds (Figure 1-2). The zone of saturation monitoring wells are typically screened between elevations 395 and 385 feet MSL with the exception MW-8 and MW-9 which are screened approximately 10 feet deeper. The monitoring wells are all 2-inch diameter wells with 10-foot screens, and were constructed between April 1996 and July 1999 (in this report, references to screen elevation describe the elevation of the bottom of the screen and/or sample interval). The September 2009 round of analytical data collected

from the well network was used for comparison to groundwater grab samples to depict groundwater flow and quality as of 2009.

Given that flow is usually toward the river, monitoring wells MW-8 and MW-9 are sufficiently far from the site that water quality in these wells will not be affected during flow reversals. This observation is confirmed by the low concentrations of the primary ash indicator constituent, boron, observed in these wells (as described below). The remainder of this document therefore refers to MW-8 and MW-9 as upgradient wells.

2.3.3 Proposed Monitoring Well Network

Based on a review of the analytical data collected from the monitoring wells and direct-push samples, additional monitoring well locations are proposed to monitor compliance with site groundwater quality standards as defined in Section 3.3 and 3.4, while some existing wells are proposed for abandonment.

As discussed above, the perched zone monitoring wells do not provide useful information relative to the extent of the boron plume; therefore, it is recommended that the perched wells be removed from the monitoring well network and permanently abandoned.

The proposed monitoring well network will be used to monitor compliance in all directions from the Venice ponds. Monitoring wells MW-10 and MW-11 will monitor compliance to the north; MW-5 will monitor compliance to the east; MW-6 will monitor compliance to the south; and MW-2, MW-3, and MW-11 will monitor compliance to the west (Figure 2-6). Deep piezometers will be nested with the water table monitoring wells at MW-2, MW-3, MW-6, and MW-11.

All new monitoring wells will be constructed consistent with monitoring well construction standards described in Section 3.1. Proposed well construction details are summarized in Table 3-1. The final screen intervals for new monitoring wells will be determined in the field during installation.

Groundwater monitoring at MW-7 cannot continue because this well is off-site and the access agreement with the property owner has ended. Ameren intends to properly abandon MW-7. MW-4 was abandoned on July 23, 2010 to make way for an access roadway associated with construction of the new I-70 bridge. Documentation of MW-4 abandonment will be included with other construction documentation in the Final Cover Construction and Closure Report as outlined in Section 5.1. Both MW-1 and MW-4 were drilled through coal ash. Review of monitoring results from these wells indicates that coal ash indicator (boron) concentrations in these wells are similar to those in the leachate wells (Tech Memo 2, Appendix C). This observation suggests that coal ash may have been dragged down to the screened interval of the monitoring wells during installation. Therefore, it is recommended that MW-1 also be permanently abandoned. Replacement wells are not needed because groundwater is monitored upgradient of these

locations at MW-8 and MW-9, and downgradient of these locations at the MW-2 and proposed MW-11 well nests. Furthermore, construction of a replacement well for MW-4 is not feasible due to usage of the east berm for I-70 bridge construction traffic, and replacement of MW-1 is not recommended because that area will be capped and a replacement well would result in a penetration through the synthetic cap material, potentially enabling seepage into the coal ash.

2.4 Groundwater Quality as of 2009

Groundwater quality was evaluated in 2009 as part of the supplemental investigation (Tech Memo 2, Appendix C); results of that investigation are summarized below:

- The boron plume has been defined through existing monitoring wells and groundwater grab samples, and extends approximately 500 feet south of the property line (Figure 2-7).

- Arsenic is present inside and outside of the boron plume at concentrations in excess of the Class I groundwater quality standard (Figure 2-8). The Venice ponds, however, are not a significant source of arsenic to groundwater. This conclusion is based upon the following: 1) arsenic concentrations in field leachate samples taken from the ash ponds were lower than the maximum concentrations observed in groundwater (Table 2-5), whereas higher concentrations would be expected in leachate if the Venice ponds were the source; 2) there is a weak inverse correlation between arsenic and boron concentrations in groundwater (Figure 2-9), rather than a positive correlation that should exist if the Venice ponds were the source; and 3) arsenic concentrations higher than the Class I standard were observed in a background sampling location (GP002) (Figure 2-8), Accordingly, arsenic concentrations higher than Class I groundwater quality standards emanate from a different source than the Venice ponds.

- Iron is present inside and outside of the plume in excess of the Class I standard. Similar to arsenic, the data suggest that the source of iron is not the ash ponds.

- Manganese is present inside and outside of the boron plume in excess of the Class I standard. The presence of manganese in upgradient wells outside of the plume indicates that there is another source in the area, in this case that source may be natural rather than anthropogenic. Unlike iron and arsenic, the data suggest that the ash ponds may contribute to elevated manganese concentrations in groundwater; although the mechanism of this impact is geochemical rather than as a direct contribution source, because manganese concentrations in the leachate were usually lower than detection limits. Furthermore, manganese is more reactive and less mobile in groundwater than boron, and the extent of manganese contributed to groundwater from the ash ponds will not be greater than the extent of boron. Therefore, boron is the primary indicator for coal ash impacts.

- Total dissolved solids concentrations reflect dissolved concentrations of major ions in groundwater that are not necessarily associated with coal ash leachate from the ash ponds.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.4.1 Other Known and Potential Sources

Past land use was evaluated using Sanborn maps from 1907, 1950, and 1962 (Appendix A). A corn refining operation and a plaster mill were in the vicinity in 1907. Creosoting operations were reported in the northern vicinity of the site as of 1950. The Sanborn maps indicated the presence of numerous oil tanks and storage areas for treated and untreated railroad ties. The creosoting operations were active as of 1962. All of these facilities were upgradient of the Venice power plant site.

As the Sanborn maps indicate, this area has been used for industrial purposes for at least 100 years, supporting the conclusion that multiple potential sources of contamination are present. For example, the petroleum impacted material encountered at GP001 (described Appendix C) is an example of the type of industrial by-products that may affect groundwater quality in the area. The creosote operation is a potentially significant potential source in the context of the Venice ash pond groundwater monitoring program because it was a wood treatment facility, and arsenic compounds were also used to treat wood at many such facilities.

2.4.2 Boron Loading to the Mississippi River

Boron loading to the Mississippi River from the inactive and dewatered Venice ponds was calculated to estimate the effect that this loading has on concentrations in the river (Appendix D). The estimated low flow of the Mississippi River at the Site is 46,500 cubic feet per second (cfs) and is four million times greater than the estimated groundwater flow into that receiving body.

Boron was chosen because it is readily available and is a very mobile indicator constituent of coal ash leachate. NRT used conservative assumptions for hydraulic conductivity, water flow conditions, and the highest observed concentration value (of 41 mg/L boron at MW-4) to calculate an estimate of the resulting incremental increase in boron in the Mississippi River due to discharge from the Venice ash ponds. The result was 0.0019 mg/L boron and this highly conservative concentration is approximately an order of magnitude lower than typical detection limits for boron as listed by USEPA. This result can be applied to other constituents that may have been released to groundwater from the Venice ash ponds. However, because boron almost always has higher concentration in coal ash leachate than any other trace or minor element (i.e., excluding the major ions Ca, Mg, K, Na, Cl, HCO_3, and SO_4), it can be assumed that these constituents will have concentrations even lower than the 0.0019 mg/L conservatively calculated for boron. Accordingly, the loading calculations indicate that boron released from the Venice ponds, and by extension all other coal ash leachate constituents, are negligible and have no perceptible impact on water quality within the Mississippi River.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.5 Fate and Transport Modeling

Groundwater fate and transport modeling was performed to assess the groundwater impacts associated with the Venice ponds, assist with the remedial alternative analysis, and assist with development of the groundwater monitoring system. Technical Memorandums 5 & 6 (Appendices F & G) describe the modeling in detail, and the following subsections summarize those memos. A disk containing model files is attached in Appendix K.

2.5.1 Conceptual Model

Groundwater in the vicinity of the Venice ponds originates as recharge from precipitation, flow from the east, and recharge from the Mississippi River when at high stage. The ultimate discharge point for groundwater is the Mississippi River since there are no known active water supply wells near the ash ponds (Appendix B). Groundwater elevation fluctuates in response to changes in river stage. Flow direction reversals are also common, resulting in a highly variable up and down, back and forth flow pathway.

The only source considered for this modeling is the Venice ponds. While other sources of contamination are present in the area, the Venice ponds are the only known significant source of boron, the primary ash indicator constituent. Boron mass enters groundwater via two mechanisms: year-round leaching as precipitation and snow melt water percolates vertically through the ash, and occasional leaching when groundwater elevation rises to a level higher than the base of ash and flows horizontally through the material. The groundwater that seeps into the ash when water table is high likely drains vertically for an unspecified period of time after the water table returns to normal elevation.

2.5.2 Model Approach

A three-dimensional transient groundwater flow and transport model was calibrated to represent the conceptual flow system described above. Modeling begins in the year 2000, and mass that entered the aquifer prior to 2000 was simulated by specifying initial concentrations in groundwater. The model was calibrated to match groundwater elevation fluctuations and concentration trends observed between 2000 and 2009 (Run 19). Prediction simulations were then performed to evaluate the effect of the cap, which was assumed to be present beginning in 2011. The following scenarios were simulated:

- No Action (Run 19pna): The calibrated model was extended 27 years into the future without simulating placement of the cap;
- Base Case (Run 19pbc): The calibrated model was extended to July 2011 (estimate of when the geomembrane portion of the cap will be constructed). Starting in August 2011 the cap was simulated 25 years into the future. The cap covers the former ponds and berms.

Electronic Filing: Received, Clerk's Office 09/28/2020

- Case 1 (Run 19pc1): Similar to the base case, the calibrated model was extended to July 2011, then the cap was simulated another 25 years in the future. This scenario differs from the base case in that the cap covers the former ponds but leaves the eastern and southern berms uncapped.

Transport of boron was modeled because it is an indicator parameter for coal ash leachate, it is mobile in groundwater, and its concentration in downgradient monitoring wells is higher than its Class I groundwater quality standard.

This model was complicated by the need to simulate the fluctuations in elevation, flow direction, and leachate generation caused by changes in Mississippi River stage. To accommodate these fluctuations, four stress periods were used for each calendar year in the model from the first year of calibration (2000) to the final year of prediction (2035), for a total of 144 stress periods. These four stress periods simulate the average long-term transient fluctuations of the Mississippi River and its effects on groundwater flow near the site.

Three model codes were used to simulate groundwater flow and contaminant transport:

- Leachate percolation from the ponds and aquifer recharge south of the ponds was modeled using the Hydrologic Evaluation of Landfill Performance (HELP) model;
- Groundwater flow was modeled in three dimensions using MODFLOW; and
- Contaminant transport was modeled in three dimensions using MT3DMS.

2.5.3 Percolation and Recharge Modeling Using HELP

The Hydrologic Evaluation of Landfill Performance (HELP) code was developed by the U.S. Environmental Protection Agency and is used extensively in waste facility assessments. HELP predicts one-dimensional vertical percolation from a landfill or soil column based on precipitation, evapotranspiration, runoff, and the geometry and hydrogeologic properties of a layered soil and waste profile.

HELP (Version 3.07; Schroeder et. al, 1994) was used to estimate percolation through the former ash ponds after construction of the synthetic cap. HELP was also used to estimate aquifer recharge in the field south of the former ash ponds. This field lies in a closed depression ringed by soil berms that form the levee, railroad tracks, and the south berm of the former ash ponds.

HELP input and output files are included on a CD included as Appendix K.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.5.3.1 Help Model Approach

Three rounds of HELP modeling were completed in support of closure:

1. HELP was used to model current conditions and assist with selection of the type of cap for closure (Tech Memo 5, Appendix F).

2. Once the cap was selected, HELP was used to estimate recharge through the cap for transport modeling. Three configurations of synthetic cap placement were simulated based on the texture of the protective soil layer (Silty, Sandy, and Clayey). HELP was also used to model infiltration south of the ponds, a large field that is a closed depression bounded by the south berm of the ash ponds, the levee, and railroad embankments.

3. HELP was also used to evaluate the effect of changes to the final grade of the synthetic cap after the transport model was completed.

2.5.3.2 HELP Input Data

Refer to Table 2-6 and Technical Memorandum No 5 (Appendix F) for detailed descriptions of model setup and input values for the first round of HELP modeling. The second and third rounds of HELP modeling are modifications of the first round. Second and third round inputs that vary from the first round are discussed below. All scenarios were modeled for a period of 20 years. Since the ponds are already dewatered, that mitigation scenario was not considered.

The second round inputs are summarized in Table 2-7. As discussed above, three configurations of the protective soil layer were tested during this round. The protective soil texture parameter was the only input varied from the first round of modeling (Table 2-6). Infiltration and recharge in the field south of the former ash ponds were also simulated with HELP for a period of 20 years at this time (Table 2-6).

The third round of inputs are summarized in Table 2-8. The 58 acre ponds were divided into two areas. The larger area was 43.5 acres with a slope of 1% over 520 feet. The smaller area was 14.5 acres with a slope of 2% over 330 feet. All other inputs were left unchanged from the previous HELP model runs (Table 2-6).

2.5.3.3 Help Model Results

The first round of HELP modeling resulted in the selection of a synthetic cap rather than soil or compacted clay caps.

The second round of HELP modeling resulted in a maximum percolation rate of 0.0024 in/yr (5.48×10^{-7} ft/day). To be environmentally conservative, that infiltration rate was rounded up to 6.00×10^{-7} ft/day for input to the transport model to represent the recharge component of seepage from the Venice ponds.

Electronic Filing: Received, Clerk's Office 09/28/2020

The third round of HELP modeling resulted in a weighted average infiltration rate of 0.0019 in/yr (4.34×10^{-7} ft/day). This result was less than the recharge rate of 6.00×10^{-7} ft/day used in the transport model; therefore, the new slope changes would result in slightly less percolation (source) through the capped impoundments. The small reduction in percolation through the cap meant that the transport modeling would still be environmentally conservative and running an updated transport model would be unnecessary.

2.5.4 Flow and Transport Modeling

2.5.4.1 Model Descriptions

MODFLOW uses a finite difference approximation to solve a three-dimensional head distribution in a transient, multi-layer, heterogeneous, anisotropic, variable-gradient, variable-thickness, confined or unconfined flow system—given user-supplied inputs of hydraulic conductivity, aquifer/layer thickness, recharge, wells, and boundary conditions. The program also calculates water balance at wells, rivers, and drains. MT3DMS (Zheng and Wang, 1998) is an update of MT3D. It calculates concentration distribution for a single dissolved solute as a function of time and space. Concentration is distributed over a three-dimensional, non-uniform, transient flow field. Refer to Appendix G for more detailed descriptions of the flow and transport models.

2.5.4.2 Model Sequence

MODFLOW was calibrated to approximate groundwater elevation data collected between March 2000 and February 2009 (nine years). This timeframe was chosen because it represents current conditions and there were adequate data for calibration of this transient groundwater flow system. Next, MT3DMS was run, and model-predicted concentrations were calibrated to observed boron concentration values at the monitoring wells. Multiple iterations of MODFLOW and MT3DMS calibration were performed to achieve an acceptable match to observed data.

Once calibrated, additional simulations were performed to evaluate the prediction scenarios. With the exception of the No Action scenario (which has no cap) the percolation rate and concentration value assigned to the cap was the same for all prediction scenarios (25 mg/L), only the distribution of the cap was varied between the Base Case and Case 1.

2.5.4.3 Flow and Transport Model Setup and Inputs

Refer to Appendix G for detailed descriptions of model setup and input values. A CD containing input files is attached in Appendix K.

Electronic Filing: Received, Clerk's Office 09/28/2020

2.5.4.4 Input Data Assumptions

Simplifying assumptions were made while developing this model, including:

- The cap has an instantaneous effect on percolation rate;
- Leachate is assumed to instantaneously reach groundwater (e.g., migrate through the unsaturated zone);
- The Mississippi River is assumed to behave in a consistent annual pattern;
- The general head boundary and natural recharge are assumed constant over time; and
- Leachate concentrations are assumed to remain constant over time.

2.5.5 Modeling Results

Results of the MODFLOW/MT3DMS modeling are presented below. A CD containing output files is attached in Appendix K.

2.5.5.1 Calibration

The model was calibrated to observed conditions from 2000 through 2009. The model was first calibrated to approximate observed groundwater elevation (head) data, and then to observed concentration data. MW-1 and MW-4 were not used for concentration calibration because those wells were installed through ash and groundwater quality results are anomalous.

Head calibration results show that the model successfully reproduces the range of observed seasonal fluctuations (Figure 2-10).[1] MW-2 and MW-7 represented downgradient calibration; MW-1 and MW-5 represented on-site calibration; and MW-8 and MW-9 represented upgradient calibration. In all three areas, modeled and observed heads were in good agreement considering that the stress periods used in the model represent river stage in concept, rather than a historical depiction.

Concentration calibration accurately simulated observed trends at most monitoring wells (Figure 2-11). MW-2, MW-3, MW-7, and GP-6 represented downgradient concentrations. GP-6 is a monitoring point placed in the model to compare to a groundwater grab sample collected in the fall of 2009. The largest

[1] Qualitative head matching (e.g., calculation of the sum of squared residuals) was not performed for this model because the average fluctuations in river stage modeled did not necessarily correlate with actual fluctuations, and given the large range in observed and modeled heads, calculations of head differential would not be meaningful. Instead, calibration was deemed successful when head fluctuations covered a similar range as observed groundwater levels, and—most importantly—when modeled long-term concentration trends closely matched observed trends.

discrepancy between modeled and observed concentrations was at MW-3, where observed concentrations appear to be anomalously low given its proximity to the site in the downgradient flow path.[2] The model also predicted a future concentration increase at MW-6 that would not be interpreted from the relatively flat trend in the observed data. Since one purpose of the model is to predict the amount of time needed for groundwater to recover to Class I standards, the higher than observed modeled concentrations at MW-3 and MW-6 are conservative because it increases predicted recovery time.

2.5.5.2 Prediction

The No Action scenario (Figure 2-12) reflects that concentrations in wells MW-2 and MW-3 (downgradient, on-site between the levee and the ponds) will stabilize around 4 to 5 mg/L boron, approximately twice the Class I standard. Concentrations in GP-6 (downgradient, off-site about 500 feet south of ponds) will stabilize just below the Class I standard of 2 mg/L. Concentrations in well MW-7 (downgradient, off-site about 100 feet south of the ponds) will stabilize around 3 mg/L, above the Class I standard. On-site concentrations at MW-6 will stabilize around 6 mg/L, while on-site concentrations at MW-5 will stabilize just below the Class I standard. This scenario was modeled for comparison with the two scenarios described next, and does not represent a closure alternative considered by Ameren.

The Base Case scenario, with a cap that covers the ponds and all berms, (Figure 2-13) suggests that concentrations in all monitoring wells will stabilize below the Class I standard within 13 to 20 years, with the exception of on-site well MW-6. Concentrations modeled at MW-6 were slowly decreasing at the end of the model period and a linear interpolation of the trend suggests that concentrations will be lower than the Class I standard 28 years after the cap is constructed. However, it is important to remember that the model conservatively predicts an increase in concentration in MW-6 that is not supported by observed data, and as a result this recovery period may also be conservatively long.

The sensitivity of the Base Case scenario to saturated ash extent was tested by increasing the area of saturated ash to include the entire footprint of the former ash ponds (Figure 2-14). The results are similar with the following exception: Concentrations in MW-2 and MW-3 (downgradient, between the levee and ponds) stabilize around 4 to 5 mg/L. This suggests that if ash extent is greater than that assumed for the base case, Class I exceedances may persist west of the ash ponds, but not to the south.

The Case 1 scenario, which most closely approximates the final closure plan because it assumes that the eastern and southern berms are not capped, reflects that concentration distribution will be similar to the

[2] The proposed monitoring program includes a deep well at this location to determine if concentrations are higher at depth in the aquifer.

Electronic Filing: Received, Clerk's Office 09/28/2020

Base Case scenario (Figure 2-15), with concentrations at most monitoring wells stabilizing at levels below the Class I standard within 14 to 20 years. The most notable difference is that the recovery period at on-site monitoring well MW-6 is 57 years, although, as stated above, the model appears to be over-predicting concentration in this well.

3 GROUNDWATER MONITORING PLAN

3.1 Groundwater Monitoring System

A groundwater monitoring system is proposed for the Venice ponds to monitor groundwater, evaluate post-closure groundwater quality and trends, and to demonstrate compliance with the groundwater quality standards as described in Section 3.3.

Standards for monitoring well design and construction include:

- All monitoring wells will be cased in a manner that maintains the integrity of the bore holes.
- Wells will be screened to allow sampling only at the specified interval.
- All wells will be covered with vented caps, unless located in flood-prone areas, and equipped with devices to protect against tampering and damage.

The proposed groundwater monitoring system will consist of 2 upgradient and 10 downgradient of wells, installed at the water table and at depth in the uppermost aquifer underlying the Venice ponds. These wells will yield groundwater samples that represent the quality of background water that has not been affected by contamination from the Venice ponds and represent the quality of downgradient groundwater at the property boundary and within the GMZ (Figure 3-1). Monitoring well depths and construction details are listed in Table 3-1.

3.2 Groundwater Monitoring Program

A groundwater monitoring program is proposed to monitor groundwater and evaluate post-closure groundwater quality within the GMZ. The groundwater monitoring program will begin upon approval of this closure plan by IEPA, and completion of the installation of the groundwater monitoring system.

3.2.1 Monitoring Parameters

Groundwater quality data will be monitored for constituents listed in 35 IAC 620.410(a) and (d) except radium-226 and radium-228. Any constituent that is not detectable at the reporting level or PQL in the downgradient wells for four consecutive quarters or has a concentration that does not differ to a statistically significant degree from the concentration detected in the upgradient wells for four consecutive quarters may be removed from the monitoring program in both the upgradient and downgradient wells with the exception of:

- boron,
- iron,
- manganese,
- field parameters including pH,
- sulfate, and
- TDS.

Field parameters will include pH, specific conductance, temperature, groundwater elevation, and monitoring well depth. Table 3-2 lists constituents to be monitored at the Venice ash ponds.

3.2.2 Sampling Schedule

Groundwater sampling will be performed according to the schedule provided in Table 3-3. Quarterly sampling will initially be performed. Five years after approval of the closure plan, a request may be made to modify the post-closure care plan to reduce the frequency of groundwater monitoring to semi-annual sampling by demonstrating all of the following:

- That monitoring effectiveness will not be compromised by the reduced frequency of monitoring;
- That sufficient data has been collected to characterize groundwater; and
- That concentrations of constituents monitored at the downgradient boundaries of the GMZ show no statistically significant increasing trends that can be attributed to the Venice ponds.

If concentrations of constituents at the downgradient boundaries of the GMZ show no statistically significant increasing trends that can be attributed to the Venice ash ponds for the five years after reducing the monitoring frequency to semi-annual, a request may be made to modify the post-closure care plan to reduce monitoring frequency to annual sampling by demonstrating the same items above as for the reduction to semi-annual monitoring.

Groundwater monitoring may be discontinued upon Agency approval of a certified post-closure care report. Specifically, when no statistically significant increase is detected in the concentration of any constituent above that measured and recorded during the immediately preceding scheduled sampling for three consecutive years after changing to an annual monitoring frequency; or, contaminated leachate is no longer generated by the Venice ash ponds.

3.2.3 Groundwater Sample Collection

Groundwater samples will be collected according to the draft standard operating procedure attached in Appendix H. The procedure is summarized below.

All groundwater elevations will be measured on a single day, in conjunction with sampling of the wells. River elevations as measured at the Venice plant will also be recorded at this time.

Monitoring wells will be sampled using a submersible pump. The well will be purged until specific conductance has stabilized within ±10 percent. Once stabilized, field parameters will be recorded in the log book. A 0.45 um filter will be attached to the discharge tube and the sample will be collected in pre-cleaned HDPE bottles. Samples for metals analysis will be preserved in the field using nitric acid (HNO_3). All samples will be placed in a cooler with ice to maintain a temperature of less than 4° Celsius during transport to the analytical laboratory.

In addition to groundwater well samples, quality assurance samples will be collected as listed in Section 3.2.5.

3.2.4 Laboratory Analysis

Laboratory analysis will be performed by Ameren's state-certified laboratory using the methods listed in Table 3-2. If alternative methods are used, they will be comparable to or better than the methods listed in Table 3-2. Concentrations lower than the reporting limit (RL) or practical quantitation limit (PQL) will be reported as less than the RL or less than the PQL.

3.2.5 Quality Assurance Program

One blind replicate and one equipment blank sample will be collected and analyzed for each day of sampling. In addition, one field blank sample will be analyzed for each sample trip.

Laboratory QA/QC programs may vary, but most laboratories use similar approaches, which include:

- Regular generation of instrument calibration curves to assure instrument reliability.
- Laboratory control samples and/or quality control check standards that have been spiked, and analyses to monitor the performance of the analytical method.
- Matrix spike/matrix spike duplicate analyses to determine percent recoveries and relative percent differences for each of the analytes detected.

- Analysis of replicate samples to check the precision of the instrumentation and/or methodology employed for all analytical methods.
- Analysis of daily or batch method blanks to assure that the system is free of contamination.

3.2.6 Groundwater Monitoring System Maintenance Plan

Monitoring wells will be inspected annually, and maintenance will be performed as needed to assure that the monitoring wells provide representative groundwater samples. Monitoring well inspections will consist of the following:

- Visual inspection, clearing of vegetation, replacement of markers, and painting of protective casings as needed to assure that monitoring wells are clearly marked and accessible.
- Visual inspection and repair or replacement of well aprons as needed to assure that they are intact, drain water away from the well, and have not heaved.
- Visual inspection and repair or replacement of protective casings as needed to assure that they are undamaged, and that locks are present and functional.
- Checks to assure that well caps are intact and vented, unless in flood-prone areas in which case caps will not be vented.
- Annual measurement of monitoring well depths to determine the degree of siltation within the wells. Wells will be redeveloped as needed to remove siltation from the screened interval if it impedes flow of water into the well.
- Checks that wells are clear of internal obstructions, and flow freely.

If maintenance of a monitoring well cannot address a deficiency, then a replacement well will be installed that meets the criteria outlined in Section 3.1.

3.2.7 Data Reporting

Sampling and analysis data from groundwater monitoring, and decisions to remove any constituent from the monitoring program, will be reported to the Agency no later than 30 days after the sampling and analysis have been completed.

3.3 Groundwater Quality Standards

3.3.1 On-Site Applicable Groundwater Quality Standards

On site, prior to the completion of the post-closure care period, the applicable groundwater quality standards at the Venice ponds are the concentrations as determined by groundwater monitoring, if such

concentrations exceed the numeric standards for Class I: Potable Resource Groundwater set forth in 35 IAC 620.410.

After completion of the post-closure care period, the on-site concentrations of contaminants from the Venice ponds as determined by groundwater monitoring, if such concentrations exceed the numeric standards for Class I Potable Resource Groundwater set forth in 35 IAC 620.410, are the applicable groundwater standards if:

- To the extent practicable, the exceedance has been minimized and beneficial use, as appropriate for the class of groundwater, has been returned on-site;
- Any threat to public health or the environment on-site has been minimized; and
- An institutional control prohibiting potable uses of groundwater is placed on the Venice site in accordance with the Uniform Environmental Covenants Act (765 ILCS 122) or an alternative instrument authorized for environmental uses under Illinois law and approved by the Agency. Existing potable uses of groundwater may be preserved as long as such uses remain fit for human consumption in accordance with accepted water supply principles.

3.3.2 Off-Site Applicable Groundwater Quality Standards

Off-site applicable groundwater quality standards are not proposed and the Groundwater Management Zone (GMZ) will terminate at Ameren's southern property boundary. Groundwater modeling predictions suggest that concentrations will return to levels lower than Class I groundwater quality standards and approach background concentrations within 25 years (Section 2.5). Monitoring well nest 6 is located near the property boundary and is reflective of off-site impacts. Furthermore:

- To the extent practicable, the activities described in this closure plan are designed to minimize exceedances of groundwater quality standards; and
- Any threat to public health or the environment has been minimized. There are no groundwater receptors in this area (Appendix B), and in recognition of the industrial nature of the area and historical waste practices, the cities of Venice, East Saint Louis, Wood River, Granite City and the Villages of Brooklyn and Sauget – located in St. Clair and Madison counties – have all enacted groundwater use restriction ordinances.

3.4 Demonstration of Compliance

3.4.1 Compliance with On-Site Applicable Groundwater Quality Standards

Compliance with on-site groundwater quality standards will be achieved when no statistically significant increasing trend that can be attributed to the Venice ponds is detected in the concentrations of all constituents monitored at the downgradient boundaries of the Venice site for four consecutive years after

changing to an annual monitoring frequency pursuant to Section 3.2. Monitoring wells to be used in this analysis are designated in Table 3-1 and Figure 3-1.

3.4.2 Demonstration of Compliance

An annual trend analysis will be performed for each compliance monitoring well designated in Table 3-1 and Figure 3-1 for all constituents monitored in accordance with Section 3.2 and listed in Table 3-2, based on a minimum of four consecutive samples, by applying Sen's Estimate of Slope. Compliance during closure and post-closure care periods will be demonstrated as described in Sections 3.4.1 and 3.4.2.

- If the results of sampling and analysis show an increasing trend at any compliance monitoring well located at the downgradient boundaries of the Venice site GMZ as specified in Table 3-1, a Mann-Kendall analysis will be performed at 95 percent confidence to determine whether or not the increasing trend is statistically significant. Ameren will investigate the cause of a statistically significant increasing trend as described below. If the statistically significant increasing trend occurs during post-closure care, the investigation will include more frequent inspection of the surface of the cover system and evaluation of background concentrations.
    - If the investigation attributes a statistically significant increasing trend to a superseding cause, Ameren will notify the Agency in writing, stating the cause of the increasing trend and providing the rationale used in such a determination.
    - If there is no superseding cause for the statistically significant increasing trend and sampling frequency has been reduced pursuant to semi-annual or annual sampling, a quarterly sampling schedule will be reestablished. After four consecutive quarterly samples show no statistically significant increasing trend, the frequency of groundwater monitoring will return to either semi-annual or annual, whichever frequency was utilized prior to the return to quarterly sampling.
    - Notifications concerning statistically significant increasing trends and revisions of the sampling frequency will be reported to the Agency in writing within 30 days after making the determinations.
- If a statistically significant increasing trend is observed to continue over a period of two or more consecutive years and there are no superseding causes for the trend, then Ameren will perform the following:
    - A hydrogeologic investigation; and
    - Additional site investigation, if necessary.

Based on the outcome of the investigation above, Ameren may take action to mitigate statistically significant increasing trends. Such actions will be proposed as a modification to the post-closure care plan within 180 days after completion of the investigation activities described above.

3.5 Proposed Mitigation Actions

If a statistically significant increasing trend is observed to continue over a period of two or more years, and a subsequent hydrogeologic and site investigation demonstrates that such exceedances are due to a release from the Venice Ash Ponds and corrective actions are appropriate to mitigate such releases, then Ameren will propose a corrective action plan as a modification to the post-closure care plan within 180 days after completion of the investigation activities. This plan will propose corrective actions to be undertaken to mitigate the groundwater quality exceedances.

4 FINAL COVER DESIGN

4.1 Overview

4.1.1 Profile

The final cover system proposed for the Venice ponds consists of the following profile (from bottom up), as depicted in Detail 3 on the enclosed Drawing 7824-Y-502164 entitled "Final Cover Sections and Details";

- 40-mil polyvinyl chloride (PVC) geomembrane infiltration barrier installed over a coal ash subgrade that will be prepared to be free of sharp objects or protrusions that may cause damage to the geomembrane when the overlying materials are placed;
- Geocomposite drainage layer, consisting of a high-density polyethylene geonet with geotextile adhered to the top and bottom of the geonet to provide a filter for the soils above the geocomposite and cushioning between the edges of the geonet and the geomembrane beneath; and
- 3-foot thick protective soil layer completely covering the geosynthetic layers with 2.5 feet of rooting zone soils and 6 inches of topsoil to support the establishment of vegetation on the cover system.

This cover design meets the requirements of 35 IAC 811.314, and provides a barrier to infiltration and subsequent generation and release of leachate.

PVC was selected for the geomembrane because of its greater flexibility relative to other types of geomembranes, making it better able to accommodate long-term settlement of ash within the ponds without compromising the infiltration barrier. PVC geomembrane is also available in larger panel sizes than that available for other types of geomembranes, which minimizes the amount of seams completed in the field. PVC is chemically compatible with the coal ash contained within the ponds. Vertical "boots" comprised of PVC geomembrane will be provided for penetrations in the cover for existing transmission tower foundations and poles for overhead electrical power distribution (Detail 4 on the enclosed Drawing 7824-Y-502164 entitled "Final Cover Sections and Details").

The geocomposite is provided to drain surface water that infiltrates the protective soil layer.

Vegetation will be established on the cover system to minimize erosion and exposure of the geosynthetics. Proposed seed mixes and related application rates are provided in Table 4-4.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.1.2 Areal Extent

The approximate extent of the cover system is depicted on the enclosed Drawing 7824-Y-502161 entitled "Geomembrane Subgrade Grading Plan" and described herein.

The cover will extend to the Metro East Sanitary District's (MESD's) levee to the west, with the exact extent subject to approval by the US Army Corps of Engineers (USACE) and MESD. Details of the final cover system germane to USACE's / MESD's regulatory authority over the project, such as the proximity of the geosynthetics to the levee, were jointly submitted to MESD and the St. Louis District of USACE for review and approval around the same time as submittal of this closure plan to IEPA.

The cover system will extend across the north containment berm of Pond 2.

The east and south containment berm of Pond 3 will be left intact in accordance with the storm water management plan for the cover, which is described in Section 4.3 below.

The cover system will extend to, but not cross, the east containment berms of both ponds and south containment berm of Pond 3. The Illinois Department of Transportation (IDOT) has constructed an access road along the east side of the ponds to their Mississippi River Bridge (I-70) project located just to the south of the ponds. The anchor trench for the geosynthetics will be excavated along the west side of this access road since the cover system will be constructed after IDOT's access road is completed and while they are using the road to access the bridge project. Ameren learned through discussions with IDOT during planning of this access road in early 2010 that extending the cover across the access road would result in an impediment to construction of the bridge by limiting access to and use of the access road by IDOT and their contractor(s).

4.2 Final Slope and Global Stability

The Venice ponds will be graded to promote drainage of storm water runoff (Drawing 7824-Y-502162 entitled "Final Cover Grading and Storm Water Management Plan) prior to installation of the geosynthetics. Stability analyses were conducted on the proposed final slopes to verify and demonstrate compliance with relevant portions of 35 IAC 840.124, which cross-references 35 IAC 811.304 for foundation and mass stability requirements. Specifically, the following analyses were performed:

- Global stability under static and seismic conditions with consideration of a rapid decline or drawdown in the elevation of the adjacent Mississippi River;
- Surface deformation and liquefaction potential under seismic conditions; and
- Veneer stability of the geosynthetic cover under static and seismic conditions.

Electronic Filing: Received, Clerk's Office 09/28/2020

Two cross-sections representing the maximum slope from the crown in the middle of the cover to both the eastern berm and western levee were evaluated under static conditions at several different river and corresponding groundwater elevations. The cross-section exhibiting deep rotational failure under static conditions at the highest river and corresponding groundwater elevation (west slope) was carried forward for evaluation of static global stability under rapid drawdown conditions, seismic deformation, and global stability under pseudo-static (seismic) conditions. Liquefaction potential was also evaluated. Further details regarding the scope of these analyses and related assumptions / input parameters are summarized briefly below and in detail in Appendix I.

The proposed slopes exceed the minimum stability requirements in 35 IAC 811.304. Results are summarized below and in Table 4-1.

Computed Stability Safety Factors for Final Slope

Analysis	Static SF	Seismic SF
Global Stability	4.9	1.3
Rapid Drawdown	5.0	1.3
Veneer Stability	24.8	1.6
Required Minimum	1.5	1.3

Global stability was analyzed using the SLOPE/W computer software. A conceptual model of subsurface conditions at the site was constructed using data from historic site investigations. Geotechnical strength parameters for subsurface materials were conservatively estimated from literature sources due to a lack of site-specific data. The static analysis was performed for six river stages ranging from base conditions up to the approximate elevation of the top of the levee. Safety factors ranged from 4.86 to 6.50 under static conditions for the various river stages evaluated,

An additional static stability analysis was performed to evaluate the effects of a rapid drawdown condition where the river stage drops faster than the saturated slope material can drain. The analysis was performed for a rapid 8-ft drop in river stage resulting in a safety factor of 4.98. All static global stability analyses exceed the minimum safety factor of 1.5 required by 35 IAC 811.304.

The seismic stability analysis incorporated peak ground acceleration (PGA) of 0.23 for a 2% occurrence probability over 50 years based on a US Geologic Survey chart of seismic activity for the eastern US. The

Electronic Filing: Received, Clerk's Office 09/28/2020

resulting factor of safety was 1.3 for a reasonable worst-case scenario with a river stage of 418 ft. An additional analysis evaluated the unlikely occurrence of simultaneous rapid drawdown and seismic events. The resulting safety factor was also 1.3. All seismic global stability analyses meet the minimum safety factor of 1.3 required by 35 IAC 811.304.

Due to the potential for earthquake-induced liquefaction, surface deformation and liquefaction analyses were conducted to satisfy the requirements of 35 IAC 811.304(f). Calculations were performed for NRT by Geo Engineering Consulting, LLC following methods published by the Tennessee Division of Solid Waste because the State of Illinois does not have specific technical guidance. The effects of both potential liquefaction and overall surface deformation on the final cover from seismic activity were determined to be negligible.

Lastly, the proposed geosynthetic cover was analyzed for veneer stability against sliding under static and seismic conditions (Appendix J). The critical interface was assumed to be between the geocomposite drainage layer and the PVC geomembrane. Material interface properties were conservatively estimated from published data for typical materials anticipated to be used in construction. The computed factor of safety against sliding was 24.78 and 1.56 for static and seismic conditions, respectively, which exceeds the corresponding minimum stability requirements of 1.5 and 1.3 in 35 IAC 811.304.

4.3 Storm Water Management Plan

Site constraints will not allow for the management of storm water outside of the limits of the final cover. The south and east containment berms of the ponds are located immediately adjacent to the property boundary, thus not providing any property outside of the ponds to the east and south for managing storm water runoff from the cover. The property to the south of the ponds is a closed depression to which the property east of the ponds already drains, and Ameren desires to avoid contributing to the potential for flooding within this area. Due to insufficient grade and concerns for erosion of the levee, Ameren is unable to direct storm water runoff from the cover to the west. Managing storm water runoff from the cover in the area north of the ponds would result in an unacceptable impact to Ameren's operations.

Consequently, storm water derived from precipitation falling onto and running off of the cover will be managed on the cover itself. The cover will be graded such that there is no off-site contribution, or run-on, of storm water from areas outside of the ponds, thus minimizing the amount of storm water that is managed on the cover. The cover grading plan was designed to collect storm water runoff in two topographically low areas located on the north and south ends of the cover (Drawing 7824-Y-502162, entitled "Final Cover Grading and Storm Water Management Plan"). Two low areas were necessary to minimize the amount of ash relocation / disturbance prior to installation of the cover. Storm water runoff collected in the low areas will be pumped from these locations over the levee to the Mississippi River.

Electronic Filing: Received, Clerk's Office 09/28/2020

The rate of inflow to the pump stations will be more variable than can be reasonably pumped to prevent ponding of storm water on the cover (most pumps operate at a static flow rate); therefore, the pump stations will be designed to minimize such ponding to the extent practical. A preliminary analysis of anticipated runoff and pumping rates suggests that ponding will be limited to approximately 0 to 3 feet in depth and 0.5 to 10 hours in duration depending upon the storm event. Recurrence intervals of 100% (1-yr), 50% (2-yr), 10% (10-yr), 4% (25-yr), 2% (50-yr), and 1% (100-yr), corresponding to the rainfall depths identified in Table 4-2, were evaluated. Runoff was quantified by the unit hydrograph method described in the Soil Conservation Service's (now referred to as the Natural Resource Conservation Service) Technical Release 55 (SCS, 1986). The shorter durations and lower depths of ponding were associated with the higher recurrence events (Table 4-3), while the longer durations and higher depths were associated with the lower recurrence events, indicating that the greatest extent of ponding anticipated will occur at a relatively low frequency.

Consequently, the cover design itself includes features to minimize infiltration while accommodating the management of storm water runoff on the cover. The geocomposite drainage layer component of the cover will drain directly into the pump stations so that infiltrated surface water is removed (Detail 1 of Drawing 7824-Y-502168, entitled "Storm Water Pump Station Sections and Details"). The geomembrane component of the cover will be placed beneath the subsurface wet wells associated with the pump stations. An additional flap of geomembrane will be placed directly beneath the geocomposite immediately surrounding the pump stations to minimize the infiltration of surface water into the topographically low spot in the main geomembrane layer. This flap will be fused to the main geomembrane layer and attached to the pump stations. A perforated pipe penetrating the geomembrane flap will be provided to facilitate monitoring for the presence of water within the topographically low spot in the main geomembrane layer and removal of this water via pumping. These details are depicted on Drawing 7824-Y-502168 entitled "Storm Water Pump Station Sections and Details".

During construction of the cover, coal ash contact water will be contained within the work area by the existing ash pond berms. Following installation of the geomembrane and construction of the storm water pump stations, accumulated storm water in the work area will be managed with the pump stations utilizing best management practices (BMPs), such as sediment traps and check dams, to minimize the amount of sediment discharged from the pump stations until vegetation is established on the cover.

4.4 Construction Quality Assurance Program

Construction of the proposed final cover system and storm water pumping stations will be subject to a quality assurance program similar to that required in 35 IAC 840.146. This program will be lead and supervised by a licensed professional engineer (PE) in the State of Illinois. Construction Quality Assurance (CQA) officers will execute the program on site through inspection and testing as described

Electronic Filing: Received, Clerk's Office 09/28/2020

below. The CQA officers will communicate associated observations and testing results to the supervising PE, construction contractor (including relevant subcontractors), design engineer, and Ameren on a day-to-day basis, and prepare and maintain daily reports documenting construction activities and relevant CQA observations and/or test results. Observed construction quality deficiencies will be rectified by the contractor to the satisfaction of the CQA officers, supervising PE, design engineer, and Ameren.

4.4.1 Geosynthetics Installation

CQA officers will review quality control certificates issued by the geosynthetics manufacturers for each specific product used in the final cover prior to installation to verify that the products conform to relevant technical specifications. For geomembrane, this includes factory seam testing results to verify that the panels delivered to the site were fabricated in accordance with the relevant technical specifications. Nonconforming products will be rejected for use in the final cover.

The subgrade surface on which geosynthetics will be deployed / installed will be inspected and approved by the CQA officers and geosynthetics installer on a daily basis. This includes inspection of completed underlying geomembrane in the case of the geocomposite drainage layer. Additional inspections shall be performed if weather, vehicular traffic, or other factors may have changed the condition of the subgrade surface following approval. The following items shall be completed during subgrade inspections:

- Verification that the subgrade surface, including the anchor trench, has been prepared in accordance with the technical specifications and drawings;
- Visual inspection of the subgrade surface to verify that it is smooth and free of ruts, erosion rills, rocks or other protrusions which are greater in size than that allowed by the technical specifications; and
- Documentation of acceptance of the subgrade surface by the CQA officer and geosynthetics installer, including signatures by authorized representatives of each party.

If any portion of the subgrade surface is determined to be unacceptable, it will be repaired and subject to re-inspection and acceptance prior to deployment of geosynthetics.

The CQA officers will verify the following during deployment of geosynthetics:

- Geosynthetics panels are installed at the locations and positions indicated on the approved panel layout plan;
- Geosynthetics are deployed reasonably flat to minimize wrinkles and subsequent folds during placement of the protective soil layer above the geosynthetics;
- Removal or cut out and repair of wrinkles in the geosynthetics that are higher than wide;
- Sufficient slack is provided in the deployed geosynthetics to account for anticipated temperature fluctuations (excessive slack should be avoided);

Electronic Filing: Received, Clerk's Office 09/28/2020

- Deployed geosynthetics have not pulled away from the subgrade surface or anchor trench after a significant drop in temperature;
- Tensile stresses in the deployed geosynthetics are minimized to the extent practical;
- Stones or excessive dust that could damage the geomembrane or clog the geocomposite are not entrapped between layers of geosynthetics;
- Adequate ballast, such as sandbags, is provided to prevent uplift of the geosynthetics by wind and prevent damage of geosynthetics during temporary anchoring; and
- Geosynthetics are inspected for damage after placement any necessary repairs are made.

Seaming operations for all geosynthetics will be monitored by the CQA officers to verify that they are conducted in accordance with the relevant technical specifications and the geosynthetics installer's quality control program. For geomembrane, this includes both trial and production seams, and related non-destructive and destructive testing of each. Any seams that fail non-destructive testing will be repaired and re-tested by the geosynthetics installer. For seams that fail destructive tests, the installer will collect and test additional samples from the length of the affected seam as indicated in the relevant technical specifications until samples are obtained that yield satisfactory destructive testing results. For geocomposite, this includes verification that the composition of the geonet ties and geotextile seams meet the requirements of the relevant technical specifications, as well as the tie spacing and geonet / geotextile overlap. Geonet ties or geotextile seams that do not comply with the material specifications will be rejected from use in the final cover. Inadequate tie spacing and/or geotextile overlap will be corrected by the geosynthetic installer and subject to re-inspection and approval by the CQA officers.

4.4.2 Protective Soil Layer

The CQA officers will observe placement of the protective soil layer above the geosynthetics to verify that the installed geosynthetics are not damaged. The thickness of the first lift will be at least 12 inches and this material will be placed onto the geocomposite by a bulldozer that exerts a ground pressure of 5 pounds per square inch (psi) or less. Fill material will be free of sticks, rocks, roots or other debris that may puncture the geomembrane. If damage to geosynthetics is observed during fill placement, the filling operations will be suspended and not resumed in the damaged area until repairs to the geosynthetics can be made by the geosynthetics installer. The CQA officers will document any damage to the geosynthetics in their daily report as well as associated repairs and testing.

The fill material will be randomly sampled by the CQA officers. These samples will be analyzed by a geotechnical laboratory for documentation purposes.

The thickness of the completed protective soil layer will be verified through field survey and comparison of the geomembrane subgrade elevations and final elevations.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.4.3 Storm Water Pump Stations

The CQA officers will inspect components of the storm water pump stations prior to installation to verify that they are in conformance with the relevant technical specifications. Surveying will be conducted during construction where appropriate to verify that these items are set at the elevations specified on the construction drawings. The CQA officers will observe construction of any piping and manhole connections and related backfill activities to verify that the materials and methods utilized conform to the relevant technical specifications and drawings for these items, and that leak testing is conducted where specified and that the results meet or exceed the requirements of the relevant technical specifications.

The CQA officers will observe nuclear density testing of structural backfill used in pump station foundations to verify compaction in accordance with the relevant technical specifications. CQA officers will also collect concrete delivery tickets and observe related quality control testing (e.g., slump, air entrainment, etc.) by the contractor to verify conformance with the relevant technical specifications. CQA officers will have authority to reject a load of concrete based upon the results of quality control testing. Cylindrical control samples of ready-mix concrete will be prepared by the contractor and tested for compressive strength to verify that cured compressive strengths meet or exceed the requirements of the relevant technical specifications. Compressive strength test results will be submitted to the CQA officers for review and approval prior to acceptance of the work.

Electronic Filing: Received, Clerk's Office 09/28/2020

5 CLOSURE AND POST-CLOSURE ACTIVITIES

5.1 Final Cover Construction and Closure Report

Ameren will prepare a final cover construction and closure report (closure report). This document will be submitted to IEPA within 90 days of completion of all closure activities described in Sections 3 and 4 of this closure plan. The closure report will include certification by a professional engineer that the Venice ponds have been closed in accordance with this closure plan, and will also contain supporting documentation including, but not limited to:

- Engineering and hydrogeology reports including, but not limited to, monitoring well completion reports and boring logs, monitoring well abandonment forms, all CQA reports, certifications, and designations of CQA officers-in-absentia;
- Photographs of the final cover system and any other photographs relied upon to document construction activities;
- A written summary of closure requirements and activities as set forth in the closure plan;
- Any other information relied upon by the professional engineer in making the closure certification; and
- The signature and seal of the professional engineer supervising the implementation of the closure plan, the preparation of the closure report, and making the certification of completion of closure.

5.2 Post-Closure Maintenance of Cover System

After closure and until completion of the post-closure report, Ameren will perform inspections of the cover system at the same time and frequency as the groundwater monitoring sampling schedule established in Table 3-3 and will take actions to mitigate the following conditions:

- Rills, gullies, and crevices six inches or deeper will be filled. Areas identified as particularly susceptible to erosion will be recontoured.
- Eroded and scoured drainage channels will be repaired, and lining material will be replaced if necessary.
- Holes and depressions created by settling will be filled and recontoured to prevent standing water.
- Areas in excess of 100 square feet, cumulative, with failed or eroded vegetation will be revegetated.

Electronic Filing: Received, Clerk's Office 09/28/2020

- Tears, rips, punctures, and other damage to the geosynthetic membrane will be repaired.
- Any woody species that take root on the protective cover will be removed.

5.3 Post-Closure Care Plan

A post-closure care plan will be submitted to IEPA within 90 days of completion of the cover.[3] The post closure care plan will include the following elements:

- Description of the post-closure care activities as listed in Section 5.2 of this closure plan;
- Description of the groundwater monitoring system as described in Section 3.1 of this closure plan, and a description of the maintenance plan for the groundwater monitoring system;
- Description of the groundwater monitoring program as described in Section 3.2 of this closure plan;
- Identification of the location of the monitoring wells used for trend analyses as listed in Section 3.4 of this closure plan;
- Description of the groundwater trend analysis methods as listed in Section 3.4 of this closure plan;
- A proposal for a groundwater management zone as listed in Section 1.5 of this closure plan;
- Description of actions proposed to mitigate statistically significant increasing trends in accordance with Section 3.4 of this closure plan, and the operation and maintenance of any structures or devices as listed in Section 3.5 of this closure plan; and
- The signature and seal of the professional engineer supervising the preparation of the post-closure care plan.

5.4 Annual Reporting

A report will be provided to IEPA annually during the post closure care period. The annual report will include the following items:

- Groundwater monitoring data;
- Annual trend analysis results per Section 3.4 of this Closure Plan, including a preliminary assessment of any statistically significant increasing trends;

---

[3] In 35 IAC 840, the post-closure care plan is due 180 days after enactment of the rule. In this case, all of the elements of the post-closure care plan are included in this closure plan; however some items such as monitoring wells, are planned at this point in time. Therefore, we propose to submit the post-closure care plan after completion of the cover. This will allow inclusion of as-built details such as monitoring well construction.

Electronic Filing: Received, Clerk's Office 09/28/2020

- Groundwater monitoring system maintenance inspection forms, including a description of any maintenance or replacement activities performed; and
- Cover inspection reports and a description of any maintenance activities performed on the cover.

The annual report will be provided to IEPA by March 31 of the following year.

5.5 Post-Closure Report and Certification of Completion of Post-Closure Care Plan

Post-closure care will continue until a demonstration of compliance with the groundwater quality standards as set forth in Section 3.3 has been approved by the Agency. Ameren will prepare and submit to IEPA for review and approval a post-closure report within 60 days after satisfying the requirements of the approved post-closure care plan and achieving the applicable groundwater quality standards as set forth in the plan and Sections 3.3 and 3.4 of this closure plan. The post-closure report will include a certification(s) by a professional engineer that the objectives of this closure plan and post-closure care plan have been met. A professional geologist may supervise post-closure care activities as appropriate under the Professional Geologist Licensing Act (225 ILCS 745). The report will also contain supporting documentation including, but not limited to:

- Engineering and hydrogeology reports including, but not limited to, documentation of compliance with the groundwater quality standards of Section 3.3;
- Photographs of the final cover system and any other photographs relied upon to document construction activities ;
- A written summary of post-closure care requirements and activities as set forth in the post-closure care plan and their completion;
- Any other information relied upon by the professional engineer or professional geologist, as appropriate for the activity, in making the post-closure care certification(s); and
- The signature and seal of the professional engineer or professional geologist (if utilized) supervising the implementation of the post-closure care plan, and the signature and seal of the professional engineer supervising preparation of the post-closure report and making the certification of completion of the post-closure care plan.

6 SCHEDULE

Closure and post closure activities will be completed according to the schedule below. IEPA will be notified of any changes in schedule. Such notifications will include the reason(s) for the change and a new schedule.

- Installation of groundwater monitoring system: within 90 days of IEPA approval of this closure plan.
- Implementation of groundwater monitoring plan: the quarter immediately following installation of the groundwater monitoring system.
- Application for new, or modification of existing, storm water discharge permits: within 180 days of IEPA approval of this closure plan or US Army Corps of Engineers approval the levee alteration and 404 permitting for the outfalls, whichever is later.
- Construction of the cover: within 18 months of IEPA approval of this closure plan or US Army Corps of Engineers approval the levee alteration and 404 permitting for the outfalls, whichever is later.
- Submittal of closure report: 90 days after completion of closure activities as outlined in Section 4 of this closure plan.
- Submittal of post-closure care plan: 90 days after completion of closure activities as outlined in Section 4 of this closure plan.
- Post-closure report: 60 days after satisfying the requirements of the approved post-closure care plan and achieving the applicable groundwater quality standards as set forth in the plan and Sections 3.3 and 3.4 of this closure plan. Specifically, when no statistically significant increase is detected in the concentration of any constituent above that measured and recorded during the immediately preceding scheduled sampling for three consecutive years after changing to an annual monitoring frequency; or, when contaminated leachate is no longer generated by the Venice ash ponds.

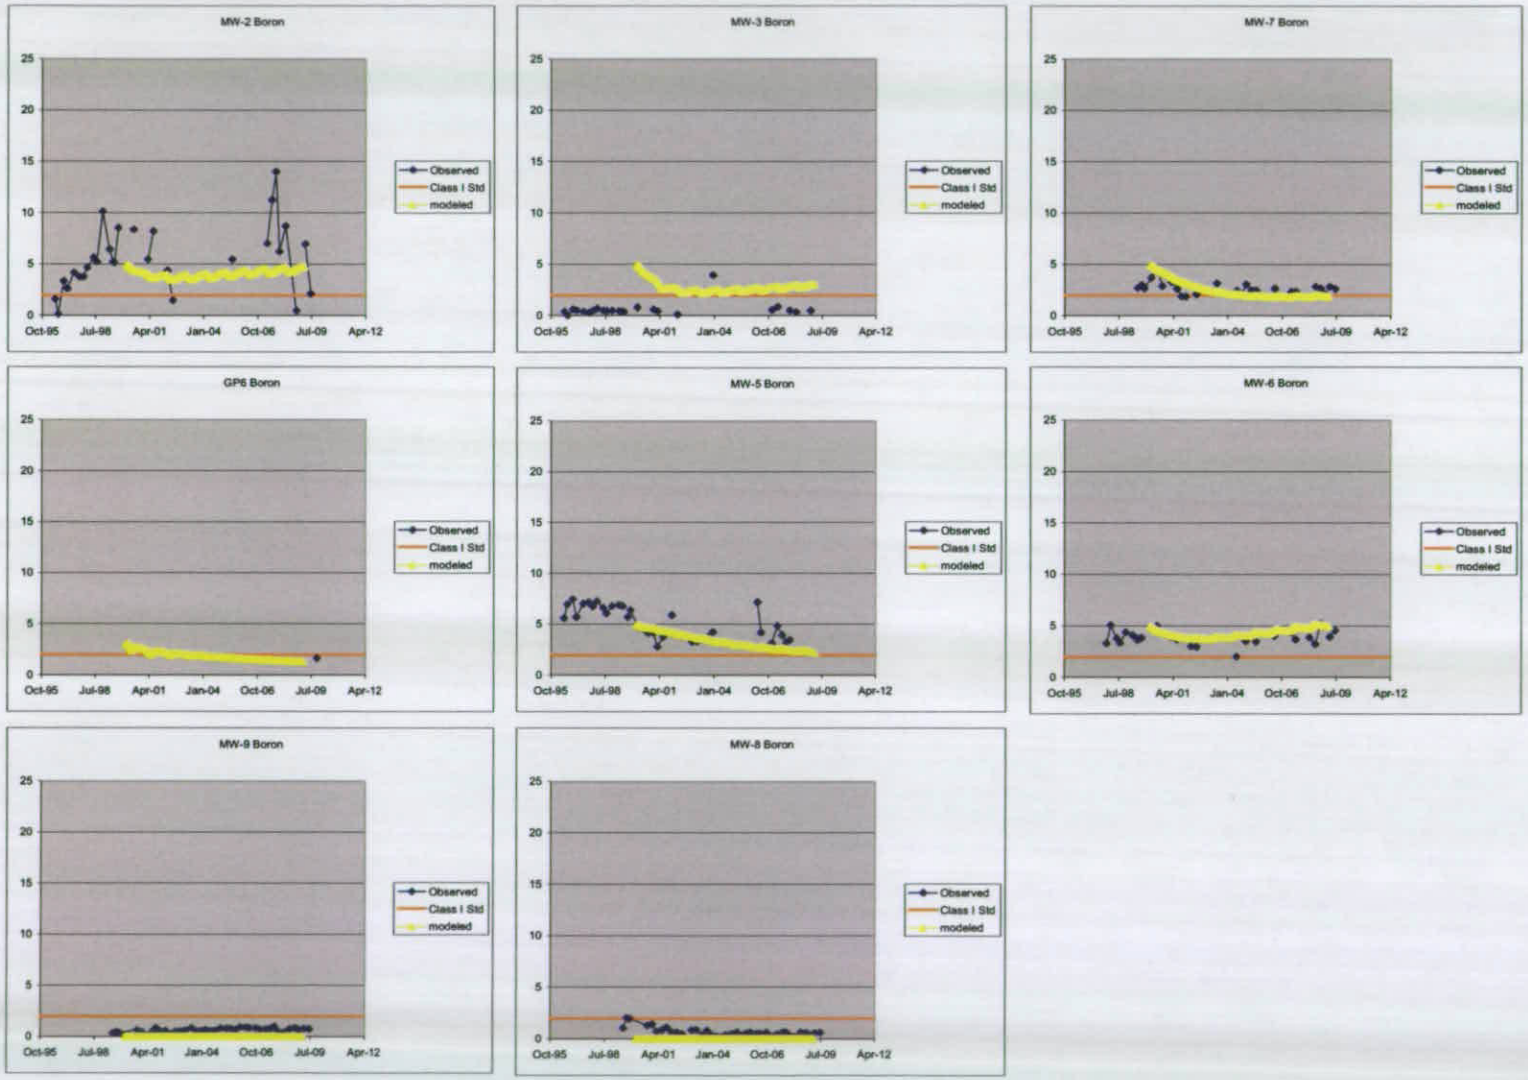
Figure 2-10 Flow Model Calibration Results

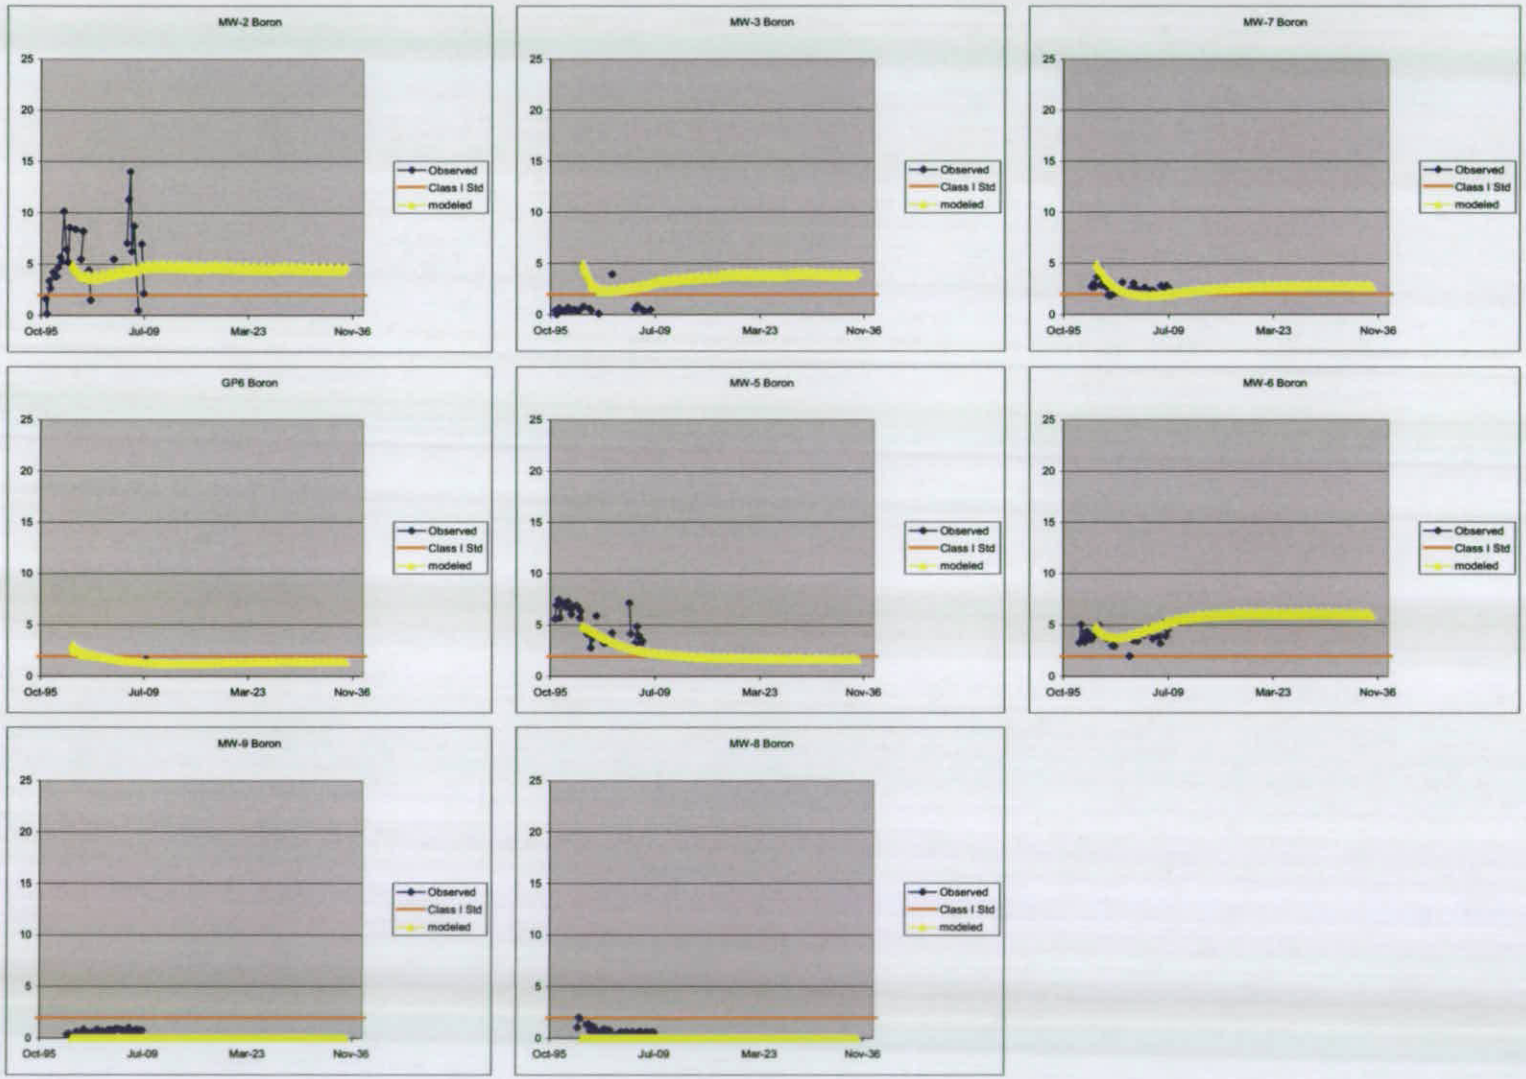


Head calibration graphs [Run 19]. MW-2 and MW-7 represented downgradient calibration; MW-1 and MW-5 represented on-site calibration; and MW-8 and MW-9 represented upgradient calibration.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 2-11 Transport Model Calibration Results

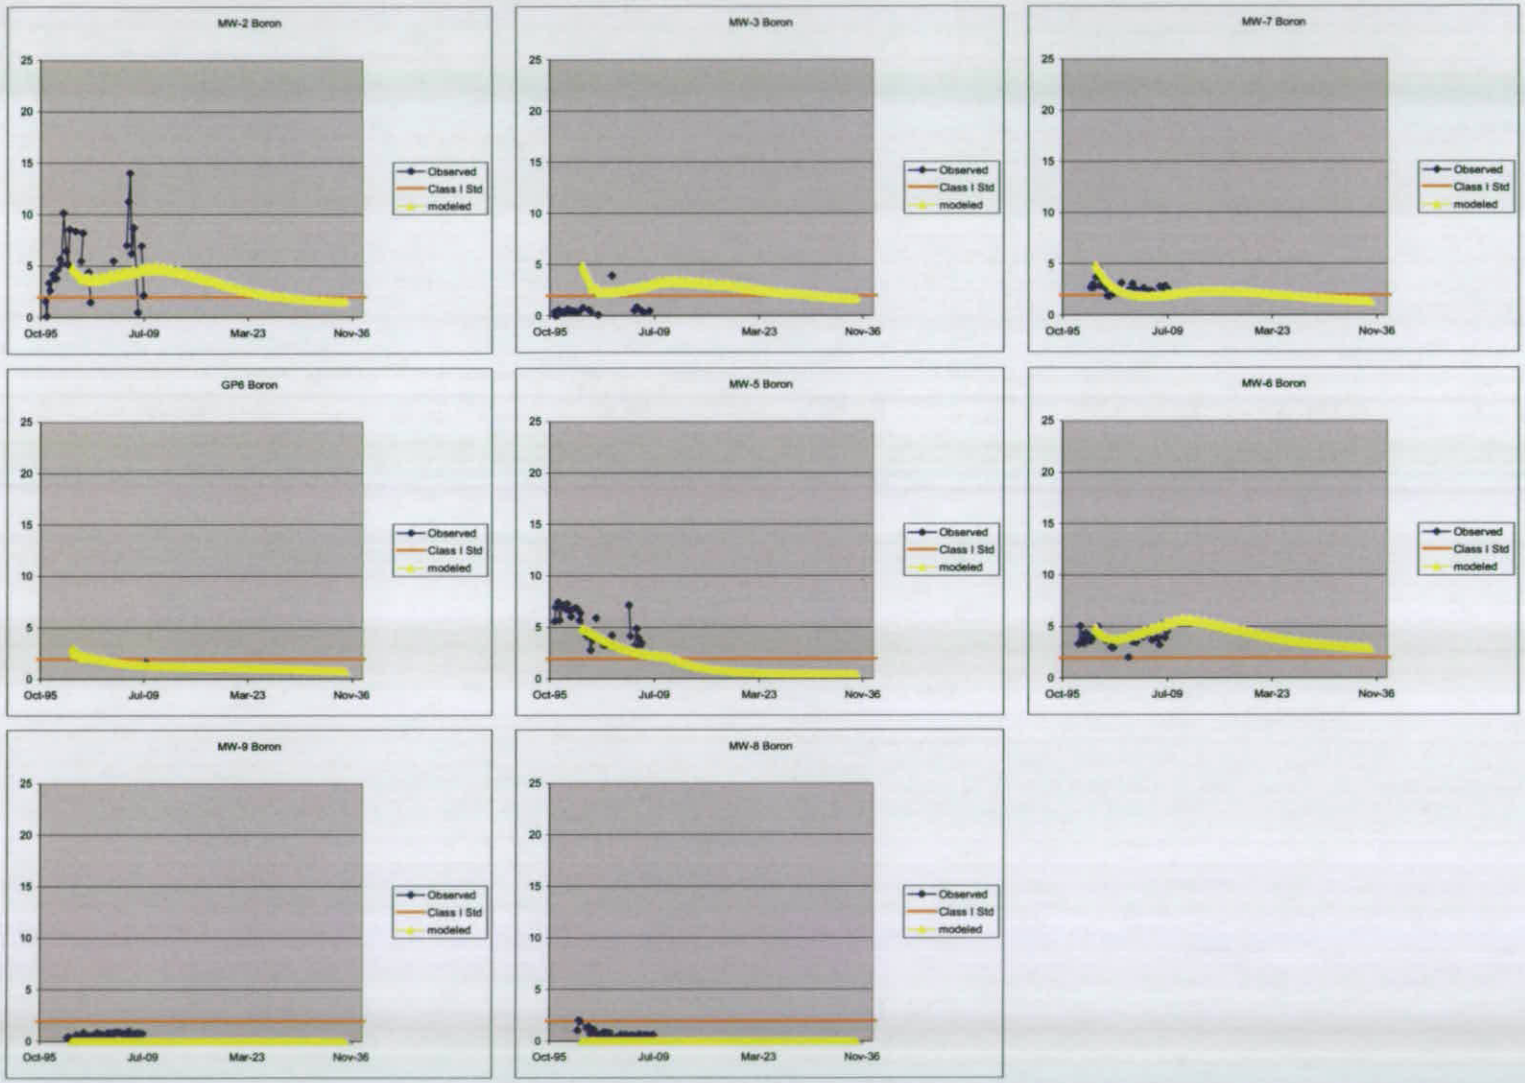


Concentration calibration graphs [Run 19]. MW-2, MW-3, MW-7, and GP-6 represented downgradient concentrations. GP-6 is a monitoring point placed in the model to compare to a groundwater grab sample collected in the fall of 2009. MW-5 and MW-6 represented on-site conditions; and MW-8 and MW-9 represented upgradient conditions.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 2-12 Prediction Model Results (No Action Scenario)

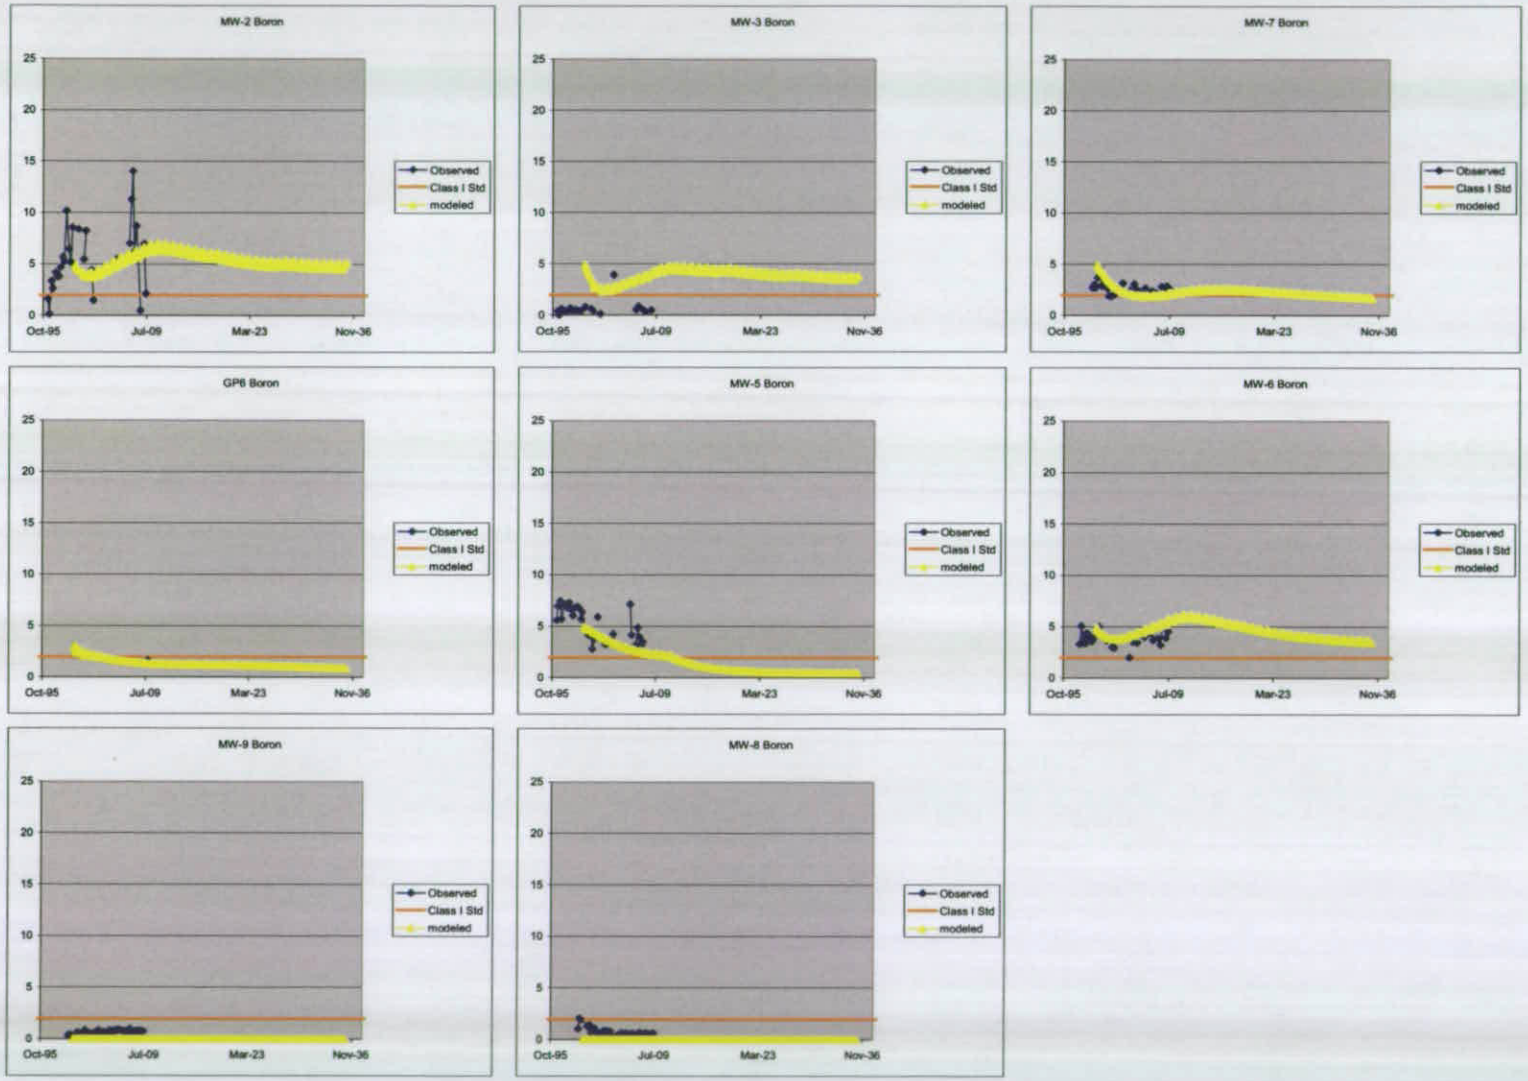


No Action Prediction Scenario [Run 19pna]. MW-2, MW-3, MW-7, and GP-6 represented downgradient concentrations. GP-6 is a monitoring point placed in the model to compare to a groundwater grab sample collected in the fall of 2009. MW-5 and MW-6 represented on-site conditions; and MW-8 and MW-9 represented upgradient conditions.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 2-13 Prediction Model Results (Base Case Scenario)

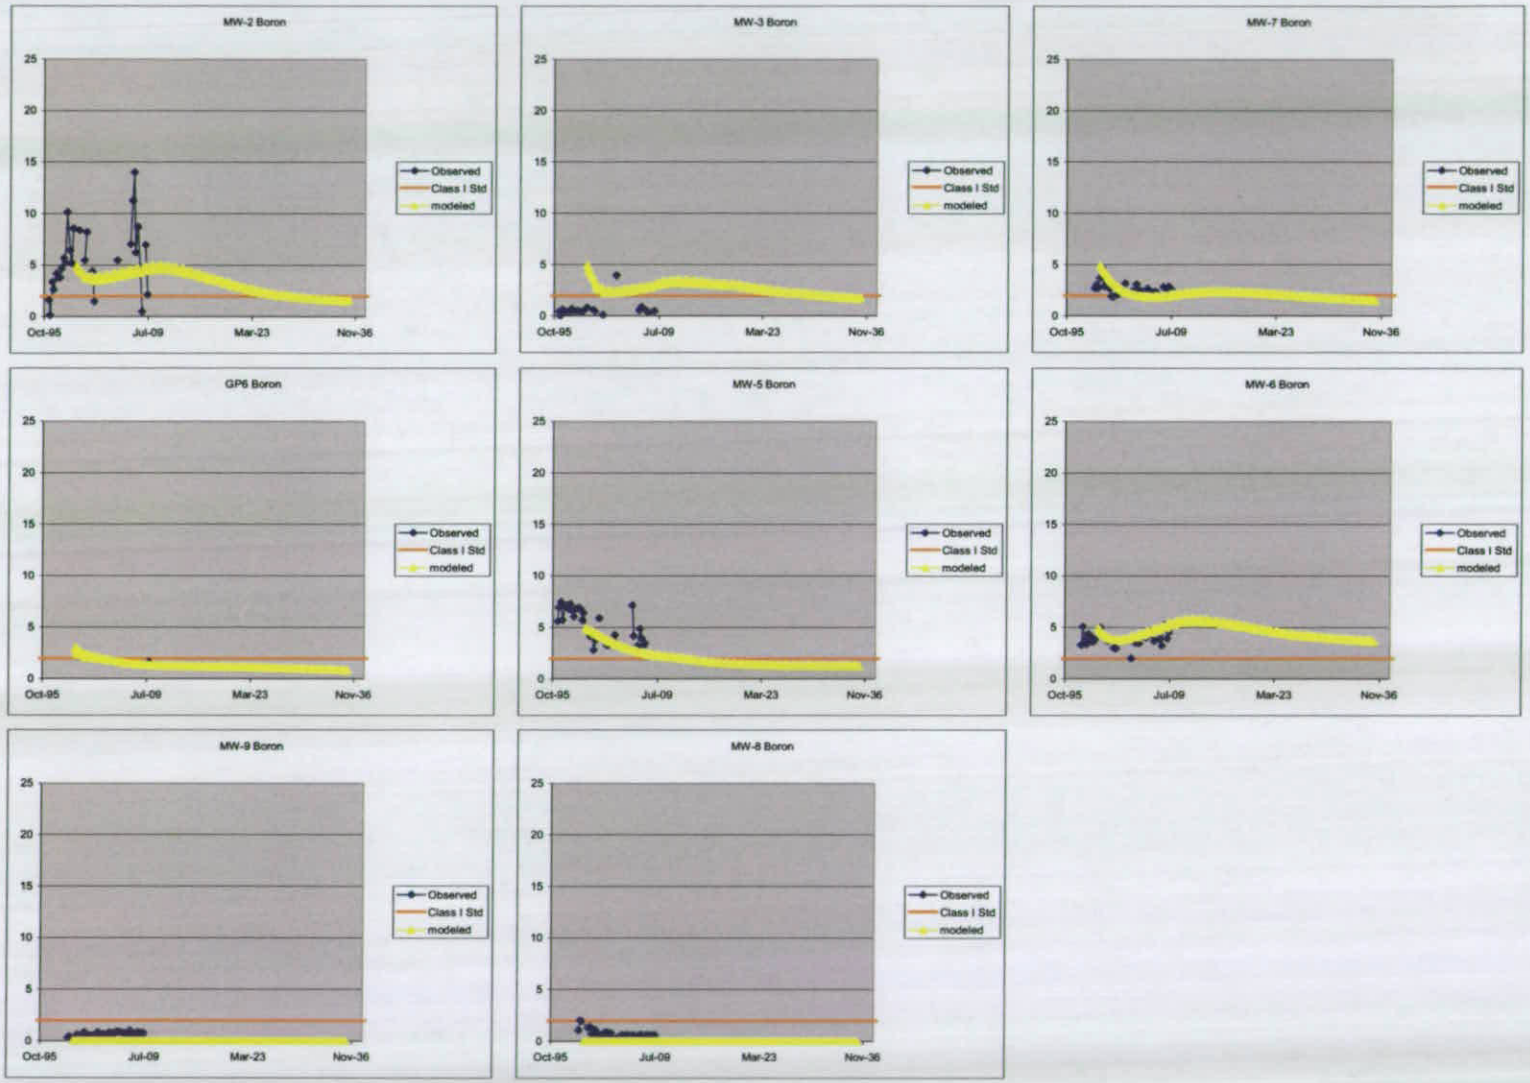


Base Case Prediction Scenario [Run 19pbc]. MW-2, MW-3, MW-7, and GP-6 represented downgradient concentrations. GP-6 is a monitoring point placed in the model to compare to a groundwater grab sample collected in the fall of 2009. MW-5 and MW-6 represented on-site conditions; and MW-8 and MW-9 represented upgradient conditions.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 2-14 Prediction Model Results (Base Case Sensitivity)



Base Case Prediction with entire footprint of saturated ash [Run 18pbc]. Compared to Figure 16, note that the results are similar with the following exception: Concentrations in MW-2 and MW-3 (downgradient, between the levee and ponds) stabilize around 4 to 5 mg/L, twice the Class I standard.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 2-15 Prediction Model Results (Case 1 Scenario)

Case 1 Prediction Scenario [Run 19pc1]. Concentration trends were similar to the Base Case scenario, with all off-site wells below the Class I standard. The most notable exception is that MW-5 concentrations appear to stabilize closer to the Class I standard than in the Base Case.

NATURAL RESOURCE TECHNOLOGY

Electronic Filing: Received, Clerk's Office 09/28/2020

APPENDIX H

GROUNDWATER SAMPLING STANDARD OPERATING PROCEDURE

Electronic Filing: Received, Clerk's Office 09/28/2020

GROUNDWATER SAMPLING PROCEDURE

Updates of this procedure should be sent to:

Section A Supervisor
Copies for sampling kit
Venice Chemical Engineer
M. F. Bollinger

A. Preparation

Before samplings are to be performed, review this procedure thoroughly. Check the electric well pump and battery to ensure the pump starts, check the conductivity meter to ensure it is calibrated and the battery is not dead, and check the depth gauge to ensure the battery is not dead.

Section A Lab Supervisor:

1. At the beginning of the middle month of each quarter, establish target sampling date when no precipitation is expected and when the wells will be accessible.

2. Ask Venice Plant Superintendent for weeds to be cleared and verify that there is safe access to the wells.

3. Schedule two Section A Section Chemical Testers for sampling, by overtime canvass.

Section A Chemical Tester:

1. Reserve the Lab Services van for the scheduled sampling day(s) and also the day before (to allow packing equipment). Verify that all items listed in Attachment A are on hand.

2. Prepare the containers (label and add preservatives) as described in Attachment B. Add the acid no more than 1 day in advance of sampling.

3. Prepare and label 1 set of containers per A-2, and fill with demineralized water for the field blank sample.

Instrument Technician:

1. Check the electric well pump and battery to make sure that they are functioning properly.

2. Check the conductivity meter and battery.

3. Check the pH meter (with temperature probe) and battery.

4. Check the depth gauge and battery.

Electronic Filing: Received, Clerk's Office 09/28/2020

B. Mobilization and Opening Wells

Important Note: A 4-wheel drive vehicle is needed for access to wells west of the levee and south of the ash ponds. Use Venice Plant Gator or truck.

1. Place ice in coolers for the bottles. Put all supplies into the van.

2. Drive to well. Remove well cover with well head tool. Unlock and remove well cap.

3. Repeat Step B-2 for each of the wells, in the expected order of sampling. All wells must be opened before sampling so that water levels in wells have time to equalize.

C. Water Level Measurement and Sampling

1. Return to the first well that was opened.

2. Turn on power and adjust volume up. Test sound.

3. Insert gauge probe into large open hole.

4. Lower probe until sound is heard. Adjust height until sound is just heard.

5. Read and record depth to 0.01 ft. on the Venice Groundwater Monitoring Data Sheet (Attachment C). Measure to the top of the PVC casing at the mark noted for depth measurement. If no water level is detected, mark "dry" on the data sheet. **All depth to water readings must be taken on the same day. If sampling will take more than one day, then repeat steps C-1 through C-5 as needed to assure that all depth to water measurements are obtained on the first day of sampling.**

6. Make sure that the wiring and tubing are secure on the electric well pump. Begin lowering the pump into the well and start the pump. When water begins to flow, flush the well for 10 minutes. Record the temperature and conductivity as indicated on the Data Sheet. Purge 5 more minutes and record the temperature and conductivity. If the conductivity has changed more than 10%, continue purging in 5 minute increments to steady-state conductivity (± 10%). Record the temperature, conductivity, and pH. Ensure that the temperature probe makes good connection with the pH meter and is responding. (Use the glass thermometer, if needed.)

7. Apply 0.45µ filter to tubing discharge. (Use large filter only if very high turbidity is seen.) Collect 1 liter dissolved metals sample in bottle labeled "filtered and acidified with HNO_3." Collect 1 liter sample in the bottle labeled "filtered." Collect 1 liter cyanide sample in bottle labeled "filtered and NaOH added." Collect ½-gallon sample in bottle labeled "filtered and acidified with H2SO4."

8. Restore site and equipment.

9. Repeat steps C-1 through C-8 above for the remaining wells. At one of the wells, take a set of duplicate samples. (Generally, duplicate well #1 in first quarter, well #2 in second quarter, well #3 in third quarter and well #4 in fourth quarter.) Collect one duplicate sample for each day of sampling.

10. Prior to sample collection at one well, remove the pre-filled field blank sample bottles from the cooler with empty bottles and remove the caps. After collecting the groundwater sample, replace the caps on the field blank sample bottles and place the bottles in the cooler with the collected samples. There is one field blank sample per sample trip.

11. Using a 5-gallon carboy of demineralized water, take a set of field equipment blank samples. Lower the pump into the carboy, then flush, check conductivity and take samples as in steps C-6 and C-7. Collect one equipment blank sample per day of sampling—use a fresh carboy for each equipment blank sample.

12. **VERY IMPORTANT! BEFORE LEAVING PLANT – ENTER THE RIVER LEVEL AT THE TIME OF THE DEPTH TO GROUNDWATER MEASUREMENTS (FROM VENICE PLANT CONTROL ROOM) ON THE DATA SHEET.**

13. Pack all samples in coolers with ice and take back to Lab Services.

D. Lab Services Follow Up

1. Complete the Request for Analysis (Attachment D) and submit to the Chemical Tester Leader along with the Venice Groundwater Monitoring Data Sheet and the samples.

2. Using a large tub or other reservoir, flush the tubing and pump by pumping soapy water and then thoroughly rinse by pumping demineralized water. Store the groundwater sampling kit, including electric pump and tubing. Return pH and conductivity meters to proper storage area.

3. The Section A Laboratory Supervisor will issue the Chemical Analysis Report of the results, with the completed Data Sheet attached, to Environmental Services and File: VEN 16-15-0.

E. Groundwater Monitoring System Inspection and Maintenance

During each sample event:

1. Assure that locks are present and functional.

2. Assure that well caps are intact and vented, unless in flood-prone areas in which case caps should not be vented.

3. Check that wells are clear of internal obstructions.

Perform at least annually during the first or second quarter sample:

1. Complete the Monitoring System Inspection form (Attachment E).

2. Inspect and repair or replace protective casings as needed to assure that they are undamaged, and that locks are present and functional.

3. Check to assure that well caps are intact and vented, unless in flood-prone areas in which case caps should not be vented.

4. Check that wells are clear of internal obstructions and flow freely.

5. Clear vegetation, repair or replace markers as needed, and paint protective casings if needed to assure that monitoring wells are clearly marked and accessible.

6. Inspect and repair or replace well aprons as needed to assure that they are intact, drain water away from the well, and have not heaved.

7. Measure monitoring well depths to determine the degree of siltation within the wells. Redevelop as needed to remove siltation from the screened interval if it impedes flow of water into the well.

ATTACHMENT A

GROUNDWATER MONITORING EQUIPMENT

SAMPLING EQUIPMENT

Electric Well Pump (Proactive Twister-Tempest)
Jug of drinking water (optional)
Two large equipment chests:
- keys to well cap locks
- well-head tools
- depth gauge (Sample Pro, model 6000)
- 12 well-specific sample tubes and 1 spare
- water filters: 24 small (QED Co. #FF8100)
- water filters: 24 large (QED Co. #FF8200)
- conductivity meter, battery-powered (Hach Instruments C0150)
- pH meter (with temperature probe), battery powered (Hach Instruments EC10)
- instructions and manuals
- thermometer (backup)
- marker (indelible)
- first aid kit
- insect repellent
- 1 trash bag (small)
- paper towels
- 2 channel-lock pliers
- 3 plastic beakers
- demineralized water, approx. 10 gallon (for equipment blanks)

Sample coolers containing:

54 each 1 L bottles, "EPA pre-cleaned," with labels and preservatives (as appropriate). (I-Chem #313-1000, HDPE, Hayward, California at 1-800-443-1689)

36 each ½-gallon or 2-liter bottles, HDPE

Water Filters: Martek "Sample Pro" 0.45µ, Std. capacity filters: Model FF8100
High capacity filters: Model FF8200 (also polyethylene tubing, tube fittings, and filter adaptors QED #8810)

Available from QED Co., Ann Arbor, Michigan at 1-800-624-2026
or VanDevanter Engineering Co., St. Louis, at 343-8880

Electronic Filing: Received, Clerk's Office 09/28/2020

GLOBAL SLOPE STABILITY EVALUATION – ASH POND CLOSURES AT AMEREN MISSOURI'S VENICE, ILLINOIS POWER PLANT

Electronic Filing: Received, Clerk's Office 09/28/2020

NATURAL RESOURCE TECHNOLOGY

TECHNICAL MEMORANDUM

www.naturalrt.com

Date: November 12, 2010

Subject: Global Slope Stability Evaluation
Ash Pond Closures at Ameren Missouri's Venice, Illinois Plant

From: Richard H. Weber, PE
Principal Engineer

Objective and Summary of Results

This technical memorandum describes the evaluation of global slope stability related to planned construction activities to regrade and cap Ash Pond Nos. 2 and 3 at the Ameren Missouri electric power generating station in Venice, Illinois. These planned closure activities must be reviewed and approved by both the Illinois Environmental Protection Agency (IEPA), as well as by the Metro East Sanitary District (MESD) and U.S. Army Corps of Engineers with respect to MESD's flood control levee, which forms the west side of the ash ponds.

Based on the evaluation described within this memorandum, the global stability of the closed ash impoundments, specifically along the east and west perimeter berms and corresponding interior ash materials, satisfies the requirements of 35 IAC 811.304(d) for foundation and mass stability with a minimum factor of safety of at least 1.5 and 1.3 for static and pseudo-static (i.e., seismic) conditions, respectively.

Deformation and liquefaction analyses of the ash pond system under reasonably expected seismic conditions is contained in separate companion technical memorandums prepared by Geo Engineering Consulting, LLC, a subconsultant to NRT. Further, analysis of interface stability of the composite geosynthetic cap is contained in another NRT technical memorandum.

Geo Engineering Consulting acted in an advisory role to NRT on this project and also peer reviewed our analysis results and this technical memorandum.

Historical Operation of Ash Pond System

From approximately 1942 until the mid-1970s, Ameren operated the Venice station as a coal-fired electric generating facility (Ameren Services, 2010). In the 1970s, Ameren converted the plant generators to burn oil. Prior to fuel conversion, Ameren managed coal combustion byproducts (CCBs) in a series of ponds

referred to as Ash Pond Nos. 2 and 3 (collectively the ash pond system) along with waste waters from the boilers and water treatment plant, various other process waters, and storm water runoff. Process waste water and storm water runoff continued to be managed in the ash pond system until 2005, when a separate treatment system for these streams was constructed. The ash pond system was constructed in the 1950s in conjunction with construction of MESD's current flood control levee system on the banks of the adjacent Mississippi River. The ash pond system is unlined, consistent with engineering and design practices of that time. The ash pond berms were constructed from indigenous earthen materials. Coal ash has not been disposed of in the system since 1977.

Coal ash, a CCB, was removed from the boilers and wet sluiced to the impoundment system via pipelines. Supernatant was discharged to the Mississippi River and water within the ponds eventually dissipated after the ash pond system was decommissioned. There is an estimated 1,425,500 cy of CCBs located within the ash pond system with a depth of approximately 27 feet. Borings advanced by Hanson Engineers through the CCBs indicate the base of ash is at an elevation of approximately 400 ft above mean sea level (MSL) (Hanson Engineers, 2000). Based on a review of groundwater monitoring data by both Hanson Engineers and NRT, groundwater flow in the vicinity is controlled by the adjacent Mississippi River. During periods of normal river stage groundwater flows towards, and discharges into, the river. During relatively short periods of high river stage, groundwater flow is reversed, with the river recharging the aquifer.

Geometry

Attachment A is Figure 5, Subsurface Profile A-A', from the Hanson Engineers Hydrogeological Investigation Report (Hanson Engineers, 2000). This figure is in an east-west orientation, and was used to develop a typical soil profile through the ash pond system. Planned construction by the Illinois Department of Transportation (IDOT) of a roadway on top of the ash pond system's east berm was also considered. This roadway was completed in Fall 2010 and serves heavy earthwork and truck vehicles during ongoing construction of a new bridge over the Mississippi River just south of the Ameren facility. Based on the Geotechnical Report by Kaskaskia Engineering Group for IDOT (Kaskaskia Engineering Group, 2010), and later confirmed during construction of the roadway, modifications of the east berm were limited to minor surficial regrading followed by installation of geomembrane/geotextile/geogrid products and a crushed aggregate traffic surface.

Closure design activities by NRT have, among other things, evaluated various grading plans to retain storm water runoff inside the existing perimeter berms, while at the same time attempting to balance cuts and fills and limiting the overall volume of materials to be moved before capping. An early grading plan contemplated a final slope of approximately 2% upward from the top of the perimeter berms (at approximately elevation 435) to a peak elevation of approximately 445-447 at the center of Ash Pond No. 2, while an existing low area at the southwest corner of Ash Pond No. 3 would be retained to collect a

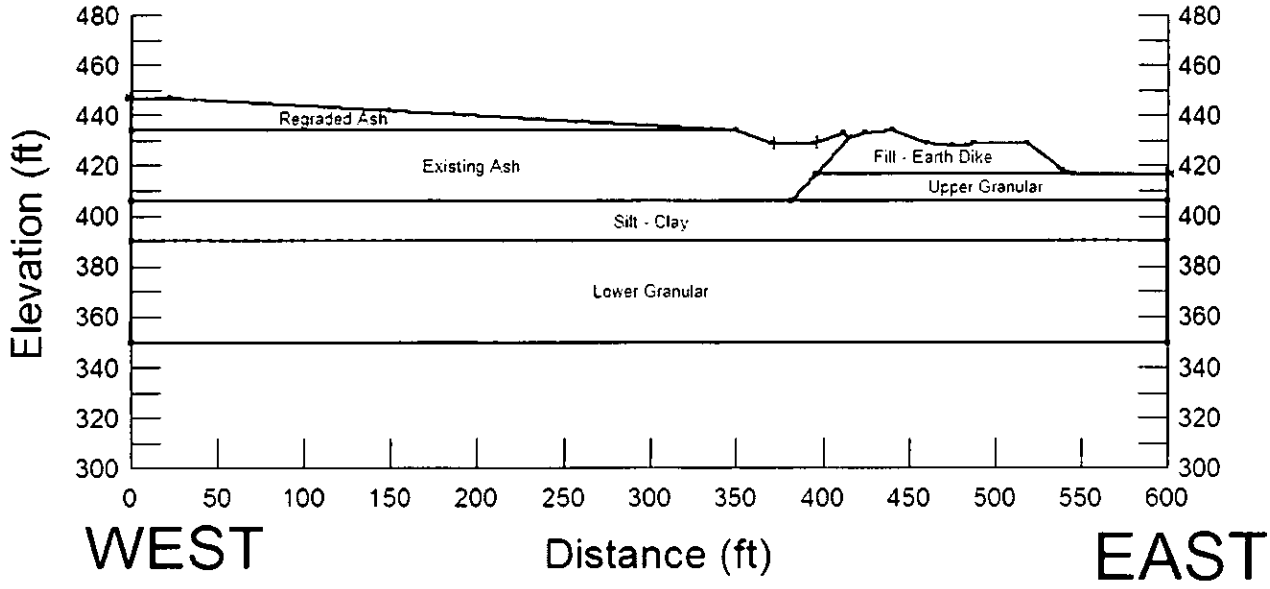
majority of storm water runoff (see Attachment B, Draft Grading Plan, April 2010). Accordingly, an east-west cross-section through the approximate center of Ash Pond No. 2, along with the Subsurface Profile A-A', was used as the geometric basis for global stability analysis of the ash pond system. The simplified east berm and west berm/levee profiles are shown hereafter in Figures 1 and 2, respectively. The subsurface horizons can be grouped as follows:

- Existing ***undisturbed ash*** and ***re-graded ash*** to re-shape the ash ponds before capping.
- ***Fill*** material of perimeter berms.
- Upper and lower native ***granular*** strata.
- Native ***clay-silt*** stratum.

Subsequently, during an August 2010 planning meeting, the U.S. Army Corps of Engineers (USACE) requested that the storm water collection area in the southwest corner of Ash Pond No. 3 be relocated eastward as far as possible to satisfy USACE concerns for seepage into this low area during potential river flood levels at or near the top elevation of the west berm/levee. Grading plan revisions thereafter changed the locations of storm water collection areas to near the north-central portion of Ash Pond No. 2 and the central portion of Ash Pond No. 3. The revisions also lowered the maximum final peak elevation to approximately elevation 440 (see Attachment C, Draft Grading Plan, October 2010). These changes were not considered appreciable with respect to the slope stability analysis. On the contrary, the lower peak elevations would result in higher safety factors than those represented herein. Therefore, a re-run of the computer model analyses to incorporate these geometric modifications was considered unnecessary.

Electronic Filing: Received, Clerk's Office 09/28/2020

Figure 1 – East Berm



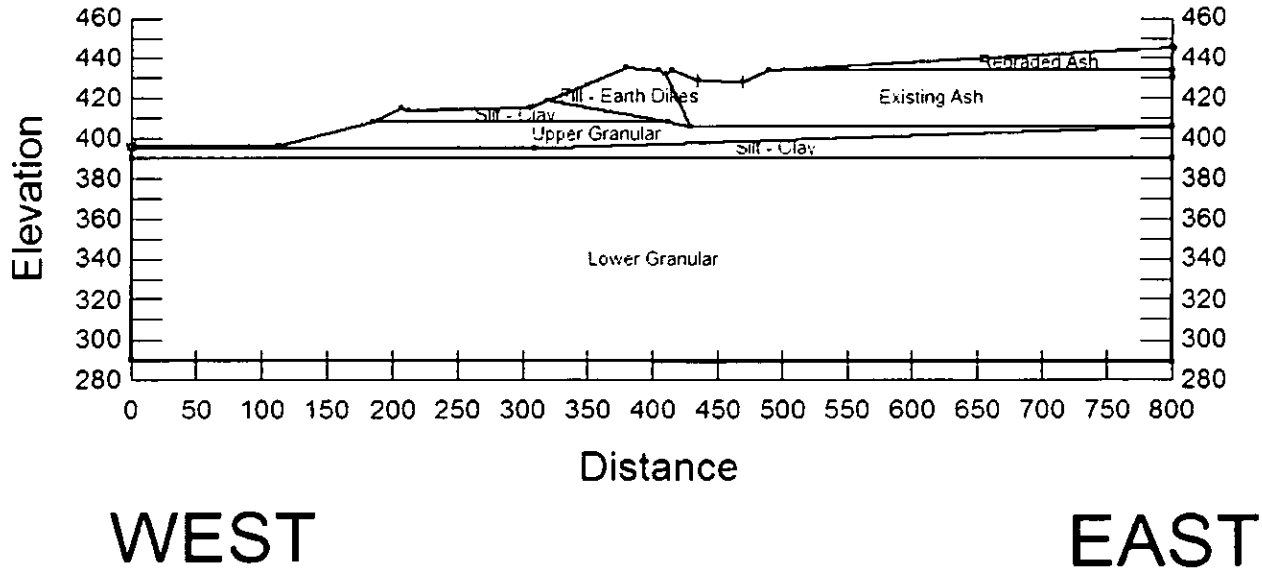


Figure 2 – West Berm/Levee

Input Parameters and Computer Model for Global Slope Stability Analysis

Soil and Ash Properties

The Hanson Engineers (2000) and Kaskaskia Engineering Group (2010) reports were reviewed for geotechnical index and strength parameters for subsurface soil and coal combustion ash, but contained limited geotechnical information. Several borings by Hanson Engineers in close proximity to the perimeter berms, and through the interior ash materials, contained no standard penetration test (SPT) N-values or undisturbed sampling/testing from which to assess relative strength and density. Although borings by Kaskaskia Engineering Group through the east berm did contain SPT N-values, the borings were relatively shallow, on the order of 25-30 feet, thus only generally evaluating the blended earthen fill and ash materials of the berm and not the underlying native soils. The Hanson report focused on hydrogeologic conditions and groundwater chemistry, and thus contained no geotechnical laboratory results. The Kaskaskia report contained limited index testing results (moisture content, grain size, density, Atterberg limits) and no strength testing results.

