SUBPART B: GENERAL AND SPECIFIC PRETREATMENT REQUIREMENTS

Section 307.1101 General and Specific Requirements

No person may introduce the following types of pollutants into a POTW:

- a) General requirements.
 - 1) Pollutants that pass through the POTW; or
 - 2) Pollutants that interfere with the operation or performance of the POTW.
- b) Specific requirements.
 - 1) Pollutants that create a fire or explosion hazard within the POTW, including, but not limited to, waste streams with a closed cup flashpoint of less than 60° C (140° F) using the test methods specified in 35 Ill. Adm. Code 721.121;
 - 2) Pollutants that would cause safety hazards to the personnel operating the treatment works;
 - 3) Pollutants that will cause corrosive damage to the POTW;
 - 4) Pollutants that would be injurious in any other way to sewers, treatment works, or structures;

- 5) Discharges with a pH less than 5.0, unless the POTW is specifically designed to accommodate such discharges;
- 6) Solid or viscous pollutants in amounts that will cause obstruction to the flow in the POTW resulting in interference;
- 7) Any pollutant, including oxygen-demanding pollutants, at a flow rate or concentration that will cause interference with the POTW;
- 8) Heat in amounts that will inhibit biological activity in the POTW and interfere with the POTW;
- 9) Heat in amounts that result in temperatures in the influent to the POTW treatment plant in excess of 40° C (104° F) unless the Agency approves alternate temperature limits in pretreatment plan;
- 10) Pollutants that would cause the effluent from the treatment works to violate applicable effluent standards;
- 11) Petroleum oil, non-biodegradable cutting oil, or products of mineral oil origin in amounts that will cause interference or pass through;
- 12) Pollutants that result in the presence of toxic gases, vapors, or fumes within the POTW in a quantity that may cause acute worker health and safety problems; or
- 13) Any trucked or hauled pollutants, except at discharge points designated by the POTW.

BOARD NOTE: Derived from 40 CFR 403.3 and 403.5 (2005).

Section 307.1102 Mercury

- a) Except as provided below, no person may cause or allow the concentration of mercury in any discharge to a publicly owned or publicly regulated sewer system to exceed the following level, subject to the averaging rule contained in 35 Ill. Adm. Code 304.104(a):

CONSTITUENT	STORET NUMBER	CONCENTRATION mg/ℓ
Mercury	71900	0.0005

- b) It will be an exception to subsection (a) of this Section if the discharge is to a publicly owned or publicly regulated sewer system that is required to meet a limitation less stringent than the 0.0005 mg/ℓ mercury concentration in which case the discharge limitation must be the same as that applicable to the publicly owned or regulated sewer system to which it discharges.
- c) It will be an exception to subsection (a) of this Section if all the following conditions are met:
 - 1) The discharger does not use mercury, the discharger uses mercury and this use cannot be eliminated, or the discharger uses mercury only in chemical analysis or in laboratory or other equipment and takes reasonable care to avoid contamination of wastewater;
 - 2) The discharge mercury concentration is less than 0.003 mg/ℓ, as determined by application of the averaging rules of 35 Ill. Adm. Code 304.104(a);
 - 3) The discharger is providing the best degree of treatment consistent with technological feasibility, economic reasonableness, and sound engineering judgment. This may include no treatment for mercury; and
 - 4) The discharger has an inspection and maintenance program likely to reduce or to prevent an increase in the level of mercury discharges.
- d) The discharge of wastes from medicinal or therapeutic use of mercury, exclusive of laboratory use, will be exempt from the limitations of subsection (a) of this Section if all the following conditions are met:
 - 1) The total plant discharge is less than 227 g (one half pound) as Hg in any year;
 - 2) This discharge is to a public sewer system; and
 - 3) The discharge does not, alone or in conjunction with other sources, cause the effluent from the sewer system or treatment plant to exceed 0.0005 mg/ℓ of mercury.
- e) No person may cause or allow any discharge of mercury to a publicly owned or publicly regulated sewer system which, alone or in combination with other sources, causes a violation by the sewer treatment plant

discharge of the water quality standard of 35 Ill. Adm. Code 302 for mercury applicable in the receiving stream.

