Monitoring wells MW-1 through MW-5 are located around a former ash pond which is no longer in operation. Monitoring wells MW-1 and MW-10 are located upgradient of this former ash pond. Monitoring wells MW-2 through MW-5 are located downgradient of it. All six of these wells are screened within the sand unit. None of these wells have any exceedances of boron or sulfate. The single boron exceedance noted in the VN for these wells was at well MW-1, which a further review has found to be a transcription error in the prior reporting to the Agency. (See corrected value for MW-1 in enclosed Tables) The boron levels both upgradient and downgradient of the former ash pond are similar to each other, further evidence that the former ash pond is not the source of groundwater impacts. Although there are alleged manganese exceedances in monitoring wells MW-4 and MW-5, the range of these manganese values was lower than in these wells than in the upgradient monitoring well MW-10. The single alleged nitrate exceedance in upgradient monitoring well MW-1 is an isolated, unconfirmed exceedance that is insufficient to prove a violation of the nitrate standard. Further, there are various sources of nitrate in groundwater that are not associated with ash pond operations, especially when no elevated levels of known coal ash indicator compounds are present, which is the case here.

The Agency's broad and all-encompassing allegations regarding the ash ponds are simply not supported by a careful evaluation of the underlying groundwater monitoring data for the respective monitoring wells that are located upgradient and downgradient of each of the subject ash ponds. The groundwater monitoring data on which the VN is based is not sufficient to show that the ash ponds are the source of the alleged exceedances.

## C. The Powerton Ash Ponds Are Not Causing Groundwater Exceedances

Because the Agency failed to specify which of the provisions of Section 12 of the Act MWG allegedly violated, MWG has had to speculate to identify the potential Section 12 violations this response needs to address. As stated above, MWG objects to the vagueness of, and legally deficient notice provided by, the VN and reserves its right to respond further when and if the Agency properly identifies the provisions of Section 12 on which it is relying.

[11] The single alleged exceedance for selenium in MW-7 that is included in the VN is due to a transcription error in prior reporting of monitoring results to the Agency. It has been corrected in the enclosed Tables.

For purposes of this response, based upon the regulations cited by the Agency in the VN, MWG has assumed that the Agency's alleged violations of Section 12 are limited to Sections 12(a), which prohibits causing or allowing water pollution, and to Section 12(d), which prohibits causing or allowing the creation of a water pollution hazard. 415 ILCS 5/12(a), (d). Based on these assumptions regarding the substance of the Illinois EPA's alleged violations, MWG submits that the Agency cannot show that the ash ponds at Powerton caused or allowed water pollution or created a water pollution hazard.

The overwhelming number of the alleged exceedances of the Class 1 groundwater standards are random and inconsistent. For all but a few of the parameters, the necessary confirmation of the existence of groundwater impacts above the Class 1 groundwater standards is absent. For the remaining few, the data is insufficient to prove that the source is one or more of the subject ash ponds.

To show a violation of Section 12(a) and 12(d), there must be a showing not only of the presence of a potential source of contamination, but also that it is in sufficient quantity and concentration to render the waters harmful. *Bliss v. Illinois EPA,* 138 Ill. App. 3d 699, 704 (1985) ("mere presence of a potential source of water pollutants on the land does not necessarily constitute a water pollution hazard"). In other words, there must be a causal link between the potential source and the water or groundwater. The groundwater monitoring data on which the Agency relies does not establish this essential causal link between the ash ponds and the groundwater. Therefore, the Agency has failed to meet its burden to prove that the ash ponds are the cause of the alleged exceedances of the groundwater standards as required to prove a violation of Sections 12(a) or 12(d) of the Act. 415 ILCS 5/12(a), (d).

Illinois EPA also alleges violations of the groundwater quality regulations based on exceedances of the groundwater quality standards in 35 Ill. Admin. Code § 620.401. There is no violation here of Section 620.401. Section 620.401 solely provides the legal criteria that groundwater must meet the standards appropriate to the groundwater's class. It is a foundational regulation, allowing for different classes of groundwater to meet different groundwater standards. It is not a prohibition regulation. There is no conduct prohibited by this section of the regulations in which MWG is alleged to have engaged. MWG cannot and did not violate Section 620.401.

The remaining alleged groundwater regulation violations, Sections 620.115, 620.301, 620.405, and 620.410 of the Board Regulations, are all based on the Agency's contention that MWG's operation of the ash ponds has caused the exceedances of the groundwater standards detected in the monitoring data. To sustain these allegations, the Agency must show that MWG caused a discharge of the subject constituents from ash ponds which in turn caused the

exceedances of the groundwater standards.[12] The relevant facts and circumstances do not support either conclusion.

The use and condition of the ash ponds does not support a finding that they are releasing constituents to the groundwater. They are not disposal sites. The ash is regularly removed from the ponds by MWG. The linings in two of the ash ponds are of sufficient permeability, consistent with accepted regulatory guidance, to prevent the release of constituents. Moreover, the groundwater down-gradient of the only unlined ash pond shows no impacts from coal ash constituents. Finally, pursuant to the terms of the Powerton Station's NPDES Permit, these ash ponds are part of the flow-through wastewater treatment process at the station. MWG's operation of the ash ponds has been carried out in accordance with the terms and conditions of the NPDES Permit. Under Section 12(f) of the Act, compliance with the terms and conditions of any permit issued under Section 39(b) of the Act is deemed compliance with this subsection.

Similarly, the groundwater data on which the Agency relies does not provide a sufficient scientific or technical evidentiary basis on which to conclude that the ash ponds are causing the alleged groundwater exceedances. The essential "causal link" between the ash ponds and the elevated constituents in the groundwater is missing. The data is at best inconclusive on this issue, while certain aspects of the data clearly point to other, unrelated causes.

Because the ash ponds have not been shown to have caused a release of any contaminants that are causing the groundwater exceedances, the Agency's VN does not support its claims that MWG has violated Sections 620.405 or 620.301 of the Board regulations. Accordingly, MWG also has not violated Section 620.115 of the Board regulations.

## III. Compliance Commitment Agreement

This VN should not have been issued. Given the absence of proof that the ash ponds are the cause of the alleged groundwater exceedances, the Agency's request for a Compliance Commitment Agreement (CCA) is an attempt to compel MWG to conduct unnecessary corrective action.

Moreover, with the pending federal regulatory process to enact regulations for the design and operation of ash ponds, it is prudent to await the outcome of the proposed federal regulations to determine whether any changes to the ash ponds construction or operation are required by those regulations. The Agency itself has previously advanced this position. In 2010, the Agency's Steven Nightingale testified before the Illinois Pollution Control Board that the Board should consider initiating a temporary moratorium on the closure of coal ash impoundments because of the U.S. EPA's intention to regulate them. (*See In the Matter of Ameren Ash Pond Closure Rules (Hutsonville Power Station): Proposed 35 Ill.Adm.Code Part 840.101 Through*

[12] *See People of the State of Illinois v. ESG Watts, Inc.*, PCB 96-107 slip op. at p. 41 (February 5, 1998) (By finding the respondent caused a discharge of constituents into the groundwater causing a violation of the Class II Groundwater standards, the Board found the respondent also violated 35 IAC §§ 620.301 and 620.115).

*840.152*, Docket R09-21 (October 7, 2010) at p. 64) On behalf of the Agency, Mr. Nightingale told the Board that if industry had to take action in the interim, it "could end up expending substantial money and resources only to find they are subject to additional and/or different closure requirements for those units." (*Id.*) The Agency's pursuit of this enforcement action, particularly given the deficiencies in its alleged evidence, also threatens to force MWG to take actions that may conflict with or otherwise differ from the requirements in the upcoming federal regulations.

As the hydrogeologic assessment showed, there is no threat to human health presented by the alleged exceedances of the groundwater standards. The hydrogeologic assessment investigated the presence of potable water sources within a 2,500-foot radius of the site. Six wells are located within the 2,500-foot radius of the site; however none of the wells are down-gradient of the ash ponds. In fact, two of the wells supply the Powerton Station with water, and are regularly sampled for potable water constituents. The sampling results have consistently been in compliance with potable water regulations.[13] In the absence of any potable groundwater receptors or use, groundwater at the Powerton site does not pose any risk to human health. Accordingly, awaiting the outcome of the federal regulatory proposal is appropriate under these circumstances.

Because MWG's preference is to cooperate with the Agency in this matter, MWG presents here a proposed CCA that should be acceptable based on the relevant facts and circumstances. The proposed CCA terms are as follows:

A. The ash ponds will not be used as disposal sites and ash will continue to be removed from the ponds on a periodic basis.

B. MWG has installed a new liner in the Ash Bypass Basin that provides protection against the migration of ash constituents to the groundwater.

C. The ash ponds and the Ash Bypass Basin will be maintained and operated in a manner which protects the integrity of the existing liners. During the removal of ash from the ponds, appropriate procedures will be followed to protect the integrity of the existing liners, including operating the ash removal equipment in a manner which minimizes the risk of any damage to the liner.

D. During the ash removal process, visual inspections of the ponds will be conducted to identify any signs of a breach in the integrity of the pond liner. In the event that a breach of the pond liner is detected, MWG will notify the Agency and will submit a corrective action plan for repair or replacement, as necessary, of the liner. Upon the Agency's approval, and the issuance of any necessary construction permit, MWG will implement the correction action plan.

[13] See previously submitted Hydrogeologic Assessment of Midwest Generation Electric Generation Stations: Will County Station, Waukegan Station, Joliet 29 Station, Crawford Station, Powerton Station.

E. MWG proposes to establish a Groundwater Management Zone ("GMZ") below the ash ponds pursuant to Section 620.250 of the Board's regulations. 35 Ill. Admin. Code § 620.250. The corrective action required by the GMZ regulations is addressed by the existing pond liners. MWG is also willing to evaluate the inclusion of institutional controls regarding the area of impacted groundwater, provided that any institutional controls allow for the continued use of the Powerton potable water wells which are located outside of the subject area and for which regular, repeated testing has confirmed are not affected.

F. MWG will continue to monitor the groundwater through the existing fifteen groundwater monitoring wells and report its findings to Illinois EPA, pursuant to Section 620.250(c) of the GMZ Regulations, 35 Ill. Admin. Code § 620.250(c). MWG reserves the right to request the Agency's approval of a cessation of all or some of the monitoring requirements based on future monitoring results.

G. MWG will continue to monitor the development of the Coal Combustion Residuals Proposed Rules, EPA-HQ-RCRA-2009-0640. When the final rule is issued, MWG will promptly notify Illinois EPA how it will comply with the new Federal Rules.

This letter constitutes our response to and proposed CCA for the Violation Notice W-2012-00057. MWG also reserves the right to raise additional defenses and mitigation arguments as may be necessary, in defense of the allegations listed in the Violation Notice in the event of any future enforcement. We look forward to discussing the above information further at the soon to be scheduled meeting with the Agency's representatives. Please contact me to schedule a mutually convenient date for the meeting.

Very truly yours,

Susan M. Franzetti

PATRICK
ENGINEERING

August 18, 2010

Mr. Joe Bocian
Project Manager
Edison Mission Energy (EME)
Midwest Generation, LLC
235 Remington Boulevard
Suite A
Bolingbrook, Illinois 60440

Subject: Proposal for Ash Pond Investigation
Powerton Generating Station
Pekin, Illinois
Reference: Patrick Proposal Number: 2B053.568

Dear Mr. Bocian:

Patrick Engineering Inc. (Patrick) is pleased to present this proposal to Midwest Generation, LLC (MWG) to implement a hydrogeologic assessment plan at the on-site ash impoundment areas at the Powerton Generating Station in Pekin, Illinois (the Site).

This assessment is to be performed as a result of numerous communications between MWG and the Illinois Environmental Protection Agency (Illinois EPA), the most recent being a meeting held at the Illinois EPA's offices in Springfield, Illinois on June 10, 2010. During that meeting, a conceptual approach to completing hydrogeologic assessments of MWG's ash ponds at a number of sites (including Powerton) was presented by MWG and agreed to by the Illinois EPA. This letter proposal describes the scope of work associated with that conceptual agreement, and includes a schedule for its implementation, and its associated costs.

## SCOPE OF SERVICES

The scope of work conceptually outlined during the June 10, 2010 meeting with the Illinois EPA is outlined below:

Task 1: Installation of Groundwater Monitoring Wells
Task 2: Hydraulic Testing of Selected Wells
Task 3: Topographic and Water Elevation Surveys
Task 4: Sampling and Analytical Testing
Task 5: Assessment Reporting

Each of these tasks is described briefly below.

MWG13-15_10759

**Task 1: Installation of Groundwater Monitoring Wells**
Ten (10) permanent groundwater monitoring wells will be installed approximately 400 feet apart around the perimeter of the ash disposal ponds. Two of the wells will be up-gradient of the ponds; the other eight wells will be down-/side-gradient wells. The borings will be advanced using hollow-stem augers to an approximate depth of 40 feet below ground surface. Soil samples will be collected at regular intervals and logged by the geologist/engineer. The final depth of the borings will be determined in the field by an experienced geologist/engineer based upon the depth that groundwater is encountered. Upon termination of the soil borings, a 2-inch-diameter PVC well will be installed in order to collect samples of the groundwater in the uppermost aquifer. The actual depth of the screened interval will be determined in the field. The wells will be completed to approximately 3 feet above grade with PVC casing and covered with a stick-up, steel well protector.

**Task 2: Hydraulic Conductivity Testing**
All wells will be developed using either peristaltic pump (low flow) or by hand bailing until at least three well volumes have been removed and the evacuated water appears clear. Five of the ten wells will be selected for hydraulic conductivity testing using rising- and falling-head slug tests. Each slug test will be performed by inserting a 'slug' into the well and instantaneously displacing water in the well. A down-hole water level measuring and recording device will measure the rate at which the water level returns to its static level. The slug will then be removed, lowering the water level in the well, and we will again measure the rate at which the water level recovers to its static level. This data will be used to calculate the hydraulic conductivity of the uppermost aquifer at the Site.

**Task 3: Water Elevation and Topographic Surveying**
The top-of-casing and ground surface elevations of all installed monitoring wells will be surveyed as well as groundwater elevations within each of the monitoring wells. The survey crew will also concurrently measure the water elevation in all of the ash ponds, Lake Powerton, the Illinois River, the intake and outflow channels, and other surface water bodies nearby. This data will assist Patrick in determining the hydrogeologic flow characteristics of the Site. The survey data will also assist Patrick in constructing geologic cross-sections of the Site.

**Task 4: Groundwater Sampling and Analytical Testing**
Groundwater elevation will be measured in each of the ten wells, and pH and conductivity measurements will be obtained using a portable meter. Groundwater samples will be collected from each of the wells with a peristaltic pump, using low-flow sampling techniques. The groundwater samples will be filtered in the field using a disposable, 0.45µm, in-line filter to allow for the analytical testing of dissolved compounds. The samples will be immediately placed on ice in a cooler and kept at a temperature no higher than 4°F. The samples will be transported to TestAmerica, an Illinois-EPA accredited analytical laboratory, under strict chain-of-custody procedures.

The analytical laboratory will test groundwater samples from each of the wells for the compounds listed in the attached Table 1. Proposed analytes include the inorganic compounds

listed in Illinois Administrative Code, Title 35: Environmental Protection, Part 620, Groundwater Quality, Section 620.410(a), excluding radium and poly-aromatic hydrocarbons (PAHs) listed in Section 620.410(b).

**Task 5: Assessment Reporting**
Patrick will develop a summary report detailing the field methods employed and results of the assessment investigation. This report will include soil boring logs and monitoring well construction diagrams, geologic cross-sections, analytical data tables, hydraulic conductivity testing results, a potentiometric surface map, and a map detailing locations of nearby potable water wells. A draft copy of the report will be forwarded to MWG for review and comment. Patrick will resolve and incorporate MWG comments and prepare a final report for submittal to the Illinois EPA.

Throughout implementation of the ash pond assessment, Patrick will communicate and coordinate the investigative effort with MWG through a series of phone calls/conferences and periodic meetings as needed. We have assumed that at least one weekly meeting (in person or via phone) will be needed throughout the duration of the investigation project.

## ASSUMPTIONS AND LIMITATIONS

Patrick has made certain assumptions in preparing this proposal:

1. MWG will provide access to the Site during normal business hours (7:00 am to 6:00 pm);
2. Groundwater will be encountered within 30 feet of ground surface;
3. All field work will be accomplished using modified Level C personal protective equipment; and
4. Any soil cuttings generated during well installation can be scattered on the ground surface around the boring/monitoring well locations or otherwise disposed of on site.

## PROJECT FEE AND AGREEMENT

Patrick proposes to perform the Scope of Work described above on a time-and-materials basis, under the terms and conditions of the existing agreement between Patrick and Midwest Generation, LLC (Terms and Conditions for Procurement of Services and Materials, dated April 15, 2004). The estimated budget for the above Scope of Work is shown below:

| | | |
|---|---|---|
| Task 1: Installation of Ten Groundwater Monitoring Wells | | |
| A. Subcontract Drilling | | $25,000 |
| B. Patrick Oversight | | $16,500 |
| Task 2: Hydraulic Testing of Selected Wells | | $ 9,000 |
| Task 3: Topographic and Water Elevation Surveys | | $11,000 |
| Task 4: Groundwater Sampling (Patrick Labor only) | | $12,000 |
| Task 5: Assessment Reporting | | $19,000 |
| | **Total:** | **$ 92,500** |

The actual costs for these services may vary based on the effort necessary to complete the scope of services as described above. The budget will not be exceeded without prior MWG approval.

The fees for Task 1 include the cost for Patrick to sub-contract a drilling firm to install the monitoring wells. Patrick sent out bid packages to four (4) drilling contractors with whom we have prior experience. The cost incorporated into the fee for Task 1 reflects the lowest of these bids. MWG will subcontract directly with TestAmerica, Inc. for analytical testing costs.

**SCHEDULE**

Patrick is available to begin work immediately on the scope of services outlined herein. Patrick can begin mobilizing to the Site within two weeks of Illinois EPA approval of the Hydrogeologic Assessment Plan discussed in an earlier proposal. A draft assessment report is expected to be submitted to MWG for the Powerton Site by mid October 2010.

Patrick appreciates this opportunity to provide professional services to Midwest Generation, LLC. Should you have any questions, please feel free to call either of us at 630-795-7200.

Sincerely,

**PATRICK ENGINEERING INC.**

Re: Groundwater Monitoring and Reporting – Various Midwest Generation Stations

Dear _____:

Midwest Generation EME, LLC (Midwest Generation) is interested in obtaining a proposal and cost estimate from your firm to assist in implementing a groundwater monitoring program at various Midwest Generation facilities in the vicinity of coal combustion ash or other specific impoundments. Enclosed are the following:

- Attachment 1 – Project Objective and Scope of Work
- Attachment 2 – Costing Sheet
- Attachment 3 – Summary table and location figures

Your proposal is to include, at a minimum, the following:

- Understanding of project objectives and scope of work
- Completed costing sheets
- Assumptions used for developing the cost estimate
- Project team and experience

Complete proposals must be submitted to me no later than close of business _____, 2010. If you have any questions, please contact me at 630-771-7862.

Sincerely,
MIDWEST GENERATION EME, LLC

Maria L. Race
Environmental Program Director

# ATTACHMENT 1

## Scope of Work

## INTRODUCTION

Midwest Generation is in the process of establishing a routine detection groundwater monitoring program in the vicinity of coal combustion ash impoundments at five (5) of the generating stations in anticipation of upcoming regulatory changes. In addition, at the Powerton Station, groundwater monitoring programs are being established as part of permit requirements for the Bypass Basin and the Metal Cleaning Basin. The objective of each sampling program is to provide detection monitoring for specific impoundments to determine whether or not a potential release may have occurred from the monitored unit. The number of wells to be sampled, frequency of sampling, sampling procedures, analytical requirements and reporting requirements are specified below. Monitoring wells have already been installed at each of the locations.

## NUMBER OF WELLS AND SAMPLING FREQUENCY

The number of monitoring wells per site and associated sampling frequencies are summarized below. Table 1 provides a summary of well numbers, well depths, casing elevations, screened intervals and depths to groundwater at each location. Approximate well location maps are provided on Figures 1 through 5.

| Station | Impoundment Type | No. of Wells | Sampling Frequency |
|---|---|---|---|
| Powerton | Coal Ash | 15 | Quarterly |
| | Bypass Basin | 3 | Bi-monthly first year, quarterly thereafter. |
| | Metal Cleaning Basin | 3 | Bi-monthly first year, quarterly thereafter. |
| Joliet #29 | Coal Ash | 11 | Quarterly |
| Will County | Coal Ash | 10 | Quarterly |
| Waukegan | Coal Ash | 5 | Quarterly |
| Crawford | Coal Ash | 2 | Quarterly |

## SAMPLING PROCEDURES

All wells are to be sampled using standard low flow sampling methodology. The following general procedures are to be used:

MWG13-15_10766

- Measure and record depth to groundwater from top of casing to an accuracy of 0.01 feet. Measure and record depth of well. For samples collected at the Powerton Station surrounding the Bypass Basin and Metal Cleaning Basin also record depth of water relative to land surface (below land surface (bls)).

- Place the low flow pump intake within the center of the screened interval.

- Initiate pumping at the lowest rate possible (e.g., 0.1 liters/minute) to minimize drawdown in the well. Record start time.

- Record initial field parameter readings of temperature, specific conductance, pH, dissolved oxygen (DO), oxidation-reduction potential (ORP) and turbidity.

- Record drawdown and adjust pumping rate as appropriate.

- Continue monitoring field parameters until stable readings are obtained for all field parameters. Record stabilized readings. Record final water level. Record time.

- Collect samples directly into laboratory prepared containers.

All purge water is to be containerized and discharged back into the impoundment.

## ANALYTICAL REQUIREMENTS

All samples will be analyzed by TestAmerica or PDC (in the case of Powerton)under the existing contract between TestAmerica or PDC and Midwest Generation. TestAmerica or PDC will bill Midwest Generation directly for the analyses. The contractor will need to coordinate with the laboratory for obtaining the appropriate number and type of sample containers (preservatives, etc.). The following parameters are to be analyzed for:

| Station | Impoundment Type | Analytical Parameter List Reference |
|---|---|---|
| Powerton | Coal Ash | IAC 620.410 (a) and (d) except radium 226/228 |
| | Bypass Basin | IAC 620.410 (a) and (d) including radium 226/228 |
| | Metal Cleaning Basin | IAC 620.410 (a) and (d) including radium 226/228 |
| Joliet #29 | Coal Ash | IAC 620.410 (a) and (d) except radium 226/228 |
| Will County | Coal Ash | IAC 620.410 (a) and (d) except radium 226/228 |
| Waukegan | Coal Ash | IAC 620.410 (a) and (d) except radium 226/228 |
| Crawford | Coal ash | IAC 620.410 (a) and (d) except radium 226/228 |

IAC – Illinois Administrative Code

MWG13-15_10767

REPORTING REQUIREMENTS

Upon completion of each sampling event, a summary letter report is to be prepared which is to include, but not be limited to:

- Documentation of field activities.
- Water elevation summary table inclusive of all previous measurements.
- Analytical data summary table inclusive of all previous data.
- Groundwater flow map.
- Attachments of field sampling sheets and analytical data packages.

Upon completion of the first year of monitoring, the annual report submittal should also include:

- Trend analysis (time versus concentration curves) for each parameter.
- Calculation of background statistics based on upgradient monitoring well location data for each unit monitored in accordance with guidance provided in IAC 811.320(e).
- Comparisons of downgradient monitoring well data to the calculated background statistical concentrations for each parameter.
- Evaluation of the adequacy of the groundwater monitoring system for release detection.

Two hard copies and an electronic copy of each submittal are to be provided to Midwest Generation within 30-days of receipt of all analytical data.

MWG13-15_10768

**Re: Violation Notice: Midwest Generation, LLC, Powerton Generating Station**
**Identification No.: 6282**
**Violation Notice No.: W-2012-00057**

Dear Mr. Constantelos:

This constitutes a Violation Notice pursuant to Section 31(a)(1) of the Illinois Environmental Protection Act ("Act"), 415 ILCS 5/31(a)(1), and is based upon a review of available information and an investigation by representatives of the Illinois Environmental Protection Agency ("Illinois EPA").

The Illinois EPA hereby provides notice of alleged violations of environmental laws, regulations, or permits as set forth in Attachment A to this notice. Attachment A includes an explanation of the activities that the Illinois EPA believes may resolve the specified alleged violations. Due to the nature and seriousness of the alleged violations, please be advised that resolution of the violations may also require the involvement of a prosecutorial authority for purposes that may include, among others, the imposition of statutory penalties.

A written response, which may include a request for a meeting with representatives of the Illinois EPA, must be submitted via certified mail to the Illinois EPA within 45 days of receipt of this letter. If a meeting is requested, it shall be held within 60 days of receipt of this notice. The response must include information in rebuttal, explanation, or justification of each alleged violation and a statement indicating whether or not the facility wishes to enter into a Compliance Commitment Agreement ("CCA") pursuant to Section 31(a) of the Act. If the facility wishes to enter into a CCA, the written response must also include proposed terms for the CCA that includes dates for achieving each commitment and may include a statement that compliance has been achieved for some or all of the alleged violations. The proposed terms of the CCA should contain sufficient detail and must include steps to be taken to achieve compliance and the necessary dates by which compliance will be achieved.

The Illinois EPA will review the proposed terms for a CCA provided by the facility and, within 30 days of receipt, will respond with either a proposed CCA or a notice that no CCA will be issued by the Illinois EPA. If the Illinois EPA sends a proposed CCA, the facility must respond in writing by either agreeing to and signing the proposed CCA or by notifying the Illinois EPA that the facility rejects the terms of the proposed CCA.

If a timely written response to this Violation Notice is not provided, it shall be considered a waiver of the opportunity to respond and meet, and the Illinois EPA may proceed with referral to a prosecutorial authority.

Written communications should be directed to:

Illinois EPA – Division of Public Water Supplies
Attn: Andrea Rhodes, CAS #19
P.O. BOX 19276
Springfield, IL 62794-9276

All communications must include reference to this Violation Notice number, W-2012-00057.

Questions regarding this Violation Notice should be directed to Andrea Rhodes at 217/785-0561.

Sincerely,

Michael Crumly
Manager, Compliance Assurance Section
Division of Public Water Supplies
Bureau of Water

CASE ID: 2012-006

**ATTACHMENT A**

**MIDWEST GENERATION, LLC, POWERTON GENERATING STATION, ID:6282**
**VIOLATION NOTICE NO. W-2012-00057:**

A review of information available to the Illinois EPA indicates the following on-going violations of statutes, regulations, or permits. Included with each type of violation is an explanation of the activities that the Illinois EPA believes may resolve the violation.

**Groundwater Quality**

No person shall cause, threaten or allow the release of any contaminant to a resource groundwater such that: treatment or additional treatment is necessary to continue an existing use or to assure a potential use of such groundwater; or an existing or potential use of such groundwater is precluded. No person shall cause, threaten or allow the release of any contaminant to groundwater so as to cause a groundwater quality standard to be exceeded. Midwest Generation, LLC must take actions to mitigate existing contamination and prevent the continuing release of contaminants into the environment.

**Violation Description**

Operations at ash impoundments have resulted in violations of the Groundwater Quality Standards at monitoring well MW-1 for the following constituents:

| Parameter | Sample Value | GW Standard | Collection Date |
|---|---|---|---|
| pH | 6.39 su | 6.5-9.0 su | 12/12/2011 |
| Boron | 2.9 mg/l | 2.0 mg/l | 3/19/2012 |
| Nitrate | 11 mg/l | 10.0 mg/l | 9/20/2011 |

Rule/Reg. Section 12 of the Act, 415 ILCS 5/12, 35 Ill. Adm. Code 620.115, 620.301, 620.401, 620.405, and 620.410.

**Violation Description**

Operations at ash impoundments have resulted in violations of the Groundwater Quality Standards at monitoring well MW-2 for the following constituents:

| Parameter | Sample Value | GW Standard | Collection Date |
|---|---|---|---|
| pH | 6.41 su | 6.5-9.0 su | 12/12/2011 |

Rule/Reg. Section 12 of the Act, 415 ILCS 5/12, 35 Ill. Adm. Code 620.115, 620.301, 620.401, 620.405, and 620.410.

**Re: Compliance Commitment Acceptance**
**Violation Notice: W-2012-00057**
**Midwest Generation, LLC, Powerton Generating Station; ID Number: 6282**

Dear Mr. Kennedy:

The Illinois Environmental Protection Agency ("Illinois EPA") has approved the Compliance Commitment Agreement ("CCA") for Midwest Generation, LLC, Powerton Generating Station. Please find enclosed an executed copy of the CCA for your records.

Failure to fully comply with the CCA may, at the sole discretion of the Illinois EPA, result in referral of this matter to the Office of the Attorney General, the State's Attorney or the United States Environmental Protection Agency.

The CCA does not constitute a waiver or modification of the terms and conditions of any license or permit issued by the Illinois EPA or any other unit or department of local, state or federal government or of any local, state or federal statute or regulatory requirement.

Questions regarding this matter should be directed to Andrea Rhodes at 217/785-0561. Written communications should be directed to the Illinois Environmental Protection Agency, Bureau of Water, CAS #19, P.O. Box 19276, Springfield, IL 62794-9276, and all communications shall include reference to your Violation Notice Number W-2012-00057.

Sincerely,

Michael Crumly
Manager, Compliance Assurance Section
Division of Public Water Supplies
Bureau of Water

**COMPLIANCE COMMITMENT AGREEMENT**

## I. Jurisdiction

1. This Compliance Commitment Agreement ("CCA") is entered into voluntarily by the Illinois Environmental Protection Agency ("Illinois EPA") and Midwest Generation, LLC, Powerton Generating Station ("Respondent") (collectively, the "Parties") under the authority vested in the Illinois EPA pursuant to Section 31(a)(7)(i) of the Illinois Environmental Protection Act ("Act"), 415 ILCS 5/31(a)(7)(i).

## II. Allegation of Violations

2. Respondent owns and operates Powerton Generating Station in Pekin, Tazewell County, Illinois ("Powerton").

3. Pursuant to Violation Notice ("VN") W-2012-00057 issued on June 11, 2012, the Illinois EPA contends that Respondent has violated the following provisions of the Act and Illinois Pollution Control Board ("Board") Regulations:

   a) Operations at ash impoundments have resulted in violations of the Groundwater Quality Standards at monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, and MW-15. Section 12 of the Act, 415 ILCS 5/12, 35 Ill. Adm. Code 620.115, 620.301, 620.401, 620.405, and 620.410.

## III. Compliance Activities

4. On September 4, 2012, the Illinois EPA received Respondent's response to VN W-2012-00057, which included proposed terms for a CCA. The Illinois EPA has reviewed Respondent's proposed CCA terms, as well as considered whether any additional terms and conditions are necessary to attain compliance with the alleged violations cited in the VN.

5. Respondent agrees to undertake and complete the following actions, which the Illinois EPA has determined are necessary to attain compliance with the allegations contained in VN W-2012-00057:

   a) The ash ponds at Powerton shall not be used as permanent disposal sites and shall continue to function as treatment ponds to precipitate ash. Ash shall continue to be removed from the ponds on a periodic basis.

   b) The ash treatment ponds shall be maintained and operated in a manner which protects the integrity of the existing liners. During the removal of ash from the ponds, appropriate procedures shall be followed to protect the integrity of the existing liners, including operating the ash removal equipment in a manner which minimizes the risk of any damage to the liner.

   c) During the ash removal process, visual inspections of the ponds shall be conducted to identify any signs of a breach in the integrity of the pond liners. In the event that a breach of the pond liners is detected, Midwest Generation shall promptly notify the Illinois EPA and shall implement a corrective action plan for repair or replacement as necessary, of the liner. Upon the Illinois EPA's approval, and the issuance of any necessary construction permit, Midwest Generation will implement the corrective action plan.

   d) Midwest Generation shall monitor the new well as described in 5(f) below and the existing fifteen groundwater monitoring wells quarterly for constituents in 35 Ill. Adm. Code 620.410(a) and (d), with the exception of radium 226 and 228, and report its findings to the Illinois EPA within 30 days of the end of each quarter. In addition, Midwest Generation shall record and report groundwater elevation and submit a potentiometric surface map with the above quarterly groundwater monitoring report.

   e) Within 90 days of the effective date of the CCA, Midwest Generation shall submit an application for a construction permit to re-line the Ash Surge Basin and the Secondary Ash Settling Basin at Powerton with a 60 mil thickness high density polyethylene ("HDPE") liner or an Illinois EPA approved equivalent material.

   f) Midwest Generation shall install an additional groundwater monitoring well south of monitor well 9, in a location approved by the Illinois EPA, to better define up gradient groundwater quality, within 60 days of the effective date of the CCA.

g) Midwest Generation shall submit an application to establish a GMZ pursuant to 35 Ill. Adm. Code Part 620.250 within 90 days of the effective date of the CCA.

h) Midwest Generation shall enter into an Environmental Land Use Control (ELUC) to cover the area of the Powerton Station property which is contained within the GMZ. Midwest Generation shall submit a proposed draft ELUC to the Illinois EPA for review and comment within 90 days of the effective date of the CCA.

i) Midwest Generation shall record the ELUC within 30 days of approval of the ELUC by the Illinois EPA.

j) Midwest Generation shall establish a GMZ pursuant to 35 Ill. Adm. Code Part 620.250 within one year of the effective date of the CCA.

k) Once the Ash Surge Basin and the Secondary Ash Settling Basin have been lined and a GMZ and ELUC have been established at Powerton, Midwest Generation shall submit a certification (or a statement) of compliance. Midwest Generation may submit either the attached "Illinois EPA Compliance Statement" or another similar writing to satisfy the statement of compliance within one year of the effective date of the CCA.

l) Midwest Generation shall not allow the East Yard Run-off Basin to be part of the ash sluicing flow system. Further, Midwest Generation shall submit monitoring results from water contained in the East Yard Run-off Basin proximate to outfall monitoring point 003 within 60 days of the effective date of the CCA. Quarterly monitoring of the East Yard Run-off Basin shall be for the constituents listed in 35 Ill. Adm. Code 620.410(a) and (d) with the exception of radium 226 and radium 228. At the end of four (4) quarters of monitoring, Midwest Generation may request cessation of water monitoring from the East Yard Run-off Basin.

m) Midwest Generation shall not use any unlined areas for permanent or temporary ash storage or ash handling.

## IV. Terms and Conditions

6. Respondent shall comply with all provisions of this CCA, including, but not limited to, any appendices to this CCA and all documents incorporated by reference into this CCA. Pursuant to Section 31(a)(10) of the Act, 415 ILCS 5/31(a)(10), if Respondent complies with the terms of this CCA, the Illinois EPA shall not refer the alleged violations that are the subject of this CCA, as described in Section II above, to the Office of the Illinois Attorney General or the State's Attorney of the county in which the alleged violations occurred. Successful completion of this CCA or an amended CCA shall be a factor to be weighed, in favor of the Respondent, by the Office of the Illinois Attorney General in determining whether to file a complaint on its own motion for the violations cited in VN W-2012-00057.

7. This CCA is solely intended to address the violations alleged in Illinois EPA VN W-2012-00057. The Illinois EPA reserves and this CCA is without prejudice to, all rights of the Illinois EPA against Respondent with respect to noncompliance with any term of this CCA, as well as to all other matters. Nothing in this CCA is intended as a waiver, discharge, release, or covenant not to sue for any claim or cause of action, administrative or judicial, civil or criminal, past or future, in law or in equity, which the Illinois EPA may have against Respondent, or any other person as defined by Section 3.315 of the Act, 415 ILCS 5/3.315. This CCA in no way affects the responsibilities of Respondent to comply with any other federal, state or local laws or regulations, including but not limited to the Act, and the Board Regulations [and Permit, if applicable].

8. Pursuant to Section 42(k) of the Act, 415 ILCS 5/42(k), in addition to any other remedy or penalty that may apply, whether civil or criminal, Respondent shall be liable for an additional civil penalty of $2,000 for violation of any of the terms or conditions of this CCA.

9. This CCA shall apply to and be binding upon the Illinois EPA, and on Respondent and Respondent's officers, directors, employees, agents, successors, assigns, heirs, trustees, receivers, and upon all persons, including but not limited to contractors and consultants, acting on behalf of Respondent, as well as upon subsequent purchasers of Respondent's Powerton in Pekin, Tazewell County, Illinois.

10. In any action by the Illinois EPA to enforce the terms of this CCA, Respondent consents to and agrees not to contest the authority or jurisdiction of the Illinois EPA to enter into or enforce this CCA, and agrees not to contest the validity of this CCA or its terms and conditions.

11. This CCA shall only become effective:

    a) If, within 30 days of receipt, Respondent executes this CCA and submits it, via certified mail, to Illinois EPA, Bureau of Water, Andrea Rhodes, MC #19, 1021 North Grand Ave East, Springfield, IL 62702. If Respondent fails to execute and submit this CCA within 30 days of receipt, via certified mail, this CCA shall be deemed rejected by operation of law; and

    b) Upon execution by all Parties.

12. Pursuant to Section 31(a)(7.5) of the Act, 415 ILCS 5/31(a)(7.5), this CCA shall not be amended or modified prior to execution by the Parties. Any amendment or modification to this CCA by Respondent prior to execution by all Parties shall be considered a rejection of the CCA by operation of law. This CCA may only be amended subsequent to its effective date, in writing, and by mutual agreement between the Illinois EPA and Respondent's signatory to this CCA, Respondent's legal representative, or Respondent's agent.

Re: Compliance Commitment Agreement – Groundwater Management Zone Application
Midwest Generation, LLC, Powerton Generating Station; ID No. 6282
Violation Notice W-2012-00057

Dear Ms. Rhodes:

The Compliance Commitment Agreement (CCA) for the above referenced site relative to Violation Notice W-2012-00057 was signed by Midwest Generation on October 15, 2012 and executed by Illinois Environmental Protection Agency (IEPA) signature on October 24, 2012 (effective date). Item 5 (g) of the CCA requires Midwest Generation to submit an application to establish a Groundwater Management Zone (GMZ) pursuant to 35 Ill. Adm. Code Part 620.250 within 90 days of the effective date of the CCA.

Based on previous discussions with IEPA, the proposed areal extent of the GMZ is shown on Figure 1 in Attachment 1. The GMZ Application Forms (Parts I through III) and supporting information/data are provided in Attachment 2. As discussed in the Application Forms support documentation, groundwater flow within the silt/clay unit in the vicinity of the subject ash basins is in a westerly direction with discharge to the adjoining intake channel and groundwater flow within the gravelly sand unit is to the north with discharge to the Illinois River. The western (downgradient) extent of the proposed GMZ corresponds with the hydraulic boundary formed by the intake channel. The northern extent corresponds with the hydraulic boundary formed by the Illinois River. The southern and eastern boundaries are defined by the property boundary. The vertical extent of the GMZ would be defined by the top of the Carbondale Formation which is estimated to be approximately 70 feet below ground surface based on other site boring logs from other portions of the property.

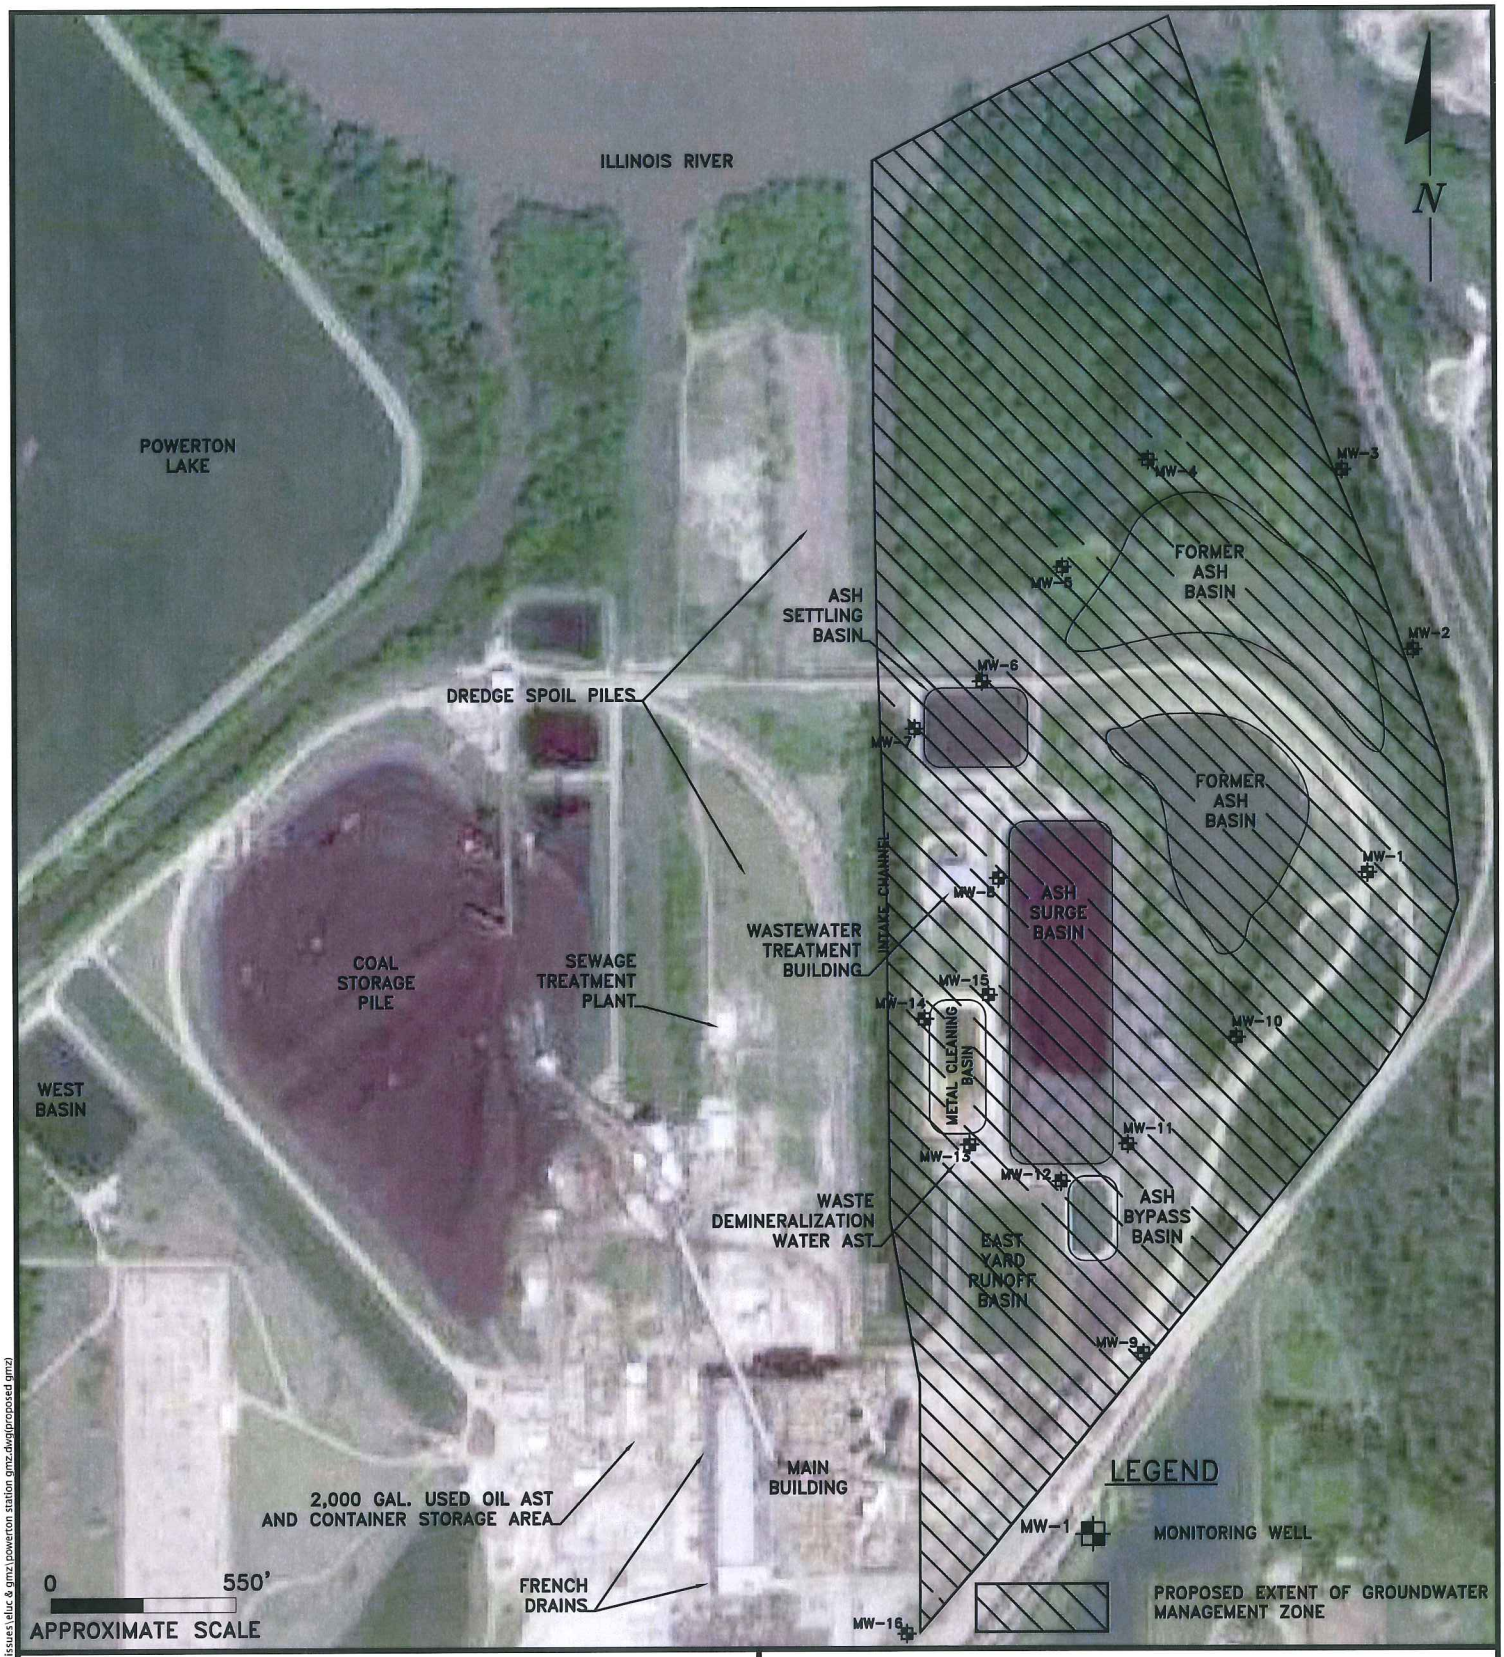
Suite A
Bolingbrook, Il 60440
Tel: 630 771 7863
Fax: 949 225 0813
ahanrahan@mwgen.com

This submittal fulfills the requirements set forth under Item 5 (g) of the signed CCA. Once the application is approved by IEPA and the proposed extent of the GMZ is agreed upon, a formal surveying of the area will be performed and legal description generated. Please call me at 630-771-7863 if there are any questions.



Sincerely,
Midwest Generation, LLC

Amy Hanrahan
Senior Environmental Engineer

## Completed GMZ Application Forms (Parts I through III)

**Section 620.APPENDIX D Confirmation of an Adequate Corrective Action Pursuant to 35 Ill. Adm. Code 620.250(a)(2)**

Pursuant to 35 Ill. Adm. Code 620.250(a) if an owner or operator provides a written confirmation to the Agency that an adequate corrective action, equivalent to a corrective action process approved by the Agency, is being undertaken in a timely and appropriate manner, then a groundwater management zone may be established as a three-dimensional region containing groundwater being managed to mitigate impairment caused by the release of contaminants from a site. This document provides the form in which the written confirmation is to be submitted to the Agency.

Note 1. Parts I and II are to be submitted to IEPA at the time that the facility claims the alternative groundwater standards. Part III is to be submitted at the completion of the site investigation. At the completion of the corrective process, a final report is to be filed which includes the confirmation statement included in Part IV.

Note 2. The issuance of a permit by IEPA's Division of Air Pollution Control or Water Pollution Control for a treatment system does not imply that the Agency has approved the corrective action process.

Note 3. If the facility is conducting a cleanup of a unit which is subject to the requirements of the Resource Conservation and Recovery Act (RCRA) or the 35 Ill. Adm. Code 731 regulations for Underground Storage Tanks, this confirmation process is not applicable and cannot be used.

Note 4. If the answers to any of these questions require explanation or clarification, provide such in an attachment to this document.

Part I. Facility Information

Facility Name Powerton Generating Station

Facility Address 13082 E. Manito Rd.
Pekin, IL

County Tazewell County

Standard Industrial Code (SIC) 4911

1. Provide a general description of the type of industry, products

manufactured, raw materials used, location and size of the facility.

The Midwest Generation Powerton Station is a coal-fired electrical power generating station in operation since the 1920s. The facility is located at 13082 E. Manito Road in Pekin, Illinois. The generating station property covers an area of approximately 1,710 acres plus approximately 1,440 acres for Powerton Lake.

2. What specific units (operating or closed) are present at the facility which are or were used to manage waste, hazardous waste, hazardous substances or petroleum?

| | YES | NO |
|---|---|---|
| Landfill | | X |
| Surface Impoundment | X | |
| Land Treatment | | X |
| Spray Irrigation | | X |
| Waste Pile | X | |
| Incinerator | | X |
| Storage Tank (above ground) | X | |
| Storage Tank (underground) | | X |
| Container Storage Area | X | |
| Injection Well | | X |
| Water Treatment Units | X | |
| Septic Tanks | | X |
| French Drains | X | |
| Transfer Station | | X |
| Other Units (please describe) | | |
| _____ | | |
| _____ | | |

3. Provide an extract from a USGS topographic or county map showing the location of the site and a more detailed scaled map of the facility with each waste management unit identified in Question 2 or known/suspected source clearly identified. Map scale must be specified and the location of the facility must be provided with respect to Township, Range and Section.

Please see Figures 1 and 2 in Attachment 2A.

4. Has the facility ever conducted operations which involved the generation, manufacture, processing, transportation, treatment, storage or handling of "hazardous substances" as defined by the Illinois Environmental Protection Act? Yes _X__ No ___ If the answer to this question is "yes" generally describe these operations.

Powerton Station generates typical hazardous and non-hazardous substance wastes associated with coal-fired electrical power generation. A full list of hazardous substances can be provided upon request.

5. Has the facility generated, stored or treated hazardous waste as defined by the Resource Conservation and Recovery Act? Yes___ No _X__ If the answer to this question is "yes" generally describe these operations.

6. Has the facility conducted operations which involved the processing, storage or handling of petroleum? Yes _X_ No ____ If the answer to this question is "yes" generally describe these operations.

The facility stores oil for operations in above ground storage tanks for start-up operations and for heavy equipment fueling and other diesel powered equipment.

7. Has the facility ever held any of the following permits?

   a. Permits for any waste storage, waste treatment or waste disposal operation. Yes __ No _X__ If the answer to this question is "yes", identify the IEPA permit numbers.

   Powerton Station did maintain a NPDES permit to filter asbestos from the Units 1 through 4 demolitions (ILR10H493).
   Sludge disposal. 2011-EE-1949
   NPDES permit (RBC Sewerage Treatment) IL0002232 (2005).

   b. Interim Status under the Resources Conservation and Recovery Act (filing of a RCRA Part A application). Yes ___ No _X__ If the answer to this question is "yes", attach a copy of the last approved Part A application.

   c. RCRA Part B Permits. Yes ___ No _X__ If the answer to this question is "yes", identify the permit log number.

8. Has the facility ever conducted the closure of a RCRA hazardous waste management unit? Yes ___ No _X__

9. Have any of the following State or federal government actions taken place for a release at the facility?

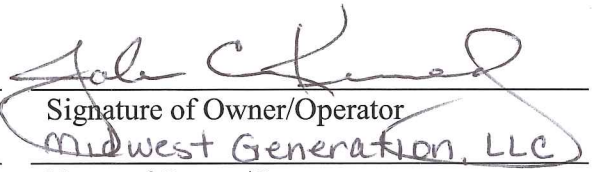
   a. Written notification regarding known, suspected or alleged contamination on or emanating from the property (e.g., a Notice pursuant to Section 4(q) of the Environment Protection Act)? Yes _X__ No ___ If the to this question is "yes", identify the caption

and date of issuance.

A Violation Notice was issued by IEPA on June 11, 2012 relative to the three ash basins alleging a potential release of coal ash constituents to groundwater (Violation Notice No. W-2012-00057). This was resolved through a Compliance Commitment Agreement (CCA) dated October 4, 2012 and formally executed on October 24, 2012. This submittal is part of the CCA compliance.

b. Consent Decree or Order under RCRA, CERCLA, EPAct Section 22.2 (State Superfund), or EPAct Section 21(f) (State RCRA). Yes ___ No _X__

c. If either of Items a or b were answered by checking "yes", is the notice, order or decree still in effect? Yes _X__ No ___



10. What groundwater classification will the facility be subject to at the completion of the remediation?

Class I __X__ Class II ___ Class III ____ Class IV ____
If more than one Class applies, please explain.

11. Describe the circumstances which the release to groundwater was identified.

As requested by Illinois Environmental Protection Agency (IEPA), a groundwater monitoring plan was developed and implemented for three ash basins known as the Ash Bypass Basin, Ash Surge Basin and Ash Settling Basin which are located on the east side of the facility. A total of fifteen monitoring wells were installed in the vicinity of the ash basins. Quarterly sampling was initiated in December 2010 and has been ongoing since. The data were provided to IEPA on a quarterly basis. Based on the monitoring data, on June 11, 2012, IEPA issued a Violation Notice (W-2012-00057) to Midwest Generation alleging that potential leakage from the basins has resulted in a violation of Class I groundwater standards for arsenic, boron, chloride, iron, lead, manganese, nitrate, pH, selenium, sulfate thallium and total dissolved solids.

Based on my inquiry of those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true and accurate.

PART II: Release Information

1. Identify the chemical constituents release to the groundwater. Attach additional documents as necessary.

| Chemical Description | Chemical Abstract No. |
|---|---|
| Arsenic | 7440-38-2 |
| Boron | 7440-42-8 |
| Chloride | 16887-00-6 |
| Iron | 7439-89-6 |
| Lead | 7439-92-1 |
| pH | Not Applicable |
| Manganese | 7439-96-5 |
| Nitrate | C-005 |
| Selenium | 7782-49-2 |
| Sulfate | 18785-72-3 |
| Thallium | 7440-28-0 |
| Total Dissolved Solids | C-010 |

2. Describe how the site will be investigated to determine the source or sources of the release.

This work has already been performed. As requested by Illinois Environmental Protection Agency (IEPA), Midwest Generation, LLC (Midwest Generation) prepared and submitted on September 3, 2010 a Hydrogeologic Assessment Plan for three ash basins located at the Powerton Generating Station. The purpose of the hydrogeologic assessment was to: (i) evaluate the potential, if any, for migration of ash related constituents from the ash basins and conduct monitoring for groundwater constituents regulated by Illinois Part 620 groundwater standards; (ii) characterize the subsurface hydrogeology: and (iii) identify potable well use within 2,500 feet of the ash basins.

Upon IEPA approval of the Hydrogeologic Assessment Plan, a total of twelve monitoring wells (MW-1 through MW-12) were installed around the three ash basins identified as Ash Bypass Basin, Ash Surge Basin and Ash Settling Basin (see Figure 3 in Attachment 2A). In addition, three monitoring wells MW-12 through MW-15 were concurrently installed associated with monitoring of the adjacent Metals Cleaning Basin. These wells have now also been included by IEPA as part of the overall ash basin system monitoring program. The wells were drilled and constructed in October 2010 after which point quarterly monitoring was initiated in accordance with approved, low-flow sampling procedures. A Hydrogeologic Assessment Report for Powerton Generating Station was prepared by Patrick Engineering, Inc. and submitted by Midwest Generation to IEPA in February 2011. The results of the Hydrogeologic Assessment Report are incorporated into this

application submittal by reference. It is noted that since the submittal of the Hydrogeologic Assessment Report, a re-evaluation of the groundwater flow system was performed and discussion submitted to IEPA as part of Violation Notice Responses dated July 27, 2012. Specifically, it was noted that wells MW-6, MW-8, MW-12, MW-14 and MW-15 are screened within a localized silt/clay unit whereas the remaining monitoring wells are screened within a gravelly sand unit. Water levels within the wells screened in the silt/clay unit tend to be higher that those in the gravelly sand unit by approximately 8 to 10 feet, or more, in elevation. When the water levels from the five monitoring wells that are screened in the silt/clay unit are plotted separately from the wells screened within the gravelly sand unit, it is evident that there are two distinct, though hydraulically connected, groundwater units beneath this portion of the site. Groundwater flow maps for each unit using the most recent data from the December 2012 sampling event are provided as Figures 4 and 5 in Attachment 2A. Figure 4 indicates a westerly groundwater flow within the silt/clay unit towards the adjoining intake channel. Figure 5 indicates a northerly groundwater flow direction within the gravelly sand unit towards the Illinois River.

Since the submittal of the Hydrogeologic Assessment Report in February 2011, quarterly monitoring of the wells has been ongoing. As part of the CCA, another upgradient monitoring well (MW-16) was installed in November, 2012 and is now included in the monitoring program. The most recent round of sampling was performed in December 2012. Complete updated data summary tables are provided in Attachment 2B. As noted above, updated groundwater flow maps using the water level measurements from the most recent round of sampling are provided as Figure 4 (silt/clay unit wells) and Figure 5 (gravelly sand unit wells) in Attachment 2A.

3. Describe how groundwater will be monitored to determine the rate and extent of the release.

As part of the hydrogeologic assessment already performed (see discussion for item 2 above), in-situ hydraulic conductivity tests were performed on five of the monitoring wells (MW-2, MW-5, MW-8, MW-9 and MW-10) installed around the ash basins. Based on the results of the testing, hydraulic conductivity values in the vicinity of the well screens were found to range from $7.41 \times 10^{-4}$ to $9.24 \times 10^{-3}$ ft/sec with an average hydraulic conductivity of $4.7 \times 10^{-3}$ ft/sec.

Relative to the extent of impacts, a box-plot map of detections of the constituents identified in Part II - Item 1 above is provided as Figure 6 in Attachment 2A.

4. Has the release been contained on-site at the facility?

Yes. Groundwater monitoring data indicates that the impacts are limited to within the property boundary. Natural groundwater flow is generally to the west towards

the adjoining intake channel (silt/clay unit) and north towards the Illinois River (gravelly sand unit).

5. Describe the groundwater monitoring network and groundwater and soil sampling protocols in place at the facility.

The existing IEPA approved groundwater monitoring network at the site consists of sixteen monitoring wells (MW-1 through MW-16) located around the three existing ash basin (see Figure 3 in Attachment 2A). Wells MW-1, MW-9, MW-10 and MW-16 are generally upgradient monitoring wells. The remaining wells are considered downgradient monitoring points. The well borings were advanced using hollow-stem augers to depths ranging from approximately 30 to 45 feet below ground surface (bgs). The depth of a specific boring was terminated approximately 10 feet below the encountered water table. The wells were subsequently constructed using standard, 2-inch diameter PVC casing with 10-feet of 0.010 slot PVC screens. The wells were completed approximately three feet above grade with locking protective steel casings and bumper posts. The boring logs and well construction summaries are included in the above referenced Hydrogeologic Assessment Report (see discussion for item 2 above). The monitoring wells are sampled on a quarterly basis using low-flow sampling with a peristaltic pump. Field measurements of pH, specific conductivity, temperature, dissolved oxygen (DO) and oxidation-reduction potential (ORP) are recorded. Once collected, the samples are placed on ice and transported under a completed chain-of-custody to PDC Laboratories, Inc. which is an Illinois accredited analytical laboratory. The samples are analyzed for the inorganic compounds listed in 35 IAC 620.410(a) and (d), excluding radium 226/228.

There is no soil sampling that is performed as part of the approved site monitoring program.

6. Provide the schedule for investigation and monitoring.

Groundwater sampling of all existing monitoring wells is performed on a quarterly basis. The general sampling schedule is as follows:

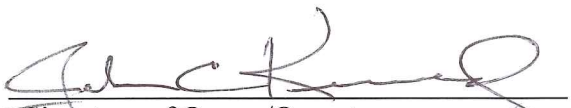
| Event | Sampling Schedule |
|---|---|
| 1st Quarter | March |
| 2nd Quarter | June |
| 3rd Quarter | September |
| 4th Quarter | December |

7. Describe the laboratory quality assurance program utilized for the investigation.

The quality management system for PDC Laboratories, Inc. is outlined in the *Quality Manual.* The *Quality Manual* defines the policies, procedures, and documentation that assure analytical services continually meet a defined standard of quality that is designed to provide clients with data of known and documented quality and, where applicable, demonstrate regulatory compliance.

The *Quality Manual* sets the standard under which all laboratory operations are performed, including the laboratory's organization, objectives, and operating philosophy. The *Quality Manual* has been prepared to assure compliance with the 2009 TNI Environmental Laboratory Sector Standard – Volume 1 – Management and Technical Requirements for Laboratories Performing Environmental Analysis (EL-V1-M1 through M7-ISO-2009). This Standard is consistent with ISO/IEC 17025:2005 requirements that are relevant to the scope of environmental testing services and thus, the laboratory operates a quality system in conformance with ISO/IEC 17025:2005(E). In addition, the policies and procedures outlined are compliant with the various accreditation and certification programs the laboratory maintains.

In addition, the *Quality Manual* has been prepared to be consistent with the requirements of the following documents:



1. Manual for the Certification of Laboratories Analyzing Drinking Water, Fifth Edition,
2. Standard Methods for the Examination of Water and Wastewater, as updated by MUR II,
3. 40 CFR Part 136 including Appendices,
4. Test Methods for Evaluating Solid Waste: SW-846,
5. State–specific analytical methods (such as OA-1 and OA-2 for State of Iowa), and
6. Title 77 Illinois Administrative Code, Chapter I, Subchapter d, Part 465 – Certification and Operation of Environmental Laboratories (Microbiology)

A copy of the *Quality Manual* can be provided upon request.

8. Provide a summary of the results of available soil testing and groundwater monitoring associated with the release at the facility. The summary or results should provide the following information: dates of sampling; types of samples taken (soil or water); locations and depths of samples; sampling and analytical methods; analytical laboratories used; chemical constituents for which analyses were performed; analytical detection limits; and concentrations of chemical constituents in ppm (levels below detection should be identified as "ND").

The data summary for all groundwater sampling performed to date is provided in Tables 1 and 2 in Attachment 2B.

Based on my inquiry of those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of knowledge and belief, true and accurate and confirm that the actions identified herein will be undertaken in accordance with the schedule set forth herein.

Part III: Remedy Selection Information

1. Describe the selected remedy.

The Ash Bypass Basin is already lined with high density polyethylene (HDPE). The Ash Surge Basin is lined with Poz-o-Pac material and the Ash Settling Basin is presently unlined. The agreed upon remedy is specified in Item 5 (a) through (m) of the executed Compliance Commitment Agreement (CCA) which is provided in Attachment 2C. The remedy includes relining of the Ash Surge Basin and Ash Settling Basin with HDPE. This Groundwater Management Zone (GMZ) application fulfills requirements set forth under Item 5 (g) of the CCA.

2. Describe other remedies which were considered and why they were rejected.

The primary alternate remedy discussed during negotiations with IEPA was to ensure that the ash basins will not be used as permanent disposal sites, maintain the ash basins in a manner that will be protective of the integrity of the existing liners, include visual inspections of the liners during ash removal events, implement repairs or replacement of the liners as necessary, establish a GMZ and to continue with the existing quarterly groundwater monitoring program until the federal ash regulation revisions are established. Upon the finalization of the new federal ash storage regulations, retrofit the basins, as necessary, to meet the new technical requirements for ash storage impoundments or re-engineer plant processes to maintain compliance and take the basins out of service.

This remedy was rejected by IEPA due to the uncertainty of the timeframe within which the new federal regulations will be issued.

3. Will waste, contaminated soil or contaminated groundwater be removed from the site in the course of this remediation? Yes _X_ No ___ If the answer to this question is "yes", where will the contaminated material be taken?

The ash that will be removed from the Ash Surge Basin and the Ash Settling Basin prior to relining will be sent to the Buckheart Mine on County Highway 6 in Canton, Illinois.

4. Describe how the selected remedy will accomplish the maximum practical restoration of beneficial use of groundwater.

Once the Ash Surge Basin and the Ash Settling Basin are lined with a HDPE liner, all the ash basins in service for ash accumulation will have been constructed and operated to minimize potential release of ash basin fluids to groundwater. Any residual groundwater impacts potentially associated with prior ash basin leakage

will naturally attenuate through the groundwater system under monitored conditions within the established GMZ with eventual discharge to the adjoining intake channel or the Illinois River.

5. Describe how the selected remedy will minimize any threat to public health or the environment.

The existing conditions do not pose a threat to public health since the impacts are limited to within the property boundary, there are no downgradient groundwater use receptors and the basins are located within a fenced property with 24-hour security controlled access. Any potential impacts to the environment will be minimized and managed as discussed under item 4 above.

6. Describe how the selected remedy will result in compliance with the applicable groundwater standards.

Once all the ash basins are lined with HDPE, the ash collection system will have been constructed and operated to minimize potential release of ash basin fluids to groundwater (i.e, the ash basins as a potential source of groundwater impacts will be eliminated). Any residual groundwater impacts potentially associated with prior ash basin leakage will naturally attenuate through the groundwater system under monitored conditions within the established GMZ and/or discharge to the adjoining intake channel or the Illinois River, west and north of the ash basins, respectively.

7. Provide a schedule for design, construction and operation of the remedy, including dates for the start and completion.

Relative to the Ash Settling Basin, the construction window will be coordinated with the spring plant shutdown which will occur from March 15, 2013 through April 15, 2013. At this time liner installation is anticipated to occur the week of April 1, 2013.

Relative to the Ash Surge Basin, the construction window is April 9, 2013 through August 28, 2013. The dredging of ash will occur between April 9, 2013 and June 3, 2013. At this time liner installation will likely occur in July 2013.

A more detailed schedule is being provided under separate cover with the Application for Construction Permit to reline the two basins.

8. Describe how the remedy will be operated and maintained.

Upon completion of construction activities, Midwest Generation will develop and submit an Operation and Maintenance (O&M) Plan to the IEPA. The O&M Plan will be based on manufacturer and installer recommendations. It will include procedures for liner system inspections, inspection frequency, documentation

requirements and what corrective measure procedures are to be implemented, if necessary.

9. Have any of the following permits been issued for the remediation?

   a. Construction or Operating permit from the Division of Water Pollution Control. Yes _X_ No ___

   This permit submittal is currently under review by IEPA.

   b. Land treatment permit from the Division of Water Pollution Control. Yes ___ No _X__ If the answer to this question is "yes", identify the permit number.

   c. Construction or Operating permit from the Division of Air Pollution Control. Yes ___ No _X__ If the answer to this question is "yes", identify the permit number.

10. How will groundwater at the facility be monitored following completion of the remedy to ensure that the groundwater standards have been attained?

There are currently 16 monitoring wells surrounding the ash basins (see Figure 3 in Attachment 2A). As required under Item 5 (d) of the CCA, these wells will continue to be monitored on a quarterly basis for constituents listed in 35 IAC 620.410(a) and (d), with the exception of radium 226/228. The monitoring data will be reported to IEPA within 30 days of the end of each quarter. In addition, an updated groundwater potentiometric surface map will be provided with each quarterly submittal. IEPA, upon written request, may approve a reduction in the frequency and scope of the sampling program in the future. Upon the IEPA's approval, the approved changes in the frequency and scope of the monitoring program shall be implemented.

It is noted that in addition to the quarterly groundwater monitoring, the CCA requires at least one year of quarterly monitoring of water from the East Yard Run-off Basin to be analyzed for constituents listed in 35 IAC 620.410(a) and (d), with the exception of radium 226/228.

Based on my inquiry of those persons directly responsible for gathering the information, I certify that the information submitted is, to the best of my knowledge and belief, true and accurate and confirm that the actions identified herein will be undertaken in accordance with the schedule set forth herein.

Notes: Groundwater sample analyzed at PDC Laboratories.
Well screen depth is from 20.5 to 30.5 feet below ground surface.
Sample collected using low-flow technique.
All values are in mg/L (ppm).

DL - Detection limit
ND - Non-detect
NA - Not Applicable
NP - Not Provided by lab

Notes: Groundwater sample analyzed at PDC Laboratories.
Well screen depth is from 30 to 40 feet below ground surface.
Sample collected using low-flow technique.
All values are in mg/L (ppm).

DL - Detection limit
ND - Non-detect
NA - Not Applicable
NP - Not Provided by lab

**Re: Proposed Compliance Commitment Agreement**
**Violation Notice: W-2012-00057**
**Midwest Generation, LLC, Powerton Generating Station; ID Number: 6282**

Dear Mr. Kennedy:

The Illinois Environmental Protection Agency ("Illinois EPA") has reviewed the proposed Compliance Commitment Agreement ("CCA") terms submitted by Midwest Generation, LLC, Powerton Generating Station in a letter dated September 4, 2012, in response to the Violation Notice dated June 11, 2012. Pursuant to the authority vested in the Illinois EPA under Section 31(a)(7)(i) of the Illinois Environmental Protection Act ("Act"), 415 ILCS 5/31(a)(7)(i), attached to this letter is a proposed CCA, which contains terms and conditions that the Illinois EPA has determined are necessary in order for you to attain compliance with the Act and Illinois Pollution Control Board Regulations.

Pursuant to Section 31(a)(7.5) of the Act, 415, ILCS 5/31(a)(7.5), **within 30 days of your receipt of this proposed CCA**, Midwest Generation, LLC, Powerton Generating Station or its duly authorized representative must either (1) agree to and sign the proposed CCA, and submit the signed and dated CCA by certified mail to Illinois EPA Bureau of Water, Andrea Rhodes, MC #19, 1021 North Grand Ave East, Springfield, IL 62702; or (2) notify the Illinois EPA by certified mail that you reject the proposed CCA.

The proposed CCA shall only become effective upon your timely submittal of the signed CCA as discussed above, and upon final execution by the Illinois EPA. Failure by you to execute and submit the proposed CCA within 30 days of receipt shall be deemed a rejection of the CCA by operation of law. Upon timely receipt of the signed CCA, the Illinois EPA will send you a fully executed copy of the CCA for your records.

In addition, the proposed CCA is not subject to amendment or modification prior to execution by you and the Illinois EPA. Any amendment or modification to the proposed CCA by Respondent prior to execution by you and the Illinois EPA shall be deemed a rejection of the proposed CCA by operation of law. The proposed CCA may only be amended subsequent to its effective date, in writing, and by mutual agreement between the Illinois EPA and you.

**COMPLIANCE COMMITMENT AGREEMENT**

## I. Jurisdiction

1. This Compliance Commitment Agreement ("CCA") is entered into voluntarily by the Illinois Environmental Protection Agency ("Illinois EPA") and Midwest Generation, LLC, Powerton Generating Station ("Respondent") (collectively, the "Parties") under the authority vested in the Illinois EPA pursuant to Section 31(a)(7)(i) of the Illinois Environmental Protection Act ("Act"), 415 ILCS 5/31(a)(7)(i).

## II. Allegation of Violations

2. Respondent owns and operates Powerton Generating Station in Pekin, Tazewell County, Illinois ("Powerton").

3. Pursuant to Violation Notice ("VN") W-2012-00057 issued on June 11, 2012, the Illinois EPA contends that Respondent has violated the following provisions of the Act and Illinois Pollution Control Board ("Board") Regulations:

   a) Operations at ash impoundments have resulted in violations of the Groundwater Quality Standards at monitoring wells MW-1, MW-2, MW-4, MW-5, MW-6, MW-7, MW-8, MW-9, MW-10, MW-11, MW-12, MW-13, MW-14, and MW-15. Section 12 of the Act, 415 ILCS 5/12, 35 Ill. Adm. Code 620.115, 620.301, 620.401, 620.405, and 620.410.

## III. Compliance Activities

4. On September 4, 2012, the Illinois EPA received Respondent's response to VN W-2012-00057, which included proposed terms for a CCA. The Illinois EPA has reviewed Respondent's proposed CCA terms, as well as considered whether any additional terms and conditions are necessary to attain compliance with the alleged violations cited in the VN.

5. Respondent agrees to undertake and complete the following actions, which the Illinois EPA has determined are necessary to attain compliance with the allegations contained in VN W-2012-00057:

   a) The ash ponds at Powerton shall not be used as permanent disposal sites and shall continue to function as treatment ponds to precipitate ash. Ash shall continue to be removed from the ponds on a periodic basis.

   b) The ash treatment ponds shall be maintained and operated in a manner which protects the integrity of the existing liners. During the removal of ash from the ponds, appropriate procedures shall be followed to protect the integrity of the existing liners, including operating the ash removal equipment in a manner which minimizes the risk of any damage to the liner.

   c) During the ash removal process, visual inspections of the ponds shall be conducted to identify any signs of a breach in the integrity of the pond liners. In the event that a breach of the pond liners is detected, Midwest Generation shall promptly notify the Illinois EPA and shall implement a corrective action plan for repair or replacement as necessary, of the liner. Upon the Illinois EPA's approval, and the issuance of any necessary construction permit, Midwest Generation will implement the corrective action plan.

   d) Midwest Generation shall monitor the new well as described in 5(f) below and the existing fifteen groundwater monitoring wells quarterly for constituents in 35 Ill. Adm. Code 620.410(a) and (d), with the exception of radium 226 and 228, and report its findings to the Illinois EPA within 30 days of the end of each quarter. In addition, Midwest Generation shall record and report groundwater elevation and submit a potentiometric surface map with the above quarterly groundwater monitoring report.

   e) Within 90 days of the effective date of the CCA, Midwest Generation shall submit an application for a construction permit to re-line the Ash Surge Basin and the Secondary Ash Settling Basin at Powerton with a 60 mil thickness high density polyethylene ("HDPE") liner or an Illinois EPA approved equivalent material.

   f) Midwest Generation shall install an additional groundwater monitoring well south of monitor well 9, in a location approved by the Illinois EPA, to better define up gradient groundwater quality, within 60 days of the effective date of the CCA.

g) Midwest Generation shall submit an application to establish a GMZ pursuant to 35 Ill. Adm. Code Part 620.250 within 90 days of the effective date of the CCA.

h) Midwest Generation shall enter into an Environmental Land Use Control (ELUC) to cover the area of the Powerton Station property which is contained within the GMZ. Midwest Generation shall submit a proposed draft ELUC to the Illinois EPA for review and comment within 90 days of the effective date of the CCA.

i) Midwest Generation shall record the ELUC within 30 days of approval of the ELUC by the Illinois EPA.

j) Midwest Generation shall establish a GMZ pursuant to 35 Ill. Adm. Code Part 620.250 within one year of the effective date of the CCA.

k) Once the Ash Surge Basin and the Secondary Ash Settling Basin have been lined and a GMZ and ELUC have been established at Powerton, Midwest Generation shall submit a certification (or a statement) of compliance. Midwest Generation may submit either the attached "Illinois EPA Compliance Statement" or another similar writing to satisfy the statement of compliance within one year of the effective date of the CCA.

l) Midwest Generation shall not allow the East Yard Run-off Basin to be part of the ash sluicing flow system. Further, Midwest Generation shall submit monitoring results from water contained in the East Yard Run-off Basin proximate to outfall monitoring point 003 within 60 days of the effective date of the CCA. Quarterly monitoring of the East Yard Run-off Basin shall be for the constituents listed in 35 Ill. Adm. Code 620.410(a) and (d) with the exception of radium 226 and radium 228. At the end of four (4) quarters of monitoring, Midwest Generation may request cessation of water monitoring from the East Yard Run-off Basin.

m) Midwest Generation shall not use any unlined areas for permanent or temporary ash storage or ash handling.

## IV. Terms and Conditions

6. Respondent shall comply with all provisions of this CCA, including, but not limited to, any appendices to this CCA and all documents incorporated by reference into this CCA. Pursuant to Section 31(a)(10) of the Act, 415 ILCS 5/31(a)(10), if Respondent complies with the terms of this CCA, the Illinois EPA shall not refer the alleged violations that are the subject of this CCA, as described in Section II above, to the Office of the Illinois Attorney General or the State's Attorney of the county in which the alleged violations occurred. Successful completion of this CCA or an amended CCA shall be a factor to be weighed, in favor of the Respondent, by the Office of the Illinois Attorney General in determining whether to file a complaint on its own motion for the violations cited in VN W-2012-00057.

7. This CCA is solely intended to address the violations alleged in Illinois EPA VN W-2012-00057. The Illinois EPA reserves and this CCA is without prejudice to, all rights of the Illinois EPA against Respondent with respect to noncompliance with any term of this CCA, as well as to all other matters. Nothing in this CCA is intended as a waiver, discharge, release, or covenant not to sue for any claim or cause of action, administrative or judicial, civil or criminal, past or future, in law or in equity, which the Illinois EPA may have against Respondent, or any other person as defined by Section 3.315 of the Act, 415 ILCS 5/3.315. This CCA in no way affects the responsibilities of Respondent to comply with any other federal, state or local laws or regulations, including but not limited to the Act, and the Board Regulations [and Permit, if applicable].

8. Pursuant to Section 42(k) of the Act, 415 ILCS 5/42(k), in addition to any other remedy or penalty that may apply, whether civil or criminal, Respondent shall be liable for an additional civil penalty of $2,000 for violation of any of the terms or conditions of this CCA.

9. This CCA shall apply to and be binding upon the Illinois EPA, and on Respondent and Respondent's officers, directors, employees, agents, successors, assigns, heirs, trustees, receivers, and upon all persons, including but not limited to contractors and consultants, acting on behalf of Respondent, as well as upon subsequent purchasers of Respondent's Powerton in Pekin, Tazewell County, Illinois.

10. In any action by the Illinois EPA to enforce the terms of this CCA, Respondent consents to and agrees not to contest the authority or jurisdiction of the Illinois EPA to enter into or enforce this CCA, and agrees not to contest the validity of this CCA or its terms and conditions.

11. This CCA shall only become effective:

    a) If, within 30 days of receipt, Respondent executes this CCA and submits it, via certified mail, to Illinois EPA, Bureau of Water, Andrea Rhodes, MC #19, 1021 North Grand Ave East, Springfield, IL 62702. If Respondent fails to execute and submit this CCA within 30 days of receipt, via certified mail, this CCA shall be deemed rejected by operation of law; and

    b) Upon execution by all Parties.

12. Pursuant to Section 31(a)(7.5) of the Act, 415 ILCS 5/31(a)(7.5), this CCA shall not be amended or modified prior to execution by the Parties. Any amendment or modification to this CCA by Respondent prior to execution by all Parties shall be considered a rejection of the CCA by operation of law. This CCA may only be amended subsequent to its effective date, in writing, and by mutual agreement between the Illinois EPA and Respondent's signatory to this CCA, Respondent's legal representative, or Respondent's agent.

**Re: Groundwater Management Zone Application**
**Violation Notice: W-2012-00057**
**Midwest Generation, LLC, Powerton Generating Station; ID Number: 6282**

Dear Mr. Kennedy:

The Illinois Environmental Protection Agency ("Illinois EPA") has reviewed the Groundwater Management Zone ("GMZ") application submitted January 18, 2013 as required by the approved Compliance Commitment Agreement ("CCA"), in response to the Violation Notice dated June 11, 2012. The Illinois EPA has also reviewed the supplemental information dated September 11, 2013, requested in its letter dated August 26, 2013 to Midwest Generation LLC.

The Illinois EPA approves the GMZ as described in the January 18, 2013 submission and subsequently amended by the August 26, 2013 submission. Midwest Generation should proceed with the GMZ as proposed in the above referenced documents.

Questions regarding this matter should be directed to Illinois EPA, Bureau of Water, Lynn Dunaway at 217/785-4787. Written communications should be directed to Illinois EPA – DPWS, Attn: Andrea Rhodes, MC #19, 1021 North Grand Ave East, Springfield, IL 62702.

Sincerely,

Re: Compliance Commitment Agreement – ELUC
Midwest Generation, LLC, Powerton Station; ID No. 6282
Violation Notice W-2012-00057

Dear Ms. Rhodes:

The Compliance Commitment Agreement (CCA) for the above referenced site relative to Violation Notice W-2012-00057 was signed by Midwest Generation on October 15, 2012 and executed by Illinois Environmental Protection Agency (IEPA) signature on October 24, 2012 (effective date). Item 5 (h) of the CCA requires that Midwest Generation submit a proposed Environmental Land Use Control (ELUC) to cover the area of the proposed Groundwater Management Zone (GMZ; application provided under separate cover). The proposed ELUC is to be submitted to IEPA within 90 days of the effective date of the CCA.

Attached is a proposed ELUC for the Powerton Station. Please note that the formal legal description that would be included as part of Exhibit A will be completed upon IEPA approval of the proposed ELUC.