Given the limited site specific information that exists, soil and ash properties were estimated generally on the low end of available ranges using various references, in combination with engineering judgment and experience. Long-term or drained, versus short-term or undrained, soil parameters are appropriate for this project given that long-term global stability of existing perimeter berms is being evaluated, in combination with interior ash materials that will be minimally re-graded before capping.

Ash: Given the period of operation of the ash pond system, from the 1950s to the 1970s, it is likely the ash spans a wide spectrum of grain sizes and contains little, if any, fly ash from advanced air pollution control equipment. Fly ash typically has grain size similar to silty soil whereas bottom ash has grain size similar to granular soils. According to Ramme (2004), fly ash typically has an angle of internal friction (ϕ) in the range of 26°–42°, whereas bottom ash has an angle of internal friction in the range of 38°–42°. Cohesion (c) for granular soils would normally be 0 pounds per square foot (psf). Kaskaskia (2010) had difficulty retrieving ash samples in an undisturbed state, which is representative of a degree of cementation. Therefore, a low value of cohesion is warranted for undisturbed ash. Ramme (2004) also indicates fly ash typically has a maximum ***dry*** density in the range of 60–110 pounds per cubic foot (pcf). According to Zand (2007) for a Class F fly ash at a site in Ohio, in situ moist densities were measured in the range of 100 to 105 pcf. Therefore, the following ash parameters were assigned:

Layer	Moist Density (pcf)	Friction Angle (degrees)	Cohesion (psf)
Re-graded ash	90	26	0
Undisturbed ash	100	28	50

Fill Materials: As noted previously, the perimeter berms of the ash pond system, including the west berm/levee, were constructed of indigenous (from the area) earthen materials. Kaskaskia borings through the east berm indicated the fill was predominantly a blend of coal combustion byproducts, including ash and cinders. Following the August 2010 meeting with the USACE referenced earlier, NRT was provided a link to their Limited Reevaluation Report (LRR), which assessed flood through-seepage and under-seepage in the MESD levee system (USACE, 2010). As part of this USACE project, they drilled a series of borings at approximately 330-ft spacing along the interior or exterior of the MESD levee system. The borings generally extended to a depth of 30 ft below the prevailing ground surface at the levee toe. None of these borings were drilled through the west berm of the ash pond system, nor were any borings by Hanson Engineers drilled through the berms during its hydrogeologic investigation of the ash pond system.

Consequently, no information exists to our knowledge on the make-up of the west berm/levee, and our assumption is that it consists of a mixture of native near-surface soils, which according to the Hanson report consist of both fine-grained clays and silts and coarse-grained granular soils (i.e., sands). Further, because these berms were constructed many decades ago, the fill materials are likely relatively dense/compact, if none other than from consolidation/settlement under self-weight over time. Therefore, the following fill parameters were assigned for this project:

Layer	Wet Density (pcf)	Friction Angle (degrees)	Cohesion (psf)
Fill (berms)	115	30	0

Granular Strata: According to the Hanson report, there is an upper and lower granular layer separated by a stratum of clay-silt. ***Rounded*** granular soils typically have an internal friction angle in the range of 30°–35° for medium dense conditions and 35°–38° for dense conditions (Das, 2005). ***Angular*** granular soils have higher friction angles, on the order of 35°–40° for medium dense conditions and 40°–45° for dense conditions. Because the Hanson boring logs contain no SPT N-values, there is no indication of the relative density of these granular soils. Cohesion for granular soils, especially without substantive fines, is generally 0 psf. Given this information (or lack thereof), the following soil properties were assigned for the granular strata:

Layer	Wet Density (pcf)	Friction Angle (degrees)	Cohesion (psf)
Upper granular	125	30	0
Lower granular	130	32	0

Clay-Silt: The clay-silt stratum has variable thickness and depth as shown on Figures 1 and 2. Again, no site-specific information exists for this material. The clay-silt was assumed to have low plasticity with a plasticity index (PI) less than 20. According to Bowles (1979), the undisturbed, drained friction angle for

low plasticity clays would typically be in the range of 32°–36°. A reasonable assumption would also be to use 0 psf for cohesion. Therefore, the assigned parameters for clay-silt strata are as follows:

Layer	Wet Density (pcf)	Friction Angle (degrees)	Cohesion (psf)
Clay-silt	120	32	0

Groundwater and River Conditions

Subsequent to the Hanson Engineers hydrogeologic investigation (2000), NRT has performed on behalf of Ameren detailed assessments of closure alternatives as well as chemical fate and transport related to the ash pond system, including development of a groundwater model to support a modified groundwater monitoring program and application for a groundwater management zone (GMZ) at the site. To date, six technical memorandums have been issued, the first (No. 1) dated September 17, 2009, and the last (No. 6) dated March 12, 2010. In Technical Memorandum No. 6, river stage data obtained from the USACE from 1999 to 2010 were reviewed and an elevation of 390 feet above MSL is a reasonable breakeven point between base-stage flow and high-stage flow. This USACE river stage data is plotted on the enclosed Attachment D. For this reason, river elevation 390 was used as the lowest river level in our global slope stability analysis, although lower river levels are normal.

Six river flood conditions were also evaluated in our stability analysis, the first two in successive 10 ft increments above the base-stage flow, equating to elevation 400 and 410 (it is our understanding that river elevation 410 is "flood stage" in the St. Louis area). The next flood condition evaluated was elevation 418, the approximate highest elevation recorded by the USACE in the period of 1999 to 2010 at St. Louis (see Attachment D). Then based on the Kaskaskia Geotechnical Report (2010), which evaluated slope stability of the east berm in relation to IDOT roadway construction, we used a river flood elevation of 426 in our stability analysis, because Kaskaskia determined a river/groundwater elevation of 423-426 was needed to result in the lowest acceptable factor of safety of 1.5 for their analysis of the east berm. Lastly, based on the USACE Limited Reevaluation Report (2010) referenced earlier, we used river flood elevations of 430 and 436 in our stability analysis, which the USACE indicated represent 100-year and 500-year events. River flood elevation 436 is at or slightly above the top of the west berm/levee.

As indicated earlier, during periods of normal river stage, groundwater flow is towards and discharges into the river. During relatively short periods of high river stage, groundwater flow is reversed, with the river recharging the aquifer, away from the river. NRT used quarterly monitoring data from monitoring well MW-6, located at the toe of the south berm of Ash Pond No. 3, to assess the relationship between groundwater levels and water levels in the adjacent Mississippi River (see Attachment D) during the period of 1996–2009. A regression analysis was performed on this data, and the best fit line is shown on Attachment E. Based on this regression analysis, the river levels and corresponding groundwater levels tabulated below were used in our global slope stability analysis.

Electronic Filing: Received, Clerk's Office 09/28/2020

River Elevation (MSL, ft)	Groundwater Elevation (MSL, ft)
390	390
400	400
410	404
418	410
426	415
430	418
436	422

Although the regression analysis calculated a slightly different groundwater level for river elevation 390 (i.e., groundwater 391) and river 400 (i.e., groundwater 398), a groundwater elevation equal to the river elevation was used for simplicity in these two scenarios. For higher river levels and stability analysis of the west berm/levee, a uniformly sloping phreatic surface was assumed through the berm, connecting the higher river level outside the berm to the lower groundwater level within the ash impoundment. For the east berm, the river is sufficiently far from the berm, so that only a constant groundwater elevation within the soil profile was used.

Rapid Drawdown Condition

To evaluate the potential effects of "rapid drawdown" (i.e., a relatively sudden drop in river flood level over a period of hours instead of over several days or weeks, thus causing groundwater seepage from the west slope/levee back toward the river), we chose river flood elevation 418, the highest river stage recorded by the USACE in the period of 1996–2010, and corresponding groundwater elevation 410, as a reasonable worst case scenario. We kept the water level within the west berm/levee and ash impoundment the same as the non-rapid drawdown scenario, but lowered the corresponding water level on the river side of the west berm/levee to follow the ground surface until the water level intersected river elevation 410, the same as the groundwater elevation within the ash impoundment.

Seismic (Earthquake) Condition

Based on the U.S. Geological Survey chart of seismic activity for the eastern United States (Attachment F), the peak horizontal ground acceleration (PGA) with a 2% probability of occurrence in 50 years is in the range of 0.20-0.26 for the St. Louis vicinity. For purposes of this project, we chose an average PGA value of 0.23 to analyze the pseudo-static (seismic) factor of safety of the west slope/levee. We also chose river flood elevation 418, the highest river stage recorded by the USACE in the period of 1996–2010, and corresponding groundwater elevation 410, as a reasonable worst case scenario for seismic analysis.

Computer Model

Commercially available SLOPE/W software was used by NRT in our static and pseudo-static slope stability analysis. The equilibrium limit, Morgenstern Price method of analysis was used.

Results of Static Global Slope Stability Analysis

Results of the static global stability analysis are summarized below for the conditions evaluated for the east slope and west slope/levee. Our subconsultant, Geo Engineering Consulting, independently checked our critical profile with a separate computer program (WinSTABL) and method of analysis (Bishop's), and determined the factor of safety to be consistent.

River Elevation (ft, MSL)	Groundwater Elevation (ft, MSL)	East Slope Factor of Safety	West Slope Factor of Safety
390	390	5.67	6.16
400	400	5.53	5.53
410	404	5.53	5.79
418	410	5.65	6.06
426	415	5.72	6.50
430	418	5.61	5.79
436	422	5.61	4.86

SLOPE/W graphical output images from each scenario are contained in Attachment G, which show the critical failure surface at the lowest computed factor of safety. These images show the critical failure surfaces for the east slope are confined to the ash pond limits as shallow slides at the inside perimeter storm water ditch, which would be easy to repair if they occurred. Further, the grading plan revisions subsequent to the August 2010 meeting with USACE significantly reduced the depth of these ditches, which would result in higher safety factors than those referenced above and an associated decrease in the probability of these shallow slides. For the west berm/levee, the output files show the critical failure surfaces are deep rotational failures up to and including the scenario of river elevation 418, whereas at higher river elevations, the critical failure surfaces are smaller, shallower, and confined to the inside perimeter storm water ditch, similar to the critical failure surfaces for the east slope. Also, as noted above, grading plan revisions subsequent to the August 2010 meeting with USACE significantly reduced the depth of these storm water ditches, which would result in higher safety factors than those referenced above for these shallow slides. In all scenarios, the computed factors of safety are well above the minimum acceptable safety factor of 1.5.

For the rapid drawdown analysis of the west slope/levee, as described earlier, the factor of safety dropped from 6.06 without rapid drawdown (see scenario of river elevation 418 and groundwater elevation 410) to a factor of safety of 4.98 with rapid drawdown. Again, this is still well above the minimum acceptable safety factor of 1.5. The SLOPE/W graphical output image for the critical failure surface from this scenario is also contained in Attachment G.

Results of Pseudo-Static Global Stability Analysis

The results of pseudo-static (seismic) global stability analysis of the west slope/levee are summarized below in comparison to the corresponding static analysis:

River Elevation	Groundwater Elevation	Factor of Safety		Rapid Drawdown Scenario
		Static (g = 0.0)	Pseudo-Static (g = 0.23)	
418	410	6.06	1.32	No
418/410	410	4.98	1.26	Yes

The SLOPE/W graphical outputs of the critical failure surface from these analyses are also contained in Attachment G. The pseudo-static factor of safety (not considering the rapid drawdown scenario) is 1.32, slightly above the minimum safety factor of 1.3 specified in 35 IAC 811.304(d).

In the unlikely scenario of a high intensity earthquake (2% in 50 years, g=0.23) during rapid drawdown from a river flood elevation 418 to 410, without adequate time for groundwater elevations in the west slope/levee and ash impoundment to equalize to the river level, the pseudo-static factor of safety was computed to be 1.26, which rounds to the minimum specified safety factor of 1.3. This same rapid drawdown condition was used in the computer software to progressively increase the seismic factor from 0.23 to 0.31, where the factor of safety dropped to just under 1.0, or theoretical failure of the soil profile. This yield acceleration of 0.31 was used by Geo Engineering Consulting in their seismic deformation analysis for the rapid drawdown condition.

Seismic Deformation and Liquefaction Analyses

Geo Engineering Consulting performed seismic deformation and liquefaction analyses for this project as a subconsultant to NRT. The deformation analysis, contained in Attachment H, was performed to estimate the permanent seismic deformation of the earthen embankment and ash fill as a result of a potential earth quake. The calculated deformation was extremely low, much less than one-tenth of an inch.

Electronic Filing: Received, Clerk's Office 09/28/2020

The liquefaction analysis, contained in Attachment I, was used to evaluate the susceptibility of saturated ash within the impoundment to liquefy during a potential earth quake. The conclusion of this analysis was that a thin layer of saturated ash at the bottom of the site is potentially liquefiable, but no surface damage is predicted.

COMPUTATION SHEET

PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Newmark Embankment Deformation	By: JMT	Date: 11/01/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.

OBJECTIVE

Estimate the amount of permanent seismic deformation of the earthen embankment and flyash fill at the Ameren-Venice flyash disposal pond closure system using procedures developed by Newmark (1965) and later refined by Makdisi and Seed (1977).

BACKGROUND

A. Site Background

- Site is located on the east bank of the Mississippi River in Venice, Illinois
- Flyash impoundments in question consist of two 'pond' systems - No. 2 (northern, approximately 30 acres) and No. 3 (southern, 30 acres), with a river flood control levee embankment to the west
- Plant began operating in 1942 as a coal-combustion power plant, but turbines were converted to oil/gas in 1972 and 1979, respectively; thus, sluicing operations to the ash ponds were suspended at that time
- The ash ponds were used for plant storm water management through 2005
- Site is in planning for long-term closure

B. Subsurface Soil Investigation Data Available

Hanson Engineers Inc. 2000. "Hydrogeological Investigation, Former Ash Disposal Pond System, AmerenUE Venice Power Plant."

- 14 soil borings in June/July 1999 using 5-ft-long CME split-barrel sampler
- 11 converted to monitoring wells
- Site geology is generally clayey silt overlying sand
- Levees classified as "fill" material

Kaskaskia Engineering Group LLC. 2010. "MRB IDOT Access Road 1."

- 5 borings using SPT at 2.5-ft intervals advanced in February of 2010
- Focus on the haul road berm on the east side of the impoundment
- Water content (14 to 88) higher than expected for given N values, likely due to cementation

Electronic Filing: Received, Clerk's Office 09/28/2020

- For the silty flyash material, ϕ' of 26° and c' = 50psf used

C. Slope Stability Analysis

Natural Resource Technology Inc. 2010. "Global Slope Stability Evaluation: Ash Pond Closures at Ameren Missouri's Venice, Illinois Plant."

Soil Horizons and Input Parameters:

Region	Soil Type	Unit Weight (pcf)	Cohesion (psf)	ϕ (deg)
1	Regraded Ash	90	0	26
2	Existing Ash	100	50	28
3	Fill	115	0	30
4	Upper Granular	125	0	30
5	Silt – Clay	120	0	32
6	Lower Granular	130	0	32

APPROACH - PERMANENT SEISMIC DEFORMATION ANALYSIS

The procedure developed by Newmark (1965) and later refined by Makdisi and Seed (1977) to determine the amount of deformation an earthen embankment may undergo as a result of seismic forces will be followed. Although Illinois does not have specific technical guidance for seismic analyses of landfill closures, nearby State guidance (Tennessee and Missouri) for similar situations advocates this procedure. Global type failures are the main focus of these guidance policies because these failures are generally of a catastrophic nature. The following assumptions are inherent in the Newmark analysis (Missouri Department of Natural Resources and Stark, 1997):

- The slide mass is a rigid-plastic body (i.e., does not deform internally)
- There is no displacement at accelerations below the yield acceleration (i.e., yield coefficient, K_y, multiplied by g, the acceleration of gravity)
- The sliding mass deforms plastically along a discrete basal shear surface when the yield acceleration is exceeded.
- Static and dynamic shearing resistances are identical.
- The effect of dynamic pore-water pressures are neglected. In other words, the materials do not lose strength during shaking (note, the extreme loss of strength case would be liquefaction).

Electronic Filing: Received, Clerk's Office 09/28/2020

3100 Lake Mendota Drive, #503 Madison, WI 53705 (608) 233-5794

PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Newmark Embankment Deformation	By: JMT	Date: 11/01/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.

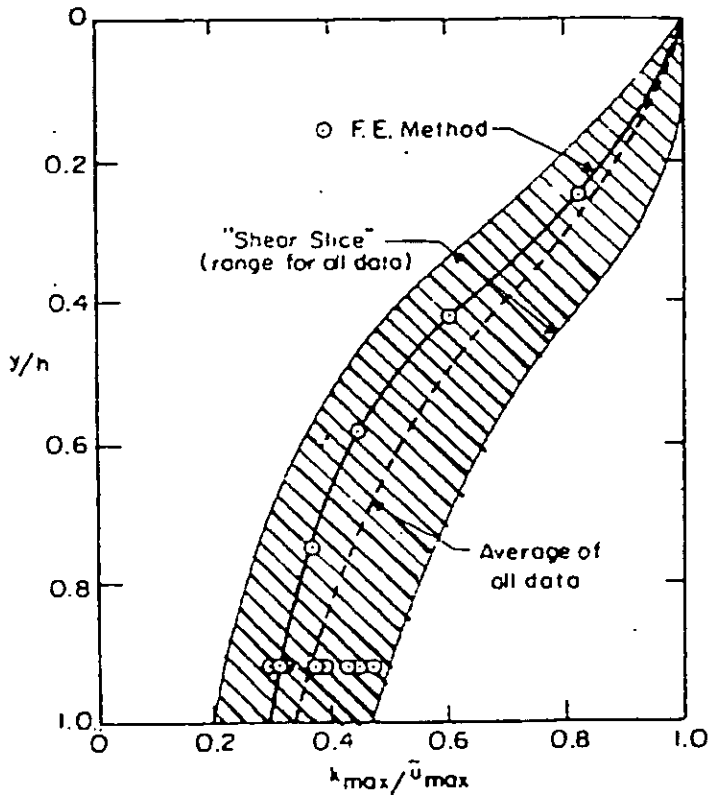
- The yield acceleration is not strain dependent and thus remains constant throughout the anaysis.

For this analysis, the "Simplified Deformation Analysis" is followed because permanent deformation caused by a seismic event would have minimal impact (i.e., there are no liner systems or leachate collection systems involved in the system). The revised Newmark procedure for the landfill stability analysis of waste slopes is thus as follows:

A. Develop a model of the landfill slope configurations to be used for pseudo-static analysis.

B. Perform pseudo-static analyses on the landfill model substituting different values of the horizontal acceleration so as to determine which acceleration results in a factor of safety of one. The horizontal acceleration that yields a factor of safety of one shall be referred to as the yield acceleration (k_y).

C. Determine the maximum crest acceleration (u_{max}) induced in the embankment and the natural period (T_o) of the embankment. This can be accomplished by several different methods, but the Makdisi and Seed procedure (1977) will be used.



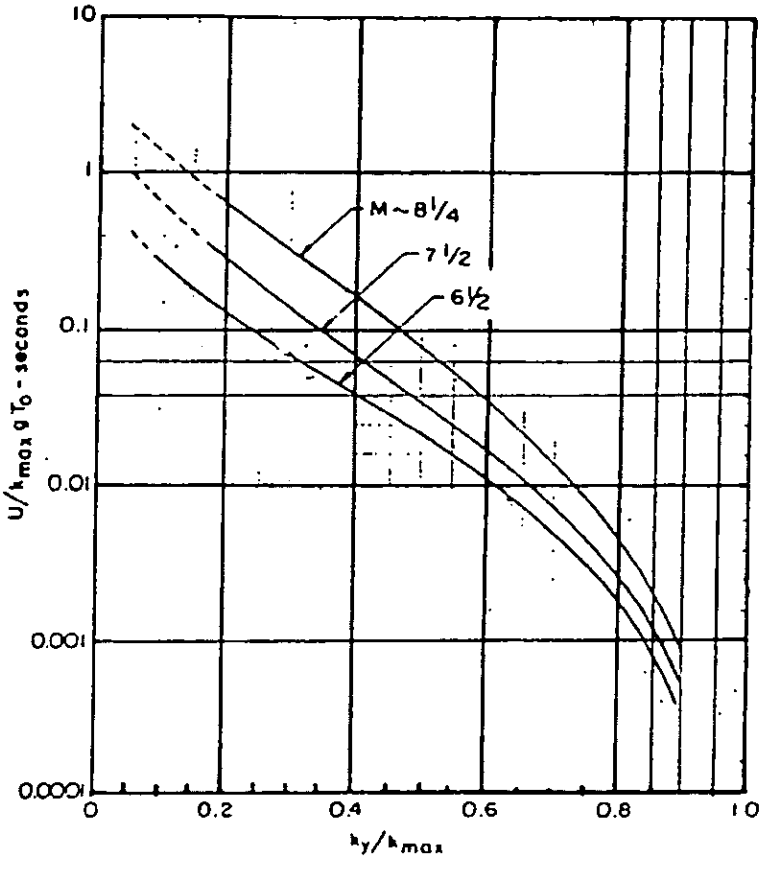
D. Determine the maximum value of average acceleration (k_{max}) for any level within the embankment using the maximum crest acceleration (u_{max}) determined in Step C and using the "maximum acceleration ratio" plot shown below:

GEO ENGINEERING CONSULTING, LLC **COMPUTATION SHEET**

SHEET 4 OF 8

3100 Lake Mendota Drive, #503 Madison, WI 53705 (608) 233-5794

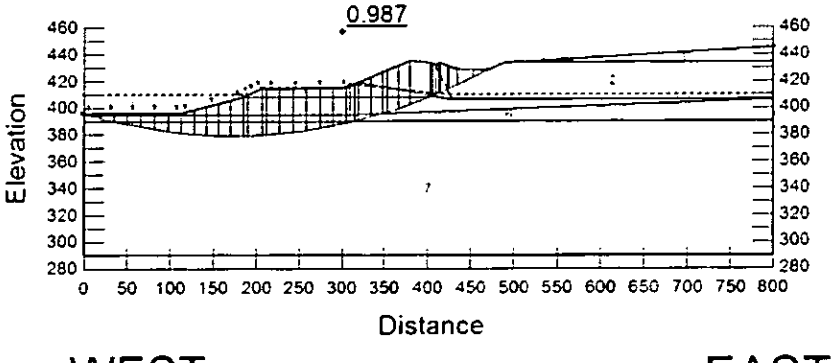
PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Newmark Embankment Deformation	By: JMT	Date: 11/01/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.



E. Determine the permanent displacements (U) for the yield acceleration (k_y) by using the following figure and the appropriate values of k_{max} and T_o:

Electronic Filing: Received, Clerk's Office 09/28/2020

3100 Lake Mendota Drive, #503 Madison, WI 53705 (608) 233-5794



PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Newmark Embankment Deformation	By: JMT	Date: 11/01/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.

ANALYSIS

A. Model of Landfill Slope Configuration:

Representative Failure Surface (Circular Failure; River Elevation 418; GW EL 410):

WEST EAST

Electronic Filing: Received, Clerk's Office 09/28/2020

3100 Lake Mendota Drive, #503 Madison, WI 53705 (608) 233-5794

PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Newmark Embankment Deformation	By: JMT	Date: 11/01/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.

Note, Layers 1 and 2 are flyash fill, so the yield acceleration failure surface shown above is a conservative representation for the Newmark calculation set.

B. Perform Pseudo-Static Analysis:

K_y, the yield acceleration, was determined to be 0.31 for the critical section show in Part A above.

C. Maximum Crest Acceleration and Natural Period

See Attachment A for the hand calculations and iteration for determination of u_{max} and T_o.

D. Maximum Acceleration Ratio

See Attached Figure 3 for the Maximum Acceleration Ratio with depth of sliding mass.

E. Maximum Permanent Displacement

See Attached Figure 4 for the calculated Permanent Displacement.

CONCLUSIONS:

An extremely low deformation value (4.5E-06 ft) is calculated via the Newmark Method as simplified by the Makdisi and Seed procedure. This is expected because of the limited slope height of flyash (conservative at 30 ft because part of this depth is below outside grade), the minimal final slope, and the estimated flyash properties. Furthermore, since there is not a liner or associated leachate collection (lateral) system, any calculated deformation would have limited impact.

OBJECTIVE

DETERMINE

(1) MAXIMUM CREST ACCELERATION, a_{max}

(2) NATURAL PERIOD, T_o

(3) PERMANENT DISPLACEMENT OF WASTE FILL, U

USING THE MODIFIED NEWMARK METHOD

FIRST ITERATION

STEP 1 DETERMINE G/G_{max}, SHEAR STRAIN, AND DAMPING

ASSUME $V_s = 400$ FT/S

$V_s/V_{max} = $ ~~500/750~~ $400/560 = 0.71$

$G/G_{max} = (V_s/V_{max})^2 = 0.51$

FOR $G/G_{max} = 0.51$, SHEAR STRAIN (γ) = 0.033 AND DAMPING (λ) = 10.5 % (SEE ATTACHED FIGURE 1)

STEP 2 CALCULATE NATURAL FREQUENCIES AND PERIOD

~~USE a_{max} WITH λ (STEP 1) AND~~

$\omega_1 = 2.4(V_s/h) = 2.4(400/30) = 32$ rad/s

$T_1 = 2\pi/\omega_1 = 2\pi/32 = 0.196$ s

$\omega_2 = 5.52(400/30) = 74$ rad/s

$T_2 = 2\pi/74 = 0.085$ s

$\omega_3 = 8.65(400/30) = 115$ rad/s

$T_3 = 2\pi/115 = 0.054$ s

Electronic Filing: Received, Clerk's Office 09/28/2020

THE UNIVERSITY of WISCONSIN MADISON

GEOLOGICAL ENGINEERING

2205 ENGINEERING HALL 1415 ENGINEERING DRIVE
MADISON, WISCONSIN 53706-1607 USA
PHONE: +1 (608) 262-3491, FAX: +1 (608) 890-3718
WWW.ENGR.WISC.EDU/INTERD/GEN

STEP 3 DETERMINE THE SPECTRAL ACCELERATIONS FOR THE THREE FREQUENCIES

USE a_{max} WITH λ (STEP 1) AND T (STEP 2) TO DETERMINE SPECTRAL ACCELERATIONS FROM FIG. 7

$S_1/a_{max} = 1.4 \Rightarrow S_1 = 1.4(0.23) = 0.322$

$S_2/a_{max} = 1.1 \Rightarrow S_2 = 1.1(0.23) = 0.253$

$S_3/a_{max} = 1.0 \Rightarrow S_3 = 1.0(0.23) = 0.230$

STEP 4 DETERMINE MAXIMUM CREST ACCELERATIONS FOR EACH NATURAL FREQUENCY

ϕ = MODE PARTICIPATION FACTOR

$\phi_1 = 1.6$, $\phi_2 = 1.06$, $\phi_3 = 0.86$

$u_{1(max)} = \phi_1 (S_1) = 1.6(0.322) = 0.515\ g$

$u_{2(max)} = \phi_2 (S_2) = 1.06(0.253) = 0.268\ g$

$u_{3(max)} = \phi_3 (S_3) = 0.86(0.230) = 0.198\ g$

STEP 5 DETERMINE MAXIMUM CREST ACCELERATION

$$u_{max} = [(u_{1max})^2 + (u_{2max})^2 + (u_{3max})^2]^{1/2}$$

$$u_{max} = [0.515^2 + 0.268^2 + 0.198^2]^{1/2} = 0.61\ g$$

STEP 6 CALCULATE THE AVERAGE EQUIVALENT SHEAR STRAIN, $(\gamma_{avg})_{eq}$

$$(\gamma_{avg})_{eq} = 0.65 \times 0.3 \times h/V_s^2 \times (S_1)$$

$$(\gamma_{avg})_{eq} = 0.65 \times 0.3 \times 30ft/(400\ ft/s)^2 \times 0.322(32.2\ ft/s^2)$$

$$(\gamma_{avg})_{eq} = 0.038\% \neq 0.033\%$$

$\therefore$ SECOND ITERATION REQUIRED

Electronic Filing: Received, Clerk's Office 09/28/2020

THE UNIVERSITY of WISCONSIN MADISON

GEOLOGICAL ENGINEERING

2205 ENGINEERING HALL 1415 ENGINEERING DRIVE
MADISON, WISCONSIN 53706-1607 USA
PHONE: +1 (608) 262-3491, FAX: +1 (608) 890-3718
WWW.ENGR.WISC.EDU/INTERD/GEP/

SECOND ITERATION

STEP 1 FROM FIG. 1 (ITERATION 2), WITH $\gamma = 0.038\%$

$G/G_{max} = 0.50$; $\lambda = 10.8\%$

$G/G_{max} = (V_s/V_{max})^2 \Rightarrow V_s/V_{max} = (0.50)^{1/2} = 0.71$

$V_s = 0.71(560) = 398$ ft/s

STEP 2

$\omega_1 = 2.4(398/30) = 32$ rad/s ; $T_1 = 2\pi/32 = 0.20$ s

$\omega_2 = 5.52(398/30) = 73$ rad/s ; $T_2 = 2\pi/73 = 0.086$ s

$\omega_3 = 8.65(398/30) = 115$ rad/s ; $T_3 = 2\pi/115 = 0.055$ s

STEP 3 SEE ATTACHED FIG. 2 (ITERATION 2)

$S_1/a_{max} = 1.5 \Rightarrow S_1 = 1.5(0.23) = 0.345$

$S_2/a_{max} = 1.2 \Rightarrow S_2 = 1.2(0.23) = 0.276$

$S_3/a_{max} = 1.0 \Rightarrow S_3 = 1.0(0.23) = 0.230$

STEP 4

$u_{1max} = 1.6 \times 0.345 = 0.552$ g

$u_{2max} = 1.06 \times \frac{0.253}{0.276} = 0.268$ g ~~0.293 g~~

$u_{3max} = 0.86 \times 0.230 = 0.198$ g

$u_{max} = [0.552^2 + 0.293^2 + 0.198^2]^{1/2} = 0.66$ g

STEP 6

$(\gamma_{avg})_{eq} = 0.66 \times 0.3 \times 30\text{ft}/(398\text{ft/s})^2 \times 0.345(32.2\text{ft/s}^2) = 0.041\%$

$0.038\% \approx 0.041\%$; STOP ITERATION PROCESS

Electronic Filing: Received, Clerk's Office 09/28/2020

ITERATION RESULT SUMMARY

$u_{max} = 0.66\,g$

$\gamma_{avg} = 0.04\%$ ⇒ SEE FIG. 1 (FINAL ITERATION)

$T_0 = 0.20\,s$ $\quad G/G_{max} = 0.45$

$\gamma = 11\%$

DETERMINE MAXIMUM VALUE OF AVERAGE ACCELERATION, k_{max}

PER FAILURE SURFACE, FLYASH FROM EL 435 TO EL 405 PARTICIPATES; THUS,

$y = h$ AND $y/h = 1.0$

⇒ SEE ATTACHED FIG. 3

$k_{max}/u_{max} = 0.34$

$k_{max} = 0.34(0.66\,g) = 0.224\,g$

DETERMINE PERMANENT DISPLACEMENT, U

$k_y/k_{max} = 0.3/0.224 = 1.38$

SEE ATTACHED FIG. 4, $U/k_{max}(T_0) \leq 0.0001$

$U = 0.0001(0.224)(0.20) = 4.5 \times 10^{-6}$ ft

∴ AN EXTREMELY LOW DEFORMATION VALUE IS CALCULATED BY THE NEWMARK PROCEDURE. FURTHERMORE, SINCE THE SITE DOES NOT HAVE A LINER SYSTEM OR ASSOCIATED COLLECTION (LATERAL) SYSTEM, ANY CALCULATED DEFORMATION WOULD NOT BE IMPACTFUL. A COROLLARY SEISMIC LIQUEFACTION ANALYSIS SHOULD BE CONDUCTED.

COMPUTATION SHEET

PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
	By:	Date:	By:	Date:	
Venice, IL Liquefaction Analysis	JMT	11/03/10	TBE	11/07/10	Natural Resource Technology Inc.

OBJECTIVE

Estimate the liquefaction potential of the saturated component of the flyash fill at the Ameren Missouri's Venice, Illinois, flyash disposal pond closure system using an evaluation of the susceptibility of the flyash to liquefaction using criteria outlined by Seed and Idriss (1982), an analysis procedure outlined by the Tennessee Division of Solid Waste (1993), supplemented with data on flyash behavior reported by Zand et al. (2007).

BACKGROUND

The term *liquefaction* is generally used to describe the phenomenon in which saturated, cohesionless soil looses effective strength during a vibration event (e.g., earthquake, blasting), thus causing deformation and flow type of responses. In general, soil will not liquefy except if all three of the following criteria are met (Seed and Idriss, 1982):

1. Water content, w, > 0.9 x the liquid limit, LL
2. LL < 35
3. Fines (< 0.005 mm) content < 15%

Based on flyash characterization of the flyash at the site by Kaskaskia (2010), the flyash specimens analyzed showed non-plastic material at an elevated water content (14% < w < 88%), with clay (< 0.075 mm) content at 5% or less; thus, that flyash material shows the potential for liquefaction according to the criteria listed above and thus the necessity of a liquefaction analysis. Furthermore, Zand et al. (2007) considered flyash as liquefiable material and performed a liquefaction potential evaluation for impounded flyash.

A. Site Background

- Site is located on the east bank of the Mississippi River in Venice, Illinois
- Flyash impoundments in question consist of two 'pond' systems - No. 2 (northern, approximately 30 acres) and No. 3 (southern, 30 acres), with a river flood control levee embankment to the west
- Plant began operating in 1942 as a coal-combustion power plant, but turbines were converted to oil/gas in 1972 and 1979, respectively; thus, sluicing operations to the ash ponds were suspended at that time
- The ash ponds were used for plant storm water management through 2005

- Site is in planning for long-term closure

B. Subsurface Soil Investigation Data Available

Hanson Engineers Inc. 2000. "Hydrogeological Investigation, Former Ash Disposal Pond System, AmerenUE Venice Power Plant."

- 14 soil borings in June/July 1999 using 5-ft-long CME split-barrel sampler
- 11 converted to monitoring wells
- Site geology is generally clayey silt overlying sand
- Levees classified as "fill" material
- The base of the flyash is generally at or above EL 406 ft
- The existing upper elevation of the flyash is at EL 432 ft

Kaskaskia Engineering Group LLC. 2010. "MRB IDOT Access Road 1."

- 5 borings using SPT at 2.5-ft intervals advanced in February of 2010
- Focus on the haul road berm on the east side of the impoundment
- Water content (14 to 88) higher than expected for given N values, likely due to cementation
- For the silty flyash material, ϕ' of 26° and c' = 50psf used

C. Slope Stability Analysis

Natural Resource Technology Inc. 2010. "Global Slope Stability Evaluation, Ash Pond Closures at Ameren Missouri's Venice, Illinois Plant." Technical Memorandum.

Soil Horizons and Input Parameters (note, for liquefaction analysis, the unit weights are input parameters):

Soil Type	Unit Weight (pcf)	Cohesion (psf)	ϕ (deg)
Regraded Ash	90	0	26
Existing Ash	100	50	28
Fill	115	0	30
Upper Granular	125	0	30
Silt – Clay	120	0	32
Lower Granular	130	0	32

APPROACH AND ANALYSIS - DETERMINATION OF LIQUEFACTION POTENTIAL

Although Illinois does not have specific technical guidance for seismic deformation analysis of landfill closures, nearby State guidance (Tennessee and Missouri) do. The Tennessee Division of Solid Waste has published a simplified method for the determination of liquefaction potential and its impact on waste fills. The general procedure requires the eight procedural steps, discussed and presented as follows:

Step 1. Determine the Maximum Horizontal Acceleration from a USGS Seismic Hazard Map:

- a_{max} = 0.23 per NRT (2010).

Step 2. Determine the Total Overburden Pressure (σ) and the Effective Overburden Pressure (σ') on the Flyash Layer in Question:

- The point of evaluation is the mid-point of the potentially saturated flyash layer.
  - Per NRT (2010), the groundwater elevation within the closure cell has been correlated to be approximately EL 410 ft at Mississippi flood stage.
  - Per Hanson Engineers Inc. (2000), the base of the flyash is approximately EL 406 ft (see attached FIG. 1).
  - The midpoint is thus $\text{Midpoint} = 406' + \frac{410' - 406'}{2} = 408'$
  - The thickness of the saturated flyash layer is thus EL 410 - EL 406 = 4 ft
- Calculate overburden pressure:
  - Per the Final Grading Plan (NRT, 2010), the high point of the cell will be EL 447 ft (see FIG. 2).
  - Assume that regraded flyash material will be placed above EL 432 ft, which is the existing high point of flyash (FIG. 1).
  - Per NRT (2010), regraded flyash has moist unit weight of 90 pcf and undisturbed flyash has moist unit weight of 100 pcf.
  - Assume that cover material (EL 444 to 447 ft) has a unit weight of 120 pcf.

Electronic Filing: Received, Clerk's Office 09/28/2020

- Thus,
$$\sigma = (447' - 444') \cdot 120pcf + (444' - 432') \cdot 90pcf + (432' - 408') \cdot 100pcf = 3840psf$$

- Calculate effective stress at the midpoint of the flyash:
$$\sigma' = 3840psf - (410' - 408') \cdot 62.4pcf = 3715psf$$

Step 3. Correct the Standard Penetration Test Value (N) for the Effect of Overburden Pressure.

- N_{avg} = 12 per Kaskaskia (2010)
- Determine the blow count overburden correction factor, C_N, using a correlation provided in NAVFAC DM 7.3 (FIG. 3):
  - In tons per square foot, tsf, $\sigma' = \frac{3715psf}{2000\frac{lb}{ton}} = 1.9tsf$
  - From FIG. 3, C_N = 0.74 and
  - $N_{corrected}$ = 0.74 x 12 = 9

Step 4. Determine the Stress Reduction Factor, r_d:

- Depth = EL 447 ft – EL 408 ft = 39 ft
- r_d = 0.86 per correlation (FIG. 4)

Step 5. Compute the Cyclic Stress Ratio, R_i, Developed in the Field During Design Earthquake:

$$R_i = \frac{\tau_{avg}}{\sigma'} = 0.65(a_{max})\left(\frac{\sigma}{\sigma'}\right)r_d$$

$$R_i = 0.65 \cdot 0.23 \cdot \left(\frac{3840psf}{3715psf}\right) \cdot 0.86 = 0.16$$

Step 6. Estimate the Cyclic Stress Ratio, R_f, Required to Cause Liquefaction:

- Assume earthquake magnitude, M = 7.5
- R_f = 0.10 (FIG. 5)

Electronic Filing: Received, Clerk's Office 09/28/2020

3100 Lake Mendota Drive, #503 Madison, WI 53705 (608) 233-5794

PROJECT/PROPOSAL NAME	PREPARED		CHECKED		CLIENT
Venice, IL Liquefaction Analysis	By: JMT	Date: 11/03/10	By: TBE	Date: 11/07/10	Natural Resource Technology Inc.

Step 7. Calculate the Factor of Safety, F_s, Against Liquefaction for the Flyash Layer:

$$F_s = \frac{R_t}{R_i} = \frac{0.10}{0.16} = 0.62 < 1.2$$

∴ There is the potential for liquefaction of the saturated flyash layer given an elevated water table in the cell (EL 410 ft) and a design earthquake of a_{max} = 0.23.

Step 8. Determine if the Potential Liquefaction will Result in Damaging Movements on the Surface:

- Thickness of the liquefiable layer = EL 410 - EL 406 = 4 ft = 1.2 m
- Thickness of the surface layer = EL 447 - EL 410 = 37 ft = 11.3 m
- From FIG. 6, **NO SURFACE DAMAGE IS PREDICTED**.

CONCLUSIONS:

Using simplified liquefaction analysis procedures recommended by the Tennessee Division of Solid Waste, the saturated flyash at the site is potentially liquefiable, but no surface damage is predicted given a high water table of EL 410 ft and the design earthquake of a_{max} = 0.23. The saturated flyash layer is of limited thickness (4 ft) and at great depth; thus, the minimal impact.

VENEER SLOPE STABILITY EVALUATION – ASH POND CLOSURES AT AMEREN MISSOURI'S VENICE, ILLINOIS POWER PLANT

Electronic Filing: Received, Clerk's Office 09/28/2020

NATURAL RESOURCE TECHNOLOGY

TECHNICAL MEMORANDUM

www.naturalrt.com

Date: **November 5, 2010**

Subject: **Veneer Slope Stability Evaluation**
Ash Pond Closures at Ameren Missouri's Venice, Illinois Plant

From: **Andrew Millspaugh, EIT**
Environmental Engineer

Objective and Summary of Results

This technical memorandum evaluates the static and pseudo-static (seismic) veneer slope stability of the planned construction activities to regrade and cap Ash Pond Nos. 2 and 3 at the Ameren Missouri electric power generating station in Venice, Illinois. Veneer analysis considers the interface stability of the various components of the multi-layer cap. Planned closure activities must be reviewed and approved by both the Illinois Environmental Protection Agency (IEPA) and the U.S. Army Corps of Engineers (USACE).

Based on this evaluation, the veneer stability of the closed ash impoundment for the maximum proposed slope satisfies the minimum requirements of 35 IAC 811.304(d) with a static and pseudo-static safety factor of at least 1.5 and 1.3, respectively.

Geo Engineering Consulting, LLC, a subconsultant to NRT, acted in an advisory role to NRT on this project and also peer reviewed the analysis, results, and conclusions.

Historical Operation of Ash Pond System

Historical operation of the ash pond system is described in a companion technical memorandum for this project titled *"Global Slope Stability Analysis."*

Closure Design

The closure design at the time of the veneer analysis called for placement of a geosynthetic cap over the ash (Figure 1) that will comprise the following layers in ascending order: a 40-mil polyvinylchloride (PVC) geomembrane directly over the ash, a geonet above the PVC, and a needle-punched, nonwoven geotextile above the geonet. Lastly, 3 ft of soil consisting of 2.5 ft of locally available undifferentiated soil and 0.5 ft of topsoil will uniformly cover the entire geosynthetic cap. The material layers of the closure design provide interface surfaces where sliding failure could occur; therefore, a veneer stability analysis was performed under static and pseudo-static conditions to evaluate corresponding safety factors.

Electronic Filing: Received, Clerk's Office 09/28/2020

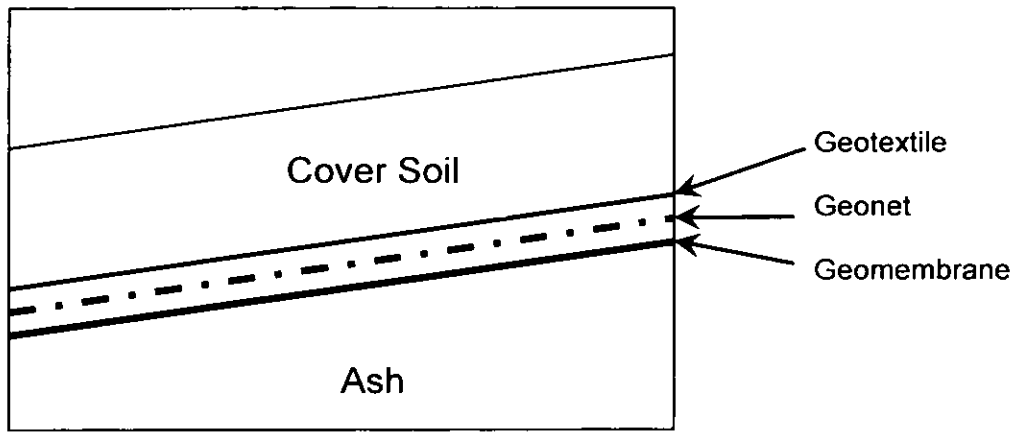

Figure 1: Representation Sketch of Geosynthetic Cap Evaluated

The closure design has since been changed to incorporate a geocomposite drainage layer over the PVC geomembrane instead of a separate geonet and geotextile. The geocomposite drainage layer consists of a geonet with geotextile bound to both the top and bottom. Interface strength parameters are greater for the geocomposite than the geonet alone; therefore, the veneer stability analysis is conservative by not incorporating the design change.

Static Veneer Stability Analysis

The static veneer stability analysis was performed for a finite slope length with cover soil of uniform thickness over a geosynthetic cap at a given angle and acted upon only by gravity (Koerner and Soong, 2005). A Microsoft (MS) Excel spreadsheet was used to simplify the calculations after input parameters were selected. The spreadsheet was constructed to accept input parameters in metric (SI) units; therefore, input parameters listed in Table 1 appear in both English and SI units. A copy of the calculation spreadsheet appears in Attachment A.

Table 1: Input Parameters for Static Veneer Slope Stability Analysis

Input Parameter	Value
Cover soil thickness (h)	3 ft (0.91 m)
Soil slope angle beneath the geomembrane (β)	2 % (1.2°)
Length of slope measured along the geomembrane (L)	400 ft (121.9 m)
Unit weight (moist) of the cover soil (γ)	110 pcf (17.3 kN/m^3)
Friction angle of the cover soil (ϕ)	30°
Cohesion of the cover soil (c)	0 psf (0 kPa)
Critical (lowest) interface friction angle, between geocomposite and geomembrane (δ)	18°
Adhesion between cover soil and geomembrane (ca)	0 psf (0 kPa)

The cover soil thickness, slope angle, and slope length were governed by the current closure design. Because a specific borrow source and cover soil have yet to be identified, 30° was selected as a conservative internal friction angle based on a typical range for soils. Granular soils typically have an internal friction angle in the range of 30°–45° depending on particle shape and relative density (Das, 2005). Undisturbed fine-grained soils of low plasticity, common in the area, typically have an internal friction angle in the range of 30°–36° (Bowles, 1979).

The interface friction angle for the geosynthetic components was selected based on the assumption that the governing failure interface would be between the geonet drainage layer and the underlying PVC geomembrane. Published data for large-scale direct shear tests between PVC and a geonet reported peak and residual interface friction angles of 23° and 18°, respectively (Environmental Protection, Inc., 2000). The lower residual angle of 18° was selected in the absence of site-specific data. Strength contributions from both the cover soil cohesion and the PVC to Geonet adhesion were assumed to be negligible. The residual interface friction angle between a geocomposite drainage layer and PVC is 23°, which is greater and more conservative than the selected angle of 18° (Environmental Protection, Inc., 2000).

The computed **factor of safety against sliding failure was 24.78** for the static stability analysis. This greatly exceeds the minimum factor of safety of 1.5 required by 35 IAC 811.304(d) for slope failure.

Pseudo-Static Veneer Slope Stability Analysis

The pseudo-static veneer stability analysis was also performed for a finite slope length with cover soil of uniform thickness over a geosynthetic cap at a given angle (Koerner and Soong, 2005). Along with gravitational forces, this seismic analysis incorporated a horizontal force acting on the centroid of the cover soil. Another MS Excel spreadsheet (Attachment B) was used to simplify the calculations after input parameters were selected.

The pseudo-static input parameters are the same as the static stability analysis with the addition of a seismic coefficient used in calculating the horizontal force. Based on a U.S. Geological Survey chart of seismic activity for the eastern United States, the peak horizontal ground acceleration (PGA) with a 2% probability of occurrence in 50 years is in the range of 0.20-0.26 for the St. Louis vicinity (NRT Global Stability Tech Memo, Attachment F). An average PGA of 0.23 was selected for the analysis.

The computed **factor of safety against sliding was 1.56** for the pseudo-static stability analysis. This exceeds the minimum factor of safety of 1.3 required by 35 IAC 811.304(d) for slope failure.

Groundwater Management Zone, Venice Plant, Madison and St. Clair Counties in Illinois.
(March 2011 Description)

A tract of land situated partly in the County of Madison and party in the County of St. Clair, State of Illinois, located in Southwest Quarter (SW¼) of Section 36, Township 3 North Range 10 West and Section 1, Township 2 North Range 10 West of the Third Principal Meridian, more particularly described as follows: Starting at a point which is marked by an Old Iron Pin in the Northwest corner of U.S Survey 623 which has Illinois State Plane coordinates of N 52868.31 E 55930.60, is the Point of Beginning;

Thence 1,342.7 ft. S 26°58'50"E to a point that is on the line between U.S. Survey 623 and 764, thence 1,980.7 ft. S 23°02'58"E to a point , thence 84.5 ft. S48°09'30"W to a point which is the intersection of the east line of Lot 100, as shown and described on a plat prepared by Julius Pitzman, City Surveyor of St. Louis, Missouri, and filed for record in Plat Book "H", Page 31 , of the records of St. Clair County, Illinois, and U.S. Survey 764, said point having an Illinois State Plane coordinate of N 49792.782 E 57252.320,, thence 290.84 ft. S48°24'34"W to a point which is the southwest corner of US Survey 764, thence 1,634.28 ft. S 77°11'49"W to the east shore line of the Mississippi River, thence following the east shore line of the Mississippi River in a northerly direction to a point that is 3,556.4 ft. N07°5'19"W of the last described point and 934.1 ft. S 83°45'07"W from the Northwest corner of U.S Survey 623 (point of beginning); thence 840.8 ft. N 68°00'47"E to a point, thence 259.98 ft. S 34°55'54"E back to the point of the Point of Beginning. Said parcel containing approximately 104 +/- acres at normal river stage.

1 Ameren Plaza
1901 Chouteau Ave.
St. Louis, Missouri 63103

Dear Mr. Pozzo:

The Illinois Environmental Protection Agency (Illinois EPA) has reviewed the Closure Plan Venice Power Plant Ash Ponds 2 & 3 (Closure Plan) dated February 14, 2011, submitted by Ameren, which contains a proposal to establish a Groundwater Management Zone (GMZ) at the Venice site.

The February 14, 2011 submission was amended by letter and revised Closure Plan pages dated March 25, 2011. The amendments reflect a reduction is size of the proposed GMZ that will limit the GMZ's extent to Ameren's property. Upon review of the Amended submittal, the depth to which the GMZ was to extend was not clear. In a letter dated April 25, 2011 Ameren clarified the intended depth of the GMZ, as discussed in the "Geology" Section (Section 2.2.1) of the amended Closure Plan. Ameren also corrected a 2011 date, which had erroneously been listed as 2010.

The Illinois EPA concurs that the Closure Plan, with the amendments and clarifications as discussed above, meets the conditions of 35 Ill. Adm. Code 620.250(a). Therefore, a GMZ is hereby established at the Venice Power Plant within the three dimensional area described in the Closure Plan. Ameren should initiate the Closure Plan at its earliest convenience.

If you have any question concerning this letter, please contact me or Lynn Dunaway of my staff at 217/785-4787.

Sincerely,

CONSTRUCTION QUALITY ASSURANCE REPORT
CLOSURE OF ASH POND A, ASH POND B, ASH POND C, AND BOTTOM ASH POND
HUTSONVILLE POWER STATION
15142 EAST 1900 AVENUE
CRAWFORD COUNTY, ILLINOIS

1.0 PROJECT BACKGROUND

The AmerenEnergy Medina Valley Cogen, L.L.C. (Ameren) Hutsonville Power Station (Hutsonville) is located at 15142 East 1900 Avenue, Hutsonville, Illinois. This report is documentation of the completed Construction Quality Assurance (CQA) program for the closure of four ash ponds: Ash Pond A, Ash Pond B, Ash Pond C, and the Bottom Ash Pond. The plan has been completed in general accordance with the coal combustion byproduct (CCB) surface impoundment closure requirements of 35 Illinois Administration Code (IAC) 840.146 entitled Construction Quality Assurance Program.

Ash Pond A was operational from 1986 until the plant ceased operations in December 2011. Fly ash from the operating units was collected by an electrostatic precipitator and sluiced to Ash Pond A. The pond was constructed with an 80 mil high-density polyethylene (HDPE) liner. Ash was sluiced to the pond where solids were permitted to settle out and supernatant liquids were decanted. The pond contained fly ash within an area of approximately 12 acres, with an average ash depth of approximately 20 feet. Prior to closure initiation, it was estimated that Ash Pond A contained approximately 81,000 cubic yards of ash. The ash pond was contained by a 2,400 foot long perimeter embankment approximately 15 feet high.

Ash Pond B, an HDPE-lined pond, was placed in service in 2000 for disposal of sluiced fly ash and bottom ash. This pond received wastewater and/or storm water for periodic discharge and was permitted under the facility's National Pollutant Discharge Elimination System (NPDES) and Subpart B permits. Ash Pond B had a surface area of approximately 4.4 acres, with a maximum embankment height of 17 feet. Prior to closure initiation, it was estimated that Ash Pond B contained approximately 12,400 cubic yards of ash. Ash Pond B functioned as a secondary settling pond (polishing pond), receiving flow via a triplex pump station in Ash Pond C and flow from Ash Pond A before discharging to the Wabash River via NPDES-permitted outfall #002 (IL0000175).

Ash Pond C was an HDPE-lined pond placed in service in 2000 for disposal of sluice water from the Bottom Ash Pond. This pond received storm water and was permitted under the facility's NPDES and Subpart B permits. Storm water from the Bottom Ash Pond and Ash Pond C was discharged to Ash Pond B via a pump station. Ash Pond C was incised with a surface area of approximately 2 acres. Prior to closure initiation, it was estimated that Ash Pond C contained approximately 10,000 cubic yards of ash.

The Bottom Ash Pond was put into service in 1969 for disposal and reuse of bottom ash. The Bottom Ash Pond had a surface area of approximately 1.2 acres, with a maximum embankment height of 15 feet. Prior to closure initiation, it was estimated that the Bottom Ash Pond contained approximately 23,000 cubic yards of bottom ash. This pond received storm water for periodic discharge and was permitted under the facility's NPDES and Subpart B permits.

In summary, the closure activities for the three clean-closure ash ponds included: removal of CCB, removal of geomembrane, grading, construction of surface water control structures, and vegetation. The closure activities for Ash Pond A included: placement of CCB from the three clean-closure ash ponds, CCB subgrade grading, CCB subgrade compaction, placement of 40-mil HDPE geomembrane, placement of a three-foot thick final cover soil layer, construction of surface water control structures, and vegetation. As required in the CQA Plan, a scheduled program of monitoring, inspecting, sampling, and testing was performed. The CQA Plan was used to evaluate compliance with the intent of the closure plans[1] and specifications[2]. A summary of the site activities, construction observation, field testing, laboratory testing, and surveying during the ash pond closures are included in this CQA report. Presented in Appendix A are the weekly memorandums, daily reports, meeting minutes, and photograph logs. Presented in Appendix B are the CQA certifications.

2.0 CLEAN CLOSURE ACTIVITIES

2.1 CCB Removal Activities

CCB was removed from Ash Pond B, Ash Pond C, and the Bottom Ash Pond to facilitate clean closure of these ponds. CCB removal began on June 4, 2015 and concluded on September 24, 2015. A CQA representative periodically observed the CCB removal activities to assess the completeness of CCB removal. The CCB removed from Ash Pond B, Ash Pond C, and the Bottom Ash Pond was placed in Ash Pond A. After the CCB was removed, the ponds were brought to final grade, storm water controls were installed, and the ponds were vegetated.

[1] *Construction Plans for the Closure of Ash Ponds A, B, C and Bottom Ash Pond, Medina Valley Cogen, LLC, Hutsonville Power Station, Revised August 2014*; prepared by Hanson Professional Services Inc. for Ameren Energy Generating Company, 2014.

[2] *Construction Specification UE-2165 for Closure of Ash Ponds A, B, C and Bottom Ash Pond at Medina Valley Cogen, LLC Hutsonville Power Station*; prepared by Hanson Professional Services Inc. for Ameren Energy Generating Company, 2014.

2.2 Coal Yard

The Coal Yard previously stored coal for use at the power plant. The excess coal stored in the Coal Yard after the power plant operation ceased was removed prior to the beginning of the project. Coal spoils were still present in the Coal Yard after these removal activities. The top twelve inches of coal spoils were removed from the surface of the Coal Yard and placed in Ash Pond A. The top twelve inches were then backfilled with excess soil from on site.

2.3 Ash Pond D Slope at the Bottom Ash Pond

Ash Pond D was closed on the site in 2012. The slope of Ash Pond D adjacent to the east end of the Bottom Ash Pond contained ash extending into Ash Pond D. The Ash Pond D slope, extending from a tie-in to the previously installed Ash Pond D geomembrane to the base of the slope, was installed using the same procedures outlined in Section 4.0 (Geomembrane) of this report. The Ash Pond D geomembrane was installed on November 5, 2015 and protective cover was installed on November 20, 2015.

2.4 Survey of Final Grade

The finished grade of Ash Pond B, Ash Pond C, and the Bottom Ash Pond was surveyed by a licensed surveyor for a final as-built drawing. The results of the survey are illustrated and summarized on Sheet S-XXX-001A.

2.5 Surface Water Management

Surface water management structures in Ash Pond B, Ash Pond C, and the Bottom Ash Pond, including ditches and outfalls, were built in accordance with the design and approved modifications thereof.

2.6 Vegetation

After Ash Pond B, Ash Pond C, the Bottom Ash Pond, and the Coal Yard were brought to final grade, they were fertilized and seeded using synthetic mats and straw as needed to establish vegetation.

3.0 ASH POND A SUBGRADE PREPARATION

Subgrade preparation began on May 11, 2015 and was completed on October 30, 2015. In summary, subgrade preparation activities consisted of placing CCB material excavated from Ash Pond B, Ash Pond C, and the Bottom Ash Pond, placing spoils excavated from the Coal Yard, grading CCB in Ash Pond A, compacting the top 1 foot of subgrade material, performing compaction testing, and surveying the final subgrade elevations. In addition, the prepared subgrade was visually assessed by the CQA Officer to observe that the surface was relatively smooth and free of deleterious materials (i.e. jagged, irregularly-shaped protrusions) that could damage the geomembrane.

3.1 Laboratory Testing

Three CCB bulk samples were obtained from the existing subgrade. Index testing (moisture content and Atterberg limits) was performed on select samples. Standard Proctor moisture-density relationship was performed on the three bulk samples. The laboratory test results are summarized and presented in Appendix C.

3.2 Subgrade Compaction

Nuclear gauge density tests were performed on the upper 12 inches of the prepared subgrade at a frequency of five tests per acre (refer to Table 1). The field density tests were compared to the standard Proctor moisture-density relationship laboratory test data (Appendix C) to provide information regarding subgrade compaction. The project specifications required the subgrade to be compacted to 90 percent of the maximum standard Proctor dry density. Areas of failed density tests were recompacted and retested as needed. Based on the laboratory test results and field density test results, the subgrade was compacted in conformance with the CQA plan. The field tests are summarized in Table 1 and provided in the field observation reports in Appendix A.

3.3 Subgrade Survey

The subgrade was surveyed by a licensed surveyor. In addition, the subgrade was observed by the CQA Officer to verify that the prepare slopes did not have sharp grade changes, depressions, or protrusions. Repairs were made to areas that did not meet these criteria prior to geomembrane placement. A final as-built survey of the subgrade was performed. The results of the survey are illustrated and summarized on Sheet SUV-1. After the subgrade was smoothed, certification of the survey data and general condition of the subgrade was provided by the CQA Officer prior to installation of the 40-mil HDPE geomembrane liner (Appendix B).

4.0 GEOMEMBRANE

Geomembrane placement began on October 30, 2015 and was completed on November 13, 2015.

4.1 Prequalification Testing

The geomembrane manufacturer supplied an inventory list of the 40-mil HDPE geomembrane rolls to the owner and the CQA Officer. The geomembrane manufacturer submitted samples from the prequalification rolls to an independent geosynthetics laboratory for verification of selected manufacturer's guaranteed properties (presented in Appendix D). On each geomembrane roll selected for sampling, a 3-foot long sample was collected along the entire width of the roll.

In addition, the manufacturer submitted documentation that the materials supplied were tested for the parameters listed in the manufacturers list of guaranteed properties at the required testing frequency. The results of the testing, including identification of tested rolls, were submitted to the CQA Officer for review. The manufacturer certified that all rolls met the manufacturer's guaranteed properties in accordance with the specified testing frequency rate (Appendix D).

Geomembrane prequalification testing was completed prior to delivery. Copies of the testing results are provided in Appendix D.

4.2 Installer Certification of Placement Surface

The geomembrane installer's inspection and acceptance of the prepared subgrade surface as suitable for the geomembrane installation is documented through Certificates of Acceptance (Appendix E). Certificates of Acceptance were provided to the CQA Officer each day for the area covered by geomembrane that day.

4.3 Seam Overlap Testing

The general contractor and geomembrane installer arranged the geomembrane panels in an orientation to reduce the number of field seams. Within the geomembrane footprint, seam overlaps were field measured by the geomembrane installer to verify that the required 3 inches of overlap was met for all seams. Seam overlaps were "shingled" in the direction of the downslope. The CQA Officer and field representatives made independent measurements of the seam overlaps for additional verification.

4.4 Non-Destructive Testing

The geomembrane installer performed non-destructive testing of seams at the frequency specified in the CQA Plan. The seams were non-destructively tested over the full-length using a vacuum test unit, air pressure test, or other methods (i.e., spark testing for geomembrane boots around vent pipes) approved by the CQA Officer. Vacuum testing and air pressure testing procedures are presented in Sections 4.4.1 and 4.4.2. Continuity testing was completed as the seaming progressed. The CQA Officer and field representatives observed the non-destructive testing performed by the geomembrane installer. The geomembrane installer submitted all non-destructive field-testing results to the CQA Officer (Appendix C).

4.4.1 Vacuum Testing (Extrusion Welds)

Extrusion welds were typically used for repairs, protrusions through the geomembrane, and the tie-in to the existing geomembrane of Ash Pond D. Vacuum testing procedures for extrusion welds follow.

Equipment

The following equipment was used:

- Vacuum box assembly consisting of a rigid housing with a transparent viewing window, soft neoprene gasket attached to the bottom, port hole or valve assembly and a vacuum gauge;
- Vacuum tank and pump assembly equipped with a pressure controller and pipe connections;
- Rubber pressure or vacuum hose with fittings and connections;
- Bucket; and
- Soapy solution.

Procedures

The following procedures were followed:

1. The vacuum pump was energized and tank pressure was adjusted to approximately 10 inches of mercury.
2. A strip of geomembrane approximately 12 inches wide by 48 inches long (an area larger than the coverage of the vacuum box) was wetted with the soapy solution.
3. The box was placed over the wetted area.
4. The bleed valve was closed and the vacuum valve opened.
5. Creation of a leak tight seal was verified.

6. The geomembrane was observed for at least ten seconds through the viewing window for the presence of soap bubbles.
7. When bubbles were not observed after 10 seconds, the vacuum valve was closed, and the bleed valve opened. The box was moved to the next adjoining area, and the process was repeated.
8. All areas where soap bubbles appeared were marked, repaired, and retested until passing test results were obtained.

4.4.2 Air Pressure Testing (Double Fusion Welds)

Double fusion seams were typically used to fuse two panels of geomembrane together. Air pressure testing procedures for double fusion welds follow.

Equipment

The following equipment was used:

- Air pump (manual or motor driven) equipped with pressure gauge capable of generating and sustaining a pressure of 25 to 30 pounds per square inch (psi) and mounted on a cushion to protect the geomembrane;
- Rubber hose with fittings and connections; and
- Sharp hollow needle.

Procedures

The following procedures were followed:

1. Both ends of the seam to be tested were sealed.
2. A needle was inserted into the tunnel created by the fusion weld.
3. A protective cushion was inserted between the air pump and the geomembrane.
4. The air pump was energized to a pressure between 25 psi and 30 psi. The valve was closed, and the pressure was sustained for a minimum of five minutes.
5. If loss of pressure exceeded 3 psi or did not stabilize, the leaking area was located, then repaired and retested until passing test results were obtained.
6. At the conclusion of a passing air pressure test, the opposite end of the seam was slit and the subsequent drop in pressure was observed. Our observation of the pressure drop indicated that the seam passed.
7. The needle was removed and the needle hole sealed.

Electronic Filing: Received, Clerk's Office 09/28/2020

4.5 Destructive Testing

Destructive seam tests were performed at randomly selected geomembrane locations as seaming work progressed. The purpose of the destructive seam tests was to evaluate seam strength. The CQA Officer and field representatives observed the destructive testing performed by the geomembrane installer.

The geomembrane installer submitted the results of the field destructive testing to the CQA Officer. An independent laboratory, selected by the CQA Officer, performed the destructive seam tests that included peel and shear strength testing. The destructive seam testing results (field-testing and independent testing) are presented in Appendix D.

4.5.1 Testing Location and Frequency

The CQA Officer or field representative selected the destructive test locations where seam samples were removed for testing at a minimum frequency of one sample per 500 feet of seaming. In addition, the CQA Officer or field representative could select additional destructive seam sample locations at their discretion. Destructive seam test locations include random seam testing and areas of possible defects (excess crystallinity, contamination, offset welds, equipment malfunction).

4.5.2 Sampling Procedures

Destructive seam samples were obtained as the seaming progressed. This method was used to facilitate approval of the geomembrane results prior to covering the geomembrane with the next layer of the closure construction. The geomembrane installer assigned a number to each destructive seam sample and marked the location and seaming information on each collected sample. The destructive seam sample location was recorded on an as-built drawing. The locations of the destructive seam samples were repaired in accordance with the CQA Plan. The continuity of the repairs was subsequently vacuum tested.

4.5.3 Field Testing

The geomembrane installer used a tensiometer to test ten 1-inch wide strips from each sample identified for destructive testing. In accordance with the CQA Plan, the field destructive tests consisted of five samples for peel adhesion and five samples for shear strength. Upon successful field-testing, the remaining destructive seam samples were qualified to be submitted for independent laboratory testing.

4.5.4 Laboratory Testing

Samples that passed the prequalifying field-tests were submitted to the independent testing laboratory. Ten specimens from each destructive seam sample were tested, including five shear strength tests and five peel adhesion tests. Laboratory testing was in accordance with "Standard Test Method for Determining the Integrity of Nonreinforced Geomembrane Seams Produced Using Thermo-Fusion Methods" (ASTM D 6392). Acceptance was based on the criteria outlined in the Geosynthetic Research Institute (GRI) standard GRI GM19 as provided in the CQA Plan.

4.5.5 Procedures for Failed Destructive Tests

If a destructive sample did not pass either a field or a laboratory test, the geomembrane installer had two options to remediate the failure. The geomembrane installer could reconstruct and repair the seam between any two passed test locations completed by the same technician on the same day. Alternatively, the geomembrane installer could trace the welding path to an intermediate location at least 10 feet from the failed test in either direction and take additional destructive seam samples. The additional samples were then field-tested prior to sending to the independent laboratory as previously described. If the additional samples passed, then the seam was reconstructed between the two passing samples. If the additional samples failed, then the process was repeated to establish the zone in which the seam should be reconstructed.

Reconstructed seams were bounded by two locations with passing laboratory destructive tests. In cases that exceeded 150 feet of reconstructed seam, a destructive sample was taken from the zone in the reconstructed area. The geomembrane installer documented the actions taken in conjunction with destructive test failures (Appendix D).

5.0 FINAL COVER

After the geomembrane was constructed and approved, 3 feet of final cover (soil) was placed over the 40-mil HDPE geomembrane. Soil grading began on November 23, 2015. On December 22, 2015, the protective cover was winterized for completion in the spring; all parts of the HDPE geomembrane were covered by at least two feet of protective cover as of this date. Protective cover placement, shaping, and grading resumed on April 6, 2016 and were completed on June 6, 2016.

The final cover installer's inspection and acceptance of the geomembrane surface as suitable for the final cover installation is documented through Certificates of Acceptance (Appendix E). Certificates of Acceptance were provided to the CQA Officer each day for the area of geomembrane covered by final cover that day.

The soil grading activities consisted of:

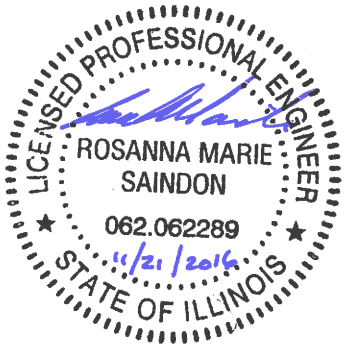
- Visually observing that the geomembrane surface was free of defects prior to soil placement,
- Removing deleterious materials (such as roots and rocks) from the soil that could damage the geomembrane,
- Spreading the soil over the geomembrane,
- Preparing the partial cover for the winter months,
- Repairing erosive damage to the partial cover when work resumed in the spring,
- Surveying the final subgrade elevations on the established 100-foot grid points, and
- Calculating the difference between the ash subgrade and the final surface to confirm that a minimum of 3 feet of soil as a final cover was present over the geomembrane.

The soil was placed in a 2-foot thick lift by a low pressure bulldozer. During the placement of the 2-foot thick lift, a 3-foot thick road was built and maintained to allow haul trucks to transport soil onto Ash Pond A. The soil was then brought to final grade in a second grading phase after the geomembrane surface was covered. The final surface survey data and calculated thickness are provided on Sheet SUV-1. Discussions of the soil placement are provided on the field observation reports presented in Appendix A.

After the final cover was graded and the surface water management controls constructed, Ash Pond A was fertilized and seeded using synthetic mats and straw as needed to establish vegetation.

6.0 SURFACE WATER MANAGEMENT

Berms and channels were constructed on the final cover for surface water management. Construction of the berms and channels were observed and an as-built survey was performed.



A copy of the surface water management structure survey data is provided on Sheet S-XXX-001A. Additional information on the field observations are provided in Appendix A.

Electronic Filing: Received, Clerk's Office 09/28/2020

7.0 SIGNATURE

As Construction Quality Assurance (CQA) Officer for the construction of the closure of Ash Pond A, Ash Pond B, Ash Pond C, and the Bottom Ash Pond (from April 14, 2015 to October 12, 2016), located at the AmerenEnergy Medina Valley Cogen, Hutsonville Plant in Hutsonville, Illinois, I am familiar with the plans and specifications, and the CQA Plan as prepared and approved for the project. Based on my observations and the observations of the Construction Quality Assurance Officers-In-Absentia (Cassandra Baresel, Steve Graham, and Jessie Hahn), it is my professional opinion that the construction was completed as described in this Report. CQA certification by the owner's representative does not relieve the contractor of their obligations to furnish all work in accordance with the contract.

Rosanna M. Saindon, P.E., Ph.D.

DRAWING NO.	REV.
S-XXX-001	1

SHEET NO. NNN

GENERAL SURVEY NOTES:

Aerial topographic information shown was taken from a photogrammetric data provided by Continental Mapping Consultants as flown April, 2010 including contours on ground surfaces.

Contours within ponds were determined by bottom of pond elevations established by the surveyor, and supplemented with surveys provided by Lamac Engineering Company in April 2014

Boundary information was taken from information provided to the surveyor by Ameren from a survey prepared February 1984 shown on sheet K-547.

The adopted coordinate system used for this survey was taken from the above mentioned survey of 1984.

The benchmark used was taken from the above mentioned survey of 1984 located near the main power plant shown as elevation 454.14'.

POND CAP SURVEY
A TRACT OF LAND BEING PART OF AMEREN HUTSONVILLE POWER STATION
HUTSONVILLE, ILLINOIS

DATE: 06/08/16
BOOK NO.: 97
DRAFTED BY: DAW
APPROVED BY: WFM
FILE NAME: 10022.DWG

SHEET TITLE:
POND CAP SURVEY

SHEET NUMBER:
SUV-1

SHEET NO: 2 OF 2

PROJECT NO: 10022.01.002

Electronic Filing: Received, Clerk's Office 09/28/2020

GENERAL SURVEY NOTES:

Original pre-construction topographic information shown was taken from a photogrammetric data provided by Continental Mapping Consultants as flown April, 2010 including contours on ground surfaces.

Original pre-construction contours within ponds were determined by bottom of pond elevations established by the surveyor, and supplemented with surveys provided by Lamoc Engineering in April 2014.

As-built contours were taken from a combination of photogrammetric data flown on August 9, 2016 and ground survey on August 29, 2016.

Boundary information was taken from information provided to the surveyor by Ameren from a survey prepared February 1984 shown on sheet K-547.

The adopted coordinate system used for this survey was taken from the above mentioned survey of 1984.

The benchmark used was taken from the above mentioned survey of 1984 located near the main power plant shown as elevation 454.14'.

SUBJECT: Weekly Summary Report for September 15, 2015 to September 18, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (^{O}F) lows ranged from 47 to 63^{O}F, and temperature highs ranged from 82 to 89^{O}F.

Construction Activities

Ash was removed from Ash Pond B and placed in Ash Pond A. The top one foot of material was removed from the Coal Yard and placed in Ash Pond A. Grading activities occurred in Ash Pond B and Ash Pond A. Wet materials in Ash Pond A were scarified to improve drying. The geomembrane liner was exposed and cleaned at the interface between the Bottom Ash Pond and the previously closed Ash Pond D.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), and 1 water truck (Caterpillar 623B).

WB Koester had 12 employees working on site: 2 laborers, 1 mechanic, and 9 equipment operators.

Lamac Engineering was on site on Friday, September 18 to survey the ash ponds.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

A weekly progress meeting was held on Wednesday, September 16, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Ash from Ash Pond B and spoils from the Coal Yard were placed in Ash Pond A.

Testing/Sampling

One sample of soil from a potential borrow source was obtained from Quality Lime Company for benzene, toluene, ethylbenzene and xylenes (BTEX) analysis.

Signature of CQA Officer

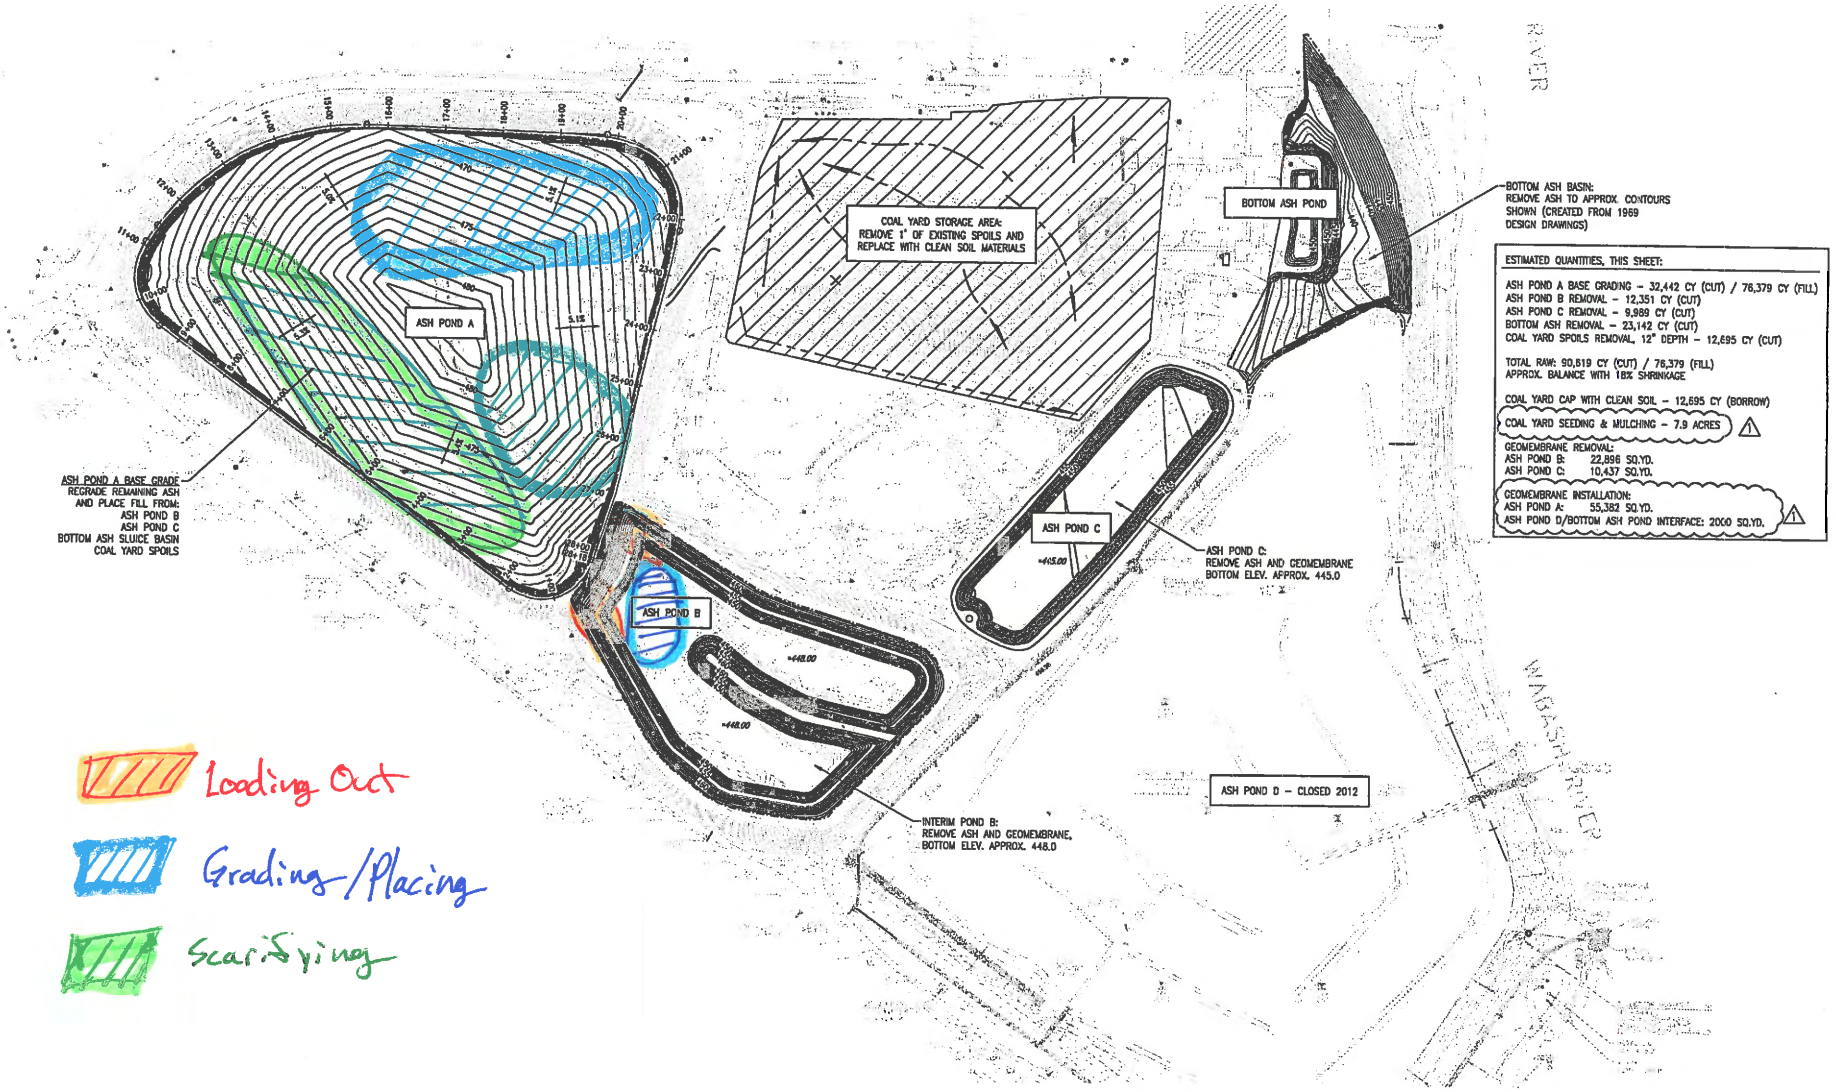
DAILY REPORT DATE: 9/15/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:
Loaded out steel from the coal yard so that the top 1' can be removed to Ash Pond A. Ongoing demolition of buildings. Don Shaver (Ameren) indicated that the hydrogen tanks will be purged Wednesday or Thursday this week so that the tanks can be removed.

WB Koester:



Equipment details: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 4 dump trucks (John Deere 400D) (3 in use), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B)

Excavated ash at the northwest corner of Ash Pond B with two excavators and placed ash on eastern half of Ash Pond A with three dump trucks (a fourth dump truck is currently out of service for repairs on site). Graded bottom of Ash Pond B with one GPS bulldozer. Graded eastern berms of Ash Pond A with one GPS bulldozer. Scarified western half of Pond A with one non-GPS bulldozer to allow material to dry (material is visibly wet). Water truck sprayed road areas with water to reduce dust.

Other:

Bottom Ash Pond is waiting on the removal of hydrogen tanks and steel debris by Brandenberg before activity continues. Observed ash in Ash Pond C on the northeast end of the southeast wall adjacent to the roadway. Observed ash in Ash Pond B along northeast , southwest, and southeast ends. Ash on Ash Pond A is visibly wet on the western half and drier on the eastern half. There is ponded water in the northeast corner.

9/15/2015

ESTIMATED QUANTITIES, THIS SHEET:

ASH POND A BASE GRADING – 32,442 CY (CUT) / 76,379 CY (FILL)
ASH POND B REMOVAL – 12,351 CY (CUT)
ASH POND C REMOVAL – 9,989 CY (CUT)
BOTTOM ASH REMOVAL – 23,142 CY (CUT)
COAL YARD SPOILS REMOVAL, 12" DEPTH – 12,695 CY (CUT)

TOTAL RAW: 90,619 CY (CUT) / 76,379 (FILL)
APPROX. BALANCE WITH 18% SHRINKAGE

COAL YARD CAP WITH CLEAN SOIL – 12,695 CY (BORROW)
COAL YARD SEEDING & MULCHING – 7.9 ACRES ⚠1

GEOMEMBRANE REMOVAL:
ASH POND B: 22,896 SQ.YD.
ASH POND C: 10,437 SQ.YD.

GEOMEMBRANE INSTALLATION:
ASH POND A: 55,382 SQ.YD.
ASH POND D/BOTTOM ASH POND INTERFACE: 2000 SQ.YD. ⚠1

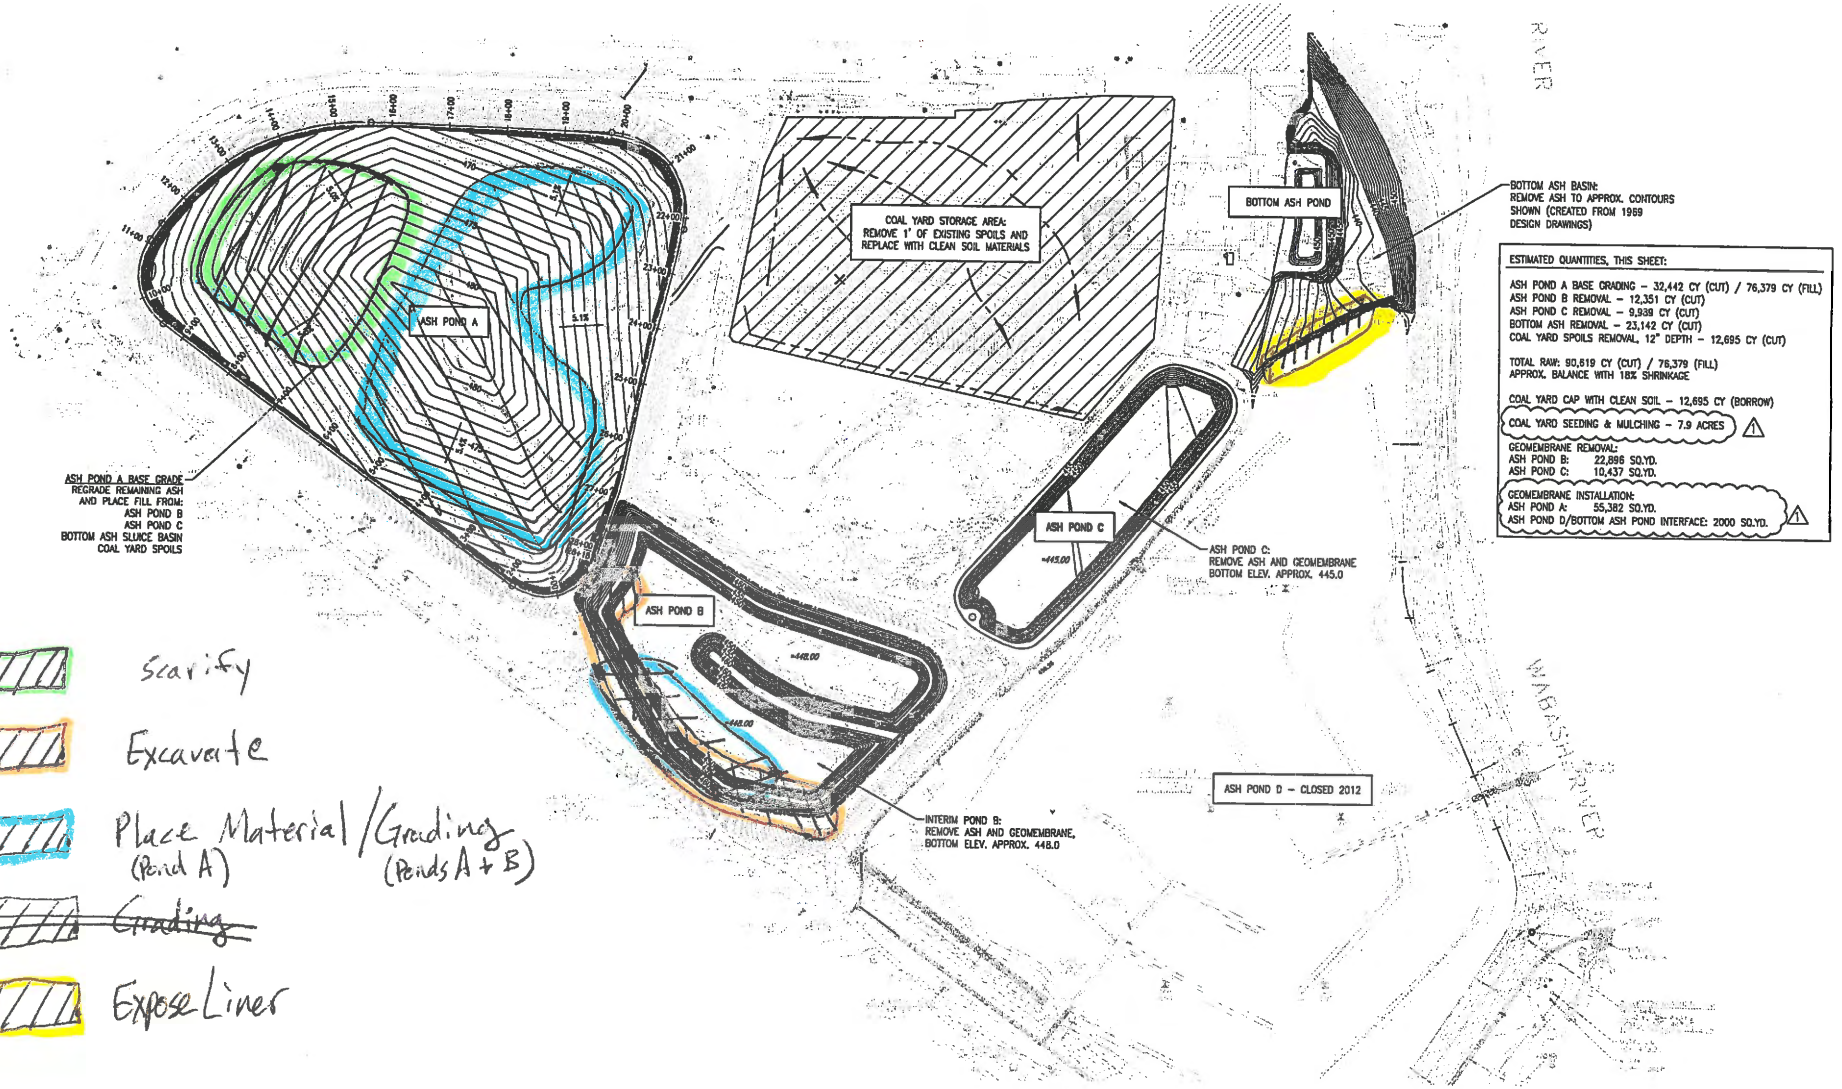
DAILY REPORT DATE: 9/16/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:
Loaded out steel from the coal yard so that the top 1' can be removed to Ash Pond A. Ongoing demolition of buildings.

WB Koester:

Equipment details: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B)



Excavated ash at the southwest wall of Ash Pond B with one excavator and placed ash on eastern half of Ash Pond A with three dump trucks (a fourth dump truck is currently out of service for repairs on site). Graded bottom and sides of Ash Pond B with one GPS bulldozer. Graded eastern berms of Ash Pond A with one GPS bulldozer. Scarified western half of Ash Pond A with one non-GPS bulldozer and one excavator to allow material to dry in the early morning. Graded northeast portion of Ash Pond A with one non-GPS bulldozer in the late morning/afternoon. Moved soil to expose HDPE geomembrane liner at the interface between the Bottom Ash Pond and Ash Pond D with one excavator. Water truck sprayed road areas with water to reduce dust. Late afternoon both backhoes loading ash out of Ash Pond B (southwest and southeast corners) into Ash Pond A.

1330: Talked with Chris Atkinson (WB Koester) about remaining ash locations in the Bottom Ash Pond.

Other:

Progress meeting held today at 1030. Refer to the meeting minutes for more information.

9/16/2015

ESTIMATED QUANTITIES, THIS SHEET:

ASH POND A BASE GRADING – 32,442 CY (CUT) / 76,379 CY (FILL)
ASH POND B REMOVAL – 12,351 CY (CUT)
ASH POND C REMOVAL – 9,938 CY (CUT)
BOTTOM ASH REMOVAL – 23,142 CY (CUT)
COAL YARD SPOILS REMOVAL, 12" DEPTH – 12,695 CY (CUT)

TOTAL RAW: 90,619 CY (CUT) / 76,379 (FILL)
APPROX. BALANCE WITH 18% SHRINKAGE

COAL YARD CAP WITH CLEAN SOIL – 12,695 CY (BORROW)
COAL YARD SEEDING & MULCHING – 7.9 ACRES ⚠1

GEOMEMBRANE REMOVAL:
ASH POND B: 22,896 SQ.YD.
ASH POND C: 10,437 SQ.YD.

GEOMEMBRANE INSTALLATION:
ASH POND A: 55,382 SQ.YD.
ASH POND D/BOTTOM ASH POND INTERFACE: 2000 SQ.YD. ⚠1

Electronic Filing: Received, Clerk's Office 09/28/2020

Electronic Filing: Received, Clerk's Office 09/28/2020

Weekly Progress Meeting

Meeting Minutes

Date: 9-16-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff (phone), Ken Beckman, John Patterson (phone), Tim Free

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Make sure to wash and scrape the parking lot on Friday.
- Discuss with work crews that all must wear seat belts.

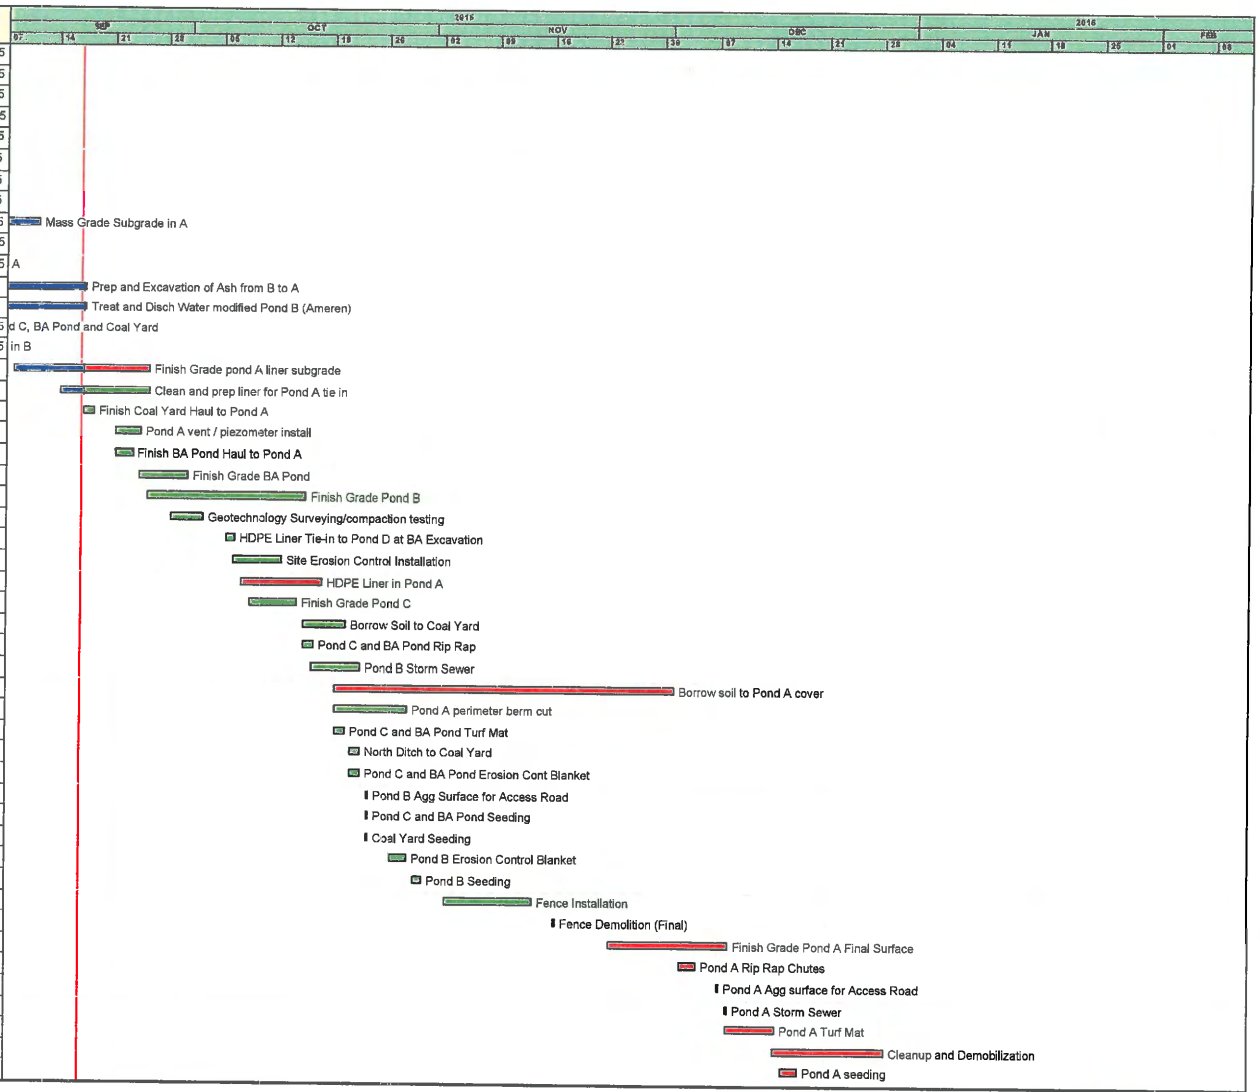
Manpower

- Man hours
  - Start of Job (4-27-15) through 9-14-15
    - Total = 6963 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 7 operators, 2 laborer, 1 teamster
  - 10 hrs days approx.

Review old minutes and action items

- Silt Fence removal will be performed on a T&M basis as opposed to lump sum.
- Mike checked with Hanson regarding lowering the bottom ash pond berm, said to only lower it 5' lower than existing elevation).
- Bob submitted flowable fill mix design and it was approved.
- Geotechnology, Inc was given 5 gallon bucket of Quality Lime borrow soil to test. Jessie will obtain more at site to test for BTEX.

Electronic Filing: Received, Clerk's Office 09/28/2020



Next Meeting Scheduled: September 23, 2015 at 9:00 CST

Action Items

- Bob Fisher
  - Prepare schedule of values
  - Provide T&M price for a temp generator?
- Mike Wagstaff –
  - Call farmer back to have him produce lease agreement. If not then WBK can borrow out of field.
  - If borrow out of field is ok then check with LAMAC to see if they can amend SWPPP Plan to include the field.
- Don Shaver
  - Take pictures during structure demolitions for records.
- Geotechnology, Inc.
  - Jessie to obtain more sample of Quality Lime borrow soil for BTEX testing
  - Jessie to obtain sample of farm field soil for testing.

