John Therriault

Subject: R08-9(D): I want a protective temperature standard for the CAWS and LDPR in effect soon.

Dear John Therriault,

Thank you for accepting my comments on rulemaking 08-9(D). I live and recreate in the Chicago area and therefore am concerned with the temperature standards set for its waterways.

I support the Board's second notice rule and believe that the Board's choice to apply the general use standard for temperature makes sense. I believe rules that protect aquatic life in the Chicago Area Waterway System (CAWS) and Lower Des Plaines River (LDPR) should be just as stringent as they are for the rest of the state, and therefore would like to see the rule adopted and be put into effect without delay.

Three years for the new standards to go into effect seems like ample time and this timeframe should not be drawn out any further. I understand that entities concerned with their ability to meet the new temperature standards can seek variances if they can really show hardship but none of them have made any attempt yet to show hardship in these proceedings. They should be working on any additional monitoring and analysis they need to apply for a variance now.

The Board has a substantial record that has been built since 2008 enabling it to move forward without allowing these proceedings to drag on.

Thank you for your attention to my comments and I look forward to seeing a protective temperature standard for the CAWS and LDPR go into effect soon.

Sincerely,
Erin Van Ness

The Board has a substantial record that has been built since 2008 enabling it to move forward without allowing these proceedings to drag on.

We who live in this area want cool, clear water. Those who would keep this from us need to pay the price and follow the rules, and the rule in question is very reasonable. Save wildlife and save the people from unnecessary pollution.

Thank you for your attention to my comments and I look forward to seeing a protective temperature standard for the CAWS and LDPR go into effect soon.

Subject: R08-9(D): I want a protective temperature standard for the CAWS and LDPR in effect soon.

Dear John Therriault,

Thank you for accepting my comments on rulemaking 08-9(D). I live and recreate in the Chicago area and therefore am concerned with the temperature standards set for its waterways.

I support the Board's second notice rule and believe that the Board's choice to apply the general use standard for temperature makes sense. I believe rules that protect aquatic life in the Chicago Area Waterway System (CAWS) and Lower Des Plaines River (LDPR) should be just as stringent as they are for the rest of the state, and therefore would like to see the rule adopted and be put into effect without delay.

Three years for the new standards to go into effect seems like ample time and this timeframe should not be drawn out any further. I understand that entities concerned with their ability to meet the new temperature standards can seek variances if they can really show hardship but none of them have made any attempt yet to show hardship in these proceedings. They should be working on any additional monitoring and analysis they need to apply for a variance now.

The Board has a substantial record that has been built since 2008 enabling it to move forward without allowing these proceedings to drag on.

Thank you for your attention to my comments and I look forward to seeing a protective temperature standard for the CAWS and LDPR go into effect soon.

Sincerely,
Stephan Loubere

I believe rules that protect aquatic life in the Chicago Area Waterway System (CAWS) and Lower Des Plaines River (LDPR) should be just as stringent as they are for the rest of the state, and therefore would like to see the rule adopted and be put into effect without delay.

The IPCB's draft rule would protect Chicago waterways by preventing high temperature discharges that can cause algae growth and harm aquatic life. This tighter safeguard would simply bring Chicago waters in line with the standard used across the rest of Illinois. Chicago's waterways deserve protection equal to the protection given for waterways elsewhere, and they need it sooner rather than later.

Thank you for your attention to my comments and I look forward to seeing a protective temperature standard for the CAWS and LDPR go into effect soon.

Sincerely,
Carole Pooler