The areal extent of the proposed ELUC is provided with the attached documentation (Exhibit B Figure B-5). Groundwater flow within the silt/clay unit in the vicinity of the subject ash basins is in a westerly direction with discharge to the adjoining intake channel and groundwater flow within the gravelly sand unit is to the north with discharge to the Illinois River. The western (downgradient) extent of the proposed GMZ corresponds with the hydraulic boundary formed by the intake channel. The northern extent corresponds with the hydraulic boundary formed by the Illinois River. The southern and eastern boundaries are defined by the property boundary. The vertical extent of the GMZ would be defined by the top of the Carbondale Formation which is estimated to be approximately 70 feet below ground surface based on other site boring logs from other portions of the property.

## Environmental Land Use Control

THIS ENVIRONMENTAL LAND USE CONTROL ("ELUC"), is made this _____ day of _____, 2013, by Midwest Generation, LLC, ("Property Owner") of that portion (as identified in Exhibit A) of the real property located at the common address of Powerton Station, 13082 E. Manito Road, Pekin, Illinois 61554 ("Property").

WHEREAS, 415 ILCS 5/58.17 and 35 Ill. Adm. Code 742 provide for the use of an ELUC as an institutional control in order to impose land use limitations or requirements related to environmental contamination so that persons conducting remediation can obtain a No Further Remediation determination from the Illinois Environmental Protection Agency ("IEPA"). The reason for an ELUC is to ensure protection of human health and the environment. The limitations and requirements contained herein are necessary in order to protect against exposure to contaminated groundwater that may be present on the property as a result of past industrial activities on or in the vicinity of the property. Under 35 Ill. Adm. Code 742, the use of risk-based, site-specific remediation objectives may require the use of an ELUC on real property, and the ELUC may apply to certain physical features (e.g., engineered barriers, monitoring wells, caps, etc.).

NOW, THEREFORE, the recitals set forth above are incorporated by reference as if fully set forth herein and the Property Owner agrees as follows:

**Section One.** Property Owner does hereby establish an ELUC on the real estate, situated in the County of Tazewell, State of Illinois and further described in Exhibit A attached hereto and incorporated herein by reference (the "Property").

Attached as Exhibit B are site maps that show the legal boundary of the Property, any physical features to which the ELUC applies, the horizontal and vertical extent of the contaminants of concern above the applicable remediation objectives for groundwater and the nature, location of the source, and direction of movement of the contaminants of concern, as required under 35 Ill. Adm. Code 742.

**Section Two.** Property Owner represents and warrants it is the current owner of the Property and has the authority to record this ELUC on the chain of title for the Property with the Office of the Recorder or Registrar of Titles in Tazewell County, Illinois.

**Section Three.** The Property Owner hereby agrees, for itself, and its heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein, that the groundwater under the Property shall not be used as a potable supply of water.

**Section Four.** This ELUC is binding on the Property Owner, its heirs, grantees, successors, assigns, transferees and any other owner, occupant, lessee, possessor or user of the Property or the holder of any portion thereof or interest therein. This ELUC shall apply in perpetuity against the Property and shall not be released until the IEPA determines there is no longer a need for this ELUC as an institutional control or until the IEPA, upon written request, issues a new no further remediation determination approving modification or removal of the limitation(s) or requirement(s); and until a release or modification of the land use limitation or requirement is filed on the chain of title for the Property.

**Section Five.** **Future Improvement of Property**: This ELUC does not limit Property Owner's or its successors' or assigns' ability to construct on or otherwise improve the Property or to allow others to use the Property. Property Owner reserves the right to remove contaminated groundwater from the Property and to dispose of it as is appropriate under applicable laws.

**Section Six.** The effective date of this ELUC shall be the date that it is officially recorded in the chain of title for the Property to which the ELUC applies.

Subject: Quarterly Groundwater Monitoring Results – Annual Report 2011
Powerton Generating Station- Ash Impoundment

Reference: Patrick Project No. 21153.018

To Whom It May Concern:

Patrick Engineering Inc. (Patrick) has prepared this letter report, on behalf of Midwest Generation, LLC, to provide the 2011 Annual Report for groundwater monitoring results associated with the on-site ash ponds at the Powerton Generating Station (The Site) located at 13082 East Manito Rd. in Pekin, Illinois (Figure 1). The Site is located along the Illinois River, south and west of the city of Pekin. The surrounding land use consists of the Illinois River to the north, industrial and residential properties to the east, agricultural land to the south, and Lake Powerton to the west. The site contains three active ash ponds. This groundwater monitoring is being performed as part of the long-term monitoring plan described in the Hydrogeologic Assessment Report submitted to the Illinois Environmental Protection Agency (Illinois EPA) in February 2011.

Ten monitoring wells have been installed (MW-1 through MW-10) surrounding the ash impoundments (both former and current) at the Powerton facility. The well locations were selected so that both upgradient and downgradient wells were represented, based upon available data regarding the expected groundwater flow direction (north, toward the Illinois River). Monitoring wells MW-1, MW-9 and MW-10 are installed upgradient of the ash ponds. The well locations are shown on Figure 2.

**GROUNDWATER ELEVATIONS**

Quarterly groundwater elevations were measured beginning in March 2011 in each of the ten wells prior to sampling. The groundwater levels were compared to levels collected by the USGS stream flow data at Station Number 05568500 located on the Illinois River at Kingston Mines, Illinois. Fluctuations in the groundwater elevations correlated to fluctuations in the River, indicating the groundwater at the site has a direct hydraulic connection to the surface water. The

water elevations in all of the ash ponds, excluding the large, former ash pond to the east, are significantly higher than the surrounding groundwater elevations. A chart depicting the groundwater elevations as compared to the Illinois River elevations is included as Attachment A in this report.

If wells MW-6 and MW-8 are excluded from the analysis, the direction of groundwater flow is clearly found to be from south to north, towards the River, as expected. The groundwater elevations in MW-6 and MW-8 are approximately 12 feet higher than in surrounding wells; the ground surface elevation in this area is also significantly higher than in the surrounding area. Boring logs from these wells also indicate the geology of this area consists of almost entirely fill material. It is Patrick's opinion that both the topography and geology of this area create a localized groundwater high.

The correlation between groundwater elevations and the Illinois River elevations was weaker in the vicinity of wells MW-1, MW-9 and MW-10, which are the three wells furthest from the River and therefore the three wells that would be expected to be the least affected by changes in River elevation. Groundwater elevation data is summarized in Table 1 and shown on Figure 3.

## SAMPLING METHODOLOGY

In accordance with the long-term monitoring plan referenced above, water samples are collected quarterly from ten monitoring wells (MW-1 through MW-10) surrounding the ash impoundments at the Powerton facility. These wells were most recently sampled on December 12, 2011.

Groundwater samples were collected from each well with a peristaltic pump, using established low-flow sampling techniques. Temperature, turbidity, conductivity, dissolved oxygen (DO), oxygen reduction potential (ORP), and pH measurements were taken at each of the wells using a portable meter with a flow through cell. All groundwater samples were filtered in the field using a disposable, 0.45µm, in-line filter to allow for the analytical testing of dissolved compounds. Field parameter data is provided in Table 2.

After collection, all samples were immediately placed on ice in a cooler and kept at a temperature no higher than 4° F. The samples were transported to TestAmerica Laboratories, an Illinois-EPA accredited analytical laboratory, in accordance with chain-of-custody procedures to maintain sample integrity. Analytes tested included the inorganic compounds listed in 35 Illinois Administrative Code (IAC) 620.410(a), excluding both radium and the poly-aromatic hydrocarbons (PAHs) listed in 35 IAC 620.410(b). Analytical laboratory results are presented in Table 3 (both current and historical). The laboratory analytical reports provided by PDC Laboratories are provided as Attachment C.

## ANALYTICAL RESULTS

Groundwater samples collected from both upgradient and downgradient wells on site have Class I Groundwater Quality Standard exceedances. These exceedances include; arsenic, iron, manganese, boron, chloride, nitrogen-nitrate, and total dissolved solids.

Quarterly Groundwater Monitoring Results – Annual Report 2011
Powerton Generating Station- Ash Impoundment
March 5, 2012

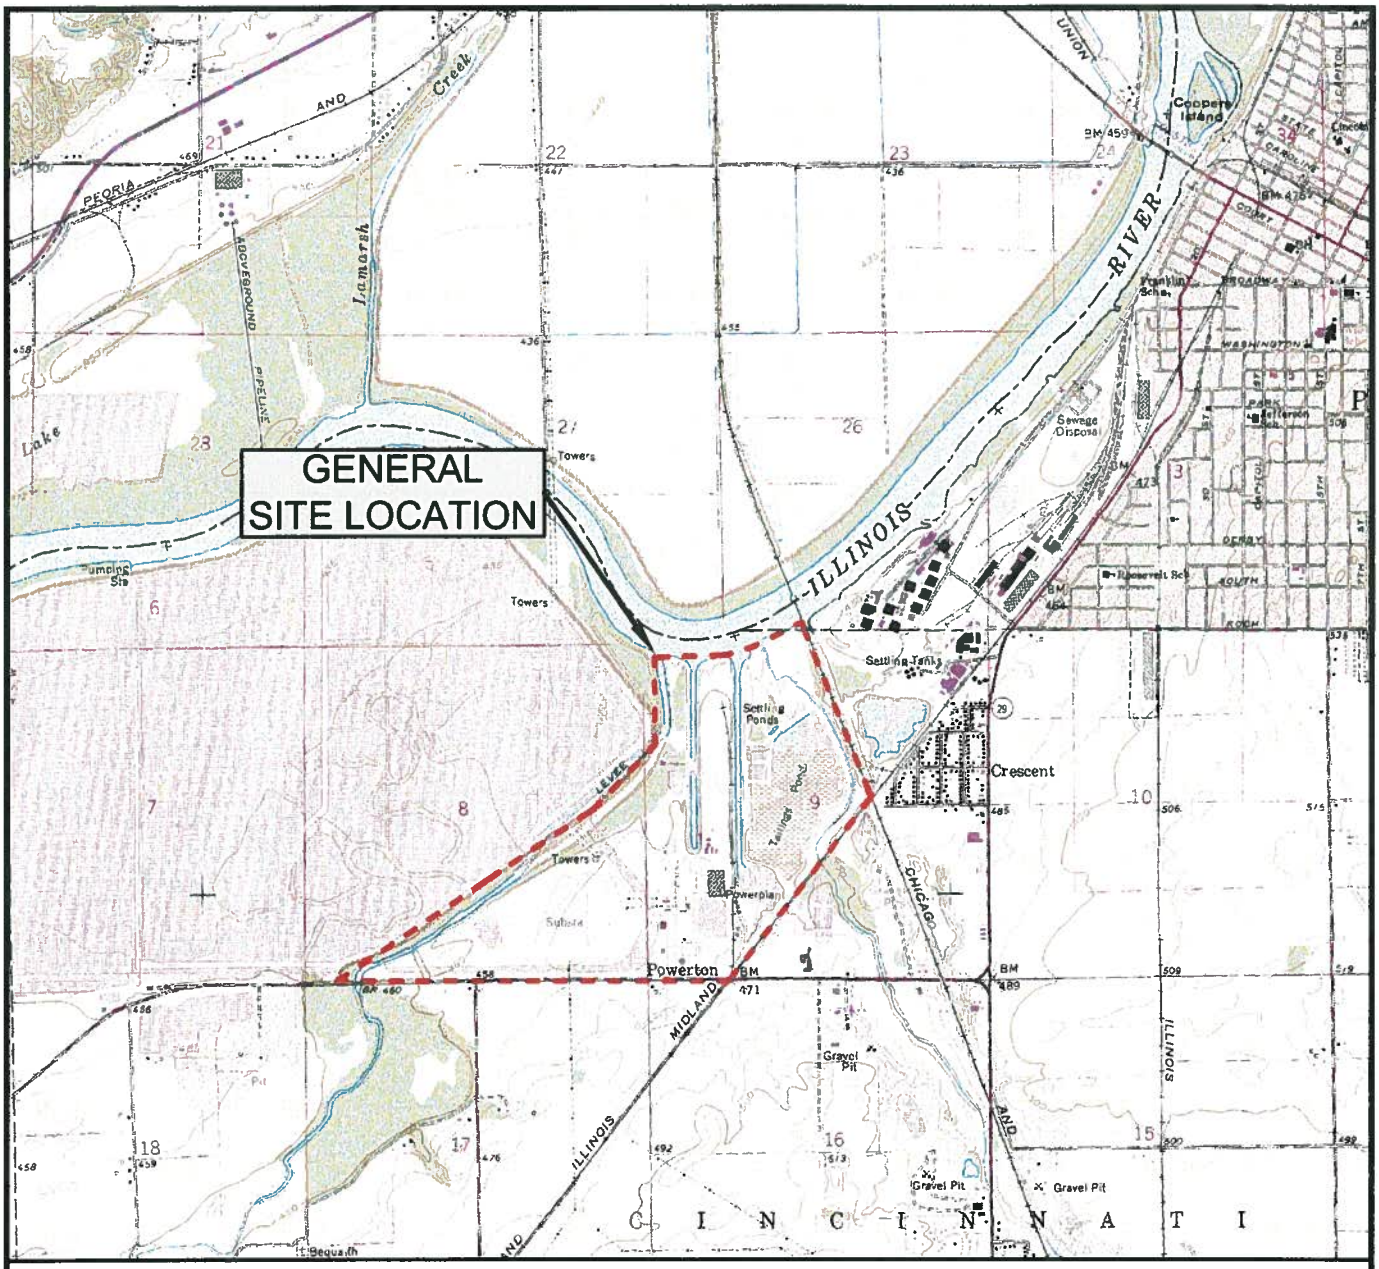
Concentrations of constituents exceeding Class I Groundwater Standards in downgradient wells (MW-2 through MW-8) were compared with upgradient well (MW-1, MW-9 and MW-10) concentrations. Average downgradient concentrations of manganese, chloride, total dissolved solids, arsenic and iron were higher than in the upgradient wells. Upgradient concentrations of boron and nitrogen-nitrate were higher than in the downgradient wells. Note that, excluding manganese, chloride, and nitrate, all of the exceedances of Class I standards were detected in only one well (MW-7). Manganese and chloride were the only compounds that exceeded Class I standards in MW-6 and MW-8.

Patrick performed trend analyses on the following parameters (arsenic, barium, chromium, cobalt, iron, manganese, nickel, selenium, boron, sulfate, chloride, nitrogen-nitrate, total dissolved solids, and fluoride). Analytical parameters without any detections were not included in the analysis.

The increasing trend in arsenic concentrations in MW-7 was the only statistically significant increase of any constituent in any well. There were no statistically significant (at the 95% confidence level) increasing or decreasing trends for any of the remaining analyzed compounds. Trend Analysis charts are provided in Attachment B. In accordance with the long-term monitoring plan, groundwater samples from the ash pond wells at the Powerton facility will continue to be collected, analyzed, and reported to Illinois EPA on a quarterly basis until sufficient statistically-significant data is available to properly assess the groundwater data.

If you have any questions, please contact me at 630-795-7464.

Sincerely,



**PATRICK ENGINEERING INC.**

KPRG Project No. 12313.1

Re: Quarterly Groundwater Monitoring Results – Fourth Quarter 2013 and Annual
Powerton Generating Station – Ash Impoundments
Compliance Commitment Agreement VN W-2012-00057; ID# 6282

Dear Ms. Rhodes:

The fourth quarterly groundwater sampling for 2013 has been completed for the ash pond monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Powerton Generating Station in accordance with the signed Compliance Commitment Agreement (CCA) with Illinois Environmental Protection Agency (IEPA) dated October 24, 2012. This quarterly monitoring report is being submitted by KPRG and Associates, Inc. (KPRG), on behalf of Midwest Generation, summarizing the results of the monitoring event. This report is also intended to serve as the Annul Report and includes historical data analysis/summaries.

## Well Inspection and Sampling Procedures

The groundwater monitoring network around the ash ponds at this facility consists of sixteen wells (MW-1 through MW-16) as shown on Figure 1. As part of sampling procedures, the integrity of all monitoring wells was inspected and water levels obtained using an electronic water level meter (see summary of water level discussion below). All wells were found in good condition with locked protector casings and the concrete surface seals were intact.

MWG13-15_19809

Groundwater samples at well locations MW-1 through MW-16 were collected using the low-flow sampling technique. In addition, a surface water grab sample was collected from the discharge of the East Yard Run-off Basin.

One duplicate sample was collected for quality assurance purposes. In addition, a deionized water trip blank was placed with the sample bottle shipment by the laboratory and accompanied the groundwater samples bottles from and back to the laboratory. The groundwater monitoring samples, the East Yard Run-off Basin sample and the duplicate sample were analyzed for the inorganic compounds listed in Illinois Administrative Code (IAC) 620.410(a), 620.410(d) and 620.410(e), excluding radium 226/228. The trip blank was analyzed for the volatile organic compounds (VOCs) listed in IAC 620.410(d).

Groundwater Flow Evaluation

Water level data from the most recent round of sampling along with historical water levels obtained from each well are summarized in Table 1. As noted in previous submittals, monitoring wells MW-6, MW-8, MW-12, MW-14 and MW-15 are screened within a shallower, localized, saturated clay/silt unit which is underlain by a more extensive sand unit. The remaining eleven monitoring wells are screened deeper, within the more extensive sand unit. The water levels from wells screened in the clay/silt unit and the water levels from monitoring wells screened within the sand unit were evaluated separately and used to generate a groundwater flow map for each unit. These maps are provided on Figures 2 and 3. The water elevation data within the clay/silt unit indicates localized groundwater flow in a westerly direction (Figure 2). Groundwater flow within the more extensive sand unit is generally in a north-northwesterly direction (Figure 3). The flow conditions observed during this sampling are generally consistent with historical conditions reported for the site.

Relative to an annual evaluation of groundwater levels, a historical hydrograph is presented in Attachment 1. The hydrograph indicates some seasonal variability over time with the highest water levels occurring in the 2nd quarter (Spring) and the lowest water levels generally occurring in the 3rd quarter (late Summer/early Fall). The noted high spike in groundwater elevations during the second quarter of 2013 is directly associated with the heavy rains and flooding that occurred at that time.

Summary of Analytical Data

A copy of the analytical data package is provided in Attachment 2. The field parameter and groundwater analytical data from the most recent sampling, along with the previous eight quarters of data, are summarized in Table 2. The duplicate sample was collected from well MW-3. The data are generally consistent with previous data generated for the site with the exception of boron and sulfate at well location MW-2 where slight increases in both parameters were noted and the boron concentration during this sampling exceeded the Class I groundwater standard. All wells for which the sampling data reports a value above one or more groundwater standards are located within the area of the approved

MWG13-15_19810

Groundwater Management Zone (GMZ) and the Environmental Land Use Control (ELUC) restrictions placed on the property with the exception of new upgradient well MW-16 which has noted nitrate impacts above the Class I groundwater standard (see discussion below on nitrate trends over time).

At this time a statistical evaluation of background water quality for comparing against downgradient wells has not been completed. The initial anticipated background well installation (MW-09) indicates impacts that are not associated with the ash ponds at the site and therefore, IEPA does not recognize the water quality data from this well as representative of background. A new background monitoring well (MW-16) has since been installed and is included within the quarterly sampling. An initial review of the data suggests that this location will provide a representative background water quality with which to perform a statistical evaluation. In general, a minimum of eight quarters of data are required to provide a meaningful statistical analysis of background water quality. The next Annual Report will include this analysis.

Relative to an annual evaluation of the water chemistry data, time versus concentration curves are provided for each parameter analyzed in Attachment 3. The curves include the Class I drinking water standard for reference. For 2013, overall, detected concentrations of the monitored parameters are generally stable/consistent relative to historical data. The following noteworthy observations are made for 2013:

- An overall evaluation indicates that some individual spikes of analytes for specific wells that were not reproducible (e.g., 2nd quarter antimony for MW-01, MW-02 and MW-04) and therefore, not believed to be representative of actual groundwater quality at those locations.

- Arsenic concentrations in well MW-07 appear to have stabilized over the last two years.

- Boron concentrations at wells appear to be generally stable and/or decreasing with the exception of well MW-02 located at the east-northeast side of the property and the newly installed background well (MW-16) as part of the CCA. The concentration of boron at well MW-02 has increased from 0.8 mg/l in December 2012 to 2.7 mg/l in October 2013. The concentration of boron at well MW-16 has increased from not detected in December 2012 to 0.350 mg/l in October 2013.

- Overall chloride concentrations in several wells (e.g., MW-04, MW-07, MW-08) appear to be increasing. Otherwise concentrations appear to be stable.

- Dissolved iron is consistently higher at well MW-07 than for the rest of the site.

- Wells MW-07, MW-10, MW-11 and MW-13 tend to have higher dissolved manganese concentrations than seen at other locations, however, there is

MWG13-15_19811

indication over the last several quarters of some decreasing trends at these locations.

- Nitrate concentrations in the new background well MW-16 are consistently higher than in the other wells and the only well consistently above the Class I groundwater standard for this parameter. This suggests an off-site source of these impacts. Upgradient land use is agricultural.

- Dissolved sulfate concentrations at wells MW-13 and MW-14 are consistently higher than at other monitoring locations.

As noted previously, all wells, except upgradient well MW-16, for which the sampling data reports a value above one or more applicable groundwater standards are located within the area of the approved GMZ and the ELUC restrictions placed on the property.

The data from the East Yard Run-off Basin sampling along with the previous sampling results are summarized in Table 3. It is consistent with the data from the previous sampling. This completes more than the four quarterly rounds of sampling for the East Yard Run-off Basin and, in accordance with the CCA, it is requested that the Agency approve the termination of the quarterly sampling requirement for this impoundment. Midwest Generation/KPRG will follow-up with IEPA regarding this request.

If there are any questions, please contact either Maria Race of Midwest Generation at 630-771-7862 or Richard Gnat of KPRG at 262-781-0475.

Sincerely,
KPRG and Associates, Inc.

Richard R Gnat

## Job ID: 500-65332-1

**Laboratory: TestAmerica Chicago**

**Narrative**

**Job Narrative**
**500-65332-1**

**Comments**
No additional comments.

**Receipt**
The samples were received on 10/22/2013 10:05 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 6 coolers at receipt time were 1.0° C, 1.7° C, 3.2° C, 3.5° C, 3.7° C and 4.4° C.

**GC/MS VOA**
No analytical or quality issues were noted.

**Metals**
Method(s) 6020A: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 500-65332-1 were outside control limits for selenium. The duplicate, serial dilution and laboratory control sample (LCS) recovery met acceptance criteria. Data has been qualified and is being reported.

No other analytical or quality issues were noted.

**Field Service / Mobile Lab**
No analytical or quality issues were noted.

**General Chemistry**
No analytical or quality issues were noted.

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| F | MS/MSD Recovery and/or RPD exceeds the control limits |
| ^ | ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits. |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

## Job ID: 500-65402-1

**Laboratory: TestAmerica Chicago**

**Narrative**

**Job Narrative**
**500-65402-1**

**Comments**
No additional comments.

**Receipt**
The sample was received on 10/23/2013 9:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice.
The temperature of the cooler at receipt was 1.0° C.

**GC/MS VOA**
No analytical or quality issues were noted.

**Metals**
Method(s) 200.8, 6020, 6020A: The internal standard (Rh) was used to report As in batch 208962.

No other analytical or quality issues were noted.

**General Chemistry**
No analytical or quality issues were noted.

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

Re: Annual and Quarterly Groundwater Monitoring Results – Fourth Quarter 2015
Powerton Generating Station – Ash Impoundments
Compliance Commitment Agreement VN W-2012-00057; ID# 6282

Dear Ms. Rhodes:

The fourth quarterly groundwater sampling for 2015 has been completed for the ash pond monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Powerton Generating Station in accordance with the Compliance Commitment Agreement (CCA) with Illinois Environmental Protection Agency (IEPA) dated October 24, 2012. This quarterly monitoring report summarizes the results of the monitoring event. This report is also intended to serve as the Annual Report and includes historical data analysis/summaries.

## Well Inspection and Sampling Procedures

The groundwater monitoring network around the ash ponds at the Powerton facility consists of sixteen wells (MW-01 through MW-16) as shown on Figure 1. As part of sampling procedures, the integrity of all monitoring wells was inspected and water levels obtained using an electronic water level meter (see summary of water level discussion below). All wells were found in good condition with locked protector casings and the concrete surface seals were intact.

Groundwater samples at well locations MW-01 through MW-16 were collected using the low-flow sampling technique.

One duplicate sample was collected from well MW-10 for quality assurance purposes. In addition, a deionized water trip blank was placed with the sample bottle shipment by the laboratory and accompanied the groundwater samples bottles from and back to the laboratory. All samples were analyzed for the inorganic compounds listed in Illinois Administrative Code (IAC) 620.410(a), 620.410(d) and 620.410(e), excluding radium 226/228. The trip blank was analyzed for the volatile organic compounds (VOCs) listed in IAC 620.410(d).

Groundwater Flow Evaluation

Water level data from the most recent round of sampling along with historical water levels obtained from each well are summarized in Table 1. As noted in previous submittals, monitoring wells MW-06, MW-08, MW-12, MW-14 and MW-15 are screened within a shallow, localized, saturated clay/silt unit which is underlain by a more extensive sand unit. The remaining eleven monitoring wells have deeper screens, within the more extensive sand unit. The water levels from wells screened in the clay/silt unit and the water levels from monitoring wells screened within the sand unit were evaluated separately and used to generate groundwater flow maps for each unit. These maps are provided on Figures 2 and 3. The water elevation data within the clay/silt unit indicates localized groundwater flow in a westerly direction (Figure 2). Groundwater flow within the more extensive sand unit is generally in a northwesterly direction (Figure 3). The flow conditions observed during this sampling are generally consistent with historical conditions reported for the site.

Relative to an annual evaluation of groundwater levels, a historical hydrograph is presented in Attachment 1. The hydrograph indicates some seasonal variability over time with the highest water levels of 2015 occurring in the 2nd quarter (Spring) and the lowest water levels generally occurring in the 4th quarter (late Fall/Winter). The high water levels are associated with Illinois River flood stage.

Summary of Analytical Data

A copy of the analytical data package is provided in Attachment 2. The field parameter and groundwater analytical data from the most recent sampling, along with the previous eight quarters of data, are summarized in Table 2. As stated above, the duplicate sample was collected from well MW-10. All duplicate values were within an acceptable range (below 30%) with the exception of benzene which was detected in the duplicate but not the investigative sample, iron which was detected in the investigative sample but not the duplicate and sulfate which was detected at a higher level than in the duplicate. The data are generally consistent with previous data generated for the site with any exceptions noted below. All wells for which the sampling data reports a value above one or more groundwater standards are located within the area of the approved Groundwater Management Zone (GMZ) and the Environmental Land Use Control (ELUC) restrictions placed on the property with the exception of upgradient well MW-16 which has noted nitrate impacts above the Class I groundwater standard (see discussion below on nitrate trends over time).

At this time a statistical evaluation of background water quality for comparing against downgradient wells has not been completed. The initial anticipated background well MW-09 indicates impacts that are not associated with the ash ponds at the site and however, IEPA does not recognize the water quality data from this well as representative of background. The exact nature of the statistics that will be required by IEPA is still in the process of being finalized.

Relative to an annual evaluation of the water chemistry data, time versus concentration curves are provided for each parameter analyzed in Attachment 3. The curves include the Class I drinking water standard for reference

As noted previously, all wells for which the sampling data reports a value above one or more applicable groundwater standards are located within the area of the approved GMZ and the ELUC restrictions placed on the property, except upgradient well MW-16.

If there are any questions, please contact either Sharene Shealey of Midwest Generation at 815-372-4625 or Richard Gnat of KPRG and Associates, Inc. at 262-781-0475.

Sincerely,

Dale Green
Station Manager

Notes: Standards obtained from IAC, Title 35, Chapter I, Part 620, Subpart D, Section 620.410 - Groundwater Quality Standards for Class I: Potable Resource Groundwater
All values are in mg/L (ppm) unless otherwise noted.

DL - Detection limit
NA - Not Applicable
ND - Not Detected
NM - Not Measured

NR - Not Required
NS - Not Sampled
^ - Denotes instrument related QC exceeds the control limits
F1- MS and/or MSD Recovery outside of limits.

* - Median Value

Notes: Standards obtained from IAC, Title 35, Chapter I, Part 620, Subpart D, Section 620.410 - Groundwater Quality Standards for Class I: Potable Resource Groundwater
All values are in mg/L (ppm) unless otherwise noted.

DL - Detection limit
NA - Not Applicable
ND - Not Detected
NM - Not Measured

NR - Not Required
NS - Not Sampled
^ - Denotes instrument related QC exceeds the control limits
F1- MS and/or MSD Recovery outside of limits.

* - Median Value

| | | |
|---|---|---|
| Temperature | °C | degrees Celcius |
| Conductivity | ms/cm$^c$ | millisiemens/centimeters |
| Dissolved Oxygen | mg/L | milligrams/liter |
| Oxygen Reduction Potential (ORP) | mV | millivolts |

Project/Site: Powerton Station Ash Ponds

TestAmerica Job ID: 500-104085-1

## Job ID: 500-104085-1

### Laboratory: TestAmerica Chicago

**Narrative**

**Job Narrative**
**500-104085-1**

**Comments**
No additional comments.

**Receipt**
The samples were received on 11/17/2015 9:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 7 coolers at receipt time were 0.3º C, 0.5º C, 1.1º C, 1.4º C, 1.8º C, 2.1º C and 8.7º C.

**Receipt Exceptions**

The following samples were received at the laboratory outside the required temperature criteria (8.7 C): MW-01 (500-104085-1); MW-07 (500-104085-2) and MW-16 (500-104085-3). The client was contacted regarding this issue, and the laboratory was instructed to proceed with analysis.

**GC/MS VOA**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Metals**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**Field Service / Mobile Lab**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

**General Chemistry**
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

## Qualifiers

### Metals

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |

### General Chemistry

| Qualifier | Qualifier Description |
|---|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| F1 | MS and/or MSD Recovery is outside acceptance limits. |

## Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|---|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CNF | Contains no Free Liquid |
| DER | Duplicate error ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision level concentration |
| MDA | Minimum detectable activity |
| EDL | Estimated Detection Limit |
| MDC | Minimum detectable concentration |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| NC | Not Calculated |
| ND | Not detected at the reporting limit (or MDL or EDL if shown) |
| PQL | Practical Quantitation Limit |
| QC | Quality Control |
| RER | Relative error ratio |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |

# Certification Summary

Client: KPRG and Associates, Inc.
Project/Site: Powerton Station Ash Ponds

TestAmerica Job ID: 500-104085-1

## Laboratory: TestAmerica Chicago

The certifications listed below are applicable to this report.

| Authority | Program | EPA Region | Certification ID | Expiration Date |
|---|---|---|---|---|
| Illinois | NELAP | 5 | 100201 | 04-30-16 |

## Laboratory: TestAmerica Sacramento

All certifications held by this laboratory are listed. Not all certifications are applicable to this report.

| Authority | Program | EPA Region | Certification ID | Expiration Date |
|---|---|---|---|---|
| A2LA | DoD ELAP | | 2928-01 | 01-31-16 |
| Alaska (UST) | State Program | 10 | UST-055 | 12-18-16 |
| Arizona | State Program | 9 | AZ0708 | 08-11-16 |
| Arkansas DEQ | State Program | 6 | 88-0691 | 06-17-16 |
| California | State Program | 9 | 2897 | 01-31-16 |
| Colorado | State Program | 8 | N/A | 08-31-16 |
| Connecticut | State Program | 1 | PH-0691 | 06-30-17 |
| Florida | NELAP | 4 | E87570 | 06-30-16 |
| Hawaii | State Program | 9 | N/A | 01-29-16 |

# TRANSMITTAL LETTER

September 11, 2013

Mr. Lynn Dunaway
Illinois Environmental Protection Agency
Bureau of Water, PWS#13
1021 North Grand Avenue East
Springfield, IL 62794-9276

VIA FEDERAL EXPRESS

Re: Midwest Generation, LLC, Powerton Generating Station; ID No. 6282
Compliance Commitment Agreement – ELUC/GMZ

Dear Mr. Dunaway:

On January 18, 2013, as part of fulfillment of an executed Compliance Commitment Agreement (CCA) dated October 24, 2012, Midwest Generation, LLC Powerton Station submitted to Illinois Environmental Protection Agency (IEPA) a proposed Groundwater Management Zone (GMZ) and a proposed Environmental Land Use Control (ELUC). The proposed ELUC was approved by IEPA in a letter dated August 26, 2013, however, IEPA did request one amendment to the proposed GMZ. Specifically, the IEPA requests that monitoring wells MW-1, MW-9 and MW-10 not be identified as "upgradient" monitoring points in the GMZ document. Even though these points may be up gradient of specific ash basins, they are not believed to be reliable up gradient monitoring points for historical ash related activities that may be impacting groundwater quality proximate to these wells. IEPA would prefer to identify the wells as either "side gradient" or "intermediate".

KPRG and Associates, Inc. (KPRG), on behalf of Midwest Generation, is providing this response to the IEPA letter dated August 26, 2013. The following amendment to the GMZ Application, Part II, Item 5 dated January 18, 2013 is proposed:

5. Describe the groundwater monitoring network and groundwater and soil sampling protocols in place at the facility.

The existing IEPA approved groundwater monitoring network at the site consists of sixteen monitoring wells (MW-1 through MW-16) located around the three existing

MWG13-15_9644

ash basin (see Figure 3 in Attachment 2A). Wells MW-1, MW-9, and MW-10 are considered intermediate monitoring wells, being generally up gradient of the ash basins but still within an area of impacted groundwater from historical ash-related handling activities. Well MW-16 is considered an upgradient monitoring well, outside the area of groundwater impacts associated with historical ash-related handling activities. The remaining wells are considered downgradient monitoring points. The well borings were advanced using hollow-stem augers to depths ranging from approximately 30 to 45 feet below ground surface (bgs). The depth of a specific boring was terminated approximately 10 feet below the encountered water table. The wells were subsequently constructed using standard, 2-inch diameter PVC casing with 10-feet of 0.010 slot PVC screens. The wells were completed approximately three feet above grade with locking protective steel casings and bumper posts. The boring logs and well construction summaries are included in the above referenced Hydrogeologic Assessment Report (see discussion for item 2 above). The monitoring wells are sampled on a quarterly basis using low-flow sampling with a peristaltic pump. Field measurements of pH, specific conductivity, temperature, dissolved oxygen (DO) and oxidation-reduction potential (ORP) are recorded. Once collected, the samples are placed on ice and transported under a completed chain-of-custody to PDC Laboratories, Inc. which is an Illinois accredited analytical laboratory. The samples are analyzed for the inorganic compounds listed in 35 IAC 620.410(a) and (d), excluding radium 226/228.

There is no soil sampling that is performed as part of the approved site monitoring program.

Based on the IEPA letter dated August 26, 2013, it is understood that upon IEPA approval of the above amended wording, the GMZ will be approved as amended without the need for resubmitting the entire application document. If there are any questions, please contact me at 262-781-0475 or Ms. Maria Race of Midwest Generation at 630-771-7862.

Sincerely,
KPRG and Associates, Inc.

# NOTIFICATION OF INTENT TO INITIATE CLOSURE OF THE FORMER ASH BASIN

Pursuant to 40 CFR 257.100(c)(1), Midwest Generation LLC is making the following notification on 17 December 2015, of intent to initiate closure of the Former Ash Basin at the Powerton Station in Pekin, IL.

1) ***Inactive CCR Impoundment***. The Former Ash Basin is an inactive CCR surface impoundment closing under the requirements of paragraph (b) of 40 CFR §257.100.

2) ***Narrative Description of Closure***. The closure approach consists of consolidating the existing ash from both North and South Ponds into the South Pond and then capping the South Pond to meet the standard of §257.100(b)(1) & (2). CCR will be moved from the North to the South Pond by dredging and sluicing. After the CCR in the North pond is removed by dredge, the pond will be dewatered and any remaining CCR will be removed to meet the standard of §257.100(b)(5). The cover system will be designed to meet the performance and material property requirements of §257.100(b)(3) and will include an 18-inch thick (minimum) infiltration layer overlain by 6-inch (minimum) thick erosion layer. The infiltration layer will have a permeability of $1x10^{-5}$ cm/sec or less.

3) ***Proposed Schedule for Completing Closure Activities***.
   a. The permitting process is anticipated to take approximately 150 calendar days beginning in late March 2016, after conceptual design is completed.
   b. Preparation of detailed design and construction documents and contractor procurement are anticipated to take approximately 100 calendar days starting in October 2016.
   c. Construction of the proposed closure construction is anticipated to begin in late March 2017 and end in late February 2018.

4) ***Certifications***. As required by §257.100(b)(4) I, Jane W. Soule, P.E., that the design of the proposed final cover system meets the requirements of §257.100(b)(3). Also, as required by §257.100(b)(6), I, Jane W. Soule, P.E., certify that the closure design described in this letter is technically feasible and can be completed within the timeframe specified in §257.100(b).

PATRICK
ENGINEERING

May 17, 2012

Illinois Environmental Protection Agency
Division of Water Pollution Control
Compliance Assurance Section
1021 North Grand Avenue East
P.O. Box 19276
Springfield, Illinois 62794-9276

Subject: Quarterly Groundwater Monitoring Results –First Quarter 2012
Powerton Generating Station – Bypass Cleaning Basin
Water Pollution Control Permit No. 2010-EB-0664

Reference: Patrick Project No. 21253.022

To Whom It May Concern:

Patrick Engineering Inc. (Patrick) has prepared this letter report, on behalf of Midwest Generation, LLC, to provide groundwater monitoring results associated with the Powerton Generating Facility located at 13082 East Manito Road in Pekin, Illinois. Groundwater is monitored quarterly in the vicinity of the bypass cleaning basin at this facility in three monitoring wells in accordance with requirements of Illinois Environmental Protection Agency (Illinois EPA) Water Pollution Control Permit No. 2010-EB-0664.

**MONITORING WELL INSTALLATION**

In accordance with the permit referenced above, three monitoring wells (MW-9, MW-11, and MW-12) have been installed in the vicinity of the bypass cleaning basin. The locations of these wells were selected so that at least one of the monitoring wells (MW-09) was installed downgradient of the basin, based upon available data regarding the expected groundwater flow direction. Figure 1 shows the location of the three monitoring wells. Drilling logs and well completion reports have been included as Attachment A.

**GROUNDWATER SAMPLING**

Prior to collecting groundwater samples from the three wells noted above, a number of field measurements were collected from each well location, including groundwater elevation, temperature, conductivity, and pH. Groundwater elevation data is summarized in Table 1. Other field parameter data is provided in Table 2.

On March 19, 2012, groundwater samples were collected from each of the three on-site monitoring wells, by the direct use of a peristaltic pump. Each well was purged until at least three well volumes had been extracted, or until the groundwater was observed to be clear. Groundwater was pumped or bailed into a decontaminated, stainless steel container and thereafter transferred to sample containers via peristaltic pump. All groundwater samples were filtered in the field using a disposable, 0.45µm, in-line filter to allow for the analytical testing of

dissolved compounds. The samples were immediately placed on ice in a cooler and kept at a temperature no higher than 4° F. The samples were transported to PDC Laboratories, an Illinois-EPA accredited analytical laboratory, in accordance with chain-of-custody procedures to maintain sample integrity.

**ANALYTICAL RESULTS**

The groundwater samples were analyzed for all of the inorganic compounds listed in 35 Illinois Administrative Code (IAC) 620.410(a) and 620.410(d), including radium 226/228. Analytical results (both current and historical) are summarized in Table 3. Laboratory analytical reports provided by PDC Laboratories are provided as Attachment B.

In accordance with Water Pollution Control Permit No. 2010-EB-0664, these three wells will continue to be sampled and reported on a quarterly basis for at least one year to establish a statistically valid representation of existing background conditions.

If you have any questions, please contact me at 630-795-7464.

Sincerely,

**PATRICK ENGINEERING INC.**

## BORING LOGS / WELL COMPLETION REPORTS

State of Illinois
Department of Public Health

# WATER WELL CONSTRUCTION REPORT

Complete within 30 days of well completion and send to the appropriate Health Department

Print Form

1. Type of Well

a. **Driven Well**: Casing Diameter (in.) _____ Depth (ft.) _____

b. **Bored Well**: Casing Diameter (in.) _____ Buried Slab? _____

c. **Drilled Well**: PVC Casing Formation Packer Set at Depth of (ft.) 40

d. **Drilled Well**: Steel Casing Mechanically Driven _____

e. Hole Diameter (in.) 8.5 to (ft.) 40 ; (in.) ___ to (ft.) ___ ; (in.) ___ to (ft.) ___

f.

| Type of Grout | # of bags | Grout Weight | From (ft.) | To (ft.) | Tremie Depth (ft.) |
|---|---|---|---|---|---|
| Bentonite | 10 | | 3 | 28 | |
| | | | | | |

g. Well Finished within Unconsolidated Materials

h.

| Kind of Gravel/Sand Pack | Grain Size/Supplier # | From (ft.) | To (ft.) |
|---|---|---|---|
| Washed quartz sand | #5 | 28 | 40 |
| | | | |

2. Well Use: Monitoring Well Disinfected? No

3. Date Well Completed: Sep 29, 2010 Driller's Estimated Well Yield (gpm): _____

4. Date Permanent Pump Installed: _____ Set at Depth (ft.): _____

5. Pump Capacity (gpm): _____

6. Pitless Adapter Model and Manufacturer: _____ Attachment to Casing: _____

7. Well Cap Type & Manufacturer: _____

8. Pressure Tank Working Cycle (gals.): _____ Captive Air? _____ 9. Pump System Disinfected: _____

10. Name of Pump Company _____

11. Pump Installer: _____ License # _____

12. _____ Date _____

Licensed Pump Installation Contractor Signature

22. Casing and Liner Information

| Diameter (in.) | Material, Joint Type | From (ft.) | To (ft.) |
|---|---|---|---|
| 2 | PVC, threaded | 0 | 30 |
| | | | |
| | | | |

23. Is the well screened? Yes If yes

| Diameter (in.) | Length (ft.) | Slot Size (in.) | From (ft.) | To (ft.) |
|---|---|---|---|---|
| 2 | 10 | 0.01 | 30 | 40 |

24. Water from gravel at a depth of (ft.) 34 To (ft.) 40

a. Static water level (ft.) below top of casing 29.5 which is (in.) above ground 3

b. pumping level is (ft.) _____ pumping (gpm) _____ for (hours) _____

25.

| Earth Materials Passed Through | From (ft.) | To (ft.) |
|---|---|---|
| cinders, gravel, clay | 0 | 10 |
| cinders and sand | 10 | 17.5 |
| organic silt | 17.5 | 31.5 |
| silty clay, sand | 31.5 | 34 |
| gravel | 34 | 40 |
| | | |

## Notes

This report shall not be reproduced, except in full, without the written approval of the laboratory.

PDC Laboratories participates in the following accreditation/certification and proficiency programs at the following locations. Endorsement by Federal or State Governments or their agencies is not implied.

PIA PDC Laboratories - Peoria, IL
NELAC Accreditation for Drinking Water, Wastewater, Hazardous and Solid Wastes Fields of Testing through IL EPA Lab No. 100230
Illinois Department of Public Health Bacteriological Analysis in Drinking Water Approved Laboratory Registry No. 17553
Drinking Water Certifications: Kansas (E-10338); Missouri (870); Wisconsin (998284430); Indiana (C-IL-040); Iowa (240)
Wastewater Certifications: Arkansas (88-0677); Wisconsin (998284430); Iowa (240); Kansas (E-10335)
Hazardous/Solid Waste Certifications; Arkansas (88-0677); Wisconsin (998284430); Iowa (240); Kansas (E-10335)
UST Certification; Iowa (240)
SPM PDC Laboratories - Springfield, MO
EPA DMR-QA Program
STL PDC Laboratories - St. Louis, MO
NELAC Accreditation for Wastewater, Hazardous and Solid Wastes Fields of Testing through KS EPA Lab No. E-10389

RE: Project: 2032097
Pace Project No.: 3065785

Dear Ms. Clutters:
Enclosed are the analytical results for sample(s) received by the laboratory on March 23, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carin A. Ferris

## PROJECT NARRATIVE

Project: 2032097
Pace Project No.: 3065785

**Method:** **EPA 903.1**
**Description:** 903.1 Radium 226
**Client:** PDC Laboratories, Inc.
**Date:** April 09, 2012

**General Information:**
3 samples were analyzed for EPA 903.1. All samples were received in acceptable condition with any exceptions noted below.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, Inc..

## PROJECT NARRATIVE

Project: 2032097
Pace Project No.: 3065785

**Method:** **EPA 904.0**
**Description:** 904.0 Radium 228
**Client:** PDC Laboratories, Inc.
**Date:** April 09, 2012

**General Information:**
3 samples were analyzed for EPA 904.0. All samples were received in acceptable condition with any exceptions noted below.

**Hold Time:**
The samples were analyzed within the method required hold times with any exceptions noted below.

**Method Blank:**
All analytes were below the report limit in the method blank with any exceptions noted below.

**Laboratory Control Spike:**
All laboratory control spike compounds were within QC limits with any exceptions noted below.

**Matrix Spikes:**
All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

**Duplicate Sample:**
All duplicate sample results were within method acceptance criteria with any exceptions noted below.

**Additional Comments:**

This data package has been reviewed for quality and completeness and is approved for release.

# QUALIFIERS

Project: 2032097
Pace Project No.: 3065785

**DEFINITIONS**

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty

(MDC) - Minimum Detectable Concentration

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

**Re: Groundwater Management Zone Application**
**Proposed CCA Amendment**
**Violation Notice: W-2012-00057**
**Midwest Generation, LLC, Powerton Generating Station; ID Number: 6282**

Dear Mr. Kennedy:

The Illinois Environmental Protection Agency ("Illinois EPA") has reviewed the Groundwater Management Zone ("GMZ") application submitted as required by the approved Compliance Commitment Agreement ("CCA"), in response to the Violation Notice dated June 11, 2012.

The Illinois EPA has the following comment on the GMZ application that was submitted in response to Item 5(g) of the approved CCA for your consideration and appropriate action.

1) Part II, Item 5 of the GMZ application: Monitoring wells MW-1, MW-9, MW-10 and MW-16 are all described as "generally up gradient monitoring wells". The Illinois EPA agrees that MW-16 is an up gradient monitoring well. The Illinois EPA does not agree that MW-1, MW-9 and MW-10 are reliably up gradient of historical ash related activities that may impact groundwater quality proximate to these wells. The Illinois EPA would characterize MW-1, MW-9 and MW-10 as side gradient or intermediate wells. An amended response to Item 5 designating wells MW-1, MW-9 and MW-10 as side gradient or intermediate wells should be submitted to the Illinois EPA. The amended response may be submitted without resubmitting the entire GMZ application.

The Illinois EPA has reviewed the draft environmental land use control ("ELUC") submitted in response to Item 5(h) of the approved CCA. The Illinois EPA has no further comment on the ELUC as drafted. Midwest Generation should proceed with the ELUC as proposed. Please submit a copy of the filed ELUC to the Illinois EPA.

MARK S. KELLY

called as a witness, having been first duly sworn, was examined and testified as follows:

EXAMINATION

BY

MR. RUSS:

Q Okay. Thank you for coming in. We're going to just go through some background stuff before I get to the questions.

First, have you ever given a deposition before?

A No.

Q Okay. It's like other legal proceedings and you have a legal obligation to answer truthfully.

Could you give your name, place of employment, and work address for the record.

A My name is Mark Kelly. I work for NRG Powerton Station in Pekin, Illinois.

Q My name is Abel Russ. I work for the

Environmental Integrity Project in Washington, D.C. Just a couple of housekeeping things. For the benefit of the court reporter, please answer verbally. I have this problem. I always nod. That doesn't get transcribed. So you have to answer verbally and not nod or shrug or things like that. If you could do that, that would be great.

If you don't understand a question, don't answer it, just ask me to clarify. Make sure you understand a question, before you answer it. And if you do answer a question, we're going to assume that you understand it.

If you need to take a break at any time, we can take a break whenever you want.

And you'll have an opportunity to read over the transcript when it's done, and if you potentially look for errors and see if anything looks wrong, correct it. Okay?

A Okay.

Q Okay. So did you prepare for this deposition at all?

A Yes, I have.

Q And what did you do to prepare?

A I talked to the attorneys here.

Q And as part of your preparation did you speak with anyone other than the attorneys about coal ash impoundments at Powerton?

A No.

Q And did you specifically talk to anybody about -- I guess the answer will be no, but -- or did you review any documents about removal of coal ash from the impoundment or inspection of liners --

A Yes.

Q -- in preparation for this deposition?

A Yes.

Q Okay. And did you review documents about the identification and repair of liner damage?

A Yes.

Q Okay. Did you review documents about relining of the impoundments?

A Review documents? No.

Q And did you review any documents about changes in operations, coal ash -- handling operations since you started working in preparation for this deposition?

MS. NIJMAN: Objection. Vague.

You can understand it, if you -- or answer, if you understand it.

THE WITNESS: No.

Could you rephrase that or however you --

MR. RUSS: Sure. That's fine.

BY MR. RUSS:

Q Did you review any documents about coal ash handling at all in preparation for this deposition?

Dredging ash from the impoundments for example?

MS. NIJMAN: Asked and answered.

BY MR. RUSS:

Q You can answer anyway.

Did you review any documents about ash disposal at Powerton?

MS. NIJMAN: Ash disposal?

BY MR. RUSS:

Q Ash storage; ash management.

A Documents? No.

Q Okay. Thank you.

And just so we're clear, if there're objections you can still answer the question. The objection is preserved for the record.

MS. NIJMAN: Unless his counsel instructs him otherwise.

BY MR. RUSS:
Q It might get struck later unless it's, like, privileged.
Okay. So before we get into the meat of this, I just want to go over some background vocabulary and concepts that I don't necessarily understand. So I want to clarify before we get into the questioning.
So can you describe "boiler slag"?
A Boiler slag is the unburned -- or it's like lava rock that falls to the bottom of the boiler and drains down, and then it gets quenched with water and then it gets grounded up into little rocks, you know, that's slag particles.
Q Okay.
A So it's just another form of bottom ash.
Q And so have you ever used the terms "boiler slag" and "bottom ash" interchangeably?
A It can be, yes.
Q And what does the term "coal cinders" mean?
A Coal cinders is bottom ash also.
Q And what is Hypalon?
A Hypalon is a rubber liner. It's a liner material that's rubbery -- rubber material.

Q And how long and thick is Hypalon?
A You can get that in various sizes.
Q And what about Poz-O-Pac? What's Poz-O-Pac?
A Poz-O-Pac is a mixture of materials to form a base layer. It's like a -- almost like a concrete substance.
Q Okay. Thanks.
That's it for vocabulary, actually, and so I'm just going to go into your personal background. And the first exhibit, which is your C.V. --
MR. RUSS: So which one are we going to --
MS. NIJMAN: Can we get this out of the ring, do you think?
MR. RUSS: Yes. Actually, why don't I take that whole thing out of the back.
BY MR. RUSS:
Q Does this appear to be an accurate copy of your C.V.?
A Yes.
Q Could you describe your educational background.
A I went to Purdue University. I started as a degree in chemistry. I wanted to transfer to engineering. I -- at the time it was full, so I completed my degree. I stayed and worked, declared in-state residency, and went part-time to get my engineering degree. And later on, I went and got my M.B.A. at Bradley.
Q And how long have you worked at Powerton?
A Since January of '92.
Q And have you worked there consistently since then?
A Yes.
Q Can you describe what your job duties were when you were first hired.
A Could you clarify that.
Q Sure.
What were you hired to do? What was the job description they gave you when they hired you?
A Are you asking when I initially started with the company or when I started at Powerton?
Q Oh -- I'm sorry -- thank you for clarifying.
Where did you work for the company before Powerton?

A I worked for the company; but it was in a field service group where I went to various stations and worked for periods of time, basically as a training period.
Q Okay.
MS. NIJMAN: And I'm just going to object to the term "company" because I think that's unclear here. That was not NRG nor Midwest Gen
BY MR. RUSS:
Q At the time you were hired, were you working for the same company that bought --
A No.
Q -- Powerton? Okay.
When you started working -- am I correct in assuming that you were working with Commonwealth Edison when you were first hired in 1992?
A Yes.
Q On your CV it states that you were working at Powerton in 1992, but that's not accurate?
A No, that is accurate.
Q Okay. So when you started working at Powerton, what was your job description?
A I was a lab supervisor. I had -- there

were four other people in the lab. I was the supervisor for them.
Q And what did the lab do?
A We were responsible for boiler water chemistry and the overseeing of the wastewater systems.
Q Did that involve coal ash wastewater?
A Yes.
Q So were you responsible for monitoring that water? Sampling that water?
A The NPDES? Yes.
Q Were you responsible for any solid waste permitting issues at that time?
A No.
Q Did your job description change over the years?
A Slightly, yes.
Q How did it change?
A I became -- well, the Operating Department took over more of the day-to-day and I oversaw that, the other responsibilities of the boiler water chemistry. We went to continuous analyzers, but I had somebody doing daily water -- daily boiler water chemistry. So I became more of a -- looking at that,

you know, instead of overseeing people. I became more project-oriented and helping more troubleshooting for operators, but as -- essentially the same things, as responsibilities.
Q Were you ever responsible for coal ash storage as part of your job?
A No.
Q I don't have any more questions about your personal background, so I just want to move on to some questions about your involvement with particular documents.
Are you familiar with the Environmental Site Assessment that was done in 1998?
A I was involved with that, yes.
Q And who was the consultant that did that assessment?
A I couldn't remember that.
Q What was your role in the process?
A I went around with the consultants and answered questions on basins and general questions that they had about the site.
Q Did you review that Environmental Site Assessment before it was finalized?
A I don't recall if I ever did that or not.

Q Okay. Let me just take a look. We may not need to go into this, but let me just take a look. Yeah, why don't we do it. Just take a look at that.
That is the Phase I Environmental Site Assessment. Could you please turn to page 8514 -- the Bates number -- the number in the lower left-hand corner, 8514.
MS. NIJMAN: Lower right.
MR. RUSS: Sorry. Lower right.
BY MR. RUSS:
Q I just want to draw your attention to the last -- and this is Exhibit No. 37 that we introduced in the past deposition.
The bottom paragraph is describing two settling basins, right?
A Okay.
Q And it says, "The unlined basin north of the service water basin is no longer used in the wastewater treatment process."
Correct?
A Correct.
Q And then -- it says, "According to Mr. Kelly, dredged material from intake flume has been placed in this basin in the past."

Right?
A Correct.
Q And that's you, correct?
A That is me.
Q So could you just -- do you remember what that dredged material would have consisted of?
A River spoils from that canal that comes in from the river. That basin was no longer used -- it was never used --
Q Okay.
A -- and so we were -- we needed to fill that in for a later project. So they were just use -- they were trying to find fill just to fill that basin in. So when we dredged that canal, they used that as fill.
Q So were you responsible for deciding where -- what kind of fill was used and where it was used?
A Not that I recall; although, I was responsible now.
Q Were you aware of it happening when it happened?
A Yes, I was aware that it happened. Yes.
Q I think that's all we're going to do with

this for now. We may want to use it again soon -- so just keep that in mind -- because there's a good map in there.

Are you familiar with the Steam Electric Questionnaire for EPA that Midwest Generation completed in 2010?

A I participated in that, yes.

Q Okay. We won't introduce it because that creates a whole confidentiality problem, but what were the specific areas that you were responsible for answering on that questionnaire?

A The wastewater and the basins, the questions relating to that.

Q Were you responsible for answering questions about the physical characteristics of the basins?

A Yes.

Q And does that include the depth of the basins?

A Not that I recall.

Q Did you have a chance to review the final response before it was submitted?

A I did not ever review the final response, no.

Q Do you know if you were listed as a technical contact on it?

A I did not know that until recently.

Q So were you ever -- I've heard that before, I've heard that before.

Were you ever contacted in your capacity as a technical contact?

A In relation to the report? No.

Q Okay. I expected that. Thank you.

And are you familiar with the Compliance Commitment Agreement that Midwest Generation entered into with the Illinois EPA in 2013?

A Yes.

Q Did you have any role in developing the terms of the Compliance Commitment Agreement?

A No.

Q Were you ever consulted on steps that Midwest Generation could take to address the violations at issue in the Compliance Agreement?

MS. NIJMAN: I'm going to object to the extent that calls for privileged conversation or direction from counsel. Other than --

BY MR. RUSS:

Q Okay. You don't have to answer that.

MS. NIJMAN: -- direction from Counsel.

BY MR. RUSS:

Q Did you review the final Compliance Commitment Agreement?

A I read the cover letter and recently I reviewed the whole thing.

Q Were you ever involved -- did you ever have any role in complying with the terms of the Compliance Commitment Agreement?

A Yes.

Q And what was your role?

A I helped put together the specifications for relining the basins, and then together the specs with the consultant, and helping as a station contact when the project was going on.

Q And -- okay. Why don't I do that.

I'm just going to introduce this into the record now. We're going to come back to it later. This is the Compliance Commitment Agreement, if you can just take a look. Oh -- I'm sorry -- I gave you the wrong copy.

Does that look like an accurate copy

of the Compliance Commitment Agreement as you recall it?

A Yes, as I recall. Yes.

Q Okay, great. Thank you. We'll come back to that later.

And one more background question: Are you familiar with the Groundwater Monitoring Well Network at Powerton?

A Yes.

Q Do you know where the wells are located?

A General, yes. I don't know the exact location; but, yes.

Q Did you have any role in planning where those wells would be placed?

A Just a general rule. All I did was when a consultant went around picking out spots, if he was near a basin, I would go back and look at prints where I would make sure there was no underground utilities in that area.

Q Okay.

A That's all I really did.

Q And do you receive the Groundwater Monitoring Reports?

A I am cc'd on the report, yes.

Q Do you have to send them to anybody else as part of your job?
A No. They're cc'd to the consultant and corporate people.
Q Okay. And do you ever provide an interpretation of those reports to anybody?
A I have not interpreted the reports, no.
Q Do you ever provide feedback to the authors of the reports?
A I have not done that, no.
Q Thanks.
So now I want to go over some details about the specific -- we'll skip the next one -- disposal or storage areas at Powerton, and I know there're a lot.
So now I want to bring back one of the exhibits we already introduced and introduce another one so that we have two maps in front of you that we can refer to?
The first one is the --
MR. RUSS: Actually, you know what? Did I do this wrong? I think we have two new documents from that. This is what I have.
Does that right to you? I'm not sure

about --
MS. DUBIN: This is the same.
MR. RUSS: What are the next two exhibits?
MS. DUBIN: The contract.
MR. RUSS: I'll skip that one. Wait a second. We may have these out of order. Where's the Groundwater Monitoring Report? That one. Okay. Yeah. Thank you.
BY MR. RUSS:
Q So does that look like an accurate copy of one of the quarterly groundwater monitoring reports that we were just discussing?
MS. NIJMAN: I'm going to object to the extent that it does not appear to be complete. It goes to page --
MR. RUSS: That's the copy we got from your files.
MS. NIJMAN: Page 3 doesn't have a --
MR. RUSS: Yeah, that's the copy we got from your files.
MS. NIJMAN: -- continued.
MR. RUSS: The Bates numbers are all in order. So...
MS. NIJMAN: Understood. But it's not a true

and correct copy of the original then. I mean, that's what was in this particular file.
BY MR. RUSS:
Q There may be a page missing.
Otherwise, does it looks like an accurate copy of the --
A As far as I know.
Q Thanks.
And can you just turn to the map on page 10320?
A Okay.
Q I just want to have that available in case we need to refer to it. And then one other exhibit I want to introduce is --
MR. RUSS: We can just skip those two now --
BY MR. RUSS:
Q Have you seen this before, this document?
A No, I have not.
Q This is Exhibit -- the Groundwater -- just for the record, the Groundwater Monitoring Report was Exhibit No. 254, and this -- I just handed you the Phase II Environmental Site Assessment for the Powerton site, and that's Exhibit 256.
And could you just turn to page 3294.

There's a map of the site there.
Does that appear to be an accurate representation of the site as it existed in 1998?
MS. NIJMAN: I'm only going to object -- it's the same objection I've raised in other depositions as to the property boundaries, that it's not -- this is when ComEd owned it. So it's not clear that the property boundaries are what Midwest Gen purchased at a later date.
MR. RUSS: Okay. That's fine. We're not going to talk about anything near the property boundaries.
THE WITNESS: So what was the question?
I'm sorry.
BY MR. RUSS:
Q Does this look like an accurate representation of how the plant was laid out in 1998?
A As far as I can tell, yes.
Q Okay. Great. And I'm not going to ask you to verify the accuracy of anything here, I just want to use it as a reference point --
A Okay.
Q -- so we can identify specific areas that we're talking about.
Now, looking at the more recent map,

the Groundwater Report Map, I'd like to start with the ash settling basin.
A Okay.
Q Do you see that on the map?
A Yes.
Q And have you ever described that by another name?
A Yes.
Q What was it called other than ash settling basin?
A It could be called the ash surge basin.
Q I'm sorry. I am looking at the ash settling basin north of what's described as the ash surge basin here.
A Okay. That could be called the secondary ash settling basin.
Q Okay. Great. Thank you.
And in 2010 was this basin lined?
A Yes.
Q And what was it lined with?
A A hype- -- HEDP -- or -- I'm sorry. A Hypalon. It was a rubber lining.
Q And did the Hypalon extend across the bottom of the pond or was it only on the sides?

A It went across the bottom.
Q And what was in the basin in 2010?
A There was ash material.
Q Was there boiler slag in the basin?
A No.
Q Was there bottom ash in the basin?
A It could be bottom ash, yes.
Q Was there any fly ash?
A There is no fly ash, no.
Q And as of 2010, was that basin being cleaned out periodically?
A To my recollection, that basin had never been cleaned, up until recently.
Q And was the basin relined?
A Yes.
Q And when was that?
A 2013.
Q And what was it relined with?
A HDPE.
Q And did you observe the condition of the basin before it was relined after it was cleaned out?
A Yes.
Q And can you describe the condition of the old liner before it was relined?

A It was intact.
Q Did you see any damage at all?
A There were rips and tears around the top part of the basin above the water line, yes.
Q Was it possible to -- did you know how long those had been there?
A There were various rips by -- but we repaired them. I mean...
Q Had you seen those rips before the basin was cleaned out for relining?
A Yes, because I said -- as I said, they were above the water line. Yes.
Q And do you recall when those rips occurred?
A No. I don't have any dates for anything -- when they occurred, no.
Q And when the ash settling basin was relined, how was the ground beneath where the liner was to be placed prepared?
A How do you mean? I mean --
Q Was there any soil excavated from the basin before it was relined?
A (No response.)
Q Was there any material excavated from the basin at all before it was relined?

A There was material taken out to help facilitate the liner, yes.
Q And what was that material?
A It would have been just dirt. I don't know the exact composition of whatever was down there, no.
Q And was the underlying soil compacted at all before the liner was placed?
A It was, yes.
Q Do you know how thick the compacted layer of soil is?
A No, I do not.
Q So, right now, what material is beneath the HDPE?
A There is rock, there is sand, there is rock, there is drainage tiles, and that's what's below the liner right now.
Q Is there any coal ash under the HDPE?
A No.
Q Does the HDPE liner have a protective covering?
A There is a -- yes.
Q And what does that consist of?
A I -- right now I cannot -- I don't know what the consistency -- what makes that up; But there

is a hard cover on it, yes. It's just a -- it is another rubber, maybe. Maybe? I don't really know.

Q Is there a warning layer over the HDPE layer?

A Yes, there is a sand layer on the bottom. Yes.

Q Okay.

A Sand gravel.

Q And what materials are kept in the ash settling basin now?

A Just any slight carrier that's considered bottom ash that comes over from the ash basin maybe.

Q And how often does ash enter the settling basin -- the ash settling basin?

A I can't give you a how often. No, I don't really know that.

Q Does it occur daily?

A I can't -- I don't really know.

Q Could you describe how ash enters the ash settling basin?

A There are pumps at the ash basin that pump the water over to that basin. So it is possible that something could carry over, but I cannot tell you how much or how often.

Q And do you know -- that's pumping from the ash surge basin, correct?

A Yes.

Q And how high in the ash surge basin is the water pumped from?

A Various levels.

Q Okay. Thank you.

How often are the materials in the ash settling basin removed now, between 2010 and 2015?

A We removed them one time.

Q Just for the relining?

A Just for the relining.

Q And are -- is the Powerton plant on a schedule for cleaning that basin out periodically?

A We have cleaned that basin periodically, yes.

Q How often?

A We have been doing it every six to eight years.

Q Before it was relined.

And going -- is that right?

A Yes.

Q And going forward, do you have a schedule for cleaning it out?

A We have not discussed a cleaning schedule yet, no.

Q Okay. Thank you.

I think -- we will move on to the next exhibit which is going to be Exhibit No. 257. We're still going to be referring to those maps from time to time.

Have you seen this letter before?

A It's a letter to me?

Q It looks like you sent it, so -- or it was to you maybe -- I'm sorry. It looks like it's to you.

A It was to me.

Q Do you remember this letter?

A As I'm sitting here, I'm reviewing it; but as to the exact letter, no, I don't remember.

Q That's fine. I just want to draw your attention to something so you know what I'm talking about.

A Okay.

Q And just take a quick skim of the "Background" section on the front page there.

A Okay.

Q And I'll let you read it. Just let me know

when you're finished.

A Okay.

Q So do you remember the conditions described there?

MS. NIJMAN: Objection. Vague.

Can you specify?

BY MR. RUSS:

Q Do you remember working with NRT to plan the relining of the secondary ash settling basin?

A Yes, I remember working with them. Yes.

Q And they say that repairs to the liner are needed along the side slopes, correct?

A Okay.

MS. NIJMAN: I'm sorry. Where are you?

MR. RUSS: That's the bottom of the first paragraph under Background.

MS. NIJMAN: Okay.

BY MR. RUSS:

Q Did you accompany NRT on that October 20th site visit?

A To the best of my knowledge, I probably did.

Q And do you know what repairs they were describing there?

A We had made repairs to that liner before, yes.
Q Are these the same tears that you referred to earlier?
A Well, it's a different basin.
Q Oh, it is? I'm sorry. I thought this was the --
A I think you're talking about -- oh, the second ash settling -- yes.
Q Those would be the same tears you were talking about earlier?
A Yes.
Q And where it says "numerous previous repairs," those were the same tears above the water line that you were describing?
A Yes, we had repaired them before. Yes.
Q Okay. Thank you.
And turn to the next page of the letter. The first two lines say that the new liner will be placed over the existing liner, right?
MS. NIJMAN: Objection. Misstates the statement. Misstates the text.
BY MR. RUSS:
Q Can you -- it says, "the replacement liners

will be constructed over the existing liners."
Correct?
MS. NIJMAN: It says "we assume the existing liner." It doesn't say it happened.
BY MR. RUSS:
Q Okay. It says, "we assume that...."
Is that correct?
A That's what it says.
Q And is that, in fact, what happened?
A No.
Q The Hypalon liner was removed?
A Yes.
Q Do you know why the plan changed between?
A I mean, I don't know why it changed; but it did.
Q Okay. Thank you. And one more question about the base of the -- the base of this basin as it was being relined.
Do you recall groundwater infiltrating the basin at any point?
A Yes.
Q And when did that occur?
A During the relining process, the river was at an all-time high. We had -- I don't know how much

rain, but it was at an all-time high. And this basin is along the canal which is connected to the river, and when we had everything excavated, getting ready to put the liner down, the water from the river and the canal was seeping through. And so we had to wait -- we waited, thinking it was going to stop and it just kept on coming, so then we had to devise another plan.
Q And what was that plan?
A We put a drain tile in the basins with the rock so that if it ever came high again, we'd drain -- I mean, we would put a sump in so that if the water did come in, it would drain over to a sump where we could pump the water out.
Q And is that sump and drain system still in place?
A Yes.
Q And are you aware of groundwater infiltrating the basin at any other point in time?
A No.
Q Did you discuss with anyone how that groundwater infiltration might affect the liner?
A With the contractor, yes.
Q And what was that conversation about? I'm

sorry. Let me rephrase that.
Do you recall what the problem would be with groundwater infiltration and the liner?
A There could be a possibility it could push the liner.
Q And why would that be a problem?
A Why -- you know why, I mean, if you push the liner you don't want to have it -- you know, come up anywhere. You want to lay it flat and keep it flat. You don't want to have any kind of, you know, seams fall apart or anything like that.
Q So if groundwater infiltrated underneath the liner, it could damage the liner?
A It's possible.
Q Okay. One more question about this.
Is it possible that groundwater infiltration could affect the liner in such a way that the liner might be damaged during the cleaning of the pump?
MS. NIJMAN: I'm going to object to the extent that he is not the consultant, nor the expert.
To the extent it's a factual question that you know and you were told, you can answer.
THE WITNESS: Say that again.

BY MR. RUSS:
Q Sure. Let me introduce an exhibit so you know what I'm talking about. This is going to be 69 from a prior -- yeah. We may -- okay. Why don't I just -- we're not sure if we're going to use this, are we?
(Kelly Deposition Exhibit No. 69 was marked for identification.)
BY MR. RUSS:
Q So can you just look at the e-mail on the bottom half of the page, please.
Do you recall receiving that e-mail?
A I don't recall, but, I mean, I've read it here.
Q Do you remember the circumstances described in that? Do you remember the conversation -- having a conversation related to that e-mail with the contractor?
A With the contractor?
MS. NIJMAN: This isn't from him.
THE WITNESS: No.
MR. RUSS: No, it's to him.
MS. NIJMAN: No, it's not.

THE WITNESS: No.
MR. RUSS: He was cc'd.
THE WITNESS: No. But I didn't discuss this e-mail with the contractor. No.
BY MR. RUSS:
Q Okay. Have you ever talked with anyone at Powerton about liners being damaged during cleaning because of groundwater infiltration?
A No.
Q Okay. Thanks.
I'm going to move on to the new basin, and now I would like to ask some questions about the ash surge basin.
Are you familiar with the ash surge basin?
A Okay.
Q Have you ever described it by any other name?
A Ash basin.
Q And do you consider that to be the primary ash basin at Powerton?
A Yes.
Q In 2010, was that basin lined?
A Yes.

Q And what was it lined with?
A The HDPE and the Poz-O-Pac bottom.
Q In 2010?
A Yes.
Q Okay.
MS. NIJMAN: Just clarifying, do you mean Hypalon or HDPE?
THE WITNESS: I'm sorry. Yes.
BY MR. RUSS:
Q Okay. Thanks. That conforms with my notes.
A In 2010, it was the HDP- -- no -- Hypalon, rubber. It was the rubber-lined, which is the Hypalon.
Q And did the Hypalon extend across the bottom or was that only on the sides?
A No, only on the sides.
Q And the bottom you said was Poz-O-Pac?
A Yes.
Q And in 2010, what was in the basin?
A Bottom ash.
Q Was there any fly ash?
A No.
Q And as of 2010, how often was that basin

being cleaned out?
A In 2010, as needed -- I mean, between six and eight years --
Q Okay.
A -- is what we were doing.
Q And how was it cleaned out?
A Are you asking about the process?
Q Yes.
A We would dewater the basin, take all the water out. And then we would put large end loaders to push the material to one side and let more water drain out to dry it and pump that off. And then once that was sufficiently dry enough, we would load up trucks and they would take it off -- off-site removal.
Q And where was the water pumped to?
A It was pumped over to the secondary ash basin.
Q Okay. And was the ash in the ash surge basin ever stacked outside of the basin prior to removal off-site?
A No.
Q And was this basin relined?
A Yes.

Q And when did that happen?
A In 2013.
Q These questions are going to get redundant. Simply the same ones for every basin.
Did you observe the condition of the basin after it was emptied out before it was relined?
A Yes.
Q And can you describe the condition of the base of the basin at that time?
A It was a Poz-O-Pac. It was very hard. I mean...
Q Had the Poz-O-Pac been damaged at all?
A Not that I could tell.
Q And was any of that pre-existing Poz-O-Pac removed prior to relining?
A A very small layer was probably scraped off to level.
Q And was some Poz-O-Pac left in place?
A Very much so.
Q How much Poz-O-Pac is still there?
A I do not know the depth; but it is mostly all there, yes, except for the -- like I said, that little part there that's scraped on. And I know it's very deep. I don't know the exact dimension.

Q And you don't know how deep it was before it was scraped and relined?
A No.
Q Is there anything under the HDPE aside from Poz-O-Pac and the soil beneath the Poz-O-Pac?
A Sand. I believe there is sand, but I don't recall what the -- was put on that.
Q Is there any --
A But there is no fly ash, no.
Q Is there any coal ash at all on there?
A No.
Q And do you know what's on top of the HDPE liner?
A Yes. There is sand and rock.
Q And is that a protective layer?
A Yes, warning layers. Yes.
Q And what materials are kept in the ash basin now?
A Bottom ash.
Q And how often is that bottom ash removed nowadays?
MS. NIJMAN: Asked and answered.
MR. RUSS: No.
THE WITNESS: We have not -- there's

about -- we have not -- as I've said before, we have not had a schedule yet set up for that.
BY MR. RUSS:
Q Okay. So that -- when I was asking about the secondary ash settling basin, is that true for the whole plant?
I can just simplify the question if that's the case?
A No, it's not. That is not true.
Q So are there some basins on site that have a schedule for cleaning, others that don't?
A Right now, yes.
Q Okay. Thanks. I'll ask about those other ponds when I get to them.
When bottom ash is removed from the ash surge basin, how is that done?
I'm sorry. That, I have actually --
A I just answered that.
Q I just asked that question.
Has the process changed since the pond was relined?
A It would be probably -- it would probably be the same process if we -- next time we do it.
Q Okay. And it --

A I can't say that for certain because I don't know if we will be given --
Q Okay.
A I don't know.
Q Has it been cleaned out since it was relined?
A No.
MS. NIJMAN: Asked and answered.
THE WITNESS: I don't think so.
BY MR. RUSS:
Q Would the same equipment be used in the future for ash removal?
MS. NIJMAN: Asked and answered.
THE WITNESS: I can't answer that right now. I mean, I don't know.
BY MR. RUSS:
Q Okay. That's fine.
And has groundwater ever infiltrated this basin?
A No.
Q I guess I should be clear.
Would you know if groundwater had infiltrated the basin when it was full of ash?
MS. NIJMAN: You mean beneath the liner?

Object to vague.
BY MR. RUSS:
Q Before it was lined with HDPE, if groundwater had infiltrated the basin, would you have known?
MS. NIJMAN: Calls for speculation. Objection.
BY MR. RUSS:
Q You can answer.
A I can't answer that right now.
Q And if groundwater infiltrated beneath the HDPE liner that's there now, would you know about it?
MS. NIJMAN: Same objection. Vague. Calls for speculation.
BY MR. RUSS:
Q You can still answer.
A I can't answer that right now.
Q Okay. I'm going to skip the next exhibit.
And why can't you answer now -- that question?
A I don't know enough about the groundwater --
Q Okay.
A -- to answer any kind of questions pertaining to that, where it's coming from or

anything like that.
Q Okay. And I'm going to turn now to another basin. And this is the -- I don't remember what it's called on the colored map there -- the former ash basin. It appears on the map to be two basins.
A Okay.
Q Has it always been that way?
A No.
Q Did it used to be one basin?
A Yes.
Q And when did it -- when was it divided?
A I can't remember the exact dates we put that rail rock. It's been within the past five years. I don't know exact dates. I don't remember.
Q And that's -- it's a rail --
A It's a rail line.
Q -- that went through the former ash?
A Yeah, we built a loop track.
Q And so now on this map where there're two areas both named Former Ash Basin, is there coal ash in the northern portion?
A I can't ans- -- I don't know.
Q And do you know if there's coal ash in the lower -- in the southern portion?

A I can't answer that. I don't know.
Q Do you know if that former ash basin is lined?
A To my knowledge, it is not.
Q In 2010, when you were working on the Steam Electric Questionnaire for EPA, did you have to answer any questions about the former ash basin?
MS. NIJMAN: If you recall.
THE WITNESS: In 2010?
BY MR. RUSS:
Q Yeah. We talked about earlier that EPA Questionnaire.
A Oh. I don't recall answering questions about the former ash basin.
Q Have you been involved in cleaning out that ash basin -- removing ash from that ash basin?
MS. NIJMAN: Objection. Misstates prior testimony as to ash.
MR. RUSS: Well, I'm just -- it's called the former ash basin. So I'm just --
BY MR. RUSS:
Q Have you ever --
MS. NIJMAN: Yes. But he already testified that it didn't contain ash.

BY MR. RUSS:
Q Have you ever been involved in removing any materials from the former ash basin?
A I have not been involved with the cleaning out of any materials from that basin, no.
Q Are you aware of that basin ever being relined in the past ten years or lined in the past ten years?
MS. NIJMAN: In the past ten years?
MR. RUSS: I'm making up a number. It doesn't really matter.
Q Has it been in the past five years?
A No.
BY MR. RUSS:
Q Are you aware of any material being removed, even if you're not working on it, from that basin?
A Not that I'm aware of.
Q Okay. And I'm going to introduce an exhibit, which will be No. 2- -- oh -- I'm sorry -- this isn't the right one. Yeah, did I -- did I make a mistake on that? Did we already do that one? We don't have it?
MS. DUBIN: I don't know. It might be -- it's

261.
BY MR. RUSS:
Q Okay. Sorry. I'm jumping ahead here. So this is going to be Exhibit 261 for the record. There it is. It's short.
Do you recall a recycle line being added for the old ash basin -- first of all -- I'm sorry -- let me back up.
This describes the old ash basin, correct, in the subject line?
A "Adding a Recycle line to the Old Ash Basin."
Yes.
Q And is this old ash basin the same as the former ash basin we have just been talking about?
MS. NIJMAN: If you know.
THE WITNESS: I don't know. I don't know. I have never seen this.
BY MR. RUSS:
Q Okay. Were you cc'd on this?
A Yes.
MS. NIJMAN: But I'm going to note for the record that it's not signed, so it's not clear that it ever went out or he ever received it.

MR. RUSS: Okay.
BY MR. RUSS:
Q Are you aware of a recycle line ever being sent to the former ash basin?
A Ask the question again.
Q Let me -- or I'll ask it a different way.
Has water ever been pumped from the old ash basin to the ash surge basin?
MS. NIJMAN: Which is the old ash basin?
MR. RUSS: Well, I'll say the former ash basin.
BY MR. RUSS:
Q Has water ever been pumped in the former ash basin to the ash surge basin?
A We have not done that, no.
Q Has water ever been pumped the other way, from the ash surge basin to the former ash basin?
A Pumped? No.
MS. NIJMAN: I'm sorry.
You're talking about this area here?
MR. RUSS: Yes.
MS. NIJMAN: Water?
MR. RUSS: Uh-huh.
BY MR. RUSS:
Q Has -- hasn't been pumped.

Has water ever been drained from the ash surge basin to the former ash basin?
A No.
Q Has water ever gotten to the former ash basin from the ash surge basin by any conveyance at all?
A Yes.
Q And how did that happen?
A There's an overflow.
Q And when the ash surge basin's too full, it would flow to the former ash basin?
A Yes, it has.
Q And how often does that happen?
A Not very often.
Q Is that overflow still in place?
A Yes.
Q Do you remember the last time it might have happened?
A Recently. The past couple weeks it happened once.
Q And before that, do you remember when?
A No, it's been -- no.
Q Now we'll move on to another basin. This is going to be the metal cleaning basin.

Are you familiar with the metal cleaning basin?
A Yes.
Q And have you ever known it by another name?
A No.
MS. NIJMAN: Hold on a second. Can you wait for a second, please.
Sorry. Go ahead.
MR. RUSS: No problem.
BY MR. RUSS:
Q In 2010, was the metal cleaning basin lined?
A Yes.
Q And what was the liner? What did the liner consist of at that time?
A The Hypalon and a Poz-O-Pac bottom.
Q And was there Hypalon on the bottom or just the sides?
A No, just the sides.
Q And in 2010, what were the contents of that basin -- metal cleaning basin?
A It had fly ash material.
Q And did it have other material?
A No.

Q Just fly ash?
A Just fly ash at the time.
Q And as of 2010, was that basin being cleaned out on a periodic basis?
A Yes.
Q And how often?
A Yearly.
Q And how was it cleaned out?
A Same method as before.
Q Did you say a front-end loader?
A Yeah. They would push the material to drain it -- to get the water -- to dry it out, and then it would be loaded onto trucks.
Q And was this basin relined?
A Yes.
Q And when did that happen?
A 2010.
Q And what was it relined with?
A The HDPE.
Q And did you observe the condition of the basin after it was emptied, but before it was relined?
A Yes.
Q And can you describe the condition of the

base of the basin at the time?
A Same as before. The Poz-O-Pac was very durable and very sturdy.
Q And was any Poz-O-Pac removed?
A Not that I recall on this one.
Q Is there anything beneath the HDPE liner other than Poz-O-Pac and soil at this point?
A At which point?
Q Now. After it was relined.
A There may be a sand layer, but I'm not a hundred percent sure. I don't remember exactly, but that would be it. If there is, that's all there would be.
Q Is there any coal ash under the HDPE?
A No.
Q And is there a protective layer on top --
A Yes.
Q -- of the HDPE?
And what materials are kept in the metal cleaning basin now?
A Fly ash material.
Q And how does the fly ash get to the metal cleaning basin?
A During outages we have a contractor come in

for a high-pressure blasting on the external part of tubes. And then that fly ash is what gets put out into the basin.
Q And is it conveyed with water or dry?
A Water.
Q Is it still being cleaned out yearly?
A Yes.
Q And have -- has the method of cleaning out that pond changed since it was relined?
A No.
Q Is it the same company doing the removal that was doing it before it was relined?
A Our employees do the work.
Q Oh, okay. I'm sorry. I didn't realize that.
Has there ever been any damage to the new liner --
A No.
Q -- of that basin?
And has groundwater ever infiltrated the metal cleaning basin to your knowledge?
A To my knowledge, no.
Q I just need to take a look at that. Sorry. Bear with me for just a second here.