Electronic Filing: Received, Clerk's Office 09/28/2020

DAILY REPORT DATE: 9/17/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

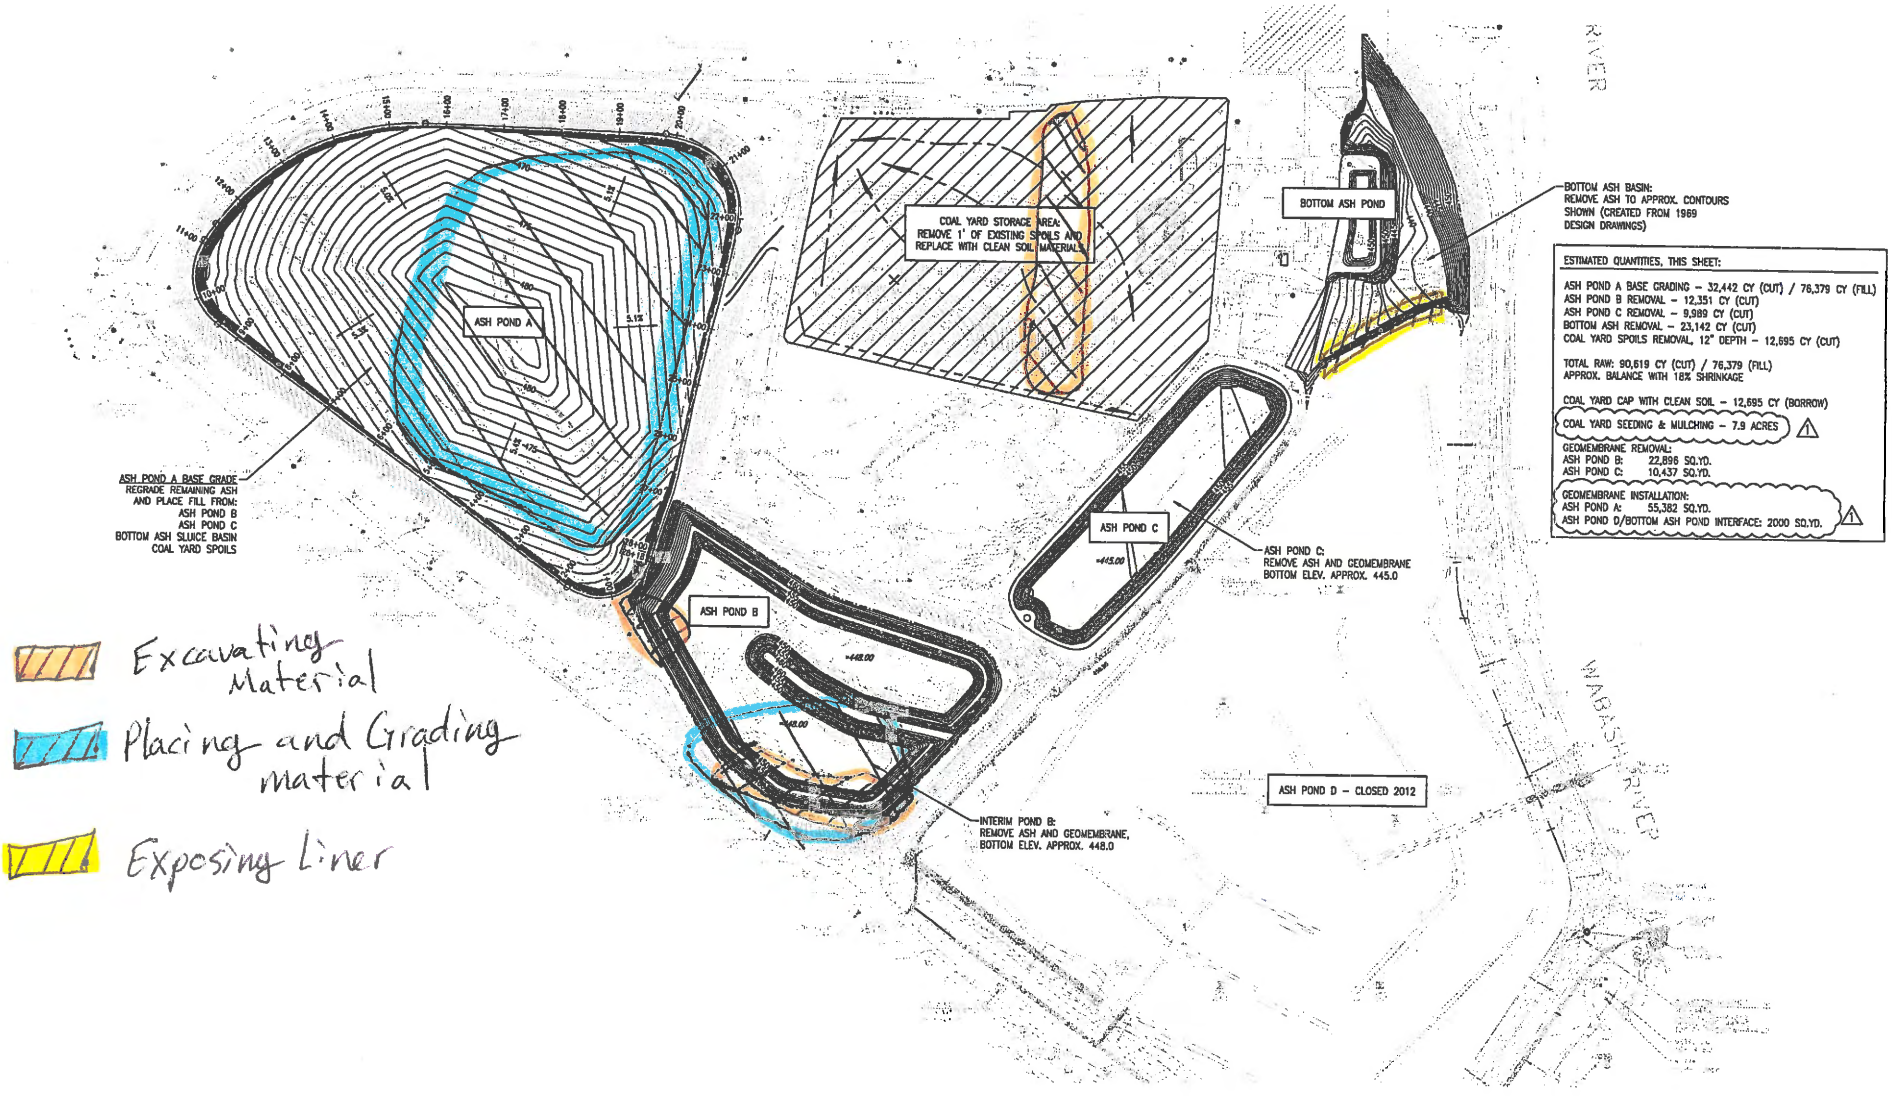
Finished loading out steel from the coal yard. Ongoing demolition of buildings. Began purging of the hydrogen tank located at the west end of the Bottom Ash Pond.

WB Koester:

Equipment details: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B)

One excavator spent one hour in the morning cleaning off the HDPE geoembrane liner at the interface between the Bottom Ash Pond and Ash Pond D. Two laborers cleaned off the HDPE geomembrane liner between Ash Pond D and the Bottom Ash Pond with shovels in the morning.

Excavated ash at the southern edge of Ash Pond B and at the western corner of Ash Pond B with two excavators and placed ash on eastern half of Ash Pond A with three dump trucks. Graded bottom and sides of Ash Pond B with one GPS bulldozer and one excavator. Graded eastern berms of Ash Pond A with one non-GPS and one GPS bulldozer.



Around 0930, one excavator and one GPS-bulldozer moved to the Coal Yard to remove the top 1 foot of material. Three dump trucks transported the removed material to Ash Pond A. This activity continued for the remainder of the day.

Water truck sprayed road areas with water to reduce dust.

One tracked jackhammer arrived on site around 1400 this afternoon.

One bulldozer (non-GPS, previously grading material placed on Ash Pond A) out of service and under repair at 1530 site walk.

Brandenburg:

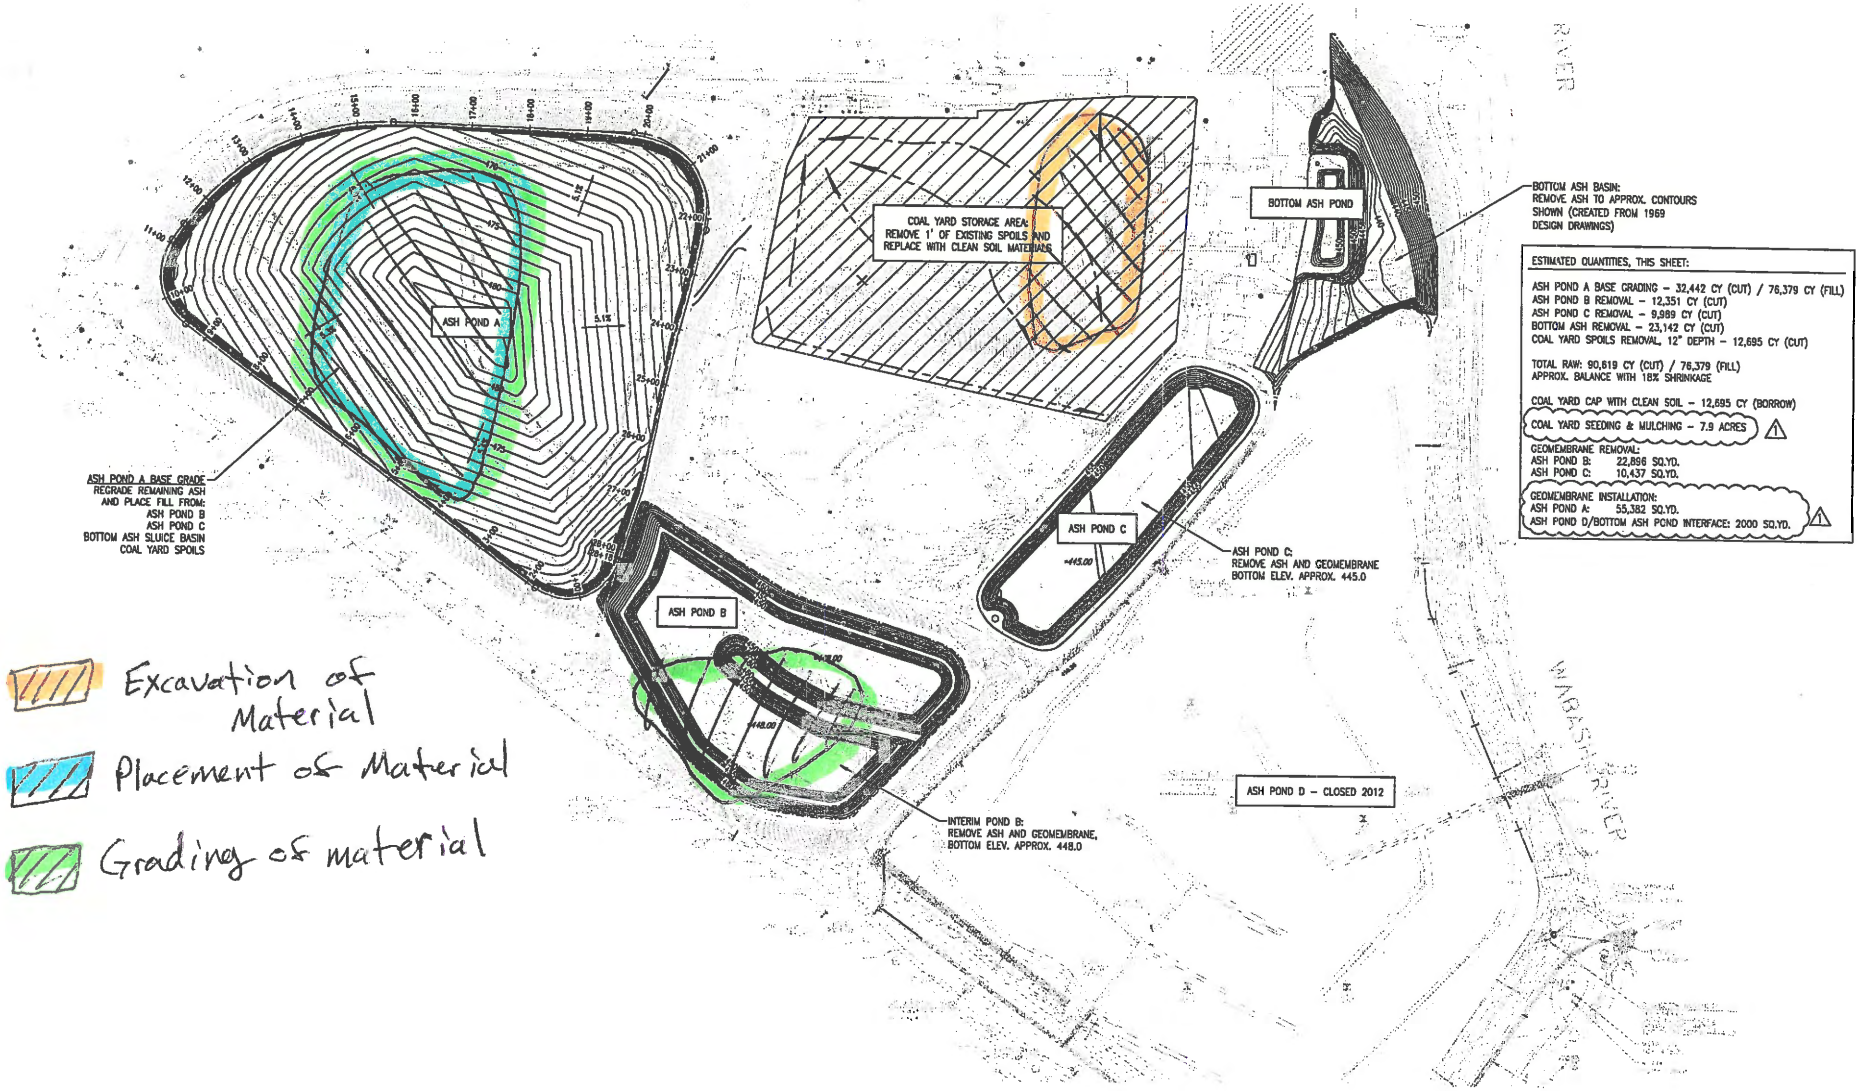
Finished loading out steel from the coal yard. Ongoing demolition of buildings. Continued purging of the hydrogen tank located at the west end of the Bottom Ash Pond.

WB Koester:

Equipment details: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B)

The bulldozer that was under repair yesterday (9/17/15) afternoon is back in service.

Graded bottom and sides of Ash Pond B with one GPS bulldozer. Graded Ash Pond A with one non-GPS bulldozer. At 1000 the GPS bulldozer at Ash Pond B moved to Ash Pond A to continue grading activities.



Two excavators and one GPS bulldozer removed the top 1 foot of spoils and debris in the Coal Yard. Three dump trucks transported the material to Ash Pond A.

Water truck sprayed road areas with water to reduce dust.

Used one bulldozer to scrape material from roads.

WB Koester had a surveyor on site to generate an updated topo for the Ash Pond B and Ash Pond A to evaluate additional ash volume in Ash Pond A and to update grade design on Ash Pond B.

Geotechnology, Inc.

DATE: October 2, 2015

SUBJECT: Weekly Summary Report for September 21, 2015 to September 25, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (^{O}F) lows ranged from 44 to 53^{O}F, and temperature highs ranged from 79 to 87^{O}F.

Construction Activities

Ash was removed from the Bottom Ash Pond and placed on Ash Pond A. The Bottom Ash Pond was graded. Ash Pond A was graded and compacted. Wet portions of Ash Pond A (near the edges of the pond) were spread and scarified to encourage drying. Seven piezometers/vents were installed in Ash Pond A by Illini Drilled Foundations, Inc. on September 21-23, 2015. The electric line adjacent to the eastern bank of Ash Pond B was taken down and re-installed by ENR on September 22-24, 2015.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 backhoes (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot compactor (CA 251), 1 smooth drum roller (CS-433E), and 1 skidsteer (Caterpillar 247B).

WB Koester had 9 employees working on site: 2 laborers, 1 mechanic, and 6 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Illini Drilled Foundations, Inc. was on site September 21-23 with 3 operators. Illini had 1 Caterpillar 312B auger machine, 1 forklift, and 1 backhoe/front-end loader on site.

ENR was on site September 22-24 with two electricians. ENR had 1 manlift on site.

Meetings

A weekly progress meeting was held on Wednesday, September 23, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Ash from the Bottom Ash Pond was placed in Ash Pond A. Four-inch HDPE piezometers were installed in Ash Pond A at seven locations.

One delivery of HDPE geomembrane arrived on site on September 21, 2015.

Testing/Sampling

One protective cover soil sample was obtained from a farm field near the site for prequalification testing.

Geotechnology, Inc. Rep. 9/21/2015 Date

Geotechnology, Inc. Engineer 9/29/2015 Date

GEOTECHNOLOGY INC
FROM THE GROUND UP

DAILY REPORT DATE: 9/21/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

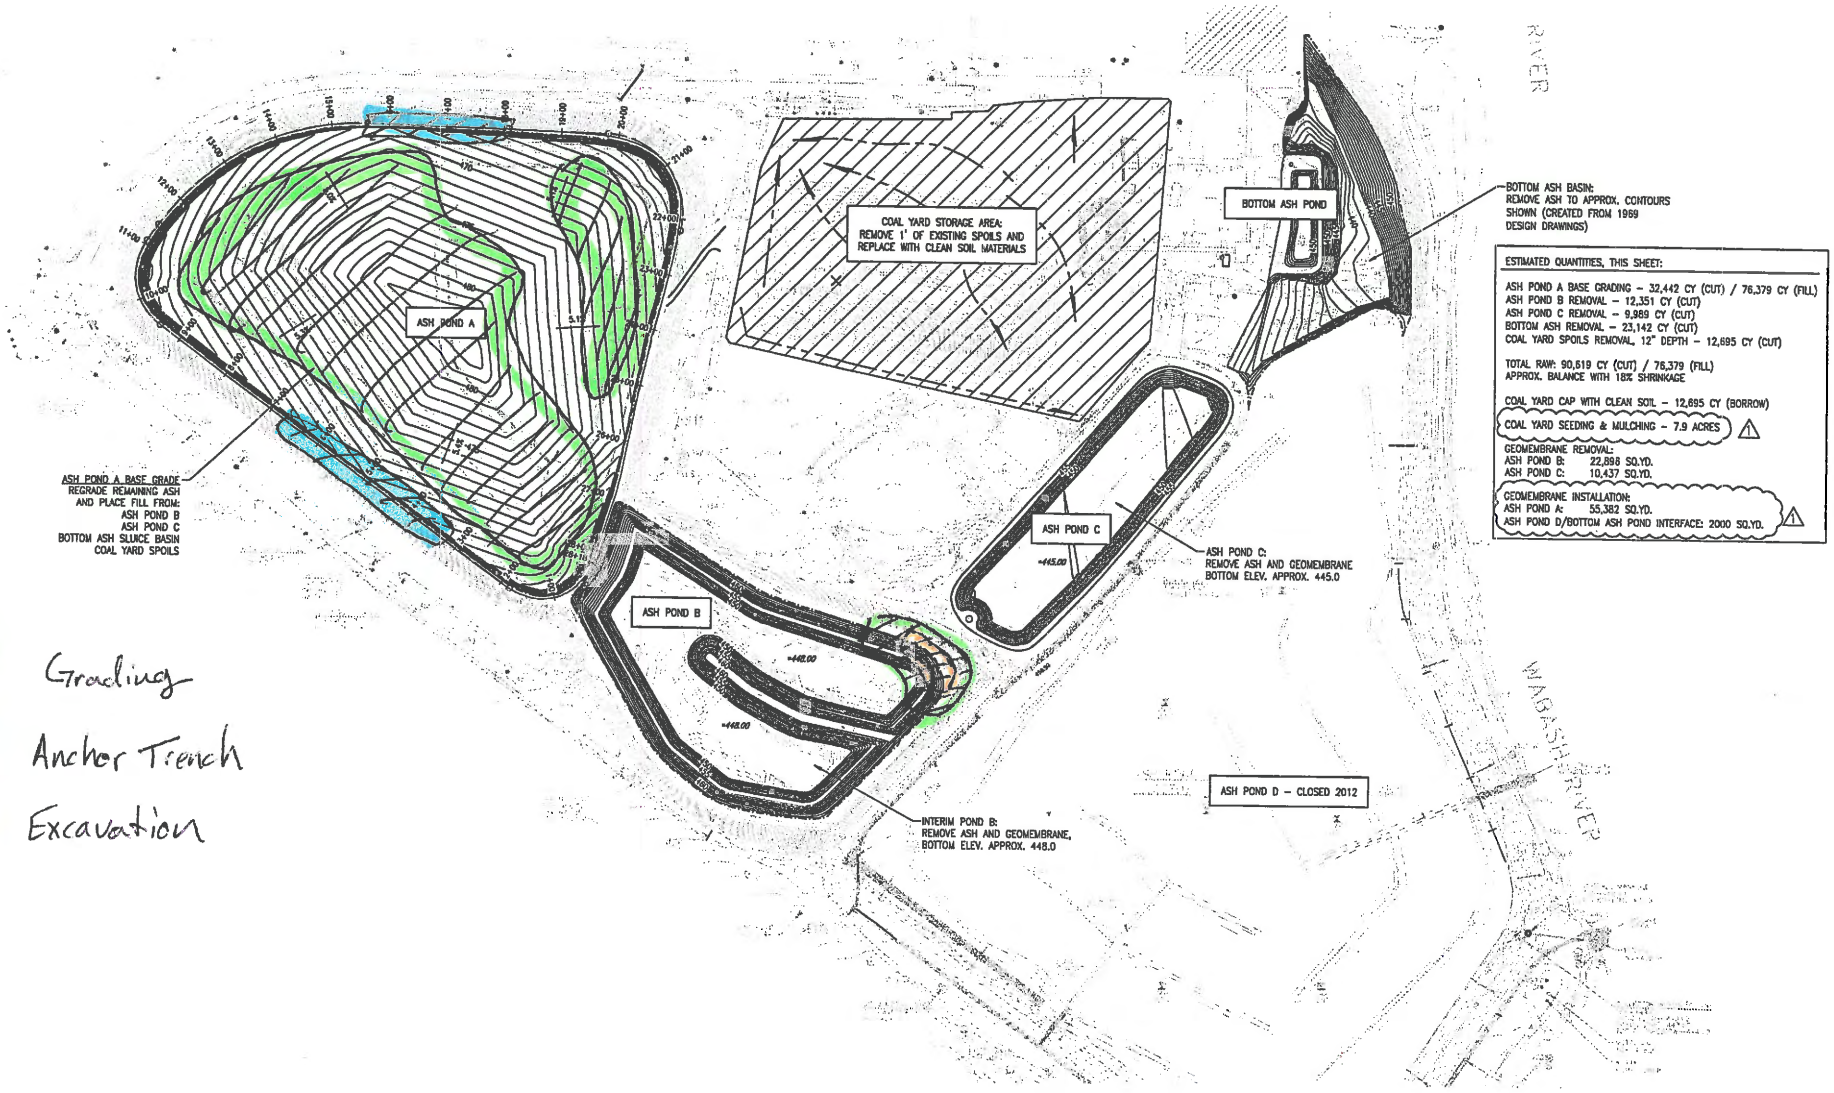
Equipment details: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 sheepsfoot roller compactor (CA 251).

Cleaned ash at the northeast corner of Ash Pond B and shaped the slopes with one excavator and dump trucks.

Mike Wagstaff (Ameren) was on site in the morning reviewing site issues and concerns. Per his direction, the east wall of Ash Pond C (where ash is visible) and the northeast corner of Ash Pond B (where ash is visible) will be covered with a protective cap of soil.

Graded Ash Pond A with three bulldozers (two with GPS). Two excavators shaped the HDPE geomembrane anchor trench at various locations at the Ash Pond A levees. In the morning, one sheepsfoot roller compacted in the northern half of Ash Pond A levees.

Illini Drilled Foundations, Inc.:



Equipment details: 1 Caterpillar 312B auger machine, 1 Caterpillar TL934C fork lift, 1 Caterpillar 420E backhoe/front-end loader.

Used auger machine to auger vents in Ash Pond A at locations indicated on attached plans. The vent borings were advanced by auger until the material was too wet, and then advanced by bucket. An 18-24 inch casing was advanced as the material was removed. The vents consist of a 4-inch HDPE pipe with four ½-inch holes at approximately 6-inch intervals. The HDPE pipe is enclosed in a sock to the approximate ground level and has three centralizers spaced evenly along its length. The borings had a diameter of approximately 18-24 inches. The annular space was backfilled with gravel and the casing removed.

At 1115, Illini had to send someone back to their Danville, IL office to pick up a correctly-sized bucket for picking up wet material. In the absence of proper tools, two other borings were advanced to the depth possible with the auger tool. The bucket arrived on site at around 1400 and normal production continued.

Two vents were completed on 9/21/2015, and a third vent was advanced to the depth possible with an auger.

9/21/2015

ESTIMATED QUANTITIES, THIS SHEET:

ASH POND A BASE GRADING – 32,442 CY (CUT) / 76,379 CY (FILL)
ASH POND B REMOVAL – 12,351 CY (CUT)
ASH POND C REMOVAL – 9,989 CY (CUT)
BOTTOM ASH REMOVAL – 23,142 CY (CUT)
COAL YARD SPOILS REMOVAL, 12" DEPTH – 12,695 CY (CUT)

TOTAL RAW: 90,619 CY (CUT) / 76,379 (FILL)
APPROX. BALANCE WITH 18% SHRINKAGE

COAL YARD CAP WITH CLEAN SOIL – 12,695 CY (BORROW)
COAL YARD SEEDING & MULCHING – 7.9 ACRES ⚠1
GEOMEMBRANE REMOVAL:
ASH POND B: 22,898 SQ.YD.

DAILY REPORT DATE: 9/22/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings. Demolition of hydrogen tank and foundation over bottom ash adjacent to the Bottom Ash Pond at the northwest corner.

Illini Drilled Foundations, Inc.:

Equipment details: 1 Caterpillar 312B auger machine, 1 Caterpillar TL934C fork lift, 1 Caterpillar 420E backhoe/front-end loader.

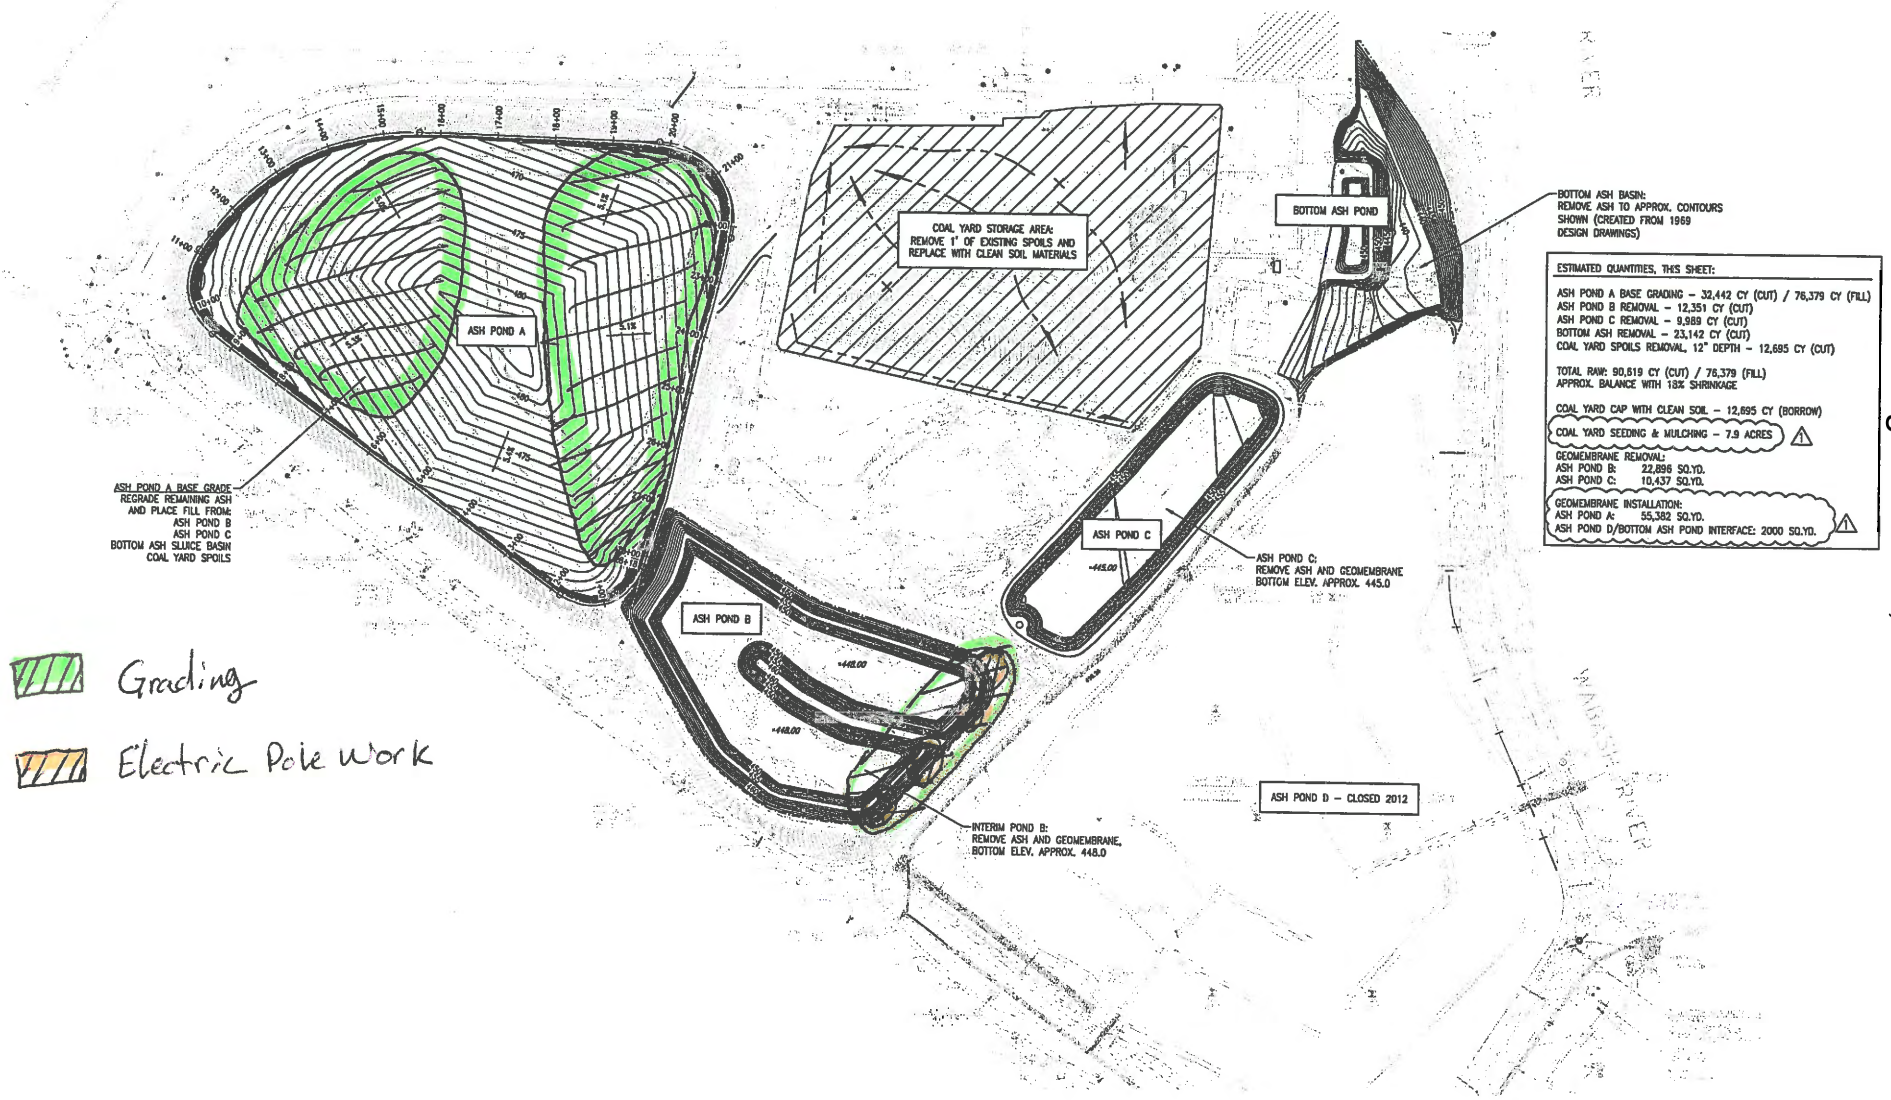
Advancement, materials, and vent construction performed as described in the 9/21/2015 daily report.

Four vents were completed on 9/22/2015.

ENR (Electricians):

Equipment details: 1 JLG Lift 600S manlift

Used manlift and one WB Koester excavator to take down the power line from the power poles on the east side of Ash Pond B. Exposed underground power lines at southeast corner of Ash Pond B. Rewired power poles after the poles were reinstalled by WB Koester.



WB Koester:

Equipment details: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS).

Graded Ash Pond A with three bulldozers (two with GPS). Two excavators shaped the HDPE geomembrane anchor trench at various locations at the Ash Pond A levees.

One excavator assisted in removing the power line along the east side of Ash Pond B. Once the power line was down (0900), two excavators and one GPS bulldozer graded the west slope of Ash Pond B and removed a large concrete structure near the southern end of that slope. The two excavators reinstalled the power poles after grading was completed (beginning around 1200). One excavator dug trenching to expose existing electric lines (southeast corner of Ash Pond B) and for burial of electric lines (northeast corner of Ash Pond B).

9/22/2015

ESTIMATED QUANTITIES, THIS SHEET:

GEOTECHNOLOGY INC
FROM THE GROUND UP

DAILY REPORT DATE: 9/23/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings. Steel above concrete structure was removed to make concrete structure accessible for removal.

Illini Drilled Foundations, Inc.:

Equipment details: 1 Caterpillar 312B auger machine, 1 Caterpillar TL934C fork lift, 1 Caterpillar 420E backhoe/front-end loader.

Advancement, materials, and vent construction performed as described in the 9/21/2015 daily report.

One vent was completed on 9/23/2015. This completes the vent installation in Ash Pond A. Illini off site by 1200 on 9/23/2015. Equipment remains on site.

ENR (Electricians):

Equipment details: 1 JLG Lift 600S manlift

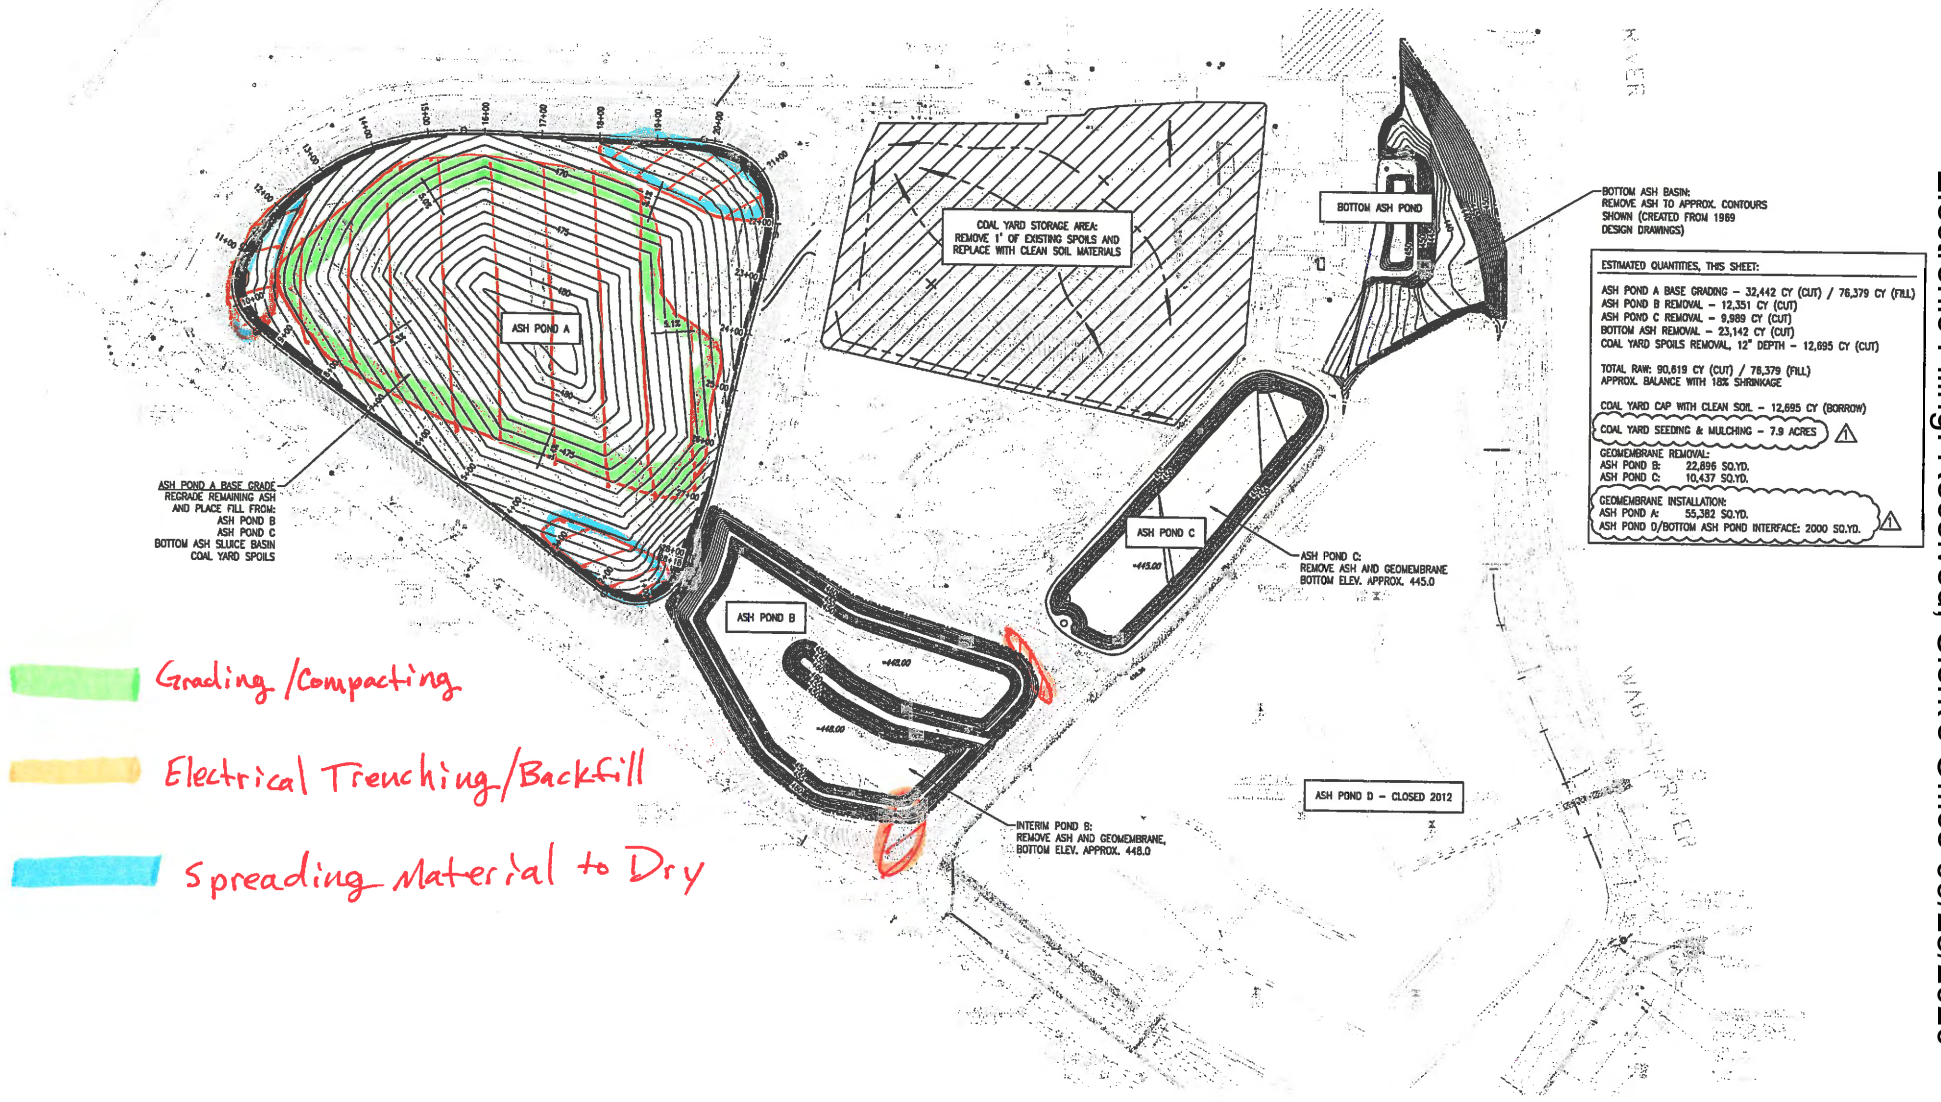
Installed power line on reinstalled power poles and in adjoining trenches.

WB Koester:

Equipment details: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 dump truck (John Deere 400D), 1 sheepsfoot roller (CA 251).

Graded and compacted Ash Pond A with two GPS bulldozers and one sheepsfoot roller.

Two excavators worked at Ash Pond B: loaded out material at the northeast corner of Ash Pond B with one dump truck in the early morning for 2-3 hours, set two power poles, and backfilled electrical trenches.



In the afternoon, two excavators worked at Ash Pond A spreading wet material from the corners to dry.

Other:

Progress meeting held at 0900. See meeting minutes for additional information.

Preliminary density testing was performed at the request of WB Koester.

Weekly Progress Meeting

Meeting Minutes

Date: 9-23-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , Ken Beckman, John Patterson, Tim Free

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Make sure to wash and scrape the parking lot on Friday.

Manpower

- Man hours
  - Start of Job (4-27-15) through 9-21-15
    - Total = 7547 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 5 operators, 2 laborer
  - 10 hrs days approx.

Review old minutes and action items

- Bob provided schedule of values and invoice to Mike.
- Mike talked to farmer and we are ok to borrow out of farm field. Seed and Lime at conclusion. Strip and save topsoil and replace. Mike to look into amending SWPPP plan. Bob to get LAMAC to look at providing plan?

Material Issues

- No issues discussed.

Quality Control Issues

- No issues discussed.

Schedule Compliance

- Liner roll off boxes and disposal on going.
- WBK is continuing to shape pond A subgrades and placing ash in Pond A.
- Ash is out of Pond B. Ash around power poles will be removed this week.
- Brandenberg removed hydrogen tank and concrete trench. Ash to be removed in these areas by the end of week.
- Illini Drilled Foundation install piezometers this week.
- National Lining Systems moved to October 5th to start liners. Liner to be delivered starting Monday September 21.
- Brandenberg Divers on site Sept 28th. Will need WBK to build retention levee in Bottom ash pond for them to pump into.
-

Cost and Budget Control

- Silt fence removal in Pond D to be by T&M and not Lump sum.

Next Meeting Scheduled: September 30, 2015 at 9:00 CST

Action Items

- Bob Fisher
  - See if LAMAC and work on SWPPP Plan in needed.
- Mike Wagstaff –
  - Look to make sure SWPPP can just be amended.
- Don Shaver
  - Take pictures during structure demolitions for records.

SUBJECT: Weekly Summary Report for September 28, 2015 to October 2, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 48 to 61^{O}F, and temperature highs ranged from 69 to 84^{O}F.

Construction Activities

Ash Pond B and the Bottom Ash Pond were graded. A levee was built in the Bottom Ash Pond for use by Brandenburg as a siltation basin.

Concrete structures in Ash Pond B and Ash Pond A were demolished and removed.

Ash Pond A was graded and compacted. The wet ash material in the corners and edges of Ash Pond A, especially the western corner, was dug out and spread to dry. Ponded water in the corners was pumped out of Ash Pond A and the wet material was spread and mixed to dry. Dry soil from the pond levees was spread over wet ash near the levees to increase stability.

The outfall structure at Ash Pond A was abandoned-in-place by encasing in concrete at both ends.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Case CX210C, 1 Caterpillar 308E), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller, 1 smooth drum roller (CS-433E), 1 skidsteer.

WB Koester had 11 employees working on site: 2 laborers, 1 mechanic, and 8 equipment operators.

Meetings

The weekly progress meeting was held on Wednesday, September 30, 2015. Refer to the meeting minutes provided by WB Koester for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Flowable fill was used to enclose both ends of the outfall structure at the southeast corner of Ash Pond A.

Testing/Sampling

Nuclear density tests were conducted at fifteen locations on Ash Pond A. See testing forms for additional information.

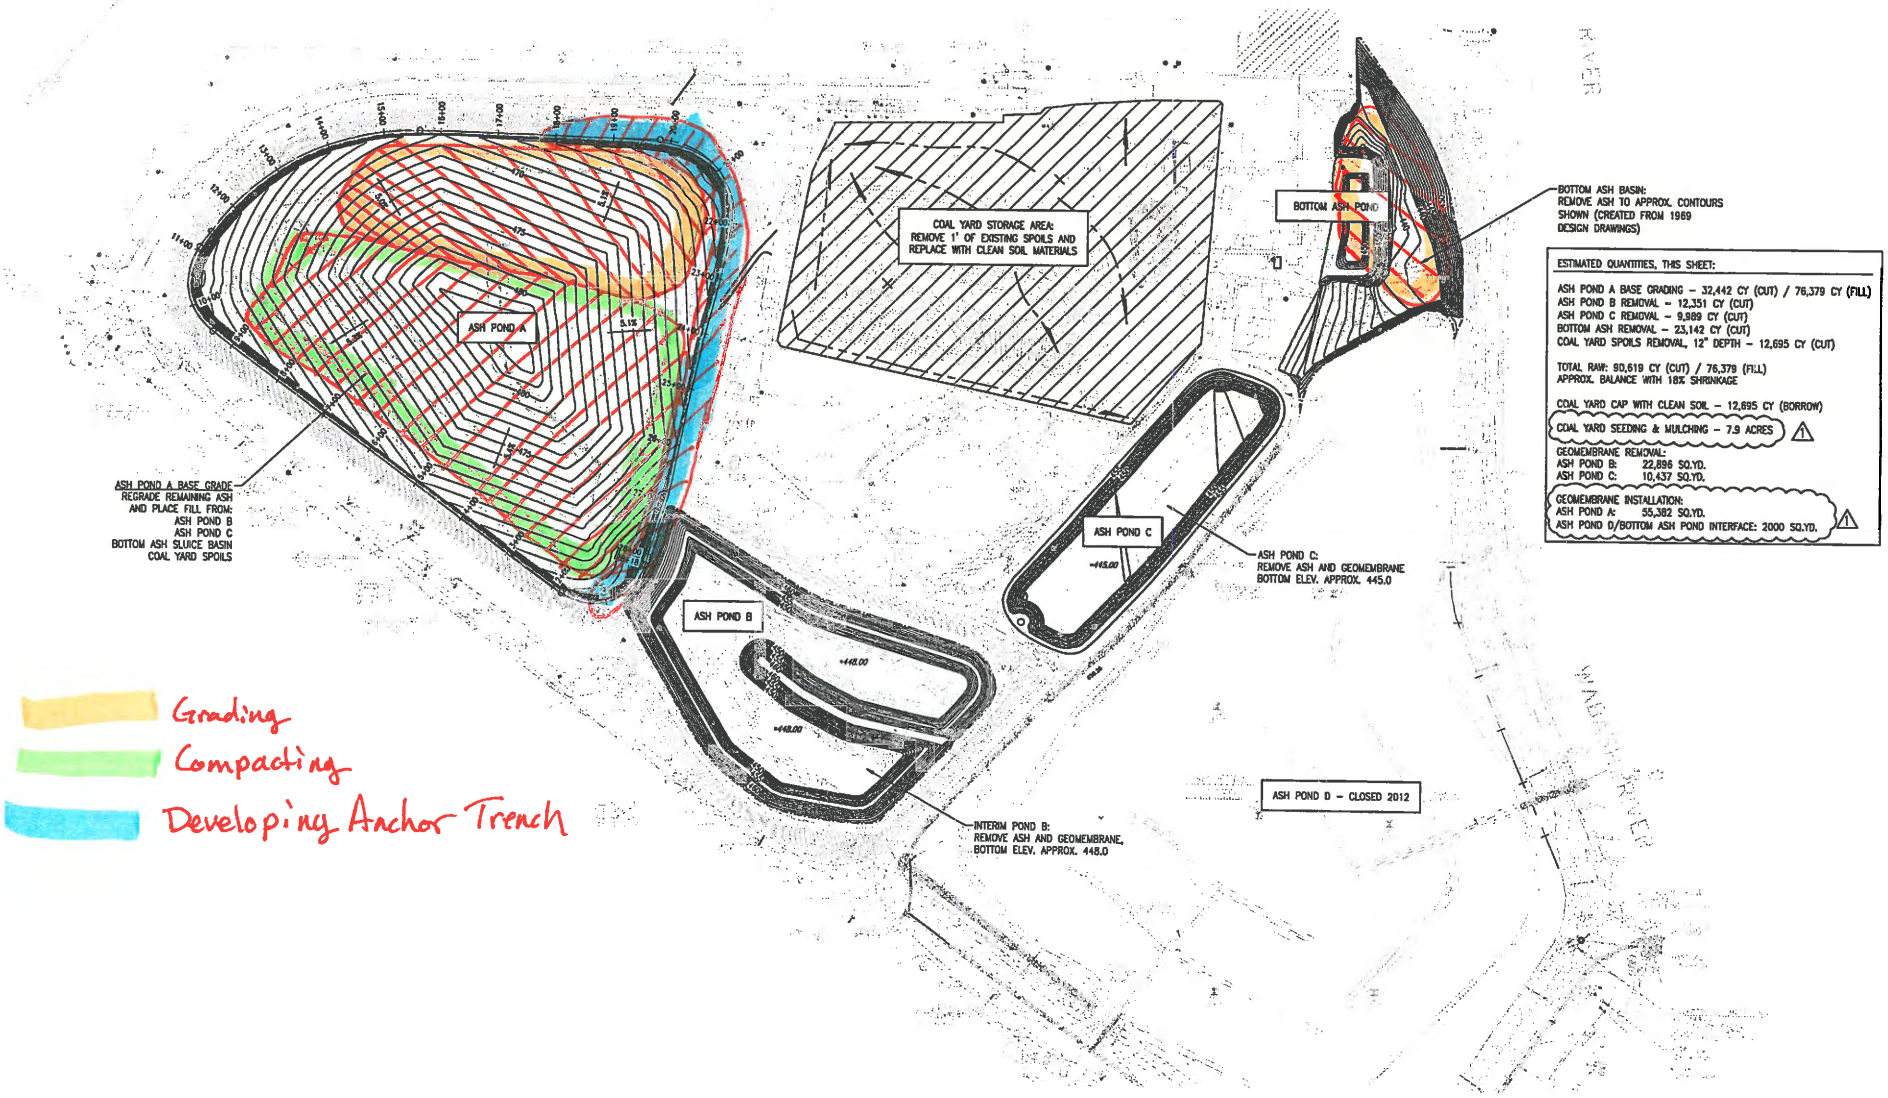
DAILY REPORT DATE: 9/28/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:



Equipment details: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 flat roller (CS-433E).

Graded and compacted Ash Pond A with one GPS bulldozer and one flat roller. Two excavators developed the anchor trench adjacent to the edges of Ash Pond A and brought the edges of the Ash Pond A to grade.

One non-GPS bulldozer and one GPS bulldozer graded the Bottom Ash Pond and began building a levee partway down its length for use by Brandenburg as a siltation basin.

The skidsteer cleaned the roads at 1430. The water truck sprayed the roads to cut down on dust throughout the day.

9/28/2015

ESTIMATED QUANTITIES, THIS SHEET:

ASH POND A BASE GRADING – 32,442 CY (CUT) / 76,379 CY (FILL)
ASH POND B REMOVAL – 12,351 CY (CUT)
ASH POND C REMOVAL – 9,989 CY (CUT)
BOTTOM ASH REMOVAL – 23,142 CY (CUT)
COAL YARD SPOILS REMOVAL, 12" DEPTH – 12,695 CY (CUT)

TOTAL RAW: 90,619 CY (CUT) / 76,379 (FILL)
APPROX. BALANCE WITH 18% SHRINKAGE

COAL YARD CAP WITH CLEAN SOIL – 12,695 CY (BORROW)

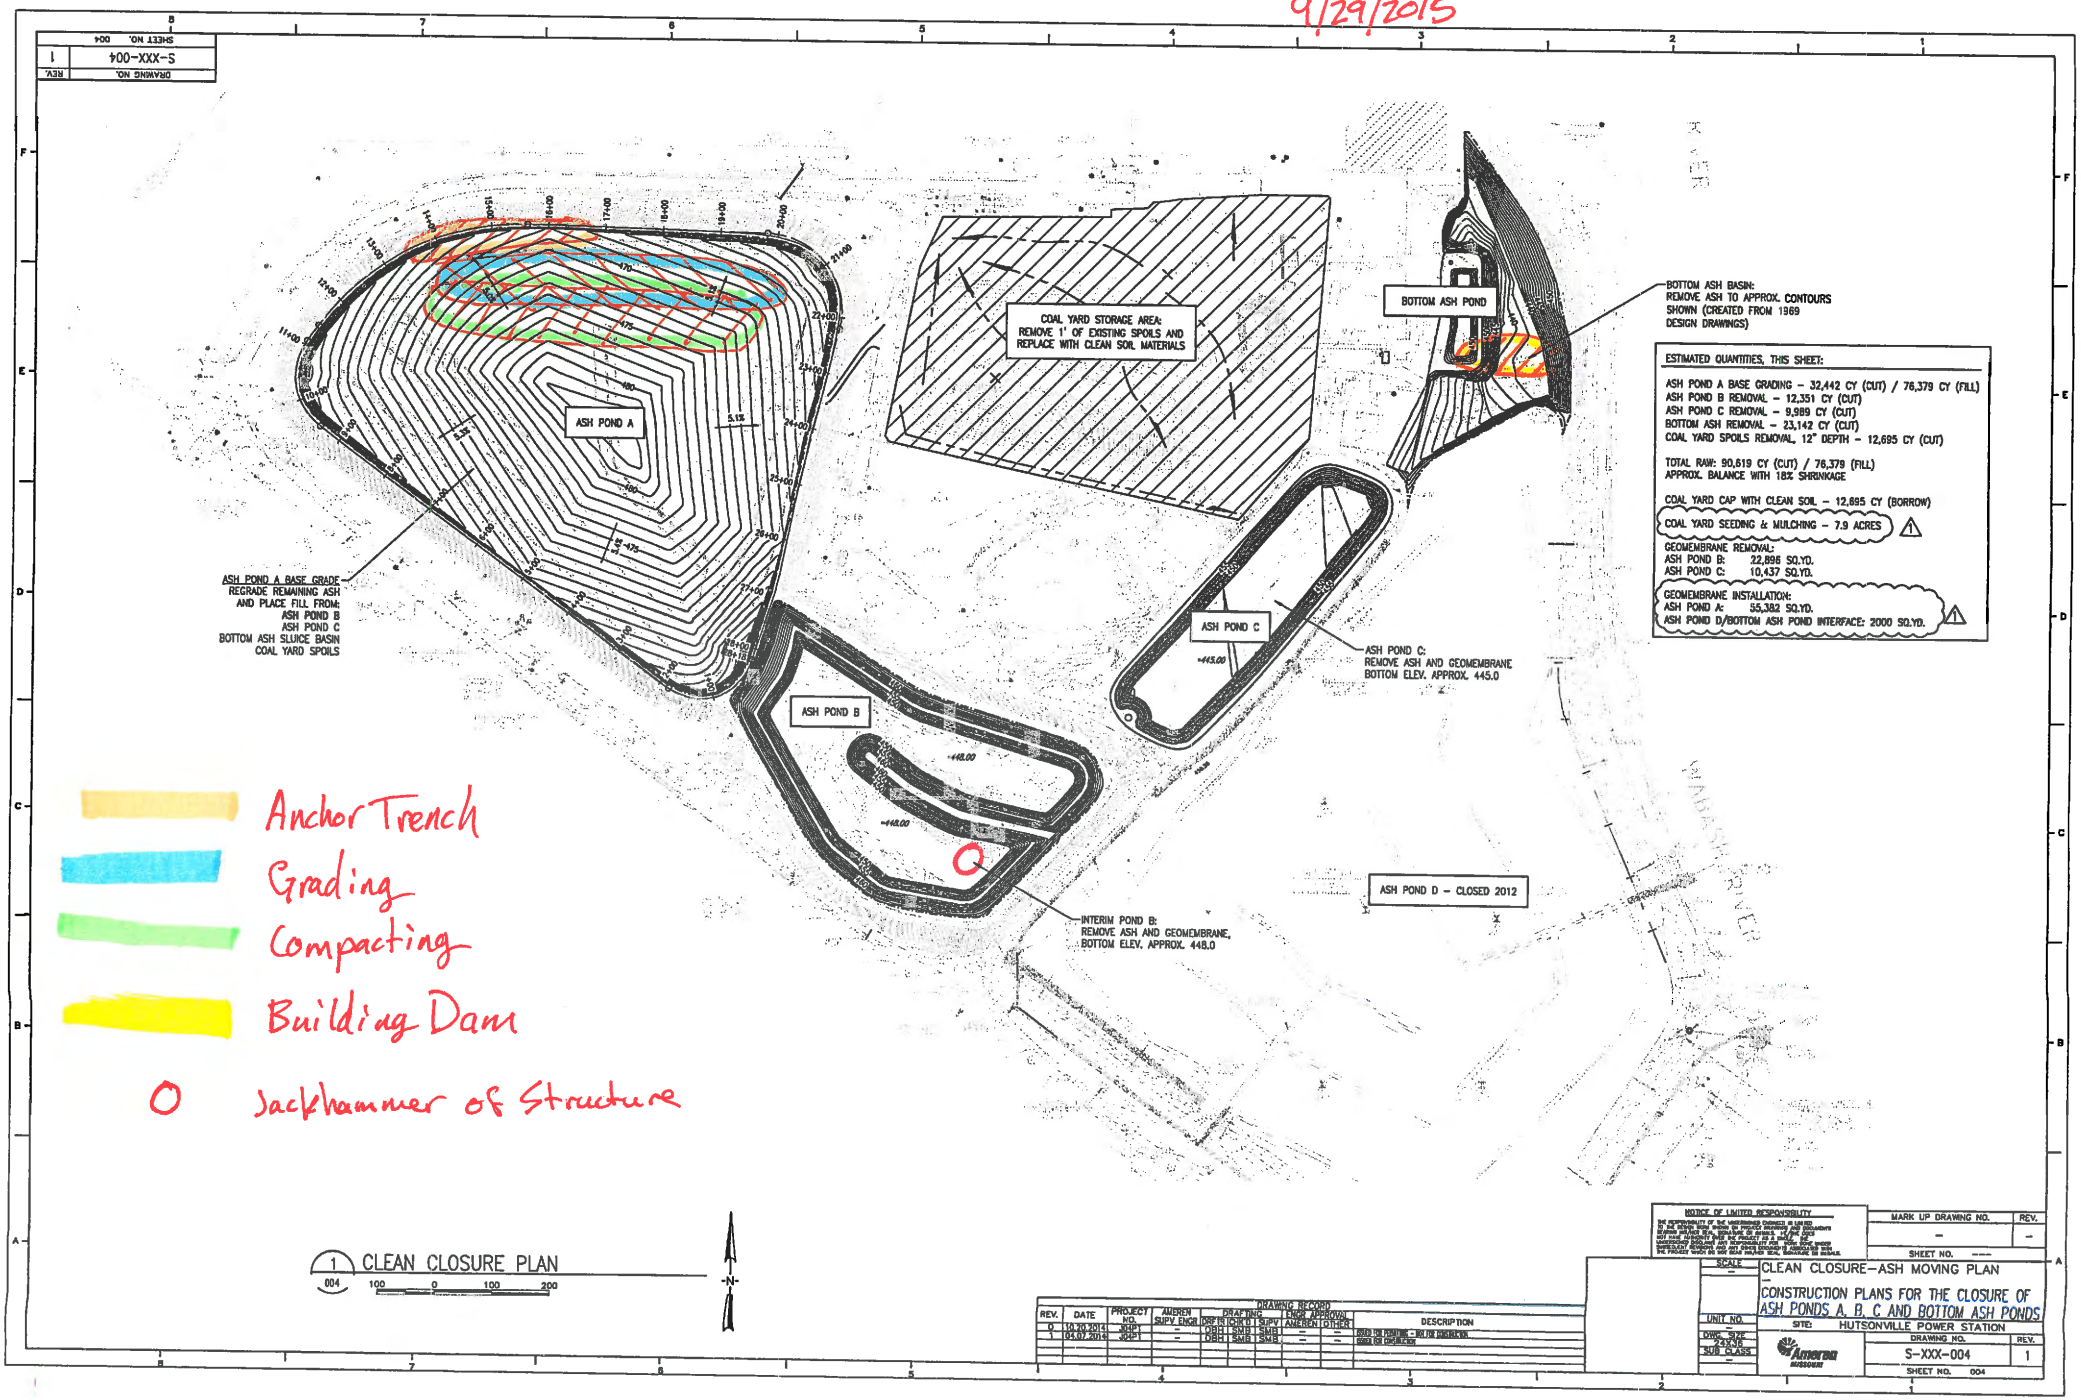
SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester: Rain day – Left site at 0930.

Equipment details: 3 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Case CX210C), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 flat roller (CS-433E).



Graded and compacted Ash Pond A with one GPS bulldozer and one flat roller. Two excavators developed the anchor trench adjacent to the edges of Ash Pond A and brought the edges of the Ash Pond A to grade.

One non-GPS bulldozer and one GPS bulldozer graded the Bottom Ash Pond and continued building a levee partway down its length for use by Brandenburg as a siltation basin.

One Case excavator with a jackhammer attachment was delivered to the site. The jackhammer was used to break up the large concrete structure remaining in Ash Pond B.

The skidsteer was used to clean the roads.

DAILY REPORT DATE: 9/30/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Equipment details: 3 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Case CX210C), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 flat roller (CS-433E).

One excavator developed the anchor trench adjacent to the edges of Ash Pond A in the morning.

Water was pumped from the western corner of Ash Pond A in the morning.

One non-GPS bulldozer finished building a levee partway down its length for use by Brandenburg as a siltation basin. This was completed around 0800.

One GPS bulldozer and one non-GPS bulldozer graded Ash Pond B.

One excavator with a jackhammer attachment was used to break up the large concrete structure remaining in Ash Pond B. One excavator was used to remove the structure.

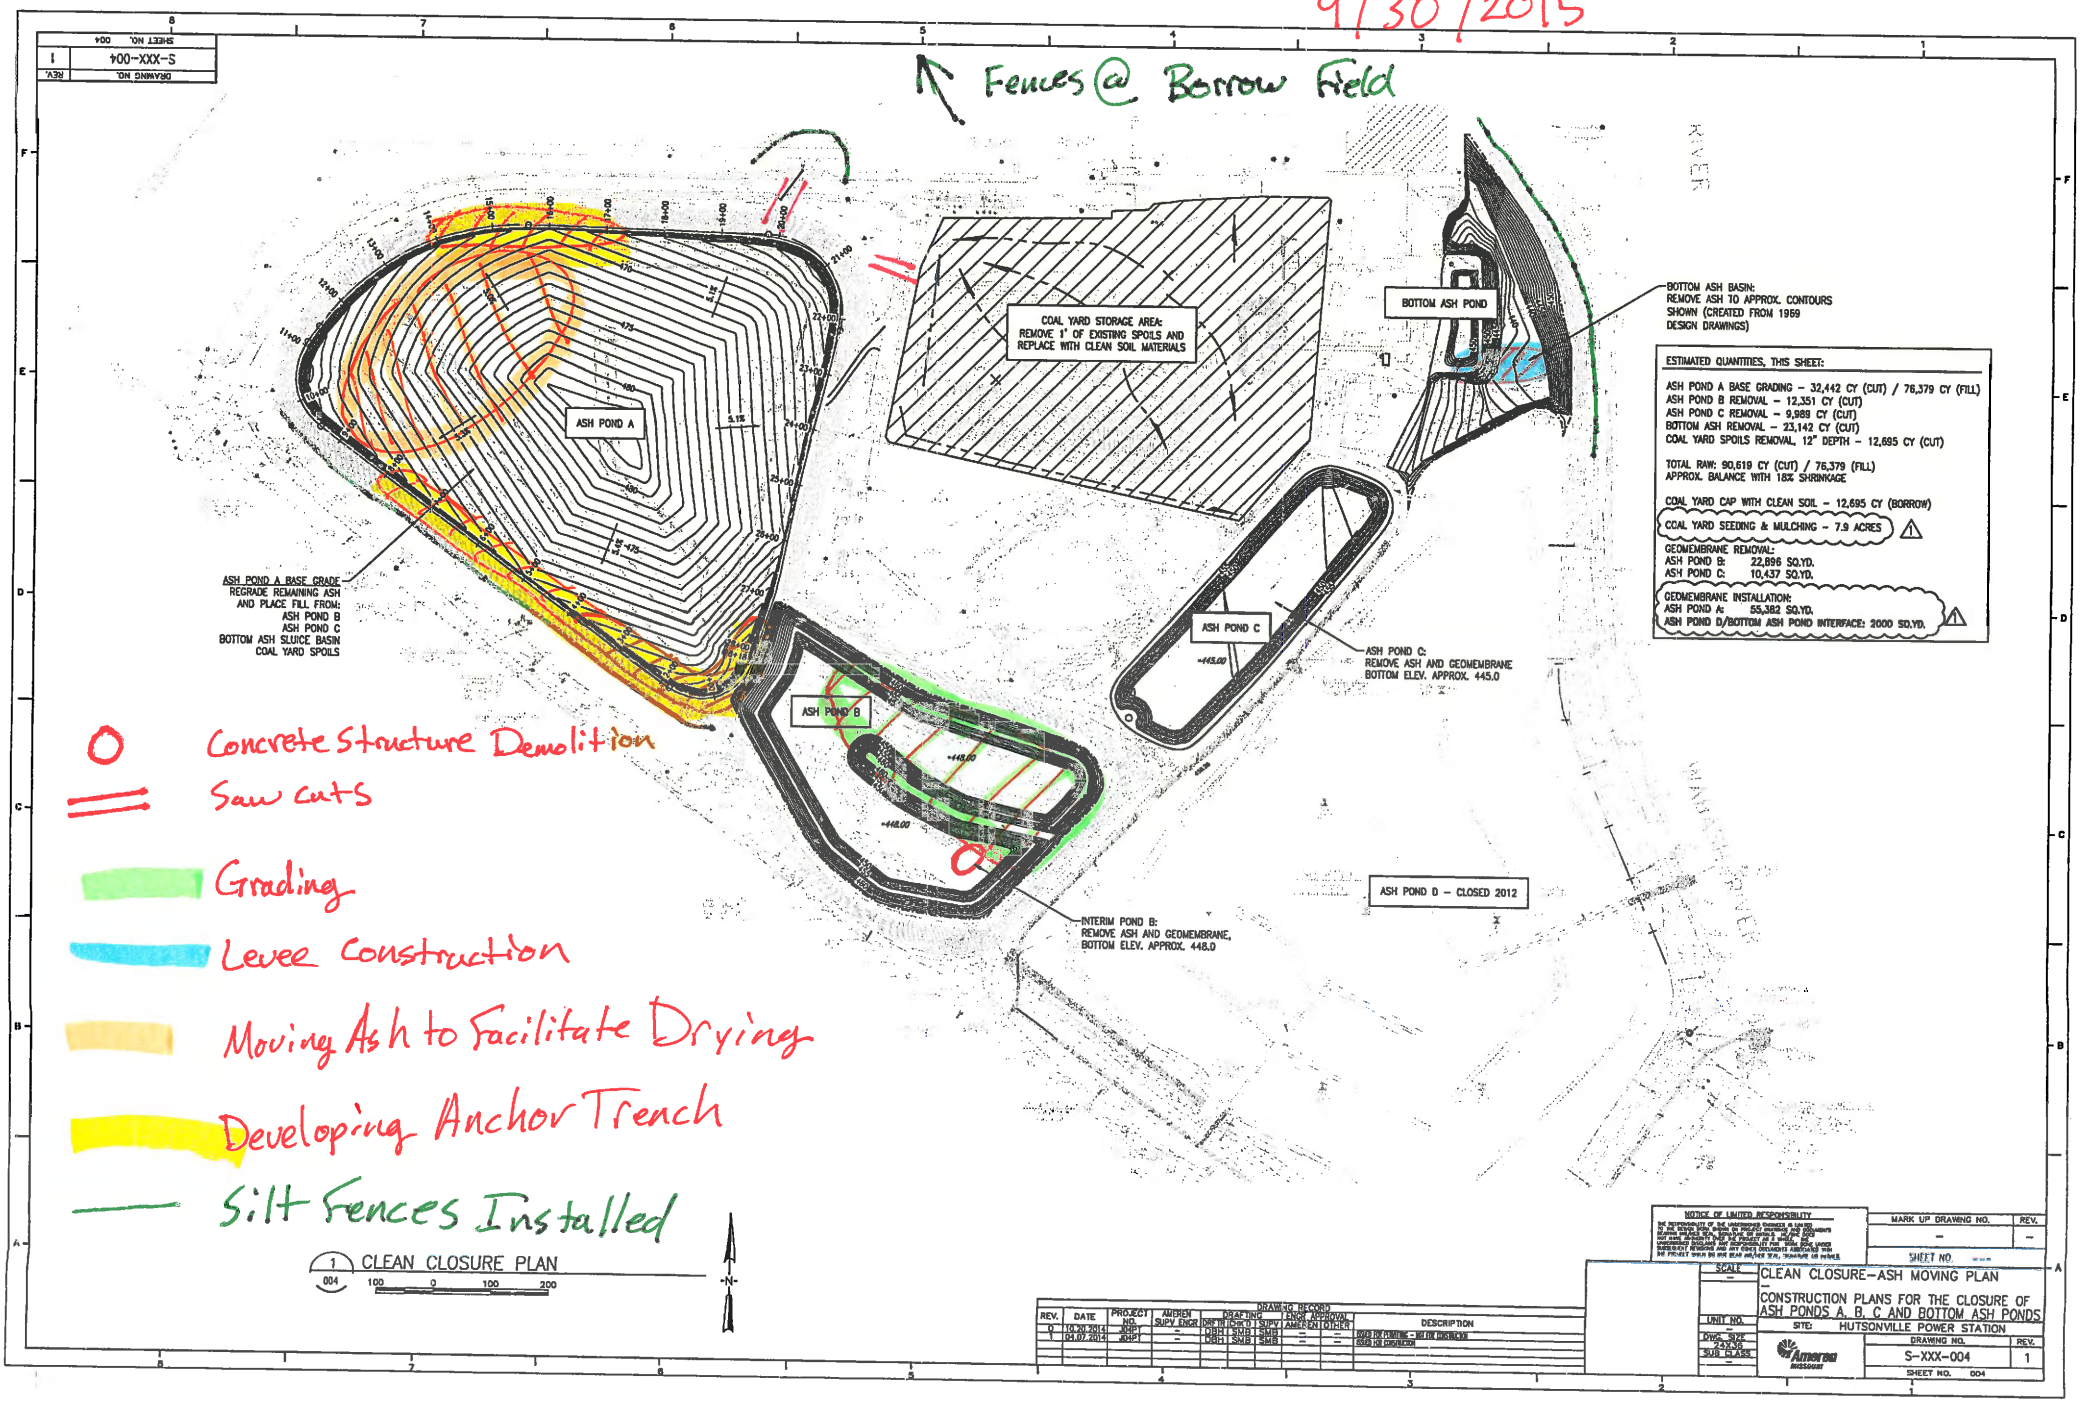
Two excavators (one with a jackhammer attachment) were used to break up and remove stabilized levee soil at the western corner of Ash Pond A to facilitate draining and drying of the ash.

Four sawcuts (at two locations) were made in the asphalt near the northern corner of Ash Pond A for future installation of HDPE culverts.

The skidsteer was used to clean the roads. The water truck sprayed the roads throughout the day.

Earth Images:

Silt fences were installed at the locations indicated on the attached work areas map.



Other:

The manlift used by the electricians was removed from site.

The weekly progress meeting was held at 0900. See the meeting minutes for additional details.

Weekly Progress Meeting

Meeting Minutes

Date: 9-30-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , Ken Beckman, John Patterson, Tim Free

WB Koester: Chris Atkinson, Bob Fisher, Greg Head, Mike Rexing

Geotechnology, Inc.: Jessie Hahn, Vince Epps, Anna Saindon

Topics:

Safety/Housekeeping

- No issues
- Chris cleaned roads sufficient last week.
- Make sure to wash and scrape the parking lot each Friday and as necessary.

Manpower

- Man hours
  - Start of Job (4-27-15) through 9-28-15
    - Total = 8042 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 6 operators, 2 laborer, 1 teamster
  - 10 hrs days approx.

Review old minutes and action items

- Mike Smallwood with Ameren completed and submitted SWPPP plan for farm field on Monday/Tuesday. LAMAC supplied drawing of erosion control features. Mike W. says it is fine to install silt fence and construction entrance while we wait for the 30 day review period to take place.

Material Issues

- No issues

Quality Control Issues

- No issues

Schedule Compliance

- Liner roll off boxes and disposal on going.
- WBK is continuing to shape pond A subgrades and placing ash in Pond A.
- No more ash from site is expected to be brought to pond A.
- National Lining Systems moved to October 12th to start liners, weather permitting. All liner has been delivered to site.
- Brandenberg Divers on site this week to begin pumping, waiting on a guard but they will try to dive today. WBK has built berm for the retention pond for them. Brandenberg installed piping. WBK to keep pump on site to pump water to pond b outlet. Silt in detention pond will remain in place at end.
- WBK met with Mike W. to discuss changes to design in Pond B, C and Bottom ash pond. Bob to send revised Auto Cad files to Mike to review (possibly with Hanson). Excess soil from Pond B and Bottom ash pond levee will be used to seal off Bottom ash pond base, and cover Pond C slopes and coal yard
- Goal is to try and get some seeding completed ASAP and cover the areas that require turf mat ASAP as well. Will have to discuss with Brandenberg to determine how much of coal yard they will use as a laydown area and we will not seed that area.
- 1" of rain at site on Tuesday. Pumping water out of Pond A to help dry it out. Many rills in previously smooth drum rolled areas that will have to be re-rolled.
- Pond A SW corner is still soft. Discussed lime addition. Anna says that the 1' clean separation layer (ie. ash not mixed with lime) would apply to the top HDPE as well as the existing HDPE. WB Koester to visit site after meeting and determine plan of action to treat the ash in SW corner. (Note: WB Koester has decided to undercut the soft areas in SW corner and spread them over Pond A to dry. Replace with a bridge lift of drier ash from pond A and test compaction. Will check on availability of lime as well as a back up plan.) Update all

on schedule for completion of Pond A (for testing and surveying) as soon as we see how the SW corner work is progressing.

- Chris saw cut the entrance road and access road where the new pipe installations will be. Will not remove until ready to install pipe. Possibly next week.
- Chris demolishing structures in Pond A and B today. Will plug structure and pipe in Pond A this week.
- Silt fence installation around Bottom ash pond berm outlet and farm field borrow area taking place today (Earth Images is subcontractor installing)

Cost and Budget Control

- None discussed.

Next Meeting Scheduled: October 7, 2015 at 9:00 CST

Action Items

- Bob Fisher
  - Send Mike W. AutoCads of Pond B, C and Bottom ash pond proposed re-design
  - Update all with schedule after SW corner work starts and progress and be projected.
- Mike Wagstaff – n/a
- Don Shaver
  - Take pictures during structure demolitions for records.
- Chris Atkinson – make sure roads are cleaned regularly

DATE: October 15, 2015

SUBJECT: Weekly Summary Report for October 5, 2015 to October 09, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 51 to 55^{O}F, and temperature highs ranged from 67 to 80^{O}F.

Construction Activities

Ash Pond A was shaped, graded, and compacted. Ponded water in the corners was pumped out of Ash Pond A. The edges of Ash Pond A were cleaned and shaped.

Excess soil was moved from Ash Pond B to the Coal Yard. Ash Pond B and the Coal Yard were graded.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), and 1 skidsteer.

WB Koester had 16 employees working on site: 7 laborers, 1 mechanic, and 8 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The weekly progress meeting was held on Wednesday, October 7, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Excess soil from Ash Pond B was placed in the Coal Yard.

Testing/Sampling

Moisture/density tests were conducted at sixty locations on Ash Pond A by Jessie Hahn of Geotechnology. Refer to testing forms for additional information.

Signature of CQA Officer

FROM THE GROUND UP

DAILY REPORT DATE: 10/05/2015

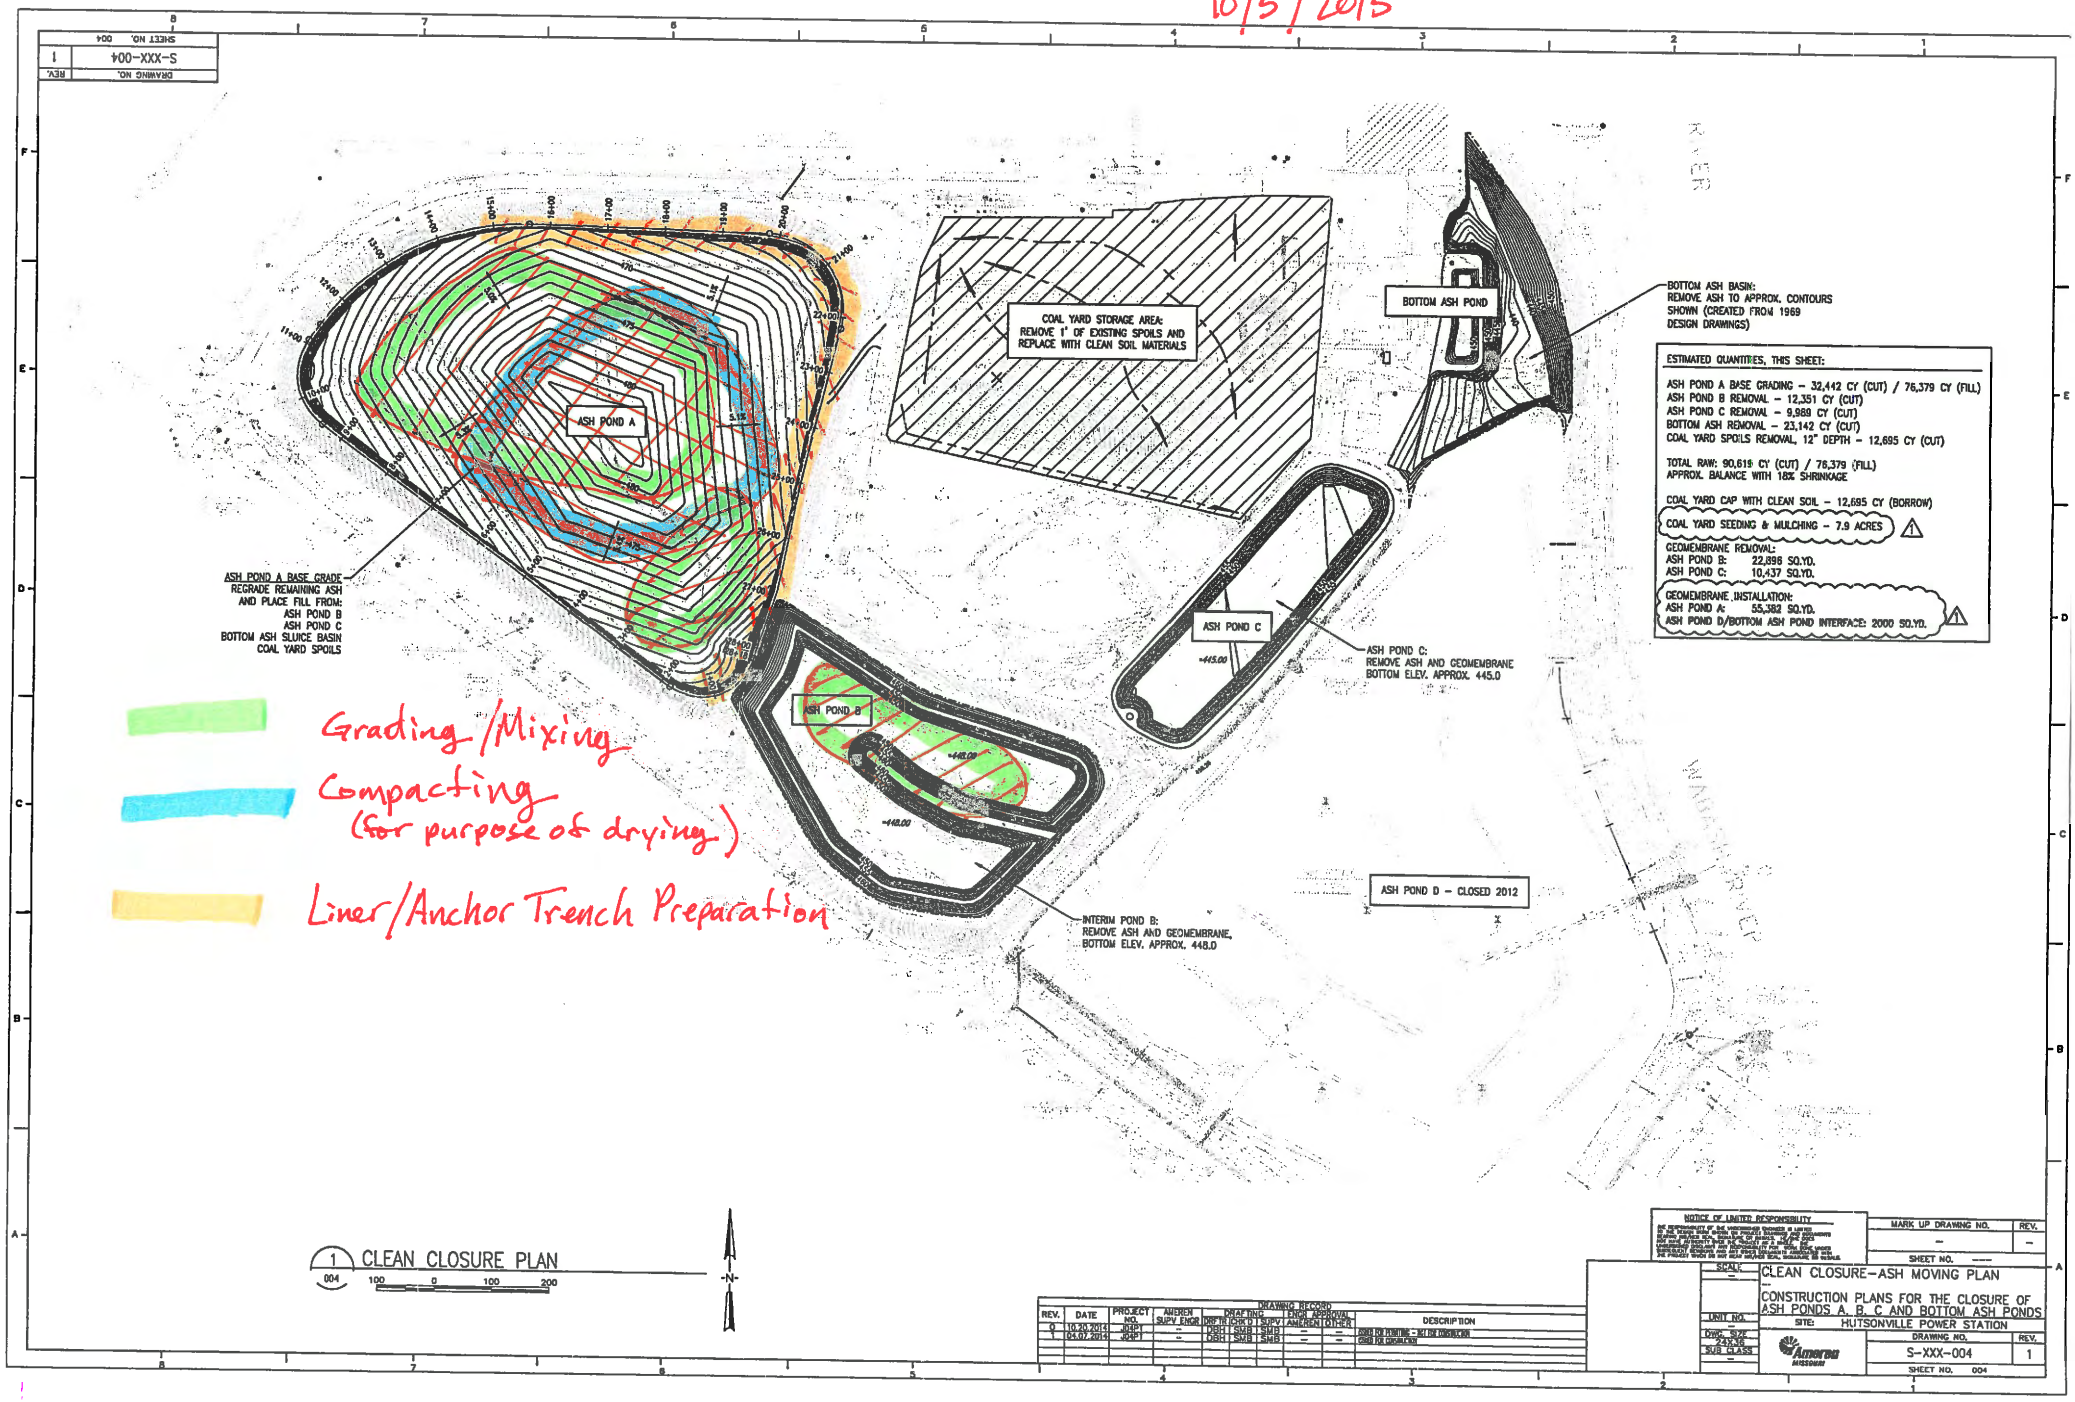
SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Equipment details: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Case CX210C, 1 Caterpillar 308E), 2 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 smooth roller (CS-433E), 1 haul truck (John Deer 400D), 1 skidsteer.



In the morning water was pumped from the western corner of Ash Pond A. Two excavators removed wet material and replaced it with loose, dry soil. A smooth drum roller compacted the placed soil.

Two bulldozers graded the wet ash on Ash Pond A. One sheepsfoot roller compacted ash on Ash Pond A in the afternoon. One GPS bulldozer graded Ash Pond B.

Three excavators exposed the HDPE liner and moved soil in preparation for the new HDPE liner and anchor trench at the Ash Pond A levees. Laborers repaired tears in the lower HDPE liner.

The skidsteer was used to clean the roads. The water truck sprayed the roads to keep the dust down.

Weekly Progress Meeting

Meeting Minutes

Date: 10-7-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , Ken Beckman, Tim Free

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Chris cleaned roads sufficient last week.
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.
- Chris to pick up loose liner pieces so they don't get blown away in high winds.
- Chris to move grease barrels closer to trailer so they don't get hit with equipment.

Manpower

- Man hours
  - Start of Job (4-27-15) through 10-5-15
    - Total = 8705 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 6 operators, 6 laborer, 1 teamster, 1 surveyor
  - 10 hrs days approx. (Daylight to dusk)

Review old minutes and action items

- Bob sent Mike W. Autocad files for the proposed designs in Ponds B, C and Bottom ash pond. He was fine with them. Would like a swale lined with turf mat in B coming out of detention area. In Pond C would like a rip rap

chute following the side slopes at the box culvert areas leading to the center swale. Turf line that swale also.

Material Issues

- No issues

Quality Control Issues

- Jessie testing compaction and today all 8 have passed.
- SE corner still leaching water so may need to undercut it like the SW corner.

Schedule Compliance

- Liner roll off boxes and disposal on going.
- Pond A should be shaped, graded and smooth rolled by end of day Thursday.
- Mike says he will try and schedule Massman to survey on Monday.
- Jessie to continue getting all compaction testing completed by end of day Friday.
- Bob to schedule liner guys for October 19th .
- Next week Chris will continue to grade Pond B and use excess soil to finish off Pond C and Coal Yard.
- Brandenberg Divers on site this week. Began pumping to Bottom Ash pond. May take 6-7 weeks for them to complete. WBK to continue pumping during that time. Silt in detention pond will remain in place at end.
- Mike says LAMAC may be used to do the final surveys at the site.
- North Farm field borrow area – 3700' of silt fence was installed last week.

Cost and Budget Control

- Bob to submit invoice which can include the cost for the stored HDPE liner (need to submit copy of National Lining Systems invoice as well).

Next Meeting Scheduled: October 14, 2015 at 9:00 CST

Action Items

- Bob Fisher
  - Bob to submit Invoice.
  - Schedule liner sub to start Oct 19th.
- Mike Wagstaff – Schedule Massman to survey on Monday Oct 12th.
- Chris Atkinson –
  - make sure roads are cleaned regularly
  - move grease barrels
  - gather liner pieces and put in dumpster.
  - Finish Pond A grading and compaction so Jessie can complete compaction testing.
- Jessie Hahn – Continue compaction testing, complete by Friday if possible.

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 34 to 51^{O}F, and temperature highs ranged from 64 to 80^{O}F.

Construction Activities

The edges of Ash Pond A were cleaned and shaped. Ash Pond A was smooth-drum rolled. A proof roll was conducted on Ash Pond A on October 15-16. On Monday, October 12, Ash Pond A was surveyed by Massmann Surveying.

Excess material was moved from Ash Pond C to the Coal Yard and the plant entrance field. Excess material was moved from Ash Pond B to the levees of Ash Pond C to form a two foot soil cap. Ash Pond B, Ash Pond C, and the Coal Yard were graded.

On October 15-16, the outfall adjacent to the Bottom Ash Pond at the Wabash River was installed.

On October 14-16, Skinner well drillers were on site to install Monitoring Wells MW-2D, MW-22S, and MW-22D and abandon Monitoring Well MW-1.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 3 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), and 1 skidsteer.

Electronic Filing: Received, Clerk's Office 09/28/2020

WB Koester had 11 employees working on site: 3 laborers, 1 mechanic, and 7 equipment operators.

Massmann Surveying had 2 surveyors working on site on October 12.

Skinner had 1 well driller on site on October 14-15 and 2 driller's helpers on site October 14-16.

Meetings

The weekly progress meeting was held on Wednesday, October 14, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Well installation materials, including 2" PVC well casing and screen, sand, bentonite, hole plug, well covers, and concrete were used for the installation of three monitoring wells.

Rip-rap, gravel bedding, and filter fabric were used for the installation of the outfall adjacent to the Bottom Ash Pond at the Wabash River.

Testing/Sampling

A survey of Ash Pond A ash subgrade was performed by Massmann Surveying on Monday, October 12.

GEOTECHNOLOGY INC
FROM THE GROUND UP

DAILY REPORT DATE: 10/12/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

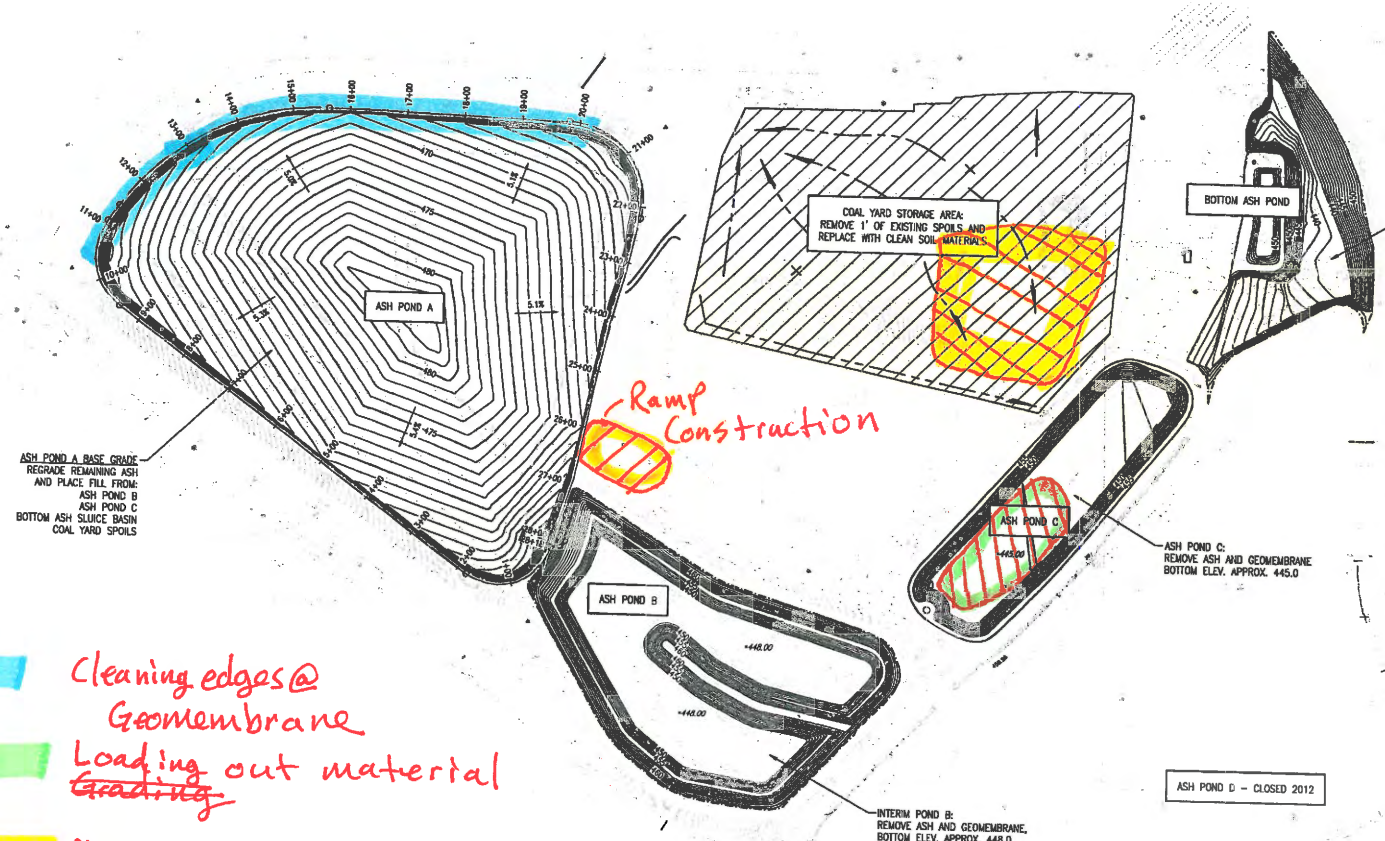
Ongoing demolition of buildings.

WB Koester:

Equipment details: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 2 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 smooth roller (CS-433E), 1 sheepsfoot roller (CA 251), 1 skidsteer, 2 haul trucks (John Deere 400D).

One smooth drum roller compacted Ash Pond A.

Laborers repaired tears in the lower HDPE liner and dressed the slopes near the exposed liner. The skidsteer was used to clean the lower geomembrane.



One GPS bulldozer graded Ash Pond C. One excavator loaded out excess material from Ash Pond C. In the morning, two haul trucks moved the excess material to the Coal Yard, one GPS bulldozer graded the Coal Yard, and one sheepsfoot roller compacted the Coal Yard. In the afternoon, one haul truck moved the excess material to build the new ramp onto Ash Pond A, one GPS bulldozer graded the ramp, and one sheepsfoot roller compacted the ramp.

The water truck sprayed the roads to keep the dust down. The skidsteer cleaned the roads.

Massman Surveying:

Two surveyors arrived on site at 1200 and surveyed Ash Pond A.

Weekly Progress Meeting

Meeting Minutes

Date: 10-14-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , Ken Beckman (phone), Tim Free

WB Koester: Chris Atkinson

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- Artic truck ran into de-energized power line at the stockpile area outside the gate while delivering cover soil. Chris wrote report and discussed the issue with crew. Reiterate that you don't move trucks until beds are completely back in place. Driver was off work for 3 days as discipline.
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.
- Continue to pick up loose liner pieces as encountered but most have been picked up by now.

Manpower

- Man hours
  - Start of Job (4-27-15) through 10-12-15
    - Total = 9345 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 4 operators, 6 laborer, 1 teamster
  - 8 hrs days approx.

Review old minutes and action items

- Bob submitted invoice
- Mike scheduled Massman to survey this week,
- Jessie completed compaction testing

- Anna to review data in anticipation that liner company will start October 19th.

Material Issues

- No issues

Quality Control Issues

- No issues

Schedule Compliance

- Liner roll off boxes and disposal on going.
- Massman completed with survey, Jessie completed with compaction testing. Anna to review data. Chris will proof roll Pond A as well this week.
- Liner guys scheduled for October 19th .
- Chris will continue to grade Pond B and C and use excess soil to finish off Pond C slopes, Pond B slopes and Coal Yard.
- Brandenberg may take 6-7 weeks for them to complete. WBK to continue pumping during that time. Silt in detention pond will remain in place at end.
    - Discussed installing the sampling outlet point through the berm to the river and then divert the Brandenberg water through the outlet.
- Chris needs to relocate the temporary fence at the bottom ash pond to allow for the outlet construction and levee removal.
- Looking to seed Coal yard, Pond C, Pond B and stockpile area outside fence as soon as they are covered.
- May start to demo silt fence at Pond D this week.
- May demo concrete pump structure at Pond C this week. Will demo as much as we can and then grout rest with flowable fill.

Cost and Budget Control

- n/a

Next Meeting Scheduled: October 21, 2015 at 9:00 CST

Action Items - n/a

GEOTECHNOLOGY INC
FROM THE GROUND UP

DAILY REPORT DATE: 10/15/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

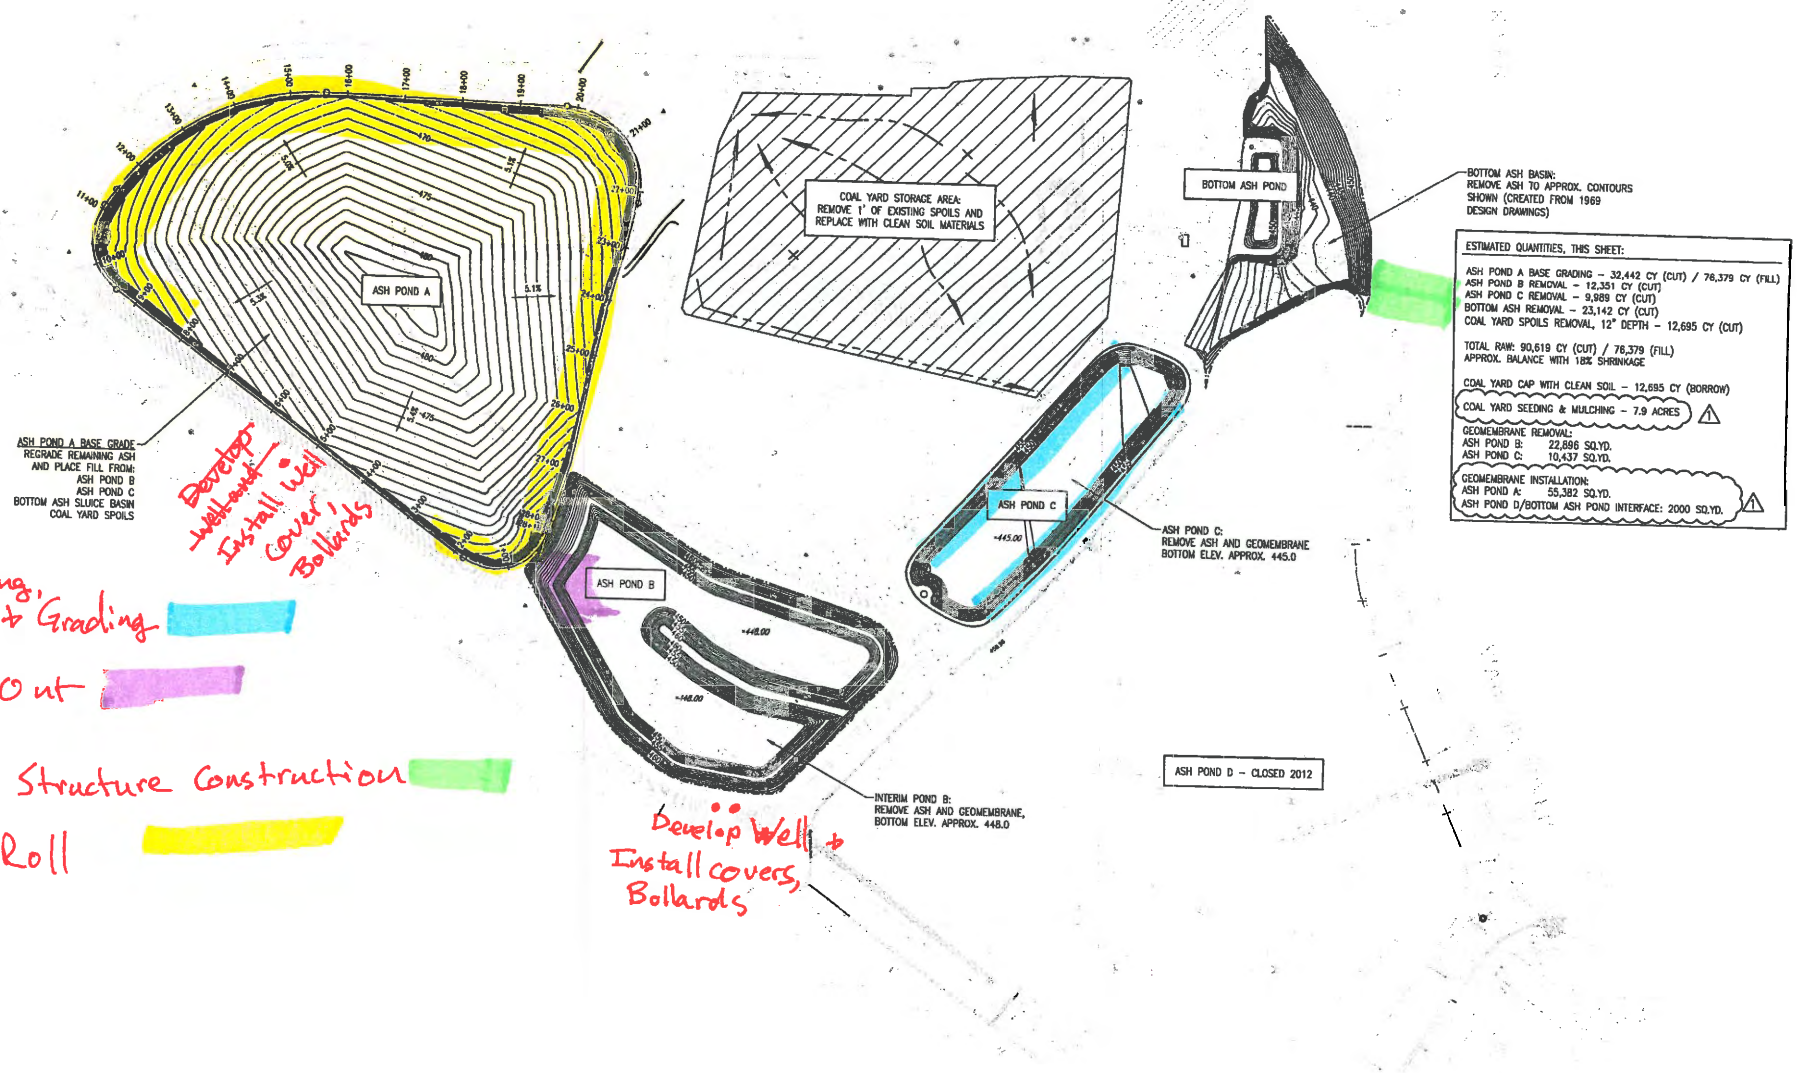
Ongoing demolition of buildings.