- f) For purposes of permit issuance the Agency may consider application of the exception of subsection (b) or (c) of this Section to determine compliance with this Section. The Agency may impose permit conditions necessary or required to assure continued application of the exception. When subsection (b) or (c) of this Section applies, the Agency may impose an effluent limitation in the permit that allows the discharge of a concentration of mercury greater than 0.0005 mg/ℓ but not more than 0.003 mg/ℓ.
- g) The mercury standards of Section 307.1102 will not apply to the Reilly Industries, Inc., Granite City, which discharges to any publicly-owned treatment works that receives such a manufacturing facility's wastewater. The amount of mercury discharged by any such manufacturing facility must not exceed a monthly average of 0.025 mg/ℓ nor a maximum of 0.035 mg/ℓ or 7.5 grams per day, subject to the Board's averaging rules during any one day.

(Source: Amended at 28 Ill. Reg. 3076, effective February 6, 2004)

Section 307.1103 Cyanide

- a) No waste to any public sewer system must contain more than 10 mg/ℓ total cyanide (STORET number 00720) provided any sample tested must not release more than 2 mg/ℓ of cyanide when tested at a pH of 4.5 and at a temperature of 66° C (150° F) for a period of 30 minutes, except as permitted by subsection (b) of this Section.
- b) Upon application by a county, municipality, sanitary district, or public utility and approval by the Agency, based upon determination by the Agency that no violation of the effluent standards of 35 Ill. Adm. Code 304 will result and that no hazard to workers in such sewage works will result, limited additional amounts of cyanide exceeding the standards in subsection (a) of this Section may be discharged to the sewage works of such county, sanitary district, municipality, or public utility.
- c) Nothing in this Section may be construed as limiting the authority of any county, municipality, sanitary district, or public utility to impose any more stringent standards or limitations on cyanide discharges to its sewage works.
- d) Any actions undertaken pursuant to subsection (b) of this Section will be subject to the limitations of Section 307.2400(b)(7).

 - i) The Control Authority determines that the cyanide limitations are not achievable due to elevated levels of non-amenable cyanide (i.e., cyanide that is not oxidized by chlorine treatment) that result from the unavoidable complexing of cyanide at the process source of the cyanide-bearing waste stream, and
 - ii) The control authority establishes an alternative total cyanide or amenable cyanide limitation that reflects the best available technology economically achievable.
 - B) The control authority must base its determination made pursuant to subsection (b)(7)(A) of this Section on a review of the relevant engineering, production, and sampling and analytical information at its disposal, including measurements of both total and amenable cyanide in the waste stream.
 - C) The control authority must set forth its determination made pursuant to subsection (b)(7)(A) of this Section in a written analysis of the extent of complexing in the waste stream and its impact on cyanide treatability, based on the information at its disposal.
 - D) Alternative cyanide discharge limitation determinations made pursuant to this subsection (b)(7) are subject to the limitations of Section 307.1103. Provided, however, Section 307.1103 may not be used to allow a discharge of total cyanide in excess of that otherwise allowed by this subsection (b)(7).
- 8) Allowances for non-metal-bearing waste streams.

- A) The control authority must establish discharge limitations for lead and zinc for waste streams not listed in Section 307.2490 and not otherwise determined to be “metal-bearing waste streams” if it determines that the wastewater metals contamination is due to background levels that are not reasonably avoidable, from such sources as intake water, corrosion of materials of construction, or contamination of raw materials.
- B) The control authority must base its determination made pursuant to subsection (b)(8)(A) of this Section on a review of relevant plant operating conditions, process chemistry, engineering, and sampling and analytical information.
- C) The control authority must set forth its determination made pursuant to subsection (b)(8)(A) of this Section in a written analysis of the sources and levels of the metals, based on the information at its disposal.
- D) The control authority may establish limitations for lead and zinc for non-metal-bearing waste streams for the purposes of subsection (b)(8)(A) of this Section between the following levels:
 - i) The lowest level that the control authority determines, based on best professional judgment, can be reliably measured; and
 - ii) The concentration of such metals present in the waste streams, but not to exceed the applicable limitations contained in Sections 307.2401 through 307.2407.
 - iii) For zinc, the applicable limitations that the discharge must not exceed are those appearing in the tables in Sections 307.2401 through 307.2407, not the alternative limitations for rayon fiber manufacture by the viscose process, as set forth in footnote 2 to the table in 40 CFR 414.25, incorporated by reference at Section 307.2401(c)(1), or the alternative limitations for acrylic fiber manufacture by the zinc chloride/solvent process, as set forth in footnote 2 to the table in 40 CFR 414.35, each incorporated by reference at Section 307.2402(c)(1).