MR. RUSS: I may not need to go over this. I think we just covered it. Okay. We've gone over that. Fine. We don't have to do that.
MS. DUBIN: Okay.
BY MR. RUSS:
Q So now I'm going to turn to the ash bypass basin.
Do you see it on the map in front of you?
A Yes.
Q Are you familiar with the ash bypass basin from your --
A Okay. Yes.
Q Have you ever known the ash bypass basin by any other name?
A No.
Q And could you describe how the ash bypass basin is used.
A It is only used when we clean out the larger ash basin because that is the path the material would go to while we clean out the larger basin.
Q So is ash removed from the ash surge basin and placed in the ash bypass basin?

A Not mechanically, I mean...
Q Okay. Is ash routed to the ash bypass basin --
A Yes.
Q -- while you're using the ash surge basin?
A Yes.
Q And when you're not doing work on the ash surge basin, is the ash bypass basin used at all?
A No.
Q And in 2010 was the ash bypass basin lined?
A Yes.
Q And what was it lined with?
A The Hypalon liner.
Q And was there any Poz-O-Pac?
A I don't recall if that one had the Poz-O-Pac bottom or not, or if it was lined all the way through.
Q Do you recall if the Hypalon extended across the bottom?
A At the time I don't remember. I don't remember.
Q Okay. And in 2010, what was in that basin?
A It would be bottom ash material.
Q And as of 2010 -- leading up to 2010, how

A I believe it was lined similar to the other ones where you have -- as I said, I can't recall if that had a Poz-O-Pac bottom; but if it -- you know, if it did, it would have that, and we'd put sand and gravel on the bottom of the liner -- gravel and sand -- and then put it one layer on top of that.
Q Okay. And -- this may sound redundant -- is the ash bypass basin still used in the same way it was used before it was relined?
A Yes.
Q And is it cleaned out only when you're about to clean the ash surge basin so that you can reroute the ash?
MS. NIJMAN: Misstates prior testimony.
You can answer, if you understand what he said.
THE WITNESS: Could you clarify again.
BY MR. RUSS:
Q Sure.
Do you reroute ash to the ash bypass basin when you're about to clean the ash surge basin?
A Yes.
Q And before you do that, do you clean the ash bypass basin?

often was that basin cleaned out?
A Just whenever we got ready to clean the larger basin, we would clean that out so we could use that basin.
Q And was it cleaned out in the same way as the other basins on this site are cleaned out?
A Yes.
Q And was it relined?
A Yes.
Q When did that happen?
A 2010.
Q And what was it relined with?
A The HDPE.
Q Before it was relined, did you notice any damage to the base of the basin?
A To the base? No.
Q Did you notice any damage to the sides of the basin?
A There was stuff, for instance some rips and tears, that had been repaired in the past, yes.
Q Were any of those below the water line?
A No.
Q And now, today, what's beneath the HDPE liner in the ash bypass basin?

A Yes.
Q Is it cleaned any other time?
A No.
Q Okay. Thank you.
And I think I know the answer to this, but I have to ask it anyway.
Is it Powerton's staff that clean this basin out or do you have outside contractors do that work?
A We would clean it out and outside contractors drive the trucks, but we do it.
Q And has groundwater ever infiltrated the ash bypass basin to your knowledge?
A Not to my knowledge.
Q Okay.
MR. RUSS: I'll introduce an exhibit that we already introduced, which is the Bates page 9733.
MS. DUBIN: What number?
MR. RUSS: I don't remember what number it is.
MS. DUBIN: What's the document title?
MR. RUSS: It's a letter from NRT to...
MS. DUBIN: 257.
MR. RUSS: 257?
MS. DUBIN: Uh-huh.

MR. RUSS: Exhibit 257.
MS. BUGEL: The November 4th letter?
MR. RUSS: Yeah. Exhibit 257.
MS. NIJMAN: Do we have it already?
MR. RUSS: Yes.
BY MR. RUSS:
Q And can you just take a look at the very bottom paragraph on the first page there.
A Okay.
Q Do you see where it says that the base of the basin may be in a deteriorated condition?
A Yes.
Q Do you know why NRT said that?
A Because at the time they could not see the bottom of the basin, but it was just speculation on their part. But it was not.
Q Okay. Thank you. So done with that exhibit.
Now, I'm going to -- just to be exhaustive, I'm going to introduce Exhibit 264, which is a Specification Data Sheet for the bypass basin liner replacement.
MR. RUSS: Yeah, it's yours.

BY MR. RUSS:
Q Do you remember seeing this? Have you ever seen this before?
A I don't recall it -- maybe -- but, yeah, probably.
Q And is this bypass basin the same ash bypass basin we've just been talking about?
A Yes.
Q And do you see where it says that site activities will consist of removal of existing Poz-O-Pac?
Under the --
A Yes.
Q -- description where it's -- all right.
Do you remember why the plan was to remove the Poz-O-Pac?
A I do not recall why, but it was not removed.
Q And do you know why the plan changed?
A I don't recall specifics; but I know we were thinking about extending that basin, but we did not do that. We kept it the same size and everything, so -- and I don't know why we would've.
Q Okay.

A We didn't change anything.
Q Okay. Thanks. I'm done with that exhibit. I'm going to now turn to Exhibit 265, which is an e-mail from you to -- I think it's this one -- Dale Green (phonetic).
I don't know why it's multiple pages, but if you can just look at the e-mail.
MS. NIJMAN: Which one?
MR. RUSS: The first page that has an e-mail on it.
MS. NIJMAN: Yeah, there's several e-mails in a row.
MR. RUSS: Right, the first e-mail on the first page. The August 23rd e-mail -- July 23rd e-mail.
BY MR. RUSS:
Q I just want to ask you about where it says, "we did not take any ash and cinders off site when we did the liner."
Do you remember writing this e-mail?
You probably write a lot of e-mails.
Is this an accurate reflection of what happened? Did you take a hundred tons of material out and place them in the big basin?
A We might have. I don't recall; but, yeah.

Q And is that something that happens regularly?
A No.
Q It was an unusual occurrence?
A Yes.
Q And do you know why it might have happened that way this time?
A No, I do not know.
Q Okay.
A I can't recall. I don't know.
Q And that 100 tons of material that was placed in the big basin --
MS. NIJMAN: Just objection to the misreading of the document. It says, "the estimate was about 100 tons."
BY MR. RUSS:
Q The material that was placed in the big basin, is that still there? Was that ultimately --
A No, it's all gone.
Q Was it removed from the big basin off site?
A I can't answer that, but -- I mean, there's nothing there now.
Q Okay. Thank you.
Now, I want to turn to another basin,

the east yard runoff basin.

Are you familiar with the east yard runoff basin?

A Yes.

Q And have you ever known that basin by another name?

A No.

Q In 2010, was this basin lined?

A It is not lined.

Q It's still not lined?

A It's still not lined.

Q In 2010, what was in this basin?

A Water.

Q Was there anything other than water in the basin?

A There may be sludge material on the bottom. I mean, it does -- that just takes rainwater from the east half of the property.

Q Okay.

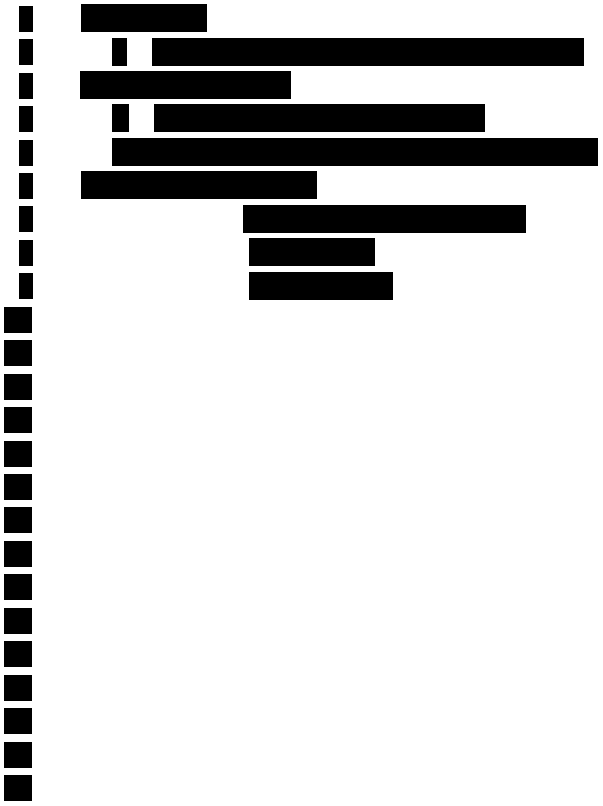
MR. RUSS: I'm going to have to introduce an exhibit that's nondisclosable, so this is going to be -- how do we characterize it?

MS. NIJMAN: Confidential.

MR RUSS: Yeah. This is going to be a

confidential part.

MS. NIJMAN: So what we've been doing is you mark it "confidential" on the record, and when we stop we'll tell you we've stopped with the confidential so that we can remove it from the pages of the transcript if we need to.



(Whereupon the following is confidential.)

(whereupon the following is no longer confidential.)

BY MR. RUSS:

Q Have you ever known fly ash to be placed in the east yard runoff basin?

A No.

Q Has fly ash ever inadvertently ended up in the east yard runoff basin?

A It's possible.

Q And how would that have happened?

A Wind could have blown some in. I mean --

Q Okay. Thank you.

Has that basin ever been relined? You said no --

A No.

Q I'm sorry. It's not lined now.

And how often is that basin cleaned out, if ever?

A I don't recall it being cleaned out.

Q Let me turn to the Compliance Commitment Agreement.

MR. RUSS: I don't know if we entered that already.

MS. DUBIN: It should be one of the first ones.

MR. RUSS: 251. Can I get a time check?

MS. BUGEL: It's 10:40.

MR. RUSS: Oh, great. I'm going to be done soon with direct. I'll improvise.

MS. NIJMAN: There's no harm in finishing early.

MR. RUSS: Yeah, right.

MS. NIJMAN: We all have things to do on a Friday.

MR. RUSS: Yeah.

BY MR. RUSS:

Q We've already looked at this. Can you turn to page 554. I'm sorry. 555.

Item L there. It says, "Midwest Generation shall not allow the East Yard Run-off Basin to be part of ash sluicing flow system."

Right?

A Correct.

Q Do you know why that provision was added to the Compliance Commitment Agreement?

MS. NIJMAN: Again, objection to the extent it's a discussion or negotiation with Counsel.

BY MR. RUSS:

Q Has ash -- you stated that ash has never been sluiced to the east yard runoff basin, correct?

A (Nonverbal response.)

MS. NIJMAN: You can answer.

THE WITNESS: No.

BY MR. RUSS:

Q And do you see where it says, "Midwest Generation shall submit monitoring results from water contained in the East Yard Run-off Basin"?

A Yes.

Q Were you responsible for doing that monitoring?

A I am not, no. That's a consultant.

Q Oh, okay.

Do you oversee the consultant's monitoring work?

A Yes. Well, I'm a station contact when he comes on site to be sampl- -- to do the sampling.

Q And has that monitoring stopped?

A No.

Q It's ongoing?

A Yes.

Q And has that monitoring revealed anything

you didn't expect?
MS. NIJMAN: Object to foundation.
BY MR. RUSS:
Q You can answer anyway.
A I'm not -- I don't know. I don't do -- I don't read the analysis.
Q You don't read the results. Okay. Okay. That's fine.
And do you know why this is included in the CCA?
MS. NIJMAN: Same objection to privilege.
THE WITNESS: I don't know.
BY MR. RUSS:
Q I think that's it for the east yard runoff basin for now.
Now, I want to turn to the limestone runoff basin. This -- if you look at the older map from the Environmental Site Assessment from 1998, there's an area described as the slag overflow basin next to the ash surge basin.
A Yes.
Q Is that the same area that has since been called the limestone runoff basin?
A Yes.

Q And can you describe the history of that basin since you started working at Powerton.
A Since I started working, that basin was never used.
Q That basin hasn't been used at all since you started working?
A As part of a process? No.
Q Has it been used for anything?
A It has been used to store -- they did store temporarily some fly ash there to be -- when they were cleaning out duct workers' soap in the boiler, and then it would be scooped up and placed with other fly ash for disposal.
Q And when did that happen?
A I can't tell you the specific dates. I don't know.
Q Did it happen more than once?
A It has happened, yes.
Q Do you remember the last time it happened?
A It's been many years ago, no.
Q And do you know why it would have been called the slag overflow basin in 1998?
A I don't know.
Q Do you know why it's called the limestone

runoff basin subsequently?
A Because we had a scrubber back in the early 80s, and that basin was used to treat the material from the scrubber. It was basically lime.
Q And when you say, It was used to treat that material, how was it treated?
A I don't know. I was -- it stopped long before I got there.
Q Okay.
A I just know that it was associated with that scrubber.
Q Okay. And was there any of that lime material in the limestone runoff basin when you started working at Powerton?
A Say that again. What was --
Q When you started working at Powerton in 1992, I believe --
A Okay.
Q -- was there any lime in that limestone runoff basin?
A No.
Q Was there anything in there?
A Not that I recall. I mean --
Q Do you remember if it was overgrown at the

time?
A I couldn't tell you. I mean, the liner was still -- I mean, what do you mean by "overgrown"?
Q Was there grass growing?
A Around the basin, yes.
Q In the basin?
A Only -- well, there was dirt in the bottom, but there -- that basin was similar to the others where it had a Poz-O-Pac.
Q Oh, okay.
A So, I mean, if there was anything growing, it was just because there was dirt that had blown in there and grass that started growing in the dirt; but there is a Poz-O-Pac bottom in that, just like all of the other basins.
Q And did that basin have Hypalon sides too?
A Yes.
Q Was that basin ever relined?
A No.
Q So does it still have a Poz-O-Pac bottom and Hypalon sides?
A Yes.
Q And I'm trying to figure out how to ask this question.

Does it still look like a basin or has it been filled in?
A No.
Q It hasn't been filled in. Okay. You said it wasn't used to store fly ash right now.
Is it used to store anything?
A No.
Q And have you ever known groundwater to infiltrate the limestone runoff basin?
A No.
Q Now, I want to turn back to the Phase II ESA, which I believe --
MR. RUSS: Oh. That's the one we're using for the map?
MS. NIJMAN: Uh-huh.
MR. RUSS: Okay. Great. Perfect. Thanks.
BY MR. RUSS:
Q So that's Exhibit 256. And if you turn to page 3236 of this document -- there is no 3236 on this document. What am I talking about here? 3263. I was reading it wrong. Just so that you know about what I'm asking you about.
See Item 8 where it says two ash/slag disposal areas at the facility?

Were you familiar with these two areas in 1998?
A Okay. Okay. Yes.
Q Did you know about it?
A Well, it's kind of vague, but I'm going to assume that I know that. I'm not -- I'll wait until your next question.
Q Okay. Were you aware of any ash or slag disposal areas on the Powerton property in 1998 other than the ash -- other than the basins?
A No.
Q And so when you're reading this here and it talks about two ash/slag disposal areas --
A Okay.
Q -- do you know where they might have been?
MS. NIJMAN: Calls for speculation.
You can try to answer.
THE WITNESS: I'm assuming what they are talking about is the ash basin and the metal cleaning basin. That's my interpretation of that -- that's what that is.
BY MR. RUSS:
Q Okay. So if you look at -- we're going to have to look at a map of where soil boring B-12 is.

On page -- there's a soil boring map.
First of all, I'll ask you, were you -- did you see the soil boring results when they did them?
A I have not seen them, no.
Q On page 3297 -- I have to apologize in advance. There's very small print here. B-12 is located off to the northeast corner of the ash surge basin.
Do you see it there?
MS. NIJMAN: I don't see any B's on here. I see S's.
MR. RUSS: On 3297, page 3297.
THE WITNESS: I can't read that.
MS. NIJMAN: I can't read that.
MR. RUSS: Everything's small print, yeah.
THE WITNESS: No, we're on the wrong page. Okay.
BY MR. RUSS:
Q That soil boring is located outside of the ash basin, correct?
A Okay.
Q Do you remember there ever being ash and slag stored in that area where boring B-12 is

located?
A No.
Q And if we flip back to 3263, the other area is described as being south of the wastewater treatment plant with soil boring B-23. Aside from the fact that I think ENSR had their directions wrong, B-23 is, I think, north of the former wastewater treatment plant near the rail line, Vesper.
A Okay.
Q Do you see the B-23?
A Okay.
Q Have you ever known ash or slag to be stored in that area?
A No.
Q Okay. Thanks. And now I want to ask about something sort of different.
Has coal ash ever been used as structural fill since you started working at Powerton?
MS. NIJMAN: Objection to vagueness.
Do you understand --
BY MR. RUSS:
Q Do you understand the question?

A As structural fill?
Q As fill of any kind?
A Fly ash on site or off site?
Q On site.
A Not that I'm aware of.
Q And has bottom ash been used as fill?
A Not that I'm aware of.
Q And are you aware of any areas where any kind of coal ash might have been used as structural -- as fill in the past?
A On site?
Q On site.
A No.
Q I want to ask about another -- one more basin, and this is Exhibit 267. I'm just showing this to you so you know what I'm asking you about.
What is the service water basin?
A That is the secondary ash basin.
Q Okay. Great.
A I'm sorry -- yes. I guess I do know it by another name as service water basin.
Q Okay. That's fine. Thank you. And that's it. I don't have any questions about that because we already talked about the service water

basin -- the secondary ash settling basin.
So now I want to ask you a few questions about groundwater monitoring.
How many groundwater wells are currently being monitored at Powerton?
A I believe there are 17.
Q 17. Okay.
And are those all part of the groundwater monitoring reports?
A Yes.
Q And aside from wells that Midwest Generation reports on to the Illinois EPA, are there any other wells on the property being monitored?
A How -- what -- for what purpose do you mean?
Q For groundwater quality.
A No. Those are the only ones that I'm aware of.
Q And have there been other groundwater quality monitoring wells on site in the past since you started working?
A I don't recall if there were or not.
Q And do you know which of the groundwater monitoring wells at Powerton are considered

upgradient?
A I do not know. I don't interpret that.
Q Were any groundwater monitoring wells added to the current network between 2010 and today?
A I know -- I seem to recall they added -- 17 was not the original number because I think they came back and added some, but I couldn't tell you when that happened or where they were placed --
Q Okay.
A -- the second time around.
Q Do you know why they added wells?
A No, I do not.
Q Okay.
A Well, I know that there were two decrees. I mean, initially there was only three wells put in.
Q Three wells.
A Three wells on the first construction permit, and then there were others added later.
Q And do you remember where the three wells were located?
A They were placed around the metal cleaning basin.
Q And when did that happen?
A That was in 2010.

Q And when were other wells added?
A I don't know the dates, I just know they were added at different times.
Q Okay. Now I want to just pull back an exhibit from --
MR. RUSS: Oh. Maybe we didn't introduce this Exhibit 38 yet.
Is that the one that Rob caught?
MS. DUBIN: I don't see 38.
MR. RUSS: We may have numbered it --
MS. DUBIN: Yeah, we numbered it differently. It's 269.
BY MR. RUSS:
Q Just take a look at that.
Have you ever seen this letter?
MS. NIJMAN: This is a duplicate page. Yeah, that's a duplicate.
Just for the record, 11234 Bates number is a duplicate of 11235.
MR. RUSS: Right.
THE WITNESS: I have not seen this. I'm not copied on it. I don't -- I don't recall seeing this ever.

BY MR. RUSS:
Q Okay. I just want to draw your attention to some -- where it says -- in the first paragraph of the front of the page of the letter it says, "Even though these points may be upgradient to specific ash basins --" and I believe it's referring to wells MW-1, MW-9, and MW-10 in that sentence above; "they are not believed to be reliable up gradient monitoring points for historical ash related activities that may be impacting groundwater quality proximate to these wells."
Is that right?
MS. NIJMAN: Objection.
Is what right? Is that what it says?
BY MR. RUSS:
Q Is that what it says? Is that how you read it?
MS. NIJMAN: Are those the words on the page?
BY MR. RUSS:
Q Yeah.
Are those the words on the page?
A Those are the words on the page.
Q Okay. Thanks.
Do you know what historical ash

related activities --
A No, I do not know.
Q All right. Thank you.
Now, I just want to turn back to the Compliance Commitment Agreement, which is Exhibit 251. I just want to go over the compliance activities listed that start on page 554 -- Bates page 554.
And 5(b) says, "The ash treatment ponds shall be maintained and operated in a manner which protects the integrity of the existing liners."
Can you describe how the ash ponds are operated in a way to protect the integrity of the liners?
A The operators go out and review on a daily basis the liners. And if anything is amiss or anything -- they are to notify the shift supervisor and Work Orders are written to repair.
Q And have any of the new liners installed since 2010 been damaged since 2010?
A No, not that I can recall.
Q And then turning to 5(c), it says, "During the ash removal process, visual inspections of the ponds shall be conducted."

Does that occur every time ash is removed from the ponds?
A Yes. The operators in the -- that are doing the work would say something if it's something -- if they notice something or saw something.
Q And are there -- do the people conducting the visual inspections generate reports if nothing is wrong?
MS. NIJMAN: I'm going to object only to the extent I'm not sure there's been a removal process since the CCAs.
Has there? Did we talk about that?
THE WITNESS: No, I don't think so.
MS. NIJMAN: Okay.
THE WITNESS: Do they generate reports? No.
BY MR. RUSS:
Q If they do find a problem, would they generate a report?
A They would notify and work orders would be written, yes.
Q And so when the metal cleaning basin is being cleaned, is the entire liner visible for visual inspection or only part of the liner?

A When it is being cleaned, the entire basin would be visible.
Q Would the liner beneath the warning layer be visible?
A Yes.
Q How would you see the liner beneath the warning layer?
A You said -- I'm sorry. I thought you said water.
Q No.
A I was thinking there would be no water in the basin.
Q Right.
A So repeat your question again.
Q Is the entire -- is the -- let me see if I can -- I'll ask this in two ways.
Is HDPE under the warning layer ever visible?
MS. NIJMAN: Any of it?
MR. RUSS: Any of it.
THE WITNESS: No, not unless there is a breach in the warning layers.
BY MR. RUSS:
Q And have there been any breaches of the

warning layers?
A None. Not that I'm aware of.
Q And when the ash is being removed from the metal cleaning basin, is all of the HDPE that's above the warning layer visible?
A We have instructed them not to get the liners on the side. We have not gotten to base liner.
Q Okay.
A There is probably a foot of material on the sides in some areas because I didn't want to get them very close to the liner --
Q Okay.
A -- but the bottom is totally visible and is in shape -- is in good shape.
Q And so what did you see on the bottom when ash is removed?
A There's rock. That's the warning layer.
Q And how much of the HDPE liner is actually visible for visible inspection?
A I'd say probably -- it varies around the basin. It can go all the way from 20 percent to -- down to over 75 percent all the way down; you can see in various spots.

Q Okay. I covered that one. I'm going to now look at 5(f), which is at the bottom of page 554. I know we just talked about this, but I'm going to ask a slightly different question.
Do you know where that new well was placed?
A Specifically, no, I do not know right now without looking at a map.
Q Was it placed south of Monitoring Well 9?
A If that's what it says, yes.
Q Okay. All right. And then 5(m), the very last one, "Midwest Generation shall not use any unlined areas for permanent or temporary ash storage or ash handling."
Has Midwest Generation or Energy used any unlined areas?
A No.
Q Okay.
MR. RUSS: So can we take a short break, and we'll talk and then come back.
MS. NIJMAN: Sure.
(After a short recess, the deposition resumed as follows:)

BY MR. RUSS:
Q I just had a few follow-up questions.
Do you remember when we were talking about the secondary ash settling basin, there were tears above the water line.
A Okay.
Q And do you know how those tears were caused?
A Just probably -- I mean, that's the exposed liner. On top it's weather-beaten. It gets brittle. It can crack easily.
Q From natural conditions?
A Yes.
Q Could it have been torn during removal of ash from the basin?
MS. NIJMAN: Objection. Speculation.
If you know.
THE WITNESS: Well, only because we've never cleaned that basin out --
BY MR. RUSS:
Q That's good.
A -- up to that point when we relined it.
Q Were there any other -- were there ever machines of any kind in the basin for any reason

other than cleaning it out? Was ash ever moved around within the basin?
A During the removal process, maybe from one side to another; but, I mean, I wasn't there for that process.
Q Okay. And it wasn't moved around prior to the removal process within the basin?
A I don't recall if it was or not. I wasn't there for that removal process. I was off site. I had medical issues.
Q Okay. We were just talking about Hypalon, right?
If it's exposed to the elements, it gets cracked and brittle?
A Okay.
Q Is that what you said?
A It can be, yeah.
Q And is that true of HDPE as well?
A Not right now, that's not in it. Plus, that has got a -- it's like that -- it's got -- the liner has got like a hardcore, very dense material over it, so it's very stable.
Q And is that material over the HDPE over the entire liner?

A Yes.
Q And how thick is it?
A I don't recall the specs of how thick that is.
Q Is any of the HDPE visible beneath the hard cover you're describing?
A No, not that I've seen.
Q So when you do visual inspections of the liner, you're actually visually inspecting the hard cover on top of the HDPE?
A Yeah.
Q And you don't know -- do you know what that hard cover's made out of?
A I don't know what it is right now. I can't recall what that is.
Q What color is it?
A It's white.
Q And on the metal cleaning basin, I believe I asked you if there had been any damage to the new liner; but was there ever any damage to the old liner?
A Yes, there were rips and tears in that -- up high you could see that, yes.
Q Okay. And --

A Those were repaired, yes.
Q "Up high," you mean above the water line?
A Yeah.
Q Was there any damage below the water line?
A When we took it down to clean -- well, when we had cleaned in the past, you can see liners, but they were mainly all up on top.
Q Okay. Mainly.
Were there any tears at all below the water line?
A Not that I remember.
Q And in that basin, which you said is cleaned out from time to time, could any of the tears and rips above the water line have been caused by the removal process?
A It could have, but I don't know of that for a fact.
Q So you're not aware of that ever happening?
A No.
Q And if there's damage above the water line to one of these liners, how quickly do you notice it?
A Fairly quickly. I mean, the operators will write work orders and we'll get somebody out there to repair it, yes.

Q And how long between when the damage might have occurred and when you see it?
MS. NIJMAN: Calls for speculation.
If you know.
THE WITNESS: I don't know. I mean --
BY MR. RUSS:
Q Is the area where the tears are on the metal cleaning basin always visible, or does the water sometimes rise above that level?
A No. They don't go above it.
Q So it's always visible?
A Yeah.
Q And then I want to pick up on Exhibit 257 one more time. It's this letter from NRT about the liners in the secondary ash basin and the ash bypass basin.
MS. NIJMAN: 257?
MR. RUSS: 257, yeah.
BY MR. RUSS:
Q And at the very -- the lower -- the bottom paragraph on that page, I was asking you about the condition of the base of the basin, but --
A Okay.
Q -- I didn't get to the end of that

paragraph where it says that repairs are needed along the side slopes.
A Okay.
Q Were those repairs made?
A I do not recall. I mean, I can't say for sure.
Q Is it possible that the damage they noticed in 2009 is still there?
MS. NIJMAN: Objection. Calls for speculation and also misstates prior testimony. It's been relined.
THE WITNESS: It has been relined since then.
BY MR. RUSS:
Q I believe you said that the original liner is still in place beneath HDPE.
A No.
Q Oh, that one was not. Okay.
A No.
Q The entire Hypalon liner was removed from the ash bypass basin?
A Yes.
Q Is there any Hypalon left in place on site? Any of the old Hypalon liner still in place?
A If there is -- yes, the limestone base, it

was not relined.
Q Right. So any --
A So that's the only one. Everything else -- the other four have been relined.
Q And the Hypalon was removed?
A Yes.
Q The Poz-O-Pac was left in place?
A Yes.
Q Okay.
A And the Hypa- -- the HDPE was put over that Poz-O-Pac, all the way across.
Q So any damage the NRT would have observed in 2009 was to a liner that's no longer there?
A Correct.
Q All right. Can you just describe -- you described Poz-O-Pac in the beginning, but do you know what Poz-O-Pac is made of --
A The consistency? No, I do not.
Q -- the materials that go into it?
A No, it would be -- I don't know for sure.
Q Okay. And then I want to follow up on some of the questions that -- the conversation we had about overflow into the former ash pond.
A Okay.

MS. NIJMAN: I'm sorry.
The former ash what.
MR. RUSS: The former ash pond.
MS. NIJMAN: I don't think there is any former ash pond on the facility.
BY MR. RUSS:
Q When I say "former ash pond," do you know what I'm talking about?
A I would assume that it should say "the former ash basin."
Q Oh, okay. Sorry. I'll say "former ash basin."
We were talking earlier about overflow from the ash surge basin to the former ash basin, right?
A (Nonverbal response.)
Q Did you say that that happened a couple of weeks ago?
A Uh-huh.
Q And do you know why it happened? The conditions that led to that happening?
A Yes.
Q What were those conditions?
A The level controllers for the ash pumps,

some -- I mean, I don't know if they froze during a cool night. I don't know exactly what caused them to stop working. And the level came -- the pumps did not come on; the level came up and overflowed.
Q And if that had not happened, the pumps would have pumped that water to the secondary ash settling basin --
A Yes.
Q How often do those pumps malfunction like that?
A It wasn't the pumps, it was the level controller.
Q Oh, I'm sorry. How often does the level controller malfunction?
A That was a rare occurrence.
Q And are there any other conditions that might cause water to overflow the ash surge basin?
A No. Usu- -- no.
Q Has it happened before that water's overflowed the ash surge basin?
A It has happened, yes.
Q And do you remember the conditions that caused it to happen before?
A No, I don't know for sure.

Q And when it does overflow, what's the conduit that carries the water from the ash surge basin to the former ash basin?
A It is a concrete pad. I mean, the -- it just comes up -- the water comes up and flows through -- there's just two openings, and water will just flow over down into that area.
Q And --
MR. RUSS: Just going -- just so I -- are these mine?
MS. DUBIN: Yes.
BY MR. RUSS:
Q Can you indicate on the map where those are located?
A It is right in this area, right here.
Q Okay. And, for the record, you're pointing from the west --
A I was on the east -- the northeast side, I don't know, maybe a quarter of the way from the north side of the ash basin. On the east side there is -- the road goes over and there's two -- there's -- there's just a -- like I said, there's a concrete trough --
Q Okay.

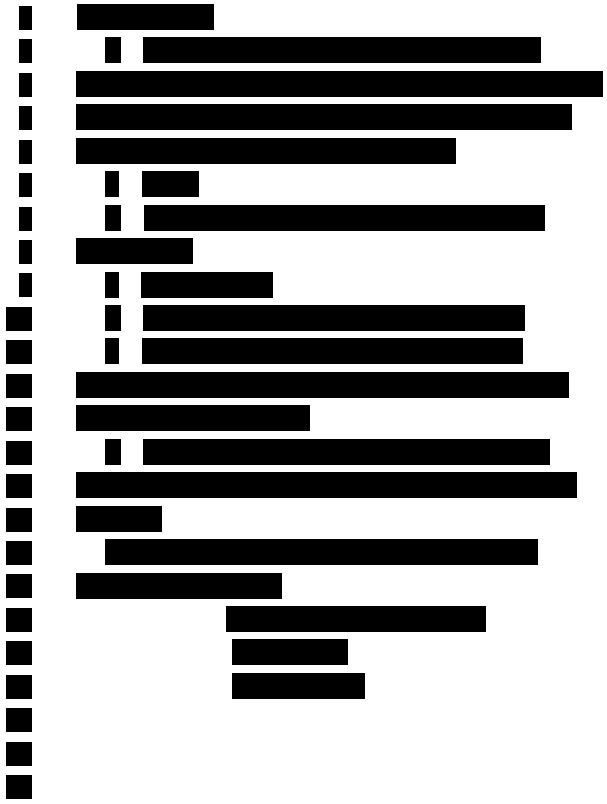
A -- and the water would just come and flow underneath the road and out into that area.
Q Okay. Great.
And is there a conduit for water to flow between the two parts of the former ash basin now?
A Are you asking between here and here (indicating)?
Q Yes.
A No.
Q So is there any water getting into the northern half of the former ash basin aside from precipitation?
A No.
Q I guess it's natural runoff from the --
A Yeah. Whatever. But from here? No.
Q Okay. I want to go back to the groundwater infiltration in the secondary ash basin.
You said that happened during the -- right before the relining; is that right?
A Uh-huh.
Q And was there any material left in the basin when the groundwater was infiltrated?
A No. They were at the point to start laying

down the liner material when the water started coming through.
Q Could you see the water coming through?
A Yes, I did see it.
Q So there were specific areas where there was visible seepage?
A You could see the water, yes, coming through the side.
Q And were there more than one areas where that was happening?
A More than one? No. It was just a general, and you could just see water.
Q So --
A It wasn't spec- -- I mean, you can't --
Q So was water seeping through the entire side facing the canal?
A It's just like one area. It was just coming through.
Q And do you know how much groundwater came in that way?
MS. NIJMAN: Don't speculate.
Object to -- calls for speculation.
THE WITNESS: I couldn't give you a GPM. I don't know.

BY MR. RUSS:
Q Did you have to pump it out?
A We did pump after -- yeah, it accumulated on the bottom. We were pumping until we came up with the drain system.
Q Do you know how much you had to pump out?
A No, I do not know.
Q Do you know how thick the groundwater got at the height -- at the maximum?
MS. NIJMAN: Calls for speculation.
THE WITNESS: No, I do not know for a fact.
BY MR. RUSS:
Q Was it deeper than 2 feet?
A No.
Q Was it less than 1 foot?
A It was less than a foot. Just enough -- let's put -- the answer is it was enough water where they could not lay the liner and be successful laying liner material.
Q Once the liner's in place, the HDPE and the warning layer on top of it, that is thicker than the depth of the groundwater that infiltrated, correct?
MS. NIJMAN: Object to vagueness.

BY MR. RUSS:
Q The depth of the warning layer -- is the warning layer more than a foot thick?
A When we went back, I don't know the exact depths because we had to put rock on the bottom, and I'm sure that the level of that rock and the drain tile we put in there -- I am sure that was taller than the water that was in there. Then we put down everything on top of that, so we did lose, you know, capacity in our basin; but -- and I don't know for a fact if it was taller than the groundwater, but I'm almost certain that is was --
Q Okay.
A -- because now that this water comes in, it's going to go to that drain tunnel and we're going to -- that is going to be funneled to a sump and we pump that off.
Q And do any of the other basins at Powerton have that drain system?
A No.
Q When we talked about the material that was moved from the ash bypass basin to the ash surge basin, it was roughly a hundred tons.
That was ultimately shipped off site?

A Uh-huh.
Q How do you know that it was?
A I don't recall the date of that letter, but if it was before we took everything out of that basin, everything out of that basin was removed to reline it.
Q And that particular quantity of material was moved to the ash surge basin, correct?
A Uh-huh.
Q And was that before the ash surge basin was relined?
A Uh-huh.
Q Okay. Okay. I understand. So --
A I believe the date was 2012 on that letter, and we did the basin in 2013.
Q Okay. Let me just go make sure I have that right. Yeah, that's right. Okay.
And now back to the limestone runoff basin. I just want to go over its status.
Is it still concave? Could it still hold water?
A It could.
Q And why is it still lined?
MS. NIJMAN: If you know.



BY MR. RUSS:
Q If you know.
A I do not know, but it's there.
Q Have you and your -- has Midwest Generation ever considered using that area for something else?
A We have had talks to -- since the cc- -- the agreement, one of options we were talking about was relining that basin so we could use that to store material; but we have decided to place it all into the metal cleaning basin, so we are not going to reline that basin as of right now.
Q Okay. And -- actually, it just occurred to me.
Why is the metal cleaning basin called the metal cleaning basin?
A Because the main -- that ash is a lot of iron -- there's a lot of iron in that ash, so it's just the metal. It's just a general term. And as far as cleaning, I have no idea; but if it -- just to distinguish it maybe from the ash basin because we only use that basin when we are cleaning the boilers during outages.
Q Is there a lot of manganese in that ash?
A I do not know.

Q Okay.
MR. RUSS: I want to go back to confidential.
(Whereupon the following is confidential.)

(Whereupon the following
is no longer
confidential.)
BY MR. RUSS:
Q Now I want to ask about the visual inspections of the liners again.
Is there any way to detect liner damage other than visual inspections?
MS. NIJMAN: Objection to the extent it requests expert opinion as to inspection processes.
BY MR. RUSS:
Q Have you ever had to consider inspecting the liners in any way other than a visual inspection?
A (No response.)
Q Are you aware of other methods that might be used at other Midwest Generation plants for liner inspections?
A No.
Q And do Powerton staff conduct any inspections to the liners other than visual inspections?
A No.
Q Have they ever?
A Not that I'm aware of.

Q And are you aware of anyone observing ash being stored on the ground, in direct contact with the ground, at Powerton at any point in time since you started working there -- aside from the two areas we talked about, Environmental Site Assessment?
A Yes, there was a time -- yes, there was bottom ash on the ground.
Q And where was that?
A To an area --
Q We can look at one of the maps that --
A (Indicating.)
The area to the south of the ash bypass basin, there was a time there was bottom ash stored in that area.
Q South of the ash bypass basin, but north of the railroad tracks?
A Yes.
Q And when was that?
A I can't -- I don't know the dates, but I know there was material stored there for a period of time.
Q Do you know how long they were stored there?
A There was a few months during the winter.

Yes.
Q Was that during the past five years?
A I can't remember the dates.
Q Do you remember if it was before or after the Notices of Violation came?
A I don't.
Q Okay.
A I didn't think of it -- it had to have been before --
Q Okay.
A -- because since then -- yeah, it had to have been before because we have not dumped anything on the ground since then --
Q Okay.
A -- or placed anything on the ground.
Q Okay. And sorry this is kind of a scattershot follow-up question.
Going back to the east yard runoff basin, I asked you if there -- how ash might have gotten into it; you said it might have blown in.
Are there any other pathways from any of the ash basins to the east yard runoff basin?
A No.
Q Any hydraulic connections between any of

the ash basins and east yard --
A To the east yard? No.
Q And how does -- rough -- does the east yard runoff basin receive runoff?
A Yes.
Q And where does that runoff come from?
A From the areas on the east side of the property.
Q And by "the east side --"
A Just basically anything in this area over here.
Q South of that channel?
A And I believe some of the drains in the north of the building are here also --
Q Okay.
A -- area drains.
Q And you said there was sludge in the bottom of the east yard runoff basin?
A Yes.
Q Do you know how thick that is?
A No.
Q Is it ever visible? Is there -- there's always water above it --
A There's always water, yes.

MS. NIJMAN: I'm going to object only to the sense I think he speculated, "there might be sludge."
THE WITNESS: Yeah.
BY MR. RUSS:
Q And how does water leave the east yard runoff basin?
A It gets pumped. There's a pump; it pumps it from the east yard to the trough that leads to the ash basin.
Q And the secondary ash settling basin, how does water leave the secondary ash settling basin?
A Gravity feeds to the river or there are pumps; we can pump it and recycle back to the cooling pond.
Q And the gravity feeds to the river through a discrete channel --
A Yes.
Q -- is that correct?
A Yes. You can't see it on here; but there is tunnel that goes from here and there's a sump -- you can just barely make it out right here -- there's a sump and then from that sump, the gravity feeds to the canal.
Q And the metal cleaning basin, how does

water leave the metal cleaning basin?
A It gets pumped from here to the service water basin, which is the secondary ash basin.
Q From the metal cleaning basin --
A Oh, I'm sorry. You have to adjust from -- I thought you asked from this basin.
Q I was at first, and then -- I'm jumping around. Sorry.
A The water from the metal cleaning basin, the process is there is a pump -- we have an area right here -- we call that the flash mix area -- where we add a chemical to raise the pH. And from there it -- gravity feeds to a clarifier; from that clarifier it overflows to a sump; and then from that sump the water gets pumped, either recycled back to the metal cleaning or it gets pumped to the larger ash basin.
Q And water from the ash bypass basin, where does that go?
A That water -- there is an overflow weir and then there's pipes that lead down the side. And that comes into the side of where the ash pumps are, the ash basin, and then from there it gets pumped similar to the ash basin to the secondary ash basin.

Q So is it the case that all of the water from the active ash basins goes through the secondary ash settling basin before being discharged?
A From this basin, this basin, and this basin? Yes.
Q Right. Yes. The east yard runoff basin water --
A Oh, that one. That would go to that -- yes, similar.
Q And from the former ash ponds, where does that water go?
A It just sits there.
Q Does it seep into the groundwater?
MS. NIJMAN: Objection. Calls for speculation.
BY MR. RUSS:
Q Is there a discharge channel from the "former ash ponds"?
A No.
Q Okay.
MS. NIJMAN: Again, you're talking about the basin area marked on that? Is that what you mean by former ash ponds?
MR. RUSS: Yes.

BY MR. RUSS:
Q Has there ever been a NPDES permitted outflow from the former ash basin?
A Not that I'm aware of.
Q And do you recall sampling that took place in the former ash basin since you started working there?
MS. NIJMAN: You mean, other than noted on this map?
MR. RUSS: Yes.
BY MR. RUSS:
Q Not necessarily bad water monitoring. Sampling of the content of the former ash basin.
A There may have been sampling when they put that rail track in there, but I don't recall what that was. I don't --
Q Do you know if anyone ever measured the thickness of the ash in the former ash basin?
A No.
MS. NIJMAN: Objection. Assumes facts not in evidence.
BY MR. RUSS:
Q Is there ash in the former ash basin?
A I can't answer that.

MS. NIJMAN: Objection. Asked and answered.
BY MR. RUSS:
Q And I think you said this --
MR. RUSS: But you may object.
BY MR. RUSS:
Q Was ash ever removed from the former ash basin?
MS. NIJMAN: Objection. Asked and answered.
BY MR. RUSS:
Q You can answer.
Are you aware of ash ever being removed from the former ash basin?
A I am not aware, no.
Q And, just for the record -- I have to go back to what we were saying before -- the east -- correct me if I'm wrong, but water from the east yard runoff basin, the ash bypass basin, the metal cleaning basin, and the ash surge basin all pass through the secondary ash settling basin before being discharged; is that correct?
A Yes.
Q Okay. Thanks.
MR. RUSS: That's it.
MS. NIJMAN: Okay.

MR. RUSS: Thanks.
MS. NIJMAN: Thank you very much.
FURTHER DEPONENT SAITH NOT. . .

BEFORE THE ILLINOIS POLLUTION CONTROL BOARD
In the Matter of:
SIERRA CLUB, ENVIRONMENTAL LAW AND POLICY CENTER, PRAIRIE RIVERS NETWORK, and CITIZENS AGAINST RUINING THE ENVIRONMENT
Complainants,
v.
MIDWEST GENERATION, LLC,
Respondents.
) PCB No-2013-015
) (Enforcement - Water)

This is to certify that I have read the transcript of my deposition taken on the 23rd day of January 2015 in the foregoing cause, and that the foregoing transcript accurately states the questions asked and the answers given by me, with the changes or corrections, if any, made on the Errata Sheet(s) attached hereto.

MARK S. KELLY

Subscribed and sworn to before me this day of 2015

Notary Public

STATE OF ILLINOIS )
) SS:
COUNTY OF COOK )

Brad Benjamin, being first duly sworn on oath, says that he is a Certified Shorthand Reporter, that he reported in shorthand the testimony given at the taking of said deposition, and that the foregoing is a true and correct transcript of his shorthand notes so taken as aforesaid and contains all the testimony given by MARK S. KELLY at said deposition. And further, that he is not connected by blood or marriage with any of the parties to this action, nor is he a relative or employee or attorney or counsel of any of the parties, or financially interested directly or indirectly in the matter in controversy.

That the preceding deposition shall be read by said deponent, and any and all corrections which the deponent desires to make shall be duly made by the deponent on the enclosed Errata Sheet(s), indicating page and line to be corrected, and that the explanation, if any, given by the deponent for said corrections, shall be thereon noted.

Brad Benjamin

**Re: Sierra Club et al. v. Midwest Generation, LLC.**

**Dear Ms. Nijman:**

**Enclosed please find the transcript of the discovery deposition of Mark S. Kelly, taken on January 23, 2015, in the above-entitled cause.**

**Since signature was reserved, please ask Mr. Kelly to review his transcript from January 23, 2015, making any necessary corrections on the Errata Sheets, and sign and notarize the deponent's signature page.**

**Please send the original signed Errata Sheets and signed deponent's certificate to Mr. Mark S. Kelly, keep a copy for yourself, and please send a copy to me for my records.**

**According to Amended Rule 207(a), signature must be obtained within 28 days or the deposition may then be used as fully as though signed.**

**Your cooperation in this matter is greatly appreciated. Thank you.**

**Sincerely,**

**Brad Benjamin, CSR**

(The witness was duly sworn.)

REBECCA MADDOX,

called as a witness herein, having been first duly sworn, was examined upon oral interrogatories, and testified as follows:

EXAMINATION

BY MR. RUSS:

Q. For the record, can I just get your name.

A. My name is Beckie Maddox.

Q. And place of employment?

A. I work at the Will County Station.

Q. For what company?

A. NRG/Midwest Generation.

Q. And the address of the station?

A. 529 East 135th Street in Romeoville, Illinois.

Q. Great. Thank you.

And my name is Abel Russ, and I'm an attorney with the Environmental Integrity Project and we represent the Sierra Club in this case.

Have you ever given a deposition before?

A. I have not.

Q. Okay. So this is a formal legal proceeding like in court and you're under the same

legal obligation to answer all the questions truthfully.

And for the benefit of the court reporter, I'm going to try to speak clearly and I just ask that you speak clearly, too, so that we can just get it all down the first time.

A. Okay.

Q. If you don't understand something I'm asking, please don't answer. Just ask me to repeat the question. I'm happy to do that.

A. Okay.

Q. If you do answer a question, we're going to assume that you understood the question.

And if you need a break, let us know. We'll take a break.

A. Okay.

Q. And then at the end, you will have a chance to look over the transcript and see if it matches what you remember, so...

So I'm going to start with some questions about your background. How long have you worked at Midwest Generation?

A. It will be seven years this coming February.

Q. And how long in your current position?
A. Seven years.
Q. Okay. So you've had the same position the whole --
A. I have.
Q. Okay. And what are your responsibilities?
A. I manage air compliance, waste compliance, and assist our chemistry specialists with NPDES water compliance.
Q. Okay. And do you -- in your position, do you have the responsibility of reviewing groundwater quality data?
MS. NIJMAN: Review for what purposes? Do you understand the question?
THE WITNESS: No.
BY MR. RUSS:
Q. Do you ever look at groundwater quality data as part of your job?
A. Can you -- as far as what?
Q. Let's see. Are you familiar with the quarterly groundwater monitoring that --
A. I am.
Q. -- happens at Will County?
And do you see the quarterly groundwater

monitoring reports?
A. I do.
Q. And do you -- is it part of your job to review them and make sure that they are accurate and prepared correctly?
A. What do you mean by "review?"
Q. So let me see if I can figure out a way to ask this differently. Are you -- do you receive those quarterly reports and then hand them on to somebody else as part of your job, or do they go directly from the consultant to somebody else?
MS. NIJMAN: Object to compound. You can answer it, if you understand.
BY THE WITNESS:
A. I don't...
BY MR. RUSS:
Q. Okay. So you do see them --
A. I do see them.
Q. -- as part of your job?
A. Uh-huh.
MS. NIJMAN: Well, objection. She didn't say it was part of her job. She said she sees them.
BY MR. RUSS:
Q. Is it part of your -- part of the duties

that you carry out in your position to look at the groundwater reports?
A. They are sent to me --
Q. Okay.
A. -- from the consultant.
Q. And do you have to look at the groundwater reports to address any compliance issues that are part of your job?
A. I'm not looking at that.
Q. Okay.
A. I'm not an expert.
Q. Okay. So you said you work on air compliance and NPDES compliance and not -- do you work on compliance with the Compliance Commitment Agreements?
A. I was a part of that, yes.
Q. Okay. Okay. And what exactly were your responsibilities with the Compliance Commitment Agreements?
A. I worked with our station management to ensure that all the conditions of the CCA were met.
Q. Okay. And did you help in preparing the CCAs that were proposed by Midwest Generation?
MS. NIJMAN: Objection; states facts not

in evidence.
BY MR. RUSS:
Q. Are you familiar with the Compliance Commitment Agreements that were proposed?
MS. NIJMAN: Objection; same objection.
BY MR. RUSS:
Q. Before -- are you -- do you remember working on Compliance Commitment Agreements before they were signed?
A. Yes.
Q. Okay. Thank you.
And did you have any role in drafting what the terms of the Compliance Commitment Agreement would be?
A. No.
Q. Okay. Thank you. That's what I was looking for.
Did you see the notices of violations from Illinois EPA?
A. I have seen them.
Q. Okay. Just one more background question. Do you review groundwater elevation data?
A. What do you mean by "review?"
Q. Have you seen the groundwater elevation

data that are collected with the quarterly groundwater monitoring reports?
A. I've seen the data.
Q. Okay. And have you ever been responsible for providing an interpretation of that data?
A. Never.
Q. Okay. Thanks.
So now I just have some questions about terminology. What is slag?
A. Slag is from our cyclone boiler, so it's similar to bottom ash in that it's the same type of process but it's a completely different boiler --
Q. Okay.
A. -- used -- beneficially we use it for completely different things than what bottom ash is used for.
Q. Okay. But it's similar -- you said it was similar to bottom ash?
A. It's got -- it has different characteristics. My understanding is it's a different color.
Q. Okay.
A. It's a completely different process from the type of boiler that it's generated from being a

cyclone boiler and bottom ash is from the T-fired.
Q. Okay. So you would never use the terms "slag" and "bottom ash" interchangeably?
A. I would not.
Q. Different things. Okay.
And what is a slag tank? Are you familiar with that term?
A. I am -- I've heard the term. I don't know --
Q. Okay.
A. -- what it is.
Q. That's totally fine. That's fine.
What is process water? Are you familiar with that term?
A. No.
Q. Okay. How about sluice; what is sluice? Are you familiar with that term?
A. My understanding is it's the water that goes into the bottom -- or the ash impoundments.
Q. Okay. And does sluice contain ash?
A. It could.
Q. Okay. Are you familiar with the term "inactive impoundment?"
A. Familiar...

Q. Inactive -- do you use the word "inactive" to describe some of the ponds at Will County?
A. I do.
Q. And you use the word "active" to describe other ponds?
A. I do.
Q. Could you distinguish between what those two terms, active and inactive, mean?
A. Active is a pond that is receiving bottom ash. Inactive would mean it is not in service.
Q. Okay. Thanks.
And in your work, do you distinguish between ash ponds and ash impoundments?
A. Can you rephrase that?
Q. So do you describe the ash ponds at Will County as ash ponds typically?
A. I'd say yes.
Q. And do you ever describe them as ash impoundments?
A. Sometimes.
Q. Okay. And have you ever used the term "ash basins?"
A. No.
Q. Okay. A couple more questions about

terminology, but I just realized I missed one about your responsibilities. Did you have any role in responding -- are you familiar with the questionnaire that Midwest Generation filled out for EPA for the steam electric rulemaking?
A. I'm aware of it, yes.
Q. Did you have any role in filling that questionnaire out for Will County?
A. I did not fill out the questionnaire.
Q. Okay. Did you have any role in providing information that was put into the questionnaire?
A. I may have provided some data --
Q. Okay.
A. -- but I can't --
Q. And did you review the final response?
A. No.
Q. Okay. So -- back to terminology. Sorry about that tangent. What is geomembrane? What's your understanding of geomembrane?
A. Do you have any other information on that?
Q. I do, but if you don't --
MS. NIJMAN: If you don't know --
BY THE WITNESS:
A. I don't know.

BY MR. RUSS:
Q. I can get to it later. We'll get to it later. That's fine.
How about -- are you familiar with the product HDPE liner?
A. Yes.
Q. And can you describe what that is?
A. My understanding is it's -- it's a high-density polyethylene liner that we utilize to line our two ash ponds.
Q. Okay. And what is Poz-o-Pac? Am I pronouncing that right, Poz-o-Pac?
A. Poz-o-Pac. My understanding currently is it's a -- similar to a concrete-type material.
Q. Okay. Does Poz-o-Pac contain fly ash?
A. I don't know.
Q. Okay. And what is air heater ash?
A. I don't know.
Q. Never heard of it. Okay. That's fine.
And one more terminology question. I might have to come back to Poz-o-Pac, but are you familiar with geocell?
A. Yes.
Q. Can you describe what geocell is?

A. My understanding is it's -- it's almost like a honeycomb-type substance -- or substance. It's a material that we put around the slopes of our ash pond and we fill it in with concrete.
Q. Okay.
A. So the geocell itself isn't concrete. It's the -- I don't know what the material it's made out of --
Q. Okay.
A. -- but it would hold concrete. It looks like a honeycomb.
Q. Yeah.
And roughly how wide are the honeycomb cells?
A. I don't recall.
Q. Okay. I couldn't -- I saw some pictures, but I couldn't tell.
(Exhibit No. 90 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. So I'm going to turn to an exhibit. This is going to be Exhibit 90, I think. And here's a copy for you to look at. Can you just look at the lower half of the page? Is this an email that you

were cc'd on in 2008?
A. I was cc'd on it, yes.
Q. Do you remember this email?
A. I don't recall it.
Q. Okay. Does it look like an accurate reproduction of the email?
MS. NIJMAN: Objection. She said she doesn't recall.
MR. RUSS: Okay.
BY MR. RUSS:
Q. Does it look like a typical email for your work?
A. Meaning -- "typical" meaning?
Q. Does it have right -- I mean, is this the format that you're used to seeing emails in in your day-to-day job?
A. The lower half of the email where I'm cc'd on.
Q. Okay. Great. Thank you.
And is that your -- can you just read the first number in that email, number one?
A. Describe what the Poz-o-Pac liner is?
Q. Yes.
A. What does it consist of?

Q. Yeah. And do you see where it says it's a stabilized subgrade that's comprised of lime, fly ash, and aggregate?
A. I see that.
Q. Is that your understanding of what Poz-o-Pac is compromised of?
MS. NIJMAN: Objection; asked and answered. She said she didn't know if there was fly ash in the Poz-o-Pac earlier.
BY MR. RUSS:
Q. Does this refresh your memory?
A. No.
Q. Okay. That's fine. That's fine.
So now we're out of the terminology stuff. I'm going to be asking questions specifically about Will County now.
So how many ash ponds does Will County currently have?
A. Two active.
Q. Okay. And how many inactive ponds do they have?
A. Two.
Q. Okay. And can you tell me what each of the active ponds is used for?

A. We have three south and two south and they're used for bottom ash from the operating boilers unit three and unit four.
Q. Okay. Is there anything different about the way those two ponds are used?
A. No.
Q. Are they used interchangeably?
A. No. One is in service while the other one is --
Q. In sequence?
A. -- out of service.
Q. Okay. Are -- is two south lined?
A. Can you give me a definition for lined?
Q. Does two south have a liner?
A. I need a definition of liner.
Q. Do you use the term "liner" in your work?
A. I do.
Q. And what do you understand liner to mean?
A. It could either be a Poz-o-Pac or an HDPE liner.
Q. Okay. Does pond two south have a Poz-o-Pac liner?
A. It had a Poz-o-Pac liner.
Q. Does it no longer have a Poz-o-Pac liner?

A. It had --
Q. Is there any Poz-o-Pac within the footprint of pond two south?
A. There is.
Q. Okay. And is there HDPE lining two south?
A. There is.
Q. Okay. Is there geocell in pond two south?
A. In two south, yes.
Q. Okay. And the same for three south; is there Poz-o-Pac in three south?
A. Yes, remaining.
Q. And is there HDPE in three south?
A. There is.
Q. And is there geocell in three --
A. There's no geocell for three south.
Q. Okay. And do you know how thick the Poz-o-Pac in two south is?
A. I can't recall.
Q. Okay. And three south?
A. I can't recall what's remaining.
Q. And is pond one north -- are you familiar with pond one north?
A. Uh-huh, yes.
Q. And is pond one north lined with Poz-o-Pac?

A. My understanding, it's lined with Poz-o-Pac.
Q. Is it lined with HDPE?
A. No.
Q. Okay. Geocell?
A. No.
Q. Okay. And pond two south, is it lined with Poz-o-Pac?
MS. NIJMAN: Asked and answered.
MR. RUSS: I'm sorry. I'm sorry.
BY MR. RUSS:
Q. Is pond one south inactive? Is pond one south inactive?
A. The term "inactive" meaning?
Q. You described earlier there being two inactive and two active ponds at Will County. Is pond one south one of the inactive ponds?
A. It is the inactive.
Q. Is pond one south lined with Poz-o-Pac?
A. My understanding today is it's lined with Poz-o-Pac.
Q. Okay. And is it lined with HDPE?
A. No.
Q. And geocell?

A. No.
Q. Okay. Thank you.
One more question about the liners. In pond one north, it's lined with Poz-o-Pac. Are you aware that there's fill between layers of Poz-o-Pac in pond one north?
A. I don't know for one north.
Q. Okay. Is there -- are there layers of Poz-o-Pac in pond one south?
A. I don't know the answer to that.
Q. Are there layers of Poz-o-Pac in pond two south?
A. There was.
Q. And are there still multiple layers of Poz-o-Pac in two south?
A. My understanding today is that there is not.
Q. Okay. And in pond three south, are there multiple layers of Poz-o-Pac?
A. There was.
Q. And today?
A. My understanding today that there's not.
Q. Okay. Great. Thank you.
(Pursuant to agreement, pages 22 through 47 were placed under seal.)

BY MR. RUSS:

Q. Is ash pond one north inactive?

A. It is.

Q. Would you describe it as retired?

A. I would need a definition of "retired."

Q. Have you described it in your work as decommissioned?

A. No.

Q. Are you familiar with the term "decommissioned?"

A. I'm familiar with the term.

Q. And what does it mean to you?

A. Out of service.

Q. Okay. Are there any engineering tasks as part of decommissioning that you're aware of?

A. I don't understand the question.

Q. Would the ponds have to be altered to be decommissioned?

A. I don't understand the question.

Q. If -- if the pond one north stopped receiving ash, would it be decommissioned?

A. I don't know.

Page 48

Q. Would something else have to happen for it to be decommissioned?

A. I would need a definition of "decommissioned."

Q. You're familiar with the term?

MS. NIJMAN: Asked and answered.

BY MR. RUSS:

Q. You know what decommissioned -- okay.

A. Yes.

Q. Okay. Okay. Could that pond be used again?

A. No.

Q. Why not?

A. Per the Compliance Commitment Agreement, it can no longer receive ash.

Q. Is there any physical reason that it couldn't be used again?

A. Yes.

Q. And what's that?

A. We've blocked off it receiving any -- any water.

Q. Okay.

A. Process water.

Q. Is there currently water in pond one north?

Page 49

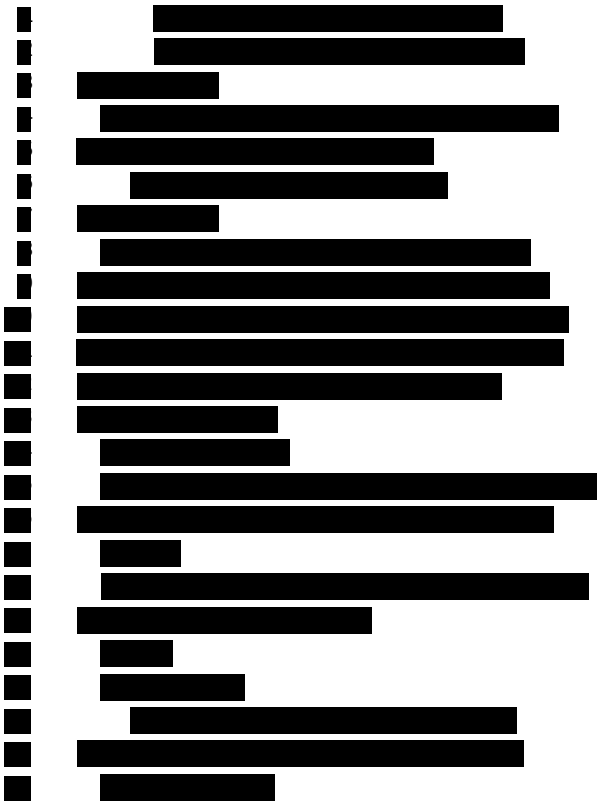
A. Currently today, I don't believe so.
Q. Is there ash in pond one north?
A. There's slag.
Q. There's slag.
Is there any bottom ash in pond one north?
A. No.
Q. Is there any fly ash in pond one north?
A. Not that I recall.
Q. Okay. You said that the -- it can no longer receive ash because the channel has been blocked?
A. Correct.
Q. Channel is not the right word -- I'm sorry -- but was ash removed from pond one north?
A. No.
Q. Okay. So any ash that was in pond one north in 2010 is still there?
A. That's correct.
Q. And is that true of pond one south?
A. That's correct.
Q. Okay. Is there any fly ash in pond one south?
MS. NIJMAN: Asked and answered. Oh, sorry. You asked about one north. My mistake.

BY THE WITNESS:
A. To my knowledge today, no.
BY MR. RUSS:
Q. Has there ever been fly ash in one south?
A. There may have been, yes.
Q. Is there bottom ash in pond one south?
A. No.
(Exhibit No. 98 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Okay. Now I'm going to ask you to look at another exhibit. This is an email and it's -- there it is. Thank you.
This is an email from James Sault to David Kamano, correct?
A. Yes.
Q. And it was -- you were cc'd, correct?
A. In the one email in the middle, yes.
Q. The middle. I'm sorry. Yes. That's the one email I'm talking about.
Do you remember this email?
A. I don't recall.
Q. Okay.
MS. NIJMAN: It seems to be cut off on the

left-hand side, too.
MR. RUSS: Not my copy.
THE WITNESS: The second paragraph, does it say "hile," or does yours say "while?"
MR. RUSS: No. This one says "hile" as well. Okay. That's interesting. Just that one letter. It may be a typo because everything appears to be lined up correctly.
BY MR. RUSS:
Q. Do you see where it says: As Jeff says, we have no plans to remove material from either of these ponds given the high cost of disposal off site?
A. I do see that.
Q. Do you remember -- were you part of conversations about disposing of ash off site from those two ponds?
A. No.
Q. Okay. Are you familiar with the cost of disposal off site?
A. Yes.
Q. Do you know where it would have been disposed if it were disposed off site?
A. A landfill.

Q. And what would the -- what would the cost -- would there have been trucking costs?
A. There would have been trucking costs, yes.
Q. Would there have been tipping fees?
A. I don't recall.
Q. Okay. Okay. Fair enough.
And is it your recollection that in 200- -- in 2012 did -- were you planning to dispose of ash off site from ponds one north and one south?
MS. NIJMAN: Objection; foundation. She stated she wasn't part of those conversations.
MR. RUSS: Okay. Good point.
BY MR. RUSS:
Q. Did you ever have conversations about leaving the ash in the ponds?
MS. NIJMAN: Same objection.
MR. RUSS: You can answer.
BY THE WITNESS:
A. I don't recall.
BY MR. RUSS:
Q. Okay. All right. We already talked about the liners.
(Exhibit No. 99 marked for identification, 12-2-14.)

BY MR. RUSS:
Q. Now turning to another exhibit, this is a letter from the Illinois EPA, correct?
A. Yes.
Q. And in it the Illinois EPA is approving the Compliance Commitment Agreement for Midwest Generation for Will County, correct?
MS. NIJMAN: I'm going to object to foundation.
BY MR. RUSS:
Q. Have you seen this letter before?
A. I have seen this letter.
Q. Okay. Thank you.
If you turn to Bates page -- it's actually on 561, item 5e down near the bottom, the last sentence of 5e says: A dewatering system shall be developed and implemented which will not allow water to exceed a depth of one foot above the bottom of ponds one north and one south, correct?
A. Yes. I see that.
Q. Is there such a dewatering system in place now?
A. There is.
Q. And is there a depth of water of one foot



in ponds one north and one south?
A. Sitting here today, no.
Q. And there's no water in pond one north at all, correct?
A. There could -- there could be rainwater.
Q. Okay. Okay. Thank you. That's helpful.
On the same page where it says -- the very last part of that sentence "the bottom of ponds one north and one south," how --
MS. NIJMAN: What letter are you in?
MR. RUSS: Still 5e.
BY MR. RUSS:
Q. How do you understand the bottom of pond one north? What does that mean to you?
A. To me, the bottom is -- the bottom of the pond where -- it's the base of the pond.
Q. Okay. Is the bottom above the liners, above the Poz-o-Pac?
MS. NIJMAN: Do you mean on top of the Poz-o-Pac?
BY MR. RUSS:
Q. Is the bottom elevation higher than the Poz-o-Pac?
A. I don't know.

Q. In your understanding of the word "bottom" -- he says the bottom of the pond -- is that below the ash?
A. My understanding is the bottom is below -- below the slag, yes.
Q. But not below the Poz-o-Pac?
A. My understanding is it's the same thing. The top of the Poz-o-Pac is the bottom of the pond.
Q. Okay. Thank you. That's what I was getting at. Thank you very much.
(Pursuant to agreement, pages 57 through 58 were placed under seal.)

[redacted]

(Pursuant to agreement, pages 57 through 58 were placed under seal.)
(Exhibit No. 100 marked for identification, 12-2-14.)

BY MR. RUSS:

Q. Let's see. Now I'm going to turn to another exhibit. This is not confidential. This is 100. This is another email. This is -- I'm looking at the top half of the page here on 27950. I'm sorry. Let me start at the bottom, the bottom of the pond -- bottom of the page. No. That's not it either. It's the next -- I'm sorry. So it's on the other side. It's 27951. It's part of the same email chain, I believe.

On 27591 there's an email from Jeff Beaudry to you, correct, on January 4th?

A. Yes.

Q. Do you remember this email?

A. No.

Q. Do you remember having a conversation with Jeff Beaudry about seeding the ash in the north and south ponds?

A. Very vaguely.

Q. Was -- did anyone ever plant seed in those

ponds?

A. My understanding is no.

Q. Okay. Great.

Do you see where Jeff's email states that: We may have an issue with getting a lot of slag carryover into the wet well?

A. I see that statement.

Q. What is the wet well?

A. The wet well is the area -- there's a pond, there's a weir, and on the other side of the weir is where water would go. So the weir, in theory, holds back any solids.

Q. Okay.

A. And on the other side of the weir is where the water --

Q. Okay.

A. -- would go.

Q. And has slag crossed the weir into the wet well in the past?

A. In the past it has.

Q. And where does it go once it gets into the wet well?

A. Then it would go to our recycle house where there's a series of recycle pumps.

Q. Okay.

A. And from there, it would either get recycled back into operations or sent to the wastewater plant.

Q. Is it disruptive to operations for slag to get into the wet well?

A. To get into the wet well, no, but where it goes to, yes.

Q. Okay. And is that why Jeff -- is it your understanding that Jeff Beaudry did not want slag to get into the wet well?

A. That is my understanding, yes.

Q. And is that because it causes a problem with the recycle pumps?

A. Correct, yes.

Q. Okay. Thank you.

And so you said that the ponds were not seeded. Was something else done to hold the slag in place?

A. Yes.

Q. And what was done to hold the slag in place?

A. A series of stone was placed in the -- in the pond.

Q. Was the stone placed in a way that it would block the slag from reaching the weir?
A. Yes.
Q. Okay. Thank you.
And then back on the other page of that exhibit, 27590, there's an email from Amy Hanrahan to you on January 4th, correct?
A. Correct.
Q. Do you remember that email?
A. No.
Q. Do you remember Amy Hanrahan expressing concerns over seeding to you?
A. No.
Q. And do you know what those concerns might be?
A. I don't recall.
Q. Okay. That's fine.
I'm sorry. There's one more. On page 27950, the bottom half of the page, you wrote: Maybe it could be a start to closing the ponds in place if we want to go that route in the future, correct?
A. I see that, yes.
Q. What does "closing the ponds in place"

consist of?
A. My understanding is keeping the slag in the ponds.
Q. Would closing the ponds in place include covering the ash or slag in the ponds with any other material?
A. I don't know.
Q. Okay. Have you ever had to think about closing the ponds in place beyond just leaving the ash where it is?
A. What do you mean by just "think about?"
Q. Have you -- okay. That's a fair question.
Have you looked at plans to close the ponds in place that would require more than leaving the ash there?
A. I have not, no.
Q. Are you familiar -- are you aware that there are such plans?
A. I don't know.
Q. Okay. Have you looked at closure in place at other plants in Midwest Generation's fleet?
A. No.
Q. Okay. Thank you.

(Exhibit No. 101 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. This is on page 27- -- this is Exhibit 101. Not confidential still.
A. I'm sorry. What exhibit?
Q. This is Exhibit 101.
A. Oh, okay.
Q. And it's on page 27954. I think it's just a one-page exhibit. This is an email from David Kamano to you and others, correct?
MS. NIJMAN: The bottom half are you looking at?
MR. RUSS: That's a good question. No. I think I'm looking at the top half.
BY MR. RUSS:
Q. You were cc'd on this email, correct?
A. I was cc'd on the email.
Q. Do you remember the email?
A. No.
Q. This was sent in February of 2013, right?
A. Yes.
Q. And it says in bold -- the first bold sentence: Yes, you are correct we will only be

repositioning material, right?
A. I see that statement.
Q. Is that what happened? Was material repositioned in ponds one north and one south?
A. Yes.
Q. And where was it repositioned from?
A. Remained in the pond.
Q. And was it moved from one side to another?
A. Just within the pond.
Q. Okay. Was it distributed evenly across the bottom of the pond?
A. Can we rephrase that?
Q. Before the material was repositioned, was there more ash or slag in one place than in another?
A. My recollection is yes.
Q. And was slag moved from the area where there was more of it to the area where there was less of it?
A. I don't recall.
Q. Okay. And do you see under number two, it says: I recall that we discussed that we will not be purposefully seeding the pond to avoid our work being categorized and as "pond decommissioning."
A. I see that, yes.

Q. Do you -- were you part of that discussion?
A. I don't recall.
Q. And do you understand why seeding would be characterized as pond decommissioning?
A. No.
Q. Okay. All right. Fair enough. I think we've covered that one.
(Exhibit No. 102 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. I'm going to turn to pond 2S. This is going to be Exhibit 102. This is an email from Jeff Beaudry to Aron Yakima and you are cc'd, correct?
A. Yes, I am.
Q. And this was July of 2013?
A. Correct.
Q. Are you familiar with this email? Do you remember this email?
A. I don't recall, no.
Q. Okay. Do you see where it says: NRT would like one sample to be taken in the center and another sample to be taken near the edge of the pond?

A. I see that, yes.
Q. And they're referring to core samples, correct?
A. My understanding is, yes, core sample.
Q. And were those core samples taken?
A. I don't recall.
Q. Okay. Did you ever see core samples from that pond 2S?
A. I don't recall.
(Exhibit No. 103 marked for identification, 12-2-14.)
BY MS. RUSS:
Q. Okay. So Exhibit 103 now. That is an email from Terry Anderson to a group of people, and you're among the people that are -- no, you're not. Okay. I think I understand what happened here. Do you see this email dated 7-17-2013 at the bottom half of the page?
A. I do see that.
Q. And do you see on the top of the page where it says on July 18th, 2013, it was forwarded?
A. Yes.
Q. And it was forwarded to you, correct?
A. Correct.

Q. Okay. So you did see this email at one point, correct?
A. Yes.
Q. You received it in your inbox?
A. In my inbox, yes.
Q. And looking at the email itself in the lower half of the page, do you recall this email?
A. I don't recall the email.
Q. Okay. Do you -- were you part of any discussions about what the core drilling in pond 2S found?
A. I don't recall.
Q. Okay. Do you see the description on the third line of "pit run" in quotes?
A. Okay.
Q. It says: There were two six-inch layers of Poz-o-Pac, then about 12 inches of "pit run," right?
A. Correct.
Q. Do you understand that term "pit run?"
A. No.
Q. Okay. And do you see the second paragraph where it says: After all that and the conversation with Jeff, my question is, shall we remove a total

of 12 inches of Poz-o-Pac, or do we aim to get the elevation proposed on the drawings?
A. I see that, yes.
Q. Do you know whether a total of 12 inches of Poz-o-Pac was removed?
A. I don't recall.
Q. Okay. Do you know if more material was excavated than originally planned in that process?
A. I don't recall.
(Exhibit No. 104 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Okay. So now I'm going to turn to Exhibit 104.
MS. NIJMAN: Do you need to take a break at all?
MR. RUSS: Do you want to take a break?
THE WITNESS: Yeah. Sure.
MR. RUSS: Can we stop the clock? I have -- we started a little late. It's going to be tight.
MS. NIJMAN: Sure.
MR. RUSS: Thanks.
(A recess was taken.)

MR. RUSS: We're back on.
BY MR. RUSS:
Q. We're going to be looking at Exhibit 104. So this is e-mail in the middle of the page addressed to you, Beckie, it says, from Eric -- I don't know how to pronounce his last name. How do you pronounce his last name?
A. Tiachac.
Q. Okay. Thanks.
Do you remember this email?
A. It was sent to me. I don't recall it.
Q. Do you remember having conversations about leak detection at pond 2S?
A. I remember having conversations, yes.
Q. Okay. Looking at the first sentence, it says: It would not have been possible to even perform the survey on the bottom of the pond without leaving the top two rows of geocell empty, right?
A. I'm sorry. Where was that at?
Q. I'm sorry. It's not the first line. It's the first sentence of the first serious paragraph there. Right after it says "in the interim," it says: It is important to point out that it would

not have been possible to even perform the survey. Do you see that sentence?
A. Uh-huh.
Q. Do you remember that concern coming up about geocell and leak monitoring?
A. I really don't know.
Q. Okay. Do you know why geocell would have to be left empty in order to perform the survey?
A. No.
Q. Do you know if the geocell was empty at the time that this survey was conducted?
A. I don't recall.
Q. Actually, I should back up. Do you -- do you know if a leak location survey was conducted on this pond?
A. It was, yes.
Q. Okay. And you don't recall whether the geocell was empty.
Looking at the second paragraph, the fourth line in the second paragraph, the sentence that starts: I think that the concrete-filled geocell at Will County pond two changes things a bit, do you see that sentence?
A. I do.

Q. And do you understand pond two to mean pond 2S?
A. Correct, yes.
Q. And do you know what -- do you understand why it changes things a bit that there's -- do you understand why concrete-filled geocell at pond two would change things a bit?
A. My understanding is that the concrete is on top of the liner.
Q. Okay. And is this an electronic or electrical leak location survey that was conducted?
A. My understanding is yes.
Q. Okay. And it's your -- is it your understanding that having concrete-filled geocell interferes with the ability to do that kind of survey?
A. I don't know.
Q. Do you see on the third line from the bottom, it says: They may release that particular pond from the inspection requirement?
A. I see that, yes.
Q. And then after that it says: If not, one could still visually inspect the concrete-filled geocell following dredging for any disturbance.

A. I see that, yes.
Q. Is it part of your job responsibilities to oversee inspections of the ponds?
MS. NIJMAN: Object to foundation.
BY MR. RUSS:
Q. Have you participated in inspections of the ponds?
MS. NIJMAN: Same objection.
MR. RUSS: You can answer.
BY THE WITNESS:
A. Everyone at the station does walk-arounds of the ponds. It's just part of overall responsibilities.
BY MR. RUSS:
Q. Do you know if Midwest Generation is required to conduct visual inspections of the ponds?
A. Yes.
MS. NIJMAN: Under the CCAs, you mean?
MR. RUSS: Yes.
BY THE WITNESS:
A. Under the CCAs, yes.
BY MR. RUSS:
Q. Do you communicate the results of those

inspections to anyone?
A. Not communicate, no.
Q. Okay. Does anyone send the results of those inspections to Illinois EPA?
A. No. My understanding, it's not a requirement of the CCA.
Q. Okay. So is it the case then that the visual inspections are conducted and the results are maintained in-house?
A. Correct.
Q. Okay. And if IEPA wanted them, they would ask for you to provide them?
MS. NIJMAN: Object; speculation.
BY MR. RUSS:
Q. Has IEPA ever asked for the results of the visual inspections?
A. IEPA has never asked, no.
Q. Okay. Is it possible to visually inspect the liner in pond 2S, the bottom liner?
MS. NIJMAN: Object to foundation.
BY MR. RUSS:
Q. Is there a -- do you understand the term "bottom liner?"
A. No.

Q. Are you familiar -- let me see here. The first sentence -- the first sentence of the first full paragraph in that email: It would not have been possible to even perform the survey on the bottom of the pond, do you see that?
A. Uh-huh.
Q. And then in the next line, it says: The top of the liner needs to be electrically isolated from the bottom?
A. Okay.
Q. They're talking about a liner on the bottom of the pond, correct?
MS. NIJMAN: Objection. She said she doesn't remember this. If this helps you, you can answer it.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. You don't know where -- okay. You don't know where that liner is. Okay.
Do you see the second line of the second full paragraph: CCA references a visual inspection requirement?
A. Yes.

Q. Are you familiar with that requirement?
A. Yes.
Q. What does that requirement consist of?
A. My understanding is a visual inspection of the liner.
Q. Okay. And are there any parts of the liner in pond 2S that cannot be inspected visually at present?
A. Yes.
Q. And where are those parts of the liner?
A. Any parts that are still -- have ash on top of them and the side slopes where the geocell membrane is on top of the liner.
Q. And is there any part of the liner that can be visually inspected?
A. I believe, yes.
Q. Is it less than half?
A. Half of what?
Q. Is it less than half of the total liner that can be visually inspected?
MS. NIJMAN: Calls for speculation.
MR. RUSS: You can answer.
BY THE WITNESS:
A. My understanding would be yes.

BY MR. RUSS:
Q. Okay. Is it less than 10 percent of the liner?
A. That I don't know.
MS. NIJMAN: Same objection.
BY MR. RUSS:
Q. Okay. One more question about this. This is sort of a terminology question about this email. Do you see where it says in the fourth line of the first full paragraph: The cushion and warning layers? Do you know what the cushion and warning layers are?
A. Yes.
Q. Can you describe for me what the cushion layer is?
A. Cushion layer and the warning layer, they're both aggregate. I don't recall the actual size -- different sizes of the stone, but there's a certain amount of cushion layer which is aggregate and then another warning layer on top of it, and it's to aid in the dredging.
Q. Okay.
A. So as an operator is removing ash, as they get close to removing the bottom of that ash, they

would hit rock and know that they should stop. It's basically a protection for the liner that's below those layers of aggregate.

Q. Okay. And the liner below the aggregate, what is that?

A. That's the HDPE.

Q. HDPE.

And is -- is the geocell only on the side slopes, or is there geocell on the bottom of the pond?

A. My understanding, it's only on the side slopes.

Q. Okay. Okay. Thank you.

And on the next page of the same exhibit, the paragraph immediately under the line that says "C. Cement Lined Slopes..."

A. Uh-huh.

Q. First I should make sure that -- did you write this email?

A. If it's a continuation from the first page, then yes.

Q. Yeah. And I'm looking at your name at the bottom of the email.

A. Yes. Okay.

Q. So -- and it says there: The cement lined slopes of south ash pond two could not be surveyed, correct?

A. It says that, yes.

Q. What kind of survey was that that could not be performed?

A. My understanding, it's the leak -- leak location survey.

Q. Okay. And that's the electrical survey, correct?

A. Correct.

Q. Okay. So looking at that email, is it the case that the leak location survey was not conducted because it could not be conducted?

MS. NIJMAN: I just want to clarify something on this email. It looks to me like the section you're reading from under C. Cement Lined Slopes is a quote from some other report and is not actually written by Beckie. Is that your understanding, too? Because that --

MR. RUSS: It could be. I'm not sure. That's why I was asking who wrote the email.

MS. NIJMAN: Okay. Yeah. But she clearly didn't write that piece. I just wanted to --

MR. RUSS: Right.

MS. NIJMAN: -- make sure we're looking at this correctly.

MR. RUSS: Right.

BY MR. RUSS:

Q. Okay. So let's look at the top of the email which you did write, correct?

A. Correct.

Q. Between Eric or Joseph?

A. Yes.

Q. You say in the third line: I seem to recall discussing this topic, correct?

A. It says that, yes.

Q. And do you recall discussing this topic now?

A. Today, no.

Q. Okay. And you ask a question: Is there going to be any way to certify that there are no leaks of the membrane on the slopes?

A. I did ask that, yes.

Q. And what did you mean by "leaks?"

A. Anything that would cause -- if we would do the leak location test that would cause it to fail.

Q. And why would the leak location test fail?

A. Something within the survey that would lead itself to...

Q. And what does that indicate?

A. You know, I'm not an expert on the leak location, so I really can't -- I can't answer that.

Q. Is it your understanding that leak means something getting out of the pond through the membrane? If there's a leak in the membrane, does that suggest that something got...

A. Not necessarily.

Q. So what is your understanding of leaks?

A. In this sense, there was no -- there was no water in the pond at the time, so it's a leak of the seams of the liner and things weren't joined together.