WB Koester:

Equipment details: 2 excavators (1 Komatsu PC 350 LC, 1 Caterpillar 320B), 1 bulldozer (Caterpillar D6N LGP with GPS), 1 sheepsfoot roller (CA 251), 1 smooth drum roller (CS-433E), 1 skidsteer, 1 haul truck (John Deere 400D).

One excavator loaded out excess material from Ash Pond B. Two haul trucks moved excess material to the levees of Ash Pond C. One GPS bulldozer graded Ash Pond C. One sheepsfoot roller compacted the Ash Pond C levees.

One excavator cleared trees and excavated the Bottom Ash Pond outfall location. A power line was uncovered (dug by hand once tape was revealed) at a higher elevation than expected, which would place it in the rip-rap of the final outfall. WB Koester dug out 50 feet from the exposed location in either direction in order to allow the line to sag to a lower elevation.



A proof roll of the wet parts of Ash Pond A was performed with the smooth drum roller.

The water truck sprayed the roads to keep the dust down. The skidsteer cleaned the roads.

Skinner:

Developed two wells, abandoned one well, and installed covers and bollards at three wells. Locations are indicated on attached location drawing.

DATE: October 29, 2015

SUBJECT: Weekly Summary Report for October 19, 2015 to October 23, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

NOTE: A Geotechnology representative was not present on site on Monday, October 19, 2015.

Weather

The weather was generally partly cloudy. Temperature (^{O}F) lows ranged from 32 to 54^{O}F, and temperature highs ranged from 70 to 83^{O}F.

Construction Activities

On Monday, October 19, Ash Pond A was surveyed by Massman Surveying due to a loss of data from their previous survey.

Ash Pond B, Ash Pond C, and the Coal Yard were graded. A perforated pipe was installed with gravel in the Bottom Ash Pond to facilitate draining of the anchor trench at the east levee. Excess cementitious soil material was moved from the levees of Ash Pond A to the Bottom Ash Pond as backfill and graded.

Reinforced concrete pipe was installed at the new outfall location at Ash Pond B. Corrugated plastic culvert was installed under the road near the north corner of Ash Pond A.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E, 1 Hyundai 290), 3 dump trucks (John Deere 400D), 3 bulldozers

Electronic Filing: Received, Clerk's Office 09/28/2020

(Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), 1 skidsteer.

WB Koester had 8 employees working on site: 2 laborers, 1 mechanic, and 5 equipment operators.

Massman Surveying had 2 surveyors on site on October 19.

Meetings

The weekly progress meeting was held on Wednesday, October 21, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Gravel bedding, reinforced concrete pipe, and corrugated plastic culvert were installed on the site.

Testing/Sampling

Testing and sampling activities did not occur during the referenced time period.

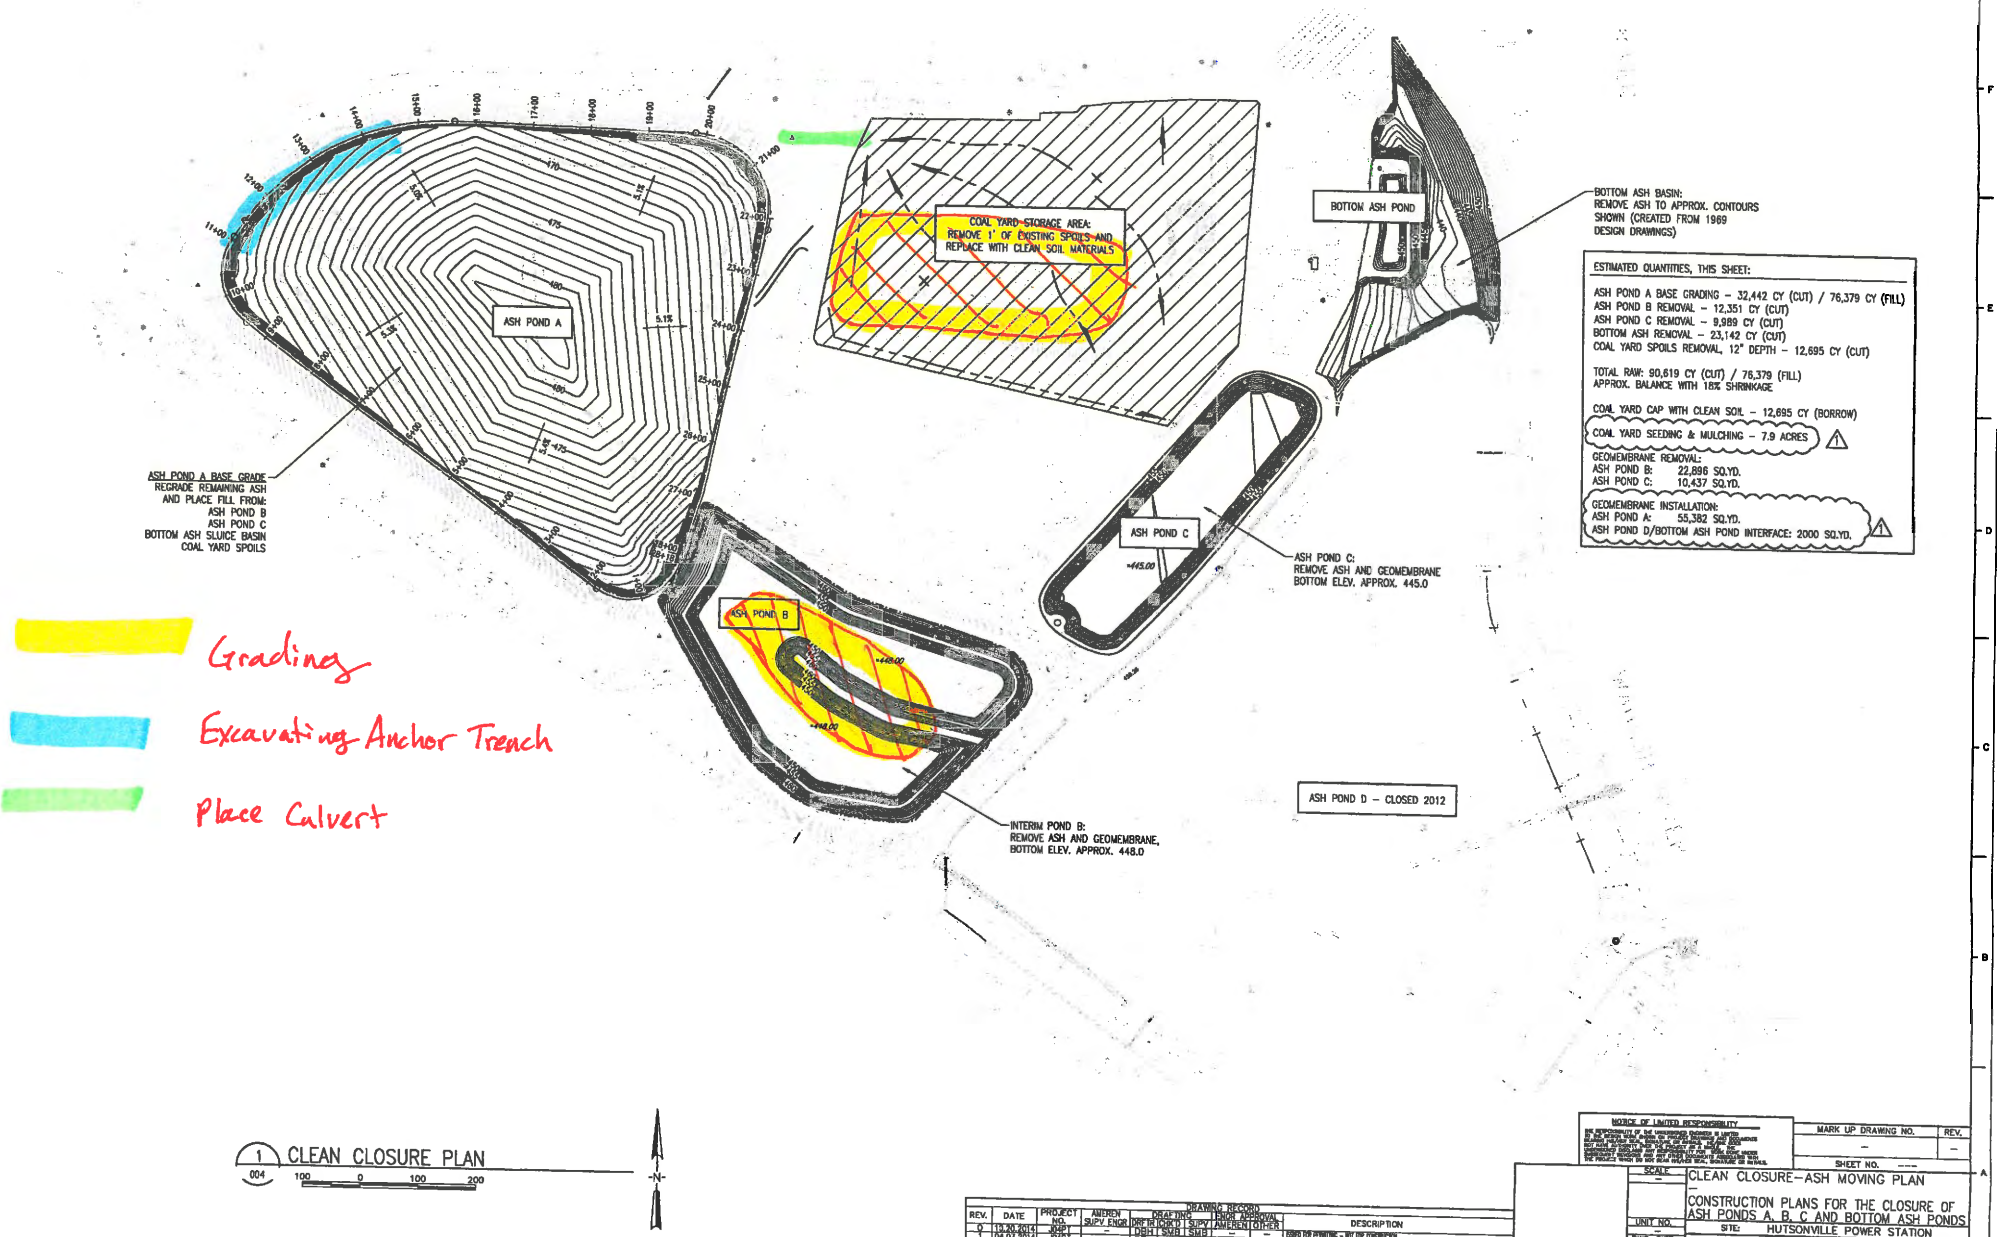
Equipment details: 2 excavators (1 Komatsu PC 350 LC, 1 Caterpillar 320B), 1 bulldozer (Caterpillar D6N LGP with GPS), 1 skidsteer, 1 haul truck (John Deere 400D).

Two bulldozers graded Ash Pond B and the Coal Yard.



One excavator began excavating the anchor trench around Ash Pond A.

Laborers pumped ponded water out from location adjacent to the liner at Ash Pond A.

One excavator and one haul truck were used to place a plastic corrugated culvert under the road at the location indicated on the attached location drawing.

The water truck sprayed the roads keep the dust down. The skidsteer cleaned the roads.

Weekly Progress Meeting

Meeting Minutes

Date: 10-21-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , John Patterson (phone), Tim Free

WB Koester: Chris Atkinson

Geotechnology, Inc.: Jessie Hahn, Anna Saindon

Topics:

Safety/Housekeeping

- No issues
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.
- Continue to pick up loose liner pieces as encountered but most have been picked up by now.

Manpower

- Man hours
  - Start of Job (4-27-15) through 10-19-15
    - Total = 9807 hrs.
- Next week expected manpower
  - WBK = 1 superintendent, 1 mechanic, 4 operators, 6 laborer, 1 teamster
  - 8 hrs days approx.

Review old minutes and action items

- Waiting on liner company to complete project in North Carolina and then they will mobilize to Hutsonville.

Material Issues

- No issues

Quality Control Issues

- No issues

Electronic Filing: Received, Clerk's Office 09/28/2020

Schedule Compliance

- Liner roll off boxes and disposal on going.
- Liner guys scheduled for week of October 26th .
- Chris finished grading Pond C, Coal Yard and most of Pond B.
- Chris installed HDPE pipe across access road
- Chris installed RCP pipe outlet in Pond B.
- Chris installed rip rap at box culverts in Pond C.
- Chris demolished structure at Pond C and filled with flowable fill.
- Brandenberg may take 6-7 weeks for them to complete.
    - Installed the sampling outlet point through the berm to the river so we can divert the Brandenberg water through the outlet.
- Chris relocated the temporary fence at the bottom ash pond to allow for the outlet construction and levee removal.
- Looking to seed Coal yard, Pond C, Pond B and stockpile area outside fence week of October 26.
- Completed demo of silt fence at Pond D.

Cost and Budget Control

- n/a

Next Meeting Scheduled: October 28, 2015 at 9:00 CST

Action Items - n/a

DATE: November 5, 2015

SUBJECT: Weekly Summary Report for October 26, 2015 to October 31, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 36 to 50^{O}F, and temperature highs ranged from 54 to 68^{O}F. No work was performed Tuesday, October 27, 2015 due to rain.

Construction Activities

Reinforced concrete pipe was installed under the main access road near the north corner of Ash Pond A and an associated ditch was excavated.

Excess material from Ash Pond B was placed at the former stockpile outside the gate. Ash Pond B and the former stockpile outside the gate were graded. Excess cementitious soil material was moved from the levees of Ash Pond A to the Bottom Ash Pond as backfill, then was graded and compacted.

After the rain on October 27, 2015 temporary drainage ditches were excavated at the Ash Pond A levees to promote drainage in preparation for HDPE geomembrane placement.

National Lining Systems (NLS) filled sand bags on October 28 and 29. NLS placed, seamed, and tested the 40 mil HDPE geomembrane on October 30 and 31, 2015.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E, 1 Hyundai 290), 3 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), and 1 skidsteer.

WB Koester had 8 employees working on site on October 26 and 28-30, 2015: 2 laborers, 1 mechanic, and 5 equipment operators. WB Koester had 5 employees working on site on October 31, 2015: 2 laborers and 3 equipment operators.

NLS had 10 employees working on site on October 28-31, 2015.

Meetings

The weekly progress meeting was held on Wednesday, October 28, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Gravel bedding, reinforced concrete pipe, and 40 mil HDPE geomembrane were installed on the site.

Testing/Sampling

Non-destructive air testing of HDPE geomembrane seams was performed on October 31, 2015. Testing of trial seams for the HDPE geomembrane was performed on October 30 and 31, 2015. Refer to the geomembrane logs for additional information.

Weekly Progress Meeting

Meeting Minutes

Date: 10-28-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , John Patterson (phone), Tim Free, Ken Beckman (phone)

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.

Manpower

- Man hours
  - Start of Job (4-27-15) through 10-26-15
    - Total = 10,075 hrs.
- Next week expected manpower
  - WBK = 8 total this week, 12 total next week
  - 5-8 hrs days approx. except Chris and operator will be on site whenever the Liner crew is working.
  - Liner crew (National Lining Systems) is on site and weather permitting will begin liner deployment this week. They have 10 employees and will likely work 6 – 5, and may work Saturdays and Sundays, weather permitting.
  - If Liner crew is working Sunday, Chris is to tell Don by Noon on Thursday.

Review old minutes and action items

- LAMAC has not been on site yet due to weather to locate the property boundaries of the borrow field.
- Archeological study has not been performed on field yet either.

Electronic Filing: Received, Clerk's Office 09/28/2020

Material Issues

- No issues

Quality Control Issues

- Steve with Geotechnology, Inc will be on site today to be QC for the liner install.

Schedule Compliance

- Natinal Lining Systems on site today filling sand bags. Will evaluate with Geotechnology to see if Pond A or the Pond D tie in location is stable/dry enough to begin installation this week.
- Likely will take 1 week after obtaining the liner destructive test samples to get results.
- Chris has about 1,000 CY of material to remove from Pond B to complete.
- Looking to seed Coal yard, Pond C, Pond B and stockpile area outside fence October 30 if it is dry enough.
- Existing Pond B outfall is still being utilized. Pump from BA pond to Pond B outfall. Once the BA Pond Levee is breached and turned into an outfall the pumping will stop and Pond B outfall will be plugged and abandoned. Bob to submit plugging procedure.
- New Pond B outlet pipe has 8" of soil cover, Mike would like it shaped up and additional vegetative soil cover placed. Can also use geotextile with Rip Rap.
- Brandenberg may take 6-7 weeks for them to complete.

Cost and Budget Control

- Bob to submit request for EWO to place erosion control blanket on slopes of Pond B and C.
- Mike will send Bob's Excel file on the EWO for Excess Ash and additional off site borrow needs to Don and Tim for review.
- August invoice should be paid this week. September invoice has been submitted and should be paid in a couple of weeks.

Next Meeting Scheduled: November 4, 2015 at 9:00 CST

Action Items -

- Bob to submit request for EWO for Erosion Control Blanket
- Bob to submit procedure for plugging pipe at Pond B outfall.
- Mike will send Bob's Excel file on the EWO for Excess Ash and additional off site borrow needs to Don and Tim for review.
- Chris to check on National Lining's operator's qualifications. They are deploying with a skid steer.

DAILY REPORT DATE: 10/29/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

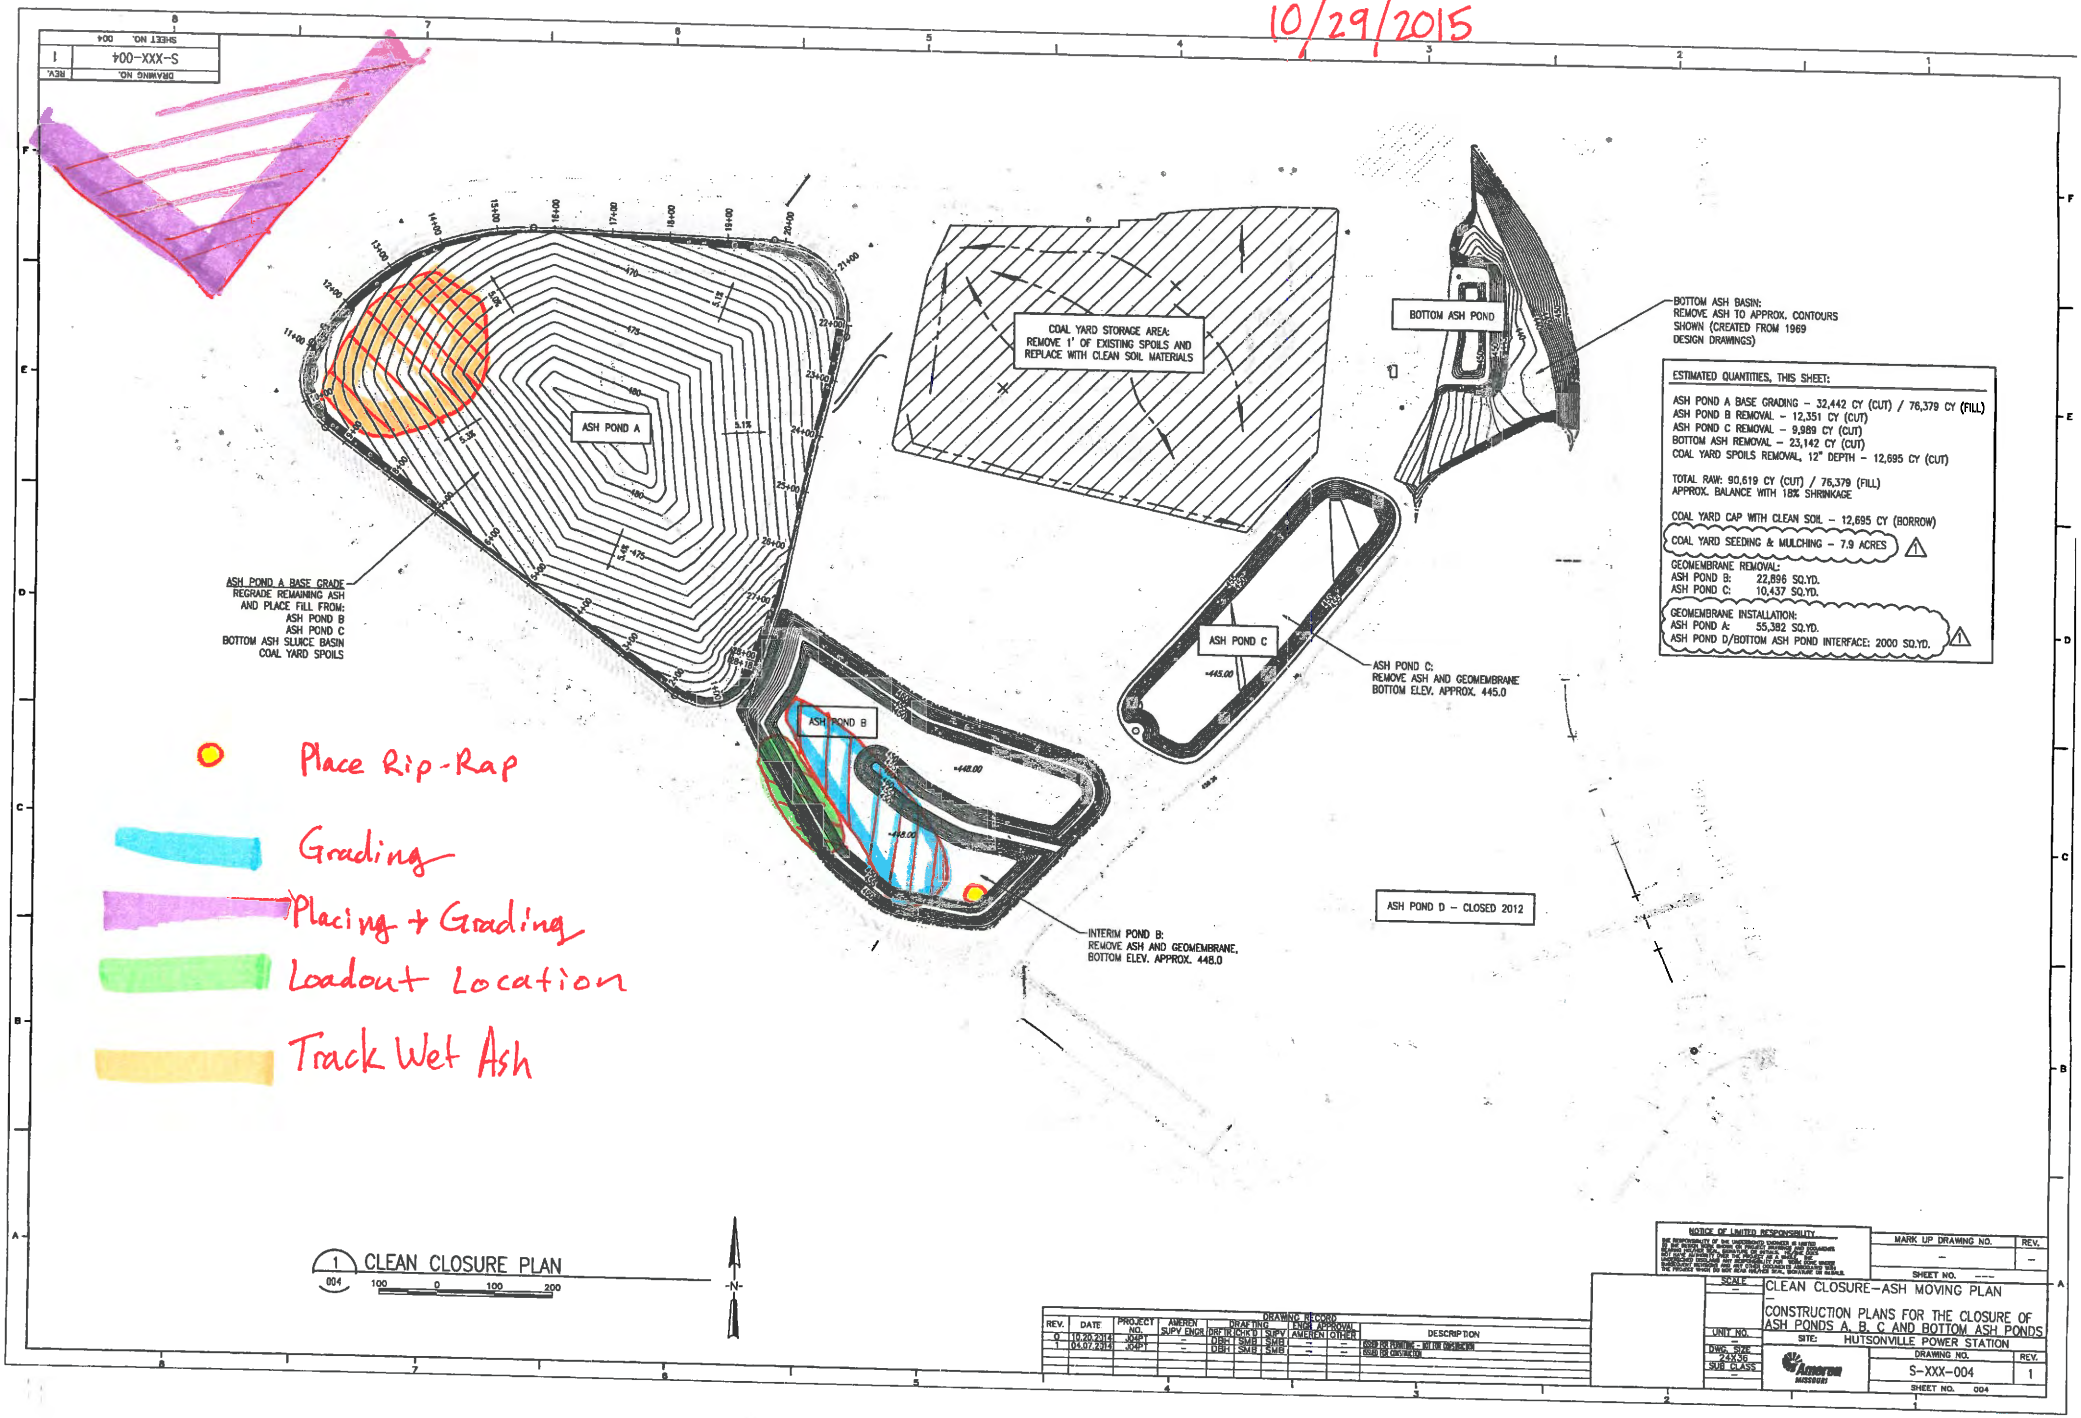
Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Equipment Details: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 2 bulldozers with GPS (Caterpillar D6N LGP), 2 haul trucks (John Deere 400D), 1 water truck, 1 skid steer.

In the early morning for 1 hour, one excavator loaded rip rap into a haul truck and another excavator placed the rip rap at the new outfall inlet in the southeast corner of Ash Pond B.



One bulldozer graded Ash Pond B. One excavator loaded excess material at Ash Pond B into haul trucks. Two haul trucks moved the excess material to the former stockpile location outside the gate. One bulldozer graded the material placed at the former stockpile location.

One bulldozer tracked ash in the southeast corner of Ash Pond A to promote drying.

National Lining Systems:

Filled sand bags. Site was too wet to begin liner.

Geotechnology, Inc.

DATE: November 18, 2015

SUBJECT: Weekly Summary Report for November 1, 2015 to November 7, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 34 to 57^{O}F, and temperature highs ranged from 58 to 74^{O}F. No work was performed Friday, November 6, due to rain.

Construction Activities

Excess material from Ash Pond B was placed at the Bottom Ash Pond and into a stockpile at the southern side of the Coal Yard. Ash Pond B and the Bottom Ash Pond were graded.

WB Koester excavated an anchor trench for the HDPE geomembrane at Ash Pond A and the Bottom Ash Pond. After HDPE geomembrane placement, WB Koester backfilled the anchor trenches at Ash Pond A between seams.

Earth Images seeded the field outside the gate, the Coal Yard, Ash Pond B, and Ash Pond C.

National Lining Systems (NLS) placed, seamed, and tested 40 mil HDPE geomembrane on Ash Pond A.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E, 1 Hyundai 290), 3 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), and 1 skidsteer.

Electronic Filing: Received, Clerk's Office 09/28/2020

WB Koester had 5 employees working on site: 2 laborers, 1 mechanic, and 2 equipment operators.

NLS had 10-11 employees working on site and 1 skidsteer.

Earth Images had 4 employees working on site and had 1 hydroseeder, 1 straw spreader, and 1 skidsteer on site.

Meetings

The weekly progress meeting was held on Wednesday, November 4, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane and grass seed with straw were installed on the site.

Testing/Sampling

Testing of trial seams and non-destructive air testing of HDPE geomembrane seams were performed on site. Destructive samples of HDPE geomembrane seams were tested on site and then sent to an independent laboratory for further testing.

GEOTECHNOLOGY INC
FROM THE GROUND UP

DAILY REPORT DATE: 11/03/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

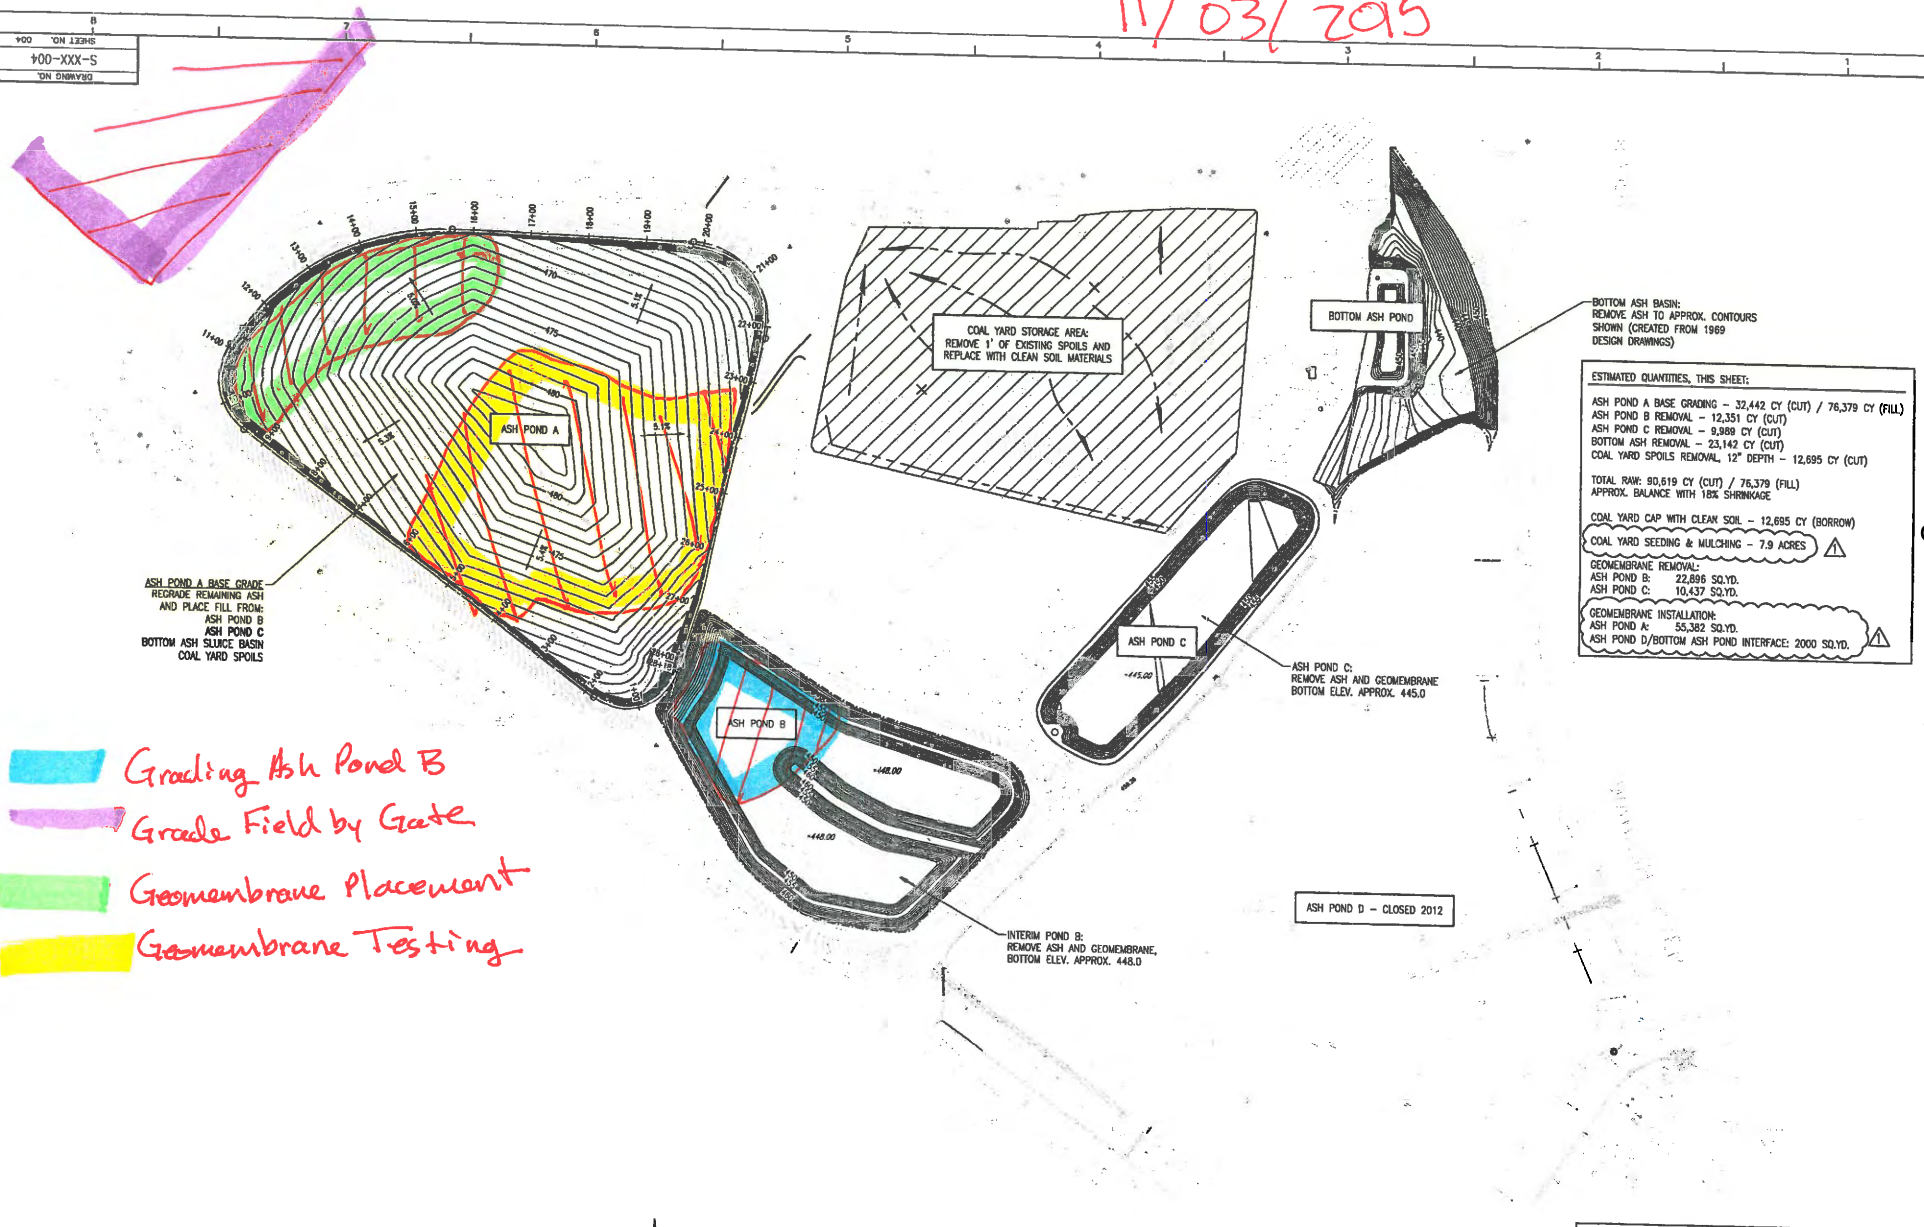
Ongoing demolition of buildings.

WB Koester:

Equipment Details: One tractor with scraper roller box, 1 bulldozer with GPS (Caterpillar D6N LGP), 1 skidsteer.

One bulldozer graded Ash Pond B. One tractor with scraper/roller box graded the field outside the gate (former CCW stockpile). One skidsteer transported temporary culvert to a location adjacent to the potential borrow field in preparation for clearance to access the land.

The skidsteer cleaned the road.



National Lining Systems:

Installed liner on Ash Pond A. See field notes for additional information.

At 1000, Jessie Hahn and Steve Graham of Geotechnology talked with Khamkhoun Thayravanh of NLS and indicated that they would like destructs cut and tested so that they could be sent off on 11/03/15. Thayravanh indicated that destructs would be cut and tested after lunch.

Destructs were tested immediately after trial welds after lunch.

DAILY REPORT DATE: 11/04/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Equipment Details: 1 bulldozer with GPS (Caterpillar D6N LGP), 1 trackhoe, 1 skidsteer.

One backhoe excavated the vertical anchor trenches at the Ash Pond D slope.

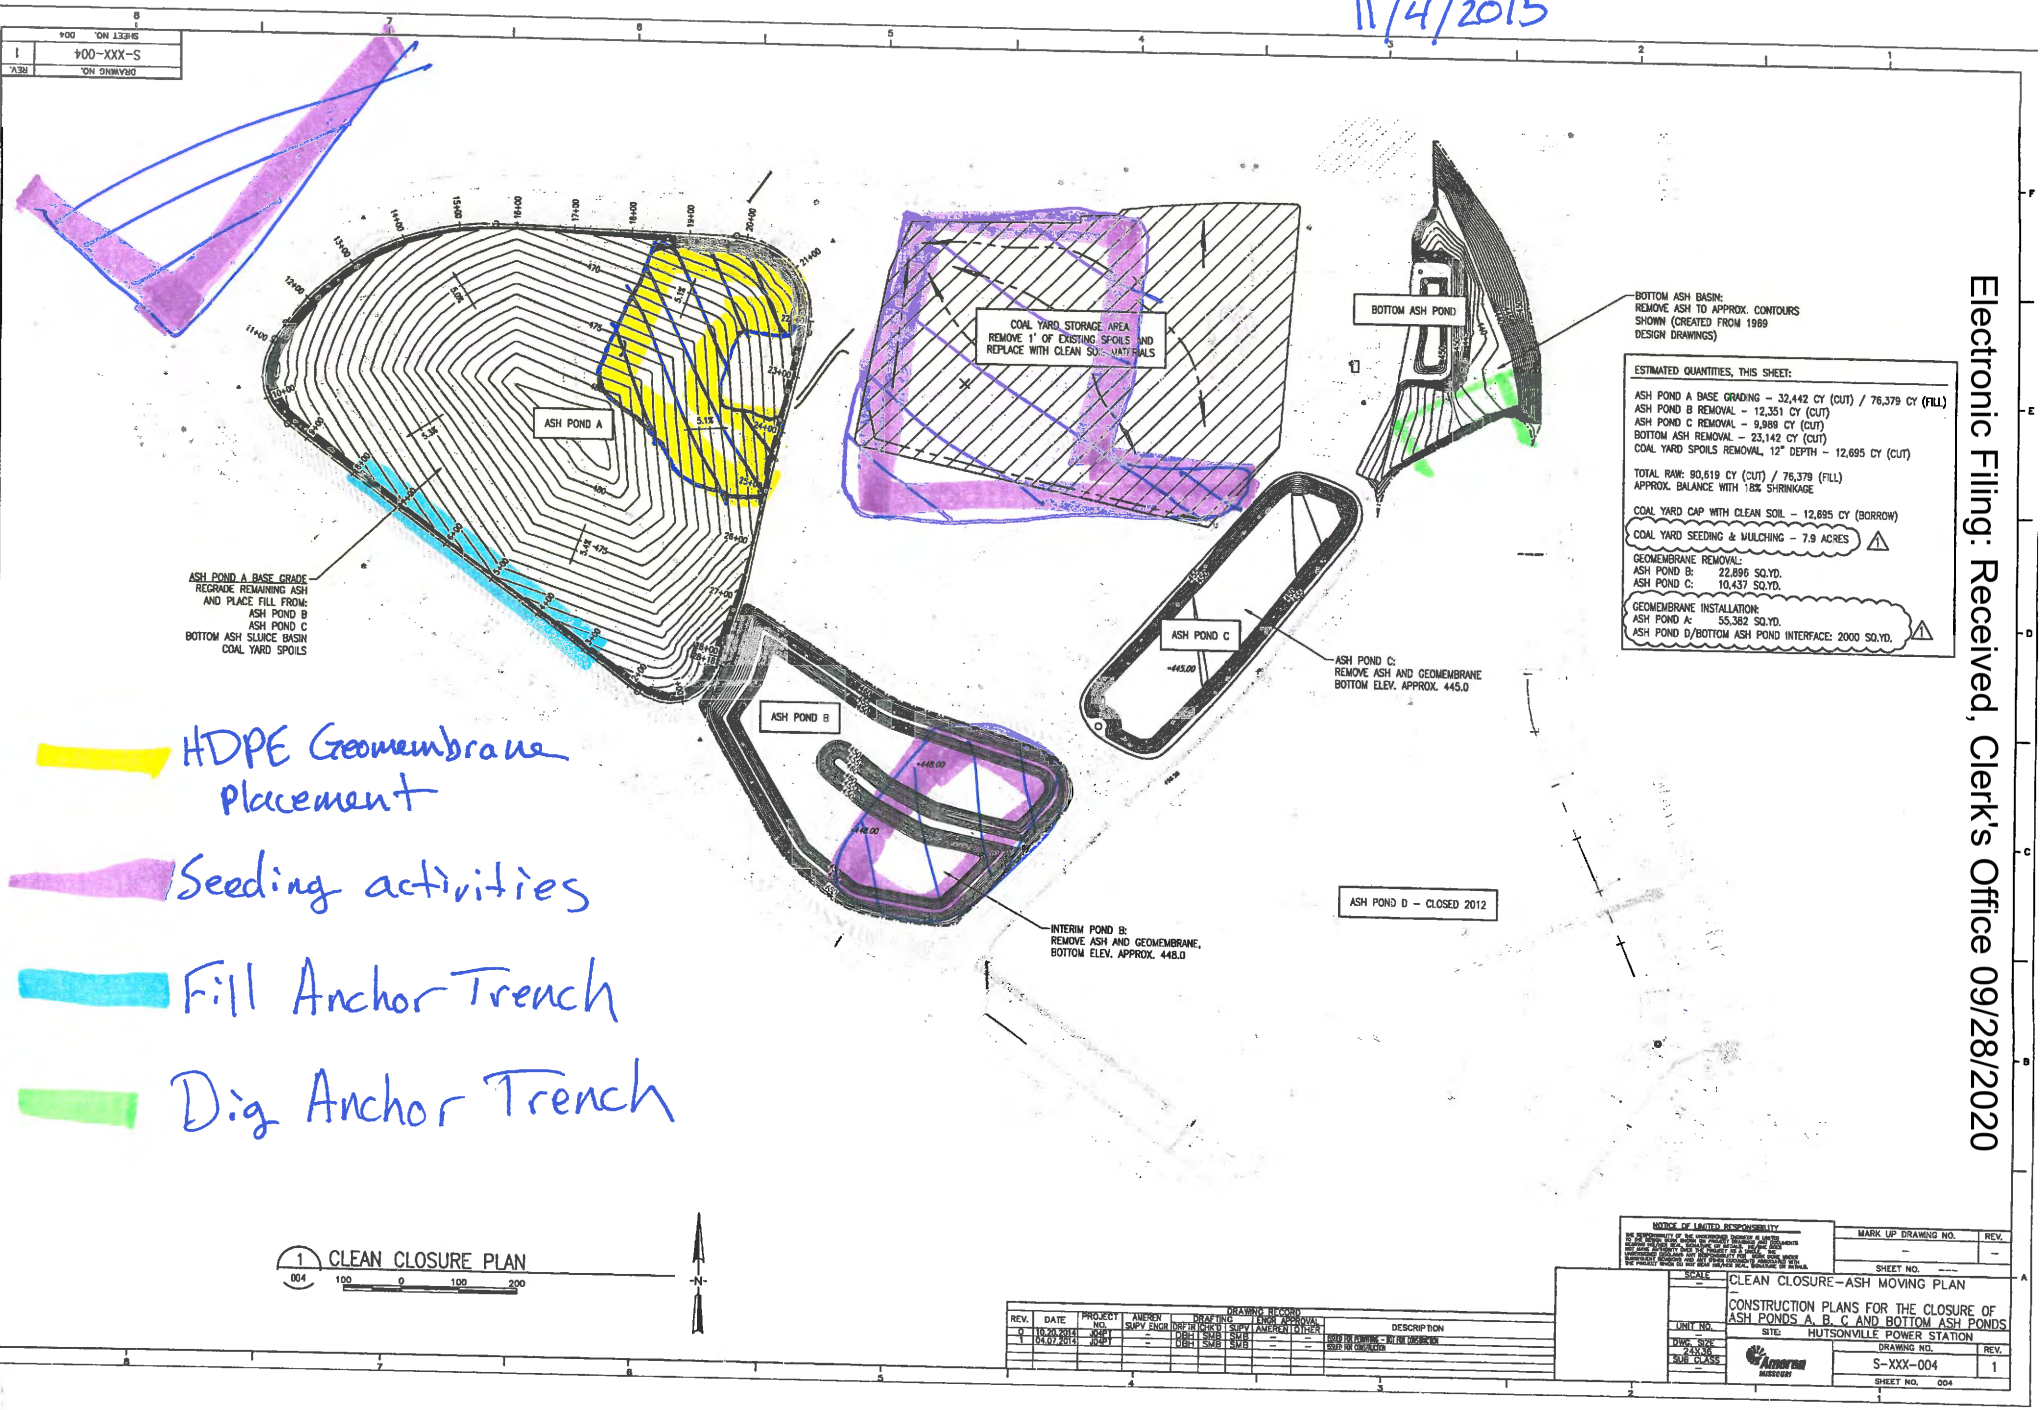
One backhoe backfilled the anchor trench at Ash Pond A at specific locations, which were coordinated with National Lining Systems. Two laborers were present to remove larger pieces of cementitious material.

The skidsteer cleaned the road.

National Lining Systems:

Installed liner on Ash Pond A. See field notes for additional information.

At 1445, the skidsteer became stuck in the Ash Pond A subgrade adjacent to the access ramp location. The skidsteer was removed by WB Koester's bulldozer. The disturbed location was not covered by HDPE geomembrane.



Earth Images:

Earth Images seeded the field outside the gate and the Coal Yard.

Other:

The weekly progress meeting was held at 0900. See the meeting minutes for additional information.

Weekly Progress Meeting

Meeting Minutes

Date: 11-4-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff , John Patterson (phone), Mike Smallwood, Mike Bollinger

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.

Manpower

- Man hours
  - Start of Job (4-27-15) through 11-2-15
    - Total = 11,020 hrs.
- Next week expected manpower
  - WBK = 5 total this week
    - 5-8 hrs days approx. except Chris and operator will be on site whenever the Liner crew is working.
  - National Lining – 11 this week
    - Working 7 am to 5 pm.
    - Will work Saturday but not Sunday this week. Looking to complete by next Tuesday

Review old minutes and action items

- LAMAC has not been on site yet due to weather to locate the property boundaries of the borrow field.
- Archeological study has been performed on field, waiting on report from State

- Bob submitted EWO for additional erosion control blanket on slopes. Bob gave Mike W. sketch in meeting today.
- Bob needs to submit procedure for filling pond B outlet pipe with grout.
- Chris "task trained" National lining systems operator. Appears to be a very good operator per Chris and Don. The operator did sign into union on a project agreement.

Material Issues

- No issues

Quality Control Issues

- Steve with Geotechnology, Inc will be on site today to be QC for the liner install.

Schedule Compliance

- Liner placement continuing. Should have Pond A "blacked out" by end of day today, will then continue with testing and repairs on Pond A and will also install liner at Pond D tie in likely tomorrow.
  - Jessie say the liner installation is going good after they adjusted their welder.
  - A little behind on testing/repairs.
  - Gut feel is that testing/repairs can be complete by Friday Nov 13th.
- Archeological survey complete on borrow area. Waiting on results. Hopefully we will be good to go by early next week.
  - WBK will install gate to borrow area but will wait to strip topsoil.
- Seed Coal yard, Pond C, Pond B and stockpile area outside fence today.
- Existing Pond B outfall is still being utilized. Pump from BA pond to Pond B outfall. Once the BA Pond Levee is breached and turned into an outfall the pumping will stop and Pond B outfall will be plugged and abandoned. Bob to submit plugging procedure.
- Brandenberg may take 2 more weeks of pumping and then 2 weeks of grouting for them to complete. Still need to keep berm in Bottom Ash pond that whole time.

Electronic Filing: Received, Clerk's Office 09/28/2020

Cost and Budget Control

- Bob submitted October invoice to Mike W. this week.
- Mike still evaluating EWO for the excess ash and borrow soil.

Next Meeting Scheduled: November 11, 2015 at 9:00 CST

Action Items -

- Bob to submit procedure for plugging pipe at Pond B outfall.
- Don to look into getting new locks for new wells. All keyed the same.

Electronic Filing: Received, Clerk's Office 09/28/2020

DATE: November 18, 2015

SUBJECT: Weekly Summary Report for November 9, 2015 to November 13, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 26 to 42^{O}F, and temperature highs ranged from 53 to 70^{O}F.

Construction Activities

Bottom Ash Pond levee material was used to backfill the anchor trench at the Ash Pond D slope and the Bottom Ash Pond was graded. The fencing around the site parking area was removed.

After HDPE geomembrane placement, WB Koester backfilled the anchor trenches at Ash Pond A and the Ash Pond D slope.

National Lining Systems (NLS) placed, seamed, and tested 40 mil HDPE geomembrane on Ash Pond A and the Ash Pond D north slope.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 4 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC, 1 Caterpillar 308E, 1 Hyundai 290), 3 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 water truck (Caterpillar 623B), 1 sheepsfoot roller (CA251), 1 smooth drum roller (CS-433E), and 1 skidsteer.

Electronic Filing: Received, Clerk's Office 09/28/2020

WB Koester had 4-5 employees working on site: 1-2 laborers, 1 mechanic, and 2 equipment operators.

NLS had 11 employees working on site and 1 skidsteer.

Meetings

The weekly progress meeting was held on Wednesday, November 11, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane and grass seed with straw were installed on the site.

Testing/Sampling

Testing of trial seams and non-destructive air testing of HDPE geomembrane seams were performed on site. Destructive samples of HDPE geomembrane seams were tested on site and then sent to an independent laboratory for further testing. Non-destructive vacuum box testing was conducted at HDPE extrusion welds on site and spark testing was conducted at boots on HDPE vents on Ash Pond A.

Weekly Progress Meeting

Meeting Minutes

Date: 11-11-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff (phone), Tim Free

WB Koester: Chris Atkinson, Greg Head

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.

Manpower

- Man hours
  - Start of Job (4-27-15) through 11-9-15
    - Total = 11,859 hrs.
- Next week expected manpower
  - WBK = 5 total this week
    - 5-8 hrs days approx. except Chris and operator will be on site whenever the Liner crew is working.
  - National Lining – 11 this week
    - Working 7 am to 5 pm.
    - Looking to complete by end of week.

Review old minutes and action items

- Archeological study has been performed on field, waiting on report from State
- Bob needs to submit procedure for filling pond B outlet pipe with grout.
  - Submitted and Mike W. approved.

Material Issues

- No issues

Electronic Filing: Received, Clerk's Office 09/28/2020

Quality Control Issues

- Liner testing and repairs is ongoing
- Soil from Bottom ash pond levee will need to be tested prior to placing on liner at Pond D tie in.

Schedule Compliance

- Liner testing/repairs ongoing. Should be complete by end of week.
- Archeological survey complete on borrow area. Waiting on results.
  - WBK installed gate to borrow area but will wait to strip topsoil.
- Existing Pond B outfall is still being utilized. Pump from BA pond to Pond B outfall. Once the BA Pond Levee is breached and turned into an outfall the pumping will stop and Pond B outfall will be plugged and abandoned. Should happen this week.
- Liner at Pond D tie in is complete. Waiting on environmental testing of Bottom Ash levee soil prior to filling on top of liner at this location.
- Chris demolished the remaining existing fence around the office trailers and parking areas.
- Brandenberg may take 2 more weeks of pumping and then 2 weeks of grouting for them to complete. Still need to keep berm in Bottom Ash pond that whole time.

Cost and Budget Control

- Mike still evaluating EWO for the excess ash and borrow soil. Hoping to have approval by next week.

Next Meeting Scheduled: November 18, 2015 at 9:00 CST

Action Items - None.

Electronic Filing: Received, Clerk's Office 09/28/2020

DATE: November 25, 2015

SUBJECT: Weekly Summary Report for November 16, 2015 to November 21, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 25 to 48^{O}F, and temperature highs ranged from 49 to 65^{O}F.

Work was not performed on November 17 or November 18 due to rainy conditions.

Construction Activities

Ash Pond D protective cover material was placed over exposed Ash Pond D HDPE geomembrane. Bottom Ash Pond levee material was placed as protective cover over the HDPE geomembrane at the Ash Pond D Slope.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B and 1 Komatsu PC 350 LC), 3 haul trucks (John Deere 400Ds), 2 bulldozers (Caterpillar D6N LGPs with GPS), 1 water truck (Caterpillar 623B), 1 skidsteer.

WB Koester had 4-7 employees working on site: 1 laborer, 1 mechanic, and 2-5 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The weekly progress meeting was held on Wednesday, November 18, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Soil from the Bottom Ash Pond levee was used as protective cover for the HDPE geomembrane at the Ash Pond D Slope.

Testing/Sampling

Jessie Hahn (Geotechnology, Inc.) obtained CQA conformation samples before placement of borrow field soil began due to concern about the sand content of the soil.

Signature of CQA Officer

Anna Saindon, P.E., Ph.D.
Geotechnology, Inc.

printed on recycled paper

Weekly Progress Meeting

Meeting Minutes

Date: 11-18-15

Attendees:

Ameren: Don Shaver, Ken Beckman (phone), Mike Wagstaff (phone), Tim Free

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Chris to make sure to wash and scrape the parking lot each Friday and as necessary.

Manpower

- Man hours
  - Start of Job (4-27-15) through 11-16-15
    - Total = 12,466 hrs.
- Next week expected manpower
  - WBK = depending on weather, 2 to 12 total

Review old minutes and action items

- Archeological study has been performed on field, ok to proceed with borrow in field
- Update on EWO's – on VP desk waiting on approvals, should be approved in couple of days.
- Mike to send Bob SWPPP manual

Material Issues

- No issues

Quality Control Issues

- Liner testing and repairs is done

- Soil from Bottom ash pond levee is being tested. Waiting on results prior to placing on liner at Pond D tie in.

Schedule Compliance

- Liner at Pond D tie in is complete. Waiting on environmental testing of Bottom Ash levee soil prior to filling on top of liner at this location.
- 3" of rain this week, waiting on it to dry prior to hauling Borrow
- Erosion in pond C around box culverts. Needs to be repaired. Don to send Mike W. pictures to determine if we should add additional rip rap.
- Brandenberg pumping until week of Dec. 7th. Still need to keep berm in Bottom Ash pond that whole time.
- Seeding/blanket placement will be in Spring. Permanent fence install will be in Spring after Brandenberg finished with building demo.
- Discussion on how far to go with cover soil this year. Bob to revise schedule to show anticipated production, working Saturdays, Sundays, and day after Thanksgiving and don't take into account any rain days.
- Bob to submit a cost to work premium time days.

Cost and Budget Control

- Waiting on EWO approval.

Next Meeting Scheduled: November 25, 2015 at 9:00 CST

Action Items -

- Don to send Mike pictures of Erosion at Pond C box culverts.
- Bob to send Mike revised schedule showing working Saturdays, Sundays and day after thanksgiving.
- Bob to send Mike cost to work premium times.

GEOTECHNOLOGY INC
FROM THE GROUND UP

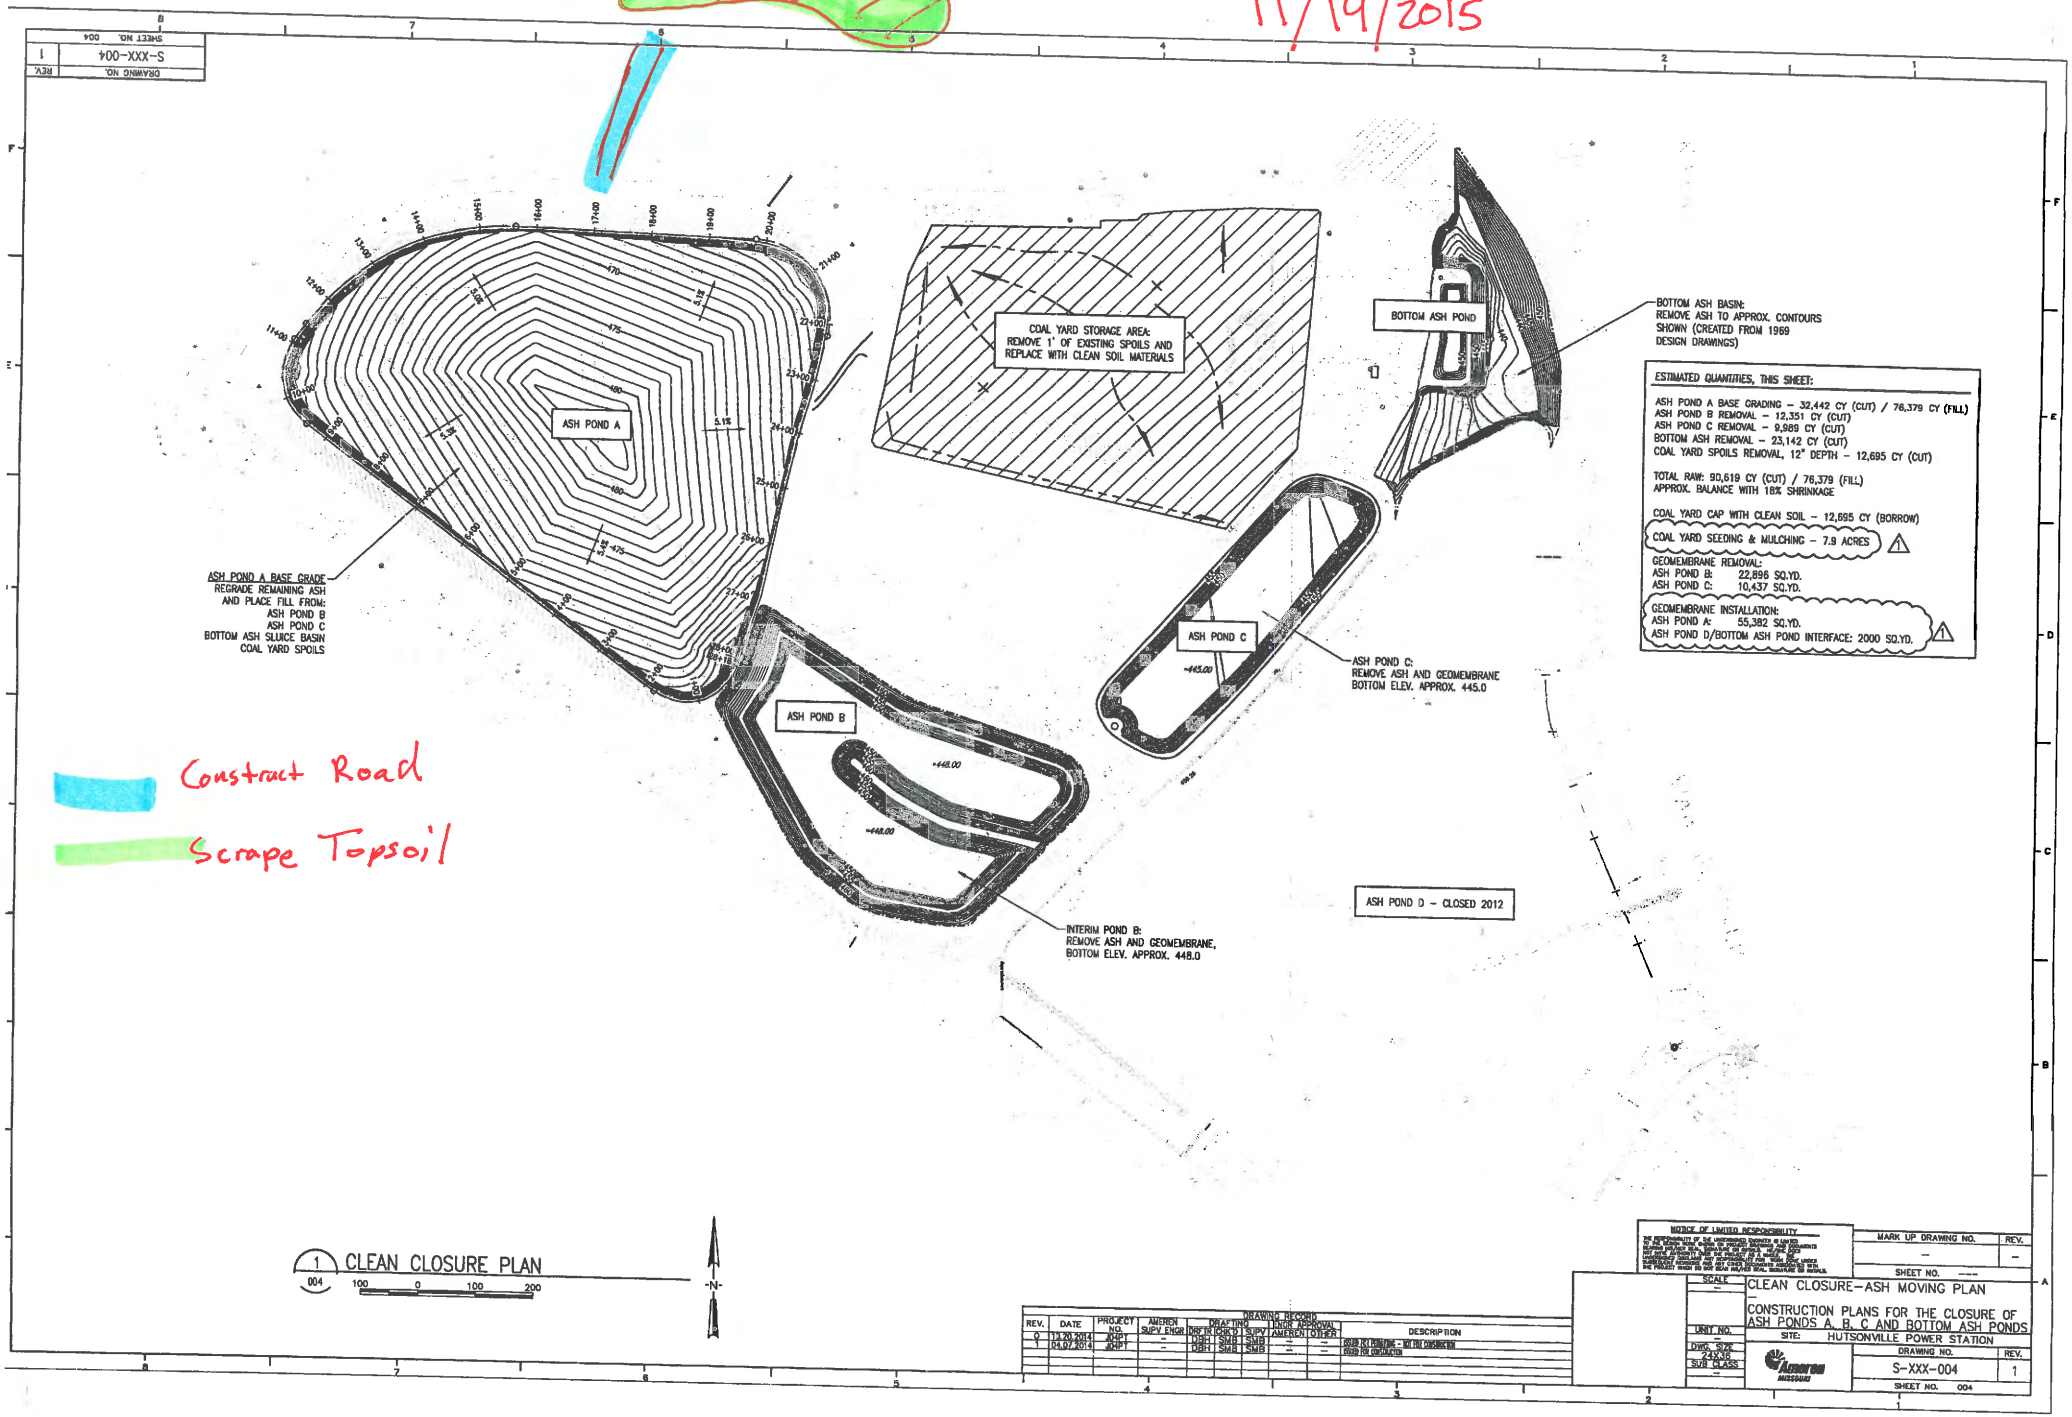
DAILY REPORT DATE: 11/19/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.



WB Koester:

Constructed road to borrow field. Scraped topsoil off of the borrow field with two tractors with scraper boxes.

At 0900, Chris Atkinson (WB Koester) dug an observation pit in the borrow field and expressed concern to Jessie Hahn (Geotechnology) about the sand content, which appeared to be higher than it was in the prequalification sample for the borrow source. Hahn consulted with Anna Saindon (Geotechnology) via phone, who requested that samples be shipped to her for observation and analysis to visually assess if they would meet the specification. After additional sampling at other locations in the field, five samples were shipped overnight to Saindon.

DATE: December 1, 2015

SUBJECT: Weekly Summary Report for November 23, 2015 to November 28, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 25 to 34^{O}F, and temperature highs ranged from 50 to 58^{O}F.

Work was performed on November 23 through November 25. November 26 (Thanksgiving) was a holiday and work was not performed. Work was not performed November 27 or November 28 due to rainy and wet conditions.

Construction Activities

Material from the borrow field was placed on Ash Pond A and graded.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Komatsu PC 350 LC), 3 haul trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 water truck (Caterpillar 623B), 1 tractor with roller/scraper box, 2 tractors with scraper boxes, and 1 skidsteer.

WB Koester had 6-10 employees working on site: 1-2 laborers, 1 mechanic, and 4-7 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The weekly progress meeting was held on Wednesday, November 25, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Protective cover soil from the borrow field was placed on Ash Pond A.

Testing/Sampling

Jessie Hahn (Geotechnology) collected a prequalification sample from a potential topsoil borrow source and Construction Quality Assurance samples of protective cover from the Bottom Ash Pond Levee and the borrow field.

Signature of CQA Officer

One bulldozer cleared topsoil (the top 6 inches) off of the borrow field.

One tractor with roller/scraper box flattened and compacted the ramps and horseshoe-shaped haul road built across the east side of Ash Pond A.

One skidsteer cleaned the roads throughout the day.

In the morning at approximately 1030, one skidsteer placed rip rap at the concrete box culverts on the east and west levees of Ash Pond C to prevent further erosion.

At 1600, hauling of material from the borrow pit ceased and erosion control measures were taken in anticipation of rain. Erosion control activities included an excavator digging a drainage sump for the borrow field haul road and two bulldozers and a tractor with a roller/scraper box shaping the material on Ash Pond A.

Weekly Progress Meeting

Meeting Minutes

Date: 11-25-15

Attendees:

Ameren: Don Shaver, Tim Free

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn

Topics:

Safety/Housekeeping

- No issues
- Tim had stand down meeting with crew to discuss hauling/digging near the overhead power lines in borrow field.
- Also discussed leaving cone of dirt 15' diameter around each pole in field.
- Borrrow hauling puts some soil on the plant roads. Chris is scraping it multiple times during day and will broom/wash it at end of day.

Manpower

- Man hours
  - Start of Job (4-27-15) through 11-23-15
    - Total = 12,700 hrs.
- Next week expected manpower
  - WBK = 10 this week, as many as 13 next week.

Review old minutes and action items

- Update on EWO's – Have email approval from Mike. Still waiting on Ameren official Change order paperwork.
- Bob submitted updated schedule and cost info to Mike regarding premium time for working weekends and holidays.
- Don sent pictures of washout around box culverts in Pond C after last rain. Bob to submit cost to widen the rip rap around the box culverts to around 40' wide, add more geotextile (anchor it in at top) and add more rip rap.

Material Issues

- No issues

Quality Control Issues

- No issues

Schedule Compliance

- Erosion in pond C around box culverts. Needs to be repaired. Chris will try and beef it up with rip rap today ahead of rains later in week.
- Brandenberg pumping until week of Dec. 7th. Still need to keep berm in Bottom Ash pond that whole time.
- Seeding/blanket placement will be in Spring. Permanent fence install will be in Spring after Brandenberg finished with building demo.
- Hauling borrow soil to top of Pond A and placing in a 3' layer. Excavator and three trucks for now while we are starting. 2-4 more days of hauling we will add in Tractor and pans to bump up the production. Also will look into adding another excavator and more trucks although congestion of traffic on haul roads and top may limit.
- Next week will work on the ditch north of Pond A and possibly start pushing the Pond A berms across.
- Chris thinks that the topsoil haul trucks from Quality Lime will have trouble with the ramps and turning around at the top. Looking into having them deliver and stockpile topsoil in laydown yard and then haul up with Artic trucks when we have an area ready.
- Forecast for Friday is 100% chance of rain (1" to 4") with high chance of rain Saturday Sunday and Monday as well. Decided in meeting to not work Friday. Chris will monitor site and contact Don is it looks like we can go Saturday and or Sunday and Don will contact Geotechnology. If we get a lot of rain Friday it may not dry out enough to allow productive and safe hauling on Saturday or Sunday. Chris will observe and update Don.

Cost and Budget Control

- Waiting on EWO official paperwork.

Electronic Filing: Received, Clerk's Office 09/28/2020

Next Meeting Scheduled: December 2, 2015 at 9:00 CST

Action Items -

- Bob to submit price to expand the riprap protection at the box culverts in Pond C.
- Chris to update Don on Friday about working on Saturday or Sunday.

Electronic Filing: Received, Clerk's Office 09/28/2020

DATE: December 10, 2015

SUBJECT: Weekly Summary Report for November 30, 2015 to December 5, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 27 to 35^{O}F, and temperature highs ranged from 42 to 47^{O}F.

Construction Activities

On Monday, the borrow field haul road was dewatered by digging drainage trenches and pumping water.

Protective cover was transported via haul truck from the borrow field to Ash Pond A. Haul trucks moved on the horseshoe-shaped haul road (maximum 3 foot thickness) on Ash Pond A. The material was placed by haul trucks near the center of Ash Pond A and pushed to the edges by a low-pressure bulldozer. The Ash Pond A haul road was maintained by a tractor with a scraper/roller box.

An excavator folded Ash Pond A levee material with the protective cover placement along the east levee of Ash Pond A.

On Wednesday, steel pipe was installed under the haul road ramp of the borrow field and an associated ditch was excavated to protect the telecommunications line.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 5 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 Tractor (Case 9370) with smooth drum roller (CS-433E), 1 skidsteer (Caterpillar 274B3), 1 water truck (Caterpillar 623B) (unused), 2 Tractors (Case 435, Cast stx480) (unused) with scraper boxes (Reynolds).

WB Koester had 10-16 employees working on site: 1-2 laborers, 1 mechanic, and 8-13 equipment operators.

Meetings

The weekly progress meeting was held on Wednesday, December 2, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Protective cover from the borrow field located northeast of Ash Pond A.

Testing/Sampling

Jessie Hahn and Seth Lamble (Geotechnology) obtained a CQA prequalification sample of Ash Pond A levee material for placement as a protective cover.

Signature of CQA Officer

Anna Saindon, P.E., Ph.D.

DAILY REPORT DATE: 12/01/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Placed material from the borrow field on Ash Pond A as protective cover. One excavator loaded out borrow field material. Three haul trucks transported the material to Ash Pond A. One bulldozer graded material placed at Ash Pond A.

One bulldozer cleared topsoil (the top 6 inches) off of the borrow field and cleaned and maintained haul road for borrow field.

One tractor with roller/scraper box flattened/compacted the ramps and horseshoe-shaped haul road built across the east side of Ash Pond A.

One skidsteer cleaned the roads throughout the day.

At 1600, hauling of material from the borrow pit ceased and the site was prepared for end of work day.

Weekly Progress Meeting

Meeting Minutes

Date: 12-2-15

Attendees:

Ameren: Don Shaver, Tim Free, Mike Wagstaff

WB Koester: Chris Atkinson

Geotechnology, Inc.: Jessie Hahn, Anna Saindon, Seth

Topics:

Safety/Housekeeping

- No issues
- Borrrow hauling puts some soil on the plant roads. Chris is scraping it multiple times during day and will broom/wash it at end of day.

Manpower

- Man hours
  - Start of Job (4-27-15) through 11-30-15
    - Total = 12,976 hrs.
- Next week expected manpower
  - WBK = 13 next week.

Review old minutes and action items

- None recorded

Material Issues

- No issues

Quality Control Issues

- No issues

Schedule Compliance

- Brandenberg pumping until week of Dec. 7th. Still need to keep berm in Bottom Ash pond that whole time. Will have to dry before grading can take place.

Electronic Filing: Received, Clerk's Office 09/28/2020

- Seeding/blanket placement will be in Spring. Permanent fence install will be in Spring after Brandenberg finished with building demo.
- Hauling borrow soil to top of Pond A and placing in a 3' layer.
- Chris thinks that the topsoil haul trucks from Quality Lime will have trouble with the ramps and turning around at the top. Looking into having them deliver and stockpile topsoil in laydown yard and then haul up with Artic trucks when we have an area ready.
- Will haul Saturday and Sunday this week.

Cost and Budget Control

- n/a

Next Meeting Scheduled: December 9, 2015 at 9:00 CST

Action Items -

- Chris to update Don about working on Saturday or Sunday.

Electronic Filing: Received, Clerk's Office 09/28/2020

DATE: December 17, 2015

SUBJECT: Weekly Summary Report for December 6, 2015 to December 12, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 23 to 56^{O}F, and temperature highs ranged from 43 to 70^{O}F.

Construction Activities

Protective cover was transported via haul truck from the borrow field to Ash Pond A. Haul trucks moved on the horseshoe-shaped haul road (minimum 3 foot thickness) on Ash Pond A. The material was placed by haul trucks near the center of Ash Pond A and pushed to the edges by two low-pressure bulldozers. The Ash Pond A haul road was maintained by a tractor with a scraper/roller box and a bulldozer.

An excavator folded Ash Pond A levee material with the protective cover placement along the north and east levees of Ash Pond A.

On December 12, no material was hauled from the borrow field. Material was removed from the north Ash Pond A ramp and placed on Ash Pond A.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 5 dump trucks (John Deere 400D), 3 bulldozers (Caterpillar D6N LGP, 2 with GPS), 1 Tractor (Case 9370) with roller/scraper box (CS-433E), 1 skidsteer (Caterpillar 274B3), 1 water truck (Caterpillar 623B) (unused), 2 Tractors (Case 435, Cast stx480) (unused) with scraper boxes (Reynolds).

WB Koester had 6-15 employees working on site: 1-2 laborers, 1 mechanic, and 4-12 equipment operators.

Meetings

The weekly progress meeting was held on Wednesday, December 9, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Protective cover from the borrow field located northeast of Ash Pond A.

Testing/Sampling

Testing and sampling were not performed on site this week.

DAILY REPORT DATE: 12/09/2015

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

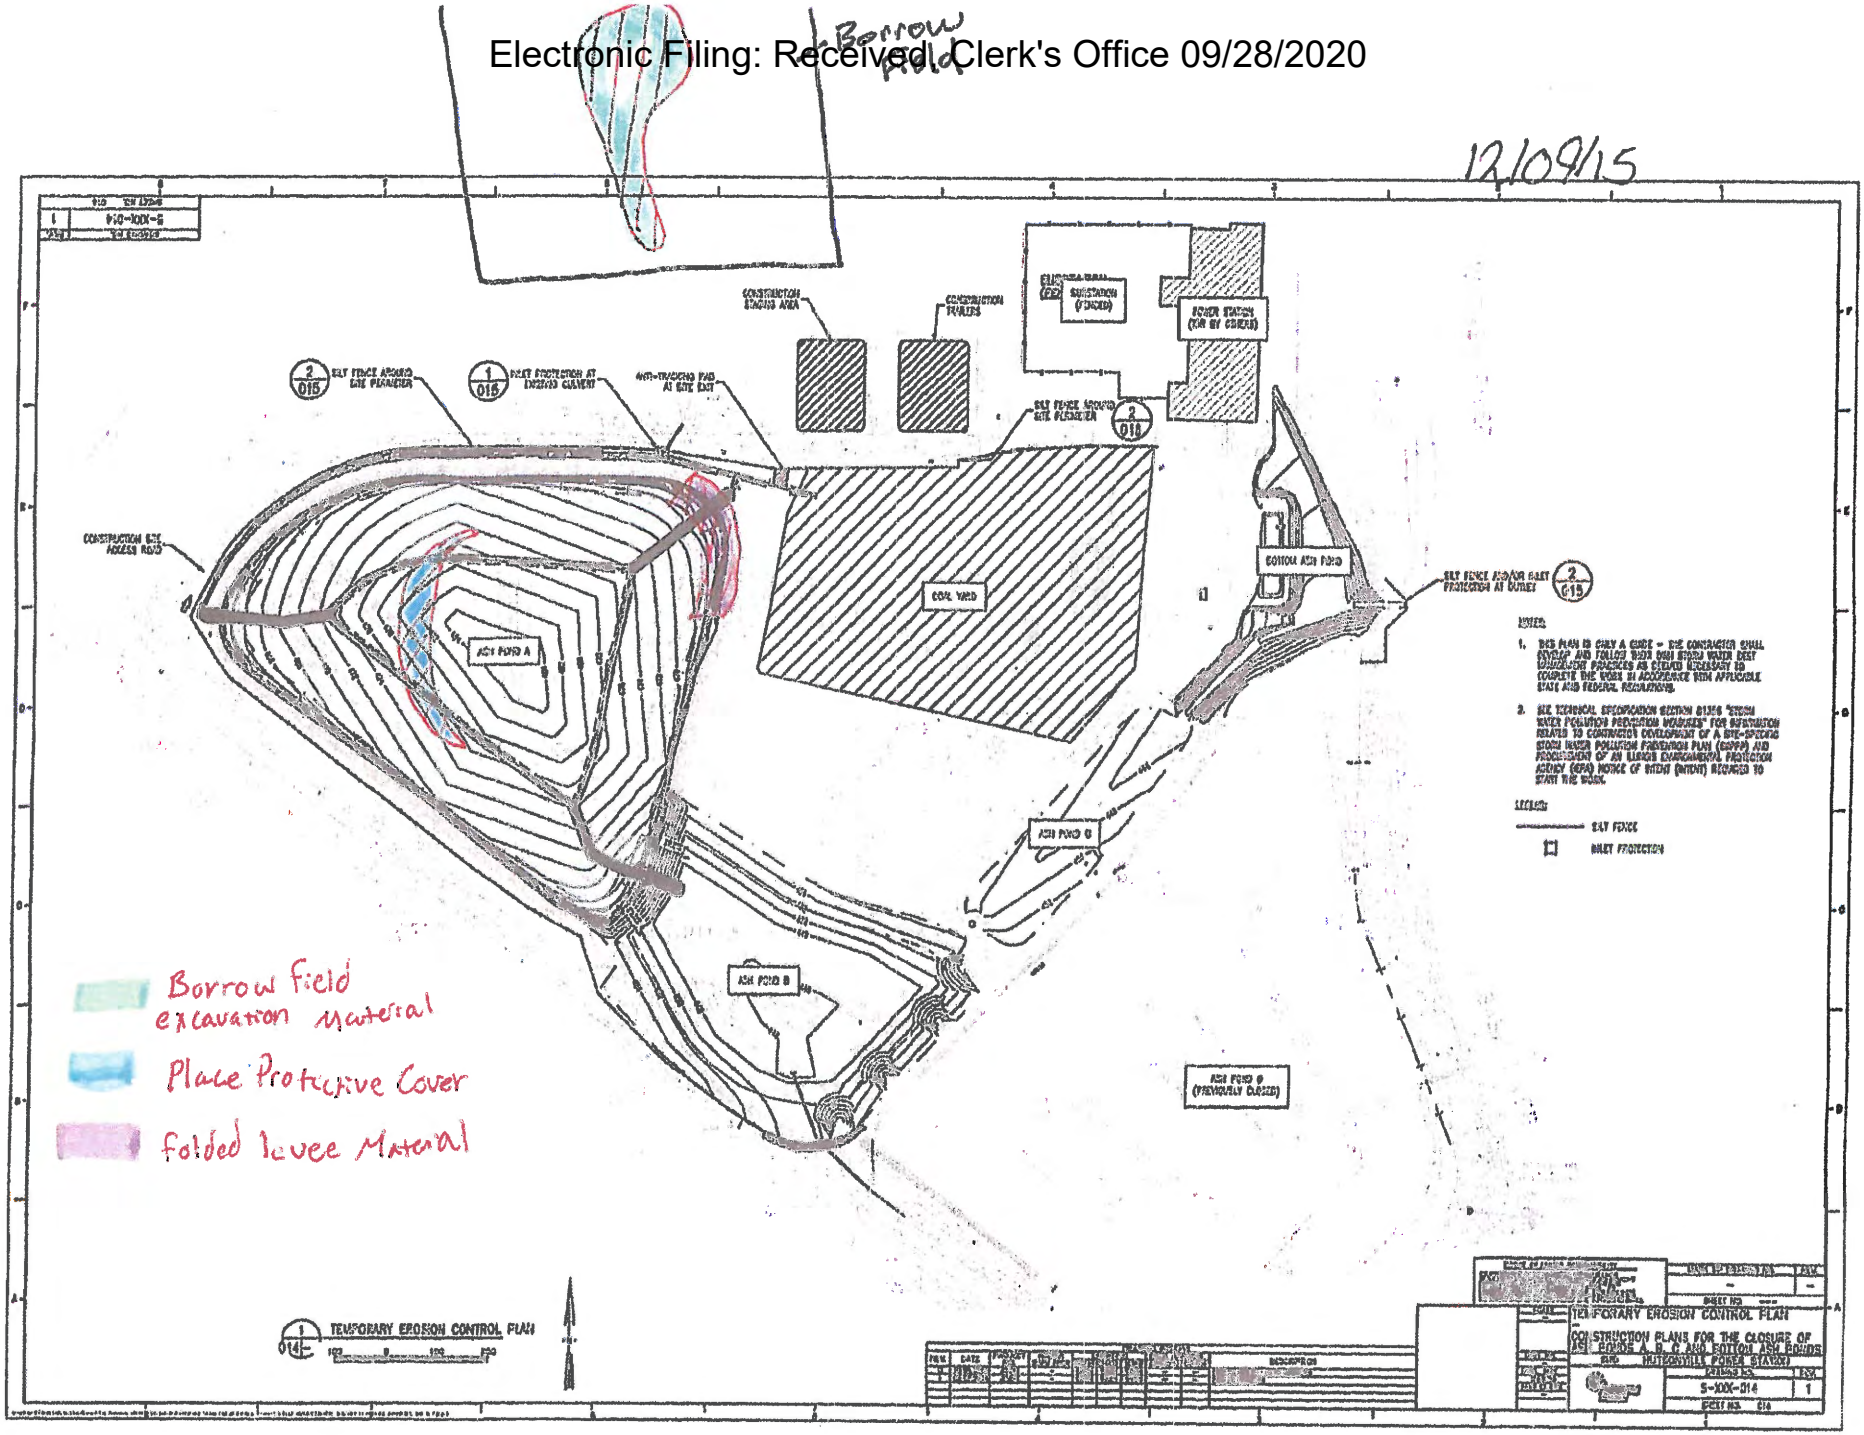
Brandenburg demolition to the building.

WB Koester:

Placed material from the borrow field on Ash Pond A as protective cover.

One bulldozer cleared topsoil (the top 6 inches) off of the borrow field and cleaned and maintained haul road for borrow field.

One excavator loaded out borrow field material. Five haul trucks transported the material to Ash Pond A. Two bulldozers graded material placed at Ash Pond A.



One excavator folded levee material with protective cover at the north corner levee of Ash Pond A.

One tractor with roller/scraper box and one bulldozer flattened/compacted the ramps and horseshoe-shaped haul road built across the east side of Ash Pond A.

One skidsteer cleaned the roads and graded the borrow field throughout the day.

The weekly progress meeting was held at 0900. See the meeting minutes for additional information.

At 1620, hauling of material from the borrow pit ceased and the site was prepared for end of work day.

Weekly Progress Meeting

Meeting Minutes

Date: 12-9-15

Attendees:

Ameren: Don Shaver, Tim Free, Mike Wagstaff, Ken Beckman

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Jessie Hahn, Cassie

Topics:

Safety/Housekeeping

- No issues
- Borrrow hauling puts some soil on the plant roads. Chris is scraping it multiple times during day. Need to try and wash it at end of day.
- Chris to make sure to discuss with crew in morning the congestion in the trailer parking area. Need to slow down as there are more pedestrians.

Manpower

- Man hours
  - Start of Job (4-27-15) through 12-7-15
    - Total = 13,900 hrs.
- Next week expected manpower
  - WBK = 15 next week.
  - Rain Expected Sunday/Monday this week so likely only work Saturday this week.

Review old minutes and action items

- Geotechnology expects to get the topsoil testing results back by next Monday.

Material Issues

- No issues

Quality Control Issues

- No issues

Schedule Compliance

- Brandenberg pumping until end of year (flowable fill application) Still need to keep berm in Bottom Ash pond that whole time. Will have to dry before grading can take place (likely to take place in Spring)
- Seeding/blanket placement will be in Spring. Permanent fence install will be in Spring after Brandenberg finished with building demo.
- Hauling borrow soil to top of Pond A and placing in a 3' layer. Should be close to having all borrow to the top of Pond A by Friday/Saturday this week. Will then start shaping into 2.5' layer with dozers. Will also shape the diversion berms/downchutes.
- Chris thinks that the topsoil haul trucks from Quality Lime will have trouble with the ramps and turning around at the top. Looking into having them deliver and stockpile topsoil in laydown yard and then haul up with Artic trucks when we have an area ready. Currently waiting on approval from Geotechnology to give Quality Lime authorization to begin to build haul road to their topsoil area. Currently topsoil area is very wet and may be difficult to access. We will see what the rain this weekend does. Hope to be able to stockpile topsoil Thursday/Friday next week.
- Need approx. 2000 cy of topsoil in stockpile before we start hauling to top. Estimated to take 6 days to get it to the top.

Cost and Budget Control

- n/a

Next Meeting Scheduled: December 16, 2015 at 9:00 CST

Action Items -

- Chris to update Don about working on Saturday or Sunday.
- Bob to update schedule to show topsoil placement separated and bottom ash pond grading in spring.

DATE: December 28, 2015

SUBJECT: Weekly Summary Report for December 13, 2015 to December 18, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Temperature (^{O}F) lows ranged from 27 to 58^{O}F, and temperature highs ranged from 33 to 68^{O}F.

Construction Activities

Material was moved from the Ash Pond A north ramp to the Ash Pond A cap for use as protective cover. Material from the Ash Pond A levees was folded with material already present on the cap as supplementary protective cover. The protective cover material on Ash Pond A was graded and shaped.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 5 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 Tractor (Case 9370) with smooth drum roller (CS-433E) (unused), 1 skidsteer (Caterpillar 274B3), 1 water truck (Caterpillar 623B) (unused), 2 Tractors (Case 435, Case stx480) with scraper boxes (Reynolds).

WB Koester had 4-5 employees working on site: 1-2 laborer and 3 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The weekly progress meeting was held on Wednesday, December 16, 2015. Refer to the meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Protective cover from the borrow field located northeast of Ash Pond A.

Testing/Sampling

Material from the Ash Pond A levees was sampled by Cassandra Baresel of Geotechnology on December 15, 2015.

Signature of CQA Officer

Anna Saindon, P.E., Ph.D.

Weekly Progress Meeting

Meeting Minutes

Date: 12-16-15

Attendees:

Ameren: Don Shaver, Mike Wagstaff, Ken Beckman

WB Koester: Chris Atkinson, Bob Fisher

Geotechnology, Inc.: Cassie, Anna

Topics:

Safety/Housekeeping

- No issues
- Chris to keep scraping and washing the roads.
- Don says they added reflectors to the main gate to help with visibility during foggy weather.
- 5 random drug screens were performed and all were compliant.
- Wait until spring to repair the road cuts. Don says it is fine for now and ok to wait until spring.

Manpower

- Man hours
  - Start of Job (4-27-15) through 12-14-15
    - Total = 14,580 hrs.
- Next week expected manpower
  - WBK = 5 next week.
  - No Saturday or Sunday work this week. Monday – Thursday next week. Plan on demobilizing until spring next Wednesday.

Review old minutes and action items

- Topsoil from quarry was approved this week.

Material Issues

- No issues

Quality Control Issues

- Topsoil from quarry was approved this week.

Schedule Compliance

- Chris will continue shaping the Pond A borrow material and reclaiming the borrow area. Plans on working rest of this week (not Saturday or Sunday) and Monday through Wednesday of next week.
- Brandenberg pumping until end of year (flowable fill application) Still need to keep berm in Bottom Ash pond that whole time. Will have to dry before grading can take place (likely to take place in Spring) Chris will likely come to the site over the winter to dewater the bottom ash pond after Brandenberg is complete with the bottom ash pond.
- Topsoil placement/Seeding/blanket placement will be in Spring. Permanent fence install will be in Spring after Brandenberg finished with building demo.
- Bob will update Ameren and Geotechnology on the anticipated date of spring startup. May try and deliver and stockpile topsoil prior to the hauling crews showing up. Depends on the weather in the spring.
- Other items for the spring: finish the downchutes/rip rap on pond A, finish the ditch north of pond A, place the aggregate on the roads, fix the road cuts with concrete, finish the piezometers, finish grade the bottom ash pond, closure of the Pond B outlet with flowable fill.

Cost and Budget Control

- Bob to submit invoice for December (including the two days of Sunday work) and submit an estimate of 2016 costs.
- Geotechnology to submit estimate of 2015 and 2016 cost.

Next Meeting Scheduled: December 23, 2015 at 9:00 CST

Action Items -

- Bob to submit invoice for December (including the two days of Sunday work) and submit an estimate of 2016 costs.
- Geotechnology to submit estimate of 2015 and 2016 cost.

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Demolition of building.

WB Koester:

One excavator loaded out material from the north ramp for use as protective cover. Two tractors transported the north ramp material to the crest of Ash Pond A. Two bulldozers graded the material into place.

At 1000 the excavator ceased loading material. The two bulldozers and two tractors with pans graded and shaped the protective cover.

In the morning and early afternoon part of the crew cleaned equipment.

At 1605 the site was prepared for end of the day.

SUBJECT: Weekly Summary Report for December 21, 2015 to December 25, 2015

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy. Work was performed on December 22, 2015, which had a high of 55^{o}F and a low of 41^{o}F

Construction Activities

Work was not performed December 21, 2015 due to wet conditions.

The site was winterized and erosion control structures improved on December 22, 2015.

Site work ceased December 22, 2015 until the spring. WB Koester and Geotechnology demobilized.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 1 dump truck (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds) (unused).

WB Koester had 5 employees working on site: 2 laborers, 1 mechanic, and 2 equipment operators.

Meetings

Project meetings were not held this week.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Additional materials were not used this week.

Testing/Sampling

Testing and sampling did not occur on site this week.

DATE: April 14, 2016

SUBJECT: Weekly Summary Report for April 4, 2016 to April 8, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site. The time covered in this weekly summary is April 6, 2016 to April 8, 2016, which is the period of time when Geotechnology had a representative on site.

Weather

The weather was generally cloudy with intermittent periods of rain. Work was not performed on Thursday, April 7, 2016 due to rain. Morning temperatures ranged from 35 F to 48 F. Afternoon temperatures ranged from 37 F to 47 F.

Construction Activities

Work was not performed April 7, 2016 due to rain.

Borrow material was transported for use as soil cover on Ash Pond A on April 6 and April 8, 2016.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds) (unused).

WB Koester had 5-6 employees working on site: 1 mechanic and 4-5 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The project coordination meeting was held on Wednesday, April 6, 2016. See the attached meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Borrow field soil was placed on Ash Pond A.

Vegetative cover soil was transported and stockpiled on site from Quality Lime Service on April 5 and April 6, 2016.

Testing/Sampling

Testing and sampling did not occur on site this week.

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings.

WB Koester:

Graded borrow field access and side slopes of Ash Pond A. Topsoil was stockpiled between coal yard and Ash Pond B. Started adding borrow material as cover ~1000. Added 10" cover material to complete three foot thick "roadway" across top of Ash Pond A from ramp to fill areas on Ash Pond A. Continued until rain-out at 1445. Ramps and roadways were graded periodically to prevent rutting.

Weekly progress meeting at 0900. Off-site members were not able to call in, so meeting was held with on-site personnel only.

Note: Directions provided relative to magnetic north and not plant north.

Quality Control Issues

- n/a

Electronic Filing: Received, Clerk's Office 09/28/2020

Schedule Compliance

- This week will get site in order (erosion control repairs, prep borrow area, prep topsoil stockpile area, prep Pond A). Started hauling topsoil in from off site. Total of approximately 2000 tons stockpiled yesterday. May start hauling borrow to Pond A to form the terraces today.
- Brandenberg pumping into Bottom ash pond until around April 8th. After that WBK should be able to dewater and grade the Bottom Ash pond.
- Other items for the spring: finish the downchutes/rip rap on pond A, finish the ditch north of pond A, place the aggregate on the roads, fix the road cuts with concrete, finish the piezometers, closure of the Pond B outlet with flowable fill (this may have already been done, Bob will check with Chris to make sure).
- Topo prior to topsoil placement was decided not to be necessary. Topo after topsoil placement is sufficient.
- Brandenberg will be working on site and in the way of the permanent fence until around the first week in June. WBK should plan on holding off on the permanent fence installation until then.

Cost and Budget Control

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy with intermittent periods of rain. Work was not performed on Monday, April 11, 2016 due to rain. Morning temperatures ranged from 37 F to 40 F and afternoon temperatures ranged from 56 F to 67 F.

Construction Activities

Work was not performed April 11, 2016 due to rain. Borrow material was transported for use as soil cover on Ash Pond A on April 12 through April 15, 2016. Protective cover was transported to the site by Quality Lime Service on April 15, 2016.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 2 excavators (1 Caterpillar 320B, 1 Caterpillar 308E), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 4-5 employees working on site: 1 mechanic and 3-4 equipment operators.

Meetings

The project coordination meeting was held on Wednesday, April 13, 2016. See the attached meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Borrow field soil was placed on Ash Pond A.

Topsoil was transported and stockpiled on site from Quality Lime Service on April 15, 2016.

Testing/Sampling

Jessie Hahn of Geotechnology collected one conformation sample of topsoil sourced from Quality Lime Service on April 14, 2016.

DAILY REPORT DATE: 04/13/2016

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

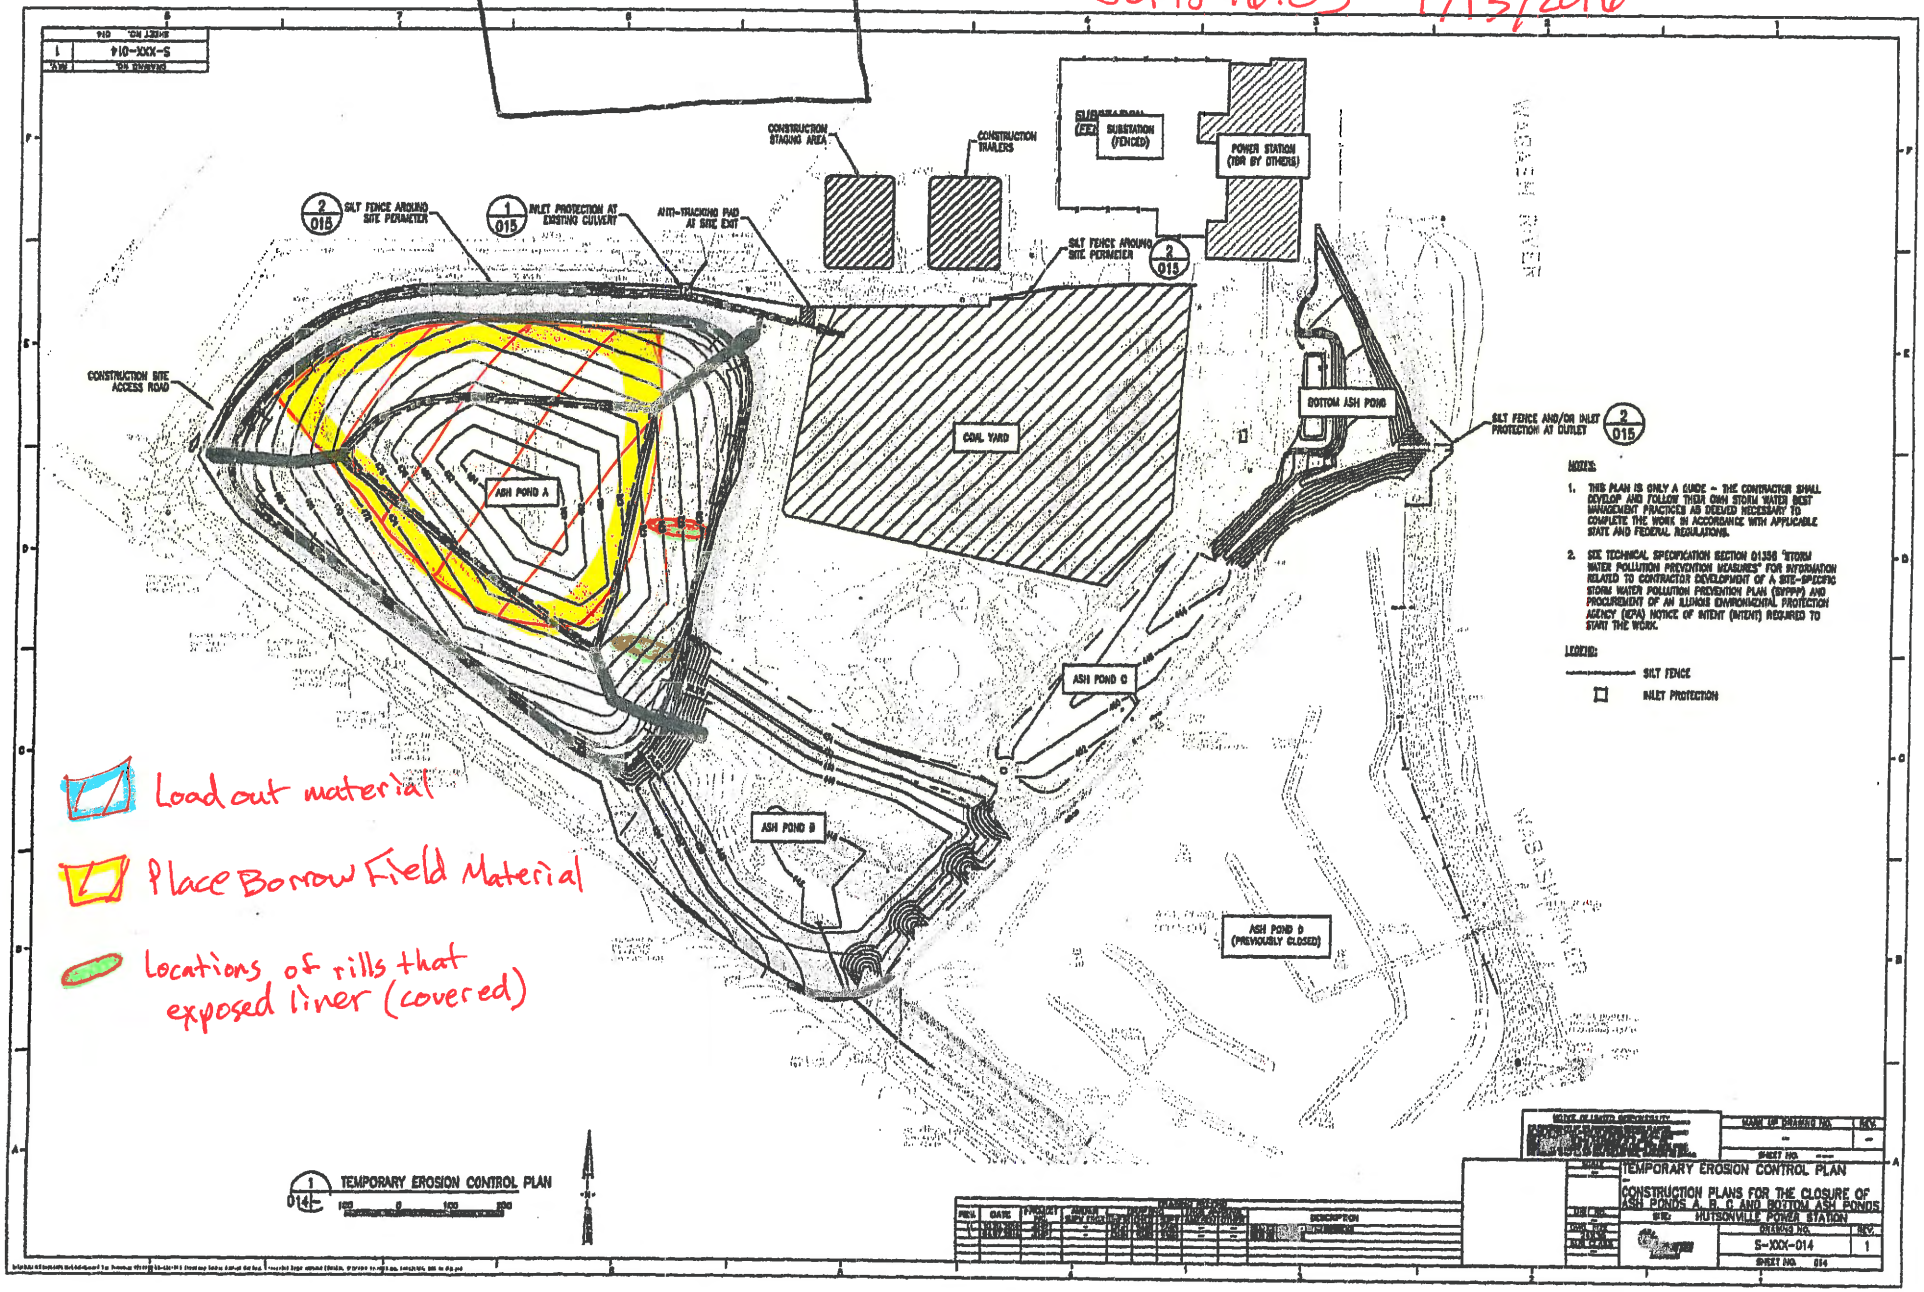
Brandenburg:

Ongoing demolition of buildings.