- E) The limitations for individual dischargers must be set on a mass basis, by multiplying the concentration allowance established by the control authority times the process wastewater flow from the individual waste streams in which incidental metals are present.
- c) Compliance date. All dischargers subject to a pretreatment standard for existing sources in this Subpart O must have complied with the standard by no later than November 5, 1990.

40 CFR 423.13(k)(3) and (o), 423.18, and 423.19, as added at 85 Fed. Reg. 64650 (Oct. 13, 2020); and appendix A to 40 CFR 423 (2020). These incorporations include no later amendments or editions.

- A) Flue Gas Desulfurization (FGD) Wastewater Discharges by Electric Generating Units (EGUs) Seeking Voluntary Incentives Participation (VIP). The owner or operator of an EGU opting into VIP, may seek to operate under alternative standards for FGD wastewater, as defined in 40 CFR 423.11(n), incorporated by reference in subsection (b), discharges as provided in 40 CFR 423.13(g)(3)(i) after fulfilling the certification requirements in 40 CFR 423.19(a), (b), and (h).

BOARD NOTE: This subsection (c)(1)(A) derives from 40 CFR 423.13(g)(3)(i) and 423.19(h). USEPA calls VIP “Voluntary Incentives Program,” and the Board evokes enough of that name as is evocative but stops short of using the same name. USEPA stated that its Voluntary Incentives Program applies only to direct discharges and is not finalized as to indirect discharges. 85 Fed. Reg. 64650, 64660, 64675 (Oct. 13, 2020). USEPA’s rules, however, expressly contemplate applying its elements to indirect discharges. See 40 CFR 423.19(h)(3).

- B) Flue Gas Desulfurization (FGD) Wastewater Discharges by EGUs Initiating Cessation of Coal Burning. The owner or operator of an EGU that will undergo permanent cessation of coal combustion, as defined in 40 CFR 423.11(w), incorporated by reference in subsection (b), may seek to operate under alternative standards for FGD wastewater, as defined in 40 CFR 423.11(n), incorporated by reference in subsection (b), discharges as provided in 40 CFR 423.16(e)(1) after fulfilling the certification requirements in 40 CFR 423.19(a), (b), and (f).

BOARD NOTE: This subsection (c)(1)(B) derives from 40 CFR 423.16(e)(1) and 423.19(f).

- C) Notice of Material Delay. An EGU that will undergo permanent cessation of coal combustion or one that opted into VIP under alternative standards under subsection

(c)(1)(A) operating under alternative standards under subsection (c)(1)(B) must submit a notice of significant delay as required by 40 CFR 423.19(j).

BOARD NOTE: This subsection (c)(1)(C) derives from 40 CFR 423.19(j).

- D) FGD Wastewater Discharges by Low Utilization EGUs (LUEGUs). The owner or operator of an EGU that qualifies as a LUEGU, as defined in 40 CFR 423.11(z), incorporated by reference in subsection (b), may seek to operate under the alternative standards for FGD wastewater, as defined in 40 CFR 423.11(n), incorporated by reference in subsection (b), discharges provided in 40 CFR 423.16(e)(2) after fulfilling the certification requirements in 40 CFR 423.19(a), (b), and (e).

BOARD NOTE: This subsection (c)(1)(D) derives from 40 CFR 423.16(e)(2) and 423.19(e).