Q. So is it your understanding that a leak could be a potential source of materials leaving the membrane even if it never happened?

MS. NIJMAN: Objection; vague. She's testified there was no water in the pond.

MR. RUSS: You can answer.

THE WITNESS: Can you rephrase it?

BY MR. RUSS:
Q. What's your understanding of the word "leak" in a general sense, not specific to Will County?
MS. NIJMAN: I'm just going to object to the extent she's already answered what it means under the circumstances of this email. Are you asking something different now?
MR. RUSS: Yes.
MS. NIJMAN: Okay.
THE WITNESS: Can you repeat the question?
BY MR. RUSS:
Q. So what's your understanding of leak in the sense of a pot of water?
A. Water is leaving the pot through a non-normal way.
Q. So in the context of Will County, leak means something different, correct?
MS. NIJMAN: As to this email?
MR. RUSS: (Nodding head.)
MS. NIJMAN: Yes?
BY THE WITNESS:
A. Yes.
MS. NIJMAN: I'm sorry. You nodded, but

you didn't say anything, so I'd like it on the record.
MR. RUSS: Yes, yes, in -- in the context of this email.
BY MR. RUSS:
Q. So it does not mean water leaving the pond. I'll just leave it at that.
The first line of the next paragraph says: Moving forward, we will need to determine that the liner has not been compromised during cleanout. What is your understanding of compromise of the liner?
A. My understanding is that there's -- any tear or a puncture of the liner.
Q. Okay. And has the liner been compromised in the past at pond 2S?
A. 2S, to my understanding, no.
Q. Have any of the liners in the ash ponds at Will County been compromised during cleanout?
MS. NIJMAN: Objection; vague.
MR. RUSS: You can answer.
BY THE WITNESS:
A. The three south pond liner.

BY MR. RUSS:
Q. Okay. Thanks. I'll actually get to that later.
In the same exhibit, the bottom of that second full paragraph says: We wouldn't be able to inspect the bottom due to; one, the warning and cushion layers; and two, any remaining ash and/or water that is at the bottom of the pond. Do you see that?
A. I do see that.
Q. So have you inspected the bottom?
A. Of which pond?
Q. Of pond 2S.
A. No.
Q. Is it required by the Compliance Commitment Agreement?
A. The CCA, my understanding, is an inspection of the ponds.
Q. Okay. And you haven't -- you already answered that question. Okay.
The same exhibit, I believe, Bates page 27133, the email at the top of the page is addressed to you, correct? You may have to flip back to the other one, but it starts with -- I think

that's your name there.
A. Yes.
Q. Do you remember this email?
A. I don't recall the email.
Q. Okay. It asks at the end: Where did you wind up with IEPA on the scope of the inspection, correct?
A. It does ask that.
Q. Did you have conversations with the IEPA about the scope of the inspections?
A. I don't recall.
Q. Did you ever provide an answer to Eric to that question?
A. It appears, in reviewing the email, there's no answer to that.
Q. Do you remember answering that question?
A. I don't recall.
Q. Okay. Do you see at the bottom of the first full paragraph there it says: Consequently, it appears that it will not be possible to certify that there are no leaks in the geomembrane on the side slopes of pond two using this approach?
A. I do see that.
Q. Okay. I'm going to leave it there. We've

already talked about leaks.
Actually, I'll ask one question about it.
Is it still the case that electrical resistivity testing is not possible on the side slopes of pond two?
A. Can you repeat the question again?
Q. So here -- it will not be possible to certify that there are no leaks using electrical resistivity testing is what that last sentence is getting at, correct?
A. It says that, yes
Q. Is that still the case? Is it possible to perform electrical resistivity testing on the side slopes of pond 2S now?
A. My understanding is no.
Q. Okay. Great. Thanks.
Let's see. How do you certify that there are no leaks of the geomembrane on the side slopes of pond two?
A. By inspecting any concrete that we can visually see. And as long as the concrete is not damaged, we make an assumption that the liner is not damaged.
Q. Okay. Thank you.

become just like concrete?
A. I see that statement.
Q. And then the last sentence says: It probably wasn't the Poz-o-Pac but just old ash.
A. It says that, yes.
Q. Do you have any recollection of that conversation with one of the guys?
A. No.
Q. Okay. And have you ever had conversations, outside of this context, about ash that has hardened to become just like concrete?
A. Not that I recall, no.
Q. Okay. Leave that there.
Do you remember -- you might want to keep this exhibit there because I'm going to ask a question that's sort of related to it. Do you remember -- this email is discussing ash pond three south, correct?
A. I don't know.
Q. Do you see the subject line that says Ash Pond Number Three?
A. Okay.
Q. Would that be pond three south?
A. I assume it is, yes.

I'll skip a couple questions here. I'll skip this question and I'm going to move to questions about pond 3S, so Exhibit 106.
(Exhibit No. 106 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. This is an email from you to Maria Race, correct?
A. Yes.
Q. And it was sent a long time ago in 2008 --
A. Uh-huh.
Q. -- correct?
Do you remember this email?
A. No.
Q. Okay. Do you remember what the email is describing where it says: KPRG hit today with the hand auger?
A. No, I don't.
Q. Okay. Do you see the second sentence says: He did indicate -- "he" being one of the guys from the first sentence, I assume?
A. Uh-huh.
Q. He did indicate that if the ash is not dug out of the ponds, over time it will harden and

Q. Okay. What was KPRG doing with an auger in pond three south?
A. I don't recall.
Q. Do you know if KPRG removed any material from pond three south in 2008?
A. What do you mean by "material?"
Q. Anything at all.
A. They did do a core sample.
Q. Okay. Okay. Do you know if they removed any coal ash from the pond in 2008, KPRG?
A. I don't believe KPRG did, no.
Q. Okay. And was the Poz-o-Pac in pond three south removed, in part or in whole, in 2008?
A. I don't recall in 2008. I don't know.
Q. Okay. When was Poz-o-Pac removed from pond three south?
A. When the liner project was ongoing which I don't recall the date of that.
Q. Okay. Do you know what year that was?
A. 2009, 2010.
Q. Okay.
A. I don't recall.
Q. I think that's right. I think we're going to get there in the next exhibit.

(Exhibit No. 107 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Okay. Yes. This is Exhibit 107. And actually, I'll ask you one more question about the -- about the Poz-o-Pac.
Who would know what KPRG was doing in 2008 in pond 3S?
MS. NIJMAN: You mean other than KPRG?
BY MR. RUSS:
Q. Other than KPRG and yourself, who at Midwest Generation would have been overseeing their work in pond three south?
A. I really don't know.
Q. Okay. So Exhibit 107, this is an email from you to a couple of people, correct?
A. Yes.
Q. And you're sending four photographs of liner damage in pond three south, correct?
A. Correct.
Q. I think this is what you were referring to earlier. Do you see where it says: The southeast section of HDPE liner on our 3S ash pond is extremely damaged?

A. Uh-huh, yes.
Q. Can you describe that damage?
A. The HDPE liner was torn and the -- the felt material was exposed which is the underlining of the HDPE liner.
Q. Okay. And do you see where it says: I think this has been buried under some of the ash for a bit?
A. Yes.
Q. When you said "for a bit," how long did you mean?
A. I don't know.
Q. Do you know what caused the damage?
A. The cleanout process of the pond.
Q. And who did that?
A. LaFarge.
Q. Okay. Did anyone investigate the damage?
A. What do you mean by "investigate?"
Q. Did anyone -- let me see how I can phrase this.
(Brief pause.)
BY MR. RUSS:
Q. Do you see where it says in the third line: Could have occurred during the cleanout of the pond

many months ago?
A. Uh-huh, yes.
Q. And in the next sentence: We had some real fears this was going to be an issue going forward with LaFarge and the cleanout process.
A. I see that, yes.
Q. Why did you have fears that this was going to be an issue?
A. You have heavy equipment in the ponds, and in order to remove bottom ash from the ponds, one has to be extremely careful and diligent on how they're removing the material.
And plus, the equipment that's in the pond, you have heavy equipment, as well as trucks that are entering and leaving the pond.
Q. Do you know what piece of equipment specifically caused the damage?
A. No. I don't know that.
Q. Did LaFarge admit that they had caused the damage?
A. I don't -- I don't recall, actually.
Q. Okay. Was there ever any uncertainty about what caused the damage? Were you always clear that it was LaFarge that had caused the damage?

A. There was a little bit of uncertainty.
Q. Okay. And to resolve that uncertainty, was there -- that's what I mean when I say "investigation." How did you resolve that uncertainty?
A. We didn't really resolve it.
Q. Okay. Okay. Was the damage repaired?
A. It was repaired.
Q. And were you involved in planning the repair?
A. Yes.
Q. And what did the repair consist of?
A. The contractor who installed the liner originally came out and did -- put new pieces of HDPE liner and the felt material underneath that and -- and repaired it.
Q. Okay. Do you have a sense of the earliest point in time that the damage could have occurred?
A. During -- if -- the cleanout process which I don't know the date for that.
Q. How often is that pond cleaned out?
A. It varies, but at a minimum, annually.
Q. At a minimum.
And at a maximum?

A. Twice.
Q. Twice a year. Okay.
So is it fair to say it could have been between six months and a year before it was discovered?
MS. NIJMAN: Objection.
BY MR. RUSS:
Q. It could have been up to a year -- could it have been -- would it have been less than a year before it was discovered?
A. I would agree with that.
Q. Okay. Thanks.
And could it have been six months before it was discovered?
MS. NIJMAN: Objection; calls for speculation. That's not what the email says.
MR. RUSS: That's okay. You can answer.
BY THE WITNESS:
A. I don't -- I don't know.
BY MR. RUSS:
Q. Okay. Is the pond ever cleaned out more frequently than six months?
A. No.
Q. Okay. And you say that it was buried

under some of the ash. Do you know how deep the ash was over the damaged spot?
A. No, I don't.
Q. Okay. And what steps have been taken to prevent that from happening in the future?
A. Conversations with LaFarge. They put some other material to -- not materials -- an easier trackway to get into the pond so they're protecting the ramp which is where this happened at.
Q. Okay.
A. It was the entrance to the pond. So that's the only thing that has been done.
Q. And they haven't changed the equipment that they're using?
A. I don't -- I don't know --
Q. Okay.
A. -- actually.
(Exhibit No. 108 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. So now I'm going to turn to Exhibit 108. I must be looking at the next page. Let me see. I think I may have made a mistake here. So this -- I think I know what happened here. Some of the

documents we were provided with weren't stamped originally. This is a different page. That's okay. I'll skip that question for now. And you can just put that exhibit aside because that's not the right page.
Is it possible to visually inspect the bottom of pond 3S?
A. What do you mean by "the bottom?"
Q. The part of the pond that's within the side slopes.
A. No.
Q. And why not?
A. You have the warning and cushion layer, and you also have ash that's remaining. The ash is not all -- 100 percent removed.
Q. Okay. Has it been -- some ash has been removed from pond 3S?
A. Yes, it has. Yes.
Q. And is that part of a periodic removal, or is it a permanent removal?
A. I don't understand the question.
Q. Is 3S still active?
A. It is still active.
Q. So it will receive more ash in the future?

A. It will.
Q. Okay. And -- okay. Is it possible to visually inspect the side slopes of 3S?
A. Yes.
Q. Okay. Has the liner of pond 3S been damaged before that occurrence that we were just talking about that you're aware of?
A. Not that I'm aware of, no.
Q. And has it been damaged since then?
A. Not that I'm aware of, no.
Q. Okay. Thanks.
Have you ever had conversations about the amount of weight that can be safely stacked on top of an HDPE liner?
A. The amount of what? I'm sorry.
Q. Of weight.
A. Can you repeat the whole question?
Q. Yes. Sure.
Have you ever had conversations with anyone as part of your job about how much material in weight can be safely stacked on top of an HDPE liner?
A. No, I've not.
Q. Okay. I'll just skip that line of

questioning then.
Would geocell have prevented that damage from occurring?
MS. NIJMAN: Objection; vague.
BY MR. RUSS:
Q. Geocell, as you described it earlier, is a honeycomb matrix filled with concrete, correct?
A. Correct.
Q. And why is that used?
A. It was to aid LaFarge in cleaning the side slopes.
Q. Okay. So does geocell do anything to prevent damage of bottom liners?
A. Not to my understanding, no.
Q. Okay. And was the damage that LaFarge caused on the side slope?
A. It was not, no.
(Exhibit No. 112 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Now Exhibit 112. This is just to clarify something. If you turn to the reverse page, 27525 -- although I guess I should ask you to verify it. This is an email from Raymond Wolan to

Margaret Ruane or however that's pronounced and you are cc'd, correct?
A. I am.
Q. Okay. And this is an email about the ponds at Midwest -- at Will County, correct?
A. Yes.
Q. And it says: Marge, I believe LaFarge is afraid of getting too close to the liner and afraid of running a machine on the stone and punching a hole in the liner, correct?
A. It says that, yes.
Q. I believe they need to get into the pond with a small track machine like a bobcat or rubber tire end loader to remove most of the remaining material, correct?
A. Yes. It says that.
Q. Did they do that? Did they use a bobcat or rubber tire end loader?
A. I don't know.
MS. NIJMAN: Objection to foundation.
MR. RUSS: What?
MS. NIJMAN: Objection to foundation. You can answer.

BY THE WITNESS:
A. I don't recall.
BY MR. RUSS:
Q. Okay. Okay. Do you know what equipment LaFarge is currently using to clean out ash ponds?
A. No, no.
Q. Okay.
(Exhibit No. 113 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Exhibit 113. If you turn to page -- Bates page 26904, this is an email from James Sault to Jeff Beaudry and you're cc'd, correct?
A. Correct.
Q. Do you remember this email? I have to ask.
A. I don't recall the email.
Q. Okay. Do you see where it says in the last sentence of the first full paragraph: It would still be done in time before 3S got too full.
A. I see that sentence, yes.
Q. What happens when 3S gets too full?
A. There's a potential for ash to fill up the pond.
Q. And how is that dealt with?

A. We've never had that problem.
Q. Okay. Okay. Let's turn to page 26909 in this same exhibit. Do you see -- this email starts on 26908. It looks like it's from Raymond Wolan to Margaret Ruane, correct?
A. Correct.
Q. And you were cc'd?
A. Yes, correct.
Q. It says: Marge, I believe it was sometime in March that they piled up the slag in 3S and we gained another couple months. So if we do this, we could make it until 2S is finished, right?
A. It says that, yes.
Q. Are you familiar with the process of piling up the ash in 3S? Do you know what he's talking about?
A. Yes.
Q. And is that done to accommodate more ash when the pond is full?
A. Not necessarily, no.
Q. Okay. And go to page 26906 in the same exhibit. Wait a minute. I may have this wrong. I'm looking for something specific.
Has pond 3S ever overflowed?

A. No, not to my knowledge.
Q. Okay. Good enough.
I'm going to turn to groundwater issues now. It's a little bit different line of questioning. I'm going to start without exhibits, but were you aware of groundwater monitoring wells being installed in 2010?
A. Yes. I was aware of those.
Q. And do you know how many were installed?
A. I believe there were ten.
Q. Okay. Do you know if any wells were installed after that, after 2010?
A. To my knowledge, I don't believe any were installed.
Q. And were there any monitoring wells on site before those wells were installed in 2010?
A. I was aware of two.
Q. Okay. And where were they located?
A. Near the north diesel tank farm.
Q. And where is that?
A. Just north of the main parking lot by our diesel fuel tanks --
Q. Okay.
A. -- unrelated to ash ponds is my

understanding.
Q. Okay. And are those wells currently monitored?
A. No.
Q. Okay. Do you know when they stopped being monitored?
A. No.
Q. Okay. That's fine.
(Exhibit No. 94 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. So if you turn -- this is Exhibit 94 -- to Bates page 516, do you see where it says Proposed Additional Monitoring Well?
A. Yes.
Q. And do you see the two proposed additional monitoring wells on the map in red?
A. I do see those.
Q. Do you know why those proposed additional monitoring wells were proposed?
A. No.
Q. Do you know whether they were ever installed?
A. To my knowledge, I don't believe they were.

Q. And do you know why not?
A. No.
Q. Okay. This is exhibit -- oh. Let me ask one follow-up question on that.
Do you know who would know why those wells were not installed?
A. No.
(Exhibit No. 114 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Okay. Exhibit 114. On the second page, 14033 Bates number, there's an email at the top from you to Maria Race, correct?
A. Yes.
Q. And it says: Groundwater sampling results from our wells; interesting results, right?
A. Yes.
Q. Did groundwater monitoring results always go to you before they went to Maria Race?
A. I don't know, but I'm set up with -- Test America is our main lab, so any results -- or any samples that are sent there on our behalf are always sent to me.
Q. And you would look at them when they come

in?
A. Not always.
Q. What did you mean when you said "interesting results?"
A. I don't recall.
Q. Okay. And you asked: What are we comparing with limit wise? Do you -- did you get an answer to that question?
A. I don't recall.
(Exhibit No. 115 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Okay. Let's turn to Exhibit 115. This is an email -- do you see the data that start on page 14098, the analytical results?
A. I see the data, yes.
Q. Have you seen this before?
A. I can't recall.
Q. Have you seen groundwater analytical results for Will County before?
A. I have.
Q. From Patrick Engineering?
A. I don't recall from Patrick Engineering, no.

Q. Okay. Do you know what the -- what's your understanding of the term "downgradient?"
A. Very limited.
Q. Okay. But what is it? That's fine.
A. Downstream of some other point that's upstream of it.
Q. And is downgradient an -- are the words "downgradient" and "upgradient" typically used to describe groundwater wells?
MS. NIJMAN: Object to the extent it calls for an expert opinion. You can speak as a layperson.
BY MR. RUSS:
Q. Have you ever described any of the wells at Will County as upgradient or downgradient in conversations on the job?
A. Yes.
Q. And which wells are upgradient?
A. Anything that's east, northeast, south of the -- of the ponds.
Q. Do you recall which wells specifically are upgradient?
A. I don't recall offhand, no.
Q. Okay. So in this email, if you look --
MS. NIJMAN: What page?

MR. RUSS: This is still -- it's 14096. I'm sorry.
BY MR. RUSS:
Q. Eighth line down, halfway through the first full paragraph, a little bit more, it says: At Will County, for example, there is strong hydraulic evidence to suggest that everything is downgradient. Do you see that?
A. I see that.
Q. Have you ever had conversations about all of the wells being downgradient?
A. I've never had conversations, no.
Q. Do you understand what is being described there?
A. No.
Q. Okay. And the next -- the next sentence continues: The ponds may be draining in multiple directions towards either the river or the canal. Do you understand that drainage pattern?
MS. NIJMAN: Object to foundation. You can answer, if you know.
BY THE WITNESS:
A. No.

BY MR. RUSS:
Q. Okay. That's fine.
Do you know if elements from coal ash have been seen in any of the monitoring wells at Will County?
MS. NIJMAN: Vague.
BY MR. RUSS:
Q. Are you familiar with pollutants -- are you familiar with elements known as coal ash indicator pollutants?
MS. NIJMAN: Same objection regarding calling for an expert opinion. To the extent you know, you can answer.
BY MR. RUSS:
Q. Are you familiar with the chemical boron?
A. Yes.
Q. And in your work, have you ever treated boron as an indicator of coal ash?
MS. NIJMAN: Foundation.
BY THE WITNESS:
A. What -- can you rephrase that?
BY MR. RUSS:
Q. When you see high boron concentrations in a monitoring well as part of your job near an ash

pond, does that mean anything to you?
MS. NIJMAN: Same objection; foundation, calls for expert opinion.
MR. RUSS: That's okay. You can answer.
BY THE WITNESS:
A. (Shaking head.)
BY MR. RUSS:
Q. It means nothing. Okay. You can -- you have to answer out loud.
A. No. I'm sorry.
Q. Okay. I'll ask the same question about manganese. Are you familiar with the element manganese?
A. Yes.
Q. And have you seen evidence from Will County of manganese concentrations that are higher in downgradient wells than they are in upgradient wells?
A. I don't recall sitting here today.
Q. And have you seen evidence of boron concentrations that are higher in downgradient wells than in upgradient wells?
A. I don't recall today sitting here, no.
Q. Okay. Are you familiar with the term

"groundwater mound?"
A. Can you repeat that?
Q. Groundwater mound.
A. No.
Q. Or groundwater mounding?
A. No.
Q. Okay. That's fine.
What does the word "contamination" mean to you in the context of your work?
A. My understanding is something -- something that's possibly there that should not be there.
Q. And if you see the concentration of an element that's higher than a state groundwater protection standard, does that -- is that contamination as you understand the word?
A. In what context, I guess?
Q. In the context of Will County. If you saw boron, for example, in a groundwater monitoring well -- let's take a look at -- let's look at this exhibit again, 115, page 14098. Do you see the column that says Groundwater Quality Standard?
A. Uh-huh, yes.
Q. The standard for boron is two --
A. Yes.

Q. -- milligrams per liter?
And do you see under the column for Monitoring Wells three, four, five, six, seven, and nine and ten, those numbers are in bold font, correct?
A. Correct.
Q. Do you know why?
A. They exceed the groundwater quality standard.
Q. Right. Okay. Thank you.
And do you consider that to be contamination in your work?
MS. NIJMAN: I'm sorry. Is that the definition you want her to use?
MR. RUSS: I'm asking her, I guess, if -- if that's an example of contamination.
BY THE WITNESS:
A. I can't answer that. I don't know.
BY MR. RUSS:
Q. Okay. Do you know whether a boron concentration of 3.7 milligrams per liter, which is what is in monitoring well four, for example, is naturally occurring?
A. I don't know.

Q. No. Okay. All right.
Now, this is Exhibit 90 which we've looked at before. And this is a different issue, a different part of the email. We've already talked about this email. You were cc'd on it and it was a long time ago, and just to remind myself -- sorry to ask twice -- do you remember this email?
A. I don't remember the email, no.
Q. Okay. Do you see item three: Are there any groundwater issues at the site?
A. I see that, yes.
Q. And it says: Midwest Generation is not aware of any groundwater issues associated with the ponds at the site?
A. Yes. I see that.
Q. Does the phrase "groundwater issues" mean anything to you? What do you understand that to mean?
MS. NIJMAN: Foundation objection. She didn't write this.
MR. RUSS: That's true.
You can answer.
BY THE WITNESS:
A. I don't know what -- what the author meant.

BY MR. RUSS:
Q. Okay. Are you aware of any groundwater issues at the site?
A. What's your definition of "issue?"
Q. What's your definition of "issue?" I should ask you.
MS. NIJMAN: It's not her terminology. If you want to help her with a question, give her a definition. She can answer it.
BY MR. RUSS:
Q. Is the groundwater at Will County affected by the coal ash ponds? Has it ever been affected by the coal ash ponds?
A. I don't --
MS. NIJMAN: Objection to foundation.
BY MR. RUSS:
Q. In your experience.
A. I don't know.
Q. Are there any exceedances of ground water standards in the groundwater monitoring wells at Will County?
A. In the data I've reviewed, yes, there are.
Q. Okay. And do you know what caused those?
A. I don't know.

Q. Okay. Do you see the second sentence -- the second underlined sentence in number three: Groundwater elevation is anticipated to be below elevation 580 feet?
A. I see that, yes.
Q. Do you know why that's relevant to the groundwater issues being discussed?
MS. NIJMAN: Same objection.
MR. RUSS: You can answer.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. You don't know. Okay.
Let me think about that one. I'll probably come back to that one.
Are you aware of groundwater elevation generally at Will County? Do you have a sense of how high the groundwater is at the site?
A. No.
Q. And are you -- do you know if the groundwater under the Will County site is ever in contact with the pond liners, the ash pond liners?
A. Can you repeat that question?
Q. Do you know if -- yeah. Do you know if

the groundwater at Will County ever comes into contact with the liners of the ash ponds?
A. And which liner are you referring to?
Q. Any of them, so I'll start with 3S. Have you ever known groundwater to come into contact with the liner of pond 3S?
MS. NIJMAN: I'll object to vagueness. If you understand it...
BY THE WITNESS:
A. No. I -- I don't -- I don't know.
BY MR. RUSS:
Q. Are you aware of groundwater ever coming into contact with any part of pond 2S?
MS. NIJMAN: Same objection.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. And the two north ponds, the same thing?
MS. NIJMAN: Same objection.
BY THE WITNESS:
A. Same answer.
BY MR. RUSS:
Q. Good. I've got that consistent.

(Exhibit No. 117 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Now Exhibit 117. This is a Field Change Request, right?
A. It is.
Q. Can you describe what a Field Change Request is?
A. Any change to a project that was already established, so anything that wasn't part of the original scope of work.
Q. Okay. And did you fill this change request out?
A. I only filled out the bottom portion.
Q. Oh. Who filled out the top portion?
A. It's requested by Tedd Mills.
Q. Okay. So you reviewed it before you signed it?
A. Correct.
Q. Okay. And Tedd Mills said that he was going to cut holes in liners to pump out groundwater, correct?
A. It says that, yes.
Q. And is this -- do you know which pond this

is?
A. My understanding is it's three south.
Q. Three south. Okay.
So was there groundwater in pond three south?
A. There was water.
Q. And the reason for change, it says: unknown water source is trapped in liner, correct?
A. Correct.
Q. Do you remember that happening?
A. I do.
Q. Where in the liner was it trapped?
A. If I recall correctly, on the side slope on the south side of the pond.
Q. And by "trapped in liner," do you mean it was -- does that mean it was between two sections of liner?
A. That means it was underneath the liner.
Q. Underneath the HDPE?
A. Correct.
Q. And what was it -- what was below the water that was trapped under the HDPE?
A. Just the side slope.
Q. Okay. Do you know why Tedd Mills described

it as groundwater?
A. I don't know.
Q. Okay. Why was the Field Change Request necessary in this case?
A. Moving forward, we didn't want any water underneath the liner. And you could walk on top of the liner and basically push it in, so we wanted to ensure that there wasn't anything behind it.
Q. And why is that important?
MS. NIJMAN: To your knowledge.
BY THE WITNESS:
A. I don't know to my knowledge, so...
BY MR. RUSS:
Q. Why would -- you said you didn't want water trapped in the liner, correct?
A. Correct.
Q. And why didn't you want water trapped in the liner?
A. You know, at the time I don't know why we didn't. It did not seem right to us at the time.
Q. Okay. So did this -- this work was performed, correct?
A. It was.
Q. Holes were cut in the liner?

A. I don't recall how the work was actually performed.
Q. Okay.
A. Cut holes...
Q. And to your knowledge, has this been an issue since 2009?
A. No, to my knowledge.
Q. And is it possible that water is getting trapped in the liner in places that you haven't seen?
MS. NIJMAN: Object; calls for speculation.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. Are there sections of the liner where you would not notice water trapped in the liner?
A. Which pond are you referring to?
Q. In pond three south.
A. I don't know.
Q. Are there sections of the liner that are covered with ash?
A. Yes.
Q. And would you notice if water were trapped in the liner under the ash?

A. I would not be able to tell, no.
Q. Okay. Thanks.
(Exhibit No. 118 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Now, this is Exhibit 118. This is a Stormwater Construction Site Inspection Report, correct?
A. Correct.
Q. And the inspector's name is your name, correct?
A. Correct.
Q. So you made this inspection in 2009?
A. Yes.
Q. Of the three south ash pond?
A. Yes.
Q. And you wrote -- in the bottom of that top box in response to the question: Are there any discharges at the time of the inspection, you marked the box Yes, correct?
A. It's checked yes.
Q. And it says: Water is seeping through cracks in second p-o-p layer, correct?
A. Correct.

Q. Is that Poz-o-Pac?
A. That is.
Q. And what is the second Poz-o-Pac layer?
A. So we removed the first layer.
Q. Yes.
A. And this is the Poz-o-Pac layer that was remaining.
Q. Okay. And is that second Poz-o-Pac layer still there?
A. Yes.
Q. And when you say "water is sleeping through the cracks," where was it going?
A. It remained in the pond.
Q. So was it coming up through the Poz-o-Pac or going down through the Poz-o-Pac?
A. I don't -- I don't recall.
Q. So you wrote that water is seeping through cracks. How did you know water was seeping through cracks?
A. My recollection is that I saw water.
Q. Did you see water where it shouldn't be?
A. Can you rephrase that?
Q. You saw water. How did you know that water was seeping through the cracks?

A. I don't recall.
Q. Was it coming up from the ground?
MS. NIJMAN: Objection; asked and answered.
BY THE WITNESS:
A. Yeah. I don't -- I don't recall.
BY MR. RUSS:
Q. What was done about this?
A. I don't recall.
Q. And why would you call the water seeping through cracks a discharge?
A. I don't know.
Q. What does "discharge" mean to you when you're filling out this form?
A. To me, it would have meant discharge off site, but...
Q. Off site meaning off the property?
A. Off the property, but that's not...
Q. Would water seeping into groundwater be a discharge, as you understand it, when you're filling out this form?
A. I don't know.
Q. Okay. Let's move on to Exhibit 119. I'm sorry. One more question about that.
Do you know how much water we're talking

about in this report?
A. No.
Q. Okay.
A. I don't recall.
Q. Okay. Do you know who would know how much water seeped through the cracks?
A. I don't know.
Q. Okay.
(Exhibit No. 119 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Exhibit 119, I'm looking at the bottom. This is an email from you to Sarah Kamm, correct?
A. Yes.
Q. From 2012.
And you're describing a pump to remove excess water that has accumulated in the bottom of two south, correct?
A. Correct.
Q. And do you know where that water came from?
A. It could have been stormwater or as bottom ash is dewatered naturally.
Q. So that water could have been seeping out of the bottom ash? When you say it's dewatered

naturally --
A. Yes.
Q. -- the water separates itself from the bottom ash?
A. Yes.
Q. But you didn't know at the time where it was coming from, correct, or did you know?
A. At the time this was written, I don't know.
Q. And you describe it as excess water. Do you remember why you described it that way as excess?
A. No. I don't recall.
Q. And the email goes on to say: What isn't fine is that they have strung the hose outside of the pond and just laid it in the grassy field to the east. We cannot pump water that has come into contact with combustion by-products in the ground just to have it seep into the earth. Do you know how much water was pumped out that way?
A. I don't recall.
Q. Would you characterize that as a discharge?
A. No.
Q. Okay. Has that happened since?
A. No.

Q. Do you know who would know how much water was pumped out that way?
A. No. I don't know.
Q. Or whether that was a discharge? Do you know who would know if that's a discharge?
A. I don't know.
Q. How long did it take for that problem to be corrected?
A. I don't recall.
Q. Do you recall how long it had been happening when you noticed it?
A. No.
Q. Okay. Would you describe that as a problem?
MS. NIJMAN: Objection; vague.
BY MR. RUSS:
Q. You said "it isn't fine." When you say "it isn't fine," is it your understanding that that's not standard operating procedures?
A. It's not good -- good -- good procedures.
Q. Okay. Okay. Thanks.
Is it a violation of any NPDES permit for the site?
A. No.

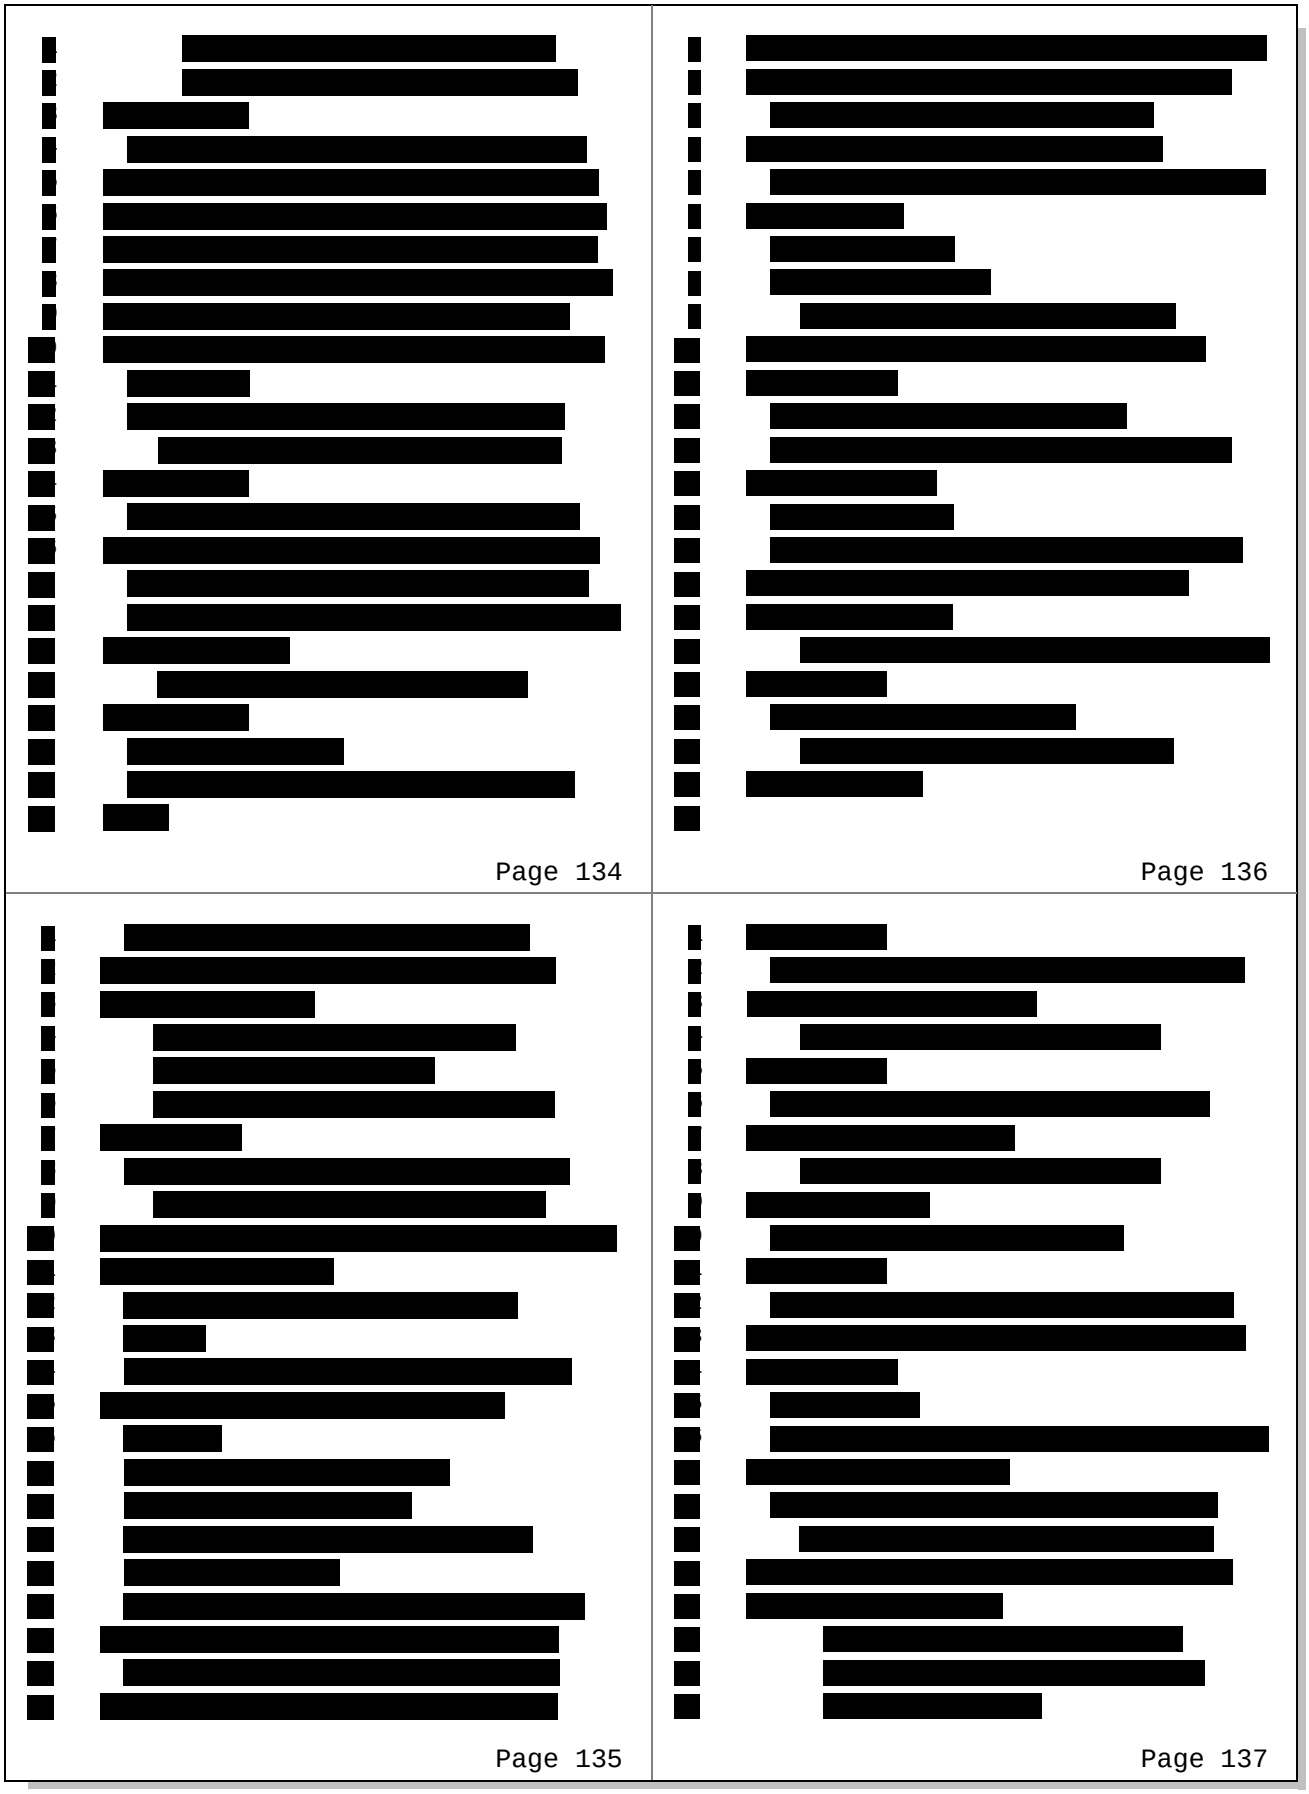
Q. So why isn't it a good procedure to pump it out of the pond that way?
A. All the water needs to be treated through our wastewater treatment system.
Q. And is water that seeps into the earth untreated?
A. What's your definition of "untreated?"
Q. Well, you said that it has to be treated by your wastewater treatment system. This water described in this email was not, correct?
A. Correct.
Q. So is it fair to characterize it as untreated?
A. I would agree, yeah.
Q. Okay. Thanks.
(Exhibit No. 120 marked for identification, 12-2-14.)
BY MR. RUSS:
Q. Now, this is Exhibit 120. This is a Proposal for Ash Pond Investigation from Patrick Engineering, correct?
A. Yes.
Q. Have you seen this before?
A. No.

Q. Okay. Did you work with Patrick Engineering on a proposal for ash pond investigations?
A. On a proposal, no.
Q. Okay. You did work with them in some capacity on the ash pond investigations?
A. Yes.
Q. And what was that capacity?
A. Scheduling them to come on site, being the site contact.
Q. Did you ever review their plans before they started doing the work?
A. No.
Q. Okay. This -- I know you said you haven't seen this, but I'm going to ask you to look at Bates page 21488 just so that you know what I'm talking about when I ask you the next question.
Under task three, the third line says: The survey crew will also concurrently measure the water elevation in all of the ash ponds, the river, and the Chicago Sanitary and Ship Canal, right?
A. Correct.
Q. Do you know if that work has been performed?

A. I don't know.
Q. Okay. Do you know who would know if Patrick Engineering was taking those measurements?
A. Patrick Engineering.
Q. Okay. Do you know, is there anyone at Midwest Generation who is responsible for ensuring that that task is carried out?
A. I don't know.
Q. You don't know who it is? Do you know --
A. The name of --
MS. NIJMAN: It's addressed to somebody.
BY THE WITNESS:
A. Mr. Joe Bocian on the -- project manager on the letter that it was addressed to.
BY MR. RUSS:
Q. Okay. And did you work with Joe Bocian?
A. Not on this specific project, no.
Q. Okay. Did you work with Joe Bocian in relation to Will County at all?
A. On other matters, yes.
Q. Okay. Okay. Now I'm going to turn to the Compliance Commitment Agreement, so this is going to be -- I'm going to ask a few questions before we actually even leave the exhibits.

So do you have any role in assuring compliance with the Compliance Commitment Agreement?
A. Yes.
Q. And what is your role?
MS. NIJMAN: Asked and answered. You can answer again.
BY THE WITNESS:
A. At the time that it was in place, ensure that all the steps were completed.
BY MR. RUSS:
Q. Is there any remaining -- are there any remaining obligations under the Compliance Commitment Agreement that you're responsible for ensuring the completion of?
A. I'd have to review the CCA again.
Q. Okay. That's Exhibit 99. Do you see anything in there that is ongoing?
A. Yeah. We always op- -- item 5b, Operating.
Q. Uh-huh.
MS. NIJMAN: Just for the record, the witness is reading from Bates page 561.
MR. RUSS: Thanks.
BY THE WITNESS:
A. So item 5b.

BY MR. RUSS:
Q. Is there an ongoing groundwater monitoring requirement?
A. Yes, 5d.
Q. Okay. Do you have a sense of whether the concentrations of boron in the groundwater monitoring wells at Will County have changed over time?
MS. NIJMAN: Objection; vague.
BY MR. RUSS:
Q. Do you know --
MS. NIJMAN: Foundation.
BY MR. RUSS:
Q. -- have the concentrations of boron in the monitoring wells remained steady, in your opinion?
MS. NIJMAN: Again, objection; calls for an expert opinion. She's already testified as to her knowledge of boron.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. Do you know -- did you look at boron monitoring results from 2010 when they were sent to you?



A. I reviewed the report.
Q. And have you looked at groundwater monitoring results from 2013 in 2014?
A. I've reviewed the reports.
Q. Did you ever compare concentrations of boron in 2013 and 2014 to concentrations in 2010?
A. I personally have not.
Q. Okay. Have you looked at other people's assessments of that comparison?
A. "Other people's" meaning?
Q. Have you looked at who sends you the quarterly monitoring reports?
A. I get it from our consultant.
Q. And who is that?
A. Rich Gnat.
Q. And does Rich Gnat compare current concentrations of boron and other elements to concentrations in the past?
A. I believe the report shows that, yes.
Q. And do you look at those comparisons?
A. Briefly.
Q. Do you know what they show off the top of your head?
A. Off the top of my head, no. I'd have to

look at the report.
Q. Okay. That's fair.
Are you aware of any groundwater monitoring that takes place outside of the terms of the Compliance Commitment Agreement today?
MS. NIJMAN: Asked and answered.
MR. RUSS: Actually, I asked about -- it's a slightly different question, but...
MS. NIJMAN: She identified all the wells she was aware of.
MR. RUSS: Yeah, but this is a different question.
BY MR. RUSS:
Q. So the Compliance Commitment Agreement has ten wells in it, correct?
A. Correct.
Q. And it requires quarterly monitoring, correct?
A. Correct.
Q. Does Midwest Generation monitor those wells more frequently than quarterly?
A. To my knowledge, we do not.
Q. Okay. And do you measure elements that are not in the groundwater monitoring reports that you

submit to IEPA?
MS. NIJMAN: I'm objecting to the extent -- are you asking for her personal knowledge? Does she do it, or has she seen it?
MR. RUSS: No. I'm asking for her personal knowledge.
BY MR. RUSS:
Q. Are you aware of Midwest Generation measuring other things in those wells other than the things that are reported to IEPA?
A. I don't know.
(Pursuant to agreement, pages 134 through 137 were placed under seal.)

Page 134

Page 136

Page 135

Page 137

(Pursuant to agreement, pages 134 through 137 were placed under seal.)
BY MR. RUSS:
Q. So the two northern ponds, one north and one south, there's ash in those ponds currently, right?
A. Correct.
Q. And you don't know if it's fly ash, but there's bottom ash and slag in ponds one north and one south, correct?
A. There's slag.
Q. Oh. And maybe bottom ash, but you don't know?
A. Slag and maybe fly ash.
Q. No bottom ash?
A. No bottom ash.
Q. Okay. Okay. Thanks for clarifying that.
Does Midwest Generation, as far as you know, have any plans to remove the ash from those ponds currently?
MS. NIJMAN: I'm going to object to asked and answered. And then secondly, she's here not speaking for the company.
MR. RUSS: That's okay.

MS. NIJMAN: To your own personal knowledge.
BY MR. RUSS:
Q. Are you aware of any plans to do that?
A. I personally don't know of any plans.
Q. Have you reviewed any plans to completely dewater those ponds?
MS. NIJMAN: Same objection.
BY THE WITNESS:
A. I've not reviewed any plans for that.
BY MR. RUSS:
Q. Have you seen any plans?
MS. NIJMAN: Same objections.
BY THE WITNESS:
A. I have not.
BY MR. RUSS:
Q. Have you seen any plans to use the ponds again in the future?
MS. NIJMAN: Asked and answered. Same objections.
BY THE WITNESS:
A. I've not seen any plans to use them in the future.
BY MR. RUSS:
Q. So who would know about Midwest Generation's

intentions for those ponds in the future?
MS. NIJMAN: I'll object to vague. If you know, you can answer.
BY THE WITNESS:
A. I have no idea.
BY MR. RUSS:
Q. Is there anyone working at Will County who would know about plans for those two ponds?
MS. NIJMAN: Same objection.
BY THE WITNESS:
A. No. I would be speculating. I don't know.
BY MR. RUSS:
Q. Okay. I want to go back to the issue of seepage really briefly when you wrote that report about water seeping through the Poz-o-Pac. Who would know where that water came from?
MS. NIJMAN: Objection; calls for speculation. You can try to answer it, if you know.
BY THE WITNESS:
A. I don't know.
BY MR. RUSS:
Q. Let's go over your job duties a little bit more.
As a NPDES compliance person, what exactly

do you do?
A. Our station chemist is the main person responsible for NPDES compliance, so if she is unable or not at the station for our sample day, I will back her up and take samples. That's the extent --
Q. Okay.
A. -- to my duty.
Q. And then as the -- you said you do compliance around waste issues at the site?
A. Yes.
Q. And what does that job entail specifically?
A. Coordinating any hazardous waste, non-haz universal waste pickup with our vendor, inspections of our haz waste room, universal waste room.
Q. And was it in your capacity as a solid waste compliance employee that you wrote the report about the water being pumped out of the pond and into the grass --
MS. NIJMAN: Objection; vague.
BY MR. RUSS:
Q. -- or was that in your capacity as a NPDES compliance person?

A. Can you rephrase that?
Q. Do you remember the email where you stated that water can't be pumped out of the pond onto the ground?
A. Correct.
Q. Do you consider that to be part of your job as someone who works on NPDES compliance?
A. General overall compliance.
Q. So part of your job is overall environmental compliance at the site?
A. Yes.
Q. And what -- in that capacity, what are your specific responsibilities around, for example, say, pond three south?
MS. NIJMAN: Can you -- I'm sorry. Object to vague.
THE WITNESS: Can you be more specific?
MR. RUSS: Sure.
BY MR. RUSS:
Q. In a given week, what do you have to do with pond three south?
A. In a given week me personally?
Q. (Nodding head.)
A. If I happen to be out in that area, I

would take a look, but there's nothing on a weekly basis that I'm responsible for.
Q. Do you ever write reports about specific ash ponds at the site?
A. I haven't, no.
Q. Do you ever report on the conditions of the ponds at the site to anybody?
A. If I would see an issue, to the operations manager.
Q. Okay. And then if you find a problem like water seeping through the Poz-o-Pac, who deals with that?
A. Well, I wouldn't see that at this time.
Q. Now. You did in the past.
A. Okay.
Q. So when that happened in the past, who was responsible for addressing -- remediating that problem?
A. It was part of the project.
Q. Okay. Was it a consultant, or was it Midwest Generation staff that addressed it?
A. I don't recall.
Q. So on an annual basis with pond three south, what kind of reporting do you have to do?

Is there anything systematic that's not in response to something you discover walking around?
A. Reporting to...
Q. Anybody within your organization.
A. Within the organization...
There's no formal reporting outside of the inspection once the pond has been cleaned by LaFarge and documenting that, but...
Q. Okay. So every time LaFarge cleans out the pond, you have to go take a look at it?
A. That's the only time I could get any sense of a little bit of the liner, yes.
Q. Okay. And when you say "a little bit of the liner," does that mean that even after LaFarge has cleaned out a pond, you can't see the whole liner?
A. That's correct.
Q. Okay. And when -- until LaFarge cleans out a pond, you don't conduct any inspections of the pond at all? Between clean-outs, do you ever visually inspect the pond?
MS. NIJMAN: Asked and answered. We had a big discussion about it.
MR. RUSS: I don't think so. You can

answer.
BY THE WITNESS:
A. If I'm in the area and -- as I said before, every employee who's traveling outside in that area is -- have an obligation to see what's happening with the equipment.
BY MR. RUSS:
Q. Okay. "The equipment" meaning the cleanout equipment?
A. No, the pond.
Q. The pond. Okay. Thank you.

Page 147

Page 149

Page 150

(Pursuant to agreement, pages 146 through 151 were placed under seal.)

BY MR. RUSS:

Q. Do you use Microsoft Excel at work?

A. I do.

Q. Do you ever create charts of groundwater quality data?

A. I don't, no.

Q. Do you have any spreadsheets of groundwater quality data that you maintain?

MS. NIJMAN: That she's created?

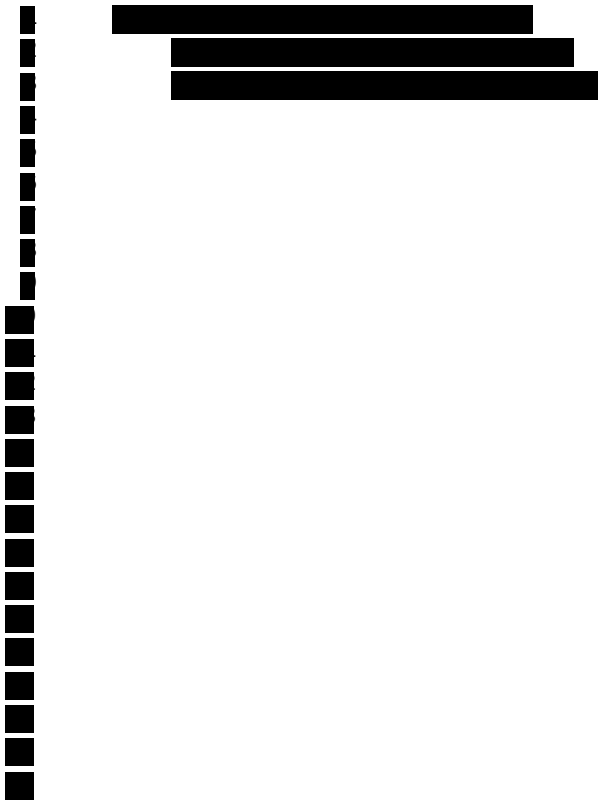
MR. RUSS: Uh-huh.

BY THE WITNESS:

A. I haven't created any spreadsheets on groundwater data.

BY MR. RUSS:

Q. Okay. Do you have spreadsheets of air quality data?



A. That I download from our system.

Q. Same deal. Okay.

Is there anyone at the Will County Station who generates charts from spreadsheets of groundwater quality data?

A. Not to my knowledge, no.

Page 152

Page 151

Q. Is there anyone at Midwest Generation who does that that you know of?

A. I don't know the answer to that.

Q. You've seen charts of groundwater quality data that outside people have made, correct?

A. Charts, do you mean spreadsheets?

Q. Spreadsheets and graphs.

A. I have, yes.

Q. And who does that?

A. Our consultants.

Q. And is that Patrick Engineering?

A. It had been.

Q. And is it KPRG?

A. It is currently.

Q. And the labs that do the testing, they include Test America?

A. Yes.

Q. Are there any other labs that do testing?

A. I don't know if there's anybody else.

Q. There were other consultants that have worked at Will County over the past -- since you started working there, right?

A. In regards to what?

Q. Groundwater. Patrick Engineering, KPRG.

Page 153

Have there been any other outside consultants on site working on groundwater monitoring?
A. No.
Q. On the ash ponds liners?
A. There are contractors, yes.
Q. And they include LaFarge for cleaning out the ponds?
A. Just on cleaning out the ponds.
Q. Who works on the liner repair?
A. On the repair? That was Clean Air Water Systems.
Q. Okay. And who works on installing new liners?
A. It was Breezer -- well, the installation is C-A-W-S, CAWS.
Q. Okay.
A. They did the actual installation of the liner.
Q. And what did Breezer do?
A. The prep work of the pond itself.
Q. And what does that include?
A. Regrading of the slopes, warning cushion layer installation, any assistance that the Clean Air Water Systems company would need.

Q. And as part of prepping the site for the new liner, are we talking about pond two south?
A. We're talking about both ponds.
Q. Pond three south?
A. They did both.
Q. And pond three south was relined in 2009; is that right?
A. I believe so.
Q. Roughly?
A. Roughly.
Q. Roughly.
Not in 2013?
A. No. It was not in 2013.
Q. Yep.
When that prep work was being done, did it include removal of Poz-o-Pac?
MS. NIJMAN: Asked and answered.
MR. RUSS: Yeah. That's true, but I have to ask that --
BY THE WITNESS:
A. Yes.
MR. RUSS: -- so you know what I'm talking about.

BY MR. RUSS:
Q. And did Breezer do that work, the Poz-o-Pac removal?
A. I believe so, yes, at this time.
Q. And after Breezer was complete with the Poz-o-Pac removal, did you inspect the pond 3S in 2009 or whenever that was relined?
MS. NIJMAN: Did she personally?
MR. RUSS: Personally.
BY THE WITNESS:
A. What do you mean by "inspect?"
BY MR. RUSS:
Q. Did you look at it? Do you visually inspect it?
A. What do you mean by "inspect?"
Q. You looked at it, right?
A. I did see it, yes.
Q. And did you file any reports about Breezer's performance on the job, whether they did a good job?
A. I don't recall.
Q. Do you remember seeing Poz-o-Pac in the bottom of the pond after Breezer had finished --
A. Remaining?

Q. -- prepping the site?
A. Intact?
Q. Yes.
A. Yes. There was a layer remaining.
Q. And the top layer had been completely removed at that point?
MS. NIJMAN: Asked and answered.
BY THE WITNESS:
A. Yes.
BY MR. RUSS:
Q. And where was it sent?
A. I don't recall.
Q. Was it sent off site?
A. It was off site.
Q. Okay. And do you remember how much Poz-o-Pac is left in the bottom in depth, inches, thickness?
MS. NIJMAN: Asked and answered.
BY THE WITNESS:
A. I don't recall exactly.
MS. NIJMAN: If we're just going to repeat, we should just tie this up.
BY MR. RUSS:
Q. In pond 2S when that was relined, was it

the same process: The top part of the Poz-o-Pac was removed, the bottom part left in place?

MS. NIJMAN: Asked and answered.

BY THE WITNESS:

A. Yes.

BY MR. RUSS:

Q. And did Breezer do that work?

A. They did.

Q. And do you know if the top layer of Poz-o-Pac was sent to the same place several years later?

A. That I don't recall.

Q. Okay. And do you recall in 2009 when pond three -- when pond 3S was relined, were there plans to reline more than one pond at that time?

MS. NIJMAN: You mean was she aware of it?

MR. RUSS: Uh-huh.

BY THE WITNESS:

A. There was.

BY MR. RUSS:

Q. And why wasn't that done?

A. I -- I don't recall at the time, actually.

Q. But you do recall there being a plan to line?

A. There was.

Q. What other ponds were...

A. Just two south.

MR. RUSS: Okay. I think that's it for me. That's it.

MS. NIJMAN: Reserve signature, please.

**Re: Sierra Club vs. Midwest Generation**
**Case No. PCB No-2013-015**

**Dear Ms. Nijman:**

**Enclosed please find a copy of the deposition transcript of Rebecca Maddox which was taken on December 2nd, 2014.**

**As signature was reserved, please arrange for the deponent to review her transcript making any necessary corrections on the errata sheets. Then have her sign the deponent's signature page and have the signature notarized.**

**Please send the original errata sheets and signed deponent's certificate within 28 days of today to Ms. Faith E. Bugel, keep a copy for yourself, and please send a copy to me. If they are not returned by said date, upon request an affidavit will be provided pursuant to the procedure outlined in Rule 207(a) of the Illinois Supreme Court Rules and the deposition will be completed and will be "used as fully as though signed."**

**Thank you for your cooperation in this matter. If you have any questions, please do not hesitate to call me.**

**Sincerely,**

**Caryl L. Hardy**

(The witness was duly sworn.)

RICHARD R. GNAT,

called as a witness herein, having been first duly sworn, was examined upon oral interrogatories, and testified as follows:

EXAMINATION

BY MR. HARLEY:

Q. For the record, could you please state your name.

A. Richard Gnat.

Q. And how do you spell Gnat?

A. G-n-a-t.

Q. And what is your employer, Mr. Gnat?

A. KPRG & Associates, Inc.

Q. And what is the address of your place of employment?

A. 14665 West Lisbon Road, Suite 2B, as in boy, Brookfield, Wisconsin, 53005.

Q. Mr. Gnat, my name is Keith Harley. I'm an attorney for a group called Citizens Against Ruining the Environment. I wanted to ask you, have you ever given a deposition before?

A. Yes, I have.

Q. So you know that you're under an

obligation to answer the questions truthfully?

A. Yes.

Q. Please answer out loud. If at any point you need for me to speak louder or to clarify a question, please just let me know that.

Also, you'll have an opportunity to review the deposition transcript and correct any transcription errors.

If you need a break at any time, just let me know. We'll take a short break.

One thing to clarify, although you have significant academic and professional credentials, you have not been called as an expert witness. You've been called as a fact witness to testify regarding factual matters about which you have firsthand observations, knowledge, and experience. Is that understood?

A. Yes.

MS. NIJMAN: Is that a statement or a question?

MR. HARLEY: It was a -- it was a statement and then a question. Hopefully you'll foreclose the number of possible objections.

MS. NIJMAN: Okay. He is -- I agree that he

is a fact witness and has not been named as an expert in this case.

MR. HARLEY: All right. At this time I'd like to enter the curriculum vitae of Richard R. Gnat as Exhibit 165.

(Exhibit No. 165 marked for identification, 12-18-14.)

BY MR. HARLEY:

Q. Mr. Gnat, for the record, is this a true and accurate copy of your CV?

A. It appears to be.

Q. I've been reading a number of documents in anticipation of today's deposition, and there's one question that I must start with. What does KPRG stand for?

A. Those are the initials of the owners of the company. K was for Fred Krikau, P for David Pyles, R for Tom Rysiewicz, and G for Richard Gnat. And Fred Krikau is now retired.

Q. I see.

(Mr. Zaharoff entered the deposition room.)

BY MR. HARLEY:

Q. And what is your job title at KPRG?

A. Principal.

Q. How long have you been a principal at KPRG?

A. I started at KPRG in January of 2002 and I earned out ownership of the company over two years and formally become a principal in 2004.

Q. When KPRG performs work for an entity like Midwest Generation, how do you refer to this entity? For example, is this your client?

A. Yes. We refer to them as a client.

Q. Approximately when did Midwest Generation become KPRG's client?

A. I believe we started initial small projects with Midwest Generation in the 2002, 2003 time frame.

Q. Does KPRG have an employee who is the primary point of contact in relationship to Midwest Generation?

A. Yes.

Q. Who is that?

MS. NIJMAN: Over what time period?

MR. HARLEY: At this time.

BY THE WITNESS:

A. At this time that would be me.

BY MR. HARLEY:

Q. At the time Midwest Generation become KPRG's client, did Midwest Generation designate a primary point of contact?

MS. NIJMAN: Objection; vague. At Midwest Gen or at Midwest -- or at KPRG?

MR. HARLEY: At Midwest Gen.

THE WITNESS: I'm not sure I understand the question completely.

MS. NIJMAN: Let him -- you can ask him to rephrase, if you'd like.

THE WITNESS: Can you rephrase it?

MR. HARLEY: Yes.

BY MR. HARLEY:

Q. When Midwest Generation became KPRG's client, who did KPRG report to at Midwest Generation?

A. That would depend on the project.

Q. And who is your point of contact at Midwest Generation today?

A. Again, that would depend on the project. Primarily Jim DiCola.

Q. Jim DiCola.

What is your understanding of KPRG's present scope of work for Midwest Generation?

A. We provide a variety of -- of assignments for them, take care of tasks for them for various environmental items depending on the project and the need they have at the time.

Q. How many separate projects are you doing at this point?

A. It would be hard to quantify.

Q. Less than ten?

A. At any specific point in time?

Q. Right now.

A. Right now...

Over the course of the last several months, probably ten to 12 projects.

Q. Okay. Besides Jim DiCola, have you reported to others at Midwest Generation as to KPRG's work on these projects in the past year?

A. Yes.

Q. Who?

A. Maria Race.

Q. Anyone else?

A. Peter O'Day.

Q. What is Peter O'Day's title at Midwest Gen, do you know?

A. I -- I'm not sure I know his exact title.

He's my environmental contact at the Joliet facility.

Q. I see.

Anyone else?

A. Harrison Estap.

Q. And in what -- where is Harrison Estap located at?

A. At the Joliet facility as well.

Q. Anyone else?

A. Rebecca Maddox.

Q. Anyone else?

A. Currently that's the primary contacts we've been talking with.

Q. As part of your work for Midwest Generation over the past year, have you also communicated with people who are not directly employed by Midwest Generation but who, like you, are doing work for Midwest Generation?

MS. NIJMAN: Objection; compound. You can answer, if you understand it.

THE WITNESS: Can you clarify the question, please?

MR. HARLEY: Yes.

BY MR. HARLEY:

Q. People who -- do you communicate on these projects with people who are not employed by Midwest Generation?

MS. NIJMAN: Vague. You can answer.

THE WITNESS: Can I ask my attorney some counsel on this one because I'm not quite sure how to answer that question?

MS. NIJMAN: All right.

MR. HARLEY: Sure.

MS. NIJMAN: To the extent there is a conversation based on privilege with counsel, I'm going to advise him to exclude any conversation with counsel. I think what Keith is getting at is subcontractors or other consultants?

MR. HARLEY: Yes, that's right.

MS. NIJMAN: So maybe we can ask it that way.

BY THE WITNESS:

A. Normally in the recent past, if there are conversations with other consultants working -- because Midwest Generation does use a variety of consultants and a variety of contractors, if there is a collaborative effort, it's generally done

under protection of counsel, under confidentiality. And there are projects where we are asked to interact and provide our portion of -- of the project -- the information that we have that might assist another consultant in their work, we provide that at the direction of Midwest Generation.

BY MR. HARLEY:

Q. And who would be another consultant with whom you interacted over the past year?

A. Patrick Engineering and NRT.

Q. And who at Patrick Engineering?

A. Rick Frendt was the main person I talked with.

Q. And who at NRT was it?

A. NRT, correct. That would be Heather Simon and, I believe, Bruce Hensel.

Q. Okay. Thank you.

I'm going to ask you a series of questions in which I'm asking you to respond. To be clear, when I say "you," I mean you in the context of your employment at KPRG.

As part of your work for Midwest Generation, do you have knowledge of the groundwater monitoring wells that have been installed at

Midwest Generation's Waukegan facility?

A. I'm familiar with them.

Q. Do you have knowledge of the groundwater monitoring wells that have been installed at Midwest Generation's Powerton facility?

A. I am familiar with them.

Q. Same question Will facility.

A. Yes.

Q. Same question Joliet.

A. I'm familiar with them.

Q. Did you have any role in designing the groundwater monitoring wells at Waukegan? By "design," I mean determining the location and depth of the groundwater monitoring wells.

A. Not all of the wells.

Q. Not of the wells?

A. Not all of the wells.

Q. Not all of the wells at Waukegan. Thank you for clarifying.

Did you have any role in designing the groundwater monitoring wells at Powerton?

A. Not all of the wells.

Q. Same question Will.

A. We did not install any of those wells.

Q. And same question Joliet.
A. We did not install any of those wells.
Q. Do you have ongoing responsibilities in relationship to the operation of the groundwater monitoring wells that you designed?
MS. NIJMAN: Objection; vague as to terminology of "operation." Do you mean the sampling? You can answer.
BY THE WITNESS:
A. Can you clarify that? Is this in regards to the sampling of the monitoring wells?
BY MR. HARLEY:
Q. I have separate questions for sampling. I'm wondering about the physical -- maintaining the physical integrity of the monitoring wells.
A. The physical integrity of the monitoring wells is checked with each round of sampling. And if the sampling crew identifies that there's damage to a well, we will go out there and fix that damage prior to the next round of sampling.
Q. And when you say "we," you mean KPRG?
A. Correct.
Q. As part of your work for Midwest Generation, do you have knowledge of the

groundwater sampling that is taking place at Midwest Generation's Waukegan facility?
A. Yes.
Q. Same question Powerton.
A. Yes.
Q. Same question Joliet.
A. Yes.
Q. Same question Will.
A. Yes.
Q. What is your role in relationship to designing the groundwater sampling protocol?
MS. NIJMAN: Object to vague. If you understand, you can answer.
THE WITNESS: Can you clarify or specify what you intend?
BY MR. HARLEY:
Q. The constituents which are sampled and the frequency of sampling.
A. I was not involved in the selection of the parameters or the establishment of the frequency of sampling that was done prior to KPRG's involvement in the work.
Q. And do you know who was responsible for establishing that protocol?

A. It is my understanding that Midwest Generation, Packer Engineering, and Illinois EPA developed it.
Q. What is your role, if any, in relationship to ongoing groundwater sampling at the facilities?
A. KPRG is contracted to perform quarterly monitoring at all four stations and the reporting.
Q. What is your role in relationship to analyzing trends for different constituents that are present in groundwater sampling?
A. In the annual report submittals, we do develop time-versus-concentration curves for all historical data for each well.
Q. As part of your work for Midwest Generation, do you have knowledge of the Compliance Commitment Agreement that Midwest Generation entered into with the Illinois EPA regarding groundwater conditions at Waukegan?
A. I'm familiar with it.
Q. The same question Powerton.
A. I'm familiar with it.
Q. Same question Joliet.
A. Same answer.
Q. Same question Will.

A. Same answer.
Q. What was your role, if any, in relationship to the Compliance Commitment Agreements?
MS. NIJMAN: Objection; vague.
BY THE WITNESS:
A. Our role was part of an attorney-privileged team that was looking at how best to respond to the CCA, to the notices of violation.
BY MR. HARLEY:
Q. Okay. As part of your work for Midwest Generation, do you have knowledge of activities related to relining ash ponds at Waukegan?
A. Can you rephrase that?
Q. Were you involved in activities related to relining ash ponds at Waukegan?
A. No. The ash ponds at Waukegan were already lined.
Q. And would that be the same answer if we look back now to 2005?
MS. NIJMAN: Objection; vague.
BY THE WITNESS:
A. Yes. The ponds were lined.

BY MR. HARLEY:
Q. Have you had any relationship to the relining of ash ponds at Powerton?
A. We were not involved in that project.
Q. The same question Joliet.
A. We were not involved in the relining at Joliet.
Q. The same question Will.
A. We were not involved with the relining at Will.
Q. As part of your work for Midwest Generation, do you have knowledge of the groundwater management zone that was established at the Powerton facility?
A. I'm familiar with it.
Q. The same question Joliet.
A. I'm familiar with it.
Q. The same question Will.
A. I'm familiar with it.
Q. What was your role, if any, in developing these groundwater management zones?
A. As part of assisting with developing the responses to the notices of violation and put into -- and then executing the Compliance

Commitment Agreement, I was involved in the development of the groundwater management zone and the submittals to IEPA.
Q. As part of your work for Midwest Generation, do you have knowledge of the environmental land use controls that were established at the Waukegan facility?
A. I'm familiar with them.
Q. The same question Powerton.
A. Also familiar with that, yes.
Q. The same question Will.
A. Yes, I am.
Q. What was your role, if any, in developing these environmental land use controls?
A. The same as for the groundwater management zones where we were tasked to assist in developing responses to fulfill the Compliance Commitment Agreement, recognizing that at Waukegan Station, there was already an existing ELUC on site which we were not involved with.
MR. HARLEY: Could you -- I'm sorry. Can you read back that last statement.
(Record read.)
MR. HARLEY: Thank you.

BY MR. HARLEY:
Q. As part of your work for Midwest Generation, do you have knowledge of the ash management practices at the Waukegan facility?
A. Basic, not -- not intimate.
Q. The same question Powerton.
A. Same.
Q. Same question Joliet.
A. Same answer.
Q. The same question Will.
A. Yes.
Q. What is your role, if any, in relationship to ash management practices?
A. We do not have a role in ash management practices.
Q. As part of your work for Midwest Generation, do you have knowledge of the off-site ash disposal practices at Midwest Generation's Waukegan facility?
A. Not that I'm aware of.
Q. The same answer Powerton?
A. I guess I'm not sure what -- what the actual question is.
Q. Do you have knowledge of where ash is

directed for off-site disposal?
A. It is my understanding that some of the ash is taken by a truck for landfilling when they remove ash from impoundments on a regular basis. Which landfills those contractors use I'm not aware of.
Q. And that would be the same answer for all Midwest Generation facilities?
A. Yes.
Q. As part of your work for Midwest Generation, do you have knowledge of Midwest Generation's 2010 response to a request by USEPA for information regarding coal ash commonly called the Steam Electric Questionnaire?
A. I'm not familiar with that.
Q. As part of your work for Midwest Generation, do you have knowledge of the chemical constituents of the coal ash that is generated at Midwest Generation's facility?
MS. NIJMAN: At which time period? I'll object to vague.
BY THE WITNESS:
A. Currently or...

BY MR. HARLEY:
Q. Presently.
A. I'm aware of some ash data. I -- I do not -- so I'm aware of constituents within -- within the ash.
Q. Are you familiar with a coal combustion byproduct sampling exercise which took place at the Joliet facility?
A. I'm familiar with it.
Q. Were you a participant in that coal combustion byproduct sampling exercise?
A. I was involved, yes.
Q. And what was the results -- what was the work product that was generated as a result of that coal combustion byproduct sampling?
A. That was a while ago. If my recollection is correct, at the time we were asked to sample an area that had some ash placed in it to evaluate whether or not that ash would meet the requirements of the coal combustion byproduct for potential beneficial reuse.
Q. And did that include analyzing the levels of different chemical constituents in that coal combustion byproduct?

A. I believe there -- there is a leach test that was performed and the chemical analysis for the compounds, yes.
Q. Do you recall, is antimony a chemical constituent of that coal combustion byproduct?
A. Antimony was, I believe, on the list of analyses.
Q. Arsenic?
A. I believe it was on the list of analyses.
Q. Boron?
A. I believe it was on the list of analyses.
Q. Manganese?
A. I believe it was on the list of analyses.
Q. Sulfate?
A. I believe it was on the list of analyses.
Q. Iron?
A. I believe so. That I'm not 100 percent sure on, but I believe it was.
Q. Selenium?
A. I believe it might have been.
Q. Sulfate?
A. I believe you've asked that already, sulfate.
Q. Oh, I did. I'm sorry. Strike that.

Vanadium?
A. I believe that it might have been. I'd have to see what that analytical protocol was at the time. That was quite a long time ago and exactly what all the constituents were on that list I don't want to misspeak.
Q. Fair enough.
I want to turn now to the Will County facility, so all the questions in the next sequence relate solely to Will County.
In the past year, approximately how often have you visited Midwest Generation's Will County facility?
A. Myself personally?
Q. Yes.
A. Maybe once.
Q. Have there been years where you visited -- when you visited the facility more frequently?
A. Yes.
Q. When you visited the facility this year, was there a primary on-site contact for you?
A. Yes.
Q. Who was that?
A. Rebecca Maddox.

Q. I would like to call your attention to the aerial depiction of the Will County facility marked with Bates number 644. This will be marked as Deposition Exhibit Number 166.
(Exhibit No. 166 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Do you recognize this depiction?
A. Yes, I do.
Q. Who prepared this depiction?
A. KPRG.
Q. Did you have any role in the preparation of this depiction?
A. One of my engineers did this drawing.
Q. Does this exhibit accurately depict ash ponds at the Will County facility?
A. It appears to.
Q. For the record, how are these ash ponds identified in this depiction?
A. Well, I believe you've got ash pond three south, ash pond two south, ash pond one south, and ash pond one north.
Q. Does this exhibit accurately depict the relative location of groundwater monitoring wells?

A. In general, yes.
Q. And for the record, how are these wells identified?
A. As monitoring wells MW 1 through MW 10.
Q. Apart from the coal ash ponds that are delineated on Exhibit 166, are you aware of any other areas of the Will County facility where coal ash has been deposited in the past?
A. Not that I'm aware of.
Q. So the record is clear on this point, you are unaware of a spent slurry pond?
A. I'm unaware of a spent slurry pond.
Q. You are unaware of a stand-by pond?
A. I'm unaware of a stand-by pond.
Q. Are you aware of a south area runoff basin?
A. The name is familiar, but I cannot speculate where that is.
(Exhibit No. 167 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Calling your attention to a document which is marked with Bates number 618 and Deposition Exhibit 167, are you familiar with this depiction?
A. Seeing it now, yes, I am.

Q. And this also was developed by KPRG; is that correct?
A. Yes, it was.
Q. On this depiction, you'll notice that there are two retention ponds which are south of ash pond 3S. Do you see those?
A. Yes, I do.
Q. Do you know if coal ash was ever deposited in either of those retention ponds?
MS. NIJMAN: I'm going to object to the time period you're asking about.
MR. HARLEY: At any time in the past.
BY THE WITNESS:
A. Not that I'm aware of.
BY MR. HARLEY:
Q. And are you aware of the dep- -- depositing coal ash in the south runoff basin at any point in the past?
A. Not that I'm aware of.
Q. Are you familiar with the hydrogeology at the location of the Will County facility; for example, the depth, direction, and rate of flow of groundwater?
A. In general, yes.

Q. How far below ground surface is the groundwater at the Will County facility?
A. To my recollection, not having the data tables in front of me, I believe it's fairly shallow between nine and a half and maybe 11, 12 feet.
Q. And what is the thickness of the aquifer?
A. I'd have to go back and review the literature on that.
Q. What is the direction of the rate of flow -- strike that.
What is the direction of flow of the groundwater?
A. In the vicinity of the ponds?
Q. Yes.
A. To the -- let me make sure I've got my directions right. To the west.
Q. And what is the rate of flow of groundwater to the west?
A. Offhand, I do not remember what that value was.
Q. Do you know where the groundwater discharges?
A. I believe it discharges to the river.

Q. Can you clarify which river, please?
A. To the Des Plaines River.
Q. Thank you.
Turning your attention back to Exhibit 166, is it accurate to say that the groundwater monitoring wells are clustered around the delineated ash ponds?
MS. NIJMAN: I'll object to the terminology. If you understand it, you can answer.
BY THE WITNESS:
A. I would ask that to be rephrased because a clustered well is -- is a specific definition.
BY MR. HARLEY:
Q. Is it accurate to say that these wells are concentrated around the delineated ash ponds?
A. Same --
MS. NIJMAN: Same objection.
BY MR. HARLEY:
Q. I'm sorry. Did you answer?
A. They appear to be.
Q. Why are these wells located where they are?
MS. NIJMAN: Objection; foundation. He already stated he didn't locate them.
MR. HARLEY: He did answer in the

affirmative.
MS. NIJMAN: For he did not locate them.
BY THE WITNESS:
A. KPRG did not install any of the monitoring wells at Will County.
BY MR. HARLEY:
Q. Have you, individually or as part of a team working for Midwest Generation, considered placing groundwater wells at additional locations at the Will County facility?
MS. NIJMAN: I'm going to object to the extent you've had privileged conversations through counsel in response to the violation notices or this litigation.
BY THE WITNESS:
A. I would decline to answer. Any opinions that I provided were done under privilege.
BY MR. HARLEY:
Q. Do you review groundwater sampling results derived from the wells at the Will County facility?
A. I'm involved in it, yes.
Q. Over what period of time have you been reviewing these sampling results?
A. KPRG started work on the groundwater

monitoring and reporting, I believe, the second quarter of 2013.
Q. How often do you review the results of the groundwater sampling?
A. Groundwater samples are collected on a quarterly basis and we have to provide a quarterly report to Illinois EPA.
Q. Do you participate in the submission of these reports?
A. Yes, I do.
Q. As part of your review, do you compare the concentrations of sample constituents to any groundwater quality standards?
A. For the purposes of comparison, we are using the class 1 -- Illinois EPA class 1 groundwater standards.
Q. Is arsenic one of the constituents that you compare to groundwater quality standards?
A. Yes.
Q. Is boron?
A. Yes.
Q. Is manganese?
A. Yes.
Q. Is sulfate?

A. Yes.
Q. As part of your review -- strike that.
You also analyze arsenic trends in groundwater samples over time; is that correct?
A. As part of the annual report submittal, time-versus-concentration curves are provided.
Q. The same answer for boron?
A. Yes.
Q. Same answer for manganese?
A. Yes.
Q. Same answer for sulfate?
A. Yes.
(Exhibit No. 168 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Calling your attention to a document marked with Bates number 620 and Deposition Exhibit 168 --
MS. NIJMAN: Just note for the record that all of these maps that we have drawn -- you've used as exhibits so far are part of larger reports. You're taking them out of the reports to show the witness which is fine except that there may be conclusions or statements in the report that

obviously the witness does not have in front of him.
BY MR. HARLEY:
Q. Do you recognize this depiction of the Will County facility?
A. I'm familiar with it.
Q. What was your role in developing the data which is reflected on this exhibit?
MS. NIJMAN: Objection; vague.
BY THE WITNESS:
A. I had one of my engineers develop this figure.
BY MR. HARLEY:
Q. On this exhibit, what is the significance of the yellow, bolded sampling results?
A. The yellow, bolded results indicate values which exceed the comparison standard that we were using which is the class 1 groundwater standard assuming that this is, in fact, class 1 groundwater.
Q. When is this exhibit dated, for the record?
A. January 17th, 2013.
Q. On this exhibit, are there any wells which exhibit more constituents that are not in compliance with groundwater quality standards than others?

MS. NIJMAN: Objection; vague.
THE WITNESS: Can you rephrase that?
BY MR. HARLEY:
Q. Are there any monitoring wells that have more exceedances of the class 1 groundwater standards than others?
MS. NIJMAN: Same objection. I'm also going to object because this does not show all of the data for each of the wells. It's a select set of data.
BY THE WITNESS:
A. Based on this depiction, there are some wells with more highlighted exceedances than other wells.
BY MR. HARLEY:
Q. Would monitoring well four be one of those wells?
A. Yes, it would.
Q. Do you know why monitoring well four has more constituent exceedances by comparison to other wells?
MS. NIJMAN: I'm going to object to the extent any opinions you've drawn were for counsel.

BY THE WITNESS:
A. I cannot speculate on that.
BY MR. HARLEY:
Q. You've never had to discuss this directly with Illinois EPA?
A. Discussions that I had were primarily with counsel under privilege. I had discussions with Illinois EPA. I do not recall specifically discussing any specific well and/or exceedance.
Q. Is it accurate to say that this depiction was developed at the early stages of the process that you began reviewing sampling results?
MS. NIJMAN: Again, I'm going to object to this because it's from a report. We don't know what the report is dated and the date that's on this map may not, in fact, be the date of the data; that that may be the generation of the aerial map which you can see is from the other aerial maps that you've shown.
MR. HARLEY: I believe he testified that he began reviewing sampling results in the second quarter of 2013.
MS. NIJMAN: Yes.
MR. HARLEY: I'm merely trying to confirm

that these results are within the period that he was reviewing sampling results.
MS. NIJMAN: Okay. But we can't tell when these samples on this map were taken from this exhibit alone.
THE WITNESS: And also, second quarter of 2013 -- January 2013 is first quarter.
MS. NIJMAN: Right. I mean, the dates don't match up is what I'm telling you.
BY MR. HARLEY:
Q. So you were not a part of developing the results which are depicted on this exhibit?
MS. NIJMAN: Again, vague. We don't know the dates of the results on this exhibit. It's not the date of the map. The date of the map is just the aerial.
MR. HARLEY: The question is open-ended. It's not specific to --
MS. NIJMAN: You can try to answer it. I'm going to object to vague and the fact that this is an incomplete exhibit that is not an accurate depiction. You can try to answer the question.
BY THE WITNESS:
A. KPRG generated this map under my

direction. Looking at this map, I do not know the date that the particular data that's depicted was generated.
BY MR. HARLEY:
Q. But you have reviewed data subsequently?
MS. NIJMAN: Subsequent to what?
MR. HARLEY: January 17th, 2013.
BY THE WITNESS:
A. Yes.
BY MR. HARLEY:
Q. Are there still groundwater exceedances in any wells at Will facility?
A. There were some exceedances, I believe, during the last quarter of sampling that was submitted to IEPA which was submitted, I believe, end of October.
Q. Do you know which wells exhibited exceedances?
A. I would have to go back to those reports.
Q. Was antimony one of the constituents that exhibited exceedances in your most recent report to Illinois EPA?
A. I do not remember.
Q. Boron?