WB Koester:

One excavator loaded out materials from the borrow field. Two haul trucks transported borrow field material to Ash Pond A. One bulldozer spread and graded material on Ash Pond A.

At various times throughout the day, the bulldozer scraped and maintained the haul road to the borrow field and on Ash Pond A.



The project coordination meeting was held at 0900 in the Ameren trailer. See the meeting minutes for additional details.

At 1015, Jessie Hahn (Geotechnology) observed two locations where erosion rills had exposed the HDPE geomembrane on Ash Pond A. Hahn told Chris Atkinson (WB Koester) about the locations. Atkinson, operating a bulldozer, placed soil in the rills to cover the exposed geomembrane by 1045.

At 1530, transport of borrow field soil ceased. One backhoe scraped the roads and one broom cleaned the roads. The bulldozer continued to maintain and scrape the haul road on Ash Pond A.

- National Lining Systems sent email with missing QC data requested by Geotechnology, Inc. Bob to forward after meeting.

Schedule Compliance

- Started hauling topsoil in from off site. Total of approximately 3,200 tons stockpiled. Started hauling borrow to Pond A to form the terraces last week. Will continue starting again today.
- Due to river being up, Brandenberg pumping into Bottom ash pond until around April 25th. After that WBK should be able to dewater and grade the Bottom Ash pond.
- Downchutes/rip rap on pond A will likely start next week. May need to widen Pond C rip rap as it is still eroding around the rip rap.
- Placing topsoil on Pond A may start next week.
- Continue to fix erosion around ponds B and C, plan is to seed B and C when we seed pond A.
- Other items to be done: finish the ditch north of pond A, place the aggregate on the roads, fix the road cuts with concrete, finish the piezometers, closure of the Pond B outlet with flowable fill.
- Topo prior to topsoil placement was decided not to be necessary. Topo after topsoil placement is sufficient.
- Brandenberg will be working on site and in the way of the permanent fence until around the first week in June. WBK should plan on holding off on the permanent fence installation until then.
- Don will work on a preliminary punch list to see if there are any items we need to add to future schedules.

Cost and Budget Control

- n/a

Next Meeting Scheduled: April 20 at 9:00 CST

Action Items -

- Bob to send National Lining Systems email to Anna and Mike
- Don to prepare preliminary punch list and Bob to put those items on schedule.

DATE: April 26, 2016

SUBJECT: Weekly Summary Report for April 18, 2016 to April 22, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy with intermittent periods of rain. Work was not performed on April 21-22 due to rain. Morning temperatures ranged from 50 F to 52 F and afternoon temperatures ranged from 70 F to 80 F.

Construction Activities

Erosion repairs were performed on April 18. The borrow field was graded April 18-19. Borrow soil was transported to Ash Pond A on April 19. Vegetative cover was transported to the site by Quality Lime Service on April 18-20. Vegetative cover was placed on Ash Pond A on April 20. Work was not performed April 21-22 due to rain.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 1 excavator (Komatsu), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 7 employees working on site: 1 mechanic, 1 laborer, and 5 equipment operators.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The project coordination meeting was held on Wednesday, April 20, 2016. See the attached meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Borrow field soil was placed on Ash Pond A.

Topsoil was transported and stockpiled on site from Quality Lime Service. Topsoil from the stockpile was placed on Ash Pond A.

Testing/Sampling

Testing and sampling were not performed this week.

Weekly Progress Meeting

Meeting Minutes

Date: 4-20-16

Attendees:

Ameren: Don, Mike

WB Koester: Chris, Bob

Geotechnology, Inc.: Anna, John

Topics:

Safety/Housekeeping

- No accidents/near misses to report.
- Brandenberg will have 15 concrete trucks, 10-12 steel hauling trucks throughout the days so will need to keep an eye on traffic, especially when 12-15 topsoil trucks are delivering topsoil
- WBK has broom on site and will sweep roads when needed. WBK and Brandenberg have also been running water truck to help control dust.

Manpower

- Man hours
  - Start of Job (4-27-15) through 4-18-16
    - Total = 15,335 hrs.
- Next week expected manpower
  - WBK = 4 operators, 1 laborer, 1 superintendent (6 total)
  - Plan on working 5-10 hr days.
  - No Saturday or Sunday work.

Review old minutes and action items

- Jessie took topsoil sample on Friday, results likely in next Monday
- Don sent preliminary punch list to WBK.

Material Issues

- n/a

Quality Control Issues

- n/a

Schedule Compliance

- Continue to stockpile topsoil. Will start hauling topsoil to Pond A this week.
- Finished hauling out of borrow pit so have started reclaiming and regrading borrow pit.
- Repairing silt fence around sites.
- Mike asked Chris to regrade south end of coal yard where it is ponding water. Also said that the diversion channels on top of Pond A can be field fit to a certain extent to ensure water does not pond on Pond A.
- Due to river being up, Brandenberg pumping into Bottom ash pond until around May 2. After that WBK should be able to dewater and grade the Bottom Ash pond.
- Downchutes/rip rap on pond A will likely start this week. May need to widen Pond C rip rap as it is still eroding around the rip rap.
- Continue to fix erosion around ponds B and C, plan is to seed B and C when we seed pond A.
- Other items to be done: finish the ditch north of pond A, place the aggregate on the roads, fix the road cuts with concrete, finish the piezometers, closure of the Pond B outlet with flowable fill.
- Topo prior to topsoil placement was decided not to be necessary. Topo after topsoil placement is sufficient.
- Brandenberg will be working on site and in the way of the permanent fence until around the first week in June. WBK should plan on holding off on the permanent fence installation until then.

Cost and Budget Control

- n/a

Next Meeting Scheduled: April 27 at 9:00 CST

DATE: May 4, 2016

SUBJECT: Weekly Summary Report for April 25, 2016 to April 29, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy on days when work was performed. Work was not performed on April 27-29 due to rain and wet conditions. Morning temperatures ranged from 57 F to 63 F and afternoon temperatures ranged from 79 F to 80 F.

Construction Activities

The borrow field was graded April 25-26. Vegetative cover was transported to the site by Quality Lime Service on April 25. Vegetative cover was placed on Ash Pond A on April 25-26. Initial excavation of outfalls was performed on the Ash Pond A levee on April 26. Work was not performed April 27-29 due to rain and wet conditions.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 1 excavator (Komatsu), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 7 employees working on site: 1 mechanic, 1 laborer, and 5 equipment operators.

Geotechnology had one representative on site on April 25-27. Anna Saindon, Geotechnology's CQA officer, visited the site on April 29. Geotechnology did not have representatives on site on April 28 due to the wet conditions.

Meetings

The project coordination meeting was held on Wednesday, April 27, 2016. See the attached meeting minutes for additional information.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Topsoil was transported and stockpiled on site from Quality Lime Service. Topsoil from the stockpile was placed on Ash Pond A.

Testing/Sampling

Cassandra Baresel of Geotechnology collected one sample of vegetative cover soil from the soil from Quality Lime Service stockpiled on site.

Ongoing demolition of buildings.

WB Koester:

No equipment used – rain day

The weekly progress meeting was held on site at 1000. Refer to the meeting minutes for additional information.

One soil sample was collected from the stockpiled vegetative cover soil from Quality Lime Service on site by Cassandra Baresel of Geotechnology.

Electronic Filing: Received, Clerk's Office 09/28/2020

Weekly Progress Meeting

Meeting Minutes

Date: 4-27-16

Attendees:

Ameren: Don, Mike

WB Koester: Bob

Geotechnology, Inc.: Anna, Cassie

Topics:

Safety/Housekeeping

- No accidents/near misses to report.
- Brandenberg will have 15 concrete trucks, 10-12 steel hauling trucks throughout the days so will need to keep an eye on traffic, especially when 12-15 topsoil trucks are delivering topsoil
- WBK has broom on site and will sweep roads when needed. WBK and Brandenberg have also been running water truck to help control dust.

Manpower

- Man hours
  - Start of Job (4-27-15) through 4-25-16
    - Total = 15,578 hrs.
- Next week expected manpower
  - WBK = 4 operators, 1 laborer, 1 superintendent (6 total)
    - May downsize slightly when topsoil is finished.
  - Plan on working 5-10 hr days.
  - No Saturday or Sunday work.

Review old minutes and action items

- Jessie took topsoil sample on Friday, results show high on Boron, Cassie to grab sample to run TCLP on sample.

Material Issues

- n/a

Quality Control Issues

- n/a

Schedule Compliance

- Finished stockpiling topsoil for now. Started hauling to Pond A from stockpile. Mid next week (weather permitting) should have all topsoil hauled to Pond A and terraces shaped. May need more topsoil delivered if we are short.
- Finished hauling out of borrow pit so have started reclaiming and regrading borrow pit.
- Mike asked Chris to regrade south end of coal yard where it is ponding water. Also said that the diversion channels on top of Pond A can be field fit to a certain extent to ensure water does not pond on Pond A.
- Due to river being up, Brandenberg pumping into Bottom ash pond until around May 2. After that WBK should be able to dewater and grade the Bottom Ash pond.
- Excavation of Downchutes/rip rap on pond A started this week. Need to place rip rap next week. May need to widen Pond C rip rap as it is still eroding around the rip rap.
- Continue to fix erosion around ponds B and C, plan is to seed B and C when we seed pond A.
- Other items to be done: finish the ditch north of pond A, place the aggregate on the roads, fix the road cuts with concrete, finish the piezometers, closure of the Pond B outlet with flowable fill.
- Topo prior to topsoil placement was decided not to be necessary. Topo after topsoil placement is sufficient. Need to topo prior to seeding. Maybe 2nd or 3rd week in May.
- Brandenberg will be working on site and in the way of the permanent fence until around the first week in June. WBK should plan on holding off on the permanent fence installation until then.

Cost and Budget Control

- n/a

Next Meeting Scheduled: May 4 at 10:00 CST

Action Items -

- Cassie to grab another sample of topsoil to run TCLP test
- Anna to give Massman a heads up that we may need Pond A topo done around 2nd or 3rd week in May prior to seeding.
- Bob to check with Chris to see if we will do any more work on Pond A this week.

Electronic Filing: Received, Clerk's Office 09/28/2020

DATE: May 10, 2016

SUBJECT: Weekly Summary Report for May 2, 2016 to May 7, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally overcast on May 3-5 and clear on May 6-7. Work was not performed on May 4 due to rain. Morning temperatures ranged from 50 F to 58 F and afternoon temperatures ranged from 62 F to 65 F.

Construction Activities

The culvert cuts in the access road were repaved on May 3. Concrete was placed in the upstream end of the former Ash Pond B outfall pipe. The borrow field was graded May 6-7. Vegetative cover on Ash Pond A was graded May 3 and 5-7 and placed May 6-7. Various storm water drainage grading was performed each day. Work was not performed May 4 due to rain and wet conditions.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 1 excavator (Komatsu), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 4-7 employees working on site: 1 mechanic, 0-1 laborer, and 3-5 equipment operators.

Geotechnology had one representative on site on May 3-7. Geotechnology did not have representatives on site on May 2 due to the wet conditions.

Meetings

The project coordination meeting was not held on May 4, 2016 only involved on-site personnel. Meeting minutes are attached.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Topsoil from the stockpile was placed on Ash Pond A.

Testing/Sampling

Testing and sampling were not performed during the subject time period.

DATE: June 1, 2016

SUBJECT: Weekly Summary Report for May 9, 2016 to May 20, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the activities at the referenced site.

Weather

The weather was overcast and raining on May 9 and rained out the week of May 9-13, 2016. The weather was generally cloudy from May 18-20, and began raining on May 20. Morning temperatures ranged from 45 F to 58 F and afternoon temperatures ranged from 60 F to 70 F.

Construction Activities

Vegetative cover on Ash Pond A was dried on May 18 and placed on May 19-20. Washouts on Ash Pond A, B, and C were regraded. Geotextile and rip-rap was widened at the east outfall structure of Ash Pond C. Precast concrete collars were placed around the piezometers on Ash Pond A and filled with gravel.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 1 excavator (Komatsu), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 4-6 employees working on site: 1 mechanic and 3-5 equipment operators.

Geotechnology had one representative on site on May 9 and May 18-20. Geotechnology did not have representatives on site on May 10-13 or May 16-17 due to the wet conditions.

Electronic Filing: Received, Clerk's Office 09/28/2020

Meetings

The project coordination meeting was held on May 18, 2016. Meeting minutes are attached.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Topsoil from the stockpile was placed on Ash Pond A. Concrete rings and gravel were used around piezometers on Ash Pond A. Rip-rap was used along the stormwater down drains on Ash Pond A.

Testing/Sampling

Testing and sampling were not performed during the referenced time period.

DAILY REPORT DATE: 05/18/2016

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

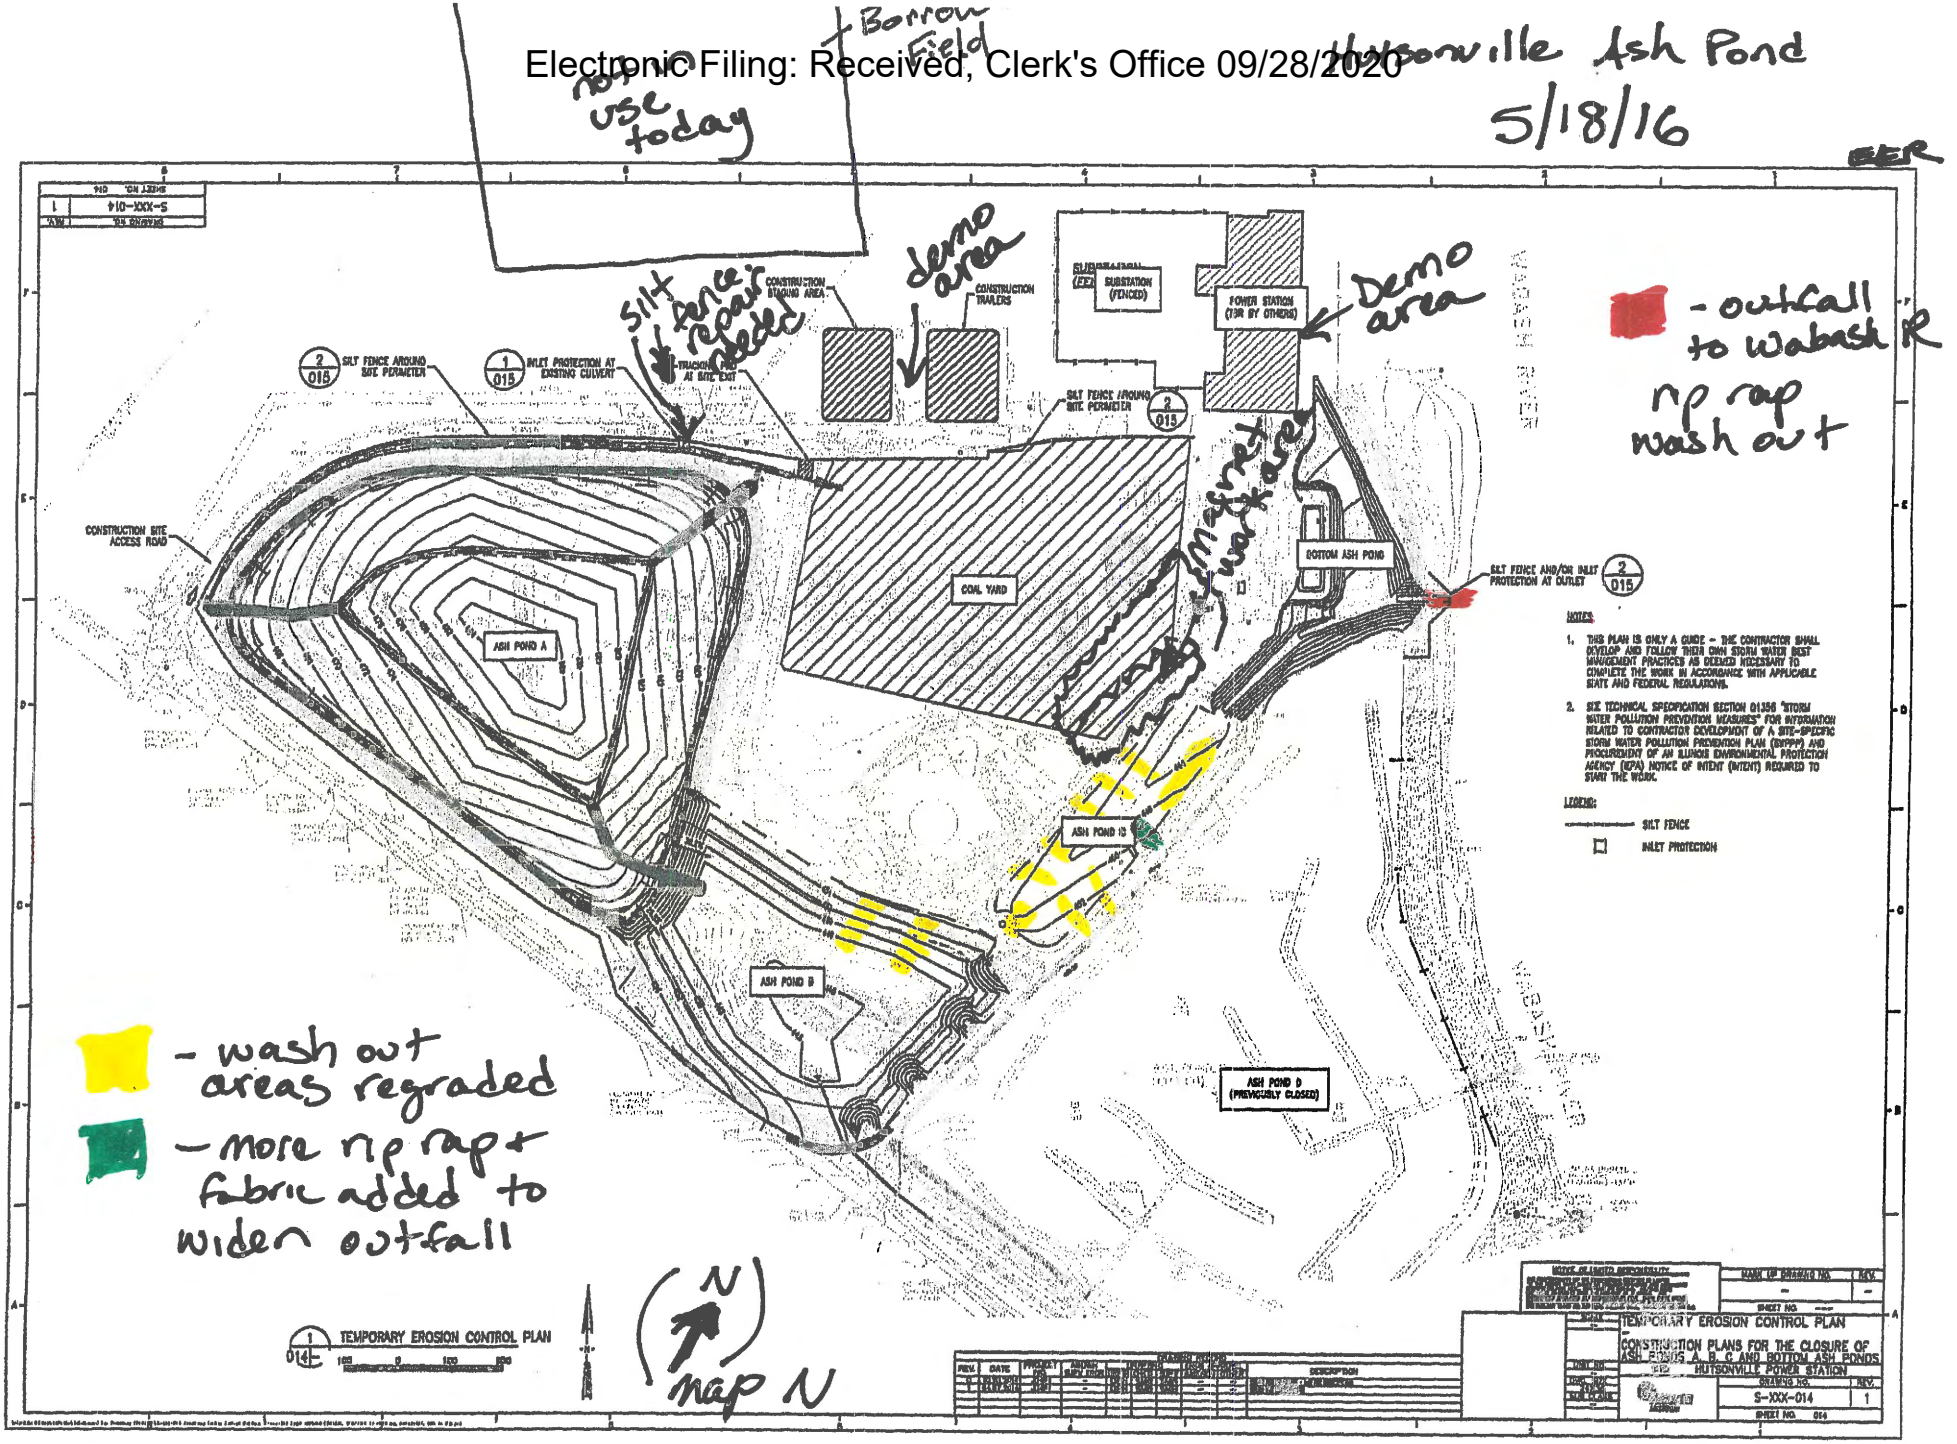
Brandenburg:

Ongoing demolition of buildings. Using large magnet to remove metal from soil in demolished area near east edge of coal yard near north end of Ash Pond C.

WB Koester:

Dozer tracking contour fill on top of Ash Pond A to help dry the soil in preparation for top soil placement tomorrow. Not much sun, light winds, and cool conditions are making for a slow drying process. No membrane exposures found when arrived on site.

Dozer re-graded Ash Pond B and C slope washout gullies.



Widened geofabric and rip rap at east outfall structure of Ash Pond C.

Geotechnology:

Attended site safety talk with Don Shaver and 9am construction meeting.

Site photos taken walking counter clockwise around site from job trailer area. Included silt fences in need of repair and areas that have been repaired. Also, areas where rip rap has been placed in one down chute at N corner of Ash Pond A. The other two at W and SE corners have been excavated, but geofabric and rip rap have not been placed. Some washouts of slopes observed in Ash Ponds B and C. Also, observed washout of rip rap of outfall at the Wabash River east of the Bottom Ash Pond exposing geofabric.

Topics:

Safety/Housekeeping

- No accidents or near misses to report.

Manpower

- Man hours
  - Start of Job (4-27-15) through 5-17-16
    - Total = 15,967 hrs.
- Next week expected manpower
  - WBK = 3 operators, 1 mechanic, 1 superintendent (5 total)
    - May downsize slightly when topsoil is finished.
  - Plan on working 5-10 hr days.

Review old minutes and action items

- Chris repaired silt fence and silt buildup. Will be updating erosion inspection forms.

Material Issues

- n/a

Quality Control Issues

- n/a

Schedule Compliance

- Chris will put the manhole sections over each piezometer this week if dry enough.
- Chris will also try and finish placing the rip rap at the downchutes this week.
- Topsoil delivered and stockpiled on site. Will get on Pond A this week and try and dry it out enough to place topsoil
- Brandenberg done with major pumping into Bottom ash pond but may still need to pump collected groundwater and rain water. Discussing constructing a ditch to the outfall so they don't have to use as much hose/pipe and not adding more water to the Bottom ash pons.
- Brandenberg will be working on site and in the way of the permanent fence until around the last week in June. WBK should plan on holding off on the permanent fence installation until then.

Cost and Budget Control

- Bob submitted invoice to Mike.

Next Meeting Scheduled: May 25 at 9:00 CST

Action Items -

- Chris to update erosion inspection reports.

FROM THE GROUND UP

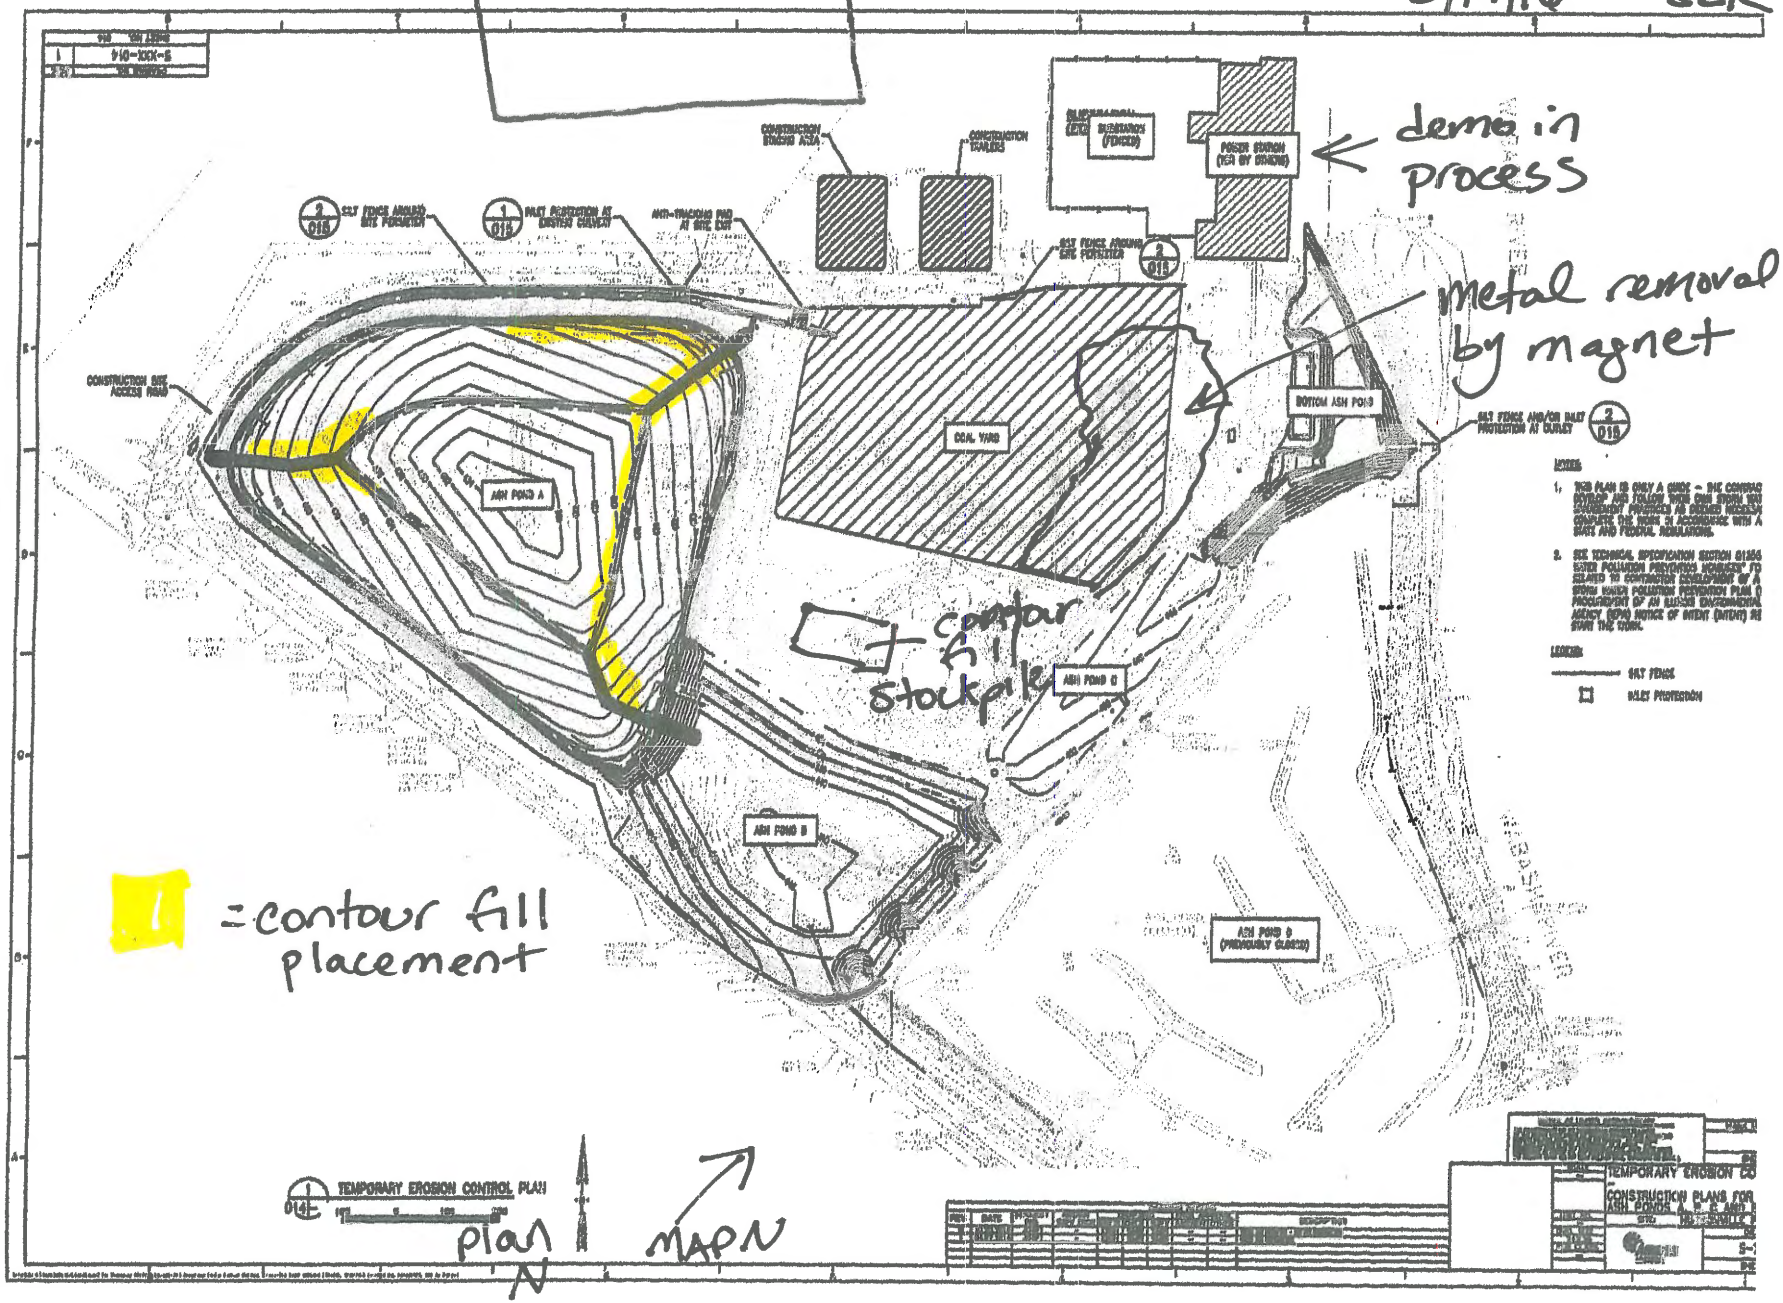
DAILY REPORT DATE: 05/19/2016

SITE ACTIVITIES, OBSERVATIONS, CONTACTS, AND ADDITIONAL NOTES:

Brandenburg:

Ongoing demolition of buildings. Using large magnet to remove metal from soil in demolished area near E edge of coal yard near north end of Ash Pond C.



WB Koester:

Hauling contour fill material to NE edge and drainage berms on top of Ash Pond A. Grading in with a dozer with onboard GPS for elevations (was told it is being graded .1" high). Disced the top for help with drying. Dressed up north borrow site. Pumping water to Wabash River outfall from Bottom Ash Pond.

Contour stockpile gone by 2:30 pm. Still need about 200 cyd to complete Ash Pond A to grade. Set concrete collars around piezometers with geofabric underneath.

SUBJECT: Weekly Summary Report for May 23, 2016 to May 27, 2016

PROJECT: Hutsonville Ash Pond A Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.05

The following is a weekly summary of the activities at the referenced site.

Weather

The weather was generally clear from May 23-25. Morning temperatures was approximately 65 F and afternoon temperatures ranged from 78 F to 80 F.

Construction Activities

Vegetative cover on Ash Pond A was placed and graded on May 23-25. Stormwater control structures were graded on Ash Pond A.

Equipment and Personnel On-Site

WB Koester had the following equipment on site: 1 excavator (Komatsu), 2 dump trucks (John Deere 400D), 2 bulldozers (Caterpillar D6N LGP with GPS), 1 backhoe (Caterpillar), 1 water truck (Caterpillar 623B) (unused), 3 Tractors (Case 435, Case STX480, Case 9370) with scraper boxes (Reynolds), and one broom.

WB Koester had 3-4 operators working on site.

Geotechnology had one representative on site on from May 23-25. Geotechnology did not have representatives on site on May 26-27 due to CQA not being required during that time.

Meetings

The project coordination meeting was held on May 25, 2016. Meeting minutes are attached.

Photographs

A photograph log with selected photographs obtained this week is attached.

Materials

Topsoil from the stockpile was placed on Ash Pond A.

Testing/Sampling

Testing and sampling were not performed during the referenced time period.

Weekly Progress Meeting

Meeting Minutes

Date: 5-25-16

Attendees:

Ameren: Don, Mike

WB Koester: Chris, Bob

Geotechnology, Inc.: Anna, John

Topics:

Safety/Housekeeping

- No accidents or near misses to report.

Manpower

- Man hours
  - Start of Job (4-27-15) through 5-24-16
    - Total = 16,219 hrs.
- Next week expected manpower
  - WBK = 3 operators, 1 superintendent (4 total)
  - Plan on working 5-10 hr days.
  - Monday May 30th is holiday. No work.

Review old minutes and action items

- Chris working on catching the erosion inspection forms back up.
- Anna says Massman on schedule to topo Pond A May 31st.

Material Issues

- n/a

Quality Control Issues

- n/a

Schedule Compliance

- Piezometers completed.
- Rip rap at the downchutes, outfall at river should be completed this week
- Topsoil delivery and placement on Pond A should be done this week in preparation for Massman surveying on Tuesday.
- Massman to survey the liner portion of Pond A as well as the down chutes and the lower berms to the toe.
- Roll off box will be on site today and Chris will proceed with the general clean up of the work site areas.
- Brandenberg done with major pumping into Bottom ash pond. WB Koester pumped pond down but the 3-4' of silt is very soft. Chris will the end berm down to grade and see if the silt will dewater. Mike and Anna say that the silt will need to be compacted to around 80-85% and then seeded. May take a while for sun and wind to dry material out enough to reach compaction needed.
- Brandenberg will be working on site and in the way of the permanent fence until around the last week in June. WBK should plan on holding off on the permanent fence installation until then.
- Don has been updating As built drawings.
- Another contractor will be on site next Tuesday to begin well abandonment.

Cost and Budget Control

- n/a

Next Meeting Scheduled: June 1 at 9:00 CST

Action Items -

- Chris to finish updating erosion inspection reports.

Electronic Filing: Received, Clerk's Office 09/28/2020

CQA CERTIFICATIONS

Electronic Filing: Received, Clerk's Office 09/28/2020

CQA CERTIFICATION
(Form CQAP-2.1)

The CQA certification as provided herein is based on a review of available inspection, testing and sampling results for the subject Work and is for the sole purpose of noting compliance of these results with established design parameters and taking no exceptions to initiation of new sequential Work. CQA certification by the Owner's Representative does not relieve the Contractor of its obligations to furnish all Work in accordance with the Contract.

1. LOCATION AND DESCRIPTION OF THE SUBJECT WORK:

Base Grade of Ash Pond A (prior to placement of geomembrane).

2. CONTRACTOR COMPLETING THE SUBJECT WORK:

WB Koester

3. NEW SEQUENTIAL WORK TO BEGIN:

Placement of Geomembrane.

RE: Hutsonville Bottom Ash **WorkOrder:** 15071241

Dear Vince Epps:

TEKLAB, INC received 1 sample on 7/22/2015 3:06:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: J019896.05 Hutsonville **WorkOrder:** 15090606

Dear Jessie Hahn:

TEKLAB, INC received 1 sample on 9/10/2015 3:20:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.05 **WorkOrder:** 15091079

Dear Anna Saindon:

TEKLAB, INC received 1 sample on 9/18/2015 3:35:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.05 **WorkOrder:** 15110660

Dear Anna Saindon:

TEKLAB, INC received 1 sample on 11/11/2015 2:39:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.06 **WorkOrder:** 15111371

Dear Anna Saindon:

TEKLAB, INC received 1 sample on 11/24/2015 9:48:00 AM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.05 **WorkOrder:** 15111370

Dear Anna Saindon:

TEKLAB, INC received 3 samples on 11/24/2015 9:48:00 AM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.06 **WorkOrder:** 15120342

Dear Jessie Hahn:

TEKLAB, INC received 1 sample on 12/3/2015 4:05:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Shelly A Hennessy

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	M -	Manual Integration used to determine area response
ND -	Not Detected at the Reporting Limit	R -	RPD outside accepted recovery limits
S -	Spike Recovery outside recovery limits	T -	TIC(Tentatively identified compound)
X -	Value exceeds Maximum Contaminant Level

RE: Hutsonville J019896.05

WorkOrder: 16041043

Dear Anna Saindon:

TEKLAB, INC received 1 sample on 4/15/2016 4:05:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Emily E. Pohlman
Project Manager

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon
B -	Analyte detected in associated Method Blank
E -	Value above quantitation range
H -	Holding times exceeded
I -	Associated internal standard was outside method criteria
J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response
ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits
S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)
X -	Value exceeds Maximum Contaminant Level

RE: J019896.05 Hutsonville

WorkOrder: 16041804

Dear Anna Saindon:

TEKLAB, INC received 1 sample on 4/28/2016 3:40:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Emily Pohlman

Emily E. Pohlman

Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Surr	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU)

Qualifiers

# -	Unknown hydrocarbon	B -	Analyte detected in associated Method Blank
E -	Value above quantitation range	H -	Holding times exceeded
I -	Associated internal standard was outside method criteria	J -	Analyte detected below quantitation limits
M -	Manual Integration used to determine area response	ND -	Not Detected at the Reporting Limit
R -	RPD outside accepted recovery limits	S -	Spike Recovery outside recovery limits
T -	TIC(Tentatively identified compound)	X -	Value exceeds Maximum Contaminant Level

Dear Ms. Saindon:

Thank you for consulting TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report of the laboratory testing for the sample(s) listed below.

Project:	**Ameren Hutsonville Power Station Closure**
TRI Job Reference Number:	E2401-99-04
Material(s) Tested:	Two, GSE 40 mil Textured HDPE Geomembrane(s)
Test(s) Requested:	Thickness (ASTM D 5994) Tensile Properties (ASTM D 6693) Puncture Strength (ASTM D 4833) Tear Resistance (ASTM D 1004)

If you have any questions or require any additional information, please call us at 1-800-880-8378

Sincerely,

Jarrett A. Nelson

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Ash Pond A**
TRI Job Reference Number:	**18725**
Material(s) Tested:	(19) Heat Fusion Weld Seam(s) (1) Single Extrusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

Jennifer Tenney
Project Manager
Geosynthetic Services Division
http://www.geosyntheticstestinc.com

The testing herein is based upon accepted industry practice as well as the test method listed. Test results reported herein do not apply to samples other than those tested. TRI neither accepts responsibility for nor makes claim as to the final use and purpose of the material. TRI observes and maintains client confidentiality. TRI limits reproduction of this report, except in full, without prior approval of TRI.

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Ash Pond A**
TRI Job Reference Number:	**18748**
Material(s) Tested:	(10) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

Jennifer Tenney
Project Manager
Geosynthetic Services Division

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Ash Pond A**
TRI Job Reference Number:	**18789**
Material(s) Tested:	(18) Heat Fusion Weld Seam(s) (1) Single Extrusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

Jennifer Tenney
Project Manager
Geosynthetic Services Division
http://www.geosyntheticstestinc.com

The testing herein is based upon accepted industry practice as well as the test method listed. Test results reported herein do not apply to samples other than those tested. TRI neither accepts responsibility for nor makes claim as to the final use and purpose of the material. TRI observes and maintains client confidentiality. Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Ash Pond A**
TRI Job Reference Number:	**18807**
Material(s) Tested:	(12) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

Jennifer Tenney
Project Manager
Geosynthetic Services Division

Dear Ms. Saindon,

Thank you for consulting with TRI/Environmental, Inc. (TRI) for your geosynthetics testing needs. TRI is pleased to submit this final report for laboratory testing.

Project:	**Hutsonville Ash Pond A**
TRI Job Reference Number:	**18835**
Material(s) Tested:	(8) Heat Fusion Weld Seam(s)
Test(s) Requested:	SAME DAY Peel and Shear (ASTM D 6392/GRI GM19/D 4437/NSF 54/882 mod.)

Codes:	
AD	Adhesion Failure (100% Peel)
BRK	Break in sheeting away from Seam edge.
SE	Break in sheeting at edge of seam.
AD-BRK	Break in sheeting after some adhesion failure - partial peel.
SIP	Separation in the plane of the sheet (leaving the bond intact).
FTB	Film tearing bond (all non "AD" failures).
NON-FTB	100% peel.

If you have any questions or require any additional information, please call us at 1-800-880-8378.
Sincerely,

Jennifer Tenney
Project Manager
Geosynthetic Services Division

INSTALLER CERTIFICATION

Electronic Filing: Received, Clerk's Office 09/28/2020

INSTALLER CERTIFICATE OF ACCEPTANCE
(Form CQAP-4.1)

INSTALLER: National Lining Systems **DATE :** 11/5/2015

GEOSYNTHETIC MATERIAL: 40 mil HDPE

AREA ACCEPTED:

Ash Pond D slope at the Bottom Ash Pond
(Panels 1D – 15D)

INSTALLER: The undersigned authorized representative of the Installer certifies that he has visually inspected the substrate for the above referenced area and has found the surface to be acceptable for installation of the above referenced geosynthetic material on the date so noted.

The Installer shall be responsible for the integrity and suitability of the finished geosynthetic material from this date to completion of the installation.

CERTIFICATION OF ACCEPTANCE:

Signature of Installer's Authorized Representative: [signature]

Printed Name of Installer's Authorized Representative: KhamKhoun Thaypravanh

Title of Installer's Authorized Representative: PM

Date: 11-5-15

CERTIFICATE OF ACCEPTANCE RECEIVED BY CQA OFFICER:

Signature of CQA Officer-in-Absentia (if applicable): [signature]

Printed Name of CQA Officer-in-Absentia: Jessie Hahn

Date: 11/5/2015

Signature of CQA Officer: _____

Printed Name of CQA Officer: _____

Date: _____

Electronic Filing: Received, Clerk's Office 09/28/2020

INSTALLER CERTIFICATE OF ACCEPTANCE
(Form CQAP-4.1)

INSTALLER: WB Koester **DATE :** 11/20/2015

GEOSYNTHETIC MATERIAL: Protective Cover

AREA ACCEPTED:

Ash Pond D slope

INSTALLER: The undersigned authorized representative of the Installer certifies that he has visually inspected the substrate for the above referenced area and has found the surface to be acceptable for installation of the above referenced geosynthetic material on the date so noted.

The Installer shall be responsible for the integrity and suitability of the finished geosynthetic material from this date to completion of the installation.

CERTIFICATION OF ACCEPTANCE:

Signature of Installer's Authorized Representative: [signature]

Printed Name of Installer's Authorized Representative: Chris Atkinson

Title of Installer's Authorized Representative: Foreman

Date: 11/20/15

CERTIFICATE OF ACCEPTANCE RECEIVED BY CQA OFFICER:

RADIOACTIVE SEALED SOURCE LEAK TEST REPORT

Test Date: March 20, 2015 Analytical Date: March 20, 2015

Source Identification:

Manufacturer: CPN Model No.: MC3

Mach S/N: M30059559

Radionuclide: Cs-137 Activity: 10.0 mCi

Source S/N: C9559

Radionuclide: Am-241/Be Activity: 50.0 mCi

Source S/N: A9559

Sample Submitted By: Kenneth Bachmann, Health Physicist

Facility: Geotechnology, Inc.

Address: 11 French Village Industrial Park

Fairview Heights, IL 62208

The identified sealed source listed above has been tested for leakage of radioactive materials as required by the United States Nuclear Regulatory Commission. The analysis of the wipe material used in testing the sealed source reveals the presence of $\leq 7.75 \times 10^{-5}$ µCi of loose contamination for Cs-137 and $\leq 3.13 \times 10^{-5}$ µCi of loose contamination for Am-241.

(X) This source is acceptable for continued use.

( ) This source has been found to have a level of loose contamination greater than 0.005 µCi of removable radioactive materials, and should be removed from service immediately.

(N/A) Operational and performance check of shutter mechanism satisfactory.

Nest Leak Test Date: September 20, 2015

Dear Mr. Wagstaff:

Attached is the Construction Quality Assurance report for the referenced site. This report covers the activities associated with the Ash Pond D closure at the Hutsonville Power Station in Crawford County, Illinois.

If you have any questions or comments regarding the attached information, please feel free to contact the undersigned at (314) 997-7440.

Very truly yours,

GEOTECHNOLOGY, INC.

HUTSONVILLE, CRAWFORD COUNTY, ILLINOIS

1.0 PROJECT BACKGROUND

The Ameren Energy Resources (Ameren) Hutsonville Power Station (Hutsonville) is at 15142 East 1900 Avenue, Hutsonville, Illinois. This report describes the completed Construction Quality Assurance (CQA) program for the Ash Pond D closure. The plan has been completed in general accordance with the coal combustion waste (CCW) surface impoundment closure requirements of 35 Illinois Administration Code (IAC) 840.146 entitled Construction Quality Assurance Program.

Ash Pond D was the primary disposal location for CCW generated from the Hutsonville coal fired power plant from 1968 to 2000. Reportedly, the CCW consisted primarily of fly ash and bottom ash, and was sluiced to Ash Pond D. Based on information provided by Ameren, Ash Pond D is estimated to contain between 800,000 and 850,000 cubic yards of ash.

In summary, the Ash Pond D Closure activities included: CCW subgrade grading, CCW subgrade compaction, placement of 40- mil high density polyethylene (HDPE), placement of a three-foot thick vegetative soil layer, vegetation, construction of surface water control structures, and construction of a groundwater collection system. The CQA Plan[1] required a scheduled program of monitoring, inspecting, sampling, and testing. The CQA Plan was used to evaluate compliance with the intent of the closure plans[2] and specifications[3]. This CQA report includes a summary of the site activities, construction observation, field-testing, laboratory testing, and surveying during the Ash Pond D closure. Presented in Appendix A are the weekly memorandums, daily reports, meeting minutes, and photograph logs. Presented in Appendix B are the CQA certifications.

2.0 SUBGRADE PREPARATION

Subgrade preparation began on March 28, 2012 and was completed on May 29, 2012. In summary, subgrade preparation activities consisted of deconstructing the geotubes (geotextile wrapped ash), spreading geotube material into Ash Pond D, grading ash and embankment materials, compacting the top one foot of subgrade material, performing compaction testing, and surveying the final subgrade elevations. In addition, the prepared subgrade was visually assessed by the CQA Officer to observe that the surface was relatively smooth and free of deleterious materials (i.e. jagged irregular shaped protrusions) that could damage the geomembrane.

2.1 Laboratory Testing

Four CCW bulk samples were obtained from the existing subgrade and two bulk samples were obtained from the existing embankment materials. Index testing (moisture content and Atterberg limits) was performed on select samples. Standard Proctor moisture-density relationship was performed on the six bulk samples. The laboratory test results are summarized and presented in Appendix C.

2.2 Subgrade Compaction

Nuclear gauge density tests were performed for the upper 12 inches of the prepared subgrade at the 100 foot surveying grid points provided on the site plans (refer to Table 2). The field density tests were compared to the standard Proctor moisture-density relationship laboratory test data (Appendix C) to provide information regarding subgrade compaction. The project specifications required the subgrade to be compacted to 90 percent of the maximum standard Proctor dry density. Areas of failed density tests were recompacted and retested as needed. Based on the laboratory test results and field density test results at the grid points, the subgrade was compacted in conformance of the CQA plan. The field tests are summarized in Table 2 and provided in the field observation reports in Appendix A.

2.3 Subgrade Survey

The subgrade was surveyed by a licensed surveyor. In addition, the subgrade was observed by the CQA Officer to check that the prepare slopes did not have sharp grade changes, depressions, or protrusions. Repairs were made to areas that did not meet these criteria, prior to geomembrane placement. A final as-built survey of the subgrade was performed. The results of the survey are illustrated and summarized on Sheet 1. After the soil liner was smooth drum rolled, certification of the survey data and general condition of the subgrade was provided by the CQA Officer prior to installation of the 40-mil HDPE geomembrane liner (Appendix B).

Electronic Filing: Received, Clerk's Office 09/28/2020

3.0 GEOMEMBRANE

After the subgrade was approved, geomembrane placement began on May 30, 2012 and was completed on June 16, 2012.

3.1 Prequalification Testing

The geomembrane manufacturer supplied an inventory list of 40-mil HDPE geomembrane rolls to the Owner and the CQA Officer. The geomembrane manufacturer submitted samples from the prequalification rolls to an independent geosynthetics laboratory for verification of selected manufacturer's guaranteed properties (presented in Appendix D). On each geomembrane roll selected for sampling, a 3-foot long sample was collected along the entire width of the roll.

In addition, the manufacturer submitted documentation that the materials supplied were tested for the parameters listed in the manufacturers list of guaranteed properties at the required testing frequency. The results of the testing, including identification of tested rolls, were submitted to the CQA Officer for review. The manufacturer certified that all rolls met the manufacturer's guaranteed properties, in accordance with the specified testing frequency rate (Appendix D).

Geomembrane prequalification testing was completed prior to delivery.

3.2 Installer Certification of Placement Surface

Prior to daily geomembrane placement, the geomembrane installer provided the CQA Officer daily "certificates of acceptance." The "certificates of acceptance" documented the geomembrane installer's inspection and acceptance of the prepared subgrade surface as being suitable for the geomembrane installation (Appendix D).

3.3 Seam Overlap Testing

The general contractor and geomembrane installer arranged the geomembrane panels in an orientation to reduce the number of field seams. Within the geomembrane footprint, seam overlaps were field measured by the geomembrane installer to verify that the required three inches of overlap was met for all seams. Seam overlaps were "shingled" in the direction of the downslope. The CQA Officer and field representatives made independent measurements of the seam overlaps for additional verification.

Electronic Filing: Received, Clerk's Office 09/28/2020

3.4 Non-Destructive Testing

The geomembrane installer performed non-destructive testing of seams at the frequency specified in the CQA Plan. The seams were non-destructively tested over the full-length using a vacuum test unit, air pressure test, or other methods (spark testing for geomembrane boots around vent pipes) approved by the CQA Officer. Vacuum testing and air pressure testing procedures are presented in Sections 3.4.1 and 3.4.2. Continuity testing was completed as the seaming progressed. The CQA Officer and field representatives observed the non-destructive testing performed by the geomembrane installer. The geomembrane installer submitted all non-destructive field-testing results to the CQA Officer (Appendix D).

3.4.1 Vacuum Testing (Extrusion Welds)

Extrusion welds are typically used for repairs and protrusions through the geomembrane. The following procedures describe vacuum testing of the extrusion welds.

Equipment

The following equipment was used:

- A vacuum box assembly consisting of a rigid housing, a transparent viewing window, a soft neoprene gasket attached to the bottom, a port hole or valve assembly, and a vacuum gauge;
- A vacuum tank and pump assembly equipped with a pressure controller and pipe connections;
- A rubber pressure or vacuum hose with fittings and connections;
- A bucket; and
- A soapy solution.

Procedures

The following procedures were followed:

1. The vacuum pump was energized and tank pressure was adjusted to approximately ten inches of mercury.
2. A strip of geomembrane approximately 12 inch wide by 48 inch long (an area larger than the coverage of the vacuum box) was wetted with the soapy solution.
3. The box was placed over the wetted area.
4. The bleed valve was closed and the vacuum valve opened.
5. Creation of a leak tight seal was verified.
6. The geomembrane was observed for at least 10 seconds through the viewing window for the presence of soap bubbles.

Electronic Filing: Received, Clerk's Office 09/28/2020

7. When bubbles were not observed after 10 seconds, the vacuum valve was closed, and the bleed valve opened. The box was moved to the next adjoining area, and the process was repeated.
8. All areas where soap bubbles appeared were marked, repaired, and retested until passing test results were obtained.

3.4.2 Air Pressure Testing (Double Fusion Welds)

Double fusion seams are typically used to fuse two panels of geomembrane together. The following procedures describe air pressure testing of double fusion welds.

Equipment

The following equipment was used:

- An air pump (manual or motor driven) equipped with pressure gauge capable of generating and sustaining a pressure of 25 to 30 pounds per square inch (psi) and mounted on a cushion to protect the geomembrane;
- A rubber hose with fittings and connections; and
- A sharp hollow needle.

Procedures

The following procedures were followed:

1. Both ends of the seam to be tested were sealed.
2. A needle was inserted into the tunnel created by the fusion weld.
3. A protective cushion was inserted between the air pump and the geomembrane.
4. The air pump was energized to a pressure between 25 psi and 30 psi. The valve was closed, and the pressure was sustained for a minimum of five minutes.
5. If loss of pressure exceeded 3 psi or did not stabilize, the leaking area was located, then repaired and retested until passing test results were obtained.
6. At the conclusion of a passing air pressure test, the opposite end of the seam was slit and the subsequent drop in pressure was observed. Our observation of the pressure drop indicated that the seam passed.
7. The needle was removed and the needle hole sealed.

Electronic Filing: Received, Clerk's Office 09/28/2020

3.5 Destructive Testing

Destructive seam tests were performed at randomly selected geomembrane locations as seaming work progressed. The purpose of the destructive seam tests was to evaluate seam strength. The CQA Officer and field representatives observed the destructive testing performed by the geomembrane installer.

The geomembrane installer submitted the results of the field destructive testing to the CQA Officer. An independent laboratory, selected by the CQA Officer, performed the destructive seam tests that included peel and shear strength testing. The destructive seam testing results (field-testing and independent testing) are presented in Appendix D.

3.5.1 Testing Location and Frequency

The geomembrane installer selected the destructive test locations where seam samples were removed for testing. In addition, the CQA Officer or field representative could select additional destructive seam sample locations at their discretion. Destructive seam test locations include random seam testing and areas of possible defects (excess crystallinity, contamination, offset welds, equipment malfunction). The destructive seam samples were collected and tested according to the requirements in the CQA plan.

3.5.2 Sampling Procedures

Destructive seam samples were obtained as the seaming progressed. This method was used to facilitate approval of the geomembrane results prior to covering the geomembrane with the next layer of the closure construction. The geomembrane installer assigned a number to each destructive seam sample and marked the location and seaming information on each collected sample. The destructive seam sample location was recorded on an as-built drawing. The explanation for taking the sample was also recorded. The locations of the destructive seam samples were repaired in accordance with the CQA Plan. The continuity of the repairs were subsequently vacuum tested.

3.5.3 Field-Testing

The geomembrane installer used a tensiometer to test ten 1-inch wide strips from each sample identified for destructive testing. In accordance with the CQA Plan, the field destructive tests consisted of five samples for peel adhesion and five samples for shear strength. Upon successful field-testing, the remaining destructive seam samples were qualified to be submitted for independent laboratory testing.

Electronic Filing: Received, Clerk's Office 09/28/2020

3.5.4 Laboratory Testing

Samples that passed the prequalifying field-tests were submitted to the independent testing laboratory. Ten specimens from each destructive seam sample were tested that included five shear strength tests and five peel adhesion tests. Laboratory testing was in accordance with "Standard Test Method for Determining the Integrity of Nonreinforced Geomembrane Seams Produced Using Thermo-Fusion Methods" (ASTM D 6392). Acceptance was based on the criteria outlined in the Geosynthetics Research Institutes (GRI) standard GRI GM19 as provided in the CQA Plan.

3.5.5 Procedures for Failed Destructive Tests

If a destructive sample did not pass either a field or a laboratory test, the geomembrane installer had two options to remediate the failure. The geomembrane installer could reconstruct and repair the seam between any two passed test locations completed by the same technician on the same day. Alternatively, the geomembrane installer could trace the welding path to an intermediate location at least ten feet from the failed test in either direction and take additional destructive seam samples. The additional samples were then field-tested prior to sending to the independent laboratory as previously described. If the additional samples passed, then the seam was reconstructed between the two passing samples. If the additional samples failed, then the process was repeated to establish the zone in which the seam should be reconstructed.

Reconstructed seams were bounded by two locations with passing laboratory destructive tests. In cases that exceeded 150 feet of reconstructed seam, a destructive sample was taken from the zone in the reconstructed area. The geomembrane installer documented the actions taken in conjunction with destructive test failures (Appendix D).

4.0 VEGETATIVE COVER

After a section of geomembrane was constructed and approved, three feet of vegetative cover (soil) was placed over the 40-mil HDPE geomembrane. Soil grading began on June 11, 2012 and was completed on October 4, 2012. The soil grading activities consisted of:

- Visually observing that the geomembrane surface was free of defects prior to soil placement,
- Removing deleterious materials (such as roots and rocks) from the soil that could damage the geomembrane,
- Spreading the soil over the geomembrane,
- Surveying the final subgrade elevations on the established 100-foot grid points,

Electronic Filing: Received, Clerk's Office 09/28/2020

- Calculating the difference between the ash subgrade and the final surface to confirm that a minimum of three feet of soil vegetative cover was present over the geomembrane.

In summary, the soil was placed in a 3-foot thick lift, which was brought to final grade in a second grading phase after the geomembrane surface was covered. The final surface survey data and calculated thickness is provided on Sheet 2. The vegetative layer (soil) installer's certificates of acceptance of the geomembrane are provided in Appendix E. Discussions of the soil placement are provided on the field observation reports presented in Appendix A.

After the vegetative layer was graded and the surface water management controls constructed, Ash Pond D was fertilized and seeded using synthetic mats, coconut mats, and hay as needed to establish vegetation.

5.0 SURFACE WATER MANAGEMENT

Berms and channels were constructed on the vegetative layer for surface water management. Construction of the berms and channels were observed and an as-built survey was performed. Concrete testing was performed on paved ditches along the west, south, and east Ash Pond D perimeter. In general accordance with the CQA Plan, concrete testing included slump testing, air entrainment, and compressive strength testing. One failed air entrainment test occurred on August 24, 2012, and the concrete plant was notified the same day. Subsequent air entrainment tests performed that day passed. The slump and air entrainment requirements for the paved ditches were adjusted from the original CQA Plan by the Ameren project manager and the design engineer, due to the paved ditches not requiring the same loading conditions as concrete in the roadway. A copy of the specifications is provided in Table 1.

A copy of the berm and channel survey data is provided on Sheet 3. Copies of the concrete test data are provided in Appendix C. Additional information on the field observations are provided in Appendix A.

6.0 GROUNDWATER COLLECTION SYSTEM

The groundwater collection system is designed to intercept and collect potentially impacted groundwater along the south side of Ash Pond A and Ash Pond D. This system is generally composed of a series of pumps, pump structures, collector pipe, discharge pipes, cleanouts, and other electrical and mechanical devises. Periodic field observations and visual observations of the connections in the groundwater collection system occurred and are included in Appendix A. The elevations of the collector pipe and dewatering sumps were field adjusted when bedrock was encountered, and surveyed for positive grade (Sheet 3). The groundwater collection system was commissioned on October 1, 2012.

Electronic Filing: Received, Clerk's Office 09/28/2020

7.0 SIGNATURES

As Construction Quality Assurance (CQA) Officer for the construction of the Ash Pond D Closure (from March 28, 2012 to October 16, 2012), located at the Ameren Energy Generating Company Hutsonville Plant in Hutsonville, Illinois, I am familiar with the plans and specifications and the CQA Plan as prepared and approved for the project, and it is my professional opinion that the construction was completed as described in this Report. CQA certification by the Owner's Representative does not relieve the Contractor of their obligations to furnish all Work in accordance with the Contract.

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: April 3, 2012

SUBJECT: Weekly Summary Report for March 26, 2012 to March 30, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny with temperature (°F) lows in the 50s and temperature highs in the 70s. Weather related delays did not occur.

Construction Activities

Equipment mobilization, vegetation removal, ash grading, and geotube demolition occurred this week. Vegetation was removed on the north side in quadrant A and B, and on the east and west areas between the geotubes and the embankments to facilitate grade staking and preparation for ash grading. Geotubes were broken open on the south and east sides in preparation for ash grading. Geotubes on the north side were cut open to dry over the weekend. Ash was moved from quadrant A and B to lower areas of quadrant A, and the northern portion of quadrant C. Grading began in quadrant C. Refer to attached daily reports and photograph log for additional information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Water Truck

Electronic Filing: Received, Clerk's Office 09/28/2020

Geotechnology, Inc. – Joe Cravens
Ash Management Systems, LLC (AMS) – Randy Porter, Jimmy Boone, and Robert Dunkley
Charah, Inc. – Joe Tasich
Belt Construction, Inc. – Shelby Belt, Jared Belt, Nick Walker, Kevin Flynn, and Brad Bolenbaugh
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, March 27, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached .

Materials

Ash in the geotubes and within the footprint of Ash Pond D was graded.

Testing/Sampling

Two ash samples were obtained to run Standard Proctor tests. Sample Ash 1 was obtained from the north side of Ash Pond D, and sample Ash 2 was obtained from the south side of Ash Pond D.

Calibration Records

Calibration information was requested from LAMAC Engineering Co., Inc. for their surveying equipment.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren UE | Date: 3/26/12

TIME: Arrive: 6:30 AM | Depart: 3:00 PM | Travel: 1.0 hr | Total: 9.5 hrs
Weather: Sunny, 70° | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: None

Site Activities / Observations / Contacts / Notes: Met with Randy Porter (AMS) and Joe Tasich, who works for Charah and is the Safety Specialist for AMS. Randy, AMS's Site Supervisor, gave me a tour of the Hutsonville Power Station and its ash ponds. At this time, Randy does not have any co-workers on site. There are three job trailers on site: 1- Geotechnology/Ameren, 2- AMS Randy's, and 3- AMS Employee's. Currently, there is no electric, data, or phone lines supplied to the trailers. Note: AMS will have three types of workers: 1- Operators, 2- Teamsters (truck drivers), and 3- Laborers. Along with the trailers, AMS has supplied Out Houses (porter potties), Dumpsters, and Smoking areas.

Met with Shelby Belt, Jared, and Nicky with Belt Construction. Belt brought out two pieces of equipment, 1- 325C Excavator and 2- D6N Dozer. Both pieces are Caterpillar (CAT) models. Full Names: Shelby Belt, Jared Belt, and Nick Walker. They went to the Newton Plant for badges.

Aside from Surveying and Mobilization, no work has been performed on site to date.

Note, the Power Plant will be completely shut down after Friday, March 30, 2012.

No. A 13762

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren UE | Date: 3/27/12

TIME: Arrive: 6:30 AM | Depart: 3:30 PM | Travel: 1.0 hr | Total: 10.0 hrs
Weather: Sunny, 50° AM, 75° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: None

Site Activities / Observations / Contacts / Notes: Progress Meeting 3/27/12: Attendees - Mike Wagstaff, Paul Zinsious, Jimmy Boone, Randy Porter, John Denham, Joe Tasich, Austin Ridgely, and myself. Key Components: Power to trailers needed, AMS will move the Employee trailer to join the other two, after plant shutdown on Friday, I will receive keys to all new locks (approx. 18 locks), and AMS will develop an evacuation plan for storm/hazard events.

Two pieces of equipment were delivered for Belt Construction: 1- 1812C John Deere Scraper or "Pan" by Robert Ryterski with Ryterski Trucking, and another 2- 1812C John Deere Scraper by Andrew Miller with ERB Trucking.

The coal pile will be used in Ash Pond D as Fill. The approx. 5000 c.y. of coal will be placed in the pond and covered with ash. The coal cannot come into contact with the overlying geomembrane. However, Mike, Paul, Austin, and myself discussed cleaning the entire lot where the coal was placed (i.e. the coal pile and 12"-18" of coal covering the lot would be put in the ash pond). Soil backfill would then be need to fill the entire lot, along with mulching and seeding. AMS will provide a cost to AER before preceding. The volume of coal and soil will be produced from areas calculated from aerial photos for cost.

Robert Dunkley, AMS's Teamster, arrived today and went through training with Joe Tasich.

Belt Construction delivered a CAT D6H Dozer and a John Deere 9520 Dual Wheel Tractor. They also brought a 4700 International work truck to be left on site. They will assemble their tractor and scrapers for the remainder of the day.

Additional Comments: Longer Hours are expected due to the delay of ash movement.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13763

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 3/28/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.5 hrs
Weather: Sunny, 65°AM, 75°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: CAT D6N Dozer, CAT D6H Dozer, CAT 325C Excavator, John Deere 9520
Site Activities / Observations / Contacts / Notes: Tractor, Two John Deere 1812C Pans, and Water Truck.

Two new operators arrived for Belt: Kevin Flynn and Brad Bolenbaugh. They went through training with Belt and AMS, and received their badges from the Newton Plant.

Robert Dunkley will primarily drive the Water Truck and the Bus. Nick Walker will primarily operate the 9520 Tractor with the two 1812C Pans. Jared Belt will primarily operate the D6N Dozer. Brad Bolenbaugh will primarily operate the D6H Dozer. Kevin Flynn will primarily operate the 325C Excavator. This is subject to change throughout the project.

Work began in Sections A and B, or the North end of Pond D. Both Dozers and the Tractor began stripping the grass and topsoil in order for the remainder of the North end of the Pond to be staked. The 100' grid was never finished due to the tall grass. Lamac will finish the grid after clearing. On the West side of the Pond, or the NW area of the geotubes, or Sections A and C, a geotube was broken to allow access from the South end of the Pond (the cleared end with the geotubes), to the North end of the Pond (the heavily vegetated end). As of right now, one gate on the West side is the only gate big enough for the equipment to enter, hence, the path between the geotubes was created. Pipe was laid in the entryway to act as a culvert and was covered. This pipe is only temporary to allow water to flow until excessive fill is placed in the center of the Pond.

The strobe light on the Water Truck was repaired. Randy will host thee safety meetings/day. Joe found two potential storm shelters in the event of a tornado. The operators will fill out weekly inspections. Electric Utility stopped by and will use existing pole for power. Will be setup next week. No word from Frontier about phone or data.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13764

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 3/29/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 11.0 hrs
Weather: Sunny, 50° AM, 70° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck

Site Activities / Observations / Contacts / Notes:

To continue from yesterday: The only entry for equipment into Pond D is on the West side of the Pond, in Section C, within the cleared area in between the geotubes. The NW area of the geotubes was cut to allow access to the North end of the Pond, in Sections A and B. The NW entryway was finished with Fill over the pipe from Sections A and B. However, during constructing, the tractor and pans got stuck in the entryway. They were pulled out with a dozer and the underlying pipe was not damaged. An entryway was also made on the NE side of the geotubes, similar to the NW entryway; with an underlying pipe to act as a temporary culvert, and Fill from the North end of Pond D. This will allow for more efficient grading with the tractor and pans, being able to make a circular route from Sections A and B to Sections C and D. Stripping the uncleared North end of the Pond continued, and the vegetation surrounding the perimeter of the geotubes was cleared. Belt began breaking the East side geotubes in Section D. They began placing Fill in Section C from Sections A and B, and they began grading Section C with a dozer.

Obtained samples for Proctors from the North and South end of the Pond. Leaking values on the Water Truck were fixed and dust control was started. Surveyors will come next Mon. or Tues. to finish staking the PGL, stake some cut areas, and stake all fill areas. Due to existing site features, the Fill will primarily consist of Fly Ash, but will also contain Bottom Ash, Geotube material, PVC, topsoil, grass, roots, and Coal. At this time, the wheels on the pans are to act as rollers. However, if compaction is not met, AMS will pursue using a sheepsfoot roller. After time restraints end for the SWP3, Work can proceed on the outer perimeter of the Pond.

Additional Comments: Same operators for the same equipment as yesterday's list.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13765

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 3/30/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.5 hrs
Weather: Sunny, 55° AM, 80° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck

Site Activities / Observations / Contacts / Notes:

The majority of Pond D has been cleared of vegetation, excluding the far East side of the Pond. The D6H Dozer continued grading Section C. The 325C Excavator finished breaking the East side geotubes and began breaking the South side geotubes. At the end of the day, the tops of the North side geotubes were ripped open to dry over the weekend. This area is critical of drying because it will contain the most Fill and the Coal, once the EWO is approved, will be placed in this area as well. The D6N Dozer continued grading Section A. The 9520 Tractor continued cutting the North area of Section A and B, and filled lower areas of Section A. In all areas where dozers graded, the tractor would pull the 1812C Pans in these areas to compact the disturbed soil.

They do not need a roller to compact the Base material until they approach the Base grade elevation, where 6" lifts are required in the upper 1.0 ft, and 90% of the Maximum Dry Density of the material is required. If compaction is not reached at the Base grade, they will have to use Steel or Tamped Foot rollers.

Note: Required PPE - Hard Hat, Steel-Toe Boots, Glasses with side protection, and bright shirts or vests. Reflective vests are only required when not wearing bright clothes or at night time (AMS).

Dust Control being performed. Along with Electric (AAA) next week, Frontier will be here April 3, at 10:30 AM for phone and data.

Additional Comments: Same operators for same equipment used as yesterday's list.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

04 WORKER PROTECTION ASSURANCE

2012-03-27	OPEN - no issues. LOTO for temporary electric for trailer.
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

05	**EMPLOYEE DRUG TESTING**	
	2012-03-27	OPEN - Belt Construction employees 3x tested negative [will begin work]. Scheduled testing for 1x teamster on 03-27 and 2x operators on 03-28. Reminder for 24 HR notice.
	2012-03-20	OPEN - Reminder to call ahead. All scheduling to Newton is to be coordinated reported to and coordinated by P. Zinsious. M. Wagstaff indicated AER pays for the drug test. Also if workers have copy of a drug test in the last 6x months, this will be acceptable. Lamac inquired about interns on site during the summer. No issue with AER or AMS as long as follows same CBT, drug testing, and badge as required for this project.
	2012-03-13	[No previous commentary]
06	**AMS SAFETY**	
	2012-03-27	OPEN - Portable toilets and hand wash stations on site and set up. Only smoking area is located at the employee trailer[s]. J. Cravens Geotechnology Construction Manager now full time on site. M. Wagstaff reviewed the program for J. Cravens list he gave him for the "anytime anyone see anything" safety program on site. J. Tasich general safety discussion.
	2012-03-20	OPEN - The switch gear area adjacent to the plant has bench mark within confines of the fenced area. If a surveyor or engineer requires entrance, they are to be escorted. M. Wagstaff indicated this switch gear area is not owned by AER, but by Ameren Illinois. All site access is to be coordinated through R. Porter. Geotechnology indicated training on 03-28 and/or 03-29. AMS to upcoming training 3x workers. M. Wagstaff discussed J. Cravens list he gave him for the "anytime anyone see anything" safety program on site. R. Porter indicated similar to AMS "brothers keeper".
	2012-03-13	NEW - no issues - no work on site. Training to begin on 03-22.
07	**HOUSEKEEPING**	
	2012-03-27	OPEN - no issues
	2012-03-20	OPEN - no issues
	2012-03-13	NEW - no issues - no work on site.
08	**PLANT ACCESS - CBT BADGE**	
	2012-03-27	OPEN - J. Denham concern over badge in/out at other plants and the change over required back to Hutsonville for those who go to other plants. M. Wagstaff indicated can still get a visitors badge, but he would provide J. Denham, J. Boone, and J. Tasich consultant's badge [where as "employee" of M. Wagstaff].
	2012-03-20	OPEN - R. Porter to get visitors badge if goes to other Ameren plants. When badge in/out workers are to watch the light on the swipe unit, not the green light above.
	2012-03-13	NEW - no issues - no work on site.
	[01] All employees are to be badged.	
	[02] All employees are to swipe in/out at the existing gate. This will remain active for project.	
	[03] Hauling contractor can swipe in once at beginning of their day, and out once at the end of their day.	
	[04] Employees without badge or not current are to go to Newton Power Station located at 6725 North 500th Street, Newton, IL 62447	
	[05] For option [extreme cases after push-back] AER has option of sending information to the corporate office. This is considered a last resort.	
	[06] M. Wagstaff to look into contact and schedule at the plant for CBT and drug testing.	
	[07] Key required by AMS for locks. Guard does not have key.	
	[08] Visitors over 1-2 days have to get badge. Visitor get escorted when on site.	
09	**VEHICLES ON SITE**	
	2012-03-27	OPEN - Fuel trucks [such as for Belt Construction] can be on work site. Park at trailer area. Only Geotechnology and AMS trucks allowed frequent access. For Lamac, vehicle allowed on site, but work in that area when they are surveying will be shut down.
	2012-03-20	OPEN - Employees to park in lot, ride AMS transportation bus to site and back from badge in area.
	2012-03-13	NEW - no issues - no work on site.
10	**OSHA LOG - WORK HOURS**	
	2012-03-27	OPEN - no workers on site except Site Manager and surveyor. Hours will be from previous Monday to Friday [the week].
	0,059.00	RT
	0,000.00	OT
	0,059.00	TOTAL
	2012-03-20	OPEN - no workers on site except Site Manager.
	0,000.00	
	0,000.00	
	0,000.00	
	2012-03-13	NEW - no issues - no work on site.

02 WORK HOURS

2012-03-27 OPEN - Standard hours

2012-03-20 OPEN - Standard hours

2012-03-13 NEW - no issues - no work on site.

03 OVER TIME

2012-03-27 OPEN - none projected

2012-03-20 OPEN - none projected

2012-03-13 NEW - no issues - no work on site.

04 TRAILER [AND GENERAL CONDITIONS]

2012-03-27 OPEN - Price form AAA Electric 03-28. AMS to move employee trailer adjacent to GEO trailer. No generators will be required for now. J. Tasich discussed the electric can be heavy wall SCH 80 conduit run on top the ground with gravel covering. Their could be issues with the Ameren Illinois requirement for the new pole height. M. Wagstaff to get with utility to review options.

2012-03-20 OPEN - Trailers on site. AMS has set 3x portable toilets with 2x hand wash stations. Units are "unisex". AMS will also set a storage container in the next week or so.

2012-03-13 NEW - no issues - no work on site. Employees trailer to be delivered 03-20. Some equipment to be delivered 03-13 and mobilized on 03-20.

07 PREVIOUS

01 SUBCONTRACTS

2012-03-27 OPEN - no issues

2012-03-20 OPEN - no issues

2012-03-13 NEW - no issues - no work on site.

02 SUBMITTALS

2012-03-27 OPEN - no issues

2012-03-20 OPEN - no issues

2012-03-13 NEW - no issues - no work on site.

08 MATERIAL

01 GENERAL

2012-03-27	OPEN - Lamac to take few more elevation shots in coal yard.
2012-03-20	OPEN - Discussion on the remaining coal pile volume, Lamac survey show approximately 3,500 CY. If area around coal pile considered to level, 3,780 CY. Coal has to be placed in the bottom of the APD, as it cannot come in contact with the liner. The schedule will need to be adjusted to account for this activity. This area may also require top soil and seeding.
2012-03-13	NEW - no issues - no work on site.

09 ADJACENT PROPERTIES

01 GENERAL

2012-03-27	OPEN - General discussion. AMS in process of reviewing subcontractors for the Perforated Collector Pipe [PCP]. When subcontractor is approved, then excavation plan will be published. AMS reiterated that if it is not necessary, the area will not be used. General consensus to "wait and see" as the scope of work is not until June.
2012-03-20	OPEN - Lamac surveyed are of License Agreement and found path of irrigation unit extends into this area. Lamac provided drawing of the wheel arc in the area. Work is scheduled in this area in June, and AMS indicated that if it is not necessary, the area will not be used. A. Ridgely indicated there is a cable in the field the irrigation unit follows. No action required at this time. When excavation plan has been created, AMS will review again. Survey stakes currently will be left in the area.
2012-03-13	NEW - General discussion regarding the adjacent Wampler Farmland. J. Denham indicated before we do anything in that area 24 HRS notice will be given.

10 QUALITY CONTROL

01 GENERAL

2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

02 ASH

2012-03-27	OPEN - no issues. AMS to proceed with mixing in the "topsoil" found within the Ash Pond D into the fill. [Note: This is as noted in previous contract documents]. Reviewed the topographic survey by Lamac. A. Ridgley indicated the topo on the [AER] drawings Land Lamac survey were very close and AER engineer probably used "LiDAR" [Light Detection and Ranging], an [optical] scanning process. The delta in the survey is about 5,000 CY. Drawing will be created fro EWO baseline.
2012-03-20	OPEN - no issues. Lamac topographic survey of the ash pile was within 300 CY of the Massmann aerial survey. A. Ridgely indicated variation could be due to the actual in place fluctuations in elevation in between survey points. The delta in volume is considered almost a "wash".
2012-03-13	NEW - no issues - no work on site.

03 CLAY

2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-03-27	OPEN - No significant changes. AMS to update. General discussion 2012-10-11 good end [substantial completion] date.
2012-03-20	OPEN - Review of general and critical path schedules provided by AER. General discussions of rain days and how budgeted into the schedule calendar. The end date has been extended to 2012-10-11, and is acceptable to Ameren. The primary driving factor at this item is the seeding in the fall of the cap.
2012-03-13	NEW - no issues - no work on site.

02 TIME AND MATERIAL

2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

03 COORDINATION

2012-03-27	OPEN - J. Cravens and R. Porter to monitor the access to the site as team. M. Wagstaff to notify the team of any AER personnel or entity coming to the site or who should badge in. The concern was knowledge of who has permission to come on site once security is gone.
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-03-27	OPEN - General discussion items for EWO [Potential change Orders - PCO] ash cap, coal pile, pipe [in berm], surveying, and utility change. If excavating the trench in Pond A is just a few hours, AMS would not charge for this work.
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site. AMS request tax exemption clarification.

02 AMS PAY APPLICATION

2012-03-27	OPEN - no issues. J. Denham we will have pay app this month.
2012-03-20	OPEN - no issues
2012-03-13	NEW - no issues - no work on site.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-30-27

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers.
[17] ACAD files to AMS [CLOSED - AER transmitted disc]
[18] AER to print full size schedule [CLOSED]
[19] Flood plain permit [CLOSED - AMS will publish AER info]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

2012-30-20

[03] Fire protection [OPEN - where to go for high winds or tornado]
[13] Wetlands permit application by Hanson [CLOSED - non-issue. Hanson reviewed, AER issued e-mail.]
[14] Keys for locks [CLOSED - AMS has keys]
[15] Provide new safety SPOC [CLOSED - M. Wagstaff is safety SPOC]
[16] Tax exemption clarification [CLOSED - AER will renew when dates reaches close to expiration]
[17] ACAD files to AMS [OPEN - AER to send disc]
[18] AER to print full size schedule [NEW]
[19] Flood plain permit [NEW - AER provide copy of the permit via e-mail]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

2012-30-13

[01] Security procedures after 2012-03-01 [CLOSED – badge in/out at gate]
[02] Vehicle tag requirements [CLOSED - not required]
[03] Fire protection [OPEN - where to go for high winds or tornado]
[04] Water source [possible use of 1MG tank on site] [CLOSED – approved for use – RFI response]
[05] Severe weather procedure [gathering place] [CLOSED - approved as submitted – RFI response]
[06] Provide existing site survey [after ash placement in PAD] [CLOSED – AER submitted]
[07] Information for "ftp" site [CLOSED]
[08] Revised drawings [CLOSED – AER has published]
[09]Tax exemption [CLOSED – AER has published]
[10] Telephone hookup in trailer area. [CLOSED - data line to be provided]
[11] Fencing specification [CLOSED - response to RFI].
[12] Investigate if AER requires copy of borrow site agreement. [CLOSED - AER not requiring]
[13] Wetlands permit application by Hanson [NEW]
[14] Keys for locks [NEW]
[15] Provide new safety SPOC [NEW]
[16] Tax exemption clarification [NEW]
[17] ACAD files to AMS [NEW]

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-03-27

[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run .
[06] RFI-01 roadway clarification [OPEN - AER sent e-mail, AMS to check]
[16] Submittal log [OPEN - AMS submit EOW] [In progress]

2012-03-20
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – revised ash placement price within week]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – AMS to create PCO, line will have to be lowered, manhole will have to be cut into. Lamac to shoot elevations of pipe at manhole.
[06] RFI-01 roadway clarification [OPEN - AER sent e-mail, AMS to check]
[11] AER request each Subcontractor to have their lead person with 30HR. AMS to create RFI. [CLOSED - AER not requiring sub supervisors to have 30 HR]
[14] Issue log [CLOSED - information to PCO and RFI]
[15] Check on drawing distribution for Lamac. [CLOSED - Lamac sent e-mail drawings were received]
[16] Submittal log [OPEN - AMS submit EOW]
[17] HDPE QA/QC [CLOSED - liner subcontractor to submit - Geotechnology to provide lab information]
[18] Last two weeks close out [CLOSED - reviewed at Ameren scheduling meeting]

2012-03-13
[01] Calculate water requirements [CLOSED – AER has submitted in RFI]
[02] Coordinate with AER safety – Mr. Richard Spurgeon [CLOSED - AER provide contact].
[03] Set up survey meeting [CLOSED – meeting 2012-02-29]
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – further disc.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – further disc.]
[06] RFI-01 roadway clarification [OPEN - RFI to be submitted]
[07] RFI-02 12 IN bridge lift on geomembrane [CLOSED - RFI to be submitted]
[08] Provide NMA information [CLOSED – J. Denham to attend Building Trades Meeting 03-01]
[09] Coordinate liner approval [CLOSED – information submitted]
[10] E-mail radio channel frequency requirements [CLOSED – in specifications]
[11] AER request each Subcontractor to have their lead person with 30HR. AMS to create RFI.
[12] Provide trailer information. [CLOSED]
[13] SWP3 for Ash Pond D Closure submittal. [CLOSED]
[14] Issue log [NEW]
[15] Check on drawing distribution for Lamac. [NEW]
[16] Submittal log [NEW]
[17] HDPE QA/QC [NEW]
[18] Last two weeks close out [NEW]

15 PRODUCTION

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: April 9, 2012

SUBJECT: Weekly Summary Report for April 2, 2012 to April 6, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny, but became cloudy with rain beginning the evening of April 4, 2012, continuing to the morning of April 5, 2012. Temperature (°F) lows ranged from 40 to 65°F, and temperature highs ranged from 55 to 80°F. Earthwork was not performed on April 5, 2012, due to wet site conditions.

Construction Activities

Ash grading and geotube demolition occurred this week. The remaining geotubes on the west portion of Ash Pond D were broken open in preparation for ash grading. All of the geotubes on-site have been broken. Ash was moved from quadrant A and B to lower areas of quadrant A, quadrant B, and the northern portion of quadrant C. Grading occurred in quadrants A, C, and D. On April 2, 2012, the CAT D6N bulldozer got stuck in quadrant D (between the broken geotubes and the east embankment). The CAT 325C excavator was used to pull the dozer out. A Lessons Learned/Near Miss Report was developed by AMS and is included with the daily reports. Refer to attached daily reports and photograph log for additional information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator

John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Water Truck

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, and Jimmy Boone
Charah, Inc. – Joe Tasich
Lamac Engineering – Austin Ridgely
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Shelby Belt
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, April 3, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash in the geotubes and within the footprint of Ash Pond D was graded. The geomembrane is estimated to be delivered in early May 2012.

Testing/Sampling

Two ash samples were obtained to run Standard Proctor tests. Sample Ash 3 was obtained from the west side of Ash Pond D, and sample Ash 4 was obtained from the east side of Ash Pond D.

Calibration Records

Calibration information was not obtained this week. LAMAC will provide calibration information for their total station in approximately one week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13766

FIELD OBSERVATION REPORT

Representative: Joe Cravens
Project No.: J019896.01 Task: 2370
Equipment & ID No.: —
Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 Zone: —
Client: Ameren ER Date: 4/2/12

TIME: Arrive: 6:30 AM Depart: 4:45 PM Travel: 1.0 hr Total: 10.75 hrs (0.5 hr for lunch/safety)
Weather: Sunny, 65° AM, 80° PM Contractor: AMS Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck

Site Activities / Observations / Contacts / Notes:

The D6H continued grading Section C, as well as the Southern portion of Section A. The 9520 continued cutting the high areas of Section A and B, and filling the low, SW area of Section A. The D6N began grading Section D, where the geotubes have already been broken. The 325C continued breaking the South end geotubes, along with spreading the material out from the already broken East side geotubes.

The batteries in the Water Truck were replaced. Fittings were replaced in the hitch connecting the 1812C Scrapers. Dust Control being performed on a daily basis. Randy and I raised the Fill stakes for the operators. The fuel truck came to fuel equipment and tanks. A Konex Trailer was delivered for AMS for storage. Belt also brought a small trailer for their own use. Lomac, AAA, and Frontier will be on site tomorrow.

D6N Dozer - Jared (Belt)
D6H Dozer - Brad (Belt)
325C Excavator - Kevin (Belt)
9520 Tractor - Nick (Belt)
1812C Pans - Nick (Belt)
Water Truck - Robert (AMS)
School Bus - Robert (AMS)
AMS Chevy Pickup - Numerous

The D6N got stuck in Section D, East of the geotubes near the ponded water. The 325C pulled the dozer out, but then got stuck in the same area. They had to bring out cables and mats to get the 325C out. After the excavator buried itself passed the cab with only using the mats, the D6N pushed the mats under the tracks, and pulled it out. After, they used water hoses on the Water Truck to clean the excavator. This incident happened from approx. 1:30 PM to 4:15 PM.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13767

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/3/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.5 hrs (Did paperwork through lunch)
Weather: Sunny, 55° AM, 85° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes: Due to the incident regarding the 325C Excavator getting stuck in Section D, between the broken geotubes and the East embankment, AMS issued a Near Miss Report. This area will be avoided during Earth Work until a plan is developed by Randy and Paul, regarding remediation so this incident doesn't occur again. This could lead to a possible PCO or EWO if undercutting and decanting is Required. AMS will provide a proposal to AER before commencing work. Report will go towards "Lessons Learned". Austin Ridgely with Lamac was on site to finish staking the PGL around Pond D. He also staked more cut and fill locations for the 100' grid. I should receive a Cert. of Calibration for Lamac's Total Stations by the end of this week. Austin will convert Northing's and Easting's for the PGL and 100' grid system into Lat. and Long. and forward to Geotechnology. AAA Electric was here to setup a Disconneect from the existing power pole, and branch off hard wiring to the trailers in conduit from an A-Frame. All work performed is OSHA approved. AMS Employee trailer will be moved tomorrow, adjacent to the other trailers. Electric will not be on until Thursday, when local utility installs a meter for hard wiring. The potential storm shelter, selected by Joe T., is still awaiting approval. The HDPE to be used on site is currently in Houston, TX. It will be mobilized to the site within 30 days. The Coal Pile issue is still not approved. An EWO was submitted, but may not go through. The SWP3 time constraint has passed; erosion control can begin. AMS will build a large entry sign, regarding procedures and contacts for visitors, when Randy and I are away from the trailers. AMS will consistently provide a temporary berm around Pond D to prevent drainage into Wabash River. 325C continued breaking geotubes. 9520 continued cutting and filling Section A and B. D6N and D6H continued grading Section A, C, and D. Paul and Jimmy were on site to view the wet area on the East side of Pond D.

Additional Comments: Mike is trying to issue myself a stamp for submittals and deliveries.

ORIGINAL - FILE COPIES: 1-JOB SITE 1-ACCOUNTING

Frontier arrived to install phone lines, no data yet.

Same operators for same equipment as listed on 4/2/12.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13768

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/4/12

TIME: Arrive: 6:30 AM | Depart: 4:15 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.25 hr for lunch/safety)
Weather: Cloudy, 55° AM, 70° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck

Site Activities / Observations / Contacts / Notes:

The 325C finished breaking the West end geotubes. All of the geotubes have now been broken in Pond D. The 325C then continued to spread out the geotube material across the southern portion of the Pond, excluding the broken, North end geotubes. These will remain in place since they are located in the greatest Fill area. The D6H continued grading Section C and D. The D6N graded different areas across the Pond in all four Sections. The 9520 continued cutting the north areas of Section A and B, and filling the southern areas of Section A and B. Little fill has been placed in the Center of the Pond. This is because AMS is still awaiting confirmation whether to use the Coal Pile or not.

Shelby Belt came on site to view the wet area where the excavator was stuck. AMS is still developing remediation procedures for this area. The wet area, between the East end broken geotubes and East embankment, runs from approx. Sta. 10+00 to 17+00. This wet ash shows that even though there is no geosynthetic liner, the clay liner below was constructed well.

Two samples were obtained for Standard Proctor tests from the west and east ends of the Pond. AMS's Employee trailer was moved adjacent to the other two trailers on site. AAA finished installing Electric and local utility installed the meter. Frontier hooked up the second phone line. There is still no internet on site. The existing drainage pipes from under the geotubes were moved to the Yard. The crane mats and cable still remain on the East end of the Pond.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13769

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/5/12

TIME: Arrive: 6:30 AM | Depart: 1:30 PM | Travel: 1.0 hr | Total: 8.0 hrs
Weather: Rain, 50° AM, Cloudy, 60° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: None.
Site Activities / Observations / Contacts / Notes:

Rain Day - The site was too wet for earthwork. No Production in Ash Pond D.

Kevin Flynn, Brad Bolenbaugh, and Robert Dunkley did not come to the site.

Jared Belt and Nick Walker did routine maint. on their equipment. They also put up an orange fence around an above ground pipe, located next to the proposed Coal Route. Still awaiting approval from AER to move the coal.

No lunch or safety meetings took place today, strictly paperwork and phone calls.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13770

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 4/6/12

TIME: Arrive: 6:30 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10.25 (installed software through lunch)
Weather: Sunny, 40°AM, 55° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes:

Work Proceeded; the majority of the site was dry enough to move Ash. The 325C continued spreading out geotube material in Section C and D. The 9520 continued cutting and filling Section A and B. The D6H continued grading Section C and D. The D6N continued grading Section A and D. The site is looking much more uniform.

Randy estimates they have moved approx. 23,848 CY of ash to date. (Half of org. proposed)

Randy probed for the outfall pipe (HDPE 18") from Ash Pond B to the manhole located East of Pond D, near the outfall structure. The depth ranged from 2' to 4'.

CB's are now installed in the trailers for communication with the operators. 2-way radios are put together and charging.

Ash Sample locations

Electronic Filing: Received, Clerk's Office 09/28/2020

AMS
Ash Management Services

Lessons Learned/Near Miss Report

Project: Hutsonville Ash Pond Closure

Site Manager: Randy Porter

Date of Incident: April 2, 2012

Details of Incident: Excavator that was being operated by Kevin Flynn was traveling across the east side of Ash Pond D at about 1:30 pm when the left track sunk without warning

Repairing the Problem Encountered: *crew immediately got and placed the mats under the tracks, one under each track being pushed underneath by dozer while excavator held the front of the tracks up by pushing down with the bucket. Crew also placed the third mat cross way under the mat that was long ways under the track. This process made the back of the tractor sink down further, but by doing this process it gives a stable ramp for excavator to be pulled out by dozer. After a safety brief and going over the safe start and hazards of the task along with the inspection of proper rigging equipment. The excavator come out without further incident. Joe Tasich ,Charah Safety Specialist was on site and Joe Cravens who is representing Ameren was also on site. Once machine was stabilized with mats Jimmy Boone was notified.*

Damage or Injury: *there was no damage to the machine or any injuries*

Lessons Learned: do not work in the east side of Ash Pond D with excavator unless on a minimum of five mats, after revaluating the scope of work to be performed in this area with Jimmy Boone and John Denham

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-04-03	OPEN - no issues. CORRECTED THE NUMBERING FOR THIS TOPIC
2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues

02 WORKER PROTECTION ASSURANCE

2012-04-03	OPEN - no issues [electricians working on temporary power 04-03] Meter based LOTO by AMS. R. Porter did not want any work "hot" if meter base was to be put in. M. Wagstaff to contact Ameren Utilities for the meter, and come on site Monday or Thursday [see also action item].
2012-03-27	OPEN - no issues. LOTO for temporary electric for trailer.
2012-03-20	OPEN - no issues

03	**EMPLOYEE DRUG TESTING**	
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - Belt Construction employees 3x tested negative [will begin work]. Scheduled testing for 1x teamster on 03-27 and 2x operators on 03-28. Reminder for 24 HR notice.
	2012-03-20	OPEN - Reminder to call ahead. All scheduling to Newton is to be coordinated reported to and coordinated by P. Zinsious. M. Wagstaff indicated AER pays for the drug test. Also if workers have copy of a drug test in the last 6x months, this will be acceptable. Lamac inquired about interns on site during the summer. No issue with AER or AMS as long as follows same CBT, drug testing, and badge as required for this project.
04	**AMS SAFETY**	
	2012-04-03	OPEN - AMS submitted "Lessons Learned/Near Miss Report": Summary: Excavator was traveling across the east side of Ash Pond D when the left track sunk without warning. After a safety brief and going over the safe start and hazards of the task along with the inspection of proper rigging equipment, work proceeded to remove the excavator. The excavator come out without further incident. J. Tasich was on site and J. Cravens. There was no damage to the machine or any injuries. No work this portion of the site until further review. See report for more details.
	2012-03-27	OPEN - Portable toilets and hand wash stations on site and set up. Only smoking area is located at the employee trailer[s]. J. Cravens Geotechnology Construction Manager now full time on site. M. Wagstaff reviewed the program for J. Cravens list he gave him for the "anytime anyone see anything" safety program on site. J. Tasich general safety discussion.
	2012-03-20	OPEN - The switch gear area adjacent to the plant has bench mark within confines of the fenced area. If a surveyor or engineer requires entrance, they are to be escorted. M. Wagstaff indicated this switch gear area is not owned by AER, but by Ameren Illinois. All site access is to be coordinated through R. Porter. Geotechnology indicated training on 03-28 and/or 03-29. AMS to upcoming training 3x workers. M. Wagstaff discussed J. Cravens list he gave him for the "anytime anyone see anything" safety program on site. R. Porter indicated similar to AMS "brothers keeper".
05	**HOUSEKEEPING**	
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - no issues
	2012-03-20	OPEN - no issues
06	**PLANT ACCESS - CBT BADGE**	
	2012-04-03	AAA 2x electricians went this AM. Currently working on visitor as the badge form Newton not assigned to Hutsonville. Coordination in e-mail to ensure Newton assigns workers to Hutsonville. R. Porter reported various Ameren employees have been coming on site, such as substation maintenance. R. Porter and J. Cravens are monitoring this together.
	2012-03-27	OPEN - J. Denham concern over badge in/out at other plants and the change over required back to Hutsonville for those who go to other plants. M. Wagstaff indicated can still get a visitors badge, but he would provide J. Denham, J. Boone, and J. Tasich consultant's badge [where as "employee" of M. Wagstaff].
	2012-03-20	OPEN - R. Porter to get visitors badge if goes to other Ameren plants. When badge in/out workers are to watch the light on the swipe unit, not the green light above.
07	**VEHICLES ON SITE**	
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - Fuel trucks [such as for Belt Construction] can be on work site. Park at trailer area. Only Geotechnology and AMS trucks allowed frequent access. For Lamac, vehicle allowed on site, but work in that area when they are surveying will be shut down.
	2012-03-20	OPEN - Employees to park in lot, ride AMS transportation bus to site and back from badge in area.
08	**OSHA LOG - WORK HOURS**	
	2012-04-03	OPEN - total all hours [including subcontractors]
	0,239.00	RT
	0,000.00	OT
	0,239.00	TOTAL
	2012-03-27	OPEN - no workers on site except Site Manager and surveyor. Hours will be from previous Monday to Friday [the week].
	0,059.00	RT
	0,000.00	OT
	0,059.00	TOTAL
	2012-03-20	OPEN - no workers on site except Site Manager.
	0,000.00	
	0,000.00	
	0,000.00	

06 MANPOWER

02 WORK HOURS

2012-04-03 OPEN - Standard hours
2012-03-27 OPEN - Standard hours
2012-03-20 OPEN - Standard hours

03 OVER TIME

2012-04-03 OPEN - none projected. Advise GEO if change.
2012-03-27 OPEN - none projected
2012-03-20 OPEN - none projected

04 TRAILER [AND GENERAL CONDITIONS]

2012-04-03 OPEN - no issues. Power to trailer[s] this week. AMS employee trailer to move to trailer site 04-04.
2012-03-27 OPEN - Price form AAA Electric 03-28. AMS to move employee trailer adjacent to GEO trailer. No generators will be required for now. J. Tasich discussed the electric can be heavy wall SCH 80 conduit run on top the ground with gravel covering. Their could be issues with the Ameren Illinois requirement for the new pole height. M. Wagstaff to get with utility to review options.
2012-03-20 OPEN - Trailers on site. AMS has set 3x portable toilets with 2x hand wash stations. Units are "unisex". AMS will also set a storage container in the next week or so.