- E) Bottom Ash (BA) Transport Water Discharges. Discharge of BA transport water, as defined in 40 CFR 423.11(p), incorporated by reference in subsection (b), is prohibited and only allowed as provided in 40 CFR 423.16(g) after complying with the best management practices requirements of 40 CFR 423.13(k)(3) and fulfilling the certification requirements in 40 CFR 423.19(a) through (d).

BOARD NOTE: This subsection (c)(1)(E) derives from 40 CFR 423.13(k)(3), 423.16(g), and 423.19(c) and (d).

- F) EGUs Seeking to Transfer Between Applicable Discharge Limitations. Subject to the limitations in subsection (c)(1)(G), the owner or operator of an EGU may seek to transfer applicable discharge standards, as provided in 40 CFR 423.13(o), after fulfilling the certification requirements in 40 CFR 423.19(a), (b), and (i). The permissible transfers are the following:

- i) Before December 31, 2023, from limitations applicable to an EGU initiating cessation of coal

combustion under subsection (c)(1)(B) to those applicable to a LUEGU under subsection (c)(1)(D);

- ii) Before December 31, 2023, from VIP limitations under subsection (c)(1)(A) to those applicable to a LUEGU under subsection (c)(1)(D);
- iii) Before December 31, 2025, from VIP limitations under subsection (c)(1)(A) to those applicable to an EGU initiating cessation of coal combustion under subsection (c)(1)(D);
- iv) Before December 31, 2025, from limitations applicable to an EGU initiating cessation of coal combustion under subsection (c)(1)(B) to VIP limitations under subsection (c)(1)(A);
- v) Before December 31, 2025, from limitations applicable to a LUEGU under subsection (c)(1)(D) to generally applicable limitations for discharges of FGD wastewater and BA transport water under 40 CFR 423.16;
- vi) Before December 31, 2025, from limitations applicable to a LUEGU under subsection (c)(1)(D) to VIP limitations under subsection (c)(1)(A)
- vii) Before December 31, 2025, from limitations applicable to a LUEGU under subsection (c)(1)(D) to those applicable to an EGU initiating cessation of coal combustion under subsection (c)(1)(B).

BOARD NOTE: This subsection (c)(1)(F) derives from 40 CFR 423.13(o) and 423.19(i). USEPA calls VIP “Voluntary Incentives Program,” and the Board evokes enough of that name as is evocative but stops short of using the same name. USEPA stated that its Voluntary Incentives Program applies only to direct discharges and is not finalized as to indirect discharges. 85 Fed. Reg. 64650, 64708 n. 166 (Oct. 13, 2020). USEPA’s rules, however,

expressly contemplate applying its elements to indirect discharges. See 40 CFR 423.19(i)(1).

- G) Conditions for Transfer Between Applicable Discharge Limitations. Conditions apply to transfer between applicable discharge limitations:
- i) An EGU must comply with all currently applicable requirements before filing notice under 40 CFR 423.19(i) seeking transfer to other applicable discharge limitations, as provided in 40 CFR 423.13(o)(2); and
 - ii) An EGU seeking a transfer described in subsections (c)(1)(F)(iii) through (c)(1)(F)(vii) must comply with more stringent limitations that already apply, instead of the less stringent limitations sought.

BOARD NOTE: This subsection (c)(1)(G) derives from 40 CFR 423.13(o)(2) and (o)(3).

- H) An EGU that would otherwise qualify as an LUEGU or as ceasing combustion of coal before December 31, 2028 will continue to qualify if the conditions in 40 CFR 423.18 are true and after the owner or operator fulfills the certification requirements in 40 CFR 423.19(a), (b), and (g).

BOARD NOTE: This subsection (c)(1)(H) derives from 40 CFR 423.16(e)(1) and (e)(2), 423.18, and 423.19(g). The requirements of 40 CFR 423.18 directly apply to conditions in NPDES permits. The certification requirement of 40 CFR 423.19(g) allows the discharge standards for the LUEGU or EGU ceasing coal combustion subcategory continue to continue to apply to indirect dischargers under the same circumstances and conditions.