A. It may have.
Q. Manganese?
A. It may have. Without seeing the report, I cannot definitively answer your question.
MS. NIJMAN: So is this 169?
MR. HARLEY: This is Exhibit 169 which is Bates number 625.
(Exhibit No. 169 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Do you recognize this depiction of the Will County facility?
A. It's a KPRG figure also generated at my direction.
Q. And the heading for this document is Proposed Groundwater Management Zone; is that correct?
A. Yes.
Q. And it's dated January 11th, 2013; is that correct?
MS. NIJMAN: Same objections to the dating versus the data.
BY THE WITNESS:
A. That is the date on the figure.

BY MR. HARLEY:
Q. Does the groundwater management zone that was proposed -- strike that.
Does the proposed groundwater management zone that is depicted in this exhibit extend over the entire Will County facility?
A. No, it does not.
Q. Do you know why not?
MS. NIJMAN: Only to the extent you've had those conversations with IEPA or outside of counsel.
BY THE WITNESS:
A. This figure was developed as a result of discussions in addressing the CCA requirements, and the boundaries were agreed upon between IEPA and Midwest Generation.
BY MR. HARLEY:
Q. But this is a proposed groundwater management zone; is that correct?
A. Correct.
Q. Whose proposal is this?
A. Midwest Generation's proposal.
Q. Do you know why Midwest Generation proposed a groundwater management zone that only partially covered the Will County facility?

MS. NIJMAN: Again, except privileged conversation, you can answer.
BY THE WITNESS:
A. Most of those discussions were done under attorney-client privilege and -- it's my understanding that with the proposal provided, IEPA was in agreement with the way it was -- was bounded out.
BY MR. HARLEY:
Q. Did you ever speak directly to any employee of Illinois EPA about this groundwater management zone?
A. Not individually, no.
Q. In what context did you have non-privileged discussions about the proposed groundwater management zone?
A. Once the initial draft response -- draft submittals in response to the CCA requirements were submitted to Illinois EPA, I believe there were some comments that Illinois EPA had. We addressed those comments and finalized what the groundwater management zone was.
(Exhibit No. 170 marked for identification, 12-18-14.)

BY MR. HARLEY:
Q. I'm handing you a document which has been marked as Deposition Exhibit 170 and is Bates stamped as 621. Do you recognize this depiction of the Will County facility?
A. Yes, I do.
Q. Did you participate in the preparation of this depiction?
A. It was generated under my direction.
Q. And is it correct that the title of this depiction is Proposed ELUC Boundary?
A. That is the title on the figure.
Q. And it's dated January 14th, 2013?
MS. NIJMAN: Same objections as to date of the figure versus date of the data.
BY THE WITNESS:
A. That is the date on the figure, yes.
BY MR. HARLEY:
Q. Does the area subject to the environmental land use control extend over the entire Will County facility?
A. No, it does not.
Q. Do you know why not?
MS. NIJMAN: Same privilege objection.

BY THE WITNESS:
A. The same sequence of -- of discussions and events as -- as the groundwater management zone in that these two were being done in parallel in response to the CCA.
BY MR. HARLEY:
Q. Did you engage in direct conversations with any employee of Illinois EPA about the environmental land use control at the Will County station?
A. Once this proposed ELUC boundary was submitted, Illinois EPA provided comments. We responded to those comments as part of finalizing the ELUC.
MR. HARLEY: Let's go off the record for a second.
(Discussion had off the record.)
MR. HARLEY: Let's go back on the record.
BY MR. HARLEY:
Q. The following questions all relate to the Joliet facility.
Over the past year, how many times have you visited the Joliet facility?
A. Numerous times.

Q. Monthly?
A. Over the past year personally, I was at the Joliet facility perhaps six, ten times.
Q. When you visit the facility, do you have a primary on-site contact?
A. Yes.
Q. Who is that?
A. Peter O'Day.
Q. Is the reason that you're visiting the Joliet facility because you have projects at the Joliet facility?
A. Yes.
Q. Can you describe those projects?
A. Right now our projects include work to do the quarterly monitoring for the ash pond monitoring system, as well as other work for Joliet which is on the other side of the river.
Q. When you say "the other side of the river," do you mean the quarry sites?
MS. NIJMAN: You're saying other than Joliet 29 station?
THE WITNESS: Other than Joliet 29 station.
MS. NIJMAN: So this is only about Joliet 29.

THE WITNESS: Yes. Just Joliet 29, yes.
BY MR. HARLEY:
Q. Is your only project at Joliet 29 related to groundwater sampling?
A. We just finished another one which was assisting with the clean out of their wastewater treatment sludges.
Q. Are those the only two projects this year?
A. Currently right now, yes, and -- and this year relative to Joliet 29.
Q. And in the past three years, have there been other projects that you have been asked to complete at Joliet 29?
A. At Joliet 29 I believe we do an annual cleaning of the wastewater treatment sludges. And I believe between that -- over the last three years between that project and the groundwater monitoring are really the only ones we're working on at Joliet 29 right now.
MR. HARLEY: For the record, this is a depiction of the Joliet facility Bates stamped 688, Deposition Exhibit 171.
(Exhibit No. 171 marked for identification, 12-18-14.)

BY MR. HARLEY:
Q. Do you recognize this depiction?
A. I'm familiar with it.
Q. What was your role in the preparation of this depiction?
MS. NIJMAN: Again, I'm going to just object to the fact that this is one page out of a much larger report. The dates don't match up. To the extent you can answer the question, you can answer.
BY THE WITNESS:
A. This figure was generated by one of my engineers under my direction.
BY MR. HARLEY:
Q. Does this exhibit accurately depict ash ponds at the Joliet facility?
A. To the best of my knowledge, yes.
Q. For the record, how are these ash ponds identified in this depiction?
A. Ash pond one, ash pond two, and ash pond three.
Q. Does this exhibit accurately depict the relative location of groundwater monitoring wells?
A. In general, yes.

Q. And how are these wells identified?
A. As monitoring wells MW 1 through MW 11.
Q. Apart from the ash ponds that are delineated on this exhibit, are you aware of any other areas at the Joliet facility where coal ash has been deposited in the past?
A. I'm aware of some areas that may have had coal ash placed on them in the past.
Q. How many areas?
A. KPRG was tasked to sample some ash, as you had mentioned earlier, and that was in this northwest portion of the site.
Q. Does that area have a designation or a name?
A. Not that I'm aware of.
Q. Do you have knowledge of areas at Joliet 29 where ash and slag -- strike that.
Do you recall participating in an ash burial runoff inspection at the Joliet facility?
A. Yes. I do that. And there is an ash -- my understanding is that there may -- that there is an ash area over to the east.
Q. What is an ash burial runoff inspection?
A. It is my understanding that that part of

the property has a stormwater permit requirement, I believe, as part of their stormwater permit requirement, to inspect the cover that's in place for any indication of excessive rilling or erosion that may occur over the course of a year and if such is identified to -- to repair it.
Q. To your knowledge, has it ever been necessary to repair the cover in that area?
A. There have been instances where repairs needed to be made.
Q. What was your role in executing those repairs?
A. We contracted -- once I identified the areas that I felt had some rilling starting to develop, I contract with a company called Allied Landscaping. I meet with their foreman. We go through each area that I've identified.
And the area then gets properly filled in with a clay material, pack it down, an erosion mat placed, and -- and re-seeded to try and reestablish that -- that portion of the cover.
Q. You used the term "rilling." Can you describe what rilling is?
A. Rilling is the erosion of soil through

surface runoff and develops a rill in the soil.
Q. What is the cover on that area?
A. I do not know exactly what material -- what type of material was used for that cover placement. I am not aware of when it was placed, and I have not performed any borings through that area, so I really cannot answer that question. I do not know.
Q. In the area which is east of ash pond three, is there a liner?
A. I do not know.
Q. Turning to the area that you described as northwest of the site, is there a cover on that coal ash disposal area?
A. At the time when we did our sampling, there was no specific cover on that.
Q. And when was that?
A. I do not remember the exact year. That was probably 2003, 2004 time frame, maybe a little bit -- 200- -- 2005. Circa 2003, 2004, I think. It was a while ago.
Q. Was there a liner?
A. I don't understand that question.
Q. Is there a liner underneath that coal

disposal area -- strike that.
Is there a liner underneath that coal ash disposal area?
MS. NIJMAN: I'm going to object as to timing and foundation.
MR. HARLEY: He already testified that he inspected the site in 2003.
BY THE WITNESS:
A. At the time when we did our borings within this placement area, the borings did not indicate a liner.
BY MR. HARLEY:
Q. Besides the area that you've described as the northwest area and the area you've described as the east area, are you aware of any other places at the Joliet facility where coal ash has been disposed of?
MS. NIJMAN: I'll object to the terminology.
BY THE WITNESS:
A. I'm not aware of any disposal areas.
BY MR. HARLEY:
Q. Are you familiar with the hydrogeology at the location of the Joliet facility; for example, the depth, direction, and rate of flow of

groundwater?
A. In the vicinity of the ash ponds in general, yes.
Q. How -- strike that.
Approximately how far below ground surface is the groundwater?
A. I don't recall exactly offhand. I believe it's on the order of 15 feet, maybe a little bit deeper, maybe a little bit shallower.
Q. Approximately how thick is this aquifer?
A. I would have to go back to the literature.
Q. What is the direction of groundwater flow?
A. In the vicinity of the ash ponds, the direction of groundwater flow is, in general, to the southeast -- south, southeast.
Q. Where does it discharge?
A. The groundwater is flowing towards the intake channel for the station.
Q. Approximately what is the rate of flow?
A. I would have to go back to the report where -- where it's calculated.
Q. As to the groundwater monitoring wells, is it accurate to say that these wells are concentrated around the delineated ash ponds?

MS. NIJMAN: Same objection; vague.
BY THE WITNESS:
A. KPRG did not install any of these wells. They appear to be placed in the vicinity of the ash ponds.
BY MR. HARLEY:
Q. According to this depiction, are there any ash ponds immediately proximate to the northwest coal ash disposal area?
A. Can you rephrase that? I'm not sure what you mean by "northwest coal ash disposal area."
Q. That is the area that you described as being in the northwest corner of the facility.
MS. NIJMAN: I don't think he used the term "disposal area," so that's what threw him.
MR. HARLEY: Oh.
BY THE WITNESS:
A. That's correct. I did not refer to it as disposal area.
BY MR. HARLEY:
Q. What is the correct way to call that area?
A. I do not believe there's a specific term for that area. I believe the term I used was placement where there was former ash placement in

that area that we were asked to sample.
Q. Were you asked by Midwest Generation to place groundwater monitoring wells near the northwest ash placement area?
MS. NIJMAN: At the time of the sampling?
MR. HARLEY: At any time.
MS. NIJMAN: I'm going to object to the extent there's been a privileged discussion in that regard. To the extent that deals with the 2003 time period and the sampling you did, you can answer.
BY THE WITNESS:
A. In 2003 that was not what we were requested or tasked to do. Any subsequent discussions were done under client privilege.
BY MR. HARLEY:
Q. The area that you have described as the east ash placement area, have you been asked by Midwest Generation to place groundwater monitoring wells proximate to that area?
MS. NIJMAN: Same objection. To the extent there's privileged conversations, don't answer.

BY THE WITNESS:
A. No, I have not.
(Exhibit No. 172 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Calling your attention to a document that has been marked as Deposition Exhibit Number 172 and is Bates stamped 670, do you recognize this depiction of the Joliet 29 facility?
A. I'm familiar with the figure.
Q. What was your role in the preparation of this depiction?
MS. NIJMAN: Just noting for the record the same objection as to this exhibit as we have with prior exhibits. You can answer.
BY THE WITNESS:
A. I had an engineer draft up this figure and the work was being performed as part of assisting Midwest Generation in responses to the -- to fulfill the Compliance Commitment Agreement.
BY MR. HARLEY:
Q. And is it correct that the title of this figure is Proposed Groundwater Management Zone?
A. Yes.

Q. And mindful of counsel's objection, this figure is dated January 19th, 2013?
A. That is the date on the figure.
Q. Does the proposed groundwater management zone extend over the entire Joliet 29 facility?
A. No, it does not.
Q. Do you know why not?
MS. NIJMAN: Object to privilege. If there were discussions outside of privilege, go ahead and answer.
BY THE WITNESS:
A. Basically the same answer as for the previous station discussion. The management zone proposal was developed and submitted as part of our CCA compliance requirements to Illinois EPA. Illinois EPA provided comments, and we finalized the GMZ submittal.
BY MR. HARLEY:
Q. Outside of any privileged conversation, did you express -- strike that.
As part of your work for Midwest Generation and outside of any privileged conversation, did you have any recommendation for the extent of the groundwater management zone at

the Joliet facility?
A. Any recommendations provided were done under attorney-client privilege.
Q. Does the groundwater management zone of the Joliet facility include the area that you have characterized as the northwest ash placement area?
A. No.
Q. Does the groundwater management zone include the area that you have characterized as the east ash placement area?
A. No.
Q. Do you know if there's an environmental land use control for the Joliet facility?
A. Not associated with the ash ponds that I'm aware of.
Q. Do you know why not?
MS. NIJMAN: Same objection.
MR. HARLEY: What objection is that, please?
MS. NIJMAN: Privilege.
BY THE WITNESS:
A. I guess I'm not understanding your question.

BY MR. HARLEY:
Q. As part of your work for Midwest Generation and apart from any privileged conversations that you've had, do you know why there is not an environmental land use control at the Joliet facility?
A. I was tasked to help Midwest Generation respond to the notice of violation and the scope of the Compliance Commitment Agreement that was negotiated. My understanding did not include an ELUC, so therefore, KPRG was not involved in the development of the ELUC.
MR. HARLEY: Can we go off the record for a second?
(Discussion had off the record.)
MR. HARLEY: Let's go back on the record.
BY MR. HARLEY:
Q. The following questions all relate to the Waukegan facility.
How often have you visited the Waukegan facility over the past year?
A. Three -- maybe three times.
Q. And is that because you have projects for Midwest Generation at the Waukegan facility?

A. That is correct.
Q. And what are those projects?
A. Right now our projects are primarily associated with the groundwater monitoring around any ash pond issues.
Q. What are the ash pond issues?
A. The groundwater monitoring that's occurring around the two ash ponds out at Joliet.
MS. NIJMAN: Waukegan. Waukegan.
THE WITNESS: I'm sorry. At Waukegan. At Waukegan.
BY MR. HARLEY:
Q. Are there any other ash pond issues at Waukegan that are part of projects that you're doing for Midwest Generation?
A. No.
Q. When you visit the facility, who is your primary on-site contact?
A. Fred Veenbaas.
(Exhibit No. 173 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. I'd like to call your attention to the aerial depiction of the Waukegan facility marked

with Bates number 608 and Deposition Number 173. Do you recognize this depiction?
A. I'm familiar with it.
Q. Who prepared this depiction?
A. One of my engineers under my direction.
Q. Does this exhibit accurately depict coal ash ponds at the Waukegan facility?
A. It appears to.
Q. For the record, how are these ash ponds described?
A. The west ash pond and the east ash pond.
Q. Does this exhibit accurately depict the relative location of groundwater monitoring wells?
A. It appears to.
Q. For the record, how are these wells identified?
A. The wells on this figure at this time are identified as wells MW 1 through MW 7.
Q. Have there been additional monitoring wells that have been installed since the period of time in this depiction?
A. Yes.
Q. What are those wells?
A. MW 8 and MW 9.

Q. And relative to the other monitoring wells that are on this depiction, where is monitoring well eight?
A. I believe monitoring well eight is located north of monitoring well six along the west -- or near the west property boundary, and well MW 9 is located along the access road to the north and slightly west of MW 5.
Q. Do you know why monitoring wells eight and nine were installed?
MS. NIJMAN: Other than your conversations with counsel, you can answer.
BY THE WITNESS:
A. They were installed to provide additional information on groundwater quality to the north -- to the north and west of the ash ponds.
BY MR. HARLEY:
Q. Approximately when were those groundwater monitoring wells installed?
A. Approximately a year ago, I believe. I want to say it was in the first quarter or second quarter of this -- of 2014, I believe.
Q. What prompted the installation of additional monitoring wells at the Waukegan

facility?
MS. NIJMAN: Same privilege objection.
BY THE WITNESS:
A. I will decline to answer that. That was all discussed under privilege.
BY MR. HARLEY:
Q. Apart from the west ash pond and the east ash pond that are delineated on this exhibit, are you aware of other areas at the Waukegan facility where coal ash has been deposited in the past?
MS. NIJMAN: Same objection as to privilege.
BY THE WITNESS:
A. From anecdotal discussions, I'm aware of -- of a potential placement of ash off properties by the tannery potentially and then other potential -- potential areas, but I do not have any direct knowledge of that.
BY MR. HARLEY:
Q. So you don't have any knowledge of potential location?
A. My understanding is there may be some ash placed in the vicinity to the west of the west ash pond. However, we don't -- do not have any direct

data from that location.
Q. When you say no data, no historic information?
A. I have no soil borings running through that area.
Q. Have you been asked by Midwest Generation to perform any -- strike that.
Have you been asked by Midwest Generation to collect any data related to a potential ash placement area?
MS. NIJMAN: Object to the extent those have been conversations through counsel.
BY THE WITNESS:
A. I will decline to answer that. All those conversations were under privilege.
BY MR. HARLEY:
Q. Do you have knowledge of a bottom ash settling pond at the Waukegan facility?
A. Not that I'm aware of.
Q. Did you ever participate in an excavation of any ash at the Waukegan facility?
A. The excavation of any ash...
Not that I'm aware of.
Q. Did you participate in a geotechnical

analysis of soil surrounding ponds at Waukegan?
A. Yes.
Q. Can you describe that geotechnical analysis?
A. To the best of my recollection, that was a while ago. A series of soil borings were placed around the east and west ash ponds and samples were collected, both disturbed and undisturbed samples, for specific geotechnical analyses that were requested by Midwest Generation.
Q. When you use the term "undisturbed," what does that mean?
A. For geotechnical analyses, an undisturbed sample would be, for example, a Shelby tube which is pushed into the ground as opposed to a disturbed sample which, say, would be collected from a split spoon which is actually pounded into the ground.
Q. I see.
And what is the goal of a geotechnical analysis using these techniques?
A. To define the specific geotechnical properties in the soil that -- that were being requested.
Q. Do you recall how far below ground surface

the analysis extended?
A. I would have to speculate on that. I believe they extended to the base of the ponds to the same elevation as the base of the ponds, but I'd be speculating at this point exactly the depths.
Q. And do you recall what the geotechnical analysis revealed in terms of the surface and subsurface material?
A. What the data showed?
Q. Yes.
A. I do not remember.
Q. So the record is clear on this point, you don't recall if the subsurface material included ash?
A. There may have been ash in some of the borings. I would have to go back and take a look at them.
Q. And to be clear, these are areas outside of the west ash pond and the east ash pond?
A. I would have to go back and take a look at the map as to where the borings were placed.
Q. Mindful of counsel's objection related to privilege, did the results of those borings

contribute to the decision to place monitoring well eight and monitoring well nine west of the west ash pond?
A. Not that I'm aware of.
Q. Are you familiar with the hydrogeology?
A. In general, yes.
Q. How far below ground surface is groundwater at the Waukegan facility?
A. Without going back and looking at the data tables, I cannot say exactly, but I would imagine it's on the order of anywhere from 12 to 15, 20 feet depending on the location, but again, not seeing the data, I don't want to misspeak on that.
Q. Approximately how thick is the groundwater layer, the aquifer?
A. I would have to go back and check the literature on that. I don't remember offhand.
Q. What is the direction of groundwater flow at the ground -- at the Waukegan facility?
MS. NIJMAN: I'm going to object only to the extent you're talking about Exhibit 173, or are you talking generally?
MR. HARLEY: Knowledge.

BY THE WITNESS:
A. Based on the map that's provided here, the direction of groundwater flow is in a southeasterly direction which is generally consistent in this area of the property.
BY MR. HARLEY:
Q. And where does groundwater discharge?
A. Groundwater in this area discharges into -- or towards the direction of the wetland and Lake Michigan.
Q. What is the wetland?
A. There is a wetland that is located between the east ash pond and Lake Michigan. I do not know if the wetland is delineated.
Q. I'm sorry. I couldn't hear that last part of your statement.
A. I do not know if the wetland is formally delineated.
Q. All right. Before we get to this exhibit, if the wetland has not been formally delineated, on what basis are you characterizing it as a wetland?
MS. NIJMAN: Object to foundation. You can answer.

BY THE WITNESS:
A. I'm not quite sure where you're leading with the question.
BY MR. HARLEY:
Q. It was your term "wetland" and I'm just trying to sort out that characterization.
A. To -- to back up a little bit --
Q. Yes.
A. -- I use that term not as a wetland expert. I'm not a wetlands expert.
Q. Uh-huh.
A. I do not perform delineations. It appears to be a swampy-type area, so what the actual correct terminology for that is I'm not an expert in which to define that.
Q. And to your knowledge, is that wetland area within the boundaries of the Midwest Generation property?
A. From my understanding, it is.
(Exhibit No. 174 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. I would like to call your attention to a document which has been marked as Deposition

Exhibit 174 and is Bates stamped as 610. Do you recognize this depiction of the Waukegan facility?
MS. NIJMAN: I'm just going to object to the same issue with all of these other maps.
BY THE WITNESS:
A. I'm familiar with the map.
BY MR. HARLEY:
Q. What was your role in the development of this map?
A. I had -- I directed my engineer to generate the map. And just like our involvement with the other facilities, we were responding relative to -- to fulfill the requirements of the CCA since we were tasked to assist with that.
Q. According to this depiction which KPRG prepared, does the proposed ELUC boundary extend over the entire Waukegan facility?
A. No, it does not.
Q. Do you know why not?
MS. NIJMAN: Objection in relation to privileged conversations. Otherwise, you can answer.
BY THE WITNESS:
A. My answer will be the same as it was for

the other facilities. We provided the proposal to Illinois EPA. Illinois EPA provided comments, and then we were tasked to finalize the ELUC submittal.
BY MR. HARLEY:
Q. Did you have any direct communications with Illinois EPA about the ELUC?
A. Just through the written comments.
Q. Does the environmental land use control extend over the area which includes monitoring wells eight and nine?
A. The proposed ELUC boundary on this map does not extend to wells eight and nine.
Q. This map also delineates a previously-established environmental land use control. Are monitoring wells eight and nine contained within that previously-established ELUC area?
A. I believe so, yes.
Q. Earlier you indicated that there was a potential ash pond to the north and west of the west ash pond?
MS. NIJMAN: I'm going to object to the mischaracterization of prior testimony. There was never a discussion of an ash pond.

BY THE WITNESS:
A. I did not refer to anything as an ash pond outside of the east and west ash ponds.
BY MR. HARLEY:
Q. How did you characterize the area where there was no data, no soil borings, but perhaps ash -- the deposition of ash in the past?
A. That may -- may have been an ash placement area.
Q. Ash placement area.
When you use the word "ash placement area," how is that distinguished from an ash pond, in your mind?
A. I'm not quite sure I understand the question.
Q. You now have used, in the context of the Joliet facility and now in the context of the Waukegan facility, the term "ash placement area." I'm trying to understand what you mean by the term "ash placement area." What does that mean?
A. It's an area where there may potentially include some residual ash from former operations that I'm not familiar with.
Q. What is the difference between the term

"ash placement area" and "ash landfill," if any?
MS. NIJMAN: Object to foundation.
BY THE WITNESS:
A. I would decline to answer as -- as not specifically being in a position to define the difference between the two.
BY MR. HARLEY:
Q. Is the potential ash placement area at the Waukegan facility within the boundaries of the proposed environmental land use control?
MS. NIJMAN: Objection; misstatement of prior testimony. He's already said he can't define -- it may exist and can't define an area, so how can he answer that? Object to foundation.
BY THE WITNESS:
A. I decline to answer. I don't know the boundary.
BY MR. HARLEY:
Q. How is it that you came to know about a potential ash placement area outside of west ash pond and east ash pond at the Waukegan facility?
A. I would decline to answer based on client-privileged discussions.
MS. NIJMAN: Can we chat for a second?

(A recess was taken.)
MS. NIJMAN: So I've asked the witness to supplement his answer based on some data he's aware of.
MR. HARLEY: Thank you.
BY THE WITNESS:
A. The boring log for monitoring well MW 5 --
BY MR. HARLEY:
Q. Yes.
A. -- does have coal ash in the boring log for that well location suggesting that there's ash in the vicinity of well MW 5.
Q. Would that also be true for monitoring well six?
A. I would have to go back and check the boring log for well MW 6.
Q. Would that also be true for monitoring well eight?
A. The same: I'd have to go back and check the boring log for that. There may have been some.
Q. Is there any evidence of ash in the soil boring for monitoring well nine?
A. I would have to go back and check, but there may have been some.

Q. And what document would you refer to in order to confirm or deny the existence of ash in monitoring well six, eight, and nine?
A. For monitoring well six, I would -- that well placement was part of our CCA requirements, and so I'd go back and check the submittal of fulfillments of our CCA requirements which will include that boring log.
The other data is -- was done under privilege.
MS. NIJMAN: I think the data was produced.
MS. LAUGHRIDGE GALE: The groundwater monitoring data was produced.
MS. NIJMAN: The monitoring data was produced for nine.
BY THE WITNESS:
A. For eight and nine, the groundwater monitoring data, I'd have to go back into our files and check the boring logs in our files.
BY MR. HARLEY:
Q. These boring logs that you're describing, were the borings done as part of establishing monitoring well eight and monitoring well nine?

A. As part of drilling those wells, yes.
Q. And that was done in the first quarter of this year, I believe you testified?
A. First -- first quarter, early second quarter. I don't think I actually identified exactly the date we put those in.
Q. With that time frame in mind, you still don't have a recollection of whether or not there was ash in those borings?
A. There -- there may have been some. I don't want to misspeak.
(Exhibit No. 175 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Before we leave Waukegan, I would like to call your attention to a depiction of the Waukegan facility which has been marked as Deposition Exhibit 175 and is Bates stamped number 609. Are you familiar with this depiction of the Waukegan facility?
A. Yes, I am.
Q. What was your role in the preparation of this depiction?
A. An engineer developed this under my

direction.
Q. And is it correct that this is titled Aerial Distribution of Groundwater Impacts?
MS. NIJMAN: And I'll object on the same basis as the other objections --
MR. HARLEY: Sure.
MS. NIJMAN: -- that the data doesn't match up with the date of the aerial necessarily.
BY THE WITNESS:
A. That is the title on the figure.
BY MR. HARLEY:
Q. What was the purpose of the preparation of this depiction of the Waukegan facility?
MS. NIJMAN: Object to the extent it's a page taken out of a report. If you want to give him the report, he could probably tell you what the reason was.
BY MR. HARLEY:
Q. Do you remember?
A. As to which report this particular figure came out of?
Q. No. I'm just wondering if you recall why it is that KPRG was tasked to prepare this depiction of the Waukegan facility.

MS. NIJMAN: Same objection.
BY THE WITNESS:
A. If this figure was associated or taken out of the ELUC preparation submittal, it was a requirement of IEPA, as part of that ELUC submittal, to provide an aerial distribution map, if my memory serves me correctly.
BY MR. HARLEY:
Q. On this depiction, for monitoring well five what are the constituents that exceed class 1 groundwater standards?
A. The class 1 groundwater exceedances are depicted in yellow. And for MW 5 those appear to be arsenic, boron, chloride, manganese, sulfate, and total dissolved solids.
Q. Are the levels which are shown here similar to the exceedances which are found in monitoring well eight?
MS. NIJMAN: That's not on this map?
MR. HARLEY: That's not on this map.
BY THE WITNESS:
A. Monitoring well eight is not on this map.
BY MR. HARLEY:
Q. Which did not exist at this time. I'm

asking based on your knowledge of the sampling results for monitoring well eight.
MS. NIJMAN: If you remember, you can answer.
THE WITNESS: Pardon me?
MS. NIJMAN: If you remember, you can answer. I'm sorry.
BY THE WITNESS:
A. I would not like to misspeak in this forum. I -- without seeing that last round of data for MW 8, I would not like to speculate and misspeak.
BY MR. HARLEY:
Q. Would it be the same answer for monitoring well nine as well?
A. Correct.
Q. Is there a groundwater management zone for the Waukegan facility?
A. Not that I'm aware of.
Q. Do you know why not?
MS. NIJMAN: Objection to privilege. To the extent you had conversations about it other than with counsel, you may answer.

BY THE WITNESS:
A. I'm not aware that it was requested or negotiated as part of the CCA. And as to why, I'm not aware.
BY MR. HARLEY:
Q. The following questions all relate to the Powerton facility.
In the past year, how often have you visited the Powerton facility?
A. Maybe one -- in the past year, I have not been at the Powerton facility personally.
Q. Approximately how many times have you visited the Powerton facility in the past three years?
A. Twice.
Q. And was that because you had projects for Midwest Generation?
A. Relative to the groundwater monitoring of the ash ponds, yes.
(Exhibit No. 176 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. I would like to call your attention to the document which is Bates stamped number 723 and which

is Exhibit 176. Do you recognize this depiction?
A. I'm familiar with it.
Q. What was your role in the preparation of this depiction of the Powerton facility?
A. This was prepared by an engineer under my direction.
Q. And is it correct that this depiction is titled Groundwater Contour Map for Silt Clay Unit 12-12-2012?
A. That is the title.
Q. What is the significance of the term "silt clay unit?"
A. At Powerton, once KPRG started getting involved in looking at some of the information, we didn't necessarily agree with the way the groundwater flow maps were being drawn at Powerton. There was some -- there were some convoluted contours -- potentiometric contours and, in looking at it, didn't make sense.
So we went back in and took a look at the boring logs to see where individual wells were screened, and we identified that there was -- that there were a series of five or six wells that were screened within a silty clay layer whereas the rest

of the wells were screened in a fine sand.
So when we isolated the wells screened in the silty clay layer and contoured the groundwater flow within that unit separately as opposed to including all the data together between two units, the groundwater flow direction started to make much more sense from a hydrogeologic standpoint.
And so this map shows the groundwater flow within that silty clay unit using water levels only from the wells within -- screened within the silty clay unit.
Q. What is the relationship between the silty clay unit and the other groundwater unit that you were describing?
A. I'm not sure I follow your question. Can you rephrase that?
Q. You said that this is a characterization of groundwater in relationship to a silt clay unit which removed another groundwater aquifer from consideration?
MS. NIJMAN: Object to the misstatement of prior testimony. You can try to answer it, if you know what he's...

BY THE WITNESS:
A. I believe what you may be asking --
BY MR. HARLEY:
Q. Yes.
A. -- is, is the silt clay unit and the fine sand unit -- are they hydro- -- hydrologically connected.
Q. Yes.
A. I believe they are.
Q. So in light of that hydrogeologic connection, why exclude the fine sand unit?
MS. NIJMAN: Object to the misstatement of prior testimony. He didn't exclude them. Just for the purposes of this map.
THE WITNESS: Right.
BY THE WITNESS:
A. Those are not excluded. There is a separate groundwater flow map for the wells screened in the sand unit.
BY MR. HARLEY:
Q. So if I ask you questions about the hydrogeology at the Powerton facility, it would be appropriate to ask questions separately about the fine sand unit versus the silt clay unit?

A. Relative to groundwater flow direction, you can view them separately, if you like.
Q. Does this exhibit accurately depict ash basins at the Powerton facility?
A. It appears to.
Q. Why are they characterized as ash basins at Powerton but ash ponds at other facilities?
A. I believe that is strictly a difference in terminology used between plants.
Q. But they serve the same function?
A. That is my understanding.
Q. Does this exhibit accurately depict the relative location of groundwater monitoring wells at the Powerton facility?
A. It appears to, yes.
Q. Apart from the ash basins that are delineated on this exhibit, are you aware of any other areas at the Powerton facility where coal ash has been deposited in the past?
MS. NIJMAN: Object to privilege, but you can answer.
BY THE WITNESS:
A. Not that I'm aware of.

BY MR. HARLEY:
Q. Did you participate in a geotechnical analysis of soil surrounding the settling basin and ponds at Powerton?
A. If you're referring to the same geotechnical study that we did at Waukegan, we also did some geotechnical borings, if I remember correctly, in -- at the Waukegan -- at the Powerton station and I believe had the same geotechnical analyses run on those samples as well.
Q. Approximately where, using this depiction, were those soil borings taken?
A. I couldn't speculate on that. It was quite a while ago. The borings were right in the vicinity of the ash bonds. Exactly where I can't speculate at this time without going back and seeing them there.
Q. Do you recall what those borings showed in terms of the subsurface material that you sampled?
A. In general, there was some ash in -- in some of the borings. However, you know, the specific stratigraphy all the way down I -- it's quite a while ago.
Q. Do you recall to what depth those borings

extended approximately?
A. The approximate -- I believe the target was the base of the -- of the basins, you know, the approximate equal elevation of basin to basin. Offhand, I don't remember what the exact depths of the basins are.
Q. So let's talk about the hydrogeology at the location of the Powerton facility. For the silt clay unit, how far below ground surface is groundwater?
A. I believe it's within ten or 12 feet, maybe shallower. I'd have to go back and take a look at the data tables.
Q. Approximately how thick is the groundwater aquifer?
A. I'd have to go back to the literature and check on that.
Q. What is the direction of flow in the silt clay unit?
MS. NIJMAN: Same objection as to the map and the dates on the map if you're asking for at this time of the map or generally?
MR. HARLEY: Generally.

BY THE WITNESS:
A. At the time of this drawing, groundwater flow is in a westerly direction and it's generally consistent with what we've seen within the silt and clay layer.
BY MR. HARLEY:
Q. And what is -- where does it discharge?
A. The groundwater flow is towards the -- the former intake channel.
Q. And does the intake channel connect to any body of water?
A. The intake channel comes in off of the Illinois River.
Q. Now, as to the fine sand unit, how far below ground surface is the fine sand unit?
A. Again, I would have to speculate. I would have to go back to the boring logs or cross-sections to provide a definitive answer. I don't want to speculate.
Q. Can you state approximately?
A. I'd have to go back. I don't want to misspeak.
Q. How thick is the fine sand unit?
A. The fine sand unit is the main aquifer in

that area. And its depth I'd have to go back into the literature, but if I -- if my recollection serves me correct, it's up to about 130 feet deep in this area.
Q. Okay. And what is the direction of flow in the fine sand unit?
A. It is in a northerly direction.
Q. And where does it discharge?
A. It flows towards the Illinois River.
Q. Can you describe the hydrogeologic connection between the fine sand unit and the silt clay unit?
MS. NIJMAN: To the extent you've developed an opinion for counsel, I'm going to direct you not to answer that. To the extent you have reported this elsewhere, you can answer.
BY THE WITNESS:
A. I'll decline in answering that in that any of my opinions and conclusions were provided to counsel under privilege.
BY MR. HARLEY:
Q. Generally speaking, is there a difference in rate of flow of groundwater in the fine sand unit versus the silt clay unit?

A. There may be.
Q. Which one would tend to have a greater rate of flow?
A. The fine sand unit.
Q. Of the monitoring wells which are identified in this exhibit, which monitoring wells would characterize the silt clay unit?
A. It would -- based on the figure I have in front of me here, it would be wells MW 12, MW 14, MW 15, MW 8, and MW 6.
Q. And from that, can we conclude that the other monitoring wells are characterizing groundwater in the fine sand unit?
A. Yes.
Q. Why is monitoring well 16 located where it is?
MS. NIJMAN: Objection; foundation.
BY THE WITNESS:
A. Monitoring well 16 was installed as part of CCA compliance requirements in an area defined further upgradient of groundwater flow for purposes of -- of trying to establish additional background.
BY MR. HARLEY:
Q. Do you know if that was done at the

suggestion of Illinois EPA, or was that done at the suggestion of Midwest Generation?
MS. NIJMAN: I'll object to the extent that was a conversation -- a privileged conversation with counsel. To the extent there was a conversation with EPA, you can answer.
BY THE WITNESS:
A. That was discussed with Illinois EPA with some of the initial discussions when the notices of violation came out and as the scopes of the CCAs were being developed, and so it was a combined discussion.
(Mr. Zaharoff left the deposition room.)
BY MR. HARLEY:
Q. In reviewing sampling results, have you observed differences in the level of constituents identified in monitoring well 16 versus downgradient wells?
MS. NIJMAN: Object to foundation.
BY THE WITNESS:
A. I have observed differences on some of the parameters.

BY MR. HARLEY:
Q. Which parameters?
A. I'd have to go back and take a look at the data. I do not have it in front of me.
Q. In reviewing well sampling data, have you observed differences in the sampled constituents that you find in the silt clay unit versus the fine sand unit?
A. I have not sat down and looked at the distinction between the chemistry from the wells in the silt unit versus the wells in the sand unit.
Q. Is that because you have not been asked to do that by Midwest Generation?
MS. NIJMAN: I'll object to the extent you've been directed either way from counsel.
BY THE WITNESS:
A. Any -- I'll decline to answer any opinions or conclusions that we have that were done under discussions with -- under client privilege.
BY MR. HARLEY:
Q. Have you ever had direct conversations with Illinois EPA about differences in constituents in wells in the silt clay unit versus the fine sand unit?

A. Not that I'm aware of, no.
MR. HARLEY: Off the record.
(Discussion had off the record.)
(Exhibit No. 177 marked for identification, 12-18-14.)
BY MR. HARLEY:
Q. Calling your attention to what has been marked as Deposition Exhibit 177 and is Bates stamped number 727, do you recognize this depiction of the Powerton facility?
A. I'm familiar with it.
Q. And what was your role in developing this depiction?
A. I directed my engineer in the drawing of it and it was developed as part of our task to assist in responses to the CCA requirements.
Q. And is it correct that this document is titled Proposed Groundwater Management Zone?
A. That is what's on the title, yes.
Q. On this document there are two areas which are identified as dredge spoil piles. Do you know what those dredge spoil piles consist of?
A. I -- I do not know. I did not do any work with the dredge spoil piles.

Q. When you visited the Powerton facility, has there ever been any discussion about the dredge spoil piles?
A. I can -- can I -- can I ask...
MS. NIJMAN: Sure.
(A recess was taken.)
MS. NIJMAN: Back on the record.
What was the last question?
(Record read.)
BY THE WITNESS:
A. I personally have not had any discussions about the dredge spoil piles. Didn't -- didn't even see them.
BY MR. HARLEY:
Q. I couldn't hear the last part.
A. I personally did not have any discussions with -- relative to the dredge spoil piles. I didn't even see them. I was not on that part of the site.
Q. This depiction also identifies features which are described as French drains. Do you know what a French drain is?
MS. NIJMAN: At this facility or generally?
MR. HARLEY: Generally.

MS. NIJMAN: Okay.
BY THE WITNESS:
A. I'm not an engineer. However, yes, I am familiar with the basic concept of a French drain.
BY MR. HARLEY:
Q. What is the basic concept of a French drain?
A. I'm not sure where your question is leading. I'm not an engineer, but a French drain is generally an underdrain that will allow for some de-watering or interception of water in an area.
Q. Is that surface water?
MS. NIJMAN: Generally?
MR. HARLEY: Generally.
MS. NIJMAN: So without -- do you have an understanding generally of how French drains operate?
BY THE WITNESS:
A. In general, it would be intercepting some groundwater.
BY MR. HARLEY:
Q. Groundwater?
A. Yes.
Q. Do you know if that's how the French

drains function at the Powerton facility?
A. I'm not familiar with their design, construction, nor when they were put in, nor who put them in, so I cannot answer that question.
Q. In developing this depiction of the Powerton facility, do you know why it was important to identify the location of French drains?
MS. NIJMAN: Object to foundation.
BY THE WITNESS:
A. As part of our response requirement for the GMZ submittal is a site map which identifies various -- excuse me -- items and structures. This information was provided to me by Midwest Gen to post on the maps, so am I aware of the significance of that? No, I'm not.
BY MR. HARLEY:
Q. Generally speaking, can the existence of a French drain change the direction of flow?
MS. NIJMAN: Objection; foundation.
BY THE WITNESS:
A. Generally speaking, yes.
BY MR. HARLEY:
Q. Okay. Also referring to Deposition Exhibit 177, does the groundwater management zone

extend over the entire Powerton facility?
A. No, it does not.
Q. Do you know why not?
MS. NIJMAN: Object to the extent it calls for privileged conversation with counsel.
BY THE WITNESS:
A. My answer will be similar to the answers for the previous stations. We were tasked to assist in developing the GMZ. We proposed an area to Illinois EPA. They reviewed and provided us some comments, and we finalized the current boundary.
BY MR. HARLEY:
Q. And to foreclose another detour, would you give the same answer to the boundaries of the environmental land use control at the Powerton facility?
A. Yes.
Q. I had some questions of a more general nature, and then I believe my colleague may have some questions that I will ask you as well, but we're getting very close to the conclusion.
As part of your work for Midwest Generation, have you ever been asked by Midwest

Generation to evaluate the use of interceptor trenches as part of addressing groundwater conditions at any Midwest Generation facility?

MS. NIJMAN: I'll object only to the extent if it's been directly by Midwest Gen, you can answer. If it's through counsel, it's privileged.

BY THE WITNESS:

A. I will decline to answer in that any of those discussions would have been done under attorney-client discussions to my -- to my recollection.

BY MR. HARLEY:

Q. So you never were a participant in any direct conversations with Illinois EPA about the potential use of interceptor trenches at any Midwest Generation facility?

A. Not that I'm aware of or not that I recall.

Q. I believe your answers will be similar for the following questions, but I do want this to be clear for the record.

As part of your work for Midwest Generation, have you been asked by Midwest Generation to evaluate the use of in situ

biodegradation as part of addressing groundwater conditions at any Midwest Generation facility?

MS. NIJMAN: Same privilege objection.

THE WITNESS: I get -- can I -- again, I'm sorry. Can I ask you?

MS. NIJMAN: Sure.

THE WITNESS: I've just -- I'm not quite sure where your questions are leading.

(A recess was taken.)

MS. NIJMAN: Back on the record.

The only issue was the deponent wanted to clarify we were talking about these four facilities.

MR. HARLEY: Yes. I'm sorry.

BY THE WITNESS:

A. Okay. The way it was stated to me was unclear if we were talking strictly on these four facilities.

BY MR. HARLEY:

Q. I see, because I said "any Midwest Generation facility." Yes. I'm clarifying that it means -- when I say "any Midwest Generation facility," I mean Will, Joliet, Waukegan, and Powerton.

As part of your work with Midwest

Generation, have you been asked by Midwest Generation to evaluate the use of in situ biodegradation as part of addressing groundwater conditions?

MS. NIJMAN: Same privilege objection.

BY THE WITNESS:

A. At these four stations, to my best recollection, no.

BY MR. HARLEY:

Q. As part of your work for Midwest Generation, have you been asked by Midwest Generation to evaluate the use of pump-and-treat systems as part of addressing groundwater conditions at any one of these four facilities?

MS. NIJMAN: Same privilege objection.

BY THE WITNESS:

A. Same -- to the best of my recollection at these four facilities, I have not been asked to evaluate them.

BY MR. HARLEY:

Q. As part of your work for Midwest Generation, have you been asked by Midwest Generation to evaluate the use of in situ chemical oxidation as part of addressing groundwater

conditions at any of the four Midwest Generation facilities?

MS. NIJMAN: Same objection. We're excepting any conversations you may have had with or through counsel.

BY THE WITNESS:

A. Any -- any conversations on remediation would have been done under counsel privilege. To my recollection, no.

BY MR. HARLEY:

Q. As part of your work for Midwest Generation, have you been asked by Midwest Generation to employ three-dimensional groundwater monitoring at any of the four Midwest Generation facilities?

MS. NIJMAN: Object to foundation and, again, with the exception that we're not talking about any conversation you may have had with counsel.

BY THE WITNESS:

A. That would strictly have been under counsel-privileged discussions in regards to three-dimensional groundwater monitoring I believe is what you're saying.

BY MR. HARLEY:
Q. Uh-huh.
As part of your work for Midwest Generation, have you been asked by Midwest Generation to employ contaminant particle tracking simulations for groundwater for any of the four Midwest Generation facilities?
MS. NIJMAN: And I'm going to object to foundation as to what that is and what it means and object to exclude any conversations you may have had by or through counsel.
BY THE WITNESS:
A. And I will decline on that that any of those conversations that I had would be under client -- counsel privilege.
BY MR. HARLEY:
Q. There strictly as to the foundation objection, for the record, can you describe what three-dimensional groundwater modeling is?
A. In general terms, a three-dimensional groundwater model is a numerical simulation of the subsurface conditions in which groundwater moves, and it allows you to evaluate and replicate existing groundwater flow conditions and then to

use that model as a tool to help evaluate, if there's a change in conditions, what might one expect as a change in groundwater flow.
Q. And has KPRG ever undertaken a three-dimensional groundwater model?
A. KPRG uses an associate that specializes in groundwater modeling. It's a very specialized field to do it right and we use an associate to do three-dimensional groundwater modeling for KPRG's clients if our clients need that level of -- of analysis.
Q. And when you say "an associate," do you mean someone who is employed by KPRG?
A. He is an associate firm. A one-man shop basically, two-man shop.
Q. What is that firm called?
A. Geo-Hydro, Inc.
Q. And what is the individual's name?
A. Charles Norris.
Q. To your knowledge, has Geo-Hyrdo, Inc., ever completed any work for Midwest Generation?
A. Relative to these four facilities?
Q. Yes.
A. No.

Q. And again, strictly as to the foundation objection, can you please describe for the record what contaminant particle tracking simulation is?
A. In general terms, contaminant particle tracking is an add-on package to a groundwater model. Once you develop a three-dimensional numerical model that simulates groundwater flow properly, you can then tack on an additional package where you can introduce the specific chemistry into the aquifer at a specific point, and then the flow model will calculate the dispersion and downward movement of -- of the constituent that you're going to model.
So it's particle tracking, a very descriptive term for those packages.
Q. And what kind of particles could be tracked using this simulation?
A. Particles are referred to as molecules in the contaminant. Depending on what you would put in as your source in the term, the model then numerically goes through the crunches to -- to allow you to evaluate how a particular compound can move through the system.
Q. And when you say "compound," would that

be, for example, antimony?
A. Maybe.
Q. Could it be boron?
A. Maybe.
Q. Does KPRG perform contaminant particle tracking simulations?
A. That would be done through our associate modeling -- the associate who does our modeling -- groundwater modeling for us.
Q. And that would be in this case again?
A. Geo-Hyrdo, correct.
Q. Geo-Hydro.
Do you know if Geo-Hyrdo has completed any work for Midwest Generation related to contaminant particle tracking simulations?
MS. NIJMAN: You mean as through KPRG as an associate of KPRG?
MR. HARLEY: Yes.
BY THE WITNESS:
A. At these four facilities, no.
BY MR. HARLEY:
Q. To wrap up, just some clarifying questions about hyrdogeology at the Will County facility.
Do you communicate directly with Patrick

Engineering regarding the work that they have completed at the Will County facility?

MS. NIJMAN: Again, I'm going to object. Other than to the extent you described earlier that there was conversations through counsel in response to the CCAs -- excuse me -- the violation notices, you can answer other than those conversations.

BY THE WITNESS:

A. Can you clarify the time frame as well? At the present time we do not talk with Patrick Engineering.

BY MR. HARLEY:

Q. Two years ago.

A. We had discussions with Patrick Engineering in regards -- when the notices of violation came out in regards to some of the data tables and some of their groundwater flow maps.

Q. And did those include conversations about the Will County facility?

A. Yes.

Q. What were the nature of the conversations that you had with Patrick Engineering regarding hydrogeologic conditions at the Will County facility?

MS. NIJMAN: I object. To the extent any opinions or issues were conclusions drawn under the scope of counsel, I direct you not to answer. If there's data you want to -- you've discussed, you can talk specifically about data.

BY THE WITNESS:

A. In regards to the hydrogeology, we did not necessarily agree on the groundwater flow maps that were being generated for the facility.

BY MR. HARLEY:

Q. What was the nature of the disagreement?

A. If I remember correctly, the groundwater flow maps that were being generated were being done via a computer plotting program, a computer contouring program which is a nice exercise to do.

However, being a computer program, this is a mathematical averaging program, and the contours that are generated by the computer have to then be looked at by a professional to make sure that they make sense hydrogeologically.

And if I remember correctly, I had some issues on their figures where basically the computer printout was just being used without taking the next step of -- of -- of having to

modify the flow lines correctly so that they made sense hydrogeologically and it's not just a computer mathematical depiction.

Q. What additional steps needed to be taken, beyond the computer simulation, in order to accurately characterize groundwater flow?

A. The flow lines needed to be -- the term is smoothed out. The way the -- if my recollection is correct, the computer flow lines, the potentiometric surface lines, were basically coming across the river at 90 degrees. Computer-wise that made sense. From a hydrogeologic standpoint, you've created a waterfall. There's no waterfall. The flow lines can't be crossing the river one after another at 90 degrees because that means water is -- you're creating a waterfall.

So those three lines had to be smoothed out so that you get a more accurate depiction of groundwater flow as it's approaching the surface water body.

Q. So what empirical work did you do in order to come to the conclusion that these flow contours needed to be smoothed out?

MS. NIJMAN: Asked and answered.

THE WITNESS: Pardon?

MS. NIJMAN: Asked and answered. You just described that.

MR. HARLEY: He described his conclusion. He did not describe the method that he used in order to come to that conclusion.

MS. NIJMAN: He looked at it. He described that.

BY THE WITNESS:

A. Straight hyrdogeologic interpretation of a situation that I know doesn't exist.

BY MR. HARLEY:

Q. Why wasn't that clear to Patrick Engineering, if you know?

MS. NIJMAN: Objection; calls for speculation.

BY THE WITNESS:

A. I can't speculate on that.

BY MR. HARLEY:

Q. Have you ever reviewed groundwater data at the Will County facility that suggests that there's a groundwater mound under the ash ponds?

A. Not that I recall. And any discussions I may have had on opinions or conclusions were done

under attorney-client privilege.
Q. Have you ever seen groundwater data related to the Will County facility indicating groundwater flow toward the canal?
A. I have not seen any data for groundwater elevations on the east side -- east half of the site, so I can't make any conclusions in regards to that.
Q. So you have not been asked by Midwest Generation to characterize groundwater flow for that portion of the site?
MS. NIJMAN: Objection to the extent it's privileged.
BY THE WITNESS:
A. I will decline to answer based on any discussions that we had in regards to -- to these issues were under attorney-client privilege.
BY MR. HARLEY:
Q. Have you ever seen groundwater data at Will County suggesting groundwater flow in a southwesterly direction?
MS. NIJMAN: Same privilege objection. You're asking for his opinions now based on data that he's seen and his opinions to the extent --

MR. HARLEY: I know. I think it's -- I'm sorry. I'm sorry. Please complete your objection. I'm sorry.
MS. NIJMAN: Okay. So to the extent there is -- are you asking for data like a map that shows that someone else said is showing going to a certain direction? I mean, he obviously reviews data, so I'll object to vagueness, foundation, and privilege. You can try to restate it.
MR. HARLEY: I believe the question was of a factual nature, not requesting any kind of conclusion. It was simply has he reviewed data.
MS. NIJMAN: But you're suggesting the data reveals a conclusion. So are you saying someone else came to a conclusion of a direction of flow that he has seen it?
MR. HARLEY: If he hasn't seen it, then the simple answer is no.
BY MR. HARLEY:
Q. Have you ever seen groundwater data at Will County indicating groundwater flow in a southwesterly direction?
MS. NIJMAN: Same objection. If you can understand what he's talking about, you can answer.

BY THE WITNESS:
A. I -- I believe this comes down -- there may have been -- and I do not recall exactly. There may have been some initial depictions that Patrick Engineering had that might have shown some flow from the Des Plaines River towards the facility.
And again, we disagreed with the way they were drawing their maps, and so whether or not their interpretations were correct, I can't recall, but our fundamental disagreement with them was how they were drawing it on computer maps.
BY MR. HARLEY:
Q. Have the disagreements between KPRG and Patrick Engineering ever been reviewed by Illinois EPA?
MS. NIJMAN: Objection to vague. You can answer, if you understand.
BY THE WITNESS:
A. The -- after KPRG took over the groundwater monitoring program, certainly our maps were the ones being submitted at that point, so IEPA was certainly aware of the difference in some of those interpretations.

And also, in the responses to the NOVs, we had identified several issues with the data at that point, and those were also, I believe, clarified within the context of the response to the notices of violation.
MR. HARLEY: One moment, please.
(Brief pause.)
MR. HARLEY: I have no further questions.
MS. NIJMAN: Okay. Thank you.
Reserve signature.

**Re: Sierra Club vs. Midwest Generation**
**Case No. PCB No-2013-015**

**Dear Ms. Nijman:**

**Enclosed please find a copy of the deposition transcript of Richard R. Gnat which was taken on December 18th, 2014.**

**As signature was reserved, please arrange for the deponent to review his transcript making any necessary corrections on the errata sheets. Then have him sign the deponent's signature page and have the signature notarized.**

**Please send the original errata sheets and signed deponent's certificate within 28 days of today to Ms. Faith E. Bugel, keep a copy for yourself, and please send a copy to me. If they are not returned by said date, upon request an affidavit will be provided pursuant to the procedure outlined in Rule 207(a) of the Illinois Supreme Court Rules and the deposition will be completed and will be "used as fully as though signed."**

**Thank you for your cooperation in this matter. If you have any questions, please do not hesitate to call me.**

**Sincerely,**

**Caryl L. Hardy**

(Witness sworn.)
MARIA RACE,
called as a witness herein, having been first duly sworn, was examined and testified as follows:
EXAMINATION
BY
MS. BUGEL:

Q Do you want to be called Miss Race or Maria, which one --
A Maria is fine with me.
Q Maria, will you please give your name for the record.
A Maria Loraine Race.
Q And can you spell that, please.
A Sure. M-a-r-i-a L-o-r-a-i-n-e R-a-c-e.
Q And your place of employment, please.
A NRG Energy. So it's just capital N-R-G.
Q And your business address?
A It's changed. I believe it's 529 Romeo Road, Romeoville, Illinois 60446.
Q Okay. And I know you know me, Faith

Bugel --
A Yes.
Q -- from the ELPC. I am here representing ELPC, but I'm asking questions on behalf of all the plaintiffs today. We're just going to have one questioner.
Have you ever given a deposition before?
A No.
Q Then I just want to go over a couple of the basics of depositions. This is a formal legal proceeding. You know you've been sworn in and that means you are under oath to answer all the questions truthfully.
For the benefit of the court reporter, please answer out loud. It makes it hard -- nods and things just make it hard for her.
If you don't understand a question, please tell me. If you need me to rephrase a question, I can do so; but if you do answer a question, we will assume that you've understood it.
If you need a break, please let us know. We're happy to take as many breaks as you need.

And then also at the end, you will have an opportunity to read over the deposition and correct any mistakes in the transcript afterwards.

So do you understand those directions?

A Yes, I do.

Q All right. So your current employer is NRG. Is there still a subsidiary of that company that's Midwest Generation?

A Yes. I believe Midwest Generation is still the name that's associated with the power plant.

Q And before working at NRG, you were working at Midwest Generation; is that correct?

A Correct. And also Edison Mission Energy.

Q Are you in any capacity still working for Midwest Generation or overseeing the plants in any way?

MS. NIJMAN: I object to form.

Do you understand the question?

THE WITNESS: I don't understand the question.

BY MS. BUGEL:

Q What I'm trying to get at is that you worked at Midwest Generation and they were bought by NRG and you still have a role in Midwest Generation as a company?

A Correct.

Q Okay. And can you tell me how long you've been in your current position?

A Since April.

Q And what was -- what are your responsibilities in that position?

A My current responsibilities are to assist in the commercial operation of the facilities.

Q And what is your title?

A Asset manager, director of Asset Management.

Q And what was your previous position?

A I was director of Environmental Services for Midwest Generation, Edison Mission Energy.

Q And how long were you in that position?

A Approximately four years.

Q And what were your responsibilities in that position?

A Could I see my résumé? That may make it easier.

MS. NIJMAN: Did you -- we sent that off to you.

MS. BUGEL: Yeah, and I didn't make it an exhibit because my background -- I've got two more

questions on background.

THE WITNESS: I can just --

MS. NIJMAN: You want to give a general?

THE WITNESS: -- wing it.

Sure.

I worked for Bill Constantelos to assist the company in compliance direction and decision-making on a day-to-day basis with regard to environmental compliance, and that was for the wind farms and for the coal plants.

BY MS. BUGEL:

Q And prior to being director of Environmental Services, what position were you in?

A I had a variety of positions where my title changed, but I was basically doing the same thing. I started out as, I think, senior environmental engineer or something along those lines; and I worked managing the NPDES permitting, day-to-day compliance and Toxics Release Inventory, Lincoln Stone Quarry Landfill, and just managing day-to-day compliance issues surrounding those types of things. And there were more responsibilities, but those were probably the major ones.

Q And what year did you start working at

Midwest Generation?

A 2001.

Q And I want to ask you a few questions about terminology related to coal ash.

Can you explain to me what is slag?

MS. NIJMAN: Let me just state for the record that Maria is a fact witness, she's not an expert witness. She can give her understanding of what it means. She's not giving an expert opinion as to the definition of "slag."

So in your role, you can describe --

THE WITNESS: Okay.

MS. NIJMAN: -- how you believe "slag" is defined.

THE WITNESS: In my role as an environmental compliance officer, my understanding is that slag is the bottom ash that comes from a cyclone boiler.

MS. BUGEL: And let me explain what I'm looking for in these questions. I'm looking for if there is sort of a common way the term is used within Midwest Gen, within the company, so sort of practice, again, obviously not expert opinion.

MS. NIJMAN: Yeah. And then let me just clarify for the record that Maria Race is not

testifying as to how it's used within the company. She's testifying as to how she uses it. She can't testify as to how other people understand it.
BY MS. BUGEL:
Q How is slag related to ash?
A When -- in my recollection, my understanding is that slag and bottom ash are combined in hand- -- wet handling at our facilities.
Q Have you ever used those terms interchangeably?
MS. NIJMAN: Which terms?
MS. BUGEL: Slag and ash.
MS. NIJMAN: Bottom ash?
MS. BUGEL: I had just asked about ash.
MS. NIJMAN: Okay. Well, if you understand.
THE WITNESS: I suppose it's possible that I could have, but to my recollection, I generally combine bottom ash and slag together.
BY MS. BUGEL:
Q What is the slag tank in your experience?
A I'm not sure. In my experience, I believe slag tank may be on some drawings in the permits -- permit applications, but I'm not sure what a slag tank is, literally.

Q Do you know if there's a wet bottom slag tank at Will County?
A I don't know.
Q What is processed water -- let me rephrase that.
What is your understanding of processed water?
A My understanding is that processed water is water that's being used by an industrial -- being used in an industrial process. So when you say "processed water," I'm assuming that for our facilities that means water that is in our process being used for a variety of purposes.
Q Then in your understanding for your facilities, is it -- can it be related to ash?
A Yes.
Q Can you explain how it might be related to ash?
A My understanding is that processed water is used to transport bottom ash and slag from the boilers to the ash impoundments.
Q What is your understanding of the meaning of sluice?
A My understanding of sluice is that that

implies movement, that you're sluicing water from one place to another and that it doesn't necessarily have a process. Meaning it could be clean water being sluiced or it could be processed water being sluiced.
Q How can sluice be related to ash?
A My understanding -- and the way that I use it -- is that ash can be sluiced from a boiler to an ash impoundment. So, in other words, it's transported from one place to another using water as the medium.
Q If sluice water or sluice -- which one is more -- the proper usage? Sluice water or sluice, or doesn't it matter?
A I don't think it matters as long as I understand what you're saying.
Q Okay. If sluice water is used to move ash, does it end up with ash in it?
A If processed --
MS. NIJMAN: Just -- in your experience. That sounds to me like an expert opinion request. If you've seen it or you have experience with it or if you know you can answer the question, you can answer it. If it's asking for an opinion, I'm going to object.

THE WITNESS: Could you repeat the question.
(Record read as requested.)
THE WITNESS: I don't know the answer to that.
BY MS. BUGEL:
Q Can you identify -- just to make this more concrete about Midwest Gen facilities so we can get away from this expert opinion thing, can you explain -- can you identify a Midwest Gen facility where sluice is used to move ash?
A At Joliet 29, water is used to sluice ash from the boiler to a pond.
Q Do the sluice and ash then get routed to the same place at Joliet 29?
A It is my understanding that sometimes they get routed to the same place.
Q Can you explain at Joliet 29 how they would get separated?
A Well, they don't get separated from each other, but sometimes the Joliet 29 ash goes to Lincoln Stone Quarry and sometimes the Joliet 29 ash is sluiced to ash -- either Ash Pond No. 1 or Ash Pond No. 2.
Q So if the ash is sluiced to Lincoln Stone Quarry, do both the sluice and the ash end up in

Lincoln Stone Quarry?
MS. NIJMAN: You mean the water and the ash together?
MS. BUGEL: Yes.
THE WITNESS: Yes.
BY MS. BUGEL:
Q And you said the second option for where they might go is to a pond?
A Mm-hmm.
Q Do the -- if sluice is used to move ash, do the water and ash together then end up in the pond?
A Yes. They do end out in the pond. If what you mean is the initial water with the ash in it moving ends out in the pond, then yes.
Q Yes. That's what I meant.
And I am passing you what has been marked as Deposition Exhibit 1 -- and I apologize, because of the volume of documents, we just made two copies -- and Deposition Exhibit 1 appears to be an e-mail from -- oh, I'm sorry, can you turn to Page 13734 of Deposition Exhibit 1 referring to the e-mail on that page? This appears to be an e-mail with the RE heading of Subgrade for Joliet 29 Ash Pond Liner 2 -- I'm sorry, Ash Pond 2 Liner from Eric Tlachac --

Am I pronouncing his name correctly?
A I don't know actually. Good guess.
Q -- to Maria Race on October 24th, 2007, 1:22 p.m.
Do you see where it says that? The identifying -- just the identifying information I read.
A Yes, I do.
Q And this e-mail was to you; correct?
A Correct.
Q And are you familiar with this e-mail?
A I'm not sure. It's been a while since I've seen it, but I'm sure this is a true e-mail that came to me.
Q Do you recall reading this e-mail when you received it?
A I'm not sure to be honest with you.
Q Does this appear to be a true and accurate copy of that e-mail?
MS. NIJMAN: Asked and answered.
You can answer again.
THE WITNESS: I believe so.
MS. NIJMAN: You can read them all if you want to.

THE WITNESS: Should I read this? Do you have more questions?
BY MS. BUGEL:
Q I was just waiting for you to --
A Okay.
Q -- to review it if you wanted to review it.
MS. NIJMAN: Let her ask the next question and then we can see what you need to do.
THE WITNESS: Okay.
BY MS. BUGEL:
Q If you refer to the second paragraph in the e-mail, it begins, Just to clarify. Just to clarify there is 4 to 6 -- I'm sorry, 4, dash, 6 of bottom ash above the Poz-O-Pac. However, this will make an excellent bedding layer for the geomembrane.
Do you see where it says that?
A Yes, I do.
Q Do you have an understanding of what the 4 to 6 was referring to?
A I wouldn't want to guess.
Q And turning the page to 13735 and at the top of this -- the page, this appears to be an e-mail -- this one, it's a little hard to tell. It appears to be an e-mail from Eric Tlachac to Maria

Race?
A Mm-hmm.
Q October 24th, 2007, 12:02 p.m.
Do you see where it says that?
A Correct. Yes, I do.
Q And looking at the end of the second paragraph -- the second paragraph begins, Pond 2 --
A Mm-hmm.
Q -- in a parenthetical at the end it says, There is probably more risk from the unlined runoff basins out there than a little ash stuck between the Poz-O-Pac and the geomembrane.
Do you see where it says that?
A No.
Q Do you see that?
A Oh, I'm looking in the wrong place. Yes, I see that.
Q Do you have an understanding of what Eric Tlachac meant by that?
MS. NIJMAN: Only if you know what he meant.
THE WITNESS: I don't know what he meant.
BY MS. BUGEL:
Q And turning back to Page 13734, at the bottom of that page, there is an e-mail from you,

Maria Race, to Eric Tlachac sent Wednesday, October 24th, 2007, 12:22 p.m. The second -- do you see where it says that?

A Yes.

Q The second sentence of that e-mail says, I agree with your assessment of risk/benefits.

Do you see where it says that?

A Yes.

Q Do you recall what you meant by that?

A If I were to guess, based on what I see in this e-mail --

MS. NIJMAN: Well, don't guess. If the e-mail helps your recollection or if there's something stated there, that's fine.

THE WITNESS: I'm agreeing in this e-mail that it's okay to leave the 4 to 6 inches, it says, of ash in place.

BY MS. BUGEL:

Q And do you understand from this e-mail chain that that was saying "in place" meaning between the Poz-O-Pac and the geomembrane?

A Yes.

Q And do you recall considering the risk of doing that?

A I don't recall considering the risk of doing that.

Q Do you have an understanding of the risk of doing that?

MS. NIJMAN: I object to the form. The risk of doing what?

MS. BUGEL: Leaving 4 to 6 inches of ash in between the Poz-O-Pac and the geomembrane.

MS. NIJMAN: And what risk are we talking about?

MS. BUGEL: The risks -- there were risks discussed in this e-mail. Maria has read where she said, I agree with your assessment of the risk, slash, benefits. That is the risk we're talking about.

MS. NIJMAN: So whatever general risk --

THE WITNESS: Let me look at this again.

As I sit here, I believe I wouldn't have considered the ash placed on the Poz-O-Pac, the ash that was still there to be a risk, the bottom ash, which is what is stated in here.

BY MS. BUGEL:

Q Why wouldn't you consider that to be a risk?

MS. NIJMAN: If you recall.

THE WITNESS: As I sit here, bottom ash is used for a variety of purposes and bedding for the liner seemed appropriate.

BY MS. BUGEL:

Q And looking, again, at the second paragraph in the very first e-mail on Page 13734, the paragraph that begins, "Just to clarify," this goes on in the third sentence -- I'm sorry, the second sentence -- second sentence begins, However, this will make an excellent bedding liner for the geomembrane, parentheses, we just did a cover project that way this summer on an ash landfill in Wisconsin, closed parentheses, comma, provided that it is dry, comma, so installing in spring may not make sense either.

Do you see where it says that?

A Yes, I do.

Q Do you recall having any understanding of that part of the e-mail at the time you received it?

A I don't recall.

Q It goes on to say, July/August would be ideal, comma, and I believe that L.C. said that Pond 1 wouldn't be full until 2009, period.

Do you see where it says that?

A Yes.

Q Do you recall having any understanding of that at the time you read it?

A I don't recall.

Q Do you recall any agreement to that time period?

A No, I don't recall making an agreement to a particular time period.

Q Do you recall if the membrane at Joliet 29 Ash Pond 2 was, in fact, installed?

A This is actually Will County e-mail, isn't it?

MS. NIJMAN: It says Joliet 29.

THE WITNESS: This says Will County. I'm getting confused.

MS. NIJMAN: The RE says "Joliet," but the text says "Will County," so it's a little complicated.

THE WITNESS: They both have a Pond 2, which is why I'm confused.

BY MS. BUGEL:

Q Okay.

A Let me see.

Q The third paragraph goes, FYI, I have not heard back from Jim Sault on our proposal for

permitting the replacement liners for Ash Ponds 2 and 3 at Will County. And then in the parenthetical it goes on to say, I wasn't anticipating Joliet 29 needs for procurement support based upon a conversation that I had with Lynn Johnson in September, but we're happy to do it, dash, it's nice to see these projects through to complete, parenthetical.

Do you see where it says that?

A Yes.

Q Does that clear up whether this was Joliet or Will County?

A Well, Jim Sault works at Will County.

Q Mm-hmm.

A From looking at these e-mails, I believe that Ash Pond 2 they're discussing here is Joliet because Bill Spelich and Elsie Briette work at Joliet.

Q And do you recall that liner being installed following this e-mail chain?

A I think this is a very confusing e-mail chain.

Can you repeat the question, please.

MS. BUGEL: Can you read it back.

(Record read as requested.)

THE WITNESS: No, I do not.

MS. BUGEL: Can we turn to Deposition Exhibit 2, please.

BY MS. BUGEL:

Q I'm passing you what's been marked as Deposition Exhibit 2. This is Bates No. 18418. Turning to the lower e-mail on that page, this appears to be an e-mail from Brian Delcorio to Maria Race and others on July 24th, 2008, at 10:27 a.m., with a subject line of Joliet Pond No. 1 Liner Install.

Do you see where it says that?

A Yes.

Q Are you familiar with this e-mail?

A No, I don't recall it.

Q Does your name appear on this e-mail?

A Yes.

Q Are you able to say whether this is a true and accurate copy of this e-mail?

A As I sit here, it looks like one.

Q If you want to take a moment to review the long paragraph in that e-mail.

MS. NIJMAN: Faith, I just have a question. Is the -- on the subject line, there is a little symbol

like there is an attachment. Is that an attachment symbol?

MS. BUGEL: I believe that is an attachment symbol. The exhibits that we received, sometimes they had the attachments, many times they did not have the attachments.

MS. NIJMAN: Okay. I'm just asking if the next page is the attachment.

MS. BUGEL: No, I don't believe that the -- this is the attachment. I think there would have been something -- a document attached.

THE WITNESS: Okay. I've read the document.

BY MS. BUGEL:

Q Okay. And then referring to the top e-mail on that page from Maria Race to Brian Delcorio, among others, on July 24th, 2008, 10:36 a.m.

Do you see where it says that?

A Yes.

Q Do you see where it says, You may proceed as you describe?

A Yes.

Q Do you recall giving that response to this e-mail?

A I do not recall it.

Q Do you know whether they went ahead and reconstructed the bank as discussed in the e-mail?

A I do not.

Q Do you recall whether any of the actions discussed in this bottom e-mail were taken?

A I don't know.

Q Do you know when Joliet Pond No. 1 was relined?

A I'm not sure. I know that it was relined, but I'm not sure of the day.

Q I'm passing you what has been marked as Deposition Exhibit 3 and it's got Bates No. 13737 through 13745. And this appears to be an e-mail from Eric Tlachac to Blake Connolly, cc'ing Maria Race, among others, February 21st, 2008, 9:13 a.m.

Do you see where it says that?

A Yes.

Q Do you see where you were cc'd on this e-mail?

A Yes, I do.

Q Are you familiar with this e-mail?

A I don't remember it.

Q Do you recall reviewing this e-mail at the time you received it?

A No, I don't, but I get a lot of e-mails, so I may have.

Q Do you know whether this appears to be a true and accurate copy of the e-mail chain?

A I would believe it is.

Q Referring to the last -- the very last -- I've got to find where I'm referring to. Referring to the last paragraph on this page, the last sentence, it's not complete on this page, but begins, In fact.

Do you see that, where it says that?

A Yes.

Q We did not want to remove the existing Poz-O-Pac liner at Joliet because we were concerned that would present a subgrade surface that would jeopardize the integrity of the geomembrane replacement liner, parentheses, i.e., sharp edges, closed parentheses, comma, or at least require additional accommodations, slash, cost to mitigate -- and this goes on -- but the Joliet ponds are 15 to -- 15, dash, 20 feet deep, parentheses, as opposed to 7 feet at Will County, closed parentheses, coma, so the capacity impact there was much less significant, period.

Do you see where it says that?

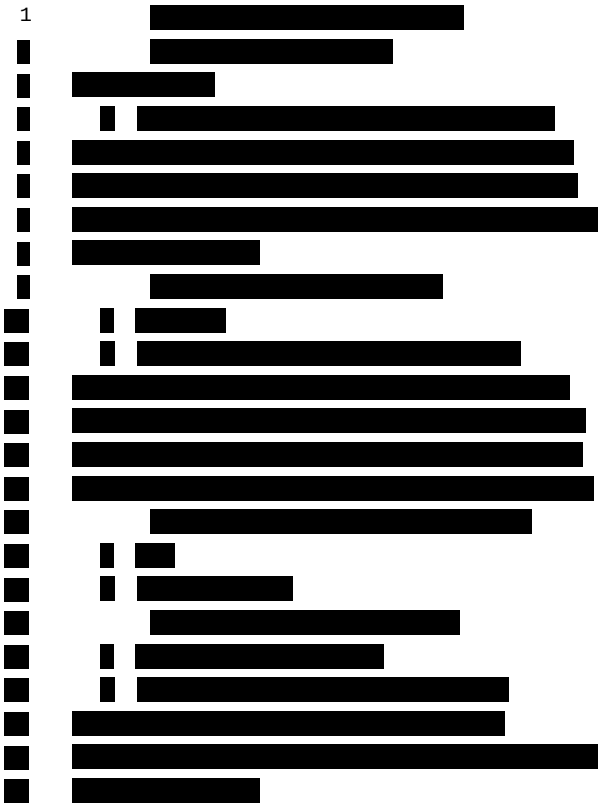
A Mm-hmm. Yes.

Q Do you recall whether the Poz-O-Pac liner at Joliet and -- I'm sorry, I got confused myself -- do you recall whether the Poz-O-Pac liner at Joliet was removed?

MS. NIJMAN: In which pond?

MS. BUGEL: This does not specify a pond, but in relining -- let's -- I'm going to refer to Pond Liner 1.

BY MS. BUGEL:

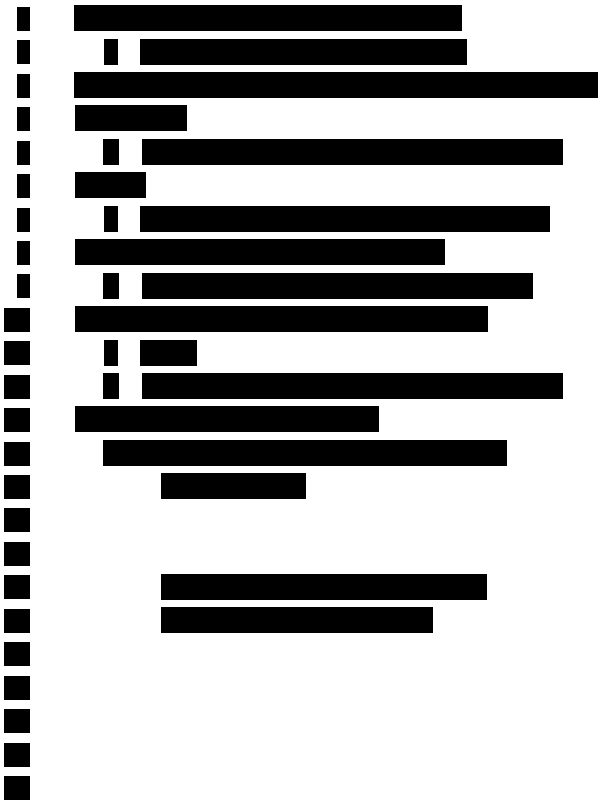


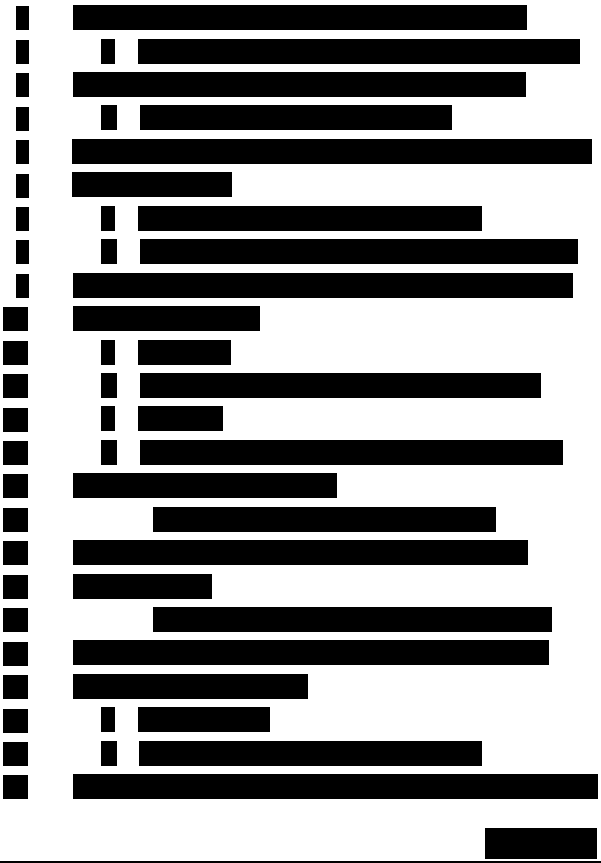
Q Do you recall that being removed?

A I don't recall.

MS. BUGEL: We are now referring to a document that's confidential, so if you could mark the transcript as confidential and I will let you know when we're done.

(Whereupon the following pages are marked confidential.)





(whereupon the following pages are no longer confidential.)

BY MS. BUGEL:

Q I am passing you what is marked as Exhibit 5 -- so I've passed you what's been marked as Exhibit 5.

A Mm-hmm.

Q And this has a caption, In the matter of Midwest Generation, LLC, Joliet 29 Generating Station, Joliet, Will County, Illinois, ID No. 6284, Illinois EPA VN W, dash, 2012, dash, 00059 Bureau of Water.

Do you see where it says that?

A Yes, I do.

Q And are you familiar with this document?

A Yes, I am.

Q Have you reviewed this document?

A Yes, I have.

Q Does this appear to be a true and accurate copy of the Joliet Compliance Commitment Agreement?

A Let me just take a quick look. It looks incomplete because it's not countersigned, but otherwise it looks like the correct agreement, but I'm concerned that it isn't countersigned. I don't

believe John Kennedy signed a version that wasn't countersigned, though, that we didn't agree on, but I'm not sure.

MS. NIJMAN: Okay. That's fine.

BY MS. BUGEL:

Q Can you please turn to Provision 5C on Bates Page -- my page number on it is wrong, but Bates 526.

Are you familiar with this provision?

A Yes, I am.

Q Do you know how Joliet complies with this visual inspection requirement?

A I do not. I assume that they have a procedure in place at the site for that.

Q Do you know if this CCA prohibits storage or handling of ash in unlined ponds?

A As I sit here, my understanding is that this regards the ash ponds at Joliet 29. I'm not sure how it addresses other items.

Q And can you explain how -- if this addresses just the ash ponds at Joliet 29 and not other items, how is that relevant to any prohibition on storing or handling ash in unlined ponds?

MS. NIJMAN: I'm going to object to the form of

the question as compound and vague.

THE WITNESS: I don't understand the question.

BY MS. BUGEL:

Q Okay. I had asked you if this CCA prohibits storing or handling ash in unlined ponds, and your answer -- to paraphrase it -- says this is in regards to the ash ponds at Joliet.

I'm trying to figure out how that response answered my question.

MS. NIJMAN: You can answer, if you understand what she's asking.

THE WITNESS: Are you -- the CCA describes the following actions that need to be taken at the ash ponds.

MS. NIJMAN: And you're referring, in your answer, to the operational ash ponds?

THE WITNESS: Correct.

MS. NIJMAN: I think that's the distinction, Faith.

BY MS. BUGEL:

Q So -- well, let me -- is there an explicit requirement in here or -- let me rephrase that.

Is there an explicit prohibition in here on storing or handling ash in unlined ponds?

MS. NIJMAN: I think the document speaks for itself. It's either there or it's not.

You can answer if you know or you can -- we can sit here and she can read every word and see if it's there, but it seems like a waste of our time.

THE WITNESS: Under Compliance Activities in Part 3, in 5A, it states: The ash ponds at Joliet 29 shall not be used as permanent disposal sites and shall continue to function as treatment ponds to precipitate ash. Ash will continue to be removed from the ponds on a periodic basis.

And I believe that is what the compliance activities listed here are about.

BY MS. BUGEL:

Q Okay. Do you -- let me back up a little bit.

Can you explain what role you played in responding to the Violation Notice -- and I believe it's the same Violation Notice that's listed on this CCA, Illinois EPA VN W, dash, 2012, dash, 00059. Is that the Violation Notice, to best of your knowledge, for --

A I believe so.

Q Okay. And can you explain what role you played in responding to that Violation Notice?

A Sure. I was working with a team on addressing the VNs. The team consisted of my boss and his boss, among others.

Q And who was your boss?

A Bill Constantelos.

Q And who was his boss?

A Doug McFarland.

Q And when you said -- I believe you referred to the VNs. When you referred to the VNs, were you referring to the VNs for all of the Midwest Gen --

A All of the Midwest Gen groundwater well VNs that came out at approximately the same time in June 2012.

Q Can you explain what role you played in this Compliance Commitment Agreement?

THE WITNESS: Can I talk to you for a minute?

MS. NIJMAN: Is this a privilege question?

(Break taken.)

THE WITNESS: Thank you.

Could you please read the last question.

(Record read as requested.)

THE WITNESS: I worked with a team of Midwest Generation folks and we were directed by counsel in putting together information.
BY MS. BUGEL:
Q In doing so, were you involved in putting together any information about other potential sources of contamination that might have affected the groundwater at Joliet 29?
MS. NIJMAN: I'm going to object.
I direct you not to answer. It is a privileged conversation.
She stated she was directed by counsel on how and what to review. So given that, whether she looked at information relating to other items would be between -- whether counsel asked her for that or not. That's the basis of the privilege.
MS. BUGEL: I'm going to take a short break. Can we go off the record for a moment.
(Break taken.)
BY MS. BUGEL:
Q Separate from the knowledge you gained as a result of being directed by counsel, were you aware of other potential sources of groundwater contamination at Joliet 29?