07 PREVIOUS

01 SUBCONTRACTS

2012-04-03 OPEN - no issues
2012-03-27 OPEN - no issues
2012-03-20 OPEN - no issues

02	**SUBMITTALS**	
	2012-04-03	OPEN - no issues. In progress.
	2012-03-27	OPEN - no issues
	2012-03-20	OPEN - no issues

08	**MATERIAL**	
01	**GENERAL**	
	20120-04-03	OPEN - M. Wagstaff concern on liner delivery. P. Zinsious contacted subcontractor, and liner has been manufactured, and is in Houston, TX. No issue with delivery [if required] within 30 D.
	2012-03-27	OPEN - Lamac to take few more elevation shots in coal yard.
	2012-03-20	OPEN - Discussion on the remaining coal pile volume, Lamac survey show approximately 3,500 CY. If area around coal pile considered to level, 3,780 CY. Coal has to be placed in the bottom of the APD, as it cannot come in contact with the liner. The schedule will need to be adjusted to account for this activity. This area may also require top soil and seeding.

09	**ADJACENT PROPERTIES**	
01	**GENERAL**	
	2012-04-03	OPEN - no issues. AMS announced Koberstein Contracting as the pipe subcontractor, who will provide excavation plan.
	2012-03-27	OPEN - General discussion. AMS in process of reviewing subcontractors for the Perforated Collector Pipe [PCP]. When subcontractor is approved, then excavation plan will be published. AMS reiterated that if it is not necessary, the area will not be used. General consensus to "wait and see" as the scope of work is not until June.
	2012-03-20	OPEN - Lamac surveyed are of License Agreement and found path of irrigation unit extends into this area. Lamac provided drawing of the wheel arc in the area. Work is scheduled in this area in June, and AMS indicated that if it is not necessary, the area will not be used. A. Ridgely indicated there is a cable in the field the irrigation unit follows. No action required at this time. When excavation plan has been created, AMS will review again. Survey stakes currently will be left in the area.

10	**QUALITY CONTROL**	
01	**GENERAL**	
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - no issues
	2012-03-20	OPEN - no issues
02	**ASH**	
	2012-04-03	OPEN - no quality issues. Safety concern - reference Item No. 05.04-2012-04-03 above. A. Ridgely indicated survey shows settlement in Pond D as minimal - approximately 2/10 FT. AMS at this time indicated not an issue.
	2012-03-27	OPEN - no issues. AMS to proceed with mixing in the "topsoil" found within the Ash Pond D into the fill. [Note: This is as noted in previous contract documents]. Reviewed the topographic survey by Lamac. A. Ridgley indicated the topo on the [AER] drawings Land Lamac survey were very close and AER engineer probably used "LiDAR" [Light Detection and Ranging], an [optical] scanning process. The delta in the survey is about 5,000 CY. Drawing will be created fro EWO baseline.
	2012-03-20	OPEN - no issues. Lamac topographic survey of the ash pile was within 300 CY of the Massmann aerial survey. A. Ridgely indicated variation could be due to the actual in place fluctuations in elevation in between survey points. The delta in volume is considered almost a "wash".
03	**CLAY**	
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - no issues
	2012-03-20	OPEN - no issues

11	**SCHEDULE REVIEW**	
01	**SCHEDULE**	
	2012-04-03	OPEN - No significant changes. AMS to update actuals and submittals. AER changed the description "piezometer" to "vent pipe" on the P6 schedule. M. Wagstaff concern addition of 17D to critical path by EWO-02 [reference item No. 12.03-2012-04-03 below] as project is already "2x weeks behind schedule". Two week look ahead - pipe filling in Pond D.
	2012-03-27	OPEN - No significant changes. AMS to update. General discussion 2012-10-11 good end [substantial completion] date.
	2012-03-20	OPEN - Review of general and critical path schedules provided by AER. General discussions of rain days and how budgeted into the schedule calendar. The end date has been extended to 2012-10-11, and is acceptable to Ameren. The primary driving factor at this item is the seeding in the fall of the cap.

02 TIME AND MATERIAL

2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues
2012-03-20	OPEN - no issues

03 COORDINATION

2012-04-03	OPEN - no issues. Reference Item No. 05.06-2012-04-03 above regarding others access to plant. AMS to laminate sign and post. Reference Item No. 14.01.20-2012-04-03 below.
2012-03-27	OPEN - J. Cravens and R. Porter to monitor the access to the site as team. M. Wagstaff to notify the team of any AER personnel or entity coming to the site or who should badge in. The concern was knowledge of who has permission to come on site once security is gone.
2012-03-20	OPEN - no issues

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-04-03	OPEN - AMS submitted EWO-02 and EWO-03. See Item No. 12.03 and 12.04
2012-03-27	OPEN - General discussion items for EWO [Potential change Orders - PCO] ash cap, coal pile, pipe [in berm], surveying, and utility change. If excavating the trench in Pond A is just a few hours, AMS would not charge for this work.
2012-03-20	OPEN - no issues

02 AMS PAY APPLICATION

2012-04-03	OPEN - in progress
2012-03-27	OPEN - no issues. J. Denham we will have pay app this month.
2012-03-20	OPEN - no issues

03 EWO-02 - ASH PLACEMENT

2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff requesting the description be changed from "ash placement" to "cap modification". This EWO is to include all changes from the plan changes to date. P. Zinsious indicated AMS to have AER "agree in principle" with the ash placement portion presented. AMS will provide spreadsheet showing changes of overall project such as the channels, berms, pump system, etc. M. Wagstaff question how AMS arrived at the 17D addition to the critical path. P. Zinsious to investigate calculation used. R. Porter reported there is a soft area approximately 50 FT x 1,000 FT located on the east and south perimeter of the pond. P. Zinsious indicated that J. Denham and J. Boone are in process of reviewing options, and would report back in a couple of days.

04 EWO-03 - COAL PILE

2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff indicated AER has to review as other options for site may affect the decision.

05 EWO-04 - PIPE RELOCATION

2012-04-03	NEW - R. Porter briefly explained the procedure to excavate and move the line inside the berm. M. Wagstaff requested "pothole" to locate.

05 EWO-05 - ELECTRICAL REVISION

2012-04-03	NEW - M. Wagstaff indicated drawings to be released 04-03.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-04-03

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich reviewed location, and has proposed option. Will review 04-03]
[17] ACAD files to AMS [CLOSED - AER transmitted disc]
[18] AER to print full size schedule [CLOSED]
[19] Flood plain permit [CLOSED - AMS will publish AER info]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]
[21] M. Wagstaff to contact Ameren Utilities for the meter.
[22] Mailbox and delivery thereof status.

2012-30-27

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers.
[17] ACAD files to AMS [CLOSED - AER transmitted disc]
[18] AER to print full size schedule [CLOSED]
[19] Flood plain permit [CLOSED - AMS will publish AER info]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

2012-30-20
[03] Fire protection [OPEN - where to go for high winds or tornado]
[13] Wetlands permit application by Hanson [CLOSED - non-issue. Hanson reviewed, AER issued e-mail.]
[14] Keys for locks [CLOSED - AMS has keys]
[15] Provide new safety SPOC [CLOSED - M. Wagstaff is safety SPOC]
[16] Tax exemption clarification [CLOSED - AER will renew when dates reaches close to expiration]
[17] ACAD files to AMS [OPEN - AER to send disc]
[18] AER to print full size schedule [NEW]
[19] Flood plain permit [NEW - AER provide copy of the permit via e-mail]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-04-03
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [In progress]
[06] RFI-01 roadway clarification [OPEN - AMS in progress]
[16] Submittal log [OPEN - AMS submit EOW] [In progress - couple days out]
[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.
[20] Site entry signage

2012-03-27
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run .
[06] RFI-01 roadway clarification [OPEN - AER sent e-mail, AMS to check]
[16] Submittal log [OPEN - AMS submit EOW] [In progress]

2012-03-20
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – revised ash placement price within week]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – AMS to create PCO, line will have to be lowered, manhole will have to be cut into. Lamac to shoot elevations of pipe at manhole.
[06] RFI-01 roadway clarification [OPEN - AER sent e-mail, AMS to check]
[11] AER request each Subcontractor to have their lead person with 30HR. AMS to create RFI. [CLOSED - AER not requiring sub supervisors to have 30 HR]
[14] Issue log [CLOSED - information to PCO and RFI]
[15] Check on drawing distribution for Lamac. [CLOSED - Lamac sent e-mail drawings were received]
[16] Submittal log [OPEN - AMS submit EOW]
[17] HDPE QA/QC [CLOSED - liner subcontractor to submit - Geotechnology to provide lab information]
[18] Last two weeks close out [CLOSED - reviewed at Ameren scheduling meeting]

15 PRODUCTION

01 GENERAL

2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues - no work on site.
2012-03-20	OPEN - no issues - no work on site.

02 ASH

2012-04-03	OPEN - no issues - 10,300 CY as of 03-03. Estimated 13,968 CY EOD.
2012-03-27	OPEN - no issues - no work on site.
2012-03-20	OPEN - no issues - no work on site.

03 CLAY

2012-04-03	OPEN - no issues - this activity not begun. Borrow site in process closing on agreements.
2012-03-27	OPEN - no issues - no work on site.
2012-03-20	OPEN - no issues - no work on site.

16 DOCUMENTS TRANSMITTED

2012-04-03	[01] AMS - EWO-02 - ash placement to AER and GEO
	[02] AMS - EWO-03 - coal pile to AER and GEO
	[03] AMS - Lessons Learned/Near Miss Report [Incident dated 2012-04-20]
	[04] AMS - Contact list [next print out 11x17]
2012-03-27	[01] AER - CD drawings on ACAD and PDF to LEC, GEO, and AMS
	[02] AMS - Lamac topographic of the ash pond [COR to AER info]
	[03] AMS - Lamac topographic of coal ash pile
2012-03-20	[01] Critical Path schedule dated 2012-03-19
	[02] Full schedule dated 2012-03-19

17 DOCUMENTS REVIEW ONLY

2012-04-03	None
2012-03-27	None
2012-03-20	[01] Lamac revised borrow access road layout dated 20120-03-19 [road marked yellow]
	[02] Lamac layout of Wampler property in Geotechnology binder.

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, April 10, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: April 16, 2012

SUBJECT: Weekly Summary Report for April 9, 2012 to April 13, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and windy. Temperature (°F) lows ranged from 35 to 45°F, and temperature highs ranged from 60 to 70°F. Weather delays did not occur.

Construction Activities

Ash grading, undercutting of soft areas, and locating the HDPE drainage pipe occurred this week. Ash was moved from quadrant A and B to lower areas of quadrant A, quadrant B, and the northern portion of quadrant C. Grading occurred in all four quadrants. On April 10, 2012, the John Deere 9520 tractor encountered soft soils andgot stuck in the southern end of quadrant A (where fill was being placed). The CAT D6N and D6H bulldozers were used to remove the tractor. A CAT 324 C Excavator dug a test pit to locate soft areas in quadrant D along the east embankment. Soft ash was undercut along the south portion of quadrant D, along the south embankment. The 18-inch HDPE gravity drainage pipe was located and surveyed along the south and east embankments of Ash Pond D. Refer to attached daily reports and photograph log for additional information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator

Electronic Filing: Received, Clerk's Office 09/28/2020

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, and Jimmy Boone
Charah, Inc. – Joe Tasich
Lamac Engineering – Austin Ridgely
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Shelby Belt
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, April 10, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash within the footprint of Ash Pond D was graded. The geomembrane is estimated to be delivered in early May 2012.

Testing/Sampling

Additional testing and sampling did not occur.

Calibration Records

Calibration information was obtained from Lamac for their surveying equipment.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

FROM THE GROUND UP

No. A 13771

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 4/9/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 11.0 hr (created spreadsheet through lunch)
Weather: Sunny, 45° AM, 65° PM Windy | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes:

The D6H continued grading Section C to match the PGL. The D6N continued grading Section A and C to match the PGL. The west side of Pond D is starting to take shape very well. The 9520 continued cutting and filling Section A and B. The 325C cut the ash on the north side of the Pond next to the PGL near the fence. This was too close to the fence for the tractor and scrapers. The 325 C then began pulling out the ripped geotube HDPE from the ash around the exterior perimeter, and placing it in the center of the Pond to be covered. This will allow for more efficient grading and compaction around the exterior perimeter of the Pond.

The locks for the gates were never changed. We will continue to use the existing locks.

Lamac will be back on Wednesday to stake additional areas in the 100' grid layout.

Data lines were never provided from Frontier. The phone lines might be cancelled.

Created a Submittal spreadsheet for review in tomorrows meeting.

Additional Comments: Same operators for same equipment as last week.

No. A 13772

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/10/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.0 (0.5 hr for lunch)
Weather: Sunny, 50° AM, 60° PM Windy | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325 C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes:

The D6N continued grading Section D. The D6H continued grading the south end of Section A. The 9520 continued cutting Section A and B, and filling the south end of Section A. The 325C began clearing the remaining vegetation on the east side of the Pond, near the wet area by the east embankment. Crane mats were used as a precaution in this area, even though the actual wet area was avoided.

The 9520 got stuck in the south end of Section A, where fill was being placed. The D6N pushed the pans out of the ruts, and then pulled the tractor out with a cable, as the D6H pushed the pans from behind.

AMS plans to bring in a Long Reach Excavator to undercut the wet area of the east side of the pond. The material will be cut 18"-24", or as necessary, and will be pushed towards the center of the Pond to dry. The material from the embankment will be cut and used to fill this area once it is dried. This might begin next week and AMS may or may not have an additional operator for this procedure.

EWO-02 and EWO-03 was approved. The additional 50,000 CY will be moved, and AMS will begin moving the coal at the end of this week, or next week, once final approval goes through and the coal route is prepared.

Joe Tasich and Shelby Belt were here to observe site activities. Storm shelter will be finalized by Joe T. Weekly Progress Meeting attended.

Additional Comments: As of 4/9/12, Belt has moved approx. 28,076 CY of Ash.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13773

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/11/12

TIME: Arrive: 6:30 AM | Depart: 4:15 PM | Travel: 1.0 hr | Total: 10.25 hr (0.5 hr for lunch)
Weather: Sunny, 35° AM, 60° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes:

Austin Ridgely with Lamac was on-site to stake more of the 100' grid. Point numbers were written on all of the stakes to match the drawings. The 100' grid, including the PGL, is now complete. Randy raised all of the stakes to visually show the Ash Grade. Lamac will return on Monday to stake the layout of the Silt Fence for the Erosion Control.

The 325 C finished clearing the vegetation on the east side of the Pond. All of the vegetation has now been cleared, excluding the little vegetation that is left by the embankment perimeter. The cleared vegetation was then spread out to dry. The 325C dug a test pit in the wet area next to the east embankment. This was done to determine how wet the material is, and to determine the condition of the embankment material. The test pit was approx. 6' deep, and the embankment had a decent slope of clay + silt material going into the ash. The test pit was filled in to prevent accidents. The Long Reach Excavator will be here next Tuesday to undercut this area. The 325C also graded more of the PGL at the north tip of the Pond.

The D6N and D6H continued grading Section D. The 9520 continued cutting Section A and B, and filling the area located in the Center of the Sections.

Shelby Belt was here to observe site activities. AMS will attempt to dewater the standing water in the coal yard when the coal pile is moved. It is unknown when AMS will divert the ponded water in Ash Pond A. The west perimeter of the Pond needs to be evaluated for slopes, swales, and the paved ditch, to prevent the slope of the clay cap coming into the existing west gravel road.

Additional Comments: Same operators for same equipment as last week.

ORIGINAL - FILE COPIES: 1-JOB SITE 1-ACCOUNTING

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13774

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 4/12/12

TIME: Arrive: 6:30 AM | Depart: 6:15 PM | Travel: 1.0 hr | Total: 12.75 hrs (emails through lunch)
Weather: Sunny, 35°AM, 70°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck

Site Activities / Observations / Contacts / Notes:

The D6N continued grading the south end of Section A, along with Section C and D. The D6H continued grading Section D. The 9520 continued cutting the north ends of Section A and B, and filling the south end of Section A, along with Section C. The 325C continued spreading out wet ash and cleared vegetation on the east side of the Pond, next to the outfall structure. The 325C then began undercutting the south end of the Pond in Section D.

Jimmy Boone and Shelby Belt were on-site to discuss the schedule. The Long Reach Excavator will be delivered on 4/17/12, and picked up on 5/1/12. Belt will hire an additional operator to operate the Long Boom. This two week period is very critical, if there are any delays, all personnel will have to switch to 10 hour days. The Long Boom will be used to undercut the ash along the east embankment.

The silt fence (SF) will be constructed on 4/18/12 by a subcontractor. The SF will not follow the original plan. AMS will set the location of the SF instead of Lamoc. The SF cannot be set in the south and east berms until they are cut down. The northeast SF will now run along the tree line next to the river, and will extend passed the Deep Wells on the east side of the Pond. On the farmer's land, the SF will be located 2' inside the AMS property line. A section will be left open between the field and the inside of the chain link fence, until the fence is taken down on the south side of Pond B. The subcontractor can install the SF in one day with a plow, as opposed to one week if AMS were to install the SF with a trencher.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13775

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/12/12

TIME: Arrive: | Depart: | Travel: | Total:
Weather: REFER TO PAGE ONE (1) | Contractor: | Subcontr./Supplier:
Equipment Working:
Site Activities / Observations / Contacts / Notes:

A forklift for the HDPE Liner will be ordered on 4/23/12, and delivered on 4/25/12. The liner will be delivered on 4/27/12. Belt will unload and stock the Liner.

Tomorrow, the 325C will locate the existing drainage pipe around the south and east embankments of Pond D in 4-6 locations. When pipe relocation from Pond B to the manhole by the outfall structure begins, AMS will hire a new laborer. The new operator and laborer will be trained next Tuesday by Joe T. The 18" HDPE gravity pipe may or may not be plugged for relocation. The pipe will be moved as a whole, 3' horizontally, and 7' vertically, starting from the outlet of Pond B, to the manhole east of Pond D. An EWO was sent this afternoon for pipe relocation. Randy and I will survey the exposed pipe with a level, to enable design for a new location and flowline of the discharge pipe.

If rain days occur, AMS plans on working on the pipe and moving the coal pile to minimize delays. This time is very critical on the schedule. Jimmy and Shelby viewed the borrow site to determine a schedule. The SF cannot be contructed around the borrow site and the haul road for another 2 weeks, per the SWPPP.

A photo log was created for the West Side PGL (Gutter location) to be submitted to Hanson. This side needs to be evaluated for the gutter and slopes/fence and gravel road. Lamac will layout the gutter next time they are on site.

Additional Comments: Same Operators for Same Equipment as last week.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 4/13/12

TIME: Arrive: 6:30 AM | Depart: 4:15 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.25 hr for lunch)
Weather: Sunny, 45°AM, Cloudy 70°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck
Site Activities / Observations / Contacts / Notes:

The 9520 continued cutting the north end of Section A and B, and filling Section C. The D6H graded Section C and D. The D6N graded Section C, D, south of B, and the north tip of the pond where the excavator had graded. The 325C continued undercutting the south end of Section D next to the embankment until it got too wet (the crane mats were sinking). Then the 325C began spreading out the undercut material to dry. The undercut area was blocked off with tape and tags signed by Randy P. for safety.

Randy probed for the 18" drainage HDPE pipe along the south and east embankments, and the 325C exposed the pipe in these areas along the berms. Next to the manhole and Pond B, the HDPE was cased in concrete. The pipe was 18" to 36" deep along the berms. On the east embankment, the old drainage pipe was found in two locations next to the new HDPE pipe. The old drainage is made of corrugated pipe. AMS needs to know what to do with it. There is a possibility this old corrugated pipe is located along the south embankment as well. Randy and I shot in the elevations of the pipe with a Level, with the nearby station as a control. We also shot the flowline in the outfall structure in Pond D and the outlet structure in Pond B. After surveying, the pipe was covered up for safety. This information will be sent out Monday.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-04-10	OPEN - no issues.
2012-04-03	OPEN - no issues. CORRECTED THE NUMBERING FOR THIS TOPIC
2012-03-27	OPEN - no issues

02 WORKER PROTECTION ASSURANCE

2012-04-10	OPEN - no issues.
2012-04-03	OPEN - no issues [electricians working on temporary power 04-03] Meter based LOTO by AMS. R. Porter did not want any work "hot" if meter base was to be put in. M. Wagstaff to contact Ameren Utilities for the meter, and come on site Monday or Thursday [see also action item].
2012-03-27	OPEN - no issues. LOTO for temporary electric for trailer.

03	**EMPLOYEE DRUG TESTING**	
	2012-04-10	OPEN - no issues. Inquiry as to liner subcontractor [Chesapeake Containment]. Trained on schedule, some already trained.
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - Belt Construction employees 3x tested negative [will begin work]. Scheduled testing for 1x teamster on 03-27 and 2x operators on 03-28. Reminder for 24 HR notice.
04	**AMS SAFETY**	
	2012-04-10	OPEN - no issues.
	2012-04-03	OPEN - AMS submitted "Lessons Learned/Near Miss Report": Summary: Excavator was traveling across the east side of Ash Pond D when the left track sunk without warning. After a safety brief and going over the safe start and hazards of the task along with the inspection of proper rigging equipment, work proceeded to remove the excavator. The excavator come out without further incident. J. Tasich was on site and J. Cravens. There was no damage to the machine or any injuries. No work this portion of the site until further review. See report for more details.
	2012-03-27	OPEN - Portable toilets and hand wash stations on site and set up. Only smoking area is located at the employee trailer[s]. J. Cravens Geotechnology Construction Manager now full time on site. M. Wagstaff reviewed the program for J. Cravens list he gave him for the "anytime anyone see anything" safety program on site. J. Tasich general safety discussion.
05	**HOUSEKEEPING**	
	2012-04-10	OPEN - no issues
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - no issues
06	**PLANT ACCESS - CBT BADGE**	
	2012-04-10	OPEN - no issues
	2012-04-03	AAA 2x electricians went this AM. Currently working on visitor as the badge form Newton not assigned to Hutsonville. Coordination in e-mail to ensure Newton assigns workers to Hutsonville. R. Porter reported various Ameren employees have been coming on site, such as substation maintenance. R. Porter and J. Cravens are monitoring this together.
	2012-03-27	OPEN - J. Denham concern over badge in/out at other plants and the change over required back to Hutsonville for those who go to other plants. M. Wagstaff indicated can still get a visitors badge, but he would provide J. Denham, J. Boone, and J. Tasich consultant's badge [where as "employee" of M. Wagstaff].
07	**VEHICLES ON SITE**	
	2012-04-10	OPEN - no issues
	2012-04-03	OPEN - no issues
	2012-03-27	OPEN - Fuel trucks [such as for Belt Construction] can be on work site. Park at trailer area. Only Geotechnology and AMS trucks allowed frequent access. For Lamac, vehicle allowed on site, but work in that area when they are surveying will be shut down.
08	**OSHA LOG - WORK HOURS**	
	2012-04-10	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday]
	0,522.00	RT
	0,000.00	OT
	0,522.00	TOTAL
	2012-04-03	OPEN - total all hours [including subcontractors]
	0,239.00	RT
	0,000.00	OT
	0,239.00	TOTAL
	2012-03-27	OPEN - no workers on site except Site Manager and surveyor. Hours will be from previous Monday to Friday [the week].
	0,059.00	RT
	0,000.00	OT
	0,059.00	TOTAL

[01] Teamsters
[00] Survey
[01] Foreman [Full time]
[06] Total

2012-03-27 OPEN - no workers on site except Site Manager and surveyor. Projection for next week will add employees: 4x ash placement and 1x for water truck.
Current
[00] Pipe
[00] Mech
[00] Elec
[00] Cement
[00] Laborers
[00] Operators
[02] Survey [Part time]
[01] Foreman [Full time]
[03] Total

02 WORK HOURS

2012-04-10 OPEN - Standard hours
2012-04-03 OPEN - Standard hours
2012-03-27 OPEN - Standard hours

03 OVER TIME

2012-04-10 OPEN - none projected
2012-04-03 OPEN - none projected. Advise GEO if change.
2012-03-27 OPEN - none projected

04 TRAILER [AND GENERAL CONDITIONS]

2012-04-10 OPEN - no issues. Power to trailers operational. Phone lines dead. M. Wagstaff to cancel order due to data service not available to the site by landline.
2012-04-03 OPEN - no issues. Power to trailer[s] this week. AMS employee trailer to move to trailer site 04-04.
2012-03-27 OPEN - Price form AAA Electric 03-28. AMS to move employee trailer adjacent to GEO trailer. No generators will be required for now. J. Tasich discussed the electric can be heavy wall SCH 80 conduit run on top the ground with gravel covering. Their could be issues with the Ameren Illinois requirement for the new pole height. M. Wagstaff to get with utility to review options.

07 PREVIOUS

01 SUBCONTRACTS

2012-04-10 OPEN - no issues
2012-04-03 OPEN - no issues
2012-03-27 OPEN - no issues

02 SUBMITTALS

2012-04-10	OPEN - no issues. In progress, J. Cravens and P. Zinsious to finish out log. GEO to maintain the log. Submit in groups.
2012-04-03	OPEN - no issues. In progress.
2012-03-27	OPEN - no issues

08 MATERIAL

01 GENERAL

20120-04-10	OPEN - Liner can be delivered early to the site if necessary.
20120-04-03	OPEN - M. Wagstaff concern on liner delivery. P. Zinsious contacted subcontractor, and liner has been manufactured, and is in Houston, TX. No issue with delivery [if required] within 30 D.
2012-03-27	OPEN - Lamac to take few more elevation shots in coal yard.

09 ADJACENT PROPERTIES

01 GENERAL

2012-04-10	OPEN - no issues. Excavation plan scheduled for two weeks out.
2012-04-03	OPEN - no issues. AMS announced Koberstein Contracting as the pipe subcontractor, who will provide excavation plan.
2012-03-27	OPEN - General discussion. AMS in process of reviewing subcontractors for the Perforated Collector Pipe [PCP]. When subcontractor is approved, then excavation plan will be published. AMS reiterated that if it is not necessary, the area will not be used. General consensus to "wait and see" as the scope of work is not until June.

10 QUALITY CONTROL

01 GENERAL

2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues

02 ASH

2012-04-10	OPEN - no quality issues. Ash placement by scrapers. No issue on compaction. Tests to be taken when elevation is within 1 FT of finish grade. GEO has taken samples for proctors, and 1 of 2 test analysis have been returned.
2012-04-03	OPEN - no quality issues. Safety concern - reference Item No. 05.04-2012-04-03 above. A. Ridgely indicated survey shows settlement in Pond D as minimal - approximately 2/10 FT. AMS at this time indicated not an issue.
2012-03-27	OPEN - no issues. AMS to proceed with mixing in the "topsoil" found within the Ash Pond D into the fill. [Note: This is as noted in previous contract documents]. Reviewed the topographic survey by Lamac. A. Ridgley indicated the topo on the [AER] drawings Land Lamac survey were very close and AER engineer probably used "LiDAR" [Light Detection and Ranging], an [optical] scanning process. The delta in the survey is about 5,000 CY. Drawing will be created fro EWO baseline.

03 CLAY

2012-04-10	OPEN - no issues. Samples to be taken in next week or two [by AMS]. Analysis to follow the [revised] CQA plan.
2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues

11 SCHEDULE REVIEW

01 SCHEDULE

2012-04-10	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. . AER to provide revised schedule next week. One rain date documented for 04-05.
2012-04-03	OPEN - No significant changes. AMS to update actuals and submittals. AER changed the description "piezometer" to "vent pipe" on the P6 schedule. M. Wagstaff concern addition of 17D to critical path by EWO-02 [reference Item No. 12.03-2012-04-03 below] as project is already "2x weeks behind schedule". Two week look ahead - pipe filling in Pond D.
2012-03-27	OPEN - No significant changes. AMS to update. General discussion 2012-10-11 good end [substantial completion] date.

02 TIME AND MATERIAL

2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues

03 COORDINATION

2012-04-10	OPEN - no issues. Hierarchy for call for site access - R. Porter, J. Craven, and then M. Wagstaff. Post sign on site.
2012-04-03	OPEN - no issues. Reference Item No. 05.06-2012-04-03 above regarding others access to plant. AMS to laminate sign and post. Reference Item No. 14.01.20-2012-04-03 below.
2012-03-27	OPEN - J. Cravens and R. Porter to monitor the access to the site as team. M. Wagstaff to notify the team of any AER personnel or entity coming to the site or who should badge in. The concern was knowledge of who has permission to come on site once security is gone.

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	OPEN - AMS submitted EWO-02 and EWO-03. See Item No. 12.03 and 12.04
2012-03-27	OPEN - General discussion items for EWO [Potential change Orders - PCO] ash cap, coal pile, pipe [in berm], surveying, and utility change. If excavating the trench in Pond A is just a few hours, AMS would not charge for this work.

02 AMS PAY APPLICATION

2012-04-10	OPEN - M. Wagstaff indicated the application has been received from AMS, and he has forwarded to J. Davis at AER for review.
2012-04-03	OPEN - In progress
2012-03-27	OPEN - no issues. J. Denham we will have pay app this month.

03 EWO-02 - ASH PLACEMENT

2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff requesting the description be changed from "ash placement" to "cap modification". This EWO is to include all changes from the plan changes to date. P. Zinsious indicated AMS to have AER "agree in principle" with the ash placement portion presented. AMS will provide spreadsheet showing changes of overall project such as the channels, berms, pump system, etc. M. Wagstaff question how AMS arrived at the 17D addition to the critical path. P. Zinsious to investigate calculation used. R. Porter reported there is a soft area approximately 50 FT x 1,000 FT located on the east and south perimeter of the pond. P. Zinsious indicated that J. Denham and J. Boone are in process of reviewing options, and would report back in a couple of days.

04 EWO-03 - COAL PILE

2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting. However, AER approved this work.
2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff indicated AER has to review as other options for site may affect the decision.

05 EWO-04 - PIPE RELOCATION

2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - R. Porter briefly explained the procedure to excavate and move the line inside the berm. M. Wagstaff requested "pothole" to locate.

05 EWO-05 - ELECTRICAL REVISION

2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - M. Wagstaff indicated drawings to be released 04-03.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-04-10

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room]

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing]

[21] M. Wagstaff to contact Ameren Utilities for the meter. [CLOSED]

[22] Mailbox and delivery thereof status.[CLOSED - M. Wagstaff reports all mail now goes to Newton]

2012-04-03

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich reviewed location, and has proposed option. Will review 04-03]

[17] ACAD files to AMS [CLOSED - AER transmitted disc]

[18] AER to print full size schedule [CLOSED]

[19] Flood plain permit [CLOSED - AMS will publish AER info]

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

[21] M. Wagstaff to contact Ameren Utilities for the meter.

[22] Mailbox and delivery thereof status.

2012-30-27
[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers.
[17] ACAD files to AMS [CLOSED - AER transmitted disc]
[18] AER to print full size schedule [CLOSED]
[19] Flood plain permit [CLOSED - AMS will publish AER info]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-04-10
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.] [CLOSED - differed to discussion after progress meeting]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [CLOSED - differed to discussion after progress meeting]
[06] RFI-01 roadway clarification [OPEN - AMS not received]
[16] Submittal log [OPEN - AMS submit EOW] [CLOSED - reference above in submittals]
[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.[CLOSED - e-mails will be copied/forwarded]
[20] Site entry signage [CLOSED - provide draft]

2012-04-03
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [In progress]
[06] RFI-01 roadway clarification [OPEN - AMS in progress]
[16] Submittal log [OPEN - AMS submit EOW] [In progress - couple days out]
[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.
[20] Site entry signage

2012-03-27
[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]
[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run .
[06] RFI-01 roadway clarification [OPEN - AER sent e-mail, AMS to check]
[16] Submittal log [OPEN - AMS submit EOW] [In progress]

15 PRODUCTION

01 GENERAL

2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues - no work on site.

02 ASH

2012-04-10	OPEN - no issues. Estimated 28,076 CY EOD 04-09.
2012-04-03	OPEN - no issues - 10,300 CY as of 03-03. Estimated 13,968 CY EOD.
2012-03-27	OPEN - no issues - no work on site.

03 CLAY

2012-04-03	OPEN - no issues - this activity not begun. Borrow site agreement signing 04-10.
2012-04-03	OPEN - no issues - this activity not begun. Borrow site in process closing on agreements.
2012-03-27	OPEN - no issues - no work on site.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: April 23, 2012

SUBJECT: Weekly Summary Report for April 16, 2012 to April 20, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and windy. Temperature (°F) lows ranged from 40 to 65°F, and temperature highs ranged from 60 to 80°F. Weather delays occurred on April 16, 2012 due to rain over the weekend.

Construction Activities

Ash grading, undercutting of soft areas, coal pile transported to ash pond, silt fence installation, ADS corrugated pipe removal, and 18-inch HDPE gravity drainage pipe excavation occurred this week. Ash was moved from the northern portion of quadrant A and B, to the southern portion of quadrant A and B, and the northern portion of quadrant C. Grading occurred in all four quadrants. Soft ash was undercut along the south and east portion of quadrant D beside the embankments, and spread out within the pond to dry. The coal pile was moved to the south end of quadrant A and B to be covered with ash. The 18-inch HDPE gravity drainage pipe was exposed and approx. 600 feet of the ADS corrugated pipe was removed from the south embankment of Ash Pond D. Refer to attached daily reports and photograph log for additional information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Hyundai 290 LC-9 Long Reach Excavator
Water Truck
John Deere 5420 tractor with silt fence plow
John Deere 35D Mini Excavator with John Deere HH50 Hammer.

Geotechnology, Inc. – Joe Cravens
Ash Management Systems, LLC (AMS) – Randy Porter, Robert Dunkley, James Marks, Jimmy Boone, and Paul Zinsious
Charah, Inc. – Joe Tasich and Kirby Bilsland
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, Marc Downs,
Daylight Land Management – Adam Ziliak, John Ziliak, and Billy Georges.
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, April 17, 2012. Refer to the attached meeting minutes for additional information.

Photographs

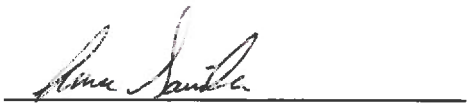
A photograph log with select photographs obtained this week is attached.

Materials

Ash within the footprint of Ash Pond D (quadrants A, B, C, and D) was graded. The geomembrane is estimated to be delivered in early May 2012.

Testing/Sampling

Testing and sampling did not occur.



Electronic Filing: Received, Clerk's Office 09/28/2020

Calibration Records

Calibration information was obtained from Geotechnology, Inc. for the nuclear moisture density gauge.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13777

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/16/12

TIME: Arrive: 6:30 AM | Depart: 2:45 PM | Travel: 1.0 hr | Total: 9.25 (no lunch)
Weather: Cloudy, 50°AM, 65°PM (Windy) | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, 325C Excavator
Site Activities / Observations / Contacts / Notes:

Rain Day - No Production.

On-Site Personnel: Joe Cravens, Randy Porter, Jared Belt, Nick Walker

Jared and Nick took down one section of pipe running south of the coal yard for coal route access. One pipe support was also dug out for the coal route access. The pipe was used for drainage in the entrance to the coal yard. For the rest of the day, Jared and Nick did routine maint. on equipment.

Anthony Divers (AMS Focus Group) will be on-site next week to assist Randy.

Mike Wagstaff and I discussed the HDPE Gravity Drain Pipe and the issue with the west side Gutter. Lamac is to shoot in the west fence line next time on site.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13778

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 4/17/12

TIME: Arrive: 6:30 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12 hrs (paperwork through lunch)
Weather: Sunny, 40°AM, 75°PM | Contractor: AMS | Subcontr./Supplier: Belt/Daylight Land Management
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck,
Site Activities / Observations / Contacts / Notes: 290 LC-9 Excavator, 5420 Tractor with Silt Fence Plow, and 35D Mini Excavator with HH50 Hammer

New operator for Belt arrived; Marc Downs will be operating the long boom. He was trained by Kirby Bilsland (Charah Safety) and got his badge from the Newton Plant. He completed his paperwork and CBT and began working in the PM. The Long Reach Excavator, "Long Boom", was delivered (60' Hyundai 290 LC-9) by Glenn Brown Trucking, LLC. It will have to be sent back to Diamond Equipment in two weeks.

The D6N graded south Section C and D. The D6H graded Section C and D, coal placed in the Pond, and built up the coal route entrance with gravel. The 9520 began moving the coal pile, and placing the coal in the south end of Section A and B, south of the north broken geotubes. The 325C undercut the south end of Section C and D along the south embankment. The 290 LC-9 began undercutting the east side of the Pond in Section D.

Daylight Land Management arrived to install the silt fence. Employees: Adam Ziliak, John Ziliak, and Billy Georges. Equipment: John Deere 5420 Tractor with Silt Fence Plow, and John Deere 35D Mini Excavator with John Deere HH50 Hammer. Billy will operate the Mini Ex, and John will operate the Tractor. They arrived late so they worked late. They began the fence at the north tip of the Pond, and worked SE on the outside of the berm, to wrap around the south end. They will pin up the fence tomorrow and will be completed. The Switchgear Room was viewed by Joseph King (AAA Electric) with Randy, Paul, and Mike to determine the MCC Plan. Jimmy and Paul here all day. Attended Progress Meeting. Developed official submittal log with Paul Z.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13779

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 4/18/12

TIME: Arrive: 6:30 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10.25 hrs (photo log through lunch)
Weather: Sunny, 40°AM, 78°PM | Contractor: AMS | Subcontr./Supplier: Belt/Daylight Land Management
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck, 290 LC-9 Excavator (Daylight demobilized their equipment yesterday evening)
Site Activities / Observations / Contacts / Notes:

The 325C began cutting the south embankment, exposing the 18" HDPE Gravity Drain Pipe, and ripping out the old ADS Corrugated Drain Pipe. There will be a dumpster delivered to haul off the old ADS pipe. For now, the pipe is being layed outside of the embankment (south of the berm). The location of the ADS Pipe on the south berm differs from its location on the east berm. On the south berm, it is inside the HDPE pipe, as opposed to outside the HDPE pipe on the east berm. The cut embankment material was placed in the undercut area in Section C for grading. The 325C also spread out undercut material in Section D at the end of the day. Cutting the south berm ceased when they reached the undercut areas with ponded water.

The 9520 continued cutting the cool pile, and filling the south end of Section A and B. The D6H continued grading Section C and D. The D6N graded Section C and D, and the cut south embankment material. The 290LC-9 continued undercutting the east side of the pond in Section D along the east embankment, as well as the south side of the pond in Section D along the south embankment.

Adam Ziliak finished stapling the silt fence. The 3200' silt fence along the NE, E, SE, and S ends of the pond is complete. James Marks, AMS's new laborer, arrived today for training. Joko Tasich did the training.

Additional Comments: James is scheduled to start next Monday to assist with pipe relocation.

FIELD OBSERVATION REPORT

Representative: Joe Cravens
Project No.: J019896.01 Task: 2370
Equipment & ID No.: —
Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 Zone: —
Client: Ameren ER Date: 4/19/12

TIME: Arrive: 6:30 AM Depart: 4:00 PM Travel: 1.0 hr Total: 10.25 hrs (0.25 hr for lunch)
Weather: Sunny, 50°AM, 80° PM Contractor: AMS Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans, Water Truck, 290 LC-9 Excavator
Site Activities / Observations / Contacts / Notes:

Moving the coal pile has been completed. The 9520 cut the east end of the coal yard and filled the west end to promote drainage. The D6N graded within the coal yard, cut small key ways in for drainage, and re-graded coal route. If there is standing water in the coal yard after the next rain, the yard will be re-graded for drainage.

The 290 LC-9 continued undercutting the south side of the Pond along the embankment, and moving undercut wet ash within the Pond. The D6H graded section C and D. The D6N graded section C and D, as well as South Section A and B where the coal was covered. The 325C continued cutting the south embankment, exposing the pipe, and filling the undercut trench with berm material. Over 500' of the HDPE Pipe has been exposed. The 325C also moved undercut wet ash on the east side of the Pond, and spread it out within the Pond. The 9520 re-cut the western entrance to Pond D to remove the coal from the coal route. In the PM, the 9520 continued cutting the north end of Section A and B, and filling the south end of Section A and B to cover the coal.

The ponded water in the undercut south trench will be directed to the undercut east trench as it is completed. Then the water will be either pumped or bailed out. The wet ash undercut on the south end of Pond D is very wet. Drying time might delay schedule for compaction testing and/or geomembrane installation. Next week, the temporary drainage pipes (ADS) used between the N and S end of the Pond will be taken out, and the drainage ditch will be filled.

Additional Comments: The electric running to the deep wells needs determined for construction of collection pipes.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/20/12

TIME: Arrive: 6:30 AM | Depart: 3:15 PM | Travel: 1.0 hr | Total: 9.5 hrs (0.25 hr for lunch)
Weather: Sunny, 65° AM, 60° PM Cloudy/Windy/Rain | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, Two 1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290LC-9 Excavator

Randy and I uncovered the manhole located NE of Pond D. The flowline in the bottom of the manhole (flow from the outfall structure) measured 10.5' from top of lid. The flowline of the drainage pipe entering the manhole measured 5.75'. The top of the concrete invert in the manhole measured 9.1'. Therefore, there is only ≈ 5.0' to drop the drainage pipe within the manhole. AMS may try to re-route the HDPE pipe to come in where the outfall drainage comes in; instead of filling the outfall drainage with flowable fill it would just be removed. This would prevent making a new entry into the manhole. We will discuss during the next meeting.

The D6N and D6H continued grading Section C and D. The 290LC-9 continued undercutting along the east embankment in Section D. The 325C moved undercut wet ash within the pond and continued cutting the south embankment in Section D, while filling the undercut trench with berm material. The 9520 continued cutting the north end of Section A and B, and filling the south end of Section A and B.

It began raining in the PM and the D6N re-graded the west end of the coal yard.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-04-17	OPEN - no issues.
2012-04-10	OPEN - no issues.
2012-04-03	OPEN - no issues. CORRECTED THE NUMBERING FOR THIS TOPIC

02 WORKER PROTECTION ASSURANCE

2012-04-17	OPEN - no issues. AAA electric to be on site 04-17 to review electric switch gear room.
2012-04-10	OPEN - no issues.
2012-04-03	OPEN - no issues [electricians working on temporary power 04-03] Meter based LOTO by AMS. R. Porter did not want any work "hot" if meter base was to be put in. M. Wagstaff to contact Ameren Utilities for the meter, and come on site Monday or Thursday [see also action item].

03 EMPLOYEE DRUG TESTING

2012-04-17	OPEN - no issues. AMS worker scheduled for 04-18. Belt Construction 1x 04-17. Daylight Farms 3x 04-16. M. Wagstaff indicated drug testing cost is borne by the subcontractors, notes in specifications.
2012-04-10	OPEN - no issues. Inquiry as to liner subcontractor [Chesapeake Containment]. Trained on schedule, some already trained.
2012-04-03	OPEN - no issues

04 AMS SAFETY

2012-04-17	OPEN - no issues. Next Safety Luncheon scheduled for 04-08.
2012-04-10	OPEN - no issues.
2012-04-03	OPEN - AMS submitted "Lessons Learned/Near Miss Report": Summary: Excavator was traveling across the east side of Ash Pond D when the left track sunk without warning. After a safety brief and going over the safe start and hazards of the task along with the inspection of proper rigging equipment, work proceeded to remove the excavator. The excavator come out without further incident. J. Tasich was on site and J. Cravens. There was no damage to the machine or any injuries. No work this portion of the site until further review. See report for more details.

05 HOUSEKEEPING

2012-04-17	OPEN - no issues. AMS to reinstall caution tape on south berm where wind blew down.
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

06 PLANT ACCESS - CBT BADGE

2012-04-17	OPEN - no issues. M. Wagstaff to investigate AMS consultant badges.
2012-04-10	OPEN - no issues
2012-04-03	AAA 2x electricians went this AM. Currently working on visitor as the badge form Newton not assigned to Hutsonville. Coordination in e-mail to ensure Newton assigns workers to Hutsonville. R. Porter reported various Ameren employees have been coming on site, such as substation maintenance. R. Porter and J. Cravens are monitoring this together.

07 VEHICLES ON SITE

2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

08 OSHA LOG - WORK HOURS

2012-04-17	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday]
0,746.00	RT
0,000.00	OT
0,746.00	TOTAL
2012-04-10	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday]
0,522.00	RT
0,000.00	OT
0,522.00	TOTAL
2012-04-03	OPEN - total all hours [including subcontractors]
0,239.00	RT
0,000.00	OT
0,239.00	TOTAL

06 MANPOWER

01 CREW SIZE

2012-04-17 OPEN - AMS and Belt Construction on site. Project addition of 1x Laborer and 1x Operator next week.

Current

[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[00] Laborers
[04] Operators
[01] Teamsters
[00] Survey
[01] Foreman [Full time]
[06] Total

2012-04-10 OPEN - AMS and Belt Construction on site.
Current
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[00] Laborers
[04] Operators
[01] Teamsters
[00] Survey
[01] Foreman [Full time]
[06] Total

2012-04-03 OPEN - AMS and Belt Construction on site.
Current
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[00] Laborers
[04] Operators
[01] Teamsters
[00] Survey
[01] Foreman [Full time]
[06] Total

02 WORK HOURS

2012-04-17	OPEN - Standard hours
2012-04-10	OPEN - Standard hours
2012-04-03	OPEN - Standard hours

03 OVER TIME

2012-04-17	OPEN - If rains first week of long boom operation, will work OT second week - at AMS cost.
2012-04-10	OPEN - none projected
2012-04-03	OPEN - none projected. Advise GEO if change.

04 TRAILER [AND GENERAL CONDITIONS]

2012-04-17	OPEN - no issues. Communication line dead.
2012-04-10	OPEN - no issues. Power to trailers operational. Phone lines dead. M. Wagstaff to cancel order due to data service not available to the site by landline.
2012-04-03	OPEN - no issues. Power to trailer[s] this week. AMS employee trailer to move to trailer site 04-04.

07 PREVIOUS

01 SUBCONTRACTS

2012-04-17	OPEN - no issues. Koberstein in progress.
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

02 SUBMITTALS

2012-04-17	OPEN - no issues. In progress, J. Cravens and P. Zinsious to meet after the progress meeting. Resubmit with [corrected] specification numbers.
2012-04-10	OPEN - no issues. In progress, J. Cravens and P. Zinsious to finish out log. GEO to maintain the log. Submit in groups.
2012-04-03	OPEN - no issues. In progress.

08 MATERIAL

01 GENERAL

20120-04-17	OPEN - Liner sample tests not back from TRI.
20120-04-10	OPEN - Liner can be delivered early to the site if necessary.
20120-04-03	OPEN - M. Wagstaff concern on liner delivery. P. Zinsious contacted subcontractor, and liner has been manufactured, and is in Houston, TX. No issue with delivery [if required] within 30 D.

09 ADJACENT PROPERTIES

01 GENERAL

2012-04-17	OPEN - no issues. Excavation plan in progress.
2012-04-10	OPEN - no issues. Excavation plan scheduled for two weeks out.
2012-04-03	OPEN - no issues. AMS announced Koberstein Contracting as the pipe subcontractor, who will provide excavation plan.

10 QUALITY CONTROL

01 GENERAL

2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

02 ASH

2012-04-17	OPEN - no quality issues. Ash proctors have been received. J. Cravens to review how to match results as one of the three has different characteristics.
2012-04-10	OPEN - no quality issues. Ash placement by scrapers. No issue on compaction. Tests to be taken when elevation is within 1 FT of finish grade. GEO has taken samples for proctors, and 1 of 2 test analysis have been returned.
2012-04-03	OPEN - no quality issues. Safety concern - reference Item No. 05.04-2012-04-03 above. A. Ridgely indicated survey shows settlement in Pond D as minimal - approximately 2/10 FT. AMS at this time indicated not an issue.

03 CLAY

2012-04-10	OPEN - no issues. Samples to be taken in next week or two [by AMS]. Analysis to follow the [revised] CQA plan.
2012-04-03	OPEN - no issues
2012-03-27	OPEN - no issues

11 SCHEDULE REVIEW

01 SCHEDULE

2012-04-17	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. [01] 04-16 - documented rain date. [02] 04-18 - silt fence installation. [03] 05-01 - two weeks estimated ash placement complete. [04] Outfall manhole access - AER permission to cut lock if no key provided.
2012-04-10	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. . AER to provide revised schedule next week. One rain date documented for 04-05.
2012-04-03	OPEN - No significant changes. AMS to update actuals and submittals. AER changed the description "piezometer" to "vent pipe" on the P6 schedule. M. Wagstaff concern addition of 17D to critical path by EWO-02 [reference Item No. 12.03-2012-04-03 below] as project is already "2x weeks behind schedule". Two week look ahead - pipe filling in Pond D.

02 TIME AND MATERIAL

2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

03 COORDINATION

2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues. Hierarchy for call for site access - R. Porter, J. Craven, and then M. Wagstaff. Post sign on site.
2012-04-03	OPEN - no issues. Reference Item No. 05.06-2012-04-03 above regarding others access to plant. AMS to laminate sign and post. Reference Item No. 14.01.20-2012-04-03 below.

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-04-17	OPEN - no issues. AMS to provide credit from AAA Electric on EWO-01.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	OPEN - AMS submitted EWO-02 and EWO-03. See Item No. 12.03 and 12.04

02 AMS PAY APPLICATION

2012-04-17	OPEN - M. Wagstaff indicated 10% will be held at the end on the job.
2012-04-10	OPEN - M. Wagstaff indicated the application has been received from AMS, and he has forwarded to J. Davis at AER for review.
2012-04-03	OPEN - in progress

03 EWO-02 - ASH PLACEMENT

2012-04-17	OPEN - M. Wagstaff has under review. Work is soft are will be long boom excavator on matts. Area will be 35 FT wide swath first week. Standard boom excavator for back fill. The cut from the clay berm will be pushed into the are of the soft ash excavation to bridge the area.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff requesting the description be changed from "ash placement" to "cap modification". This EWO is to include all changes from the plan changes to date. P. Zinsious indicated AMS to have AER "agree in principle" with the ash placement portion presented. AMS will provide spreadsheet showing changes of overall project such as the channels, berms, pump system, etc. M. Wagstaff question how AMS arrived at the 17D addition to the critical path. P. Zinsious to investigate calculation used. R. Porter reported there is a soft area approximately 50 FT x 1,000 FT located on the east and south perimeter of the pond. P. Zinsious indicated that J. Denham and J. Boone are in process of reviewing options, and would report back in a couple of days.

04 EWO-03 - COAL PILE

2012-04-17	OPEN - M. Wagstaff to forward EWO.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting. However, AER approved this work.
2012-04-03	NEW - AMS submitted EWO letter. M. Wagstaff indicated AER has to review as other options for site may affect the decision.

05 EWO-04 - PIPE RELOCATION

2012-04-17	OPEN - M. Wagstaff approved orally. AMS reports there are tow lines in the berm, one to be relocated, and the other portions of previous line left in the berm when replaced earlier. M. Wagstaff will provide elevations at specific stations on the line for relocation. Some of the pipe has been backfilled with bottom ash, and the old line has areas encased in concrete. Areas encased in concrete to remain in place. AMS indicated the new culvert at the road crossing [between Pond A and Pond D] will be lowered [field elevations] to get underneath pipe line. Pipe may create voids if buried in the ash pond, so it was determined to dispose of the pipe removed off-site, and estimated 6-7 dumpsters for pipe disposal, also approved. Short piece of pipe from the AER yard will be connected to the manhole with a repair-type mechanical compression clamp.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - R. Porter briefly explained the procedure to excavate and move the line inside the berm. M. Wagstaff requested "pothole" to locate.

05 EWO-05 - ELECTRICAL REVISION

2012-04-17	OPEN - in progress.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.
2012-04-03	NEW - M. Wagstaff indicated drawings to be released 04-03.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-04-17

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room - in progress]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]
[23] NEW - M. Wagstaff to provide drawings for the existing MCC.

2012-04-10

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing]
[21] M. Wagstaff to contact Ameren Utilities for the meter. [CLOSED]
[22] Mailbox and delivery thereof status.[CLOSED - M. Wagstaff reports all mail now goes to Newton]

2012-04-03

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich reviewed location, and has proposed option. Will review 04-03]
[17] ACAD files to AMS [CLOSED - AER transmitted disc]
[18] AER to print full size schedule [CLOSED]
[19] Flood plain permit [CLOSED - AMS will publish AER info]
[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [NEW - AER to get revised]
[21] M. Wagstaff to contact Ameren Utilities for the meter.
[22] Mailbox and delivery thereof status.

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-04-17

[06] RFI-01 roadway clarification [CLOSED - correct RFI No. 9]

[20] [REOPEN] P. Zinsious to provide draft.

2012-04-10

[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.] [CLOSED - differed to discussion after progress meeting]

[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [CLOSED - differed to discussion after progress meeting]

[06] RFI-01 roadway clarification [OPEN - AMS not received]

[16] Submittal log [OPEN - AMS submit EOW] [CLOSED - reference above in submittals]

[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.[CLOSED - e-mails will be copied/forwarded]

[20] Site entry signage [CLOSED - provide draft]

2012-04-03

[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.]

[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [In progress]

[06] RFI-01 roadway clarification [OPEN - AMS in progress]

[16] Submittal log [OPEN - AMS submit EOW] [In progress - couple days out]

[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.

[20] Site entry signage

15 PRODUCTION

01 GENERAL

2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues
2012-04-03	OPEN - no issues

02 ASH

2012-04-17	OPEN - no issues. Estimated 38,996 CY EOD 04-16.
2012-04-10	OPEN - no issues. Estimated 28,076 CY EOD 04-09.
2012-04-03	OPEN - no issues - 10,300 CY as of 03-03. Estimated 13,968 CY EOD.

03 CLAY

2012-04-17	OPEN - no issues - this activity not begun.
2012-04-10	OPEN - no issues - this activity not begun. Borrow site agreement signing 04-10. [corrected minutes date date]
2012-04-03	OPEN - no issues - this activity not begun. Borrow site in process closing on agreements.

16 DOCUMENTS TRANSMITTED

2012-04-17	[01] AMS - Contact List HUT-APD-CON-20120-04-17
2012-04-10	[01] AMS - Contact List HUT-APD-CON-20120-04-10 [02] AMS - Submittal Breakout Report [previously issued at Pre-Con] dated 20120-01-31. [03] AER - J. Craven submittal log draft spreadsheet.
2012-04-03	[01] AMS - EWO-02 - ash placement to AER and GEO [02] AMS - EWO-03 - coal pile to AER and GEO [03] AMS - Lessons Learned/Near Miss Report [Incident dated 2012-04-20] [04] AMS - Contact list [next print out 11x17]

17 DOCUMENTS REVIEW ONLY

2012-04-17	None
2012-04-10	None
2012-04-03	None

18 NEXT PROGRESS MEETING

Next meeting will be held in one week - Tuesday, April 24, 2012 at Hutsonville

19 DISTRIBUTION - STANDARD

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: May 1, 2012

SUBJECT: Weekly Summary Report for April 23, 2012 to April 27, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny. Temperature (°F) lows ranged from 35 to 65°F, and temperature highs ranged from 68 to 75°F.

Construction Activities

Ash grading, undercutting of soft areas, ADS corrugated pipe removal, and 18-inch HDPE gravity drainage pipe excavation occurred this week. Ash and embankment grading occurred in all quadrants of Ash Pond D. The main fill area was in the south end of Quadrant A and B. Excess berm material was stockpiled outside of the pond. The AMS entry signs were placed at the plant entrance and by the job trailers. On April 26, 2012, a Sky Track 6036 Forklift and a Wacker RT Trench Roller was delivered. Two samples were taken from the embankment material for material testing. Four test pits were excavated to depths of approximately 8 to 13 feet below ground surface. The material found in the test pits were generally red to brown silty clays, underlain by red fine to silty, or coarse sands at various depths. Refer to the attached daily reports for additional information regarding the test pits. The test pits indicate that a dewatering system will be needed before the excavation of the trench.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Hyundai 290 LC-9 Long Reach Excavator
Sky Track 6036 Forklift
Wacker RT Trench Roller
Water Truck

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, and James Marks
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Marc Downs
Charah – Joe Tasich
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, April 24, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash and embankment material within the footprint of Ash Pond D (quadrants A, B, C, and D) was graded. The geomembrane is estimated to be delivered on April 30, 2012.

Testing/Sampling

Two samples of the embankment material were obtained to run Standard Proctor tests. The first sample was obtained from the south embankment at approx. Station 21+00, and the second sample was obtained from the east embankment at approx. Station 15+00.

Electronic Filing: Received, Clerk's Office 09/28/2020

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13782

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 4/23/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 10.75 hrs (0.25 hr for lunch)
Weather: Sunny, 35°AM, 68°PM Windy | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, ~~D6H Dozer,~~ 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

Updated Equipment and Personnel:

	Company:
Jared Belt - Cat D6N Dozer	Belt
Nick Walker - 9520 Tractor with 2-1812C Pans	Belt
Kevin Flynn - Cat 325C Excavator	Belt
Brad Bolenbaugh - Cat D6H Dozer (Not on-site today - Dr. Appt.)	Belt
Marc Downs - Hyundai 290 LC-9 Excavator	Belt
Robert Dunkley - Water Truck / School Bus	AMS
James Marks - None (AMS Pickup Truck)	AMS

The 9520 continued cutting the north end of Section A and B, and filling the south end of Section A and B. The D6N graded ash and berm material in Section D, and graded around stakes in Section A and B. The 290 LC-9 continued undercutting along the south and east embankments in Section D. The 325C spread out berm material within the pond, and continued cutting the south embankment. Around the SE corner of the embankments, the cut material was thrown outside of the pond, instead of inside, because they are running out of room in this area to work the material. This berm material may be used in the Cap, but would have to be approved. Berm Material: Primarily Brown, Silty CLAY-CL, with large amounts of sand and gravel to cobbles.

James Marks (AMS Laborer) began work today. He piled up the old ADS pipe for pickup. Joko on site today to observe activities. Randy made a grade rod with RR iron and chains. D6N tested it out in the PM in the coal yard.

No. A 13783

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/24/12

TIME: Arrive: 6:30 AM | Depart: 4:45 PM | Travel: 1.0 hr | Total: 11.0 (0.25 hr for lunch)
Weather: Sunny, 45°AM, Cloudy 70°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

The 325C removed the temporary ADS corrugated drainage pipes from the north to south entrances in south Section A and B. Then the 325C began cutting the east embankment, filling the east undercut trench, and placing the excess berm material outside of the pond. The 290 LC-9 continued undercutting along the east embankment in Section D. The 9520 continued cutting the north end of Section A and B, and filling the existing ditch running east to west across Section A and B. The D6H continued grading Section C and D. The D6N continued grading Section C and D, as well as the existing ditch as it was filled. The entire south embankment has been cut down to expose the HDPE gravity drain pipe. The old ADS drainage pipe is continuously layed outside the pond.

Jeff Bosing, Lynn Elpers, and Tony Anderson, with Koberstein Contracting, Inc., visited the site to discuss the perforated collection pipe (PCP), outfall structure demo and modification, paved ditch, gutter, bentonite, and junction box. They will get trained this week and begin the outfall structure next week. The concrete from the structure will be incorporated into the fill, and the steel will be taken to the plant.

Shelby, Jimmy, and Paul were on site all day to observe activities. AAA Electric was on site to observe the MCC plans and work in the switchgear room. Any dewatering on site will more than likely be pumped into Pond B. Any excess spoils on-site from Pond D (soil) will have to be lost on site. Joko on-site all day. He put supplies in the storm shelter and will finalize a plan. Submittals need to be accelerated to get the project back on schedule.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13784

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 4/25/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 10.75 hrs (0.25 hr for lunch)
Weather: Sunny, 55°AM, Cloudy, 70°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

The D6H continued grading Section C and D. The D6N continued grading Section D and south Section B. The 9520 continued cutting the north end of Section A and B, and filling the south end of Section A and B. The 290 LC-9 continued undercutting along the east embankment in Section B. The 325C continued cutting the east embankment, and filling the east undercut trench, and stockpiling excess berm material outside of the pond. The 325C also moved cut material within the pond along the south embankment.

Along the east embankment, the old ADS corrugated gravity drainage pipe is located outside the 18" HDPE pipe, as opposed to inside of the pipe along the south embankment.

The 290LC-9 will be here an additional week to dig the trench in Ash Pond A.

James Marks put up the AMS entry signs at the plant entrance, and by the job trailers.

Mike Burch, with Freitag-Weinhardt, Inc., visited to discuss scheduling of the installation of the HDPE pipes (discharge) and the dewatering sumps (DS).

Randy checked grades in the field along the embankments with a laser level.

Dust Control being performed on a daily basis.

Additional Comments: Currently evaluating the issue with the stockpile material.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13785

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/26/12

TIME: Arrive: 6:30 AM | Depart: 4:15 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.25 hr for lunch)
Weather: Sunny, 65°AM, 75° PM | Contractor: AMS | Subcontr./Supplier: Bett Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

The D6H continued grading south Section A and B, while covering the broken north end geotubes and grading placed fill. The D6N continued grading Section D, and south Section B. The 9520 continued cutting the north end of Section A and B, and filling south end of Section A and B. The 9520 also cut the soil/ash mix along the NE embankment, so it could be covered with ash in the center of the pond, while leaving a small berm along the NE embankment to catch water runoff. The 290LC-9 continued under cutting along the east embankment in Section B (including undercutting around the outfall structure). The 325C continued cutting the east embankment, while exposing the 18" HDPE gravity pipe.

Deliveries: Sky Track 6036 Forklift and Wacker RT Trench Roller.

James gathered old geotube material in Section C, and placed by old ADS pipe.

Samples were obtained in the embankment material for proctors at ≈ 21+00 and ≈15+00.

John Boyer with B&T Drainage visited. He will supply AMS with a sewer laser.

In the PM, the 290LC-9 got stuck in the NE section of the pond, just NW of the outfall structure. The 325C gathered crane mats, and the D6N pulled it out with a cable. ~ Short delay in production. The usage of the embankment material has been determined.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13786

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/27/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 11.0 hrs (met with B&T over lunch)
Weather: Sunny, 40°AM, 70°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

The 9520 continued cutting and filling within Section A and B. The D6H graded Section A, and the D6N graded Section A, C, and D. The 290LC-9 moved wet undercut ash in Section D to dry over the weekend. The 325C finished cutting the east berm, and began cutting the NE Berm. The 325C also dug 4 test pits along the proposed line for the groundwater collection pipe to evaluate material. John Boyer with B&T was here to observe the pits.

Test Pit 1
South of - Center of Pond A
0-5' Red, Silty CLAY
5-8' Red, Fine SAND
8-10' Brown, Fine to Coarse SAND
GWT = 8.0'
Could not keep pit open after 8.0'

Test Pit 2
South of - Between Pond A and B
0-2' Brown, Silty CLAY
2-10' Red, Fine to Silty SAND
GWT = 10', Sandstone = 10'
Terminated at 10'

Test Pit 3
South of - Center of Pond D
0-1.5' Black, Coal Fines
1.5'-6' Red, Fine SAND
6-8' Brown, Fine to Coarse SAND
GWT = 8.0'
Terminated at 8'

Test Pit 4
South of - SE Corner of Pond D
0-13' Brown, Silty CLAY
GWT = 13'
Terminated at 13'

The water and the sand will cause many problems in digging the trench. A dewatering system will have to be implemented before excavation. This may cause significant changes in the schedule... More time required.

Additional Comments: Jimmy Boone and John Denham here in the AM to observe the site.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues.
2012-04-10	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-04-24	OPEN - no issues. AAA electric to be on site 04-24 again to review electric MCC/switch gear room.
2012-04-17	OPEN - no issues. AAA electric to be on site 04-17 to review electric switch gear room.
2012-04-10	OPEN - no issues.

03 EMPLOYEE DRUG TESTING

2012-04-24	OPEN - no issues. Koberstein 5x workers to be scheduled for 04-27.
2012-04-17	OPEN - no issues. AMS worker scheduled for 04-18. Belt Construction 1x 04-17. Daylight Farms 3x 04-16. M. Wagstaff indicated drug testing cost is borne by the subcontractors, notes in specifications.
2012-04-10	OPEN - no issues. Inquiry as to liner subcontractor [Chesapeake Containment]. Trained on schedule, some already trained.

04 AMS SAFETY

2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. Next Safety Luncheon scheduled for 04-08.
2012-04-10	OPEN - no issues.

05 HOUSEKEEPING

2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. AMS to reinstall caution tape on south berm where wind blew down.
2012-04-10	OPEN - no issues

06 PLANT ACCESS - CBT BADGE

2012-04-24	OPEN - no issues. AMS received AER consultant badges.
2012-04-17	OPEN - no issues. M. Wagstaff to investigate AMS consultant badges.
2012-04-10	OPEN - no issues

02 SUBMITTALS

2012-04-24	OPEN - no issues. In progress - liner sample tests results from TRI under review by GEO
2012-04-17	OPEN - no issues. In progress, J. Cravens and P. Zinsious to meet after the progress meeting. Resubmit with [corrected] specification numbers.
2012-04-10	OPEN - no issues. In progress, J. Cravens and P. Zinsious to finish out log. GEO to maintain the log. Submit in groups.

08 MATERIAL

01 GENERAL

20120-04-24	OPEN - [ref. Item No. 07.02-2012-04-24 above].
20120-04-17	OPEN - Liner sample tests not back from TRI.
20120-04-10	OPEN - Liner can be delivered early to the site if necessary.

09 ADJACENT PROPERTIES

01 GENERAL

2012-04-24	OPEN - no issues. Excavation plan submitted by Koberstein [part time at meeting]. [01] General discussion trench width. [02] Stockpile top soil. [03] 80 FT/D production rate. Duration of work projected 50D. [04] Pump groundwater to Pond A or Pond B. [05] Alignment of pipe is flexible [for filed conditions]. Curve or "angle" OK. [06] KCI recommended double cleanouts for ease. AER indicated single [as designed] OK. [07] AER reviewed pipe can go directly into the manhole [shown on drawings as adjacent]. [08] Spoils can be "lost" on the berm embankments.
2012-04-17	OPEN - no issues. Excavation plan in progress.
2012-04-10	OPEN - no issues. Excavation plan scheduled for two weeks out.

10 QUALITY CONTROL

01 GENERAL

2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues

02 ASH

2012-04-24	OPEN - no quality issues. R. Porter report the wet ash in the east area of the pond is going to require 2-3 days [stacked] to drain the water off. J. boone indicated this area of pond is further away from the discharge inlet, thus reason for the fines [not settle out in other areas of the pond]. The wet ash is being stacked and spread out to dry.
2012-04-17	OPEN - no quality issues. Ash proctors have been received. J. Cravens to review how to match results as one of the three has different characteristics.
2012-04-10	OPEN - no quality issues. Ash placement by scrapers. No issue on compaction. Tests to be taken when elevation is within 1 FT of finish grade. GEO has taken samples for proctors, and 1 of 2 test analysis have been returned.

03 CLAY

2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. [added entry for this date]
2012-04-10	OPEN - no issues. Samples to be taken in next week or two [by AMS]. Analysis to follow the [revised] CQA plan.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-04-24	OPEN - Review of schedule 04-18. [01] Schedule to be adjusted and corrected for end date calculations. [02] 05-02 - Pipe relocation start. [03] 05-04 - Massmann to survey. [04] 05-07 - Begin demolition outfall structure. AMS to set scrap steel in plant yard. Duration 2D include flowable fill. [05] 05-07 - Illini Drilled to mob to site for cap vents. [06] 05-29 - Projected start date for the PCP. End date projection 09-11.
2012-04-17	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. [01] 04-16 - documented rain date. [02] 04-18 - silt fence installation. [03] 05-01 - two weeks estimated ash placement complete. [04] Outfall manhole access - AER permission to cut lock if no key provided.
2012-04-10	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. . AER to provide revised schedule next week. One rain date documented for 04-05.

02 TIME AND MATERIAL

2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues

03 COORDINATION

2012-04-24	OPEN - no issues. Signs on site [ref. Item No. 14.20-2012-04-24 below].
2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues. Hierarchy for call for site access - R. Porter, J. Craven, and then M. Wagstaff. Post sign on site.

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. AMS to provide credit from AAA Electric on EWO-01.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.

02 AMS PAY APPLICATION

2012-04-24	OPEN - M. Wagstaff indicated 10% will be held at the end on the job. AMS no issue. CLOSED
2012-04-17	OPEN - M. Wagstaff indicated 10% will be held at the end on the job.
2012-04-10	OPEN - M. Wagstaff indicated the application has been received from AMS, and he has forwarded to J. Davis at AER for review.

03 EWO-02 - ASH PLACEMENT - CAP MODIFICATIONS

2012-04-24	OPEN - AER to provide interim e-mail stating approval for this work to AMS.
2012-04-17	OPEN - M. Wagstaff has under review. Work is soft are will be long boom excavator on matts. Area will be 35 FT wide swath first week. Standard boom excavator for back fill. The cut from the clay berm will be pushed into the are of the soft ash excavation to bridge the area.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.

04 EWO-03 - COAL PILE

2012-04-17	OPEN - Work completed. Some areas graded to "original soil" under coal pile. AMS will wait for rain to determine location of the drainage trenches. AER to provide interim e-mail stating approval for this work to AMS.
2012-04-17	OPEN - M. Wagstaff to forward EWO.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting. However, AER approved this work.

05 EWO-04 - PIPE RELOCATION

2012-04-24	OPEN - M. Wagstaff published elevations. [Current progress: pipe exposed along the south and at turn of east side pond.] AER to provide interim e-mail stating approval for this work to AMS.
2012-04-17	OPEN - M. Wagstaff approved orally. AMS reports there are tow lines in the berm, one to be relocated, and the other portions of previous line left in the berm when replaced earlier. M. Wagstaff will provide elevations at specific stations on the line for relocation. Some of the pipe has been backfilled with bottom ash, and the old line has areas encased in concrete. Areas encased in concrete to remain in place. AMS indicated the new culvert at the road crossing [between Pond A and Pond D] will be lowered [field elevations] to get underneath pipe line. Pipe may create voids if buried in the ash pond, so it was determined to dispose of the pipe removed off-site, and estimated 6-7 dumpsters for pipe disposal, also approved. Short piece of pipe from the AER yard will be connected to the manhole with a repair-type mechanical compression clamp.
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.

06 EWO-05 - ELECTRICAL REVISION

2012-04-24	OPEN - in progress. AAA to be on site to inspect MCC /switchgear room. Meeting after [part of] this progress meeting.
2012-04-17	OPEN - in progress
2012-04-10	OPEN - Discussion and review of EWO's to be deferred to after the progress meeting.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-04-24

[03] Fire protection [CLOSED - Old switchgear room will be emergency shelter. J. Tasich ahs supplies to set in place 04-24]. Signs will be posted, and a plan will be finalized.

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp.

2012-04-17

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room - in progress]

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC.

2012-04-10

[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room]

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing]

[21] M. Wagstaff to contact Ameren Utilities for the meter. [CLOSED]

[22] Mailbox and delivery thereof status.[CLOSED - M. Wagstaff reports all mail now goes to Newton]

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-04-24

[20] [REOPEN] P. Zinsious to provide draft. CLOSED - signs on site, ready to be installed].

2012-04-17

[06] RFI-01 roadway clarification [CLOSED - correct RFI No. 9]

[20] [REOPEN] P. Zinsious to provide draft.

2012-04-10

[04] Cost review – relocation flume and change to cap [when receive revised drawings] [OPEN – General discussion topo reference previous commentary above in Item No. 10.02-2012-03-27 - communication will be essential during ash placement to track changes.] [CLOSED - differed to discussion after progress meeting]

[05] Cost review – HDPE line relocation [when receive revised drawings] [OPEN – line to be moved to inside of the pond area, as pipe will get "shorter" by virtue of shorter run . [CLOSED - differed to discussion after progress meeting]

[06] RFI-01 roadway clarification [OPEN - AMS not received]

[16] Submittal log [OPEN - AMS submit EOW] [CLOSED - reference above in submittals]

[19] All documents to be copied [e-mailed] to Mr. Joe Cravens - M. Wagstaff representative on site.[CLOSED - e-mails will be copied/forwarded]

[20] Site entry signage [CLOSED - provide draft]

15 PRODUCTION

01 GENERAL

2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues
2012-04-10	OPEN - no issues

02 ASH

2012-04-24	OPEN - no issues. Estimated 55,452 CY EOD 04-23. General discussion CY are estimates and more than likely under-reported. AER inquired how AMS plan ash to grade - projection is site may possibly balance. M. Wagstaff concern ash placement may not make schedule.
2012-04-17	OPEN - no issues. Estimated 38,996 CY EOD 04-16.
2012-04-10	OPEN - no issues. Estimated 28,076 CY EOD 04-09.

03 CLAY

2012-04-24	OPEN - no issues - this activity not begun.
2012-04-17	OPEN - no issues - this activity not begun.
2012-04-10	OPEN - no issues - this activity not begun. Borrow site agreement signing 04-10. [corrected minutes date date]

16 DOCUMENTS TRANSMITTED

2012-04-24	[01] AMS - Electrical drawing package [1x copy 23 x 36] to AAA [02] AMS - Schedule dated 04-18 [03] AMS - Koberstein [1x copy] to AER "Excavation Plan" [04] AMS - Contact list HUT-APD-CON-2012-04-24

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: May 7, 2012

SUBJECT: Weekly Summary Report for April 30, 2012 to May 4, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy with periods of rain. Temperature (°F) lows ranged from 60 to 70°F, and temperature highs ranged from 70 to 88°F. The rain caused production delays on May 1 and May 4, 2012.

Construction Activities

Ash grading, undercutting of soft areas, geomembrane delivery, ADS corrugated pipe removal, and 18-inch HDPE gravity drainage pipe excavation occurred this week. Ash and embankment grading occurred in all quadrants of Ash Pond D. The main fill area was in the south end of Quadrant A and B. Geomembrane was delivered and stored according to the CQA plan.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Hyundai 290 LC-9 Long Reach Excavator
Sky Track 6036 Forklift
Wacker RT Trench Roller
Water Truck

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, and James Marks
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Marc Downs
Charah – Joe Tasich
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, May 1, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash and embankment material within the footprint of Ash Pond D (quadrants A, B, C, and D) was graded. The geomembrane was delivered on April 30 and May 1, 2012.

Testing/Sampling

Sampling and testing did not occur this week.

Electronic Filing: Received, Clerk's Office 09/28/2020

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13787

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 4/30/12

TIME: Arrive: 6:30 AM | Depart: 4:15 PM | Travel: 1.0 hr | Total: 10.5 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 65°AM, 80°PM Cloudy/Rain | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: Water Truck, 290LC-9 Excavator, Sky Trak 6036 Forklift

The D6N continued grading Section C and D. The D6H continued grading Section A. The 9520 continued cutting and filling ash within Section A and B. The 290 LC-9 moved undercut ash in Section B and D to dry. The 325C moved undercut ash in Section C and D, and continued cutting the NE embankment.

60 of the 72 rolls of geomembrane were delivered (5 trucks, 12 rolls/truck). Brad Bolenbaugh unloaded the rolls with the forklift and placed them in the construction yard.

Truck 1	Truck 2	Truck 3	Truck 4	Truck 5	
108162809	108162804	108162779	108162858	108162863	Any defects (visual) were recorded. Randy received all the papers for each delivery. All rolls were labled correctly and will be checked with the roll spreadsheet accordingly.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 5/1/12

TIME: Arrive: 6:30 AM | Depart: 3:15 PM | Travel: 1.0 hr | Total: 9.5 hrs (0.25 hr for lunch)
Weather: Foggy/Cloudy, 60°AM, 75° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 2-1812C Pans,
Site Activities / Observations / Contacts / Notes: 290LC-9 Excavator, Sky Trak 6036 Forklift

The 325C spread out cut berm and ash material in Section B and D. The 290LC-9 undercut wet ash along the NE embankment in Section B. The D6N and D6H graded Section A and B. The D6H uncovered an old HDPE drainage pipe in Section B. It was used for temporary drainage for the old existing road running west to east across the pond. It had been abandoned and therefore ripped out and incorporated into the fill. No dust control required today; Robert Dunkley had the day off.

The last of the geomembrane was delivered (72 rolls on-site).

Truck 6

108162840	Dave Valentine (Charah) attended the meeting with Joko.
108162828	
108162817	Mike, Paul, and Joe King observed the Pond C junction box and the elec.
108162834	building near the water tank to plan running new electric.
108162824	
108162820	More stoplogs need to be put in the outfalls of Pond A and B.
108162825	
108162837	It began raining at 9:30 am and work was terminated at 10:30 am.
108162838	No Production after 10:30 am.
108162822	
108162823	B&T Drainage should submit their bid in the next couple days.
108162816	

Additional Comments: If the trenches for the collector pipe exceed 20', an engineered plan is required.

Electronic Filing: Received, Clerk's Office 09/28/2020

No. A 13789

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/2/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.5 hrs (no lunch)
Weather: Sunny, 70°AM, 88°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 4-1812C Pans,
Site Activities / Observations / Contacts / Notes: 290 LC-9 Excavator, Water Truck

The oil was changed in the 9520, and one of the 1812C Pans was dropped due to the following: speed up cutting and filling since the distance to move the material has reduced, not efficient to use two pans for the cut/fill that remains, and less chance of getting stuck in the wet material. The D6N and D6H continued grading Section A and B. The 325C cut down the north end of the pond to grade, until enough space was provided from the fence line for the dozers to take over. After, the 325C continued cutting the NE embankment. The 290LC-9 continued undercutting along the NE embankment. The 9520 continued cutting and filling Section A and B, primarily working in Section B.

Two 40 YD dumpsters will be delivered tomorrow for disposing of the old ADS corrugated pipe on the south side of Pond D, along with remaining geotube material.

James Marks began taking down the gate in the chain link fence, beside the box culvert, on the west side of the pond.

A dumptruck will be on-site tomorrow to test how much material can be loaded in one truck, to determine how many trucks will be required for the CBS.

Important Dates: Liner Pre. Con. Meeting - 5/22/12, Liner Mob. and Setup - 5/29/12, Begin installation of Geomembrane - 5/30/12.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13790

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/3/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 10.75 hr (0.25 hr for lunch)
Weather: Sunny, 70°AM, 85° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 1812C Pan,
Site Activities / Observations / Contacts / Notes: Water Truck, 290LC-9 Excavator

The 9520 continued cutting and filling within Section A and B, as well as filling the northern portion of Section C. The D6N graded Section B and D. The D6H graded Section B and D, as well as the eastern portion of Section C. The 325C continued cutting the NE embankment, and moved wet undercut ash in Section B and D. The 290LC continued undercutting along the NE embankment, and moved wet undercut ash in B.

A dumptruck (Fawnlane Trucking) was brought to the site to test how many excavator buckets it can carry, without exceeding the load limit. The bucket on the 325C is 60" at 2.33 CY. At 4 buckets, the weight was approx. 15 tons. At 5 buckets (max), the weight was approx. 16.5 tons. When the dumptruck came back to the site after weighing, the load was ≈ 31,700 lb ≈ 15.85 tons. Therefore, each dumptruck used for the CBS can carry 5 buckets of material, or ≈ 16 tons and be within the loading limits. This will help AMS to develop a more accurate schedule for moving the CBS.

The 40 yd dumpsters were delivered today to dispose of the old ADS corrugated pipe and remaining geotube materials. They were placed on the south side of Pond D, along the gravel road. They will be loaded tomorrow by the 325C.

James Marks began filling the dumpster with small pieces.
Jimmy Boone here today to observe site activities.

Additional Comments: Geomembrane Pre-Con Meeting moved to 5/8/12.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13791

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 5/4/12

TIME: Arrive: 6:30 AM | Depart: 11:00 AM | Travel: 1.0 hr | Total: 5.5 hrs
Weather: Cloudy, 70°AM, 60°PM, Cloudy/Rain | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: D6N Dozer, D6H Dozer, 325C Excavator, 9520 Tractor, 1812C Pan,
Site Activities / Observations / Contacts / Notes: Water Truck, 290LC-9 Excavator

The D6H continued grading Section D. The D6N continued grading Section B, and filled undercut areas with embankment material. The 325C filled the dumpsters with the old ADS corrugated pipe and remaining geotube material, and continued cutting the NE embankment along with moving undercut ash in Section B. The 290LC-9 continued undercutting along the NE embankment, and moved ash in Section B. The 9520 did not perform cutting and filling. Instead, the 9520 drove around in all 4 Sections, smoothing out the ash surface with one 1812C Pan, for preparation for the rain. This will allow the site to drain better.

James cleaned up areas around existing grade stakes in Section C and D.

It began raining at 9:30 AM and work ceased at 10:00 AM.
No Production after 10:00 AM.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-05-01	OPEN - no issues. AAA electric to be on site 05-01 to go over EWO details.
2012-04-24	OPEN - no issues. AAA electric to be on site 04-24 again to review electric MCC/switch gear room.
2012-04-17	OPEN - no issues. AAA electric to be on site 04-17 to review electric switch gear room.

03 EMPLOYEE DRUG TESTING

2012-05-01	OPEN - no issues. Illini Drilled 2x workers to be scheduled for 05-07.
2012-04-24	OPEN - no issues. Koberstein 5x workers to be scheduled for 04-27.
2012-04-17	OPEN - no issues. AMS worker scheduled for 04-18. Belt Construction 1x 04-17. Daylight Farms 3x 04-16. M. Wagstaff indicated drug testing cost is borne by the subcontractors, notes in specifications.

04 AMS SAFETY

2012-05-01	OPEN - no issues. M. Wagstaff requested [in EWO] 'stop log" adjustments in Pond A and Pond B. AMS workers will receive water training for this work. Next week is the monthly safety luncheon.
2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. Next Safety Luncheon scheduled for 04-08.

05 HOUSEKEEPING

2012-05-01	OPEN - no issues. AMS policy all workers drug test before on AMS site. J. Tasich to set up site in Robinson, IL. Nomenclature for drug testing is such that a positive result = bad [drugs found] whereas a negative result = good [no drugs found].
2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. AMS to reinstall caution tape on south berm where wind blew down.

06 PLANT ACCESS - CBT BADGE

2012-05-01	OPEN - no issues. Badges [consultant] switch over no-issue. J. Denham requested AER provide gate log once a month.
2012-04-24	OPEN - no issues. AMS received AER consultant badges.
2012-04-17	OPEN - no issues. M. Wagstaff to investigate AMS consultant badges.

07 VEHICLES ON SITE

2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues

08 OSHA LOG - WORK HOURS

2012-05-01	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 04-30
1,327.00	RT
0,000.00	OT
1,327.00	TOTAL
2012-04-24	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 04-23
1,051.50	RT
0,000.00	OT
1,051.50	TOTAL
2012-04-17	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday]
0,746.00	RT
0,000.00	OT
0,746.00	TOTAL

06 MANPOWER

01 CREW SIZE

2012-05-01 OPEN - AMS and Belt Construction on site. Koberstein declined. Corrected count for 04-24 below.

Current
[01] Geotechnology
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[00] Laborers
[05] Operators
[01] Teamsters
[00] Survey
[01] Foreman [Full time]
[08] Total

2012-04-24 OPEN - AMS and Belt Construction on site. Project addition of Koberstein next week.

Current
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[00] Laborers
~~[04] Operators~~ [05] Operators
[01] Teamsters
[00] Survey
[01] Foreman [Full time]
~~[06] Total~~ [07] Total

	2012-04-17	OPEN - AMS and Belt Construction on site. Project addition of 1x Laborer and 1x Operator next week.
	Current	Addition of CM/GEO
	[00] Pipe	
	[00] Mechanical	
	[00] Electrical	
	[00] Cement	
	[01] Laborers	
	[05] Operators	
	[01] Teamsters	
	[00] Survey	
	[01] CM/GEO	
	[01] Foreman	[Full time]
	[09] Total	

02	**WORK HOURS**	
	2012-05-01	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Corrected time below.
	2012-04-24	OPEN - Standard hours - 7:00 AM CT to 3:30~~ AM CT~~ PM CT
	2012-04-17	OPEN - Standard hours
03	**OVER TIME**	
	2012-05-01	OPEN - None projected.
	2012-04-24	OPEN - Referencing 04-17 commentary, current production is 100 FT/D and is good rate, no OT projected.
	2012-04-17	OPEN - If rains first week of long boom operation, will work OT second week - at AMS cost.
04	**TRAILER [AND GENERAL CONDITIONS]**	
	2012-05-01	OPEN - no issues.
	2012-04-24	OPEN - no issues.
	2012-04-17	OPEN - no issues. Communication line dead.

07 PREVIOUS

01	**SUBCONTRACTS**	
	2012-05-01	OPEN - no issues. Koberstein declined. Replacement subcontractor in review - BT Drainage.
	2012-04-24	OPEN - no issues. Koberstein in progress.
	2012-04-17	OPEN - no issues. Koberstein in progress.
02	**SUBMITTALS**	
	2012-05-01	OPEN - no issues. In progress - M. Wagstaff request mechanical submittal be checked for missing pump information. AER has returned mechanical, electrical, and liner submittals.
	2012-04-24	OPEN - no issues. In progress - liner sample tests results from TRI under review by GEO
	2012-04-17	OPEN - no issues. In progress, J. Cravens and P. Zinsious to meet after the progress meeting. Resubmit with [corrected] specification numbers.

08 MATERIAL

01	**GENERAL**	
	20120-05-01	OPEN - no issues. All HDPE liner on site [72 rolls] as of 05-01.
	20120-04-24	OPEN - [ref. Item No. 07.02-2012-04-24 above].
	20120-04-17	OPEN - Liner sample tests not back from TRI.

09 ADJACENT PROPERTIES AND PCP LINE

01	**GENERAL**	
	2012-05-01	OPEN - BT Drainage [01] Deepest projected part of excavation is 22-23 FT. [02] J. Denham indicated the rock may not dig, requested AER consider raising the line above the bedrock line.
	2012-04-24	OPEN - no issues. Excavation plan submitted by Koberstein [part time at meeting]. [01] General discussion trench width. [02] Stockpile top soil. [03] 80 FT/D production rate. Duration of work projected 50D. [04] Pump groundwater to Pond A or Pond B. [05] Alignment of pipe is flexible [for filed conditions]. Curve or "angle" OK. [06] KCI recommended double cleanouts for ease. AER indicated single [as designed] OK. [07] AER reviewed pipe can go directly into the manhole [shown on drawings as adjacent]. [08] Spoils can be "lost" on the berm embankments.
	2012-04-17	OPEN - no issues. Excavation plan in progress.

10 QUALITY CONTROL

01 GENERAL

2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues

02 ASH

2012-05-01	OPEN - no issues. On going process.
2012-04-24	OPEN - no quality issues. R. Porter report the wet ash in the east area of the pond is going to require 2-3 days [stacked] to drain the water off. J. boone indicated this area of pond is further away from the discharge inlet, thus reason for the fines [not settle out in other areas of the pond]. The wet ash is being stacked and spread out to dry.
2012-04-17	OPEN - no quality issues. Ash proctors have been received. J. Cravens to review how to match results as one of the three has different characteristics.

03 CLAY

2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. [added entry for this date]

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-01	OPEN - Review of schedule 04-30. [01] Schedule critical path and look ahead reviewed. [02] Actual percent completion on ash pond sectors: A = 90%, B = 70%, C = 90%, D = 75%. [03] Activity No. 106 cap vents still scheduled for 05-14 as shown on 04-30 schedule. [04] Compaction testing for ash and surveying to be coordinated for same time if possible. Surveyor can come out twice. [05] Build pads for cap vent drill rig. [06] Discussion on the liner schedule and Memorial Day holiday. Verify day after the holiday.
2012-04-24	OPEN - Review of schedule 04-18. [01] Schedule to be adjusted and corrected for end date calculations. [02] 05-02 - Pipe relocation start. [03] 05-04 - Massmann to survey. [04] 05-07 - Begin demolition outfall structure. AMS to set scrap steel in plant yard. Duration 2D include flowable fill. [05] 05-07 - Illini Drilled to mob to site for cap vents. [06] 05-29 - Projected start date for the PCP. End date projection 09-11.
2012-04-17	OPEN - Review of schedule with actuals dates, activity look-ahead for two weeks, and critical path. [01] 04-16 - documented rain date. [02] 04-18 - silt fence installation. [03] 05-01 - two weeks estimated ash placement complete. [04] Outfall manhole access - AER permission to cut lock if no key provided.

02 TIME AND MATERIAL

2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues
2012-04-17	OPEN - no issues

03 COORDINATION

2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues. Signs on site [ref. Item No. 14.20-2012-04-24 below].
2012-04-17	OPEN - no issues

12 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.
2012-04-17	OPEN - no issues. AMS to provide credit from AAA Electric on EWO-01.

02 AMS PAY APPLICATION

2012-05-01	OPEN - M. Wagstaff indicated signed off with AER, should be reviewed by EOW. Invoice for stored materials on the HDPE liner.
2012-04-24	OPEN - M. Wagstaff indicated 10% will be held at the end on the job. AMS no issue. CLOSED
2012-04-17	OPEN - M. Wagstaff indicated 10% will be held at the end on the job.

03 EWO-02 - ASH PLACEMENT - CAP MODIFICATIONS

2012-05-01	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.
2012-04-24	OPEN - AER to provide interim e-mail stating approval for this work to AMS.
2012-04-17	OPEN - M. Wagstaff has under review. Work is soft are will be long boom excavator on matts. Area will be 35 FT wide swath first week. Standard boom excavator for back fill. The cut from the clay berm will be pushed into the are of the soft ash excavation to bridge the area.

04	**EWO-03 - COAL PILE**	
	2012-05-01	OPEN - Work completed. Area to be observed for drainage. Date corrected below 04-24.
	2012-04-24	OPEN - Work completed. Some areas graded to "original soil" under coal pile. AMS will wait for rain to determine location of the drainage trenches. AER to provide interim e-mail stating approval for this work to AMS.
	2012-04-17	OPEN - M. Wagstaff to forward EWO.
05	**EWO-04 - PIPE RELOCATION**	
	2012-05-01	OPEN - In progress. Pipe is exposed, and ready to begin lowering. AMS recommending removal of the pipe to be demolished and filled
	2012-04-24	OPEN - M. Wagstaff published elevations. [Current progress: pipe exposed along the south and at turn of east side pond.] AER to provide interim e-mail stating approval for this work to AMS.
	2012-04-17	OPEN - M. Wagstaff approved orally. AMS reports there are tow lines in the berm, one to be relocated, and the other portions of previous line left in the berm when replaced earlier. M. Wagstaff will provide elevations at specific stations on the line for relocation. Some of the pipe has been backfilled with bottom ash, and the old line has areas encased in concrete. Areas encased in concrete to remain in place. AMS indicated the new culvert at the road crossing [between Pond A and Pond D] will be lowered [field elevations] to get underneath pipe line. Pipe may create voids if buried in the ash pond, so it was determined to dispose of the pipe removed off-site, and estimated 6-7 dumpsters for pipe disposal, also approved. Short piece of pipe from the AER yard will be connected to the manhole with a repair-type mechanical compression clamp.
06	**EWO-05 - ELECTRICAL REVISION**	
	2012-05-01	OPEN - in progress. Meeting after progress meeting with AAA Electric.
	2012-04-24	OPEN - in progress. AAA to be on site to inspect MCC /switchgear room. Meeting after [part of] this progress meeting.
	2012-04-17	OPEN - in progress

13	ACTION ITEMS - AER
01	**AMEREN [AER]**
	2012-05-01
	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]
	[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp. [CLOSED - reminder site cleared 5th of month by AER]
	2012-04-24
	[03] Fire protection [CLOSED - Old switchgear room will be emergency shelter. J. Tasich ahs supplies to set in place 04-24]. Signs will be posted, and a plan will be finalized.
	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]
	[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp.
	2012-04-17
	[03] Fire protection [OPEN - pumps off in plant so cannot use basements - team to review pit next to coal pile "push wall". The gathering place is guard shack by the trailers. [OPEN - J. Tasich described area and supplies for emergency shelter in old switchgear room - in progress]
	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]
	[23] NEW - M. Wagstaff to provide drawings for the existing MCC.

14	ACTION ITEMS - AMS
01	**ASH MANAGEMENT [AMS]**
	2012-05-01
	None
	2012-04-24
	[20] [REOPEN] P. Zinsious to provide draft. CLOSED - signs on site, ready to be installed].
	2012-04-17
	[06] RFI-01 roadway clarification [CLOSED - correct RFI No. 9]
	[20] [REOPEN] P. Zinsious to provide draft.

15	PRODUCTION	
01	**GENERAL**	
	2012-05-01	OPEN - no issues
	2012-04-24	OPEN - no issues
	2012-04-17	OPEN - no issues
02	**ASH**	
	2012-05-01	OPEN - no issues. Estimated 70,988 CY EOD 04-30.
	2012-04-24	OPEN - no issues. Estimated 55,452 CY EOD 04-23. General discussion CY are estimates and more than likely under-reported. AER inquired how AMS plan ash to grade - projection is site may possibly balance. M. Wagstaff concern ash placement may not make schedule.
	2012-04-17	OPEN - no issues. Estimated 38,996 CY EOD 04-16.
03	**CLAY**	
	2012-05-01	OPEN - no issues - this activity not begun.
	2012-04-24	OPEN - no issues - this activity not begun.
	2012-04-17	OPEN - no issues - this activity not begun.

16 DOCUMENTS TRANSMITTED

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: May 15, 2012

SUBJECT: Weekly Summary Report for May 7, 2012 to May 11, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally cloudy with periods of rain. Temperature (°F) lows ranged from 50 to 70°F, and temperature highs ranged from 72 to 78°F. The rain caused production delays on May 7, 2012.

Construction Activities

Ash grading, undercutting of soft areas, trenching through Ash Pond A and 18-inch HDPE gravity drainage pipe relocation occurred this week. Ash and embankment grading occurred in all quadrants of Ash Pond D. Compaction occurred on the west half of Ash Pond D. This area was tested for moisture and density on May 10 and May 11, 2012. Refer to compaction field forms for additional information. Soft areas continue to be cut and material spread to dry. A trench was dug through Ash Pond A for drainage. The 18-inch HDPE gravity drainage pipe was relocated to the new grade.

Equipment and Personnel On-Site

2-CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Hyundai 290 LC-9 Long Reach Excavator
Sky Track 6036 Forklift
Wacker RT Trench Roller
Water Truck

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Robert Dunkley, Anthony Driver, and James Marks
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Marc Downs
Charah – Joe Tasich
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, May 8, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash and embankment material within the footprint of Ash Pond D (quadrants A, B, C, and D) was graded.

Testing/Sampling

Moisture and density testing occurred on May 10 and May 11, 2012. Refer to compaction field forms for additional information.

Electronic Filing: Received, Clerk's Office 09/28/2020

Calibration Records

Calibration information was obtained for equipment from Massmann Surveying this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

No. A 13792

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/7/12

TIME: Arrive: 6:30 AM | Depart: 4:00 PM | Travel: 1.0 hr | Total: 10.25 hrs (0.25 hr for lunch)
Weather: Cloudy, 70° AM, 78° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 325C Excavator, 290LC-9 Excavator
Site Activities / Observations / Contacts / Notes:

Rain Day: No significant production in Ash Pond D. (EWO and Random Work).

The 290LC-9 dug the trench in Ash Pond A, from the north side of Pond A within the geotubes, to the south side of Pond A next to the weir (outfall), per EWO-06. The 325C cut the geotubes (SE corner) in Pond A and spread out Ash. The stoplogs and aluminum guard were placed in the Pond A outfall structure. Until water training is completed, the stoplogs cannot be placed in the Pond B outfall structure.

The 325C cut into the south embankment in Pond D, and pushed a hole through, underneath the HDPE pipe to allow the water to drain that was ponded along the cut embankment. Then, the 325C had to remove some of the ADS pipe out of the dumpsters so they could be legally hauled off. Last, the 325C dug a hole in the SW corner of Section C to bury fill that was piled next to the fence line on the west side of Section C. However, as digging continued, more and more fill was uncovered. This will create a problem when digging for the Gutter and Anchor Trench in this area. The fill that was already dug up was buried, but the open hole created from digging up the fill was left open for Mike to see. It appears the fill continues into the gravel roadway. Fill consists of concrete, rebar, steel plates, and clay bricks.

Belt had another D6N delivered, totalling 3 Dozers on site. Anthony Driver (AMS Focus) was here to train with Randy. Jared and Nick did maint. on their equipment. They will begin HDPE pipe relocation tomorrow.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 5/8/12

TIME: Arrive: 6:30 AM | Depart: 4:45 PM | Travel: 1.0 hr | Total: 10.75 hrs (0.5 hr for lunch)
Weather: Sunny, 60°AM, 73°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, D6H Dozer, 325C Excavator, 290 LC-9 Excavator
Site Activities / Observations / Contacts / Notes:

The 325C began digging the new grade for the existing 18" HDPE Gravity Drainage Pipe. Pipe Slope: from ≈26+75 to 23+00 is 1.67%. Pipe Slope: from 23+00 to 11+00 is 0.42%. Total pipe relocation length = 1575'. James Marks checked the grades within the trench with a sewer laser. The D6N (Jared Belt) continued grading Section B. The D6N (Brad Bolenbaugh) regraded the coal yard to promote drainage. The D6H (Nick Walker) continued grading Section D. In the PM, the D6H was parked and Nick took over the D6N because Brad had a Dr. Appt. The D6N (Nick Walker) continued grading Section B. The 290 LC-9 continued grading, moving, and undercutting ash in Section B. Once all of the new grade for the HDPE pipe is completed, the pipe will be moved as a whole into the graded trench.

Anthony Driver will remain on site to train with Randy for ≈ 2 months. He is also a pipe specialist and will be good to have his expertise when laying the PCP. AMS had a 2nd pickup truck delivered on site for Anthony's use.

The 9520 was not in use today (too wet to be efficient). This is the last week the 290LC-9 will be on site. It is unknown if Marc Downs will remain as an operator.

Ryan Clark (Chesapeake Containment Systems, Inc.) and Bill (Illini Drilled Foundations, Inc.) joined the Progress Meeting to discuss the liner and cap vents, respectively. Cap Vent Drilling will begin next Monday (5/14/12). A dumptruck will be required for the fill found in Section C, and dig tests will be performed to determine the extent of the fill along the fence.

Additional Comments: EWO-05 and EWO-07 will be combined.

ORIGINAL - FILE COPIES: 1-JOB SITE 1-ACCOUNTING

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13794

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/9/12

TIME: Arrive: 6:30 AM | Depart: 4:45 PM | Travel: 1.0 hr | Total: 11.0 hrs (0.25 hr for lunch)
Weather: Sunny, 58°AM, 72°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, D6H Dozer, 325C Excavator, 9520 Tractor, 1-1812C Pan,
Site Activities / Observations / Contacts / Notes: Water Truck, 290 LC-9 Excavator

The D6N (Brad) performed finish grading in Section C. The D6N (Jared) performed finish grading in Section A. The D6H continued grading Section B. The 325C continued cutting the new grade for the 18" HDPE Gravity Drainage Pipe. James Marks checked grade with a sewer and rotating laser, and Anthony Driver supervised. The 9520 performed cutting and filling in Section B. The 290LC-9 continued undercutting wet ash and moving ash and embankment material in Section B.

The 9520 with one (1) full pan will be rolling the west side of the pond to be tested for compaction tomorrow morning. Stakes within this perimeter will be removed.

Austin (Lamac) will be here Friday to stake the cap vent locations with offsets.

The new grade for the HDPE pipe should completed tomorrow, and they will begin moving the pipe to its new grade. Before the 18" HDPE pipe is moved, they will uncover and dispose of the existing drainage pipe between the outfall structure and the MH in Section B. After removal of the pipe, they will brake the entry of the 18" HDPE into the MH so this end will be free for the pipe relocation. Once the pipe is at its new grade, it will be directed into the MH in the same hole where the drainage pipe from the outfall structure entered the MH. Sometime during this process, the outfall structure will be demolished and buried, except for the steel which will be taken out of the pond.

Additional Comments: Compaction testing will begin tomorrow - 5/10/12.