- 2) No person subject to the pretreatment standards incorporated by reference in subsection (c)(1) may cause, threaten, or allow the discharge of any contaminant to a POTW in violation of those standards.

SUBPART CL: PLASTICS MOLDING AND FORMING

Section 307.7300 General Provisions

- a) Applicability.
 - 1) This Subpart CL applies to any plastics molding and forming process that introduces or may introduce process wastewater pollutants into a POTW. Plastics molding and forming processes include processes that blend, mold, form, or otherwise process plastic materials into intermediate or final plastic products. They include commonly recognized processes such as extrusion, molding, coating and laminating, thermoforming, calendering, casting, foaming, cleaning, and finishing.
 - 2) Plastics molding and forming processes (e.g., extrusion and pelletizing) used by plastics resin manufacturers to process crude intermediate plastic material for shipment off-site are excluded from this regulation and regulated under the organic chemicals, plastics, and synthetic fibers category. Plastics molding and forming processes used by plastic resin manufacturers to process

crude intermediate plastic materials, which are further processed on-site into intermediate or final plastics products in molding and forming processes, are controlled by this Subpart CL.

- 3) Processes that coat a plastic material onto a substrate may fall within the definition of electroplating and metal finished as defined in Subpart N or AH of this Part. These coating processes are excluded from the electroplating and metal finishing point source categories and are subject to this Subpart CL.
 - 4) Coating of plastic material onto a formed metal substrate is also covered by this Subpart and is not covered by the specific metal forming guidelines such as aluminum forming, copper forming and nonferrous metals forming (Subparts BP, BQ, and BT of this Part). This Subpart CL applies only to the coating process; the metal forming operations are subject to the specific metal forming regulation.
 - 5) Research and development laboratories that produce plastic products using a plastics molding and forming process are subject to this Subpart CL if the plastics molding and forming process discharges process water. The mass of plastic product produced in the plastics molding and forming process is not considered when determining the applicability of this Subpart CL to plastics molding and forming processes at research and development laboratories.
 - 6) Chemical and thermal reticulation processes for polyurethane foam are not subject to this Subpart CL. Water used in those processes is not considered to be process water as defined in this regulation. Processes used to further mold or form the reticulated foam are subject, however, to this regulation if they discharge process water.
 - 7) Processes used to regenerate cellulose and to produce a product (e.g., rayon) from the regenerated cellulose are not subject to the limitations and standards in this Subpart. Processes that mold or form cellulose derivatives (e.g., cellulose acetate) are subject to this Subpart CL if they discharge process water.

SUBPART CP: ALUMINUM FORMING

Section 307.7700 General Provisions

- a) Applicability.

- 1) Aluminum forming includes commonly recognized forming operations such as rolling, drawing, extruding and forging, and related operations such as heat treatment, casting, and surface treatments. Surface treatment of aluminum is any chemical or electrochemical treatment applied to the surface of aluminum. Such surface treatment is considered to be a part of aluminum forming whenever it is performed as an integral part of aluminum forming. For the purposes of this Subpart CP, surface treatment of aluminum is considered to be an integral part of aluminum forming whenever it is performed at the same plant site at which aluminum is formed and such operations are not considered for regulation under the electroplating and metal finishing provisions of Subparts N and AH of this Part. Casting aluminum when performed as an integral part of aluminum forming and located on-site at an aluminum forming plant is considered an aluminum forming operation and is covered under this Subpart CP. When aluminum forming is performed on the same site as primary aluminum reduction the casting must be regulated by Subpart CT of this Part (nonferrous metals) if there is no cooling of the aluminum prior to casting. If the aluminum is cooled prior to casting then the casting must be regulated by this Subpart CP.
 - 2) This Subpart CP applies to any aluminum forming facility, except for plants identified under subsection (a)(3) of this Section, which introduces or may introduce pollutants into a POTW.
 - 3) This Subpart CP applies to indirect discharging aluminum forming plants that extrude less than three million pounds of product per year and draw, with emulsions or soaps, less than one million pounds per year.