MS. NIJMAN: Prior to the VNs?
MS. BUGEL: Prior to being directed by counsel to investigate any sources.
MS. NIJMAN: Assuming that direction was ever given.
THE WITNESS: So separate from the VNs is what you mean?
BY MS. BUGEL:
Q What I mean is, prior to any direction by counsel to do any investigation, were you aware of any potential sources of groundwater contamination at the Joliet 29 vicinity?
MS. NIJMAN: And let me insert an objection as to relevance and overbreadth because we're talking about this litigation relating to ponds. So are you asking for any source of groundwater contamination?
MS. BUGEL: Well, in order to make a determination as to whether it was the ponds, you might need to look at other sources besides ponds. So yes.
MS. NIJMAN: If you can answer the question, subject to the objection of overbreadth. Beyond the scope.
THE WITNESS: Can you give me a time frame for

that? That would help me.
BY MS. BUGEL:
Q Prior to being directed by counsel -- prior to any direction by counsel to investigate after you received the VNs, before you had confidential --
A Okay.
Q -- communications with counsel, did you become aware in that time period of any other potential sources of contamination?
A At Joliet 29, my main concern for source of contamination was road salt coming from off-site.
Q Can you explain why were you concerned about off-site road salt?
A Because the chlorides were high and we weren't seeing much more than that and before -- in the time frame that you just described, I would have probably investigated the road salt issue.
Q And what did that investigation turn up?
A I don't think anything of substance in that I looked at -- I looked on-line to see if I could find information relating to salt in the Des Plaines River and there were -- you know, anecdotally I can tell you that there is more salt after the snowy season and -- so I could see that there was a

correlation, but I don't believe at that time I went further to try to prove it.
Q Did you investigate any other potential sources other than road salt prior to any confidential direction by counsel?
MS. NIJMAN: After receiving the VNs?
MS. BUGEL: After receiving the VNs.
THE WITNESS: As I sit here, I can't remember doing that.
BY MS. BUGEL:
Q Before receiving the VNs, did you learn of any potential sources that led you to be concerned about groundwater contamination at the Joliet 29 facility?
MS. NIJMAN: I'm going to object to the form of the question as vague and also, again, overbroad as going beyond the scope of the complaint.
You can answer it if you understood it.
THE WITNESS: So are you talking about contamination potential co-located with the ash ponds? Something near the ash ponds? Is that what you're asking?
BY MS. BUGEL:

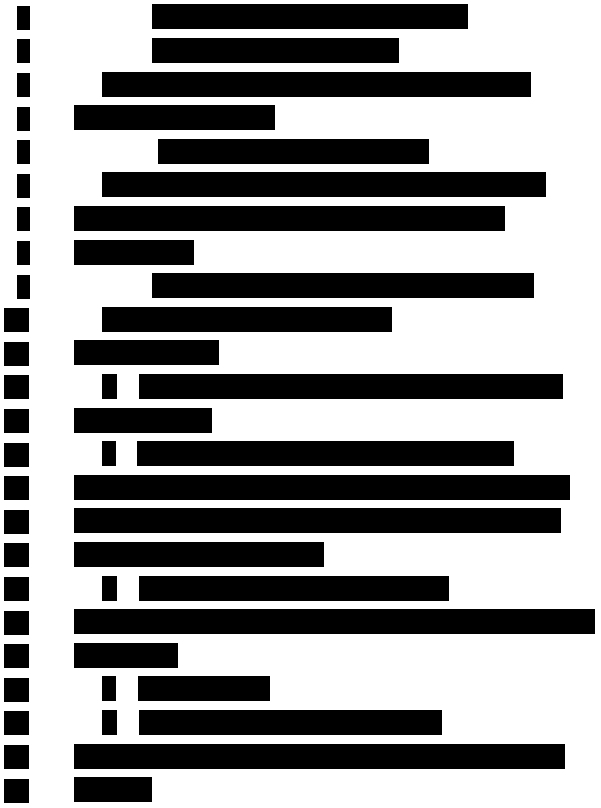
Q Let's start with that. Something near the ash ponds.
A Not that I'm aware of that I can remember right now.
Q Were there any other sources within the Joliet 29 property lines that you identified as potential sources of contamination at the Joliet 29 facility, water contamination, prior to the VNs?
MS. NIJMAN: Outside of direction from counsel.
BY MS. BUGEL:
Q Outside of direction from counsel.
A As I sit here, I can't remember having concern about water contamination of anything outside of direction by counsel.
Q I'm going to pass you what has been marked as Deposition Exhibit 6.
Are you familiar with this document?
A Only because it was one of the Bates numbers that was sent over, but I hadn't before that ever seen this document before.
Q When those Bates numbers were sent over, did you actually review documents prior to today?
A I didn't have a lot of time. So what I did was open up each one and just glance at the first

page and see if I recognized it.
MS. BUGEL: So for the record, this is Bates 25326. It's dated October 20th, 1992, to J.J. Kowalczyk. Subject: Submittal of individual stormwater permit application for Joliet Station No. 29.
BY MS. BUGEL:
Q Do you see where it says that?
A Yes.
Q So is it fair to say you've never reviewed this document beyond glancing at the first page before today?
MS. NIJMAN: It misstates testimony. She doesn't recall.
THE WITNESS: I don't recall seeing it. However, I have looked at files before at sites and it's not impossible that I've seen this.
BY MS. BUGEL:
Q Okay. Let's just flip to Page 25326 -- I'm sorry, we were already on Page 25326. Let's turn to Page 25339. And do you see the second paragraph there where it discusses an abandoned ash landfill area?
A Yes.

Q And do you see in the very first sentence that it identifies that -- that says, East of the station is an old landfill that has received bottom ash and fly ash from Joliet Station No. 9?
A Yes.
Q Do you see where it says that?
Do you have any idea if this is talking about the same ash disposal area that we discussed in regards to Deposition Exhibit 4 which is the U.S. EPA questionnaire?
MS. NIJMAN: If you know. I don't know how you would know.
THE WITNESS: I'm not sure.
BY MS. BUGEL:
Q Okay. Turning the page, there is a map on 25340 and --
A I need to get my bearing here. Hang on.
Q Okay.
A All right. I'm ready for a question.
Q Do you see on this map towards the middle where there is a V-shaped set of arrows that are labeled Stormwater Outfall No. 2?
A Yes.
Q Abandoned ash landfill?

A Yes.
Q Do you have any idea if this is the same ash landfill/ash disposal area that is discussed in deposition Exhibit No. 4, the U.S. EPA questionnaire?
MS. NIJMAN: I'm going to object to the form of the question and asking her to make that comparison. The documents speak for themselves. Exhibit 4 has latitude and longitude numbers on it -- you can certainly determine -- but asking her to make that assessment here without knowing latitude and longitude and being unable to compare, I think, is an inappropriate line of questioning.
You can try to answer it.
MS. BUGEL: I realize you think it's inappropriate, Jennifer, but as the person who was director of Environmental Services for Midwest Gen, I thought she might have some knowledge as to where the ash landfill was, that that might be something she came across in her career of 13 years.
MS. NIJMAN: Then ask her that.
THE WITNESS: Is that a question?
MS. BUGEL: You can read back my question, please, Tracy.
(Record read as requested.)

THE WITNESS: I'm not sure.
MS. NIJMAN: That's it.
THE WITNESS: Yeah, I'm not sure.
MS. BUGEL: And, Jennifer, I'm going to object to you coaching the witness and telling her "that's it" while she's still answering a question. I would appreciate if you would let the witness finish herself.
MS. NIJMAN: I understood she was finished, but that's fine.
MS. BUGEL: Well, it doesn't require a comment from you which could actually be perceived as coaching her to stop talking.
MS. NIJMAN: Certainly no intention to do that.
MS. BUGEL: Okay.
BY MS. BUGEL:
Q The abandoned ash disposal area that's discussed in Deposition Exhibit No. 4, do you have any idea where that is located at the Joliet 29 facility?
MS. NIJMAN: I object to form and vague.
You can answer, if you understand the question.
THE WITNESS: I believe -- so this is



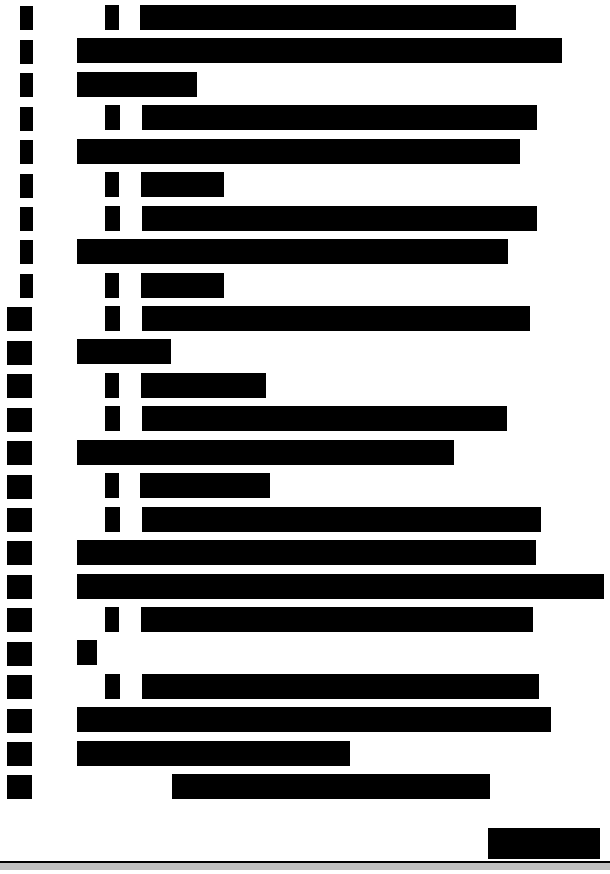


Exhibit 4; right?
MS. BUGEL:
Q This is Exhibit 4 --
A This is not?
Q U.S. EPA questionnaire. Let's set aside --
A Okay. So setting this aside -- that would be better. I could more easily speak to this.
Q Okay. Let's set Exhibit 6 aside and if you want to pull this up again and I need to flip back to find those page numbers again. So this is -- yes, it begins at 821?
MS. BUGEL: For the record, we are discussing a confidential exhibit again and you -- we were looking at Pages Bates No. 890, 891.

(Whereupon the following pages are marked confidential.)

are no longer confidential.)

(Whereupon the following pages are no longer confidential.)

BY MS. BUGEL:

Q I am passing you what has been marked as Deposition Exhibit 8. The first page is just the file folder that it came in, so you can flip to the second page of it which is Bates No. 25139 and this goes through 25167.

MS. BUGEL: And for the record, this is titled Commonwealth Edison Company, Chicago, Illinois, Phase 1, Environmental Site Assessment of Commonwealth Edison, Joliet No. 29 Generating Station, 1800 Channahon Road, Joliet, Illinois, and -- by ENSR Consulting dated October 1998.

BY MS. BUGEL:

Q Are you familiar with this document?

A Yes.

Q And how did you come to be familiar with it?

A I can't remember. I know that sometime in the mid 2000s I became aware of it.

Q And you've reviewed this document?

A At some point I have. Not recently.

Q And if you could refer to Page 25149. There is a map on Page 25149 and this map appears to be of the Joliet 29 facility; is that correct?

A Yes.

Q And on this map, do you see where -- in the lower left-hand corner there is a label, ash landfill?

A Yes.

Q Do you have any knowledge as to what that ash landfill is?

A No, I do not.

Q Based on its location on this map -- based on its location on this map alone, would that be a different ash landfill than the ash disposal area that you just indicated that you knew of that was east of the ponds?

MS. NIJMAN: I object to foundation. Compound. If you know, you can answer.

THE WITNESS: I'm not sure, but I think so.

MS. BUGEL: And just for the record, this ash landfill that's labeled here -- the label for an ash landfill here would be southwest of the ponds.

BY MS. BUGEL:

Q Is that correct?

A Southwest, yes. More south.

Q And the -- do you see how the property boundary is depicted on this map with a long dash and then two small dashes -- shorter dashes? You can look at the legend.

A Yes.

Q And do you have any idea if the property boundary that is depicted on this map remains the same?

A I don't think so.

MS. NIJMAN: I'm also going to object --

THE WITNESS: I'm not sure.

MS. NIJMAN: -- the question assumes that she knows what the property boundary is. Foundation.

BY MS. BUGEL:

Q Do you know what the property boundary is at the Joliet 29 facility?

A I have to tell you, I'm not entirely sure because ComEd retained some property and Midwest Gen has some property, and so I actually have to look at a property map to know whenever I'm doing anything with the site.

Q Okay. I am handing you what has been marked as Deposition Exhibit 7. This is dated April 18th, 2011, beginning at Bates No. 2496 through Bates No. 2550. The first page appears to be a letter to the Illinois Environmental Protection Agency; the second page -- Page 2497 indicates that it is signed by Richard M. Frendt.

Are you familiar with this document?

A Yes, I am.

Q And have you reviewed this document -- previously reviewed this document?

A Yes, I did.

Q And --

A Probably during its preparation I would have reviewed it.

Q And it is the quarterly groundwater monitoring results, first quarter 2011, Joliet 29 generating station ash impoundment; is that correct?

A Correct.

Q And does this appear to be a true and accurate copy?

A Yes.

Q Could you please refer to Page 2499. Page 2499. And this appears to be a site location map.

Do you see where it says that?
A Mm-hmm.
Q And a moment ago we were talking about the property boundaries of the Joliet 29 facility, and do you see where this is indicated in the legend as a dashed red line?
A Mm-hmm. Where it says General Site Location?
Q Yes. And given this property boundary, do you have any idea of whether the ash landfill that was indicated in Exhibit 8 would be within the property boundaries of the Joliet Station No. 29?
A I don't think so based on my knowledge. However, I would note that this is meant to be a general location and not a completely, you know, "In God We Trust" accurate map.
Q Okay. Do you know if Midwest Gen has ever monitored the groundwater in the south to southwest side of the property?
MS. NIJMAN: I'm just going to object to overbreadth to the extent it asks her about the entire company. You can ask if she's aware of it. She's not answering for the company. She's not a --
MS. BUGEL: And I've asked if she knows. I've

asked for just her awareness of what she knows.
MS. NIJMAN: No, you didn't, but that's fine. If she knows --
MS. BUGEL: No, I think I started that question with, Do you know, which is kind of asking for what she knows.
MS. NIJMAN: Okay. Given that qualification.
THE WITNESS: I am not aware of any as I sit here except for the groundwater monitoring that we've done for the monitoring wells around the ash impoundments.
BY MS. BUGEL:
Q For reference, can you turn to Page 2501 of Exhibit 7?
A Mm-hmm.
Q And have you reviewed this portion of this document before?
A I'm sure I have.
Q And does this appear to be the monitoring well location -- I'm sorry, monitoring well location map?
Do you see where it says that?
A Yes. It does appear to be that.
Q And this map indicates where I believe a

total of 11 monitoring wells are located.
Do you see that?
A Yes.
Q And can you describe, generally, where those wells are located to the best of your understanding?
MS. NIJMAN: I object to vague.
You can answer, if you understand what she's asking.
THE WITNESS: Could you be more specific in your question? I'm not sure I understand it.
BY MS. BUGEL:
Q You indicated earlier that you understand that Midwest Gen has done some monitoring around the ash ponds?
A Yes.
Q And does this map -- is this map consistent with your understanding of where those monitoring wells are located?
A This looks like where our monitoring wells are located on this page, yes.
Q And on this page, those monitoring wells appear to be located immediately adjacent to the ash ponds -- I'm sorry, let me rephrase that.

Those monitoring wells are located adjacent to the ash ponds; is that correct?
A Yes.
Q And around the ash ponds; is that correct?
A Correct.
Q And on this map, there are -- well, I realize this map may not show the full extent of the property boundary; but at least on this map, there don't appear to be any monitoring wells south of the actual facility building?
A That's correct.
Q Or southwest of the facility building?
A Correct.
Q Do you know if there are any monitoring wells that do not appear on this map but are at -- but are on the property boundary?
A I don't think so, as I sit here.
MS. BUGEL: Give me a moment to figure out where I am and what I've covered, and I figure we'll go for maybe another seven minutes and take a break for lunch.
THE WITNESS: Sure.
BY MS. BUGEL:
Q Is that good?

A Yeah, that's great. Thank you.
Q I'm passing you what has been marked as Deposition Exhibit 9 and this is a -- covers the Bates range 19485 through 19668. And if you turn past the file folder page to Page 19486, do you see where it says, This is a summary report dated July 25th, 2005, and it's on KPRG letterhead?
A Yes, I do.
Q And do you see where your name appears on this?
A Yes.
Q So is it correct to say that this summary report was directed to you?
A Yes.
Q And are you familiar with this report?
A Yes.
Q And have you reviewed this report?
A Not recently. Probably, you know, in the time frame when it came out.
Q And on Page 19486, under Project History and Previous Work, do you see where it says -- in the very first sentence, Midwest Generation, Joliet Station No. 29 include areas where ash and slag resulting from the combustion of coal were formerly

placed on the ground surface.
Do you see where it says that?
A Yes, I do.
Q Do you have an understanding as to which ash disposal areas that is identifying?
A Yes, I do.
Q Can you explain which one or ones?
A Yeah. Actually, if you go to Bates Page 19495, there's a legend that has -- that has this. It isn't on a larger map, though.
Q So can you indicate generally -- and let me -- for the record, this page is indicated as Former Ash Placement Area, Joliet Station No. 29.
Do you see where it says that?
A Yes.
Q Can you indicate, to the best of your ability, where you understand this former ash placement area to be on the Joliet Station 29 property?
A Going back to this other -- let me look at this other document and see if it makes it easier to point it out. It's not on here. It's hard to say. It's near the coal pile just to the north, I believe.
Q Now, would that be different from the ash

disposal area that we identified as being east of the ponds?
A Yes.
Q And do you have any idea of the size of this former ash placement area that is depicted on Page 19495?
A I guess I would use the scale that's here as an estimate but -- and measure it out. I honestly don't remember.
Q And turning to Page 19486, which is the cover letter.
A Mm-hmm.
Q The second sentence says, The -- and then it has a segment that's redacted -- ash placement area at Station No. 29 is approximately 13.2 acres in size.
Does that strike you as accurate based on your understanding?
A Sure.
Q Do you have any idea whether this ash placement area that we just identified was lined?
A To my knowledge, it was not lined.
Q Do you understand whether coal ash was placed directly on the ground surface?

A My understanding is that that is the case.
Q Turning to Page 19492, this discusses inlet metals data from sample locations.
Do you see that?
A Yes. In the bullet points?
Q In the bullet points, yes.
A Okay.
Q Do you have any idea whether the sampling resulted in -- the sampling indicated elevated levels of any constituents?
MS. NIJMAN: Are you just asking her to read what it says in the document or are you asking for an independent recollection?
MS. BUGEL: No, I'm asking her recollection.
THE WITNESS: I don't remember.
BY MS. BUGEL:
Q Do you have any recollection as to the depth of the ash in the area that we've identified -- that you said is near the coal pile to the north of the property?
A I don't recall the depth, but it is probably in this document.
Q And turning to Page 19487, second paragraph -- I'm sorry, second full paragraph begins,

The borings indicated that the depth of ash ranged from 2.5 to 18 feet in thickness within the two areas.

Do you have any idea what two areas that is referring to?

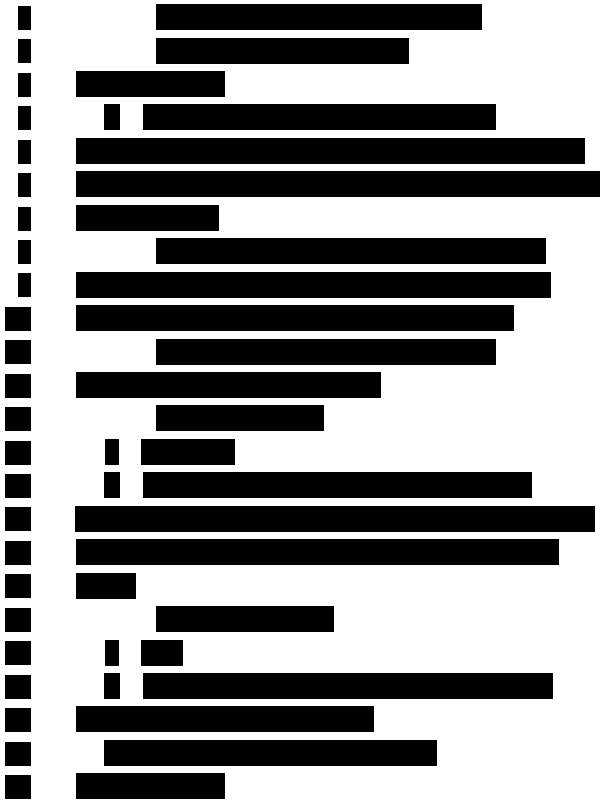
A No. Maybe, you know, you could figure it out from context, but I don't know. I would assume that it's the areas in this map.

Q Do you know why KPRG was hired to write this report?

THE WITNESS: There's a privilege issue here that I should discuss with you.

MS. NIJMAN: Okay.

MS. BUGEL: If you want to discuss it -- I have four questions left on this, so if you want to discuss it, then we can do those four questions and then break for lunch just to finish off this area.



MS. NIJMAN: Well, if you want to go on with your questions other than the "why" question, we can discuss this at lunch and get back to you.

MS. BUGEL: Okay. Let's go back to that question after lunch.

BY MS. BUGEL:

Q Do you know if the ash, from the area that

we've identified again near the coal piles to the north, was ever used for a beneficial reuse as CCB?

A I can't remember.

Q Do you know if the ash in that area is still on-site?

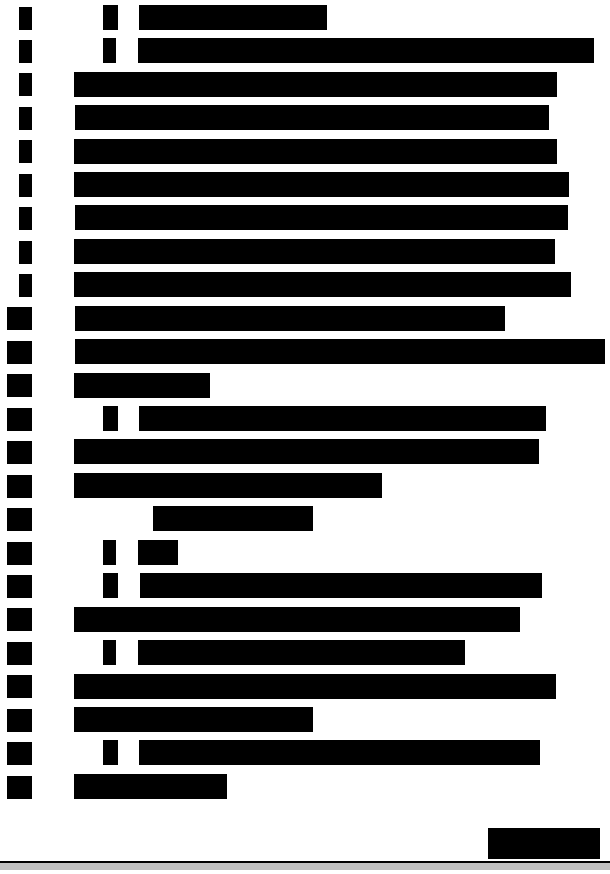
A No, it is not, as I remember.

MS. BUGEL: That's all.

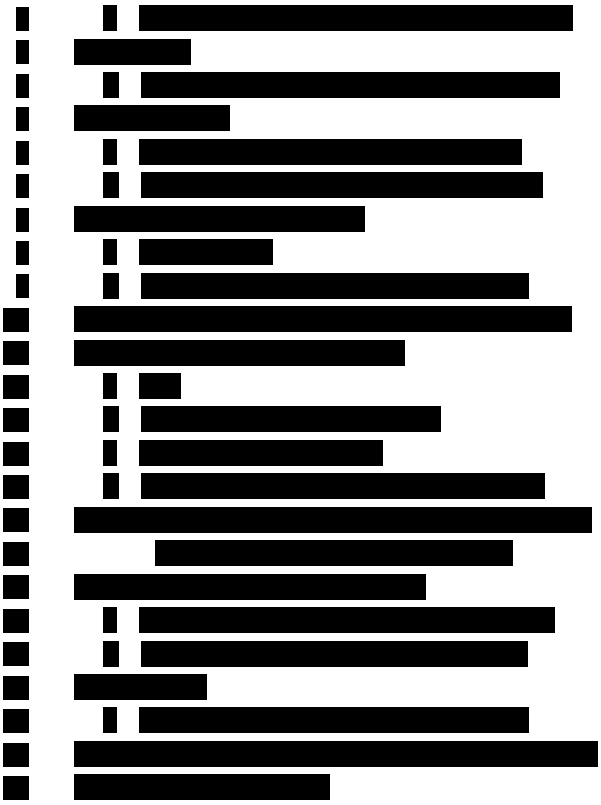
MS. NIJMAN: Okay.

(Whereupon, a luncheon recess was taken to resume at 1:00 p.m.)

(Whereupon, Deposition Exhibit Nos. 43 through 52 were marked for identification.)

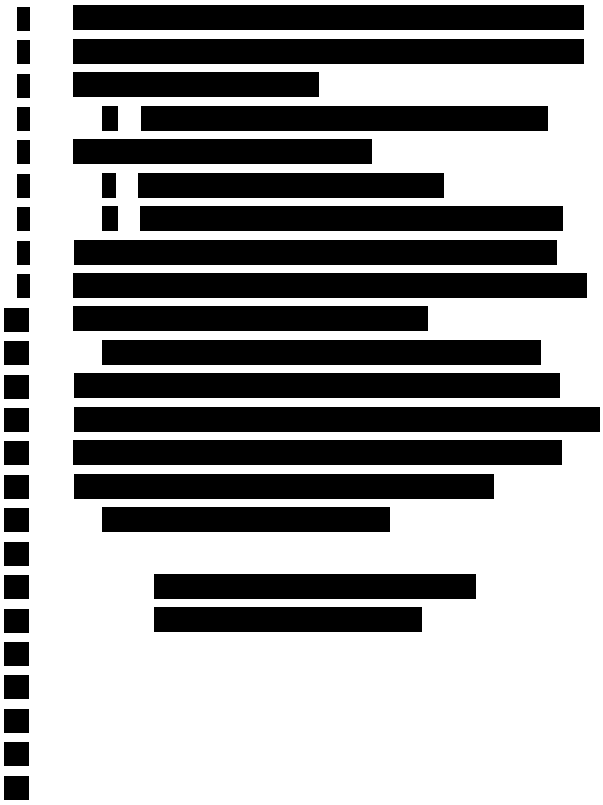


(Record read as requested.)

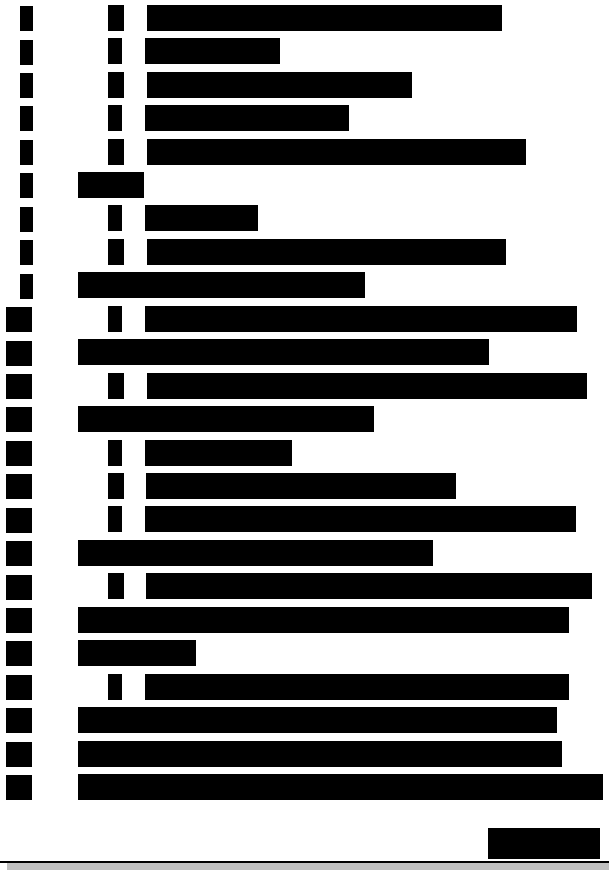


MS. NIJMAN: I'm going to direct her not to answer on the basis of attorney-client privilege.

MS. BUGEL: We are going back to Deposition Exhibit No. 4 and I think this is -- that's your copy.



(Whereupon the following pages are marked confidential.)



(Whereupon the following pages
are no longer confidential.)

BY MS. BUGEL:

Q I am passing you a document that has been marked Exhibit 20. And, for the record, that document is dated October 4th, 2012. It is -- has a cover letter to John Kennedy and it is regarding the Proposed Compliance Commitment Agreement Violation Notice W, dash, 2012, dash, 00056, Midwest Generation, LLC, Waukegan Generating Station ID No. 6281.

Do you see where it says that?

A Yes.

Q And attached to the letter beginning on Bates Page 540, there is a Compliance Commitment Agreement for Illinois EPA VN W, dash, 2012, dash, 00056, Bureau of Water in the matter of Midwest Generation, LLC, Waukegan Generating Station.

Do you see that?

A Yes.

Q Are you familiar with this document?

A Yes, I am.

Q Have you reviewed this document?

A Yes. At the time that it came out in 2012.

Q And acknowledging that it is not signed by Michael Crumly. Otherwise -- I'm sorry, strike that.

Acknowledging that it's missing a signature for Michael Crumly, does this appear to be a true and accurate copy of the Waukegan CCA that is just signed by John Kennedy?

A Well, the concern that I have -- and I noticed this before -- is that it says "proposed" because this was the proposal, but it does look like -- it looks very similar to -- and John Kennedy signed it, so it just isn't countersigned yet.

Q Does the CCA require the relining of any ponds at Waukegan?

A No, it does not.

Q Do you have an understanding of why not?

MS. NIJMAN: You don't need to speculate. Just if you know.

THE WITNESS: No, I'm thinking about it.

MS. NIJMAN: Okay.

THE WITNESS: The liners were in good condition and Illinois EPA asks for what they wanted in the Compliance Commitment Agreement.

BY MS. BUGEL:

Q What did they want?

A The things that are listed here under Compliance Activities and Terms and Conditions.

Q Do you have an understanding of how the items listed in the CCA would address the violations from the Violation Notice?

THE WITNESS: Is this a privilege issue?

MS. NIJMAN: Well, she's asked for your understanding --

THE WITNESS: My understanding.

MS. NIJMAN: -- of how they respond to the VN.

THE WITNESS: Okay.

MS. NIJMAN: So if you have an independent understanding, not based on direction or conversation with counsel.

THE WITNESS: Could you read the question, please.

(Record read as requested.)

MS. NIJMAN: If you're concerned about a privilege issue, we can talk about it.

THE WITNESS: No, I'm just thinking about my answer. My understanding is that the ash impoundment liners' condition was good and that the site ponds have never been used as permanent disposal places and that we have monitoring wells in place; that those

things -- plus the ELUC that was added because there was a previous one for the tannery site that encompassed part of the property, this encompassed the rest of the property, that those things put together, my understanding is that that satisfied Illinois EPA, that these things -- with those things in the forefront satisfied the Illinois EPA.

BY MS. BUGEL:

Q Do you know what information formed the basis for the conclusion that the liners were in good condition?

A I do not. I'm sure we provided them information --

Q Do you --

A -- but I don't know what made them satisfied.

Q Do you know what information was provided to IEPA?

A I think that probably -- that could have been done under privilege.

MS. NIJMAN: We provided everything that was given to the EPA because it's -- once we've given it to the EPA, it's not privileged. So...

THE WITNESS: Yeah, I don't know of any

particular documents that we gave them.

BY MS. BUGEL:

Q Do you agree with the conclusion that the liners are in good condition?

A Yes, I am -- I do.

Q What's the basis for your agreement?

A I've seen the liners myself. As I sit here, I believe that they are in good condition. The last time that I saw them was from the roof of Waukegan station a few months ago and they were in good condition, to me, at that point in time.

Q How can a visual inspection inform the conclusion that they're in good condition? If you could just walk through what you're looking for.

MS. NIJMAN: Again, she's not an expert in reviewing liners. She's saying -- you've asked her for her basis for her understanding and she's given you her basis.

MS. BUGEL: And I'm asking what formed her basis. I'm trying to understand what she was looking for when she was up on the roof looking at the pond.

MS. NIJMAN: As a layperson?

MS. BUGEL: Yeah.

THE WITNESS: As a layperson, I would look for

rips or tears in the liner. The liner is white material, the ash is not white. So you can see the difference and, you know, you could see if there was a rip or a tear between the liner and the ground.
BY MS. BUGEL:
Q Okay. And I am passing you what has previously been marked Deposition Exhibit No. 21. The first page of this appears to be an e-mail, Waukegan Station 1 SR, Quarter Ash Pond Monitoring Report from Richard R. Gnat to Fredrick Feenbaas among others, cc Maria Race, dated 4/25/2014, 4:11 p.m.
Do you see where it says that?
A Yes, I do.
Q And your name appears on here as a cc?
A Yes.
Q And attached to this e-mail, if you flip to Page 2, is a letter with a title, Quarterly Groundwater Monitoring Report, Waukegan Generating Station, April 23rd, 2014, directed to Andrea Rhodes of Illinois Environmental Protection Agency and signed by Mark Nagel.
Do you see that?
A Yes, I do.

Q Are you familiar with this report?
A Yes, I am.
Q Have you reviewed it?
A I'm sure I reviewed it.
Q And turning to Page -- Bates No. Page 15564, did you review these groundwater analytical results?
A I'm sure I have.
Q And, again, I understand you are not an expert in groundwater monitoring or reading the results, but in reviewing the -- let me ask a different question.
Did you review multiple sets of groundwater monitoring results from the period of when the monitoring wells were installed through the present?
A Yes, I would have done that.
Q And did you -- are you able to look at results like this and understand where in the table you might -- let me strike that and rephrase it.
Are you able to look at results and identify if results are showing an exceedance in a table like this?
A Well, what I would do is compare what it

says for standards to what it says for results.
Q And in looking at results, are you able to determine if something might be a man-made source of contamination versus naturally occurring background?
A No. I can't -- as I sit here, I can't tell what a particular contaminant can emanate from in terms of whether it's natural or not natural; the molecules are the molecules. But I could look at something and say that it is higher than some of the other values, for example.
Q Okay. Can you look at the row listed as boron?
A Sure.
Q Do you see -- do you see boron levels in that row that are exceeding the standard in the first column?
A Yes.
Q And where are you seeing those?
A As I sit here and look at this, I can see from March 14th of 2012, June 18th, 2012, and across the page, every quarterly value is higher than the standard of 2.0 for this particular Monitoring Well 5.
Q Have you reviewed any monitoring reports

or -- let me rephrase that.
Have you reviewed any monitoring results from wells associated with the tannery that you just mentioned?
MS. NIJMAN: I'm sorry, did you mention a tannery?
MS. BUGEL: A couple questions ago.
THE WITNESS: I did mention a tannery.
I have reviewed data from the tannery that's produced under the ELUC for the tannery; that's one source of information.
BY MS. BUGEL:
Q And the data you reviewed, did you ever look at the boron levels in that data?
A That data was collected by Commonwealth Edison's consultant and they did not look at boron, but my answer is incomplete and I need to talk to counsel.
(Break taken.)
THE WITNESS: All right. I'm satisfied with my answer and ready for the next question.
MS. BUGEL: Could you read back my last question and answer.
(Record read as requested.)

BY MS. BUGEL:
Q And referencing the same data that you had reviewed that was collected by Commonwealth Edison, did you see any sulfate measurements from those wells?
MS. NIJMAN: If you recall.
THE WITNESS: I know -- I know as I sit here that they did measure manganese and probably sulfate, maybe iron -- sometimes they monitor iron, sometimes they don't -- and arsenic, but I don't remember the results.
BY MS. BUGEL:
Q How recently did you review that data?
MS. NIJMAN: The ComEd data?
MS. BUGEL: Yeah.
THE WITNESS: Probably in the spring sometime. I know that they send out more data in the summer. They usually do their sampling in the summer. I don't remember if I reviewed that data, but I probably did, so maybe in the summer.
BY MS. BUGEL:
Q So this calendar year, 2014?
A Yeah, this calendar year, 2014, I've probably seen it.

Q And does Midwest Gen -- I'm sorry, do you know if Midwest Gen has that data on file?
A We do have that data on file.
MS. BUGEL: Can that data please be provided?
MS. NIJMAN: I thought it was.
MS. LAUGHRIDGE GALE: Yeah, I will go look for it --
MS. BUGEL: Okay.
MS. LAUGHRIDGE GALE: -- and if I have it, then I'll find it and get it to you.
MS. BUGEL: Okay. Thank you, Kristen.
BY MS. BUGEL:
Q And there is a site adjacent to the Waukegan facility called general boiler; is that correct?
A Correct.
Q And is there also -- do you know if there is monitoring at that site as well?
A I know that there's a monitoring well that -- it's called Monitoring Well 15 that is next to that site, plus we have monitoring wells that are next to that site too now.
Q And when you said there was Monitoring Well 15 which is next to that site.

A Yeah, it's to the south and it's kind of in the corner and it's one of the ELUC wells from the tannery site.
Q Okay. Do you know whose property it's on?
A I believe it's our property.
Q Okay. And have you reviewed any data from that Monitoring Well 15?
A Yes. That would have come with the other -- the other ELUC wells, it would have been in the same time frame.
Q And do you recall what the constituents were?
A Arsenic, probably manganese and -- like you were saying, maybe sulfate.
Q And does Midwest Gen have that data on file?
A Yes. It's together.
MS. BUGEL: If that -- the same request --
MS. LAUGHRIDGE GALE: Sure.
MS. BUGEL: -- for that to be provided, if it has not been.
THE WITNESS: It may have come in in August.
BY MS. BUGEL:
Q And aside from any confidential exchanges

with counsel or work that was done in response to counsel, do you have an independent understanding of whether the tannery is a source of groundwater impacts alleged in the Violation Notice?
A I believe as I sit here that it is.
Q And what's the basis for your belief?
A My understanding is that there is a plume coming onto our site and, therefore -- that's carrying contaminants, such as arsenic and boron, and I would expect that it's impacting our site further to the south because the monitoring wells that are further to the north show impacts.
Q And, again, aside from any privileged information as a result of interactions with counsel, do you have an independent understanding of whether the general boiler site is impacting groundwater at Waukegan?
A I'm not sure.
Q We can put aside Exhibit 21 and turn to Exhibit 23, and I'm passing to you what has been marked as Exhibit 23. And this exhibit, for the record, is titled Commonwealth Edison Company, Chicago, Illinois, Phase 1, Environmental Site Assessment of Commonwealth Edison, Waukegan

Generating Station, 10 Greenwood Ave., Waukegan, Illinois, by ENSR dated October 1998.

Do you see where it says that?

A Yes, I do.

Q And are you familiar with this document?

A I read this document a while ago. I am somewhat familiar with it.

Q And when you say you read it a while ago, can you put any time frame on that?

A I know that I first saw it in the 2000s -- mid 2000s time frame and I'm sure I looked at it since then. And in 2012 when we were packing our offices, I would have put them together, but I don't think I read them at that point.

Q And turning to Page 11999, do you see the bullet point -- third bullet point on the page labeled Adjacent Properties?

A Yes.

Q Have you reviewed this bullet point before?

A Not recently.

Q I'll give you a minute to review it now.

A Okay.

Q And towards the end of that bullet in the second to last sentence, it says, An arsenic, lead,

mercury and chromium contaminated groundwater plume has been identified on the former tannery site which extends easterly onto the subject property.

Do you see where it says that?

A Yes, I do.

Q So do you have an understanding of what pollutants you would expect to occur at elevated concentrations if they were coming from the tannery?

MS. NIJMAN: I object to foundation.

THE WITNESS: I only know what I'm seeing here. I do know that the ELUC that we signed had to do with arsenic, in particular; but lead, mercury, chromium I don't remember coming up. I remember arsenic, iron and manganese in the ELUC.

BY MS. BUGEL:

Q Could you repeat what you said you remember in the ELUC?

MS. NIJMAN: She can read it back.

(Record read as requested.)

MS. NIJMAN: Is this 1998?

THE WITNESS: 1998.

BY MS. BUGEL:

Q In reviewing groundwater monitoring results from the monitoring wells on the Waukegan property,

have you seen arsenic?

MS. NIJMAN: Asked and answered.

BY MS. BUGEL:

Q Have you seen elevated arsenic levels?

A Yes.

Q How about lead?

A I don't remember. I just generally don't look at every constituent and --- I'm focused on the ones that I'm expecting to see, like arsenic.

Q Would your answer be the same for mercury?

A I don't remember.

Q And how about chromium?

A I don't remember.

Q I believe we can set aside Exhibit 23 and turn to Exhibit 24 -- I'm sorry, let me -- we'll get Exhibit 24, but I just wanted to go back and clarify for the record, where are the wells on the Midwest Gen Waukegan property that you believe are affected by the tannery plume?

MS. NIJMAN: If you have an independent recollection sitting here.

THE WITNESS: My understanding is that the wells that are to the west of the ash ponds are impacted. It's possible that they're impacted; I'm

not a hydrogeologist, but...

BY MS. BUGEL:

Q Okay. Turning to Exhibit 24, I am passing you what has been previously marked as Deposition Exhibit 24 and this appears to be an e-mail titled Ash Pond Data Summaries from Richard Frendt to Maria Race, February 10th, 2012, 11:21 a.m.

Do you see where it says that?

A Yes, I do.

Q And your name appears as the recipient of this e-mail; correct?

A Correct.

Q Are you familiar with this e-mail?

A Yes.

Q And have you reviewed it?

A Yes, I reviewed it in 2012.

Q And this e-mail appears to contain an attachment, if you flip to Page 14158, Ash Pond Data Evaluation and Summary, Joliet No. 29 Station, Midwest Generation, LLC, Joliet, Illinois, January 2012.

Do you see that?

A Yes.

Q Okay. And then based on the first page, it

appears to have a summary -- evaluation and summary for each of the five stations.

Do you see that on the very first page, I think, looking at the icons?

A Okay. Yes. I see that.

Q So let's flip to -- if you flip to Page 14166, that contains the evaluation and summary for Waukegan station.

A Okay.

Q Do you see that?

A Yes.

Q And then turning to Page 14167 there is a heading titled Conclusions.

Do you see that?

A Yes.

Q And do you recall reviewing this portion of the evaluation and summary?

A I recall reviewing it.

Q And the third bullet down, the second sentence -- I'm sorry, let me back up a bit.

The third bullet down talks about MW, dash, 5.

Do you have an understanding of what MW, dash, 5 is?

A Yes, I do.

Q What is that?

A It's the upgradient well that's on the south side of the west ash pond at Waukegan.

Q And if you turn the page to 14169 --

A Mm-hmm.

Q -- this appears to be a monitoring well location map.

Do you see that?

A Yes.

Q And does MW-5 appear on this map?

A Yes, it does.

Q And is it in the location you just described?

A Well, it's a little further to the middle than I would have remembered; but I'm sure this is correct.

Q But it's your understanding that that location is upgradient?

A Upgradient of the other wells.

Q Of the other wells and the groundwater flow is from west to east?

MS. NIJMAN: Objection. Foundation. And not an expert.

BY MS. BUGEL:

Q When you say "upgradient," what do you mean by that?

A That the water is moving from that side of the impoundments roughly towards the other side of the impoundments. However, to correct myself, as I sit here, I know I have seen potentiometric maps showing that the water moves sort of in a -- what is that -- southeasterly direction, not directly across.

Q Okay. So --

A But it varies.

Q So turning back to Bullet Point 3 under Conclusions, when this references MW-5, it is the well marked on the map on Page 14169 that's marked MW-5?

A Yes.

Q That well?

A Yes.

Q And the second sentence of that bullet says, The elevated concentrations of compounds of interest in MW-5 appear to be the result of the well being installed in a former ash disposal area and not a result of leakage from the current ash ponds.

Do you see where it says that?

A Yes.

Q Did you form an independent conclusion of whether you agreed with that or not?

MS. NIJMAN: In her layperson understanding of it. This is written by a consultant.

THE WITNESS: I have -- I have an opinion that there is ash shown to be in that area, but that does not make it a former ash disposal area.

BY MS. BUGEL:

Q What is the basis for your understanding that there is ash shown to be in that area?

A I believe I have seen borings independently that show ash to be in that area -- bottom ash.

Q Do you have an understanding of how that ash came to be there?

A No, I do not.

Q You indicated that it's your understanding that it is not a former ash disposal area?

A I don't know.

Q Do you have an understanding as to whether the tannery plume would impact the groundwater monitoring results from MW-5?

MS. NIJMAN: Again, I'm just going to object to the extent this is calling for an expert opinion.

THE WITNESS: I don't know for certain.
MS. BUGEL: Bear with me. I'm just going to take a minute and make sure I covered everything.
BY MS. BUGEL:
Q Can you pull your copy of Depo Exhibit 23 again, please.
A Sure.
Q And referring to Page 12012, do you recall ever reviewing this site plan?
A I remember seeing this.
Q Do you see where -- to the left of the fly/bottom ash settling basin, there is a rectangle that is labeled Former Slag, slash, Fly Ash Storage Area?
A Yes, I do.
Q And was that area ever used -- I'm sorry, let me rephrase that.
Has that area been used as a slag, slash, fly ash storage area actively while you have been at Midwest Gen?
A No, it has not.
Q And do you have any other information about this former slag, slash, fly ash storage area that we haven't already covered?

MS. NIJMAN: Objection to the vagueness. It's overbroad.
THE WITNESS: There -- it would help me if you rephrased the question.
BY MS. BUGEL:
Q Okay. Do you know anything else about this former slag/fly ash storage area?
A No, I don't.
Q I think we can move on to Exhibit 27. I'm going to turn to Powerton now.
A Okay.
Q And I'm passing you an exhibit that is marked Deposition Exhibit 27. It appears to be an e-mail from Rich R. Gnat to William Gaynors, cc Maria Race, among others, entitled Powerton Station Ash Pond Monitoring First Q 2014, dated 1/20/2014, 10:52 a.m.
Do you see that?
A Yes, I do.
Q And does your name appear on this e-mail as a cc?
A Yes, it does.
Q Are you familiar with this e-mail?
A I don't remember it.

Q Do you know whether you reviewed it?
A I may have reviewed it, but in looking at this, I'm not entirely sure I did.
Q I'll give you a minute to review it now.
A Okay.
Q Referring to the "PS" on the e-mail which is the last paragraph, it reads, Has the metals cleaning basin been used in the last four months, question mark. If so, please let me know because we have some additional reporting requirements. Last we talked, it was indicated that the basin may be used during the first quarter of 2014.
Do you see where it says that?
A Yes.
Q Do you -- do you know if the metals cleaning basin at Powerton is lined?
A I'm not sure if it's been recently relined, but it does have a liner as I sit here.
Q I'm going to back up. Are you familiar with a metals cleaning basin at Powerton?
A I have seen it before, yes.
Q Do you know what it's used for?
A Not entirely.
Q Do you know if it is used as an ash

impoundment?
A I don't know.
Q Do you know why it's called the metals cleaning basin?
A I know that when cleaning is being done at the facility that the basin is used for the discharge from the cleaning.
Q Do you know if there have been groundwater impacts associated with it?
A I don't know.
Q Do you see where this e-mail mentions additional reporting requirements?
A Yes, I do.
Q Do you know what those additional reporting requirements are?
A No.
Q Do you know if they're being complied with?
MS. NIJMAN: Objection. No foundation. She said she doesn't know what they are, so how can she know if they are being complied with?
MS. BUGEL: If she doesn't know what they are in detail, someone might say in an e-mail they're complying with them and you can know --
MS. NIJMAN: Objection.

MS. BUGEL: -- that something is complied with without knowing what the requirement is.
MS. NIJMAN: Objection. No foundation.
THE WITNESS: As I sit here, I would assume that we would be complying with it, with whatever the requirements are.
BY MS. BUGEL:
Q And the second sentence talks about the basin -- the basin may be used during the first quarter of 2014.
Do you know if it was used in the first quarter of 2014?
A No, I do not.
Q We can set that aside and turn to Exhibit 28, and I'm passing you an exhibit that's been previously marked as Exhibit 28 and Bates No. 16342. It appears to be an e-mail from Bill Buscher to Maria Race with the subject being RE, tomorrow, dated January 14th, 2013, 3:51 p.m.
Do you see where it says that?
A Yes, I do.
Q And are you familiar with this e-mail?
A Yes.
Q And you're the recipient of this -- the top

e-mail?
A Yes.
Q And does this appear to be a true and accurate copy of that e-mail?
A Yes, it does.
Q And this e-mail arranged a meeting with Bill Buscher in Springfield; is that correct?
A Correct.
Q Do you recall that meeting?
A I think so.
Q Do you recall -- so did that meeting, in fact, happen?
A I believe so, yes.
Q Do you recall what you were meeting about?
A Given the timing of the meeting, I would say that we were updating him on our progress on the CCAs. It would have been a courtesy meeting because I was going to Springfield regularly for Title 5 meetings during that period of time. So as a courtesy, before or after I would offer to meet with them and I'm sure I did that on more than one occasion. So I don't remember this exact meeting, but I think, roughly, I -- it would have been an update like, Oh, we've gotten this pond done or, you

know, we're working on getting this GMZ application in or whatever.
Q We can set that aside and turn to Depo Exhibit 29. I am passing you what has been marked as Deposition Exhibit No. 29 and this appears to be an e-mail from William Gaynors to Charles Hart, cc Maria Race, among others, Subject, FW Liner in Pekin and -- on September 24th, 2013, 1:04 p.m.
Do you see that?
A Yes, I do.
Q And you were cc'd on this e-mail?
A Yes.
Q Are you familiar with this e-mail?
A I think I remember it.
Q And you've reviewed it?
A I'll review it now.
Q Okay.
A Okay.
Q If you could flip to the backside, which is Bates 22766, do you see the last e-mail in the chain?
A Yes.
Q And it reads, Matt, comma, I was just informed by my site superintendent that several areas of liner to the north of the rear wall pulled the

backing strips away and the liner is loose.
Do you see where it says that?
A Yes, I do.
Q And do you recall this portion of that e-mail?
A I don't.
Q Do you recall anything about the loose liner discussed in that e-mail?
A I recall that -- this misinstalled liner, I recall that.
Q Okay. Can you explain what the misinstalled liner was?
A When I read that, I was assuming that some portion of it was not installed properly and that they were trying to get them back to do that.
Q And do you know if Clean Air and Water Systems, the company listed in the e-mail, did, in fact, return to address that misinstalled liner?
A They would have, yes. As I sit here, I'm sure that they did because we had the deadline that we had to meet and everybody was under pressure then.
Q So am I to understand -- strike that.
Is it correct then to summarize -- strike that. I'm having trouble phrasing this

question.
Is it correct to say that this was not -- strike that, too. Maybe the fourth time is the charm. So I'm just trying to sum this up.
Is my understanding correct if I say that a liner -- this was a new liner being installed?
A Correct.
Q And it was installed incorrectly?
A A section was misinstalled.
Q And the company that installed it had to come back and fix that?
A That's my understanding.
Q And the -- in that time the pond would not have been put into use; correct?
A I don't know.
Q Okay. And do you know when that liner was originally installed? And when I say "originally," I mean, again, this relining project by Clean Air and Water Systems.
A So when --
MS. NIJMAN: When was the new reliner put in.
THE WITNESS: The new relined liner --
BY MS. BUGEL:
Q Yes.

A -- been installed?
I'm not certain, some time in 2013.
Q I think we're going to turn to Exhibit 30.
Okay. I am handing you an exhibit that's been marked as Exhibit 30 and this appears to be an e-mail from Jeffrey Bard to Maria Race, cc Joseph Heredia, among others, date of 8/13/2012, 8:37 a.m., Subject, Refreshing my memory.
Do you see that?
A Yes, I do.
Q And are you familiar with this e-mail chain?
A It looks like something that I wrote. I'm -- you know, I wrote it several years -- a couple of years ago, so I'd need to reread it if you want me to.
Q Okay. I am specifically going to ask about the second e-mail down --
A Okay.
Q -- in that chain, the bottom e-mail on Page 21335 if you want to review that.
A Okay. So this -- this section here?
Q And, for the record, from Maria Race -- that is you --

A Mm-hmm.
Q -- to Mark Kelly, among others, dated 8/12/12 -- 2012, 3:32 p.m., Subject, Refreshing my memory.
A Okay.
Q And you were the author of that e-mail; correct?
A Correct.
Q And you're familiar with that e-mail?
A Well, I am now, but I don't specifically remember writing it.
Q And referring to Point 9, do you see where it says, When did we reline the bypass basin and the metal cleaning basin, parentheses, at the same time, question mark, end parentheses?
Do you see that?
A Yes.
Q Do you recall anyone responding to that question?
A No, I don't.
Q And do you recall ever learning of the metal cleaning basin being relined?
A I can't remember.
Q And do you know if it has been relined?

A I'm pretty sure it has been relined. It says here that we received the metal cleaning basin construction permit on November of 2009. I think that that's probably the time frame that we did it.
Q Do you see where -- do you see Point 2, I asked NRT to quit working on the construction permit applications for new liners?
A Yes.
Q Do you see that?
And do you see Point 5, Sent e-mail to Mark Kelly, don't reline anything else pending U.S. EPA final rules; but Mark sent back an e-mail on the bypass basin saying, The condition required relining.
Do you see that?
A Yes.
Q So do you know if either of those two directions affected relining of the metal cleaning basin?
A Absolutely would have -- if there was a condition issue, we would have done the relining.
Q Okay.
A Regardless.
Q So the condition issue in Point 5 refers to the bypass basin; correct?

A Yes, I believe so.
Q And do you know if any condition issue related to the metal cleaning basin?
A No, not off the top of my head.
Q Why did you ask NRT to quit working on the construction permit applications for new liners?
A Because there were a new set of regulations coming out and my concern was that if we put in liners, we would just have to redo them.
Q And then referring to Point 5 again -- well, we'll go with Point 5 since we mentioned it already.
Do you know what the condition was at the bypass basin that required relining?
A No, I don't. I don't remember.
Q Do you know if the bypass basin, in fact, got relined pursuant to Mark's e-mail saying, Condition required relining?
A As I sit here, I am certain it would have.
Q Okay. Just backing up to Point 3, referencing a construction permit for relining the secondary ash basin, do you see where it says this was not actually built, though? Correct?
A Yes, I see that.

Q Did anyone indicate that your understanding was correct, that it was not actually built?
A I don't think so. I don't remember getting an answer.
Q And do you -- looking at Point 6, do you see where it says, Summer 2010, comma, execs decide to go ahead and comply with IEPA's request to put in the ash ponds' monitoring wells?
Do you see where it says that?
A Yes, I do.
Q Put a place holder there, I'm going to pass you another exhibit.
(Whereupon, Deposition Exhibit No. 53 was marked for identification.)
BY MS. BUGEL:
Q And the court reporter has passed you an exhibit marked as 53. This appears to be an e-mail from Maria Race to Mark Wehling, among others, and others cc'd, on 7/8/2010, time of 12:45 p.m., Subject, Ash impoundment wells.
Do you see where it says that?
A Yes.
Q And you're the author of this e-mail;

correct?
A Correct.
Q Do you recall this e-mail?
A Not this specific e-mail, but I recall I would have -- it makes sense I would have written an e-mail like this during this time period.
Q And I will give you a moment to review it if you want.
A Sure.
Q Okay?
A I've reviewed it.
Q And do you see where it says -- it's going to be the fourth sentence, and it says, MWG resisted doing this for some time; however, we have decided to perform the installations as the repercussions from not doing it were significant.
Do you see that?
A Yes, I do.
Q And is that referencing resisting installing wells around the ash impoundments? Is that what they resisted?
A That's complicated. Yes. As I sit here, I would say that my understanding is that we didn't believe that installation of the wells would show

whether or not the ponds were leaking and that is the only reason that we resisted putting in monitoring wells.
Q This e-mail also says, The repercussions from not doing it were significant.
Do you see where it says that?
A Yes.
Q What repercussions were those?
A We didn't want to harm our relationship with Illinois EPA.
Q You indicated that you did not believe that installing monitoring wells would show that the ponds were leaking?
A Whether or not the ponds were leaking.
Q What was the basis for that belief?
A My belief is that these are old industrial sites and that it would be very difficult to show whether or not the impoundments were leaking by putting a couple of wells on either side.
Q And has that belief been confirmed by your experience of actually installing monitoring wells?
A I'd say it's been mixed.
Q And what's the basis for your answer?
A In looking at the results, some upgradient

wells show values that would be higher than the downgradient wells.
Q At which sites?
A Waukegan is one that is very -- very obvious.
Q Any others?
A No, I think Waukegan is the main one that -- where that's very apparent, but the other sites, I think the wells are sort of -- I'm getting lost in my answer.
MS. NIJMAN: And I'm going to object, again, to the extent this is calling for an expert opinion.
As to what these wells reflect or don't reflect, you can say what you know.
THE WITNESS: All I know is that like for Waukegan, I've seen upgradient values higher than downgradient values, so I would say that my opinion, not being an expert, is mixed on whether these monitoring wells have had values showing whether the ponds are leaking.
BY MS. BUGEL:
Q If monitoring wells do not necessarily have values to show whether ponds are leaking, do you know of anything that would show whether the ponds are

leaking?
MS. NIJMAN: Objection. Same objection. Not an expert and she doesn't need to answer any hypothetical questions.
MS. BUGEL: It's not a hypothetical.
MS. NIJMAN: You said "if."
MS. BUGEL: My question is, what would she use instead.
BY MS. BUGEL:
Q Do you know of anything that you can use instead to show whether ponds are leaking?
MS. NIJMAN: Objection. Same objection.
THE WITNESS: I'm not an expert. As I sit here, I would say the condition of the impoundment itself would tell you if it's leaking.
BY MS. BUGEL:
Q And can you explain what you mean by "condition"?
A If there is a suitable liner in the impoundment.
Q In your experience at Midwest Gen, do you know if the company takes steps to determine what the condition of the liner is at the impoundments?
A Yes.

Q What steps are those?
A At Midwest Generation in the mid 2000s, we looked at the liners for all of the impoundments, not just the ash impoundments, to see if they were in good condition.
Q How did the company go about doing that?
MS. NIJMAN: Again, I'm going to object to "the company," but you can ask what her information is in her job.
BY MS. BUGEL:
Q Okay. You indicated that in the mid 2000s Midwest Gen looked at all of the liners to see what condition they were in; correct?
A Correct.
Q Do you know what steps anyone took to look at the liners?
A Yes. I had a consultant put together an assessment looking at all of the impoundments for operations and maintenance reasons to decide how to approach lining maintenance.
Q What consultant was that?
A NRT.
Q And why did you decide to do that in the mid 2000s when you did?

MS. NIJMAN: Assuming there is no privilege related, you can answer.
THE WITNESS: There is privilege related.
MS. NIJMAN: I direct her not to answer.
BY MS. BUGEL:
Q What -- was there any action taken as a result of that assessment?
A Yes.
Q What action?
A We used the assessment to then begin a maintenance program to reline the ponds.
Q And do you know what ponds were relined as a result of that assessment?
A I can't remember anymore. We would have obtained construction permits for those.
Q And looking back at Exhibit 30, Point 2 references NRT work on the construction permit applications for new liners. Was that work a result of the NRT assessment that you were just speaking of?
A I believe so. That's logical.
Q And -- so it was -- you were the one who instigated this assessment in the mid 2000s; is that correct?
MS. NIJMAN: Objection. I think she described

when you asked the "why" that there was a privilege objection there.

MS. BUGEL: But I was just confirming that it was.

MS. NIJMAN: She hired the consultant.

THE WITNESS: I hired the consultant.

MS. BUGEL: Okay. Okay. Thank you.

BY MS. BUGEL:

Q Is this assessment -- was that just a one-time thing?

MS. NIJMAN: Objection to vagueness.

BY MS. BUGEL:

Q I'm trying to understand if you did this on a regular basis.

MS. NIJMAN: I'm going to object to the extent this addresses a privileged issue, direction by counsel.

BY MS. BUGEL:

Q Have you ever done another assessment similar to the assessment you talked about in the mid 2000s?

MS. NIJMAN: Has she personally within her job?

MS. BUGEL: Personally sought a consultant to perform the assessment -- an assessment.

THE WITNESS: No.

BY MS. BUGEL:

Q Referring back to Exhibit 30, Point 7 -- I'm sorry, Point 8 -- Point 8, do you see where it says, 1/28/2011, comma, Ash Surge Basin Relining Design Proposal from NRT arrived, parenthetical, history, Mark, did you ask for that, question mark, closed parentheses.

Do you see where it says that?

A Yes, I do.

Q Did the ash surge basin get relined pursuant to this proposal?

A Yes, it did.

Q Do you know when?

A In 2013.

Q And that was two years later; correct?

A Correct.

Q Is there a reason for that two-year gap?

A The only reason is that we were waiting for the coal combustion residuals rule, and if a basin was in good condition, we didn't want to reline until the new rules came out.

Q Okay. And I'm passing you what has previously been marked as Exhibit 33, Bates Nos. 530

through 536, a date of October 4th, 2012, to John Kennedy, RE, Proposed Compliance Commitment Agreement Violation Notice W, dash, 2012, dash, 00057, Midwest Generation, LLC, Powerton Generating Station ID No. 6282.

Do you see where it says that?

A Yes, I do.

Q And this was from Michael Crumly and, flipping to Bates Page 531, cc Basil G. Constantelos, Maria Race.

Do you see where it says that?

A Yes, I do.

Q So you were cc'd on this letter?

And attached to this letter, Compliance Commitment Agreement in the matter of Midwest Generation, LLC, Powerton Generating Station Pekin, Tazewell County, Illinois, ID No. 6282.

Do you see where it says that?

A Yes.

Q And are you familiar with this document?

A Yes, I am.

Q Have you reviewed it?

A I have reviewed it before.

Q And acknowledging that this is missing

Michael Crumly's signature but does contain John Kennedy's, dated October 15th, 2012, on Bates Page 536.

Do you see that?

A Yes, I do.

Q Does this appear to be a true and accurate copy of this document?

A Yes, it does.

Q And is the east yard basin covered by the CCA?

A Let me look.

MS. NIJMAN: Do you want to see the Violation Notice to see what was in the Violation Notice?

THE WITNESS: No, because I know the east yard -- I was thinking the east yard basin is covered in here and it is in here.

BY MS. BUGEL:

Q Where do you see that?

A In Point L.

Q Do you have an understanding of why the east yard basin was included in the CCA?

A Yes, I do.

Q And what is that?

A My understanding is that in the NPDES

Permit Application, there is a diagram that shows the potential for -- as an alternate route, that ash sluice will go to the east yard runoff basin.

Q And the CCA prohibits the east yard basin from being part of the ash sluicing flow system; is that correct?

A That's correct.

Q And do you see Provision 5M on Page 534?

A Yes.

Q Midwest Generation shall not use any unlined areas for permanent or temporary ash storage or ash handling.

Do you see where it says that?

A Yes, I do.

Q Do you have an understanding of why this provision was included in the CCA -- in the Powerton CCA?

MS. NIJMAN: Provision M?

MS. BUGEL: Provision M.

MS. NIJMAN: I'm going to object to the extent it relates to a strategy discussion with direction from counsel.

Other than that, if you have an independent understanding, you can answer.

THE WITNESS: My understanding is that at some point, someone saw ash on the ground there and -- in an unlined area, and so as a result of that, this provision was put in place.

BY MS. BUGEL:

Q And when you say "someone saw ash on the ground there," are you referring to Powerton?

A Yes.

Q Do you know where that was?

A No, I don't.

Q Do you know anything else about this ash on the ground?

A All I know is that someone was driving over the bridge by Powerton and saw ash sitting on the ground.

Q And I'm assuming you don't know who this someone was?

A I don't know exactly, but I think it was someone who belonged to Illinois EPA, you know, someone that worked for the agency that happened to drive by there on their route to work or something.

Q Do you know when this was?

A It was around this time.

Q And "around this time" being around --

A 2012. Sometime in 2012.

Q Do you know if anyone within Midwest Gen confirmed that there was ash on the ground at Powerton?

A I believe when the topic came up, that was confirmed, that there was ash on the ground and it was there for -- temporarily. It wasn't, you know, something that had been placed permanently or such.

Q Do you know how long "temporarily" was?

A No, I don't.

Q Do you know how much ash was on the ground?

A No, I don't.

Q And is it correct to say that the metal cleaning basin is not explicitly identified in the CCA?

A Let me look.

MS. NIJMAN: As she sits here looking at it today, she can answer the question, I guess.

THE WITNESS: I cannot recall. I do know there are monitoring wells around the metal cleaning basin.

BY MS. BUGEL:

Q Do you recall any discussions with the IEPA about the metal cleaning basin in relation to the Violations Notice?

A The only thing I remember discussing with the agency is that it was difficult -- because these ponds are co-located, it's difficult to figure out if there was contamination, which impoundment it would be related to, because the basins are very close to each other; but that's the only thing I remember.

Q Do you recall anything being done in response to this difficulty of identifying contamination?

A We put in an additional upgradient well to try to get a true upgradient marker.

Q Do you know what well that is?

A I believe it's No. 9 as I sit here, that's what I'm recalling. It's the furthest to the south on the property.

Q Do you recall any other communications with IEPA about the metal cleaning basin?

A Well, I'm sure we would have had a construction permit for the liner there whenever we relined and there could have been more communications, but I don't remember.

Q Would Midwest Gen still have that construction permit in its possession, do you know?

A I'm sure we do, you know.

MS. BUGEL: I'd like to make a request for that construction permit to be provided.
MS. NIJMAN: Every permit we have is in there. I mean --
MS. LAUGHRIDGE GALE: It would -- I'll look.
THE WITNESS: Some plant libraries are better than others, that's for sure.
BY MS. BUGEL:
Q And I'm passing to you what's previously been marked as Exhibit 31 and this is Bates No. 21464, an e-mail from Mark Kelly to Joseph Heredia, cc'ing Maria Race, June 8th, 2010, time of 11:13 a.m., Subject, RE, FW Ash Impoundment.
And are you familiar with this document?
A Yes.
Q And you were cc'd on this e-mail; correct?
A Yes.
Q And have you reviewed this document?
A Yes.
Q And do you have an opinion about silly pop culture -- strike that. It's a little deposition humor. Oh, come on now. It's always fun to read those e-mails.

A I know. People don't realize that these things will end up in depositions, that's for sure.
Q This one -- thank God they end up in depositions, the first time we laughed all day.
Now, here's the real humor, this is not the e-mail I was looking for. I think this is some place where I didn't renumber. I'm actually looking for the one with Bates No. 21361, but while we're on this one, let's go ahead and ask questions about it.
A Okay.
Q If I can find those questions in my notes or we can just -- so the second paragraph after the silly pop culture -- right after the silly pop culture reference, it begins, The secondary ash basin, to my knowledge, has never been dredged. We were going to do it the first time this summer to repair the liner.
Do you see where it says that?
A Mm-hmm.
Q Do you know what kind of repair the liner needed in the secondary ash basin?
A No, I don't.
Q Do you know what kind of damage there might

have been to the liner?
MS. NIJMAN: Don't --
THE WITNESS: I wouldn't want to guess.
BY MS. BUGEL:
Q Okay. Let me rephrase that.
Do you know why it needed a repair?
A No, I don't.
Q Do you know how anyone determined that a repair was needed?
MS. NIJMAN: If you can understand the question, you can answer it.
I object to vagueness.
THE WITNESS: I think that -- I don't understand what you're asking.
BY MS. BUGEL:
Q Okay. I'm trying to find out how individuals at Powerton determined that the liner needed a repair.
MS. NIJMAN: She said she doesn't know anything about the rips or the repair.
THE WITNESS: About this specific --
BY MS. BUGEL:
Q This specific repair.
MS. NIJMAN: So asked and answered. I object.

BY MS. BUGEL:
Q You can still answer if your attorney has not directed you to not answer.
MS. NIJMAN: If you know how other people made this assessment, I guess you can answer.
THE WITNESS: I can only guess.
BY MS. BUGEL:
Q Okay. And moving on to the next paragraph, do you see where it says, I would like to repair ripped liners in the metal cleaning basin later this summer?
Do you see where it says that?
A Yes, I do.
Q Do you know anything about the ripped liners in the metal cleaning basin?
A The metal cleaning basin was only periodically used and I don't remember specifically this particular case. However, I believe he wanted to repair it before he needed to use it and -- well, I answered the question.
Q Do you know if those repairs were made?
A Either the repairs would have been made or a new liner would have been installed.
Q And I want to ask you about the way you

answered. Because you said either the repair would have been made or a new liner would have been installed. So you don't, in fact, know which one happened; is that correct?

A This particular time.

Q This particular time?

A Yeah, I'm not sure.

Q So is the basis for your answer -- what is the basis for your answer?

A What I'm seeing here is that we needed to repair or replace a liner. I'm not sure in June of 2010 which one we ended up doing, but we would have needed a permit to construct a new liner. So I'm assuming that that's probably the way we would have gone, it would have made more sense.

Q And your answer, though -- is your answer informed by common practice at Midwest Gen? Because you're talking about what would have happened without knowing which one of these routes.

A Because we wouldn't have -- we wouldn't have used a liner that wasn't intact. So it would have either been repaired or replaced before it was put into use.

Q So is your answer based on the fact -- your

experience with Midwest Gen, that when a liner is not intact, the practice is either to repair or replace it?

A Yeah.

Q But in this specific situation, you don't know what happened?

A I don't know which way it went.

Q So you're answering from your general experience?

A Exactly.

Q And do you know how the rips in the liner of the metal cleaning basin were caused?

A I would not want to hazard a guess.

MS. BUGEL: Bear with me a second while I figure out where I am.

Can we go off the record for a second.

(Discussion off the record.)

MS. BUGEL: So I was just stating for the record that I am only about halfway done with my outline and that to complete this deposition and the questions that the plaintiffs have, we would need another four hours.

MS. NIJMAN: And we are certainly willing to cooperate in a reasonable time period. We've already

extended it by an hour, to four hours, beyond the requirement under the law. We are willing to stay here another hour if you need that time, but we are not willing to come back another day and we are not willing to extend this to eight hours. So you can do what you want to do in the next hour and then we're done.

MS. BUGEL: And I want to make sure that before we take us to the hearing officer, we've made an effort to resolve it. So if we're going to bring this up as a motion with a hearing officer, does that change your offer?

MS. NIJMAN: No. No. I think we've been very reasonable. I think the legislature has made it very clear that depositions of fact witnesses should be done in three hours. We've already extended it once. We're willing to be reasonable and extend it again. We've scheduled, what, six, seven other depositions --

MS. LAUGHRIDGE GALE: Five.

MS. NIJMAN: -- and you said you'd want more than that, so I think we are well within our reasonableness of stating that this is more than sufficient time.

MS. BUGEL: And just so our position is on the record, we see the need for this deposition to be longer simply because of the number of years that Miss Race has worked at Midwest Gen and subsequent owners and the breadth of her involvement in the documents, the number of documents that have her cc'd or as a sender or recipient in some way, the breadth of this case, the number of facilities we're dealing with, and the breadth of Miss Race's knowledge and experience for us are all the reasons that support needing more time.

MS. NIJMAN: Feel free to put that in a motion.

MS. BUGEL: I will -- if we can take a break, I will look at what I have left and I will see if it's at all possible to finish in an hour. I'm just trying to decide, you know, if -- well, let's -- why don't we take a break and see if we can finish in an hour.

MS. NIJMAN: Fair enough.

(Recess taken.)

BY MS. BUGEL:

Q This one we're looking at now is Exhibit 34. Do you have a --

A I don't think we have it.

Q I'm handing you what has previously been marked Exhibit 34 and this appears to be an e-mail from Maria Race to William Gaynors, cc others, October 19th, 2012, 9:25 a.m.

Do you see where it says that?

A Yes.

Q And you were the author of this e-mail?

A Yes, I was.

Q And do you recall this e-mail?

A Not specifically, but it looks like something I could have written.

Q Okay. Do you want to take a minute to review it?

A Sure. Okay.

Q Do you see where Point No. 1 discusses the limestone basin?

A Yes.

Q And can you -- do you know what the limestone basin is?

A Yes, I do.

Q Can you explain it?

A It's a basin to the east of the larger ash bypass basin.

Q What is it used for?

A Currently, I don't know that it's used for anything.

Q Was it historically used for something?

A There was some process involving limestone that it was used for in ComEd days and I don't -- that's where it got its name, limestone basin, but I arrived after that process had been dismantled.

Q And --

A So it doesn't have limestone in it or anything.

Q Okay. And in Point 1, you indicated it is simply a temporary holding spot for ash in the second to last line.

Do you see that?

A Yes, I see that.

Q Is it currently used as a temporary holding spot for ash?

A I don't know.

Q Do you know if it's lined?

A It was lined the last that I knew.

Q Do you know if it's ever been relined?

A I know it was relined sometime in the mid 2000s.

Q And Point No. 2, you discuss the east yard

basin.

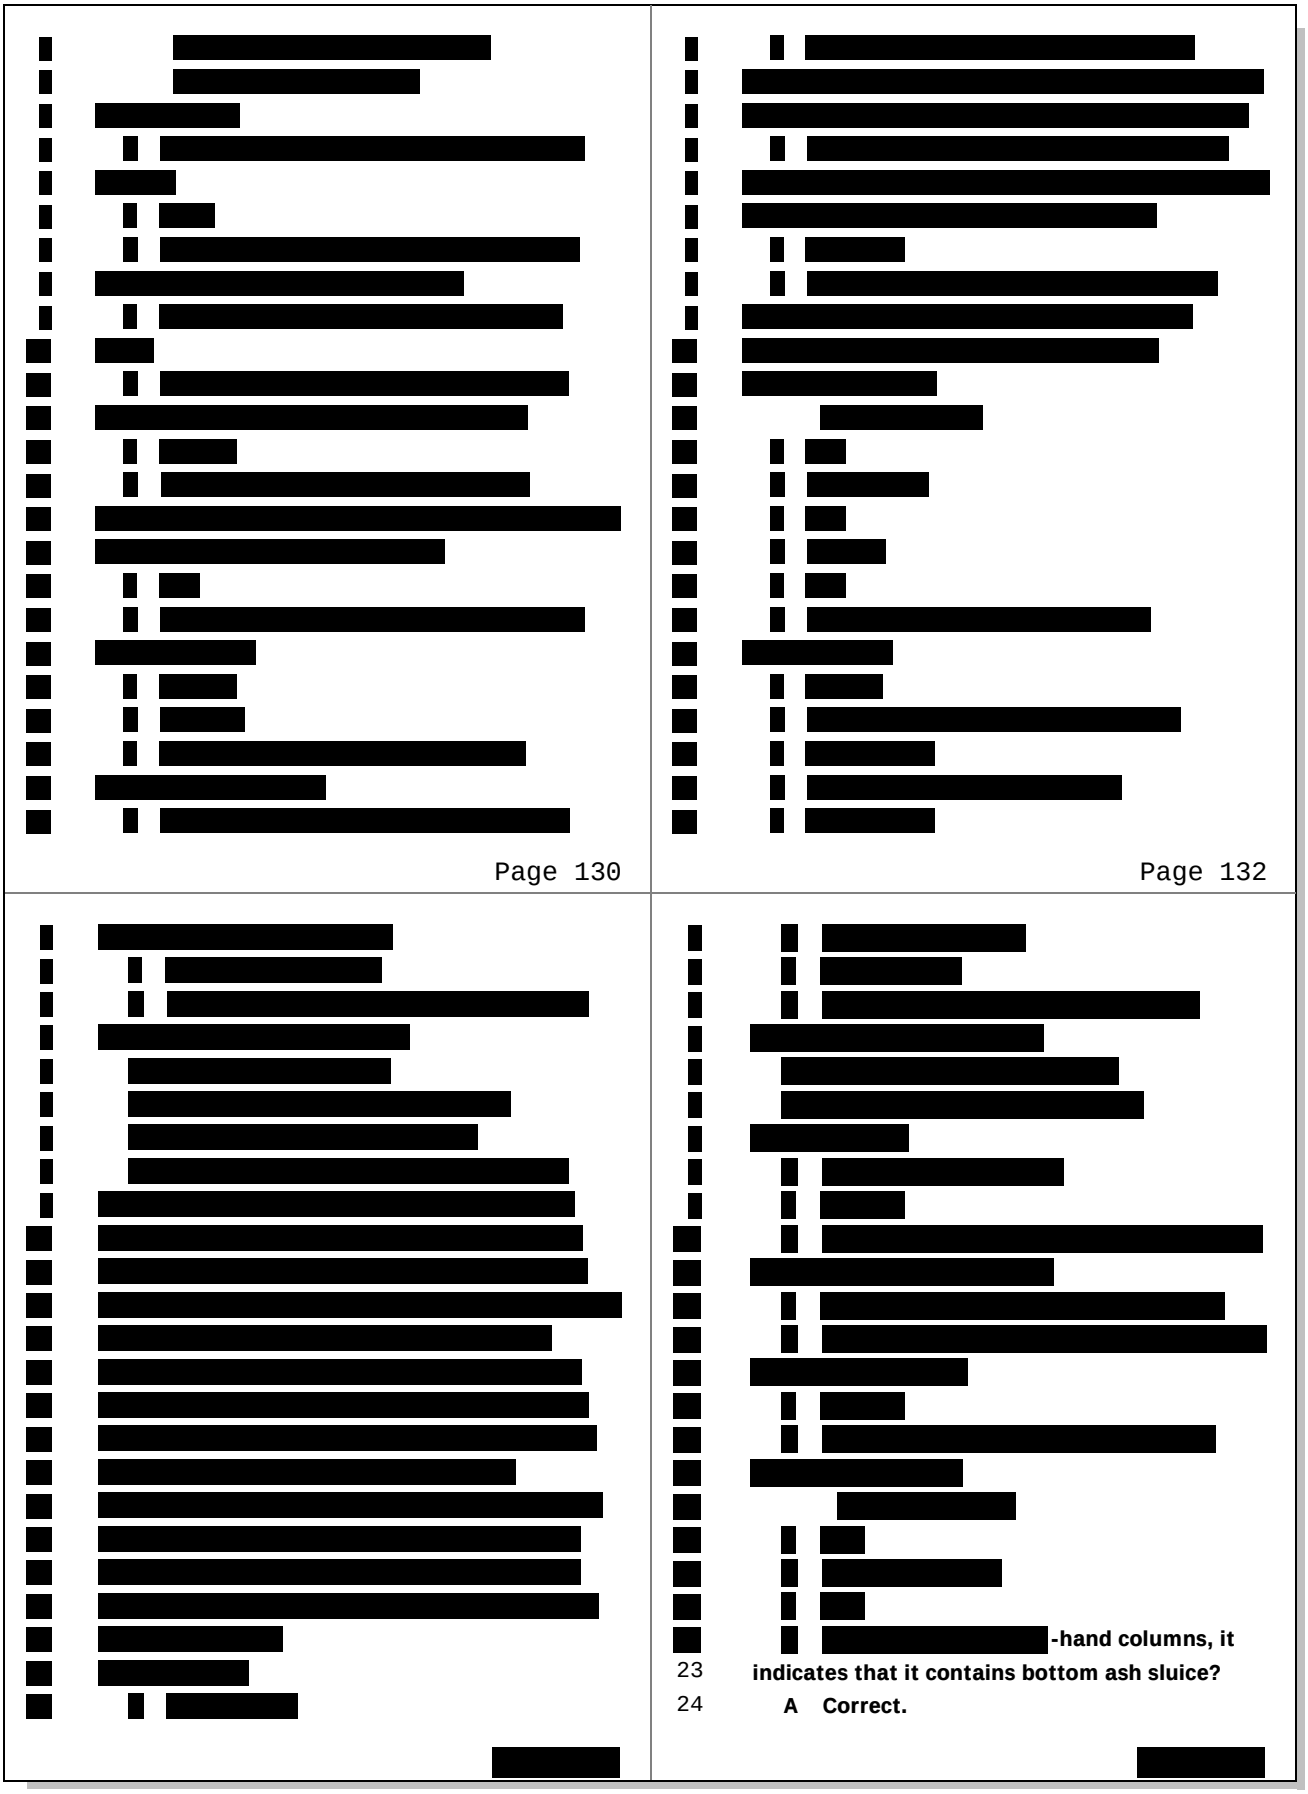
A Mm-hmm.

Q And I know we've already touched on that today, so I'll try to just get to the point. You indicate that, We cannot use the east yard basin for Unit 5 and 6 fly tank overflow.

Do you see that?

A Yes, I do.