FIELD OBSERVATION REPORT

Representative: Joe Cravens / Ron Williams
Project No.: J019896.01 Task: 2370
Equipment & ID No.: —
Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 Zone: —
Client: Ameren ER Date: 5/10/12

TIME: Arrive: 6:30 AM Depart: 1545 Travel: 1.0 hr Total: 10.25
Weather: Sunny, 58°AM, 75°PM Contractor: AMS Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 325C Excavator, 9520 Tractor, 1-1812C Pan, Water Truck,
Site Activities / Observations / Contacts / Notes: 290 LC-9 Excavator

The D6N (Jared) continued finish grading in Section A and B. The D6N (Brad) continued finish grading Section A and B, and grading Section D. The 325C continued digging the new grade for the 18" HDPE Pipe, with James checking grade with a sewer and rotating laser, with Anthony supervising. The 9520 began rolling the west side of the pond in Section A and C with one full pan and a drag blade. The Water Truck went in front of the tractor to wet the ash for better compaction. The 290 LC-9 continued moving undercut ash to dry in Section B. The 325C had a hydraulic hose break. While Jared left to get a new hose, Kevin operated the D6N in the meantime. Since Randy is already Water-Trained, he went ahead and put the stoplogs in Pond B, which completes EWO-06. Lamac will now survey the Cap Vents on 5/18/12, and Illini Drilling will begin on 5/21/12 due to material delivery. Tim Wilson arrived today to begin compaction testing in Section A. Up until I left, his readings were all over 100% for the grid points tested. Ron Williams arrived today as well to take my place tomorrow. I familiarized him with the site, personnel, and duties. — JRC

D6N (JARED) AND D6N (BRAD) AND 9520 (NICK) CONTINUED EXCAVATION AND MATERIAL REMOVAL/PLACEMENT IN WATER TRUCK CONTINUED TO HYDRATE SUBGRADE IN AREAS A & C; 325C (KEVIN) REMOVED OUTFALL DRAIN PIPE AT MANHOLE (TO BE MODIFIED) AT BASE INGRESS POSITION AND EXPOSED REMNANT BELLED PIPE END — UPPER CORRUGATED PIPE BREACHED DURING THIS EXCAVATION PROCEDURE AND WATER FLOW CONTAINED IN ADJACENT, EXCAVATED END-OF-TRENCH POSITION; FOUR DIGI PHOTOS. TWENTY-ONE COMPACTION TESTS ACCOMPLISHED RANGING FROM 99% TO 114% OF MAX STANDARD PROCTOR (35 HEADS) & LOCATED SPILL WALKWAY & PLATFORM REMOVED FROM OUTFALL STRUCTURE. — RBW Randy Portz 12

Additional Comments: COMPACTION TESTING TO CONTINUE DURING NEXT SHIFT

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.

02	**WORKER PROTECTION ASSURANCE**	
	2012-05-08	OPEN - no issues.
	2012-05-01	OPEN - no issues. AAA electric to be on site 05-01 to go over EWO details.
	2012-04-24	OPEN - no issues. AAA electric to be on site 04-24 again to review electric MCC/switch gear room.
03	**EMPLOYEE DRUG TESTING**	
	2012-05-08	OPEN - no issues. Illini Drilled 1x workers to be scheduled for 05-08. AER to schedule 1x worker for Massmann and 2x TSI workers by EOM.
	2012-05-01	OPEN - no issues. Illini Drilled 2x workers to be scheduled for 05-07.
	2012-04-24	OPEN - no issues. Koberstein 5x workers to be scheduled for 04-27.
04	**AMS SAFETY**	
	2012-05-08	OPEN - no issues. Water training to take place today for work on Pond A and B [some work already completed before water in the areas of work on Pond A]. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter areas has supplies. [02] AMS will have cleaned out [dirt from varmints, etc...]. [03] Signs will be posted by next week. [04] EAP will be reviewed at the safety luncheon [today]. AMS stepped out of meeting for a corporate "all-hands" safety conference call commemorating the following: [01] Charah/AMS 2,000,000 [two million] man-hours without lost time milestone. [02] Mine Safety Health Administration [MSHA] Sentinel of Safety Award for no lost time incidents in 2010 at Charah' s Brickey's limestone grinding facility [we are supplier to Ameren Missouri]. [03] North Carolina Department of Labor Gold Level Safety Achievement Award for the Charah Roxboro site [a large site where Charah manages fly ash, bottom ash, gypsum, and landfill projects].
	2012-05-01	OPEN - no issues. M. Wagstaff requested [in EWO] 'stop log" adjustments in Pond A and Pond B. AMS workers will receive water training for this work. Next week is the monthly safety luncheon.
	2012-04-24	OPEN - no issues.
05	**HOUSEKEEPING**	
	2012-05-08	OPEN - no issues.
	2012-05-01	OPEN - no issues. AMS policy all workers drug test before on AMS site. J. Tasich to set up site in Robinson, IL. Nomenclature for drug testing is such that a positive result = bad [drugs found] whereas a negative result = good [no drugs found].
	2012-04-24	OPEN - no issues.
06	**PLANT ACCESS - CBT BADGE**	
	2012-05-08	OPEN - no issues. M. Wagstaff e-mailed 6x WKS gate log to J. Denham, and he requested every 2x WKS. M. Wagstaff inquired on CC - for now J. Denham and P. Zinsious.
	2012-05-01	OPEN - no issues. Badges [consultant] switch over no-issue. J. Denham requested AER provide gate log once a month.
	2012-04-24	OPEN - no issues. AMS received AER consultant badges.
07	**VEHICLES ON SITE**	
	2012-05-08	OPEN - no issues. GEO to bring "gator" [utility vehicle] on site. AMS to bring second pick up truck on site for A. Driver. AMS will provide safety flags for both vehicles.
	2012-05-01	OPEN - no issues
	2012-04-24	OPEN - no issues
08	**OSHA LOG - WORK HOURS**	
	2012-05-08	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-07
	1,555.50	RT
	0,000.00	OT
	1,555.50	TOTAL
	2012-05-01	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 04-30
	1,327.00	RT
	0,000.00	OT
	1,327.00	TOTAL

02 WORK HOURS

2012-05-08 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Chesapeake may work extended hours.
2012-05-01 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Corrected time below.
2012-04-24 OPEN - Standard hours - 7:00 AM CT to 3:30~~ AM CT~~ PM CT

03 OVER TIME

2012-05-08 OPEN - None projected at this time. Referencing Item No. 06.02-2012-05-07 above - Chesapeake may have OT.
2012-05-01 OPEN - None projected.
2012-04-24 OPEN - Referencing 04-17 commentary, current production is 100 FT/D and is good rate, no OT projected.

04 TRAILER [AND GENERAL CONDITIONS]

2012-05-08 OPEN - no issues.
2012-05-01 OPEN - no issues.
2012-04-24 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-05-08 OPEN - no issues. BT Drainage in progress.
2012-05-01 OPEN - no issues. Koberstein declined. Replacement subcontractor in review - BT Drainage.
2012-04-24 OPEN - no issues. Koberstein in progress.

02	**SUBMITTALS**	
	2012-05-08	OPEN - no issues. In progress - P. Zinsious to revise log information by EOW and review mechanical.
	2012-05-01	OPEN - no issues. In progress - M. Wagstaff request mechanical submittal be checked for missing pump information. AER has returned mechanical, electrical, and liner submittals.
	2012-04-24	OPEN - no issues. In progress - liner sample tests results from TRI under review by GEO

08 MATERIAL

01	**GENERAL**	
	20120-05-01	OPEN - no issues. See below for meetings.
	20120-05-01	OPEN - no issues. All HDPE liner on site [72 rolls] as of 05-01.
	20120-04-24	OPEN - [ref. Item No. 07.02-2012-04-24 above].
02	**GEOMEMBRANE PRE-CON MEETING**	
	20120-05-08	NEW - Meeting during Progress Meeting with Mr. Ryan Clark - Chesapeake Containment [CCS]. [01] 05-29 first day of deployment. [02] Mobilization will take place prior to first day of deployment. Badges, drug testing, and safety training required before. [03] Safety glasses to have foam gasket. [04] CCS discussed proposed panel layout and Geotechnology agreed that given the low slope (5%) that downslope orientation is not as critical. CCS to provide revised proposed panel layout. [05] All CCS vehicles will need magnetic signage. [06] CCS trailer can be left on-site. [07] AMS to provide operator for deployment. [08] AMS lag from liner start to clay placement is about 6 days. [09] CCS will have tensiometer certifications on-site and provided to Geotechnology. [10] All pipe boots are to be welded to HDPE gas vent pipe as shown in detail. [11] There are some repairs needed in the existing HDPE lined ponds. CCS will patch while on-site. [12] CCS [NMA] site extension has been filed, process of finalize site meeting and agreement with local labor union. [13] Expected manpower on-site is 12x workers working 10 hours+/- per day, 6x days a week with 7th day as a make-up day. [14] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [15] Mr. Matt Garland - CCS General Superintendent will be coordinating the final schedule. [16] R. Clark will go out to pond to inspect progress and check on condition of delivered materials.
03	**CAP VENT PRE-CON MEETING**	
	20120-05-08	NEW - Meeting after Progress Meeting with Mr. Bill Kelly - Illini Drilled Foundations [IDF]. [01] 05-14 first day of deployment. [02] Discussion of submittal and installation of the cap vents. [03] IDF will have different size spacers on site to accommodate change in the bore hole size. [04] Drill rig will have approximately 50 FT tall mast. [05] IDF can adjust mast a few degrees to accommodate for the slope on the ash pond. If required AMS will level out area. [06] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [07] Duration estimated at 3x days for all cap vents. [08] Safety glasses to have foam gasket. [09] B. Kelly will go out to pond to inspect progress and check slope.

09 ADJACENT PROPERTIES AND PCP LINE

01	**GENERAL**	
	2012-05-08	OPEN - [01] Excavation plan is to be prepared by professional engineer. [02] VES-01 for Bentonite M. Wagstaff indicated is approved [reference 12.1.09-2012-05-08 EWO-09 below]. [03] P. Zinsious indicated manhole as shown on drawings not a standard size. Brief discussion - M. Wagstaff indicated any [close] standard size is acceptable if the buoyancy calculations are approved. [04] Review of process if the rock is not "dig-able". M. Wagstaff indicated that Hanson understands the rock may not "dig". Once work begins, and if the rock does not "dig", the PCP can be raised [partially] or all the way out of he rock and set on the rock. Elevation [and alignment] can be made in the field. Pump structure can be made in sorter ring height to accommodate the change in elevations if necessary.
	2012-05-01	OPEN - BT Drainage [01] Deepest projected part of excavation is 22-23 FT. [02] J. Denham indicated the rock may not dig, requested AER consider raising the line above the bedrock line.

	2012-04-24	OPEN - no issues. Excavation plan submitted by Koberstein [part time at meeting]. [01] General discussion trench width. [02] Stockpile top soil. [03] 80 FT/D production rate. Duration of work projected 50D. [04] Pump groundwater to Pond A or Pond B. [05] Alignment of pipe is flexible [for filed conditions]. Curve or "angle" OK. [06] KCI recommended double cleanouts for ease. AER indicated single [as designed] OK. [07] AER reviewed pipe can go directly into the manhole [shown on drawings as adjacent]. [08] Spoils can be "lost" on the berm embankments.

10 QUALITY CONTROL

01 GENERAL

2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues

02 ASH

2012-05-08	OPEN - no issues. On going process. Compaction testing possibly scheduled for 05-09.
2012-05-01	OPEN - no issues. On going process.
2012-04-24	OPEN - no quality issues. R. Porter report the wet ash in the east area of the pond is going to require 2-3 days [stacked] to drain the water off. J. boone indicated this area of pond is further away from the discharge inlet, thus reason for the fines [not settle out in other areas of the pond]. The wet ash is being stacked and spread out to dry.

03 CLAY

2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-08	OPEN - Review of schedule to date. [01] Documented rain days: 05-04 and 05-07. P. Zinsious published e-mail with dates [on 05-07 shows total 5x days so far]. [02] Actual percent completion on ash pond sectors: A = 95%, B = 75%, C = 95%, D = 80% [03] 05-08 - Geomembrane Pre-Con Meeting [with AER and GEO during the Charah/AMS conference call]. [04] 05-10 - projected date for GEO compaction testing. [05] 05-11 - J. Cravens off-site. GEO to have 2x men: Tim and Ron. [06] 05-14 - Massmann on site to survey ash cap certification and fence alignment for AER. [07] 05-14 - Lamac on site to survey/locate cap vents. [08] 05-29 - Chesapeake to begin work.
2012-05-01	OPEN - Review of schedule 04-30. [01] Schedule critical path and look ahead reviewed. [02] Actual percent completion on ash pond sectors: A = 90%, B = 70%, C = 90%, D = 75%. [03] Activity No. 106 cap vents still scheduled for 05-14 as shown on 04-30 schedule. [04] Compaction testing for ash and surveying to be coordinated for same time if possible. Surveyor can come out twice. [05] Build pads for cap vent drill rig. [06] Discussion on the liner schedule and Memorial Day holiday. Verify day after the holiday.
2012-04-24	OPEN - Review of schedule 04-18. [01] Schedule to be adjusted and corrected for end date calculations. [02] 05-02 - Pipe relocation start. [03] 05-04 - Massmann to survey. [04] 05-07 - Begin demolition outfall structure. AMS to set scrap steel in plant yard. Duration 2D include flow able fill. [05] 05-07 - Illini Drilled to mob to site for cap vents. [06] 05-29 - Projected start date for the PCP. End date projection 09-11.

02 TIME AND MATERIAL

2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues

03 COORDINATION

2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues. Signs on site [ref. Item No. 14.20-2012-04-24 below].

12.0 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-05-08	OPEN - EWO list reviewed, numbers and descriptions to be corrected in minutes.
2012-05-01	OPEN - no issues.
2012-04-24	OPEN - no issues.

02 AMS PAY APPLICATION

2012-05-08	OPEN - M. Wagstaff approved the draft pay-app for submittal as invoice. AMS to send copy of draft to J. Cravens.
2012-05-01	OPEN - M. Wagstaff indicated signed off with AER, should be reviewed by EOW. Invoice for stored materials on the HDPE liner.
2012-04-24	OPEN - M. Wagstaff indicated 10% will be held at the end on the job. AMS no issue. CLOSED

12.1 EXTRA WORK ORDERS

01 EWO-01 ELECTRIC TEMPORARY

2012-05-08	Work is completed. Cost was audited with subcontractor, AMS to provide partial credit [reference EWO-08 below].

02 EWO-02 ASH PLACEMENT - CAP MODIFICATIONS

2012-05-08	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.
2012-05-01	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.
2012-04-24	OPEN - AER to provide interim e-mail stating approval for this work to AMS.

03 EWO-03 COAL PILE

2012-05-08	OPEN - Work completed [05-08 dozer working to fine grade area], final grade for drainage to be finished.
2012-05-01	OPEN - Work completed. Area to be observed for drainage. Date corrected below 04-24.
2012-04-24	OPEN - Work completed. Some areas graded to "original soil" under coal pile. AMS will wait for rain to determine location of the drainage trenches. AER to provide interim e-mail stating approval for this work to AMS.

04 EWO-04 PIPE RELOCATION

2012-05-08	OPEN - work in progress. AMS briefly described process of moving pipe from existing elevation into the new trench. Pipe will be slinger on the end at current elevation and at the new elevation. Connector fitting for the manhole fitting on site 05-08.
2012-05-01	OPEN - In progress. Pipe is exposed, and ready to begin lowering. AMS recommending removal of the pipe to be demolished and filled with
2012-04-24	OPEN - M. Wagstaff published elevations. [Current progress: pipe exposed along the south and at turn of east side pond.] AER to provide interim e-mail stating approval for this work to AMS.

05 EWO-05 ELECTRIC FEEDER

2012-05-08	OPEN - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.
2012-05-01	OPEN - in progress. Meeting after progress meeting with AAA Electric.
2012-04-24	OPEN - in progress. AAA to be on site to inspect MCC /switchgear room. Meeting after [part of] this progress meeting.

06 EWO-06 POND A TRENCH

2012-05-08	NEW - Work completed for trench excavation. The weir structure "stop logs" are to be installed in Pond A and Pond B.

07 EWO-07 ELECTRIC OVERHEAD

2012-05-08	NEW - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.

08 EWO-08 CREDIT TO EWO-01

2012-05-08	NEW - In progress [reference above].

09 EWO-09 BENTONITE VES-01

2012-05-08	NEW - M. Wagstaff indicated approval. Hanson has provided submittal review, and AMS in process of reply.

10 EWO-10 FLOW-ABLE FILL CREDIT

2012-05-08	NEW - Discussed previously [reference Item No. 09.01-2012-04-24 No. 07] pipe can be removed and go direct to manhole, eliminating the flow-able fill.

11 EWO-11 BUILDING SPOILS REMOVAL

2012-05-08	NEW - Excavation along Station 29+00 at fence line uncovered building spoil material within limits of the ash pond. M. Wagstaff requested exploratory holes dug along the fence line to determine the extent of the foreign material. AMS will dig holes at 100 FT intervals, and if something is uncovered will go to 50 FT intervals to determine the extent of the material. AMS will excavate the material to a predetermined depth by GEO/AER. Material excavated out will be disposed of within the ash pond, in the are east section where lower elevations are still being worked. A dump truck will have to be used to transport the material within the pond. Material adjacent to the pond that extends under the road is to remain in place and not to be disturbed.

13 ACTION ITEMS - AER

01 AMEREN [AER]

2012-05-08

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

2012-05-01

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp. [CLOSED - reminder site cleared 5th of month by AER]

2012-04-24

[03] Fire protection [CLOSED - Old switchgear room will be emergency shelter. J. Tasich ahs supplies to set in place 04-24]. Signs will be posted, and a plan will be finalized.

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp.

14 ACTION ITEMS - AMS

01 ASH MANAGEMENT [AMS]

2012-05-08

None

2012-05-01

None

2012-04-24

[20] [REOPEN] P. Zinsious to provide draft. CLOSED - signs on site, ready to be installed].

15 PRODUCTION

01 GENERAL

2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues
2012-04-24	OPEN - no issues

02 ASH

2012-05-08	OPEN - no issues. Estimated 77,320 CY EOD 05-07.
2012-05-01	OPEN - no issues. Estimated 70,988 CY EOD 04-30.
2012-04-24	OPEN - no issues. Estimated 55,452 CY EOD 04-23. General discussion CY are estimates and more than likely under-reported. AER inquired how AMS plan ash to grade - projection is site may possibly balance. M. Wagstaff concern ash placement may not make schedule.

03 CLAY

2012-05-08	OPEN - no issues - this activity not begun.
2012-05-01	OPEN - no issues - this activity not begun.
2012-04-24	OPEN - no issues - this activity not begun.

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: May 21, 2012

SUBJECT: Weekly Summary Report for May 14, 2012 to May 18, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 55 to 70°F, and temperature highs ranged from 76 to 84°F. Weather delays did not occur this week.

Construction Activities

Ash grading, 18-inch HDPE gravity drainage pipe relocation, compaction testing, and surveying, and west fence line cleanup occurred this week. Ash and embankment grading occurred generally on the eastern half of Ash Pond D. Compaction testing generally occurred on the eastern half of Ash Pond D on May 16 and May 17, 2012. Refer to compaction field forms for additional information. Massmann Surveying surveyed ash grade on the western portion of Ash Pond D. Lamac Engineering Co. surveyed the seven cap vent locations. The 18-inch HDPE gravity drainage pipe was backfilled at its new grade, except for the last 50 ft. of pipe besides the manhole. This section of pipe was left uncovered until the manhole ingress is completed. The fill that was found along the west fence line in Quadrant C, consisting of concrete, brick, rebar, and steel plates, was excavated and buried in the center, eastern half of the pond. Approx. 1 ft. of ash and remaining vegetation was removed along the west fence line, and was replaced with embankment material. The box culvert connecting Pond D and Pond C was cleaned, and the proposed rip rap pad and slopes were roughed in at the box culvert egress. More of the old ADS corrugated pipe was removed and disposed of throughout the perimeter of the pond.

Equipment and Personnel On-Site

2-CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
John Deere 9520 Tractor with 2-1812C John Deere Scrapers (Pans)
Hyundai 290 LC-9 Long Reach Excavator (demobilized on May 15, 2012)
Sky Track 6036 Forklift
Wacker RT Trench Roller
Water Truck
Watson 1500 Drill Rig (Illini Drilling)

Geotechnology, Inc. – Joe Cravens
Ash Management Services, LLC (AMS) – Randy Porter, Jimmy Boone, Robert Dunkley, Anthony Driver, and James Marks
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, Brad Bolenbaugh, and Shelby Belt
Charah, Inc. – Joe Tasich
Massmann Surveying – Gary Delf and Rick Koeac
Lamac Engineering Co. – Jake Lewis and John Porter
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, May 15, 2012. Refer to the attached meeting minutes for additional information.

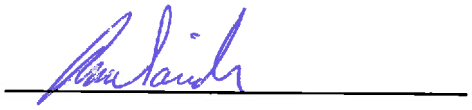
Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash and embankment material within the footprint of Ash Pond D on the eastern half was graded.

Testing/Sampling



Moisture and density testing occurred on May 16 and May 17, 2012. Refer to compaction field forms for additional information. Survey of the ash pond grade on the western half of Ash Pond D occurred May 14, 2012. Survey of the cap vent locations occurred May 17, 2012.

Calibration Records

Calibration information was not obtained for equipment this week.

Signature of CQA Officer

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13797

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/14/12

TIME: Arrive: 6:30 AM | Depart: 4:30 PM | Travel: 1.0 hr | Total: 10.75 hrs (0.25 hr for lunch)
Weather: Sunny, 65°AM, 80°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 9520 Tractor, 1-1812C Pan, 290 LC-9 Excavator, Water Truck, 325C Excavator
Site Activities / Observations / Contacts / Notes:

The D6N (Brad) backfilled the relocated 18" HDPE Pipe along the south embankment in Section C, spread out cut embankment material for the scraper to pick up in Section B, and performed finish grading in Section D. The D6N (Jared) graded Section B, and performed finish grading in Section D. The 9520 cut ash and embankment material in Section B, and moved the cut material to the last major fill area located at the center axis of all the Sections. The 9520 also began cutting material in Section D. The 290 LC-9 (Kevin) moved the remaining wet ash in Section B for decanting. The 325C began backfilling the relocated 18" HDPE Pipe along the south embankment in Section D.

Gary and Rick with Massmann Surveying were here to survey (check) the grid points that were tested for compaction on the west side of the Pond in Section A and C.

Anthony and James checked PGL grades with a rotating laser in Section B and D, where the PGL stakes were offset.

The entire 18" HDPE Pipe has been relocated and the slope was checked by Lamac. The entire pipe has a positive fall towards the manhole. The materials for ingress into the manhole should be here Thursday. The old ADS pipe still remains in the east embankment.

Marc Downs was laid off last Friday (5/11/12) and the 290 LC-9 will leave tomorrow (5/15/12).

Additional Comments: The old pipe for the MW was cut off, capped, and buried 3' under grade.

No. A 13798

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 5/15/12

TIME: Arrive: 6:30 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 70° AM, 82° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 325C Excavator, 9520 Tractor, 1-815C Pan, Water Truck
Site Activities / Observations / Contacts / Notes:

The D6N (Brad) graded Section B, and performed finish grading in Section D. The D6N (Jared) graded Section B, performed finish grading in Section D, and graded the embankment material over the backfilled relocated 18" HDPE Pipe along the south and east berms in Section C and D. The grades along the embankment were checked by Randy and James with a rotating laser. The 325C finished backfilling the 18" HDPE Pipe and leveling the stockpiled berm material, as well as ripping out the old ADS Drainage Pipe that remained in the east embankment. The last 50' of HDPE Pipe was left open towards the manhole in Section B to allow the pipe to be moved, if needed, when sealing the pipe into the manhole occurs. The 9520 continued cutting embankment material in Section C and D, and filling the major fill area along the Section B and D axis, or border. James cleaned the 290LC-9 and it was hauled off site. Joko and Randy setup the signs for the emergency shelter.

Steve Bluemner was here with Mike, and we gave Steve a tour of the site, as well as inspected Ponds B, C, and D, and the Bottom Ash Pond. I had a meeting with Paul to discuss edits for current submittals and dates for future submittals, and went over AAA's bid changes for the overhead electric and electric feeders. This will be relayed onto Mike when determining if the bid will be accepted or not. John Boyer's (BTD) bid was accepted. However, all HDPE Piping might be switched to DR PVC pipe due to the excavation conditions. *Field Adjustment: the ash grade was left 6" high between Sta. 22+00 and 23+00 in order to cover the relocated HDPE Pipe. The slope in this area was adjusted accordingly. For the rest of this week,

Additional Comments: Belt is working 10 hour days in order to complete ash placement by Friday.

No. A 13799

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 5/16/12

TIME: Arrive: 6:30 AM | Depart: 6:15 PM | Travel: 1.0 hr | Total: 12.5 hrs (0.25 hr for lunch)
Weather: Sunny, 70°AM, 80° PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 325C Excavator, 9520 Tractor, 1-815C Pan, Water Truck
Site Activities / Observations / Contacts / Notes:

The D6N (Brad) continued grading Section B. The D6N (Jared) continued grading Section B, and performed finish grading in Section D and along the south and east embankments. The D6N also cleaned up excess material along the west fence line. The 9520 continued filling the major fill area along Section B and D axis, and performed cutting in Section B, NE embankment, south embankment, and along the west fence line. After cutting 1.0' along the fence line, the 9520 filled the cut area with embankment material. The 325C completed cutting the NE embankment, and spreading out piled ash in Section B. All embankments surrounding the Pond are now to grade. The 325C removed the remaining concrete casing beside the manhole in Section B and buried it in the major fill area. The 325C ripped out the remaining old ADS Pipe in the SW corner in Section C. It was removed up to 2.5' from the gate in the fence. The two full dumpsters were hauled off and a third dumpster was brought in. The 325C filled it with ADS Pipe. The 325C went along the south embankment, smoothing out the crest and the slope with a crane mat. The 325C dug test holes along the west fenceline to determine the volume of fill that was found, consisting of concrete, bricks, steel plates, and rebar. Once the perimeter of the fill was determined, it was dug out and piled in Section C. A dumptruck was brought in and the 325C loaded the fill. The dumptruck dumped the fill in the major fill area. After the fill was moved, the 9520 piled embankment material beside the hole to be filled. It will be filled tomorrow morning. James, Randy, and Anthony checked PGL grades with the laser. Tim Wilson was here for compaction testing.
Note: Samples were taken from the CBS for physical and chemical testing on Monday.

Additional Comments: Randy will be off the next 2 days. Jimmy Boone to replace him.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13800

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 5/17/12

TIME: Arrive: 6:30 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 55°AM, 76°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 325C Excavator, 9520 Tractor, 1-1812C Pan, Water Truck
Site Activities / Observations / Contacts / Notes: Jimmy Boone as Site Supervisor for Randy. The D6H still remains on the site, but it hasn't been used and is parked in the const. yard. The D6N (Brad) continued grading Section B. The D6N (Jared) continued finish grading Section D, grading Section B, and cleaned up more excess material along the west fence line. The 325C filled the excavated hole beside the west fence line in Section C with embankment material, and leveled the placed embankment material along the entire fence line with a crane mat. The 325C also removed the additional precast box connected to the box culvert on the west side of the pond, and dug a 6'x6' pad in front of the box culvert, with 1:1 slopes, for riprap. At lunch, the 325C moved remaining crane mats in the pond to the construction yard and parked the equipment. Kevin Flynn (Belt) was laid off afterwards (not enough excavator work left). The 9520 finished scraping and filling along the west fence line, continued cutting high spots in Section B, cutting stockpiled embankment material outside of the pond, and filling the major fill area along Section B and D axis.

Remaining Personnel:
Jared Belt (Belt) - D6N
Nick Walker (Belt) - 9520
Brad Bolenbaugh (Belt) - D6N
Robert Dunkley (AMS) - Teamster
James Marks (AMS) - Laborer

Lamac staked the cap vent locations with 25' offsets. Tim Wilson finished 2nd Phase of Compaction Testing. There are approx. 40 points left to test. Illini Drilling had their drill rig delivered - Watson 1500. Illini will drill the dewatering wells for BTD next week after the cap vents. Shelby Belt was here to meet with AMS. Anthony Driver will be leaving this job site after this week. Johnny Mcgrew trained with Joko - new AMS operator for the CBS.

Additional Comments: James picked up remaining debris along the west fence line.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/18/12

TIME: Arrive: 6:30 AM | Depart: 3:30 PM | Travel: 1.0 hr | Total: 9.75 hrs (0.25 hr for lunch)
Weather: Sunny, 55°AM, 84°PM | Contractor: AMS | Subcontr./Supplier: Belt Construction
Equipment Working: 2-D6N Dozers, 9520 Tractor, 1-1812C Pan, Water Truck
Site Activities / Observations / Contacts / Notes:

All equipment focused their work in Section B. Both D6N Dozers performed finish grading in Section B. The 9520 continued cutting high spots in B, and filling the major fill area on the Section B and D border. James Marks cleaned the 325C and D6H in the yard. Robert Dunkley focused Dust Control in Section B.

Jimmy Boone didn't come to the site today; Anthony Driver was the temporary Super.

No additional visitors, deliveries, schedule updates, or work items.

The Pond should be to grade by Monday or Tuesday.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-05-15	OPEN - no issues.
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-05-15	OPEN - no issues. None projected for 2x week look ahead or for Illini Drilled [IDF].
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues. AAA electric to be on site 05-01 to go over EWO details.

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-05-15 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current General discussion on what the AMS-Charah focus program is to train site Managers.
[01] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[01] Laborers
[04] Operators [long boom operator not required]

02 WORK HOURS

2012-05-15 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt to work 4x D 10x HRS due to dry weather [internal cost to AMS]. When Chesapeake comes on board, they may work 12x HRS a day maximum due to instrumentation calibration procedures required in the specifications.

2012-05-08 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Chesapeake may work extended hours.

2012-05-01 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Corrected time below.

03 OVER TIME

2012-05-15 OPEN - Belt has projected OT per Item No. 06.02-2012-0515 above.

2012-05-08 OPEN - None projected at this time. Referencing Item No. 06.02-2012-05-07 above - Chesapeake may have OT.

2012-05-01 OPEN - None projected.

04 TRAILER [AND GENERAL CONDITIONS]

2012-05-15 OPEN - no issues.

2012-05-08 OPEN - no issues.

2012-05-01 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-05-15 OPEN - no issues. BT Drainage by EOW.

2012-05-08 OPEN - no issues. BT Drainage in progress.

2012-05-01 OPEN - no issues. Koberstein declined. Replacement subcontractor in review - BT Drainage.

[13] Dewatering will be by well point. Illini Drilled will drill well points [next week].
[14] Issue of water volume from the dewatering operation. Could possibly be millions of gallons. J. Boyer indicated amount not known, but possibly the areas of the bedrock in a "valley" might be able to be pumped down, but this depends on the length of the "valley". Pumps in the well points will operate 24/7, in any order, one or more at a time. In the beginning all pumps will be operating. This may create an issue for the adjacent property owner [farmer] who pumps ground water for irrigation.

[15] Issue of water volume disposal into the ponds. M. Wagstaff will research what is required for pumping into the ponds and what is required for the pond elevation relative sampling of the discharge by AER [and paid for by AER].
[16] The well point will pump system will have safety fence, light, and the power cord above ground in a conduit.
[17] Delivery of the dewatering sump structures are 2 WKS [after approval].
[18] Discussion of the diameter and the thickness of the manhole barrel. M .Wagstaff indicated as long as buoyancy [reference item NO. 09.01-2012-05-08-03 below] good, alternates will be acceptable. Possible options are larger base and matt [concrete] at base such as a 4 FT DIA MH with larger base [J. Boyer indicated may install larger base for BTD insurance].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-05-15	OPEN - [01] See Item No. 08.04-2012-05-15 for PCP Pre-Con Meeting and submission of the Excavation Plan. [02] Corrected ring description below in body of text. [03] No tax exemption if materials not purchased in Illinois.
2012-05-08	OPEN - [01] Excavation plan is to be prepared by professional engineer. [02] VES-01 for Bentonite M. Wagstaff indicated is approved [reference 12.1.09-2012-05-08 EWO-09 below]. [03] P. Zinsious indicated manhole as shown on drawings not a standard size. Brief discussion - M. Wagstaff indicated any [close] standard size is acceptable if the buoyancy calculations are approved. [04] Review of process if the rock is not "dig-able". M. Wagstaff indicated that Hanson understands the rock may not "dig". Once work begins, and if the rock does not "dig", the PCP can be raised [partially] or all the way out of he rock and set on the rock. Elevation [and alignment] can be made in the field. Pump structure can be made in ~~sorter~~ shorter ring height to accommodate the change in elevations if necessary.
2012-05-01	OPEN - BT Drainage [01] Deepest projected part of excavation is 22-23 FT. [02] J. Denham indicated the rock may not dig, requested AER consider raising the line above the bedrock line.

10 QUALITY CONTROL

01 GENERAL

2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues

02 ASH

2012-05-15	OPEN - no issues. J. Cravens Section A and C approximately 50 point for ash compaction density tests have been performed to date. All test have to date have passed in the range of 99% to 114% compaction. GEO technician Mr. Tim Wilson will be back on site tomorrow [05-16]. Massmann is to download files for GEO locations.
2012-05-08	OPEN - no issues. On going process. Compaction testing possibly scheduled for 05-09.
2012-05-01	OPEN - no issues. On going process.

03 CLAY

2012-05-15	OPEN - no issues. Samples taken yesterday [05-14]. The physical analysis will be by Holcomb and the chemical analysis will be by ARDL. Results should be in by next mid-week or before.
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-15	OPEN - Review of schedule to date. M .Wagstaff on vacation 05-15 to 05-22. [01] Actual percent completion on ash pond sectors: A = 100%, B = 90%, C = 100%, D = 85% [02] 05-11 - Lamac survey for "as-built" [record drawings] of the pipe relocation. [03] 05-29 - BTD start date projection for PCP. [04] Brief discussion electrical [AAA] and mechanical [FWI] scope.
2012-05-08	OPEN - Review of schedule to date. [01] Documented rain days: 05-04 and 05-07. P. Zinsious published e-mail with dates [on 05-07 shows total 5x days so far]. [02] Actual percent completion on ash pond sectors: A = 95%, B = 75%, C = 95%, D = 80% [03] 05-08 - Geomembrane Pre-Con Meeting [with AER and GEO during the Charah/AMS conference call]. [04] 05-10 - projected date for GEO compaction testing.

06	EWO-06	POND A TRENCH	
	2012-05-15	No issues. Work 100% complete.	
	2012-05-08	NEW - Work completed for trench excavation. The weir structure "stop logs" are to be installed in Pond A and Pond B.	
07	EWO-07	ELECTRIC OVERHEAD	
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.	
	2012-05-08	NEW - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.	
08	EWO-08	CREDIT TO EWO-01	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - In progress [reference above].	
09	EWO-09	BENTONITE VES-01	
	2012-05-15	OPEN - in progress. M. Wagstaff indicated that yesterday [05-14] Hanson approved the AMS response comments to the Hanson submittal review. GSE to provide pricing and AMS to calculate EWO.	
	2012-05-08	NEW - M. Wagstaff indicated approval. Hanson has provided submittal review, and AMS in process of reply.	
10	EWO-10	FLOW-ABLE FILL CREDIT	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - Discussed previously [reference Item No. 09.01-2012-04-24 No. 07] pipe can be removed and go direct to manhole, eliminating the flow-able fill.	
11	EWO-11	BUILDING SPOILS REMOVAL	
	2012-05-15	OPEN - in progress. AMS to dig test holes by EOW.	
	2012-05-08	NEW - Excavation along Station 29+00 at fence line uncovered building spoil material within limits of the ash pond. M. Wagstaff requested exploratory holes dug along the fence line to determine the extent of the foreign material. AMS will dig holes at 100 FT intervals, and if something is uncovered will go to 50 FT intervals to determine the extent of the material. AMS will excavate the material to a predetermined depth by GEO/AER. Material excavated out will be disposed of within the ash pond, in the are east section where lower elevations are still being worked. A dump truck will have to be used to transport the material within the pond. Material adjacent to the pond that extends under the road is to remain in place and not to be disturbed.	

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-05-15

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [CLOSED - drawing issued]

[24] Research with Hanson PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].

[25] Research with Hanson alignment of the discharge piping structure at the outfall man hole. AER original design took into consideration a "mixing zone". R. Porter indicated since the line pipe relocation alignment can be direct. Discussion of the grade to be field adjusted around the box if new location is approved.

2012-05-08

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

2012-05-01

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp. [CLOSED - reminder site cleared 5th of month by AER]

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-05-15

[21] BTD/AMS VES-02 for PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].

01 ACCIDENTS OR INJURIES

2012-05-15	OPEN - no issues.
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-05-15	OPEN - no issues. None projected for 2x week look ahead or for Illini Drilled [IDF].
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues. AAA electric to be on site 05-01 to go over EWO details.

03 EMPLOYEE DRUG TESTING

2012-05-15	OPEN - no issues. J. Boone indicated Chesapeake Containment will have list by next Progress Meeting. Some workers will already have AER badges in good standing. BT Drainage will have projection today [05-15]. The borrow site [CBS] will not require AER badge/CBT/DT, only AMS safety training.
2012-05-08	OPEN - no issues. Illini Drilled 1x workers to be scheduled for 05-08. AER to schedule 1x worker for Massmann and 2x TSI workers by EOM.
2012-05-01	OPEN - no issues. Illini Drilled 2x workers to be scheduled for 05-07.

04 AMS SAFETY

2012-05-15	OPEN - no issues. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter area to be cleaned today [05-15], and will be on going procedure. [02] Water training was completed for installation of the "stop logs". [03] Refining Item No. 05.05-2012-05-15 below, bees swarming on GEO trailer, have been sprayed. Workers for AMS are to note on their new employee form allergies such as to bee stings. The employee is required to notify the Site Manager of such allergies. In the case of a bee [or insect sting], each worker is responsible to carry their own medication, such as an "epi-pen" [Epinephrine Auto-Injectors] accordingly.
2012-05-08	OPEN - no issues. Water training to take place today for work on Pond A and B [some work already completed before water in the areas of work on Pond A]. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter areas has supplies. [02] AMS will have cleaned out [dirt from varmints, etc...]. [03] Signs will be posted by next week. [04] EAP will be reviewed at the safety luncheon [today]. AMS stepped out of meeting for a corporate "all-hands" safety conference call commemorating the following: [01] Charah/AMS 2,000,000 [two million] man-hours without lost time milestone. [02] Mine Safety Health Administration [MSHA] Sentinel of Safety Award for no lost time incidents in 2010 at Charah' s Brickey's limestone grinding facility [we are supplier to Ameren Missouri]. [03] North Carolina Department of Labor Gold Level Safety Achievement Award for the Charah Roxboro site [a large site where Charah manages fly ash, bottom ash, gypsum, and landfill projects].
2012-05-01	OPEN - no issues. M. Wagstaff requested [in EWO] 'stop log" adjustments in Pond A and Pond B. AMS workers will receive water training for this work. Next week is the monthly safety luncheon.

05 HOUSEKEEPING

2012-05-15	OPEN - See Item No. 05.04-2012-05-15 above regarding bees swarming at GEO trailer.
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues. AMS policy all workers drug test before on AMS site. J. Tasich to set up site in Robinson, IL. Nomenclature for drug testing is such that a positive result = bad [drugs found] whereas a negative result = good [no drugs found].

06 PLANT ACCESS - CBT BADGE

2012-05-15	OPEN - no issues. Projection 1x to 2x at EOW, possibly 10x for BTD. M. Wagstaff to issue gate log again. P. Zinsious request copy [not received].
2012-05-08	OPEN - no issues. M. Wagstaff e-mailed 6x WKS gate log to J. Denham, and he requested every 2x WKS. M. Wagstaff inquired on CC - for now J. Denham and P. Zinsious.
2012-05-01	OPEN - no issues. Badges [consultant] switch over no-issue. J. Denham requested AER provide gate log once a month.

07 VEHICLES ON SITE

2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues. GEO to bring "gator" [utility vehicle] on site. AMS to bring second pick up truck on site for A. Driver. AMS will provide safety flags for both vehicles.
2012-05-01	OPEN - no issues

08 OSHA LOG - WORK HOURS

2012-05-15	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-014
No incidents or accidents.	
1,945.50	RT
0,000.00	OT
1,945.50	TOTAL
2012-05-08	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-07
1,555.50	RT
0,000.00	OT
1,555.50	TOTAL
2012-05-01	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 04-30

02 WORK HOURS

2012-05-15 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt to work 4x D 10x HRS due to dry weather [internal cost to AMS]. When Chesapeake comes on board, they may work 12x HRS a day maximum due to instrumentation calibration procedures required in the specifications.

2012-05-08 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Chesapeake may work extended hours.

2012-05-01 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Corrected time below.

03 OVER TIME

2012-05-15 OPEN - Belt has projected OT per Item No. 06.02-2012-0515 above.

2012-05-08 OPEN - None projected at this time. Referencing Item No. 06.02-2012-05-07 above - Chesapeake may have OT.

2012-05-01 OPEN - None projected.

04 TRAILER [AND GENERAL CONDITIONS]

2012-05-15 OPEN - no issues.

2012-05-08 OPEN - no issues.

2012-05-01 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-05-15 OPEN - no issues. BT Drainage by EOW.

2012-05-08 OPEN - no issues. BT Drainage in progress.

2012-05-01 OPEN - no issues. Koberstein declined. Replacement subcontractor in review - BT Drainage.

02 SUBMITTALS

2012-05-15	OPEN - no issues. In progress - P. Zinsious to meet with J. Cravens today [05-15] to review log. Pump information to be re-submitted [again] due to identification.
2012-05-08	OPEN - no issues. In progress - P. Zinsious to revise log information by EOW and review mechanical.
2012-05-01	OPEN - no issues. In progress - M. Wagstaff request mechanical submittal be checked for missing pump information. AER has returned mechanical, electrical, and liner submittals.

08 MATERIAL

01 GENERAL

20120-05-15	OPEN - R. Porter reports pipe ordered for relocation connection to the manhole. Details in Item No. 12.1.04-2012-05-15 below.
20120-05-08	OPEN - no issues. See below for meetings. [date corrected]
20120-05-01	OPEN - no issues. All HDPE liner on site [72 rolls] as of 05-01.

02 GEOMEMBRANE PRE-CON MEETING

20120-05-15	OPEN - no issues.
20120-05-08	NEW - Meeting during Progress Meeting with Mr. Ryan Clark - Chesapeake Containment [CCS]. [01] 05-29 first day of deployment. [02] Mobilization will take place prior to first day of deployment. Badges, drug testing, and safety training required before. [03] Safety glasses to have foam gasket. [04] CCS discussed proposed panel layout and Geotechnology agreed that given the low slope (5%) that downslope orientation is not as critical. CCS to provide revised proposed panel layout. [05] All CCS vehicles will need magnetic signage. [06] CCS trailer can be left on-site. [07] AMS to provide operator for deployment. [08] AMS lag from liner start to clay placement is about 6 days. [09] CCS will have tensiometer certifications on-site and provided to Geotechnology. [10] All pipe boots are to be welded to HDPE gas vent pipe as shown in detail. [11] There are some repairs needed in the existing HDPE lined ponds. CCS will patch while on-site. [12] CCS [NMA] site extension has been filed, process of finalize site meeting and agreement with local labor union. [13] Expected manpower on-site is 12x workers working 10 hours+/- per day, 6x days a week with 7th day as a make-up day. [14] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [15] Mr. Matt Garland - CCS General Superintendent will be coordinating the final schedule. [16] R. Clark will go out to pond to inspect progress and check on condition of delivered materials.

03 CAP VENT PRE-CON MEETING

20120-05-15	OPEN - Mobilization date moved to 05-21.
20120-05-08	NEW - Meeting after Progress Meeting with Mr. Bill Kelly - Illini Drilled Foundations [IDF]. [01] 05-14 first day of deployment. [02] Discussion of submittal and installation of the cap vents. [03] IDF will have different size spacers on site to accommodate change in the bore hole size. [04] Drill rig will have approximately 50 FT tall mast. [05] IDF can adjust mast a few degrees to accommodate for the slope on the ash pond. If required AMS will level out area. [06] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [07] Duration estimated at 3x days for all cap vents. [08] Safety glasses to have foam gasket. [09] B. Kelly will go out to pond to inspect progress and check slope.

04 PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING

20120-05-15	NEW - Meeting after Progress Meeting with Mr. John Boyer - B&T Drainage [BTD] [01] M. Wagstaff inquired as to small business status. J. Boyer indicated no, as past 3x years BTD did under $ 28M. [02] Presentation of the "Excavation Work Plan for the Perforated Collector Pipe". [03] General review by all. [04] Plan to be edited for GCL. Was not presented as GCL, as not approved. [05] M .Wagstaff indicated alignment of PCP is flexible. [06] PCP can go direct into the Dewatering Sumps, "A-Lock" type seal with clamp. [07] J. Boyer concerned over Monitoring Well No. 2 [MW-2]. AER indicated see when get to that point if demo. [08] Spoils transfer by "tag-team" excavators. However, there may be no spoils above the GCL elevation. [09] General discussion that welding HDPE inside the trench boxes is a safety issue due to small work area, water, and access. J. Boyer proposed a PVC pipe option. The focus for this alternate is safety, but there is a possible cost savings as well. The pipe thickness could be an DR 14 [approximate thickness 3/4 IN] or DR 18 [approximate thickness 1/2 IN] per J. Boyer. There is flexibility in the shorter pieces of pipe, the mechanical connections, primarily her would be "bell and spigot". BTD to research price for PVC, and AER to review with Hanson. [10] If the bedrock cannot dug with and excavator, then pipeline can be raised. This creates issue with the manholes [dewatering sumps - reference Item No. 09.01-2012-05-08 below] height. If they cannot be adjusted with the ring[s], then area they protrude above the plan grade can be adjusted in the field. Barrel heights come in 16 IN, 32 IN, or 48 IN heights. [11] Projected manpower is 3x Operators [or more] and 3x Laborers. [12] Duration is approximately 30x D.

[13] Dewatering will be by well point. Illini Drilled will drill well points [next week].
[14] Issue of water volume from the dewatering operation. Could possibly be millions of gallons. J. Boyer indicated amount not known, but possibly the areas of the bedrock in a "valley" might be able to be pumped down, but this depends on the length of the "valley". Pumps in the well points will operate 24/7, in any order, one or more at a time. In the beginning all pumps will be operating. This may create an issue for the adjacent property owner [farmer] who pumps ground water for irrigation.

[15] Issue of water volume disposal into the ponds. M. Wagstaff will research what is required for pumping into the ponds and what is required for the pond elevation relative sampling of the discharge by AER [and paid for by AER].
[16] The well point will pump system will have safety fence, light, and the power cord above ground in a conduit.
[17] Delivery of the dewatering sump structures are 2 WKS [after approval].
[18] Discussion of the diameter and the thickness of the manhole barrel. M .Wagstaff indicated as long as buoyancy [reference Item NO. 09.01-2012-05-08-03 below] good, alternates will be acceptable. Possible options are larger base and matt [concrete] at base such as a 4 FT DIA MH with larger base [J. Boyer indicated may install larger base for BTD insurance].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-05-15	OPEN - [01] See Item No. 08.04-2012-05-15 for PCP Pre-Con Meeting and submission of the Excavation Plan. [02] Corrected ring description below in body of text. [03] No tax exemption if materials not purchased in Illinois.
2012-05-08	OPEN - [01] Excavation plan is to be prepared by professional engineer. [02] VES-01 for Bentonite M. Wagstaff indicated is approved [reference 12.1.09-2012-05-08 EWO-09 below]. [03] P. Zinsious indicated manhole as shown on drawings not a standard size. Brief discussion - M. Wagstaff indicated any [close] standard size is acceptable if the buoyancy calculations are approved. [04] Review of process if the rock is not "dig-able". M. Wagstaff indicated that Hanson understands the rock may not "dig". Once work begins, and if the rock does not "dig", the PCP can be raised [partially] or all the way out of he rock and set on the rock. Elevation [and alignment] can be made in the field. Pump structure can be made in ~~sorter~~ shorter ring height to accommodate the change in elevations if necessary.
2012-05-01	OPEN - BT Drainage [01] Deepest projected part of excavation is 22-23 FT. [02] J. Denham indicated the rock may not dig, requested AER consider raising the line above the bedrock line.

10 QUALITY CONTROL

01 GENERAL

2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues

02 ASH

2012-05-15	OPEN - no issues. J. Cravens Section A and C approximately 50 point for ash compaction density tests have been performed to date. All test have to date have passed in the range of 99% to 114% compaction. GEO technician Mr. Tim Wilson will be back on site tomorrow [05-16]. Massmann is to download files for GEO locations.
2012-05-08	OPEN - no issues. On going process. Compaction testing possibly scheduled for 05-09.
2012-05-01	OPEN - no issues. On going process.

03 CLAY

2012-05-15	OPEN - no issues. Samples taken yesterday [05-14]. The physical analysis will be by Holcomb and the chemical analysis will be by ARDL. Results should be in by next mid-week or before.
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-15	OPEN - Review of schedule to date. M .Wagstaff on vacation 05-15 to 05-22. [01] Actual percent completion on ash pond sectors: A = 100%, B = 90%, C = 100%, D = 85% [02] 05-11 - Lamac survey for "as-built" [record drawings] of the pipe relocation. [03] 05-29 - BTD start date projection for PCP. [04] Brief discussion electrical [AAA] and mechanical [FWI] scope.
2012-05-08	OPEN - Review of schedule to date. [01] Documented rain days: 05-04 and 05-07. P. Zinsious published e-mail with dates [on 05-07 shows total 5x days so far]. [02] Actual percent completion on ash pond sectors: A = 95%, B = 75%, C = 95%, D = 80% [03] 05-08 - Geomembrane Pre-Con Meeting [with AER and GEO during the Charah/AMS conference call]. [04] 05-10 - projected date for GEO compaction testing.

		[05] 05-11 - J. Cravens off-site. GEO to have 2x men: Tim and Ron. [06] 05-14 - Massmann on site to survey ash cap certification and fence alignment for AER. [07] 05-14 - Lamac on site to survey/locate cap vents. [08] 05-29 - Chesapeake to begin work.
	2012-05-01	OPEN - Review of schedule 04-30. [01] Schedule critical path and look ahead reviewed. [02] Actual percent completion on ash pond sectors: A = 90%, B = 70%, C = 90%, D = 75%. [03] Activity No. 106 cap vents still scheduled for 05-14 as shown on 04-30 schedule. [04] Compaction testing for ash and surveying to be coordinated for same time if possible. Surveyor can come out twice. [05] Build pads for cap vent drill rig. [06] Discussion on the liner schedule and Memorial Day holiday. Verify day after the holiday.

02 TIME AND MATERIAL

2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues
2012-05-01	OPEN - no issues

03 COORDINATION

2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues.
2012-05-01	OPEN - no issues.

12.0 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-05-15	OPEN - no issues.
2012-05-08	OPEN - EWO list reviewed, numbers and descriptions to be corrected in minutes.
2012-05-01	OPEN - no issues.

02 AMS PAY APPLICATION

2012-05-15	OPEN - AMS submitted pay application. M. Wagstaff indicated no issues, and that the revised AER PO is in process.
2012-05-08	OPEN - M. Wagstaff approved the draft pay-app for submittal as invoice. AMS to send copy of draft to J. Cravens.
2012-05-01	OPEN - M. Wagstaff indicated signed off with AER, should be reviewed by EOW. Invoice for stored materials on the HDPE liner.

12.1 EXTRA WORK ORDERS

01 EWO-01 ELECTRIC TEMPORARY

2012-05-15	No issues. 100% complete.
2012-05-08	Work is completed. Cost was audited with subcontractor, AMS to provide partial credit [reference EWO-08 below].

02 EWO-02 ASH PLACEMENT - CAP MODIFICATIONS

2012-05-15	No issues. In progress.
2012-05-08	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.
2012-05-01	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.
2012-04-24	OPEN - AER to provide interim e-mail stating approval for this work to AMS.

03 EWO-03 COAL PILE

2012-05-15	No issues. 100% complete.
2012-05-08	OPEN - Work completed [05-08 dozer working to fine grade area], final grade for drainage to be finished.
2012-05-01	OPEN - Work completed. Area to be observed for drainage. Date corrected below 04-24.

04 EWO-04 PIPE RELOCATION

2012-05-15	OPEN - work in progress. R. Porter reports pipe is ordered for the connection, and scheduled for installation next week on Monday [05-21]. The connection to the manhole will be a short piece of SDR 35 PVC pipe connected to the HDPE with a stainless steel repair coupling. The interior of the manhole will be patched with non-shrink grout, the exterior with the "A-Lock" ring and concrete. Details will be provided on the plan and profile record drawings for this line.
2012-05-08	OPEN - work in progress. AMS briefly described process of moving pipe from existing elevation into the new trench. Pipe will be slinger on the end at current elevation and at the new elevation. Connector fitting for the manhole fitting on site 05-08.
2012-05-01	OPEN - In progress. Pipe is exposed, and ready to begin lowering. AMS recommending removal of the pipe to be demolished and filled with

05 EWO-05 ELECTRIC FEEDER

2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.
2012-05-08	OPEN - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.
2012-05-01	OPEN - in progress. Meeting after progress meeting with AAA Electric.

06	EWO-06	POND A TRENCH	
	2012-05-15	No issues. Work 100% complete.	
	2012-05-08	NEW - Work completed for trench excavation. The weir structure "stop logs" are to be installed in Pond A and Pond B.	
07	EWO-07	ELECTRIC OVERHEAD	
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.	
	2012-05-08	NEW - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.	
08	EWO-08	CREDIT TO EWO-01	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - In progress [reference above].	
09	EWO-09	BENTONITE VES-01	
	2012-05-15	OPEN - in progress. M. Wagstaff indicated that yesterday [05-14] Hanson approved the AMS response comments to the Hanson submittal review. GSE to provide pricing and AMS to calculate EWO.	
	2012-05-08	NEW - M. Wagstaff indicated approval. Hanson has provided submittal review, and AMS in process of reply.	
10	EWO-10	FLOW-ABLE FILL CREDIT	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - Discussed previously [reference Item No. 09.01-2012-04-24 No. 07] pipe can be removed and go direct to manhole, eliminating the flow-able fill.	
11	EWO-11	BUILDING SPOILS REMOVAL	
	2012-05-15	OPEN - in progress. AMS to dig test holes by EOW.	
	2012-05-08	NEW - Excavation along Station 29+00 at fence line uncovered building spoil material within limits of the ash pond. M. Wagstaff requested exploratory holes dug along the fence line to determine the extent of the foreign material. AMS will dig holes at 100 FT intervals, and if something is uncovered will go to 50 FT intervals to determine the extent of the material. AMS will excavate the material to a predetermined depth by GEO/AER. Material excavated out will be disposed of within the ash pond, in the are east section where lower elevations are still being worked. A dump truck will have to be used to transport the material within the pond. Material adjacent to the pond that extends under the road is to remain in place and not to be disturbed.	

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-05-15

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [CLOSED - drawing issued]

[24] Research with Hanson PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].

[25] Research with Hanson alignment of the discharge piping structure at the outfall man hole. AER original design took into consideration a "mixing zone". R. Porter indicated since the line pipe relocation alignment can be direct. Discussion of the grade to be field adjusted around the box if new location is approved.

2012-05-08

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

2012-05-01

[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

[23] NEW - M. Wagstaff to provide drawings for the existing MCC. [OPEN - drawings received. AAA may require additional drawings. M. Wagstaff offered to post on ftp. [CLOSED - reminder site cleared 5th of month by AER]

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-05-15

[21] BTD/AMS VES-02 for PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].

FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: May 29, 2012

SUBJECT: Weekly Summary Report for May 21, 2012 to May 25, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 55 to 76°F, and temperature highs ranged from 73 to 92°F. Weather delays did not occur this week.

Construction Activities

Ash grading, cap vent installation, dewatering well installation, pipe relocation with manhole ingress, compaction testing, and surveying occurred this week. Ash and embankment finish grading occurred on the eastern half of Ash Pond D. After grading was completed, Ash Pond D was smooth drum rolled in preparation for the geomembrane placement. The pipe and fittings for the relocated HDPE pipe and manhole ingress were installed, concrete was placed over the connections and ingress, and the remainder of the exposed HDPE pipe was backfilled, completing EWO-04. Compaction testing generally occurred on the eastern half of Ash Pond D on May 23, 2012. Refer to compaction field forms for additional information. Massmann Surveying surveyed final ash grade on the eastern portion of Ash Pond D on May 23, 2012. Every grid point tested and surveyed was approved, and Ash Management Services, LLC was given the notice-to-proceed to begin the geomembrane placement. Lamac Engineering Co. surveyed the location for the perforated collector pipe (PCP). Seven cap vents were installed by Illini Drilled Foundations, Inc. on May 21 and May 22, 2012. Refer to Daily Reports for more information. Illini also installed four dewatering wells for the PCP; two wells south of Pond A, and two wells south of Pond D.. Refer to Daily Reports for more information. B&T Drainage began pumping well number two, discharging groundwater into Ash Pond B.

Equipment and Personnel On-Site

2-CAT D6N Bulldozer
CAT D6H Bulldozer
CAT 325C Excavator
CAT 330D Excavator
CAT 613C Water Truck
John Deere 9520 Tractor with 2-1812C John Deere Scraper (Pan)
Sky Track 6036 Forklift
Wacker RT Trench Roller
John Deere 410J Backhoe
Case 580 Backhoe
Ingersoll Rand SD-122DX Roller
Watson 1500 Drill Rig (Illini Drilling)
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Tim Wilson, Anna Saindon
Ash Management Services, LLC (AMS) – Randy Porter, Jon Dietzel, Jimmy Boone, Robert Dunkley, James Marks, Shawn McClaskey, Brad Bolenbaugh, and Johnny McGrew
Belt Construction, Inc. – Jared Belt, Nick Walker, Kevin Flynn, and Shelby Belt
Charah, Inc. – Joe Tasich
Massmann Surveying – Gary Delf and Rick Koeac
Lamac Engineering Co. – Jake Lewis
Illini Drilled Foundations, Inc. – Nick Roberts, Ernie Thomas, Troy Harwood, and Chuck Hines
B&T Drainage – John Boyer, Chase Boyer, and Eric Blankenship
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, May 22, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

Ash and embankment material within the footprint of Ash Pond D on the eastern half was graded.

Testing/Sampling

Moisture and density testing occurred on May 23, 2012. Refer to compaction field forms for additional information. Survey of the final ash pond grade on the eastern half of Ash Pond D occurred May 23, 2012. Survey of the PCP location occurred May 22, 2012.

Calibration Records

Calibration information was not obtained for equipment this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13802

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 5/21/12

TIME: Arrive: 6:30 AM | Depart: 6:30 PM | Travel: 1.0 hr | Total: 12.75 hr (0.25 hr for lunch)
Weather: Partly Cloudy, 68° AM, 73° PM | Contractor: AMS | Subcontr./Supplier: Belt/Illini/BTD
Equipment Working: 2-D6N Dozers, 9520 Tractor, 1-1812C Pan, 325C Excavator, Water Truck,
Site Activities / Observations / Contacts / Notes: 1500 Watson Drill Rig, 410J Backhoe

Belt Construction/AMS:

The D6N (Brad) continued finish grading Section B. The D6N (Jared) continued finish grading Section B and D, and graded the stockpiled embankment material to allow the scraper to pick it up, as well as performed embankment restoration. The 9520 cut embankment material outside the Pond along the south and east embankments, and moved it to the major fill area along the axis of Section B and D. The 325C (Johnny Mcgrew) assisted with moving the 18" HDPE Pipe and the SDR-35 PVC Pipe for the manhole ingress. The HDPE and PVC pipes had to be cut to adjust the alignment of the PVC Pipe and to make the 90° fitting work. The stainless steel/rubber water main fitting was too small for the HDPE Pipe. A Fern Co. coupling was ordered and the manhole ingress and pipe relocation will be completed tomorrow. James Marks, Randy Porter, and Jonathan Dietzel assisted with the pipe. Jon Dietzel is with AMS's focus group and will be working under Randy for the next 2-8 weeks.

Illini Drilled Foundations/B&T Drainage:

BTD (John Boyer and Eric Blankenship) brought a John Deere 410J Backhoe to assist Illini since they will be drilling the dewatering wells. The 410J (Eric) moved Illini's cuttings to the major fill area, and moved/poured the rock for the cap vents. Illini - Troy Harwood (Field Operations Manager), Nick Roberts (Driller), Ernie Thomas (Helper). The HDPE Pipe (4" perforated), filter sock, and centralizers, did not arrive till this afternoon. Therefore, all holes (7 cap vents) were drilled first. Two of the holes stayed open without casing, so they used an 18" Auger. All other holes required casing, so they used a 24" Auger. Two loads of rock was delivered for the backfill. Four of the seven cap vents completed (#1, 2, 4, and 5).

Additional Comments: Will copy all the Driller's records tomorrow for details.

No. A 13803

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/22/12

TIME: Arrive: 6:30 AM | Depart: 7:15 PM | Travel: 1.0 hr | Total: 13.75 hrs (no lunch)
Weather: Sunny, 55°AM, 78°PM | Contractor: AMS | Subcontr./Supplier: Belt/Illini/BTD/Lamac
Equipment Working: 1-D6N Dozer, 9520 Tractor, 1-1812C Pan, 325C Excavator, Water Truck, Sky Trak
Site Activities / Observations / Contacts / Notes: 6036 Forklift, 1500 Watson Drill Rig, 410J Backhoe

Belt Construction/AMS:

The D6N (Jared) continued grading the stockpiled embankment material outside the Pond along the east embankment to allow the material to be picked up by the scraper. The D6N also performed embankment restoration, finish grading in the last fill area along the axis of Section B and D, and covered the 18" HDPE Pipe to the fitting connecting the SDR 35 PVC Pipe. The 9520 finished cutting the material along the east embankment, filling the last fill area, and graded the entire pond with the drag blade.* Ash placement and finish grading has been completed. The only remaining earthwork consists of the remaining work around the manhole. The 325C (Brad) assisted with the HDPE Pipe manhole ingress by lifting pipes when necessary. The 6036 (Brad) also assisted with the ingress by hauling materials including concrete bags and fittings. Randy, James, and Jared put on the new pipe fitting (force main coupling), hooked up pipes, and poured the concrete collar around the SDR 35 ingress into the manhole. James put up orange fence around the box culvert. The concrete collar around the coupling and 45° fitting will be completed tomorrow, as well as backfilling the pipes. AMS hired another laborer - Shawn McClaskey. He did CBT training with Joko and was badged at Newton. James and Shawn began taking down the mesh on the west side fence.

Lamac Engineering:

Jake Lewis staked the locations for the PCP every 50', with 30' offsets. On the east end, south of Pond D, the PCP was too close to the wood line. Therefore, on the west end of Pond D, the PCP was offset 10' north at the kink, and the PCP was offset 20' north on the east side of Pond D at the end of pipe. The PCP location in between these points was adjusted accordingly. An as-built will be produced.

TIME: Arrive: | Depart: | Travel: | Total:
Weather: | Contractor: | Subcontr./Supplier:
Equipment Working: REFER TO PAGE ONE (1)

Site Activities / Observations / Contacts / Notes:

Illini Drilled Foundations / BTD:

All 7 cap vents have been drilled and installed. The driller's records were copied, which contain the shaft depths, diameters, and numbers. The filter socks on the 4" HDPE vents covered all of the perforations, with the centralizers acting as clamps. River rock was used to backfill the vents. The top cap vent assemblies came pre-fabricated per detail 5 of sheet 10 of drawing 5-386 (Rev. G), except for the top threaded cap and mesh strainer cap. These will be shipped and installed tomorrow. The assemblies were welded to the top of the vents with a McElroy Pit Bull 14 Fusion Machine. The 410.1 (Eric) removed the auger cuttings, backfilled the cap vents, and assisted with moving drilling equipment. John Boyer delivered 4 slotted 18" casings for the dewatering wells. Illini drilled 3 dewatering wells and installed the casings. Dewatering Wells: 2 wells south of Pond A and 2 wells south of Pond D. The cuttings from the most eastern well (next to Wabash River) consisted of clayey material. The cuttings from the other 2 western wells were sandy material. The casings were backfilled with pea gravel up to 10', and the upper 10' with river rock. All wells were drilled to bedrock. Wells were drilled with a 30" and/or 36" Auger. Illini will return on Friday to drill the last well. BTD will install the pumps next week, and they will have to be monitored daily. The water will be pumped into Ash Pond B, as long as it can keep up with drainage.

Misc.:

Wacker RT Trench Roller picked up (never used). Delivered: Ingersoll Rand (IR) SD-122DX Steel Drum Roller and CAT 613C Water Truck to assist Roller. Jon Dietzal and Johnny at CBS today. As of today, Brad Bolenbaugh is now an AMS operator. Belt will begin demobilizing the rest of the week, but will leave a D6N Dozer.

Additional Comments: AAA's Overhead and Feeder Bid is still under review for acceptance.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13806

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/23/12

TIME: Arrive: 6:30 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 63°AM, 80°PM | Contractor: AMS | Subcontr./Supplier: Lamac/Massmann
Equipment Working: D6N Dozer, 325C Excavator, 6036 Forklift, SD-122DX Roller, 613C Water Truck,
Site Activities / Observations / Contacts / Notes: Water Truck (Dust Control)

AMS:

The 325C (Brad) placed rock around the remainder of the exposed 18" HDPE pipe. The 6036 (Brad) used the bucket attachment for mixing concrete for the pipe fillings. Randy, Jon, James, and Shawn mixed and placed a thick collar of concrete around the manhole ingress and the pipe fitting/coupling (HDPE to PVC). The D6N (Brad) backfilled the remaining exposed pipes and graded around the manhole, completing EWO-04. The D6N also smoothed out the remaining wet area in Section B. The 325C removed remaining materials off the pond and mobilized outside the embankment to finish disposing of the remaining ADS pipe when another dumpster arrives. The SD-122DX (Brad) began rolling Pond D, while the 613C (Johnny) watered ahead of the roller. James and Shawn continued removing the mesh on the west fence, pulled the remaining grade stakes in the Pond, cleaned around each cap vent, and walked the Pond picking up visible debris. Randy and Jon put back all the PGL stakes from their offsets. The old ingress hole on the manhole was blocked off and filter fabric was used to prevent sediment from entering the manhole.

Lamac:

Jake Lewis finished staking the PCP every 50', with 30' offsets.

Massman:

Gary and Rick completed surveying the ash grade points.

Compaction:

Tim Wilson completed compaction testing.

Misc:

Anna Saindon (CQA Officer) will inspect site tomorrow.

Additional Comments: Currently, CCS is scheduled to work 6 days/week, considering no delays.

No. A 13807

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 5/24/12

TIME: Arrive: 6:30 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12 hrs (0.25 hr for lunch)
Weather: Sunny, 62° AM, 92° PM | Contractor: AMS | Subcontr./Supplier: Illini/BTD/Belt
Equipment Working: D6N Dozer, 410J Backhoe, 6036 Lift, SD-122DX Roller, 613C Water Truck,
Site Activities / Observations / Contacts / Notes: Water Truck (Dust Control), 330D Excavator, Watson 1500

Illini Drilled Foundations / BTD:
Driller - Chuck Hines, Helper - Troy Harwood. They drilled the fourth well, most western well, south of Pond A. They had to drill a few trial holes with the Watson 1500 to get to the desired depth, passed the cut of the PCP. Dewatering Wells (west to east): D1, D2, D3, D4, with D1 and D2 south of Pond A, and D3 and D4 south of Pond D. D3 was moved across the gravel road and re-drilled to achieve greater depth. 330D (John Boyer - BTD) dug a test pit before drilling D3 to ensure bedrock was at a greater depth. Well Depths: D1 = 16', D2 = 29', D3 = 16', D4 = 22'. When re-drilling D3, a 8"-12" ductile iron pipe was punctured, but it was an abandoned water line to the SE Deep Well. The 410J (John Boyer and Chase Boyer) backfilled the well casings with pea gravel and backfilled test pits. Illini hauled off all parts and equipment except for the drill rig, which was parked in the yard and will be picked up later. Illini will abandon and re-drill MW2 at a later date. After drilling was completed, the 330D (John) dug more test pits south of Pond A to determine depth of rock, and the water table. Rock ranged from 7.5' to 11.0', the soil was generally clay overlying sand, and there was minimal water. The 410J (Chase) filled in these test pits. BTD brought in a CAT XQ0 Generator and a 7.5HP TSURUMI Pump with a 4" discharge. The pump was placed in D2 and was discharged into Pond B. The pump will remain on until tomorrow to determine its affect on the GWT.

AMS: D6N (Brad) and 6036 (Johnny) smoothed out rough areas in Pond D. SD-122DX (Brad) continued rolling Pond D and the 613C (Johnny) continued watering. Shawn continued taking down the fence and flagged the cap vents. James was off today. A 4th dumpster was brought in, and the 3rd one was hauled off.

Additional Comments: Belt demobilized 1-D6N and D6H.
Rolling to be completed tomorrow.

FIELD OBSERVATION REPORT

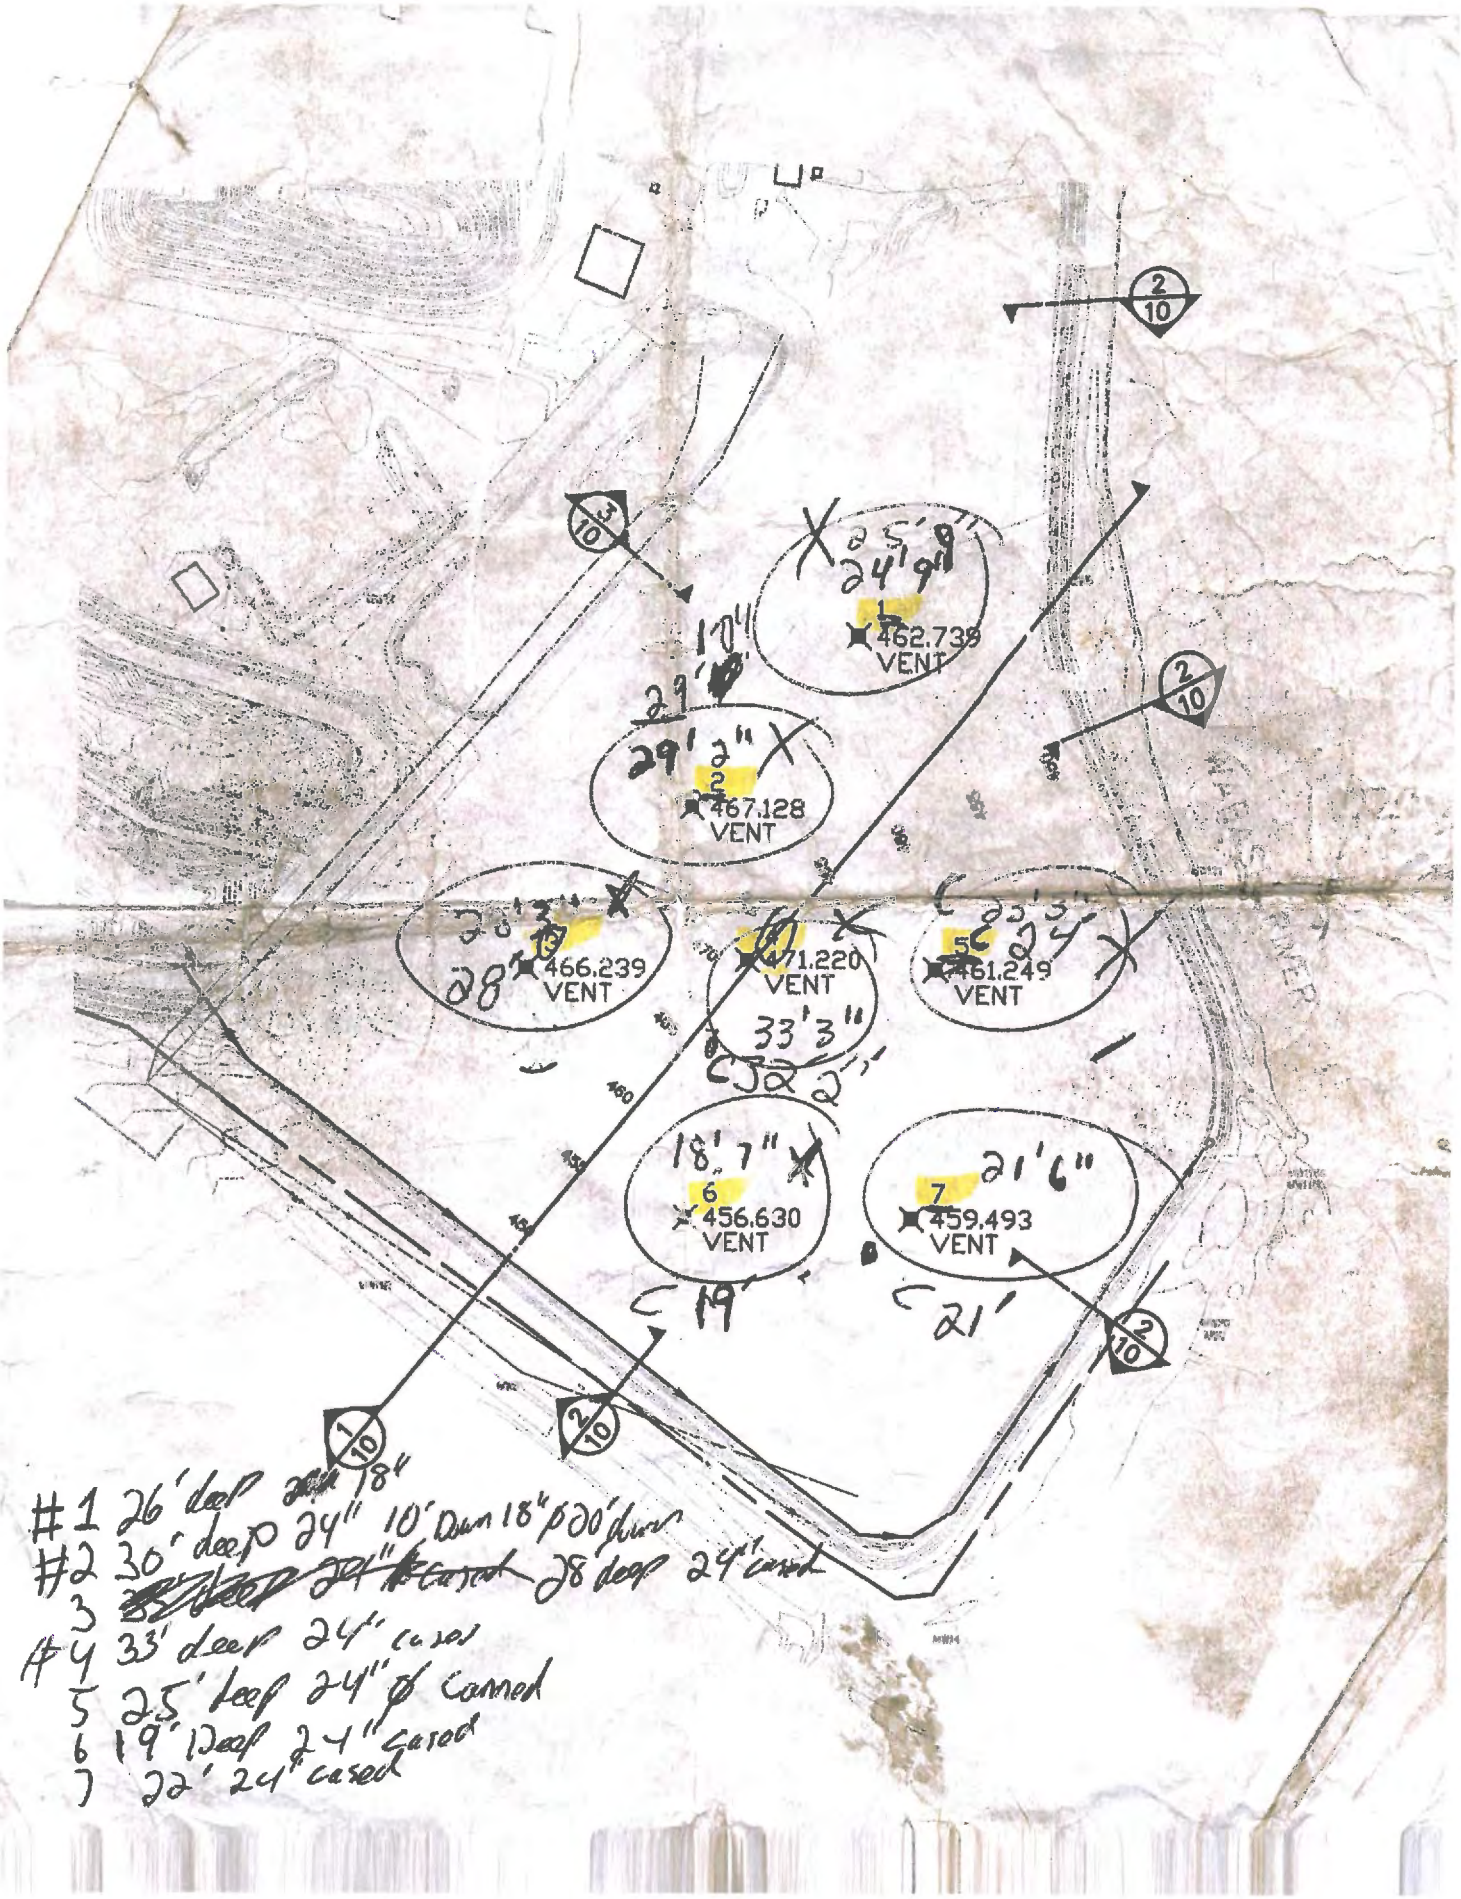
Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/25/12

TIME: Arrive: 6:30 AM | Depart: 12:45 PM | Travel: 1.0 hr | Total: 7.25 hrs (no lunch)
Weather: Partly cloudy, 76°AM, 90°PM | Contractor: AMS | Subcontr./Supplier: BTD
Equipment Working: 325C Excavator, SD-122DX Roller, 6036 Forklift, Water Truck (Dust Control)
Site Activities / Observations / Contacts / Notes: CCS and GEO to be on site next week. An additional ≈ 15 personnel.

BTD:
Chase Boyer checked groundwater levels in the Wells and fueled the generator to continue pumping. AMS will shut the pump off at the end of the day.

AMS:
Shawn and James filled in Pond around the cap vents and finished taking down the west fence line. SD-122DX (Brad) completed rolling Pond D. The 6036 (Brad) helped Ameren load equipment and materials. The 325C (Brad) partially loaded the dumpster with ADS pipe. Johnny was off today. Randy left early and Jon Dietzel stayed the whole day. The parts from the west fence line will be moved to the construction yard.

Demobilized:
325C, 2-1812C Scrapers, SD-122DX, Watson 1500 Drill Rig
Delivery:
Yesterday - BTD 330D Excavator, Today - AMS Case 580 Backhoe



Equipment and Personnel Update:
AMS - 6036 Forklift, Water Truck, D6N Dozer, 613C Water Truck, 580 Backhoe
Randy, Jon, James, Shawn, Johnny, Brad, Robert
BTD - 330D Excavator, 410J Backhoe
John and Chase

Additional Comments: Yesterday Shawn and Johnny re-fenced generator/pump and provided lights, fire ext., and spill kit.

03 ABBREVIATIONS

AER	Ameren Energy Resources
AMS	Ash Management Services
BNSF	Burlington
CBT	Computer Based Training
EAP	Emergency Action Plan
EOD	End of [the] Day
EOM	End of [the] month
EOW	End of [the] week
EDTS	Energy Delivery Transmission Services
EDC	Estimated Date [of] Completion
EWO	Extra Work Order
HDPE	High Density Polyethylene
HRS	Hours
LOTO	Lock Out Tag Out
NMA	National Maintenance Agreement
OSHA	Occupational Safety Health Administration
PCP	Perforated Collector Pipe
PO	Purchase Order
RHOM	Routine Handling, Operation, and Maintenance
SPOC	Single Point of Contact
T/M	Time and Materials
TBD	To Be Determined
TD	Transmission Dispatch
WPA	Worker Protection Assurance

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-05-22	OPEN - no issues.
2012-05-15	OPEN - no issues.
2012-05-08	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-05-22	OPEN - no issues. None projected for 2x week look ahead. Chesapeake Containment [CCS] will use generators.
2012-05-15	OPEN - no issues. None projected for 2x week look ahead or for Illini Drilled [IDF].
2012-05-08	OPEN - no issues.

03	**EMPLOYEE DRUG TESTING**	
	2012-05-22	OPEN - no issues. BT Drainage count in progress. 1x AMS yesterday DT at Robinson [05-21] and 1x AMS today [05-22].
	2012-05-15	OPEN - no issues. J. Boone indicated Chesapeake Containment will have list by next Progress Meeting. Some workers will already have AER badges in good standing. BT Drainage will have projection today [05-15]. The borrow site [CBS] will not require AER badge/CBT/DT, only AMS safety training.
	2012-05-08	OPEN - no issues. Illini Drilled 1x workers to be scheduled for 05-08. AER to schedule 1x worker for Massmann and 2x TSI workers by EOM.
04	**AMS SAFETY**	
	2012-05-22	OPEN - no issues. Next safety luncheon is 06-12. [01] J. Tasich briefing on glove usage for material handling and look out for insects/varmints. [02] Bees at trailer are eradicated. [03] J. Denham briefing on cooling stations, 2x will be set up. [04] Brief discussion on hydrating. Energy drinks not encouraged due to caffeine content. [05] Review of Charah/AMS safety awards [ref. Item No. 05.04-2012-05-08.01,02,03 below]. [06] No cooling station at CBS as workers [operators] in equipment with **AC.**
	2012-05-15	OPEN - no issues. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter area to be cleaned today [05-15], and will be on going procedure. [02] Water training was completed for installation of the "stop logs". [03] Refining Item No. 05.05-2012-05-15 below, bees swarming on GEO trailer, have been sprayed. Workers for AMS are to note on their new employee form allergies such as to bee stings. The employee is required to notify the Site Manager of such allergies. In the case of a bee [or insect sting], each worker is responsible to carry their own medication, such as an "epi-pen" [Epinephrine Auto-Injectors] accordingly.
	2012-05-08	OPEN - no issues. Water training to take place today for work on Pond A and B [some work already completed before water in the areas of work on Pond A]. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter areas has supplies. [02] AMS will have cleaned out [dirt from varmints, etc...]. [03] Signs will be posted by next week. [04] EAP will be reviewed at the safety luncheon [today]. AMS stepped out of meeting for a corporate "all-hands" safety conference call commemorating the following: [01] Charah/AMS 2,000,000 [two million] man-hours without lost time milestone. [02] Mine Safety Health Administration [MSHA] Sentinel of Safety Award for no lost time incidents in 2010 at Charah' s Brickey's limestone grinding facility [we are supplier to Ameren Missouri]. [03] North Carolina Department of Labor Gold Level Safety Achievement Award for the Charah Roxboro site [a large site where Charah manages fly ash, bottom ash, gypsum, and landfill projects].
05	**HOUSEKEEPING**	
	2012-05-22	OPEN - No issues. M. Wagstaff inquire about CCS and liner material. CCS will have dumpster and AMS will help keep clean.
	2012-05-15	OPEN - See Item No. 05.04-2012-05-15 above regarding bees swarming at GEO trailer.
	2012-05-08	OPEN - no issues.
06	**PLANT ACCESS - CBT BADGE**	
	2012-05-22	OPEN - no issues. M .Wagstaff to issue gate log. DT info listed above. Item No. 05.03.
	2012-05-15	OPEN - no issues. Projection 1x to 2x at EOW, possibly 10x for BTD. M. Wagstaff to issue gate log again. P. Zinsious request copy [not received].
	2012-05-08	OPEN - no issues. M. Wagstaff e-mailed 6x WKS gate log to J. Denham, and he requested every 2x WKS. M. Wagstaff inquired on CC - for now J. Denham and P. Zinsious.
07	**VEHICLES ON SITE**	
	2012-05-22	OPEN - no issues. Brief review of workers bused to ash pond work site by **AMS.**
	2012-05-15	OPEN - no issues
	2012-05-08	OPEN - no issues. GEO to bring "gator" [utility vehicle] on site. AMS to bring second pick up truck on site for A. Driver. AMS will provide safety flags for both vehicles.
08	**OSHA LOG - WORK HOURS**	
	2012-05-22	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-21
	No incidents or accidents.	
	0,0000.00	RT
	0,000.00	OT
	2,347.50	TOTAL [time not split out RT/OT]
	2012-05-15	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-014
	No incidents or accidents.	
	1,945.50	RT
	0,000.00	OT
	1,945.50	TOTAL
	2012-05-08	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-07
	1,555.50	RT
	0,000.00	OT
	1,555.50	TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-05-22 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current General discussion on what the AMS-Charah focus program is to train site Managers.
[01] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[03] Laborers
[05] Operators [long boom operator not required]
[01] Teamsters
[00] Survey
[02] Foreman [Full time] [Mr. John Dietzel new Charah/AMS Focus Site Manager on project].
[12] Total

2012-05-15 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current General discussion on what the AMS-Charah focus program is to train site Managers.
[01] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[01] Laborers
[04] Operators [long boom operator not required]
[01] Teamsters
[00] Survey
[02] Foreman [Full time]
[09] Total

2012-05-08 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current Correction in crew size for 05-01 below [not discussed at the meeting]
[01] Geotechnology [work hours not
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[01] Laborers
[05] Operators
[01] Teamsters
[00] Survey
[02] Foreman [Full time]
[10] Total

02 WORK HOURS

2012-05-22 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt started to work 10x HRS [internal cost to AMS] last Tuesday [05-15] and will continue until finished. CCS still on track for OT. No work on site Memorial Day holiday [observed Monday 05-28].

2012-05-15 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt to work 4x D 10x HRS due to dry weather [internal cost to AMS]. When Chesapeake comes on board, they may work 12x HRS a day maximum due to instrumentation calibration procedures required in the specifications.

2012-05-08 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Chesapeake may work extended hours.

03 OVER TIME

2012-05-22 OPEN - Belt has projected OT per Item No. 06.02, and will de-mob on Friday [05-25].

2012-05-15 OPEN - Belt has projected OT per Item No. 06.02-2012-0515 above.

2012-05-08 OPEN - None projected at this time. Referencing Item No. 06.02-2012-05-07 above - Chesapeake may have OT.

04 TRAILER [AND GENERAL CONDITIONS]

2012-05-22 OPEN - no issues.

2012-05-15 OPEN - no issues.

2012-05-08 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-05-22	OPEN - no issues. BT Drainage has contract [CLOSED].
2012-05-15	OPEN - no issues. BT Drainage by EOW.
2012-05-08	OPEN - no issues. BT Drainage in progress.

02 SUBMITTALS

2012-05-22	OPEN - no issues. In progress - P. Zinsious submitted to J. Cravens today updated cover sheets and log.
2012-05-15	OPEN - no issues. In progress - P. Zinsious to meet with J. Cravens today [05-15] to review log. Pump information to be re-submitted [again] due to identification.
2012-05-08	OPEN - no issues. In progress - P. Zinsious to revise log information by EOW and review mechanical.

08 MATERIAL

01 GENERAL

20120-05-22	OPEN - R. Porter reports all material in, however bands too long [will resolve].
20120-05-15	OPEN - R. Porter reports pipe ordered for relocation connection to the manhole. Details in Item No. 12.1.04-2012-05-15 below.
20120-05-08	OPEN - no issues. See below for meetings. [date corrected]

02 GEOMEMBRANE PRE-CON MEETING

20120-05-22	OPEN - no issues. GEO inspection on Thursday [05-24].
20120-05-15	OPEN - no issues.
20120-05-08	NEW - Meeting during Progress Meeting with Mr. Ryan Clark - Chesapeake Containment [CCS]. [01] 05-29 first day of deployment. [02] Mobilization will take place prior to first day of deployment. Badges, drug testing, and safety training required before. [03] Safety glasses to have foam gasket. [04] CCS discussed proposed panel layout and Geotechnology agreed that given the low slope (5%) that downslope orientation is not as critical. CCS to provide revised proposed panel layout. [05] All CCS vehicles will need magnetic signage. [06] CCS trailer can be left on-site. [07] AMS to provide operator for deployment. [08] AMS lag from liner start to clay placement is about 6 days. [09] CCS will have tensiometer certifications on-site and provided to Geotechnology. [10] All pipe boots are to be welded to HDPE gas vent pipe as shown in detail. [11] There are some repairs needed in the existing HDPE lined ponds. CCS will patch while on-site. [12] CCS [NMA] site extension has been filed, process of finalize site meeting and agreement with local labor union. [13] Expected manpower on-site is 12x workers working 10 hours+/- per day, 6x days a week with 7th day as a make-up day. [14] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [15] Mr. Matt Garland - CCS General Superintendent will be coordinating the final schedule. [16] R. Clark will go out to pond to inspect progress and check on condition of delivered materials.

03 CAP VENT PRE-CON MEETING

20120-05-22	OPEN - Drilling completed on Monday [05-21].
20120-05-15	OPEN - Mobilization date moved to 05-21.
20120-05-08	NEW - Meeting after Progress Meeting with Mr. Bill Kelly - Illini Drilled Foundations [IDF]. [01] 05-14 first day of deployment. [02] Discussion of submittal and installation of the cap vents. [03] IDF will have different size spacers on site to accommodate change in the bore hole size. [04] Drill rig will have approximately 50 FT tall mast. [05] IDF can adjust mast a few degrees to accommodate for the slope on the ash pond. If required AMS will level out area. [06] Any disturbed are requiring re-compaction to be looked at on case-by-case basis with GEO/AER. [07] Duration estimated at 3x days for all cap vents. [08] Safety glasses to have foam gasket. [09] B. Kelly will go out to pond to inspect progress and check slope.

04 PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING

20120-05-22	OPEN - Meeting during Progress Meeting with Mr. John Boyer. [01] Open discussion of safety concern due to wet/damp installation and welding of HDPE in the trench. [02] M. Wagstaff indicated Hanson concern damage of pipe when installed. [03] AMS to provide PVC Value Engineering Submittal [substitution]. J. Boyer indicated cost estimated at $ 500 more. [04] P. Zinsious indicated pipe will not be damaged. J. Boyer stated can run "mandrel test" after pipe installation. [05] Existing Ameren MW-2 probably not able to be saved,
20120-05-15	NEW - Meeting after Progress Meeting with Mr. John Boyer - B&T Drainage [BTD] [01] M. Wagstaff inquired as to small business status. J. Boyer indicated no, as past 3x years BTD did under $ 28M. [02] Presentation of the "Excavation Work Plan for the Perforated Collector Pipe". [03] General review by all. [04] Plan to be edited for GCL. Was not presented as GCL, as not approved. [05] M .Wagstaff indicated alignment of PCP is flexible.

[06] PCP can go direct into the Dewatering Sumps, "A-Lock" type seal with clamp.
[07] J. Boyer concerned over Monitoring Well No. 2 [MW-2]. AER indicated see when get to that point if demo.
[08] Spoils transfer by "tag-team" excavators. However, there may be no spoils above the GCL elevation.
[09] General discussion that welding HDPE inside the trench boxes is a safety issue due to small work area, water, and access. J. Boyer proposed a PVC pipe option. The focus for this alternate is safety, but there is a possible cost savings as well. The pipe thickness could be an DR 14 [approximate thickness 3/4 IN] or DR 18 [approximate thickness 1/2 IN] per J. Boyer. There is flexibility in the shorter pieces of pipe, the mechanical connections, primarily her would be "bell and spigot". BTD to research price for PVC, and AER to review with Hanson.

[10] If the bedrock cannot dug with and excavator, then pipeline can be raised. This creates issue with the manholes [dewatering sumps - reference Item No. 09.01-2012-05-08 below] height. If they cannot be adjusted with the ring[s], then area they protrude above the plan grade can be adjusted in the field. Barrel heights come in 16 IN, 32 IN, or 48 IN heights.
[11] Projected manpower is 3x Operators [or more] and 3x Laborers.
[12] Duration is approximately 30x D.
[13] Dewatering will be by well point. Illini Drilled will drill well points [next week].
[14] Issue of water volume from the dewatering operation. Could possibly be millions of gallons. J. Boyer indicated amount not known, but possibly the areas of the bedrock in a "valley" might be able to be pumped down, but this depends on the length of the "valley". Pumps in the well points will operate 24/7, in any order, one or more at a time. In the beginning all pumps will be operating. This may create an issue for the adjacent property owner [farmer] who pumps ground water for irrigation.

[15] Issue of water volume disposal into the ponds. M. Wagstaff will research what is required for pumping into the ponds and what is required for the pond elevation relative sampling of the discharge by AER [and paid for by AER].
[16] The well point will pump system will have safety fence, light, and the power cord above ground in a conduit.
[17] Delivery of the dewatering sump structures are 2 WKS [after approval].
[18] Discussion of the diameter and the thickness of the manhole barrel. M .Wagstaff indicated as long as buoyancy [reference Item NO. 09.01-2012-05-08-03 below] good, alternates will be acceptable. Possible options are larger base and matt [concrete] at base such as a 4 FT DIA MH with larger base [J. Boyer indicated may install larger base for BTD insurance].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-05-22	OPEN - [01] P. Zinsious reported Mr. Wampler [Wampler Farms]. [02] Open discussion of License Agreement and boundary line alignment off approximately 80FT. [03] M. Wagstaff indicated no issue. AMS to show on drawing.
2012-05-15	OPEN - [01] See Item No. 08.04-2012-05-15 for PCP Pre-Con Meeting and submission of the Excavation Plan. [02] Corrected ring description below in body of text. [03] No tax exemption if materials not purchased in Illinois.
2012-05-08	OPEN - [01] Excavation plan is to be prepared by professional engineer. [02] VES-01 for Bentonite M. Wagstaff indicated is approved [reference 12.1.09-2012-05-08 EWO-09 below]. [03] P. Zinsious indicated manhole as shown on drawings not a standard size. Brief discussion - M. Wagstaff indicated any [close] standard size is acceptable if the buoyancy calculations are approved. [04] Review of process if the rock is not "dig-able". M. Wagstaff indicated that Hanson understands the rock may not "dig". Once work begins, and if the rock does not "dig", the PCP can be raised [partially] or all the way out of he rock and set on the rock. Elevation [and alignment] can be made in the field. Pump structure can be made in ~~sorter~~ shorter ring height to accommodate the change in elevations if necessary.

10 QUALITY CONTROL

01 GENERAL

2012-05-22	OPEN - no issues
2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues

02 ASH

2012-05-22	OPEN - no issues. All ash compaction density test have passed [over 90% density], some areas at PGL have to be tested. GEO to issue report. Mr. Tim Wilson [GEO] and Massmann to be on site 05-22. Ash pond elevations at 98% to grade [as determined by the 02-06 drawings], some spots high. General discussion "zig" [valley] in final grade per plan.
2012-05-15	OPEN - no issues. J. Cravens Section A and C approximately 50 point for ash compaction density tests have been performed to date. All test have to date have passed in the range of 99% to 114% compaction. GEO technician Mr. Tim Wilson will be back on site tomorrow [05-16]. Massmann is to download files for GEO locations.
2012-05-08	OPEN - no issues. On going process. Compaction testing possibly scheduled for 05-09.

03 CLAY

2012-05-22	OPEN - no issues - sample analysis submitted.
2012-05-15	OPEN - no issues. Samples taken yesterday [05-14]. The physical analysis will be by Holcomb and the chemical analysis will be by ARDL. Results should be in by next mid-week or before.
2012-05-08	OPEN - no issues.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-22	OPEN - Review of schedule to date. [01] Actual percent completion on ash pond sectors: A = 100%, B = 98%, C = 100%, D = 98% [02] 05-22 cap vents projected to 05-25. [03] 05-29 - BTD start date projection for PCP. [04] 05-21 - BTD to begin drilling de-watering wells. Pumping possibly 24/7 if required. [05] 05-22 - AMS to begin removing fencing along ash pond leaving poles. [06] 05-26 - Smooth drum roll ash placement ,no vibration, and addition of water for moisture content. [07] Box culvert demolition complete.
2012-05-15	OPEN - Review of schedule to date. M .Wagstaff on vacation 05-15 to 05-22. [01] Actual percent completion on ash pond sectors: A = 100%, B = 90%, C = 100%, D = 85% [02] 05-11 - Lamac survey for "as-built" [record drawings] of the pipe relocation. [03] 05-29 - BTD start date projection for PCP. [04] Brief discussion electrical [AAA] and mechanical [FWI] scope.
2012-05-08	OPEN - Review of schedule to date. [01] Documented rain days: 05-04 and 05-07. P. Zinsious published e-mail with dates [on 05-07 shows total 5x days so far]. [02] Actual percent completion on ash pond sectors: A = 95%, B = 75%, C = 95%, D = 80% [03] 05-08 - Geomembrane Pre-Con Meeting [with AER and GEO during the Charah/AMS conference call]. [04] 05-10 - projected date for GEO compaction testing. [05] 05-11 - J. Cravens off-site. GEO to have 2x men: Tim and Ron. [06] 05-14 - Massmann on site to survey ash cap certification and fence alignment for AER. [07] 05-14 - Lamac on site to survey/locate cap vents. [08] 05-29 - Chesapeake to begin work.

02 TIME AND MATERIAL

2012-05-22	OPEN - no issues
2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues

03 COORDINATION

2012-05-22	OPEN - no issues. R. Porter to get with G. Musch to fill the water tank.
2012-05-15	OPEN - no issues
2012-05-08	OPEN - no issues.

12.0 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-05-22	OPEN - no issues.
2012-05-15	OPEN - no issues.
2012-05-08	OPEN - EWO list reviewed, numbers and descriptions to be corrected in minutes.

02 AMS PAY APPLICATION

2012-05-22	OPEN - no issues.
2012-05-15	OPEN - AMS submitted pay application. M. Wagstaff indicated no issues, and that the revised AER PO is in process.
2012-05-08	OPEN - M. Wagstaff approved the draft pay-app for submittal as invoice. AMS to send copy of draft to J. Cravens.

12.1 EXTRA WORK ORDERS

01 EWO-01 ELECTRIC TEMPORARY

2012-05-22	Deferred.
2012-05-15	No issues. 100% complete.
2012-05-08	Work is completed. Cost was audited with subcontractor, AMS to provide partial credit [reference EWO-08 below].

02 EWO-02 ASH PLACEMENT - CAP MODIFICATIONS

2012-05-22	Deferred.
2012-05-15	No issues. In progress.
2012-05-08	OPEN - In progress. Spoils can go into Ash Pond D, and on the slopes as clean. Material opt be monitored by GEO and AMS. Consensus is the ash will balance.

03 EWO-03 COAL PILE

2012-05-22	Deferred.
2012-05-15	No issues. 100% complete.
2012-05-08	OPEN - Work completed [05-08 dozer working to fine grade area], final grade for drainage to be finished.

04	EWO-04	PIPE RELOCATION	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - work in progress. R. Porter reports pipe is ordered for the connection, and scheduled for installation next week on Monday [05-21]. The connection to the manhole will be a short piece of SDR 35 PVC pipe connected to the HDPE with a stainless steel repair coupling. The interior of the manhole will be patched with non-shrink grout, the exterior with the "A-Lock" ring and concrete. Details will be provided on the plan and profile record drawings for this line.	
	2012-05-08	OPEN - work in progress. AMS briefly described process of moving pipe from existing elevation into the new trench. Pipe will be slinger on the end at current elevation and at the new elevation. Connector fitting for the manhole fitting on site 05-08.	
05	EWO-05	ELECTRIC FEEDER	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.	
	2012-05-08	OPEN - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.	
06	EWO-06	POND A TRENCH	
	2012-05-22	Deferred.	
	2012-05-15	No issues. Work 100% complete.	
	2012-05-08	NEW - Work completed for trench excavation. The weir structure "stop logs" are to be installed in Pond A and Pond B.	
07	EWO-07	ELECTRIC OVERHEAD	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.	
	2012-05-08	NEW - in progress. AMS setting up meeting to audit price with AAA Electric. M. Wagstaff request combine EWO with EWO-07.	
08	EWO-08	CREDIT TO EWO-01	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - In progress [reference above].	
09	EWO-09	BENTONITE VES-01	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - in progress. M. Wagstaff indicated that yesterday [05-14] Hanson approved the AMS response comments to the Hanson submittal review. GSE to provide pricing and AMS to calculate EWO.	
	2012-05-08	NEW - M. Wagstaff indicated approval. Hanson has provided submittal review, and AMS in process of reply.	
10	EWO-10	FLOW-ABLE FILL CREDIT	
	2012-05-22	Deferred.	
	2012-05-15	OPEN - in progress.	
	2012-05-08	NEW - Discussed previously [reference Item No. 09.01-2012-04-24 No. 07] pipe can be removed and go direct to manhole, eliminating the flow-able fill.	
11	EWO-11	BUILDING SPOILS REMOVAL	
	2012-05-22	Deferred. No other issues, test holes revealed.	
	2012-05-15	OPEN - in progress. AMS to dig test holes by EOW.	
	2012-05-08	NEW - Excavation along Station 29+00 at fence line uncovered building spoil material within limits of the ash pond. M. Wagstaff requested exploratory holes dug along the fence line to determine the extent of the foreign material. AMS will dig holes at 100 FT intervals, and if something is uncovered will go to 50 FT intervals to determine the extent of the material. AMS will excavate the material to a predetermined depth by GEO/AER. Material excavated out will be disposed of within the ash pond, in the are east section where lower elevations are still being worked. A dump truck will have to be used to transport the material within the pond. Material adjacent to the pond that extends under the road is to remain in place and not to be disturbed.	

13	ACTION ITEMS - AER [25]	
01	AMEREN [AER]	
	2012-05-22	Discussion of collection box pipe alignment direct to the manhole.
	2012-05-15	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [CLOSED - drawing issued] [24] Research with Hanson PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09]. [25] Research with Hanson alignment of the discharge piping structure at the outfall man hole. AER original design took into consideration a "mixing zone". R. Porter indicated since the line pipe relocation alignment can be direct. Discussion of the grade to be field adjusted around the box if new location is approved.
	2012-05-08	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [OPEN - Hanson to provide revised drawing - in progress]

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-05-22 In progress.

2012-05-15

[21] BTD/AMS VES-02 for PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: June 6, 2012

SUBJECT: Weekly Summary Report for May 29, 2012 to June 2, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 51 to 70°F, and temperature highs ranged from 61 to 85°F. Weather delay due to rain occurred on May 31, 2012.

Construction Activities

Anchor trench construction and 40 mil HDPE geomembrane installation occurred this week. The anchor trench has been excavated along the northern half of Quadrant A, all of Quadrant B, and the eastern side of Quadrant D. IDOT FA-01 sand for anchor trench backfill, and 4-inch double walled, HDPE perforated pipe with most of the associated pipe materials for anchor trench drainage was delivered to the site. Part of the anchor trench in Quadrant A, with the 4-inch HDPE pipe, had been backfilled. Chesapeake Containment Systems, Inc. installed 40 mil HDPE geomembrane liner in parts of Quadrants A, B, and C. Geotechnology, Inc. observed quality control of the installation. Refer to geomembrane documentation for more details. Dewatering for the proposed perforated collector pipe excavation continues in well number 1 and 2, located south of Ash Pond A.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT 330D Excavator
CAT 613C Water Truck
CAT 279C Skid Steer (rubber track)
John Deere 624H Front End Loader
John Deere 9520 Tractor
John Deere 6430 Tractor
Sky Track 6036 Forklift
John Deere 410J Backhoe
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Tim Wilson, Steve Graham, and Anna Saindon
Ash Management Services, LLC (AMS) – Randy Porter, Jon Dietzel, Jimmy Boone, Robert Dunkley, James Marks, Shawn McClaskey, Brad Bolenbaugh, and Johnny McGrew
Charah, Inc. – Joe Tasich
Chesapeake Containment Systems, Inc – Jose Valverde, Barbarito Flores, Daniel Gonzales, Leroy Smith, Phet Vongkhamchanh, Jose Flores, Alberto Ortiz, Manuel Gonzales, Israel Gonzales, Erik Sefton, Blake Bunting, Matthew Watts, and Ryan Clark
Daylight Land Management – Adam Ziliak and Billy Georges
B&T Drainage – John Boyer and Chase Boyer
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, May 29, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane was installed on site. Materials for the 4-inch HDPE double walled pipe and IDOT FA-01 sand was delivered on site for the anchor trench.

Electronic Filing: Received, Clerk's Office 09/28/2020

Testing/Sampling

Geomembrane destructive and non-destructive testing and sampling occurred this week. Refer to geomembrane documentation for additional details.

Calibration Records

Calibration information was obtained for Chesapeake's tensiometer this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 5/29/12

TIME: Arrive: 6:30 AM | Depart: 6:45 PM | Travel: 1.0 hr | Total: 13.25 hrs (no lunch)
Weather: Sunny, 70°AM, 85°PM | Contractor: AMS | Subcontr./Supplier: CCS/BTD
Equipment Working: 6036 Forklift, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
The 6036 loaded the remaining ADS Pipe in the dumpster, moved the remaining west fence parts to the construction yard, and loaded the crane mats on site to be taken to the CBS. The two laborers assisted the 6036 and setup the temporary snow fence south of Ash Pond B for the construction easement. The 580 began digging the anchor trench in the NW corner of Section A in Pond D. Any ash spoils from the trench will be dumped into Pond A. Personnel on site: Brad, Shawn, James, and Robert. Jon and Johnny worked at the CBS today.

BTD:
Chase Boyer came in to check the groundwater levels and fuel the generator. Delivery – John Deere 624H Front End Loader. BTD will use PVC instead of HDPE for the PCP.

CCS:
Chesapeake Containment Systems, Inc. arrived on site and received CBT and badges from Newton. Personnel began loading sandbags, preparing testing appartus, and preparing materials. They will begin laying geomembrane rolls, or panels, tomorrow. They plan to work 6-10's. Personnel on Site: Jose Valverde (Super), Barbarito Flores (QC), Daniel Gonzales, Leroy Smith, Phet Vongkhamchanh, Jose Flores, Alberto Ortiz, Manuel Gonzales, Israel Gonzales, Erik Sefton, Blake Bunting, Matthew Watts.

Misc:
MW2 will be drilled and installed next week by a local drilling company. The existing MW2 will be torn out during the PCP excavation. Personnel from Geotechnology on site this week: Anna Saindon, Tim Wilson, Steve Graham.

GEOTECHNOLOGY INC
FROM THE GROUND UP

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 5/30/12

TIME: Arrive: 6:30 AM | Depart: 6:30 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 62°AM, 81°PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 continued digging the anchor trench for the geomembrane in Section A. The 6036 was used for deploying the liner rolls for geomembrane placement, as well as staging liner rolls. The laborers setup cooling stations for CCS, cleaned out debris in the anchor trench, checked grade in the anchor trench, and took down an additional section of the west fence line.

CCS:

The panel layout was changed: Full length rolls (750') will be used across the entire south end of the Pond, running south/north. The remaining north end of the Pond will have panels running south/north, and will be cut to fit as required to cover the northern portion. CCS estimates this will save two days worth of seaming. They began placing panels in the northern portion of the Pond in Section A, and run parallel to the west fence line. All seams are hot wedge double track fusion welds, welded by an automatic fusion welder. Extrusion welding is only performed where fusion welding is not possible, such as pipe penetrations, patches, and repairs. The site was very dusty and it was difficult keeping the seams clean. Therefore, the Water Truck was used to suppress the dust as the liner was being placed.

GEO (Geotechnology):

Steve went to the Newton Power Station for a CBT refresher, his drug testing was current. Both Steve and Tim will overlook CCS's QC for geomembrane placement, panel numbering, length, and area, extrusion and double fusion seaming (welding), shear and peel testing, air and vacuum testing, etc. Geotechnology will keep records of all mentioned items on a daily basis, as well as collect destruct samples for archive.

Additional Comments: Additional Personnel on-site: Jon (AMS) and Johnny (AMS).

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13811

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 5/31/12

TIME: Arrive: 6:30 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10 hrs (0.25 hr for lunch)
Weather: Sunny, 54° AM, Cloudy/Rain 67° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 580 Backhoe, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
The 580 continued digging the anchor trench in Section B and D. The 6036 continued deploying liner rolls for geomembrane placement, and staged liner rolls for the southern half of the pond. The laborers continued checking grade in the anchor trench.

CCS:
The partial panels for the northern portion of Pond D have been placed. CCS made up more sand bags, began air testing on the west side of the northern portion heading east, and cleaned up excess material. They will begin placing full length panels (750') in the southern portion of the pond tomorrow. They were rained out and could not complete a full day. Note: All seam overlaps are shingled in the direction of the downslope.

Misc.:
The local Pit Run Sand does not meet the specifications for oversized particles. Therefore, the washed, fine sand used to fill the sand bags will be used for the anchor trench fill.

Refer to Geotechnology's Data Sheets for geomembrane details.

No. A 13812

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/1/12

TIME: Arrive: 6:30 AM | Depart: 6:45 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.5 hr for lunch)
Weather: Cloudy, L. Rain, 54°AM, 61°PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/BTD/DLM
Equipment Working: 6036 Forklift, 580 Backhoe, 330D Excavator, 6430 Tractor
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 finished digging the anchor trench on the east side of Section B and D, and the south, west side of Section A. The remaining anchor trench to be dug is located in Section C, and the south side of Section D. The 580 also pulled the west fence posts in Section A, and they were taken to the construction yard. The 6036 staged liner rolls and sand bags across Pond D. Delivery: 3500' of 4" double wall pipe (AASHTO M252 S) with Class II perforations and filter sock, with 4" snap tees and end caps. The pipe was unloaded with the 6036 and staged in Pond D. The 4" perforated pipe will be placed in the anchor trench. The solid wall pipe for the 4" tees have not been delivered yet. A CAT 279C skid steer (rubber track) was also delivered and will be used to backfill the anchor trench. 10 loads of FA-01 sand was delivered for anchor trench. The laborers assisted with the anchor trench, pulling fence posts, and removed snow fence in temp. easement.

CCS:

It was too windy to deploy panels today. However, sand bags were made, air testing was completed in the northern section of panels (P1-P45), and they began patching/repairing areas in the northern section by extrusion welding. Destruct samples were cut and they began shear and peel testing. GEO took care of archive and lab samples. Refer to Geotech. data sheets for details. Note: spark testing will be performed for the cap vent boots, and they will patch holes in Pond A and Pond B.

BTD:

John and Chase Boyer installed another pump in dewatering well 1. Both pumps are now being discharged into Pond A. Well 1 dropped water level in a matter of minutes. Therefore, only well 2 will be pumped 24/7, and well 1 pumped only as needed. Well 2 was shut off briefly, but the water level rose quickly, and, therefore, will remain on.

Additional Comments: DLM: Adam Zilick and Billy Georges unloaded 40 bales of hay with a John Deere 6430 Tractor.

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/2/12

TIME: Arrive: 6:30 AM | Depart: 5:00 PM | Travel: 1.0 hr | Total: 11.25 hrs (0.25 hr for lunch)
Weather: Sunny, 51°AM, 70°PM Partly Cloudy | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 279C Skid Steer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 6036 continued deploying liner rolls for geomembrane placement. The 4" perforated pipe for the anchor trench was staged along the northern section of geomembrane panels. Each snap coupling was duck taped to insure integrity when placing pipe in the trench. After the tape, the filter socks were overlapped and zip tied. Any holes found in the filter socks were also duck taped to prevent sediment from entering the perforations. Part of the pipe was laid in the trench from Sta. 37+50 to Sta. 40+00. The 279C backfilled the trench in the west end of Section A with FA-01 sand.

CCS:

CCS began deploying panels in the southern section of Pond D. There was a misunderstanding of the length of the geomembrane rolls, and when they began deploying panels in the southern section, they were 50' short of reaching the PGL on the south end of the pond, thinking the rolls were 750', but they are 700'. Therefore, there will be a 50' strip on the south end of the pond that needs to be covered. It was too windy in the PM to deploy panels, so they continued double fusion seaming, air testing, shear and peel testing on destructs, patching, and clean up. GEO will be mailing the first set destructs to the TRI Lab in Austin, TX this weekend. Ryan Clark (VP) was here to observe site activities.

Additional Comments:

Randy Poetter — Contractor Representative — AMS — Company
Signature — 6-2-12 — Date

TD	Transmission Dispatch
WPA	Worker Protection Assurance

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues.
2012-05-15	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-05-29	OPEN - no issues. None projected for 2x week look ahead.
2012-05-22	OPEN - no issues. None projected for 2x week look ahead. Chesapeake Containment [CCS] will use generators.
2012-05-15	OPEN - no issues. None projected for 2x week look ahead or for Illini Drilled [IDF].

03	**EMPLOYEE DRUG TESTING**	
	2012-05-29	OPEN - no issues. P. Zinsious reports that Jasper County Health has been good to work with, very flexible. CCS has 12x and BTD 3x workers at Newton today [05-29]. A. Saindon reports 1x worker from TSI to schedule TBD.
	2012-05-22	OPEN - no issues. BT Drainage count in progress. 1x AMS yesterday DT at Robinson [05-21] and 1x AMS today [05-22].
	2012-05-15	OPEN - no issues. J. Boone indicated Chesapeake Containment will have list by next Progress Meeting. Some workers will already have AER badges in good standing. BT Drainage will have projection today [05-15]. The borrow site [CBS] will not require AER badge/CBT/DT, only AMS safety training.
04	**AMS SAFETY**	
	2012-05-29	OPEN - no issues. [01] J. Tasich briefing heat exhaustion and dehydration. [02] J. Tasich review of insects. [03] J. Denham briefing schedule cooling stations when work is begun 05-30 - 2x 10 FT x 10 FT for CCS and 1x 10 FT x 10 FT general. [04] Next safety luncheon is 06-12. M. Wagstaff will not be able to attend.
	2012-05-22	OPEN - no issues. Next safety luncheon is 06-12. [01] J. Tasich briefing on glove usage for material handling and look out for insects/varmints. [02] Bees at trailer are eradicated. [03] J. Denham briefing on cooling stations, 2x will be set up. [04] Brief discussion on hydrating. Energy drinks not encouraged due to caffeine content. [05] Review of Charah/AMS safety awards [ref. Item No. 05.04-2012-05-08.01,02,03 below]. [06] No cooling station at CBS as workers [operators] in equipment with AC.
	2012-05-15	OPEN - no issues. J. Tasich reported on site specific emergency action plan [EAP]: [01] Shelter area to be cleaned today [05-15], and will be on going procedure. [02] Water training was completed for installation of the "stop logs". [03] Refining Item No. 05.05-2012-05-15 below, bees swarming on GEO trailer, have been sprayed. Workers for AMS are to note on their new employee form allergies such as to bee stings. The employee is required to notify the Site Manager of such allergies. In the case of a bee [or insect sting], each worker is responsible to carry their own medication, such as an "epi-pen" [Epinephrine Auto-Injectors] accordingly.
05	**HOUSEKEEPING**	
	2012-05-29	OPEN - Dumpster for CCS - P. Zinsious to investigate.
	2012-05-22	OPEN - No issues. M. Wagstaff inquire about CCS and liner material. CCS will have dumpster and AMS will help keep clean.
	2012-05-15	OPEN - See Item No. 05.04-2012-05-15 above regarding bees swarming at GEO trailer.
06	**PLANT ACCESS - CBT BADGE**	
	2012-05-29	OPEN - R. Porter reports getting difficult to monitor the gate with both himself and Joe on the site. AER requires frequent access to the substation. Sometimes the entities accessing the site do not have proper PPE or identification signs on their vehicles. R. Porter also reports they are not calling the numbers on the entrance sign and at the trailers to access the site. There has also been unknown vehicle accessing the site. M. Wagstaff indicated that re-activation of the gate is an option. General discussion that gate is good idea, but does not prevent access to the plant. Consensus is that using the gate when no one is at the trailers will at least force direction of traffic around to where vehicles can be seen from the work site.
	2012-05-22	OPEN - no issues. M .Wagstaff to issue gate log. DT info listed above. Item No. 05.03.
	2012-05-15	OPEN - no issues. Projection 1x to 2x at EOW, possibly 10x for BTD. M. Wagstaff to issue gate log again. P. Zinsious request copy [not received].
07	**VEHICLES ON SITE**	
	2012-05-29	OPEN - no issues.
	2012-05-22	OPEN - no issues. Brief review of workers bused to ash pond work site by AMS.
	2012-05-15	OPEN - no issues
08	**OSHA LOG - WORK HOURS**	
	2012-05-29	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-28 No incidents or accidents. 2,255.50 RT 0,168.00 OT 2,423.50 TOTAL
	2012-05-22	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-21 No incidents or accidents. 0,0000.00 RT 0,000.00 OT 2,347.50 TOTAL [time not split out RT/OT]
	2012-05-15	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-014 No incidents or accidents. 1,945.50 RT 0,000.00 OT 1,945.50 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-05-29 AMS, Chesapeake Containment [CCS], and BT Drainage [BTD] on site.
Belt Construction [BCI] and Illini Drilled [IDF] have demobilized.
[04] Geotechnology [work hours not included in OSHA Log above - 2x this AM, 4x by EOD]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[15] Laborers [BTD 1x, AMS 2x, IDF 2x, CCS 11x]
[04] Operators [BTD 1x, AMS 2x, IDF 2x]
[01] Teamsters
[00] Survey
[03] Foreman [Full time] [Mr. John Dietzel new Charah/AMS Focus Site Manager on project] [CCS 1x]
[27] Total

2012-05-22 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current General discussion on what the AMS-Charah focus program is to train site Managers.
[01] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[03] Laborers
[05] Operators [long boom operator not required]
[01] Teamsters
[00] Survey
[02] Foreman [Full time] [Mr. John Dietzel new Charah/AMS Focus Site Manager on project].
[12] Total

2012-05-15 OPEN - AMS and Belt Construction on site. AMS Focus [training program] Site Manager Mr. Anthony Driver on site.
Current General discussion on what the AMS-Charah focus program is to train site Managers.
[01] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[01] Laborers
[04] Operators [long boom operator not required]
[01] Teamsters
[00] Survey
[02] Foreman [Full time]
[09] Total

02 WORK HOURS

2012-05-29	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT. No work Memorial Day holiday [Monday 05-28].
2012-05-22	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt started to work 10x HRS [internal cost to AMS] last Tuesday [05-15] and will continue until finished. CCS still on track for OT. No work on site Memorial Day holiday [observed Monday 05-28].
2012-05-15	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt to work 4x D 10x HRS due to dry weather [internal cost to AMS]. When Chesapeake comes on board, they may work 12x HRS a day maximum due to instrumentation calibration procedures required in the specifications.

03 OVER TIME

2012-05-29	OPEN - CCS work hours 7:00 AM CT to 5:30 PM CT.
2012-05-22	OPEN - Belt has projected OT per Item No. 06.02, and will de-mob on Friday [05-25].
2012-05-15	OPEN - Belt has projected OT per Item No. 06.02-2012-0515 above.

04 TRAILER [AND GENERAL CONDITIONS]

2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues.
2012-05-15	OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues. BT Drainage has contract [CLOSED].
2012-05-15	OPEN - no issues. BT Drainage by EOW.

02 SUBMITTALS

20120-05-29	Submittal log as published by GEO on 05-25 distributed. General discussion. [01] Submittal log copies distributed. [02] Submittal log last two on list review by AER. [03] Seed/mulch submittal under review by AER. [04] VES-01 to be returned by AER. [05] VES-02 M. Wagstaff orally approved. [06] SWP3 for APD submitted by AMS as matter of record. [07] AMS to submit dewatering sump 05-30. [08] J. Denham and P. Zinsious overview of submittals not required at this time, some at the end of the project. [08] Massmann to certify subgrade and set spots to patch. [09] Discussion liner anchor trench.
2012-05-22	OPEN - no issues. In progress - P. Zinsious submitted to J. Cravens today updated cover sheets and log.
2012-05-15	OPEN - no issues. In progress - P. Zinsious to meet with J. Cravens today [05-15] to review log. Pump information to be re-submitted [again] due to identification.

08 MATERIAL

01 GENERAL

20120-05-29	OPEN - R. Porter reports all material in, for pipe relocation connection and complete. [CLOSED]
20120-05-22	OPEN - R. Porter reports all material in, however bands too long [will resolve].
20120-05-15	OPEN - R. Porter reports pipe ordered for relocation connection to the manhole. Details in Item No. 12.1.04-2012-05-15 below.

02 GEOMEMBRANE PRE-CON MEETING

20120-05-29	OPEN - J .Denham indicated certifications required for fork lift drivers. R. Porter reports has certifications, same as when unloading the liner.
20120-05-22	OPEN - no issues. GEO inspection on Thursday [05-24].
20120-05-15	OPEN - no issues.

03 CAP VENT PRE-CON MEETING

20120-05-29	OPEN - Everything complete except the strainers, which will be installed after the clay cap.
20120-05-22	OPEN - Drilling completed on Monday [05-21].
20120-05-15	OPEN - Mobilization date moved to 05-21.

04 PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING

20120-05-29	OPEN - Discussion during Progress Meeting: [01] M. Wagstaff reports sequence for new monitoring well: [01] Install new monitoring well next week 06-04 by local subcontractor Todd Skinner [worked at Newton]. [02] Will not require safety training by AMS. Will wear PPE, and sign in. [03] New well depth 15 FT to 18 FT. [04] When well is developed in 2x weeks, EC Lab will sample both wells. [05] When samples approved, old well can be abandoned. [06] AMS to remove when excavating the PCP, projected 06-18. No impact to schedule. [02] Water from dewatering well [points] discharged into Pond B. R. Porter indicated Pond A has 3 FT freeboard, concerned with stirring up [ash] and Pond A being full. [03] M. Wagstaff indicated Pond A is where discharge is to go, take advantage of delay in sampling.
20120-05-22	OPEN - Meeting during Progress Meeting with Mr. John Boyer. [01] Open discussion of safety concern due to wet/damp installation and welding of HDPE in the trench. [02] M. Wagstaff indicated Hanson concern damage of pipe when installed. [03] AMS to provide PVC Value Engineering Submittal [substitution]. J. Boyer indicated cost estimated at $ 500 more. [04] P. Zinsious indicated pipe will not be damaged. J. Boyer stated can run "mandrel test" after pipe installation. [05] Existing Ameren MW-2 probably not able to be saved,
20120-05-15	NEW - Meeting after Progress Meeting with Mr. John Boyer - B&T Drainage [BTD] [01] M. Wagstaff inquired as to small business status. J. Boyer indicated no, as past 3x years BTD did under $ 28M. [02] Presentation of the "Excavation Work Plan for the Perforated Collector Pipe". [03] General review by all. [04] Plan to be edited for GCL. Was not presented as GCL, as not approved. [05] M .Wagstaff indicated alignment of PCP is flexible. [06] PCP can go direct into the Dewatering Sumps, "A-Lock" type seal with clamp. [07] J. Boyer concerned over Monitoring Well No. 2 [MW-2]. AER indicated see when get to that point if demo. [08] Spoils transfer by "tag-team" excavators. However, there may be no spoils above the GCL elevation. [09] General discussion that welding HDPE inside the trench boxes is a safety issue due to small work area, water, and access. J. Boyer proposed a PVC pipe option. The focus for this alternate is safety, but there is a possible cost savings as well. The pipe thickness could be an DR 14 [approximate thickness 3/4 IN] or DR 18 [approximate thickness 1/2 IN] per J. Boyer. There is flexibility in the shorter pieces of pipe, the mechanical connections, primarily her would be "bell and spigot". BTD to research price for PVC, and AER to review with Hanson. [10] If the bedrock cannot dug with and excavator, then pipeline can be raised. This creates issue with the manholes [dewatering sumps - reference Item No. 09.01-2012-05-08 below] height. If they cannot be adjusted with the ring[s], then area they protrude above the plan grade can be adjusted in the field. Barrel heights come in 16 IN, 32 IN, or 48 IN heights.

[11] Projected manpower is 3x Operators [or more] and 3x Laborers.
[12] Duration is approximately 30x D.
[13] Dewatering will be by well point. Illini Drilled will drill well points [next week].
[14] Issue of water volume from the dewatering operation. Could possibly be millions of gallons. J. Boyer indicated amount not known, but possibly the areas of the bedrock in a "valley" might be able to be pumped down, but this depends on the length of the "valley". Pumps in the well points will operate 24/7, in any order, one or more at a time. In the beginning all pumps will be operating. This may create an issue for the adjacent property owner [farmer] who pumps ground water for irrigation.

[15] Issue of water volume disposal into the ponds. M. Wagstaff will research what is required for pumping into the ponds and what is required for the pond elevation relative sampling of the discharge by AER [and paid for by AER].
[16] The well point will pump system will have safety fence, light, and the power cord above ground in a conduit.
[17] Delivery of the dewatering sump structures are 2 WKS [after approval].
[18] Discussion of the diameter and the thickness of the manhole barrel. M .Wagstaff indicated as long as buoyancy [reference Item NO. 09.01-2012-05-08-03 below] good, alternates will be acceptable. Possible options are larger base and matt [concrete] at base such as a 4 FT DIA MH with larger base [J. Boyer indicated may install larger base for BTD insurance].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-05-29	OPEN - Review of Lamac drawing of PCP alignment survey. [01] West area by License Agreement offset mover 80 FT due to coordination with boundary line/survey/drawings. [02] East area by License Agreement offset mover 80 FT. [03] East portion of PCP moved 10 FT to 20 FT due to trees and berm area. [04] M. Wagstaff only concerns are depth to remain and pond embankment global stability during excavation. [05] M. Wagstaff no issue with overall plan, but requested submit in a **RFI.**
2012-05-22	OPEN - [01] P. Zinsious reported Mr. Wampler [Wampler Farms]. [02] Open discussion of License Agreement and boundary line alignment off approximately 80FT. [03] M. Wagstaff indicated no issue. AMS to show on drawing.
2012-05-15	OPEN - [01] See Item No. 08.04-2012-05-15 for PCP Pre-Con Meeting and submission of the Excavation Plan. [02] Corrected ring description below in body of text. [03] No tax exemption if materials not purchased in Illinois.

10 QUALITY CONTROL

01 GENERAL

2012-05-29	OPEN - no issues. Poor material form areas at anchor trench excavation can be disposed of in Pond A.
2012-05-22	OPEN - no issues
2012-05-15	OPEN - no issues

02 ASH

2012-05-29	OPEN - work complete. P. Zinsious request copy of Massmann survey files. AER indicated by EOW.
2012-05-22	OPEN - no issues. All ash compaction density test have passed [over 90% density], some areas at PGL have to be tested. GEO to issue report. Mr. Tim Wilson [GEO] and Massmann to be on site 05-22. Ash pond elevations at 98% to grade [as determined by the 02-06 drawings], some spots high. General discussion "zig" [valley] in final grade per plan.
2012-05-15	OPEN - no issues. J. Cravens Section A and C approximately 50 point for ash compaction density tests have been performed to date. All test have to date have passed in the range of 99% to 114% compaction. GEO technician Mr. Tim Wilson will be back on site tomorrow [05-16]. Massmann is to download files for GEO locations.

03 CLAY

2012-05-29	OPEN - Borrow material analysis submitted show acceptable as both clay cover and vegetative material. Clay projected 06-11.
2012-05-22	OPEN - no issues - sample analysis submitted.
2012-05-15	OPEN - no issues. Samples taken yesterday [05-14]. The physical analysis will be by Holcomb and the chemical analysis will be by ARDL. Results should be in by next mid-week or before.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-05-29	OPEN - Review of schedule 06-01 handed out and 2 WK Look Ahead. [01] 06-05 - BTD to possibly begin. [02] 06-11 - Clay projected. [03] CBS Grubbing and road work this week. [04] During clay placement cap vents will be beamed and flagged. [05] License agreement "snow fence" installation. [06] Remove AER fence last minute for security. [07] Liner installation projected to progress at 8D duration, about 2D per 25% of area. [08] Activity No. 174 change to 05-29. [09] Dewatering progressing. [10] Ash Pond D 100% rolled and ready.

	2012-05-22	OPEN - Review of schedule to date. [01] Actual percent completion on ash pond sectors: A = 100%, B = 98%, C = 100%, D = 98% [02] 05-22 cap vents projected to 05-25. [03] 05-29 - BTD start date projection for PCP. [04] 05-21 - BTD to begin drilling de-watering wells. Pumping possibly 24/7 if required. [05] 05-22 - AMS to begin removing fencing along ash pond leaving poles. [06] 05-26 - Smooth drum roll ash placement ,no vibration, and addition of water for moisture content. [07] Box culvert demolition complete.
	2012-05-15	OPEN - Review of schedule to date. M .Wagstaff on vacation 05-15 to 05-22. [01] Actual percent completion on ash pond sectors: A = 100%, B = 90%, C = 100%, D = 85% [02] 05-11 - Lamac survey for "as-built" [record drawings] of the pipe relocation. [03] 05-29 - BTD start date projection for PCP. [04] Brief discussion electrical [AAA] and mechanical [FWI] scope.
02	**TIME AND MATERIAL**	
	2012-05-29	OPEN - no issues
	2012-05-22	OPEN - no issues
	2012-05-15	OPEN - no issues
03	**COORDINATION**	
	2012-05-29	OPEN - no issues. R. Porter to get with G. Musch to fill the water tank this week.
	2012-05-22	OPEN - no issues. R. Porter to get with G. Musch to fill the water tank.
	2012-05-15	OPEN - no issues

12.0 COST AND BUDGET

01	**CHANGE REQUEST ISSUES**	
	2012-05-29	OPEN - no issues.
	2012-05-22	OPEN - no issues.
	2012-05-15	OPEN - no issues.
02	**AMS PAY APPLICATION**	
	2012-05-29	OPEN - no issues.
	2012-05-22	OPEN - no issues.
	2012-05-15	OPEN - AMS submitted pay application. M. Wagstaff indicated no issues, and that the revised AER PO is in process.

12.1 EXTRA WORK ORDERS

01	**EWO-01**	**ELECTRIC TEMPORARY**
	2012-05-29	No issues. Work 100% complete.
	2012-05-22	Deferred.
	2012-05-15	No issues. 100% complete.
02	**EWO-02**	**ASH PLACEMENT - CAP MODIFICATIONS**
	2012-05-29	No issues. Work completing. AMS to include in draft of pay-app on 06-05.
	2012-05-22	Deferred.
	2012-05-15	No issues. In progress.
03	**EWO-03**	**COAL PILE**
	2012-05-29	No issues. Work 100% complete.
	2012-05-22	Deferred.
	2012-05-15	No issues. 100% complete.
04	**EWO-04**	**PIPE RELOCATION**
	2012-05-29	No issues. Work 100% complete.
	2012-05-22	Deferred.
	2012-05-15	OPEN - work in progress. R. Porter reports pipe is ordered for the connection, and scheduled for installation next week on Monday [05-21]. The connection to the manhole will be a short piece of SDR 35 PVC pipe connected to the HDPE with a stainless steel repair coupling. The interior of the manhole will be patched with non-shrink grout, the exterior with the "A-Lock" ring and concrete. Details will be provided on the plan and profile record drawings for this line.
05	**EWO-05**	**ELECTRIC FEEDER**
	2012-05-29	OPEN - in progress. M. Wagstaff review and will have list of questions 05-29.
	2012-05-22	Deferred.
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.
06	**EWO-06**	**POND A TRENCH**
	2012-05-29	No issues. Work 100% complete.
	2012-05-22	Deferred.
	2012-05-15	No issues. Work 100% complete.

07	**EWO-07**	**ELECTRIC OVERHEAD**
	2012-05-29	OPEN - in progress. M. Wagstaff review and will have list of questions ~~05~~ 29.
	2012-05-22	Deferred.
	2012-05-15	OPEN - in progress. AMS and AAA meeting yesterday [05-14], review after Progress Meeting.
08	**EWO-08**	**CREDIT TO EWO-01**
	2012-05-29	OPEN - in progress.
	2012-05-22	Deferred.
	2012-05-15	OPEN - in progress.
09	**EWO-09**	**BENTONITE VES-01**
	2012-05-29	OPEN - in progress. Approved. AMS to provide cost account.
	2012-05-22	Deferred.
	2012-05-15	OPEN - in progress. M. Wagstaff indicated that yesterday [05-14] Hanson approved the AMS response comments to the Hanson submittal review. GSE to provide pricing and AMS to calculate EWO.
10	**EWO-10**	**FLOW-ABLE FILL CREDIT**
	2012-05-29	OPEN - in progress. Work in area complete. AMS to provide cost account.
	2012-05-22	Deferred.
	2012-05-15	OPEN - in progress.
11	**EWO-11**	**BUILDING SPOILS REMOVAL**
	2012-05-29	OPEN - in progress. No further spoils found, AMS to provide cost account.
	2012-05-22	Deferred. No other issues, test holes revealed.
	2012-05-15	OPEN - in progress. AMS to dig test holes by EOW.

13 ACTION ITEMS - AER [25]

01	**AMEREN [AER]**	
	2012-05-29	Pipe alignment direct to the manhole M. Wagstaff indicated discussion with Hanson and no issues with alignment and connection proposed by AMS. Work is considered a field change and no RFI required, only show final layout of Record Drawings. M. Wagstaff requested Lamac shoot final elevations.
	2012-05-22	Discussion of collection box pipe alignment direct to the manhole.
	2012-05-15	
	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [CLOSED - drawing issued]	
	[24] Research with Hanson PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].	
	[25] Research with Hanson alignment of the discharge piping structure at the outfall man hole. AER original design took into consideration a "mixing zone". R. Porter indicated since the line pipe relocation alignment can be direct. Discussion of the grade to be field adjusted around the box if new location is approved.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: June 12, 2012

SUBJECT: Weekly Summary Report for June 4, 2012 to June 9, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 54 to 72°F, and temperature highs ranged from 66 to 88°F. Weather delay did not occur this week.

Construction Activities

Anchor trench construction and 40 mil HDPE geomembrane installation occurred this week. The remainder of the anchor trench has been excavated, excluding the outlet drainage trenches. Part of the anchor trench in Quadrant A and B, containing the 4-inch HDPE perforated drainage pipe, has been backfilled with IDOT FA-01 sand. Chesapeake Containment Systems, Inc. completed installation of the 40 mil HDPE geomembrane liner in all quadrants of Ash Pond D. Typical repairs on the geomembrane liner continue. Geotechnology, Inc. observed quality control of the installation. Refer to geomembrane documentation for more details. Dewatering for the proposed perforated collector pipe excavation continues in well number 2, located south of Ash Pond A. The replacement monitoring well MW-2R, was installed on June 4, 2012 by Skinner Limited. See daily reports for additional information.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT 330D Excavator
CAT 613C Water Truck
CAT 279C Skid Steer (rubber track)
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 9520 Tractor
John Deere 410J Backhoe
Sky Track 6036 Forklift
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Tim Wilson, Steve Graham, and Anna Saindon
Ash Management Services, LLC (AMS) – Randy Porter, Jon Dietzel, Jimmy Boone, Robert Dunkley, James Marks, Shawn McClaskey, Brad Bolenbaugh, Greg Siverly, and Jeremy Shorter
Charah, Inc. – Joe Tasich
Chesapeake Containment Systems, Inc – Jose Valverde, Barbarito Flores, Daniel Gonzales, Phet Vongkhamchanh, Jose Flores, Alberto Ortiz, Manuel Gonzales, Israel Gonzales, Erik Sefton, Blake Bunting, and Matthew Watts
Daylight Land Management – Adam Ziliak and Billy Georges
B&T Drainage – John Boyer and Chase Boyer
Skinner Limited – Todd Skinner, Adam Bruce, Allan Denk, and Jeff Walsh
Visitors –Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, June 5, 2012. Refer to the attached meeting minutes for additional information.

Photographs

A photograph log with select photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane was installed on site. Additional IDOT FA-01 sand and 4-inch HDPE drainage pipe was delivered on site for the anchor trench.

Electronic Filing: Received, Clerk's Office 09/28/2020

Testing/Sampling

Geomembrane destructive and non-destructive testing and sampling occurred this week. Refer to geomembrane documentation for additional details.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DAILY REPORTS

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13814

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 6/4/12

TIME: Arrive: 6:30 AM | Depart: 6:30 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 60°AM, Rain 66° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/DLM/Skinner
Equipment Working: 6036 Forklift, Water Truck, CME 550 Drill Rig, 6430 Tractor
Site Activities / Observations / Contacts / Notes:

AMS:
The 6036 continued deploying liner rolls on the southern section of the pond. Due to the recent rain events, the entire eastern anchor trench is filled with water. They began pumping the water from the trench into the Water Truck, and using it for dust control on the pond. Johnny McGrew is no longer an AMS operator. 10 more loads of FA-01 sand was delivered.

CCS:
They continued placing geomembrane panels on the southern section of the pond, double fusion seaming (welding), and conducting peel and shear tests on destructs. No air testing or extrusion welding performed today. Refer to Geotechnology's data sheets for more information. Leroy Smith is no longer working on the job site.

Skinner, Ltd.:
Skinner Limited drilled and installed MW-2R. Personnel- Todd Skinner (driller), Adam Bruce, Allan Denk, Jeff Walsh. MW-2R is located 13' north of MW-2, and approx. 19'-20' south of Ash Pond A's embankment toe. The well was drilled to 18' and was continuously sampled with a split-spoon. The subsurface generally consisted of sand (0-17.5'), overlying glacial till. The well was drilled with 4¼" H.S. augers, and standard AWJ rods. Well Installation: 0-3' concrete, 3-5' bentonite seal (chips), 5'-7' sand, 7'-18' screen (11.0'). The well stickup has a casing and is surrounded by 3 bollards. The well was not able to be developed due to the adjacent dewatering wells.

DLM: Adam Ziliak and Billy Georges delivered more hay and demobilized their John Deere 6430 Tractor.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13815

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/5/12

TIME: Arrive: 6:30 AM | Depart: 5:00 PM | Travel: 1.0 hr | Total: 11.25 hrs (0.25 hr for lunch)
Weather: Sunny, 65° AM, 77° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 279C Skid Steer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 6036 continued deploying liner rolls on the southern section of the pond, and staged more rolls on the east side of the pond. The 279C was used to move materials along the anchor trench. The laborers continued pumping water from the anchor trench on the east side, into the water truck, and discharged the water into Ash Pond C. They also assisted CCS for geomembrane placement. AMS trained two operators and they will begin work tomorrow.

CCS:

They continued deploying geomembrane panels on the southern section of the pond, double fusion seaming (welding), and staging sand bags. They deployed 12 rolls today, and approx. 50 rolls to date. There was no patching/repairing, extrusion welding, destructive testing, or non-destructive testing today. Refer to Geotechnology's data sheets for more information.

Misc.:

The details of the PCP should be worked out next week, and excavation should begin on 6/18/12. Clay placement should begin on 6/11/12, pending geomembrane certification.

ORIGINAL - FILE COPIES: 1-JOB SITE 1-ACCOUNTING

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13816

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/6/12

TIME: Arrive: 6:30 AM | Depart: 5:45 PM | Travel: 1.0 hr | Total: 12 hrs (0.25 hr for lunch)
Weather: Sunny, 54° AM, 78° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 580 Backhoe, 279C Skid Steer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 6036 continued deploying liner rolls on the southern section of the pond, and staged liner rolls on the south end of the pond. The 580 began digging the anchor trench on the south end of the pond. The only part of the anchor trench that remains to be excavated is on the south and west end of Section C. The 279C placed sand bedding for the 4" perforated pipe in the NE portion of the anchor trench, forcing the remaining water in the trench towards the east. The laborers continued pumping water from the anchor trench on the east side of the pond into the water truck, and using it for dust control on the pond. Shawn McClaskey is no longer an AMS laborer. AMS's new operators are Greg Siverly and Jeremy Shorter.

CCS:

They finished deploying geomembrane panels on the southern section, going towards the east side of the pond. The areas left to cover are a 50' strip on the south and west end of the pond. All the panels placed have been seamed. No air testing took place today. They began vacuum testing repairs on the north side of the pond, and continued patching/repairing panels with extrusion welding. Three destructs were failed in the lab for peel incursion. DT-7, 12, and 19 were retested by cutting additional samples 10' on both sides of the original 1'x3' DT on the same seam. The retested samples passed in the field per GM19 requirements, and the lab samples were sent out. If lab results extend passed the weekend, only panels P-1 to P-9 will be allowed to be covered with vegetative cover, pending vacuum testing.

Electronic Filing: Received, Clerk's Office 09/28/2020

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13817

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/7/12

TIME: Arrive: 6:30 AM | Depart: 7:45 PM | Travel: 1.0 hr | Total: 14 hrs (0.25 hr for lunch)
Weather: Sunny, 59°AM, 80°PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 6036 Forklift, 580 Backhoe, 279C Skid Steer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 6036 continued deploying liner rolls on the south and west ends of the pond. The 279C removed anchor trench spoils on the northern end of Section A, and stockpiled the spoils outside the pond on the NW corner. The 580 finished digging the anchor trench on the south end of the pond, and began digging the anchor trench on the west side of Section C. The 580 also removed anchor trench spoils on the west end of Section A, and regraded the sloped pad in front of the box culvert before deploying geomembrane. The 4" solid-walled subdrainage pipe for the anchor trench cleanouts were delivered along with additional IDOT FA-01 Sand for the anchor trench backfill.

CCS:

They completed deploying geomembrane panels on Ash Pond D. All the panels deployed have been double fusion welded at the seams. After seaming, the panels were pulled back on the west side of Section C in order to complete the excavation of the anchor trench. Vacuum testing, patching and repairing, and extrusion welding continued on the northern section of panels. Air testing continued on the southern section of panels. After further review, it was found that destruct sample DS-2 did not meet GM19 requirements. Therefore, a new sample was cut, field tested, and sent to TRI labs. If the new sample does not have passing results, this will delay clay placement on 6/11/12. Currently, the date has not been changed.

Additional Comments: The date for PCP excavation has been moved up to 6/13/12.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13818

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: - | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: - | Client: Ameren ER | Date: 6/8/12

TIME: Arrive: 6:00 AM | Depart: 6:30 PM | Travel: 1.0 hr | Total: 13.25 hrs (0.25 hr for lunch)
Weather: Sunny, 70°AM, 88° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/BTD
Equipment Working: 580 Backhoe, 279C Skid Steer, 624H Front End Loader
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 finished digging the anchor trench on the west side of Section C. The anchor trench excavation is now complete. The 279C began backfilling the anchor trench and 4" perforated drainage pipe on the north and northeast side of Section A with FA-01 sand. A plate compactor was delivered and used to compact the backfilled anchor trench. Joko was here and finished training the truckers for the CBS route. The following are potential drivers for next week: James Griffith, Robbx Sanders, Gary Lamb, James Urfer, Lee Edington, Kim Edington, James Elledge, Scotty Comer, Greg Lingorfelter, Frank Walton, Tom Sager, and Ralph McReynolds (12 Total).

CCS:

They continued patches/repairs and vacuum testing on the northern section of panels. Panels P-1 to P-17 (NW Section A) has been fully repaired and tested. This area was outlined with sand bags and is ready for clay placement, pending the approval of the results from DS-2 retest. Air testing was completed in the southern section. Air testing remaining: South and West strip. They began patches/repairs in the southern section and destructs were marked and cut.

BTD:

The 624H unloaded two trench boxes and John refueled the generator. A Bomag BW 172 PDB-2 single drum, pad foot roller with cutting blade was delivered.

Weather: Sunny, 72° AM, 88° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO
Equipment Working: 279C Skid Steer, 580 Backhoe, 6036 Forklift
Site Activities / Observations / Contacts / Notes:

AMS:

The 279C and 580 continued backfilling the anchor trench and 4" perforated drainage pipe on the NE side of Section A, and the north side of Section B. A plate compactor was used to compact the backfilled anchor trench. The 6036 staged drainage pipe around the anchor trench and removed excess materials outside the pond to the construction yard. PGL stakes with 3' marks, and grid stakes with 3' marks were placed in Section A for clay placement on Monday.

CCS:

Air testing has been completed and CCS continued repairing, vacuum testing, and testing destructs in the southern section of panels in the pond, and the west and south 50' strip of panels. DS-2 retest had passing results and panels P-1 to P-17 have been approved for clay placement. A CQA Certification form for panels P-1 to P-17 will be issued before clay placement.

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past three weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN".

05 SAFETY - HOUSEKEEPING

01 ACCIDENTS OR INJURIES

2012-06-05	OPEN - no issues.
2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues.

02 WORKER PROTECTION ASSURANCE

2012-06-05	OPEN - no issues. None projected for 2x week look ahead.
2012-05-29	OPEN - no issues. None projected for 2x week look ahead.
2012-05-22	OPEN - no issues. None projected for 2x week look ahead. Chesapeake Containment [CCS] will use generators.

03 EMPLOYEE DRUG TESTING

2012-06-05	OPEN - no issues. AMS has sent 2x employees. M. Wagstaff sent thank you e-mail to JCH. P. Zinsious suggested inviting them to a safety luncheon.
2012-05-29	OPEN - no issues. P. Zinsious reports that Jasper County Health has been good to work with, very flexible. CCS has 12x and BTD 3x workers at Newton today [05-29]. A. Saindon reports 1x worker from TSI to schedule TBD.
2012-05-22	OPEN - no issues. BT Drainage count in progress. 1x AMS yesterday DT at Robinson [05-21] and 1x AMS today [05-22].

04	**AMS SAFETY**	
	2012-06-05	OPEN - no issues. [01] J. Denham reported on 1x AMS operator who was not operating safety while operating the [all terrain] fork lift on 06-01. Worker was suspended for unsafe actions and not wearing a seat belt and is currently under review. AMS has a zero tolerance policy, and if the review proves accurate, the worker will be terminated. Official response and [incident] violation report should be ready by 06-06. [02] General discussion safety concerns for the vegetative cover hauling [soil materials form the borrow site]. P. Zinsious indicated signs will be placed on Illinois Route 1 northbound and southbound lanes where trucked entering the highway. Currently Illinois is working on the bridge deck that crosses over Raccoon Creek on the haul route. Truckers will not be allowed to deviate form the route and travel the "back way" into the borrow site to avoid the work at the bridge deck. Estimated time of this work on the bridge deck is 6x to 8x Wks. [03] B. Muesenfechter concern that open liner anchor trenches could be a potential tripping hazard and indicated previous issue at Coffeen [Ameren power plant]. M. Wagstaff indicated depends on trench. J. Denham indicated caution tape will be placed at trenches, on the exterior, as the interior has liner, and cannot penetrate the liner [with posts]. [04] Cooling stations are set up.
	2012-05-29	OPEN - no issues. [01] J. Tasich briefing heat exhaustion and dehydration. [02] J. Tasich review of insects. [03] J. Denham briefing schedule cooling stations when work is begun 05-30 - 2x 10 FT x 10 FT for CCS and 1x 10 FT x 10 FT general. [04] Next safety luncheon is 06-12. M. Wagstaff will not be able to attend.
	2012-05-22	OPEN - no issues. Next safety luncheon is 06-12. [01] J. Tasich briefing on glove usage for material handling and look out for insects/varmints. [02] Bees at trailer are eradicated. [03] J. Denham briefing on cooling stations, 2x will be set up. [04] Brief discussion on hydrating. Energy drinks not encouraged due to caffeine content. [05] Review of Charah/AMS safety awards [ref. Item No. 05.04-2012-05-08.01,02,03 below]. [06] No cooling station at CBS as workers [operators] in equipment with AC.
05	**HOUSEKEEPING**	
	2012-06-05	OPEN - M .Wagstaff concern regarding small pieces of liner. J. Boone indicated daily cleanup.
	2012-05-29	OPEN - Dumpster for CCS - P. Zinsious to investigate.
	2012-05-22	OPEN - No issues. M. Wagstaff inquire about CCS and liner material. CCS will have dumpster and AMS will help keep clean.
06	**PLANT ACCESS - CBT**	
	2012-06-05	OPEN - M .Wagstaff reports that Ameren [Services] will begin transmission line work [between Kansas and Illinois], and will be using the coal yard at the Hutsonville plant as storage. Ameren will provide a guard for 12 HR shifts. The contacts at Ameren as Mr. Jim Williams [over the GENCO division] and Mr. Bob Simmons who will be the site SPOC. Work to begin the middle of June 2012. J. Boone indicated concern over coordination of trucks hauling into the site, and M. Wagstaff said no issue, as the trucks can come in through the gate by the [west] PCP line.
	2012-05-29	OPEN - R. Porter reports getting difficult to monitor the gate with both himself and Joe on the site. AER requires frequent access to the substation. Sometimes the entities accessing the site do not have proper PPE or identification signs on their vehicles. R. Porter also reports they are not calling the numbers on the entrance sign and at the trailers to access the site. There has also been unknown vehicle accessing the site. M. Wagstaff indicated that re-activation of the gate is an option. General discussion that gate is good idea, but does not prevent access to the plant. Consensus is that using the gate when no one is at the trailers will at least force direction of traffic around to where vehicles can be seen from the work site.
	2012-05-22	OPEN - no issues. M .Wagstaff to issue gate log. DT info listed above. Item No. 05.03.
07	**VEHICLES ON SITE**	
	2012-06-05	OPEN - no issues. Both GEO and CCS have "gators" on site.
	2012-05-29	OPEN - no issues.
	2012-05-22	OPEN - no issues. Brief review of workers bused to ash pond work site by AMS.
08	**OSHA LOG - WORK HOURS**	
	2012-06-05	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-04.
	No incidents or accidents.	
	2,543.50	RT
	0,436.50	OT
	2,980.00	TOTAL
	2012-05-29	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-28
	No incidents or accidents.	
	2,255.50	RT
	0,168.00	OT
	2,423.50	TOTAL
	2012-05-22	OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 05-21
	No incidents or accidents.	
	0,0000.00	RT
	0,000.00	OT
	2,347.50	TOTAL [time not split out

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-06-05 AMS, Chesapeake Containment [CCS], and BT Drainage [BTD] on site.

[03] Geotechnology [work hours not included in OSHA Log above]
[00] Pipe
[00] Mechanical
[00] Electrical
[00] Cement
[12] Laborers [AMS 2x, CCS 10x]

02 WORK HOURS

2012-06-05 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT.

2012-05-29 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT. No work Memorial Day holiday [Monday 05-28].

2012-05-22 OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. Belt started to work 10x HRS [internal cost to AMS] last Tuesday [05-15] and will continue until finished. CCS still on track for OT. No work on site Memorial Day holiday [observed Monday 05-28].

03 OVER TIME

2012-05-29 OPEN - CCS work hours 6:00 AM CT to 4:30 to 6:30 PM CT

2012-05-22 OPEN - Belt has projected OT per Item No. 06.02, and will de-mob on Friday [05-25].

2012-05-15 OPEN - Belt has projected OT per Item No. 06.02-2012-0515 above.

04 TRAILER [AND GENERAL CONDITIONS]

2012-06-05 OPEN - no issues.

2012-05-29 OPEN - no issues.

2012-05-22 OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-06-05 OPEN - no issues.

2012-05-29 OPEN - no issues.

2012-05-22 OPEN - no issues. BT Drainage has contract [CLOSED].

02	**SUBMITTALS**	
	20120-06-05	Submittal log as published by GEO on 06-2 distributed. General discussion. [01] Submittal log copies distributed. [02] Seed/mulch submittal under review by AER returned. [03] VES-01 to be returned by AER returned. [04] VES-02 M. Wagstaff orally approved returned. [05] SWP3 for APD submitted by AMS as matter of record original signed on 02-28. [06] AMS to submitted dewatering sump under AER review.
	20120-05-29	Submittal log as published by GEO on 05-25 distributed. General discussion. [01] Submittal log copies distributed. [02] Submittal log last two on list review by AER. [03] Seed/mulch submittal under review by AER. [04] VES-01 to be returned by AER. [05] VES-02 M. Wagstaff orally approved. [06] SWP3 for APD submitted by AMS as matter of record. [07] AMS to submit dewatering sump 05-30. [08] J. Denham and P. Zinsious overview of submittals not required at this time, some at the end of the project. [08] Massmann to certify subgrade and set spots to patch. [09] Discussion liner anchor trench.
	2012-05-22	OPEN - no issues. In progress - P. Zinsious submitted to J. Cravens today updated cover sheets and log.

08	MATERIAL	
01	**GENERAL**	
	20120-06-05	OPEN - no issues.
	20120-05-29	OPEN - R. Porter reports all material in, for pipe relocation connection and complete. [CLOSED]
	20120-05-22	OPEN - R. Porter reports all material in, however bands too long [will resolve].
02	**GEOMEMBRANE PRE-CON**	
	20120-06-05	Open - no issues. [01] A. Saindon reviewing tests, looks good. However test results for areas will not be ready until about 4:00 PM CT on 06-07. [02] Using stakes on positioned by sandbags and leaving the sandbags in place are acceptable per A. Saindon.
	20120-05-29	OPEN - J .Denham indicated certifications required for fork lift drivers. R. Porter reports has certifications, same as when unloading the liner.
	20120-05-22	OPEN - no issues. GEO inspection on Thursday [05-24].
03	**CAP VENT PRE-CON**	
	2012-06-05	OPEN - no issues. [corrected date errors of "20120" below]
	2012-05-29	OPEN - Everything complete except the strainers, which will be installed after the clay cap.
	2012-05-22	OPEN - Drilling completed on Monday [05-21].
04	**PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING**	
	2012-06-05	OPEN - Discussion during Progress Meeting: [01] M. Wagstaff concern on the PCP alignment and liquefaction [due to seismic] of the soil near the pond berm. There was no specification provided by Ameren, and for now the alignment look good, will go with Hanson. [02] J. Boyer reports at area of DS-1 hit shallow sandstone, about 20 FT west from location. Will status once excavation begins if a new location or higher elevation will be required. [03] M .Wagstaff reports that new well MW-2R could not develop due to dewatering. [02] P. Zinsious reports that review of PCP alignment allow for power poles to stay in place [Ameren does not need to remove for now].
	20120-05-29	OPEN - Discussion during Progress Meeting: [01] M. Wagstaff reports sequence for new monitoring well: [01] Install new monitoring well next week 06-04 by local subcontractor Todd Skinner [worked at Newton]. [02] Will not require safety training by AMS. Will wear PPE, and sign in. [03] New well depth 15 FT to 18 FT. [04] When well is developed in 2x weeks, EC Lab will sample both wells. [05] When samples approved, old well can be abandoned. [06] AMS to remove when excavating the PCP, projected 06-18. No impact to schedule. [02] Water from dewatering well [points] discharged into Pond B. R. Porter indicated Pond A has 3 FT freeboard, concerned with stirring up [ash] and Pond A being full. [03] M. Wagstaff indicated Pond A is where discharge is to go, take advantage of delay in sampling.
	20120-05-22	OPEN - Meeting during Progress Meeting with Mr. John Boyer. [01] Open discussion of safety concern due to wet/damp installation and welding of HDPE in the trench. [02] M. Wagstaff indicated Hanson concern damage of pipe when installed. [03] AMS to provide PVC Value Engineering Submittal [substitution]. J. Boyer indicated cost estimated at $ 500 more. [04] P. Zinsious indicated pipe will not be damaged. J. Boyer stated can run "mandrel test" after pipe installation. [05] Existing Ameren MW-2 probably not able to be saved,

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-06-05	OPEN - Discussion during Progress Meeting: [01] J. Boone reports Mr. Duane Wampler has communicated not happy with fence alignment. [02] AMS has mover the fence back. J. Cravens has been in contact with Wampler. [03] J. Boyer indicated collector tile work in about two weeks [will need coordination with Mr. Wampler]. [04] J. Boyer reports only need in week in this area, as shallow. [05] M. Wagstaff will be in contact with Mr. Wampler to resolve.
2012-05-29	OPEN - Review of Lamac drawing of PCP alignment survey. [01] West area by License Agreement offset mover 80 FT due to coordination with boundary line/survey/drawings. [02] East area by License Agreement offset mover 80 FT. [03] East portion of PCP moved 10 FT to 20 FT due to trees and berm area. [04] M. Wagstaff only concerns are depth to remain and pond embankment global stability during excavation. [05] M. Wagstaff no issue with overall plan, but requested submit in a RFI.
2012-05-22	OPEN - [01] P. Zinsious reported Mr. Wampler [Wampler Farms]. [02] Open discussion of License Agreement and boundary line alignment off approximately 80FT. [03] M. Wagstaff indicated no issue. AMS to show on drawing.

10 QUALITY CONTROL

01 GENERAL

2012-06-05	OPEN - no issues
2012-05-29	OPEN - no issues. Poor material form areas at anchor trench excavation can be disposed of in Pond A.
2012-05-22	OPEN - no issues

02 ASH

2012-06-05	OPEN - Survey information sent to Lamac, for A. Ridgely to determine the delta.
2012-05-29	OPEN - work complete. P. Zinsious request copy of Massmann survey files. AER indicated by EOW.
2012-05-22	OPEN - no issues. All ash compaction density test have passed [over 90% density], some areas at PGL have to be tested. GEO to issue report. Mr. Tim Wilson [GEO] and Massmann to be on site 05-22. Ash pond elevations at 98% to grade [as determined by the 02-06 drawings], some spots high. General discussion "zig" [valley] in final grade per plan.

03 CLAY

2012-06-05	OPEN - no issues begin placement on 06-11.
2012-05-29	OPEN - Borrow material analysis submitted show acceptable as both clay cover and vegetative material. Clay projected 06-11.
2012-05-22	OPEN - no issues - sample analysis submitted.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-06-05	OPEN - Review of schedule 06-01 handed out [01] B. Muesenfechter presented "First Planner" . [02] Open discussion and review of "First Planner" process with the Build Team present. [03] Review of draft "First Planner" look-ahead. Individual activity review with modifications of dates and "Last Planner" assignments.
2012-05-29	OPEN - Review of schedule 06-01 handed out and 2 WK Look Ahead. [01] 06-05 - BTD to possibly begin. [02] 06-11 - Clay projected. [03] CBS Grubbing and road work this week. [04] During clay placement cap vents will be beamed and flagged. [05] License agreement "snow fence" installation. [06] Remove AER fence last minute for security. [07] Liner installation projected to progress at 8D duration, about 2D per 25% of area. [08] Activity No. 174 change to 05-29. [09] Dewatering progressing. [10] Ash Pond D 100% rolled and ready.
2012-05-22	OPEN - Review of schedule to date. [01] Actual percent completion on ash pond sectors: A = 100%, B = 98%, C = 100%, D = 98% [02] 05-22 cap vents projected to 05-25. [03] 05-29 - BTD start date projection for PCP. [04] 05-21 - BTD to begin drilling de-watering wells. Pumping possibly 24/7 if required. [05] 05-22 - AMS to begin removing fencing along ash pond leaving poles. [06] 05-26 - Smooth drum roll ash placement ,no vibration, and addition of water for moisture content. [07] Box culvert demolition complete.

02 TIME AND MATERIAL

2012-06-05	OPEN - no issues
2012-05-29	OPEN - no issues
2012-05-22	OPEN - no issues

03 COORDINATION

2012-06-05	OPEN - no issues
2012-05-29	OPEN - no issues. R. Porter to get with G. Musch to fill the water tank this week.
2012-05-22	OPEN - no issues. R. Porter to get with G. Musch to fill the water tank.

12.0 COST AND BUDGET

01 CHANGE REQUEST ISSUES

2012-06-05	OPEN - no issues.
2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues.

02 AMS PAY APPLICATION

2012-06-05	OPEN - no issues, draft revised on 06-05 few items to revise.
2012-05-29	OPEN - no issues.
2012-05-22	OPEN - no issues.

12.1 EXTRA WORK ORDERS

01 EWO-01 ELECTRIC TEMPORARY

2012-06-05	CLOSE
2012-05-29	No issues. Work 100% complete.
2012-05-22	Deferred.

02 EWO-02 ASH PLACEMENT - CAP

2012-06-05	OPEN - ash placement work 100% complete.
2012-05-29	No issues. Work completing. AMS to include in draft of pay-app on 06-05.
2012-05-22	Deferred.

03 EWO-03 COAL PILE

2012-06-05	CLOSE
2012-05-29	No issues. Work 100% complete.
2012-05-22	Deferred.

04 EWO-04 PIPE RELOCATION

2012-06-05	CLOSE
2012-05-29	No issues. Work 100% complete.
2012-05-22	Deferred.

05 EWO-05 ELECTRIC FEEDER

2012-06-05	OPEN - in progress. AER and AAA review after Progress Meeting today [06-05].
2012-05-29	OPEN - in progress. M. Wagstaff review and will have list of questions 05-29.
2012-05-22	Deferred.

06 EWO-06 POND A TRENCH

2012-06-05	CLOSE
2012-05-29	No issues. Work 100% complete.
2012-05-22	Deferred.

07 EWO-07 ELECTRIC OVERHEAD

2012-06-05	OPEN - in progress. AER and AAA review after Progress Meeting today [06-05].
2012-05-29	OPEN - in progress. M. Wagstaff review and will have list of questions 05-29.
2012-05-22	Deferred.

08 EWO-08 CREDIT TO EWO-01

2012-06-05	CLOSE - include in pay-app.
2012-05-29	OPEN - in progress.
2012-05-22	Deferred.

09	**EWO-09**	**BENTONITE VES-01**
	2012-06-05	CLOSE - include in pay-app.
	2012-05-29	OPEN - in progress. Approved. AMS to provide cost account.
	2012-05-22	Deferred.
10	**EWO-10**	**FLOW-ABLE FILL CREDIT**
	2012-06-05	CLOSE - include in pay-app.
	2012-05-29	OPEN - in progress. Work in area complete. AMS to provide cost account.
	2012-05-22	Deferred.
11	**EWO-11**	**BUILDING SPOILS REMOVAL**
	2012-06-05	OPEN - in progress. No further spoils found, AMS to provide cost account.
	2012-05-29	OPEN - in progress. No further spoils found, AMS to provide cost account.
	2012-05-22	Deferred. No other issues, test holes revealed.
12	**EWO-12**	**PCP Survey**
	2012-06-05	NEW - AMS coordinate Lamac to survey "as-built" for the PCP installation.

13 ACTION ITEMS - AER [25]

01	**AMEREN [AER]**	
	2012-06-05	CLOSE
	2012-05-29	Pipe alignment direct to the manhole M. Wagstaff indicated discussion with Hanson and no issues with alignment and connection proposed by AMS. Work is considered a field change and no RFI required, only show final layout of Record Drawings. M. Wagstaff requested Lamac shoot final elevations.
	2012-05-22	Discussion of collection box pipe alignment direct to the manhole.
	2012-05-15	
	[20] Drawing S-386 SHT 5 RF - the survey coordinates are reversed. [CLOSED - drawing issued]	
	[24] Research with Hanson PVC verses HDPE for the PCP [reference Item No. 08.04-2012-05-15-09].	
	[25] Research with Hanson alignment of the discharge piping structure at the outfall man hole. AER original design took into consideration a "mixing zone". R. Porter indicated since the line pipe relocation alignment can be direct. Discussion of the grade to be field adjusted around the box if new location is approved.

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: June 19, 2012

SUBJECT: Weekly Summary Report for June 11, 2012 to June 15, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 55 to 72°F, and temperature highs ranged from 75 to 88°F. A weather delay occurred on June 11, 2012 due to afternoon storms.

Construction Activities

Anchor trench construction, 40 mil HDPE geomembrane installation, groundwater collection system installation, and clay placement occurred this week. The anchor trench has been excavated, excluding the outlet drainage trenches. The 4-inch HDPE perforated drainage pipe placement within the anchor trench and backfilling of the drainage pipe and trench continue. The outlet drainage trench excavations begun. Chesapeake Containment Systems, Inc. (CCS) completed testing and repairs on the geomembrane liner, as well as liner repairs in Ash Pond A and B then demobilized. Geotechnology, Inc. observed quality control of the geomembrane work. Refer to geomembrane documentation for more details. B&T Drainage began construction of the groundwater collection system. This included the installation of dewatering sump DS-1, perforated collector pipe PCP-1, and clean out CO-1. Due to the variable bedrock elevations on the south end of the property, DS-1 was set approx. 9.0' higher than the original design and PCP-1 was installed at a +0.40% grade running from DS-1 to CO-1. Similar field adjustments are expected and were previously approved by Hanson Professional Services for the construction of the groundwater collection system. Lamac Engineering Co. surveyed portions of the groundwater collection system. Dewatering for the proposed PCP excavation continues in

Electronic Filing: Received, Clerk's Office 09/28/2020

well number 2 and in the additional temporary well installed this week next to DS-1, located south of Ash Pond A. Fawn Lane Transit, Inc. and Belt Construction, Inc. began clay placement on the north portion of Quadrant A. Ten to 15 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to clay placement documentation for more details.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT 330D Excavator
CAT 613C Water Truck
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 9520 Tractor
John Deere 410J Backhoe
Sky Track 6036 Forklift
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Tim Wilson, Steve Graham, and Anna Saindon
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Jon Dietzel, Jimmy Boone, Robert Dunkley, James Marks, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. – Austin Ridgley
Charah, Inc. – Joe Tasich
Chesapeake Containment Systems, Inc. (CCS) – Jose Valverde, Barbarito Flores, Daniel Gonzales, Phet Vongkhamchanh, Jose Flores, Alberto Ortiz, Manuel Gonzales, Israel Gonzales, and Matt Watts
B&T Drainage (BTD) – John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, and Michael Dashiell
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Scott Comer, James Elledge, Frank Walton, Jim Urfer, Gary Lamb, Robbx Sanders, Greg Lingorfelter, Tom Sager, James Griffith, Eric Bierman, and Greg Cornwell
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, June 12, 2012. Refer to the attached meeting minutes for additional information.

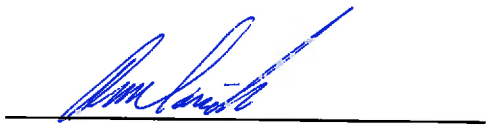
Photographs

A photograph log with select photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane was repaired on site. Clay for the vegetative layer, IDOT FA-01 sand, IDOT CA-7 aggregate, dewatering sump manhole base and sections, and 8-inch C900 DR18 PVC perforated pipe with filter sock and fittings were delivered.

Testing/Sampling



Geomembrane destructive and non-destructive testing and sampling was completed this week. Refer to geomembrane documentation for additional details.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

FROM THE GROUND UP

No. A 13820

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/11/12

TIME: Arrive: 6:30 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 72° AM, Rain 75° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/TSI/FLT/Belt
Equipment Working: 580 Backhoe, D6N Dozer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
The 580 dug an outlet trench from the anchor trench at Sta. 8+00, and pulled the fence posts out on the west side of Section C and placed them in the construction yard. The 613C Water Truck was demobilized and mobilized to the CBS. As of 6/11/12, Matt Watts and Blake Bunting are no longer with CCS and are now AMS laborers.

CCS:
The destructive samples have been completed and mailed to TRI Labs. Patches and repairs continue.

Belt Construction:
Jared Belt began clay placement on the geomembrane liner with the D6N in the NW area of Section A. The clay is being placed with a 3' lift. Area Covered: P-1 to P-5, P-7, and P-9.

FLT (Fawn Lane Transit, Inc.):
They have 10 trucks cycling between the CBS and APD. Drivers: Kim Edington, Scott Comer, James Elledge, Frank Walton, Jim Urfer, Gary Lamb, Robbx Sanders, Greg Lingorfelter, Tom Sager, and James Griffith. 112 Loads Delivered - 11 cy/truck *

TSI:
Andrew DeClue arrived and is in charge of quality control of the clay placement.

Additional Comments: The site work ended at approx. 2:30 PM due to thunderstorms.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/12/12

TIME: Arrive: 6:30 AM | Depart: 6:15 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.5 hr for lunch)
Weather: Sunny, 71°AM, 83° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/TSI/FLT/BCI
Equipment Working: 580 Backhoe, 6036 Forklift, D6N Dozer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

Correction to yesterday's FOR - The 580 dug an outlet trench at Sta. 10+00, not 8+00. Today, the pipe was placed in the outlet trench and backfilled. An outlet trench was also dug at Sta. 14+00. The 580 finished backfilling the 4" drainage pipe in the anchor trench in Section B. The 6036 staged more drainage pipe around the anchor trench. 10 more loads of FA-01 sand were delivered. The 279C Skid Steer was demobilized. Matt Watts is no longer an AMS employee. Now, Blake Bunting and Eric Sefton are the new laborers.

CCS/GEO:

They continued vacuum testing, repairs, cleanup, and welded the cap vent boots. The boots will be spark tested tomorrow. TRI finished all the destructs. Failures: DT-34, 50, 72, and 84B. Samples will be retested and mailed off tomorrow. They will repair the holes in the liners of Pond A and B tomorrow. The 9 remaining liner rolls were hauled off site.

FLT/BCI/TSI:

Continue clay placement. They plan to add an additional 5 dump trucks to the cycle by the end of the week (15 total). Area = P-1 to P-10, Loads = 178

Misc.:

Miller Construction Co. will begin mobilizing equipment and materials to the coal yard and a guard will be on-site. This is an Ameren subcontractor and is not affiliated with the project; records will not be kept of their equip. or personnel.

FROM THE GROUND UP

No. A 13822

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/13/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 55° AM, 80° PM | Contractor: AMS | Subcontr./Supplier: BTD/CCS/GEO/TSI/FLT/BCI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450LC Excavator, 410J Backhoe, 624H F.E.L., Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 finished backfilling the anchor trench and the 4" drainage pipe on the east side of Section D, and began backfilling on the south side of Section D and the west side of Section C.

BTD:

Personnel - John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Michael Dashiell.
Delivery - John Deere 450 LC Excavator, IDOT CA-7 Aggregate, Precast Manhole, 8" Perforated DR18 water main pipe - PVC C900 1120 (bell and spigot) with filter sock and couplings. The pit for DS-2 was excavated. However, the pit repeatedly caved in due to the water rushing into the excavation. Therefore, the pit was backfilled and they will continue to dewater this area. The pit for DS-1 was excavated next. At approx 11.0', the GWT and the top of sandstone was encountered. The excavator ripped through approx. 2.0' of sandstone and encountered hard shale (not rippable). BTD is utilizing rock bucket teeth for the bedrock. A final depth of 13.23' was reached and the trench box (shoring) for the manhole was set. At this depth, this puts the flowline of the PCP at the surface of the sandstone, or 4" into the sandstone. Approval for this elevation did not come until late in the day and the shoring had to be taken out so the pit could be cleaned out again, and the shoring could be reset. For a shoring system, BTD is utilizing the drag-box excavation method to install the pipeline. Additionally, trenches will be sloped at 1.5:1 to 12' depth, then continued down with trench boxes. Boxes utilized (stackable): 8'x12' and 8'x20'. CA-7 backfill will be placed in 8" lifts.

CCS/GEO:

Finished cleanup, retesting destructs, mailing destructs, repairs, vacuum testing, and spark testing. Holes in Pond A and B liners were fixed and CCS demobilized; will return only if TRI fail more destructs.

FLT/BCI/TSI: Clay Placement -

Additional Comments: Area = P-1 to P-10, P-12, P-14, and P-15
Loads = 152

Weather: Sunny, 55°AM, 82°PM | Contractor: AMS | Subcontr./Supplier: BTD/CCS/GEO/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450 LC Excavator, 410J Backhoe, BW 172 Roller,
Site Activities / Observations / Contacts / Notes: 624 H Front End Loader, Water Truck

AMS:

The 580 finished backfilling the anchor trench on the west side of Section A and C. The southern trench will be backfilled tomorrow. Additional IDOT FA-01 sand was delivered.

BTD:

The manhole shoring was reset in the pit for DS-1, and the manhole base and one precast section was installed. Approx. 8" of CA-7 stone was used for the manhole bedding. CA-7 was backfilled around the manhole to 1.0' above the inverts, and trench material was used for backfill to the ground surface. Refer to S-386, Sheet 12, Details 3 and 4 for the following approved deviations: the sump can be bedded in CA-7, not concrete-bridged to sandstone; since the manhole doesn't have a perforated base, it doesn't have to be wrapped with geotextile and the CA-7 pack also does not have to be wrapped with geotextile. An 8" slotted PVC pipe (vertical) was left next to DS-1 for necessary dewatering (casing for pump). The measured flowline and sump floor were 9.90' and 12.24', respectively, from the ground surface. Based on a surface elevation of 451.40, their elevations are 441.50 and 439.16, respectively. This makes the as-built and planned elevation difference to be 9.16'. The manhole, base, steps, and inverts comply with the specifications. They began construction for PCP-1, beginning at DS-1 running west to CO-1. Approx. 150' of 8" C900 was laid (halfway between DS-1 and CO-1). When they began running pipe from DS-1, the rock ledge dropped off and the sandstone was not encountered again untill approx 100' of pipe was laid. Water was pumped out of the trench as required as the trench progressed. Due to the elev. change of DS-1, the grade of the PCP between DS-1 and CO-1 changed as well. The PCP between DS-1 and CO-1 is being laid with a grade of 0.40% (std. minimum slope requirement for gravity fed lines). Refer to S-386, Sheet 8, for this grade change.

Site Activities / Observations / Contacts / Notes:

BTD (cont.):
They are utilizing a sewer laser to run the PCP at 0.40%, beginning at the manhole invert. All pipe being laid contains perforations and filter sock. Besides the grade, the PCP installation, bedding, haunching, and backfills remain unchanged (refer to S-386, Sheet 12, Detail 8). Lamac will be on-site tomorrow to survey the PCP.

CCS/GEO:
The failed destruct was retested (DS-84B), repaired, extrusion welded, and vacuum tested.

FLT/BCI/TSI:
Clay Placement - the north tip of the pond has been covered and now the clay is being placed to the south along Section A. Area = P1-P16, Loads = 160. 11 Trucks are now utilized in the cycle. Additional Personnel (FLT): Eric Bierman

Vehicle: 7 | Zone: — | Client: Geotechnology | Date: 6-14-12

TIME: Arrive: 6:45 | Depart: 5:30 | Travel: 1.0 | Total: 11.75 (.5hr lunch)
Weather: 80-80's Sunny | Contractor: AMS | Subcontr./Supplier: —
Equipment Working:
Site Activities / Observations / Contacts / Notes: Belt construction continues to place 3 Feet of coverage Fill over Geo-Membrane. Material is a silt to lean clay with roots being hauled in from offsite borrow Area. Belt using D6 to place Fill in such a way that Geo-membrane doesn't wrinkle and/or become ripped/torn. Fill was placed on Panels: P-1 thru P-16. By noon they had Finished placing Fill to North edge of Pond. They then focused on heading Southward stringing on approved Panels.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/15/12

TIME: Arrive: 6:00 AM | Depart: 5:30 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.25 hr for lunch)
Weather: Sunny, 61°AM, 88° PM | Contractor: AMS | Subcontr./Supplier: BTD/Lamac/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450LC Excavator, 410J Backhoe, BW 172 Roller, 624H Front End Loader, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 stockpiled the western anchor trench spoils on the NW corner of Pond D.

BTD/Lamac:

PCP-1 has been completed. The trench was excavated, bedded with CA-7, the 8" collector pipe with non-woven geotextile filter sock was installed, haunched with CA-7, and backfilled with CA-7 and trench material. CO-1 was installed (non-perforated) and has sufficient stickup with a water tight cap. Tyler Union 8" 90° Md fittings are used for the cleanout. The concrete slab and bollard will be installed towards completion (refer to S-386, Sheet 12, Detail 6). PCP-1 was laid at +0.40% from DS-1 invert to CO-1, and the section was compacted. The CO elevation shot with the grade laser is at 443.48. Lamac also shot in PCP-1 at the DS-1 invert, 150' west of DS-1, and at CO-1. BTD continues dewatering in well 2 and in the temporary well next to DS-1. They plan to install additional dewatering wells before DS-2 excavation. Additional 8" perforated DR-18, PVC C900 pipe was delivered. Length = 117'

FLT/BCI/TSI:

Clay Placement - Section A. Panels P-1 to P-45 (northern section) have now been approved for cover. Additional Personnel (FLT): Greg Cornwell; 12 trucks total. They plan to add 4 additional trucks to the cycle next week. The 9520 was demobilized. The excavator loading the trucks at the CBS broke down and FLT could not complete their 10 hour production. This will be fixed tomorrow. Area = P-3 to P-5, P-7, P-9, P-11, P-12, and P-14 to P-16. Loads = 144

04 DOCUMENTATION

Minutes are documented weekly, and the publication have a "rolling record" of the immediate past two weeks. Each week the oldest drops off and the current week is added to the minutes. Items are categorized as either "NEW", "OPEN", "CLOSE", or in case the an item has to be re-published after closed the previous week - "REOPEN". Minutes format changed for Progress Meeting No. 13 deleting and combining certain items for brevity and to abbreviate documentation. Currently the item numbers remained the same for tracking purposes.

05 SAFETY - HOUSEKEEPING

02 WORKER PROTECTION ASSURANCE

2012-06-12 OPEN - no issues. None projected for 2x week look ahead.

2012-06-05 OPEN - no issues. None projected for 2x week look ahead.

03 EMPLOYEE DRUG TESTING

2012-06-12 OPEN - no issues. AMS projects 2x teamsters [Fawn lane], 2x laborers [already have CBT - but AMS DT they will go to Robinson].

2012-06-05 OPEN - no issues. AMS has sent 2x employees. M. Wagstaff sent thank you e-mail to JCH. P. Zinsious suggested inviting them to a safety luncheon.

04 AMS SAFETY

20120-06-12 OPEN - no issues.

[01] 1x worker terminated and replaced an operator for safety concerns - AMS zero tolerance policy.

[02] Borrow haul route signage installed on roadway.

[03] Spotters for trucks on site, 1x to 2x laborers. Additional spotters if/as required.

[04] Cooling stations are set up.

[05] J. Tasich on site 06-11. Training 2x laborers today [06-12].

[06] Training tomorrow [06-13] for AMS site-specific.

2012-06-05 OPEN - no issues.
[01] J. Denham reported on 1x AMS operator who was not operating safety while operating the [all terrain] fork lift on 06-01. Worker was suspended for unsafe actions and not wearing a seat belt and is currently under review. AMS has a zero tolerance policy, and if the review proves accurate, the worker will be terminated. Official response and [incident] violation report should be ready by 06-06.
[02] General discussion safety concerns for the vegetative cover hauling [soil materials form the borrow site]. P. Zinsious indicated signs will be placed on Illinois Route 1 northbound and southbound lanes where trucked entering the highway. Currently Illinois is working on the bridge deck that crosses over Raccoon Creek on the haul route. Truckers will not be allowed to deviate form the route and travel the "back way" into the borrow site to avoid the work at the bridge deck. Estimated time of this work on the bridge deck is 6x to 8x Wks.
[03] B. Muesenfechter concern that open liner anchor trenches could be a potential tripping hazard and indicated previous issue at Coffeen [Ameren power plant]. M. Wagstaff indicated depends on trench. J. Denham indicated caution tape will be placed at trenches, on the exterior, as the interior has liner, and cannot penetrate the liner [with posts].
[04] Cooling stations are set up.

05 HOUSEKEEPING

2012-06-12 OPEN - AMS will have walk through today [06-12] for cleanup.

2012-06-05 OPEN - M .Wagstaff concern regarding small pieces of liner. J. Boone indicated daily cleanup.

06 PLANT ACCESS - CBT

20120-06-12 OPEN - B. Simmons Ameren services general discussion of plant access and projected work:
[01] Subcontractor [Miller] and Ameren will use entire coal yard.
[02] Possible set trailer next week, possible same electric service usage.
[03] Project is capacity and clearance scope until through EOY [Hutsonville, Palmyra to Indiana areas].
[04] Starting 06-14 guard form 6:00 AM CT to 6:30 PM CT, then 24/7 when conductors stored/staged on site.
[05] Parking on far west lost, up to 15x personal vehicles.
[06] Subcontractor will not have AER badges, guard will have list update for workers on project. They will only have to show driver's license.
[07] B. Simmons indicated workers not allowed beyond designated area, if caught outside area, will be terminated.
[08] M. Wagstaff is SPOC for this project to the APD project.
[09] Borrow haul traffic only concern.
[10] D. Curlin contact for Miller.

2012-06-05 OPEN - M .Wagstaff reports that Ameren [Services] will begin transmission line work [between Kansas and Illinois], and will be using the coal yard at the Hutsonville plant as storage. Ameren will provide a guard for 12 HR shifts. The contacts at Ameren as Mr. Jim Williams [over the GENCO division] and Mr. Bob Simmons who will be the site SPOC. Work to begin the middle of June 2012. J. Boone indicated concern over coordination of trucks hauling into the site, and M. Wagstaff said no issue, as the trucks can come in through the gate by the [west] PCP line.

08 OSHA LOG - WORK HOURS

2012-06-12 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-11.
No incidents or accidents.
3,304.00 RT
0,700.50 OT
4,004.50 TOTAL

2012-06-05 OPEN - total all hours [including subcontractors] [Point of clarification: Hours are to EOD Monday] 06-04.
No incidents or accidents.
2,543.50 RT
0,436.50 OT
2,980.00 TOTAL

06 MANPOWER [HEAD COUNT]

01 CREW SIZE

2012-06-12 AMS, Chesapeake Containment [CCS], BT Drainage [BTD], and returning Belt Construction [BCI] on site.

[04] Geotechnology [work hours not included in OSHA Log above]

[21] Total

02 WORK HOURS AND OVERTIME

2012-06-12	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT. Fawn Lane trucking 10 HR.
2012-06-05	OPEN - Standard hours - 7:00 AM CT to 3:30 PM CT. CCS still on track for OT.

04 TRAILER - GENERAL CONDITIONS - COORDINATION - VEHICLES

2012-06-12	OPEN - no issues. GEO/CCS "gators" leaving this week.
2012-06-05	OPEN - no issues.

07 PREVIOUS

01 SUBCONTRACTS

2012-06-12	OPEN - no issues.
2012-06-05	OPEN - no issues.

02 SUBMITTALS

20120-06-12	Submittal log as published by GEO on 06-09 distributed. General discussion. [01] Submittal log copies distributed. [02] Discussion CA-7 sample for PCP coarse aggregate. [03] No issues.
20120-06-05	Submittal log as published by GEO on 06-2 distributed. General discussion. [01] Submittal log copies distributed. [02] Seed/mulch submittal under review by AER returned. [03] VES-01 to be returned by AER returned. [04] VES-02 M. Wagstaff orally approved returned. [05] SWP3 for APD submitted by AMS as matter of record original signed on 02-28. [06] AMS to submitted dewatering sump under AER review.

08 MATERIAL

01 GENERAL

2012-06-12	OPEN - no issues. [corrected dates below 20120].
2012-06-05	OPEN - no issues.

02 GEOMEMBRANE PRE-CON

2012-06-12	OPEN - no issues.
2012-06-05	Open - no issues. [01] A. Saindon reviewing tests, looks good. However test results for areas will not be ready until about 4:00 PM CT on 06-07. [02] Using stakes on positioned by sandbags and leaving the sandbags in place are acceptable per A. Saindon.

03 CAP VENT PRE-CON

2012-06-12	OPEN - no issues.
2012-06-05	OPEN - no issues. [corrected date errors of "20120" below]

04 PERFORATED COLLECTOR PIPE [PCP] PRE-CON MEETING

2012-06-12	OPEN - Discussion during Progress Meeting: [01] Lamac to perform record drawing "as-built" survey for AER direct, instead of through AMS. [02] P. Zinsious presented M. Wagstaff concern over the global stability of the PCP trench and Hanson response that proposed new alignment is not acceptable due to the close proximity. [03] R. Porter indicated if higher elevation of excavation, the trench may not be as wide. General consensus of the team is a "wait-and-see" approach [due to the many factors involved]. [04] MW-2R remains undeveloped due to dewatering. [05] BTD to begin PCP on 06-13 in AM. Estimated production rates [provided by BTD for scheduling meeting at Ameren] are shallow = 40 FT/D, average 60 FT/D, and deep[er] = 80 FT/D.
2012-06-05	OPEN - Discussion during Progress Meeting: [01] M. Wagstaff concern on the PCP alignment and liquefaction [due to seismic] of the soil near the pond berm. There was no specification provided by Ameren, and for now the alignment look good, will go with Hanson. [02] J. Boyer reports at area of DS-1 hit shallow sandstone, about 20 FT west from location. Will status once excavation begins if a new location or higher elevation will be required. [03] M .Wagstaff reports that new well MW-2R could not develop due to dewatering. ~~[02]~~ [04] P. Zinsious reports that review of PCP alignment allow for power poles to stay in place [Ameren does not need to remove for now].

09 ADJACENT PROPERTIES AND PCP LINE

01 GENERAL

2012-06-12	OPEN - Discussion during Progress Meeting: [01] AMS has removed fencing for now. [02] M. Wagstaff will be in contact with Mr. Wampler to resolve.
2012-06-05	OPEN - Discussion during Progress Meeting: [01] J. Boone reports Mr. Duane Wampler has communicated not happy with fence alignment. [02] AMS has mover the fence back. J. Cravens has been in contact with Wampler. [03] J. Boyer indicated collector tile work in about two weeks [will need coordination with Mr. Wampler]. [04] J. Boyer reports only need in week in this area, as shallow. [05] M. Wagstaff will be in contact with Mr. Wampler to resolve.

10 QUALITY CONTROL

03 CLAY

2012-06-12	OPEN - Roots being pulled out of the material.
2012-06-05	OPEN - no issues begin placement on 06-11.

11 SCHEDULE REVIEW

01 SCHEDULE

2012-06-12	OPEN - Review of schedule 06-07 handed out [01] B. Muesenfechter presented "First Planner" . [02] Open discussion and review of "First Planner" process with Lamac. [03] J. Cravens out 07-13, and P. Zinsious vacation 06-21 - 06-28. [04] Two critical work areas, the clay placement and the PCP. [05] Baseline SC changed to 10-11. Currently SC in projected 10-24. [06] P. Zinsious indicated AMS to increase trucks for borrow haul from 10x to 15x. [07] PCP projected now to start 06-13, will help schedule. [08] Weather days coded.
2012-06-05	OPEN - Review of schedule 06-01 handed out [01] B. Muesenfechter presented "First Planner" . [02] Open discussion and review of "First Planner" process with the Build Team present. [03] Review of draft "First Planner" look-ahead. Individual activity review with modifications of dates and "Last Planner" assignments.

12.0 COST AND BUDGET

02 AMS PAY APPLICATION - CHANGE REQUEST

2012-06-12	OPEN - no issues. AMS sent SOV to M. Wagstaff.
2012-06-05	OPEN - no issues, draft revised on 06-05 few items to revise.

12.1 EXTRA WORK ORDERS

11 EWO-11 BUILDING SPOILS REMOVAL

2012-06-12	OPEN - in progress.
2012-06-05	OPEN - in progress. No further spoils found, AMS to provide cost account.

12 EWO-12 PCP Survey

2012-06-12	CLOSE - Lamac to go direct to AER.
2012-06-05	NEW - AMS coordinate Lamac to survey "as-built" for the PCP installation.

13 EWO-13 Electrical feeder/overhead

2012-06-12	NEW - combined EWO-05 and 07 per AER. AMS to have pricing in day or two.

13 ACTION ITEMS - AER [25]

01 AMEREN [AER]

2012-06-12	NONE
2012-06-05	CLOSE

14 ACTION ITEMS - AMS [21]

01 ASH MANAGEMENT [AMS]

2012-06-12	NONE
2012-06-05	In progress.

15 PRODUCTION

03 CLAY

2012-06-12	OPEN - Trucks are hauling 11 CY. Currently 10x trucks. Placement as of 06-11 is 1,232 CY.
2012-06-05	OPEN - no issues [projected start 06-11].

16	DOCUMENTS TRANSMITTED

GEOTECHNOLOGY INC
FROM THE GROUND UP

MEMORANDUM

TO: Mike Wagstaff, P.E.
Ameren Energy Resources

FROM: Anna Saindon, P.E., R.G., Ph.D.
Geotechnology, Inc.

DATE: June 19, 2012

SUBJECT: Weekly Summary Report for June 11, 2012 to June 15, 2012

PROJECT: Hutsonville Ash Pond D Closure
Crawford County, Hutsonville, Illinois
Geotechnology Project No. J019896.01

The following is a weekly summary of the site activities at the referenced site.

Weather

The weather was generally sunny and dry. Temperature (°F) lows ranged from 55 to 72°F, and temperature highs ranged from 75 to 88°F. A weather delay occurred on June 11, 2012 due to afternoon storms.

Construction Activities

Anchor trench construction, 40 mil HDPE geomembrane installation, groundwater collection system installation, and clay placement occurred this week. The anchor trench has been excavated, excluding the outlet drainage trenches. The 4-inch HDPE perforated drainage pipe placement within the anchor trench and backfilling of the drainage pipe and trench continue. The outlet drainage trench excavations begun. Chesapeake Containment Systems, Inc. (CCS) completed testing and repairs on the geomembrane liner, as well as liner repairs in Ash Pond A and B then demobilized. Geotechnology, Inc. observed quality control of the geomembrane work. Refer to geomembrane documentation for more details. B&T Drainage began construction of the groundwater collection system. This included the installation of dewatering sump DS-1, perforated collector pipe PCP-1, and clean out CO-1. Due to the variable bedrock elevations on the south end of the property, DS-1 was set approx. 9.0' higher than the original design and PCP-1 was installed at a +0.40% grade running from DS-1 to CO-1. Similar field adjustments are expected and were previously approved by Hanson Professional Services for the construction of the groundwater collection system. Lamac Engineering Co. surveyed portions of the groundwater collection system. Dewatering for the proposed PCP excavation continues in

well number 2 and in the additional temporary well installed this week next to DS-1, located south of Ash Pond A. Fawn Lane Transit, Inc. and Belt Construction, Inc. began clay placement on the north portion of Quadrant A. Ten to 15 trucks were used to haul clay material to Ash Pond D. The vegetative cover is being placed in a single three foot lift, and a representative from TSI Engineering, Inc. observed quality control for the clay placement procedure. Refer to clay placement documentation for more details.

Equipment and Personnel On-Site

CAT D6N Bulldozer
CAT 330D Excavator
CAT 613C Water Truck
Bomag BW 172 PDB-2 Roller
John Deere 624H Front End Loader
John Deere 450 LC Excavator
John Deere 9520 Tractor
John Deere 410J Backhoe
Sky Track 6036 Forklift
Case 580 Backhoe
Water Truck (Dust Control)

Geotechnology, Inc. – Joe Cravens, Tim Wilson, Steve Graham, and Anna Saindon
TSI Engineering, Inc. – Andrew DeClue
Ash Management Services, LLC (AMS) – Randy Porter, Jon Dietzel, Jimmy Boone, Robert Dunkley, James Marks, Brad Bolenbaugh, Greg Siverly, Jeremy Shorter, Blake Bunting, and Eric Sefton
Belt Construction, Inc. (BCI) – Jared Belt
Lamac Engineering Co. – Austin Ridgley
Charah, Inc. – Joe Tasich
Chesapeake Containment Systems, Inc. (CCS) – Jose Valverde, Barbarito Flores, Daniel Gonzales, Phet Vongkhamchanh, Jose Flores, Alberto Ortiz, Manuel Gonzales, Israel Gonzales, and Matt Watts
B&T Drainage (BTD) – John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, and Michael Dashiell
Fawn Lane Transit, Inc. (FLT) – Kim Edington, Scott Comer, James Elledge, Frank Walton, Jim Urfer, Gary Lamb, Robbx Sanders, Greg Lingorfelter, Tom Sager, James Griffith, Eric Bierman, and Greg Cornwell
Visitors – Refer to the Visitor's Log for visitors, dates, and times.
Refer to the meeting minutes for additional personnel.

Meetings

The weekly progress meeting was held on Tuesday, June 12, 2012. Refer to the attached meeting minutes for additional information.

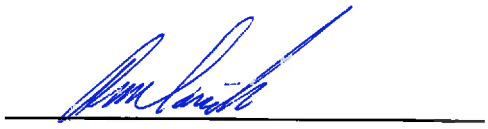
Photographs

A photograph log with select photographs obtained this week is attached.

Materials

40 mil HDPE geomembrane was repaired on site. Clay for the vegetative layer, IDOT FA-01 sand, IDOT CA-7 aggregate, dewatering sump manhole base and sections, and 8-inch C900 DR18 PVC perforated pipe with filter sock and fittings were delivered.

Testing/Sampling



Geomembrane destructive and non-destructive testing and sampling was completed this week. Refer to geomembrane documentation for additional details.

Calibration Records

Calibration information was not obtained this week.

Signature of CQA Officer

Anna Saindon, P.E., R.G., Ph.D.

GEOTECHNOLOGY INC
FROM THE GROUND UP

No. A 13820

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/11/12

TIME: Arrive: 6:30 AM | Depart: 3:45 PM | Travel: 1.0 hr | Total: 10 hrs (0.25 hr for lunch)
Weather: Partly Cloudy, 72° AM, Rain 75° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/TSI/FLT/Belt
Equipment Working: 580 Backhoe, D6N Dozer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:
The 580 dug an outlet trench from the anchor trench at Sta. 8+00, and pulled the fence posts out on the west side of Section C and placed them in the construction yard. The 613C Water Truck was demobilized and mobilized to the CBS. As of 6/11/12, Matt Watts and Blake Bunting are no longer with CCS and are now AMS laborers.

CCS:
The destructive samples have been completed and mailed to TRI Labs. Patches and repairs continue.

Belt Construction:
Jared Belt began clay placement on the geomembrane liner with the D6N in the NW area of Section A. The clay is being placed with a 3' lift. Area Covered: P-1 to P-5, P-7, and P-9.

FLT (Fawn Lane Transit, Inc.):
They have 10 trucks cycling between the CBS and APD. Drivers: Kim Edington, Scott Comer, James Elledge, Frank Walton, Jim Urfer, Gary Lamb, Robbx Sanders, Greg Lingorfelter, Tom Sager, and James Griffith. 112 Loads Delivered - 11 cy/truck *

TSI:
Andrew DeClue arrived and is in charge of quality control of the clay placement.

Additional Comments: The site work ended at approx. 2:30 PM due to thunderstorms.

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: – | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/12/12

TIME: Arrive: 6:30 AM | Depart: 6:15 PM | Travel: 1.0 hr | Total: 12.25 hrs (0.5 hr for lunch)
Weather: Sunny, 71°AM, 83° PM | Contractor: AMS | Subcontr./Supplier: CCS/GEO/TSI/FLT/BCI
Equipment Working: 580 Backhoe, 6036 Forklift, D6N Dozer, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

Correction to yesterday's FOR - The 580 dug an outlet trench at Sta. 10+00, not 8+00. Today, the pipe was placed in the outlet trench and backfilled. An outlet trench was also dug at Sta. 14+00. The 580 finished backfilling the 4" drainage pipe in the anchor trench in Section B. The 6036 staged more drainage pipe around the anchor trench. 10 more loads of FA-01 sand were delivered. The 279C Skid Steer was demobilized. Matt Watts is no longer an AMS employee. Now, Blake Bunting and Eric Sefton are the new laborers.

CCS/GEO:

They continued vacuum testing, repairs, cleanup, and welded the cap vent boots. The boots will be spark tested tomorrow. TRI finished all the destructs. Failures: DT-34, 50, 72, and 84B. Samples will be retested and mailed off tomorrow. They will repair the holes in the liners of Pond A and B tomorrow. The 9 remaining liner rolls were hauled off site.

FLT/BCI/TSI:

Continue clay placement. They plan to add an additional 5 dump trucks to the cycle by the end of the week (15 total). Area = P-1 to P-10, Loads = 178

Misc.:

Miller Construction Co. will begin mobilizing equipment and materials to the coal yard and a guard will be on-site. This is an Ameren subcontractor and is not affiliated with the project; records will not be kept of their equip. or personnel.

No. A 13822

FIELD OBSERVATION REPORT

Representative: Joe Cravens | Project No.: J019896.01 | Task: 2370
Equipment & ID No.: — | Project Name: Hutsonville Ash Pond D Closure
Vehicle: 4103 | Zone: — | Client: Ameren ER | Date: 6/13/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 55° AM, 80° PM | Contractor: AMS | Subcontr./Supplier: BTD/CCS/GEO/TSI/FLT/BCI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450LC Excavator, 410J Backhoe, 624H F.E.L., Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 finished backfilling the anchor trench and the 4" drainage pipe on the east side of Section D, and began backfilling on the south side of Section D and the west side of Section C.

BTD:

Personnel - John Boyer, Scott Boyer, Brian Schaefer, Brent Neibauer, Michael Switzer, Michael Dashiell.
Delivery - John Deere 450 LC Excavator, IDOT CA-7 Aggregate, Precast Manhole, 8" Perforated DR18 water main pipe - PVC C900 1120 (bell and spigot) with filter sock and couplings. The pit for DS-2 was excavated. However, the pit repeatedly caved in due to the water rushing into the excavation. Therefore, the pit was backfilled and they will continue to dewater this area. The pit for DS-1 was excavated next. At approx 11.0', the GWT and the top of sandstone was encountered. The excavator ripped through approx. 2.0' of sandstone and encountered hard shale (not rippable). BTD is utilizing rock bucket teeth for the bedrock. A final depth of 13.23' was reached and the trench box (shoring) for the manhole was set. At this depth, this puts the flowline of the PCP at the surface of the sandstone, or 4" into the sandstone. Approval for this elevation did not come until late in the day and the shoring had to be taken out so the pit could be cleaned out again, and the shoring could be reset. For a shoring system, BTD is utilizing the drag-box excavation method to install the pipeline. Additionally, trenches will be sloped at 1.5:1 to 12' depth, then continued down with trench boxes. Boxes utilized (stackable): 8'x12' and 8'x20'. CA-7 backfill will be placed in 8" lifts.

CCS/GEO:

Finished cleanup, retesting destructs, mailing destructs, repairs, vacuum testing, and spark testing. Holes in Pond A and B liners were fixed and CCS demobilized; will return only if TRI fail more destructs.

FLT/BCI/TSI: Clay Placement -

Additional Comments: Area = P-1 to P-10, P-12, P-14, and P-15
Loads = 152

Vehicle: 4103 | Zone: – | Client: Ameren ER | Date: 6/14/12

TIME: Arrive: 6:00 AM | Depart: 6:00 PM | Travel: 1.0 hr | Total: 12.75 hrs (0.25 hr for lunch)
Weather: Sunny, 55°AM, 82°PM | Contractor: AMS | Subcontr./Supplier: BTD/CCS/GEO/FLT/BCI/TSI
Equipment Working: 580 Backhoe, D6N Dozer, 330D Excavator, 450 LC Excavator, 410J Backhoe, BW 172 Roller, 624 H Front End Loader, Water Truck
Site Activities / Observations / Contacts / Notes:

AMS:

The 580 finished backfilling the anchor trench on the west side of Section A and C. The southern trench will be backfilled tomorrow. Additional IDOT FA-01 sand was delivered.

BTD:

The manhole shoring was reset in the pit for DS-1, and the manhole base and one precast section was installed. Approx. 8" of CA-7 stone was used for the manhole bedding. CA-7 was backfilled around the manhole to 1.0' above the inverts, and trench material was used for backfill to the ground surface. Refer to S-386, Sheet 12, Details 3 and 4 for the following approved deviations: the sump can be bedded in CA-7, not concrete-bridged to sandstone; since the manhole doesn't have a perforated base, it doesn't have to be wrapped with geotextile and the CA-7 pack also does not have to be wrapped with geotextile. An 8" slotted PVC pipe (vertical) was left next to DS-1 for necessary dewatering (casing for pump). The measured flowline and sump floor were 9.90' and 12.24', respectively, from the ground surface. Based on a surface elevation of 451.40, their elevations are 441.50 and 439.16, respectively. This makes the as-built and planned elevation difference to be 9.16'. The manhole, base, steps, and inverts comply with the specifications. They began construction for PCP-1, beginning at DS-1 running west to CO-1. Approx. 150' of 8" C900 was laid (halfway between DS-1 and CO-1). When they began running pipe from DS-1, the rock ledge dropped off and the sandstone was not encountered again until approx 100' of pipe was laid. Water was pumped out of the trench as required as the trench progressed. Due to the elev. change of DS-1, the grade of the PCP between DS-1 and CO-1 changed as well. The PCP between DS-1 and CO-1 is being laid with a grade of 0.40% (std. minimum slope requirement for gravity fed lines). Refer to S-386, Sheet 8, for this grade change.