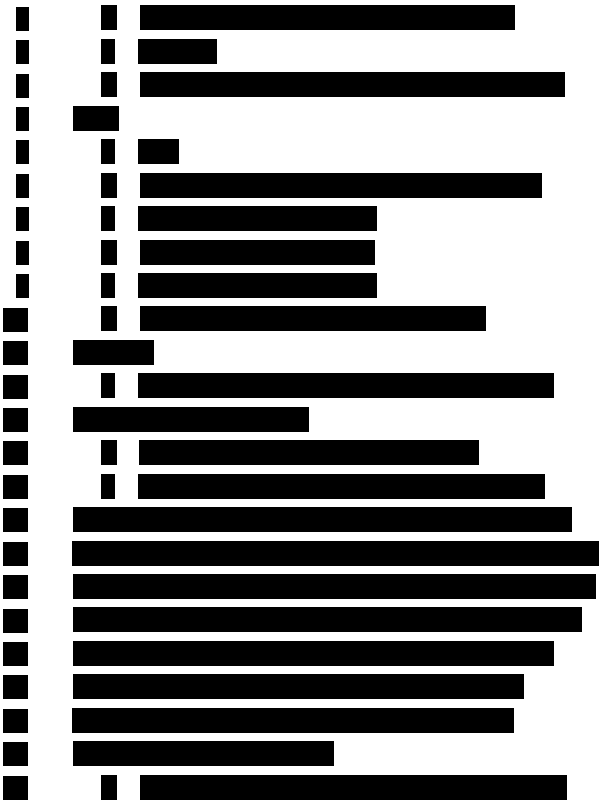
Q And do you know what fly tank overflow is?



A Intuitively, I was assuming that it's just the bottom ash holding tank overflow water, processed water, and that the reason I would have used that term is because there would have been a diagram -- an NPDES diagram that would have had a box that said that, so I was just repeating what I saw there. This was an ash source; therefore, it can no longer go to the -- it couldn't go to the east yard basin, it couldn't be routed there.

Q And turning to Deposition Exhibit 4 -- I think we can set that aside now and then we'll go back to Deposition Exhibit No. 4 and this is confidential.

(Whereupon the following pages



**are marked confidential.)**

Page 130

Page 132

-hand columns, it
23 indicates that it contains bottom ash sluice?
24 A Correct.

through 20126. And if you turn to the second page, 20002, for the record, this appears to be the Quarterly Groundwater Monitoring Report, Powerton Generating Station, April 23rd, 2014, to Andrea Rhodes of the Illinois Environmental Protection Agency and the cover letter is signed by Jeffery Kickert, station manager.

Are you familiar with this report?

A I have seen it.

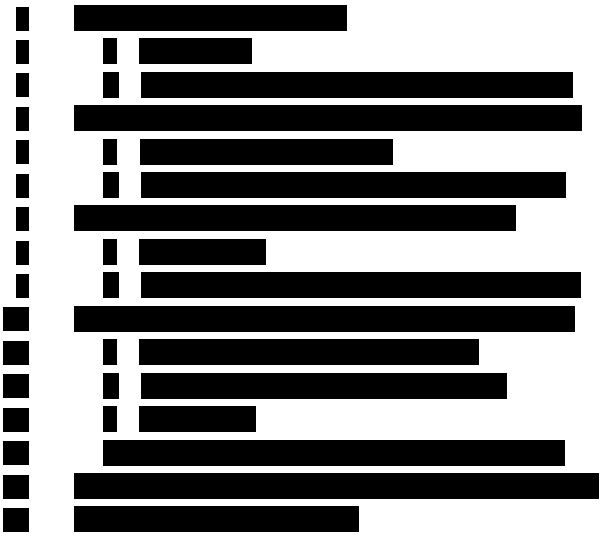
Q And have you reviewed it?

A I've reviewed it probably very lightly.

Q And referring to the maps that are on Page 20006, 20007, can you turn to those pages?

A Mm-hmm.

Q And starting -- it's not 2006, it should be 2 -- 20006, 2-0-0-0-6. This page has a site map, Powerton Station, Pekin, Illinois.



Do you see that?

A Yes, I do.

Q And we were talking about the old ash basin. Can you identify which basin that is on this map, if it appears there?

A It does appear there, but it's been split in two. It was at one time one whole basin, but

(Whereupon the following pages are no longer confidential.)

BY MS. BUGEL:

Q And I am handing you what has been marked as Deposition Exhibit 35, and if you flip -- the first page is the file folder, but if you turn to the second -- for the record, this is Bates No. 20001

there's a rail loop that was run in between it and so now it's been split into two basins; but at the time that the ICR was made, it was actually one basin.

Q And on this map, then it appears as former ash basin --

A Correct.

Q -- two of them?

A And the overflow portion is the southern piece.

Q Does that mean the former ash basin north of the split does not get used as an emergency overflow?

A I believe they're still hydraulically connected.

Q Do you know how much bottom ash the two former ash basins -- or one, since they're hydraulically connected -- contain?

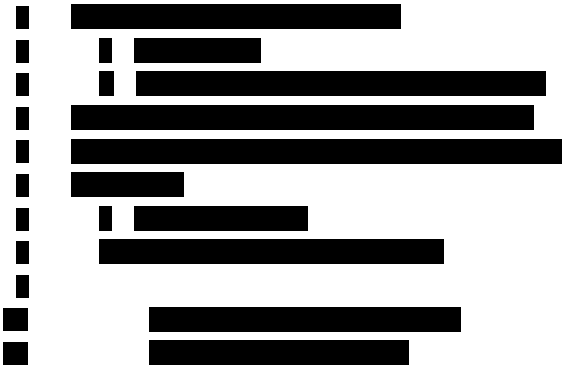
A No, I do not.

Q And do you know if it contains any fly ash?

A I don't.

Q Do you know how much slag it contains?

A I don't.



MS. BUGEL: And -- okay. And we are going to turn back to the questionnaire for just one more

question -- one more line of questions, the same pages we were on, 1273 through 1276. We are back on the record of confidential.

(Whereupon the following pages are marked confidential.)

(Whereupon the following pages are no longer confidential.)

BY MS. BUGEL:

Q And I am handing you what's been marked as Deposition Exhibit No. 36 and this is Bates No. 11302 through 11492. And it appears to be a cover letter addressed to Michael Reed, Midwest Generation, Powerton Generating Station, from Sean C. Chisek, C-h-i-s-e-k, of Andrews Environmental Engineering, cc'ing Maria Race, with a date of June 8th, 2004. And attached to that letter is Draft Sampling Plan Report, Midwest Generation, LLC, Powerton Generating Station, June 2004.

Do you see where it says that?

A Yes.

Q And are you familiar with this document?

A I remember it.

Q And you received a copy of it; correct?

A Probably.

Q You were cc'd on the cover letter; correct?

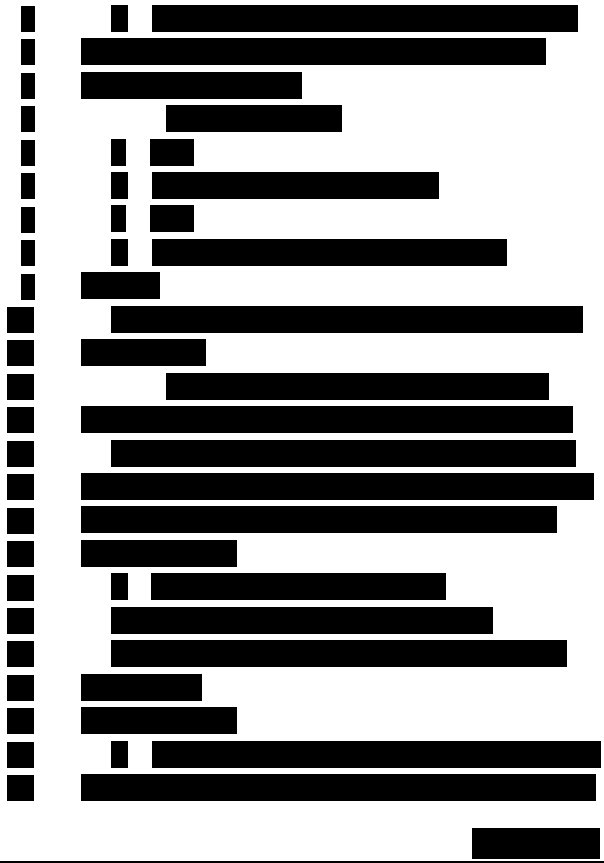
A Yes, I was.

Q Have you reviewed this before?

A Not for 10 years, but I'm sure I reviewed it at the time.

Q Okay. Fair enough. And I'll try to isolate my questions to certain pages so you don't have it review the whole thing.

Let's turn to Page -- let's turn to Page 11306 and let's see, the -- if you look at 11305, Section 2.0 covers the limestone runoff basin.



Do you see that?

A Yes.

Q And then this document, Test Pit Excavation and Sampling, in Section 2.2, do you see that?

A Yes.

Q And do you know what the source of the

material in the limestone runoff basin is per this report?
A I believe it was an area that the station used to put material that was in equipment that they were working on.
MS. BUGEL: I'm sorry, can you read back the answer.
(Record read as requested.)
BY MS. BUGEL:
Q And what do you mean by "material that was in equipment"?
A Ash or material like that. Ash-like material.
Q And if you look under the table listed as TPO 3, it describes the surficial material and it says, The surficial material appeared to be fly ash.
Do you see where it says that?
A Yes.
Q Is that consistent with your understanding of what would be contained in the limestone runoff basin?
A Yes. At that time.
Q Do you have any idea of how much fly ash is currently in there?

A No, I do not.
Q Bottom ash?
A I do not.
Q I think we can set Exhibit 36 aside. I'm passing you what has been marked as Deposition Exhibit 37 and this is Bates No. 8502 through 8536. And it's titled Commonwealth Edison Company, Chicago, Illinois, Phase 1, Environmental Site Assessment of the ComEd Powerton Generating Station, Manito, Pekin, Illinois, by ENSR, dated October 1998.
Do you see where it says that?
A Yes. And you did say Manito; right? I had to be corrected on that -- just for a little levity, here.
Q Oh, well, thank you. That's a high point of my day, too. I still can't pronounce Tlachac, though.
Okay. So are you familiar with this document?
A Yes, I am.
Q And have you reviewed this document?
A Not recently, but I'm familiar with it.
Q And can you turn to Page 8514, please and we are looking -- one, two, three, four -- starting

with the fourth paragraph down, do you see where this says, A former slag and dumping area is located directly east of the coal pile collection basin?
Do you see where it says that?
A Yes.
Q Do you know if that former slag and dumping area is still in that location at Powerton?
A I don't think so. I don't remember an area like that.
Q And it does say the area is presently overgrown with vegetation.
A I don't think so, but I'm not sure.
Q And next paragraph down, do you see -- okay. Strike that.
A Let me think about the directions. I'm not sure. I don't think so.
Q Do you know who would know?
A The station manager.
MS. NIJMAN: This is from 1998.
THE WITNESS: Yeah, I mean this -- I'm not sure.
BY MS. BUGEL:
Q And let's turn to Page 8531 and this Section 5.0, Summary of Findings, very bottom of that

page, it references the slag dumping area again and the very last sentence says, It is unknown whether slag and/or coal management practices in these areas have had an adverse impact on soil and/or groundwater quality.
Do you see where it says that?
A Yes.
Q So it indicates in 1998 that it was unknown. Would the monitoring wells that have since been installed on the property provide any indication as to whether the slag and dumping area has had an adverse impact on groundwater quality?
MS. NIJMAN: I'm going to object to the extent your question asks for an opinion and expert assessment.
If you know.
THE WITNESS: I don't know.
BY MS. BUGEL:
Q And moving on to Exhibit 38. I'm passing you a document that has been marked as Exhibit 38 and it is eight (sic) pages, 11233 through 11237. And turning to the second page, do you see -- the second page and the third page appears to be duplicates of each other, but do you see that it is dated September

11th, 2013, to Mr. Lynn Dunaway, Illinois Environmental Protection Agency, RE, Midwest Gen, LLC, Powerton Generating Station ID No. 6282, Compliance Commitment Agreement, dash, ELUC, slash, GMZ?

Do you see where it says that?

A Yes, I do.

Q And it is signed on Page 11234 by Richard R. Gnat, KPRG & Associates, and cc includes Miss Maria Race, among others?

A Yes, I see that.

Q Are you familiar with this document?

A I am sure I received it. I can review it.

MS. NIJMAN: Let's see what the question is.

BY MS. BUGEL:

Q And you are cc'd on it; correct?

A Correct.

Q And you are also referenced in this -- in the very last sentence where it says, If there are any questions, please contact me at (262) 781-0475 or Miss Maria Race of Midwest Generation at (630) 771-7862.

Do you see that?

A Yes.

Q Let's look at the first paragraph and -- I'm looking at the very first paragraph right after Dear Mr. Dunaway; it begins, On January 18th, 2013, if you want to start by just reviewing that paragraph.

A Sure. Okay. I read the first paragraph.

Q Do you see the second to last sentence that reads, Even though these points may be upgradient of specific ash basins, they are not believed to be reliable upgradient monitoring points for historical ash-related activities that may be impacting groundwater quality proximate to these wells.

Do you see where this says that?

A Yes.

Q Do you have any understanding of what is meant by "historical ash-related activities"?

MS. NIJMAN: Does she know what IEPA meant?

MS. BUGEL: No, this was written by --

THE WITNESS: I'm not sure. Yeah, I'm not so sure.

MS. BUGEL: -- her consultant.

MS. NIJMAN: Because this is a quote from the IEPA comment, that's all in quotes. This is the consultant quoting IEPA.

MS. BUGEL: I don't see that this is a long quote of the IEPA's. I see quotes around things like upgradient, side-gradient and intermediate, but there are no quotes around that whole sentence.

MS. NIJMAN: Well, if you have a question, she can try to answer it.

MS. BUGEL: Okay. Do you want to read back my question, Tracy.

(Record read as requested.)

MS. NIJMAN: With my objection, you can answer it, if you know.

THE WITNESS: The only thing that I know of is that there are fly ash handling silos that are near the area and so, perhaps, the handling of the fly ash near the upgradient areas gave IEPA concern, but I don't know that for certain.

BY MS. BUGEL:

Q I'm handing you what's been marked as Deposition Exhibit 39 and it's Bates Pages 10639 through 10771. And it's -- I am not sure whether the pages are out of order, but let's refer to Pages 10642 and 10643. And this is dated -- it looks like those might be even be duplicates of each other, but it's dated October 20th, 2010, to Illinois

Department of Public Health referencing monitoring well construction reports signed by Patrick Engineering, Steven E. Kroll.

Do you see where it says that?

A Yes.

Q Are you familiar with these reports?

A I'm not sure that I saw these, but I may have. I don't remember them explicitly.

Q So would it be accurate to say you don't remember having reviewed them?

A I don't remember having reviewed them.

Q I'll just ask you one question about 10649, if looking at that jogs your memory at all.

Are you familiar at all with these well construction reports on this page?

A I've seen them before.

Q And on -- I'm looking at the form for Well No. PEIMW 06.

Do you see that --

A Yes.

Q -- in the upper right-hand corner?

A I do.

Q And then looking at No. 25, it has a table labeled Earth Materials Passed Through.

Do you see that?
A Yes, I do.
Q And third entry down in that table says, Cinders?
A Yes.
Q Do you have any understanding of what cinders in a report like this would indicate?
MS. NIJMAN: I'm going to object to the extent that this was not written by her, she has no recollection of it, she's not an expert witness. We've gone over this many, many times now.
You can try to answer, but this is a question that should be asked of Patrick, who you have on your list of requested depositions.
THE WITNESS: I'm not sure what they mean.
BY MS. BUGEL:
Q Okay. We can set this aside. And I'm handing you what has previously been marked as Exhibit 40 and this is Bates No. 19808 through 19969 and it is titled Fourth Quarter and Annual Groundwater Monitoring Report, Powerton Generating Station with a date of January 21st, 2014. This letter is directed to Miss Andrea Rhodes of Illinois Environmental Protection Agency. It is signed by

Richard R. Gnat and Maria Race is cc'd, among others.
Do you see where it says that?
A Yes, I do.
Q And do you see that you are cc'd on this report?
A Yes.
Q And do you -- are you familiar with this report?
A I'm sure I looked at it when it came out.
Q And let's -- are you aware that in this report, there is an indication that boron increased in certain wells in the latter half of 2013?
MS. NIJMAN: Only if you have independent recollection.
THE WITNESS: I am not aware of that.
BY MS. BUGEL:
Q Let's look at Exhibit 41. I'm handing you what has previously been marked as Exhibit 41 and this is Bates Page 13822. It appears to be an e-mail, Ash ponds, parentheses, few more questions, closed parentheses, from Rabins, Jaime, to Maria Race, with a date of 1/28/2009, 11:46 a.m.
Do you see where it says that?
A Yes. And I do have to correct your

pronunciation.
Q Oh, okay.
A Jaime Rabins.
Q Jaime? And I went to --
A It looks like Jaime.
Q -- spelled that way that went by "Jaime." So Jamie. Thank you.
So were you the recipient of this e-mail?
A Yes.
Q Are you familiar with this e-mail?
A Yes.
Q And have you reviewed it?
A Yes.
MS. NIJMAN: Right now, you mean?
THE WITNESS: Right now, yeah. I've looked at it right now.
BY MS. BUGEL:
Q Okay. Good. And looking at the very first sentence, do you see where this says, Are there any known groundwater impacts at the Will County Waukegan, Powerton, Joliet 29, Joliet 9 or Crawford Generating Stations?
A I see that.

Q Do you recall answering this question?
A I don't recall.
Q And can you please look at the very last sentence in this e-mail? Do you see where it says, Also confirm that there are no inactive ponds at any of the Midwest Gen facilities which contain ash?
A Yes, I do see that.
Q Do you recall responding to that request?
A No, I don't recall what I said.
Q Okay. Can we get Exhibit 42? You can keep this out, I think we may go back to it.
A Okay.
Q And I'm passing you what has been marked Deposition Exhibit 42 and this appears to be an e-mail, the title RE, FW Ash pond information, from Bill Constantelos to Maria Race, dated 1/12/2009, time of 1:40 p.m.
Do you see that?
A Yes, I do.
Q Okay. And then we're going to try to work -- do you see -- if you flip to Page 13954, do you see the middle e-mail on that page?
A Yes.
Q From Jaime Rabins to Maria Race, 1/12/2009

a.m. -- I'm sorry, 11:24 a.m., Subject, RE, Ash pond information, and -- do you see that e-mail?
A Yes.
Q And you were the recipient of this e-mail?
A Yes.
Q And the last sentence in that e-mail says, I'm assuming that there are no inactive or closed ash basins at any of Midwest Gen's facilities.
Do you see where it says that?
A Yes.
Q And then further up, the next e-mail up appears to be your response.
Do you see that?
A Yes.
Q Do you see where it says, in the last sentence, I'll look into the closed, slash, inactive basins, period; I don't think so?
A Yes.
Q Do you recall providing that response?
A I don't recall providing that response.
Q And do you -- I find it difficult to tell whether these two e-mails are in a related chain at all.
Do you recall if Exhibit 41 and

Exhibit 42 were in a related chain?
A I don't know, but Jaime Rabins did ask questions about the ash impoundments during that January time frame, so they may not have been like related, like this one leads to this one, but he asked a question and then two weeks later asked another question. I could see that as being a possibility.
Q Okay. And did you later receive any information about closed or inactive basins at the facilities?
A I think that within the context of what he was asking -- he was asking if there were any -- as he puts it here -- where is it -- no inactive or closed ash basins, I was focused on the ash basins that existed within our NPDES System. And so I was looking into whether or not there were closed or inactive basins that were just sitting idle, and I'm sure I would have gotten back to him with an answer to that eventually. And it looks like from what the e-mail chain is here, that I called him, that I didn't send an e-mail.
Q And do you recall any of the details of that phone call?

A No, I don't.
Q And do you have an understanding today of whether there are any closed or inactive basins at Midwest Gen's facilities?
A I know that there are various basins that are included or not included in our NPDES permit application and permit systems.
Q That are closed or inactive?
A Inactive.
Q And can you list which ones they are?
MS. NIJMAN: Just what you recall.
THE WITNESS: Okay. I recall at Will County there are three -- I think it's either two or three inactive basins to the -- I'm so terrible with directions -- but it's to the south, I think on the south side of the property; and at Powerton, the limestone basin is inactive, not part of our NPDES System. And that's all I can think of right now.
MS. BUGEL: I will be mindful of the time. I know it's 4:00 o'clock. I have more questions, but we will not get to them today. So --
MS. NIJMAN: How close are you?
MS. BUGEL: We haven't covered Will County at all, so at the pace we're going, you know, it would

be an hour and a half. And then I have some questions about the compliance letters that followed -- that came at the end of the -- not at end of the Compliance Commitment Agreement, but indicating compliance with the Compliance Commitment Agreement.
MS. NIJMAN: There's no way you would have gotten this done in one day is what you're saying?
MS. BUGEL: Yeah.
MS. NIJMAN: Okay. Fair enough. We're done.
FURTHER DEPONENT SAITH NOT. . .

This is to certify that I have read the transcript of my deposition taken on the 12th day of November 2014 in the foregoing cause, and that the foregoing transcript accurately states the questions asked and the answers given by me, with the changes or corrections, if any, made on the Errata Sheet(s) attached hereto.

MARIA RACE
Subscribed and sworn to
before me this day
of 2014

Notary Public

STATE OF ILLINOIS )
) SS:
COUNTY OF WILL )

Tracy L. Overocker, being first duly sworn on oath, says that she is a Certified Shorthand Reporter, that she reported in shorthand the testimony given at the taking of said deposition, and that the foregoing is a true and correct transcript of her shorthand notes so taken as aforesaid and contains all the testimony given by MARIA RACE at said deposition.

And further, that she is not connected by blood or marriage with any of the parties to this action, nor is she a relative or employee or attorney or counsel of any of the parties, or financially interested directly or indirectly in the matter in controversy.

That the preceding deposition shall be read by said deponent, and any and all corrections which the deponent desires to make shall be duly made by the deponent on the enclosed errata sheet(s), indicating page and line to be corrected, and that the

explanation, if any, given by the deponent for said corrections, shall be thereon noted.

**Re: Sierra Club et al., vs. Midwest Generation, LLC**

**Dear Ms. Nijman:**

**Enclosed please find the transcript of the discovery deposition of MARIA RACE, taken on November 12, 2014, in the above-entitled cause.**

**Since signature was reserved, please ask MARIA RACE to review her transcript from November 12, 2014, making any necessary corrections on the errata sheets, and sign and notarize the deponent's signature page.**

**Please send the original signed errata sheets and signed deponent's certificate to Ms. Bugel, keep a copy for yourself, and please send a copy to me for my records.**

**According to Amended Rule 207(a), signature must be obtained within 28 days or the deposition may then be used as fully as though signed.**

**Your cooperation in this matter is greatly appreciated. Thank you.**

**Sincerely,**

**Tracy L. Overocker, CSR**

JOHN PATRICK SEYMOUR, P.E.,

called as a witness herein, having been first duly sworn, was examined and testified as follows:

EXAMINATION

BY

MS. CASSEL:

Q Good morning, Mr. Seymour. My name is Jennifer Cassel. I'm an attorney at the Environmental Law & Policy Center, and I'm here on behalf of Sierra Club, ELPC, and a group called Prairie Rivers Network today.

Can you tell me for the record your full name, your place of employment, and the address of that place of employment.

A Sure. John Patrick Seymour, I work at the Geosyntec Consultant [SIC] located in Chicago at 134 North LaSalle, Suite 300, Chicago 60602.

Q Great.

Have you ever given a deposition before, Mr. Seymour?

A Yes.

Q Can you tell me the circumstances under which you gave a deposition?

A Last time I gave a deposition was over ten years ago. It was in a case that was a Superfund site that was -- it was a lawsuit over allocation.
Q Did your testimony in that case have anything to do with interpreting groundwater results?
A No.
Q What did your testimony have to do with in that case?
A It had to do with what waste was present and what property it was located at and what had been found in surface water and in a few waste samples, as to whether or not it was -- to characterize it.
Q Did that involve coal or coal ash?
A No.
Q Okay. So, as you know, having given a deposition before -- oh, I should say -- you said the last one you gave was over 10 years ago.
Have you given other depositions besides that?
A Yes. Probably on the order of 20 years ago.
Q Twenty years ago. Okay.
Do you recall what the circumstances were --

A Yes.
Q -- of that deposition?
A It was a site in Michigan that had been acquired by a county for an airport expansion. And the owner was suing the County to receive more money, felt it was undervalued because he had received a Hazardous Waste Part A Permit, and he believed that it was worth more because it could get a hazardous waste treatment storage and disposal facility.
Q And did that particular deposition -- in that deposition did you give testimony relating to coal ash or --
A No.
Q -- coal?
A No.
MS. NIJMAN: Wait until she finishes.
BY MS. CASSEL:
Q Did you give testimony relating to interpreting groundwater results?
A No.
Q Any other depositions that you recall beside those two?
A Not depositions, no. Those are the only two.

Q So, as you know, having given a deposition before, you are testifying under oath today. You have an obligation to answer all of the questions truthfully.
Do you understand that?
A Yes, ma'am.
Q For the benefit of the court reporter, please do answer out loud. If you don't understand a question, feel free to ask me to rephrase it, and I'm happy to do that. If you do answer a question, I will assume you understand it.
Do you understand?
A Yes.
Q If you need a break, let us know, and we'll be happy to take a brief break. When necessary, we'll also plan on taking a brief lunch break --
A Okay.
Q -- at some point here.
You will have the opportunity to read over the deposition transcript and correct any mistakes in transcribing what you've said after that transcript is available.
A Okay.
Q Are you currently taking any medication

that might affect your memory today?
A No.
Q Okay. Do you have any other physical or mental issues that might affect your memory today?
A No.
Q Now, I would like to mark our first exhibit, which is your CV.
(Seymour Deposition Exhibit No. 1 was marked for identification.)
MS. CASSEL: And these will be marked as Seymour Deposition Exhibits 1, 2, 3, just to keep it simple.
THE WITNESS: Thank you.
BY MS. CASSEL:
Q Sure.
So taking a look on the first page of your CV, the Career Summary -- and this is Bates 48959 -- you state that your career summary includes, quote, geotechnical and environmental evaluations of waste disposal expansions, operations, and -- let's see -- and closure?
Can you tell me, in brief, what those environmental evaluations entail.

A Well, for, actually, more like thirty years, I have been working with a Superfund, site assessments, investigations, groundwater quality evaluations, soil analytical analysis, mainly around landfills and waste containment facilities. I've also managed risk assessments; feasibility studies; conducted remedial designs; remedial actions; and conducted an O&M for waste containment facilities for many years.

Q I believe your career summary also states that you have provided relevant consulting engineering services for seven CCRs, which is defined as coal combustion residuals, impoundments, and fourteen CCR landfills.

Is that accurate?

A Actually, it's more now. I've done more since that resumé has been issued.

Q How many have you done then?

A Well, it's hard to count. I was retained as an expert by TVA for the Kingston failure on an insurance claim, but -- I prepared the expert report, but I was not declared as an expert. But it included hundreds of pond review of EPA Reports that we summarized the results from.

And then I've also been conducting and managing landfill inspections and impoundment inspections under the CCR Rule.

I've completed guidance documents for the Electric Power Research Institute regarding dewatering ash ponds -- coal ash ponds and enclosing coal ash ponds, including construction over coal ash ponds.

And there's some other ponds. Of course I'm not very familiar with these ponds; but I've also worked at a pond in Kentucky where I've evaluated the Coal Ash Rule location restrictions, groundwater monitoring networks, coal ash pond in Southern Ohio doing the same thing: looking at the location restrictions and groundwater quality monitoring network as regarding compliance with the Rule, and, actually, two ponds in Southern Ohio, very large ponds.

Q So for those ponds that you've just described, the TVA and Ohio and Kentucky ponds as well, did you interpret groundwater results as part of an investigation of --

A No. These were evaluating compliance of the networks. It was not evaluating groundwater

quality.

Q And what did your evaluation of the monitoring networks entail?

A Looking at the -- well, I was a project manager, and I had to review -- go through everything and direct the work. But I had to review the locations of the wells; the geology of the wells; whether or not the screen length was at the appropriate location; whether they had adequate downgradient wells, upgradient wells.

Q And did that involve an interpretation of groundwater flows?

A Yes.

Q What else did it involve, if anything?

A That was mostly it. I mean, it was regarding the groundwater compliance. We also, then, made recommendations for additional monitoring and changing of the network. And, currently, we are working with the client in doing the field effort to install new wells, envelop, and initially sample those wells in preparation for the monitoring for the Rule.

Q Okay. Let's take a look at some of the projects that you specifically mention in your CV

just to get a better idea of what those entailed.

You first mention on the second page of your CV, which is Bates 48960, the J.C. Weadock Plant CCR Facility Engineering Study.

A Yes.

Q Do you see that? Okay.

It says that you assessed future use and closure of the facility, considering regulations and future proposed regulations regarding CCRs under RCRA.

Do you see that?

A Yes.

Q Is that an accurate statement?

A Yes.

Q Could you explain what that means in a little more detail?

A The client was looking to the future to what they could do with this area. It was prior to the CCR Rule, and it was basically a feasibility study of looking at this site with different configurations, looking for a new adjacent site, and looking for off-sites.

So it was a feasibility study, we called it an engineering study, to evaluate future

methods of managing their CCR waste.
Q Did you evaluate groundwater quality data as part of that project?
A No.
Q Did you perform an environmental evaluation other than the feasibility study as part of that project?
A We looked at the different environmental regulations to see what they needed to do to adhere to the different regulations, including local laws; Michigan laws and CCR Rule, which is draft at the time, or proposed, and the proposed effluent limit guidelines as to the needs -- for future needs for their facility.
Q Okay. Now, can you identify for me -- obviously, you've got a good number of projects listed here on your CV. Can you identify for me in which of these projects -- or any of these projects in which you did interpretation of the groundwater monitoring results?
A In the James M. Gavin Power Plant, I had a small role in the Monongahela Network. In evaluating what the results were, there weren't any problems, so it was not much of a review.

The R. Paul Smith Evaluation was basically installation of a new network. But, again, there were no problems, so there was not much of an evaluation.
MIG/DeWane Landfill Superfund Remedial Design, a lot of groundwater evaluations regarding flow, concentrations, degradation, existing treatment, potential future treatment.
Q Did this particular facility, the Superfund site, did that involve coal or coal ash?
A No.
Q Okay.
A It did include looking at the inorganics, but not at coal or coal ash.
Q Okay.
A Yeoman Creek Landfill Superfund Site, that is one where I was in charge of obtaining the groundwater data, taking the initial review of the data, and providing that data to the U.S. EPA as an ongoing monitoring of the Superfund site.
Q That was the Yeo- --
A Yeoman Creek Landfill Superfund Site.
Q And did this site entail coal or coal ash?
A No.

Q And during the groundwater interpretation that you did here -- you did say you did groundwater interpretation at this site, right?
A Yes.
Q Did you use any indicators as a -- to evaluate the groundwater contamination at that site?
A At this point of the site, those had already been established.
Q Okay. So you used indicators, but they had already been chosen by someone else?
A Yes.
Q Can you identify any other sites in which you did groundwater interpretation?
A The -- we did some for the multiple sites for utilities in Wisconsin where we had a groundwater contamination for a manufactured gas plant site where I did look at the groundwater quality and the monitoring results looking for remedies, if you will.
Q Did you use any indicators in evaluating the groundwater contamination there?
A We did to a general extent, but they were -- so the answer's "yes."
Q Okay. Can you tell me more about that.
A Well, these are mostly manufactured gas

plant sites. So they're mainly organics. So they have heavy organics and some benzene, toluene, xylene, those types of organics as well. They do have -- chrome, for example, is one of the waste products at MGP sites, but it's not something that -- and cyanide, but that was not of a concern for me on the -- for groundwater.
Q So the constituents that you mentioned, the organic constituents, benzene, toluene, were those indicators that you used in identifying contamination?
A They were. Unfortunately, that was -- the site had lots of impacts and there -- multiple indicators.
Q What do you mean by "multiple indicators"?
A Well, there's a lot of -- this site -- MGP plants have a tendency to have a lot of organic contamination, and so there's naphthalene and all the PNAS, other -- you know, other problems at the site. So there was a lot of indicators.
Q Okay.
A It didn't actually -- we looked at it from a wastewater treatment facility as to what needed to be treated. That's what we looked at for indicators.

Q Can you continue to go through your CV --
A Sure.
Q -- to identify it further.
A Albion-Sheridan Township Landfill was a solid waste landfill that contained hazardous waste, and I was working with the client on the closure under Superfund. And, again, it was just getting the data -- initial data and doing a monitoring program.
Q So it was not interpretation of groundwater results for looking -- evaluating contamination?
A That is correct.
Q Which of the other projects within your -- on your CV involved interpreting groundwater contaminant- --
A The --
Q -- you know, monitoring for purposes of evaluating contamination?
Excuse me.
A The McGraw-Edison facility was one where we examined groundwater, and I helped conduct a feasibility study for the remediation of impact to groundwater and soil gas and existing previously stored waste at the site.
Q So this did not involve coal or coal ash;

is that right?
A That's correct.
Q Okay. Any others?
A The J&L Landfill Steel Company was similar. It was a Superfund site landfill closure where the wells were installed and we continued monitoring. This site contained solid waste, hazardous waste, and it was listed as a Superfund site because it had electric arc furnace dust, which is a heavy inorganic dust from steel manufacturing.
Q Can you -- I know you had discussed early on in your CV, a number. You said it was greater than your numbers that were listed here, seven CCR impoundments and fourteen landfills.
Can you identify which of the projects listed on here are those landfills or impoundments.
A Well, yes, I can.
Unfortunately, I think some of the -- this is not a complete resumé -- the Summary is more accurate -- but the ponds are, again, two ponds in southern Ohio that are major and flash ponds.
Q Can I ask, just to interrupt you quickly, so do they not appear in the listing of individuals?
A They're not listed specifically.

Q Okay.
A I can go through what is -- what I can tell you, yes, as I go through these.
The Weadock Plant.
Q What page is that?
A It's on page 2 of my resumé.
Q Right.
Okay. So we discussed that plant.
A Yes. But it was -- just to be clear, it started off as a major impoundment. And over the years, after filling, it was being converted to a landfill. So that is a pond that has been converted to a landfill.
Q Okay. And were you part of -- excuse me -- were you part of the decision to -- or did you recommend that the site be converted to a landfill?
A It had been ongoing, and I was preparing, again, the study that we had as -- the engineering study for future use.
Q Uh-huh.
A Follow-up work, continued work in this facility is to regrading the site because they had a stormwater pond within the landfill footprint. We wanted to eliminate the stormwater pond so that it

would not be considered a pond. So that was a pond project.
Q So the decision had already been made when you became involved to convert it into a landfill --
A Yes.
Q -- and so you were helping --
A Yes.
Q -- with that project?
A Yes.
Q Okay.
A And then, again, we had a stormwater pond that we wanted to make sure if there're any kind of coal combustion residuals, that they're removed to make it so it would no longer impound water and not be considered as an impoundment.
Q Okay. Are there any of the specific projects -- any of the rest of the specific projects listed on here besides, obviously, the guidance documents, the RP guidance documents that are listed here? Did any of these other ones involve coal or coal ash?
A Yes. Yes.
The General James M. Gavin Plant. That is the major pond. And, actually, there's two

sets of ponds again. I've continued to work at this facility. There's a very large fly ash pond that we looked at closure of that pond, groundwater monitoring for that pond, assessment for compliance for the CCR Rule.

They also have bottom ash ponds -- they have two of them -- Bottom Ash Pond Complex. We did the same regarding compliance of the CCR Rule.

The Monroe Power Plant --

Q Quickly, before we move on from there, can you tell me a little more about -- in the Gavin Power Plant project, did you recommend that the fly ash ponds be closed?

A The pond had been inactive already. They had converted their -- was not receiving waste. And so I worked with them for the last four years designing the closure of that facility. And they initiated some construction last year and it's been permitted. And so I continued to work with them to close that facility, but I did not recommend it. It was -- the client had already decided to close it.

Q Did you recommend the method by which it should be closed?

A We worked with the client. We came up with

an engineering concept that went to design. So the answer is basically yes.

Q Can you tell me what those recommendations entailed.

A Yes.

MS. NIJMAN: Just let me object. If there's a confidentiality issue here or if we need to put this on confidentiality for your client's sake, that's up to you.

THE WITNESS: This site is a permitted site in the state of Ohio. So...

MS. NIJMAN: Okay. So you're speaking --

THE WITNESS: The documents --

MS. NIJMAN: -- about public matters?

THE WITNESS: Yes.

MS. NIJMAN: Okay.

THE WITNESS: Thank you.

Will you please repeat the question.

MS. CASSEL: Will you read the question back, please.

(The last question was read by the reporter.)

THE WITNESS: The major effort in these large pond enclosures is movement of the ash. And in this

case it was primarily fly ash because it's difficult to work with when it's wet. And so it was a major relocation of the ash that was in place to allow for the cover design to properly function. And so the configuration of the cover design and the layering of the cover design was recommended by my company and me as an engineer.

BY MS. CASSEL:

Q When you say the movement of the fly ash, do you mean the movement within that impoundment, or was it removed all the way out of that impoundment?

A It was a very large impoundment, and it was movement within to obtain proper slopes so that the cover -- the new cover that was going be in placed [SIC] would properly function.

Q Has that remedy been put in place already at that site?

A It, again, has been permitted, and it is -- we're currently preparing construction documents to be constructed beginning this year. The client has started some construction on its own beginning last year.

Q Okay. But it has not yet been fully implemented?

A Correct.

Q Okay. Now, you had started to discuss the Monroe Power Plant?

A Yes. That's got two ponds. The main pond is a large 400-acre fly ash pond, and we've been working with the client for the last five or six years and the Michigan DEQ. We did a number of different projects. Regarding what you might be interested in here, it is, again, looking at closure concepts, which we're working with the client right now.

We've also provided some repairs of surface soil sloughing, which has been -- of course, all the reports have been submitted to the State, so they're not confidential.

And they had a vertical expansion of a portion of the landfill. We conducted the investigation of the ash and review, on the client's behalf, of the design which was done by another company. That was the fly ash pond.

Q When you say "the investigation of the ash" or "evaluation of the ash," what do you mean by that?

A It was a geotechnical evaluation of the ash that was within the -- they call it the ash basin

because the vertical expansion landfill was going to be constructed on the ash. And so we obtained the geotechnical properties to design the landfill for settlement and slope stability primarily.

Q Okay. I apologize. I had meant to ask you more questions about -- you had also mentioned a couple of bottom ash ponds at the Gavin Power Plant before we continue on more with the Monroe Power Plant.

Can you tell me a little more about what you did with regard to the bottom ash ponds at the Gavin Power Plant.

A Sure. We did a compliance review regarding location restrictions and Groundwater Monitoring Well Network, compliance with the CCR Rule.

Q Okay. So determining whether or not the location of the monitoring wells would be compliant with the CCR Rule; is that correct?

A Both the location of the wells, yes --

Q Okay.

A -- but also the location of the facility -- there are location requirements -- physical locations that were also examined.

Q Of the landfill?

A Of the bottom ash ponds.

Q Of the bottom ash ponds.

Okay. Did you do any groundwater quality interpretation as part of that?

A No.

Q So moving back to the Monroe Power Plant, you said you did a geotechnical analysis of the ash as part of the ash ponds that are there.

Have you done any interpretation of groundwater concentrations as part of the project with the Monroe Power Plant?

A No.

Q It looks like the next plant in Guatemala also involved CCB; is that correct?

A Yes. But it was a design project. It did not include groundwater.

Q Can you tell me, as we go through this -- again, this list of projects you've worked on, which of them have involved interpretation of groundwater results relating to coal or coal ash?

A There's one that's not on here. That is the city of Lansing.

Q So quickly, just to close that out, does that mean that of the ones that are on here, none of

those meet the criteria I just said?

A Looking again, as I mentioned, the Albion-Sheridan Landfill had ash -- inorganic ash, but not coal ash. Excuse me. That was the J&L Landfill.

Yes, there's one that is missing that is not included to my knowledge. I don't see it here. It's called the --

Q Okay. So -- I'm sorry -- just to make sure my question is fully answered, of the other ones that we've talked about, of the projects you see on here, only the two -- is it only the Gavin -- no, that -- you said that didn't involve groundwater -- interpretation of groundwater results.

You had said the MIG/DeWane Landfill?

A I did.

Q I apologize.

We've been -- just to make sure I'm totally clear on the record, can you just tell me, of these -- just identify the projects, first, that involved interpretation of groundwater results, whatever --

A Okay.

Q -- you were interpreting, starting on page

2 of your resumé.

MS. NIJMAN: I'm sorry. I'm a little lost.

What do you want him to identify?

MS. CASSEL: Just ones where he -- projects in which he interpreted results of groundwater quality or standards.

MS. NIJMAN: Regardless of what it --

MS. CASSEL: Regardless of what it contained.

MS. NIJMAN: And just name them?

MS. CASSEL: Yes.

THE WITNESS: The General James M. Gavin Power Plant Landfill.

BY MS. CASSEL:

Q Landfill.

A The R. Paul Smith Landfill on page 3. The MIG/DeWane Landfill Superfund Site.

Q Okay.

A The Confidential Landfill Remedial Action Support Services on page 3.

Q Okay.

A Yeoman Creek Landfill Superfund Site, interpreting results.

Q Utility Company, Multiple Sites.

In that situation I looked at two --

MS. NIJMAN: She just wants the names.
THE WITNESS: Okay. Thank you. There were two sites in there.
The McGraw-Edison facility; the J&L Landfill facility; the Albion-Sheridan Township Landfill; the Rasmussen Landfill, the Motor Wheel Disposal Site; the Brownfield Redevelopment Site.
BY MS. CASSEL:
Q Where is that listed?
A On the bottom of page 4.
The Janesville Disposal Facility on page 5.
Q I see.
A The National Industrial Environmental Services site, page 5.
Q Okay.
A The Berlin & Farro Liquid Incineration site, the Butterworth Landfill, the Bailey Dump Superfund Site, the Salt Intrusion Groundwater Modeling and Feasibility Study on page 6.
Q Uh-huh.
A And there were multiple LUST, underground -- leaking underground storage plant sites, probably five or six.

Q Now, of those that you just identified, can you tell me which of them involved interpreting groundwater results, looking for coal or coal ash contamination.
A General James M. Gavin Plant Landfill.
Q And is that both projects, both the one listed at the bottom of the second page and the top of the third page, the separate projects?
A They're related --
Q Okay.
A -- but the one didn't include the groundwater.
Q So --
A One was a feasibility study; one is the landfill design.
Q And is it the one on the bottom or the one on the top that's the one where you interpreted the results?
A The bottom of page 2.
Q The bottom of page 2. Okay. Thank you.
A The R. Paul Smith Landfill Expansion where we did sampling analysis.
Excuse me. The question -- we're looking for coal ash.

Q Correct. Coal or coal ash.
A And the one that is missing, that -- it was an older project from about twenty years ago -- was -- I was mentioning the Lake Lansing Landfill in Lansing, Michigan, where I interpreted coal ash results; but it was a while ago, and I did not make the -- this resumé. This resumé doesn't include all of my projects.
Q Okay. So only the two you identified, which were the Gavin Power Plant Landfill as well as the R. Paul Smith CCB Landfill Expansion, were the two that are listed on here that you evaluated an interpretation of --
A Yes, to my knowledge.
Q -- groundwater results for coal ash?
Okay. And then there's this additional project over twenty years ago for Lake Lansing in Michigan?
A Yes.
Q Okay. Can you tell me a little more about what that project entails, if you recall.
A Yes. Well, it was an open landfill for a power plant with coal ash. And I was retained as a consultant to come in, evaluate the groundwater

conditions, and look at where groundwater monitoring needed to be improved and then obtain that monitoring data and work with the client to assess a remedy based on the impacts that were measured.
Q Were there impacts measured?
A Yes.
Q And what do you mean by "impacts"?
A There were inorganics in the groundwater around the disposal facility.
Q And what was -- you said you were involved in proposing a remedy for that -- those impacts?
A We evaluated the rules. We told the client what they needed to do. And we started by installing, as I said, upgraded Groundwater Monitoring Well Network and obtaining the samples. We did not proceed farther than that.
Q Okay. So the only aspect of remediation per se that you were involved in were identifying additional locations for -- designing additional monitoring wells and interpreting the results of those?
A We -- yes, we -- in part, yes. We put -- we recommended locations of wells; we installed them; we sampled them; and we also instructed the client on

the process of how to work with the State to obtain a remedial action plan to address the groundwater impacts that we found.

Q But you were not engaged or involved in designing what that remedial action plan would look like?

A Correct.

Q Okay. Now, quickly, to continue with your CV -- although, I think we're getting close to done -- can you tell me, for any of the projects that you worked on that related to coal or coal ash, were you involved in making recommendations as to remedies for those sites?

A No.

Q Okay. I think we can move on.

MS. CASSEL: If you would give me the next exhibit. We will mark as the next exhibit your Initial Expert Report.

(Seymour Deposition Exhibit No. 2 was marked for identification.)

BY MS. CASSEL:

Q Can you review and then kind of let me know if that appears to be a true and accurate copy of

your report.

A As we get to the report, as you know, yesterday we submitted supplemented changed parts of this report.

Q I understand that. And today, we're not going to be asking any questions about that supplement --

A Okay.

Q -- with the exception of one, just to better understand it.

A It looks complete as qualified.

Q Okay. Can you turn to page 43 of the report, please.

Do you see at the bottom of that page where you state that, "It is my opinion that the recent groundwater impacts are not a result of the ash currently stored in ponds at the sites, but instead are more likely than not a result of historical uses at the sites and the surrounding industrial companies and conditions"?

Do you see that statement?

A Yes.

Q Do you continue to agree with that statement?

A Yes.

Q Let me ask you some questions about this "surrounding industrial companies and conditions." I'd like to go plant by plant.

Can you tell me what you allege are the other sources of contamination that are not the coal ash ponds or historic ash fill at Joliet.

A There's nothing outside that's proven. There are -- I'd have to look at -- let me look at the map.

MS. NIJMAN: Do you want your own?

THE WITNESS: Sure. Excuse me.

MS. CASSEL: Yep.

MS. NIJMAN: Just for the record, the witness is getting his own copy of the report that has the larger maps since these have been copied in a small version on Exhibit 2.

THE WITNESS: They're probably the same. I'm just comfortable with this.

At Joliet, there are offsite areas, but they are not necessarily impacted -- excuse me. There are facilities to the -- across to the west that are unclear to me, but may be impacting. And there are generally industrial areas to the

southwest. I believe there's a Caterpillar plant, but may not be. Again, I won't say that is impacting Joliet. I'm not saying it is impacting Joliet. It's there, but I'm not seeing it as impacting.

BY MS. CASSEL:

Q Are there any particular, specific non-coal ash pond or ash fill sources that you opine are impacting the groundwater?

A I have not opined that on Joliet.

Q So is it your opinion that the historical uses of the sites and the coal ash ponds are impacting the groundwater at Joliet?

THE WITNESS: Pardon me. Repeat the question.

MS. CASSEL: Could you read the question back, please.

(The last question was read by the reporter.)

MS. NIJMAN: Objection. Misstates prior testimony, that we read his prior opinion and its conjunction. Form of question.

You can try to answer, if you understand the question.

THE WITNESS: I can understand part of it. I can answer to part of it.

The Power Plant is over 50 years old and there are many historic uses at the site that may have caused the impacts that we're seeing, and they may be related to coal ash from historic uses.
BY MS. CASSEL:
Q Can you tell me what the historic uses are at the site that you allege may be affecting the groundwater concentrations and the water monitoring wells there.
A Based on just general knowledge of the coal power plant processes, they could -- again, they have something that occurred in the past that's not clear to me, where it could have come from; but I know there are historic uses of ash that they've used that may be causing these -- contamination to exist.
Q And what are the historic uses that you believe could --
A I'm just saying as a coal power plant.
Q As a coal power plant. Okay.
Have you done any specific evaluations of those historic uses to determine whether or not they are impacting the groundwater?
A No.
Q Have you --

MS. NIJMAN: Do you mean -- sorry.
MS. CASSEL: I'm sorry.
MS. NIJMAN: Just going back to that question, what do you mean by "historic evaluations"?
BY MS. CASSEL:
Q Have you done any --
MS. NIJMAN: Can you read back that question.
MS. CASSEL: Yeah, can you read the question back.
MS. NIJMAN: Maybe I just misheard it.
(The last question was read by the reporter.)
MS. CASSEL: "Have you done any specific specifics?"
Have you done any specific investigations of those historic uses to det- --
MS. NIJMAN: And what do you mean by "specific investigations"?
That's what I was hung up on.
BY MS. CASSEL:
Q Have you gone onsite to evaluate historic uses at the site to determine whether or not they've impacted the groundwater?
MS. NIJMAN: Like, by sampling?

MS. CASSEL: Could be one.
MS. NIJMAN: If you understand the question, you can answer it. It's very broad.
THE WITNESS: Yeah, I understand.
MS. NIJMAN: Object to broadness. Sorry.
THE WITNESS: In general, I have not done what I would call "specific research" into the plant records to see what may have been done. There has been previous work done on some of the ash sampling and ash fill that have been done that have identified, you know, what could be out there; but they -- I have not done any additional site investigation or sampling or analysis other than what's available in the record.
BY MS. CASSEL:
Q So you have -- is it correct that you've reviewed documents that relate to these general historic uses at the plant?
A That's what I said.
I didn't do specific research to pull up documents to say what they did with all their materials historically.
Q So your conclusion that there are historic uses that may be impacting the plant is solely based

on general knowledge of what is done at a coal plant?
A And looking at it by process of elimination, what we've seen out there so far doesn't appear to be an active source. So it must be from some other historic use.
Q But you can't tell me what that other historical use specifically is?
A I don't know what --
MS. NIJMAN: Objection. He said it's the historic use of the coal plant.
MS. CASSEL: Besides that --
MS. NIJMAN: Misstates prior testimony.
MS. CASSEL: -- that statement that it was historic use of the coal plant.
BY MS. CASSEL:
Q You can't identify within that more general statement a particular coal pile, a particular area of ash fill, any other particular specific source within that coal plant that you allege is contributing to the groundwater contamination?
A Correct.
Q Now, moving to Powerton, can you tell me -- okay. Now, to just follow up a little bit on Joliet, you had mentioned some ash fill sampling that had

been done.
Can you tell me what that consisted of.
A There's some ash fill sampling in the southwest part of the site that was conducted west of the Power Plant.
Q Do you know when that was conducted?
A I believe it was around 2005. I'd have to check to be correct, but I'm pretty sure it was around 2005.
Q And did you review those, either the samples themselves or a report about that sampling?
A There's a report by KPRG, and I did review that report.
Q Does that report -- did you rely on that report in coming to the conclusion that other sources -- or that the current ash ponds are not contributing to the groundwater contamination?
A That is one of the lines of evidence that I've used, yes.
Q What other lines of evidence?
A It's very broad because there's a whole report on that. So could you be more specific.
Q Okay. Besides that specific report, are

there other specific documents that you rely on in --
A Pardon me. I want to get a clar- -- I want to get a clarification of the previous question. I may --
Q Okay.
A I may have not answered it. I may not have answered the question that you asked.
THE WITNESS: Can you go back and ask the question again about what I relied upon.
(The requested testimony was read by the reporter.)
MS. NIJMAN: I'm going to, before you answer, object to the form of the question.
MS. CASSEL: Yeah. Why don't I restate that question.
THE WITNESS: It was kind of complex.
BY MS. CASSEL:
Q It was -- yeah, it went two directions.
Did you rely on the KPRG Ash Sampling Report in determining that other sources are likely contributing to the coal ash contamination?
MS. NIJMAN: Wait.
BY MS. CASSEL:
Q To the contamination at the groundwater --

of the groundwater at the Joliet site?
And I can rephrase that yet again if that was too complicated?
MS. NIJMAN: Yeah. That other -- you know, this other sources thing --
MS. CASSEL: Can you -- sorry. I was distracted.
BY MS. CASSEL:
Q Can you please tell me whether the KPRG Report that you reused -- that you reviewed -- excuse me -- did you rely on that report in coming to the conclusion that other sources that are not either the coal ash fill or the coal ash ponds are contributing to groundwater contamination at the site?
A It was --
MS. NIJMAN: Object to the form of the question. Vague. I don't know what she means by "other sources" at this point.
BY MS. CASSEL:
Q If you understand that question, you can answer.
A I can tell you what I -- they used the KPRG data for --
Q Okay.

A -- in that it was looked at to identify whether the ash that was there had leachate characteristics that would be acceptable or unacceptable to the State of Illinois and beneficiary use.
And when we look at the data, we look at it as potentially impacting groundwater. And it was identified that nothing in the ash exceeded the groundwater class- -- the groundwater quality criteria except for the data at one boring, which was subsequently removed.
Q Okay. So I apologize for cutting you off.
Had you completed your answer?
A No.
Q Okay.
A That was one piece of data that we used amongst data to indicate -- to conclude that the existing ash outside of the ponds was not contributing to the groundwater, so it must be something other than those areas.
Q I understand that.
And so what I'm looking for is what you used to determine that something other than those things have contributed to the groundwater

contamination at Joliet.
MS. NIJMAN: Objection. Misstates prior testimony.
MS. CASSEL: I think we're going to move on.
BY MS. CASSEL:
Q Can you tell me at Powerton what specific sources outside of the Powerton Plant you allege are sources of groundwater contamination at that plant?
A We have not -- I have not opined on any specific source.
Q Do you have an opinion, as we sit here, today of any other sources outside of the Powerton Plant?
A No specific source.
Q No specific source.
Any general sources?
A The inorganics that are in the groundwater are characteristic of coal ash materials.
My point is that the ash that we sampled and analyzed and where we evaluated it, it doesn't appear to be contributing enough to cause what we're seeing. And so I'm concluding by process of elimination there's something else.
Q Okay. So you aren't --

A But what I'm --
Q I'm sorry.
A And I'm thinking something old and historic, but not something current.
Q And, again, at Powerton, have you done any investigation of what that something old and historic is --
A No.
Q -- that you allege could be contributing to the groundwater contamination at Powerton?
MS. NIJMAN: Objection. Vague.
You can try and answer it.
THE WITNESS: I've -- I'm sorry. Please re-read the question.
(The last question was read by the reporter.)
THE WITNESS: I don't have a specific historical source.
Similar to Joliet, we're looking at the ash that we've seen outside the ponds. That does not appear to be the source.
BY MS. CASSEL:
Q Okay. So now let me ask -- we've now talked about the surrounding industrial companies. I

want to now ask that -- you also reference in your report on page 43 historical uses at the sites.
Do you allege that the contamination in the groundwater at Powerton is resulting from historical uses at the Powerton site?
A Yes.
MS. NIJMAN: Asked and answered.
Go ahead.
THE WITNESS: I bel- -- yes, that is my opinion, that it's something other than the ponds and other than the ash that we've sampled and analyzed.
BY MS. CASSEL:
Q What specific historical uses at the Powerton site do you allege contributed to the groundwater contamination at that site?
A Historically, the way power plants operated 50, 60, 100 years ago is the waste was not contained as it is now. So there's uncontained waste that historically caused some impacts, but what we've sampled recently does not appear to be contributing.
Q Have you done any sort of site investigation to evaluate whether there was, in fact, that historic use of waste at Powerton?
A I have not done an investigation. I've

relied on existing data to come to my conclusions.
Q Okay. Have you relied on any -- have you reviewed any documents relating to historic uses of ash at Powerton?
MS. NIJMAN: I'm going to object, only to the extent that the record is, what, 30 boxes now?
THE WITNESS: I'm trying to remember whether or not there is something that -- there was a specific study at Powerton outside the ponds.
MS. NIJMAN: So to the extent you can remember --
THE WITNESS: So I can't recall.
MS. NIJMAN: -- as you sit here.
THE WITNESS: I don't recall.
MS. NIJMAN: That's all you can do.
BY MS. CASSEL:
Q Can you identify for me today any specific historic use at Powerton that you allege may have contributed to the groundwater contamination --
MS. NIJMAN: Asked and answered.
BY MS. CASSEL:
Q -- other than the historical uncontained placement of ash waste at the site?
MS. NIJMAN: Asked and answered.

THE WITNESS: No specific source, historical source.
BY MS. CASSEL:
Q And what is the basis of your statement that historically power plants would not contain their ash waste?
A Discussions with power plant operators that are, well, older than me --
Q Did you --
A -- not specifically to here.
Q Okay. So not including operators at Powerton?
A Correct.
Q Did that include operators at the Joliet plant?
A No.
Q And you have not reviewed any specific records that show that that historic use of waste occurred at Powerton or Joliet that you recall?
MS. NIJMAN: Objection. Previous objections to the scope of the record.
And you can answer as you sit here and can recall today.
THE WITNESS: It does come to mind that in my

memory that there was the ENSR Report from back in, maybe, 1998, where they identified various uses and looked at the history of the facilities.
And so there -- that was the report that looked, you know, I would say, historically at the facilities.
BY MS. CASSEL:
Q Are you relying on that report as a basis for your conclusion that the contamination in the groundwater is a result of historic uses at the site?
MS. NIJMAN: You mean amongst the other things he's talked about already?
THE WITNESS: In com- --
MS. CASSEL: He can answer the question, if he understands it.
MS. NIJMAN: Okay.
THE WITNESS: In combination with --
MS. NIJMAN: Objection to vagueness of the question and overbroad.
You can try to answer it the best you can.
THE WITNESS: Again, there's a whole report, and the data from that ENSR Report along with the other data have allowed me to come to my opinion.

BY MS. CASSEL:
Q Can you tell me if there are specific documents, that you recall, that you rely on for the particular conclusion that other sources that are not the current ash ponds are contributing to the groundwater contamination at Powerton?
A I --
MS. NIJMAN: Again, objection to overbreadth. There's a series of documents cited in his report. There's a series of documents in the record.
If you can, off the top of your head, remember anything else, you can answer the question; but objection to overbreadth and vagueness.
THE WITNESS: I'll do my best in that, again, the ENSR Report had the most historical information; but it doesn't completely rule out other sources or activities have not yet been identified.
So I'm looking at the entire data set and identifying what I know, what I have measured, and what I don't know. And what I don't know is whether there's a specific source for the contamination.
BY MS. CASSEL:
Q Let's move on to Will County.

What do you allege --
MS. NIJMAN: I have the citation.
BY MS. CASSEL:
Q What do you allege are the sources of groundwater contamination from the surrounding industrial companies and conditions at Will County?
A Again, Will County has got properties adjacent to, but I would say are not necessarily causing active contamination because Will County is somewhat of an island. And then this is -- the comment -- the statement that you read for me earlier was a broad statement, I agree. Specifically to this site, though, they're -- it would be the historical sources, again, from an old power plant, not a company contributing to this --
Q Okay.
A -- the measured groundwater contamination.
Q So you're clarifying that at the Will County site, you're not alleging that there are any surrounding industrial companies or conditions that are contributing to the groundwater contamination?
A I'm --
MS. NIJMAN: From conditions? Companies and conditions?

Object to compound.
MS. CASSEL: I'm reading directly from his report and --
MS. NIJMAN: I understand.
MS. CASSEL: -- I'm asking him to clarify.
THE WITNESS: Where are you reading it? I'm sorry.
BY MS. CASSEL:
Q The bottom of page 43.
MS. NIJMAN: I understand, but that doesn't mean your question isn't compound.
THE WITNESS: Can you read it again, please.
MS. CASSEL: Let me restate that.
BY MS. CASSEL:
Q So are you clarifying now that for Will County that there are no surrounding industrial companies that are contributing to the contamination of the groundwater there?
A Not to my knowledge, currently.
Q Okay. Are there any specific surrounding industrial conditions that are contributing to the contamination of the groundwater at Will County?
A Not to my knowledge.
Q Can you tell me what historic uses at Will

County you allege are the sources of groundwater contamination at that site?
A It would be the same as Powerton. I don't have specific historical uses or conditions that would have caused it; But, again, I'm dealing with what I know, and what I know versus what I don't know.
Q And you said that your knowledge of historic uses at coal plants of placing ash in an uncontained manner comes from discussions with the operators in part; is that accurate?
A In part, yes.
Q What else does it come from, if not only from that?
A The ENSR documents, documents where some coal ash has been placed, of course, and some areas that have been reused for previous waste -- excuse me -- ash placement on a temporary basis. My experience, going to power plants and seeing how ash is handled historically. I've been going there for ten years or more now.
Q To the Will County plant in particular?
A No, in general. In my general experience.
Q Okay. Can you tell me, did you have any

discussions with the operators at Will County -- with any operators at Will County about historical uses of coal ash at that site?
A I relied on the documents that I could review, that I could -- I did not speak to them directly.
Q You did not speak to the operators directly. Okay.
Now, moving on to Waukegan, you state -- let's see. Let's turn to page 19 of your report, if you would.
A Yes, I'm on 19.
Q Do you see where you say, "Analytical res- --" this is in the first full paragraph near the bottom -- "Analytical results of the groundwater at/from the tannery indicate that certain inorganic constituents including arsenic, boron, chromium, lead, and mercury have migrated onto the Waukegan property."
Do you see that statement?
A Yes.
Q What is the basis for your statement that those particular constituents have migrated onto the Waukegan property?

A Well, I've got a citation, Footnote 46. And there's a series of documents that were called out by Bates numbers.
Q Do you recall what those are?
A At this time, probably groundwater monitoring results to some extent, but I don't remember all of them. That's all.
Q Do you remember -- regardless of the documents, your bases for stating that those particular constituents have migrated onto the Waukegan property?
MS. NIJMAN: Object to the form of the question. His bases is listed.
MS. CASSEL: Jennifer, I would object to the spoken objections. If he understands the question, he can answer. You've gotten your objection on the record. I would appreciate if you could let him answer.
THE WITNESS: Could you please ask it again. It's --
MS. CASSEL: Could you repeat that question, please.
(The last question was read by the reporter.)

MS. NIJMAN: Asked and answered. In the record.
THE WITNESS: Okay. Well, basically, people like to focus on boron as an example of an im- -- something that's coming onto the property. And there's boron on the upgradient side in a number of wells west of the existing facility that have boron, and the groundwater contours, in general, move west to east toward the property. And so I'm saying that the boron -- some of the boron, not all of it could be coming from the offsite property.
BY MS. CASSEL:
Q Where does the remainder of the boron come from in your opinion?
MS. NIJMAN: Objection. Vague.
THE WITNESS: As I've stated in the report, I believe there are some historical uses at these properties that have caused some old releases. And based on the data that we have obtained to date, when we look at the sampling, that where it's leaching greater than the groundwater quality criteria.
And so I don't have an answer what, specifically, the historic sources are. I'm saying I know what I don't know in that I don't -- I know that

it's not coming from what we've measured, but it must be coming from somewhere else onsite that I've not specifically identified.
BY MS. CASSEL:
Q So, to be clear, for your prior answer, you were saying that some of the boron you're alleging is coming from this offsite property, this tannery, but not all of the boron that's found in the monitoring wells at issue here is coming from that tannery.
Is that accurate?
A That's accurate, considering there are other characteristics of coal ash that aren't characteristic of a tannery.
Q Can you describe for me what characteristics of coal ash are not characteristics of a tannery.
A Well, I'm just saying in general that a tannery has certain types of chemicals, like chromium. If they have chromium, we don't see chromium to -- that I recall. So I'm just saying is that I'm not pinning all of the blame on the tannery.
Q And where did you not see chromium?
A I don't recall. I'm just saying, in general, it's a tannery. It's a different

manufacturing process. I don't recall the specific -- all of the chemistry --
Q Okay.
A -- but we do know that boron is common to both processes.
Q With regard to the other constituents that you list here, which includes chromium, I know -- arsenic, chromium, lead, and mercury, do you recall the bases for your statement that those particular constituents have migrated onto the Waukegan property?
A I'd have to go back and look at these individual citations --
Q Okay.
A -- which I brought. Sorry.
MS. CASSEL: Let's -- yeah, let's take out the next set of exhibits, if you would. So, let's see, some of these are contiguous and some are not, right? Or is this -- this one's for me.
MS. DUBIN: I'll take those two.
MS. CASSEL: So we're going to mark -- these are the ones we've been -- handed to the Court, right?
MS. DUBIN: I guess it doesn't matter.

MS. CASSEL: All right. I guess I've been keeping those. I'll give you one of these; one of these. And what else do we have? 8/15? There are other boring logs, though. Can you give me the other ones as well for 1324?
THE WITNESS: Could I ask for a five-minute break?
MS. CASSEL: Yeah. Of course. That's fine.
(After a short recess, the deposition resumed as follows:)
(Seymour Deposition Exhibit Nos. 3, 4, and 5 were marked for identification.)
BY MS. CASSEL:
Q Now, I've marked three additional exhibits. If you take a quick look at those, please.
A Uh-huh.
Q And Exhibit 3 has a backside as well.
MS. NIJMAN: I'm just moving the sticker so it doesn't cover the Bates number.
BY MS. CASSEL:
Q When you're done reviewing, if you could let me know if you've seen these before.

A Boring Log 8, yes. Boring Log MW-58, yes. MW-15 Boring Log, no.
Q And for the ones that you've seen before, which I think you said were 8 and 5, and there was a 9 on the back of the 8.
A Excuse me.
Q Have you seen that?
A MW-9? Yes.
Q Did you take those particular documents into account in concluding that the constituents you listed on page -- I believe it was 43 -- excuse me -- 19 of your report -- migrated onto the Waukegan property?
A I don't recall if those are specific ones that I relied on.
Q And you did not rely on Monitoring Well 15 Boring Log, correct?
A I don't recall seeing it.
Q Don't recall seeing it. Okay.
Is it your opinion that a monitoring well being screened in ash would have an impact on groundwater concentrations in that well?
A If the ash has leachable constituents remaining and if it is saturated, meaning you can

have a well screen in the ash and not have a saturation. So the answer in that situation would be it wouldn't have much impact. If it was saturated and you had a monitoring well screen in it, it would have some impact.
Q And what would impact -- what would determine whether the constituents remaining were leachable?
A Age. If the ash is really old and it had been there a long time, it would have less and less impact with time.
Q What amount of time?
A I honestly don't know.
Q Do you know what the age is of the ash in the monitoring wells that are -- I've got boring logs for -- in Exhibits 3, 4, and 5 -- so Monitoring Wells 5, 8, 9 and 15?
A Monitoring Well 8 and 9, to the best of my recollection, are west of the ash ponds and they're identified as being -- that area as being present in the 1998 ENSR Report. So it's older than that, and I did not look at historical topography to see if it -- how long it had been there; but I know it's at least before 1998 in the area west of the ash ponds.

Monitor Well 5A is right next to the ash pond and, as you can see, there's -- much of the dike is constructed of ash as I would expect it would have been as old as when that pond was constructed -- which I forget when it was constructed. I believe it was in the 1970s.
Q Do you know for certain whether or not the ash in this boring log described here is as old as the ash pond?
MS. NIJMAN: Objection. Vague and asked and answered.
THE WITNESS: As I've stated, I know it's from before 1998, but I don't know when that area was placed.
BY MS. CASSEL:
Q So you had referenced an area with regard to Monitoring Wells 8 and 9, I believe, and then with regard to Monitoring Well 5.
Are you also referencing the area west of the ash ponds?
MS. NIJMAN: Objection. Vague.
BY MS. CASSEL:
Q What area are you referencing when you discuss the 1998 ENSR document?

A The 1998 ENSR document documents that the area of Monitor Well 8 and 9, which is west of the ash ponds, existed.
Q What existed?
MS. NIJMAN: The area --
THE WITNESS: That area. The land, the soils that are logged in this hole existed, at least up until that time -- and I mean "before."
BY MS. CASSEL:
Q So there was land there, that's what they show? Or are you referencing the former ash area that's shown in the ENSR document?
A Yes. It's called the former -- I believe it's called the former ash area, west of the ponds.
Q And so in your answer about the age of the ash in Monitoring Wells 8 and 9, are you concluding that the ash in the Monitoring Wells 8 and 9 came from that former ash area west of the ponds?
A Again, to the best of my recollection, Wells 8 and 9 are installed in that area; but I would like to have a moment if I could check the location.
MS. NIJMAN: She didn't ask you for it.
THE WITNESS: Okay.

BY MS. CASSEL:
Q So are you -- is that what you're stating, or are you not certain whether or not Monitoring Wells 8 and 9, the ash in those particular monitoring wells comes from or is part of the former ash area west of the current ash ponds at Waukegan?
MS. NIJMAN: And I'm just going to object to the extent that you can answer to the best of your recollection as you sit here.
THE WITNESS: May I look at the Boring Log just to be certain?
BY MS. CASSEL:
Q You may, if you would just let me know what it is exactly that you're looking at.
A I'm looking at Figure 4-3 in my report, which is the Waukegan station monitoring wells for --
Q 4- -- does that have a Bates number on it, sir?
A It's my report, so let me look for the Bates number.
Q I'm sorry.
What figure did you say it was?
A 4-3.
Q 4-3?

MS. NIJMAN: It's Bates number -- your copy isn't Bates'd either.
MS. CASSEL: Does it not -- it may not have a Bates number, actually. I'm not sure if the report did have a Bates number. Just Figure 4-3. Okay. That's good enough.
BY MS. CASSEL:
Q So you're looking at that figure?
A Yes.
Q Okay.
A I just wanted to confirm the locations of 8 and 9, and that's on the edges of the former ash area that was identified in the ENSR Report.
Q Is Monitoring Well 5 also in -- is it in the former ash area, to your knowledge?
A Well, it's on the edge. And when I look at the Boring Log, I have concluded that it's likely -- it looked to me as part of the dike construction because it's made of a lot of coal cinders and ash for fill in that area.
Q Okay. So there's the ash -- the ash from the Monitoring Well 5 either comes from the dike or possibly from that former ash area itself.
Is that a fair statement?

A Yes.
Q And so going back to the earlier question, the age of that ash, you don't know exactly how old it is, you just know that it's been there since before 1998.
Is that accurate?
MS. NIJMAN: Objection. Vague.
THE WITNESS: To the best of my recollection, that's how I answered the question; that was placed before 1998.
BY MS. CASSEL:
Q Do you have any different answer to that question now as to how old that ash is?
A I don't think so. I believe that that's what I answered before. And I also said that in the area 5A, I thought it was a part of the dikes. And so it would have been constructed as part of dike, which I believe is in the 1970s.
Q For the ponds, not --
A For the pond dike.
Q Not for any former ash area?
A Correct. For the pond enclosure, if you will.
Q Okay. And since you said the Monitoring

Wells 8 and 9 are on the edge of that former ash area, do you believe that the ash that is in two of those particular wells specifically comes from that former ash area? Or do you also believe it was part of a separate construction?
A I don't know. I don't think there was -- I don't see any other construction in that area. It could have been from demolition activities over at the tannery. I'm not -- I don't really know.
Q Demolition activities at the tannery would create black slag to be put into the monitoring well or that would be fill in the monitoring well?
A My comment was that when you do demolition, you do earthwork, and they may have moved materials around. I'm not concluding that.
Q So it's a possibility?
A It's a possibility, a hypothetical.
Q Do you have any specific opinion as to the leachability of ash that is from 1998 or before?
A I don't have a specific opinion.
MS. NIJMAN: You mean other than what's in the report?
MS. CASSEL: I think he completed his answer.
MS. NIJMAN: Okay. Then you need to supplement

your answer.
Obviously, there's a report here. I mean, if you're asking for his recollection without having him refer to the report, or in addition to the report?
The objection is --
MS. CASSEL: If he doesn't understand my question, he's --
MS. NIJMAN: Okay.
MS. CASSEL: -- more than, you know, able -- welcome to ask me to clarify it. But I've asked him the question. I think they're relatively clear.
THE WITNESS: Just to be thorough, will you please read back the question.
(The last question was read by the reporter.)
THE WITNESS: I have not made an opinion on that, and I don't believe I made an opinion in the report either.
BY MS. CASSEL:
Q All right. Now, I'd like to move on and discuss with you a bit your selection of coal ash indicators. I'd like -- we talked about indicators a little before.

Can you give me a better understanding of what it means for a pollutant to be an indicator of contam- -- of something?
A Specifically for coal ash?
Q Sure. Let's do specifically for coal ash.
What does that mean?
A Well, when we -- when I looked at the data, you look for indicators from the ash itself, and you look at leachability results. So, in other words, you leach the -- you conduct the leaching tests and the chemistry analysis on the extract, and then you identify what could be coming from that sample.
Q Is there a reason they are called indicators? Is there a subset of coal ash pollution that is an indicator versus some subset of coal ash pollutants that are not indicators?
A First of all, you speak in a very broad sense of coal ash, and coal ash varies from where you obtain the coal and how you burn it. It's not always the same.
So when you look specifically to, for example, the sub-bituminous coal, there's history and there's specific data that you look at. So the indicators must be specific to the area that you're

trying to establish indicators. So it does vary from sample to sample, the indicators, primarily based on the coal source and how they're burning the coal.
Q And within each individual coal source and method of burning coal, are there any constituents that come from that coal source and that type of burning that are not used as indicators for that particular type of coal and method of burning?
A That's a complex sentence. Maybe you could break that up for me.
Q I could try.
So we've got a particular coal source and a particular way of burning that source, and that -- those two combined lead to some number of pollutants, correct?
A Some number of indicators, which are elements of the coal.
Q That's what I'm trying to understand.
Is there any differentiation between the total number of pollutants that come from that particular type of coal and method of burning that are not indicators? Is there any world of pollutants that are not indicators?
MS. NIJMAN: I'm going to object to the term

"pollutants" since it's not what he testified to.
THE WITNESS: As far as the constituents in coal, when you do an evaluation of the impacts and you look for indicators and then you look at the impacts frequently in a remedial investigation-type program or investigation, you're going to look at, you know, ultimately what is in the groundwater, what is in the soil, what is in the surface water, and identify, for those exposure roots, what elements, indicators, cause more health concerns than others.
And so you can select indicators on a set that's smaller than the entirety, depending on what you -- where you expect those indicators to be migrating to and the health or aquatic -- or biological effects of those indicators. So you would have a set smaller than the whole when you look at indicators.
BY MS. CASSEL:
Q So when you are using the term "indicators," you are referring to the entire world of potential pollutants that come from that particular type of coal and that they're burning and saying you can select a subset of them if you want, but your use of the word "indicators" is all of them.

Is that accurate?
MS. NIJMAN: Objection. Compound. Misstates prior testimony.
THE WITNESS: I think you have it backwards. I'm saying that you look at the entire list of chemicals, not indicators.
BY MS. CASSEL:
Q Okay. Not indicators?
A It's not -- all of the elements of the ash.
Q Okay.
A And you said a smaller subset based on the impact -- the effects of those indicators. And also the prevalence.
Q The effects of those chemicals?
Excuse me for interrupting you.
A Excuse me.
Effects of the chemicals -- constituents. And then you make it a smaller set to be able to say these are what I'm most interested in. They're more prevalent, they have more health effects, and they're -- obviously, they're from the source of the ash. That's how you go about setting a cons- -- indicators.
Q So in selecting indicators, you can select

some subset of those total number of chemicals based on some particular goal that you're looking for, like which ones impact health most? Is that a fair statement?
A That is a fair statement.
Q Okay. Can I ask --
A In part. In part.
Q In part.
Please complete it then.
A Well, you talked about health effects, and you -- maybe it would be more specific to human health versus biological surface water. The effects on the environment would be more thorough.
Q Okay. Have you ever used indicators in order to try to identify contamination coming from a given source -- a particular source?
A Yes.
Q What indicators did you use in what context?
A Would you specify as to -- that's a very --
Q Broad statement.
A You could ask about my whole career. I mean --
Q Okay.

A -- it should be a little --
Q When we're talking about --
A -- more focused.
Q -- coal ash, have you ever used indicators specifically before to try to identify coal ash contamination?
MS. NIJMAN: Coal ash -- objection to the term "contamination."
THE WITNESS: I have used the process at a number of sites, but not specifically in this context to look at an indicator from a leaking pond, for example.
BY MS. CASSEL:
Q Okay.
A I have looked at it from a leaking pond -- one leaking pond -- from a review capacity. A colleague asked me to review a document. I did not conduct that evaluation.
Q Okay. Now, can I ask if water testing showed that many indicators of coal ash were present in groundwater, but not every single chemical that could potentially come from coal ash were present in that groundwater, would that rule out coal ash as the source of those contaminants in the groundwater?

THE WITNESS: Could you re- --
MS. NIJMAN: Objection. Complex. Compound. Overbroad.
THE WITNESS: I lost my train of thought. I'm very sorry. Can you repeat the question.
MS. CASSEL: Let's try reading it back, if you got it, and we'll see if that works; and if not, I'll rephrase.
(The last question was read by the reporter.)
THE WITNESS: Thank you.
I think the answer is that -- again, it's very general -- that if you have twenty chemicals expected in coal ash and you find fifteen, I would not say that rules out coal ash. You have to look at a lot of data.
Again, that is very general statement. I mean, obviously if you had all twenty match you'd say it's coal ash. If you had ten out of twenty, maybe, but you may want to be looking for something else. Five, again, the fewer and fewer common matches, the less likely it would be coal ash.
BY MS. CASSEL:
Q Okay. Now let me ask a somewhat similar

question, so bear with me.

But if water testing showed some coal ash indicator pollutants in the groundwater as well as some non-coal ash indicators also in that groundwater, in that circumstance could you absolutely rule out coal ash as the source of the coal ash indicator contaminations?

MS. NIJMAN: Same objections.

THE WITNESS: I don't think it's quite that simple, as a "yes" or "no" question.

BY MS. CASSEL:

Q Okay.

A So -- because you look at lots of things when you look at what could be the source. So you can have non-coal ash indicators that could indicate there is something else as well. It wouldn't necessarily rule out coal ash, but it wouldn't necessarily say that it is coal ash. It becomes more complicated.

Q So there could be multiple sources of groundwater pollution in the same groundwater --

A That's --

Q -- and coal ash could be one of those sources of contamination, and something else entirely

could be another source of that contamination?

A It's very common at industrial sites to have more than one source.

Q But the fact that you have, for example, benzene present in groundwater while you also have a number of coal ash indicators, that in itself wouldn't rule out the possibility that the coal ash indicators came from coal ash?

A I would agree with that.

Q Now, turning to your analysis in this initial report -- and, again, we're not talking about the supplement yesterday to the extent that it even applies -- I don't know if it does -- did you consider anything detected in leachate -- the specific leachate test that you look at, to be an indicator pollutant?

MS. NIJMAN: Objection. Vague.

What are you referring to?

THE WITNESS: Are you referring to the leaching studies that were conducted on the ash samples or the leaching study on the -- outside the ash pond samples?

I'm not sure exactly what...

BY MS. CASSEL:

Q Let's take a look at Table 5-3 of your report.

So this looks to be the leachate collected from landfills and impounded as reported by EPRI 2006.

So with regard to this particular leachate, did you consider anything detected in the leachate as an indicator pollutant for coal ash?

A Regarding the Table 5-3, the impoundment from PRB source coal by the EPRI Study, if they detected it, we wanted to evaluate it.

Q Okay.

A And it is a -- I'll call it a conservative approach. We didn't try to shorten the list in any way. We wanted to use what they basically found.

Q So the answer is "yes" to my question?

A Yes.

Q Did your selection of indicators account for the relative concentrations of those pollutants within the leachate?

A No, not to my recollection.

Q And is it your opinion that that very -- that the -- excuse me.

Is it your opinion that a pollutant that has a much smaller concentration in leachate is as good an indicator as a pollutant that has a much higher concentration in the same leachate?

A That's a very general question.

I would say that when you look at all the data, you can say the smaller concentrations can influence a decision just as the higher can.

Q In what circumstances would the smaller concentrations be as good as indicators as pollutants with higher concentration?

A If you had something that was very unique, that may be a consideration. Again, you still need to look at all the data. But if it was something really unique to a particular substance, then you could -- if it was a small concentration, then, yes, you could say that's from that.

Q Are there any constituents listed, for example, in this Table 5-3 of your report, which is the leachate values from EPRI -- is that correct? Is that what these are, these -- the leachate constituents from the EPRI test?

A I'm sorry. Read that statement again. It was a little long.

Q It's just a question. I'm just trying to identify whether these particular constituents that are listed in Table 5-3 are, in fact, what was found in the leachate as reported by EPRI.

Is that right?

A Well, these data from EPRI are all they tested for, but that -- as you can see, beryllium, iron, silver, and thallium were not detected.

Q Right.

So -- but the answer to my question is "yes." These were the things that they tested for, and some of them they didn't find. But these were the constituents that they -- that they looked for, EPRI looked for in the leachate?

MS. NIJMAN: Objection. I'm not sure what the question is. There's no question pending. It sounded like a statement.

MS. CASSEL: I'm going to -- we can forget that question. Skip that question.

BY MS. CASSEL:

Q Let me just ask, of these constituents that are listed here on Table 5-3, are there any of those constituents that are very unique to coal ash?

A In the context of our previous question and

answer or -- because it -- these are indicators. I wouldn't say any, you know, are truly unique. I can say that we should look at all of them not being necessarily unique. You can't look at one being unique.

Q So it did come from your previous answer to my last question of stating that a constituent with a much smaller concentration in leachate can be as good an indicator as one with a higher concentration if it is very unique to coal ash or the substance that we're saying it's sourced from.

Is that accurate, the statement? Is that an accurate reflection of your prior testimony?

A The prior --

MS. NIJMAN: Objection. Objection. Misstates prior testimony.

THE WITNESS: Yeah. My prior testimony was in general, and now we're talking specifically to the EPRI data.

BY MS. CASSEL:

Q Okay.

A And I would not look at any one of these as being unique in the previous -- similar to the previous context.

Q Okay. So, in that case, is it your opinion that for coal ash indicators, concentration is irrelevant to whether a constituent serves as a good indicator for coal ash pollution?

MS. NIJMAN: Objection. Misstates prior testimony.

THE WITNESS: I'm not sure I heard you.

Did you say it was relevant or irrelevant?

BY MS. CASSEL:

Q Irrelevant.

A Okay. Then maybe you can read the question back.

Q Is it your opinion that concentration is irrelevant to whether a constituent serves as a good indicator for coal ash?

MS. NIJMAN: Same objection. Misstates prior testimony.

THE WITNESS: I hadn't stated that before, and I would say that in -- for coal ash, you have to look at more than just the concentration. It's not just minimum. You can't base it just on the minimum. You have to look at all of the data. I wouldn't say that one, for example, that's unique, if it was unique in

coal ash, because there is not one that's unique in coal ash that would be used.

BY MS. CASSEL:

Q So is concentration irrelevant to whether a constituent serves as a good indicator or not?

MS. NIJMAN: Objection. Asked and answered. Misstates prior testimony.

MS. CASSEL: I didn't say that --

THE WITNESS: It can be relevant or irrelevant. It all depends on the context. In this case we've picked lower concentrations as well as higher concentrations, so they're all relevant.

BY MS. CASSEL:

Q Okay. So if you contend that it is relevant, that concentration is relevant to whether a constituent serves as a good indicator for coal ash?

A To the extent that you found it. In other words, if you haven't found it, the concentration is low, which is relevant that it's not an indicator.

Q Okay. So it's not detected, then that level of concentration does matter and you wouldn't select it as an indicator?

A Correct.

Q Okay. But anything above detection makes

that a relevant concentration for this purpose?
A For the purpose of looking at indicators, that's the way we approached it, yes.
Q Okay. Do all pollutants travel through groundwater at the same rate?
A That's a very broad question.
Could you be more specific?
Q Do all coal -- do all pollutants coming from coal ash travel through groundwater at the same rate?
MS. NIJMAN: Same objection. Overbroad.
THE WITNESS: Again, there's very complex geochemistry involved, and that as a lot of these compounds move through the environment and you change oxidation state, some can precipitate and move slower. And, in fact, if you have an active source that has a variable pH, you can mobilize some and you can precipitate some. And so the answer is that they don't all move at the same speed.
BY MS. CASSEL:
Q And it's different circumstances that affect the mobility of those different constituents?
A Yes, it's very site-specific.
Q Okay.

A Geochemistry-specific.
Q So can you -- you had said pH can affect the rate at which a constituent moves through groundwater; is that accurate?
A Yes. Let me clarify.
Q Okay.
A The pH of the environment can affect how much it -- how far it goes. It wouldn't necessarily be the speed or the rate, but it would attenuate or -- the pH would cause it to attenuate or, again, it can also mobilize some metals.
So it's not really -- pH doesn't affect the speed per se as the -- how much mass is mobilized.
Q And when you say "how much mass is mobilized," is that similar to saying whether something leaches or doesn't?
A It's specifically that as the, let's say, impacted groundwater is moving through the environment -- let's pick on selenium. As it moves, there are elements and there are conditions where the selenium will precipitate out and will stop moving. It won't be dissolved anymore. And there are others that may be mobilized if the pH is changing over

distance.
So if you had -- so you can have both. I'm just saying that pH affects the mobility of the chemicals in the environment.
Q Are there any chemicals -- coal ash indicators, I'll say, to make it more specific -- that have a relatively constant rate of mobility through the environment?
A Yes.
Q Which are those?
A One that is commonly used is boron.
Q Are there any others?
A I believe sulfate is one, but I like to look first at boron.
Q And why is it that you like to look first at boron?
A Because it moves with water.
Q So would you say boron is highly mobile in groundwater?
A I don't think the adjective is necessary, but it is as mobile as water.
Q As mobile as water. Okay.
What about sulfate, is that the same situation?

A I'm not positive, but I think it is, similar. But sulfate, again, will combine with other elements in the environment. So I'd actually say probably, in general, not. I take that back.
Q Would you agree that pollutants with a -- that move at the same rate as water make better indicator pollutants than pollutants that do not move at that speed?
MS. NIJMAN: Objection. Terminology. "Pollutants."
THE WITNESS: In general, boron is a good indicator.
BY MS. CASSEL:
Q Why do you say "boron is a good indicator"?
A Well, it's a characteristic of ash and it is often found in ash areas, and it's shown by studies to be mobile in the environment.
Q Are there any other coal ash indicators that have similar characteristics?
A I don't recall.
Q Did your selection of indicator pollutants that you looked at in this -- in your report account for the relative mobility of those pollutants?
A We selected indicators -- two types of

indicators, some from site-specific data as shown on Table 5-3 from Midwest Generation facilities, and some from the EPRI Study, and we did not consider mobility.

Q Did any of the -- excuse me. Do any of the indicators that you selected, whether those are from the site-specific indicators or the EPRI indicators, do they occur in the groundwater naturally?

A Yes.

Q Can you identify which ones occur in groundwater naturally?

A Naturally in the world?

Q Or naturally in the area of the Midwest Gen power plants, let's say that.

A I didn't do a study that specific.

Q Okay. Do they appear -- did all of the pollutants appear naturally in the world?

MS. NIJMAN: I'm going to object to overbreadth.

I don't know if you can begin to answer that.

THE WITNESS: All of these are elements with the exception of sulfate, so they exist in the world. And I'm not here to opine -- to be very specific, I'm

just giving you a very general science question. Sulfate is a compound, and so these all exist naturally. They're not created by man. They're not --

BY MS. CASSEL:

Q And sulfate as a compound, does that ever occur naturally in groundwater to your knowledge?

A I'm not sure.

MS. NIJMAN: Objection.

BY MS. CASSEL:

Q Do you know whether these constituents occur naturally at the same concentrations as each other?

MS. NIJMAN: Objection. Overbreadth.

THE WITNESS: That would -- I can't answer that question. It's too broad.

BY MS. CASSEL:

Q Depends on -- what does it depend on?

A It depends on the environment, the geologic environment, the groundwater chemistry. You can have, you know, highly mineralized water naturally from bedrock, for example. You can have it from fine particles in soil where they have -- over time, can dissolve. And so they exist in many different

environments. I can't say anything about concentration.

Q But you said -- correct me if I'm wrong -- that you didn't specifically look at the concentrations of naturally occurring constituents of these coal ash indicators at the Midwest Gen plant sites?

MS. NIJMAN: Objection. Misstates.

THE WITNESS: I didn't do any specific study in the Midwest Gen coal ash area site, to identify whether in that region they exist.

BY MS. CASSEL:

Q Okay. And so you did not -- or -- actually, excuse me. Scratch that.

Did you take natural occurrence of these constituents into account in determining which coal ash indicators to use?

A When we look at this type of a situation, we look at the chemistry from the project site and all around that we have data for. We take all that into consideration when we look at indicators and whether they are occurring naturally or not.

Q Did you specifically look at the naturally occurring concentration of pollutants that you

selected as indicators in determining that those would be the indicators you used?

MS. NIJMAN: Asked and answered and overbroad.

THE WITNESS: The normal process when you look at what's naturally occurring is to identify the background. And, as you know, the background at these sites is very difficult to determine.

And so what we do is we take a step back and we say, Okay. Well, this is what we have. Whether it's natural or not natural, we have to deal with it.

So then you take a step back and say Well, where's it moving to? Who's exposed to it? And so in many -- if you don't have background, you can still address the problem. What is the problem with the whole process, if you don't have background, you can't eliminate it as background. If it's a part of background, regulatory programs don't require you to address it.

BY MS. CASSEL:

Q So for this particular set of indicators that you relied in your report -- which are two sets, right -- which is both the onsite tests -- excuse me -- leachate tests on the plants as well as the

EPRI indicators -- the only factor that you looked at to determine whether something should be an indicator is whether the pollutant exceeded the detection limits of that leachate test?

MS. NIJMAN: Objection.

THE WITNESS: Correct.

BY MS. CASSEL:

Q "Correct" was your answer?

MS. NIJMAN: First, put my objection on the record. Thank you.

THE WITNESS: Yes.

BY MS. CASSEL:

Q Just making it -- "yes"?

A Yes.

Q Okay.

All right. Can you tell me, are you aware of other projects in which this set of indicators has been used to indicate coal ash constituents?

A In regards to a groundwater impact study?

Q We can start there.

MS. NIJMAN: I'm sorry. I missed the question. I was looking for something.

Do you mind?

(The last question was read by the reporter.)

MS. NIJMAN: I'm just going to object to vagueness.

THE WITNESS: It's very broad and I don't -- I'm not aware of one. I do know that this data was identified, like for EPRI, for a purpose, and that is to understand what to look for. So that's what I know.

BY MS. CASSEL:

Q Have you ever used this particular list of indicators before, yourself, in evaluateing coal ash constituents in groundwater?

MS. NIJMAN: Same objection.

THE WITNESS: It's a very long list and it's very specific to this data, but I have not used this data on another application.

BY MS. CASSEL:

Q So now, in a connected matter, I want to better understand leachate.

Can you give me just your definition of what leachate is.

A When you take a sample -- I'll give you a couple of different ideas. When you take a sample

and you pass water or solvent through it, the purpose is to identify what is leaching from that, or what is extracted from it.

From a common landfill-type perspective, leachate is what water is dissolved -- constituents from the contained materials -- into some liquid form that exits the waste and becomes a leachate, having water percolated through the waste and then discharged out through a leachate collection -- leachate collection system is leachate.

Q What factors can affect how much a constituent leaches?

A In what particular test?

Q Are there any factors that no matter what test you use can affect how much a constituent leaches?

A There are probably many. Of the most common is the pH of the liquid that's used to mobilize the elements that are in the sample. That's one.

Temperature. We don't normally -- you don't have -- you run tests at constant temperature; but in the environment, in a landfill situation, temperature changes. So that can affect

how much it leaches.

The various things that are in the material, whether or not there's -- I'll call it competition. If something's mobilized, is it going -- not mobilize, because pH doesn't mobilize everything. So there are a number of things, but first we look at pH and temperature.

Q Okay. So, now, looking back at page 41 of your report I think we marked as Deposition Exhibit 2 -- let me know when you're there.

A I'm on 41.

Q So the leachate data that you cited on this page came from a 1985 ASTM test method; is that correct?

A ASTM 3987-85.

Q And you've got a citation there that says "ASTM, 1985." So it's from -- that's the leach test data that you discussed at this particular portion of your report?

A That's the procedure that was used.

Q Procedure that was used. Okay.

And did you rely on this, the results of this procedure, in coming to your conclusion that the constituents in the groundwater either were or

were not similar to the leachate?
MS. NIJMAN: Objection to vague.
THE WITNESS: As I previously stated, that this test procedure was done on samples that we had on hand. It was done on both the ash in the ponds and in ash outside of the ponds. We ran those tests and we came up with the results to see what would be indicators.
BY MS. CASSEL:
Q So you did compare the constituents in the groundwater with the results of these leachate tests --
A Yes.
Q -- this 1995 [SIC] -- okay.
A Yes.
Q And you relied on that comparison in part in concluding -- in determining what constituents matched or didn't match the leachate or -- I'm sorry. I'll leave it there.
Is that correct?
A We used this data and the groundwater data, and we did a comparison to see what matched --
Q Okay. And then you --
A -- or did not match.

Q And you relied on that comparison in coming to the conclusion that the contamination that's in the groundwater is not coming from the coal ash -- the current coal ash ponds; is that correct?
A That's correct.
Q Okay. In deciding to rely upon the results of this 1985 ASTM method, did you check whether that test method is still recommended by ASTM?
A ASTM doesn't recommend tests. They provide the tests as a test -- as a standardized test. I believe if you look at the ASTM standards, they don't say what they recommend it for or not for.
So what we do is we looked at that test -- as engineers and scientists, we look at what test to use. This test was available and made available and used in Illinois specifically for an application to look at what could come out of that ash that could be of concern. So it's a very state-specific test.
Q Can I ask, did you check whether ASTM considers that this 1985 test method has been superseded?
A I did not check. Normally, it would be superseded by a different dash, year at the end, but

I did not check.
THE WITNESS: Can I get a water?
MS. NIJMAN: Sure.
MS. CASSEL: Of course.
Go a little longer and then take a lunch break?
MS. NIJMAN: Sure.
MS. CASSEL: Does that work for you?
MS. NIJMAN: Uh-huh.
THE WITNESS: Okay.
MS. CASSEL: Let's mark the next exhibit, please.
(Seymour Deposition Exhibit No. 6 was marked for identification.)
MS. CASSEL: Here's a copy for you, Jennifer.
BY MS. CASSEL:
Q Now, if you would take a look at the exhibit, which is Exhibit No. 6.
Can you tell me, in general, are you familiar with ASTM's website?
A Yes.
Q Have you visited it before?
A Yes.

Q Can you tell me what ASTM does. I think you said they provide tests.
Is that --
A They develop standardized tests.
Q Develop standardized tests.
Is that specifically for leaching, or do they do things beyond that?
A They go very far beyond that. They do testing for many, many things.
Q Note for the record, I'm going to indicate that what you've just been handed, Deposition Exhibit 6, is a screenshot of ASTM's website.
A Uh-huh.
Q Do you see at the top there where it mentions -- where it states the name -- or -- excuse me -- the number of this test, D3987-85? Do you see that?
A Yes.
Q And that is the test that was utilized, that you relied on the results of?
A I believe so.
Q Do you see where it says "Superseded" on this website, right beneath the name of the test?
A I see that.

Q Do you think it's still appropriate to rely on the results of a test that are superseded -- has been superseded?

MS. NIJMAN: I'm going to object to the mode of questioning here in the sense of we're looking at something that doesn't show how or what was superseded in what way and also that his report cites to the 2004 date.

So I'm not quite sure where this is -- it's all relevancy and to the fact that this is an incomplete document. So he can't make any assessments to it.

BY MS. CASSEL:

Q Well, let me ask what your reaction is, sir, to this particular screenshot of the website.

Do you have any reaction to the fact that it says "Superseded" there?

A Well, I was not aware that this was superseded. I don't -- and I would have to know why it was superseded as to whether it could still be relevant.

Q Okay.

A Again, as Ms. Nijman has stated, I don't know why it was superseded, and that's important.

Q So you don't have a specific opinion as to whether or not this statement that has been superseded affects the reliability of those test results?

A I would state that when the tests were run, they were reliable and I would -- and I relied on them. I would not think that because it was superseded, it may very well be that there's a different test that they now use. But that test, when it was performed on the samples, it was relevant.

Q And how do you know that it was not superseded at the time it was run?

A I'd have to check.

Q Putting that aside, let's look at -- can we look at page...

MS. CASSEL: Can you mark this as the next exhibit, please.

(Seymour Deposition Exhibit No. 7 was marked for identification.)

BY MS. CASSEL:

Q Can you tell me, have you seen this document before, sir?

A Yes.

Q Can we turn to page 4, please.

Are you familiar with the 2012 ASTM neutral leaching test that was referenced here by Dr. Kunkel here on page 4 at the bottom?

A At the very bottom, there's a number of them that are listed.

Which one?

Q At the -- under the header, in the first paragraph under the header, Mr. [SIC] Kunkel states that, quote, in its most recent publication of the neutral leaching test, ASTM (2012), in part --

A I'm sorry. Can you -- I didn't find where you started.

Q The bottom -- the last sentence before the bullet points.

A Okay.

Q We're referencing a 2012 neutral leaching test from ASTM, ASTM D3987-12.

Are you familiar with that test?

A Yes.

Q And in deciding whether to rely on the 1985 ASTM neutral leaching test, were you aware of the statement in the "Significance and Use" section of

the ASTM D3987-12 procedure that states, as Mr. Seymour quotes, "This practice is not intended --" or -- excuse me. "This practice is not intended to produce extracts to be used as the sole basis of engineering design."

Were you aware of that statement?

A Which bullet is it?

MS. NIJMAN: I'm going to, first of all, object to the form of the question as complex, compound, overbroad, and vague. All of those things. I couldn't follow it.

If you can understand it without breaking it down, you can try to answer it.

THE WITNESS: Which bullet were you pointing to, the one that says 4.1, 4.2, or 4.3?

BY MS. CASSEL:

Q This one is actually 4.1.

Were you aware of this statement in 4.-- excuse me. I'm sorry. 4.2.

Do you see where it says, "This practice is not intended to provide an extract that is representative of the actual leachate produced from the solid -- a solid waste in the field or produce extracts to be used as the sole basis of

engineering design"?
Do you see where it says that?
A Yes.
Q In relying on the ASTM D3987-85 leaching procedure, were you aware of this bullet point 4.2?
A Yes.
Q Were you aware of Bullet Point 4.3 that says that, "This practice is not intended to simulate site-specific leaching conditions. It has not been demonstrated to simulate actual disposal site leaching conditions"?
A I see that.
Q When you decided to rely on the 1985 -- the ASTM D3987-85 procedure, you were aware of these bullet points --
A Yes.
Q -- 4.2 and 4.3?
Why did you decide to rely on the test?
A Most of the ASTM tests have similar qualifications. ASTM does not want to be pinned down as that definitive one answer because, in reality, this is true that the site-specific conditions vary by very many sites. This is a test -- as a standard

test. It's up to the engineer to decide how to use it.
So these are qualifications to basically say let the user decide whether it's appropriate or not. It doesn't say it should never be used. It's not what it's intended for, but you can still utilize it as a tool in our engineering tool kit.
Q So is it your understanding that they were, in fact -- the ASTM, in providing these statements, 4.1, 4.2, 4.3, were not indicating to engineers that these tests should not be used to determine appropriate leachate in-field conditions?
MS. NIJMAN: Object to form.
THE WITNESS: It's a very long question, but I -- these statements are in -- if you pulled out any of these other test results, my judgment would say that they have the same types of qualifications. What these statements are for are to tell the user that it's not specific to this specific site because you can't write a standard test for all sites.
So it's up to the user to decide how best appropriate to use it because there are many choices. There's not one choice, as you can see. It

doesn't rely on one type of test. This is the test that was run that was appropriate for Illinois, and it was accepted and that's what we used -- or what we relied on.
BY MS. CASSEL:
Q So have you in the past used other tests that have included similar language indicating that the test was not appropriate for the particular -- for field conditions?
THE WITNESS: Repeat the question, please.
MS. CASSEL: Could you read it back, please.
(The last question was read by the reporter.)
MS. NIJMAN: Object to overbroad.
THE WITNESS: I'm not sure I understand the question because there's a "not" in there that threw me.
Can you maybe rephrase it.
BY MS. CASSEL:
Q Okay. You said that a lot of tests, if not all tests, include language such as this; is that accurate?
A Yes.
Q Okay. Have you relied on other tests --

MS. NIJMAN: Objection. Misstates prior testimony. You said "similar to this."
BY MS. CASSEL:
Q Have you relied on other tests that had similar qualifying language such as what is found in 4.1, 4.2, and 4.3 for the ASTM D3987-12 test?
MS. NIJMAN: Objection to overbroad.
THE WITNESS: Having read a lot of ASTM procedures, they all have common similar statements that it's up to the user to decide which test to use. They're not making them site-specific.
So my statement was that if you went to these other tests, then I would expect that'd they have similar language.
BY MS. CASSEL:
Q Okay. So just to make sure the question is clear because I don't think I got a clear answer to it, when you've -- have you relied on other ASTM tests in the past?
A Yes.
Q And do you recall whether those ASTM tests had language similar to 4.1, 4.2, and 4.3?
A Specifically --
MS. NIJMAN: Specifically, as he sits here

today?
THE WITNESS: No.
BY MS. CASSEL:
Q Do you recall whether they had qualifying language suggesting that that test was not appropriate for detecting leachate in field conditions, for example?
MS. NIJMAN: Objection. Overbroad.
THE WITNESS: I don't recall. I do know that we used many different leaching procedures and that there's no one, normally, that's to be used in all situations; but I have used other tests, but I don't recall whether or not they had this specific language.
BY MS. CASSEL:
Q But it's your recollection that other tests -- that many other tests include similar language indicating that the test is not necessarily appropriate in given conditions?
MS. NIJMAN: Objection. Asked and answered. Misstates testimony.
THE WITNESS: What I mean is that a lot of ASTM procedures -- I've read a lot of them -- have qualification language. In general, ASTM doesn't

know if this is the full "Scope" section. It's impossible to say based on this one sheet of paper what this is.
MS. CASSEL: I'm asking the witness if he knows about a "Scope" section. And so that's actually whose testimony I'm interested in.
THE WITNESS: I know that when I looked at the test, I looked at the "Scope" section that was in the test. I can't tell you whether this is the same "Scope" section.
BY MS. CASSEL:
Q Do you recall whether or not that "Scope" section included any language stating that the test method was intended to be used under the specified testing conditions?
A That would be typical, but I don't specifically recall.
Q Can I ask, did you determine what the specific testing conditions were for an ASTM D3987-85?
MS. NIJMAN: I'm sorry. Testing conditions of what? Vague.
MS. CASSEL: D -- of ASTM, D3987-85.
MS. NIJMAN: Same objection. I don't know if

want to say it's for a specific use. In other words, you have to have the specific use in mind and you have to decide which test to use. That's what I said.
BY MS. CASSEL:
Q And you've relied on tests with qualifying language?
A Yes.
Q Okay. Now, turning back to -- I think this is Deposition Exhibit 6. I believe it's the screenshot of the PDF regarding D3987-85.
Do you see where it lists three bullet points under "Scope"?
A I see that.
MS. NIJMAN: Again, I'm objecting to a screenshot without the document attached and the appropriateness of the line of questioning without the document.
MS. CASSEL: Well, if you would let me set a foundation, then I can try to do that.
BY MS. CASSEL:
Q Can I ask you if -- are you familiar with a "Scope" section with relation to the D-3987-85 test?
MS. NIJMAN: I'm going to object. I don't even

you know what she's talking about.
THE WITNESS: I'm not clear on the scope or the statement. Would you -- I don't know if this is the scope of the actual test because it may be incomplete. I can read this if you'd allow me just to read it.
BY MS. CASSEL:
Q You can read that. I don't know that that will actually lead you to the answer of the question.
What I'm going for here is understanding what the specified testing conditions are that are instructed to be used for the ASTM D3987 test itself.
A Yes. This -- again, this is very common and standard in ASTM. What they say is that here's the test that you're going to run. Here's the specified test and conditions, like in the laboratory and the equipment. That's what they're saying. That's what it is appropriate for, the laboratory.
Q And do you know, for example, this particular test assumes a particular pH; is that right?
A I believe so, yes.
Q Do you know what that pH is?

A I believe it's neutral.
Q Neutral. Okay.
MS. NIJMAN: To the best of your recollection.

BY MS. CASSEL:
Q Did you --
A To the best of my recollection, it's neutral.
Q Did you evaluate what the conditions are in terms of pH at the coal ash ponds at the Midwest Gen sites?
A The bottom ash ponds that receive the ash, I believe, are more neutral. They are not acidic or basic.
Q Did you do any tests to determine the acidity or basicness, if that's a word --
A No.
Q -- of the conditions at the coal ash ponds?
A I rely on my general experience. I did not have a specific pH test.
Q Did you look at any documents or information concerning the pH of precipitation in the area of the Midwest Generation coal plant?
A I do know that area and the pH general

knowledge, and I also know that it's normally around 5 -- in the 5s, and that when we look at the ponds recognized to have an NPDES permit with a pH range. So I'm assuming it's going to be in that neutral range that's required by the permit.
Q You're assuming, but did you do anything beyond rely on your general knowledge to determine that?
A The knowledge of the permit, that the permits run from 6 to 9 -- pH 6 to 9, and I'm not aware of any violations.
Q And did you look at -- excuse me -- did you conduct any investigation to determine what the pH of groundwater is at the Midwest Generation plant sites?
A Well, the pH of the groundwater is in some of the test results, and I believe it was -- so it is available. I don't remember all the results.
Q And did you look at those results in deciding whether or not to rely on the neutral leaching test?
A Not for the groundwater because, again, it's a different application. You're looking at where the ash is, and in the ponds it's more neutral.
Q And is it your opinion that the pH of the

groundwater does not affect the pH in the ponds?
A I would --
MS. NIJMAN: Objection. Vague.
THE WITNESS: I would expect the pH in the groundwater would not affect the pH in the pond.
BY MS. CASSEL:
Q What's the basis for that statement?
A That the groundwater does not flow into the ponds.
Q Did you -- do you know whether the testing conditions assumed by ASTM D3987-85 has any assumed liquid to solid ratio?
MS. NIJMAN: Again, same line of objections.
To the extent you remember each aspect of this ASTM test, you can answer.
THE WITNESS: The way that tests are normally run is they have a volume of liquid and a volume of solids, but I don't -- or mass -- but I don't recall what they are.
BY MS. CASSEL:
Q And did you look at that volume of solid as compared to the volume of liquid in deciding whether or not to rely on this ASTM test?
A I looked at the results of the tests for

the purpose of comparison. The purpose of the comparison was, is it going to provide something that is acceptable in Illinois for a reuse standard. That's how I used it.
Q Okay. But that didn't answer my question, which is did you look at the solid to liquid ratio, or the volume of liquid to the volume of solid, as assumed or as used in the ASTM D3987 test when deciding to rely on the results of that test?
MS. NIJMAN: Same series of objections.
THE WITNESS: I did not.
BY MS. CASSEL:
Q Did you do anything to determine the liquid to solid ratio in the field conditions at the Midwest Generation sites?
A We did not calculate that.
Q The -- sort of a side question. The E-P-R-I, EPRI, data that you cited in Table 5-2 of your references, is that -- I think we didn't see that in the list of references. I may be missing it.
Could you identify either where it is in the list of references or let us know if it's not there in your report?
A Are you saying it's not specifically

referenced in our "Reference" section?
Q I believe so. I'm just asking if you can identify what it -- if it's in here, what it is.
MS. NIJMAN: It came from their documents.
THE WITNESS: Yeah.
MS. NIJMAN: Just for the record, it came from your documents, Sierra Club Document 15059.
MS. CASSEL: 15059.
Okay. It was that single page was the only thing that --
MS. NIJMAN: No, it's a document. That's the beginning of it.
MS. CASSEL: Okay.
BY MS. CASSEL:
Q Is that the entirety of the EPRI data cited in Table 5.2?
A There's a lot of data that's in that report, much more than what's on my one spreadsheet that I provided.
Q Gotcha.
But that's the sole source of that data that you used in your report?
A The EPRI data that we presented, that's the only document that we pulled the data from.

Q Just want to make sure that we've got the sources that you relied on in putting together the report.
MS. CASSEL: 12:15.
This might be a good time to break, I think, for lunch --
MS. NIJMAN: Okay.
MS. CASSEL: -- if that works for you all.
MS. NIJMAN: Sure.
MS. CASSEL: I'm happy with 45 minutes or an hour, whatever you guys prefer.
MS. NIJMAN: 45 minutes is great.
MS. CASSEL: Okay. So we'll reconvene around 1:00.
MS. NIJMAN: One other thing that I wanted to point out is that yesterday, the witness contacted me to tell me that he had prepared some notes, and to be fair to you, I wanted to let you know that. And if you would like those notes, he has brought them. And they're not notes that were prepared previous to yesterday. So I didn't have them before, and, in fact, I've not even seen them. So if they're --
MS. CASSEL: Yes, we would like to have them. Thank you. I appreciate that information.

(Tendered document.)
MS. BUGEL: Jenny?
THE WITNESS: Would you like them? Or...
MS. BUGEL: Jenny, do you want them?
MS. CASSEL: Yes.
MS. NIJMAN: Do they have the Bates number on them now?
MS. GALE: No. We haven't seen them.
MS. NIJMAN: This is the first time looking at it too. He told me he had prepared notes and I said to bring them to the deposition.
MS. CASSEL: So just for purpose of identifying them later, why don't we mark them as an exhibit since they don't have Bates numbers. We may or may not actually reference them in the deposition, but --
MS. NIJMAN: That's fine.
MS. CASSEL: We'll just mark them as an exhibit then.
(Whereupon, a luncheon recess was taken to resume at 1:00 p.m.)
(Seymour Deposition Exhibit No. 8 was marked for identification.)

MS. CASSEL: We can go on the record.
BY MS. CASSEL:
Q Okay, sir. I would like to turn to page 42 of your report, please, Deposition Exhibit 2.
So this is Section 5.5.2, the matching analysis that you did in this report and -- as well as in Tables 5-4 and 5-5.
And, so the record is clear, we're discussing the matching analysis in this initial report since I only received the supplement to that yesterday, and we're not prepared ask you questions about it other than a single question just to understand what was done.
So we will focus on this report and those -- the tables in the initial report?
MS. NIJMAN: Okay. Then let me just state for the record, though, depending upon on your questions -- it was a mathematical error that was corrected. So if you're going to ask him about his document, these pages have been supplemented.
MS. CASSEL: Well, I don't know enough about what was supplemented until I ask him.
MS. NIJMAN: Sure.
MS. CASSEL: So I'm going to focus on this and,

you know, I'll assume his answers based are on this unless he tells me otherwise.
MS. NIJMAN: So you'll have to clarify --
THE WITNESS: We'll take each question as it comes --
MS. CASSEL: Perfect.
THE WITNESS: -- and decide.
BY MS. CASSEL:
Q Okay. So you state on page 42 -- let's see if I can find it -- quote, Conceptually -- this is the second sentence of the paragraph under 5-5- -- or -- excuse me -- 5.5.2, page 42.
A Excuse me. Pardon me. I'm going to look for my supplement just in case I want to check something.
Go ahead. I'm sorry.
Q So you state on page 42, "Conceptually, if all the constituents detected in groundwater samples from a monitoring well match the constituents detected in leachate from ash currently stored in ponds, and if constituents not detected in groundwater samples match the constituents not detected in leachate from ash currently stored in ponds, then it would be probable that leachate from

ash currently stored in ponds is impacting groundwater."
Do you see where you state that?
A Yes.
Q What do you mean by "match"?
A Well, what we've done, in general -- because I know that you haven't seen the supplement -- but, in general, we're looking to see what you can find in the groundwater that's common to the pond or what's found in the groundwater that's inconsistent with what's in the pond. So if you look at both matching and non-matching data.
Q So what is -- if a pollutant is detected in both the groundwater and the leachate, then that's a match?
A Yes.
Q And if it's not detected in groundwater and not detected in leachate, that's a match?
A Well, that's one of the things that in the supplement you'll notice that we've changed because it came to us that by including that number in the denominator, it was calculating a number that we didn't think was representative of a matching versus non-matching analysis.

Q So what is the diff- -- so please explain to me what the difference is.
So is it not a match if the constituent is not found in the leachate and not found in the groundwater?
A Yes, because we felt that you could add a series of elements or compounds that didn't exist in the ash and didn't exist in the groundwater, and theoretically that number keeps getting less and less representative, so we took that data out.
Q But they are both in, then they are both a match?
A If they're both in and they both -- then they match.
Q When a pollutant is below detection, does that mean that there is none of it in the sample tested?
A In which media are you talking when you say there's a pollutant detected?
Q In any media. We can say the groundwater.
If there's a pollutant -- if a pollutant is below detection in groundwater, does that mean there is none of it in the groundwater?
A Well, by definition, if it's not detected,

we're not including it.
Q But that's not my question, as to whether you're including it.
I'm asking you, is there none of it in the groundwater if it's below detection.
MS. NIJMAN: Object to vagueness.
THE WITNESS: Again, the -- the sci- -- I'm sorry.
MS. NIJMAN: Go ahead.
THE WITNESS: The science is that if you don't detect it, you assume it's not there.
BY MS. CASSEL:
Q And is that what you did?
A Correct.
Q Okay. If you ran a test on the same groundwater that had a lower detection threshold and the concentration of a pollutant was found to be detectable under that test, but it was not found -- it was below detection in another test with a higher detection threshold -- what am I trying to say? The pollutant is, in fact, present in that groundwater in that case; is that correct?
MS. NIJMAN: Object to form. Compound.
THE WITNESS: The practice that we follow is

that you have detection limits, and you follow standard detection limits for groundwater quality monitoring.

In our practice in groundwater assessments, we have laboratory analyses and you have detection limits, and those detection limits are based on a lot of procedural things that the lab follows. And so you have a detection that's accepted and a standard test that's accepted.

Now, there are cases where you have a lower detection limit with a different method, and if that's accepted in the practice, then you would say it's there if you detect it.

BY MS. CASSEL:

Q Now, in determining whether there was a match of pollutants, as you call it in your report, did you take into consideration whether the test method used to analyze leachate had the same detection limits as the method used to analyze groundwater?

MS. NIJMAN: Object to form. Pollutants is not what he testified about in his report that you referenced.

THE WITNESS: What we took into consideration

was that the ASTM test that we used for the -- the extraction test, it met groundwater quality standards, which is what's required by the test.

So we believe that if the constituent was found and it was above the groundwater quality standard, then we would include it. If it was not detected, we always knew that it was below the water quality standard, and so we felt comfortable not including it if it was less than that detection level.

BY MS. CASSEL:

Q Do the leachate test that you relied on and the groundwater monitoring tests of the groundwater at the Midwest Generation plants have the same detection limits for all pollutants?

A Not for all.

Q So they have different detection limits for the same --

A For --

Q -- let's -- boron -- is that correct?

A I would have to look. I know that there are a few that are the same; but, in general, I think there's one that's got a lower detection limit in the groundwater test, and most of them are higher in the

leachate test than in the groundwater testing.

Q Did the fact that there were different detection limits figure into your analysis at all in terms of determining whether pollutants matched in the leachate and the groundwater?

A I believe you asked that question earlier and --

Q I may have. I'm trying to understand the --

A -- and the -- we did not fac- -- we factored in the detection level concept in that we knew we were meeting groundwater quality criteria in the analyses. That's how we factored it in.

Q You had said before that -- I believe you said that there are accepted detection limits that are used for different types of tests; is that accurate?

A Yes, that is --

Q What makes --

A -- accurate.

Q Excuse me.

What makes them accepted?

A In this case there are standards. And so it's a standard ASTM test and it's a standard test

for groundwater analysis accepted by the state. In this case both analyses types are accepted by the State of Illinois IEPA.

Q So they're accepted by the IEPA, and that's what you mean by "accepted"?

MS. NIJMAN: Objection. Asked and answered.

THE WITNESS: That's correct.

BY MS. CASSEL:

Q So just to make sure I'm understanding the data correctly, I'm going to look at your old Table 5. I recognize there's a new one. You can tell me what constituents there are.

Table 5-5. I'm sorry.

A I'm sorry, Jenny. I have to look at this one because I took 5-5 out of my -- my book.

Q Okay. If we can look at 5-5 for Waukegan, specifically.

A 5-5?

Q 5-5 for Waukegan, yes.

A I have it.

Q Okay. So just to make sure I understand what this table shows, what does a blank mean in the table, if there's a blank in the cross section between a well and a particular constituent?

A That it was not detected.
Q Okay. Blank means not detected.
What does the X mean?
A That it was detected.
Q Was detected.
Okay. So -- and in the second column, is this showing that under this analysis, only three of these constituents you considered to be indicators of leachate?
A In the second column of the table, it indicates that barium, boron, and sulfate are indicators of leachate.
Q And none of the other constituents are indicators of leachate; is that correct?
A That's correct.
Q Is that what the blanks mean? Okay.
Not -- so the table doesn't show concentration data; but if the leachate and the groundwater have the same concentration of the constituent, is that a match?
A I'm sorry, Jenny. Can you repeat the question.
MS. CASSEL: Could you read it back, please.

there could have been -- or there may be up to .05 milligrams per liter of arsenic in that water without it being detected; is that correct?
MS. NIJMAN: Objection. Vague. You said "leachate," then you said "water." I'm trying not to do a talking objection, but the question was unclear.
BY MS. CASSEL:
Q In the leachate, if the detection limit is .05 milligrams per liter, there could be up to .05 milligrams per liter in that leachate without it being detected; is that correct?
A That's correct.
Q So on Table 5.5 for Waukegan -- which I get back to that -- there is an X for all wells for arsenic.
What does that represent? Does that mean it was detected?
A It was detected.
Q So it was above .05 milligrams of arsenic per liter?
A I believe the groundwater quality detection was for lower. I'm almost certain. So it's actually higher than maybe .1 or -- excuse me -- one or two parts per billion detection level.

(The last question was read by the reporter.)
THE WITNESS: If they're not shown on the table, they're not detected. If they're detected, there would either be a match or a no match.
What I'm saying is that --
BY MS. CASSEL:
Q So there's no concentration data, obviously, or it's just X's and blanks.
But if the leachate -- if there's the same exact concentration of a pollutant in groundwater as there is in leachate, is that a match under your analysis?
A Yes.
Q Let's look at arsenic, just to take an example.
Do you know what the detection limit for arsenic was in the leach test?
A The leach test was -- I believe, is 50 parts per billion or .05 milligrams per liter --
Q Okay.
A -- because it's in the Clean Water -- or the Class I Illinois Drinking Water Standard.
Q Okay. So that means that in the leachate

Q This is for the groundwater?
A For the groundwater.
Q This is not for the leachate?
A Not for the leachate.
Q Okay. So let's look at the data for the wells, just to see what it actually was.
MS. CASSEL: Can you hand me the next exhibit.
MS. DUBIN: 56445?
MS. CASSEL: Yes.
That's part of this whole thing, right?
MS. DUBIN: Yes.
MS. CASSEL: Okay. Can you mark this exhibit, please.
(Seymour Deposition Exhibit No. 9 was marked for identification.)
BY MS. CASSEL:
Q So you have been handed what's been marked as Deposition Exhibit No. 9 -- Seymour Deposition Exhibit No. 9.
A Uh-huh. Okay.
Q Do you recognize this document?
A I recognize it as a Groundwater Quarterly

Monitoring Report, Waukegan Station, and it is labeled as the Fourth Quarter, 2015.

Q So let's take a look -- it says, "Annual and Quarterly Groundwater Monitoring Results - Fourth Quarter, 2015," right?

A Yes.

Q Okay. Just to make sure.

So let's look at Bates page 56445.

A Jenny, recognize, please, that this is 2015 data. This analysis is based on 2014 data.

Q It's fourth quarter, 2015. Okay.

I believe this data does have the 2014 concentrations in it, so we can look at those.

If you would look at 56445.

A Okay.

Q So the arsenic concentrations in Monitoring Well 2, as an example, in 2014 were .0085, .0062, .0081, and .0095.

I believe that's milligrams per liter; is that correct?

A Yes.

Q So in the groundwater -- there was arsenic in that groundwater in 2014, correct?

A Yes.

Q But that arsenic was always below .01 milligrams per liter, right?

A Based on the detection level standard.

Excuse me. This is the standard. I'm not sure what the detection level is.

Q So if the leachate --

A There we go. Excuse me. The detection is listed next to the result.

Q So if the leachate had the same amount of arsenic, just below .01 milligrams per liter, or these specific numbers below .01 milligrams per liter, would the leach test data have detected that arsenic?

THE WITNESS: I'm sorry. I'd like to have that question reread.

MS. CASSEL: Can you read it back.

(The last question was read by the reporter.)

THE WITNESS: I'm very sorry. I'm -- I'm -- please do it one more time, Brad.

(The last question was read by the reporter.)

MS. NIJMAN: Object. Vague. It's --

THE WITNESS: It's -- I'm just confused by the

question.

MS. NIJMAN: -- a hypothetical that you're giving?

MS. CASSEL: No.

BY MS. CASSEL:

Q Well, would this amount of arsenic that's shown in the 2014 groundwater data for Monitoring Well 2, would that amount of data show up in the leachate test?

A If you had results, for example -- looking for arsenic -- August 21st, 2014, the concentration is .0081, and that would be below the leachate test detection level.

Q And are all of the results for 2014 for arsenic in Monitoring Well 2 below the leachate test detection levels?

A They appear to be.

Q Okay. But the leachate could, in fact, have that same concentration of arsenic in it, correct?

A I think earlier the question that was asked that the arsenic could be in the leachate sample up to the detection level of the leachate test, which is .05.

Q So, "yes"?

A So the answer would be "yes."

Q Yet -- so essentially you could have the same concentration of arsenic, this concentration that's shown in the groundwater levels for 2014, in the leachate, but under your analysis that would not match; is that correct?

A Correct.

Q And the detection limit for groundwater, just to be clear, in 2014 for Monitoring Well 2 was .001 milligrams per liter, right?

A For the monitoring groundwater sample --

Q For the groundwater sample.

A -- .001, yes.

Q Thank you.

Let's consider antimony, just as another point of comparison. If we look at Table 5-4 of your report --

A For Waukegan?

Q For Waukegan also.

A Okay.

Q And this is looking at the -- 5-4 -- detected -- and here, we have a different list of constituents as being indicators of leachate.

Why is there a different list in this table?

A This list is based upon the EPRI leachate data.

Q So here we show in Table 5-4 of your report -- we show antimony as being in that leachate, correct? Because it was only an indicator if it was in it --

A Yes.

Q -- is that right?

But it's not present in the groundwater samples for any of the wells; is that correct?

A Yes.

Q Let's see how much antimony was detected in the leachate data. So if we can look at 5-2, Table 5-2, page 1 of that table.

A Page 1.

Q Page 1 of Table 5-2, the first page of that table.

A Okay.

Q So is it correct that the concentrations of antimony in leachate for sub-bituminous coal range between .00024 and .00062 milligrams per liter?

A In the impoundment for sub-bituminous coal, antimony was found at those levels in parts per million.

Q Okay. So that is less than .001 milligrams per liter, correct?

A Yes.

Q Now, let's compare how much antimony was detected in the groundwater.

If you would look back at the same monitoring data, page 56445 --

A I've got it.

Q -- from Monitoring Well 2. We have a non-detect, right, for antimony for each of those dates in 2014?

A Yes.

Q And the detection level of that is .0030, correct?

A Yes.

Q So with the concentrations of antimony that were found in the EPRI leachate data, up to .00062 milligrams per liter, would that amount of antimony be detectible in groundwater using this detection limit?

A It does not look like it would be.

Q So even if the groundwater had the same amount of antimony as the leachate, your matching analysis would not show a match in this circumstance, correct?

A What I would say is that if it was a detection level of .003 for groundwater, that --

THE WITNESS: I'm sorry. I shouldn't answer a question not asked.

Can you read the question again.

(The last question was read by the reporter.)

THE WITNESS: Correct. It would not match.

BY MS. CASSEL:

Q Okay. Have you used this same matching analysis before, matching the constituents in -- all constituents found in leachate to all constituents found in groundwater?

A For coal ash?

Q For coal ash.

A I have not.

Q Have you used it for other types of sources?

A No, I have not.

Q Do you know of any other projects in which

that matching analysis has been used?

A Well, my -- from my experience? What I have done or for other people?

Q Well, you just answered for what you've done, right?

A Right.

Q So do you know of any other people that have used that?

A I would be pretty sure that they have used that type of analysis before. Whether it's for coal ash or not, I can't speak. It's just a matching method.

Q Do you know for certain whether that particular method that you used here has been used before?

A No, I do not.

Q Do you know if this method has been published in any journals or academic papers?

A I don't believe it has.

Q So we went into this a little bit earlier, but can you tell me -- can you explain, because I just didn't understand, what exactly the differences are between your initial report and the supplement that you -- we were provided yesterday.

A Okay. What we did is that where we found in the denominator of the equation -- which includes matching and non-matching compounds as the total that was found in groundwater, whether they matched or not matched -- it included those that were non-detect, not in the groundwater, and non-detect in the leachate. And we felt that increased the denominator higher than what we believe represents the actual result, which -- so we lowered the denominator to remove data that was both non-detect in the groundwater when it was non-detect in leachate.

Q Is -- I'm sorry.

A And the reason is that, as I mentioned previously, if you take that to the limit, you could add more and more compounds that were not-detect in each -- leachate or ash, and the denominator keeps getting bigger and bigger and the result gets smaller and smaller. And we didn't feel that was representative.

Q You can invent any type of constituent you could ever imagine and that would all go into the denominator under --

A Throw lots of matter in there, and it would make the number less accurate.

Q Okay. Is that the only difference in that supplemental report?

A Yes, I'm pretty sure.

Q Okay.

A I'm 99 percent sure.

Q Okay. That was the mathematical error that was referred to on the first page of that report?

A Yes, Jenny.

Q Okay. Now, let's see. I think I'll turn to something different. I want to talk a little bit about your discussion of ash and fill areas outside of the ponds.

Is it your contention that the fill ash and fill areas outside of the coal ash ponds have not contributed to the concentrations of contaminants in the groundwater at those monitoring wells?

MS. NIJMAN: I'm sorry. I need to hear that again.

THE WITNESS: Can you repeat the question, please, Brad.

MS. CASSEL: Why don't I restate the question.

BY MS. CASSEL:

Q Is it your contention that the historical ash fill at the sites is not contributing to the

concentrations of constituents in the groundwater at those sites?

A The analysis that we've done indicates that we believe it is not contributing because the -- again, the analysis that we've done show leachates that are very low or, you know, not below the groundwater classified -- groundwater standards. And so we don't believe it's contributing to something that's above groundwater standards.

Q So let me ask, looking at the samples you mention, plant by plant, at Joliet 29, you relied on that same neutral leachate procedure as we were discussing earlier, right, the ASTM 1985 test?

A Yes.

MS. NIJMAN: We need to clarify the record. It's not an '85 test, it's a 2004 test.

MS. CASSEL: It says "D3987-85."

THE WITNESS: '85.

MS. NIJMAN: Paren (2004). And that's how it's noted in his report.

MS. CASSEL: The citation is ASTM 1985.

MS. NIJMAN: Okay. But if you look at the references in his report, it says Paren (2004).

MS. CASSEL: Okay.

MS. NIJMAN: So I just don't --

MS. CASSEL: I'll refer to it as the name of the test.

MS. NIJMAN: That sounds good.

BY MS. CASSEL:

Q ASTM D3987-85, I believe, are the numbers.

A Okay.

Q Is that -- that was what was done for Joliet 29; is that correct?

A Yes.

Q And those tests were conducted in 2005, right?

A I believe it was 2005.

Q Do you know where the Joliet 29 site samples were collected from?

A In general, yes, I -- if you have the report, I could point to it specifically.

Q In your report?

A Either my report or the KPRG that actually has boring locations on it.

Q Let's find it in your report because I don't know that we have the KPRG Report with us.

Do you know where in your report you have that location?

A It would have been -- if it's Joliet, it would have been Figure, probably like -- maybe, 4.1, 5.1. The figures are toward the back.
Q I'm sorry.
You said it's in a figure?
A Figure. Figure for Joliet.
Q Okay. Figure, Waukegan.
Okay. I have a figure, 7.1, that has a picture of Joliet.
So can you point out for me where on that figure, 7-1, of your report.
A Relative to where the ponds are located, if you go southwest, there's a very large dark area. It was in the green area next to the dark area, so it was to the southwest of the ponds. I believe the --
Q So where is this -- I'm sorry.
A I believe the black area is a coal pile that was separate from that. It was outside the coal pond.
Q So to see if I understand, where it says "Coal handling and transfer area, approximate area, 2.8 acres." And there's a green --
MS. NIJMAN: I'm sorry. What page are you on? He doesn't have that on his.

MS. CASSEL: I'm looking at Figure 7-1 of his report.
MS. NIJMAN: Oh. He was looking at 4-1.
THE WITNESS: I'm sorry.
MS. CASSEL: I can look at whatever -- whichever works best. But...
MS. NIJMAN: Was it in between?
THE WITNESS: I don't think so. Here it is.
And your question was...?
BY MS. CASSEL:
Q I'm just trying to identify on the Figure 7-1 where you were just referencing.
So do you see -- are you looking at the figure that says "Coal handing and transfer area, approximate area 2.8 acres"?
A That's -- I see that.
Q Can you tell me where the sampling was done relative to that.
A I am pretty sure it was in the green area where it says "Coal." It wasn't done in the black area where there's coal.
Q Okay.
A So it's outside that area.
Q Where the word "Coal" appears?

A Prob- -- yeah. In that general area.
Q In that general area. Okay.
Did you evaluate whether the samples that were taken there are representative of fill elsewhere on the Joliet site?
A When you look at the boring logs, fill is variable and those samples were also variables. So I would say, yes, it was consistent with the variable type of fill.
Q So the basis for your statement right now -- so you're concluding that it was representative, right? Is that correct?
A Yes.
Q And the basis for that is because those samples were variable and the ash -- the boring logs for the monitoring wells were also variable; is that correct?
A There's boring logs from the monitoring wells which don't all have ash, of course, unless -- I don't know if Joliet has any, but there're other boring logs in the site that have logged fill.
Q Okay. So based on looking at those two things --
A Correct.

Q -- those samples and the boring logs at Joliet. You're saying that's the basis of saying it's representative?
A Yes.
Q Okay.
MS. NIJMAN: A basis.
BY MS. CASSEL:
Q Is there any other basis for saying they're representative?
A Just the general knowledge of the site activities, knowing that it was placed there at some point in the past, similar to other areas on the site.
Q The -- I'm sorry.
What was placed there? You said "it."
A Well, the ash out here has been -- and the power plants have been burning a certain type of ash -- excuse me -- a certain type of coal for a number of years. And so, if you've been burning the same type of coal, then you're going to have similar by-products. And based on that as well as the, you know, general characteristics, that's what it was based on.
Q Do you know whether the coal that's in that

fill is the same type of coal that was also placed in that fill elsewhere on the site?
A In general, as far as the coal that was burned and then the ash that was placed in that area, I was told that it was -- they had been burning the same type of coal for a number of years now. I don't know exactly how long.
Q So you don't know for certain whether the coal that was burned, the ash that was placed there is the same type of coal that created the ash that was placed elsewhere onsite?
A I don't know if the records exist to make that determination.
Q Now, looking at Powerton, I think you state on page 47 of your report that samples were taken from the Limestone Runoff Basin; is that correct?
A (No response.)
Q Just under "Powerton Investigation" on page 47.
A Yes.
Q And, again, these samples were also analyzed using ASTM D3987-85; is that right?
A Yes.
Q Do you know what the Limestone Runoff Basin

was used for?
A At one time it did receive ash that was stored there on a temporary basis. My understanding is that it is no longer allowed to be stored there as a result of the Compliance Commitment Agreement?
Q Do you know if it was used for anything else in the past?
A I don't recall if it was a limestone quarry.
Q The name suggests limestone of some sort.
Did you also evaluate whether the material that was sampled from the Limestone Runoff Basin is representative of coal ash used as fill elsewhere at Powerton?
A The coal that was -- the waste that was being placed there -- the ash that was being placed there, was based on the coal that they had been burning consistently at these various power plants. So I'm assuming that it was consistent.
Q And what type of coal was that?
A Sub-bituminous Power River Basin -- Powder River Basin Coal.
Q Do you know when they began burning that coal at Powerton?

A I don't recall.
Q And do you know when the fill was placed in the Limestone Runoff Basin?
A Well, I don't recall specifically, but it wasn't kept there for very long. You know, I don't know if it was weeks or months, but it was placed at some historical time when they sampled it and now it's been removed. I don't know when it was placed there, but obviously it was placed there before it was sampled in 2004.
Q And do you know when other historical ash in fill at Powerton was placed on the Powerton site?
A All I know is that when we look at the drawings as of a certain date, it was before that date; but I don't know when it was placed there.
Q Do you know what that date was that you're -- the drawings you're talking about were?
A Well, there are many drawings. And so I don't have specifically which drawing; but suffice it to say, it's -- could be years, many years. But I really don't know specifically.
Q Is it your understanding that sub-bituminous PRB coal has been used at the site for many years, or do you not -- do you know --

MS. NIJMAN: Asked and answered.
BY MS. CASSEL:
Q -- how long it's been?
MS. NIJMAN: Asked and answered. He said three times now he doesn't know specifically.
BY MS. CASSEL:
Q If that remains your answer, I'm fine with that.
Let's now take a look at Will County.
Ms. CASSEL: Let's take a look at the next exhibit, the KPRG Report.
Sorry, Jennifer. There was an extra copy for you there. I forgot to pass it out.
(Seymour Deposition Exhibit No. 10 was marked for identification.)
MS. CASSEL: So this should be -- this is No. 10. There's a copy of No. 10 for you.
MS. GALE: Are we skipping 9? What was 9?
MS. DUBIN: Wasn't that --
MS. NIJMAN: That one was the --
MS. CASSEL: It was the groundwater data that we were just --
MS. NIJMAN: -- the January 22nd, 2016

Groundwater Monitoring.
BY MS. CASSEL:
Q Okay. Have you seen this report before, sir?
It's been marked as Deposition Exhibit 10.
A Yes.
Q Let's take a look at 59566, please.
A Excuse me.
What number?
Q Should be --
MS. NIJMAN: Maybe you mean 49?
THE WITNESS: Did you mean 49566?
BY MS. CASSEL:
Q I'm sorry. 49566. I apologize. 49566. Yeah.
So this discusses the samples that were collected at Will County -- or some samples that were collected at Will County, right?
A It says "Will County," yes.
Q And these samples were analyzed using the same method we've been discussing, Method ASTM D3987-85?
A Yes.

Q Let's take a look at where the ash was sampled from, I believe 49569.
A Okay.
Q Do you know where on the Will County site this is taken from?
A I'm not sure. I don't know for sure.
Q I'm trying to see if it says the study area.
I know we don't -- it doesn't seem like we have a clear idea of where the study area is, but did you evaluate whether those samples that were taken by KPRG at Will County were representative of other fill at the Will County site?
A I remember looking at the leachate results. I don't remember looking at the actual sample descriptions other than knowing it was a bottom ash-type material.
Q So you didn't do a comparison specifically between that fill and fill elsewhere on the site?
A Yes. This is a very --
MS. NIJMAN: Objection. Misstates testimony.
The WITNESS: I'm sorry?
MS. CASSEL: Can you read back the question, please.

(The last question was read by the reporter.)
THE WITNESS: I don't recall.
BY MS. CASSEL:
Q Now, I don't believe you cited any comparable sampling of ash fill at Waukegan; is that correct?
A I believe that is correct.
Q Do you recall the former ash area at Waukegan that we were discussing earlier, west of the current ash ponds?
A I do recall that area.
Q Do you know if there's been any soil sampling or leach testing from that former ash area?
A I don't believe it's been done at Waukegan.
Q Have you seen any leach test data from Waukegan other than from that area?
A Not for the general ash fill area because, I believe, if you look at our table, there's no Waukegan data, if that's what you're talking about.
Q Okay. And there's no leach test data from elsewhere on the Waukegan site that you're aware of, right?
A Correct. I'm not aware of any other leach test data --
Q Okay.
A -- of ash outside the ponds.
Q Are there any leach data of anything other than ash outside of the ponds that you're aware of?
A I'm not aware of any leach test data.
Q Okay.
MS. NIJMAN: Outside the ponds.
THE WITNESS: Correct. Outside the ponds.
MS. CASSEL: Can you tell me how long we've been going for?
(A discussion was held off the record.)
MS. CASSEL: We can go back on the record, please.
BY MS. CASSEL:
Q Now, let's go back to the report, please. If you would turn to page 5.
So in the fourth bullet point down, the third black bullet point, you wrote, "It is my opinion that groundwater concentrations are not the result of leaks of leachate from the ash currently stored in lined ponds."
Do you see where you state that?

A Yes.
Q What does "groundwater concentrations" refer to?
A This is the concentrations of the analytes that were detected in groundwater that we've evaluated.
Q So all -- any constituent that was found in groundwater is what you mean by "groundwater concentrations"?
A Relative to the studies we've done to match what -- from the ponds and then the groundwater. That's what this is relative to.
Q I'm not sure I understand your answer.
When you reference groundwater concentrations, are you only discussing -- are you only referencing the concentrations of constituents that are above the standards, or no?
A It's just, in general, what was found in the groundwater.
Q Do you know when groundwater testing first was done at these four Midwest Generation plants?
A The data that I've seen, that I've used in my evaluations, the data that's been taken since around 2010, I didn't factor in any -- there might

have been some historical and some old documents I did not factor that in.
Q So your conclusions, look at the groundwater data starting since that was reported in 2010?
A Yes.
Q Did you evaluate whether the ponds could have been leaking before they were relined?
A Well, we looked at the data since 2010, and some of the ponds were lined in 2000 -- in the 2000s; in mid to like -- at Waukegan. And then at, I think, Joliet there are some ponds that were lined earlier.
When you look at the ponds from 2013, that part that I was looking at, this 2014 data, to see what was going on -- so when you look at that data in general -- just trying to prepare for this deposition, I wanted to understand, well, could there be, you know, a question like this that I'd want to refresh my memory because I've looked at all the data; and my opinion previously, in general, was that it's scattered. It's not like -- it's not a plume. It's not strong.
And so, in doing so, I looked at whether they're increasing or decreasing as an

indication of whether a pond could be leaking. And what I found was that some are increasing; some are decreasing; some are staying the same.
Q So do you have an opinion as to whether the ponds could have been leaking before they were relined?
A Again, it's a "coulda" question. I don't have the information to make a real good conclusion.
Q Well, you stated that some of the ponds were not relined until 2013, right?
A That's the data I looked -- I'm sorry.
Q Did you look at -- did you consider whether ponds that weren't relined prior to 2013 could be leaking?
MS. NIJMAN: Asked and answered.
THE WITNESS: I think, in general, they're -- again, some of the ponds are very old and the practices are very old. These ponds go back to -- some of them to 1978, and they have very different kinds of liners. I didn't -- I have no analytical data to make a conclusion as to whether or not they were leaking.
BY MS. CASSEL:
Q So you didn't come to a conclusion as to

that particular question?
A I did not. I did not have the data to make that conclusion.
Q Did you evaluate whether groundwater concentrations are the results of leaks of leachate from ash currently stored in unlined ponds?
A The analysis that we looked at is in my report, and I don't recall unlined pond being in the report. I was asked to look at the ponds addressed by the Compliance Commitment Agreements, and I don't believe there are data on the ponds that are unlined.
Q Did you evaluate, for example, groundwater concentrations in the area of Will County Ponds 1N and 1S?
A If there was groundwater monitoring wells in the area, then I did.
Q Did you come to any specific conclusions about whether the groundwater concentrations could have resulted from Ponds 1N and 1S at Waukegan?
A My conclusions are in the report, that there's no identified leakage from these ponds -- from the ponds.
Q I apologize. I just -- I'm noting that this is a part- -- I'm asking about this particular

statement which references, specifically, lined ponds.

And so I want a better understanding of what your conclusion was, if you came to one, about unlined ponds such as 1N or 1S.

A Well, when we looked at the data for what's in the ponds and we looked at the groundwater data, it included all the groundwater data, including that which is around the unlined ponds at Will.

So the answer is because the data set were included, indirectly we did -- or directly we did.

Q And so the basis of your indirect conclusion is the matching analysis, and the other things that we've discussed here today is the basis of a conclusion that they were not coming from -- that contaminants in the groundwater were not coming from the unlined pond?

MS. NIJMAN: Okay. I need to object to the terminology of "unlined ponds." The witness already said that they were lined, different liners.

THE WITNESS: What -- let me look at one thing. For 1 North and 1 South at Will --

BY MS. CASSEL:

Misstates the prior testimony that he just said 2 seconds ago.

THE WITNESS: The report addresses the groundwater conditions since 2010 in the pond areas.

BY MS. CASSEL:

Q So we talked a minute ago about geo- -- now I forget -- HDPE liners, correct?

A Yes.

Q And there are other types of liners, right?

A Yes.

Q Is Poz-O-Pac -- are you familiar with that term?

A Yes.

Q Can you tell me what Poz-O-Pac is.

A Poz-O-Pac is a product, a cementitious product, made out of a combination of pozzolanic fly ash, cement, some aggregate, and it hardens like a concrete.

Q When you say "a cementitious product," does that just mean it includes cement? Is that what you said is an ingredient?

A Yes. You can sometimes use lime, sometimes cement, but it hardens.

Q Hardens. Okay.

Q Well, let me quickly ask you a preliminary question. We can hold that question for a second.

When you say "stored in lined ponds," what type of liner are you referencing there on page 5 of your report?

A We were looking at the geomembrane-lined ponds.

Q So the HDPE --

A HDPE lined ponds.

Q Okay.

A As I also said, though, that the groundwater quality data, a reflective also from around 1N and 1S -- and although we didn't state it, specifically, the groundwater data from that area reflect the pond, lined or unlined.

Q Did you evaluate as part of your analysis whether groundwater concentrations are the results of leaks of leachate from ash formerly stored in the ash ponds?

A I did not make an evaluation other than what's in my report.

Q Is it a fair statement to say your report focuses on current liner conditions?

MS. NIJMAN: I'm going to object again.

And you said it was similar to concrete?

A It hardens like concrete.

Q Like concrete. Okay.

Did you evaluate the extent to which the conditions of the ash ponds and the ash pond liners before the ponds were relined with HDPE might have created a risk of leaking or leaching contaminants?

MS. NIJMAN: Asked and answered. As to the groundwater data, he's answered this question.

THE WITNESS: I've looked at the data that I had, that was available to me. I had the data available since 2010. So I would be able to evaluate the data from the ponds that were relined in 2013 and would have been lined previously as far as ongoing. I can't go back farther than that and look at other liners.

BY MS. CASSEL:

Q Okay. Let's take a look at a new exhibit.

(Seymour Deposition Exhibit No. 11 was marked for identification.)

BY MS. CASSEL:
Q If you would look at this exhibit that's been marked as Exhibit No. 11, Deposition Exhibit 11.
Can you tell me if you've seen this document before.
A It looks generally familiar, but I don't remember specifically. Can you tell me where it's from? It doesn't have any identifying source.
Q Well, it was produced to me by your counsel, so they would have a better idea of the source, potentially, than I would.
MS. NIJMAN: The only question, is it part of the report or is this the document the way it was produced to you?
MS. CASSEL: I believe this is the document the way it was produced to us.
MS. NIJMAN: Okay.
MS. CASSEL: I believe. And I apologize if I'm misstating, but I think that's the case.
MS. NIJMAN: The only question is, is it part of a report, and, if it is --
MS. CASSEL: Right.
MS. NIJMAN: -- then let me object to the use of it without the rest of the report.

MS. CASSEL: That's fair, and I'm happy -- to the extent it is part of another -- a larger report, I'm happy to, you know, re-mark the exhibits to have that accounted in evidence, but I don't -- I'm afraid I don't have it here.
BY MS. CASSEL:
Q I will note, if you see the bottom of each of the pages that have tables on them, do you know that it says "Last Revised" -- do you see where it says "Last Revised 12/20/05"?
A Yes.
Q Okay. So let's take a look quickly at the first table, which is Bates 27 -- excuse me -- 23723, Powerton.
Do you see where it shows the column for the Secondary Ash Settling Basin?
A Yes.
Q Do you see where it shows under the row "Liner Material," no liner there?
A Yes.
Q And do you see where it shows for "Liner Condition, if known" -- do you see where it says "Poor" for Ash Surge Basin?
A On the Ash Surge Basin, the liner

condition, it says "Poor." Yeah, I see it.
Q And then looking at the row about eight or so rows down -- more than that, that says "Contamination Potential," do you see that it says "High" for Ash Surge Basin, Secondary Ash Settling Basin, and Bypass Basin?
A Yes.
MS. NIJMAN: I want to put an objection into the record. We have located the document. It was attached to MWG13-15_23721.
MS. GALE: You mean 23.
THE WITNESS: Yes.
MS. NIJMAN: 23721.
MS. GALE: Oh, I'm sorry.
MS. NIJMAN: 23721.
MS. GALE: Sorry. Sorry.
MS. NIJMAN: 23721, a letter dated December 21st from 2005 from NRT to Maria Race, enclosing NRT's Surface Impoundment Matrix and Supporting Tech Memos 1 and 2 from Midwest Generation's Impoundment Liner Evaluation at the six generating stations.
And then it goes on with describing what this document is. So --

MS. CASSEL: I'm sorry.
Could you state what the date of the document was again.
MS. NIJMAN: December 21st of 2005.
MS. CASSEL: I apologize for not having the entirety of the document with us.
MS. NIJMAN: It also says "We envision further refinements to the Matrix and Ranking Analysis as you review the documents, with that qualification of these being draft preliminary documents."
You can ask questions.
MS. CASSEL: Well, why don't we -- let's see if we can get that document.
Can you note it down and we'll ask to see if Rob could possibly bring it over.
MS. BUGEL: Yeah.
MS. CASSEL: Thank you.
BY MS. CASSEL:
Q So do you disagree with the descriptions that we just looked at in this Impoundment Rate Matrix, that as of, apparently, December 20th [SIC], 2005, the condition of the liners -- excuse me -- of the liner of the Ash Surge Basin was poor?
A I have no basis to know. This data is

collected and presented by somebody else. I have no idea what it's based on.
Q Do you contend that the condition of the Ash Surge Basin liner at Powerton was not poor before it was relined in 2013?
A I didn't say that. I said I don't have any basis to change -- make an opinion.
Q I understand that.
I've asked you a separate question, which is, do you have any basis to contend -- or do you contend that the condition of the liner at the Ash Surge Basin was not poor before 2013? Do you contend that?
A I --
MS. NIJMAN: If you need to look at your -- the documents of the various reports of the pond condition.
I mean, the problem I'm having with -- and you can go off the record or on the record -- I don't care -- but the problem I'm having, Jenny, is that you're using an old draft document when, in fact, we know when ponds were relined, that they saw the Poz-O-Pac long after this.
So you're --

MS. CASSEL: All right. Well, let's --
MS. NIJMAN: -- raising issues that --
MS. CASSEL: I'm sorry. Like I said, we talked about --
MS. NIJMAN: -- trying to trick him with a draft document that he didn't even write.
MS. CASSEL: I'm not trying to trick anyone. This is -- speaking objections, really, we've had too many of them today.
MS. NIJMAN: That's why I said you can take it off the record if you want to. I'm not trying to make a speaking objection. What I'm saying is, you trying to trick the witness this way is inappropriate.
MS. CASSEL: I'm trying to understand what he understands and what he contends, and that's fully appropriate for an expert witness. So...
MS. NIJMAN: Yes. And then if he has to look at these documents, then he can do that.
BY MS. CASSEL:
Q If you have something you need to look at in terms of coming up with your answer, I'm happy to give you the time to look at that.
A I believe --

MS. NIJMAN: We need to go off.
THE WITNESS: Okay.
MS. CASSEL: Can we go off the record, please.
(After a short recess, the proceeding resumed as follows:)
MS. CASSEL: We can go back on the record.
I actually don't even know if there was a question pending. Can you let me know?
There was not. Okay.
BY MS. CASSEL:
Q So I believe we were talking about Powerton, and I was asking you if, recognizing that this document is obviously -- was drafted far before you got involved -- well, actually -- I'm sorry.
MS. CASSEL: Before I continue with that question, I want to state for the record in evaluating and noting the way that these documents were produced to us, this was actually produced as a separate PDF from the letter that you guys referenced before.
So I'm not stating that it was necessarily -- is a separate document, I'm just saying the way it was produced to us was as a

separate PDF.
MS. GALE: Hang on.
MS. NIJMAN: Actually, no.
MS. GALE: It was a produced in the boxes that you guys chose. The company you chose separated it.
MS. CASSEL: Okay. That could be true.
MS. GALE: Well, no, I can tell you --
MS. NIJMAN: It is true.
MS. CASSEL: I was on maternity leave at the time, so fair statement.
Okay. So we'll acknowledge that this was attached to that letter.
BY MS. CASSEL:
Q Now, back to the question.
So I was asking you if you contend that the condition of the liner of the Ash Surge Basin at Powerton was not poor before that basin was relined in 2013?
MS. NIJMAN: And I'm going to object to this whole line of questioning.
To the extent you can remember --
BY MS. CASSEL:
Q To the extent you have -- you remember.
MS. NIJMAN: -- because this report should tell

you basically nothing about it.
MS. CASSEL: Okay, Jennifer, please. Really, the testimony needs to be the witness's. This is getting old.
MS. NIJMAN: And it can be.
MS. CASSEL: I've asked him a question.
MS. NIJMAN: And I'm objecting to the entire line based on this incomplete document.
THE WITNESS: My recollection, as I sit here today, is that at Powerton -- and I apologize. Sometimes when the negative or double negatives come in, it can be somewhat confusing in conversation -- there's a deposition that I just reread yesterday from Mark Kelly saying that the Poz-O-Pac was in great condition at Powerton.
BY MS. CASSEL:
Q Okay. So wait.
So are you relying on that deposition transcript to say that it was, in fact, not in poor condition prior to relining in 2013?
A Well, first of all, that was not an opinion in my report. I'm saying --
Q I'm not asking necessarily about opinions in your report, I'm asking about your opinions today.

A I'm saying that that, I would rely on to be that it was in good condition.
Q Okay. Now, do you have any other basis for saying, as we sit here today, that the liner of the Ash Surge Basin was not in poor condition prior to being relined in 2013?
A I don't recall anything else I would have relied on.
Q Now, let's look at the next portion of this impoundment matrix, which references Will County. So this is Bates 23725.
Do you show where it references the impoundment ID of South Impoundment -- South Ash Impoundment 3, South Ash Impoundment 2, South Ash Impoundment 1, and North Ash Impoundment at the top?
A I see that.
Q Do you see where -- the row that says "Liner Constructed in," it states "1977" for all four of those impoundments.
A Yes.
Q And then do you see just above that date line, under the row "Liner Condition, if known," where it states "Poor" --
A I see that.

Q -- for each of those liners? Okay.
A Yes.
Q South Ash Impoundment 1 and North Ash Impoundment have not been relined with HDPE, correct?
A South Imp- -- I'm sorry. South Impoundment --
Q Ash Impoundment 1.
A 1.
Q So 1 South and 1 North.
A I believe they were taken out of service. They were not relined.
Q Not relined with HDPE?
A That's what I recall. Let me look at my report for Will.
Q Okay.
A Okay.
Q You're all set? Okay.
Now, do you disagree that the liners for these two impoundments were in poor condition when this document was created?
MS. NIJMAN: Objection as to anything scope -- to the scope of this document.
THE WITNESS: My understanding of this document when you view it in its entirety, it was a document

that was done as a general assessment of the pond conditions. And I don't know if any of this -- or how this data was verified to be true or not true. I don't know that. Okay? I wasn't there.
I know there were some other depositions and other reports as to the conditions, for example, when the ponds were relined, that looked at the condition of the Poz-O-Pac as to whether it would be a suitable subgrade or not; but I honestly don't recall all the different ponds as to, at that time, whether it was acceptable or not acceptable. I'm focusing on it's been relined. Whatever the condition was before, it's been relined.
BY MS. CASSEL:
Q Okay. And so -- but, obviously, I'm asking you questions about prior to relining or for the ones that haven't been relined, those ponds.
So now, I understand you don't have a basis to contest this one way or the other for the time that it was written, do you contend that the liners for 1 South and 1 North, which do not have HDPE, as we discussed, are in good condition?
A I have no opinion. I don't know.
Q Okay.

MS. NIJMAN: Well, I'm going to, again, object. Misstates prior testimony. Where you just said there are depositions out there, you don't have them in front of you.
BY MS. CASSEL:
Q Now, do you have any opinion as to the conditions of those two liners for impoundment -- 1 South and 1 North at Will County right now?
A Currently?
Q Uh-huh.
A The lined ponds, I've seen it in my report that we don't have evidence that they are leaking. I have not -- and I've looked -- all I've looked --
Q So I've asked you about the condition of the liner in 1N and 1S.
A Oh, excuse me. Thank you.
Q I apologize.
A I --
Q Do you have any opinion about that?
A I don't have an opinion about 1 North and 1 South.
Q Do you contend that the condition of the liners in Will County ash ponds 2 South and 3 South were not poor before they were relined in 2009 and

2013?
MS. NIJMAN: Same objection.
To the extent you can recall as you sit here right now.
THE WITNESS: I think I've answered that for these ponds, that I -- there is other information out there that states what the condition was when they were relined and where they are now. I don't recall the conditions of all the ponds at Will at the time they were relined.
BY MS. CASSEL:
Q Do you know what any of those other documents are --
MS. NIJMAN: Asked and answered.
BY MS. CASSEL:
Q -- that you can tell me that would reference the condition of the ponds before they were relined that you relied on?
A I do know that it was in some various correspondence or e-mails and could have been in some Inspection Reports, but I don't specifically remember. I do know that there were some conclusions as to whether or not it was in good condition, needed to be removed or not, but I don't remember

specifically which pond. But they were all not in poor condition, some were in very good condition.
Q Okay. And -- but you can't -- would that be in your report? Would you specifically note in your report, documents that state that the condition of the Poz-O-Pac at these -- or the lack of liner altogether, if that was ever the case, were it not in poor condition?
A As I stated, I don't have an opinion in my report to that -- to the condition of the Poz-O-Pac or the previous liners.
Q And you can't point me to specific documents right now that --
MS. NIJMAN: Other than the depositions.
BY MS. CASSEL:
Q -- provide the basis for the -- other than the one that you just referenced, the Mark Kelly deposition for Powerton?
A That is the one specific that I recall, but, again, there are so many documents.
Q Okay.
A And if you have one that you can show me, then I'd be glad to look at it.
Q Did you take this impoundment matrix into

consideration in evaluating whether that -- the Poz-O-Pac or subgrade of the ash ponds was in good condition prior to them being relined?
MS. NIJMAN: Same objection to the use of this document.
THE WITNESS: I did not take that document into consideration for anything other than a historical account of what had been there and the dimensions and when they were constructed. I did not take the condition of the ponds into consideration for my evaluation.
As I said, I cannot verify how they identified the conditions of the ponds.
BY MS. CASSEL:
Q Did you look at any other documents that you recall that involved pictures of the ponds that would show what condition those ponds were in --
MS. NIJMAN: Asked and answered.
BY MS. CASSEL:
Q -- prior to being relined?
MS. NIJMAN: Asked and answered. He's talked about depositions, he's talked about his report, and he said he can't recall anything else.
I mean, what else do you want him to

say.
THE WITNESS: Well, I've --
MS. NIJMAN: If you can think of other documents as you sit here, you can answer the question.
THE WITNESS: I think -- I'm sorry.
Brad, can you please restate the question.
(The last question was read by the reporter.)
THE WITNESS: Again, what my opinion is is my opinion. I looked at a lot of documents. At the time -- and at the time this opinion was written, I believe I've answered the question. I don't have other specific documents. My concern was not the condition of the ponds prior to relining. I did not evaluate them. I have no basis to evaluate them.
BY MS. CASSEL:
Q Okay. Let's move on. Let's move back to page 6 of your report.
So near the top of that page, under the bullet "Historical ash and fill materials outside of the ponds is not a source and is not a risk to human health and environment," you have a sub-bullet

saying, quote, Ash generated by coal combustion may be classified as CCB." And then describe several conditions -- or conditions for that?
Can you tell me if IEPA has classified the historical ash in fill materials outside the ponds as beneficial use.
A The process is that the person who wants to beneficially reuse the ash does the examination. I do not believe the Illinois EPA -- I don't recall whether the IEPA approves it or not.
Q So you don't -- do you know whether they have, in fact, classified that ash as beneficial use?
A I don't believe it's in the -- required by the process.
Q But that's not my question.
I'm asking you if IEPA has classified it to your knowledge --
MS. NIJMAN: Asked and answered.
BY MS. CASSEL:
Q -- as CCB?
A The answer is I don't believe they have.
Q Okay.
MS. NIJMAN: Because it's not part of the process. Finish your answer.

THE WITNESS: Because it's not part of the process.
MS. CASSEL: The answer can be discerned from his answers. This is getting a little out of hand here.
MS. NIJMAN: Yes.
BY MS. CASSEL:
Q How does the classification as beneficial use affect the potential for coal ash for leach contaminants.
A Well, as a beneficial reuse, it's an evaluation as to whether you should be allowed to do it or not. And so those -- if it's allowed to be beneficially reused, for example, as structural fill or road fill, you'd say that it has a low potential for leaching.
Q Does the classification as beneficial use change in in any way the chemical or physical properties of the coal ash so designated?
A The classification doesn't change the properties. The classification just means that if it meets the criteria, then you can beneficially reuse it.
If not, you could, for example, have

to deal with TACO regulations as to whether or not they meet those rules. But, in general, being more specific -- excuse me -- to be more specific, it doesn't -- it's a process that which -- whether you can reuse it or not in the environment.
Q But it doesn't actually change the properties in any way of beneficial reuse?
Does ash that has -- that's been classified as beneficial reuse have different chemical properties than ash that has not been so?
MS. NIJMAN: Specifically asked and answered. You can ask Brad to read that back. I'm telling him to stop answering these questions that you keep asking four or five times now.
MS. CASSEL: That's fine. If you don't want to answer that question, I can move on. I think I understand the answer to that. I'm just trying to clarify it in my head.
Let's see, what did I miss?
BY MS. CASSEL:
Q Okay. Now, I want to talk a little more about liners, generally.
In your opinion, what would you expect to happen to an HDPE liner if the base on which that

liner's placed is not smooth?
MS. NIJMAN: Object to breadth.
THE WITNESS: Well, if you have a liner that's placed, a subgrade that's not smooth, that would normally not be in accordance with a design specification. You'd expect it to be built in accordance with the design specification, which prescribes the base -- the subgrade below the HDPE.
BY MS. CASSEL:
Q And who -- I'm sorry. Was that answer complete?
A And so -- yes, for now.
You have a follow-up question?
Q Yeah. Just you said "a design specification."
Where does that design specification come from?
A Well, the engineer. And, for example, NRT, for the relining, they have specifications that they followed that said what the bottom subgrade should be. And, as you probably know, they use a cushion for areas that had a rougher subgrade.
Q So what is the -- why would you not want a liner to be placed on an area that's not smooth?

A Well, you would only do that, again, if you had a cushion to protect it. You wouldn't put it on a subgrade that is not smooth that -- in accordance with a specification.
Q Why not?
A Because if you have an uneven subgrade and you load the geomembrane, the protrusions can cause punctures of the geomembrane.
Q When you say "load the geomembrane," what does that mean?
A When you apply the soils and the way ash and everything else -- it adds a load, a pressure. You put a pressure on the geomembrane --
Q Okay.
A -- based on weight.
Q And the geomembrane, that is -- when you refer to "geomembrane," are you saying the same thing as HDPE liner?
A Yes, excuse me. HDPE liner is a -- geomembrane's the general term.
Q Okay.
A HDPE liner is specific.
Q In your opinion, would the placement of geomembrane or HDPE liner on cracked Poz-O-Pac be

good engineering practice?
MS. NIJMAN: Objection. Assumes facts.
THE WITNESS: Hypothe- --
MS. NIJMAN: Are you asking generally?
BY MS. CASSEL:
Q You can answer the question, if you understand it.
MS. NIJMAN: If you understand it.
THE WITNESS: Hypothetically, if you have a Poz-O-Pac liner with a crack in it but it still remains smooth, that would be an acceptable subgrade by the specification.
BY MS. CASSEL:
Q Okay. So if it does have -- if it's smooth but it has a crack, that would be acceptable?
A Correct.
Q Okay.
A If it's smooth and it is uneven, then you -- and, again, you have a criteria for that -- then you'd have to either remove the bump, if you will, to make it smooth -- but if it's cracked and still smooth, it would be acceptable.
Q So unevenness is also a problem.
You wouldn't want that as a subgrade

characteristic?
A You want to avoid sharp -- sharpness. And so if it's a sharp edge or a protrusion, you want to avoid the potential for puncture.
Q Could limestone create sharp edges?
A On what?
Q If you were to place a geomembrane on top of limestone, could that potentially create a jagged edge that could damage the liner?
A Well, now you're speaking in hypothetical. In my practice, my feeling and my many years of practice you would not put a geomembrane or HDPE liner on top of limestone. You'd want to have it smooth, without protrusions, without particles larger than approximately three-quarters of a -- three-eighths to three-quarters of an inch, depending on the geomembrane. You would not put it on a sharp edge of a rock.
Q Have you evaluated whether limestone layers -- I believe it was the warning layer at a number of these ponds -- could migrate down through the cushion layer to the geomembrane at the Midwest Generation ponds?
A I have not previously analyzed that at all.

Q Do you know if any analysis has been done of that question?
A I don't remember if there's been an analysis.
Q Would you expect there to be leaching in an uncovered pond without an HDPE or geomembrane liner?
A Did you say "uncovered pond"?
Q Yes, I did.
MS. NIJMAN: Object to overbreadth.
THE WITNESS: I'm sorry. Read the question.
(The last question was read by the reporter.)
MS. NIJMAN: Object to the overbreadth of the hypothetical.
THE WITNESS: So are you saying that if you have a pond that's not covered and you have rainfall falling on it, will there be leaching of the constituents from the ash if there is no bottom liner?
BY MS. CASSEL:
Q Correct.
Although, I'm asking specifically in this case if there's no HDPE liner.
A Well, either -- if you have a HDPE or don't

have a HDPE, that is the process, that water will move through the ash and will mobilize the ash.
The question is does it go anywhere, does it get out. If it's not contained, then it will get out.
Q And if you don't have an HDPE liner, in your opinion, will it get out?
A Absent appropriate subgrade or appropriate other liner. I'm assuming if there's no liner and the subgrade is not low-permeability clay, then it will get out --
Q Okay.
A -- will leach out.
Q If Poz-O-Pac is the liner of an uncovered pond and that Poz-O-Pac is cracked, would that lead to leaching in your opinion?
MS. NIJMAN: Same objection to the overbreadth of a hypothetical.
THE WITNESS: If any liner is not intact and it's put under a hydraulic load like from liquids, it will push the liquids through the cracks if there's no subgrade that's appropriate that would contain it.
BY MS. CASSEL:
Q Looking quickly at page 54 of your
